While affective exchange processes are critical for teams, our understanding of emotional group dynamics, as well as their gendered nature, is limited. The current research examines whether and how women can improve team outcomes through emotional labor by identifying some of the team-level mechanisms through which these relationships occur. In particular, extending emotional contagion principles to processes of gendered emotional transfer in teams, we examine the mediating effect of deep acting as a group emotional mechanism, assuming it is more prevalent among groups with higher proportions of women. 437 male and female employees working in 92 teams in Spanish organizations responded to measures of emotional labor and team performance. Employees were nested in work teams, and data were analyzed using multilevel structural equation modelling. Results showed that proportions of women in the group are associated with higher levels of group deep acting, as well as team performance. These findings contribute to a deeper understanding of the female advantage at the meso level and the gendered nature of emotional exchange processes in group dynamics and outcomes. Mediation effects were confirmed at the group level, suggesting that future research should also more cautiously differentiate between individual and team levels of emotional analyses.

When is the Right Time to Grow My Family? The Hidden Challenges of Family Planning in Academia *When Is the Right Time to Grow My Family?*

Organizer: **Serena Sohrab**, *Ontario Tech U.*
Organizer: **Golshan Javadian**, *Morgan State U.*
Organizer: **Nada Basir**, *U. of Waterloo*
Organizer: **Shora Moteabbed**, *George Mason U.*
Panelist: **Rachel McCullagh Balven**, *Arizona State U.*
Panelist: **Emily S. Block**, *U. of Alberta*
Moderator: **Raina A. Brands**, *UCL School of Management*
Panelist: **Sean Buchanan**, *U. of Manitoba*
Panelist: **Hamid Foroughi**, *Cardiff U.*

In this workshop, we will explore the timing of family planning in academia with a focus on less-discussed challenges such as infertility, miscarriage, and other pregnancy complications. We will explore family planning at different stages of the academic career to better understand the costs and rewards associated with each stage. The panelists are chosen to represent various family planning trajectories. These scholars will share their family planning journey with the audience and provide guidance on strategies to effectively navigate family planning in academia.

According to a recent McKinsey (2021) report: “The Covid-19 pandemic has accelerated existing trends in remote work, e-commerce, and automation, with up to 25% more workers than previously estimated potentially needing to switch occupation.” Some of the changes that have taken place since the pandemic, such as increased remote work and virtual meetings, are likely to continue to some extent, same as the faster adoption of automation and AI often replacing low wage occupations, which are disproportionately carried out by migrants, ethnic minorities, and women. The pandemic has highlighted the deleterious effects of precarious work for vulnerable demographic groups worldwide with women, ethnic minorities, people with disabilities, among others, to experience in and out of work poverty and to be affected considerably more by precarious living. However, research on the future of work often treats diversity and inclusion challenges as an afterthought. This PDW seeks to unpack this research and offer insights into the role of organizations in fostering inclusive change. Through a panel presentation and round table discussions, the goal of the PDW is to develop a more nuanced understanding of the various contexts, experiences, and consequences of the future changes of work. The proposed PDW brings together international scholars to discuss ways to address these challenges and offer a way forward. Thus, we contribute to drawing awareness of the future of work and diversity and inclusion in organizations by bringing together experts in a PDW designed to: (1) uncover and document the variety of issues facing vulnerable demographic groups in the changing workplace (2) promote greater scholarship on the link between the future of work, diversity and inclusion during the economic and social upheaval, (3) develop a research program and agenda that sheds light into new and critical aspects of the future of work, diversity and inclusion, (4) to foster opportunities to build a community of scholars with interest in the future of work, precarity and diversity.

HCM: Procurement Institutions and Essential Drug Supply in Low and Middle-Income Countries      

Author: **Lucy Xiaolu Wang**, *Assistant Professor at UMass Amherst*
Author: **Nahim Zahur**, *Queen's U.*

International procurement institutions have played an important role in drug supply. This paper studies price, delivery, and shipment time of essential drugs supplied in 106 developing countries from 2007-2017 across four procurement institution types. We find that pooled procurement institutions lower prices: pooling internationally is most effective for small buyers and more concentrated markets, and pooling within-country is most effective for large buyers and less concentrated markets. Pooling can reduce delays, but at the cost of longer anticipated shipment times. Finally, pooled procurement is more effective for older generation drugs, compared to IP licensing institutions that focus on newer, patented drugs. We corroborate the findings using multiple identification strategies, including an instrumental variable strategy as well as the Altonji-Elder-Taber-Oster method for selection on unobservables. Our results suggest that the optimal mixture of procurement institutions depends on the trade-off between costs and urgency of need, with pooled international procurement institutions particularly valuable when countries can plan well ahead of time.

HCM: Make it Easy: How Mobile Vaccination Units Increase COVID-19 Vaccination Uptake in a Field Experiment 

Author: **Anna-Corinna Kulle**, *U. of Bern*
Author: **Frauke Von Bieberstein**, -
Author: **Stefanie Schumacher**, -

We study the effect of reducing individuals' transaction costs of getting vaccinated against COVID-19 on vaccination decisions. In a field experiment conducted in August 2021, we sent mobile vaccination units to Swiss communities for half a day. Vaccinations at these units required no appointments. We find a substantial increase in vaccination rates of the previously unvaccinated of plus 7.4 percentage points compared to the control group over a three-week period. The increase is present for all age groups and both genders. We find no cannibalization of vaccinations in dedicated vaccination centers or at local doctors and pharmacies. Transaction costs for vaccinations should thus be kept as low as possible, even at a stage when appointments are in high supply and individuals had ample time to contemplate their vaccination decision.

Paper is Available to Meeting Registrants Only.

HCM: Medicaid Expansion, Disproportionate Share Payments, and the Performance of Safety Net Hospitals 

Author: **Jon Law**, *U. Medical Center of El Paso*
Author: **S Robert Hernandez**, *U. of Alabama, Birmingham*
Author: **Allyson Hall**, *U. of Alabama, Birmingham*
Author: **Nathan Carroll**, *Virginia Commonwealth U.*
Author: **Jeff Szychowski**, *U. of Alabama, Birmingham*

Safety-net hospitals (SNHs) in the United States provide necessary emergency and acute care to all individuals regardless of their financial resources, insurance coverage, or legal residency status. The erosion of subsidies for indigent populations is causing serious problems for this safety net system. Research suggests that SNHs continue to have weaker operating margins when compared to other hospitals and are financially vulnerable. This study examined the extent to which there is an association among Medicaid expansion, disproportionate share payments, and the performance of SNHs. Findings suggest that there is an association between Medicaid expansion and financial performance but there is no association between disproportionate share payments and performance. Management, policy, and research implications are discussed.

CSR and Institutions

Session Moderator: **Kristin Brandl**, *Gustavson School of Business, U. of Victoria*

IM: IGOs and the Impact of Institutional and Economic Integration on CSR Performance ➔

Author: **Kristin Brandl**, *Gustavson School of Business, U. of Victoria*
Author: **Elizabeth Marie Moore**, *Northeastern U.*
Author: **Larissa Marchiori Pacheco**, *Northeastern U.*
Author: **Luis Alfonso Dau**, *Northeastern U.*

Intergovernmental organizations (IGOs), such as the European Union, coalesce divergent member countries toward cooperative political, social, environmental, and economic activities to promote the betterment of communities and societies. The level of integration of member countries in the IGO is thereby expected to shape the level of betterment. To understand this connection, we study the impact of institutional and economic integration of IGO member countries on the Corporate Social Responsibility performances of its firms. Building on insights from political science, nonmarket strategy, and institutional theory as well as an empirical analysis of the EU, we find that low levels of institutional integration of IGO member countries reduce CSR performances of their firms. We also find that high levels of economic integration enhance CSR performances and that this high economic integration also moderates the negative impact of low levels of institutional integration on the CSR performances of firms. We contribute to institutional theory and societal sustainability concerns, by connecting the supranational, national, and firm-level.

IM: Corporate Social Irresponsibility in Host Countries: The Interplay of Home and Host Institutions ➔

Author: **Ye He**, *U. of Victoria*
Author: **Raveendra Chittoor**, *U. of Victoria*

Corporate social irresponsibility (CSI) by multinational enterprises (MNEs) has been attracting increasing attention by policy makers as well as scholars. Building on institutional perspectives and the 'distance' research in the international business (IB) field, our study examines how the institutional characteristics of home and host countries, their interplay, as well as cross-national institutional distances affect MNEs' CSI in host countries. We test our hypotheses using panel data of 1,087 listed firms based in 48 countries, with CSI incidents occurring in 150 host countries during 2007-2018. We find that both stronger home and host institutions are negatively associated with CSI occurring in the host markets, but the mitigating effect of host (home) institutions on CSI will be weaker when home (host) institutions are stronger. We further find that as institutional distance between home and host countries increases, MNEs' involvement in CSI incidents in the host countries grows. We contribute to CSI research and 'distance' literatures by offering theoretical mechanisms and empirical evidence on whether and when MNEs respond to varied stakeholder and institutional pressures in their CSI engagements.

IM: The Role of National Institutions in Shaping Economic Outcomes of CSR Communication ➔

Author: **Hanh Pham**, *Leeds U. Business School*
Author: **Hien Thi Tran**, *VNU U. of Economics and Business, Vietnam National U., Hanoi*

This paper examines if the financial outcomes of corporate sustainability communication are conditional on institutional factors. The article first constructs a theoretical framework explaining how regulatory and socio-cultural factors of a firm's home country moderate the effect of corporate sustainability communication on financial performance. The paper then tests the theoretical predictions with the data of 621 multinational enterprises (MNEs) headquartered in 31 countries from 2012-2018, using the general method of moments (GMM) and two-stage least square instrumental variable (2SLS IV). The paper finds significant strengthening effects of auditing and accounting standards, corporate ethical culture, uncertainty avoidance culture but significant weakening effects of press freedom, power distance, individualism, and masculinity, along with insignificant impact of long-term orientation and indulgence culture of a firm's home country on the relation between corporate sustainability communication and financial performance. The paper provides significant implications for literature, public policy and management of MNEs, offering a practical framework for MNEs to consider when designing their corporate sustainability communication strategy in different institutional contexts.

Organizations around the world increasingly face volatile environments characterized by rapidly changing market conditions and evolving consumer demands. These signal the need for organizations to continuously innovate in order to sustain competitive advantage. Despite the universal importance of innovation, innovation researchers repeatedly call for more emphasis on boundaries to the universality in innovation and its country- and culture-specific issues. This symposium applies a cross-cultural perspective, specifically an Asia-centric perspective, on understanding the antecedents and workings of innovation. The authors present a comprehensive set of studies, including one conceptual framework on national cultures' influence on innovation and four empirical studies that demonstrate cross-national differences in innovation antecedents (e.g., configurations in ambidextrous leadership and team initiative, and entrepreneurial opportunity identification) and innovation outcomes (e.g., firm product innovativeness and innovativeness perceptions). The discussions generated by this symposium contribute to a deepened understanding and appreciation of both the rich diversity in Asian cultures and the context-specificity of innovation.

Every day, academic research is published in an attempt to inform the world’s biggest issues, from informing optimal and innovative business strategies to shaping the future of work and employee and management behavior. Academic scholarship occasionally succeeds and provides impact far beyond the proverbial walls of the global “University Ivory Tower,” while some critics suggest many academic scholars focus on esoteric areas with little relevance or impact to society. This dynamic begs the question: how are AOM scholars, and management scholars at large, turning their insights and published research into solutions for the workplace and answering the biggest organizational societal challenges? This panel will examine the real-world impact of scholarly research and provide practical advice and examples in how scholars can extend the impact of their research for practitioners worldwide. Join AOM Scholars as they share their expertise and research-based insights on the positive social impact that can be made and has been made by business school academics, through their research. The panel will feature discussion regarding: • Academic influence and the collective goal to promote public good through insights-driven, peer-reviewed research • How scholars can translate research into tangible societal impact • How to align or partner with management practitioners • Barriers for academics in providing social change • The future of academia and fostering a culture of change • Use cases from SMEs (may include research impacting the following areas): o Economic development o Benefiting society and the environment

Winner of the Benedictine University Scholar-Practitioner Collaboration Award

Professional service firms apply specialist knowledge to create customised solutions to client problems. In their work, teams of professionals undertake projects in which clients may be closely involved in co-creating solutions. However, we know little about the conditions under which client involvement contributes to better performance. We examine the direct and conditional contribution client involvement can make to project success and propose team bonding capital as a moderator. We conduct multi-level analysis of data from 58 project managers and 171 consultants nested in project teams. We find a positive impact of client involvement on both team performance and team member idea creativity. Team bonding capital moderates the relationships client involvement has with both team performance and individual member idea creativity, where the impact of client involvement is greater when team bonding capital is high. Implications for theory and practice are discussed.

MC: **KYC Principles Embedded in AI-enabled Mobile Banking in the Face of Money-Laundering**      

Author: **Jocelyne Boulos Eid**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Author: **Laura Khachan**, *U. Paul Valery, Montpellier*
Author: **Marc Bonnet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Anti-money laundering and financial terrorism laws create a major dilemma for banks, where the latter could be held liable as constructive trustees for the rightful owner of the corrupted funds. This paper aims to find out ways to maintain compliance to the Know Your Customer (KYC) principles via an Artificial Intelligence AI-enabled mobile banking service. The intervention research was conducted in the Middle East precisely in a private-owned bank. The results show that the bank's compliance program can benefit from the AI banking services as enablers to fight Money-laundering. For this reason, the intervention research management consulting project comprises of valuing the impact of implementing a Socio-economic Approach to Management to synchronize the human potential and AI banking services to sustain the compliance program (FATF, 2012). This anticipated improvement in performance would increase the AI services and KYC implementation return on investment thus ensuring compliance and competitive advantage.

Paper is Available to Meeting Registrants Only.

MC: **IT Project Manager's Influence Tactics To Form Critical Project Alignments**      

Author: **Ghassan ABUKAR**, *Weatherhead School of Management, Case Western Reserve U.*

Influence has long been recognized as an essential element of leadership and a critical determinant of a manager's effectiveness. This research investigates an unexplored topic: IT project manager's influence in forming business and stakeholder alignment and shaping consequent project success. We ask the following: what are the primary influence tactics and the related mechanism used by IT project managers to form critical project level alignments (stakeholder/business)? To answer this question, we conduct a qualitative inquiry by interviewing 33 experienced IT project managers. The inquiry aims to uncover influence tactics they use while creating stakeholder and business alignment. We use grounded theory and thematic analysis in the analysis of the data. Analysis reveals, IT project managers use different tactics as means to achieve the desired results and/or actualize benefit while engaging with business and stakeholders. Nonetheless, this behavior is harnessed on the leadership style which is dependent on personal traits and positional power. The IT Value Realization Model is a complex set of processes that requires a dynamic shift and myriad leadership styles depending on the project phase, stakeholders and benefits to be actualized. The role of the IT project manager is to be insightful to get things done through people while assessing the environment. To this end, we develop a theoretical model of IT project manager influence choice during project execution. It offers an explanatory account of the potential impact of project manager influence tactics which expands beyond existing empirical research on the topic.

Facilitator: **Noman Ikram**, *U. of Northern Iowa*
Facilitator: **Ali Bai**, *U. of Northern Iowa*
Facilitator: **Cheick Bally**, *U. of Northern Iowa*

The purpose of our workshop is to offer an introduction of what an honoring circle is. We will also break out in smaller groups where participants will have the opportunity to experience the process of an honoring circle with some of our trained facilitators. We will share what we have learned from personal and cultural experiences within our Global Community Hub. What started as a small local team eventually grew into a global hub with diverse members from more than 60 countries after enrolling for a training program at the Presencing Institute of MIT in 2015. One of the exercises was a coaching circle that eventually evolved into our honoring circle. This is a practice to deepen our awareness of our embodied selves focusing on our common humanity, our internal body awareness, and as such it is a practice with a broad cultural reach. These honoring circles also have historical connections with indigenous people around the world as one of our team members experienced while spending the past three years living and working in a natural habitat with an Aboriginal tribe in Australia. This was also confirmed by some of our younger members who are still residing in a refugee camp in Africa. We also included the reflections and performance of a team of BIPOC students majoring in Dance in the United States who expressed a need to move within their own narratives and were given the opportunity to do so.

The Many Faces of Leadership and Management in Change Efforts

Session Moderator: **Feim Blakçori**, *AFG College with the U. of Aberdeen*

ODC: Strategizing from the Middle: Sensemaking of Change Process in the Public Sector

Author: **Feim Blakçori**, *AFG College with the U. of Aberdeen*

The theoretical dispositions exclude the criticality of turbulent and transitional contexts in constructing sensemaking of change process. The paper demonstrates how middle managers create meaning to ambiguous and ambivalent cues but also provides legitimacy for acting as sensemakers of change, strategically. A framework is developed that demonstrates two interlinked processes to be critical to the accomplishment of middle managers' strategizing sensemaking in the public sector. Strategizing sensemaking is understood closely with the need for engagement in tactical action of change where sensemaking is not momentary or episodic, but rather it is a process that continuously covers specific moments and episodic events. Also, developing horizontal and vertical dialogues has been considered a structural boundary for strategizing sensemaking in the public sector. It is well elaborated that understanding sensemaking as a discursive process alleviates the burden of structural boundary for middle managers, as unplanned events, cues, frames and accounts are deliberated a trigger of shared meanings and understandings of practices encountered. This is a pioneering research on middle managers' strategizing sensemaking in the public sector in a transition context and therefore theoretical and practical implications are thoroughly elaborated.

ODC: A Multi-Level Study Analysis of the Gray Shades of Responsible Leadership Behavior for Themselves 

Author: **Ali Nawaz Khan**, *Department of Management HSE U., Saint Petersburg Russia*

Author: **Ali Ahmad**, *SEM Tongi U.*

Author: **Naseer Abbas Khan**, *U. of Sargodha*

Most theories and research on responsible leadership have focused on how the behavior of responsible leaders affects followers, and portraying these behaviors is undoubtedly beneficial. We shifted from our primary focus to the gray side of responsible leader behavior on leaders themselves. Based on the conservation of resource theory, we assume that although responsible leader behavior brings benefits to leaders and followers, these behaviors will also cause resource damage to the leaders themselves. The findings of two study samples show that leaders and their followers have completed five consecutive weeks of weekly surveys. The results show that responsible leader behavior is associated with leader psychological distress and subsequent increase in leader burnout. These detrimental outcomes go beyond the benefits to followers (Study 1) and the leaders themselves (Study 2). Moreover, the extent to which responsible leader behavior is related to increased psychological distress depends on the attributes of the followers. Therefore, when the leader's responsible behavior is directed at followers with low proactive personality (study 1) and competence (study 2), the leaders experienced greater increases in psychological distress. Overall, the results of this article answer why and under what circumstances the gray side of responsible leader behavior may appear.

ODC: The Impact of Servant Leadership on Innovative Work Behavior and Adaptive Work Performance  

Author: **Sabeen Bhatti**, *Bahria U., Islamabad Pakistan*

Author: **Scott Dust**, *U. of Cincinnati*

Author: **Jabran Khan**, *Bahria U., Business School, Islamabad, Pakistan*

Author: **Ramsha Zakariya**, *Capital U. of Science and Technology*

The focus of this work is on leadership during a global health crisis. Using Job Demand-Resource (JD-R) theory, we propose, and our results confirm, that servant leadership impacts employees' innovative work behaviors and adaptive work performance via employees' job crafting behaviors. Further, task autonomy and task interdependence act as conditional moderators, such that the positive impact of servant leadership on job crafting is enhanced when these job characteristics are higher. Data were collected in two studies during the COVID-19 pandemic. Study 1 included data from multiple industries, while study 2 focused on IT firms. By exploring the relationship between servant leadership and employee-driven work design, our study enriches the literature on how leaders can positively influence employee performance in the midst of crises. For practitioners and employees who encounter imbalance between job demands and personal needs during challenging times, we suggest that organizations should encourage servant leadership and job crafting training to increase employees' innovative work behavior and adaptive performance.

ODC: "Surmounting muddled pathways": Adaptive leadership and Psychosocial Safety Climate Approach

Author: **Muhammad Salman Chughtai**, *Faculty of Management Sciences, International Islamic U., Islamabad*

Author: **Hira Salah Ud Din Khan**, *School of Management, Jiangsu U., China*

Author: **Ma Zhiqiang**, *School of Management, Jiangsu U.*

Author: **Li Mingxing**, *School of Management, Jiangsu U.*

Turbulent times have led organizations into an uncertain and chaotic state of affairs that requires immediate fixing and calls for appropriate leadership to steer out of the crisis. In this regard, we drew from psychosocial safety climate theory to examine the impact of adaptive leadership on safety citizenship behaviors by analyzing the moderating role of psychosocial safety climate and mediating effect of readiness to change, specifically in Pakistani work culture. Hence, we collected data from 397 employees working in Pakistan's manufacturing industry at two different times. We conducted a regression analysis and used PROCESS-macro to test our moderated mediation model. The findings of our study supported the model. The moderated path analysis indicated that psychosocial safety climate strengthens adaptive leadership's direct effect on readiness to change and its indirect effect on safety citizenship behaviors. To conclude, our research offers extensive implications for organizations and practitioners in sound and disruptive conditions. Keywords: Adaptive leadership, Safety citizenship behaviors, psychosocial safety Climate; Readiness to Change

From Mundane Technologies to Agility: Driving Innovation Through Change

Session Moderator: **Lauri Juhani Paavola**, *Aalto U. School of Business*

ODC: **How Mundane Technologies Can Trigger and Drive Institutional Change**

Author: **Lauri Juhani Paavola**, *Aalto U. School of Business*
Author: **Richard Cuthbertson**, *U. of Oxford*

We examine the role that mundane technologies may play in institutional change. We conduct an inductive longitudinal study in the field of UK grocery retailing and elucidate a process of bottom-up institutional change, where customer data replaced product data as a key determinant in decision making. Mundane technologies have typically been seen to support rather than drive institutional change. We illustrate an alternative mechanism, through which the high cost of employing mundane technologies at scale drove institutional change. Building on this, our study illustrates a mechanism through which high costs associated with the use of a technology can lead to field-level change in three phases: (1) costs of the mundane technology drives a search for its greater application, (2) costs of the new applications drives the need for their monetization through new services, and (3) costs of the new services creates the need to find competition at the field level.

ODC: **Mastering Explorations Challenges by Incumbents Facilitating Employees to Become Entrepreneurs**  

Author: **José María Visconti-Caparrós**, *ESIC Business & Marketing School*
Author: **Juan Ramón Campos Blázquez**, *ESIC Business & Marketing School*
Author: **Luis Rubio-Andrada**, *U. Autónoma de Madrid ESQ2818013A*
Author: **Marisol Celemín-Pedroche**, *U. Autónoma de Madrid*

In today's competitive environment, incumbents are facing several challenges when trying to build sustainable innovation programs, often exhibiting incompetence and responding inappropriately. Organizational structures, practices, and systems tailored to existing operations prevent these same companies from adapting to a completely different process of calibrating inventions and turning them into innovation. Instead, they tend to invest in small, incremental innovations that are appropriate to their current organizational design. Although some studies provide empirical evidence regarding the use of open innovation initiatives in organizations, very few show how using it can help incumbents respond to disruptive innovation challenges. Through a single case study, the purpose of this research is to explore the best practices that Enagás (Spain) followed implementing a dual-open innovation initiative, with a special focus on the internal crowdsourcing program, the type of innovation activities pursued, and innovation outputs achieved. Our results show how that latter program helped their employees to become effective entrepreneurs. We present the process that describes the decision-making components required to lead the design and rollout of a dual-open innovation initiative and the mechanism used by Enagás to enable their employees to become entrepreneurs.

ODC: **Accelerating Innovation through Agility: Transforming a Manufacturer's Product Innovation Department** 

Author: **Sebastian Peter Gauster**, *U. of Innsbruck School of Management*
Author: **Ferry-Michael Brendgens**, *U. of Innsbruck School of Management*
Author: **Katja Hutter**, *U. of Innsbruck School of Management*

In a world typified by uncertainty and unprecedented change, agility is the key theme to innovation and essential for maintaining competitiveness. There is a notable gap between the concepts' popularity and the understanding of how agile practices influence firms' innovation processes and output. This study draws on the case of a leading family-owned manufacturing firm in the dental supplier industry transforming their product innovation department by means of agile practices. Building on theoretical concepts of innovation management and agility we study the adoption, use and efficacy of agile practices to facilitate companies' innovation processes. Our findings highlight the importance of leadership capabilities that encourage individuals' innovation activities. We found that an organization-specific innovative culture and organizational commitment are vital to facilitating the agile transition. These factors enhance employees' beliefs and willingness to contribute to the transformation. Additionally, we discuss learnings and insights for managers operating non-software producing areas, searching for approaches to manage complexity and being not naturally firm with agile transitions.

Author: **S. Tamer Cavusgil**, *Georgia State U.*

Author: **Maria Luiza C.A. Pinho**, *Georgia State U., J. Mack Robinson College of Business*

Shifting social norms, climate change, and frequent disruption are the new normal. Firms are learning to thrive in a high uncertainty and fast-change environment. In both academic and management circles, no other concept has been advocated as vital to overcoming these challenges than agility. Scholars from business and management fields have put considerable effort into researching the topic. However, few academic works have examined the agility construct in-depth. This article assesses the agility literature, providing a qualitative review of the theoretical roots of agility studies and analyzing the agility domain quantitatively over the past 30 years (1991-2021). We identified five main theoretical approaches throughout 476 articles. Exploring the conceptual and intellectual domains of agility, our work contributes to a better understanding of the field and offers a future research agenda.

Panelist: **Ofer Zwikael**, *Australian National U.*
Panelist: **Angelina Zubac**, *U. of Queensland*
Discussant: **Danielle Tucker**, *U. of Essex*

This symposium addresses the 2022 conference theme, specifically, the cross-disciplinary and longer-term implications of organizations' unique institutional contexts. By better understanding them, and the recursive practices and intra-/inter-firm collaborations they stimulate, we can develop new paradigms on organizations' strategic, operational and cultural issues. Critically, STR scholars will learn about an innovative framework for understanding superior performance. ODC scholars will learn about the unique institutionally-situated influences on organizational change. SAP scholars will learn about how managers and their people are addressing the market and non-market environments together. All of these scholars will gain insight into how they may better work with each other, across their respective areas of interest and expertise, to conduct process and action-oriented studies of complex change phenomena occurring at the micro-, meso- and macro-levels.

All welcome whether attending in person or virtually.

Managing Hybrid Organizations for a Better World

Session Moderator: **Leonardo Boni**, *Politecnico di Milano School of Management*

SIM: How B Corps are Hybrid? Investigating hybrid Condition Within a Specific Social Enterprise Setting

Author: **Leonardo Boni**, *Politecnico di Milano School of Management*

Author: **Riccardo Fini**, *U. of Bologna*

Author: **Laura Toschi**, *U. of Bologna*

This paper aims at exploring the hybrid condition in the B Corp movement. Despite extant literature investigated hybridity by referring to the broad concept of social enterprise as an ideal type of hybrid organizations, the emerging spread of specific hybrid settings suggest heterogeneous facets of being hybrid that have been poorly investigated. Accordingly, this field of literature requires a better understanding how hybridity unfolds with respect to a peculiar type of social enterprises. In this perspective, we exploit the Italian context of the B Corp movement as a specific hybrid setting, to determine how B Corps are hybrid. We offer research advancements to the field studying social enterprises, hybrid organization and B Corps, contributing to the nascent literature that tackles the heterogeneous features of hybridity.

SIM: Inside the Black Box of Green Companies: Organizational Identity of Certified B Corporations

Author: **Hyeonjin Cha**, *U. of Oregon*

Pursuing prosocial certifications has become an increasingly popular strategy for organizations to obtain social support from their external audiences. However, little is known on how the certifications shape perceptions of the key audience inside the organizations: employees. Reviewing the literature reveals that the current stream of research on prosocial certifications and organizational identity poses several limitations. Through a qualitative study of Certified B Corporations, I build a model of organizational identity outcomes throughout the process of prosocial certifications. The findings suggest that the degree to which a business is embedded in prosocial values, in conjunction with reflexivity during and after the certification process, differentially shapes employees' prosocial identity. The prosocial identity held by employees is then manifested via various forms of workplace behavior. This research contributes to the literature streams on prosocial certifications identity moving beyond the cross-sectional relationship between the antecedents and outcomes of organizational identity.

SIM: Is More Diversity Always a Good Thing? Dehybridization as a Response to Social Enterprise Tensions 🗨️

Author: **Magdalena Plesa**, *U. of Oxford*

This paper examines the challenges of board diversity in the transformation of social enterprises through an analysis of 33,350 Community Interest Companies from 2006-2020 in the United Kingdom. In the world of social enterprises, an important problem is why these organizations shed one or more logics and the conditions under which it occurs, which this paper conceptualizes as the process of dehybridization. Governance in the form of board diversity is examined through a heterogeneity index which compiles eight diversity characteristics and finds that more diverse boards are more adaptive in dehybridizing. This paper supports the significance of the board heterogeneity index through a multinomial logistic regression model and finds that Community Interest Companies are 16.559 ($p < 0.001$) times more likely to transform by shedding logics. Building on the significance of board heterogeneity, a chi-squared analysis was used to compare the most and least heterogeneous boards and this study finds that Community Interest Companies that dehybridized were 58.725 ($p < 0.001$) times more likely to have the most heterogeneous boards than all other outcomes.

How to Experiment: Lessons from Economics

How to Experiment

Organizer: **Chiara Spina**, *INSEAD*
Speaker: **Stefano Brusoni**, *ETH Zürich*
Speaker: **Giada Di Stefano**, *Bocconi U.*
Speaker: **Jacqueline Lane**, *Harvard U.*
Speaker: **Leandro S. Pongeluppe**, *The Wharton School, U. of Pennsylvania*
Presenter: **Charles Eric Eesley**, *Stanford School of Engineering*

This symposium proposes that experiments have the potential to be used more effectively in strategy and entrepreneurship research if they leverage methodological innovations from other disciplines that have a longer tradition of using experiments. The symposium combines the perspectives of leading experts on experiments in Economics captured on video with a live debate and commentary with management scholars with deep expertise on experiments. The management scholars participating in the live debate will ‘translate’ best practices from economics, discuss to what extent and how they can be applied to research in strategy and entrepreneurship by putting them in the context of their own work. This symposium outlines the specific opportunities to advance the theory, techniques, and variety of topics that methodologically advanced experiments can address and provides actionable insights for researchers at all stages of their career.

Strategic management as a field is primarily concerned with examining and explaining performance asymmetries between firms, yet the field’s heavy reliance on archival studies and resulting lack of methodological diversity leads to endemic problems with endogeneity and the potential presence of confounding variables. Experimental methods are excellent for dealing with endogeneity, but level of analysis concerns, lack of reviewer acceptance, and other barriers have prevented their widespread use in the strategic management context. Nonetheless, scholars have successfully published papers on important strategic management topics that have served to consolidate past theoretical gains, serve as a platform for future work, and drive the field forward. The purpose of this symposium is to gather some of these scholars together to share their experiences publishing strategic management papers that included experiments. We hope to address both the theoretical benefits of how greater methodological diversity can improve individual papers and the field as a whole, and share very practical suggestions for how scholars can overcome the very real barriers to using such methods in this context. Importantly, the theme of the panel will not be that experiments should completely replace archival methods, or that archival methods are not valuable; rather, it will advocate that the field should “widen its toolbox” and exploit the benefits of a wider range of methods for the benefit of the field.

Participant: **Thiago J. Soares**, *Inspire Institute of Education and Research*
Participant: **Jianan Hou**, *KU. Leuven*

What effect does investment in R&D have on firm performance? The papers in this symposium consider a particular form of R&D investment—namely, corporate research laboratories, seeking to unpack the relationship between the firms’ use of corporate research labs to pay-offs to R&D investments. Each paper in the symposium presents a different lens on how corporate research laboratories create value for the parent firms. Arora, Belenzon, Kosenko, Suh and Yafeh argue that corporate research labs can fill institutional voids. Knott and Vinokurova document persistence of corporate research labs over time and the labs’ negative impact on research productivity. Martins and Soares investigate whether firms are able to retain the knowledge generated after the labs shut down. Finally, Arts, Cassiman, and Hao develop a new measure for the degree to which R&D investment translates into technological differentiation and show that such differentiation is especially valuable in markets characterized by product competition and high R&D intensity.

People and Innovation Track: Political and Academic Engagement and Diversity

Session Moderator: **Nina Rosenbusch**, *Wilfrid Laurier U.*

TIM: How Does Political Appointment Affect Innovation Ambidexterity: The Case of China's Central SOEs

Author: **Fu Haiping**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Hongquan Chen**, *Shanghai Jiao Tong U.*

Author: **Justin Tan**, *York U.*

Author: **Saixing Zeng**, *Shanghai Jiao Tong U.*

Does political appointment affect innovation ambidexterity? To answer the interesting question, we distinguish two types of political appointments: government and party; and find that these different types of appointments do affect firms' exploitative or exploratory innovations, inducing appointees by respectively incentive systems. Furthermore, we consider that these effects stem from time orientation and risk uncertainty and add two moderators: agent tenure and industry dynamism. We test our framework with a panel data set of central state-owned enterprises in China from 2006 to 2016. We find that agents appointed by the government will be more likely to pursue exploitative rather than exploratory innovation than agents appointed by the party, particularly when agent tenure is short and industry dynamism is low. Our research contributes to the literature on the effects of political appointment, the time and risk orientation of political appointment, and the relationship between corporate political activities and innovation ambidexterity

TIM: Academic Engagement and the Outside Assignment of University Patents

Author: **Marco Corsino**, *U. of Bologna*

Author: **Salvatore Torrisci**, *U. of Milano-Bicocca*

This paper analyzes the relationship between outside assignment of university patents and academic engagement. This is a relevant topic because the outside patent assignment concerning inventions developed with the use of university resources gives rise to a loss of financial resources that a university could invest in future research or teaching activities. Drawing on agency theory, we conjecture that asymmetric information and divergent goals between the academic scientist and her employer raise the risk that patents developed in the context of direct scientist-firm relationships are commercialized through non-university channels. Besides, we hypothesize that the provision of outcome-based rewards to get university scientists involved in technology transfer and the pursuit of research partnership at the organizational level mitigate the effect of academic engagement on the external assignment of university patents. We empirically test these hypotheses drawing on both survey and archival data concerning more than 500 research projects spawning a patent application. Our analysis provides cross-country evidence on how academic engagement, formal research partnerships and incentive systems impinge upon the outside assignment of university patent.

TIM: Symbolic or Substantive: Globalization Imprinting and Innovation in China

Author: **Daxin Sun**, *Shanghai Jiao Tong U.*

Author: **Saixing Zeng**, *Shanghai Jiao Tong U.*

By integrating the imprinting theory and the literature on innovation strategies and symbolic management, this study has developed a theoretical framework by identifying a key organizational imprinting: globalization imprinting, and empirically tested whether and why this specific imprinting affects two distinct innovative behaviors: symbolic and substantive. Furthermore, we highlight how two different logics influence such an innovation decoupling: (1) How do firms vary in symbolic innovation or substantive innovation through the state logic such as state ownership and political hierarchy; (2) How do firms behave differently in symbolic or substantive innovation through the competitive logic such as FDI and complexity of technology sector. We test our theory in the context of Chinese publicly listed firms in manufacturing sector from 2002 to 2015. We find that global imprinting actually facilitates both firms' symbolic and substantive innovation. Moreover, such a positive relationship between globalization imprinting and symbolic innovation is more pronounced when firms are state-owned or affiliated with higher political hierarchy, while things are the opposite for the substantive innovation. We further find that the positive relationship between globalization imprinting and substantive innovation is more pronounced when firms are located in regions attracting more foreign direct investments. Our findings contribute to the knowledge of organizational imprinting, advance the understanding of globalization for transitional economies, and provide novel insights into forms of strategic innovations.

TIM: Hidden in Plain Sight: A Meta-Analysis of the Gender-Innovation Relationship

Author: **Nina Rosenbusch**, *Wilfrid Laurier U.*

Author: **Simon Parker**, *Ivey Business School*

Author: **Janice Byrne**, *Ivey Business School*

Are gender and gender diversity related to innovation, and if so, how? Prior research does not offer clear-cut answers to this question. To address it, we theorize several hypotheses and perform a comprehensive meta-analysis. We show that while women appear to be disadvantaged when it comes to innovation, gender diverse teams outperform homogenous teams in innovation outcomes. We also show that gender diversity is particularly beneficial when it comes to green innovations. By contrast, gender diversity is not significantly associated with innovation inputs.

TIM: Shortcuts to Innovation: The Use of Analogies in Knowledge Production

Author: **Soomi Kim**, *MIT Sloan School of Management*

TIM Division Best Student Paper Award Finalist
TIM Best Paper Award Finalist
William H. Newman Award Nominee

Old ideas serve as critical inputs into new ideas, but how do knowledge workers innovate in domains where there are no existing ideas yet to build on? In this paper, I explore how analogical reasoning—and technologies that automate it—can serve as “shortcuts” that allow innovators to import knowledge from an adjacent domain, bypassing the need to build knowledge from the ground up. Yet, at the same time, because analogies require the availability of adjacent domains as templates, they may narrow the line of inquiry towards areas of research with neighboring domains, even if those areas are less fruitful. Using the setting of biology, I document a quantity-quality tradeoff: I find that while the arrival of an analogy-based technology increased the quantity of innovation, it also led to workers herding around solving similar, less impactful problems.

TIM: Synchronous Computer-Aided Design (CAD): A Mid-level Technology Affordance Perspective

Author: **Tucker James Marion**, *Northeastern U.*

Author: **Alison Olechowski**, *U. of Toronto*

Author: **Satish Nambisan**, *Weatherhead School of Management, Case Western Reserve U.*

Recently, cloud-based software enabling real-time collaboration has migrated into the realm of physical product design, with computer-aided design (CAD) software platforms such as PTC's Onshape and Autodesk's Fusion 360. Now that CAD is becoming cloud-based and offers synchronous design and collaboration among contributors, little is known from a theoretical and practical viewpoint on the affordances that impact synchronicity as seen through the lens of the development of physical product design. Recent research has begun to use a socio-technical affordance lens to examine innovation and knowledge creation in large-scale collaboration networks. Technology affordances are relational and denote action possibilities offered by a set of technology features to meet the goals of an individual, group, or organization. This conceptual research fills several gaps in our current theoretical understanding of collaborative CAD tools by illustrating a lack of differentiation amongst the features of the tools, and therefore lack of clarity on the complex affordances of these new tools. Secondly, there is a lack of a conceptual framework that links high-level social-technical affordances with the engineering actions undertaken in the CAD platform. Our research develops a conceptual framework for mid-level affordances of cloud-based CAD that links specific engineering challenges within knowledge-based theory on collaborative networks. We illustrate our mid-level affordances with real-world design data.

TIM: What's in a Problem? Identifying Key Characteristics of Problem Statements

Author: **Martin Meinel**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Author: **Tobias Thomas Eismann**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Author: **Sebastian Fixson**, *Babson College*

Author: **Kai-Ingo Voigt**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

The way we frame a problem, i.e., how we define and articulate it, is crucial for subsequent idea generation and implementation. Therefore, developing a better understanding of the role of the problem statement could benefit creative problem-solving. Although research has begun investigating the relationship between the problem statement and the quality of the subsequent solutions, the question remains of how to assess and distinguish different problem statements in the first place. To further our understanding, this work aims to identify problem-statement characteristics that can help distinguish different problem statements from one another. Accordingly, we first investigate the broad field of problem-solving literature and related areas, to identify problem-statement characteristics that existing research has articulated. Building on this work, we propose a four-dimensional problem-discovery framework. To test its usefulness, we investigate problem statements that students from a major European university developed. We found that four characteristics—problem space, solution focus, user focus, and originality—enable measuring problem-statement distinctiveness.

Author: **Max Mulhuijzen**, *Utrecht U. School of Economics*

Author: **Jeroen De Jong**, *Utrecht U. School of Economics*

Household sector innovation is significant in scale and scope and expected to increase, but has so far been studied in isolation and with mixed evidence regarding its antecedents. In this paper, we recognize that household sector innovation is embedded in the broader phenomenon of (Third-Wave) do-it-yourself (DIY) by consumers. Drawing on a literature review, we identify important parallels—e.g., both phenomena are driven by personal needs and/or process-related benefits. The main distinction is that household innovation results in goods with functional novelty, while DIY is broader and also includes homebuilt existing goods. We explore if studying household sector innovation and DIY in an integrated framework helps to resolve the inconsistent findings on the role of personal resources (income and discretionary time). Based on a neoclassical model in which agents maximize their allocation of time, we hypothesize that personal resources positively relate to DIY, but—given consumers' engagement in DIY—negatively relate to innovation. Our theoretical findings suggest that consumers with more personal resources derive more process benefits from DIY, but crowd out individuals' focus on the function of their objects, hence, the likelihood that they are innovative. Using survey data from the United Arab Emirates ($n = 2,728$) we find evidence for our suppositions.

Organizational Innovation Track: How Communication and Culture Build Knowledge Capabilities

Session Moderator: **Keith Pennington, UCLA**

TIM: How to improve Technological Competences: Can Social Media Technologies be the Right Tool?

Author: **María Esmeralda Lardón-López, U. of Granada**
Author: **Rodrigo Martín-Rojas, U. of Granada**
Author: **Victor J. Garcia-Morales, full professor**

Social Media Technologies are still an incipient phenomenon to be worked on. They provide us with vast amounts of information and knowledge resources that can enable us to learn better and more quickly. This study aims to identify the relationship between the use of social media technologies, organizational learning and the acquisition of technological knowledge competences; as well as the effects of technological knowledge competences on organizational learning and, finally, its influence on organizational performance. These relationships were tested in a sample of 201 Spanish technology-based companies, using a structural equation model with Lisrel. The main contribution of this study to the literature consists of proposing an empirical model that shows how the use of social media technologies is key in the development of social and inter-organizational collaboration networks, favoring -in business knowledge ecosystems- the organizational learning and the improvement of technological knowledge competences and, consequently, helping to reinforce through innovation the strategic positioning of companies and their organizational performance.

TIM: The Impact of Organizational Knowledge on Organizational Technologies: Evidence from Patent Data

Author: **Valery Yakubovich, ESSEC Business School**
Author: **Shuping Wu, INSEAD**

Organization theorists have long claimed that organizational knowledge is nontechnological, in part, because it is unpatentable. The claim rests on the assumption that organizational knowledge is embodied in persons and contexts rather than in context-free practical tools. However, over the last three decades information and communication technologies gradually expanded the universe of tools for embodying organizational knowledge which, in principle, can be patented. To provide the first empirical evidence regarding the patentability of organizational knowledge, we trained two machine learning algorithms to identify a population of 205,434 patent applications for organizational technologies (OrgTech) and, among them, 141,285 applications that use organizational knowledge accumulated over the 20th century. Our event history analysis of the probability of patenting an OrgTech invention shows that the presence of organizational knowledge decreases the probability of patent allowance unless it includes a practical tool in addition to abstract ideas about organizing. We frame these findings as the embodiment problem: The present-day digital transformation places organizational innovations in the realm of high tech and turns the debate about organizational technologies into the challenge of designing practical organizational tools that embody big ideas about organizing. We outline an agenda for patent-based research on OrgTech as an emerging phenomenon.

TIM: Chance Encounters with Proximate Inventors Increase Invention Novelty  

Author: **Keith Pennington, UCLA**

I explore the effect of chance encounters on innovation. Prior research shows that changes in proximity between people can lead to collaborations and knowledge exchange through chance encounters, but research does not yet evaluate the difference in the nature of collaborations formed by chance encounters from otherwise. Using a social avoidance behavioral response to fear of the flu (a behavioral response to relatively minor diseases borrowed from pre-pandemic social epidemiology literature) as a proxy for lower potential chance encounters, I predict and find that collaborations that are more influenced by chance encounters result in more novel recombinations of knowledge because “serendipitous” knowledge from chance encounters is less constrained by the tendency toward local, exploitative search. During times with fewer chance encounters, inventors substitute where they get knowledge, more often turning to prior contacts and, therefore, limit recombination potential.

Organizational Learning and Search Track: Search as Enabler and Threat to Innovation

Session Moderator: **Alessio Delpero**, *WU Vienna*

TIM: Sequential Knowledge Search: A Dynamic Perspective on the Effect of Knowledge Generality

Author: **Alessio Delpero**, *WU Vienna*

Scholars tend to conceptualize knowledge search as a one-time effort, but knowledge search is in most cases sequential. This study shows how the effect of the level of generality of a knowledge element drawn from a new knowledge domain changes as a firm sequentially searches for more knowledge in that domain. An analysis of RIM's patenting history in light of the Leahy-Smith America Invents Act in the U.S., describes how less general knowledge elements have positive effects on the value of the innovation a searching firm generates, but the benefits decrease if an element occupies a subsequent position in the firm's sequential knowledge search. By contrast, more general knowledge elements have negative effects on the value of the innovation they underlie, but positive effects on the innovations generated using elements subsequently drawn from the same domain. Whereas searching for knowledge that is less general seems more suitable for immediate innovation targets, searching for knowledge of greater generality has benefits that manifest at subsequent stages of a firm's sequence of innovations.

TIM: Underrated Innovators: Reactive Search of Incumbent Firms under Disruptive Innovation Shocks   

Author: **Gang Zheng**, *Zhejiang U.*

Author: **Wanru Deng**, *Zhejiang U.*

Author: **Song Wang**, *Zhejiang U.*

Author: **Yanting Guo**, *School of Management, Xiamen U.*

How do incumbent firms choose appropriate response strategies in the face of disruptive shocks from new entrants? Based on the problem-solving perspective, we conducted a multiple-case study of three incumbent firms in China's home appliance industry successfully responding to new entrants. The results show that (1) under the disruptive shocks, incumbents mainly face the problems of incremental or radical innovation in the technological dimension and existing or new demand in the market dimension. (2) In the face of heterogeneous problems, incumbents' reactive timing (fast vs. slow) and search behavior (heuristic search vs. trial-and-error search) are different. (3) Through various action combinations, they can choose reinforcing, challenging, or adapting strategies to deal with the shocks. Overall, a key contribution of this paper is to provide a new conceptual framework for incumbents to respond to disruptive shocks, outlining their reactive search actions and processes. This framework responds to previous studies' underestimation of incumbents and deepens the understanding of corporate strategic renewal activities in the era of change.

TIM: Technology Searching Breadth and Innovation Productivity: Evidence from the Chemical Industry

Author: **Jinho Park**, *Hankuk U. of Foreign Studies*

Author: **Byungchul Choi**, *Hankuk U. of Foreign Studies*

The association between technology searching breadth and innovation productivity has received much attention from scholars. While conventional wisdom argues that there is negative relationship of technology searching breadth and efficiency in production, we assert that under innovation contexts the relationship between the scope of sourcing knowledge and innovation productivity has curvilinear. Adopting the construct of innovation productivity based on the production function measured in financial terms, we explore the relation in the US chemical industry context based on the organizational learning theory, by using the financial and patent-based panel data. In addition, we investigate the moderating role of traits of financial resources as the boundary conditions of the association between them. This study contributes to the extension of organizational learning theory to innovation productivity and to suggesting an integrated view by collaborating with financial economics and to giving managers the guidance of effective technology searching breadth on innovation productivity.

TIM: Organizing for Inter- & Transdisciplinary Collaboration in Science: The Role of Autonomy vs. Control

Author: **Susanne Beck**, *LBG OIS Center & Copenhagen Business School*

Author: **Marcel LaFlamme**, *Public Library of Science*

Author: **Marion Kristin Poetz**, *Copenhagen Business School*

Academic scientists are increasingly expected to conduct their research in an open and collaborative manner, crossing disciplinary, organizational, and even functional boundaries to increase the productivity and impact of their research. Yet, such inter- and transdisciplinary collaborations bear multiple risks for the scientists involved including career threats in case projects fail or get delayed. At the same time, a progressive trend toward managerialism in scientific research organizations such as universities or research institutes is enmeshing organizational priorities with individual researchers' agendas and workflows. This raises the question of whether and how scientific organizations can act as facilitators of implementing collaborative research practices on the part of individual scientists. We shed light on how organizational design choices – related to exercising control vs. granting autonomy – influence the scientists' engagement in inter- and transdisciplinary research collaborations. We investigate this question by exploring two in-depth case studies of scientific organizations in Europe with a total of 63 interviews with scientists, 4,129 pages of secondary material, and field observations. Our analysis shows that control-related design choices are 1) more frequently applied than those related to granting autonomy but 2) also bear the risk of (unintended) blocking or deterring scientists from collaborating at all, in particular when scientists' norms and values are not sufficiently considered. 3) Interestingly, granting scientists autonomy in their collaboration activities seems to predominantly encourage collaborations with close (compared to distant) collaborators and lead to collaborations with low levels of decision rights on the side of the collaboration partners. Our findings contribute to the literature on the organization of science and hold meaningful implications for research policy and managers of scientific organizations.

Panelist: **Raj Krishnan Shankar**, *Great Lakes Institute of Management*

Panelist: **Ferran Giones**, *U. Stuttgart*

In many industries, entrepreneurial ventures are the source of disruptive innovation and industrial change. A burgeoning approach by which incumbent firms can react to or potentially tap into entrepreneurial ventures' innovative potential is through Corporate Accelerator Programs (CAP). Yet, many CAPs fail, and extant research provides limited understanding of how incumbents can effectively harness innovation through these novel corporate-start-up engagements that go beyond traditional approaches like acquisitions and alliances. Following last year's successful AoM Annual Meeting Symposium, this new panel session will highlight the ongoing state of research on different types of accelerators (with a focus on corporate-backed ones), the current tools deployed for validation and scaling as well as their shortcomings to address the great disruption challenges across industries. We will extend our understanding of different acceleration modalities, including consortia, deep tech and moonshot acceleration, and suggest ways for developing new and existing theories using the CAP context. Our panel of leading scholars and practitioners will share their views on how innovation and entrepreneurship theory relate to CAPs, how CAPs are distinct from conventional approaches to firm innovation and industrial change, and how academic research can contribute to a better design and management of CAPs. This distinctive Panel will be of great interest to the TIM and ENT Divisions.

Open Innovation Track: Heterogeneous User Motivations and Contributions

Session Moderator: **Mikhail Lysyakov**, *U. of Rochester*

TIM: What Drives Users to Go Beyond Mere Contribution? – The Role of Perceived Ownership

Author: **Erdem Yilmaz**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Author: **Tim Meyer**, *LMU Munich School of Management*

Author: **Milan Miric**, *U. of Southern California -Marshall School of Business*

As digitization proceeds, relying on user communities to gain knowledge has become increasingly important for many firms. If firms want to benefit from such user communities providing knowledge and ideas, it is essential that users do not only contribute to the community but also give up some of their intellectual property rights so that others can build on their contributions in a cumulative manner. While previous research has shown that users can benefit from allowing others to build on their contributions, not all users decide to do so. We argue that this is due to perceived psychological ownership of the product, which can result in territorial responses and is particularly strong among users with high levels of reputation among community members. On the other hand, high levels of reciprocity among users shift the perceived locus of product ownership from the individual user to the community, and thus increase the likelihood that users give up some of their intellectual property rights and allow others to build on their contributions. We use data from the 3D-printable design community Thingiverse to test our claims and find evidence that is consistent with our theoretical reasoning.

TIM: Recombinant Innovations: What Differentiates Experienced Designers in Open Crowdsourcing Contests?

Author: **Mikhail Lysyakov**, *U. of Rochester*

Author: **Siva Viswanathan**, *Robert H. Smith School of Business, U. of Maryland*

Prior studies of online crowdsourcing platforms have found that experienced designers are more likely to win in crowdsourcing contests. However, what gives experienced designers an edge in these contests is not well understood. Our study seeks to understand what differentiates experienced designers from other participants, with a particular focus on how they leverage information in open design contests. We use a large-scale empirical analysis employing deep-learning algorithms and find that, experienced designers are more adept at integrating information from several prior highly-rated submissions from other designers within a contest, while less-experienced designers are more likely to excessively imitate individual prior highly-rated submissions. We also find that experienced designers whose submissions are closer in similarity to a synthesized image of several highly-rated prior submissions, are more likely to win. Our results are consistent with prior work on recombinant innovations which finds that a majority of innovations happen by a synthesis or recombination of prior innovations, and that designers, as they gain experience, learn optimal recombination strategies. Our findings provide new insights into the winning strategies of experienced designers in crowdsourcing platforms and have implications for the design of such markets.

TIM: User Innovators' Fairness Perceptions when Firms Commercialize their Innovations

Author: **Tuong-Vi Sophie Quach**, *WU Vienna*

Author: **Nikolaus Franke**, *WU Vienna*

User innovators have become an important input source for firms' innovation performance. Theoretically, the objectives, roles, and resources of users and firms are complementary and hence the commercialization of user innovations smooth and trouble-free. However, in reality, user innovators often feel exploited when firms adopt and commercialize their innovations. In some cases, this has led to severe conflicts. In order to understand when firms' commercialization behavior results in user innovators' perception of fairness or unfairness, we combine the theories of social exchange theory and organizational justice. The core of our conceptual model is the user innovator's interpretation of the firm as either a social or an economic exchange partner. The model allows us to develop a series of propositions that may guide both firms' commercialization behavior and serve as a starting point for future empirical research.

TIM: Revenge of the Forgotten? Consequences of Idea Rejection in Open Innovation Contests

Author: **Mario Schaarschmidt**, *Newcastle Business School, Northumbria U., UK*

Author: **David Dose**, *U. of Exeter Business School*

Open innovation contests are a well-accepted and cost-efficient approach to tap the creativity of users that complements the firm's own research and development activities. Firms that provide consumer-focused products and services that do not require substantial technical development are especially prone to use idea contests. However, although much research has been devoted to the factors that motivate consumers to participate in such contests, research that investigates how consumers react when their idea is not accepted is comparatively rare. This research focuses on idea rejection and the resulting consequences. In three experimental studies, the authors show how rejected ideas may cause negative emotional and behavioral outcomes. Study 1 assesses the different effects of idea acceptance (vs. rejection) in an experimental setting based on appraisal theory. Study 2 also employs an experimental research design and investigates the longitudinal effects of being rejected with different forms of firm responses. Finally, Study 3, which was organized as a field study of burger contest, is devoted to assessing differences in firm feedback in a real-world setting and comparing customers' emotions and their evaluations of a firm before and after an idea contest. In particular, the study tests the effects of response individualization (versus standardization) and examines blame attribution possibilities. Taken together, the studies show that the way rejection is communicated is important. The findings have important theoretical and managerial implications for innovation management at the fuzzy front end and for building customer-firm relationships through idea contest initiatives.

TIM: Managing the Promise-Risk Tension: Recrafting Narratives of Innovation After Catastrophic Failure

Author: **Sen Chai**, *ESSEC Business School*
Author: **Anil R. Doshi**, *UCL School of Management*
Author: **Luciana Paola Silvestri**, *Harvard U.*

To gain necessary resources and support to succeed, firms pursuing novel innovations typically craft initial narratives that suggest success in innovative outcomes and achieving commercial activity. Acknowledgements of the possibility of innovation failure contradict that narrative. On one hand, raising the possibility of failure in the initial narrative may lead external stakeholders to withhold the very resources the firm depends on, before a failure materializes. On the other hand, not accounting for that possibility may have a detrimental effect. If a failure was to occur, the firm will likely need to reconcile its initial narrative with the failure, especially when it is catastrophic. Our analysis of a case of catastrophic innovation failure at Virgin Galactic in the private space industry reveals how projective narratives are recrafted after such an event. We find that organizations emphasize and deemphasize three types of statements that compose its narrative: positive projections, ambivalent projections, and averted risk statements. We also identify a tension—inherent to the crafting of projective narratives for innovating firms—between promising how it will function once commercially active, which assumes a successful innovative outcome (to elicit external stakeholder support) and acknowledging the risks of failure in the innovation process (which may deter them). Our findings suggest an opportunity for innovating firms to proactively manage and balance this tension between promise and risk in their external narratives even before the occurrence of catastrophic failures.

TIM: Under Scrutiny: Differentiation and Integration of Knowledge in Organizations

Author: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*
Author: **Youstina Masoud**, *UMass Amherst*
Author: **Garima Garg**, *U. of Massachusetts, Amherst*
Author: **Aurora Genin**, *Indiana U. - Kelley School of Business*

Decisive for firms' innovation performance in knowledge-intensive environments is the way firms combine their strategies to differentiate and integrate knowledge. While independently, differentiation and integration of knowledge have been found to mostly have positive effects on innovation performance, little is known about the effects of using both strategies simultaneously. We know that differentiating knowledge creates specialization advantages and that integrating knowledge enables transferability. Independently, both are necessary but insufficient for performance. So, in what combination do they maximize firms' innovation performance? Adopting a congruence methodological approach, we find that devoting significant resources to both strategies simultaneously (congruence) is more conducive of high innovation performance compared to directing resources to one over the other (incongruence). We also find that congruence is more beneficial when firms have a significant amount of knowledge resources to devote. Our study advances the knowledge-based theory of the firm by incorporating novel insights from innovation research.

TIM: The Pressure to Go Long: Analyst Scrutiny and Out-licensing Decisions

Author: **Thomas M. Klueter**, *IESE Business School*
Author: **Solon Moreira**, *Fox School of Business, Temple U.*
Author: **Ram Ranganathan**, *U. of Texas at Austin*

Departing from existing research that links financial market pressures to short-term myopia in firms' strategic investments, we argue that these pressures can also conversely encourage firms to undertake riskier and longer-term R&D while discouraging short-term opportunities to monetize this R&D. We theorize in the context of the bio-pharmaceutical industry where firms engage in uncertain and costly R&D to develop and commercialize the next "blockbuster" drug. We relate financial market scrutiny to a strategic choice firms face: whether to develop R&D projects in-house or license out their technologies to earn short-term returns. To develop and explicate the mechanism underlying our central argument, we first undertake a qualitative analysis of analyst reports, which reveals that analysts not only have strong preferences for the blockbuster drug model, but also have clear reservations against the out-licensing model. We then use a robust empirical design that addresses both the endogeneity of analyst coverage and the challenges in measuring a firm's licensing intent, to test this mechanism in a large multi-year panel of bio-pharmaceutical firms. Overall, we contribute to research that examines how institutional pressures shape firms' innovation strategies, and provide important implications for scholars and practitioners focusing on interfirm collaborations and markets for technology.

Paper is Available to Meeting Registrants Only.

Author: **Ryan Allen**, *Harvard Business School*

When do niche product innovations—new products that initially appeal to narrow market segments—achieve widespread commercial success? To answer this question, I develop an agent-based model of innovation diffusion in a competitive product market. The model varies two important parameters of the market: incumbent market power (the degree to which sales are concentrated in a small number of incumbents), and customer mimesis (the degree to which customers' preferences depend on other customers' preferences). The model indicates that niche product innovations are more likely to be big hits than products with broad appeal when incumbent market power and customer mimesis are both high, but less likely when both are low. I empirically validate the model using a consumer panel dataset of over 11,000 new consumer products purchased by about 400,000 consumers from 2006-2019. The results imply a "market size paradox": under certain conditions, innovations that initially appeal to relatively narrow market niches (as opposed to broad appeal) actually tend to achieve greater widespread commercial success. Thus prior to launch, niche innovations, which have more potential for commercial success, may systematically appear to have small potential market sizes according to traditional market-sizing techniques.

People and Innovation Track: Culture and Practices within Innovative Organizations

Session Moderator: **Denise Tsang**, *U. of Reading*

TIM: Technological innovation and Knowledge in Chinese Space 

Author: **Denise Tsang**, *U. of Reading*
Author: **Yan Zhang**, *Shandong U., China*

Chinese firms have made considerable progress in the space industry within recent decades; some larger state entities have joined the Fortune Global 500 list. The market liberalization, since 2014, has further attracted aspiring entrepreneurial entrants. This article develops a conceptual model by synthesizing business process and technical knowledge among high tech employees to understand technological accumulation within the context of the quadruple helix. We examine the case study of Zhuhai Orbita Aerospace Science and Technology in the Southern Guangdong Province of China, basing on extensive primary and secondary data collection. The findings in this article suggest that technological accumulation within the firm is linked to cultural mechanisms, and therefore provides a broad perspective on managing knowledge and innovation. The findings in this article also suggest that global firms that connects with China's past are more likely to motivate talented employees in the industry.

TIM: Does Member Familiarity Help or Hinder Innovation? The Roles of Expertise and Dialogic Coordination   

Author: **Michael Zaggl**, *Aarhus BSS, Aarhus U.*
Author: **Ann Majchrzak**, *U. of Southern California*
Author: **Jennifer Gibbs**, *U. of California, Santa Barbara*
Author: **Philip H Birnbaum-More**, *U. of Southern California*

Modern organizations increasingly rely on flexible work arrangements such as innovation task forces to quickly assemble members with diverse expertise needed to create innovative solutions for particular problems. The literature has produced mixed findings on the relationship between member familiarity and innovation, which we suggest may be explained by two forms of coordination: expertise and dialogic. We hypothesize and find that dialogic coordination produces more innovative outcomes for unfamiliar task forces, whereas expertise coordination produces more innovative outcomes for familiar task forces. Further, dialogic coordination in unfamiliar task forces is associated with greater innovative outcomes than expertise coordination in familiar task forces. Our results also highlight the importance of temporal dynamics of dialogic coordination in task force work. Hypotheses were tested through a longitudinal analysis of survey data with external ratings of the innovation outcome from 179 individuals in 32 innovation task forces from a variety of large U.S.-based companies. The findings contribute to an understanding of coordination in contemporary turbulent work environments.

TIM: Formal and Informal Cultural Tightness and Employee Creativity in Organizations   

Author: **Roy Yong Joo Chua**, *Singapore Management U.*
Author: **Na Krystal Zhao**, *Lee Kong Chian School of Business, Singapore Management U.*
Author: **Meng Han**, *Lee Kong Chian School of Business, Singapore Management U.*

Scholars have been increasingly interested in understanding how cultural tightness, the extent to which a group of people is constrained by rules and norms, shapes creativity. Tighter cultures are often linked to lower creativity. Extending this body of work, the current research examines cultural tightness in organizations and its impact on employee creativity. We differentiated cultural tightness in organizations into formal versus informal aspects. Organizations with high formal cultural tightness have extensive formal control systems to constrain employee behaviors, whereas those with high informal cultural tightness regulate behaviors through informal control systems. In a field study across nine diverse companies, we find that experienced informal cultural tightness has a negative linear effect on employee creativity but experienced formal cultural tightness has an inverted-U shape effect on employee creativity. These two forms of cultural tightness interact to affect employee creativity such that when experienced informal cultural tightness is low (i.e., employees are not constrained by unwritten social norms), increasing formal cultural tightness enhances creativity; when experienced informal cultural tightness is high (i.e., employees are constrained by extensive unwritten social norms), increasing formal cultural tightness has no effect on creativity. These findings contribute to cultural tightness-looseness theory and research on how organizational culture affects employee creativity.

TIM: The Long-Term Role Model Effect of Prizes to Female Scientists 

Author: **Michael Ernst Rose**, *Max Planck Institute for Innovation and Competition*
Author: **Laura Rosendahl Huber**, *Erasmus U. Rotterdam*
Author: **Stefano Horst Baruffaldi**, *U. of Bath*

One of the most important reasons for the under representation of female researchers in many academic disciplines is a masculine culture. Female role models can play an important role in changing the perceptions about a masculine domain leading to more interest and entry into these fields. In this paper we look at the long term effect of sudden role models, namely female awardees of prestigious prizes. To test our theoretical framework we use a unique longitudinal data set of a comprehensive population of 40 million active scientists since 1970. We find that after the first female prize winner in a certain country and field, the share of active female scientists in that country and field increases by 3 p.p. on average. Since the share of women in our sample is below 30% in most countries, this corresponds roughly to a 10% increase from baseline.

AI and Emerging Technologies Track: Algorithms and Trust

Session Moderator: **Daria Morozova**, *HEC Paris*

TIM: Defying and Following Algorithmic Suggestions: Prescriptive Authority and Human Uniqueness Beliefs  

Author: **Daria Morozova**, *HEC Paris*

The purpose of this paper is to explain where human action following an algorithmic suggestion falls on the algorithmic aversion – appreciation continuum, and why. I propose a theoretical distinction between a prescriptive and a suggestive algorithm (degrees of an algorithm's prescriptive authority) that takes into account micro-level perceptions of the algorithm's purpose. I hypothesize that the interaction of an algorithm's prescriptive authority and human uniqueness beliefs activated by task context results in qualitative differences in human action following a suggestion and test the hypotheses experimentally. I find that in high human uniqueness contexts, people are as reluctant and critical of suggestive algorithms as they are of prescriptive ones. In low human uniqueness contexts, a prescriptive suggestion is followed more precisely than a suggestive one regardless of who or what made it. I contribute to the understanding of algorithmic aversion by developing a framework outlining how and when the interaction of prescriptive authority and human uniqueness beliefs nudges individuals to converge to or diverge away from an algorithmic suggestion.

TIM: Dissolving Organizational Bounds - Does Blockchain Digitalize Trust?

Author: **Kristoffer Holm**, *Aarhus U., Department of Business Development and Technology*

Author: **John Mathiasen**, *Aarhus BSS, Aarhus U.*

Author: **Rene Chester Goduscheit**, *Aarhus BSS, Aarhus U.*

Author: **Henning De Haas**, -

The purpose of this paper is to gain an understanding of the practicality in using blockchain to share information across organisational boundaries. Previous research has shown trust plays an essential role in information-sharing, but this is not evident in current blockchain literature, which this paper seeks to change. First, the importance of trust in information-sharing is presented by summarizing current literature's take on the role of trust in information-sharing activities in the supply chain through which an analytical framework is presented. Following this methods used for acquiring the primary data from the wind industry, the secondary data from blockchain literature and the method used for analysing said data through thematic analysis are explained. The empirical case of the wind industry is then presented and analysed by presenting the identified themes of 1) product update handling and master data; 2) transparency and traceability; and 3) collaboration. The trust framework presented in the theoretical background is then used to analyse the contents of the themes and the wind case. This leads to the first set findings for the paper; for supply chain-based blockchain to be successful trust must be a pre-requisite for the involved parties, but in addition blockchain also facilitates trust through information-sharing, thus making trust and outcome of blockchain as well. Finally, the paper discusses how blockchain currently ties to operational interactions and not those related to tactical or strategic interactions.

TIM: Trust in and with Artificial Intelligence 

Author: **Shuang Liu**, *Clemson U.*

With the advent of the Artificial Intelligence (AI) era in organizational research, conventional trust theories may no longer be suitable for AI-related situations. AI is neither another type of human nor completely beyond human as an objective. To cope with the dramatic changes and opportunities that AI brings about, we develop a new framework of AI-related trust from two main perspectives: (1) the trajectory and dimensions of how people develop trust in AI, and (2) the upward spiral pattern and dynamic process of developing trust with AI. We also provide suggestions for future research.

TIM: Overcoming Algorithm Aversion: The Power of Task-Procedure-Fit 

Author: **Sabrina Schneider**, *MCI Management Center Innsbruck*

Author: **Elena Freisinger**, *Technical U. Ilmenau*

Decision-making by Artificial Intelligence (AI)-enabled agents challenges some of the fundamental beliefs of technology acceptance, both from a decision-maker and a decision-affected perspective. Despite the immense technological potential and rapid developments, finding effective roles for the technological agents and forms of human-technology collaborations in decision-making remains challenging. Prior research shows in parts irrational rejection of superior algorithms (algorithm aversion) and only rare situations in which people prefer algorithmic over human decision-makers (algorithm appreciation). We show that severe negative consequences of decisions dominate people's perceptions of the decision-maker, whereas technological anxiety and the decision-maker's nature matter for the acceptance of positive decision outcomes (study 1). Expert decision-makers, while emphasizing a strong negative attitude towards AI-enabled decision-makers, do acknowledge the opportunities and potentials of the technology (study 2). When AI-enabled decision-makers become part of a mixed human-technology decision group, the perceived task-procedure fit fully mediates the negative effect of AI involvement on peoples' willingness to accept the decision. Algorithm aversion thereby negatively moderates the relationship between AI involvement and task-procedure fit (study 3). The results provide insight into the mixed, but overly negative perceptions of AI-enabled decision agents and reveal how identifying an appropriate task-procedure fit can help to overcome algorithm aversion.

TIM: The Impact of Transportation Cost on Inventor Mobility and Knowledge Spillovers

Author: **Jang Woo Kim**, *National Taiwan U.*

We contribute to the understanding of the microfoundations of regional competitive advantage by investigating the flows of human capital and knowledge when the transportation costs across regions are reduced by newly launched airline routes. We construct a dataset of interregional flows of human capital and knowledge between dyads of 362 U.S. mainland MSAs using the U.S. patent and inventor data to the U.S. airline data, from 1990 to 2014. To minimize the endogeneity concerns, we used two-stage linear squares (2SLS) estimation. The results show that the regions experience lower outmigration of inventors and are more active in technological innovation (e.g., the number of patents, the number of patenting firms). However, once we classify the regions as “core” or “periphery” on the basis of their patenting activities, we find that the technologically advanced core gains from lower transportation costs more than the technologically lagging periphery, which is in line with the agglomeration mechanism.

TIM: The Effects of Academic Entrepreneurship on Knowledge Production and Collaboration in Academia 

Author: **Wolf-Hendrik Uhlbach**, *Ecole Polytechnique Fédérale de Lausanne*

This paper investigates the effects of academic entrepreneurship on scientists' productivity and collaboration patterns. To investigate these effects, the paper makes use of the Danish registry data, matched with publication data from the period of 1999 to 2016. Empirically, it employs a case-cohort design, in which each entrepreneur is matched to two comparable non-entrepreneurs. The findings suggest that academic entrepreneurship has a negative effects on productivity during as well as after the entrepreneurial spell, but these effects attenuate over time. Further, the results suggest that academic entrepreneurship affects collaboration, inducing the exploration of new co-authors in the short run, but fewer repeated co-author ties in the long run. This might suggest that the expertise acquired during an entrepreneurial spell, is not transferable to collaborative knowledge production in academia.

TIM: Efficient Industrial Policy for Innovation: Standing on the Shoulders of Hidden Giants 

Author: **Dennis Verhoeven**, *Bocconi U.*

Author: **Ralf Martin**, *Imperial College London*

Author: **Catherine Thomas**, *London School of Economics and Political Science*

Author: **Pierre Mohnen**, *UNU-MERIT/Maastricht U.*

Author: **Charlotte Guillard**, *U. College London*

Research and development is underprovided whenever it creates knowledge spillovers that drive a wedge between its total and private economic returns. Heterogeneity in the intensity of this market failure across technological areas provides an argument to vertically target public support for R&D. This paper examines potential welfare gains of such vertical industrial policy for innovation. It develops measures of private and spillover value of patented innovations using global data on patents and their citations. Our new method identifies a large number ‘Hidden Giants’ -- i.e. innovations scoring higher on our new spillover measure than on the traditional forward citation count measure -- which are shown to be particularly prevalent among patents applied for by universities. The estimated distributions of private values by technology area are then used to parameterize a structural model of innovation. The model permits estimation of the marginal returns to technology-area-specific subsidies that reduce innovators' R&D costs. Marginal returns are high when knowledge spillovers in the technology area are valuable, when private innovation costs are low, and when private values in a technology sector are densely distributed around the private cost. The results show large variation in the marginal returns to subsidy and suggest that targeted industrial policy would have helped mitigate underprovision of R&D over the time period studied. Variation in the extent to which knowledge spillovers are internalized within countries also makes a compelling case for supranational policy coordination, especially among smaller countries.

TIM: Barriers and Drivers of University–Industry Collaborative Innovation Based on Stakeholder Theory

Author: **Qianying Yang**, *Zhejiang Normal U.*

Author: **Changfeng Wang**, *Zhejiang Normal U.*

Author: **Heng Jiang**, *Zhejiang Normal U.*

Collaboration between university and industry is becoming more broadly viewed to foster innovation through knowledge transfer. Influential elements, such as drivers and barriers, and stakeholders' differing perspectives on University–Industry Collaborative Innovation (UICI) need to be explored during this process. Using the lens of stakeholder theory, this study proposes a multi-perspective framework for UICI. A systematic literature review process was used to develop the framework for multiple stakeholders' viewpoints. Moreover, 84 papers on these topics were thoroughly evaluated and classified based on structural aspects and insightful categories. This paper develops the multi-perspective framework based on the UICI barriers and drivers, in which 17 barriers and 12 drivers are categorized and analyzed according to their implications. Consequently, the overall contribution of this study is based on stakeholder theory to understand the influencing factors in UICI from multiple perspectives including government, university, and industry, and how these factors facilitate or hinder its development. Furthermore, most obstacles encountered are viewed from a cross perspective of university and industry. On the driver's side, the factors should be recognized so that cooperation parties can prepare for changes by investigating these influential positive factors. A comprehensive strategy for successfully promoting UICI is to consider influential factors from multiple viewpoints. Finally, we make some concluding remarks and discuss some emerging topics in this field that are fertile for further investigation.

The relationship between managerial attention and firms' innovation efforts is well-established in the extant literature. However, the relationship between attention and the search for and implementation of new innovations is complex. Despite the clear importance both scholastically and managerially of understanding how attention, search behaviors, and adaptation interrelate, our understanding of the mechanisms through which attention is translated or not translated into action is relatively under-developed. In this symposium, we present four recent studies that have started to unpack this relationship between managerial attention and organizational search and adaptation. The goal of this symposium is to spark interest in the broad cognitive underpinnings of technological adaptation, including how managerial attention translates into search and other innovation-related actions during periods of industry change. During such periods firms must rapidly adapt to a changing environment, and the misallocation of valuable resources, like attention, limits the ability to successfully search for new solutions and eventually adapt to the changing environment. Through this symposium, we will start to both unpack the factors and mechanisms that shape the attention-action relationship as well as deepen our understanding of another explanation as to why incumbent firms may struggle to respond to industry change.

Theorizing Digital Transformation

Session Moderator: **Mylène Struijk**, *Tilburg U.*

CTO: **Emergence and Evolution of Digital Transformation: A Morphogenetic Approach**   

Author: **Mylène Struijk**, *Tilburg U.*
Author: **Spyros Angelopoulos**, *Durham U. Business School*
Author: **Carol Xiaojuan Ou**, *Tilburg U.*

Digital transformation (DT) endeavors present high levels of failure due to their complexity, bringing to the fore the importance of better understanding how they emerge and unfold over time. To address that lacuna, we adopt a morphogenetic approach (MA) and draw upon institutional theory, as well as ten years of organizational documents and 60 interviews with employees of a multinational military organization. We uncover an emergent digital logic, which enables grasping organizational reality, pressures, appropriate behavior, and success in the digital age. Moreover, we identify four morphogenetic cycles, revealing that DT revolves around responses to institutional complexity that are dependent on interactions amongst culture, structure, and agency. We demonstrate that DT is shaped by dynamic organizational responses to institutional complexity as the digital logic emerges. Importantly, we show that the DT endeavor is initiated unconsciously before the organization starts making conscious, structural DT changes. Finally, we contribute to opening the black box of agency in dealing with institutional complexity and DT endeavors. Specifically, we identify different strategies over time that proponents of the emerging logic adopt to push the organization towards the new logic.

CTO: **What is Digital Transformation and Digital Maturity?** 

Author: **Lars Hamberg**, *Halmstad U.*

The purpose of this paper is to investigate the concepts of digital transformation and digital maturity, and specifically how they are conceptualized and how they relate to each other, in order to develop insights, critical reflections, future research paths, and research questions. The methodology is based on the three elements: a structured review of scholarly literature where both concepts occur, an AI-based study of both concepts, and a qualitative study with input from 177 experts on digital transformation. Findings confirm the conceptual ambiguity of both concepts which has been noted in extant literature. This ambiguity makes it difficult to rely on – let alone generalize from – digital transformation research output. This paper suggests both the possibility to deduct, from literature, an alternative definition of digital transformation as the “change between different states of digital maturity”, and the possibility of further simplifications, reductions, and variations, of both concepts. The theoretical and practical rationale is that change is the smallest common denominator of digital transformation, and that digital maturity is easier to measure, largely as an effect of existing and established classic maturity model, concepts, and constructs (e.g., organizational culture, leadership, learning, upskilling, et cetera) being increasingly used in general digital maturity models, which may suggest that digital transformation is not very different from other organizational changes, which in turn could have theoretical and practical implications for how the concepts of digital transformation and digital maturity are understood, measured and, ultimately, managed. The paper also highlights possible misconceptions in literature, and suggests that the successive changes between states are non-linear, as opposed to linear, and multi-directional, as opposed to unidirectional. This paper predicts a decreased use of term digital as a qualifying prefix, and that suggests that effectiveness is a common term which encapsulates what digital maturity represents.  CTO: **Digital Practices**   

Author: **Abayomi Baiyere**, *Copenhagen Business School*
Author: **Daniel Fuerstenau**, *Copenhagen Business School - Department of Digitalization*

The rise of digital-themed research in information systems (IS) and other disciplines is signaling the dawn of a new era and an opportunity for IS to position itself as a reference discipline. Emerging digital-themed studies have argued that the logic of theorizing about IT does not necessarily translate to the digital – yet we have limited theoretical explanations and toolkits for this. We propose a theory of digital practices to explain the unit of “doing”, that is, what transpires in attaining a digital-themed objective. We present digital practices as a conceptual bridge that allows for interdisciplinary conversation around objective-driven digital-themed research such as digital – transformation, entrepreneurship, innovation, among others.

ENT: **Attracting Venture Capital with Social Objectives: The Role of Early-Stage Funders** 

Author: **Yunus Emre Isik**, *Oxford U., Saïd Business School*

Ventures with social objectives have a hard time attracting venture capital (VC) as their financial capability and social aims are questioned. In this study, we focus on early-stage funders and how their simultaneous certifications relate to the success in obtaining subsequent VC investment. Social business hybrids, i.e., social value creating for-profit ventures, utilize their dual logic to attract different types of early-stage funders. We argue that funders that prioritize public welfare (e.g., governments and foundations) certify the importance of their investees' social aims whereas financially driven investors (e.g., angel investors) certify their investees' financial capability to subsequent resource providers. Therefore, we hypothesize that public-welfare-driven investors play a complementary role to financially driven investors for social business hybrids in attracting VC investment. Empirical analysis of 952 ventures demonstrates that social business hybrids with an angel investment and a government grant (foundation grant) were 1.6 (1.5) times more likely to obtain subsequent VC investment compared to ones only with an angel investment. Supporting our argument further, supplemental analysis shows that receiving an accelerator investment (i.e., another financially driven investment) next to an angel investment did not increase the likelihood of subsequent VC investment.

ENT: **Entrepreneurial Failure and Reentry: The Role of Prior Financing Experience**

Author: **Haejun Jung**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **DAEHYUN KIM**, *KAIST College of Business*

Author: **Wonjoon Kim**, *KAIST*

Recently, the topic of entrepreneurs' reentry after failure has attracted increasing interest among scholars given that failure can be valuable resource for the growth of subsequent ventures. While extant research has emphasized the role of the heterogeneity of entrepreneurial experience in entrepreneurs' decision to reenter after failure, no published research has investigated the relationship between failed entrepreneurs' prior financing experience and reentry. Based on attribution theory, this article offers a novel explanation of the relationship between prior financing experience and reentry. This study finds that entrepreneurs with prior financing experience are less likely to restart businesses after failure. Especially, this paper shows that failed entrepreneurs with prior financing experience tend to attribute their failure reasons internally and internal attribution of blame mediates the negative relationship between the prior financing experience and reentry. This study contributes to research on entrepreneurial failure literature.

ENT: **The Effect of Preferred Cash Flow and Control Provisions on Venture's Subsequent Alliance Formation**

Author: **Cyril Um**, *Purdue U.*

Author: **Umit Ozmel**, *Purdue U., West Lafayette*

Nascent ventures require resources for growth. Prior literature has focused on venture capitalists (VC) and alliances as the sources of these resources and has shown that VCs play a significant role in providing such resources. While VCs facilitate forming strategic alliances with incumbents, prior work has revolved around comparing VC-backed ventures to non-VC backed ventures. In this paper, we depart from this traditional comparison by acknowledging the heterogeneous nature of VCs. We explore how contracts design affect the post-investment behavior of the VCs, impacting the formation of strategic alliances. Through an analysis of 1,167 Series A contracts between the VC and the biotechnology ventures, we argue that preferred cash flow provision influences VC's incentive and VC board representation impacts VC's effectiveness and, consequently, show that both facet of contract design are positively related to the likelihood of forming an alliance. In addition, we investigate numerous boundary conditions to tease out our mechanisms. We discuss the theoretical implications of our study.

ENT: **Is Your Knowledge Still Valuable? CVC Knowledge Obsolescence and Portfolio Firm Innovation**

Author: **Yoon Jung Kwon**, *Rice U.*

Author: **Umit Ozmel**, *Purdue U., West Lafayette*

We examine the impact of a corporate venture capital (CVC) investor's knowledge obsolescence on their portfolio firms' innovation performance. We propose that a CVC investor's knowledge obsolescence, defined as the degree of decline in the value or usefulness of a firm's knowledge base, has a negative impact on their portfolio firms' innovation performance as knowledge obsolescence increases the incentive of CVC investors to focus efforts on their own innovation rather than those of the portfolio firms. We also suggest that this effect would be weakened by the prior litigation experience of the CVC investor and the network prominence of the independent venture capital (IVC) that co-invests with the CVC investor. Using a sample of U.S. semiconductor ventures that received a CVC investment in 2006-2015, we find support for all of our predictions. Through this study, we bring in a temporal perspective on knowledge value and provide its implications on CVC investments and portfolio firms' innovation performance.

Racial Inequalities

Session Moderator: **Brittany Torrez**, *Yale U.*

GDO: **The Misperception of Organizational Racial Progress Toward Diversity, Equity, and Inclusion**   

Author: **Brittany Torrez**, *Yale U.*

Author: **LaStarr Hollie**, *UMass Amherst*

Author: **Michael W. Kraus**, *Yale School of Management*

Despite America’s checkered racial history, people generally believe the nation has made steady, incremental progress toward achieving racial equality. In this paper, we investigate whether this American racial progress narrative will extend to how the workforce views the effectiveness of organizational efforts surrounding diversity, equity, and inclusion (DEI). Across four studies (N = 2,057), we test whether American workers overestimate organizational racial progress across the domains of benefits, compensation, and executive representation and believe that progress will naturally unfold over time (Studies 1-4). We also examine whether these misperceptions surrounding organizational progress drive misunderstandings regarding the relative ineffectiveness of common organizational diversity policies (Studies 2-4). Overall, we find evidence that American workers largely overestimate organizational racial progress, believe that organizational progress will naturally improve over time, and that these misperceptions of organizational racial progress may drive beliefs in the effectiveness of symbolic DEI policies.

GDO: **Color is Complex: How Colorism Affects Black Leaders’ Opportunities** 

Author: **Juliana Carvalho**, *Fundação Getúlio Vargas/EBAPE*

Author: **Juliana Arcoverde Mansur Kopp**, *FGV EBAPE*

Being Black is a factor that affects access to leadership positions, as Black leaders are often perceived as less adequate than their white counterparts. However, much of the research has not explored the impact of racial nuances on observers' perceptions about Black leaders. Due to existence bias according to differences in skin tone and phenotype within a racial group, this study aims to understand how colorism affects observers' perceptions of Black leaders' effectiveness. We posit that colorism affects the psychological distance through which people with different racial appearances are evaluated, leading to different impression formation processes and perceptions of fitness for leadership roles. Also, we explore the role of contextual patterns of racial classification and interracial contact, the race of the observer, and membership of the leader in a high-status group. Our proposition can contribute to both theory and practice in leadership, diversity, and inclusion by showing the existence of nuances in the racial categorization of Black leaders and that they affect perceptions of effectiveness. This may lead to more adequate policies of representation and inclusion.

GDO: **Mentoring Relationships in Academe: An Examination of URM Graduate School Experience**  

Author: **Catrina Palmer Johnson**, *Kent State U.*

Recent research has provided evidence that underrepresented racial minorities receive substantially less support than their White and Asian counterparts from academic advisors. This presents a critical issue: beyond providing custodial duties, advisors are also known to supply their current and former students with intangible support such as advocacy, coaching, and ongoing support in graduate school and their early careers. Hence, to better understand how to retain a diverse faculty in the professoriate, I examine the circumstances in which an advisor is likely to take on a mentoring role in the advising relationship, i.e., one that extends beyond their custodial duties, for White and Asian versus for underrepresented racial minority doctoral students. In doing so, I extend the mentoring literature, showing that, in the context of academia, the progression of mentorship through distinct stages (i.e., initiation, cultivation, and separation or redefinition) cannot be understood without considering what takes place in the early stages of the relationship through graduate school and into the first academic job of the advisee. To better understand the behavioral processes that define the progression of advising relationships, I use a multi-method design including a survey and the construction of a database of research publications conducted jointly by junior faculty members and their former dissertation advisors in the context of a business school setting. In examining the development and transformation of the relationship between the advisee and advisor, I shed light on underrepresented racial minorities’ career progression in the academic pipeline.

The COVID-19 pandemic has sparked significant anti-Asian prejudice and discrimination in North America. Integrating event system theory and selective incivility theory with research on diversity climate, we theorize that the typical protective effects of diversity climate against workplace mistreatment and discrimination may be disrupted by the pandemic. Specifically, given the particular animus directed toward the Chinese due to the discovery of COVID-19 in Wuhan, China paired with the fact that workers tend to share more personal information about themselves or may be more likely to adopt more visible displays of their ethnic identification at work when diversity climate is more positive, we predict that more positive diversity climates may not protect Chinese workers from selective incivility during the pandemic, whereas it may for Asian workers of other ethnic backgrounds. Downstream, workplace incivility attributed to prejudice due to COVID-19 should be related to a range of important work outcomes and social relations at and with work, including turnover intentions, job performance (including counterproductive work behaviors and organizational citizenship behaviors), and emotional exhaustion. In a 3-wave, time-separated study of Asian workers (N = 248) in North America during the first wave of the pandemic, we found support for our predictions.

Leadership and Culture: A Look Ethics, Morals, and Spirituality

Session Moderator: **Thiago Silveira Ramalho**, *FEA-USP*

The papers in this session offer diverse, cross-cultural perspectives on leadership and wisdom.

MSR: **Spiritual Leadership in a Health Foundation of João Pessoa**

Author: **Thiago Silveira Ramalho**, *FEA-USP*

Author: **Nayele Macini**, *Centro de Instrução e Adaptação da Aeronáutica*

Spiritual Leadership (SL) stands out for its potential positive impact, creating vision and congruence of values in the team, empowering at the individual level, promoting commitment and productivity. It is capable of meeting routine needs, such as promoting social alternatives for emergency situations, such as the Covid-19 pandemic. The styles and attributes of leadership is one of the topics covered in the area of people management in the third sector (TS) and tends to collaborate with the SDGs. There are four Private Foundations in João Pessoa/PB. Although SL has characteristics inherent to TS, there is a lack of research that identifies such praxis, since only one study was found that deals with SL in TS. Another gap is that no study was found that analyzed the Holistic Model of Spiritual Leadership (HMSL). Studying leadership styles active in the TS helps the development of people management practices that are more trustworthy in these organizations. Therefore: what are the characteristics of spiritual leadership in a Health Foundation in João Pessoa? Qualitative research has a thematic scope that addresses the HMSL categories and factors. The geographic scope is a health civil society organization in João Pessoa/PB and the temporal scope is longitudinal. The case study is unique, using the interpretive type. Interviews with four individuals were analyzed by Atlas.ti, via content analysis and coding. A sociodemographic questionnaire and descriptive statistics were used. Eight factors were analyzed by 35 indicators, from: 1st) Inner Life (4); 2nd) Altruistic Love (5), Hope/Faith (4) and Vision (4); 3rd) Calling/Meaning (4), Membership/Belonging (4); none of the 4th; and 5th) "Attitude or Psychological": Organizational Commitment (5) and Satisfaction in Life (5). The "Social Order" was based on Hunsaker (2014) and the "Citizen Behavior in Organization" on Phuong et al. (2018). All categories and 39 of the 47 HMSL factors were identified. The results demonstrate that SL is strongly present in the Foundation. So, this study contributes to the field of leadership styles in TS, adding to the research on SL in philanthropic Foundations and Treatment Centers working in the area of drug addiction. Academically corroborates by analyzing the HMSL, taking into account the gaps: qualitative, contemplation of Antecedents, leaders and followers. It collaborates with relevant empiricism regarding male performance in SL, guides Civil Society Organization managers on the value of adopting SL, and indicates which factors and categories deserve more attention, according to this scope, to achieve better implementation and results.

MSR: **Explicating the Moral Component of Moral Forms of Leadership**

Author: **Kashika Sud**, *Indian Institute of Management, Ahmedabad*

A leader's morality is a starting point in the making of a leader. It is one of the oldest debates in the philosophy of management. Since many positive outcomes have been associated with leader morality, a host of moral forms of leadership have been suggested and implemented in the organizations. The 21st century has particularly seen a rise in the moral forms such as ethical leadership, servant leadership and authentic leadership. The paper attempts to integrate the overlapping literature in this domain, to offer clarity in the construct of ethical, authentic and servant leadership, especially on their foundational principle of morality. A review of literature, with an agenda to juxtapose it with moral theories and moral development, has been undertaken. Deeper delving helps in constructing parallels between consequentialism, virtue ethics and deontology with servant, authentic and ethical leadership respectively as points of distinction. Along with a discrete moral identity and moral sensitivities, moral motivation and moral action as other matter of differential outlook of the leaders. Despite these perceived differences, the moral forms of leadership converge on the aspect of care. So while we may see separate branches in the moral forms of leadership, they share a common root of morality.

MSR: **Spiritual Leadership and Sustainable Actions Skills: A Study in the Brazilian Context**

Author: **Nayele Macini**, *Centro de Instrução e Adaptação da Aeronáutica*

Author: **Nelson Oliveira Stefanelli**, *Fucape Business School*

Author: **Adriana Cristina Ferreira Caldana**, *U. of Sao Paulo (FEA-RP/USP)*

Although previous studies claim that there is a relationship between Spiritual Leadership and Sustainability, there are few that present this connection in depth. Thus, in this paper we chose to include variables of competences of actions for sustainability in the Spiritual Leadership questionnaire. Thus, this paper aims to empirically analyze the relationship, in the Brazilian context, of the Spiritual Leadership questionnaire, and the variables of Competency of Actions for Sustainability. Data were collected through a questionnaire, sent electronically to respondents, in a convenience sample. 359 valid responses were received and for data analysis, Structural Equation Modeling was performed using SmartPLS. Of the hypotheses outlined, all were confirmed. Thus, it was possible to understand that there is a positive relationship between the study variables. More research is necessary to better explore these connections.

Author: **Mari Iizuka**, *Doshisha Business School*

Yin-yang master (Onmyoji) in Japan was something like Ambrose Merlyn of the west. They were initially bureaucrats to protect emperor and the country, using knowledge of calendar, Yin-yang, astrology and time about 1500 years ago. With the fall of emperors' power, many of them served to samurai lords as military strategists with psychic power and martial arts. Their influence to management and organization in Japan has been great but their methods and tactics were not well documented to this date. This is because they were kept strictly within the family. There are only less than 10 top skilled Yin-yang master remaining in Japan now. Based on interviews with an existing Yin-yang master (Onmyoji), this paper discusses the characteristics of their wisdom and practices. Four characteristics emerged are: (1) conscious use of the collective unconscious, (2) avoiding labeling good and evil (not creating religion, not helping easily to the ones spelled), (3) familiarity to the IT and welcoming attitude to the digital transformation, (4) familiarity to nature such as trees and implications for the global environment. Their ancient teachings seem to become public, when we all need to understand the post pandemic world. This paper tries to address indigenous ways of knowing and non-Western logics.

Balancing Work and Family

Session Moderator: **Ahmad Raza Bilal**, *Sohar U. Oman*

OB: Feeling Pressured Yet To Be Family-Supportive: Understanding the Costs at Work and Family

Author: **Yan Pan**, *Xi'an Jiaotong U. School of Management*

Author: **Yuhui JIANG**, *Xi'an Jiaotong U. School of Management*

Author: **Yufan Shang**, *Xi'an Jiaotong U.*

Author: **Ruonan ZHAO**, *Xi'an Jiaotong U.*

With the increasing interest in balancing work and life, employees begin to have a strong desire for receiving family-related support from their organizations, especially supervisors. However, as engaging in family support supervisory behaviors (FSSB) is often not required formally by organizations, and supervisors are often expected to achieve a high in-role job performance, supervisors thus suffer from tensions between performing extra-role and in-role behaviors. Drawing from cognitive dissonance theory and work-home resources model, we present an integrative model that examines the costs of exhibiting FSSB under high performance expectations from the organization for supervisors. Utilizing a weekly experience sampling method through which 94 supervisors were surveyed for 6 consecutive weeks, we find that FSSB interacting with high performance expectations from organization to predict negative work reflection. Negative work reflection further spillovers to family domain, interfering with work-family enrichment, and family satisfaction. Moreover, supervisor' trait family motivation influences the strength of the weekly relationships between work-family enrichment and family satisfaction. We conclude by discussing theoretical and practical implications of our research.

OB: Work-Family Conflict and Strain: Reciprocal or Spurious Effect Due to Unmodeled Trait Variance? 

Author: **Anna Brzykcy**, *Technical U. of Munich*

Author: **Tim Manfred Goetz**, *HSG U. of St. Gallen*

Author: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*

Author: **Stephan Alexander Boehm**, *U. of St. Gallen*

Does work-family conflict (WFC) cause psychological strain or vice versa? Prior research does not provide a clear answer to this question, reporting either unidirectional (i.e., WFC affects psychological strain or vice versa), reciprocal, or inconclusive results. To understand this variation, we review modeling approaches used in 66 prior longitudinal studies of this relationship and find them to rely exclusively on approaches that confound within and between/contextual effects (e.g., Crossed-Lagged Panel Models, CLPMs). Further, they do not explicitly state the expected time lags between causes and effects nor whether the longitudinal effect is primarily within or between/contextual - both of which are key indicators of the underlying dynamic of the effect of interest (i.e., immediate versus long-term effect). We use three-wave survey data from 12,241 working adults living in Germany and test the direction of this effect using the CLPM and the Random-Intercept CLPM (RI-CLPM). The latter disentangles the within and the between/contextual effects, thereby demonstrating which of these effects prevails. Whereas the results from the CLPM replicate a meta-analytical finding (i.e., WFC and psychological strain affect each other reciprocally), the RI-CLPM shows that WFC most likely leads to greater psychological strain and not vice versa. We further find that the observed longitudinal effect is primarily a between/contextual rather than an immediate within effect. Theoretical and methodological implications for future research are discussed.

OB: How and When Supervisor Bottom-Line Mentality Increased Employee Work-Family Conflict

Author: **Yun Zhang**, *Wuzhou U.*

Author: **Huiying Zhang**, *Guangdong U. of Foreign Studies*

Author: **Jun Xie**, *Guangdong U. of Foreign Studies*

Beyond perspectives proposed in past studies, we offer a new account based on a stressor-detachment perspective and propose the negative effect of supervisor bottom-line mentality (BLM) on employees' work-family conflict through psychological detachment. We then contend that employee trait optimism as a boundary condition on this relationship. Using multi-wave survey data, we found empirical evidence on our moderated mediated model. This study highlights the importance of considering the cross-domain effects of supervisor BLM. Our research extends the existing BLM literature and offer implications on the practical interventions that organizations can take to buffer the detrimental effects of supervisor BLM.

OB: I Have to Earn Bread and Butter So I Bear Abuse! Family Spillover Impact of Abusive Supervision  

Author: **Ahmad Raza Bilal**, *Sohar U. Oman*

Author: **Tehreem Fatima**, *The U. of Lahore Pakistan*

Author: **Nur Naha Binti Abu Mansor**, *Dean, Faculty of Business Sohar U.*

Author: **Muhammad Kashif Imran**, *Islamia U. of Bahawalpur*

The current study builds on the recent "Barriers to abusive supervision model" to highlight the role of employee-related (Core self-evaluations) and situational factors (perceived job dependency) that compel employees to trap in the sustained spiral of abusive supervision. Moreover building on the Work-family Spillover realm, the outcomes of abuse are extended to the family members of the abused employee. We have employed a three-wave longitudinal moderated mediation design and analyzed data from 265 employees working in the hospitality industry of Pakistan. The results showed that employees who have low core self-evaluations are prone to trap in sustained abusive supervision and spillover the reaction towards their family members. Moreover, this situation worsens when the employee dependency on the current job is high. Thus, we offered a complex interplay of personal and situational factors in being a target of supervisor abuse and why and when the retaliation is transcended to the family domain instead of the work domain.

Networks and Embeddedness

Session Moderator: **Maria Martini Barzolai**, *U. Ca' Foscari of Venice - Dept. of Management*

OMT: The Emergence of Interorganizational Networks: A Pluralistic Perspective

Author: **Maria Martini Barzolai**, *U. Ca' Foscari of Venice - Dept. of Management*

Despite the recent attention of management scholars towards the pluralistic and multilevel nature of interorganizational relationships and networks, we still have a limited account of the initial moment of network emergence and its impact on subsequent network evolution. I seek to shed some light on this point through a reinterpretation of a classic model of network formation to investigate the emergence of an interorganizational network from a pluralistic point of view: the existence of an underlying network of social interactions influences the genesis of a business network. Results of the model indicate that an underlying social level of interaction can play an enabling but also a detrimental role, in terms of architectures, dynamics and performance of the business network. Positive social exchanges favor multiplexity, while previous negative connections impede it, making it more difficult to obtain inclusive architectures. Social relationships mediate environmental conditions, and influence trajectories of network evolution in both a serendipitous and a path-dependent way, posing challenges to the governance of the network. The impact of social relationships on business ones is particularly relevant in terms of the interorganizational network performance, which is complexly shaped by both the density of the social ties and their strength, with a complementary effect at the network level but a substitutive effect at the ego level.

OMT: Interplays of Political Ties and Social Evaluation of Emerging Market Multinational Corporations

Author: **Lai Si Tsui-Auch**, *Nanyang Technological U.*
Author: **Jun Jie Yang**, *Xiamen U. Malaysia*

In this paper, we address the question of how interplays of home country political ties and target nation political ties might shape social evaluation of EMMNCs with different ownership structures. We conduct a comparative case study of four overseas acquisitions made by two EMMNCs (one SOE and one POE) from China during 2014–2017 in a strategic (port) industry. The port investments include China Merchant Group's (CMG) Hambantota Port, Sri Lanka, and Port of Newcastle, Australia) and Landbridge Group (LBG)'s Port of Darwin, Australia, and Colon Container Port, Panama). The research result shows a relationship between interplays of political ties across home and target nations and levels of public disapproval faced by EMMNCs. This study makes three contributions. First, it extends the political embeddedness perspective by developing propositions about the relationships of political ties' interplays and public disapproval levels. In particular, the case data reveals that target nation ties play a stronger role than home country ties in influencing public disapproval of EMMNCs. Second, it enriches the perspective by providing an argument for the sociopolitical liabilities (i.e., generating concerns across domestic and international levels) of political ties, depending on the strength of such ties to the home country and to a target nation. Third, it adds to literature on nonmarket strategy by highlighting the sociopolitical liabilities of CPA conducted by leveraging partnerships with governments or intergovernmental relationships. We outline future research directions and implications for EMMNC managers.

OMT: Benefits and Burdens of Positive and Negative Ties: An Empirical Examination

Author: **Srikanth Paruchuri**, *Texas A&M U.*
Author: **Prasad Balkundi**, *U. at Buffalo, The State U. of New York*

Despite the pervasiveness of social network concepts in organizational literature, two important network aspects remain understudied: positive outcomes of negative ties and interplay between positive and negative ties. In this study, we explore the implications for inventor productivity of communication (positive) and avoidance (negative) ties. By taking the direction of these ties into consideration, we argue that the out-degree centrality of inventors in the informal work-related communication network (i.e., the number of other inventors from whom the focal inventor seeks work-related information) and in the avoidance network (i.e., the number of other inventors whom the focal inventor avoids) will enhance inventor productivity; conversely, the inventors' in-degree centrality in the communication network (i.e., the number of others who seek information from this inventor) and in the avoidance network (i.e., the number of other inventors who avoid the focal inventor) will dampen inventor productivity. We further propose that the avoidance out-degree and in-degree centrality will moderate the effects of communication in-degree and out-degree centrality on inventor productivity. Empirical testing in an R&D unit of a large pharmaceutical firm using survey data about communication and avoidance network ties among inventors lends broad support to the proposed theoretical framework.

Institutional Work and Change

Session Moderator: **Daniel Jonathan Davis**, *U. of South Carolina Upstate*

OMT: **How Facebook (and other Social Media) Fractures Institutions: Materiality and Institutional Work**

Author: **Daniel Jonathan Davis**, *U. of South Carolina Upstate*
Author: **Tammy Elizabeth Beck**, *U. of Nebraska, Lincoln*

The diffusion of disinformation via social media has become a pressing societal concern for business leaders and policy makers. In recent years, disinformation has been implicated as a possible source of institutional change across a variety of societal contexts, including political contests, medical legitimacy, and scientific education. To better understand the disinformation phenomenon and how it changes institutions, we view disinformation through the lens of institutional work. From this perspective, the intentional propagation of false information represents a form of institutional work whereby actors seek to disrupt dominant institutional structures. We first focus on social media materiality or the material features of social media platforms that users interact with and the opportunities for disinformation actions that certain features afford actors. We introduce and define three social media material features: modular content, network velocity, and manifold network structures, and illustrate how they relate to three social media affordances for disinformation: crafting, amplifying, and partitioning. We then discuss a potential outcome of disinformation – institutional fracturing – as a form of institutional change. We conclude by offering recommendations for future researchers and policy makers.

OMT: **Climate Innovations and Local Meaning-Making Dynamics**

Author: **Behshad Azodideylami**, *John Molson School of Business, Concordia U.*
Author: **Mehdi Farashahi**, *Concordia U.*

We draw on the institutional theory emphasizing the social construction of meaning, Neo-Gramscian theory, and the framing literature to examine how meanings associated with climate innovations are shaped, interpreted, evolved, and even change the field frame. Climate innovations are the context that technological and institutional meaning-making are intertwined, and local interests and power relationships interact. Developing these technologies needs change in norms, rules, business models, and more importantly, the meaning of the field and breaking the hegemony of fossil fuel incumbents. We elaborated on three main processes (theorization, translation and experimentation, and public deliberation) through which a new collective technological frame is shaped that results in the formation of a new field frame. We theorize how pluralization and hegemonization processes unfold in each phase and counteract with each other in the process of framing, meaning-making, and institutional change.

OMT: **Emotional Regulation and Institutional Maintenance: Debunking Fake News with Emotions** 

Author: **Itziar Castelló**, *Surrey Business School*
Author: **Marie Joachim**, *ESSCA School of Management*
Author: **Glenn Parry**, *Surrey Business School*

How to fight fake news? Through the study of the social entrepreneur Laura Brennan, in the case of the HPV vaccination in Ireland from 2015-19 we show the importance emotional work in social media to fight fake news. We propose a model of emotional regulation in which social entrepreneurs use mirroring, distancing and enactment strategies to maintain institutional frames and debunk fake news. We claim about the importance of the transformation of negative emotions in positive emotional energy through identification and about the embodiment of the truth in creating a legitimizing frame. By that, we contribute to the understanding social entrepreneurship and emotion work and the embodiment of emotions in fighting against fake news in social media.

OMT: **'I Did Not See it Coming': Intentional Efforts and Unintentional Effects in Institutional Change**

Author: **Shivaang Sharma**, *UCL School of Management*

The literature on institutional change is characterized by two views – the consensus view emphasizes mutually supportive efforts amongst organizational actors who drive institutional change, while the frictional view sheds light on potential conflict amongst actors seeking change. Both views assume that human praxis – the transformative efforts of social actors – which emerges from societal contradictions, is directed to create intended changes in institutional targets. This single case study of a social movement organization challenges the assumption by theorizing how such transformative efforts can also unintentionally insert and amplify contradictions within organizations. The analysis uncovers three distinct tactics that help theorize how unintended effects emerge, escalate and are mitigated during an institutional change project. By offering a temporally bracketed multi-level model that complexifies the relationship between institutional change efforts and its effects, this study challenges core assumptions in the literature on institutional change.

Organizer: **Jamie Seoyeon Song**, *ESMT European School of Management and Technology*

Social network research has made considerable progress in understanding how certain network structures emerge and the extent to which they affect outcomes such as innovation or organizational performance. In recent years, however, scholars have agreed that we also need to have a better understanding of the relational content that flows through network ties. In this symposium, we attempt to push network research forward by incorporating network content into our current understanding, especially how the content of network ties is narrated by social actors. This symposium aims to encourage fruitful discussion among organizational scholars on the extent to which studying the narrative of network tie content extends our knowledge of the impact of network structures.

Economic Inequality and Management: Empirical and Theoretical Developments a Decade after Occupy

Economic Inequality and Management

Organizer: **Suhaib Riaz**, *Telfer School of Management, U. of Ottawa*

Organizer: **Kaifeng Jiang**, *Ohio State U.*

Panelist: **John Matthew Amis**, *U. of Edinburgh*

Panelist: **Matthew James Bidwell**, *U. of Pennsylvania*

Panelist: **Joel Adam Cobb**, *U. of Texas at Austin*

Panelist: **Carrie R. Leana**, *U. of Pittsburgh*

Discussant: **Anne S. Tsui**, *Arizona State U.*

A coherent agenda on economic inequality is still in its early stages of development in the management field. While research since the Occupy Wall Street movement of 2011 has helped legitimize the topic and brought inequality in vogue as a keyword in our journals, a central concern remains about how much empirical and theoretical progress has actually been made. Management scholarship in this area thus has to take stock of progress across the first decade since Occupy and critically assess empirical and theoretical insights to invigorate a new generation of scholars who can take us beyond this decade of inequality research and into the next. This panel symposium will bring together insights from the diverse panel and the discussant towards two objectives: first, to provide a critical assessment of the extent and nature of progress that has been made in the field, and second, to lay out a pathway of where the field needs to go in order to make important headway in terms of theoretical and empirical contributions, and also in providing contributions of relevance to policy and practice. In doing this, we provide an avenue for management scholars to engage with the theme of the Academy of Management 2022 conference, "Creating a Better World Together," given that inequality remains one of the most pressing societal grand challenges of our times.

Strategizing Together for a Better World: Institutional, Paradox & Practice Theories in Conversation

Strategizing Together for a Better World

Organizer: **Katrin Heucher**, *U. of Michigan*
Organizer: **Marc Krautzberger**, *U. of Edinburgh business school*
Organizer: **Rikke Rønholt Albertsen**, -
Organizer: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*
Moderator: **Ann Langley**, *HEC Montreal*
Panelist: **Natalie Slawinski**, *U. of Victoria*
Panelist: **Shahzad Ansari**, *Cambridge U.*
Panelist: **Eero Vaara**, *U. of Oxford*

The United Nations report on progress highlights that: “The current crisis is threatening decades of development gains, [...] further delaying the urgent transition to greener, more inclusive economies, and throwing progress on the SDGs even further off track” (United Nations 2021). While it is positive that management scholars have been shifting their research towards societal challenges, there is a need to continue and increase our research on these topics and provide new insights as well as work collectively on these complex problems. Therefore, this panel symposium hosts leading scholars from different theoretical backgrounds to explore strategies in response to societal challenges and to discuss how future research could make theoretically insightful and practically relevant contributions. We bring institutional (Ansari, Wijen, & Gray, 2013; Rauch & Ansari, 2021), paradox (Van der Byl, Slawinski, & Hahn, 2020), and practice theories (Joutsenvirta & Vaara, 2015; Piekkari, Tietze, Angouri, Meyer, & Vaara, 2021) into conversation with each other because we believe that these different theories may together contribute to the creation of a better world. Together, we will reflect on the similarities and complementarities of selected lenses to gain insights on two questions: 1) How have these lenses enabled researchers to provide different valuable insights on strategies in response to societal challenges? How can these lenses be combined in future research to develop new theories on promising strategies in response to societal challenges that are insightful and relevant? We will discuss these and further questions with our invited panelists.

Business, Social Value and Human Well-Being

Session Moderator: **Matt Johnson**, *Hult International Business School*

SIM: For-Profit Firms' Contribution to Society: A Strategic Orientation Perspective

Author: **Marcelo De La Cruz**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Jelena Spanjol**, *Ludwig Maximilian U. of Munich (LMU)*

For-profit firms are increasingly being called on to effectively create value to society beyond financial and customer value. Thus, the need for strategic orientations accounting for this expanded view on value is growing. We aim at providing a systematic conceptualization, aligned to the social value concept of the strategic orientation addressing the “contribution to society imperative”. Therefore, we reviewed 139 social value definitions drawn from articles in leading peer-reviewed journals across business disciplines into a strategic orientation that we labeled Strategic Social Value Orientation (SSVO). SSVO consists of three behavioral components (leading the business with purpose, support of stakeholders, focus on consequences) and one shared belief (mutuality) that characterize a business philosophy directing firms' activities towards the promotion of the common good. Furthermore, we developed and validated a linguistic, content-analytic measure for examining SSVO at organizational-level to facilitate future empirical studies across business disciplines. Our research advances the strategic orientation and organizational capability literatures, and informs practitioners seeking to integrate social value creation into for-profit firms' mainstream business and thus securing long-term success. We are convinced that SSVO is a meaningful instrument for scholars and practitioners and an important step in understanding the expanded view on for-profit firms' value creation.

SIM: Creating Value Through Social Issues: Short-Term vs. Long-Term Strategy

Author: **Brian Bolton**, *U. of Louisiana at Lafayette*
Author: **Jung Eung Park**, *Institut Supérieur de Gestion*

The level of social responsibility expected by society has risen significantly in recent years. Some companies used to pursue corporate social opportunity (CSO) thinking about how companies engage with significant social shocks over the short-term. These actions are symbolic and empty gestures. We offer 6 strategies for moving forward and for turning short-term social opportunities into long-term strategic value creations. Going beyond corporate social opportunity is about authenticity, impact and long-term strategy. This is a conceptual study aimed to help business leaders better understand their role in the decision-making process and what they need to do to ensure their business can survive in the short-term and thrive in the long-term. Doing so requires their business offering products, services and relationships that help their stakeholders improve their lives.

SIM: The Elevation of Luxury: Art Infusion and Artification as Vehicles for Creating Shared Value

Author: **Matt Johnson**, *Hult International Business School*
Author: **Rob Barlow**, *Hult International Business School*

Luxury brands have historically benefitted from engagement with the artistic community. There is a robust academic literature on the specific benefits for luxury brands of using mechanisms like art infusion and artification as a means of enhancing brand image and overcoming challenges associated with modern market conditions. Less clear, however, is how luxury brand involvement with the arts can benefit the artistic community and contribute to societal well-being more generally. In this paper, we argue that some means of artistic engagement should be considered more socially responsible than others and show how Porter and Kramer's (2011) creating shared value framework can help brands develop strategies that use art to simultaneously benefit brand and society. We highlight three specific means by which luxury brands can create shared value through their artistic engagement: 1) through reconceiving products and markets, 2) by redefining productivity in the value chain, and by enabling local cluster development, including the promotion of underrepresented artists. We close by considering how these engagements with art may play a larger, more transformative role in the CSR strategies of a luxury brand, enabling it to transcend from a corporate entity to a purveyor of culture, art, and well-being.

SIM: The Importance of an Eudaimonic Balance of Values in Small Businesses: An Analysis Using Institution

Author: **Irene Chu**, *Bradford School of Management*
Author: **Mai Chi Vu**, *Newcastle Business School, Northumbria U.*
Author: **SAMUEL ADOMAKO**, *Birmingham Business School*

This paper explores the values of the owners of small and medium sized enterprises (SMEs) and contends that the primacy placed on financial values by a majority of the literature is misplaced. Using insights from institutional logics and critical realism, the findings from a cross-cultural multi-case study in Taiwan and Vietnam are drawn on to demonstrate the importance of non-financial goals and of a balance for eudaimonia or human flourishing. The origin of these alternative values in such areas as the family, religion and the community reflects the complexity of the real world as experienced by SME owners. This leads the authors to consider aspects of critical realism and argue for a more complex framing of SMEs than that employed by a majority of the literature employing rational-actor theory, economic models and quantitative analysis.

Ethics, Justice and the Natural Environment

Session Moderator: **Frederik Dahlmann**, *U. of Warwick*

SIM: New Bioethics in the Anthropocene: Norms and Behaviours in the Pursuit of Life

Author: **Frederik Dahlmann**, *U. of Warwick*

In response to complex socio-ecological systems challenges, scholars across social and natural sciences are examining interdisciplinary implications for individuals, organisations and other actors. There is growing recognition that new approaches to ethics, values and norms are required to help govern behaviours in the epoch of the Anthropocene and to overcome overly anthropocentric perspectives. In this conceptual paper, we draw on a wide range of concepts and insights from the natural sciences to outline a novel ecocentric perspective on ethical behaviours in the Anthropocene. Specifically, we propose that scholars adopt and broaden the existing notion of bioethics to reflect the increasing impact of technologies and organisational practices on human health and life in more general. Developing the Gaian principle that assesses whether an actor creates conditions that are conducive to life in general, we explore several potential implications for individual and organisational behaviours, but also highlight their inherent challenges and limitations. Our paper contributes to literatures on ethics and business sustainability by reconceptualising ethics through an extended awareness of the connection between humans and nature more broadly, and as such provides new stimulus for reflection as well as a foundation for future academic research to examine these ideas in further detail.

SIM: Racial Capitalism and Environmental Injustice in the Anthropocene   

Author: **Seray Ergene**, *U. of Rhode Island*

Author: **Bobby Banerjee**, *Bayes Business School (formerly Cass)*

Author: **Erim Ergene**, *Bryant U.*

In this paper we study the intersections of racial and environmental injustices in histories of the Anthropocene – a new geological epoch where human activity has changed the functioning of the earth system. Drawing from environmental justice and racism scholarship, we critically analyze recent management research on grand challenges and show how the proposed solutions, such as sustainable technologies, circular economy, and shared economy, exacerbate racial injustices faced by communities of color. We contend that a climate justice agenda that is grounded on racial justice is necessary for our scholarship to develop a racially just management and organization studies in the Anthropocene. To accomplish this agenda, we propose three shifts: from studying elite institutions to grassroots organizations concerned with climate and racial justice, from global technology to understanding local adaptation by communities of color, and from offering decontextualized solutions to unraveling racial histories that can address racial and climate injustices in the Anthropocene. We argue that management and organization studies cannot afford to overlook climate justice and racial justice – they are both inextricably linked and one cannot be achieved without the other.

SIM: Introducing Justice and Care in Complex Project Systems: An Empirical Study 

Author: **Francesco Di Maddaloni**, *The Bartlett School of Construction & Project Management (UCL)*

Author: **Roya Derakhshan**, *Bocconi U.*

While projects are becoming increasingly more complex in their organizational, technological, and environmental dimensions; complex systems are deemed by being unjust by nature. Previous research has suggested that heedful interconnection among the actors of the system can enhance organization's capability in ethical coping with complexity. However, project-based organizations tend to cope with complexity through developing adaptive capacity within the borders of the organization and marginalizing the demands and concerns of some stakeholders. By investigating the controversial project of Rome Metro Line C and drawing on ethics of care and ethics of justice, this article suggests that coping with complexity is attainable by extending the organization's border to include all stakeholders of the network. The empirical study proposes that by fostering the interrelation of a broader range of stakeholders with the organization through a decentralized decision making will improve the extended organization's capability in identifying and absorbing complexity.

(Un)Ethical Behavior, Organizations and Leadership

Session Moderator: **Suzanne C. De Janasz**, *George Mason U.*

SIM: A Meta-Analytic Investigation of Antecedents of Unethical Pro-Organizational Behavior

Author: **Vivek Mishra**, *Indian Institute of Management, Lucknow*
Author: **Varun Sharma**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Deepak Verma**, *O.P. Jindal Global U., Sonapat, Haryana, India*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*

In this study, we conduct the meta-analysis of the antecedents of the Unethical Pro Organizational Behavior (UPB). Analysis of 168 studies from 125 research papers published in the last decade results in the identification of most critical antecedents of UPB. The statistically significant effect sizes of various antecedents helped us to determine the level of importance in predicting UPB where individual level variables ranked most critical followed by leader-induced variables and then organizational level variables. This aided to reconcile the inconsistencies between various variables and their role in instigating UPB. Further, the meta-analysis also contributes to deciphering the core nature of UPB by systematically and objectively comparing the voluntary negative and positive workplace behaviors. Theoretical contributions along with practical implications are also mentioned in the paper. This study also discussed various avenues for future research to advance the UPB literature.

Author: **Suzanne C. De Janasz**, *George Mason U.*

The current paper seeks to develop and test a serial mediation model linking employees' unethical pro-organizational behavior (UPB) and their consequent pro-self and pro-customer deviance. Drawing upon moral balancing theory, cognitive appraisal theory of emotion, and affective events theory, we examine the moral licensing effect of employee UPB on their organizational deviance through feelings of pride and psychological entitlement. Simultaneously, we investigate the moral cleansing effect of employee UPB on their customer-directed prosocial rule breaking via perceived loss of moral credits and feelings of guilt. Additionally, we examine the moderating role of external attribution of UPB on the aforementioned indirect effects. The results based on 340 full-time employees and their supervisors support the proposed serial mediated relationships. The findings further indicate that the strength of those indirect effects varies depending on employees' external attribution of UPB. Theoretical and practical implications of these findings are discussed.

SIM: How Transformational Leadership Engage in Unethical Pro-Group Behavior

Author: **Munisa Akhmadjanovna Toirova**, *Kyungpook National U.*
Author: **Dandan Zhao**, *Kyungpook National U.*
Author: **Yoonjung Baek**, *Kyungpook National U.*

Researchers have been more interested in the features and causes of unethical behavior in organizations in recent years. There is limited study on transformational leadership and subordinates' unethical behavior. The goal of this research was to look at the causes of pro-group unethical behavior (PUB). To explore if workplace exclusion has an impact on the link between transformational leadership and PUB, and if moral identity has a moderating role in this relationship. We collected 218 valid questionnaires from Chinese and 250 questionnaires from Korean companies. The present findings suggest that transformational leadership and workplace exclusion can positively influence unethical pro-group behavior for both Chinese and Korean samples. However, the moderating role of moral identity was statistically significant only in Chinese sample.

Dynamic Capabilities: Capabilities to Terminate *Termination Capabilities*

Discussant: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Panelist: **Isin Guler**, *U. of North Carolina, Chapel Hill*
Panelist: **Paul Nary**, *U. of Pennsylvania*
Panelist: **Arkadiy V. Sakhartov**, *U. of Illinois at Urbana-Champaign*
Panelist: **Dongil Daniel Keum**, *Columbia Business School*

This symposium aims to move dynamic capabilities research forward by highlighting the nascent yet growing body of research on termination capability. Dynamic capabilities is one of the most influential streams of research in the field of strategic management in the past three decades. The growing but diffuse body of work on termination capabilities spans disparate titles such as exits, divestitures, failures, redeployment, terminations, and abandonments. We bring together five researchers whose work highlights (1) antecedents of firm termination capabilities and (2) their importance to firm performance (3) in a variety of theoretical empirical contexts, spanning VC investments, acquisition (dis)synergies, private equity firms in markets for corporate assets, and managerial prosocial preferences that impede layoffs.

Stakeholder Heterogeneity and Corporate Purpose

Stakeholder Heterogeneity and Corporate Purpose

Discussant: **Flore Bridoux**, *Erasmus U.*

Discussant: **Mark R. DesJardine**, *Tuck School of Business at Dartmouth*

The goal of this symposium is to draw attention to the critical importance of stakeholder heterogeneity for corporate purpose research. The proposed papers explore the influence of the different motives and interests of individual stakeholder groups on these stakeholders' perception of corporate purpose and sustainability efforts and how these effects result in varying levels of resource provision for the company by these stakeholders. The symposium therefore highlights how examining stakeholder-level heterogeneity can enrich our understanding of how the management of corporate purpose contributes to the achievement of individual and organizational goals.

Resource Redeployment: Advances, Challenges, & Future Research *Resource Redeployment*

Organizer: **Timo Sohl**, *U. Pompeu Fabra*
Organizer: **Teresa Antonia Dickler**, *IE Business School*
Panelist: **Sharon Belenzon**, *Duke U.*
Panelist: **Rocio Bonet**, *IE U.*
Panelist: **Timothy B. Folta**, *U. of Connecticut*
Panelist: **Marvin B Lieberman**, *UCLA Anderson School of Management*

Despite the recent advances in our understanding of resource redeployment, the theoretical discussion and empirical validation of this nascent theory is emerging. Moreover, several current trends around the connection between diversification and resource redeployment are relatively poorly understood. Therefore, the purpose of this panel symposium is to engage a group of panelists in a formal, moderated, interactive discussion around questions such as (1) what are similarities and differences of resource redeployment theory to other theories of corporate advantage?; (2) how can resource redeployability improve our understanding of firm dynamics and long-term performance?; (3) what does a capability for redeployment consists of and how does it work within organizations?; (4) what are underemphasized costs of resource redeployment?; and (5) what are current trends in resource redeployment? The panelists are leading experts in the field of strategic management with a focus on corporate strategy, technology and innovation, human resource management, and firm and industry dynamics.

Ties That Bind: Social Networks, Conflict & Trust

Session Moderator: **Michel Ferrary**, *GSEM - U. of Geneva & Skema Business School*

CM: **Boundary Object Aggregating Network of Stakeholders and Systemic Shock: A Case Study of Downsizing**

Author: **Michel Ferrary**, *GSEM - U. of Geneva & Skema Business School*

Stakeholders forming a network do not constantly interact with each other, and the nature of their interactions may change over time. This relationship led us to develop two research questions. First, why do actors interact to form a stakeholder network? And second, why and how do interactions evolve over time that may call for a corporate political strategy? To address these questions and contribute to stakeholder theory, we mobilize two concepts: boundary objects and systemic shock. The combination suggests that boundary objects aggregate networks of stakeholders that “hold” a “stake” in it. Such networks are usually in an equilibrium of routine interactions between stakeholders that compromise depending on their interests’ satisfaction, power resources and legitimacy. A managerial decision may impact the boundary object and cause a systemic shock that affects stakeholders belonging to the network and disrupts the compromise. The shock induces intense and strong interactions aiming to reach a new compromise (or a new equilibrium) in which actors satisfy their interests depending on their redefined power resources and legitimacy. The path between two equilibria is characterized by a moving alliance of stakeholders with the firm and a coalition against it. Employment is a boundary object that is a “stake” for several “holders”. Industrial downsizing with massive dismissals is a managerial decision that is a systemic shock on a boundary object (i.e., employment) and affects the interest and satisfaction of numerous stakeholders, triggering interactions between them to reach a new equilibrium and redefine the boundary object. To illustrate this conceptual framework, this article is based on empirical evidence from an in-depth case study of industrial downsizing with massive dismissals that took place in Switzerland. The case explores the political processes that characterize relationships when a network of stakeholders is disturbed by a systemic shock.

CM: **Competition Brokerage: An Altercentric Perspective on Structural Holes in Negative Networks**

Author: **Taiyi Yan**, *UCL School of Management*

Author: **Vijaya Venkataramani**, *U. of Maryland*

Author: **Chaoying Tang**, -

In the past three decades, structural hole theory has received strong support on the benefits of employee occupying brokerage positions in their social networks. However, the literature on brokerage has almost exclusively focused on positively valence network (e.g. friendship or advice), and has overlooked negative networks. In this research, we develop and test a theory of competition brokerage, or structural holes in the competition networks. Through a network experiment (Study 1), we showed competition brokerage had a negative effect on broker’s performance due to alter coalition behavior. Then, in a network field study of 91 engineering teams (Study 2), we replicated the negative effect of competition brokerage. Additionally, we proposed two moderators related to the resource environment to explore the contingency of competition brokerage and found converging evidence that resource inequality moderated the effect such that the negative relationship between competition brokerage and performance became stronger as inequality increased. Finally, we discussed the theoretical and practical implications of our findings.

CM: **A Trust Trajectory Model of Affective Job Insecurity and Voice amid Organizational Downsizing**

Author: **Dejun Kong**, *U. of Colorado Boulder*

Author: **Tiffany Kriz**, *MacEwan U.*

Author: **Phillip M. Jolly**, *Pennsylvania State U.*

Author: **M. Audrey Korsgaard**, *U. of South Carolina*

Author: **Paul Bliese**, *Darla Moore School of Business, U. of South Carolina*

We propose a trust trajectory model to explain, in the context of initiated organizational downsizing, how employees’ affective job security leads to their reduced voice through a downward trust trajectory, and how this process is attenuated by employees’ proactive personality. We found support for our conceptual model in an experimental study and in a longitudinal survey study of an organization that initiated downsizing. In the context of organizational downsizing, employees higher in proactive personality were less likely to experience a downward trust trajectory ensuing from their affective job insecurity and thus reduce their voice than those lower in proactive personality were. Our results were robust, given that we controlled for the mean level of trust, the trajectory and mean level of psychological strain (according to the prior theoretical framework of job insecurity), and the initial level of voice after organizational downsizing was initiated. Our findings have significant implications for research on trust, job insecurity, and anchoring events, as well as for practices that can help prevent trust/relational deterioration in the event of organizational changes (such as downsizing).

William H. Newman Award Nominee

Ability to influence others or having higher status is important for professional growth and well-being. As a result, individuals strive for greater social rank in workplace and life in general. The dual framework of social rank allocation discusses dominance and prestige as two viable routes to status or social influence. In doing so, this literature has largely neglected findings demonstrating backlash against men and women for behaving in gender incongruent ways. Likewise, it is unclear if dominance and prestige continue to be effective means to status over time. In this research, we examine the viability of dominance or prestige on individual's social influence, conditional on their gender and over time. Using a stereotypically neutral context of online social networks, we unobtrusively tracked individual's social influence among their network members on Twitter. By analyzing almost 230,000 tweets, we find that men's (women's) influence increases with greater dominance (prestige), whereas women's (men's) decreases. Network centrality explains this differential interaction pattern. Additionally, longitudinal analysis provides a more nuanced understanding. Role incongruent effects dampened over time, dominance became less effective even for men, and prestige became viable for both men and women. Thus, by jointly considering the role of gender and time, this research offers key theoretical caveats to the dual rank framework and sheds light on viable pathways to achieving social influence.

Speaker: **Yena Kim**, *U. Of Chicago*

The present symposium brings together a group of experts in moral psychology and organizational behavior to explore questions such as: What are the antecedents to (i) the development of a particular moral belief and (ii) the assigning of moral sacredness to an object (papers 1 and 2, respectively)? How can we best predict whether an individual will engage in a given moral behavior (paper 3)? What prompts individuals to judge (i) the spreading of falsehoods as more or less ethical and (ii) individuals in their ingroup who choose to cooperate with outgroup members on behalf of their ingroup (“intergroup brokers”) as ethical or unethical (papers 4 and 5, respectively)? Are individuals willing to have honest conversations with others about others’ (im)morality, and if not, why (paper 6)? We believe that a better understanding of moral psychology and how it relates to individuals’ belief formation, judgments of others, and moral conversations is critical when trying to Create a Better World Together.

IM: Japanese Women Pursuing a Career at Foreign Subsidiaries: A Question of Identity    

Author: **Markus Pudelko**, *U. of Tuebingen*
Author: **Helene Tenzer**, *LMU Munich School of Management*

This study investigates what attracts career-oriented women to foreign subsidiaries and how they experience this work context. Based on 125 interviews with career-oriented women in Japan, we find that their frequent choice of foreign employers is not only motivated by professional aspirations but also by identity-related aspirations. Japanese women who embraced an internationalist orientation experience a confirmation of their progressive identity by working for foreign subsidiaries; by contrast, those who still felt bound by traditional role expectations, undergo a liberating identity transformation. Based on the perceptions of these particular employees, we develop recommendations for gender diversity management in foreign subsidiaries. We further argue that women, who are disadvantaged in the local employment context, often desire that foreign subsidiaries implement standardized home country HRM practices, instead of adopting local practices. By focusing on the recruitment of highly qualified women, foreign subsidiaries may turn their liability of foreignness into a competitive advantage.

IM: Migrants, Expatriates, and Nationals: How Do They Acculturate in a Cosmopolitan Organization?    

Author: **Hyun-Jung Lee**, *London School of Economics*
Author: **Mai Al-Naemi**, *College of Business and Economics, Qatar U.*

We investigate acculturation strategies enacted by migrants, expatriates, and nationals in a multicultural organization in which the migrants and expatriates significantly outnumber the nationals, and multiple (often opposing) cultural values and business practices coexist in equilibrium. Drawing on the data collected from participant observation, interviews, and focus groups, we conceptualized four types of acculturation strategies that variously affect individuals' status in the organization: cosmopolitanizing, brokering, assimilating, and separating. Our analysis revealed that the social boundaries marked by migration status and origin country set a clear and visible social hierarchy in the organization. Concurrently, through different acculturation strategies, individuals distinguish themselves from other members within their social groups, which creates another layer of symbolic boundaries and invisible status hierarchies in the organization. Our analysis further suggests that the adoption of a specific acculturation strategy may be constrained by cultural resources available to the individual. Our research advances current theorizations of migrant (and non-migrant) acculturation by revealing how different acculturation strategies affect the status hierarchies in an organization characterized by extreme cultural diversity.

IM: The Relationship Between Personality and Cultural Values Among Workers in Global Virtual Teams  

Author: **Madelynn R. D. Stackhouse**, *U. of North Carolina, Greensboro*
Author: **Marketa Rickley**, *U. of North Carolina at Greensboro*
Author: **Yonghong Liu**, *U. of North Carolina, Greensboro*
Author: **Vas Taras**, *U. of North Carolina, Greensboro*

The question of whether culture is “personality writ large” (Benedict, 1935: vii) has long intrigued scholars. With data from 57 nations, we investigated associations between individuals' personality traits and their national cultural values. Using the Five Factor Model of Personality (i.e., openness, conscientiousness, extraversion, agreeableness, neuroticism) to understand personality and Hofstedeian Cultural Dimensions (i.e., power distance, individualism/collectivism, uncertainty avoidance, gender egalitarianism, assertiveness, teamwork preferences, and long-term orientation) to understand cultural values, we conducted multilevel analysis that accounts for individual personality and cultural value differences both within and between nations. The results showed individual and collective personality are associated with national culture at weak and largely non-significant levels. We also show within-country variance is greater than between-country variance. This research holds implications for individuals working with others from different national backgrounds and highlights the problem of assuming workers from the same national culture share cultural values or personalities.

IM: Addressing the Dark Side of Cultural Intelligence: A Conceptual Model and Research Agenda  

Author: **Marius Brand**, *WU Vienna U. of Economics and Business*
Author: **Christopher Schlaegel**, *Otto von Guericke U. Magdeburg*
Author: **Guenter Stahl**, *WU Vienna U. of Economics and Business*

In this paper, we aim to cast doubt on the positive halo effect of cultural intelligence (CQ) by exploring several conceptual avenues of how individuals' CQ may promote undesired outcomes. We argue that CQ tends to lead to beneficial outcomes, yet, under certain circumstances, it can be associated with adverse consequences. First, individuals might become overconfident in their ability to interact effectively with members of other cultures, which can foster poor decision-making and reduced learning. Second, they might over-adjust to their cultural environment, which can lead to a perceived inauthenticity and lack of integrity. Third, individuals might develop a morally and culturally relativistic worldview, due to which they can lose their sense of cultural belongingness and which can motivate them to behave unethically. Subsequently, we discuss the differential role of the CQ facets in the proposed mechanisms, suggest various boundary conditions, and develop an agenda for future research.

IM: Environmental Regulation and MNE's Resource Commitment: Considering Impacts of COVID-19 Pandemic

Author: **Wootae Chun**, *U. of Northern British Columbia*

Author: **Zhan Wang**, *St Cloud State U.*

Author: **Hyun Gon Kim**, *Rutgers U.*

The COVID-19 pandemic is an unprecedented exogenous shock in the global economy and has caused noticeable disruptions to international business activities. In this study, we attempt to investigate how COVID-19 influences multinational enterprises' (MNE) strategic decisions in global markets. More specifically, we examine how MNE's resource commitment is linked to a target market's environmental regulation. We find that MNEs commit more resources in host countries with more stringent environmental regulations. This paper's findings also reveal that MNE's environmental capability and multiple dimensions of institutional distance, including environmental regulation distance and cultural distance, positively moderate the relationship between MNE's resource commitment and the degree of environmental regulation in foreign markets. Finally, we underscore a significant impact of COVID-19 on MNE's responses to cross-border activities. An analysis of 3,679 by 1,135 MNEs from 30 countries offers support for the hypotheses.

IM: Exogenous Shock in the GBE and The Effect of MNC International Diversification on Shareholder Value

Author: **Kijong Kim**, *Darla Moore School of Business, U. of South Carolina*

Author: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*

This article examines the effect of international diversification on Multinational corporation (MNC) shareholder value creation in the face of an exogenous shock to the global business environment (GBE). We use the UN Climate Change Summit (COP26) as our research setting to investigate the extent to which MNC international diversification impacted shareholder value after last minute shifts in the COP26 agreement. Results from an event study analysis of 196 U.S. manufacturing MNCs indicate that international diversification is negatively related to shareholder value creation after COP26. However, MNCs with strategic orientations toward CSR and digitalization continue to create shareholder value despite high international diversification. These findings contribute novel insights to literature on GBE shocks and importance of firm strategic orientations in a turbulent environment.

IM: Disasters and the Luck of the Draw: Practitioners' Decision-Making Through the Lenses of Serendipity

Author: **Linglin ZHENG**, *U. of Queensland*

Author: **Heidi Wechtler**, *U. of Newcastle*

The development of business is profoundly influenced by practitioners' decisions in response to disasters such as the COVID-19 pandemic. This unprecedented crisis has shown mixed effects on business that need further discussion and revives the gap between theory and practice. This study aims at contributing to fill this gap in focusing on the impact of disaster evaluated by business decision-makers in China. China, where the outbreak first spread, was also the first to suffer a major disruption on its business. To do so, we collect 97 articles from *Caijing*—an authoritative business magazines in China and conducted a qualitative analysis of manager-oriented discourse to investigate how the impact of COVID-19 affect the development of MNEs and provide a thorough industry examination. We use the luck and serendipity perspective to theorize the reasons of these mixed outcomes and analyze the future development trends of MNEs and associated implications for practitioners.

Session Moderator: **William H. A. Johnson**, *Pennsylvania State U.*

IM: Conflict in Virtual Teams & Necessity of Cultural Intelligence for Effective Performance      

Author: **William H. A. Johnson**, *Pennsylvania State U.*
Author: **Longzhu Dong**, *U. of Wisconsin, Eau Claire*
Author: **Ming Li**, *U. of Liverpool*

Applying an Input-Processes-Output model of team processes, we view cultural intelligence as an input variable to global virtual teams, which could help reduce one procedural aspect of team dynamics – frequency of conflicts – and consequently influence the team outcome performance. Utilizing data from a sample of 1592 global virtual teams (consisting of 7029 individuals) we tested for the effects of cultural intelligence on conflict frequency by type and team performance at both the individual and team level. Results showed that cultural intelligence exerts its effect on both individual process performance (e.g., team member satisfaction with the project) and team outcome performance (e.g., grade of the final team report) indirectly via reduction of team conflict frequency. The effects of conflict on outcome performance were differential depending on the type of conflict, which corresponds with previous literature findings. Overall, the study suggests that educators and practitioners can utilize and develop the cultural intelligence of global virtual team members to decrease negative conflict frequency and ultimately increase global virtual team performance. The study contributes to research on cultural intelligence and conflict within the context of global virtual teams.

IM: Creating a Better Workplace for Global Virtual Teams: The Influence of the “Strongest Link”  

Author: **Zandra Balbinot**, *U. du Québec à Montréal (UQAM)*
Author: **Wendy Farrell**, *Management Center Innsbruck*
Author: **William H. A. Johnson**, *Pennsylvania State U.*
Author: **Seema Pissaris**, *Florida International U.*
Author: **Eric David Cohen**, *State U. of Campinas*
Author: **Jiang Chun**, *Mae Fah Luang U.*
Author: **Vas Taras**, *U. of North Carolina, Greensboro*

In virtual spaces, misunderstandings in communication are common due to a lack of non-verbal cues or imprecise language. Utilizing a sample of 3578 participants in 755 global virtual teams (GVTs), we studied the links between the maximum cultural intelligence (MaxCQ) score, team communication frequency and conflict frequency as important elements of the GVTs environment. We also tested for their ultimate effects on GVT process performance via team satisfaction. We utilize the conceptualization of MaxCQ as a “strongest link in the team” argument (Brownell et al, 2021) to explain how it works; namely, via MaxCQ’s effect on reducing conflict frequency during a GVT project. We also found evidence that increased communication decreased conflict frequency leading to positive team satisfaction effects. The results suggest that staffing GVTs with individuals scoring high on CQ and increasing team communication frequency overall can lead to better team processes and result in overall team satisfaction. We found no evidence of MaxCQ affecting communication frequency. This supports the notion that future research should concentrate on communication quality instead of frequency, which might show a relationship between these two variables.

IM: Academic Pedigree Diversity and International Workgroup Dynamics and Performance

Author: **Seema Pissaris**, *Florida International U.*
Author: **Longzhu Dong**, *U. of Wisconsin, Eau Claire*
Author: **William Newburry**, *Florida International U.*

Academic pedigree is commonly believed to predict career success, and indeed prior research has shown a relationship between university rank and the ease of finding a job and higher pay upon graduation. Studies have also linked team effectiveness with the average academic pedigree of their members as well as with team diversity. What has not been researched is the effects of a team’s academic degree diversity on international team effectiveness and how this might vary based on the country of the team member. The present study seeks to fill this gap. Based on a sample of 490 international consulting teams, we find that university pedigree is a salient, transparent variable and that one’s alma mater matters in a team setting. We demonstrate that team members signal their university pedigree and identify, perhaps for the first time, university pedigree as a faultline variable, capable of creating sub-groups. We show that having team members from institutions of different ranks on the team leads to higher interpersonal conflict, lower task clarity, and ultimately lower team performance. Moreover, we demonstrate that these effects weaken when team members come from more reputable countries. Implications for theory and practice are discussed.

Identity and Employees Corporate Practices

Session Moderator: **Kevin Au**, *Chinese U. of Hong Kong*

IM: MNC Employees' Adoption and Adaptation of Corporate Practice: A Legitimacy-Based View

Author: **Jui-chuan Hsu**, *Xi'an Jiaotong-Liverpool U.*

Author: **Kevin Au**, *Chinese U. of Hong Kong*

Author: **Yingzhao Xiao**, *Tianjin U.*

This paper theorizes and examines the micro-institutional process of corporate practice implementation in multinational corporations (MNCs). Drawing from the social-psychological approach to institutional theory, we focus on the role of legitimacy judgment in explaining MNC employees' diverse behavioral responses to organizational and institutional pressures. Our theoretical model was examined in two studies regarding common corporate language (CCL) based on 228 MNC employees in the United Kingdom and United States (survey) and 105 MNC employees in China (experiment). The findings reveal that legitimacy judgment bolsters MNC employees' passive adoption of the CCL practice but reduces their active adaptation in the form of code-switching. Further, employees form legitimacy judgment based on authorization, external endorsement, and the interaction of authorization and external endorsement. Intriguingly, employees' adaptation, rather than their adoption, drives knowledge sharing in their MNCs, suggesting acquiescence to a taken-for-granted practice could undermine a useful outcome. Our study advances the theoretical understanding of corporate practice implementation in MNCs, legitimacy judgment, and the CCL practice.

Migration is one of the grand societal challenges of our time, but relatively little is known about the factors and mechanisms that govern immigrant experiences and contribute to successful integration outcomes in the workplace domain (e.g., career success) and personal life domain (e.g., social integration). In this study, we adopt an identity-based approach to understanding the factors that shape immigrants' identity orientations and influence their community and career embeddedness as a critical element of their integration success. The results of a study of 1,716 highly qualified immigrants from 46 countries of origin in 12 host countries reveal that aspects of the institutional and cultural environment provide both sources of opportunity (e.g., in-cresed potential for human development) and sources of disadvantage (e.g., potential status degradation) for immigrants, and that these opposing dynamics affect the emergence of a host country identity, retention of a home country identity, and, ultimately, immigrants' community and career embeddedness in the host country. The implications for research and practice are discussed.

IM: Babel and Gender: The Relationship between Identity, Clusters and Status  

Author: **Komal Kiran Kalra**, *Newcastle U. Business School*

Author: **Wade Danis**, *U. of Victoria*

This study explores the role of identity attributes that influence an individual's association with language-based clusters within multinational enterprises (MNEs). Current research on language in international business has shown that language is a core element of one's social identity and employees in MNEs can form homophily-based clusters with those who share their native language, and such clusters can significantly influence communication and knowledge sharing within MNEs. However, research assumes that clusters are static and does not take into consideration the role of attributes other than language that could influence individual association with these clusters and the resultant dynamics. We conducted a qualitative comparative case study of two MNE headquarters in India and found evidence of language-based meta-clusters in both organizations and discerned that employees' linguistic identities often intersect with identities related to gender, regional dialects and education. Our data revealed cleavages in language-based meta-cultures based on dialect-based status differences as well as disassociation from clusters by female employees which seems to be driven by gender-based stereotypes and associated in- and out-group biases. Based on these findings, we develop a process model to explain the dynamic processes by which these identity attributes change the composition of language-based clusters over time. These changes have important consequences for communications and group dynamics within organizations, particularly as they relate to power, status and affect. Keywords: Gender; language; language-based clusters; regional dialects; social identity; status; stereotypes.

CSR Disclosure and Decoupling

Session Moderator: **Ye He**, *U. of Victoria*

IM: A Closer Look at the Relationship Between Internationalization and CSR Disclosure Quality

Author: **Rong Ma**, *Rutgers U., Camden*
Author: **Rakesh B. Sambharya**, *Rutgers U., Camden*

Drawing on institutional theory, we investigate the effect of international diversification strategies of multinational corporations (MNCs) on CSR disclosure quality, the extent to which CSR reports reflect MNCs' CSR activities. We propose that as international diversification increases institutional complexity, they respond differently to this complexity by lowering disclosure quality of environmental CSR yet improving disclosure quality of employee CSR. In addition, since decoupling CSR reporting from actual practices is risky, we examine how the cultural value of uncertainty avoidance in MNCs' home country changes MNCs' decoupling response to increasing complexity due to international diversification. Based on a sample of 335 global MNEs from 31 countries, we found general support for our hypotheses.

IM: CSR Disclosure and Internationalisation: The Missing Elements Between Earnings Management and the Ma (WITHDRAWN)

Author: **Yulia Aray**, *Graduate School of Management, St. Petersburg State U.*
Author: **Tatiana Garanina**, *U. of Vaasa*
Author: **Anna Veselova**, *HSE Graduate School of Business*

This paper explores the relationship between earnings management and firms' value through the moderating effect of two missing elements—corporate social responsibility (CSR) disclosure and internationalisation. The main argument of the paper is that CSR disclosure can be used as a mitigating mechanism to weaken the negative relationship between earnings manipulation and market value. We tested our hypotheses on panel data for 223 publicly listed Russian firms for the period 2012–2018. Supported by legitimacy and stakeholder theory, we observed that firms that disclosed more CSR information experienced a weaker negative relationship between earnings management and market value because investors positively perceived their attempts to improve their socially responsible image. This negative effect was even weaker for firms that internationalised and had larger numbers of stakeholders, which placed greater expectations on firms to be transparent and responsible. Our results provide new insights into earnings management, CSR disclosure, and the internationalisation of emerging-market firms.

IM: MNEs' CSR Decoupling: How Host-Country Stakeholder Pressures Matter ✈️

Author: **Ye He**, *U. of Victoria*
Author: **Jingnan Li**, *U. of Manitoba*

The literature suggests that organizations tend to use corporate social responsibility (CSR) as a means to establish and enhance legitimacy, particularly when they operate internationally. Meanwhile, organizations that adopt voluntary CSR initiatives, such as the United Nations Global Compact (UNGC), may decouple symbolic CSR claims from actual CSR performance. Despite extensive research on organizational decoupling and the legitimation strategies of multinational enterprises (MNEs), we have limited understanding of how host-country conditions affect MNEs' CSR decoupling. Building on the idea of decoupling in institutional theory and the research on corporate adoption of voluntary codes of conduct, this paper analyzes how host-country stakeholder pressures will discourage CSR decoupling of MNEs that adopt the UNGC. We also identify possible contingencies, host country press freedom, and institutional and normative distances between home and host countries, and investigate how they moderate MNEs' responses to host-country stakeholder pressures. We test our theory using an international sample of the UNGC signatories during the period 2007-2018. Our main analyses rely on a dataset containing 4,359 observations for 305 listed firms from 36 home countries, with negative CSR events (i.e., corporate violations of the UNGC principles) taking place in 117 host countries. The results support our predictions.

Session Moderator: **Louis Mulotte**, *Tilburg U.*

STR: Time-Based Performance Increases Across Governance Modes  

Author: **Louis Mulotte**, *Tilburg U.*
Author: **Simon Porcher**, *Sorbonne Business School*

Governance research highlights the performance benefit of using the same governance mode in successive transactions. We extend this work by examining whether the time that a firm spends running a given transaction has an influence on the focal transaction's performance and whether the magnitude of this influence is the same in internal organization as it is in contractual governance. Drawing on arguments derived from organizational learning theory and transaction cost theory, we argue that time-based performance increases are primarily fueled by coordinated adaptation in internal organization, while they mostly result from high-powered incentives in contractual governance. We next develop a contingency approach to suggest that time-based performance increases are greater in internal organization than in contractual governance if the transaction is technologically complex and if it involves high levels of environmental uncertainty. Data on water supply performance in France during 1998–2008 largely support our arguments. Overall, we highlight that firms' ability to increase transaction performance in the course of action differs more in nature than in magnitude between internal organization and contractual governance. We discuss the theoretical implications for research on the relative performance of alternative governance modes.

STR: The Role of Commitment in Adaptation to Dynamic Environments 

Author: **Dorina Diana Verdes**, *U. of Southern Denmark, Odense, Denmark*
Author: **Davide Marchiori**, *U. of Southern Denmark, Odense, Denmark*

Increased strategic flexibility and exploration have been long promoted as essential for survival and profitability in highly dynamic environments. Nonetheless, managers seem to frequently defy this idea when making business decisions by frequently committing to various strategic decisions despite environmental dynamism. We investigate if there are types of dynamic environments in which constraining decision-making through commitment - understood as sticking to a choice for a given time horizon, without the possibility of changing it within that time span - is beneficial for long-term performance. Results from a computational study show that dynamic environments characterized by low magnitude of change favor constrained decisions. The findings contribute to the literature on individual and organizational decision making in dynamic environments and set the stage for empirical research on this topic.

STR: Winning over the Market Orientation Trap: A Dynamic Process Model of Market Orientation Evolution

Author: **Albena Björck**, *ZHAW School of Management and Law*
Author: **Henrik Sievers**, *Aalto U. School of Business*
Author: **Antti Ainamo**, *Aalto U.*
Author: **Fredrik Hacklin**, *ZHAW School of Management and Law*
Author: **Jari Salo**, *Helsinki U.*

The concept of market orientation (MO) has received widespread attention within the literature on marketing, strategy, and innovation during past decades. More recent debate has given rise to two conceptually distinct MO perspectives—market driving, and market-driven behavior. Although these two strategic orientations are considered highly complementary, the relatedness and dynamics between them largely remain a 'black box': the questions of how, when, and under which environmental conditions they can be combined to achieve better overall performance, have remained largely understudied. Against this background, our study introduces a novel, previously neglected perspective on MO: the dimension of time. Building on a longitudinal, embedded case study examining a leading European state-owned telecom operator over a perspective of 22 years, we develop a process study of the MO dynamics, thereby gaining a richer and multifaceted understanding of how different forms of MO unfold and interact. We offer two main propositions. First, we theorize on the gradually shifting co-evolution of proactive and reactive positioning within MO. Second, we identify effects of lock-in created in the transition from market driving to market-driven phases, leading to what we refer to as the "MO trap". We contribute to connecting the dots between theories of marketing strategy and industry dynamics, and offer managerial implications.

Author: **Uma Shankar Rangaswamy**, *Indian Institute of Management Kashipur*

Author: **Sanjay Chaudhary**, *O.P Jindal Global U.*

In this paper, we explore how organizations in service-based industries can learn and adapt to market disruptions. We propose that the relationship between team exploratory learning and team performance depends on the mediating role of adaptive capability and the moderating role of team members' positive mood satisfaction. As a part of the study, we conducted a cross-sectional survey at the team level in an Information Technology services organization. We collected data from both project managers and team members working in project teams within the organization and used PROCESS macro developed by Hayes for testing mediation and moderated-mediation models. Our findings establish that a team's adaptive capability mediates the relationship between team exploratory learning and team performance, and the relationship between team exploratory learning and team adaptive capability is moderated by team member positive mood. Finally, team member satisfaction moderates the relationship between team adaptive capability and team performance. Our study adds to the theory by establishing that team adaptive capability in service organizations intervenes in the effect of team exploratory learning on team performance. In addition, we establish a crucial role of team members' positive moods and satisfaction levels in this relationship.

CAR: Reviewing Measures of Meaningful Work 

Author: **Sunyoung Park**, *Louisiana State U.*

Author: **Eun-Jee Kim**, *Kyonggi U.*

The purpose of this study is to review the existing meaningful work measures used in empirical studies. The job characteristics model and psychology of working theory were adopted as theoretical foundations to analyze the features of each measure. We reviewed 11 measures of meaningful work using a framework with job characteristics, sensemaking, and workplace conditions. The findings indicated that all instruments include job-related components. Eight measures include items or dimensions related to interactions with other people and the job (e.g., interpersonal relationships and social support). In relation to workplace conditions, six measures are related to work contexts and specific professions. The findings from this study could play a significant role in developing further instruments to reflect critical dimensions and the diverse nature of meaningful work.

CAR: Changing Careers to Pursue a Calling: How People Make Career Pivots 

Author: **Hannah Weisman**, *Harvard Business School*

Arnon Reichers Best Student Paper Award Nominee

Management scholarship is rife with accounts of people pivoting from steady jobs and “good” careers into occupations they view as more personally and socially significant. However, existing organizational theory cannot explain how people make these career pivots. Through a longitudinal qualitative study of 69 individuals associated with When to Jump, a global community for people making career “jumps” to pursue their passions, this paper explores how people construct a “career pivot self-narrative”—an account for the unconventional career change to pursue a calling. Drawing on 201 interviews, conducted in three waves over 18-months, as well as archival and observational data gathered over 3.5 years, I found that individuals substantially revised their self-narratives over time, leading them to minimize their initial uncertainty about their callings, and ultimately downplaying the importance of playing with possible selves to find one. This study, which casts light on the real-time evolution of career pivot self-narratives as they are initially developed, subsequently revised, and eventually maintained, has theoretical implications for research on role transitions and callings. It also has practical implications for individuals seeking to change careers, who often look to others’ self-narratives as a source of guidance.

CAR: When and How Will Calling Enhance Creative Performance? The Role of Job Crafting and Inclusive Leadership 

Author: **Xueyuan Gao**, *China U. of Labor Relations*

Author: **Xun Xin**, *Southwest U. of Political Science & Law*

Research on creative performance has drawn much attention, especially its motivational antecedents. However, few studies have examined when and how calling, an integration of various motivational aspects, uniquely contributes to creativity performance in non-Western contexts. Based on the self-regulatory perspective, we investigate the underlying behavioural mechanism between calling and creative performance using a sample of 274 dyad data among Chinese employees and their supervisors. We also examine inclusive leadership, representing the ancient Chinese Taoism ideology, as a boundary condition. Results indicated that calling (employee-rated at time 1) related positively to creative performance (supervisor-rated at time 2) and individuals’ job crafting behaviour (employee-rated at time 1). Job crafting provided an explanatory mechanism between calling and creativity performance. Inclusive leadership (employee-reported at time 1) showed a moderated effect on the mediation model. Findings of this study have both theoretical and practical implications.

CAR: Meaningful Work, Luck, and Resilience: How Gig Workers Navigate the Undervaluing of Their Careers

Author: **Alexandra Lefcoe**, *Degroote School of Business, McMaster U.*

Author: **Catherine Connelly**, *McMaster U.*

Professional musicians, the original gig workers, are often not fairly compensated or recognized for the time and effort put into their craft. The current study identifies ways in which musicians make sense of this difficult reality. Some accept the undervaluing of their work and frame their successes as luck to ensure their expectations align with the reality of their careers. Furthermore, musicians find meaning in their work and create an idealized reality of music to endure the undervaluing of their craft. It is these opposing forces, a personal detachment from success and a personal connection to music, which ultimately allow musicians to persevere in their careers. Those who challenge this reality have trouble coming to terms with the undervaluing of their work and attempt to make changes to their careers or to their career expectations. Through this study, we explain how musicians’ experiences shape three interconnected realities of being a professional musician.

CAR: Conceptualization of Weather as a Career Metaphor

Author: **William E. Donald**, *Southampton Business School, U. of Southampton*

This paper offers an accessible, flexible, and homogenized approach for use in career counselling and career development via the conceptualization of Weather as a Career Metaphor (WCM). The theoretical framework underpinning the conceptualization of WCM draws together aspects of sustainable career theory, chaos theory of careers encompassing chance events and career shocks, and conservation of resources theory. The WCM is constructed of ten elements of weather that apply to different contexts and across the lifespan. These include sun, rain, drought, thunder and lightning, ice, fog, tailwind, headwind, tornado, and rainbow. The WCM offers a complementary tool as part of a wider toolkit for career counsellors to help their clients to understand potential challenges within contemporary labor markets. This facilitates individuals to take ownership of their careers, acquire personal resources, and take proactive steps to prepare themselves for when career shocks inevitably occur. Benefits subsequently transcend to organizations and national economies.

CAR: The Forest Behind the Tree: Analysing Black et al.’s International Adjustment Model

Author: **Hyacinthe Caldwell**, *U. of Liverpool*

Author: **Rory Donnelly**, *U. of Liverpool*

Author: **Huadong Yang**, *U. of Liverpool*

The world is currently facing an unprecedented health crisis that is profoundly changing our economies, including the way people work. As our ability to plan and predict are questioned, so does the future of internationally mobile workers whose work rely on their ability to operate across international borders. As businesses and organisations prepare themselves for a new normal, we take this opportunity to reflect on the legacy of Black, Gregersen and Medenhall’s cross-cultural international adjustment models (1991, 1992), hereafter model, and identify avenues for future research. Previous systematic reviews have emphasised the salience of the model in expatriation and repatriation literature. However, the degree to which changes in expatriation practices along with the current international crisis challenges the foundations of the model remain under-researched. We critically analyse changes in expatriation and repatriation research in light of the increasing diversity of expatriates and their career paths through a systematic review of 633 empirical and conceptual papers. We go further than previous reviews by examining how these papers engage with the model using a novel four-point coding scale. Our review suggests that the dominance of the model may have contributed to the fragmentation and under-theorisation of the field rather than the integration it was intended to promote. Furthermore, our review identifies the limitations of the model and the need for the development of a more inclusive lens to accommodate new forms of international career experience. The findings generate significant implications for (I)HRM research and practice moving forward.

CAR: “What Have We Learned and Where Are We Headed?”: A Bibliometric Review of Job Crafting Literature

Author: **Parijat Lanke**, *Indian Institute of Management, Tiruchirappalli*

Author: **Papri Nath**, *Indian Institute of Management, Tiruchirappalli*

This study presents a review of the literature published on job crafting using bibliometric techniques. It utilizes the papers published on the topic from 2000-2020, retrieved from the Scopus database. The purpose of the paper is an attempt to draw the intellectual, conceptual, and social structure of the field of research on job crafting. study uses the bibliometric method to review the literature on the topic of "job crafting". It uses various bibliometric indicators including co-citation and citation analysis to shed a light on the past and chalk out future directions. The data for the study is retrieved from the Scopus database. The findings of the study reveal both the micro and macro aspects of the research published so far on job crafting. Certain areas of work such as work engagement, and multi-level analysis are promising future avenues of work in the field, amongst others. This review gives a unique view of the past and outlines a number of future directions for research on the topic and it will be of interest to existing scholars in the field as well as doctoral students who might be interested in the topic.

CAR: **An Analysis and Typology of Informal Career Advice** 

Author: **Karen Lynden**, *U. of North Carolina, Greensboro*

Author: **Mark Ronald Grambo**, *UNC Greensboro*

Author: **Susan Szasz Harker**, *Academy of Management*

Author: **Arran Caza**, *U. of North Carolina, Greensboro*

This study used content analysis to extract advice themes from 291 interviews with professionals offering career advice to the next generation. The interviews were performed by college students with jobholders in their network, offering insights into the content of advice given in informal settings. The advice was consistent across job types (traditional and non-traditional), gender (of advisor and advisee), and advisor years of experience. Advisors provided abstract advice ("follow your passion") that was sometimes contradictory to the concrete advice given. Advisors also provided little guidance on practical matters like finances or developing particular technical skills. This study reveals that the informal advice being given to future professionals before entering the professional workforce is consistent, largely abstract, often contradictory, and lacking in specific areas. It adds to the career development and management literature by providing unique insights into the content of informal career advice and a typology of that career advice. This study also demonstrates the importance of career counselors, HR professionals, and managers in interpreting the types of advice given to young professionals and converting it into actionable career steps and goals. The proposed typology can influence programs and processes that support individual development and career planning for young professionals.

Covid-19’s Impact Upon Careers: Findings from a Global Study

Global Study of Covid-19 Impact Upon Careers

Session Chair: **Jon P. Briscoe**, *Northern Illinois U.*

Session Chair: **Emma Parry**, *Cranfield U.*

Facilitator: **Wolfgang Mayrhofer**, *WU Vienna*

The Covid-19 pandemic has had a dramatic impact upon how people around the world enact their careers and contemplate how to change them. This in turn has impacts upon how employees are led and managed by leaders and organizations. This symposium presents four papers based upon data gathered in several countries during the course of the pandemic. The papers focus upon the relationship between career meaning and career resilience with older workers, how gender and child care roles impact proactive career behavior, how career shocks impact the relationship between social support, career meaning, and career management; and, how career shocks lead to changes in career values and proactive behavior. Beyond careers the symposium portends implications for organizational behavior and human resource management.

Women in the New World of Careers
Women in the New World of Careers

Discussant: **Lisa Ellen Cohen**, *McGill U.*
Organizer: **Shinjae Won**, *U. of Illinois at Urbana-Champaign*
Organizer: **Yonghoon Lee**, *Hong Kong U. of Science and Technology*
Presenter: **Brandy Aven**, *Carnegie Mellon U.*
Presenter: **Wooseok Jung**, *HEC Paris*

The ways people build their careers have changed and evolved where moves across domains, locations, and organizations have become common and the proportion of nonstandard workers continues to grow. This change in how people pursue their careers has opened several interesting and important avenues of inquiry; yet, we have relatively little knowledge on how these changes have affected women and their pursuit to advance their careers. In this symposium, we compile four different empirical studies using different contexts and methods to shed light on how the new world of careers changed women’s careers.

ENT: Women Entrepreneurship and their Work-Family Interface: A Systematic Review and Research Agenda

Author: **Jasmine Banu**, *Indian Institute of Technology, Madras*

While there has been an upsurge in the growth of women entrepreneurs worldwide, the literature does not provide any conclusive insight on how women entrepreneurs navigate through their work (business) and non-work (family and other life roles). This study undertakes a systematic literature review to take stock, synthesize, and unpack women entrepreneurs' lives and how they navigate their work-family interface, highlighting potential ways forward with valuable insights. This review covers a wide range of 57 academic journals from various disciplines to integrate the literature from 1990 till October 2021. The shortlisted articles were analyzed and coded extensively. A thorough review of the articles is undertaken using the TCCM (Theory, Context, Characteristics, and Methodology) approach to highlight three significant contributions to the literature. First, we contribute to the literature by systematically identifying how various work-family interfaces have been conceptualized and operationalized, theoretical perspectives that have been embraced in the women entrepreneurship literature. Second, it aims to systematically identify significant trends and developments in the interaction between 'women entrepreneurship' literature and 'work-family interface' discipline. Third, this review aims to identify the research gaps to provide a foundation for exciting new streams of research and improve the knowledge base of the state of the art of work-family interface literature.

ENT: Is Innovativeness Gender-Neutral? A Configurational Analysis of the Owners of High-tech New Ventures

Author: **Thi Ngo**, *U. of Huddersfield*

Author: **Qihai Huang**, *Huddersfield Business School, U. of Huddersfield, UK*

Author: **Junsheng Dou**, *School of management, Zhejiang U.*

Apart from the recognized under-representation of female entrepreneurs, whether the gender of entrepreneur matters and how does it matter to new venture's innovativeness remain an under-research area. This study challenges the gender bias on low innovativeness of female-owned enterprises especially in the high-tech sector by applying a Qualitative Comparative Analysis approach to a sample of 62 new venture high-tech firms in China. Built upon the resource dependence theory (RDT) and the gender differences in innovation literature, this research holistically articulates alternative mechanisms from multiple antecedents including the gender of entrepreneur, managerial resources, and environment leading to high innovativeness. Our findings unveil that an extremely turbulent environment can suppress the influence of gender, whereas, in other circumstances, female-owned firms even engage more intensively in innovation. In doing so, this paper develops a mid-range theory by the means of three archetypes of high innovativeness to explain when and when not gender matters to innovation. It also extends the explanatory power of the RDT to explain the gender disparities by suggesting how male and female entrepreneurs differ in leveraging their resources in response to the external environment and ultimately influence innovativeness. The findings provide some practical implications for entrepreneurial firms to be highly innovative under different environmental and resource conditions.

ENT: Gender Differences in Entrepreneurship Mentoring

Author: **Carole Anna Denise Bonanni**, *Rennes School of Business*

Author: **Sandrine Stervinou**, *Audencia Nantes School of Management*

Although empathy in entrepreneurship has been well documented, there is a lack of understanding of how it could influence the willingness to be mentored. This paper aims to fill this gap by investigating how the types of empathy (cognitive vs. affective) and entrepreneurship (social vs. for-profit) influence respondents' willingness to be mentored considering the respondents' gender, and more precisely, which types of entrepreneurs could positively influence women willingness to be mentored. Drawing on the personal identification literature and the entrepreneurship literature on attitude and intention, we measured the respondent's "willingness to be mentored" through four experiments by manipulating the type of empathy and entrepreneurship and comparing its effect between male and female respondents. Our main contributions are twofold. First, we introduce a new construct in the entrepreneurship literature, "willingness to be mentored," and we differentiate it from "attitude toward entrepreneurship." Second, we demonstrate that female respondents prefer to be mentored by an entrepreneur who exhibits affective empathy rather than cognitive empathy and prefer, in the absolute, a social entrepreneur who displays affective empathy. This research builds on the necessity of developing social capabilities in succeeding in new ventures and extends our understanding of the importance of empathic entrepreneurs as mentors to foster entrepreneurship among women.

ENT: Do As I Say, Not As I Do: Cultural Dissonance and Gender Stereotyping in Social Entrepreneurship

Author: **Katie Brownell**, *U. of Southern California -Marshall School of Business*

Author: **Diana Maria Hechavarria**, *U. of South Florida*

The conceptualization and measurement of culture operates under the implicit assumption that cultural characteristics can be equally captured through an assessment of either values, which reflect what is important in society, or practices, which reflect existing behaviors in society. Culture is recognized as one of the primary determinants of social entrepreneurial action, yet empirical examination of the influence of national-level cultural factors in the context of social entrepreneurship offers inconsistent results. We suggest that this is related to theoretical claims that cultural values and cultural practices are not interchangeable, but instead, distinct constructs. In recognition of this discrepancy, we propose an alternate conceptualization of culture – cultural dissonance – which captures the misalignment in society between values and practices. Our research explores the value of this conceptualization by examining the influence of cultural inconsistencies on social entrepreneurial action across 33 countries (N = 23,828). Results demonstrate that cultural dissonance hinders engagement in social entrepreneurship in socially supportive cultures but promotes engagement in performance-based cultures, and that male social entrepreneurs are more sensitive to the effects of cultural dissonance than female social entrepreneurs. We integrate gender role congruity theory and action-based models of cognitive dissonance to explain how and why cultural inconsistencies engender a cognitive response that disrupts social entrepreneurial action.

Entrepreneurial Orientation 1

Session Moderator: **Varkey Titus**, *U. of Nebraska, Lincoln*

ENT: Does Hiring Star Employees Influence Entrepreneurial Orientation? 

Author: **Mohammad Fuad**, *Indian Institute of Management, Ahmedabad*
Author: **Mayank Varshney**, *Indian Institute of Management Ahmedabad*
Author: **Shavin Malhotra**, *U. of Waterloo*

Prior studies argue that entrepreneurial orientation (EO) pervades across various levels of the organization and that non-managerial employees may be instrumental in influencing firm's EO. The assumption is that autonomous non-managers may have the ability to influence strategic decision making and resource allocation decisions which may influence firm's EO. We theorize that in high-tech industries characterized by heightened employee mobility, incoming star scientists play a key role in influencing the EO of the firm. Findings suggest that hiring stars negatively influences the EO of the hiring firm and that hired stars' knowledge depth is negatively associated with the firm's EO. In contrast, knowledge breadth and knowledge dissimilarity of the hired stars are positively associated with the firm's EO. Our study based on a sample of 1916 firm-year observations in the US semiconductor industry between 1986 and 2013, provides a nuanced understanding of hiring star scientists and their influence on firm's EO.

ENT: When Entrepreneurial and Customer Orientation Meet Meaningful Work: A Moderated Mediation Approach

Author: **InHyouk Koo**, *Woosong U.-SolBridge International School of Business*
Author: **Julio O. De Castro**, *IE U. - IE Business School Madrid, Spain*

This study suggests that a cross-level moderated mediation approach attempts to specify both how and when the effects of entrepreneurial orientation (EO) (and customer orientation (CO)) occur when acquiring new customers (and retaining existing customers). Drawing on a data set of 336 bank branches (808 managers/7,230 competitors), the perception of meaningful work mediates the positive linkage of EO and CO to each customer-oriented outcome. This indirect positive effect of EO (CO) with new customer creation (and existing customer retention) through the relationship is stronger when job autonomy is higher than when is low. Our findings provide supports to a nuanced understanding EO/CO within different work characteristics so that our study highlights how organizational strategic postures are relevant for individual perceptions of meaningful work by addressing explanatory primitives where a multilevel model makes sense.

ENT: Make It Or Break It? Founder Social Identity, EO, And New Ventures' Financial Performance 

Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*
Author: **Philipp Sieger**, *U. of Bern*
Author: **Christine Scheef**, *U. of St. Gallen*
Author: **Thomas Markus Zellweger**, *U. of St. Gallen*

How do founder social identities and the entrepreneurial orientation of a new venture combine to explain the latter's financial performance? To address this crucial yet unanswered question, we take a set-theoretic approach based on fsQCA and analyze a sample of 492 entrepreneurs from 7 countries. We reveal nine configurations predicting either high or low financial performance, which offers unique insights into the multitude of pathways founders can take to succeed and advances several streams of literature.

ENT: Entrepreneurial Orientation and the Creative Constraint of Corporate Political Activity 

Author: **Varkey Titus**, *U. of Nebraska, Lincoln*
Author: **Izuchukwu Evans Mbaraonye**, *U. of Nebraska, Lincoln*
Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*
Author: **Owen Nelson Parker**, *UT Arlington*

Organizations engage in corporate political activities (CPA) for a variety of reasons, though one widely accepted benefit is lowering a firm's overall level of uncertainty. Yet CPA comes with its own set of costs, including restricting new market opportunity exploitation as firms invest scarce resources in government relationships rather than market opportunities. We argue that CPA creates ties to the government that binds a firm's creative freedom, and this is too steep a cost for entrepreneurially oriented (EO) firms as EO firms prioritize experimentation to exploit new market opportunities, and embrace uncertainty. We also examine the contingent nature of this relationship based on two aspects of the focal firm's rivals: the extent to which rivals receive government subsidies, and the extent to which the rivals incur regulatory sanctions. We test our hypotheses on a sample of S&P 1500 firms and find support for our theorized model.

Corporate Entrepreneurship 1

Session Moderator: **Slawa Tomin**, *Paderborn U.*

ENT: How Non-Manual Employees Navigate Venture Idea Elaboration: A Cognitive Frame Perspective on CE

Author: **Slawa Tomin**, *Paderborn U.*
Author: **Mirko Brunk**, -
Author: **Katrin Burmeister-Lamp**, *EBS U. of Business and Law*
Author: **Rudy Kabst**, *U. of Paderborn*

Championing, experimenting, and re-adjusting new venture ideas are imperative for successful corporate entrepreneurship (CE). Although these activities are mostly performed by non-managerial employees (NMEs), prior research predominantly focuses on senior and middle managers' entrepreneurial behavior leaving a gap in understanding NMEs' role in CE. Drawing on cognitive frame theory, we seek to understand how NMEs' cognition shapes new venture idea elaboration in the corporate venture inception phase. By means of an inductive qualitative study with 33 informants from two organizations, our analysis reveals that NMEs' collaboration results in a convergence or divergence of their contracted and expanded frames that, in turn, determine whether a dominant new venture idea emerges and is championed to senior management.

ENT: The Influence of Training on Internal Corporate Venturing Behavior: Evidence from a Field Experiment

Author: **Slawa Tomin**, *Paderborn U.*
Author: **Holger Steinmetz**, *U. of Paderborn*
Author: **Bernhard Wach**, *Bielefeld UAS*
Author: **Rodrigo Isidor**, *U. of Bayreuth*

To encounter uncertainty effectively in corporate entrepreneurial activities, employees must proficiently learn. We position the lean startup framework as an effective foundation from which to foster employees' entrepreneurial activity (EEA) in established firms and examine whether and why lean startup-based training (LST) exerts positive effects on EEA, highlighting mediating learning mechanisms. Using a pretest-posttest quasi-experiment with 276 employees from 12 organizations and an autoregressive mediation model, we reveal a significant effect of LST on lean startup knowledge, interrelationships among learning mechanisms, and a functional causal chain from LST via lean startup knowledge and entrepreneurial alertness to EEA.

ENT: On the Path to Net Zero: The Effect of Greenhouse Gas Emissions and Green Innovation on CVC

Author: **Fatima Shuwaikh**, *Leonard de Vinci Business School*
Author: **Yann Lelong**, *Catolica Lisbon School of Business and Economics*

Against the backdrop of the decarbonization of the world, this paper aims to analyze the impacts of greenhouse gas (GHG) emissions, as a proxy for environmental performance, as well as green innovation on corporate investors' financial performance. The sample consists of 133 U.S. firms with corporate venture capital (CVC) activity between 2002-2019. The findings reveal that both environmental performance and green innovation positively affect corporate investors' financial performance. Moreover, the combined effect of environmental performance and green innovation on financial performance is examined, suggesting a positive relationship. These findings contribute to the ongoing debate on the role of corporations in reaching net zero emissions. The results of this study indicate that corporate investors should have a financial interest to reduce their emissions and drive green innovations.

ENT: Better disagree? Corporate Venture Evolution and Motives among Parent Firm and Corporate Ventures

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Jeff Covin**, *Indiana U.*
Author: **Till Marius Gantert**, *U. of Bayreuth*
Author: **Maximilian Deist**, *U. of Bayreuth*
Author: **Robert P. Garrett**, *U. of Louisville*

The strategies of internal corporate ventures generally evolve as these new businesses explore their business environments. Parent firms and venture's motives guide corporate venture strategic evolution. Deviating from common belief on the merits of consensus, our research uses a dialectical process theory lens on strategic change and hypothesizes that venture founding motive divergence influences corporate venture strategic evolution. Our empirical findings on dyadic data from parent firms and from their corporate internal ventures reveal contextualized effects about how venture founding motive divergence is associated with the degree to which ventures strategically evolve. We reveal that the advantages of motive divergence depend on dynamism of the environment into which the venture is launched as well as the venture's level of operations autonomy.

Crowdfunding 4

Session Moderator: **Thomas Houston Allison**, *Texas Christian U.*

ENT: Skin Tone Bias in Crowdfunded Microlending ✈️ 🗣️ 🙌

Author: **Aaron Anglin**, *Texas Christian U.*
Author: **Thomas Houston Allison**, *Texas Christian U.*
Author: **Blakley Chase Davis**, *Virginia Commonwealth U.*
Author: **Benjamin Warnick**, *Washington State U.*
Author: **Alexis Nicole Smith**, *Oklahoma State U.*

Entrepreneurs of color often face discrimination when seeking financial capital. The literature, however, is devoid of theory on how biases surrounding skin color per se shape access to capital, with most research focusing on racial categorization (e.g., White versus non-White). We explore the role of colorism—a form of bias based on skin color, irrespective of race. We leverage theory on colorism, which is closely linked to theory on social status, to develop arguments concerning how entrepreneur skin color influences microloan funding. We then examine how two strategies commonly used for attracting funds in prosocial domains—use of negative language and personal disclosure—act as moderators of the colorism-funding relationship. Results indicate that entrepreneurs with very dark skin color and those with very light skin color face worse funding prospects compared to those with moderate skin darkness. Use of negative language exacerbates the influence of skin color, thereby challenging the notion the negatively framed appeals are an effective strategy for driving funds to prosocial causes. Personal self-disclosure, however, mitigates the influence of skin color. Broadly, we advance research on bias and discrimination against entrepreneurs of color, while drawing attention to the inherent, setting-driven complexity of colorism.

ENT: A Language Expectancy Theory Perspective on Entrepreneurs' Political Expressions in Crowdfunding 🖥️

Author: **Fizza Kanwal**, *U. of North Texas*
Author: **Jeffrey Chandler**, *U. of North Texas*
Author: **Jeremy Collin Short**, *U. of North Texas*

Drawing from language expectancy theory and political psychology research, we investigate how entrepreneurs' language-based expressions of their political ideology influences the performance of their crowdfunding campaigns. Since crowdfunding is considered a politically neutral platform by funders, we suggest that entrepreneurs' expressing more extreme political ideologies – regardless of the specific ideology – creates a negative language violation that lowers the likelihood that their campaigns are funded. Using this logic, we specifically argue that there is a curvilinear (inverted-U) relationship between entrepreneurs' language-based expressions of their political ideology and crowdfunding performance. As source credibility is the central boundary condition for language expectancy theory predictions, we also suggest that this relationship is mitigated by entrepreneurial credibility. Specifically, we argue that an entrepreneur's experience, media usage, and third-party endorsements weaken the curvilinear (inverted-U) relationship between entrepreneurs' language-based expressions of their political ideology and crowdfunding performance. Based on a sample of 17,198 crowdfunding campaigns based in the United States, we find strong support for our theorizing.

ENT: Pitching to Win Hearts: The Effects of Relational Communication on Entrepreneurial Funding Pitches

Author: **Sai Kalvapalle**, *Erasmus U. Rotterdam*
Author: **Joep Cornelissen**, *Erasmus U. Rotterdam*
Author: **Magdalena Cholakova**, *Erasmus U. Rotterdam*

Entrepreneurial communication in funding pitches has long been considered a means of persuasion by which the pitching entrepreneur acquires resources. Angel investors on the receiving end of a pitch, however, report looking for more than just the attributes of an entrepreneur, prioritizing instead the 'interpersonal chemistry' and 'collaborative potential' they feel from an interaction when making investment decisions. Building on this existing literature, we introduce a relational view to funding pitches, that considers pitching as an exercise in relationship-building, as an alternative to the traditional model of communication as persuasion. In two experimental studies, we test the effects of verbal and nonverbal relational cues on perceptions of the entrepreneur's coachability, and how willing investors are to make mentorship and/or monetary commitments to the entrepreneur. Counter to what we theorize, we find that high levels of relational communication, that builds rapport and rhetorical identification between interactants, makes an entrepreneur appear less coachable, and thereby renders them as less likely to be mentored. This relationship is further mediated by perceptions of the entrepreneur's humility. We discuss theoretical and practical implications of these findings, and distinguish between social competence and coachability competence.

Author: **Rakesh Kumar Pati**, *Deakin U.*

The study investigates the impact of green orientation on crowdfunding success and the moderating role of project characteristics, i.e., project duration, project stage, and project innovativeness, on the green orientation-crowdfunding success relationship. We test our hypothesis using two studies. Our first study uses 151 energy and green technology crowdfunding ventures from the Indigogo platform. For our second study, we designed three experiments with four hypothetical green crowdfunding projects each and collected data from 119 crowdfunders about their likelihood of funding the projects. The results of both studies highlighted the significant positive impact of green orientation on crowdfunding success. Moreover, in line with our expectation, projects with longer duration and high innovativeness leverage the benefit of green orientation significantly higher than projects with shorter duration and low innovativeness, respectively. However, in contrast to our hypothesis, the impact of green orientation on crowdfunding success was much stronger among projects in advanced stages than in early stages. We also discuss the implication of our findings on research and practice.

Entrepreneurial Passion 1

Session Moderator: **Daniel M. Peat**, *U. of Cincinnati*

 ENT: [Translation of CEO's Objectivism into Social Responsibility: The Role of Entrepreneurial Passion](#)  

Author: **Karina Bogatyreva**, *Graduate School of Management St.Petersburg State U.*

Enterprising individuals are often portrayed as rational actors who maximize their self-interests through business venturing. At the same time, a growing number of SMEs employ social responsibility and sustainability strategies, incorporating collective interests into their business agenda. Drawing on the entrepreneurial identity literature, objectivism (rational egoism) philosophical perspective, and the concept of entrepreneurial passion, this study sets out to analyze the interplay between rational and emotional aspects of CEO's personal identity and address its implications for socially responsible behavior of his/her business. The research hypotheses are tested based on a sample of 333 Russian SMEs. The results suggest that CEOs whose personal identities are rooted in objectivism values, are less likely to develop social responsibility within their firms. At the same time, CEO's entrepreneurial passion offsets the negative effect of objectivism on social responsiveness of the venture. Implications are discussed.

ENT: [When Creation Becomes Fixation: Venture Obsession and Agentic Relationships](#)   

Author: **Daniel M. Peat**, *U. of Cincinnati*

Author: **Jaclyn Perrmann**, *Northern Kentucky U.*

Author: **Marcia Lensges**, *Xavier U.*

Traditionally, agency theory in strategic management research is predicated on a self-interest relationship between an agent and a principal. However, there is evidence from recent literature that this conceptualization is overly simple for entrepreneurial ventures where the agent is the entrepreneur and the principal is the investor. Specifically, when entrepreneurial passion becomes venture obsession, entrepreneurs become willing to sacrifice their own self-interest as well as the interest of other stakeholders for the interest of the venture, giving rise to obsessive agency. We theorize on the agentic relationships and propose a model extending recent work on agency theory, entrepreneurial passion, and venture-related obsession.

ENT: [Performance Implications for Passion and Sleep Quality Among Entrepreneurs During COVID-19](#) 

Author: **Fredrick Rice**, *UT Arlington*

Author: **Pyayt Phyo Oo**, *U. of Texas At Arlington*

Author: **Wendy J. Casper**, *U. of Texas At Arlington*

Research in entrepreneurial passion has stated passion as a double-edged sword for the well-being and success of entrepreneurs. Among various elements of well-being, sleep quality has gained significant attentions from entrepreneurship scholars in recent years. Yet, we still do not know how passion affects sleep quality of entrepreneurs, particularly in the time of crisis. This study addresses this gap by drawing upon the Dualistic Model of Passion and provide theoretical predictions on how harmonious passion and obsessive passion influences well-being and success of entrepreneurs. We validate our predictions using a longitudinal study with 302 entrepreneurs during the COVID-19 crisis, and provide empirical evidence on how sleep quality plays as a underlying mechanism to explain effects of different types of passion on entrepreneurial success. Specifically, our results show that harmonious passion positively influences entrepreneurial success through sleep quality while obsessive passion influences on the success negatively.

ENT: [Drivers of Entrepreneurial Passion Among Graduates in Venture Creation Programs](#)  

Author: **Jonas Gabrielsson**, *Halmstad U.*

Author: **Nataliya Galan**, *U. West*

Author: **Diamanto Politis**, *Lund U., School of Economics and Management*

We develop and test an analytical framework that builds on experiential learning theory to explore drivers of entrepreneurial passion among graduates from venture creation programs (VCP). The framework identifies two main sources of experiential learning (direct and vicarious experience), and three temporal vantage points (pre-, peri- and post-education) where such experiences may occur. We employ fsQCA analysis on a sample of graduates from a Swedish university to identify causal paths leading to configurations of experiences that ultimately lead to higher entrepreneurial passion. Overall, analyses yielded a total of four effective configurations where each represents a combination of present or absent conditions that are jointly sufficient for producing the indicated outcome. While both direct and vicarious experiential learning in combination with other causal conditions can drive high entrepreneurial passion among VCP graduates, the results suggest strongest evidence for causal relations between direct experiential learning and high entrepreneurial passion. Moreover, the results suggest that post- and peri-educational experiences have stronger causal impact compared to pre-educational experiences.

Family Business and Finance 1

Session Moderator: **Timur Uman**, *Jönköping International Business School*

ENT: Auditing in Family Firms: A Literature Review

Author: **Miguel Gil**, *Jönköping International Business School*
Author: **Timur Uman**, *Jönköping International Business School*
Author: **Martin RW Hiebl**, -
Author: **Steffen Seifner**, *U. of Siegen*

In recent years, we can observe a noteworthy rise in interest in auditing research on family firms. Although many studies have been published in various scientific journals on this topic, these studies thus far have mostly remained unconnected. Therefore, in this paper, we present a synthesis of existing research on auditing in family firms. Our findings suggest that many auditing-related issues, such as audit fees, audit quality, and auditor choice, greatly differ between family firms and non-family businesses. Significant heterogeneity in auditing also exists within the large group of family firms. These findings indicate that future auditing research should investigate family influence on auditing in more depth or—in quantitative empirical settings—at least control for family influence. In addition, we can identify various gaps in current knowledge on auditing in family firms. Thus, we conclude this paper with an array of important future research avenues in this field.

ENT: Family Firms Going Public: the Choice of the CEO at an Initial Public Offering

Author: **Alessandro Cirillo**, *U. of Naples Federico II*
Author: **Emmadonata Carbone**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Salvatore Sciascia**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

Building on the signalling theory, the present study theorizes that family overhang, which indicates the quota of shares retained by the family over the quota of shares offered at IPO, positively affects the likelihood of choosing a non-family CEO versus a founder family CEO or a non-founder family CEO at the IPO stage. That is, family IPOs use the non-family CEO status as a non-family related signal for the market. Yet, in choosing between a founder family CEO and a non-founder family CEO at the IPO stage, the former is more likely to be selected. Additionally, family generational involvement strengthens the above-mentioned relationships. Drawing from a sample of Italian family firm IPOs, important theoretical contributions flowing from our study are shared in the concluding section.

ENT: Private Equity and Family Firms - Barbarians on the Yard: A Vignette Study

Author: **Christopher Khoury**, *Doctoral Candidate - WHU Otto Beisheim School of Management*
Author: **Elias Kurta**, *Doctoral Candidate - WHU Otto Beisheim School of Management*
Author: **Nadine Kammerlander**, *WHU - Otto Beisheim School of Management*

External succession through the private equity route has recently become a more common option for family firms. Drawing on the socioemotional wealth (SEW) perspective, we study what factors influence the selling decision of family firm owners and managers and look at the moderating role of family firm portfolios. Based on a unique vignette study conducted with 200 vignette responses by family firm owners and managers, we unveil that levels of SEW and financial performance influence the propensity to sell. Surprisingly, the existence of family firm portfolios only significantly moderates the relationship between innovation performance and the propensity to sell. Our research provides important implications for research on family firm external succession and the SEW literature, contributing insights on the factors influencing decisions on the private equity succession route

Paper is NOT Available. Please contact the author(s).

ENT: Why Family Firms Sell or Do Not Sell Shares to Investors

Author: **Elias Kurta**, *Doctoral Candidate - WHU Otto Beisheim School of Management*
Author: **Christopher Khoury**, *Doctoral Candidate - WHU Otto Beisheim School of Management*
Author: **Nadine Kammerlander**, *WHU - Otto Beisheim School of Management*

This study extends the research in the field of external succession in family firms. It contributes to the literature by analyzing the drivers of family firm owner managers selling a minority stake to a strategic investor. This type of external succession might be of great interest to family firms because family firm owner managers are able to secure control over the firm and hence preserve socioemotional wealth while simultaneously generating additional financing as well as gaining strategic and managerial knowhow. Likewise, minority investments in family firms might be also of high interest to strategic investors thus enabling close collaborations (e.g., in R&D, purchasing and sales), with minor equity investment. Based on the socioemotional wealth perspective we hypothesize that the degree of family prominence, the degree of employee orientation and a pure family management influence the willingness to sell. In addition, we hypothesize that the moderating effect of a below-average financial performance reverses the influence of the abovementioned direct effects. We test our hypotheses using a vignette study leveraging 327 observations from family firm owner managers.

Governance and Strategy

Session Moderator: **Tang Wang**, *U. of Central Florida*

ENT: Does Owners' Experience Matter? The Influence of Matching and Governance Experience on Firm Growth 

Author: **Jannis Von Nitzsch**, *TUM School of Management, Technical U. of Munich*

Author: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

Author: **Ed Saiedi**, *BI Norwegian Business School*

We integrate the emerging literature stream on the strategic role of firm owners' with Penrosean growth theory to investigate how two types of owners' experience – matching and governance experience – influence firm growth. Firm growth is highly dependent on the effective allocation and orchestration of resources and owners' have the ultimate discretion over them. However, research has largely neglected how owners' idiosyncratic experiences affect firms' resource deployment and consequent growth. Specifically, we theorize that the firm owners' experience in matching and governing resources positively affects firm growth and that this effect is contingent on firm age as well as the shareholder structure of the firm. Combining archival with LinkedIn-data we create a unique longitudinal sample of 2,607 German firms to test our hypotheses. We find a positive relationship between firm owners' matching and governance experience and firm growth. Further, we find that firm age, as well as family ties and institutional shareholders within the firm mitigate the positive relationship between the majority shareholders' governance experience and growth. Our findings make important contributions to research on the strategic role of owners' capabilities and firm growth.

ENT: Breaking The Imprint: When Are VCs Able To Change Organizational Structures In New Ventures?

Author: **Maximilian Lemmens**, *Heinrich-Heine U. of Dusseldorf*

Author: **Verena Rieger**, *Heinrich-Heine U. of Dusseldorf*

Imprinting theory suggests that in the first few months after founding, new ventures adopt characteristics of their founding environment to establish initial organizational structures, including their overarching approach toward functional differentiation, i.e., the extent to which organizations establish specialized organizational functions. Largely unknown are the conditions under which such initial imprints persist over time and under which circumstances adaptations may occur. To contribute to this discussion, the present study considers the entry of venture capitalists (VCs) as external resource providers with managerial guidance as an event that can alter an organization's initial approach toward functional differentiation. We use data from 333 new ventures that include profiles of 64,835 former and current employees, including their functional and hierarchical positions, to derive information about a venture's organizational structures over time. Our findings indicate that the approach toward functional differentiation initiated in the founding period persists in subsequent periods. However, the entry of VCs can indeed lead to deviations from the initial imprint, but only if VCs have sufficient experience. This suggests that the authority derived from past experiences is particularly effective in triggering divergence from initial imprints.

ENT: CEO's Power and Information Processing: Explaining Strategic Change in Entrepreneurial Firms

Author: **Tang Wang**, *U. of Central Florida*

The tumult of internal and external changes places a premium on venture CEO's power and strategic change. Based on CEO's information processing capability, we develop a novel theory on CEO's power and the directional focus and stability of strategic change. Using both archival data of post-IPO ventures and survey sample of venture CEOs, we find a positive relationship between CEO's power and the directional focus and stability of strategic change. This effect is moderated by the business diversification and CEO's political connections. This study contributes to CEO's power, information processing, and strategic change in entrepreneurial firms.

ENT: Isolating the Performance Implications of New Venture Status

Author: **Liang Wang**, *Nottingham U. Business School China*

Author: **Qing Dai**, *Nottingham U. Business School China*

Author: **Yan Gao**, *Harbin Engineering U.*

New ventures are unique to established firms in various meaningful ways, but the performance implications of the new venture status per se have remained ambiguous. To bridge this literature gap, this paper develops and verifies three theories on the linkage between new venture status and firm performance, namely competitive vulnerability, resource scarcity, and strategic flexibility. The first two theories posit an adverse effect of new venture status, which is contingent respectively on business differentiation and resource endowment. The third theory highlights a positive influence of new venture status, which is more pronounced for firms with weaker dynamic capabilities. Evidence from a sample of new and established firms in China shows that the direct effect of new venture status is negative but insignificant. Neither business differentiation nor dynamic capabilities moderates the relationship. However, low resource endowment reinforces the negative influence of new venture status. The findings, therefore, position resource scarcity as the pathway new venture status shapes firm performance rather than competitive vulnerability or strategic flexibility. Our nuanced, synthetic analysis clarifies the confusion as to whether and how newness is good or bad while generating useful implications for the creation and management of startups.

Author: **Alloysius Marcus Newenham-Kahindi**, *U. of Victoria*

Using a unique context (three refugee camps in Western Tanzania), we present field data findings in entrepreneurship regarding nascent markets with the purpose of adding nuances to existing understandings of how entrepreneurs create and develop nascent markets. We find that entrepreneurs make use of strategies such as creativity, flexibility, and secrecy to create and develop their markets. We also find that entrepreneurs build mutually beneficial business models throughout the entrepreneurship process, targeting different sets of actors in each occasion.

ENT: Returnee Entrepreneurial Liabilities among the Forced and Voluntary Returnees in Ethiopia

Author: **Toli Jembere Amare**, -

Studies on returnee entrepreneurship remain insufficient regarding what deters return migrants' potential contribution to the local economy. By employing legitimacy and self-efficacy theories, this study aims to provide evidence on the challenges of returnee entrepreneurship in Ethiopia by comparing voluntary returnees and forced returnees running a business in an environment they had been absent from for a prolonged period. We used qualitative interviews to abductively study the challenges returnees undergo as business owners. We interviewed 10 voluntary returnees and 14 forced returnees who are running a business in Ethiopia. The interview data was fed to Nvivo 12 software for coding and category development. We observe that returnee entrepreneurs face three main challenges that we collectively label as a returnee liability; institutional inertia, unrealized expectation, and readjustment crises. However, challenges interact together to constrain returnee endeavors. As we compare the forced and voluntary returnees, we observe that the challenges tend to converge at the institutional level, but manifest in different forms and magnitude among the two groups regarding expectation and readjustment crises. For the forced returnees, migration was found to contribute to the depreciation of their human capital, different from the positive role of migration in the literature. Implications of the study have been discussed.

 **ENT: Stigma and Immigrant Entrepreneurship: Black September, Ethnic Enclaves, and New Venture Performance**  

Author: **Essam M. Boraey**, *U. of Connecticut*
Author: **Loren H. Rich**, *U. of Utah, David Eccles School of Business*

Prior research on immigrant entrepreneurship has largely overlooked the difficulties faced by stigmatized immigrant groups and the strategies that such immigrant groups can undertake to improve new venture performance. To address this issue, we examine immigrant entrepreneurship in Jordan. We find that stigmatized immigrant entrepreneurs in Jordan are more negatively affected by government practices than native and non-stigmatized immigrant entrepreneurs. Moreover, we find that stigmatized entrepreneurs can partially mitigate these effects by founding their ventures in established ethnic enclaves where entrepreneurs can access brokers with social ties that can help overcome discrimination. Empirically, we examine this phenomenon using data on new venture performance of 8756 entrepreneurs in the Hashemite Kingdom of Jordan from 2003 to 2013 and supplemented with 60 qualitative interviews.

Author: **Benjamin A. Campbell**, *Ohio State U.*

Liabilities of foreignness are particularly salient for immigrant entrepreneurs because such entrepreneurs cross international borders and establish new ventures in an institutional environment that differs from that of their previous experiences. However, most existing theory in this space has focused on multinational enterprises and has not integrated the unique characteristics and constraints facing immigrant entrepreneurs. Accordingly, we draw on institutional theory to develop a theoretical framework underpinning the liability of foreignness of immigrant entrepreneurs. We then extend this framework to propose behaviors that immigrant-founded ventures may implement to navigate the liability of foreignness. In so doing, we highlight the importance of navigating isomorphic pressures in order to gain the legitimacy and resources that support success in a new environment. We test our theory using data from the US Census Bureau's Survey of Business Owners. We find that, ceteris paribus, the performance of immigrant-founded firms is consistent with facing liabilities of foreignness and those ventures that best assimilate, combine, and apply knowledge from their various institutional settings/background will reap the greatest performance benefits. Further, native-founded ventures that integrate multicultural experiences outperform non-multicultural venture. We also find that behaviors that increase the institutional isomorphism of immigrant founded ventures - including co-founding with a native, conducting business in English, and operating in a globalized context - reduce the performance gap between immigrant-founded ventures and native-founded ventures. Our analysis thus demonstrates the importance of isomorphism in mitigating and overcoming the liability of foreignness facing immigrant-founded ventures.

ENT: The Role of Cognitive Legitimacy in Social Entrepreneurship: A Multilevel, Cross-country Analysis 

Author: **Xing Li**, *Utrecht U. School of Economics*

Author: **Niels Bosma**, *Utrecht U.*

Author: **Wanxiang Cai**, *Utrecht U. School of Economics*

Despite the importance of cognitive legitimacy in new organization form development, previous research pays less attention to social enterprises' cognitive legitimacy. We explore how the social enterprises obtain cognitive legitimacy from their prevalence and the legitimacy of business and nonprofit categories (i.e., legitimacy spillovers). Using data from the Global Entrepreneurship Monitor 2015, we find that both legitimacy spillovers from business and nonprofit organizations and the perceived density of social enterprises are significantly related to individuals' engagement in social enterprise. Moreover, the legitimacy spillover effects are more important when individuals perceive a lower density of social enterprises. Our study contributes to the research on legitimacy spillover and the legitimacy of social enterprises.

ENT: Spillovers in Social Entrepreneurship: Spatial Proximity and Microfinance Performance

Author: **Knar Khachatryan**, *American U. of Armenia*

Author: **Aleksandr Grigoryan**, *American U. of Armenia*

Author: **Valentina Hartarska**, *Auburn U.*

Author: **Roy Mersland**, *full professor*

We examine the geographical proximity consequences for a distinct type of social enterprises – microfinance institutions – building on knowledge spillover entrepreneurship concept. The data covers 1,536 annual observations from 378 MFIs from 70 countries for the period 2000 to 2015. We use a unique empirical approach to provide evidence of the interlinkages between the spatial proximity and cross-border entrepreneurial knowledge spillovers. Our Seemingly Unrelated Regressions method allows to capture the simultaneous impact of spatial factors on the three dimensions of MFI performance- return-on-asset, number active borrowers and average loan per borrower. Our findings indicate that social dimensions of performance exhibit "spatial complementarity".

Paper is NOT Available. Please contact the author(s).

ENT: Modes, Models, and Momentum (M3) in Decision-Making: Entrepreneurs Collaborating on Complex Problems 

Author: **Emmalinde Roelofsse**, *U. of Northern Iowa*

M3 theory introduces a descriptive framework for entrepreneurial innovation through collaboration in pursuit of solutions to more complex market problems. Through a Social Realism epistemological lens, M3 coding presents complex strategic positions as essentialist (via modes), relative (via models), and dynamic (via momentum) to plot the dynamic trajectory of innovation transmuting over time. At a fundamental level, the M3 theory identifies a consistent set of rules that decision-makers intentionally or unintentionally engage with or ignore to take strategic positions based on four integrated yet polarized pairs of modes: +S, +R and +C, +D. Systematic (+S) vs. responsive (+R) strategies, juxtaposed the tension of processes dedicated to increasingly sophisticated +S bounded rational cognitive processes; planning, compartmentalizing, regulating emotions, against increasingly +R sensitized intuiting; reflectivity, associating, emotionally expressive action. The second pair, conforming (+C), vs. differentiating (+D) strategies, intersects but expresses the tension between +C's converging; through adapting or conveying socially perceived superior norms, or exploiting existing resources and power, against +D's departure from traditional norms; with exploration; novelty-seeking, sabotage, risk-taking, experimentation, play, flexibility, discovery. Finally, dynamism (momentum) informs how strategic modes and models of decision-making improve and adjust in sophistication under the pressure and demands of the four drives (+L). The M3 theory is informed by three distinct but interrelated and simultaneous empirical streams of data: (i) field data from five ethnographic case studies, with research participant feedback loops; (ii) the mapping of 200+ peer reviewed decision-making models; and (iii) prototyping the principles in the construction of the emergent M3 theory.

ENT: Lokasamgraha: An Indigenous Construct for Social Entrepreneurship from India 

Author: **Divakar Singh**, *Ambedkar U. Delhi*

Author: **Richa Awasthy**, *Ambedkar U. Delhi*

The purpose of this study is to explore the role of the indigenous construct lokasamgraha in the field of social entrepreneurship. Lokasamgraha discusses universal welfare, which has the potential to make a significant contribution to this field. Lokasamgraha was identified through content analysis of the Bhagwat Gita using the methodological approaches advanced by Bhawuk (2010). Social enterprises are a special kind of organization due to their ability to address social issues in a sustainable manner. However, creating social and ecological impact and remaining financially sustainable is a very challenging task and, if not managed properly, may lead to mission drift. Therefore, we investigated the prevalent tensions in social enterprises using paradox theory as a theoretical lens. We developed a framework to demonstrate how lokasamgraha can aid social enterprises to manage their tensions and achieve the triple bottom line goal. Furthermore, we validated our framework by citing an Indian social enterprise as evidence of the lokasamgraha practice. Finally, we discussed the implications for various stakeholders and provided direction for future research before we concluded.

Institutions and Entrepreneurship 1

Session Moderator: **Chris Welter**, *Miami U. Ohio*

 **ENT: Institutional Reforms and Entrepreneurial Growth Ambitions**  

Author: **Pourya Darnihamedani**, *Rotterdam School of Management, Erasmus U.*
Author: **Joern Hendrich Block**, *U. of Trier*

Institutional reforms have resulted in deep transformations of the global economy. Yet, accumulating insights about the effects of institutional reforms has been inconclusive and the theoretical development has been criticized to be largely lacking. Our study applies categorization theory to argue that flexibility- and stability-enhancing reforms may affect entrepreneurial growth ambitions in distinct ways, particularly depending on whether new versus established or innovative versus imitative entrepreneurs perceive specific reforms as an opportunity or a threat. We use a multisource and multilevel dataset including more than 1.5 million individuals from 65 countries covering 2002-2016. Our findings indicate that – on average – flexibility-enhancing reforms lead to higher growth ambitions yet they are particularly favored by established and imitative entrepreneurs. On the contrary, stability-enhancing reforms lead to higher growth ambitions of new and innovative entrepreneurs. With that, our study provides important theoretical and practical implications about the consequences of institutional reforms for different types of entrepreneurs.

ENT: What Can Mainstream Entrepreneurship Learn from Transnational Entrepreneurs?

Author: **Hamizah A Hamid**, *U. Kebangsaan Malaysia*
Author: **Robert J. Pidduck**, *Old Dominion U.*
Author: **Alexander Newman**, *Deakin U.*
Author: **Abu Hanifah Ayob**, *U. Kebangsaan Malaysia*
Author: **Farhana Sidek**, *National U. of Malaysia*

Transnationalism in entrepreneurship has predominantly been examined in the context of transnational individuals functioning as multi-resource arbitrageurs between their home and host countries. In this systematic review, we unpack the ways in which transnational entrepreneurs leverage a variety of resources to discover, enact, evaluate, and exploit opportunities across borders, shedding light on both foundational research questions and burgeoning research conversations in the field of entrepreneurship. We review and synthesise the theoretical perspectives, methodologies, and contexts reflected in the past decade of research since the concept of transnational entrepreneurship was introduced. As research on transnational entrepreneurship has emerged in multiple adjacent fields such as strategy, international business, economics, and sociology, we adopt a context-sensitive lens to make sense of these multiple, yet largely fragmented insights, with the goal of expanding the focus of inquiry and propelling the discourse of transnational entrepreneurship beyond niche subfields, to advance entrepreneurship research more broadly.

ENT: Entrepreneurial Responses to Heterogenous Institution Contexts 

Author: **Chris Welter**, *Miami U. Ohio*
Author: **Susan L. Young**, *Kennesaw State U.*

The institutional environment—with its potential uncertainty—in which an entrepreneur chooses to operate plays a key role in how entrepreneurs evaluate opportunities, yet opportunity evaluation research rarely takes this into account. We evaluate the fragmented nature of the research to date and develop a comprehensive typology. Through consideration of variations in an entrepreneur's motivation and knowledge and drawing on institutional economics theory, our typology has four potential responses: (1) institutional entrepreneurship, (2) institutional bricolage, (3) institutional avoidance, and (4) institutional bridging. We introduce the institutional bridging construct and provide a deeper understanding of opportunity evaluation and institutional uncertainty.

ENT: Financial Resources and New Venture Growth: Effects of Venture Origin and Institutional Environment 

Author: **Saehwa Hong**, *Kutztown U. of Pennsylvania*
Author: **Hyung-Deok Shin**, *Hongik U. College of Business*

Financial resources are generally known to have a positive impact on new venture growth, but various conditions may play complex roles on this relationship. This study investigated the roles of venture origin and characteristics of institutional environment in the context of the relationship between financial resources and growth of new ventures. We posit that financial resources are more critical for independent ventures (IVs) compared to corporate ventures (CVs), because IVs have more discretion and greater incentives for growth and leading them to use financial resources more extensively than CVs. Furthermore, we posit that financial resources are more critical for IVs' growth in market-oriented institutional environment than in government-driven institutional environment, because market-oriented institutional environment requires more discretionary resource management for IVs and thus financial resources should play more critical roles in market-oriented institutional environment. We find broad support for these arguments in a comprehensive data set representing South Korean new venture firms from 1991 to 2009.

Discussant: **Jennifer E Jennings**, *U. of Alberta*
Discussant: **Jennifer Randles**, *California State U., Fresno*

Countries around the world have shared understanding and unconscious biases of what abilities and personality characteristics men and women possess, and how each gender should or should not behave. Gender stereotypes tend to cast men as more competent, strong, and agentic, and women as more communal, warm, and other-oriented compared to members of the opposite sex. Partly because of such gender stereotypes, men and women are perceived and evaluated differently, and they perceive and evaluate themselves differently. Gender stereotypes are consequential: they impact women’s career choices and advancement to the management and top-level positions in the corporate sector, their likelihood of founding new ventures and receiving key financial, human capital, and network resources necessary for scaling up their businesses, their job performance, cognitive resources, and professional fulfillment. Our symposium makes a direct contribution to the 2022 AOM’s theme “Creating a Better World Together”, promoting cross-disciplinary dialogue among scholars from (social) psychology, sociology, entrepreneurship, economics, and organization theory to deepen our understand of ‘how, why, and when’ gender stereotypes are likely to influence male-female differentials in the corporate leadership and entrepreneurship. Our symposium has two goals. We bring together scholars to take stock of the literature, identify puzzles in extant work and future research directions, and build bridges for interdisciplinary research. Our symposium features pioneers from (social) psychology whose work on stereotypes has been path-breaking and is considered foundational in research on attitudes, gender, and diversity, along with strong emerging scholars working at the ‘biases and entrepreneurship’ research nexus. Our second goal is to discuss the effectiveness of existing behavioral interventions to combat gender stereotypes and increase gender leadership diversity in both labor market contexts. The symposium is designed to foster a dialogue between the panelists, discussants, and the audience centered around five discussion topics. It will close with the organizers’ summary synthesizing the scholarly exchange. The symposium is designed for researchers in ENT, OMT, and GDO but could be of interest to a much broader AoM audience interested in research on stereotypes, diversity in leadership and innovation, and organizational performance.

IM: Using Comparative Network Analysis to Explore Trust Relationships in Network Societies → 📄

Author: **Sven Horak**, *St. John's U.*

Author: **Andreas Klein**, *Niederrhein U. OAS*

Author: **Xiaomei Li**, *Tianjin U.*

Author: **Anna Svirina**, *TISBI U. of Management*

Though deviations in the nature of trust have been recognized and regarded influential for conducting international business activities successfully, empirical research into the trust context of network societies remains scarce today. We suggest a theory that reflects the multiplicity and peculiarity of trust and its relational and environmental context. By surveying 882 respondents from three countries (China, Russia, and South Korea) data suggests that with increased network importance, in-group trust increases alike. Moreover, individuals drawing predominantly on out-group trust attach less importance to in-group trust. With increases in nonspecific trust, both in-group and out-group trust increases. Hence, we find a multiplicity of trust relationships that call for a reexamination of the conventional bipolar view on trust relationships.

IM: Hidden Threats and Overlooked Solutions: Unnoticed Risks and Firm Action in Latin America → 📄

Author: **Daniel Friel**, *U. de San Andres*

Work on institutional distance has documented a number of challenges that multinational corporations face when they begin operations in distant countries. Although it has also focused principally on how socio-political risks generated by the difficulties can be mitigated by political ties, the manners in which local firms address these problems has been overlooked. At the same time, scholars in this field have not fully documented the array of socio-political challenges firms face. The field of international business needs theories that go beyond those based on new institutional economics to discover new sources of risk and how they are mitigated. I argue that the varieties of capitalism approach provides the proper framework for undertaking this type of work. I use this approach to examine how an Argentine multilateral developed a network organizational structure that effectively mitigated these risks in inter-firm relations and finance in Argentina and failed to mitigate such risks in the areas of inter-firm relations and employee relations in Brazil. I also coin the term indigenous assets to describe the type of knowledge MNEs need to acquire before entering new countries. This article concludes by explaining the relevance of its findings for theory and praxis.

IM: How do Private Sector Firms Respond to a Reduction in Competition from the Public Sector? → 🗣️ 📄

Author: **Arzi Adbi**, *NUS Business School*

Author: **Anant Mishra**, *U. of Minnesota*

Author: **Chirantan Chatterjee**, *U. of Sussex*

This study advances the strategy and international business (IB) literature on grand challenges by examining how private sector firms may respond to a reduction in competition from the public sector. Our analysis exploits an unexpected suspension of production licenses of the vaccine-manufacturing public sector units in India as an exogenous source of reduction in competition for the private sector firms. Although the suspension presented a window of opportunity for private sector firms to address unmet market demand, it was laden with uncertainty and was widely challenged due to its threat to vaccine self-sufficiency of the country. Despite the uncertainty, we find that the suspension of production licenses of the public sector units was associated with performance gains of private sector firms in the Indian vaccines market with the gains driven largely by new product introductions. Interestingly, domestic firms gained significantly from this window of opportunity, but foreign firms did not gain as much. Further analysis reveals evidence of market entry, driven by domestic firms who entered the market in greater numbers and at a faster speed, compared to foreign firms. Finally, we find that the heterogeneity between domestic and foreign firms responses remained persistent even after the revocation of the PSUs supply suspension. Taken together, the study findings show that even a transitory and uncertain window of opportunity, arising from a sudden reduction in competition from the public sector, can lead to a persistent restructuring of the market via new product introductions and market entry by private sector firms operating in related markets.

Session Moderator: **Leon Prieto**, *Clayton State U.*

MH: **Closing Ranks: Professional Associations as a Mechanism for Strategic Advantage**  

Author: **Marrisa Joseph**, *Henley Business School, U. of Reading*

Through an exploration of the history of the Publishers Association (1896) and other prominent professional associations in the British Victorian publishing industry, this paper argues that professional associations can be viewed as vehicles for institutional change, as they can be instrumental in reproducing and legitimising practices, and can be important for the progression of professions and their activities (Greenwood, Suddaby, & Hinings, 2002; Millerson, 1964; Pemberton, 1994). Primarily, the Publishers Association was formed to uphold the Net Book Agreement (1900 – 1997) which prohibited the underselling of books in Britain for almost a century. Despite no longer enforcing the net book agreement, today the Publishers Association continues to represent the interests of the houses which are responsible for the bulk of Britain’s publishing output, ensuring that those who have the most influence in the industry have their interests represented at the highest level. Through an analysis of letters from business archives, newspaper articles and privately printed histories, this paper argues that some publishers, in particular the dominant London firms were able to garner a strategic advantage by pushing their collective interests through the Publishers Association which consequently prompted institutional change that lasted for generations, weaving a lasting imprint on the publishing industry which still exists to this day.

MH: **The Functional and Dysfunctional Properties of Family Governance: Insights from the Rothschilds**

Author: **Liena L. Kano**, *Haskayne School of Business, U. of Calgary*

Author: **Andrew Kent Johnston**, *Haskayne School of Business, U. of Calgary*

We examine the interplay between the functional and dysfunctional pursuit of noneconomic goals in the first three generations of the Rothschild bank. The period analyzed covers the founding of the firm in the late 18th century, up to the European revolutions of 1848. Using an analytic narrative approach, we identify instances where the founding family’s pursuit of socioemotional wealth (SEW) resulted in value creation, as well as instances where unconstrained pursuit of SEW and associated biases destroyed value. We observe that dysfunctional properties of SEW pursuit begin to outweigh its functional properties as the structural and managerial complexity of operations increases. The interplay of constructs such as SEW and bifurcation bias explains both the successes of the Rothchild bank, such as its dominant position in European finance in the middle of the 19th century, and the firm’s key failures, such as the failure to capture the American market.

MH: **Executive Training and Strategic Renewal: Theory and Historical Evidence** 

Author: **Juha-Antti Lamberg**, *U. of Jyväskylä*

Author: **Pasi Nevalainen**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Jarmo Seppälä**, *U. of Jyväskylä School of Business*

The literature remains ambiguous on the impact of corporate-specific executive training programs on organizational performance. Instead of considering economic and learning performance, we study executive training programs as platforms that political coalitions can use to promote or block strategic renewal processes. In our comparative historical study, we look at executive training in three different organizations. The findings suggest that the transformative results of executive training programs hinge on the interplay of four potential mechanisms: program organizers’ entrepreneurial skills, the characteristics of the organizational architecture, degree of ambiguity of strategic goals, and educational content of the training program. Extended to similar cases as studied here, skillful organizational actors may use executive training programs as vehicles in broader programs of strategic renewal. However, organizational architecture and/or strong political coalitions may block such attempts and marginalize executive training programs as ritualistic symbols of modern management.

MH: **The dynamics of Leveraging Organization History During Strategic Transformation**

Author: **Zahra Kashanizadeh**, *Amsterdam Business School, U. of Amsterdam*

Reference to the organizational history is an essential part of how managers determine what actions an organization should take in the present and future. However, prior research does not explain how references to different periods of the organization’s past are associated with different types of strategic transformation initiatives. In our longitudinal study of Ericsson, we explore various ways in which an incumbent firm can leverage its past through history frames to facilitate strategic transformation and legitimize nascent strategies. Our framework illustrates how a combination of environmental and organizational contextual factors influence the interpretation of organizational decision-makers and how they can accordingly frame the organization’s recent and distant past in their communications. Our findings reveal mechanisms through which senior managers can shape stakeholders’ understanding of change to navigate the tension between continuity and change.

CEO Attributes and Organizational Outcomes: Cognition, Power, and Gender

Session Moderator: **Midam Kim**, *U. of Kansas*

MOC: **Inconsistent Performance Feedback and Firm Internationalization: Can CEO Remove the Haze?**

Author: **Anita Kerai**, *IIM Kozhikode*

Research on performance aspiration argues that firms use multiple reference points, historical and social aspirations, to compare their performance. Consequently, these performance aspirational points sometimes time to inconsistent feedback – negative correlation between performance relative to historical and social aspiration – pose challenges for the decision-makers. We argue that the inconsistent performance feedback will lead to dissimilar behavior for firms with overlapping ownership and management configuration. We examine the how moderating role of different bases of chief executive officers' (CEO) power in the relationship between inconsistent performance feedback and internationalization. We tested our hypothesis in the context of internationalization within Indian family firms from 2008-2015. We find that CEOs' structural, ownership and prestige power increases reluctance for internationalization due to inconsistency in performance feedback whereas CEO expert power based on international experience has a positive effect on family firm internationalization.

MOC: **Think Leader, Think Deep Voice? CEO Voice Pitch and Gender**   

Author: **Midam Kim**, *U. of Kansas*

Finalist for MOC Division Best Paper on Diversity and Cognition Award

Several studies in evolutionary psychology, political science, and some in management have established that followers prefer their leaders to have lower-pitched voices. While most studies have explored male leader voices, the follower preference for lower-pitched leader voices has been found to be robust across a number of decision domains ranging from selecting aboriginal tribal leaders to paying CEOs. Drawing upon the follower-centric theories of leadership, we argue that gender will moderate this relationship with the effects of pitch becoming weaker, first, (1) when leaders are female, and second, (2) when followers are female. In a forced-choice lab study where followers (i.e., respondents listening to male and female CEOs' voices) must select the most trustworthy-sounding CEO among three choices, we replicate the main finding that followers perceive lower-pitched leader voices as being more trustworthy. However, this relationship is moderated when assessing female top executive voices with the effect of voice pitch being much lower than when assessing male CEOs. This finding suggests that followers may have a different leader prototype of what makes a female business leader trustworthy.

MOC: **The Effect of CEO Cognitive Simplicity on Firm-Level Strategic Dynamism** 

Author: **David Lohmar**, *Westfälische Wilhelms-U. Münster*

Author: **Christopher Jung**, *WWU Münster*

Author: **Stephan Nüesch**, *Westfälische Wilhelms-U. Münster*

Management scholars have pointed to the cognitive models of the chief executive officer (CEO) as an integral factor for strategic decision-making, generally assuming that with more simple models, strategic change and dynamism are impeded. We question this assumption and posit that it is, in fact, CEO cognitive simplicity that will facilitate strategic change. Building upon a novel linguistic tool based on CEOs' language patterns in the question-and-answer (Q&A) parts of earnings calls, we argue that CEO cognitive simplicity positively affects firm-level strategic dynamism. Moreover, we put forward a contingent view of this relationship and introduce CEO overconfidence and the firm's information-processing load (IPL) as crucial influences. Based on our Sample of Standard & Poor's 1500 (S&P 1500) firms, we find substantial evidence for our theorizing. In our firm-fixed effects regression and two-stage least square fixed-effects instrumental variable regression (2SLS FE), CEO cognitive simplicity positively affects firm-level dynamism. Moreover, overconfidence attenuates the CEO's cognitive simplicity-strategic dynamism relationship, while a decreasing IPL strengthens it. We conclude that, contrary to the assumption of cognitively simple models making organizations more resistant to strategic change (Miller, 1991, 1993), the opposite holds true. This carries substantial implications for management literature.

Voice and Deviance

Session Moderator: **Hayley Morrison**, *U. of Central Florida*

OB: I Did it My Way: Development and Validation of a Supervisor-Directed Constructive Deviance Scale 

Author: **Louisa Antonia Bloedorn**, *WHU – Otto Beisheim School of Management*
Author: **Miriam Muethel**, *WHU – Otto Beisheim School of Management*

We conceptualize and develop a scale assessing supervisor-directed constructive deviance (SCD). SCD refers to employees' deviance from their supervisors' instruction to promote the welfare of the organization or its members. Through six studies with 1528 individuals in total, we establish convergent, nomological, and discriminant validity of our five-item measure for SCD. Our findings indicate our newly developed SCD to be distinct from other forms of constructive and destructive deviance. Second, the SCD scale predicts job performance. Third, we show that role instrumentality as well as confidence in competence predict SCD. Overall, we show SCD to constitute a reliable and valid construct, complementing the landscape of constructive deviance and thus offering a more fine-grained understanding of deviance. Taken that constructive deviance is seen as a vehicle for increasing companies' competitive advantage in times of disruptive change, our paper thus makes an important contribution to this year's AOM Annual Meeting theme.

OB: The Paradoxical Relationship between Employee Burnout and Voice on Well-Being

Author: **Marissa Shandell**, *U. of Pennsylvania*
Author: **Michael Parke**, *The Wharton School, U. of Pennsylvania*

Employee burnout is a longstanding and ubiquitous problem facing organizations, and it has only grown more severe since the onset of the COVID-19 pandemic. Critically, organizational leaders will only be able to address issues surrounding burnout and employee well-being when employees are willing to honestly share their well-being concerns. However, we argue that a paradoxical relationship between employee burnout and voice exists. On the one hand, we propose that burnout is positively related to how important employees believe well-being issues are at work (issue importance), which positively relates to voice on well-being. By contrast, we argue that burnout is negatively related to employees' belief that their voice will influence others (voice instrumentality), which enhances voice on well-being. As such, those employees who want to speak up about well-being cannot, and those who can do not. We find support for these mixed effects of burnout across two field studies, including a pre-registered Study 2 with time-separated data that accounts for many potential confounds. We discuss the implications of our findings and propose a set of practical interventions that may encourage both employees who are burned out, and those who are not, to voice on well-being.

OB: Steadying the Ship after Rocking the Boat: the Effects of Voice Staging on Supervisor Hostility  

Author: **Hee Man Park**, *Pennsylvania State U.*
Author: **Daniel Newton**, *U. of Iowa*
Author: **Nathan Black**, *U. of Iowa*

Despite its prosocial nature and organizational benefits, voice may still challenge and threaten supervisors. Specifically, voice can destabilize the social hierarchy at work, motivating supervisors to reassert themselves to regain control. This research examines when and how voice, employees' discretionary behavior to speak up with improvement-oriented communication, results in negative social consequences for voicers. Invoking theories on status motivation and status characteristics, we argue that subordinates who stage their voice in a way that threatens supervisor status in the organization become targets of supervisor hostility. We propose that public voice has an indirect effect on supervisor hostility targeted at the voicer through supervisor status threat, and that voicer's lack of preparation is a cue for low status that strengthens these indirect effects. In two samples that employ a critical incident technique (Study 1) and experiential sampling methodology (Study 2), we found support for our model. Our findings highlight the role of supervisor's relative status and voice staging to explain supervisors' reactions to voice, shedding greater light on supervisor hostility as a means to "steady the ship" after voicers "rock the boat."

Paper is Available to Meeting Registrants Only.

OB: Sanctioned for Speaking Up: Peer Punishment of Voice and the Buffering Effect of In-Group Status

Author: **Hayley Morrison**, *U. of Central Florida*
Author: **Steven Whiting**, *U. of Central Florida*
Author: **Mark G. Ehrhart**, *U. of Central Florida*
Author: **Alexander Madsen Sandvik**, *NHH Norwegian School of Economics*
Author: **Lauren Rachel Locklear**, *Texas Tech U.*

Voice research to date has emphasized the important role that supervisors play in voice behavior and the performance-based outcomes of this behavior. As a result, little is known about the role peers play in voice and the negative social consequences of voice behavior. Drawing on social identity theory and social exchange theory, we developed and tested a model examining the relationship between four different voice types (supportive, constructive, defensive, and destructive) and peer instigation of social sanctions (gossip, ostracism, and incivility) dependent upon the in-group status of the voicer. Using a round-robin design in a sample of 130 participants nested within 70 teams in Norway, we found a negative direct effect of supportive voice on social sanctions, but a positive direct effect of challenging and prohibitive forms of voice on social sanctions. Additionally, in-group status buffered voicers against social sanctions from peers at low levels of supportive voice and high levels of constructive, defensive, and destructive voice. Our results demonstrate the costs one can experience as a result of speaking up and highlight the important role that peers, voice types, and the social identity of voicers play in voice behavior.

Publishing Impactful Research in AMJ *Publishing Impactful Research in AMJ*

Organizer: **Susan Zaid**, *Academy of Management*
Presenter: **Marc Gruber**, *Ecole Polytechnique Fédérale de Lausanne*
Presenter: **Laszlo Tihanyi**, *Rice U.*

All scholars set out to publish high-quality and important research. The attributes of high quality research have been discussed at length in past commentaries (e.g., the “Publishing in AMJ” series of FTEs). What does it mean, though, for research to be important? One factor in evaluating importance is making a significant theoretical contribution—enriching, extending, and elaborating upon previous theoretical understandings of a phenomenon. A significant theoretical contribution is necessary for a high-quality paper. Indeed, we note psychologist Lewin’s (1952) adage that “there is nothing so practical as a good theory.” However, the consensus may be shifting away from a sole focus on theoretical contributions such that research is also viewed as important when it yields insights that have the potential to significantly change management practice in ways that better organizations and society (Tihanyi, 2020). Attend this session to meet with the award winners from the papers that have received AMJ’s Impact Award.

Discussant: **Davide Nicolini**, *U. of Warwick*

How can scholars create societal impact with their practice-based scholarship while delivering on required results in a competitive academic world? What does it mean to be an “engaged scholar” (Hoffman, 2021; Van de Ven, 2007), who produces “scholarly impact” (Aguinis et al., 2014; Aguinis et al., 2012; Friesike et al., 2021), and how “radical” (Ergene et al., 2021; Jarzabkowski, Dowell, et al., 2021) should we become? How can we help co-create a more desirable future through theorizing what does not (yet) exist (Gümsay & Reinecke, 2022)? By critically engaging with the vital AOM 2022 call for “creating a better world together”, this Panel Symposium will provide an inclusive space to address the challenge of creating impact through practice-based scholarship. Therefore, it will bring together distinguished senior scholars from different AOM DIGs who reflect upon the role and relevance of impact in practice-based research. Doing so, they will share their insights and knowledge by elaborating on (1) ways of creating impactful scholarship through practice-based research, and (2) opportunities of impactful engagement. Accordingly, this cross-divisional Panel Symposium strives to bring together interested attendees of the Academy’s Annual Meeting to jointly reflect on the impact we can create through and beyond practice-based research communities.

SIM: Creating organizational folk devils: The influence of moral panic on misconduct and spillover

Author: **Michael Seth Nalick**, *U. of Denver*
Author: **Andrew Schnackenberg**, *U. of Denver*

We introduce the moral panic perspective to consider the temporal process that occurs when external actors, in particular moral entrepreneurs and the media, engage in to re-categorize organizational actions into misconduct. This process can greatly influence how and when external stakeholders evaluate organizational actions and determine negative spillover for bystander organizations, and in turn, their counteractions. Specifically, we theorize that potential threats from negative spillover and substantial bystander counteractions are greater during the height of a moral panic compared to when it begins to subside. Exploring the dynamics surrounding the rise and fall of a moral panic, we offer new insights into the negative spillover and moral panic literatures.

SIM: The Price of Kindness: Micro Foundations and Cultural Roots of Organizational Bribery

Author: **Asda Chintakananda**, *National Institute of Development Administration (NIDA)*
Author: **Xiaoxiao Liu**, *Xiamen U.*

We analyze why people engage in organizational bribery, in particular countries in emerging markets with a relationship-oriented culture. Specifically, we conducted in-depth interviews among leaders in corporates from various industries in Thailand to understand how the cultural roots of bribery has challenged the implementation and effectiveness of the anti-corruption campaigns. By using a grounded theory approach to analyze the data, we identify a unique form of bribery of donation, motivated by kindness tradition and merit accumulation, rooted in Buddhist culture in the Thai context, which increases the economic and social cost for not participating in bribery. As such bribery is no longer perceived as a moral issue as portrayed in previous research. We develop a theoretical model of bribery based on our data structure and findings, and provide implications for both local and multinational firms, as well as policy makers in dealing with bribery in emerging markets.

SIM: Generalised Trust and Relation Centrim for Corruption as Perceived by Firms

Author: **Tolu Ifedapo Adebayo Olawejaju**, *Keele Business School, Keele U., U.K*
Author: **Jagannadha Tamvada**, *U. of Southampton*
Author: **Sharin McDowall-Enefiele**, *U. of Birmingham*

We investigate the role of generalised trust and relation centrim for corruption as perceived by 16,785 firms in 20 lower- and middle- income countries. The empirical results demonstrate that typically, higher levels of relation centrim and generalised trust are linked with corruption as perceived by firms. The results however show significant regional disparities suggesting that firms will need to be aware of these differences, as they are likely to determine their optimal strategic choices when entering or expanding their operations into new territories. For instance, in regions where increased friend centrim is associated with reduced corruption, firms can use weak ties more tactically but will need to be more careful with such weak ties in regions where increased friend centrim is associated with increased corruption.

SIM: Employee Voice after Organizational Wrongdoing: Affective and Analytic Judgments in Social Media

Author: **Michael Andreas Etter**, *King's College London*
Author: **Anika Marie Poli**, *Arizona State U.*
Author: **Jonathan Nicholas Bundy**, *Arizona State U.*
Author: **Donald A. Lange**, *Arizona State U.*

The literature on employee voice suggests that employees may express their concerns and judgments after organizational wrongdoing and therewith possibly trigger change for the better. However, managers often suppress and discourage such negative and critical voice within the boundaries of organizations. Over recent years, then, social media have created a new sphere where employees may express voice without the control and influence by managers and with wider public reach, which may pose a threat to organizations and their social evaluations due to negative emotions expressed in such judgments and due to the new temporal dynamics in social media. With this article we study this new form of employee voice expressed in social media after organizational wrongdoing. We analyse how organizational wrongdoing impacts affective and analytic aspects of judgments in social media and the new temporal dynamics of such judgment expression.

SIM: How Does Exposure to EITI Member Countries Affect Extractive Industry Conduct? 

Author: **Ivar Kolstad**, *NHH Norwegian School of Economics*

Author: **Arne Wiig**, *Chr. Michelsen Institute*

We analyze the effect of petroleum company exposure to host countries that are members of the Extractive Industry Transparency Initiative (EITI) on corporate conduct. To identify causal effects of company EITI exposure, we combine fixed effects models with a shift-share instrumental variable approach. Our results show that increased exposure to EITI member countries increases the amount of negative media attention related to environmental, social and governance (ESG) matters a company receives. This reflects both a significant increase in the range of ESG issues companies receive negative attention on, and an increase in the depth of criticism on individual issues, in particular corruption. The increased negative attention is unlikely to reflect a constructive exposure of companies to more transparent institutions, as company policy on corresponding ESG dimensions shows no improvement with increased EITI exposure. Our results instead suggest that EITI exposure is at best inconsequential for corporate behaviour, and at worst contributes to greenwashing of extractive company conduct.

Dorothy Harlow/McGraw Hill Best (Conference) Paper Award

In this exploratory study, we examine the role that employers play in skilled immigrants' employment integration by bringing together the experiences of newcomers with the insights of Canadian employers. Using a grounded theory approach, we analyze qualitative interview and focus group data from 48 newly arrived skilled immigrants and 41 employers to highlight the ways human resource management policies and practices shape the employment experiences of skilled immigrants. Our results indicate that while employers claim to value diversity and inclusion (D&I), most do not have coordinated policies or practices in place to promote equity for disadvantaged job seekers or employees. Even the few employers with D&I initiatives in place do not explicitly include immigrants as a group warranting special accommodation. For the most part, employers have a strong preference for Canadian education, experience, and workplace behaviour. From our results, we offer recommendations for organizations to better leverage the talents and contributions of skilled immigrant workers, critique the narrow lens through which immigrant employment is examined, and point to the need for more interdisciplinary research on immigrant employment outcomes to incorporate the voices of all stakeholders.

GDO: The Co-existence of Inclusion and Exclusion Experiences among Foreign Employees

Author: **Lailani Laynesa Alcantara**, *Ritsumeikan Asia Pacific U.*

Author: **David S. A. Guttormsen**, *USN School of Business, U. of South-Eastern Norway*

Inclusion in the workplace, which aims to leverage value from diversity and improve the wellbeing of each member of the organization, is increasingly attracting significant interest among scholars and practitioners alike. Extant studies have limited the scientific inquiry to conceptualizing and measuring inclusion and exclusion using constructs, often assumed to perform along a unidimensional continuum or outcome variable. However, our study discovers that inclusion and exclusion are experienced as co-existing and the conditions to be non-binary. We identify four types of inclusion/exclusion that are determined by five dimensions. Furthermore, we uncover the multifaceted nature of the inclusion and exclusion phenomena due to performing differently traversing various spheres at work. Additionally, we advance theory by identifying five strategic responses to the experiences of inclusion and exclusion by employees. As part of a qualitative design, we conducted 52 in-depth interviews of foreign employees who narrated about own lived experiences of being included and excluded—and how they dealt with such challenges at work. We propose a new process model to depict these relationships and promulgate propositions for future research.

Paper is Available to Meeting Registrants Only.

GDO: Racial Minority CEOs, Board Characteristics, and Foreign Worker Hiring    

Author: **Eunbi Kim**, *Franklin & Marshall College*

Author: **Uisung David Park**, *Syracuse U.*

As part of the utility-based discussion, the labor economics approach has prevailed to explain foreign worker hiring with an emphasis on economic motivations. However, we suggest that characteristics of organizational leaders and contexts can affect the level of firms' support for immigrant hiring. Building on the organizations and hiring literature, we analyze whether and how hiring patterns of foreign workers among Fortune 500 firms (2009–2019) vary by CEO race and in response to political conservatism and white dominance on the board. We find that organizations with racial minority CEOs more actively engage in foreign worker hiring compared to those with white CEOs, but such a positive effect decreases significantly when the board is politically conservative and white dominant.

GDO: Labour Market Integration of Refugee Women in Times of Crises: An Events System Theory Perspective  

Author: **Almina Besic**, *Johannes Kepler U. Linz*

Author: **Petra Aigner**, *Johannes Kepler U. Linz*

Even without the impact of a global pandemic, refugees face obstacles to their integration into the labour market. Complex labour market integration challenges are situated across different, yet interwoven, levels. These include restrictive policies at the institutional level, limited funding for support measures at the organisational level and a lack of skills at the individual level. Many of these challenges are gendered and specifically affect women. Some might be further exacerbated by the Covid-19 pandemic. However, the pandemic's effect on the labour market integration of refugee women has yet to be explored. Based on the events systems theory and drawing on the phenomenon of a canvas ceiling for refugees, this paper examines specific challenges support organisations and refugee women have faced during the pandemic. We utilise a qualitative methods approach with semi-structured interviews. As a European country that hosts many refugees with an elaborated network of support organisations, our data was collected in Austria. Results show that the pandemic as a major and unexpected event has exacerbated ongoing challenges for refugee women and support organisations. We identify implications predominantly in relation to the development of necessary digital skills to support post-pandemic labour market integration. Finally, we provide avenues for further research and practical suggestions.

Allies have played instrumental roles in efforts to address inequity in society. In the wake of civil unrest triggered by the shooting deaths of unarmed Black people, the brutalization of Asian Americans during the COVID-19 pandemic, and state legislatures passing laws that seek to reduce voting and women's rights, the supportive action taken by allies is gaining attention once again. This year's Academy of Management Conference theme "Creating a Better World Together" is a call to action for scholarship that provides insight into how organizations can anticipate and solve these important societal challenges. Yet, despite management scholars suggesting allyship is an effective way to create organizational change, the literature on allyship is still quite scarce. This symposium includes a collection of papers that examines open research questions pertaining to allyship including: who or what entities are able to engage in allyship behavior, why those actors choose allyship, and when (i.e., which contexts) support allyship. Following the presentations, Denise Lewin Loyd, a major contributor to research in the field of diversity and inclusion, will serve as our symposium's discussant. Together, we hope that this symposium will provide important insights into how to create meaningful change in organizations through allyship.

STR: Problem Formulation and its Role on Innovative Strategies: Evidence from the Field

Author: **Chan Hyung Park**, *Washington U. in St. Louis, Olin Business School*

Important tasks of top managers are to formulate their strategic problems and develop and implement innovative strategies. Since strategic problems are complex and ill-structured, previous research claims that problem formulations or theories on underlying causes of problems identify central factors of such problems and allow for valuable strategies. Still, existing research does not clarify which types of or features of problem formulations would result in innovative strategies that solve strategic problems in novel and useful ways. This paper draws on complexity theory and innovation research to claim that top managers benefit from strategic problem formulations that identify a comprehensive set of causes and theorize relationships among the causes. Comprehensiveness in strategic problem formulation ensures that top managers do not ignore relevant causes. Causal dependency or the relationships among the causes allow for overarching and focused theories on underlying causes. This paper offers the first large-scale tests of the relationships between problem formulation and strategies using managerial samples. A longitudinal study and a field experiment included in this paper uses samples of top managers and find support for the importance of causal dependency and comprehensiveness in strategic problem formulation. The theoretical clarity and empirical insights advance existing research on behavioral strategy and strategic problem-solving literature, which had relied on simulations, case studies, and theories to debate which problem formulations allow for valuable strategies.

STR: Hedonic Search: The Role of Affective Biases for Searching Complex Organizational Environments

Author: **Adrien Querbes**, *U. of Manchester*

Author: **Mark P. Healey**, *U. of Manchester*

Author: **Mercedes Bleda**, *Alliance Manchester Business School, U. of Manchester*

Search is crucial for finding solutions to complex problems. In behavioral theories of the firm, formal models of search draw on bounded rationality and focus on cognitively-driven search strategies. Here we examine the effectiveness of a different class of search strategies – namely, hedonic search strategies that are guided by the positivity or negativity of information used in the search process. We show that one particular type of hedonic search – positive search, i.e., the systematic overweighting of positive information – outperforms rival exploratory search strategies in a complex environment. Not only does positive search confer an adaptive advantage over other hedonic search strategies but it also outperforms a standard, neutral search without resorting to lengthier search process. We confirm this result in a series of computational experiments where boundedly rational agents seeking to improve their positions in complex environments search among local alternatives using different hedonic search strategies. Overall, our findings identify mechanisms that can help affectively-biased agents find rewarding paths in a complex environment.

STR: Peer Effects in the Scotch Whisky Industry: A Test of Three Selection Mechanisms

Author: **Joseph Lampel**, *U. of Manchester*

Author: **Daniel Ronen**, *U. of Manchester*

Author: **Aneesh Banerjee**, *City U. London*

The question facing managers when confronted with irreversible investment decisions is what framework they should choose to assess risks? Research suggests that managers may forgo the cognitive effort of building predictive models in favour of doing what their industry peers do. There is extensive empirical support for this so-called “peer effect”. However, the peers in peer-effect studies are usually identified by the researchers before testing the effect. In this paper, we do not identify peers but focus on alternative criteria that firms in the same industry may use to select peers. We argue that the literature points to three possible peer selection mechanisms: Regional cluster identity, similar resource size, and product market rivalry. We test these mechanisms using data on capacity expansion decisions by 117 distilleries from the Scotch Whisky industry from 1950-2010. We find that regional cluster identity and resource size are used to identify peers, but not product market competition.

STR: How Does Policy Uncertainty Affect Corporate Venture Capital Investments?

Author: **Sunu Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **Yongwook Paik**, *KAIST College of Business*

Firms' use of corporate venture capital (CVC) investments has become one the most prominent ways in which firms strategically adapt to the changing environment, and understanding the associated drivers is important for both theory and practice. In this study, we examine how policy uncertainty affects CVC investment. We argue that policy uncertainty is positively related to the amount of resources committed to CVC investment. However, we also argue that firms that are more dependent on government spending and firms with higher R&D intensity attenuate the positive relationship between policy uncertainty and CVC investment. Using data on CVC investments made by U.S. publicly traded firms from 1997 to 2020, we find empirical results supporting our theoretical arguments. Our study has important implications for entrepreneurship and innovation.

Panelist: **Sonja Opper**, *Department of Management and Technology, Bocconi U.*
Organizer: **Adam K. Frost**, *Copenhagen Business School*
Panelist: **Friederike Welter**, *U. Siegen / IfM Bonn*
Panelist: **Shuang Frost**, *Aarhus U.*
Panelist: **Ben Spiegel**, *U. of Edinburgh*
Panelist: **Hitoshi Mitsuhashi**, *Waseda U.*

The purpose of this panel is to generate new insights into the challenges and opportunities of researching entrepreneurial strategies in developing economies. While entrepreneurial strategies have been studied from a variety of perspectives, most theories are rooted in the experience of developed economies and are not necessarily generalizable beyond them. Thus, there is a major gap in our understanding of entrepreneurial strategies in developing economic contexts. This panel symposium will bring together thought leaders operating at the frontiers of research in developing economies to reflect on the state of entrepreneurship research in such contexts and its implications for management scholars. The scholars will identify questions, mechanisms, and phenomena that bear upon research in ENT, STR, TIM, and RM.

TIM: An Imperfect Perfect Project Process in Research and Innovation  

Author: **Sunny Mosangzi Xu**, *Copenhagen Business School*
Author: **Marcel Bogers**, *Eindhoven U. of Technology*

University researchers often need to plan for perfect research and innovation projects with other organizations to secure external funding. However, the unfolding process of the funded research and innovation projects is often far less than perfect. In this paper, we try to challenge the perfect project management thinking and explore the imperfect project managing processes from the perspectives of university researchers. Tensions in the project process exist both between the perfect management and imperfect managing and in university researchers striving for new knowledge exploration and learning while maintaining the exploration within predetermined project boundaries. In order to better understand how university researchers manage the tensions in an imperfect project managing process, we conducted ethnographic fieldwork in a Horizon 2020 research and innovation project. Inspired by Lefebvre's spatial triad, we identified that university researchers enact boundary setting practices and pivoting learning practices in balancing the tensions across the conceived, perceived, and lived social space of the research and innovation project. We discuss and highlight the importance of accounting for projects' embeddedness and temporariness in moving away from perfect management thinking and towards imperfect management thinking.

TIM: Navigating Through Paradoxes: The Influence of Paradoxical Thinking on Idea Screening 

Author: **Tobias Roeth**, *U. of Kassel*
Author: **Sven Heidenreich**, *Saarland U.*
Author: **Fiona Maria Schweitzer**, *Grenoble Ecole de Management*
Author: **Patrick Spieth**, *U. of Kassel*

Idea screening is crucial as it must select the 'right' new product development (NPD) ideas that are best suited to increase front-end and NPD success. Given the limited resources, high levels of uncertainty, and competing demands of the front end, idea screeners must cope with learning tensions when assessing the creativity of ideas. However, the literature tends to neglect the receiving side of creativity, namely idea screeners. This gap is problematic since idea screeners vary in coping with learning tensions and, then, fuel either innovation or counterproductive reactions. In response, we investigate the effects of idea screeners' paradoxical thinking on the assessment of the creativity of ideas and front-end success. Further, we research the motivational antecedents of paradoxical thinking. By analyzing a survey (N= 326) and an experiment (N= 292), we show that paradoxical thinking increases front-end success, idea meaningfulness, and idea novelty. In turn, by creating a motivational context (comprising decision autonomy, encouragement to take risks, and tolerance for mistakes), firms can motivate idea screeners to apply paradoxical thinking. In addition, product complexity positively moderates the positive relationship between the motivational context and paradoxical thinking. Our study contributes to and extends the literature on the front end and on creativity. Its findings show how paradoxical thinking can improve the outcomes of idea screening and how firms, by adopting paradoxical thinking, can manage idea screeners to synthesize learning tensions.

TIM: Selection Regimes and Selection Errors: A Multi-method Study  

Author: **Dmitry Sharapov**, *Imperial College Business School*
Author: **Linus Dahlander**, *ESMT European School of Management and Technology*

How can organizations structure their selection of innovation projects to reduce errors in the form of false positives (investments that should not have been made) and false negatives (investments that should have been made but were not)? Although simulations and case studies exist, our theoretical understanding of the effects of selection regimes on both types of errors has been limited due to a lack of decision and outcome data over a large set of projects. We use 121 interviews and secondary material from an accelerator targeting mobile application developers to understand how it implemented three different selection regimes over time and map these to existing literature. We complement this with unique data of 3,580 innovation projects submitted to the accelerator where we collected the outcomes for both funded and rejected projects to measure false positives and false negatives at the project-level. Our findings suggest that despite efforts to improve selection regimes, there are remarkable similarities between them in the tendency to select false positives and false negatives. Considering differences in the pools of projects submitted for selection, as the accelerator strove to tighten the quality distribution in the last selection regime, our evidence suggests that they instead became more likely to make false positive and false negative decisions. This finding holds despite a range of different controls, and aligns with the mechanism that the selectors focused too much on the team's past track record in a process that is more random than they assumed.

Author: **Andrea Blasco**, *Harvard U.*

Author: **Karim R. Lakhani**, *Harvard U.*

Scientific institutions like journals and funding agencies often express desire for novel ideas, but there are long-standing concerns that in practice they favor conservative ones. Here, we examine the association between novelty and acceptance among 21,406 manuscripts submitted between 2013-2018 to one field-leading and one middle-tier life sciences journal. Measuring the novelty of submissions as atypical combinations of journals in their reference lists, we find no evidence of conservatism. Instead, at the top journal, submissions in the top quintile of novelty are 18.5 percentage points more likely than bottom quintile ones to get accepted, while the middle-tier journal shows no systematic favor for or against novel submissions. Separating plausible mechanisms into supply-side (characteristics of the submission pool) and demand-side (judgements by editors and reviewers) shows the importance of the latter, and particularly editor discretion. On the supply-side, novelty is not strongly associated with submissions' risk or reward, measured with citations. On the demand-side, at the top journal peer reviewers do not select for or against novelty, while editors select strongly for novelty, even conditional on quality. In further support of editor discretion, different editors show different novelty responses to the manuscripts that happened to be reviewed by both journals. Overall, the findings suggest that journal peer review, particularly at the top, incentivizes novel work.

Author: **Pyung Nahm**, *U. of Minnesota*

Author: **Michael Park**, *U. of Minnesota*

Prior literature has noted that serendipitous discoveries have played an important role in science. Scholars who have explored the phenomenon generally agree that researchers with a prepared mind stand to benefit from unplanned encounters. However, there are two contrasting perspectives on what form of a prepared mind would be most beneficial. Some scholars have suggested that an open mind would be helpful while others argue that deep experience would be most favorable. Yet, due to its spontaneous nature, serendipitous discoveries have been difficult to study in a systematic manner. In this paper, we leverage a policy shock in which the shelving orders of journals in university libraries were exogenously shifted due to a change in the Anglo-American Cataloging Rules between 1981 to 1989, exposing researchers to unsought journals. In this natural experiment, we find that researchers with a broad set of knowledge, compared to ones with narrow expertise, are more likely to gain from serendipitous encounters.

Organizational Innovation Track: Building Innovation Capabilities in Organizations

Session Moderator: **Dominika Kinga Randle**, *Harvard Business School*

TIM: Epistemic Plasticity and Innovation in Data-driven Organizational Cultures 

Author: **Ryan Allen**, *Harvard Business School*

A long tradition in innovation research asserts that data-driven organizations excel at incremental innovation, but allocate resources away from less-measurable breakthrough innovations. Questioning this premise, I distinguish the magnitude of an organization's use of quantitative analysis from the epistemic plasticity of its organizational culture (the extent to which its members use different kinds of analyses). I argue that organizations using more quantitative analysis will actually produce more breakthrough innovations—provided that their cultures are plastic enough to use qualitative analysis liberally as well. To test my theory, I measure innovation performance using product-level sales and attribute data for over 3,500 consumer product launches from 61 organizations between 2010 and 2016; I measure use of qualitative and quantitative analyses using natural language processing on employee résumés. I find that increased reliance on quantitative analysis decreases innovation performance when qualitative analysis is low, and, conversely, increases when qualitative analysis is high. Additional analyses show that this relationship is particularly strong for novel products, and in markets characterized by high uncertainty. I also explore antecedents: management fads, not organizational learning, appear to account for excessively data-driven cultures. The paper contributes to organizational theories of innovation, and to research linking organizational culture to strategic performance.

TIM: Big Data Utilization in Innovation: Innovation Enhancing Activity or Capability-Enhancing Activity?

Author: **Uly Yunita Nafizah**, *Warwick Business School*
Author: **Stephen Roper**, *Enterprise Research Centre, WBS*
Author: **Kevin Francis Mole**, *U. of Warwick*

The potential benefit of big data utilization through the generation of data-driven knowledge raises questions about its role in firms' innovation performance. This paper explores two roles of big data utilization on firms' innovation: 'innovation-enhancing activity' and 'capability-enhancing activity'. While the first role highlights big data utilization as one enabler of the data-driven innovation process, the latter emphasizes the role of big data utilization to complement firms' external knowledge search activity to enable greater innovation performance. Using the matched data of the UK E-Commerce and ICT Survey 2015 and the UK Innovation Survey 2017 for over 1,300 firms in the UK, we use both probit and OLS regression models to investigate how big data utilization both directly and indirectly influence firms' innovation performance, measured by innovation outcomes and innovation productivity. While we find no evidence for big data utilization as innovation-enhancing activity, our results support big data utilization as capability-enhancing activity. Our results indicate the indirect effect of big data utilization on firms' innovation performance and emphasize the role of big data utilization to complement firms' search behaviour by enhancing firms' absorptive capacity and collaboration capability. Our results highlight both the capability-enhancing role of big data utilization and the importance of adopting a strategic approach to maximize the innovation benefits of big data utilization and external knowledge search activity.

TIM: Developing Organizational Innovation Capability in High-Technology Domain using Limited Resources 

Author: **Minh Hoang Vo**, *INSEAD*
Author: **Daniel Z. Mack**, *Singapore Management U.*
Author: **Quy Nguyen Huy**, *INSEAD*

Much empirical research investigating how organizations innovate with limited resources has focused on knowledge work in low-technology settings. These studies have largely overlooked the struggles of financially constrained, knowledge-poor organizations in attracting and incentivizing talents to support their uncertain, costly, and prolonged pursuit of high-technology innovation. Our inductive study examines how a cash-strapped industrial equipment repair shop was able to overcome this struggle to subsequently grow and become a prominent venture in defense R&D. This venture developed its reputation as a breeding ground for R&D careers by recruiting and training low-skilled knowledge workers to prepare them for jobs at more reputable R&D companies. Despite receiving low wages, many recruits worked hard to search for knowledge in distant domains and self-directed their learning when needed. Our inductive model elucidates how an organization commits limited organizational resources to the development of its employee's external careers and creates a schema valuing innovation as personal career building process rather than a fully compensated task. This schema encourages employees in a resource-constrained environment to pursue high-technology innovation through distant-and-prolonged search paths. Our study shows how promoting the turnover of skilled human capital — rather than protecting it — fosters the continuous development of the organization's innovation capability.

TIM: Technological Capabilities in Organizational Innovation    

Author: **Dominika Kinga Randle**, *Harvard Business School*

Author: **Gary Pisano**, -

Because technological innovation plays a key role in influencing firms' longevity and performance, the question of why do firms differ in their ability to develop successful inventions became a central topic in the fields of management, strategy, and organizational theory. We contribute to answering it by theorizing the influence a firm's technological capability strategy, which includes choices about the breadth of an overall capability portfolio and fungibility of individual technologies, has on its inventive success as measured by the quantity of developed inventions and the propensity to build technological breakthroughs. To test our predictions, we leveraged three decades of patenting histories of over two thousand firms, which together spanned nearly three hundred industries. Our empirical approach enabled us to characterize patterns of firm-level inventive outputs and technological capabilities at a highly detailed level while allowing for variation across time. Our results showed that firms with broad capability portfolios and highly general-purpose individual technologies outpace those with opposite capability strategies in the quantity of developed inventions. However, we also found that the capability strategy that fosters the highest overall inventive output does not translate into production of breakthroughs. Our analyses showed that firms that build narrow capability portfolios, but develop highly general-purpose capabilities within this narrow range, are the ones with the highest chances of producing breakthrough inventions. Our findings contribute to scholarship on corporate innovation and literature on firm capabilities.

TIM: Future-Making Practices in Innovation: A Conviction Narrative Perspective on Foresight 

Author: **Jose Antonio Rosa**, *Iowa State U.*

Author: **Marcelo De La Cruz**, *Ludwig Maximilian U. of Munich (LMU)*

Author: **Jelena Spanjol**, *Ludwig Maximilian U. of Munich (LMU)*

Foresight is an effective instrument for creating an anticipatory intelligence for decision-making in innovation management. Innovation actors involved in distal innovation scenarios are challenged by the uncertainty of futures for which rational and systemic decision-making approaches fall short. By contrast, decisions are made under radical uncertainty requiring mental time travel and the construction of conviction narratives that involve known facts, assumptions, inferences, and felt emotional ambivalence from individual actors and groups engaged in foresight. Thus, understanding the processes by which conviction narratives are developed and sustained is important to informing innovation management practices. We apply conviction narrative theory (Tuckett, 2011) to craft a more nuanced account of foresight in innovation management and identify two dimensions (perspectives volume and factor breadth) along which distal future decisions in innovation management may be characterized, which enable us to develop tactics for sustaining innovation-fostering mind states. These tactics seek to strengthen individual competences, enable team cohesion, and establish an institutional frame for foresight in innovation management. Our research sheds light on the microfoundations of foresight, offers insights about future-making practices as organizational phenomenon and extends CNT giving rise to managerial implications to better understand and manage foresight in innovation management.

Open Innovation Track: Sourcing Innovations

Session Moderator: **Jesse Zhou**, *Peking U.*

TIM: Upstream First: An Ethnographic Study of Open Source Software Community 

Author: **Jesse Zhou**, *Peking U.*

This research aims to trace the formation and development of community-based innovation. Based on a 14-month ethnographic study in 10 open source communities, I systematically summarized the working mechanisms of open source software development. I identified four fundamental factors that underpin open source communities, including economy of community-based maintenance, iterative generation of value, incentives of professional networking, and entrepreneurship of core teams. A comprehensive framework incorporating these four factors is then constructed, which provides a dynamic process-based snowball model to explain the heterogeneity of open source communities. This perspective can even be applied in a broader research context to analyze the uncertainty and dynamic generation of knowledge transfer and to study the iterative nature of technological innovation. In contrast to previous literature, my field research suggests that there is convergence rather than divergence between community-based innovation and intra-firm R&D, thus opening up many possibilities for future research, such as comparing open source with closed source and exploring hybrid models of organizational innovation.

Paper is Available to Meeting Registrants Only.

TIM: Co-evolutionary Lock-in in Crowdsourcing: Selection Consistency Reduces Sourcing Variety 

Author: **Sanghyun Park**, *INSEAD*

Author: **Henning Piezunka**, *INSEAD*

Author: **Linus Dahlander**, *ESMT European School of Management and Technology*

Crowdsourcing allows organizations to source novel ideas from external contributors – often carrying knowledge that is distant to the organization. We theorize that organizations' continuous crowdsourcing initiatives are characterized by an interplay between organizations' selection of ideas and contributors' submission of ideas that narrows the kind of ideas organizations gain access to. Specifically, organizations select a subset of the crowdsourced ideas for implementation. Contributors – who strive to see their ideas implemented – then submit ideas similar to those already chosen by organizations. We suggest that this “co-evolutionary lockin” where the variety of ideas narrows is strengthened the more consistent an organization's selection is because it then provides a clearer signal for contributors regarding the type of knowledge the organization is looking for. By contrast, the co-evolutionary lock is attenuated if contributors are less aware of or pay less attention to the organizations' selection. We examine our theory by creating a novel dataset that includes the crowdsourcing initiatives of 70,159 organizations. Using text analysis, we measure a variety of ideas at the community level and examine its intertemporal dynamics. We contribute to research on crowdsourcing and search for external knowledge.

TIM: Managing Attention in Virtual Hackathons: Effective Configurations of Team External Communication 

Author: **Nevena Ivanovic**, *Faculty of Economics and Business, U. of Groningen*

Author: **Thomas Arend De Vries**, *U. of Groningen, Faculty of Economics and Business*

Author: **Gerben S. Van Der Vegt**, *U. of Groningen*

TIM Division Best Student Paper Award Finalist

Virtual hackathons have become a popular accelerated innovation tool to help teams develop innovative solutions for complex challenges through intensive collaboration under high time pressure. Prior research on collaboration in hackathons has focused on within-team coordination, limiting our understanding of how participating teams might successfully manage their external connections during virtual hackathons. To address this issue, we integrate insights from the attention-based view of the firm with the literature on tie strength and temporal dimensions of communication, and propose three strategies that might help teams effectively manage their external communication during virtual hackathons. Specifically, we suggest that establishing weaker ties, organizing them in a bursty manner, and limiting the overlap between conversations might help teams successfully manage information overload and the attentional strain associated with increased external communication. Results from a study among 69 teams involved in a virtual hackathon supported the usefulness of the second and third strategy. Our findings contribute to the innovation and team literature by pointing to the importance of the appropriate timing and configuration of team external activities, and point to two strategies that teams and managers might use to leverage the innovative performance potential of virtual hackathons. Keywords: hackathon, open innovation, digital communication, attention-based view of the firm, between-team communication, communication burstiness, multicomunication.

TIM: Integrating Open Innovation into Customer Projects as a Strategy for SMEs 

Author: **François J.J. Scheid**, *EMLYON Business School*

This paper studies how two high-tech SMEs exploit their cooperation with large corporate clients to develop and successfully implement their Open Innovation (OI) process (Chesbrough 2003; Brunswicker & Vanhaverbeke, 2015). Based on a case of radical innovation in the software industry, it highlights the original embedded OI strategy carried out by these SMEs) to compensate for their lack of resources (Dahlander & Gann, 2010) and to limit their innovation risks (Wynarczyk et al., 2013). Based on the analysis of an OI project involving two SMEs and a large company, our work suggests two main contributions to the literature on the implementation of OI in SMEs (Usman et al., 2018). Our first contribution highlights the original strategy of the SMEs to embed their OI project in client projects. The objective is then to exploit the capabilities of large companies (Tobiassen & Pettersen, 2018) and minimize their innovation risk while maintaining their autonomy. Our second contribution concerns the client capabilities which are materialized in their double role: a role of project director (Usman et al., 2017) and a role of collective exploration architect. These contributions suggest a new model for open innovation in SMEs where the large company client is neither positioned as an intermediary nor as an actor in the OI project. This model adapted to the exploration phase of innovation process could serve as a basis for other research work involving high-tech SMEs and large companies (Radziwon & Bogers, 2019) that are their clients, in order to enrich it and validate its relevance, particularly in other sectors. Our work suggests several managerial implications for SMEs wishing to exploit the skills of large groups to carry out their Open Innovation project. In the implementation of their embedded Open Innovation strategy, SMEs managers must select the client with which to cooperate by qualifying their capabilities (budget, availability and skills) and their experience in managing complex projects. They must also ensure that they maintain their autonomy from large companies by retaining leadership of their project (dedicated project manager and team) and their ability to exploit their innovation on their own.

Technology and Competitive Strategy Track: Technology Strategy and New Business Models

Session Moderator: **Mehwish Malik**, *Griffith U., Australia*

TIM: Greening Project Management Practices to Achieve Competitive Advantage Through Moderated Mediation 

Author: **Mehwish Malik**, *Griffith U., Australia*

Author: **Murad Ali**, *Newcastle Business School, Northumbria U., UK*

This study envisages the impact of green project management (GPM) practices on sustainable competitive advantage through a sequential mediating model of green knowledge acquisition and green exploitative and exploratory innovation. The study also investigates the buffering effect of environmental organizational culture on the linkage between green knowledge acquisition and green exploitative and exploratory innovation. Data was collected from the multi-sector manufacturing enterprises (N = 265) in Pakistan. The analyses were conducted through partial least squares structural equation modelling (PLS-SEM) and PROCESS macros in SPSS 25.0. The results suggest that GPM practices are positively related to sustainable competitive advantage. In addition to this direct effect, green knowledge acquisition and green ambidextrous innovation play a significant role in explaining the associations between GPM practices and sustainable competitive advantage. Furthermore, environmental organizational culture strengthens the positive influence of green knowledge acquisition on green exploratory innovation. However, the moderated effect of environmental organizational culture for green knowledge acquisition and green exploitative innovation was not supported. Our findings bring essential insights for the enterprises, policymakers, practitioners, and project managers to promote green project management practices for low-carbon projects to achieve sustainable competitive advantage.

TIM: 'Push-to-focus': How Convergence of Enabling Technologies Influences Specialization in Generality?  

Author: **Mei Yun Lai**, *U. of Bremen, Institute of Project Management and Innovation*

Author: **Martin G. Moehrlé**, *U. of Bremen, Germany*

Specialization in generality is a strategy, which allows inventing firms to capture value from their R&D activities, by contracting license of enabling technologies to diverse downstream application industries. This strategy helps firms to benefit from the economies of scope and latent gains by trading in intermediate market, without having to own complementary assets. However, due to pervasiveness and generality nature of enabling technology, it tends to converge into or with other technologies. Hence, we revise Rosenberg's work and ask: how types of convergence influence firm's choice to specialize in generality? Conversely to prior research, we argue that firms inventing in a converging environment do not perpetually opt to integrate their technologies. Our contribution to literature is threefold. First, we find strong associations between convergence types and firm's choice to specialize in generality. Second, we develop a novel measure for specialization in generality based patent bibliographic and textual data. Third, we explore the role of cospecialized assets and technological relatedness in both one-way and two-way convergence of enabling technologies. Consequently, we discuss on how managers should commercialize their firm's enabling technology, in light of our findings for both types of convergence.

TIM: When are Customers Paying for Sustainability? A Configurational Analysis of 131 SC Business Models

Author: **Barbara Regina Bencsik**, *U. of St. Gallen*

Author: **Maximilian Palmié**, *U. of St. Gallen*

A growing number of smart-city initiatives (SCIs) around the world seek to develop innovative solutions to transform cities to more sustainable places. The economic attractiveness of these initiatives – and ultimately the amount of environmental and social value they create – depends on their business model (BM). However, in reality we observe only some of the smart city services are paid by customers while others are free of charge. While this observation is a blind spot in extant research we ask: What configurations of smart city BM exist that customers are paying for vs. that are free of charge for customers? To address these research questions, we build on literature covering the smart city (SC) concept as well as existing research on SC business models. The paper applies a crisp-set QCA approach to examine 193 SCIs in Switzerland. Our results reveal two configurational models comprising five BM configurations. We contribute to explain and analyze the diversity of SCIs as well as the causal complexity of SC BMs.

People and Innovation Track: Innovating Through Collaboration

Session Moderator: **Barthélemy Chollet**, *Grenoble Ecole de Management*

TIM: Balancing the Collaboration Portfolio: Functions Served by Co-authors and Scientific Productivity 

Author: **Barthélemy Chollet**, *Grenoble Ecole de Management*
Author: **Maréva Sabatier**, *U. de Savoie Mont-Blanc, IREGE*

We question the network approach to scientific collaboration. First, by insisting on collaboration relationships as channeling knowledge essentially, it tends to ignore the reality of the division of labor in science, which involves a variety of resources (legitimacy, access to funding, etc.). Our paper proposes that collaborators can serve either creative, routine or strategic functions, and that the collaboration mix (whether a scientist has relatively more creative, routine or strategic functions in her portfolio of collaborators) matters for productivity. We find empirical evidence supporting this view, after combining bibliometric and survey data on 468 French nanoscientists. Moreover, while earlier network research has conceived of any scientist as able to compose at will virtually any portfolio of collaborations, we show that, instead, the latter is endogenous. Above and beyond any deliberate collaboration strategy, the collaboration mix is determined by the scientist's pre-existing structural position within the community, position in the career cycle, institutional context, as well as the characteristics of the collaborators and the quality of the relationships to them.

TIM: Does Self-management Help with Creativity? A Multi-level Quasi-experiment

Author: **Beauregard Berton**, *Amsterdam Business School, U. of Amsterdam*
Author: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*
Author: **Henk W. Volberda**, *Amsterdam Business School, U. of Amsterdam*

In this paper, we examine whether self-managed teams are more creative than bureaucratically managed teams. We adopt a quasi-experimental design and accompany a health insurance provider in its transition to self-management. While nearly half of the organization's work teams started to organize in self-managing teams, the remaining part of the organization continued working with traditional hierarchies. Multisource data was collected from 429 employees and 27 managers. Multi-level structural equation modeling showed that self-managing teams are more creative than their counterparts. Furthermore, we proposed knowledge exchange and task conflict as crucial mediators in the relationship between self-management and creativity. These findings contribute to our understanding of how self-management affects team performance outcomes.

Paper is Available to Meeting Registrants Only.

TIM: Driving Digital Innovation Activities by Leveraging Innovation-oriented Leadership

Author: **Lukas Moschko**, *Institute for Technology and Innovation Management at RWTH Aachen*
Author: **Vera Blazevic**, *Radboud U. Nijmegen*

Industrial incumbents aim to foster their competitive position by applying digital technologies in their innovation activities, either through process optimizations or via business model innovations. Despite these ambitions, they often struggle with implementing effective measures to tackle digital transformation. We show the important role of innovation-oriented leadership in driving internal and external collaborations, which prove essential to increase the digitization contribution to innovation activities. We surveyed top managers of established industrial companies to provide empirical evidence that innovation-oriented leadership does not have a direct influence on the digitization contribution to business activities, but is fully mediated by internal and external collaboration. Based on supplemental objective data, we show additionally that a high digitization contribution in business model innovation has a beneficial effect on the sales performance.

Paper is Available to Meeting Registrants Only.

TIM: Cutting through the Tension and Perception Barriers in Cross-Functional NPD Teams

Author: **Margot L. Sandy**, *Imperial College London*
Author: **Pelin Demirel**, *Imperial College London*
Author: **Stephen Green**, *Imperial College London*

Although cross-functional new product development (NPD) teams are central to innovation processes in companies, they are often burdened with tensions between colleagues from disparate functions. These tensions can slow down projects, affect the integrity of the team and eventually reduce the likelihood of a positive innovation outcome. Through interviews with 33 cross-functional NPD team members across five different roles (design, engineering, marketing, manufacturing, and project management) within consumer goods/electronics companies in four global innovation hubs (Silicon Valley, New York, Greater Boston area and London), this paper explores the characteristics, interactions and, significantly, the sources of tensions. We focus on professional identities being a precursor to tension and teams. These identities lead to deep divides connected to the strength of the team member's allegiance to their functional perspective as well as their alignment to team and organizational identities. The findings highlight the interactions of two categories of team members, each with distinctively different professional identities, behaviour, and influences on tensions within teams: (1) those who are strongly aligned with a single functional domain and (2) those that connect across multiple knowledge domains. Highlighting root causes for functional perceptions of colleagues, the paper identifies potential avenues for improving communication and collaboration in cross-functional NPD teams to address ingrained sources of tension.

TIM: Calling Siri a Grumpy F*cker: The Study of Incivility towards AI versus Human Service Agents

Author: **Kateryna Maltseva**, *Oslo New U. College*
Author: **Suzanne Van Gils**, *BI Norwegian Business School*

People interact with a growing number of digital service agents on daily basis, covering a range of services. These service agents are both human and AI, and interactions generally follow patterns of interpersonal interaction, including impolite behavior. In this paper, we investigate how people judge incivility directed towards human agents and AI differently. In an online between-subject experiment, we demonstrate that people evaluate the same verbal expression of incivility less negatively when directed to AI as opposed to humans. We also test whether individual differences, such as a tendency to anthropomorphize, moderate the relationship between the types of the agent incivility is directed towards (AI vs. human) and evaluation of incivility. In the discussion section, we elaborate on psychological mechanisms that can explain our results as well as discuss findings in terms of their academic contributions and practical implications.

TIM: What Determines AI Adoption?

Author: **Timothy James DeStefano**, *Harvard Business School*
Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*
Author: **Jaehan Cho**, *Korea Institute for Industrial Economics and Trade*
Author: **Hanhin Kim**, *Korea Institute for Industrial Economics and Trade*
Author: **Jin Paik**, -

Over the recent years, firms have showed an increased demand for leveraging the performance potential of Artificial Intelligence (AI) technologies. However, the general applicability of AI to many settings raises important managerial questions about whether aspects such as potential for in-house versus external AI development, the presence of complementary technological resources (e.g. access to cloud computing), or even the specific use of AI (e.g. product/service development, operational management) would guide firm-level decisions underlying AI adoption. While recent research has provided some insight on worker-level decisions about using AI, knowledge about firm-level AI adoption, as well as heterogeneities in adoption, remains scant. To address this empirical gap, this preliminary paper provides one of the first comprehensive assessments of firm-level determinants of AI adoption while accounting for the heterogeneous sources, applications, and complementary technological resources of AI in organizations. Specifically, this paper reports the first results of a novel firm-level AI adoption survey deployed to a representative sample of South Korean firms from 2017 and 2018. Econometric assessments identified that firm size and use of existing intangible assets are important for AI adoption. However, while these characteristics are significant for AI adoption regardless of whether the technology was produced in-house or obtained from a vendor, analyses suggest that there may be heterogeneities on the determinants of AI adoption depending on the operational application of AI. Furthermore, AI adoption also ensues in tandem with the adoption of other digital technologies (e.g. big data, cloud computing, and the Internet of Things) and with contemporaneous firm reorganization.

TIM: Driving Infrastructural Advantage: Google's Strategic Moves in AI Digital Technology Commons

Author: **Erkko Autio**, *Imperial College Business School*
Author: **Herve Legenvre**, *EIPM*
Author: **Ari-Pekka Hameri**, *HEC Lausanne*

In recent years, the adoption of open-source digital technologies in AI computing and cloud infrastructures – which we call AI Digital Technology Commons (AI DTCs) – has accelerated the creation and adoption of cloud-based AI applications. This trend is driving infrastructural innovation and the way AI DTC resources can be harnessed for competitive advantage. We document how Google has used strategic and tactical moves in AI DTCs over the past decade to drive AI ecosystem growth while manoeuvring for a position of influence within it, to combine infrastructural and product innovation, and harness the resulting AI DTC momentum to drive proprietary advantage by exploiting data network effects. Based on this analysis we propose a three-step process model of infrastructural competitive advantage, which distinguishes between Herding, Productizing, and Colonizing activities in driving and leveraging DTCs for competitive advantage.

Author: **Sreevathsan Sridhar**, *London Business School*

Author: **Sendil Ethiraj**, *London Business School*

This paper studies how incumbent firms respond to the emergence of AI as a process technology that performs tasks that humans can perform. Humans use different human capital skills to perform multiple tasks. Recent research suggests that AI could replace human labour in middle skilled jobs while capital and labour will be used by firms to perform low and high skill jobs respectively (Acemoglu and restrepo 2019). Yet, there is less clarity on firm level response to AI when the same skill can be used to perform multiple tasks. Hence, we adopt a question driven approach to answer the following questions (1) how do incumbents respond to the entry of AI/automation from outside the industry? (2) how does incumbent response vary by nature of the task subject to AI/automation? (3) how does incumbent response vary by skill specialization? (4) what are the performance consequences of incumbent sensitivity to AI/automation? We use the mutual funds industry as the context for our empirical examination. Using the emergence of algorithmic trading as an exogenous source of entry of AI, we study how mutual funds change their portfolio allocation in response to competition from AI. Further, we study how the change in holdings vary based on the nature of information available to managers to make decisions. We then study how the response of funds vary by the skill of the manager in picking stocks. Finally, we explore the difference in performance of funds based on managers' response to the entry of AI. We find that (1) on average, mutual funds responded to the entry of algorithmic traders by reducing their exposure to affected stock; (2) this average response, however, masks considerable heterogeneity at both the task and skill-levels with funds exposure reduction increasing with greater information availability and decreasing with greater information ambiguity; (3) examining heterogeneity by skill specialization we observe that funds relying on timing skills of managers have a stronger response in reducing their exposure to AT affected stocks; (4) examining performance effects, we note that funds that move away from AT affected stocks modestly outperform stocks that are less responsive to algorithmic trading.

Technology, Policy and Society Track: Role of Government and Policy-making

Session Moderator: **Chen Zhu**, *U. of Tokyo*

TIM: Government R&D spending as a Driving Force of Technology Convergence 

Author: **Chen Zhu**, *U. of Tokyo*

Author: **Kazuyuki Motohashi**, *U. of Tokyo*

This paper investigates the impact of government R&D spending on promoting technology convergence. We test the hypotheses that a government funding program has a positive effect on technology convergence and the effects are heterogeneous on different participants (i.e., academic, and industrial inventors). To investigate this, our empirical test applies the Advanced Sequencing Technology Program (ASTP) as one example. We develop a novel dataset by linking the ASTP grantee information with the PATSTAT patent database. Based on this, we create inventor-level characteristics to implement propensity score matching, selecting an appropriate control group of inventors who are comparable to those enrolled in the ASTP. We then employ DiD models to evaluate the impact of the program on the matched sample. The results confirm that the program is a driving force of technology convergence. The findings also indicate that the program is more influential to industry inventors than their academic counterparts. Besides, we conceptualize a ‘leverage effect’ of the program and show it can attract many external industrial inventors. The work contributes to better understanding the role of a government-funded program in encouraging convergence and provides implications for developing convergence-related R&D programs in the future.

TIM: Government Financial Support and Firm Innovation

Author: **Jihye Yeo**, *EMLYON Business School*

Author: **Alexander Eapen**, *Australian National U.*

Author: **Rekha Krishnan**, *Simon Fraser U.*

Prior studies have documented a positive effect of government financial support on firms’ innovation. However, such a positive effect could be due to two alternative underlying mechanisms – ‘additionality’ or ‘crowding-out’. The former, whereby government financial assistance relaxes financial constraints for recipient firms and enables their innovation, represents the desired positive effect. On the other hand, the crowding-out mechanism – whereby financially unconstrained recipient firms use government funding to simply replace their private spending – represents mistargeted government intervention. This paper attempts to disentangle these two mechanisms to understand which one of them drives empirical observations of a positive effect of government funding on firm innovation. We achieve this through formulating and testing two competing moderator hypotheses, each one being a unique derivative of the additionality and crowding-out mechanisms respectively. Our empirical analysis uses firm-level panel data from the Business Longitudinal Database (BLD) compiled by the Australian Bureau of Statistics (ABS), 2011-2016, and addresses both endogeneity and selection problems in our estimation. We find that government financial support increases the number of innovation that recipient firms produce. However, we also find that this positive effect is likely a result of the crowding-out mechanism. Financially unconstrained firms appear to benefit more from government support than financially constrained firms.

TIM: The Role of Environmental and Artificial Intelligence Policies for Eco-innovation in China    

Author: **Effie Kesidou**, *U. of Leeds*

Author: **Despoina Filiou**, *The Open U. Business School*

Author: **Lichao Wu**, *Xiamen U.*

In this paper, we employ negative binomial and quasi-natural experimental methods (i.e., Difference-in-Differences), whereby we examine the joint impact of environmental and artificial intelligence policies (for designing smart cities) upon the generation of eco-innovations. Using longitudinal data for the period 2006-2018, we examine the changes in green patents granted: (i) due to the implementation of various levels of stringency of environmental policies across all cities; and (ii) after the introduction of smart city policies in 2012 in China. The prior literature stresses the importance of environmental policies, yet less attention has been paid to the other types of policies required to drive eco-innovation and their spatial dimension in the context of a developing economy. Our results show that, when artificial intelligence policies are implemented in cities that have adopted strict environmental policies, the production of green patents increases. We contribute to debates in the literature of policy mix for sustainability transitions in the context of a developing economy by illustrating the importance of both types of policy for eco-innovation, as they correct two market failures and, more importantly, address the systemic coordination problems that occur during the production of green patents.

TIM: Using Deep Learning to Explore the Relationship between Green Policy-mix and Firm Innovation

Author: **Y. Joseph Zhou**, *School of Public Policy and management Tsinghua U.*

Author: **Zhou Rong**, *School of Public Policy and management Tsinghua U.*

Author: **Karoline Rogge**, *SPRU U. of Sussex UK*

Author: **Qintian Zhang**, *School of Public Policy and management Tsinghua U.*

The policy-mix concept has become popular in sustainability transformation research. However, the lack of measures has prevented the theory building and conceptual clarity of policy-mix. By applying a high-performance deep learning method called Bidirectional Encoder Representations from Transformers (BERT) to policy text mining, we capture key features to measure the policy-mix in terms of policy diversification and strength. Further, we illustrate how these new measures can generate novel insights into the relationship between the policy-mix and firms’ green innovation, and how the relationship is moderated by firm heterogeneity. In this research, firms’ green innovation is denoted by the total-factor-productivity change, which comprises green technological change and production efficiency change. Our research finds that green policy-mix positively influences firms’ technological change, while having no influence on firms’ production efficiency change. We also find that firms’ economic resources and knowledge resources positively moderate the relationship between green policy-mix and production efficiency change by improving firms’ ability to respond to policies; by contrast, they both negatively moderate the relationship between green policy-mix and green technological change by reducing firms’ dependence on supporting policies. This study explores the heterogeneous effects of green policy-mix on firms’ innovation.

Organizational Learning and Search Track: Scientific and Technical Knowledge: Search, Diffusion, and Impact
Scientific and Technical Knowledge

Organizer: **Matteo Tranchero**, *Haas School of Business, UC Berkeley*

Organizer: **Lee Fleming**, *U. of California, Berkeley*

Panelist: **Gustavo Manso**, *Haas School of Business, UC Berkeley*

Panelist: **Abhishek Nagaraj**, *U. of California, Berkeley*

Panelist: **Matt Marx**, *Cornell U.*

Panelist: **Seungryul Ryan Shin**, *Cornell U.*

Both innovation and entrepreneurship crucially rely on scientific and technical knowledge. Scientific and engineering principles can be applied to processes of creative search to resolve technical problems, increase useful innovation, and create new business opportunities. Yet, recent years have seen dramatic changes in how knowledge is generated and diffused, with still limited evidence on how these changes are impacting innovation. The emergence of big data and computational capabilities might provide “automated” ways to generate knowledge in the form of predictive statements. What are their effects on the innovation search process and on the rate and the direction of technical change? Furthermore, these trends are magnified by the diffusion of the internet and digital modes of exchanging information. How important is the human component for the diffusion of knowledge? Is the diffusion and impact of knowledge still dependent on localized interactions, despite the widespread availability of ICT and the internet? This panel symposium will assemble four papers on the topics of search, diffusion, and impact of technical knowledge. It will discuss 1) the role of data in the search for innovation, 2) the directional consequences of data availability on the accumulation and diffusion of technical knowledge, and 3) the localization of knowledge and how physical proximity of scientists and inventors influence knowledge flows and company creation. These questions are important to craft strategy processes for managers and the allocation of resources for policymakers.

Stress and Recovery

Session Moderator: **Min-Hsuan Tu**, *U. at Buffalo, The State U. of New York*

OB: Understanding How and When Leisure Activities Facilitate Recovery from Abusive Supervision 

Author: **Min-Hsuan Tu**, *U. at Buffalo, The State U. of New York*
Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*

Decades of research have shown that abusive supervision hurts employees' well-being. However, little is known whether or not employees can recover from abuse during the leisure time. Building on the perspective of recovery paradox (Sonnentag, 2018), we theorize that an intense social stressor (i.e., daily abusive supervision) triggers a high level of need for recovery, which in turn reduces off-job physical and social activities but increases low-effort activities. Also, we theorize that employees' preference (extraversion) and autonomy (control over the leisure time) might influence employees' choices of leisure activities when experience a need for recovery. To test our hypotheses, we employed the experience sampling method to collect daily data twice from 203 full-time employees for ten consecutive working days, resulting in 1511 daily responses. The results of multilevel path analyses indicated that daily abusive supervision increased employees' need for recovery, which in turn (a) increased their engagement in low-effort activities, and such positive indirect effect was strengthened for employees with low extraversion (i.e., introverts); (b) reduced social activities. Furthermore although need for recovery was unrelated to physical activities, such association was significant and negative when employees were able to control over their leisure time. Finally, off-job low-effort and social activities were positively related to employees' next morning positive moods. Theoretical implications for recovery and abusive supervision literature as well as practical implications are further discussed.

OB: COVID-19 Pandemic and Work-Life Balance, Work-Family Conflict, Employee Burnout 

Author: **Afaf Khalid**, *Lahore U. of Management Sciences (LUMS)*
Author: **Usman Raja**, *Brock U.*
Author: **M Abdur Rahman Malik**, *Lahore U. of Management Sciences*
Author: **Sadia Jahanzeb**, *Brock U.*

Despite the extent of working from home during the COVID pandemic, research exploring its positive or negative effects is exceptionally scarce. Unlike the traditional positive view of working from home, we hypothesize that working from home during the COVID pandemic has triggered work-life imbalance and work-family conflict for employees. Furthermore, we suggest that work-life imbalance and work-family conflict elicit burnout in employees. Using a time-lagged design, we collected data in three waves during the peak of the first wave of the COVID-19 pandemic to test our hypotheses. Overall, we found good support for the proposed hypotheses. Working from home had a significant positive relationship with burnout. Working from home was negatively related to work-life balance and positively related to work-family conflict. Both work-life balance and work-family conflict mediated the effects of working from home on burnout. These results significantly contribute to the research on working from home and burnout and present important implications for practice and future research.

OB: A Meta-Analysis of the Effects of Work Hours on Resource Depletion, Resource Acquisition, and Strain

Author: **Jaewook Lee**, *Indiana U.*
Author: **Savannah Conder**, *Indiana U.*
Author: **Erik Gonzalez-Mule**, *Indiana U.*

Employee work hours are a frequent topic of interest among academics and management practitioners alike. However, there is a lack of theory explicating why and under what conditions longer work hours are likely to cause employee strain. Accordingly, we adopt a resource-based framework to propose that work hours can deplete resources owing to their impact on on- and off-the-job stressors, which relate positively to strain, while simultaneously proposing that longer work hours can also aid in resource acquisition, owing to positive relations with income and promotions which are subsequently negatively related to strain. We also posit that these effects vary by culture (Eastern vs. Western) and that they are curvilinear in nature (becoming stronger at higher work hours in the case of resource depletion, and weaker in the case of resource acquisition). We tested our hypotheses using meta-analytic methods based on a sample of over 360 studies including over 800,000 individuals. We found that work hours are positively related to strain via more proximal on- and off-the-job stressors, and negatively related to strain via income and promotions, although the indirect effect via income relation was weak. We found mixed support for the moderator hypotheses, as work hours were more strongly related to on-the-job stressors and income in Western than Eastern cultures, but not the other variables; work hours were also more strongly related to off-the-job stressors and promotions at high vs. low levels of work hours. We discuss the implications of our findings for research and practice.

Author: **Hadar Freidin**, *Tel Aviv U.*

Author: **Sharon Toker**, *Coller School of Management, Tel Aviv U.*

Do we know what 'stress' means, and specifically, what employees mean when they report they experience 'stress'? Understanding lay definitions of stress is essential, as different definitions may lead to miscommunication and unfavorable managerial decisions. We explored, using a qualitative approach across five samples, how managers and nonmanagers define stress (n=991) and whether stressful contexts (e.g., COVID-19), stress levels, or personal characteristics predict how stress is defined. We also explored employees' assumptions regarding others' stress definitions (n=1,634). We found that the definition of 'stress' is diverse and somewhat vague, rarely reflecting the academic understanding. A content analysis revealed two themes consisting of seven categories: Some defined stress "classically" (62.6% defined it as 'stimulus,' 'response,' 'stimulus-response relationship'), while 32.6% defined it vaguely based on its' valence (stress is 'positive,' 'negative,' 'equivocal-subjective'). The rest defined it as an 'inevitable part of life'. Notably, the stress categories were associated with gender, managerial position, and context. The analysis of perceiving others' definitions revealed biases (e.g., employees assumed managers define stress positively). Employees also perceived others would define stress differently, except when 'stress' was defined as a 'stimulus'. This study stresses the importance of communicating the complexity of 'stress' in occupational and academic outlets.

Aligning Organizational Structure with Firm Strategy

Session Moderator: **Pascal Engelmann**, *EBS U. of Business and Law*

STR: The Corporate Headquarters: Theoretical Orientation in a Dispersed Knowledge Network

Author: **Pascal Engelmann**, *EBS U. of Business and Law*

It is vital for established fields such as CHQ research, which is influenced by works by authors from several disciplines, to take stock of their trajectory from time to time. We sought to accomplish this objective by performing a bibliometric co-citation and coupling analysis in conjunction with network analysis. This multi-methodological technique captures the social and contextual structure of the discipline. Based on 389 peer-reviewed articles and their 24,452 references, we create a conceptual framework of the CHQ literature and outline the theoretical intersections between five research streams—the external environment, strategy, organizational design, organizational management, and the managerial level. We find that empirically derived author clusters do not follow thematic topics, suggesting the existence of socially constructed gaps in research with potential for integration. We also find surprising neglect of the managerial level in CHQ research. This paper broadens the range of methodological approaches to review the intellectual structure of a field. Really understanding the CHQ requires seeing the complete picture and exploring the interlinked research domains of strategic management.

STR: Ownership Design and Managerial Efficiency ➔

Author: **Pedro Makhouf**, *UCLA Anderson School of Management*
Author: **Paula Maria Infantes Sanchez**, *ESADE Business School*

The relationship between strategy and structure is a longstanding one. In this paper, we argue that corporate groups are organized to maximize managerial efficiency in the presence of diversification. We construct a novel dataset that tracks the ownership links of nearly 1.2M parent companies from 201 countries down to nine layers of controlled subsidiaries. These 2.9M ‘ownership paths’ allow us to investigate in detail the legal organizational structures of companies around the world and derive new insights. We demonstrate that vertical (or pyramidal) ownership structures are rarely used to magnify the control rights of ultimate owners. We propose, rather, that vertical ownership structures exist to minimize monitoring costs in (industrially and geographically) diversified firms. The results show that more diversified and unrelated firms have longer ownership paths, that is, more pyramidal structures. This is consistent with the idea that these structures may allow for more efficient management in diversified or unrelated conglomerates.

STR: Relatedness, Organization Structure, and Market Entry: Evidence from a Demand Shock

Author: **Vikas A. Aggarwal**, *INSEAD*
Author: **Mo Chen**, *Robert H. Smith School of Business, U. of Maryland*
Author: **Brian Wu**, *U. of Michigan*

Prior literature on market entry suggests that a firm’s related knowledge and capabilities explain entry decisions into new market segments. Yet this literature has generally focused on entry decisions at the firm-level, without explicit consideration of the dynamics of individual divisions within the firm itself. We argue that a focus solely on firm-level factors can obscure division-level mechanisms that can deepen our insight into the link between organization structure and market entry decisions. Given the limited degree of empirical research on division-level market entry outcomes, we conduct an exploratory study to gain insight into patterns of division-level entry over time. We set our analysis in the context of an industry-wide demand shock, the September 11 attacks, which led to the need for firms to reshuffle their product market profiles in order to adapt to new demand conditions. A central finding is that, in contrast with what we might expect from a naïve application of market relatedness logic, a focal division’s entry into a particular market can increase as a result of the market relatedness of its sister division, even when the focal division is less related to the target market than its sister division. We explore the extent to which knowledge sharing among divisions within a firm can explain this finding, focusing on factors such as the presence of a shared customer and the relative knowledge dispersion.

STR: Managing Strategic Flexibility Under Multiple Technological Standards ➔ 🖨

Author: **Yong Kim**, *Texas A&M U.*
Author: **Changhyun Kim**, *China Europe International Business School (CEIBS)*
Author: **Ziyi Chen**, *HKUST*

Upon market entry, firms often need to choose what to do with multiple incompatible technological standards. The extant literature provides robust justifications for specialization (e.g., focus on the most promising standard) as well as for diversification (e.g., pursue multiple standards simultaneously). However, how firms can combine both approaches effectively is less understood. Drawing on insights from extant literatures on real options, organizational design, and technological innovation, we contend that the most effective way to manage multiple technological standards can be found in certain business group structures. Specifically, we argue and find that best innovation performance can be achieved when business groups grant sufficient autonomy to subunits specializing in each standard while coordinating these subunits with an effective control and balancing mechanism. We find empirical support for our hypotheses using data on 200,000+ flat panel display-related patent families from ten major patent trademark offices from 1970 to 2010.

The often-noted positive increase in women's participation in the workforce has not been observed equally across sectors, countries, or continents. Current literature on women's careers, work opportunities, and experiences has examined diverse individual and contextual factors that enable or hinder their respective career progression and access to leadership positions. Building on and extending those themes, this presenter symposium adopts a multi-layered approach/lens to examine women's career opportunities and leadership experiences in diverse organizational, professional, national and regional settings. Incorporating theoretical, ontological and epistemological diversity and drawing on systematic reviews and empirical evidence, the collection of papers showcase innovative insights into women's career opportunities and experiences over time, including their access to and experience of leadership roles. In line with this year's AOM theme "Creating A Better World Together", the symposium will generate critical reflection for gender-inclusive careers, HRM and leadership scholarship, discourse, policy, and practice in various contexts such as USA, Canada, UK, Belgium, Sweden, India, Bangladesh, Mexico.

The intelligent career framework emerged more than two decades ago when careers began to shift from long-term and secure to temporary and uncertain. Based on this framework, in taking career ownership, individuals develop knowing-why, knowing-how, and knowing-whom competencies that transcend any single employer. We synthesize previous research on this framework and develop a process model that unpacks how career actors make sense of the three ways of knowing in encountering career events and under the influence of situational factors. It also demonstrates the accumulation of the three ways of knowing through the links among them, based on which individuals enact and achieve sensemaking outcomes. Our review suggests directions for future research and has practical implications for career actors and organizations.

CAR: **Imprinted Human Capital: A Classificatory Framework for Developing Tabula Rasa Workers**

Author: **Daniel M. Peat**, *U. of Cincinnati*
Author: **Amit Jain Chauradia**, *Doane U.*

Individuals develop human capital through both experiences and education throughout their working careers. An implicit assumption in the human capital literature is that career development is relatively uniform and agnostic to timing of the individual's experience or sequence of their experiences. However, not all individuals with similar functional backgrounds or tenures develop uniform human capital. We utilize an imprinting lens to theorize on different types of experiences, how the timing and strength of these experiences lead to differences in human capital and discuss primacy of different types of human capital. We develop a classificatory framework based on the timing and imprinting strength of different experiences and how they relate to human capital.

CAR: **Newcomers' Organizational Socialization: A Review and Future Research Agenda**

Author: **Lu Yu**, *Missouri State U.*
Author: **Hong Ren**, *U. of Wisconsin, Milwaukee*
Author: **Romila Singh**, *U. of Wisconsin, Milwaukee*

The review articles about organizational socialization in the past mostly focused on one or two theoretical perspectives, and primarily focused on the antecedents and outcomes of socialization. Since the latest integrative reviews, organizational socialization studies have experienced major advancement in theory development and testing. This paper reviews the eight prevalent theoretical perspectives, as well as the major constructs examined in the last two decades' organizational socialization literature. We also provide detailed guidance for future research at the end of the paper.

CAR: **How Does a Career Decision Become a Career Regret? A Qualitative Exploration**

Author: **Claire Schulze Schleithoff**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Eugenia Lysova**, *Vrije U. Amsterdam*
Author: **Svetlana Khapova**, *Vrije U. Amsterdam*
Author: **Konstantin Korotov**, *ESMT Berlin*

Careers Division Best Overall Paper Award Nominee

Although the topic of career regrets is of interest both to research and practice, the scholarly development of this field is still rather nascent. In particular, the knowledge about the occurrence and development of career regrets remains to be limited. Drawing on the qualitative data collected through individual reflections (N=50) and semi-structured interviews (N=22), we explore the nature of an individual's career regrets and how a career decision becomes a regret. Our findings suggest a broader understanding of career regrets that spreads beyond regrets that are tied to occupational choices. In line with this broad understanding of career regrets, we develop a framework of a career decision becoming a career regret. Our findings also show that when people reflect on career decisions in terms of how they should have behaved differently, there are some that they perceive as career regrets while others take a form of career mistakes or career realizations. We distinguish these different ways of viewing career decisions, suggesting that the latter two kinds of decisions are more influential in shaping an individual's future career decisions than career decisions that are career regrets. Our research has important theoretical and practical implications concerning career regrets.

CAR: **Navigating Incongruent Perspectives of Meaningful Work: Moral Outrage and Inhabited Institutions**  

Author: **Elizabeth Long Lingo**, *Worcester Polytechnic Institute*
Author: **Chrysanthe Demetry**, *Worcester Polytechnic Institute*

While others play a fundamental role in constituting and legitimating meaningful work, how individuals negotiate incongruence between self and others' perceptions remains unexplored. Drawing from a case study of promotion reform within a STEM-focused higher education institution, we utilize an abductive analytical approach to develop a model of how individuals move beyond individually-experienced incongruence between self and others' perceptions of meaningful work to collectively transform what constitutes meaningful work within their organization. We identify three meso-processes—1) articulating incongruence; 2) voicing moral outrage and 3) integrating organizational distinctiveness and external legitimacy—and show how they build upon each other over time to enable actors to transform the institutional arrangements that maintained and reified incongruence. Our contributions are threefold. We develop a model of how actors navigate incongruent perceptions of meaningful work among a multiplex of relevant others, and the meso-processes undergirding this process. Second, we contribute to research at the interface of meaningful work and business ethics by showing how moral outrage helps forge collective action and greater congruence around what constitutes meaningful work. Third, we introduce an inhabited institutions perspective to scholarship on meaningful work. In so doing, we show how individuals are both bounded by and exert agency over existing institutional arrangements, and help springboard future research on meaningful work embedded within both organizational and institutional contexts.

CAR: **"I'm Not Stigmatised, But...": Stigmatised Topics, Identities, and Successful Academic Careers**   

Author: **Georg Frederic Bernhard Tamm**, *U. of Melbourne*
Author: **Erica Coslor**, *U. of Melbourne*

Drawing on theories of stigma and dirty work, we examine topic and work selection as a form of career stigma management, one that interacts in interesting ways with stigmatised individual features and group membership. Utilising a qualitative semi-structured interview methodology (29 interviews), we examine how academic researchers successfully publish on stigmatised, yet valuable, research topics, and how they navigate the potential for negative career consequences for this work. Topic examples include diversity, gender, CSR, and LGBT issues. Interviews highlighted key motivations for studying and publishing on stigmatising yet meaningful research, the challenges associated with doing such work, and finally the career management strategies scholars utilised in building successful academic careers.

 CAR: **Patching Meaningfulness: How Early Career Scholars Construct Meaning in a Pluralistic Work Context**  

Author: **Johanne Ragna Duesterbeck**, *Leuphana U. Lüneburg*
Author: **Stefanie Habersang**, *Leuphana U. Lüneburg*

Arnon Reichers Best Student Paper Award Nominee

Despite an increasing interest in the concept of meaningfulness at work, so far, relatively little research has been conducted on how the construction of meaningfulness evolves in pluralistic work contexts. We explore the construction of meaningfulness in pluralistic contexts by drawing on the case of academia, particularly the experiences of early career scholars (ECS) in Germany. We found that ECS draw on three competing discourses about legitimate academic work: the "performance discourse", the "intellectual discourse" and the "engagement discourse". The competing nature of these discourses generates tensions for ECS and the need to engage in a practice that we label patching meaningfulness. Our study contributes to the emerging stream of research that conceptualizes meaningfulness as a constant tension between the "self" and "others". We show that work roles pose an important channel enabling scholars to perpetuate multiple valued self-definitions in a context of conflicting ideals about academic work. Similarly, we contribute to the literature that understands meaningfulness as inherently temporal and episodic.

CAR: **Side-hustling and Meaningfulness in Work**

Author: **Pia Heilmann**, *U. of Eastern Finland*
Author: **Marianne Ekonen**, *JAMK U. of Applied Sciences*

Purpose: In this study we investigated voluntary side-hustling – working more than one job concurrently – and what is its role in creating a meaningful career. The focus of the study was to understand why individuals voluntarily undertake side jobs and how these influence on people's experience of career meaningfulness. Design/methodology/approach: This is a qualitative study. We collected 22 side-hustling stories from Finnish online media and analyzed them using inductive thematic analysis. Findings: It can be argued that side-hustling has a positive influence on the experience of career meaningfulness. Side-hustling gives novel content for career, purpose in life, feeling of independency as well as possibilities for development. Additionally, side-hustling strengthened societal level meanings. Combining primary and secondary occupations offer a stage for creativity and self-realization. The experience of meaningfulness brings joy to work and thereby increases well-being at work. Furthermore, primary and secondary occupations can support each other. The main occupation guarantees income when the side job allows self-fulfillment. Side-hustling can also promote future career as entrepreneur. Originality: This study contributes to career literature by highlighting the connection between side-hustling and meaningfulness. We present the main reasons why some individuals do side-hustling and what meaning this has for them. Keywords: side-hustling, hybrid career, side job, multiple careers, multiple jobholding, meaningfulness, thematic analysis Purpose: In this study we investigated voluntary side-hustling – working more than one job concurrently – and what is its role in creating a meaningful career. Causes and Consequences of Prosocial Behavior

Session Moderator: **David P. Daniels**, *NUS Business School*

CM: **How Past Experiences Shape Future (Prosocial) Behaviors: A Large-Scale Natural Field Experiment**   

Author: **David P. Daniels**, *NUS Business School*
Author: **Polly Kang**, *NUS Business School*

Future behaviors are shaped by the content of past experiences, but scholars have assumed that the order of past experiences should not matter at all. Using a large-scale natural field experiment involving 14,383 volunteer crisis counselors, we examine how the content and order of past experiences causally influence future behavior – namely, whether individuals continue volunteering or quit. Volunteer crisis counselors were repeatedly and randomly assigned to perform 1,976,649 time-stamped prosocial behaviors that were either harder prosocial behaviors (suicide conversations) or easier prosocial behaviors (non-suicide conversations). We find that the content of past experiences mattered: Harder (versus easier) behaviors caused volunteers to become more likely to quit. However, we find that order mattered up to 99 times more than content: Harder behaviors caused disproportionately more quitting if they came in long streaks or at the end. Two aspects of our investigation are especially noteworthy. First, our investigation is the largest field experiment on prosocial behavior ever conducted in terms of the number of randomizations. For example, our investigation is 49,000 times larger than a classic study about helping behavior by Darley and Batson (1973). Second, our results suggest that if leaders implemented a simple “reordering intervention” (i.e., never assigning hard-behavior streaks or hard-behavior ends to volunteers), it would double prosocial behavior and save lives. Strikingly, the reordering intervention’s expected percentage point impact is 449% larger than the impact of any previous intervention mentioned in a prominent review of leading interventions by Benartzi et al. (2017).

CM: **When Given a Fish vs. Offered a Fishing Rod: Outcomes of Receiving Contrasting Types of Help** 

Author: **Jessica Jee Won Paek**, *Fuqua School of Business, Duke U.*
Author: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*

In today’s fast paced, collaborative workplace cultures, it is hard for employees to not receive help and succeed alone. Thus, giving and receiving help is omnipresent in organizations. However, receiving help has proven to be both beneficial and harmful concurrently. To reconcile these conflicting outcomes of receiving help, we adopt a dual-type view of helping. We propose that employees who receive dependency help (i.e., where a leader fixes a problem on behalf of an employee or presents a final answer) report lower job satisfaction and higher turnover intention. In contrast, employees who receive autonomy help (i.e., where a leader guides an employee through the steps on how to fix a problem) report higher job satisfaction and lower turnover intention. We further invoke Self-Determination Theory to examine the mediating role of employees’ needs for perceived impact, sense of belongingness, and occupational self-efficacy in predicting divergent outcomes. Finally, we examine the moderating role of leader-employee relationships in elucidating how high-quality LMX can buffer against the negative effects of receiving dependency help. We test our hypotheses using a combination of experimental studies and a large field study comprising of 73 supervisors and 292 employees. In doing so, this research highlights how receiving contrasting types of help can yield divergent outcomes.

CM: **Conflicted After Status Loss: How Support Exacerbates the Effect of Status Loss on Disengagement**

Author: **Jennifer Carson Marr**, *U. of Maryland*
Author: **Edward Lemay**, *U. of Maryland, College Park*
Author: **Hyunsun Park**, *U. of Maryland*

The current research examined the role of social support at work in people’s reactions to losing status. Despite the documented benefits of perceived support buffering reactions to negative work events, we argue that generally having higher perceptions of coworker support at work will counterintuitively exacerbate the negative effect of status loss on work engagement because it triggers more ambivalence, which is anxiety-inducing. In an experience sampling study of working adults (Study 1), we develop and validate a checklist of common status loss experiences at work and find that for employees with higher perceptions of general support, weekly experiences of status loss were associated with steeper declines in weekly work engagement. Then, in a recall (Study 2) and scenario-based (Study 3) experiment, using different measures and manipulations of perceived support, and different manipulations of status loss, we find consistent support that the effect of status loss on disengagement is exacerbated by higher general perceptions of support because it triggers ambivalence, which heightens anxiety.

The Enemy Within: Colleagues Who Undermine and Those Who Idly Watch

Session Moderator: **Zhanna Lyubykh**, *Haskayne School of Business, U. of Calgary*

CM: **Justifying the Inevitable: How Observers of Workplace Mistreatment Can Become Accomplices**   

Author: **Zhanna Lyubykh**, *Haskayne School of Business, U. of Calgary*

Author: **Laurie Barclay**, *U. of Guelph*

Author: **Nick Turner**, *U. of Calgary*

Author: **Sandy Hershcovis**, *U. of Calgary*

Why do some observers fail to support targets of workplace mistreatment? Drawing on system justification theory, we propose that perceiving workplace mistreatment as more inevitable can prompt observers to justify the mistreatment. Using an experiment (N = 301) and a multi-wave survey (N = 554), we found that perceived mistreatment inevitability positively related to observers' evaluations of mistreatment legitimacy and negatively related to their evaluations of target legitimacy. In turn, these legitimacy evaluations had implications for observers' reactions to the mistreatment incident (i.e., minimizing the incident) and the target of mistreatment (i.e., decreasing work-related support, increasing negative gossip, and increasing avoidance). Importantly, we identified organizational mistreatment climate as an antecedent of perceived mistreatment inevitability, with supplemental analyses revealing that gender exacerbated the negative effects of climate on perceived mistreatment inevitability for female (but not male) targets. Theoretical implications include understanding how observers may inadvertently worsen mistreatment in the workplace, including why observers may justify workplace mistreatment, how this can impact their behaviors, what may prompt observers' system justification tendencies, and who (i.e., which targets) are most likely to experience these detrimental effects. Managerial insights include recognizing that observers may contribute to further negative consequences for mistreatment targets and the critical role of organizational climate for curtailing these effects.

CM: **Ostracism and Knowledge Hiding: Sequential Mediation of Efficacy Needs and Psychological Distress**  

Author: **Sabeen Bhatti**, *Bahria U., Islamabad Pakistan*

Author: **Maryam Hussain**, *Bahria U., Islamabad Pakistan*

Author: **Gabriele Santoro**, *U. of Torino*

Drawing on the conservation of resources theory and need-threat model, this study analyses the mediating role of efficacy needs and psychological distress on the relationship between workplace ostracism and knowledge-hiding behaviour of employees. Time-lagged data were collected from 225 employees working in the mobile telecommunication sector through online survey instruments prepared in light of past literature. SPSS23 and SmartPLS3 were used to analyse the data. The results obtained confirm the initial hypothesis that there exists a positive relationship between workplace ostracism and knowledge hiding. Furthermore, the results also established the sequential mediating roles of efficacy needs and psychological distress between workplace ostracism and knowledge-hiding behaviour of employees. This study adds to the literature suggesting that workplace ostracism represents a real threat to companies that aim to foster knowledge-sharing behaviours. Moreover, it reveals that efficacy needs and psychological distress are two underlying mechanisms behind the baseline relationship.

Paper is Available to Meeting Registrants Only.

CM: **The Impact of Perpetrator and Target Gender on Third Party Attributions for Workplace Mistreatment**

Author: **Eva Zedlacher**, *Webster U., Vienna*

Author: **Takuya Yaganida**, *U. of Vienna*

Workplace mistreatment is often ambiguous for direct observers and other third parties. They may be prone to gendered attributions of blame against perpetrators and targets. In the present study, we investigate via video vignettes with four male and four female professional actors whether perpetrator and target gender affect third parties' moral anger and attributions of blame for workplace mistreatment. 999 Austrian workforce members responded to standardized video clips displaying direct anger as well as indirect social aggression (social exclusion) against a target at work. Using a 2*2*2 mixed design, we manipulated perpetrator gender, target gender and mistreatment scenario (in total four perpetrator/target gender configurations and 16 different actor combinations per scenario). Mixed-effects modeling revealed no significant perpetrator gender effects in the direct anger scenario regarding moral anger, perpetrator and target blaming. In the case of social exclusion, female perpetrators evoked significantly more moral anger and blame than male perpetrators, in particular when the target was female. In female-only perpetrator/target configurations, the female targets were blamed significantly less for social exclusion than when the perpetrator was male. Results corroborate earlier findings on the stereotype and problematization of female/female harassment. Findings also show that the impact of perpetrator gender on attributions of blame by third parties cannot be studied independently of target gender and type of mistreatment. We discuss implications and limitations of findings and the methodological approach.

CM: **Incivility or Just Another Form of Mistreatment at Work?**

Author: **Heath Gregg**, *U. of Miami*

Author: **Changmeng Xu**, *U. of Miami*

In the 22 years since the concept of workplace incivility was introduced to scholars (Andersson & Pearson, 1999), a substantial body of empirical work on potential antecedents, negative outcomes, and various boundary conditions has accumulated. Despite the fascination and the considerable interest shown in investigating incivility, there are some criticisms regarding how the construct is defined and measured. There are concerns that one of the most common measurement instruments used to assess workplace incivility (the WIS-R, Cortina et al., 2013) may not be identifying uncivil behaviors in particular, but rather it may be capturing employee appraisals of various forms of interpersonal mistreatment. For example, mistreatment might encompass perceptions of another person at work engaging in bullying, undermining, abuse, or some other form of mistreatment. To support this position, a content analysis of the Workplace Incivility Scale Revised, [WIS-R] (Cortina et al., 2013) was conducted to assess if the way workplace incivility is measured is differentiating incivility from other related interpersonal mistreatment constructs. The findings bring into question the content validity of the WIS-R and raise concerns about the current approaches to the measurement of workplace incivility and workplace mistreatment in general.

Race, Embodiment and Ethics: Exploring Bodies and Race Within Gender Research

Race, Embodiment and Ethics: A Research Agenda

Organizer: **Estelle Archibold**, *Case Western Reserve U.*
Organizer: **Alison Pullen**, *Macquarie Business School, Macquarie U.*
Panelist: **Banu Ozkazanc-Pan**, *Brown U.*
Panelist: **Alessia Contu**, *U. of Massachusetts, Boston*
Panelist: **Celina McEwen**, *UTS*

This professional development workshop (PDW) aims to generate new research insights centered on research that raises the interrelation of race, bodies and ethics in management and organizational research. The Gender, Work and Organization journal (GWO) raises the significance of scholarly research on interrelated themes in the context of its broader mission to publish “multi-disciplinary, high quality qualitative empirical research on gendered power relations and identities in the study of work and organization exploring issues of inclusion and exclusion.” The newly established GWO network on Race, Embodiment and Ethics aims to generate impactful scholarship that changes the ways in which we consider the salience of “the body” in research on race, gender and ethics in organizations and managerial theory and practice. Our proposed PDW will feature four panelists who are currently engaged in scholarly research and theorizing about race, embodiment, and ethics in the context of gender studies in the pursuit of social justice. Following we will generate discussion in small groups about budding research in these domains. We invite PDW participants who themselves are interested in developing and contributing to research agendas that raise the salience of “the body” in studies of race and intersectionality (specifically regarding race and gender), gender and the body, as well as ethics and the consequences of disembodied theories about justice and ethics in organizations. Keywords: Embodiment, gender, ethics, justice, race

You may register for this PDW at <https://forms.gle/y9HTHR1EETJcN7ECA>. Please contact Estelle Archibold - exa177@case.edu, Alison Pullen - alison.pullen@mq.edu.au, and/or Banu Ozkazanc-Pan - banu_ozkazanc-pan@brown.edu for questions about the PDW and registration. We encourage both scholars and practitioners to participate as we build bridges to support engaged scholarship.

ENT: **Entrepreneurship or Supporting the Family? Opportunity Recognition Motivation and Its Exploitation** ➔

Author: **Yapu Zhao**, *Nanjing U. of Aeronautics and Astronautics*

Author: **Depeng Liu**, *Shandong U.*

Author: **Dong Liu**, *California State U., Northridge*

Author: **Beilei Dang**, *Nanjing U.*

Employee entrepreneurship is the foundation of corporate entrepreneurship. This study examines the effects of family motivation on employees' entrepreneurial behavior within organizations (i.e., opportunity recognition and opportunity exploitation). We argue that opportunity recognition can be a response to employees' needs for supporting their family and hypothesize that family motivation has a positive effect on opportunity recognition; however, family motivation will also reduce the effect of opportunity recognition on opportunity exploitation suggesting that those opportunities identified by employees with strong family motivation are less likely to be exploited. We further propose that the negative moderating effect of family motivation is stronger for female employees than for their male peers. We test our hypotheses by analyzing two-wave and time lagged data that were collected from 280 personnel.

ENT: **Influences of University Students' Grandiose and Vulnerable Narcissism on Entrepreneurial Intention** ➔ 🖨

Author: **Tingko Lee**, *Graduate School of Resource Management and Decision Science, National Defense U.*

Author: **Chih-Hsing (Sam) Liu**, *National Kaohsiung U. of Science and Technology*

Author: **Bernard KC Gan**, *Griffith Business School, Griffith U.*

Author: **Cheng-Kuei Yang**, *Ministry of Health and Welfare Secretariat*

Based on regulatory focus theory, this study examines whether narcissistic personality traits in college students stimulates promotion focus (pursuing pleasure) or prevention focus (avoiding pain), thereby affecting entrepreneurial intention, and explores whether entrepreneurship education programmes (EEPs) moderate the relationship between motivation and entrepreneurial intention. In Study 1 and Study 2, questionnaires were distributed at three different time points (intervals of 30 days). Study 1 included 531 college students from Taiwan as the study subjects and generated the following findings: (1) grandiose narcissism and vulnerable narcissism can increase and decrease entrepreneurial intention, respectively; (2) promotion focus has a positive mediating effect on the relationship between grandiose narcissism and entrepreneurial intention; and (3) prevention focus has a negative mediating effect on the relationship between vulnerable narcissism and entrepreneurial intention. Study 2 included 231 college students from Australia. In addition to supporting the hypotheses tested in Study 1, the following findings were obtained: (4) under high-level EEPs, the positive mediating effect of promotion focus on the relationship between grandiose narcissism and entrepreneurial intention increased; and (5) under high-level EEPs, the negative mediating effect of prevention focus on the relationship between vulnerable narcissism and entrepreneurial intention decreased.

ENT: **Acquired Knowledge that Support Entrepreneurs: Implications for Entrepreneurial Emotion and Learning**

Author: **Takahiro Inada**, *Kyoto U. of Advanced Science (KUAS)*

Author: **Masato Horio**, *Kobe U.*

In the field of entrepreneurial learning, a major focus has been on understanding learning tasks, i.e., the knowledge required for entrepreneurial activity. However, to date, research has solely focused on opportunity information and concrete know-how related to technology and management, and has not analyzed the mindsets and psychological foundations that guide decision-making as learning objects. To fill this gap, we asked what knowledge entrepreneurs gain and conducted a comprehensive and exploratory analysis of archival interviews of 96 Japanese entrepreneurs. As a result, we discovered a fourth category that could not be classified into the previous three categories: opportunity information, capability, and schema. We named it way of being, meaning the personal ideals of being when working on businesses. This finding suggests that entrepreneurs navigate their emotional journey depending on what they learn from their experiences and the teaching of others. This study is novel as it examines the impact of knowledge and information acquisition activities on entrepreneurs' emotions. We also showed that entrepreneurs can be categorized into three types: strategic, cognitive, and emotional, based on the learning content they focus on.

ENT: **Intergenerational Transmission of Entrepreneurial Identity within Entrepreneurial Families**

Author: **Seyyede Sharare Bagherian**, *Sharif U. of Technology*

Author: **Sohrab Soleimanof**, *Louisiana State U.*

Author: **Alireza Feyzbakhsh**, *Sharif U. of Technology*

Entrepreneurial families play a critical role in the next generation's interest in and desire for entrepreneurship. Because entrepreneurship is an identity construction process, the influence of entrepreneurial parents on the construction or nonconstruction of their children's entrepreneurial identity (EI) needs to be explored. This paper provides a theoretical framework of the children's EI construction process. It specifically suggests that entrepreneurial parents' emotional expression resulting from the identity verification process and emotion regulation in family communication can influence the children's identity construction processes. When parents' EI is verified and its resulting positive emotion is expressed in a conversation- and conformity-oriented environment, it sends children the message that EI can enhance identity motives. This message leads to the activation of EI assimilation and maintenance for the children. We contribute to existing research by going beyond seeing parents only as role models by highlighting the interplay between parents' EI enactment and child's identity construction and explaining the family communication influence.

Immigrant Entrepreneurship 1

Session Moderator: **Nousheen Tariq Bhutta**, *Capital U. of Science and Technology*

ENT: Immigrant Entrepreneurship - A Tale of Two Worlds Bibliometric Domain Analysis 2009 -2019

Author: **Jan Wiers**, *IAE Paris - Sorbonne Business School*
Author: **Didier Chabaud**, *IAE Paris - Sorbonne Business School*

This comprehensive bibliometric study aims to analyze the nomological structure of the immigrant entrepreneurship domain 2009-2019 by means of citation and co-citation analysis for highlighting research trends, theoretical shifts and providing insights on future domain developments. SSCI citation data was initially used to return lists of most-cited authors, journals and publications. Co-citation matrixes were subsequently tabulated and visualized with Vos Viewer for three consecutive time intervals to highlight shifts in the otherwise evolving structure of knowledge. The shifts in the knowledge structure are analyzed and discussed with regards to the findings of 3 systematic literature reviews, published between 2013 and 2019 and a bibliometric predecessor study from 2013. The results show that the immigrant entrepreneurship domain transformed into a management research domain with seminal theorization shifting toward structuralistic models. Prominent phenomenon of contemporary research include ethno-national variations, Super-diversity, transnationalism and refugee entrepreneurship, which amplify the need for theoretical refinement of the field. 'Simultaneous-embeddedness' appears a most promising starting point for its conceptualization of the home country next to the host country context, though it must be extended to include additional contexts including the digital arena to better reflect the newly emerging complexities of contemporary immigrant entrepreneurship. Our study is the first update on the state of the immigrant entrepreneurship domain since 2011 and the results serve as an important point of reference regarding theoretical and empirical domain trends for established and new scholars in the growing field of immigrant entrepreneurship.

ENT: Boost or Penalty? Experimental Evidence on the Effect of Entrepreneurial Experiences on Employment

Author: **Carina Hartmann**, *U. of Mannheim*
Author: **Christoph Sajons**, *U. of Mannheim*

Entrepreneurship is a way to adequately use one's own qualifications and expertise, circumvent labor market restrictions and achieve professional and social progress. Starting-up, however, bears significant risks of failure and former founders often need to apply for wage employment afterwards. This is particularly true for migrants and refugees, who face obstacles on the institutionalized markets of developed economies. In this paper, we examine whether and how entrepreneurial experiences (EE) of former migrant founders affect subsequent hiring success. To this end, we conduct a pre-registered correspondence test, sending out fictitious applications to job vacancies in Germany. We use four main application profiles: (voluntary business exit, forced business exit, wage employment, and unemployment) and compare their rates of positive firm feedback. Our results suggest that EE fare equally well with experiences in wage employment, but significantly improve the chances for a call-back compared to unemployment. Contrary to expectations, we do not find stronger effects of EE for migrant women and refugees in application processes.

ENT: Financial Ambidexterity of the Immigrant Family Businesses: A Conceptual Perspective (WITHDRAWN) 

Author: **Bryan Malki**, *Jönköping International Business School*

Based on the multi-contextual nature of immigrant entrepreneurship, this paper theoretically introduces and discusses the ambidextrous ability of the IFBs' owners overcoming the financing barriers in host countries. Namely, discussing the behavioral ability of the immigrant entrepreneurs in flexibly switching their exploration and exploitation for formal and informal financing between the multiple contexts where they are embedded. The paper build on a synthesis of different theoretical notions in constructing the term of 'financial ambidexterity of IFBs', namely, organized proximity, boundary work, and behavioral complexity. This theoretical synthesis is thoroughly discussed within the immigrant entrepreneurship framework. The paper proposes four mechanisms to derive the IFBs' financial ambidexterity, and argues for boundary work and behavioral complexity as the critical drivers for ambidexterity. The paper provides four detailed models that illustrate each proposed mechanism, in addition to an overall model that gives a comprehensive view of the different phases of accumulating the IFBs' financial ambidexterity. The paper mainly contributes to the literatures on family business and immigrant entrepreneurship by proposing how IFBs survive the financing barriers they face in host countries. The paper tries to advance the understanding about entrepreneurial financing using social, and behavioral perspectives like organized proximity, behavioral complexity, boundary work, and behavioral complexity. The ultimate theoretical construct of this paper explains a behavioral manifestation, entitled, 'financial ambidexterity' of the IFB owners in overcoming financing barriers in host countries.

ENT: How Does National Culture Influence Entrepreneurship? (WITHDRAWN)  

Author: **Johannes Kleinhempel**, *Alliance Manchester Business School, U. of Manchester*

How does national culture influence entrepreneurship? There are three dominant perspectives –internalized cultural dispositions view, legitimacy view, and social support view– which propose distinct theoretical channels and yield partially conflicting propositions regarding the role of culture in entrepreneurship. I offer a fresh approach to culture-entrepreneurship research by decoupling the theoretical mechanisms proposed by the internalized cultural dispositions view from other cultural perspectives. The empirical context of this study are second-generation immigrants of different ancestries in the U.S. Second-generation immigrants have been born, educated, and currently live within the shared cultural, institutional, and economic environment of the U.S. but potentially differ in cultural dispositions as influenced by the culture of their country of ancestry. Specifically, I argue that second-generation immigrants are more likely to be entrepreneurs if their parents' country-of-origin culture is characterized by high levels of risk-taking propensity, need for achievement, and need for autonomy. Using data on more than 50,000 second-generation immigrants and multilevel modelling, I find support for these propositions. The results are robust to the incorporation of the legitimacy and social support view and non-cultural explanations proposed by immigrant entrepreneurship research. This paper, by providing evidence from the internalized cultural dispositions perspective, sheds light on the mechanisms through which culture matters.

ENT: The Influence of Founding Experience on the Establishment of Organizational Structures

Author: **Lukas Knauf**, *Heinrich-Heine U. of Dusseldorf*

This article introduces a multi-level human capital perspective on the origins of new ventures' organizational structures. We examine the human capital of the founding team and venture capital investors and establish a model that details each party's influence on the venture's organizational design. In explaining the role of human capital in entrepreneurship, we argue that the influence of experienced founding teams and that of experienced venture capital investors both lead to differentiated organizational designs but that there is no additional effect when both parties are experienced. To validate our hypotheses empirically, we compile a longitudinal database of 199 new biotechnology ventures founded between 2001 and 2012 with 1,723 observation years and 460 funding rounds. We find that both experienced entrepreneurs and experienced venture capital investors lead to deeper and broader organizations in the absence of the other but no additional effect of their simultaneous presence. This study contributes to human capital research in the realm of entrepreneurship by considering the experience of the founding team and venture capital investors in an integrated, multi-level model. In addition, this study contributes to organizational research by providing detailed evidence on the differences in organizational design choices made by experienced founding teams and experienced venture capital investors compared to their unexperienced counterparts.

ENT: Micro VC

Author: **Valerio Pelucco**, *Department of Management and Technology, Bocconi U.*

Author: **Mario Daniele Amore**, *Bocconi U.*

Author: **Annamaria Conti**, *U. of Lausanne*

Given its spectacular growth in recent years, venture capital is gaining significant attention among strategy scholars. In this paper, we shed light on a novel and unexplored phenomenon, namely the emergence of small-sized VC funds (micro VC hereafter). Using US data from 2000 to 2020, we show that micro VC has experienced a remarkable increase, which is economically larger than that of business angels and traditional VC. Moreover, we show that micro VC has an idiosyncratic investment style, more focused on founders and early-stage firms. Studying the performance implications for startups, we find that being backed by micro VC has a much smaller effect than traditional VC on the subsequent number of rounds and the amount raised. Moreover, while micro VC increases the likelihood of startups' success, the effect is half of that of traditional VC. Micro VC's performance is even poorer when the fund manager is a former founder.

ENT: Getting off to a Good Start: Emerging Scientific Fields and External Financing

Author: **Ciro Donald Esposito**, *Amsterdam Business School, U. of Amsterdam*

Author: **Nachoem Wijnberg**, *U. of Amsterdam*

Author: **Balazs Szatmari**, *U. of Amsterdam*

Author: **Jonathan Sitruk**, *Amsterdam Business School, U. of Amsterdam*

This paper examines whether increased involvement by scientists and investors in a scientific field affects the initial external financing received by new ventures in these fields. We argue that ventures perceived to be associated with emerging scientific fields are more likely to get initial external capital than ventures that do not have such associations. Our results indicate that being associated with emerging scientific fields increases the likelihood of acquiring needed resources for new ventures. However, we found that ventures perceived as associated with fields that showed growing investments in the past do not have a higher likelihood of obtaining initial external investments.

ENT: Cross the Road Safely: Network Defense to Indirect Ties to Competitors

Author: **Wei Chen**, *School of Business, Renmin U. of China*

Author: **Yan Yan**, *School of Business, Renmin U. of China*

In reality, some venture capital (VC) firms invest in competing start-ups simultaneously, and then an indirect tie between them is established. However, start-ups face the risk of knowledge leakage through the shared VCs. There is a research gap on what network defense the start-ups shall adopt to deal with this threat. To fill it, this paper put forward three methods: controlling partner addition, refusing "friends" and accepting "followers". Then we discuss the impact of the round number on the possibility of these three defenses. Besides, we also make contributions to the literature on the indirect tie and network dynamics and provided implications about knowledge protection and VC partner addition. This study focused on US start-ups and tested our theory using 1985 ~ 2020 VC investment data from Thomson Reuter's VentureXpert database.

Crowdfunding 1

Session Moderator: **Douglas Cumming**, *Florida Atlantic U.*

ENT: **Governance and Success in U.S. Equity Crowdfunding** 

Author: **Douglas Cumming**, *Florida Atlantic U.*

Author: **Sofia A. Johan**, *Florida Atlantic U.*

Author: **Robert Sean Reardon**, -

We propose three governance mechanisms pertinent to equity crowdfunding and campaign success through mitigating pronounced information asymmetries and agency problems. First, unlike IPOs for which the effect of Delaware incorporation has declined or disappeared over time, we propose Delaware incorporation matters a great deal for success in the new setting of equity crowdfunding. Second, we propose that security design is a critical tool for equity crowdfunding success and even more important than the limited 2-year financial statement disclosure. Third, we propose that platforms as intermediaries between entrepreneurs and investors play an important role in mitigating and sometimes exacerbating information asymmetries and agency problems. The population of equity crowdfunding campaigns from market inception in May 2016 to Q2, 2021 in the United States provides strong support for these propositions.

Paper is Available to Meeting Registrants Only.

ENT: **Does the Mismatch Between Verbal and Nonverbal Cues Affect Crowdfunding Campaign Outcome?** 

Author: **Byoungsoon Koh**, *Korean U. business school*

Author: **Daeil Nam**, *Korea U.*

Author: **Juhee Kim**, *Korea U.*

Equity crowdfunding is a unique and effective ground for new ventures to solicit external capital. New ventures introduce themselves via project description and video presentation to successfully fund the campaign. Past studies have acknowledged the importance of video presentation as the source of information and the chance for new ventures to promote a desirable image of themselves to the viewers. This paper examines whether the emotions portrayed through verbal and facial expressions reflect their own evaluation of the current firm's status. Moreover, we investigate whether expressive behaviors can facilitate investment decisions. We further posit that positive facial expression will not yield a positive funding outcome if it is moderated by negative verbal cues. Also, it is expected that potential investors will penalize the new ventures when the positive nonverbal cues diverge from the actual financial performance. To test our hypothesis, we use the data from the South Korean crowdfunding platform, Wadiz, during the 2016–2021. Our hypothesis is supported that potential investors will detect anomalies when the facial expression is met with the negative verbal sentiment, leading to lower funding outcomes.

Paper is Available to Meeting Registrants Only.

ENT: **The World at Their Feet? A Longitudinal Analysis of Born Global Startups and Equity Crowdfunding**  

Author: **Joe Cox**, *Athabasca U.*

Author: **Farzad Haider Alvi**, *Athabasca U.*

This paper examines two determinants of equity crowdfunding: success in raising targeted amounts during the fundraising period, and longitudinally, the degree of firm survival following the fundraising. We study how a particularly resource constrained type of start-up firm, born global (international new venture), performs when attempting to raise equity through a crowdfunding platform. Our methodology combines inductive qualitative analysis of the investment narrative found in the disclosure documentation, with two-stage multivariate analysis to model longitudinal performance. Based on the modelling, we classify firms as born globals, traditional (slow) globals, born locals, and anchored locals. Among the four types of firms, we find that that born globals are the least likely to enjoy fundraising success but among the more likely to survive post-campaign. Thus, the early internationalization of born globals appears to offset liabilities of newness and foreignness associated with international strategy. Further research is suggested on why crowdfunders do not appreciate the signals in the strategic narrative that lead to better investment outcomes. Given the promising nexus identified between born globals and crowdfunding, additional research is also recommended on how crowdfunding could play a larger role in innovation finance ecosystems.

Paper is Available to Meeting Registrants Only.

ENT: **The Effect of Speech Acts in Entrepreneurial Narratives on Fundraising Performance** 

Author: **Pyayt Phyoo Oo**, *U. of Texas At Arlington*

Author: **Lin Jiang**, *U. of South Florida*

Author: **Annaleena Parhankangas**, *Iowa State U.*

Author: **Chien-Sheng Richard Chan**, *Stony Brook U.-State U. of New York*

This study examines the role of entrepreneurial narratives in fundraising performance. Rather than focusing on entrepreneurs' attributes inferred from the narratives, we focus on entrepreneurs' actions within the narratives (i.e., speech acts) and their role in fundraising. Drawing on the speech act theory and the exchange theory of entrepreneur-investor relationships, we propose that three types of actions in narratives (assertive, directive, and expressive acts) positively influence crowdfunding success, whereas commissive acts negatively influence crowdfunding success. Further, a diverse mix of speech acts increases fundraising performance by leveraging complementarity. Using a sample of 28,000 crowdfunding campaigns and a supervised machine-learning approach, we find ample support for our predictions, making both theoretical and methodological contributions.

Entrepreneurial Scalability 1

Session Moderator: **Angelo Romasanta**, *ESADE Business School*

ENT: **From Growing to Scaling: An Integrative Framework of Scalability in Deep Tech**   

Author: **Angelo Romasanta**, *ESADE Business School*

Author: **Gozal Ahmadova**, *ESADE Business School*

Author: **Jonathan D. Wareham**, *ESADE*

Scalability is one of the most important features evaluators assess in new ventures. Yet, what it means for a venture to be scalable is still not well understood. To bring new insights, we explore scalability in the unique context of deep tech – ventures which require prolonged stakeholders' support in technology development before they can scale. Our study identifies the dimensions of scalability for nascent ventures based on interviews with ecosystem actors from venture capitalists, incubators, accelerators, public funders, and corporate venture builders. Instead of merely being an inherent characteristic of a firm, scalability arises from evaluators' interpretation of signals related to the ventures' technology, business model, market, and people. While inaccurate scalability evaluations can lead to firms not getting the resources needed to scale eventually, we also show that new ventures deemed scalable can still fail to scale without proper development. Our study advances an integrative framework of scalability, clarifying the relationships between scalability as a capability, scaling as a process, and other extant concepts like growth. Apart from theoretical contributions, our study guides both decision-makers evaluating new ventures and entrepreneurs aiming to win support from crucial stakeholders.

ENT: **Tipping over to Scalable Growth: Examining Micro-Activities in the Growth Dynamic Capability**  

Author: **Ivana Milosevic**, *College of Charleston*

Author: **Erin Bass**, *U. of Nebraska, Omaha*

The importance of versatile resources for firm growth is well documented in entrepreneurship literature. However, how firms navigate nonlinearities in growth and how managers in those firms develop and leverage versatile resources to build growth dynamic capability they can sustain is insufficiently explained. To enhance our understanding of this process, we investigate how individuals in a high growth tech firm overcome the early chaotic new venture growth that led them to the edge of demise – what we term a tipping point - to build growth dynamic capabilities bottom up. Our findings illustrate that growth dynamic capability embodies both intentional and serendipitous actions, as individuals retain useful resources, recombine others, and discard the less useful ones. In this context, repetition is questioned (due to its necessity for scalable growth but also potential to stifle it), and performance reliability at the firm level is continually accomplished via disruptive activities on the individual level.

Paper is Available to Meeting Registrants Only.

ENT: **Dynamic Scaling for Persistent High Growth**

Author: **Suzana Varga**, *Erasmus U. Rotterdam*

Author: **Magdalena Cholakova**, *Erasmus U. Rotterdam*

Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*

Author: **Tom Mom**, *Erasmus U. Rotterdam*

Author: **Guus J.M. Kok**, *U. of Valencia*

High-growth firms (HGFs) represent a very small proportion of all firms, yet they are responsible for most new jobs. Previous studies on HGFs, while valuable and advancing the field, have been mostly limited to explaining single three-year episodes of high growth. This leaves a noticeable gap in terms of explaining how firms that show high growth over extended periods of time are able to do so. Using a longitudinal qualitative design to study one of the fastest growing companies in the Netherlands and a persistent fast grower for more than a decade, we identify the process of dynamic scaling as being a key foundation for persistent HGFs. This enables us to demonstrate that what makes high growth sustainable over extended periods of time are the strategic leaders' consistent and deliberate efforts to scale the organization. We find that strategic leaders are able to repeatedly scale the organization by deploying and adapting four key managerial capabilities that are specific to persistent HGFs. By identifying the process of dynamic scaling and the underlying four key managerial capabilities, we are able to move beyond generic financial and performance indicators of persistent HGFs and, instead, explicate the contextual specificities of these firms, which contribute to their extended success.

ENT: **Societal Crises as External Enablers of Extreme Scaling by Digital Ventures**

Author: **Frederik Von Briel**, *U. of Queensland*

Author: **Per Davidsson**, *Jonkoping International Business School*

Author: **Jan Recker**, *U. of Hamburg*

Building on the External Enabler Framework and prior research on digital entrepreneurship and innovation, we develop new theory of how entrepreneurial ventures can leverage societal crises to realize the extreme scaling potential enabled by digital technologies. Our theory posits a general pattern through which a) digital technologies provide baseline potentialities for venture scaling, b) crises provide venture-level additive enabling mechanisms, c) ventures' task environments provide further positive feedback effects, and d) media discourse adds aggregate-level power effects, which cumulatively yield increasingly potent and non-linear scaling effects that also become progressively concentrated to a few, hyper-scaling ventures. We then outline how different development stages, market positions, and resource endowments make different hyper-scalers follow slightly different routes through the general pattern to achieve extreme outcomes. Through this work we take a major step forward in external enablement theorizing which we hope will inspire others to conduct empirical research and provide further theoretical refinements in this domain.

Innovation and Entrepreneurship 1

Session Moderator: **Nadine Scholz**, *King's College London*

ENT: Timing Matters – The Impact of Innovation Exploitation on New Venture Survival

Author: **Max Meyer**, *Heinrich-Heine U. of Dusseldorf*
Author: **Verena Rieger**, *Heinrich-Heine U. of Dusseldorf*

Previous research highlights the positive effect of exploitation and exploration innovation on firm performance, but most studies focus on established firms. Recent reviews in entrepreneurship underscore the need to model time and timing more explicitly in research. We combine these insights and explore how new ventures should prioritize innovation activities given their limited resources and survival chances. Leveraging a multi-source sample of 520 new ventures, we find that exploitation positively impacts new venture survival and that timing plays a vital role. Our results lead us to reinforce calls to form a more time-integrated perspective of the entrepreneurial process and innovation.

ENT: Experimental Spaces As Temporary Entrepreneurial Work Environments For Incubating Wildcard Ideas

Author: **Nadine Scholz**, *King's College London*
Author: **Marcela Miozzo**, *King's College London*
Author: **Gabriela Gutierrez Huerter O**, *Assistant Professor, King's Business School*

Companies often establish structured innovation programs such as innovation labs and corporate accelerators to harness employee creativity and enable them to experiment with new ideas to challenge established practices, actions or business models. What is yet to be understood is how individuals lacking such structured innovation programs in organizations pursue their ideas. This study explores inductively how individuals initiate and develop novel ideas outside the core corporate structures through the lens of experimental spaces. Experimental spaces as temporary entrepreneurial work settings provide distinct means for individuals to interact and experiment with new ideas and approaches. Using the concept of boundary work and drawing on an embedded multiple case study of six wildcard ventures that originate outside the core corporate structures, this paper unpacks the individual entrepreneurial efforts and their connections to supportive actors contributing to the emergence of experimental spaces. The findings reveal two distinct entrepreneurial venture paths, internal networked ventures and peripheral entrepreneurial ventures, that emerge through the establishment of supportive conditions along the venturing process, including different iterative product development, market engagement, and working style and methods.

Paper is NOT Available. Please contact the author(s).

ENT: Absorptive Capacity, Decision-Making Approaches, and Innovation: Evidence from Fintechs and Biotechs   

Author: **Christopher Steinert**, *Postdoctoral researcher*
Author: **Christian Landau**, *EBS Business School*

This paper addresses the question how new ventures create innovation performance through the application of two entrepreneurial decision-making approaches, namely causation and effectuation, and the usage of absorptive capacity. We build a conceptual model and use partial least squares structural equation modeling in order to analyze survey data on 150 BioTechs and FinTechs operating in three European countries. Our results reveal that causation does not directly impact a firm's innovation performance, but that this relationship is fully mediated by absorptive capacity. We further find effectuation to significantly influence innovation performance, while absorptive capacity partially mediates this relationship. We contribute to entrepreneurship theory—in particular to literature on effectuation and knowledge spillover—and the dynamic capabilities-based view by analyzing opposing effects of causal and effectual decision-making approaches on innovation performance. Furthermore, we establish the understanding that absorptive capacity enhances the impact of both causation and effectuation on innovation performance. In particular, absorptive capacity is necessarily needed if a causal approach has been applied; in case an effectual approach is used, absorptive capacity can be considered a supportive capability. The respective managerial implications as well as limitations and future research avenues are discussed.

ENT: Not all Innovations are Alike: Who Should Receive Public Grants? 

Author: **Martin Röder**, *Philipps-U. Marburg*
Author: **Vivien Procher**, *Philipps-U. Marburg*
Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg / Indiana U. Bloomington*

As innovation policy targets innovations suffering from underinvestment, we examine the effect of public grants on innovation. While innovation involves a lot of uncertainty, we suggest public grants as the best option bearing no obligations. But not all innovations are alike as they differ by newness level. Hence, we distinguish between "new-to-world" explorative and "new-to-firm" exploitation innovation. Making use of (inter)national knowledge flow, some exploitative innovations are not "new-to-firm" but rather "new-to-region or -country" leveraging existing knowledge from another region or country. Allocating grants to the most promising startups, we evaluate startups' quality by high-tech industry and "entrepreneurial orientation" (EO). Within over 4,000 early-stage German startups, we find that explorative innovations benefit the most from grants, especially high EO startups. Also, grants help low EO firms to become innovative at all and to launch exploitative innovation with (inter)national knowledge flow.

Entrepreneurial Decision-making 2

Session Moderator: **Matthias Schulz**, *U. of Cologne*

ENT: **Logics and Founder Identity: The Enabling Effect of Identification** 

Author: **Ganqi Tang**, *U. of Fribourg*

Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*

Author: **Kristina Habjan**, *U. of Fribourg*

Past work experience exposes entrepreneurs to the logics of pertinent institutional fields. Entrepreneurs integrate elements of these logics (e.g., values, meanings, beliefs, norms) into their founder identity—that is, what is important to them as a founder and what they do in their startup firm. Nevertheless, this process can be contingent on individual characteristics, and it is unclear why elements of some logics are integrated while those of others are not. Leveraging recent research on identification, we develop a theory about how institutional identification moderates the relationship between past exposure to logic and the formation of founder identity. We conducted a survey study with entrepreneurs from young startups to understand how past exposure to the social welfare logic and identification with this logic independently and jointly affect the dominant social welfare (over commercial) tendency of their founder identity. Our findings suggest that past exposure to logic and identification with logic are not significantly associated with the dominant social welfare tendency of entrepreneurs' founder identity on their own, but they interact to influence founder identity. More specifically, past exposure to the social welfare logic negatively predicts entrepreneurs' dominant social welfare tendency of founder identity when their identification with this logic is low. Our study contributes to the micro-foundations of institutional theory by identifying critical boundary conditions of how logics influence individuals' identities and behaviors.

Paper is Available to Meeting Registrants Only.

ENT: **Antecedents and Boundary Conditions of Employees' Uncertainty Regulation Processes** 

Author: **Nima Esmaili-Konari**, *U. of Bayreuth*

Author: **Jens Schueler**, *U. of Bayreuth*

While the management literature stresses the necessity for firms to take risks and face uncertainty to sustain and improve their performance, considerably less is known about how firms and their employees effectively regulate such uncertain task environments and what kind of work behaviors this entails. Therefore, this study aims to advance knowledge on opportunities in the concept of uncertainty regulation by disentangling the mechanism that shapes the uncertainty perception and appraisal of individuals in the workplace and subsequent behavioral outcomes e.g., adaptive or proactive responses in the light of uncertain events. To achieve this, we conduct a systematic literature review to develop an integrated multilevel conceptual framework spanning the drivers, mechanisms, and consequences of employees' uncertainty perception and appraisal. We specifically focus on the interactions of individual personality traits, the organizational environment, and the external task-environment. The derived multi-theoretical framework provides specific suggestions for future research on how employees regulate uncertainty in the face of firm-internal changes.

Paper is Available to Meeting Registrants Only.

ENT: **How Public Leaders Can Foster Their Entrepreneurial Behavior at Times of Uncertainty** 

Author: **Katrin Bauer**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Under turbulence, like during the COVID-19 pandemic, public leaders need to be proactive, understand citizens' needs, and deploy constrained resources at hand for the sake of the public. This submits that effectuation is an appropriate mode of entrepreneurial behavior, and, hence, uncertainty coping, in the public sector. However, recent research views public leaders' behavior as still rather static. Thus, scholars request to investigate public entrepreneurship, calling for evidence on factors that empower public leaders to behave entrepreneurially. We draw upon creation theory of entrepreneurship to explore the influence of leader-induced organizational practices and individual abilities on public leaders' effectual behavior. Thereby, we propose a moderated mediation model. Our analysis of 307 responses from public leaders reveals a significant mediation effect in that citizen involvement is positively related to public leaders' effectual behavior via knowledge integration mechanisms. We further show that individual problem-mastery ability strengthens this indirect effect. In sum, we accelerate public entrepreneurship research by disentangling crucial ingredients of public leaders' entrepreneurial behavior. We also advance entrepreneurship research, as we add novel antecedents to the nomological net of effectuation and introduce creation theory to a new domain, the public sector. Our results have implications for citizens and public leaders alike.

Paper is Available to Meeting Registrants Only.

ENT: **Hybrid Entrepreneurs' Resource Allocation and the Role of Exogenous and Endogenous Uncertainties** 

Author: **Matthias Schulz**, *U. of Cologne*

Author: **Martin Murmann**, *U. of Zurich*

Author: **Christian Schwens**, *U. of Cologne*

While prior research has made valuable contributions towards understanding why most individuals enter entrepreneurship next to their wage job, evidence on how these hybrid entrepreneurs manage their business after entry is largely absent. We fill this gap by studying hybrid entrepreneurs' resource allocation while being in hybrid entrepreneurship compared to that after transitioning to full-time entrepreneurship. Drawing on real options theory, we argue that hybrid entrepreneurs' resource allocation towards R&D tasks and sales tasks depends on whether these tasks are related to endogenous or exogenous uncertainty. Our empirical analysis based on a matched panel-dataset encompassing 797 hybrid entrepreneurs yields support for our hypotheses. Our paper offers contributions to the hybrid and the broader entrepreneurship literature, as well as to research on real options theory.

ENT: Does Environmental Hostility Break the Team and the Venture? Team Humor as a Coping Mechanism

Author: **Eva Weissenboeck**, *Ecole Polytechnique Fédérale de Lausanne*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*

Past research points towards entrepreneurial teams' perceptions of environmental hostility increasing the likelihood of an entrepreneurial team or venture breakup. This study provides insights into how entrepreneurial teams can reduce their likelihood of breakups in such perceived adverse environments. We draw on research on socioemotional behaviors to theorize that team humor can help entrepreneurial teams cope with perceived environmental hostility. Based on survey data from all cofounders of 114 entrepreneurial teams and secondary data on their ventures and cofounders, we find that team humor mitigates the positive relationship between perceived environmental hostility and the likelihood of a breakup of the entrepreneurial team or its venture. Our study contributes to the literatures on coping in entrepreneurship, entrepreneurial teams, and environmental hostility.

ENT: Dynamics Between New Venture Team Processes and Team Entrepreneurial Passion Emergence

Author: **Andreas Schunk**, *U. of Bayreuth*
Author: **Matthias Baum**, *U. of Bayreuth*
Author: **Jens Schueler**, *U. of Bayreuth*

Growing research is attesting to the beneficial effects of team entrepreneurial passion (TEP) for entrepreneurial teams' performance. However, we still lack understanding of how TEP develops in the early stages of new venture teams. Therefore, this study's purpose is to investigate the emergence of team entrepreneurial passion (TEP) among nascent venture teams. Drawing on multilevel theory of emergence, we hypothesize how team processes influence the development of TEP which in turn affects subsequent team processes. By employing a longitudinal experience-sampling study with 157 individuals nested in 32 teams over a period of three months, we provide first empirical insights for the emergence of TEP. We find that action and transition processes positively and interpersonal processes negatively affect specific kinds of TEP. Implications for future research and practice are discussed.

Paper is Available to Meeting Registrants Only.

ENT: Team Value Compositions and Business Model Quality in Social versus Commercial Entrepreneurial Teams

Author: **Yasmine Yahyaoui**, *U. of Bayreuth*
Author: **Eva Alexandra Jakob**, *U. of Bayreuth*
Author: **Rodrigo Isidor**, *U. of Bayreuth*

Research on social entrepreneurial teams is still scarce. Drawing on the theory of paradox, we suggest that social, in contrast to commercial entrepreneurial teams, improve their venture's business model quality when combining founding team members with opposing individual values (i.e., self-enhancement and self-transcendence values). Conversely, we propose that a combination of opposing individual values inhibits the business model quality of commercial entrepreneurial teams. Surprisingly, using moderated and polynomial regression analyses on 98 entrepreneurial teams, we find that for social entrepreneurial teams, a combination of either high self-transcendence and low self-enhancement, or high self-enhancement and low self-transcendence individual team members' values is beneficial.

ENT: Diversity in Entrepreneurial Teams: A Review and Multilevel Mechanism Framework

Author: **Ruidong Zhu**, *Freie U. Berlin*

Diversity attracts growing interest in entrepreneurial team research, focusing on the differences within team characteristics instead of the average level. While previous research in this field advances our understanding of the antecedents and outcomes of diversity in entrepreneurial teams, the links between relationships at multiple levels are seldom connected in a holistic picture. Drawing from the multilevel causal mechanism concept, this literature review serves as a framework for integrating the existing research on diversity in entrepreneurial teams and highlights the value of linking mechanisms across levels for future research.

ENT: **Classroom Practitioner Expertise Development for Entrepreneurship Educators** 

Author: **Raj Krishnan Shankar**, *Great Lakes Institute of Management*
Author: **Andrew C. Corbett**, *Babson College*

There is a growing interest in exploring the practice-based foundations of entrepreneurship education. Despite significant advancement in scholarship regarding entrepreneurship education, our understanding of the ‘educator’, especially how they develop and sustain their abilities to enable learning in practice-based entrepreneurship education—remains thin. We build on practice theory and expertise development literatures to develop a new concept—quasipractice—proximal engagement in the actions, emotions, and cognitive experiences of an entrepreneur, which provides an approach to enhancing the skills, knowledge, and practices of the entrepreneurship educator. We juxtapose ‘quasipractice’ vis-à-vis ‘experiential learning’ and ‘vicarious learning’ and detail its unique role in entrepreneurship educator development. Limitations and future research implications are discussed.

ENT: **Analyzing Big Data in Entrepreneurship: Replicating and Extending Evans and Leighton (1989)**

Author: **Xian Cao**, *Ball State U.*
Author: **Zigeng Wang**, *U. of Connecticut*
Author: **Huarui Jing**, *The U. of the South*
Author: **Timothy B. Folta**, *U. of Connecticut*
Author: **Frederic Delmar**, *EMLYON Business School*
Author: **Ruoqing Zhu**, *U. of Illinois at Urbana-Champaign*

Analyzing big data requires the use of more powerful big data analytical techniques. The risk of not employing such techniques is that we misunderstand the true relationships in fundamental issues. In the study, we replicate and extend Evans and Leighton (1989) to revisit the entrepreneurial entry problem using a traditional logistic regression and one type of big data techniques – random forests. Through comparing the discrepant findings of these two models, we assert the benefits of using contemporary approaches to handle big data in revisiting fundamental questions in entrepreneurship.

ENT: **Integrating Multimodal Data and Machine Learning for Entrepreneurship Research**

Author: **Yash Raj Shrestha**, *ETH Zürich*
Author: **Fang He**, *U. of St Gallen*

Extant research in neuroscience suggests that human perception is multi-modal in nature that features numerous models utilising diverse data sources such as sound, images, taste, smell, etc. Entrepreneurs who work under an extremely dynamic environment are also expected to draw on multimodal inputs in their decision making. However, extant research in entrepreneurship mostly focuses on drawing insights from data in a single mode. A few studies that have used multimodal data either manually analyse them or simplify them into a few constructs. Such oversimplification leads to omission of insights that can be gained for analysing raw multimodal data. In this article, we suggest that machine learning algorithms can be effective in capturing both individual and relational cues from raw multimodal data in a reliable and scalable manner. The variables captured from integrating multimodal data with machine learning algorithms could lead to both increasing predictive accuracy and explainability of entrepreneurial phenomenon. We present various machine learning methods that could be useful in this endeavour.

ENT: **The Effect of Gender on the Measurement of Entrepreneurial Orientation**  

Author: **Alexander Glosenberg**, *Loyola Marymount U.*

The measurement of entrepreneurial orientation (EO) is a cornerstone of research in entrepreneurship. However, common concepts involved in the operationalization of EO, namely risk-taking, innovativeness, and proactivity might be perceived as stereotypically masculine in nature. According to reasoning from social role theory, women might respond to measures of EO in ways that do not reflect the approaches of their firms but instead reflect their reaction to masculine stereotypes – stereotypes that might be more salient depending on survey response options. Gender-specific reactions might be especially likely in emerging economies where traditional gender stereotypes are strong. We test for the possibility that women might react to scales of EO in ways that differ from men through the analysis of a survey experiment of 499 entrepreneurs in Ethiopia. We find that the validity of EO measures in explaining firm revenue is lower among women than men; however, that effect is moderated by random assignment to different response scale types. Differences among men and women are greater with a common “descriptive” response scale that emphasizes the opportunity to disagree – but less pronounced with the use of a less common “branched” scale. We discuss important implications for the study of entrepreneurially-minded women and EO.

Innovation and Entrepreneurship 2

Session Moderator: **Nathan Sidney Greidanus**, *U. of Manitoba*

ENT: **Innovating from the Past: Toward a Theory of Retrovation**

Author: **Nathan Sidney Greidanus**, *U. of Manitoba*

This paper defines and develops the concept of Retrovation as a specific form of innovation that utilizes largely forgotten past practices and products to address current problems and market opportunities. Drawing on three cases of introducing products and processes from the past that are new to the innovator and the market we develop a model of retrovation. Our model proposes that retrovation tends to be demand driven but with a slow diffusion rate, and that it is largely competency destroying to incumbents, although can be co-opted through complementary assets. We also propose that retrovation is particularly relevant to sustainability focused opportunities.

ENT: **Ambidexterity and Firm Performance: The Moderating Effects of Normative and Cognitive Institutions**

Author: **Rui Fragoso**, *CEFAGE - U. of evora*

Author: **Vanessa Vasconcelos Scazziota**, *CEFAGE - U. of Évora*

Author: **Luiz Guerrazzi**, *U. of Algarve*

Author: **Rui Quaresma**, *CEFAGE - U. of evora*

Author: **Jorge Casas Novas**, *CEFAGE - U. of evora*

Firms try to follow the best strategy to reach their competitive advantage. Combining exploration and exploitation in an innovation ambidexterity strategy can be an alternative to improve firm performance. Thus, using survey data from the sample of the 2018 GUESS project, this study assessed the effect of innovation ambidexterity on firm performance and the moderator effects of normative and cognitive institutions. Our findings suggest a positive effect of ambidexterity on firm performance, which is positively moderated by normative and cognitive institutions in low- and middle-income countries, and only by cognitive institutions in high-income countries, being the moderator effect stronger for higher levels of ambidexterity.

ENT: **The Role of Opportunity Recognition in Promoting Quality Entrepreneurship**

Author: **Bao Hoang**, *Southern Arkansas U.*

Author: **J. Kirk Ring**, *Louisiana Tech U.*

Author: **Bruce Walters**, *Louisiana Tech U.*

Author: **Son Anh Le**, *Louisiana Tech U.*

Based on entrepreneurship literature and institutional theory, we conceptualize the relationships between opportunity recognition and innovation, accounting for the mediating role of quality of entrepreneurship. The study also investigates how institutional factors such as quality of institutions and social openness moderate these relationships. The empirical findings suggest that opportunity recognition is positively related to quality of entrepreneurship, and entrepreneurship quality mediates the opportunity recognition-innovation relationship. Both institutional factors—quality of institutions and social openness—significantly enhance the effect of opportunity recognition and innovation mediated by quality of entrepreneurship. Our study supports the emerging scholarship that considers entrepreneurship as an interaction between individuals and environment.

Paper is Available to Meeting Registrants Only.

ENT: **Embracing Drone Technology to Orchestrate an Innovation Ecosystem: Institutional Logics Perspective**

Author: **Indu Khurana**, *Hampden-Sydney College*

Author: **Dev K. Dutta**, *U. of New Hampshire*

By drawing upon insights from the institutional logics perspective, our study finds that innovation ecosystem actors not only engage with multiple competing institutional logics but also collaborate to build a hybrid organization to orchestrate an innovation ecosystem. Using a real-world case study, we identify a three-stage process, which we term as the 3C Process Model of innovation ecosystem emergence—Crossroads, Chaos, and Convergence. Going through this stage-wise process, ecosystem actors manage the ensuing institutional complexity resulting from the interplay of multiple institutional logics and, in turn, achieve value creation and competitive advantage.

ENT: To Tweet or not to Tweet? The Determinants of Tweeting Activity in ICOs

Author: **Andrea Moro**, *Cranfield School of Management*

Author: **Nemanja Radic**, *Cranfield School of Management*

Author: **The Vinh Truong**, *Cranfield School of Management*

Our research explores the causes of the Twitter activity in highly technological start-ups that finance their activities via ICOs. By relying on weekly data of 297 ICOs for the period 2018-2020 (36,134 obs), we examine how major exogenous events affect the number of tweets issued by the start up. Then, we explore how the community of followers reacts to the tweets. We discover that events/shocks external to the firm, affect its activity in issuing tweets by reducing it. Moreover, our evidence indicates followers' reaction is positively related to the tweets issued by the firm and negatively related to major events/shocks unrelated to the firm. Intriguingly, followers' reaction has an inverted U-shaped relation with the firm's Twitter volumes suggesting that excessive Twitter activity can have an adverse effect on the further dissemination of tweets. Our results, robust to alternative estimations techniques, stress the important role of Twitter as information disseminator, legitimizer, and as an endorser for highly opaque firms highlighting the importance of this type of communication.

ENT: Entrepreneurship as a Path to Meaningful Work? A Qualitative Study of Hobbyists-Turned-Entrepreneurs  

Author: **Benjamin Warnick**, *Washington State U.*

Author: **Jeffery S. McMullen**, *Indiana U., Bloomington*

Despite entrepreneurship's association with autonomy and the power it allegedly affords in building meaningful work, little is known about how and with what effects entrepreneurs pursue meaningful work. In contrast with predominant conceptualizations of meaningful work that take work as given and examine how meaningfulness can be increased within predefined organizational confines, we examine the opposite trajectory: beginning with an activity that is already personally meaningful and building work around it. To develop theory on entrepreneurship as a path to meaningful work, we conducted a qualitative study of 39 hobbyists-turned-entrepreneurs. Distinguishing entrepreneurs experiencing high meaningfulness from those experiencing low meaningfulness, we identified two high-meaningfulness archetypes and one low-meaningfulness archetype. These archetypes differ in their approach to financial pressure and boundaries surrounding the tasks in which they engage, whom they consider in their decision-making, and the energy they dedicate to their work. Our emergent findings offer important contributions to the literatures on meaningful work, job design, and work-life theory.

ENT: The Co-Evolutionary Process of Venture Identity Formation in the Era of Pivots

Author: **Furkan Amil Gur**, *Northern Illinois U.*

Author: **Christine Hegarty Mooney**, *Northern Illinois U.*

Author: **Blake D. Mathias**, *Indiana U.*

The traditional entrepreneurial process has changed dramatically with the recent prominence of lean start-up and hypothesis testing methodologies. Despite extensive research on venture identity formation in a traditional entrepreneurial process, we lack an understanding of how and when venture identity forms in this new entrepreneurial context. In this qualitative study, we focus on a nascent impact investing company and explore how its venture identity forms alongside the hypothesis-driven entrepreneurial process. We find that this venture employs hypothesis testing, pivoting and iterative experimentations to develop a venture identity anchored to its organizational mission. We also show how this venture's identity formed alongside the changing role identities and role centralities of the new venture team and other key actors as well as the collective identity of the developing impact investing market. We discuss the iterative and co-evolutionary process through which venture identity is formed in today's entrepreneurial context characterized by hypothesis testing and pivots.

ENT: The Impact of COVID-19 on the Landscape of Young Firms with a Public Sector Orientation 

Author: **Lauren Lanahan**, *U. of Oregon*

Author: **Iman Hemmatian**, *Cal Poly Pomona*

Author: **Evan Johnson**, *U. of North Carolina, Chapel Hill*

Author: **Amol M. Joshi**, *Wake Forest U.*

Emerging research on the impact of COVID-19 – a sudden, extreme global economic and societal shock – suggests that young businesses are especially vulnerable to the pandemic due to their small size, resource constraints, and limited experience. We leverage comprehensive longitudinal databases tracking over 200,000 young businesses with a revealed preference for interacting with the U.S. federal government. We define this population of young firms as having a public sector orientation. Our analyses of the COVID-19 outbreak's impact as an exogenous shock on this population unpack three main discoveries. First, we discover sizable shifts in overall trends in firm features and formal commercial relationships with the federal government. Second, we observe a greater tendency for this population of firms to provide services and support to the federal government rather than seek services and support from the government. Third, we discover firms that successfully engaged with the government captured additional financial benefits during the pandemic, measured by the amount and number of federal resource inflows. Thus, amid the COVID-19 crisis, we observe a silver lining of strategic opportunity amongst young firms with a distinct feature – having a public sector orientation. We discuss the theoretical, managerial, and policy implications of our empirical findings.

**Coworking Spaces: Implications for Organizations,
Workers, and Entrepreneurs**
Coworking Spaces

Panelist: **Christian Busch**, *New York U.*
Panelist: **Travis Howell**, *UC Irvine*
Panelist: **Nam Kyoon Kim**, *California State U. Sacramento*
Panelist: **Gretchen Marie Spreitzer**, *U. of Michigan*
Panelist: **Andy Wu**, *Harvard Business School*

Given its potential for disruptive change, coworking is becoming increasingly relevant to theory, practice, and policy in organizational research. Yet, given the rapid rise of the phenomenon, little research has studied its implications. Overall, more data and analysis are needed to inform owners, policy makers, and entrepreneurs regarding the effects of coworking. The purpose of this panel symposium is to engage a group of panelists in a discussion of (1) what we have learned from recent research in this area, and (2) areas for future research. Relevant questions include: Which aspects of coworking are most (and least) impactful so resources and policy can be efficiently utilized? What type of individuals and companies benefit most/least from coworking spaces? What are the implications of big companies starting to send more of their employees to coworking spaces?

GDO: “Invisible” Discrimination: Divergent Outcomes for the Non-Prototypicality of Black Women 

Author: **Rebecca Ponce de Leon**, *Columbia Business School*
Author: **Ashleigh Shelby Rosette**, *Duke U.*

By integrating the intersectional invisibility hypothesis with the BIAS (behaviors from intergroup affect and stereotypes) map framework, we examine the extent to which Black women’s dual-subordinated identities render them non-prototypical victims of discrimination, relative to White women and Black men, and the corresponding consequences. We predicted that Black women’s categorical non-prototypicality would reduce the believability of their discrimination claims, but that their non-prototypical attributes would lead to divergent treatment, depending on the type of discrimination alleged. Our predictions were supported across six experimental studies (Studies 1–4b). Specifically, Black women’s gender and racial discrimination claims were believed less than those made by White women and Black men, respectively. Moreover, after they alleged discrimination, Black women received less financial remedy than White women, but more financial remedy than Black men. Mediation testing revealed that the mechanisms underlying the believability and treatment of Black women were their non-prototypical categorization and attributes. Using discrimination data from the Equal Employment Opportunity Commission, Studies 5a and 5b replicated the effects observed on believability and financial remedy. By focusing on non-prototypicality at both the categorical and attribute levels, we thus help to disentangle when Black women’s intersectional invisibility may result in either intersectional advantages or disadvantages.

GDO: Intersectionality Theory: Preventing the Queen Bee’s Sting for Black Women 

Author: **Megan Marimuthu**, *U. Pretoria Gordon Institute of Business Science*
Author: **Caren Brenda Scheepers**, *U. Pretoria Gordon Institute of Business Science*

South African black women remain the most marginalised group in executive management. Queen bees are one barrier hindering the promotion of junior women. Previous studies have focused on the perspective of white women. This study seeks to explore the perspective of black women given the intersectionality of biases they face. This qualitative study included two sample groups – the first contained 10 black females in executive management, and the second had nine black females in middle management. The two groups allowed nuanced perspectives of executive managers who could present as queen bees, and middle managers impacted by them. Both groups encountered a queen bee or alpha male. One finding was that racial and gender bias intersected with other forms of discrimination, including age, physical appearance, and culture. The findings allowed for a model to identify and control queen bee behaviours at organisational and individual levels. Implementing these measures at both an organisational and individual level, would thereby “create a better world together” for black women. Findings also pointed out that queen bees and alpha males were cross-race, requiring deeper understanding of racial-biases. This study contributes to theory development of intersectionality, since the unique context within South Africa highlights this intersectionality.

GDO: The Gaslighting of Women of Color CEOs: Sensegiving and Sensebreaking Tactics That Center Whiteness   

Author: **Samantha E. Erskine**, *UMass Boston College of Management*
Author: **Diana Bilimoria**, *Case Western Reserve U.*

In this paper, we explore the experience of gaslighting through the lens of sensegiving and sensebreaking. Through semi-structured interviews with Black women and Latina CEOs of nonprofit organizations in the U.S. and abductive grounded theorizing around the insights they shared about navigating whiteness intra- and inter-organizationally, we suggest that gaslighting is a key mechanism that perpetuates white supremacy and systemic gendered racism—even in liberal and women of color-led organizations. We highlight racialized, gendered, and classed sensegiving tactics that center whiteness, obscure patterns of harm, and influence the sensemaking and meaning construction of others toward an organizational reality of whiteness, as well as sensebreaking tactics that invalidate, delegitimize, and/or sow seeds of doubt in Black women and Latinas’ understandings about themselves, their families, communities, and the organizations they lead.

GDO: Breaking Through Despite the Odds: Learning from the Career Experiences of Successful BAME Women  

Author: **Lilian Otake-Ebiede**, *U. of Liverpool Management School*
Author: **Samah Shaffakat**, *U. of Liverpool Management School*

The obstacles that minority groups face can often result in perceptions that success is beyond one’s control, further resulting in feelings of powerlessness, dependency, detachment, and resentment. Unlike their white counterparts who face ‘glass ceiling’, ethnic minority women who have less support and even fewer opportunities to advance, encounter “concrete ceiling” or “concrete walls” which are more difficult to break. Societal and organizational structures often put prejudicial barriers in their path which overlook merit, thereby impeding their advancement to senior positions. Being constantly overlooked, despite being competent, can negatively impact their leadership aspirations. So how do these women shield themselves from the frustration and marginalization that comes with the racial and gender prejudice they face and how do they achieve career success? To understand this, we interviewed 50 ethnic minority women in senior leadership positions. Deviating from the norm in business and management literature, we adopt a positive psychology perspective and delineate elements of Hope to examine their career goals, their motivation to reach these goals (agency) and how they go about achieving these (pathway). We found that the women in our study were hopeful in their goal pursuit, aware of the disadvantages they faced, anticipated these, and successfully identified pathways to achieve their goals and advance their careers. We develop a conceptual model based on our findings which has theoretical implications for both diversity and career success literatures.

IM Division Best Paper in Corporate Social Responsibility & Sustainability Award Finalists

Session Moderator: **William Newbury**, *Florida International U.*

IM: **Risky Reputations: The Role of CSI in Cross-Border Acquisitions**

Author: **Tsvetomira Bilgili**, *Kansas State U.*
Author: **Debmalya Mukherjee**, *U. of Akron*
Author: **Erin E. Makarius**, *U. of Akron*
Author: **Holly Loncarich**, *Kansas State U.*

This study examines the influence of reputation risk on ownership choice in cross-border acquisitions (CBAs). Building on internalization theory and the reputation literature, we argue that acquirers with higher reputation risk through involvement in corporate social irresponsibility (CSI) obtain lower levels of ownership in foreign targets, as CSI implies damage to their firm-specific advantages (FSAs). We suggest that in a cross-border context acquirers obtain lower levels of ownership to take advantage of the target firm's legitimacy in the host market and reduce the likelihood of regulatory scrutiny and stakeholder resistance. However, the negative effects of acquirer reputation risk on the level of ownership in CBAs are contingent on characteristics of the target firm's country. We find support for our hypotheses in a sample of 17,362 CBAs by 11,136 unique acquirers from 84 countries of target firms located in 67 countries.

IM: **Smart Disclosure: An Enabler for Multinationals to Promote Suppliers' Human Rights Commitments**

Author: **Stephanie L. Wang**, *Indiana U., Bloomington*
Author: **Yejee Lee**, *Indiana U. Bloomington*
Author: **Dan Li**, *Indiana U.*

Human rights violations remain an urgent global grand challenge, and multinational enterprises (MNEs) face increasing pressure to address them in their global supply chains. Drawing insights from the information as regulation literature, we propose that MNEs' smart disclosure (i.e., disclosure enabled by smart technologies with enhanced reprogrammability, accessibility, interactivity, and transferability) of supply chain information promotes suppliers' human rights commitments. We theorize that through smart disclosure, MNEs can enlist all relevant stakeholders to influence and support suppliers to solve human rights issues through a “crowdsourcing” approach. Furthermore, we argue that the information conditions in global supply chains serve as important boundary conditions. Specifically, the relationship between MNEs' smart disclosure and suppliers' human rights commitments is weakened for suppliers with stronger relational embeddedness with MNEs (i.e., internal information condition). The relationship is also weakened for suppliers located in countries with greater institutional voids (i.e., external information condition).

Paper is Available to Meeting Registrants Only.

IM: **NGOs as Multinationals' Value Creation Partners for Sustainability in Emerging Markets**

Author: **Junghoon Park**, *Baruch College & The Graduate Center, CUNY*

We analyze how multinationals implement sustainability projects in emerging markets to address the lack of provision of public goods by the government. In this theoretical paper, we propose a framework that explains how multinationals redefine their partnerships with nongovernmental organizations (NGOs) in emerging economies by embracing NGOs as value creation partners, helping multinationals internalize the externalities derived from their activities. Specifically, we suggest that foreign multinationals collaborate with the three types of NGOs (service, regulatory, and advocacy) to enhance the effectiveness of three types of value creation strategies (action, control, and information). Second, building on an extended resource-based view, we argue that relative balance between the multinational and the NGO in sustainability resources (expertise, credibility, and passion) drives the selection of three types of multinational-NGO partnerships (commissioning, co-developing, and sponsoring). In commissioning, the foreign multinational designs sustainability projects and employs NGOs to implement them. In co-developing, the foreign multinational collaborates with NGOs to co-design and co-implement sustainability projects. Finally, in sponsoring, the foreign multinational provides funds for sustainability projects designed and implemented by NGOs. These ideas can help guide research on this important and understudied mechanism for multinationals to improve the impact of their sustainability projects.

IM: **Developing Conflict: Elite Bias in the the Stakeholder Networks of World Bank Projects**

Author: **Rachel Pacheco**, *The Wharton School, U. of Pennsylvania*
Author: **Witold Jerzy Henisz**, *U. of Pennsylvania*

World Bank development projects seek to increase the economic prosperity of communities and nations, as well as reduce conflict and promote peace. Yet, the selection, funding, design and governance of these projects is influenced by national governments who may favor certain identity groups over others. As a result, the economic benefits and costs of these projects may not be distributed equitably across stakeholder groups, which may aggravate, instead of moderate, conflict risk. Building on research that examines how elite bias in stakeholder networks (i.e., the favoring of elites at the expense of peripheral stakeholders) can exacerbate conflict, as well as past research that argues development aid can worsen conflict, we examine the impact elite bias in the stakeholder network of World Bank funded projects on conflict between stakeholders. Using a panel dataset of 763 World Bank funded projects across 124 countries and the media corpus of the Global Database of Environment Language and Tone (GDEL) from these countries, we measure conflict and elite bias in the stakeholder network of intergovernmental organizations at a micro-spatial level and analyze how the relationship between these constructs varies in the presence or absence of a World Bank funded project. We further explore the impact of the national composition of project contractors and the importance of state fragility. Our findings provide support for the argument that the World Bank and other financiers of development projects should take the distribution of benefits and costs across identity groups into account in their selection of projects.

Expatriation and Repatriation

Session Moderator: **Sebastian Reiche**, *IESE Business School*

IM: **Repatriates' Experience of Identity Strain and Repatriate Knowledge Transfer**

Author: **Sebastian Reiche**, *IESE Business School*
Author: **Felipe Guzman**, *IESEG School of Management*
Author: **Mila Borislavova Lazarova**, *Simon Fraser U.*
Author: **Olivier Wurtz**, *ESCP Business School*

While it is common for repatriates to experience identity strain when they return from an international assignment, we know little about how the experience of strain leads to knowledge-related outcomes for repatriates and, by extension, their coworkers. Adopting an identity theory perspective, we conceptualize knowledge transfer as a form of repatriates' identity enactment in the face of identity strain upon their return. Further, we consider two conditions that determine how repatriates' experience of identity strain may translate into beneficial knowledge transfer outcomes for repatriates' colleagues: repatriates' generalized self-efficacy and colleagues' trust in repatriates. Drawing on a sample of 118 matched repatriate-colleague responses across five MNCs, we find that repatriates' level of knowledge transfer with colleagues mediates the relationship between repatriates' identity strain and colleague perceptions of useful knowledge receipt from repatriates. We also demonstrate that while this mediated relationship is negative at low levels of repatriates' generalized self-efficacy, it becomes non-significant when generalized self-efficacy is high. Similarly, the mediated relationship is negative at low levels of colleagues' trust in repatriates, but non-significant at high levels of colleagues' trust in repatriates. Our study contributes to identity theory and the literatures on international assignments and knowledge transfer in MNCs.

IM: **The Role of Language in Expatriate Professionals' Work-Life Balance**

Author: **Parth Patel**, *Australian Institute of Business*
Author: **Akanksha Jaiswal**, *Loyola Institute of Business Administration*
Author: **Daicy Vaz**, *NEOMA Business School*
Author: **Ziyun Ma**, *Loyola U. Chicago*
Author: **Vijay Edward Pereira**, *NEOMA Business School*
Author: **Arup Varma**, *Loyola U. Chicago*

Expatriates are an integral part of international human resources, enabling multinational corporations to implement and execute strategy. Yet, the issues related to adjustment of the expatriate and his/her family in a new culture can severely impact the MNC's ability to do business. Among the most complex issues related to adjustment in a new country is the issue of language since it is the major currency of communication. We contribute to the above research agenda by attempting to research this area and aim to plug these gaps. More specifically, we utilize social networking and linguistic relativity as two key and relevant theoretical lenses to identify and examine the key dimensions of expatriate adjustment. To do so, we conducted structured interviews with 20 Indian expatriates (both academics and corporate professionals) in several countries around the world (both English speaking and non-English speaking). This rich data was analyzed using the robust Gioia et al., (2012) methodology. Our findings revealed that factors like (i) pre-exposure to the culture and language, (ii) social networks, (iii) linguistic relativity, and (iv) coping mechanisms played a key role in the expatriate and his/her family's adjustment. Overall, we discuss theoretical and practical implications and offer suggestions for future research.

IM: **Rethinking Expat Management - A Systematic Literature Review of Sustainability in Global Mobility**

Author: **Enno Lars Holger Frithjof Ommen**, *Bayer AG*
Author: **Marina Anna Schmitz**, *IEDC-Bled School of Management*
Author: **Anja Karlsruhaus**, *CBS International Business School*

Against the backdrop of VUCA and BANI environments, climate change, and the pandemic, academic coverage of the topic of sustainable development as a potential new economic paradigm has been introduced to various fields, including international human resource management. This article aims to explore sustainable development-related topics in global mobility (GM) or expatriate management. In a comprehensive systematic literature review, relevant articles published in top IB, management, and CSR journals within the last 20 years were screened according to sustainable GM facets and matched to the Sustainable Development Goals (SDGs). Although some social aspects were somewhat overrepresented in comparison (e.g., SDG3 Good Health and Well-being and SDG5 Gender Equality), we find that other elements, primarily environmental, have not been addressed adequately and thus deserve more attention. Lastly, we draw up a model of how GM departments may impact how to make a change towards a more sustainable GM program.

Panelist: **Medha Satish Kumar**, *Simon Fraser U.*

Panelist: **Carolyn Egri**, *Simon Fraser U.*

Panelist: **Peter W. Dorfman**, *New Mexico State U.*

Panelist: **Amanda Bullough**, *U. of Delaware*

Trust is an important variable linked to employee performance, citizenship behaviors, commitment and others. However our current understanding of trust is based on western cultures and literature on interpersonal trust in the international context is as yet limited and fragmented. An important question is the link between culture and antecedents of trust in interpersonal relationship. GLOBE 2020 study aims to address this question by studying, among other topics, contemporary cultural norms and their relationship with generalized and interpersonal trust in 142 countries. In this panel symposium, we will present a review of the study, first round of findings regarding generalized trust and interpersonal trust. This session will be of value to AOM audience members through expanding knowledge of management practices across borders and offering new methodologies for international research and advance knowledge on trust dynamics across cultures.

Influential Prototypes

Session Moderator: **Pearlyn Ng**, *Ted Rogers School of Management, Toronto Metropolitan U.*

OB: Who Benefits? How Ingroup Prototypes Shift Follower Impressions of Self-serving Leaders

Author: **Pearlyn Ng**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Kristyn A. Scott**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Much of the research on negative leader behavior focuses on the antecedents and consequences of said behavior; follower reactions are less understood. The present research explores how social categorization induces followers to support self-serving leaders. Building on social identity theories, we hypothesize that leader prototypicality leads followers to make inferences with respect to how much they expect to benefit (i.e., subjective expected utility) and this impact follower perceptions of the leader's effectiveness and their willingness to support that leader. The results of two experimental studies and one correlational study support our hypotheses and stresses the importance of follower-centric perspective in understanding self-serving leader behavior.

OB: Power Distance Orientation and Perceived Insider Status: A Social Identity Perspective 

Author: **Kaili Zhang**, *East China U. of Science and Technology*

Previous studies have mostly focused on how power distance-oriented employees react to leader treatment in fostering leader justice evaluations. However, it remains unclear how power distance orientation may impact the way individuals react to leader treatment in evaluating their social identities. Taking a social identity perspective, we investigated how team-based leader treatment can impact the relationship between power distance orientation and perceived insider status. In particular, building upon the heuristic-systematic model of information processing, we argue that high power distance-oriented individuals are more likely to use both relative leader social support and team-level leader social support information as social cues to adjust their identities. Hypotheses were tested using a sample of 631 employees on 78 teams with multilevel modeling. We found an interaction effect between individual power distance orientation and relative leader social support on perceived insider status, such that the negative relationship between power distance orientation and perceived insider status would be mitigated when members receive high relative leader social support. In addition, this interaction effect was stronger when the team-level leader social support mean was high or team-level leader social support differentiation was low. Furthermore, the above three-way interaction effects were transmitted to influence employees' affective commitment and turnover intention. Theoretical and practical implications for power distance orientation are discussed.

OB: Looking Up to Leaders: The Influence of Height Stereotypes for Teams   

Author: **Kevin M. Kniffin**, *Cornell SC Johnson College of Business*
Author: **Jordan Davis**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*
Author: **John Doris**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

The stereotypical association that people tend to make between height and power has been well-studied but typically focuses on individuals as the unit of analysis. Through a set of six preregistered studies, we examine ways in which the height-and-power association can influence the formation and perception of social units in which there is a difference in power (e.g., President and Vice President). Studies 1A-1B show that people appear to have a robust expectation that the less powerful member of a power-asymmetric pair should be shorter than the person's superior. Studies 2A-2B consider a broader social context involving expectations relating to an employee and the person's superior and subordinates, finding an expectation that a person's superior should tend to be taller than a person's subordinates. Studies 3A-3B examine whether power-asymmetric pairings whose heights are congruent or incongruent with the stereotypical height-and-power association are perceived differently and shows that people are more prone to invest in a pairing whose height profile fits the stereotype compared with a pairing where the superior is shorter than the subordinate. These findings contribute to research on group dynamics as well as debates concerning the relevance of appearance and body morphology in contemporary organizational settings.

OB: Toward Differentiation Between Status and Influence in Work Groups

Author: **Ya-Ru Chen**, *Cornell U.*
Author: **Steven Blader**, *New York U.*

Status, defined as the extent to which one is respected and admired, is a ubiquitous and fundamental force in all groups and organizations. Yet, scholars' understanding of the attributes that garner status, and the consequences that follow from it, is limited in several ways. First, past work tends to focus on the task-related needs of groups, viewing competence and generosity as bases of status because these are important for groups' task performance. However, status research has paid little attention to the socioemotional needs of groups or the attributes that may serve these needs. Second, past research has often conflated status with influence, despite the fact that influence can be attained through means that are quite distinct from, and even antithetical to, respect and admiration, such as through fear and intimidation. In this research, we broaden prior research on the antecedents of status and differentiate between status and influence to enhance conceptual clarity and precision.

Contextualizing Age and Generational Differences in Organizations

Session Moderator: **Laura Venz**, *Leuphana U. Lüneburg*

OB: Age-Inclusive Leadership and Intrinsic Motivation: The Role of the Leader-Member Age Differences

Author: **Laura De Boom**, *PhD student at U. of Antwerp*
Author: **Kim De Meulenaere**, *U. of Antwerp/ Antwerp Management School*

The aging population trend renders teams within workforces increasingly age diverse. Scholars and practitioners have long been interested in how age-diverse teams can be effectively managed to keep members of all ages motivated. Previous literature has suggested that age-inclusive management is effective and has emphasized that leaders play a crucial role in managing their diverse team. In this study, we examined the role of the leader more in depth by studying how the leader-member's age difference moderates the relationship between age-inclusive leadership and team members' intrinsic work motivation. Using a Belgian sample of 100 employee observations and 21 leader observations within 21 teams, we show that team members' perceived level of age-inclusive leadership positively affects their intrinsic work motivation. This relationship is reinforced by the member-leader's (absolute) age difference to the extent that age-inclusive leadership stimulates members' intrinsic work motivation especially when the leader is substantially older or younger. This research offers valuable contributions to the literatures on age diversity (management) and the leader-member age difference. Our findings also point at valuable managerial implications we discuss in this work.

OB: Dealing with Availability and Response Expectations: Are Older Employees at an Advantage and Why?

Author: **Laura Venz**, *Leuphana U. Lüneburg*
Author: **Anne Woehrmann**, -

This research challenges technology-related age stereotypes by hypothesizing an age advantage in dealing with work-related information communication technology (ICT). Based on theorizing on aging at work, we suggest that older employees are better at psychologically detaching from work under high availability expectations and that they show more adaptive responsiveness to response expectations. We examined a potential age-related mechanism underlying this effect, namely internal workplace telepressure. We pursued a two-study approach. Study 1 examined data from 5,938 individuals who participated in a large-scale survey of employees in Germany. We tested age as moderator of the relationship between availability expectations and psychological detachment from work. Results supported the hypothesized age advantage effect showing that for older employees, availability expectations were less strongly related to impaired psychological detachment. Study 2, a diary study with 106 participants answering more than 500 daily surveys, supported lower telepressure as explanation for this age advantage effect. Study 2 further extended this finding to the relationship between response expectations and responsiveness, identifying both age and telepressure as predicted by age to moderate this relationship. This research shows age advantage effects in dealing with ICT demands, enhancing the understanding of the intersection between age and technology use at work.

OB: Does Attaining a Dream Occupation Make Youths Happy?

Author: **Hyung In Park**, *Sungkyunkwan U.*
Author: **Seunghee Lee**, *Sungkyunkwan U.*
Author: **Bora Lee**, *Korea U.*

Person-vocation (P-V) fit examines the match between an individual and his or her occupation, which has been shown to be related with critical outcomes related to job attitudes. The purpose of the current study is to provide an additional piece of evidence regarding P-V fit and its criteria (extrinsic job satisfaction, workplace satisfaction, and happiness) using longitudinal data of 1,041 youths in South Korea. While most previous studies examined P-V fit through the fit between vocational interests and characteristics of actual vocation, this study examined the fit between aspired and actual occupation both in its prestige levels to measure P-V fit. The study utilized information collected from two data points that were eight years apart: the first collected in 2004, when participants were high school seniors, and the second collected in 2012, when participants were in early adulthood. As expected, polynomial regression and response surface graphs examining the association between P-V fit and three criteria revealed that the levels of the three criteria increased as actual occupation matched with aspired occupation at a high-high fit compared to a low-low fit. On the other hand, P-V misfit did not have a systematic relationship with the three criteria. It was also discovered that happiness was the most relevant outcome, suggesting new and important implications regarding P-V fit and its criteria in youths' career aspirations and attainment.

OB: Generating Social Good in Generation Z

Author: **Nishat Babu**, *Loughborough U., School of Business and Economics*

Author: **Nicolas Raineri**, *ICN Business School*

Author: **Kenneth De Roeck**, *SKEMA Business School*

Generation (Gen) Z, or individuals born between the period 1995 – 2010, are popularly typified as entitled and self-aware with a strong will to make a positive social impact, both off and on the job. Although this generation has started to enter the workforce and is set to constitute a large portion of it in the near future, research on Gen Z is still surprisingly lacking. In this study, we investigate to what extent servant leadership is a suitable approach for fostering this generation's desire to make a positive social impact. Specifically, we use social learning theory to develop and test, through two studies, a framework whereby servant leadership promotes Gen Z's engagement in socially responsible behaviors (SRB), through its effects on prosocial motivation. We further adopt a more nuanced approach by testing the boundary condition of psychological entitlement in this mediational process. Findings from both an experimental vignette study and a multi-source field survey study provide support for our hypotheses and highlight the role of psychological entitlement in attenuating the otherwise positive effects of servant leadership on SRB through prosocial motivation, among Gen Z. Implications for theory and practice, as well as avenues for future research are discussed.

In the current symposium we will address the important topics of sleep and chronobiology in work settings. Chronobiology deals with how humans and many other living organisms synchronize their daily biorhythms with the 24h-light-dark cycle of our planet. Individual differences in synchronization (entrainment) settings have important implications for when people are capable of performing at their very best during the workday. Another critical theme in this symposium that is tightly coupled to chronobiological processes is sleep. Sleep is an activity that is controlled by chronobiological processes and that has important implications for performance and employee well-being. By doing so, our symposium aims to stimulate an integrative account of insights from chronobiology and sleep research. We believe that the connection between sleep, chronotype, and work is a compelling area of research that is of great interest to researchers and practitioners who care about organizational performance and employee well-being.

Effective collaboration is essential and ubiquitous in the modern workplace, whether between teammates, managers and their subordinates, or mentors and their mentees. All of these situations bring together individuals with diverse experiences and specialized skills who need to work together to achieve shared goals in performance and development. While collaboration would seem like an ideal environment for individuals to grow and learn, it also brings unique tensions that can undermine not only learning, but group success. In this symposium, we will explore the promises and challenges that collaboration presents for performance and learning, focusing on how group performance and individual learning can be easily helped or hindered by tensions that reside at the individual and collective levels. These papers provide new insights and tools for organizations to foster both performance and learning outcomes from collaborations, so that organizations can help individuals and teams reach their full potential.

SAP: **Reinventing Hollands Kroon: Dynamics of Strategic Change and Legitimacy in Public Sector**   

Author: **Dave Kiwi**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Saeed Khanagha**, *Vrije U. Amsterdam*

Managers of public organizations face cutting-edge technological opportunities and management practices that may enable their organizations to provide substantially higher value to citizens. However, in the absence of financial incentives and strong institutional pressures to sustain status quo attempts for strategic change are likely to face legitimacy challenges and fail. Using a multi-year qualitative study, we show how a Dutch municipality managed to undertake a major strategic change initiative while navigating legitimacy issues that emerged in relation with internal and external stakeholders. Taking a ‘legitimacy-as-process’ - perspective we offer a temporal model that explains how strategic change can endogenously happen in a public sector organization. We describe how evolving combinations of strategy, identity and institutional work were used by senior managers to kick-start, execute and preserve the change by securing legitimacy in relation with different audiences across time. We complement the strategic change research that is often focused on for profit private organizations by incorporating the unique challenges of change in public sector organizations and propose a multi-stage process model for navigating legitimacy issues during strategic change. Rather than taking an incremental approach towards change to minimize tensions, we suggest how a multi-stage, non-linear approach may be applied that 1) initially focuses on creating acceptance for a new philosophy among local stakeholders, hence creating receptiveness towards a major change, 2) then it moves to implementation of distinctive strategic initiatives based on liminal legitimacy risking issues and backlash, and 3) curbing the scope of the change initiative to satisfy the broader institutional audience while maximally using the space that is created in the previous steps.

 SAP: **Patterns of Intra-Action: How Material-Discursive Practices Progressively Shape Strategic Change**

Author: **Jarryd Daymond**, *U. Of Sydney*
Author: **Stefan Meisiek**, *U. of Sydney Business School*
Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*

We examine how strategic change is enacted through practices. While the role of social practices in shaping strategy is recognized, less understood is the way that materiality is entangled with discourse in bringing about strategic change. With the help of a 34-month interpretive case study of a digital bank, we explain how three material-discursive practices both contribute within the various phases of strategic change and evolve within them. By concluding that strategic change is materially-discursively intra-acted, we provide a new perspective on practices as agential forces for change in organizations.

Paper is Available to Meeting Registrants Only.

SAP: **The Role of Middle Management and the Mediation of Artifacts in the Process of Organizational Change**

Author: **Manoel Lins Junior**, *FDC - Fundacao Dom Cabral*
Author: **Rosileia Milagres**, *FDC - Fundacao Dom Cabral*
Author: **Maria-Elisa Brandão-Bernardes**, *FDC - Fundação Dom Cabral*

The present article proposes a reflection on the skills that organizations and managers need to develop to deal with the processes of change, mediated by artifacts influencing routines. The qualitative descriptive methodology employed was a case study in a plastic extrusion plant, where the change in routine was mediated by several artifacts that played unequivocal roles in the process: as mechanisms for recording information, for communication, for horizontal and vertical alignments, as a means of ensuring the execution of the routine, and as problem-solving facilitators. The results found help to understand how middle management led the change in the organization, acting as a facilitator and articulator of the process, based on the skills of communication, awareness, alignment and proximity, shared vision, and engagement, mediated by various artifacts. These skills favored the creation of a relationship of interdependence and interconnection between multiple agents, and the intelligent use of artifacts, creating autonomy and greater space for spontaneous exchanges. For the organization, it had a positive impact on performance, prompting the reflection that the future of management permeates the manager's capacity for agency to create an environment of interconnection based on communication, respect and mutual trust, where artifacts can play their enabling role.

SAP: **Decidedly Undecided Change: Producing Spielraum for Organizational Periphery** 

Author: **Sari Laari-Salmela**, *U. of Oulu Business School*
Author: **Juha Tuunainen**, *U. of Oulu Business School*
Author: **Kari Kantasalmi**, *U. of Oulu Business School*
Author: **Anu Kajamaa**, *U. of Oulu*

Extant strategy practice and process studies highlight the duality of change and stability, regarding strategic change as an accomplishment of both movement and recursiveness, which are also displayed by the observed difference in strategy-making between the organizational centre and its periphery. In this study, we examine the emergence of new strategic themes and related organizing in two research universities' organizational peripheries. By adopting a systems-theoretical view and drawing on Luhmannian organizational analysis, we are able to examine the co-existence of stability and change in each communication event, aiming to reduce complexity but also giving rise to novel complexities, providing 'spielraum' for peripheral development activities. The study contributes to the SAPP-oriented stream of studies on strategic change in general and emergent strategy studies in particular by providing an alternative theoretical viewpoint on the centre-periphery dynamics in strategic change and showing how organizations un/decide on new strategic themes, and through what dynamics they might become introduced and organized in established organizations.

Session Moderator: **Priyanka Dwivedi**, *Texas A&M U., Mays Business School*

SIM: Female Presence at the Corporate Apex and Likelihood to Establish a CSR Committee within the Board 

Author: **Maria Cristina Zaccone**, *U. Cattolica del Sacro Cuore*

Relying on the upper echelon and critical mass theories, as well as on the assumption that being at the corporate apex provides structural power, this study explores the relationship between female presence at the corporate apex and the likelihood to establish a CSR committee. Based on a cross-country and cross-industry dataset of publicly traded companies, I validate that the higher the presence of females within the board of directors the higher the likelihood to establish a CSR committee within the board. Similarly, I provide evidence that the higher the presence of females within the group of the executives the higher the likelihood to establish a CSR committee within the board. Also, I show that the presence of a female CEO positively influences the likelihood to establish a CSR committee within the board. Overall, I extend previous literature on CSR governance and female representation in the upper echelons by providing empirical evidence that female presence at the corporate apex is a strong antecedent of the likelihood to establish a CSR committee within the board.

Paper is Available to Meeting Registrants Only.

SIM: Women on Board of Directors and Firm Performance of Russian Companies: Does CSR Disclosure Matter? (WITHDRAWN)

Author: **Yulia Aray**, *Graduate School of Management, St. Petersburg State U.*

Author: **Tatiana Garanina**, *U. of Vaasa*

Author: **Anna Veselova**, *HSE Graduate School of Business*

Author: **Desislava Dikova**, *WU Vienna U. of Economics and Business*

While a number of studies explore a direct relationship between female representatives on board and firm performance, this paper proposes an alternative idea investigating how corporate social responsibility (CSR) disclosure mediates this relationship in the context of the transitional Russian economy, where gender disparity in board of directors remains high. The focus on Russian companies brings new insights on this type of relationships and opens the discussion about the effectiveness of corporate governance systems in emerging and transition economies, as well as extends the discussion about female board representation in emerging contexts. Stakeholder theory is used for developing the theoretical background. An empirical analysis is conducted on a sample of 223 publicly listed Russian companies with the data for the period 2012-2017. We found that women representatives on boards negatively affect CSR disclosure while having a positive effect on both accounting and market performance indicators. Explanations for these findings are deeply rooted in social and cultural specificity, masculine type of women's behaviour and standards of the corporate governance system in Russia when female directors predominantly impact financial aspects of corporate activities rather than strategic ones.

SIM: The Influence of Gender-Diversity-Valuing Institutional Investors on Female Executive Representation  

Author: **Priyanka Dwivedi**, *Texas A&M U., Mays Business School*

Author: **Lindsey Yonish**, *Texas A&M U.*

Author: **Albert Cannella**, *Texas A&M U., College Station*

Author: **Cynthia E. Devers**, *Virginia Tech*

Despite increasing stakeholder pressures, the number of female executives within the corporate upper echelons remains low relative to the number of female directors. We address this so-called "gender diversity gap" by examining the role that gender-diversity-valuing institutional investors (GDVIs), who are amongst the most prominent stakeholders advocating for gender diversity today, play in channeling managerial attention toward increasing female executive representation. Drawing on stakeholder and performance feedback theories, we propose that top managers may maintain the support and cooperation of GDVIs by increasing female executive representation at their firms but that such efforts are subject to managers' limited attention as they attempt to balance GDVIs' dual priorities of gender diversity and financial performance. We find that GDVI ownership is positively associated with increases in female executive representation but that financial performance and female board representation both at peer firms and historically within the focal firm weaken this relationship, thereby shedding light on the relative lack of progress toward gender diversity in the executive ranks.

Author: **Ali Amin**, *The U. of Lahore*

Author: **Rizwan Ali**, *Lahore Business School The U. of Lahore*

Author: **Ramiz Ur Rehman**, *Faculty of Business, Sohar U., Oman*

The recent family business literature considers the heterogeneity of ownership and categorize them into lone founder owners and family owners. The distinct social behavior of both type of owners lead to different dividend payout decisions. This study provides novel evidence by examining the effect of lone founders and family owners on dividend payout decisions, and spill over effect of annual general meeting on this relationship. We employed 4567 firm year observations of the non-financial firms listed on Pakistan Stock exchange over the period 2006-2021 and used multivariate regression analysis to test the hypotheses. For robustness check, we employed generalized method of moments estimation and two stage least squares regression and confirmed the earlier obtained results. Our findings indicate that firms under lone founders' ownership prefer long term growth strategies and therefore pay lower dividends whereas the family owners distribute higher dividend to increase family's wealth. Moreover, we found that family owners schedule annual general meeting promptly as compared to the lone founders to distribute the dividend at the earliest. Overall, our results support the concept of organizational identity in lone founder ownership and family identity in family ownership.

STR: How do Competition Policy Remedies Impact Post-Acquisition Performance? Evidence from M&As in Europe

Author: **Valentina Fani**, *Vrije U. Amsterdam*
Author: **Olivier Bertrand**, *Fundação Getúlio Vargas/EBAPE*
Author: **Jean-Philippe Bonardi**, *U. of Lausanne, HEC Lausanne*

Despite the prevalence of competition policy intervention to prevent anti-competitive Mergers & Acquisitions (M&As) and its substantive impact on firms, the relationship between competition policy and firm performance has received scant attention in strategic management. This study examines how the conditions imposed by competition authorities – i.e., remedies – affect post-acquisition performance. Drawing on the behavioral view of the firm, we argue that the binding nature of remedies allows organizational change. Specifically, we argue that when remedies are imposed firms have less need to address pressures against organizational change and so have greater exploration opportunities that will enhance post-acquisition performance. We further argue that a firm's level of innovation strengthens the remedies-performance relationship. Analyses of data on a sample of 1010 M&As authorized by the European Commission show overall a positive association between remedies and post-acquisition performance. In addition, we also find that highly innovative firms benefit from remedies more than poorly innovative firms.

STR: A Framework for the Economic Value of Corporate Strategic Moves: Joining Corporate and Competitive Strategies

Author: **Valerie Isakova**, *U. of Illinois at Urbana-Champaign*
Author: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Author: **Shinjinee Chattopadhyay**, *U. of Illinois*
Author: **Mario Schijven**, *U. of Illinois at Urbana-Champaign*

The economic value of a corporate strategic move is driven by an increase in revenues, a reduction of costs and/or risks, and consists of the net present value of projected cash flows (static value) complemented by dynamic considerations (real options value) and adjusted for competitive interactions with rivals and partners (game-theoretic value). We develop a framework of the economic value of corporate strategic moves that effectively connects corporate and competitive strategies. The framework offers a new synthesis by uncovering mechanisms that influence the profitability of a corporate strategic move across the static, real-options, and game-theoretic perspectives, identifying tensions within a given value driver, and revealing tradeoffs among the three value drivers. In this paper, we apply our framework to the revenue driver of a specific corporate strategic move—corporate diversification—and derive propositions that are new to the strategic management field.

STR: Relationships with Investment Banks and Acquisition Performance

Author: **Jason Sigler**, *The Ohio State U. Fisher College of Business*
Author: **Andrew V. Shipilov**, *INSEAD*
Author: **Alexander Sleptsov**, *U. of Illinois at Urbana-Champaign*
Author: **Jaideep Anand**, *Ohio State U.*

Although the importance of relationships between M&A advisors and the acquirer for its performance is well known, we know less about the role of M&A advisors' relationships with the target. Embeddedness theory suggests that such relationships will especially matter when firms face a long as opposed to a short shadow of the future. We study M&A deals around the market crash of 2000. We find that the acquirer and target advisors' relationships to the target improve the acquirer's performance but do not impact the target's performance. Hence, while pursuing self-interest by choosing to satisfy their acquirer clients with whom they have a long shadow of the future, economic actors avoid imposing costs on target clients with whom they have a short shadow of the future.

STR: The Effect of Foreign Competition on Related Diversification and Performance

Author: **Ricardo Laverde**, *Inspire Institute of Education and Research*

This study examines whether foreign competition affects related diversification. To obtain exogenous variation in product market competition, I exploit a quasi-natural experiment provided by large currency appreciation that occurred between 2005 and 2010 in the manufacturing sector of commodity-exporting countries. This paper examines the impact of a significant real appreciation of the Colombian Peso in the 2000s at the product-firm level. A currency appreciation shock affects a firm through two different channels: (1) Firms adjust their product portfolio by reducing sales and dropping products affected by an appreciation shock; (2) firms are more likely to add products when they have higher levels of relatedness to the core products under competitive pressure. These findings provide the first evidence on how foreign competition affect corporate diversification at the product level.

GDO: **Watch What You Say: The Double-Edged Effects of the Political Correctness Phenomenon**    

Author: **Yizhen Lu**, *National U. of Singapore (NUS)*

This paper explores the effects of politically correct and incorrect behavior on perceptions of the actor and whether the actor's ethnic background plays a role in intensifying the main effects. The phenomenon is studied in two experimental studies in which we found that politically correct behavior does influence power, legitimacy, and trustworthiness of the actor positively. In the second study, we found that the politically correct (and incorrect) behavior's effect on others-rated perception is influenced by the actor's ethnic background, with opposite effects depending on whether the actor is from a minority group. The two studies reflected the "hypocrisy" behind how people form perceptions of actors, and that these perceptions were affected by the ethnic background of the actors. We also add to our understanding of how expectancy state theory manifest in the workplace, through political language and behavior and discuss how this exacerbates our inherent bias in impression formation.

GDO: **Implicit Preference for Communication Directness in the United States**   

Author: **Misha Mariam**, *U. of Washington, Bothell*

Author: **Xiao-Ping Chen**, *U. of Washington*

Communication style is a distinct individual characteristic that observers may use to infer other attributes about the individual. In this paper, we theorize and demonstrate the implicit preference for communication directness in the United States – an implicit bias in favor of direct communicators that puts indirect communicators at a disadvantage in the assessment of their leadership potentials. Through 5 studies using different methodologies and samples, we reveal that communication directness is associated with more positive attributes like competence and honesty than is communication indirectness. Moreover, the perceived competence and/or honesty mediate the effects of communication directness on leader prototypicality perception and leader selection decisions in the organizational context. Finally, this implicit preference can be mitigated when factual information about competence or honesty is made salient. We discuss how our findings contribute to the individual perception, communication, and leadership literature and their practical implications in U.S. corporations and beyond

GDO: **Disproving Stereotypes: A Daily Examination of Nonnative Speakers' Stereotype Threat Experience**    

Author: **Mingang K. Geiger**, *Duquesne U.*

An estimated 67.3 million people are nonnative English speakers in the US. Research has shown that nonnative English speakers are often perceived to be less competent in communication, less intelligent, and less reliable in English-speaking environments, regardless of their actual capability. Given that English is a common tool for business communication, nonnative English speaker identity is particularly salient in the workplace. As a result, nonnative English speakers have been shown to be less likely to be hired or promoted to managerial positions and more likely to fail to receive funding for their business due to the stigma. Notably, even without actual discrimination, they tend to be afraid of stigmatization and unfair judgements based on their nonnative English speaker identity. Using a theoretical lens of stereotype threat, this paper examined how nonnative English speakers experience the stigma at work and how it affects their daily life. To this end, an experience sampling study of 86 full-time working nonnative English speakers in the US across 10 consecutive workdays was conducted. The results suggest that nonnative English speakers' daily experience of stereotype threat likely reduces their well-being, but not job performance. The findings help a better understanding of how stereotype threat plays a role in the workplace. Keywords: Nonnative speaker stigma, stereotype threat; resource depletion, experience sampling methods

Despite the likely outsized presence of politics in the workplace, research on how one's political ideology or affiliation shapes their time at work has been extremely limited. Collectively, the research to date showcases that how employees present their political stance to others, and how similar their political stance is to their workplace peers, is likely to shape their time at work and erode important workplace outcomes. To advance research on the role of employee political stance in the workplace, we bring together four research teams all pursuing research questions related to how employees make conscious or unconscious efforts to manage their political ideology or affiliation to others at work. These works are likely to advance scholarship on the role of political stance at work, and also test the boundaries of identity management theories in considering political stance as a potentially stigmatizing identity characteristic.

Human Relations, Crisis, Management Theorists and Structured History Approach

Session Moderator: **Leon Prieto**, *Clayton State U.*

MH: Organizing Collective Memory in the Context of Crisis: A Schematic Narrative Model

Author: **Yihan Liu**, *U. of Liverpool Management School*
Author: **Ziyun Fan**, *U. of York*

Our paper extends upon the extant organizational memory studies literature of the narrative nature of collective memory, and we use schematic narrative as a medium that shapes and conditions collective memory in the context of the crisis. We propose a typology with four types of schematic narratives to first scrutinize how collective memory is constructed and reminisced, and second to reveal how such processes frame and reframe the plausible interconnections of different collective modalities. Through a temporalized narrative approach, collective memory is re-examined as contingent, transitory and plural articulations of different modes of temporal synthesis. By bringing forward the multiplicity of temporal modalities actualized in different employment processes, we advocate a simultaneously reinforced and constrained tension between the constitution and contestations of four types of schematic narratives. Such tension fuels a constant battle between master narrative and counter-narratives both strengthens and resists to the hegemonic power and the marginalization of minority groups. We end with a call for more critical conversations for transcending potentials for the globalization and politicization of collective memory and its profound impact on policy-making and public decisions.

MH: A Game of Two-Halves: World War II and the Institutionalization of Human Relations in the U.S.

Author: **Jeffrey Muldoon**, *Emporia State U.*
Author: **Nicholous Mark Deal**, *Mount Saint Vincent U.*

Much has been made about the enduring legacy of the human relations movement, especially how it shed new light on tensions between labor and management in industry. Histories of human relations have played a game of 'two halves.' On the one hand, scholars have furnished our understanding of the Hawthorne Studies and their numerous implications on management and organization. However, on the other, this plethora of research has not yet fully considered the impact of World War II and its contribution to the institutionalization of early human relations. What we set out to address in this paper is how the War formed a specific historic context from which leading voices such as Elton Mayo and Chester Barnard helped institutionalize the nascent human relations movement as a focal of management and industrial relations research. We reassemble archival material from four archives that help trace the influence and impact of the War on human relations theorizing in the United States during the early 1940s. We conclude by suggesting the war brought about new thinking on the importance (and attention) of social relations at work.

MH: An Analytically Structured History Approach Using a Relational Database

Author: **Zeerim Cheung**, *U. of Jyväskylä School of Business*
Author: **Erik Lakomaa**, *Stockholm School of Economics*
Author: **Eero Juhani Aalto**, *Aalto U.*
Author: **Rasmus Nykvist**, *Stockholm School of Economics*

We present an analytically structured history approach using a relational database to bridge the methodological divide between history and management and organizational research. Extensive digitized archival sets with rich metadata and analytical structures form the core of the database. The approach provides multiple methodological strengths. First, source transparency is established by linking all steps of the coding and analysis to the sources in the database. Second, the approach enables real-time research collaboration and constant comparison of the coding and analysis of sources. Third, the always available and searchable database enables the researcher to easily move back and forth from sources to narrative construction and theorizing. Due to this efficiency gain, research can be based on extensive archival datasets enabling rigorous conceptual development. The approach responds to the call for methodological openness and disclosure when conducting historical analyses. Additionally, the approach enables the development of contextually grounded explanations and theories that respond to the criticism that management and organizational research is ahistorical. Thus, the approach fulfills the requirement for the dual integrity of historical veracity and conceptual rigor.

MH: Morning Has Broken: Employees as the Intellectual Peers of Theorists in Management Thought

Author: **Jeffrey Muldoon**, *Emporia State U.*
Author: **Anthony Gould**, *U. Laval*

Mainstream management history invariably establishes sidelined theorists as the most consequential protagonists in the quest to create a generic template for employee superintendence. According to this orthodoxy, in the wake of the Industrial Revolution, the new capitalists and their agents (the emerging management class), were theoretically ill-equipped to oversee large scale productive transformation. Hence, they turned to experts, mostly scholars who straddled the worlds of academia and the fledgling enterprise of industrial consulting. In this version of events, employees are represented in strawman terms: as either passive or predictable and unduly hostile actors. This article asserts and defends an alternative portrayal. It argues that the key influence on the modern template was not a conflict of theoretical perspectives concerning the nature of modernity being played out on the margins but rather a clash between theory itself and what employees, acting as intellectual equals, taught their employers.

Decision-Making Biases in the Workplace: Attribution, Positivity, Cognitive Accuracy, and Heuristics

Session Moderator: **Benjamin Webster Walker**, *Victoria U. of Wellington*

MOC: I Want to See Clearly! Antecedents of Cognitive Accuracy about Social Networks  

Author: **Jing Han**, *Winona State U.*

Author: **Jidong Zhang**, *U. of Wisconsin, Eau Claire*

Author: **Jet Krikhaar**, *Tilburg U.*

This paper reports on a study of the antecedents of cognitive accuracy about social networks, specifically an advice network, which was the focus of this study. A series of hypotheses regarding the influence of network structure and individual traits on one’s accurate perceptions about social networks were developed. Using a sample of employees working for a Dutch municipality, our results revealed that the effects of network structure (network centrality and network size) on employees’ cognitive accuracy were not significant. In contrast, individual traits made more significant contributions in explaining the variance in employees’ accurate perceptions about social networks. In particular, we found an individual’s self-monitoring, need for cognition, and promotion focus had significant positive relationships with his or her accurate perceptions about the advice network. Contrary to expectations, extraversion had significant negative impact on cognitive accuracy. No significant relationship was found between internal locus of control and cognitive accuracy in the present study. Implications for management research and practice are discussed.

MOC: Employing Tallying and Take-the-Best Heuristics in the Personnel Selection Decision-Making Process

Author: **Kristjan Pulk**, *U. of Tartu*

Author: **Maaja Vadi**, *Maaja V*

Author: **Anne Aidla**, *U. of Tartu*

Managers could benefit from using heuristics in personnel selection, as simple rules reduce time required to decide, without necessarily sacrificing predictive power. The aim of this study is to examine how managers spontaneously employ tallying and take-the-best heuristics in personnel selection and in which ways do they interpret the effects of these heuristics in their decision-making process. We conducted a laboratory experiment with 11 middle managers in a large Estonian financial sector company and 26 economics students. The results show that most managers are not cognizant about the decision-making process used, citing intuition, but the selection decision-making process is better characterized by heuristics. We also find that heuristics can help reduce decision variance. Therefore, managers’ awareness of their decision-making should be instructed to be more aware of their decision-making process and that graphical decision-aids favoring ecologically rational heuristics can be helpful in the personnel selection decision-making process.

MOC: Problems with Premortems: Self-Serving Attribution Bias in a Popular Debiasing Strategy  

Author: **Linnea Gandhi**, *The Wharton School, U. of Pennsylvania*

Author: **Annie Duke**, *The Wharton School, U. of Pennsylvania*

Author: **Maurice Schweitzer**, *U. of Pennsylvania*

Finalist for MOC Division Best Submission with Practical Implications for Organizations

Before making major decisions, managers engage in prospective hindsight – imagining a future outcome and working backward from that outcome – to anticipate risks. The most popular type of prospective hindsight is the “premortem” – imagining a negative future outcome and identifying reasons why it occurred. Premortems have been broadly endorsed by psychologists and Nobel Prize winners as a debiasing strategy over the past two decades. However, surprisingly little research has investigated the premortem to identify whether or not it actually works. Across three studies that span prediction and planning domains, we find that the types of risks premortems identify are systematically biased. We contrast premortems, preparades, and prelections – imagining bad, good, or undefined outcomes – and find that individuals who engage in a premortem focus far more attention on factors outside of their control than do individuals who engage a preparade or prelection. Further, this effect persists across perspectives: individuals imagining self-relevant and other-relevant outcomes exhibit this bias. Together, our results suggest that although premortems mute overconfidence, they introduce attribution bias, ironically focusing managers’ attention away from the risks most within their control.

Finalist for MOC Division Best Paper Award

Job performance is amongst the most common dependent variables in organizational behavior research. Despite this volume of research, however, we argue that a major barrier to comprehensive understanding of the drivers of job performance is a “positivity bias” amongst those who study it: a dual tendency to assume high performance is driven by positive (rather than negative) psychological variables, and low performance is driven by negative (rather than positive) psychological variables. We evidence this positivity bias through analysing 20 years of hypothesizing on job performance across 8 leading organizational behavior journals. We also canvas potential causes of this bias, and conclude with recommendations for cultivating a more balanced perspective on the psychology of success in the workplace.

OB: Benefits of Engaging in Work and School: The Dual Roles of Resilience and Detachment

Author: **Yinyin Cao**, *U. of Michigan, Dearborn*
Author: **Frits Pil**, *U. of Pittsburgh*

A significant proportion of full time college students have jobs, and an increasing number of full-time workers pursue academic degrees on the side. Despite the prevalence of individuals engaging in both school and work, the affective and behavioral outcomes of participation in these dual roles remains an understudied phenomenon. We draw on insights from the work-life enrichment literature and the conservation of resources theory to develop a more nuanced understanding of the relationship between work and study. Using survey data collected from two sets of traditional college students and a longitudinal survey of full-time working adults, we find strong support for the enrichment perspective: engagement in one domain (school/work) is positively associated with engagement in another (work/school), and this relationship is partially mediated by the acquisition of new resources (via increased resilience) but not by the protection of resource loss (via psychological detachment from primary role). Employees' work identity plays an important moderating role in the school-to-work interface. We discuss the implications of these findings for theory and practice.

OB: Social Influence and Stress: Extending COR Theory from a Network Perspective

Author: **Shihan Li**, *Heinz College - Carnegie Mellon U.*
Author: **David Krackhardt**, *Carnegie Mellon U.*
Author: **Nynke Niezink**, *Carnegie Mellon U. - Dietrich College of Humanities and Social Sciences*

We study how stress emerges and changes in an organizational setting. Traditional conservation of resources (COR) theory explains stress levels among participants in terms of whether the focal individual has sufficient resources to cope with environmental stressors. We posit that a key -- but neglected -- factor in one's resource conservation is the distribution of stress in the overall network in which one is embedded. To investigate this social resource, we conducted a 6-month longitudinal study of 321 early- to mid-career adults in a professional masters program as they encountered the stresses of end-of-course deadlines and exams. We follow the participants' networks as they change over this 6-month period, as well as the stress levels of the participants in the study at these stressful time points. We find that the stress levels of one's own social contacts contribute to the experience of stress in this setting, and that one's susceptibility to social influence depends on certain personality traits. Interestingly, we find that the extent to which social influence is critical to the participants' stress levels depends heavily on the variance (or lack of consensus) in stress levels among those social contacts; this social effect is significantly amplified under conditions of relative consensus.

OB: Mixed Signals: The Role of Organizational Dissociative Identity Disorder on Trust Over Time

Author: **Sean Noble**, *North Carolina State U.*
Author: **Patrick Flynn**, *North Carolina State U.*
Author: **Roger C. Mayer**, *North Carolina State U.*
Author: **Ian Siderits**, *North Carolina State U.*
Author: **Paul W Mulvey**, *North Carolina State U.*

For many employees, it can often feel like different parts of their organization have different expectations of what should be done and how. Mayer and Williams (2021) recently defined this perception as Organizational Dissociative Identity Disorder (ODID), or the degree to which an organization member believes that the organization itself or groups and individuals within the organization hold distinct values, incentives, and goals. This perception is believed to have a negative impact on the trust relationship between an employee and their organization, particularly over time. The current study set out to both: a) affirm the existence of ODID through the development of a psychometrically sound measure and b) examine the influence of perceptions of ODID on trust over time during a period of great uncertainty. We conducted a longitudinal study of university faculty over the course of five months to establish a measure of ODID and understand its role in explaining trajectories of trust over time. Support was found for the existence of two ODID factors, ODID-Demands and ODID-Values, and for the moderating influence of ODID-Values on trust over time. Acting on ODID by examining and realigning expectations between managers and subordinates might serve the needs of both employees and the organization, thus making for a better world.

OB: Post-breach Psychological Contract States: Development and Validation of a Measure

Author: **Sandra Pereira Costa**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*
Author: **Jacqueline A-M. Coyle-Shapiro**, *London School of Economics*

Research on psychological contracts is steadily growing and much empirical evidence attests to the overwhelming detrimental effect of psychological contract breach on attitudes, emotions, and behaviors. Most of this research uses a global or composite scale for psychological contract breach and does not account for the possibility that after the experience of breach, an individual's psychological contract may change for the better or worse. To address this, our study develops and validates a new multidimensional measure of psychological contract state: Post-breach Contract State (PBCS) to capture the effects of breach on an individual's subsequent psychological contract. Evidence from 5 samples from the UK and USA provides support for a four-dimension structure (Impairment, Dissolution, Reactivation and Thriving) that presents a better fit than alternative models; the dimensions are highly reliable; the scale demonstrates evidence for validity with constructs in psychological contract breach nomological network; distinctive cognitive processes leading to each state; the states explain incremental validity over psychological contract breach, fulfillment, and violation measures. Overall, results from the present study suggest that the PBCS is a measure that can provide more granulated insights to how the occurrence of breach can positively reshape or deteriorate an employee's relationship with their employer.

Institutional Logics: New Research

Session Moderator: **Arthur Gautier**, *ESSEC Business School*

OMT: **Making Sense of Hybrid Practices: The Role of Individual Adherence to Institutional Logics** 

Author: **Arthur Gautier**, *ESSEC Business School*

Author: **Filipe Manuel Simoes Dos Santos**, *Catolica Lisbon School of Business and Economics*

Hybrid practices recombine core elements of different institutional logics in novel ways. They proliferate in our complex and uncertain world. As such, they elicit contrasting responses from people who encounter them, from strong rejection to enthusiastic adoption. However, extant research in institutional theory does not capture the process through which individuals come to form these responses. To address this gap, we conducted a comparative, longitudinal multiple case study of 14 high-net-worth individuals, examining their response to impact investing, an emergent hybrid practice that combines elements of the philanthropy and finance logics. Our study shows how individuals frame the hybrid practice as an alternative to one of the pure practices being combined (e.g., giving or investing), and how their degree of adherence to the logics at play (novice, familiar, identified) orient the sensemaking process. In particular, mere familiarity with the logics at play seems to foster individuals' adoption of hybrid practices.

OMT: **Logic Work: Understanding the Institutional Work of Logic Creation and Maintenance**

Author: **Marvin Washington**, *Portland State U.*

Author: **Calvin Nite**, *Texas A & M U.*

There are two dominant but not connected streams in institutional theory: logics and work. Recently, scholars from both traditions have called for an attempt at integrating these two perspectives. We attempt to answer this call by examining how the National Collegiate Athletic Association (NCAA) created and maintained its version of amateurism: what we call logic work. We find that there were three processes: translation work (changing the British notion of amateurism to a US ethos), communicating work (the failed attempt of the Sanity Codes) and maintenance work (putting the logic in people, place, and policy). Drawing on the recent historical institutionalism as our methodological approach, we provide the account of how the NCAA created its amateur logic. We then end, by offering insights into what this tells us about institutional logics and institutional work.

OMT: **Comply, Love, or Grow Together: Decoupling Fundamental Institutions from Elemental Logics in Rwanda**

Author: **Bruno Noisette**, *ESSEC Business School*

Literature on institutional logics identifies “family”, “religion”, “State”, “professional” or “market” logics as fundamental, societal-level logics that inform lower-level ones. While some of these fundamental logics are well-studied, the variability of the family institution across time and space seems to indicate that it is necessary to go beyond currently dominant accounts of this institution in organization studies and to refine our understanding of its underlying logic(s). To do so, I study the family institution and its interplay with business in Rwanda, East-Africa. Based on interview data, I find that, in this country, the family institution is not governed by one single logic, but can be explained by several, competing logics: compliance to authority; sharing based on love; or responsibility to “grow” oneself and others. This suggests that “the” family logic may not be as fundamental as it has been portrayed to be. Instead, the family institution as defined in a given cultural context can derive its meaning from even more fundamental, elemental logics that exist independently from the family institution itself. Labelling an elementary logic based on the institution that it serves to explain in modern Western societies might be misleading.

Events, Power, and Workplace Inequality

Session Moderator: **Yusaku Takeda**, *U. of Illinois Urbana-Champaign*

OMT: When Do Organizations Advance Workplace Diversity? Non-Business Case of Innovation Adoption   

Author: **Yusaku Takeda**, *U. of Illinois Urbana-Champaign*
Author: **Letian Zhang**, *Harvard Business School*

We explore when organizations significantly advance workplace gender and racial diversity. A considerable body of work has unveiled how workplace inequality is perpetuated through existing organizational processes and structures that are difficult to change. We argue that structural reconfiguration associated with a non-incremental innovation adoption—one that requires the development of new capabilities—may dismantle such inertia and create an opportunity to increase workplace diversity significantly. Using a sample of 2,991 retail establishments from 2004 to 2015, supported by qualitative research, we found that a retailer's adoption of e-commerce is associated with a significant increase of female and minority managers. After the adoption, the proportions of Black and women managers increased by 22 percent and 17 percent, respectively. This effect is more substantial in retailers subject to affirmative action requirements and in geographic areas where diversity practices are more normatively accepted. Our study offers one distinct pathway through which organizations can bolster workplace gender and racial diversity and invites future research that examines how various opportunities to advance diversity are created and exploited (or not) in the organization.

OMT: The Role of Informal Networks in Sensemaking and Obtaining Power in Post-Acquisition Integration

Author: **Yixi Chen**, *Columbia Business School*

This qualitative case study examines how employees leverage their informal advice networks to navigate uncertainty in a turbulent post-acquisition integration process at a tech consulting firm over two years. Using interview, network survey, and data, I identified the role of employees' informal networks in shaping their differential sensemaking process and ability to obtain power and influence during the organizational upheaval. My research shows that individuals' sensemaking process is influenced by both the openness of their informal advice networks and the strength of their ties with senior leaders at the legacy firm. The openness of informal networks shapes the diversity of information employees receive; and the tie strength affects information access and sponsorship opportunities among acquired employees. Moreover, early movers were advantaged in becoming boundary spanners and gain power and influence. These findings underscore the importance of informal networks in helping individuals adapt to changes and attain status and power inside the integrated organization. Furthermore, by adopting a relational view, the study sheds light on the tenacious force behind employees' sensemaking processes over whether to stay or leave and their differential attainment of status and power at the acquired firm.

OMT: Negotiating Order: Experts and Control in Bureaucratic Organizations

Author: **Andrea Wessendorf**, *U. of Edinburgh business school*
Author: **Kamal A Munir**, *U. of Cambridge*

This two-year ethnographic study of a major UK hospital's response to the Covid-19 pandemic examines how control is negotiated between managers and experts in bureaucratic organizations. Previous studies have shown that experts lose control in bureaucratic organizations as managers come to dominate. In this study, the locus of control shifted between managers and experts through a process that we label 'negotiating order'. Specifically, we show that managerial control was temporarily challenged by the experts through a set of expert control practices – creating expert groups, framing emerging issues, and creating briefing notes for managers – which collectively enabled experts to gain control and re-establish operational order. Once the operational order was re-established, managers regained control by applying a distinct set of managerial control practices – formalizing structures, allocating roles, and creating policies – which enabled managers to take the response to scale. This process of negotiating order also led to a renegotiation of the organizational order because which individuals were in positions of control varied with every shift of the locus of control. However, such opportunities for positional shifts were not equally distributed across the organization. We discuss the implications for studies on the bureaucratization of expertise, upward influence, and intra-occupational inequality in organizations.

OMT: Adaptable Tools and Women's Job Performance in Male-Dominated Fields: Evidence from Robotic Surgery  

Author: **Harshvardhan Ketkar**, *Bocconi U.*
Author: **Seth Carnahan**, *Washington U. in St. Louis, Olin Business School*
Author: **Brad Greenwood**, *George Mason U.*

Winner of the Responsible Research Award

Physical tools often privilege the average characteristics of the male body. However, technological advances have the potential to introduce more adaptable tools which are adjustable and require less physical force to operate. In this work, we investigate whether the introduction of such tools correlate with better job performance for women employees as compared to men. We examine this question among laparoscopic surgeons using microdata from the State of Florida between 2009 and 2015. Standard laparoscopic tools privilege men because they are built for taller users with larger hands, requiring significant physical force to operate. Robotic surgical tools, in contrast, are customizable to a surgeon's physique and require less physical force to operate. Findings suggest that the use of robotic tools correlates with significant performance improvements for both men and women. However, female surgeons experience larger surgical performance improvements as compared with male surgeons. These improvements further intensify when the surgeon has a high recent caseload or works in a male-dominated surgical unit. Yet, we find that women are no more likely to use robotic surgical tools than men are. Drawing on ex post interviews with surgeons, we posit that gender barriers may limit women's access to cutting-edge tools that supplant outmoded tools designed with men's bodies in mind.

OMT: Globalization in Social-Commercial Tensions: The Case of Nepalese Microfinance

Author: **Soniya Rijal**, *UNSW Sydney Business School, Australia*
Author: **Josh Keller**, *UNSW Sydney*
Author: **Hokyu Hwang**, *UNSW Sydney*

Hybrid organizations that simultaneously pursue social and commercial objectives often experience tensions. Yet such tensions can arise from contradictory global and local demands. This study focuses on how individual actors' relations with macro-level institutions construct social and commercial objectives, which, in turn, shape tensions. We apply the qualitative case study method to investigate how the translation process from the global to the local informs the experience with tensions among leaders of hybrid organizations. We analyzed interviews and archival data on 26 microfinance organizations in Nepal, where both the traditional (local) model of microfinance and the global model of microfinance are practiced. We compare the microfinance leaders who belong to global professional networks with those embedded only in local professional networks. We find that the managers embedded in global professional network exposed to and embraced more expansive meanings of social and commercial activities and goals in microfinance. Moreover, social-commercial tensions were more pronounced among globally embedded leaders than locally embedded leaders. Our findings contribute to the hybrid organization literature and paradox theory by illustrating the role of globalization and global networks in shaping leaders' conceptualization of commercial and social objectives, which in turn give rise to tensions and hybrid organizational practice.

OMT: The Paradox of Social Progress

Author: **Marc Krautzberger**, *U. of Edinburgh business school*
Author: **Harald Tuckermann**, *U. of St. Gallen*

Much organizational paradox research shows that both/and-technology strategies can turn paradoxical tensions between economic, social, and environmental issues into synergies. We argue that previous research might provide an incomplete picture and that more holistic views are needed. Applying a historical paradox perspective, we propose that since the Industrial Revolution, paradoxically, social progress has increasingly led to significant social problems. In a sociological-historical process model, we explain how this paradoxical dynamic was created in the past (“old normal”) and increasingly led to the experience of catastrophic events and global social problems as the “new normal” of the present, how this paradoxical dynamic is partly reproduced in the present, and how nation-states and organizations might shift this dynamic toward a more desirable “future normal” through the use of a new technology strategy. The model advances understanding of both/and strategies by explaining how they may paradoxically follow an unproductive either/or logic and how both/and and either/or strategies can be combined in a synergetic way. Furthermore, the model advances understanding of paradoxical dynamics by identifying a knot in virtuous and vicious cycles.

OMT: Marginalizing Disorder: Paradoxical Tensions and the Failure of Local Collective Organizing

Author: **Mohamed Hassan Awad**, *California State U., Los Angeles*

Using an in-depth qualitative field study of homelessness in the city of Eugene, Oregon in the United States over a 10-year period, I investigate the dynamics leading to the failure of long-term local collective action in resolving social issues. Despite waves of mobilizing, organizing, coordinating, and sometimes organizational and policy outcomes, many local societal issues such as homelessness, crumbled urban transits, and urban police violence, persist. I synthesize insights from social movements research, organizations, and crisis management to unpack how different forms of collective organizing emerge, evolve, sediment, and decay over decades. I analyze these localized long-term dynamics using a tensions-based lens to identify the conflict affecting collective organizing on three levels, socio-historical local discourse, tensions around the social issue, and tensions from collective organizing. These nested multi-level tensions shape and are shaped through the contentions between local communities and how power shifts between settled and disrupted times. I reveal these dynamics and the mechanisms sustaining them to induce a process for the long-term attenuation of local collective organizing.

OMT: Imagining the Future Possibilities While Managing the ‘Performative’: Exploring the Nested Paradoxes

Author: **Shaista Ehsan Khilji**, *George Washington U.*

Paradoxes form the essence of the diversity practice. However, most research has overlooked their significance and positioned inter-related diversity concepts in isolation or opposition. The diversity paradoxes become particularly salient when we focus on diversity practitioners and their efforts to address divergent demands. This study employs the paradox perspective to understand and explain these tensions and overcome a dualistic understanding of diversity. Interviews with 81 diversity practitioners, conducted over two years- amidst the global pandemic and before and after the racial awakening of summer 2020, shed light on diversity practice within a charged diversity context. The findings indicate three nested paradoxes in diversity work, including paradoxes of intent, structure, and performance. These paradoxes were interwoven and impacted the participants daily. At the most fundamental level, the paradoxes represented the tensions practitioners experienced between agency-structure and self-other. The study describes how participants navigated and resolved various paradoxes and fueled the virtuous circle of resilience. A paradox perspective provides a critical lens to examine diversity management within organizations and rejuvenates the diversity literature.

Organizational aesthetics is a way of understanding organizational life based on sensory reactions to its material components, such as objects and settings (Baldessarelli, Stigliani, & Elsbach, 2022; Strati, 1992). Following the recent material and spatial turn in organization studies (Boxenbaum et al., 2018; Jones et al., 2017; van Marrewijk & Yanow, 2010), scholars have begun to acknowledge and document the role of aesthetics in organizations and institutions. However, the topic remains relatively unexplored, and substantial opportunities exist in management research for further analysis and theorization. This symposium brings together scholars who empirically study aesthetics in relation to key organizational topics (i.e., coordination, creative collaboration, institutionalization, stigmatization) to provide novel insights into how aesthetics contributes to organizational and institutional processes. In particular, the symposium extends management scholarship by emphasizing how aesthetics influences the construction and disruption of meanings across a variety of research settings. The four empirical papers highlight how material and visual artifacts and the subsequent experiences emerging from their use and manipulation support organizational and institutional work by forming or challenging collective understandings. In doing so, the studies point to novel research directions concerning (1) the role of interactions with artifacts that trigger sensory reactions leading to collective achievements, and (2) the use and manipulation of artifacts to strengthen cognitive and symbolic processes that challenge dominant meanings.

Institutional Theory: Social-Symbolic Work Perspectives

Session Moderator: **Mia Raynard**, *WU Vienna*

OMT: In or Out? The Role of Boundary Work in Transgressive Institutional Reform

Author: **Mia Raynard**, *WU Vienna*
Author: **Thomas B. Lawrence**, *Oxford U., Saïd Business School*
Author: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*
Author: **Giuseppe Delmestri**, *WU Vienna U. of Economics and Business*

As political, economic, and natural environments change, institutions need to be adapted to maintain their relevance and legitimacy. Such adaptations can, however, be especially difficult when they involve the incorporation of ideas or practices previously conceived of as inconsistent with the moral standards and value commitments of the institution—a situation we refer to as “transgressive institutional reform”. Drawing on an inductive longitudinal analysis of political, legal, and historical documents, we examine the work of the Chinese government to reintroduce the private sector into the Chinese economy after decades of strident and violent suppression. We find that this protracted process depended significantly on boundary work that helped make highly controversial changes less threatening. We develop a model that shows that boundary work in transgressive institutional reform unfolds through nested cycles of concretization and abstraction, where an institutional boundary is made and remade more specific and explicit and then more abstract and implicit. These cycles of boundary work transform what appears from a distance to be a solid boundary into a multi-dimensional arrangement of distinctions that are “yoked” together to sort ideas, practices, and people “into” and “out of” institutions. By exploring the role of boundary work in effecting transgressive institutional reform, we aim to extend understanding of how actors work to negotiate and construct the meanings of an institution by virtue of distinctions between what is “in” and what is “out”.

OMT: No Guidebook or Map: the Social-Symbolic Work of Expertise in Action in Post-Blast Beirut

Author: **W E Douglas Creed**, *U. of Rhode Island*
Author: **Lina Daouk-Oyry**, *American U. of Beirut*
Author: **Alain Daou**, *American U. of Beirut*
Author: **Richard DeJordy**, *California State U., Fresno*
Author: **Carmen Geha**, *American U. of Beirut*
Author: **Charlotte M. Karam**, *U. of Ottawa*
Author: **Shawn Scott**, *Bryant U.*

Following the August 2020 blast in Beirut, a national grassroots initiative, Khaddit Beirut, came together. KB’s efforts range from co-creating “community-led, evidence-based, and locally-driven” schools and community healthcare centers and rebuilding small and mediate enterprises damaged by the blast, to creating new models for civic activism and engagement and framing and enacting “expertise in action” as a process. All of which had to be done in situated ways commensurate with the constraints imposed by local history and the needs created by the shared experience of catastrophe. Building on Lawrence and Phillips (2019), we explore which forms of social-symbolic work (SSW) the KB undertook, and combined, as it built an ecosystem of cooperation, civic engagement, and organizational and institutional innovation in a geographically and historically bounded context characterized by endemic toxic institutional conditions, political corruption, societal division, and catastrophic economic collapse. We find that amidst crisis, SSW unfolds in each of three main domains, self, organization, and institutional work, but the capacity to perform one kind of work may be contingent on the ongoing engagement in another kind of work. Organization work enabled the self work of claiming expertise and working through trauma, which in turn enabled the organization work of putting that expertise in action. Without both, the institutional work social change appears out of the question. We make contributions regarding SSW, participatory action research, and the use of feminist geography and epistemology in enhancing organizational perspectives on the situatedness of SSW.

OMT: Guardians of the Discipline: Institutional Maintenance through Tenure Review

Author: **Eina I. Mäkinen**, *Tampere U.*
Author: **Daniel A. McFarland**, *Stanford U.*

While interdisciplinary research continues to be promoted in universities, early-career researchers struggle to receive recognition for their interdisciplinary work and advance in their academic careers. Drawing on institutional work and the study of professions, we examine how professional norms around career promotion are discursively constructed and used in institutional maintenance. We conducted 59 interviews with department chairs, directors of interdisciplinary research centers, and disciplinary and interdisciplinary untenured scholars in an American university. We identify two modes of discursive institutional work—expansion and expulsion discourse—which suggest that while interdisciplinarity activated efforts to transform tenure review, it also triggered institutional work to maintain disciplinary order. The untenured interdisciplinary scholars used expansion discourse to argue that the tenure review norms should be revised. However, the untenured scholars simultaneously drew on expulsion discourse to reflect on the illegitimacy of interdisciplinary research. The senior scholars relied mainly on expulsion discourse arguing that interdisciplinary research among tenure track faculty should be renounced. We contribute to extant literature by demonstrating the discursive and performative aspects of institutional work by professionals as well as by shedding light on the discursive production of justifications for institutional practices that actors seek to legitimize and maintain. More broadly, our findings problematize the career risks that untenured interdisciplinary scholars take to accomplish the interdisciplinary aims of their universities.

Author: **Giuseppe Criaco**, *Erasmus U. Rotterdam*

Author: **Vern Glaser**, *U. of Alberta*

Author: **Joel Gehman**, *George Washington U.*

This study examines institutional change initiated by marginalized actors within a majoritarian institutional field. Unlike prior studies in the literature that have investigated how certain actors accomplish, reinforce or challenge majority status in a field, we focus on a set of marginalized actors who change the institutional field from within, without challenging or overtaking the majority. Building on assemblage theory and drawing on participant observation, interviews, and archival data related to the two largest natural wine associations in Italy, we inductively build a process model of how marginalized actors become minoritarian.

Occupational Dynamics In and Around Organizations

Session Moderator: **Siyin Chen**, *U. of Toronto, Rotman School of Management*

OMT: **Art for Whose Sake? Audience Relational Orientation Work in the “Porcelain Capital” of China**   

Author: **Siyin Chen**, *U. of Toronto, Rotman School of Management*

This study examines whether and how occupational members adjust their relational orientation toward their audience in the face of a disruptive event. Drawing on interviews, observation, and photographs from an ethnographic field study, I investigate how 67 porcelain artists in Jing De Zhen responded to disintermediation in the art market, which resulted in artists interacting directly with their customers. I found that while some artists held onto or even strengthened their original relational orientation towards their customers, other artists constructed (to a greater or lesser extent) a new relational orientation. Analyzing these divergent responses to the market shift reveals that artists who constructed a new audience relational orientation experienced a misalignment between their occupational prototypes (beliefs around what constituted an exemplary occupational member) and their own personal considerations (e.g., aspirations, financial considerations, etc.), which led them to question their previous way of working and gave rise to innovations in their work. In contrast, artists who experienced alignment between their occupational prototypes and personal considerations moralized their existing orientation toward their audience and reinforced or even amplified previous ways of working. My study highlights the importance of audience relational orientation work for how occupational members see themselves and accomplish their work.

OMT: **Complying Resistant and Resistant Complying Frontline Professionals: An Identity Work Perspective**   

Author: **Farshid Shams**, *York U.*

Author: **Kathy Sanderson**, *Lakehead U.*

Professionals are caught between two competing identity demands of being autonomous actors or turning into conformist organizational members. Professionalism has been mainly viewed as a discursive resource on which professionals draw in their identity talks to either fully or partially resist managerialism that intends to discipline their identities. Based on a study conducted in a public social welfare organization, we found that the frontline professionals' identities are disciplined in their talks about two routine practices of daily paperwork and regular supervisory meetings (both introduced by the organization) when performing in congruence with the rules. However, when discussing the instances of intentional deviation from the organizational policies, their seemingly resistant identities are disciplined by their aspiration of presenting themselves as caregivers which is rooted in the most dominant professional discourse in this field. We, therefore, argue that control is not the sole property of organizations, but pervasive professional discourses may also introduce disciplinary effects that account for the responsible autonomy demonstrated by professionals. By pairing discursive practices with different types of action, our analysis also suggests that both discursive conformity and resistance cut across the boundaries between acting in alignment with and against the organizational policies.

OMT: **Networks, Translation, and Collective Sensemaking as the Sources of Institutional Compromise**

Author: **Sang-Joon Kim**, *Ewha Womans U.*

Author: **Young-Kyu Kim**, *Korea U.*

Author: **Elena Margineanu**, *Free International U. of Moldova*

Author: **Sangchan Park**, *KAIST College of Business*

We examine the role of translation in institutional maintenance. Although recent work on institutional maintenance often highlights a simplistic role of individual incumbents in protecting old institutional logics, less is known about whether and how the incumbents proactively embrace new institutional logics to enhance institutional stability. Through an in-depth, qualitative study of legal profession in Moldova after the collapse of Soviet Union, we explore how social actors taking different network positions engage in diverging translation of new institutional logics associated with Western capitalism. We find that while old institutional logics associated with communism gave way to new logics, operative institutions for the legal profession have a mixture of components from old and new logics. Our analysis also suggests that such compromised institutional arrangements are driven not only by incumbents, who more proactively engage in translation of new logics than passively resist institutional change, but also by challengers and intermediary agents who take diverse network positions. Our study therefore indicates a more nuanced image of institutional maintenance than has been suggested in prior work and highlights the value of studying how translation is collectively constructed by complex interactions between multiple actors. We conclude by discussing theoretical contributions to a broader research domain of institutional change and stability in emerging fields.

OMT: **Deviance as a Means to Build a Legitimate Career: Evidence from the EDM Industry** 

Author: **Amandine Marie Ody-Brasier**, *McGill U.*
Author: **Xu Li**, *Copenhagen Business School*

Winner of the OMT Division Best International Paper Award

Carolyn Dexter Award Nominee

In many occupational communities, informal norm enforcement emerges as a substitute for looser intellectual property (IP) laws. We propose that when a behavior is illegal but not illegitimate within a community, the latter may informally reward lawbreakers as a means of re-affirming its jurisdiction in defining what is appropriate (or not). Specifically, when the behavior is construed as a sincere commitment to core occupation-specific values, lawbreakers may be rewarded with greater opportunities to advance their career than law-abiding peers. To investigate this proposition, we focus on community responses to illegal remixing in Electronic and Dance Music (EDM) – a community where there is no norm about this practice. In combination with fine-grained interview data, we use a unique dataset on the employment outcomes of nearly 40,000 Disc Jockey (DJs) over 10 years. Our analyses provide strong support for the view that the community disputes the unwelcome intrusion of legal authorities in their work by giving lawbreakers more opportunities to “play gigs” than DJs who release original music or even legal remixes. We discuss some important implications of our findings for the scholarship on norm enforcement and managerial leniencies.

OMT: **Nascent Occupations and the Challenge of Access in Cross-Occupational Collaborations**  

Author: **Farah Kodeih**, *IESEG School of Management*
Author: **Mia Raynard**, *WU Vienna*
Author: **Diane-Laure Arjalies**, *Ivey Business School*

This study examines the role of access in cross-occupational collaborations involving members of a nascent occupation. We find that when such collaborations are voluntary, members of nascent occupations may struggle to gain meaningful access and demonstrate their potential value to collaboration partners—as they typically lack institutional signals of credentialing and formalized training. Drawing on interviews and data from a three-year ethnographic study of first-generation responsible investment analysts in France, we document the divergent interactions and experiences they had working with two groups of asset management professionals. We find that occupational features underpin dispositions towards voluntary collaborations, influencing the forms of access granted and conditioning the possibilities for collaborative engagement. By opening up and closing down opportunities for engagement, these occupational dispositions not only influence interactional dynamics and approaches to collaboration, but the nature and effectiveness of collaborative outcomes. We conclude by discussing the study’s implications for future research on cross-occupational collaborations involving members of nascent occupations.

Organizational Consequences of Status Loss

Session Moderator: **Sungchul Noh**, *Saitama U.*

 **OMT: Organizational Stigma and the Practice and Meaning of Work: When Work Becomes Dirty** 

Author: **Sungchul Noh**, *Saitama U.*

Author: **Kyoung-Hee Yu**, *U. of Technology, Sydney*

Beyond the secondary stigmatization thesis—that organizational members in stigmatized organizations can themselves experience stigmatization—we know little about how organizational stigma affects the internal lives of organizations. Where organizations are stigmatized due to events, blameworthiness has been offered as an explanation for why stigma transfers initially to the organizational leadership—for example, top executives. We examine the existing literature’s assumptions about the transfer of stigma in an event-stigmatized organization by inductively exploring how event stigma impacts group relations and work. Our research context is a public broadcasting company that became stigmatized when it lost its journalistic independence. We find that what has been depicted as an intrinsic “transfer” of stigma to responsible units in event-stigmatized organizations is in fact highly contentious, with groups vying against one another to exert control over the practice of journalism in the hopes of implementing their own vision. The internal struggle fundamentally transformed the practice and meaning of work in the journalism units of this organization, turning the work into something “dirty” for some workers. Our findings contribute to the understanding of organizational stigma as a contested phenomenon in contrast to its earlier conceptualization as a relatively stable category, and to the understanding of the conditions under which the practice and meaning of work can be transformed in event-stigmatized organizations.

OMT: The Consequences of Status Loss on the Evaluation of Market Actors

Author: **Ben LI**, *EMLYON Business School*

Author: **Bernard Forgues**, *Emlyon*

Author: **Julien Jourdan**, *HEC Paris*

How do status shocks affect social evaluations? Prior work shows that a positive status shock, such as a major award, may enlarge the audience of evaluators and lead to lower average evaluations. We have however limited understanding of the effect a sudden status downgrade may have on evaluations. To make progress on this question, we develop theories linking status shocks and social evaluations. We argue that status shocks shift evaluators’ expectations and change the comparison set used by evaluators. We test our arguments in the setting of Michelin Star restaurants in France. We find that restaurants receive on average more positive evaluations on TripAdvisor after being downgraded by the Michelin guide. Their evaluating audience decreases in size and changes in composition. Our results support the view that negative shocks not only alter the audience but also lower evaluators’ expectations and change the comparison set, resulting in an unexpected increase in average evaluations.

Paper is Available to Meeting Registrants Only.

 **OMT: Falling Fortunes: The Contingent Effect of Slipping in Organizational Rankings** 

Author: **Wyatt Lee**, *U. of Toronto*

As rankings of organizations have proliferated in recent decades, much research has focused on organizational efforts to maintain a high position in such rankings. A common theme in this research is that a fall in rank can lead to unfavorable evaluations by external audiences and negative organizational outcomes. Nonetheless, accumulating evidence suggests that rankings sometimes have little effect on audience assessments and organizational outcomes, which calls into question the power of rankings. To reconcile these contradictory views, this study theorizes the conditions under which falls in rank influence organizational outcomes. I hypothesize that a fall in rank affects organizational outcomes to the extent that the fall has information value, which depends on three factors: the availability of information from alternative sources, the sophistication of the audience, and whether the slip in rank led to a fall from a prominent ranking category (i.e., tier). Exploiting a change in the Fortune 500’s ranking methodology as a natural experiment, I examined how falls in rank affected firms’ stock prices and found evidence for these predictions. This paper develops an informational theory of declines in rank and illuminates their contingent effects on organizational outcomes, with implications for research on rankings, categories, and impression management.

New Concepts in Network Theory

Session Moderator: **Olli-Pekka Kauppila**, *NEOMA Business School*

OMT: **A Micro-macro, Brokerage-based Theory of Managing Disruptive Organizational Change**  

Author: **Olli-Pekka Kauppila**, *NEOMA Business School*
Author: **David Obstfeld**, *California State U., Fullerton*

Microfoundational processes are central to organizational capacity to respond to disruptive change. Despite recent progress, current theories provide a rather incomplete understanding of how macro-organizational changes might emanate from individuals' microfoundational processes. We propose a new theory that integrates behavioral elements with structural approaches to accommodate a combination of within-individual motivational underpinnings and between-individual relational processes in building organizational responses to the disruption. Drawing on the social network perspective and influential new research on brokerage process, we trace implications of competitive (e.g., tertius gaudens) or collaborative (e.g., tertius iungens) microsocial action trajectories that shape how organizational adaptation emerges from the micro-level to shape more macro organizing and adaptive outcomes. We conclude with a discussion of how a positive new normal in organizations might build on employee-driven processes that enhance communal social capital, collective psychological capital, and strategic agility.

Paper is Available to Meeting Registrants Only.

OMT: **Towards a Theory of Organizational Bricolage** 

Author: **Anass MAWADIA**, *IAE-CEREGE, U. de Poitiers*
Author: **Ariel EGGRICKX**, *Montpellier Research in Management*

In organizations facing ever more frequent crises (financial, ecological, Covid-19), forced to reduce their ecological footprint and costs, bricolage (Lévi-Strauss, 1966) is a possible response to deal with crises, hazards and resource scarcity. The literature review on bricolage shows a triple gap: a lack of studies exploring and developing the bricolage concept based on Lévi-Strauss's original writings, a collective or multi-level bricolage that is little theorized, and conditions of success or failure of bricolage little studied. This article aims to enrich the knowledge on these three points through a review of the literature. After exploring the concept of bricolage and its similarities with related notions (improvisation, innovation, creativity, etc.), we identify the initial conditions and the investments of form that favor collective or multi-level (individual, collective, network, strategic) bricolage dynamics, which have a positive impact on the organization while limiting the risks. In summary, we propose a simplified model of the dynamics of multi-level bricolage. Besides the managerial and didactic implications, this paper opens several research avenues.

OMT: **Spanning Up and Across: Examining the Role of Status in the Exploitation of Structural Holes** 

Author: **Andrew Joseph Foley**, *Cornell SC Johnson College of Business*
Author: **Gautam Ahuja**, *Cornell U.*

Perhaps ironically, the role of social structure in studies of structural holes has tended to be ignored: scholars have amply studied the effects of structural holes at various units of analysis - as well as their contingencies - but they have seldom studied the impact of social hierarchy on these dynamics. Even literature that has studied the role of hierarchy in the exploitation of structural holes has tended to focus exclusively on the role of power; but, hierarchies built on status are an important aspect of organizational life, and their impact has been scantily examined. In this paper, we argue that at least part of this oversight stems from the literature's primary focus on a single type of brokerage - the tertius gaudens brokerage as initially outlined by Ron Burt. We broaden theorizing on structural holes in at least two ways. First, by drawing greater attention to the role of another, and perhaps more common, form of broker - the tertius iungens. Second, we systematically integrate the literatures on structural holes and status, thereby taking a step towards greater consideration of social structure in theories of structural holes. In doing so, we resolve a number of contradictions regarding whether spanning structural holes is beneficial, and why they may remain "open" despite the value presented to those who could close them.

Misconduct: Mechanisms in and Around Organizations

Session Moderator: **Xiangpei Chen**, *Montana State U.*

OMT: **Windfall Federal Grants and Local Government Corruption**

Author: **Xiangpei Chen**, *Montana State U.*
Author: **Angela Gore**, *George Washington U.*
Author: **Jennifer Spencer**, *George Washington U.*
Author: **James Wade**, *George Washington U.*

While federal grants comprise a significant and increasing revenue source for many local governments, regulators have expressed concerns about the effectiveness of the federal government's grant management systems. This study investigates and finds that windfall increases in federal grants lead to significantly more public corruption charges. We then explore whether audit monitoring and press transparency mechanisms help ameliorate that relationship. We find that municipalities' poor quality internal controls exacerbate the effect of windfalls on corruption, but such effect is attenuated when there are increases in the presence of state fraud auditors. As for press transparency, we find that a greater number of newspaper employees and reporters weaken the relationship. Overall, our study contributes the extant literature by exploring accounting-related aspects of local government political corruption.

OMT: **Impression Management in Corporate Communication to Camouflage Financial Misrepresentation**

Author: **Max Braun**, *Freie U. Berlin*
Author: **Claas Jess**, *Freie U. Berlin*

Finalist for the OMT Division Best International Paper Award

Acts of corporate misconduct affect the communication behaviors of firms and managers. Unconscious expressions of discomfort and self-distancing are well documented in the speech of fraudulent executives. Considering the increasing professionalization and relevance of corporate communication, we study the communication strategies that help to camouflage acts of financial misrepresentation. Based on impression management and psycholinguistic literature, we conduct interviews and hypothesize on four distinct strategies employed in the financial communication of firms. We test their use in a sample of German firms, half of them found to misrepresent their accounts. The results document manipulations through contents, language, and visualizations of shareholder letters. Misrepresenting firms omit financial topics, increase the complexity of their communication, and use pictures more frequently. Unexpectedly, we find shareholder letters of misrepresenting firms also to reveal strong psycholinguistic leakages of emotional discomfort and self-distancing that even permeate carefully crafted artifacts of corporate communication.

OMT: **Intergenerational Transmission of Organizational Misconduct: Evidence from the Chicago Police Dept**

Author: **Justin Frake**, *Ross School of Business, U. of Michigan*
Author: **Derek Harmon**, *U. of Michigan*

This paper investigates how organizational misconduct is perpetuated through intergenerational transmission. We theorize that early exposure to misconduct imprints newcomers with the belief that misconduct is normal, which is then carried by these individuals into managerial positions and passed down to future generations of subordinates. We test this using longitudinal administrative data from the Chicago Police Department from 1980–2017. We exploit the random assignment of applicants to training cohorts to demonstrate that applicants exposed to higher levels of misconduct during their initial training not only engage in more misconduct over their careers (first generation effect), but also increase the misconduct of their subordinates after they become managers years or decades later (second generation effect). Mechanism tests suggest that this intergenerational transmission occurs through both incentive structures (i.e., annual reviews) and social influence (i.e., racial homophily). Taken together, these findings reveal how managers carry the normalization of misconduct from an organization's past into its future, expanding our understanding of how misconduct in organizations is perpetuated and offering important policy implications for addressing the problem of police misconduct.

OMT: **Homogeneous Relations and State Misconduct: Foreign Financial Ties and Human rights Across Africa**

Author: **Christopher B. Yenkey**, *Darla Moore School of Business, U. of South Carolina*

This paper investigates how misconduct, in the form of state-level human rights violations, is related to the homogeneity of external relationships, in the form of global financial ties. State-caused deaths resulting from political violence, a clear violation of human rights, across Africa from 2003 through 2015 serve as the macro-level form of misconduct. Descriptive and econometric analyses demonstrate that homogeneous foreign financial ties have a direct predictive effect on the incidence and number of deaths from state-caused political violence. Foreign countries, however, vary in their reactions to this misconduct. I find that bilateral relations based in natural resource trade and colonial ties are durable to and even grow following such misconduct events. Identifying types of relationships durable to misconduct demonstrates a mediated pathway through which misconduct may result in the homogeneous relations that support rather than deter misconduct. In short, results from my abductive study support an endogenous theory of misconduct whereby tolerance of misconduct by perpetrators' contacts results in the perpetuation of the behavior.

 OMT: **Backstages and the Spread of Organizational Misconduct** 

Author: **Kun Yao**, *U. of Illinois at Urbana-Champaign*

Author: **Nate Xu**, *U. of Illinois at Urbana-Champaign*

We examine the spread of stock option backdating, an organizational misconduct about which public information was virtually absent until 2005. Drawing on Goffman's backstage theory, we emphasize local upper-class clubs as a backstage of interactions for the diffusion of backdating. We find that backdating is likely to spread via executive interactions at local upper-class golf clubs but not board interlocks or other clubs. We further examine boundary conditions of local golf clubs as a backstage: the impact of local golf club interactions on the diffusion of backdating is enhanced by the visibility of firms at the frontstage, the unavailability of alternative backstages in the community, and small communities. Together these findings extend the backstage theory by suggesting that invisible organizational misconduct could follow some unique diffusion patterns via the backstage of interactions.

So Much Work to Do: New Approaches to Studying Work Tasks

New Approaches to Studying Work Tasks

Panelist: **Nathan Wilmers**, *Massachusetts Institute of Technology*

Panelist: **Callen Anthony**, *New York U.*

Panelist: **Jillian Chown**, *Northwestern Kellogg School of Management*

Panelist: **Theodore DeWitt**, *U. of Massachusetts Boston*

Discussant: **Lisa Ellen Cohen**, *McGill U.*

Winner of the OMT Division Best Symposium Proposal Award

In this symposium, we ask how to bring the study of work tasks more centrally to organizational research. We invite junior scholars to present novel approaches to studying and theorizing the role of work tasks in organizations. Presenters will cover both the nuts-and-bolts of identifying and working with task data, and the broader implications for our thinking, research questions and theorizing that come from focusing on tasks.

Presenter: **Daniel Z. Levin**, *Rutgers U.*

Social network research is increasingly recognizing that relationships and networks are not static but rather evolve and change over time. Within this area of network dynamics, though, change can come suddenly. Such shocks may be exogenous, such as a pandemic, or may be internally generated, such as a conflict that ends a relationship. The purpose of this symposium is to highlight new research studies and perspectives that help us understand the causes, processes, and consequences of such disruptions. We aim to go beyond just noting that network change happens, and even go beyond noting the ways in which network ties and networks are dynamic. Instead, we aim to examine relationship and network change specifically when it is sudden or dramatic, i.e., a shock.

Sensemaking in Corporate Social Responsibility and Sustainability

Session Moderator: **Anne Françoise Barraquier**, *SKEMA Business School*

SIM: The Micro Foundations of Sustainability: A Social Process of Sensemaking and Knowledge Sharing  

Author: **Anne Françoise Barraquier**, *SKEMA Business School*

Micro-foundations of sustainability integration have not so far, been much explored. Building on sensemaking as a social process, I expand theory on how managers integrate sustainability in organizational practices. The findings reveal that sustainability-related knowledge is perceived as controversial, that managers unravel multiple dualities during sensemaking, and that sustainability knowledge becomes salient in work relations. I propose a model of sustainable organizing showing how these three dimensions interact. The discussion section elaborates on the implications of a perspective of sustainability rooted in social processes of sensemaking.

SIM: Make Petrobras Great Again: Analyzing Identification Work After a Corruption Scandal 

Author: **Renato Chaves**, *HEC Montreal*

Author: **Emmanuel Raufflet**, *HEC Montreal*

This paper uses a work lens to examine a multinational company's purposeful actions to communicate the expansion of an ethics and compliance program after a massive corruption scandal. It draws on the notion of communication as symbolic management, which offers a window into program implementation, to analyze what we call identification work—the top-down, sensegiving process through which organizational leaders construct a collective sense of self and present it to organizational members and external stakeholders to restore their organization's legitimacy. Identification work makes extensive use of various discursive resources to reduce uncertainty as well as to evoke social, relational, and personal identification. This paper also mobilizes the concept of ventriloquism to explain the constitutive power of communication and how the company gives voice to key human and non-human actors such as regulators, civil society organizations, the media, and its ethics and compliance program. We have found that the company's ethics and compliance program is at the center of its newly-constructed sense of self, which is presented to both organizational members and external stakeholders as human-like, assuming a heroic quality strongly supported by symbols.

SIM: Sensemaking and Identity Recovery After Organizational Misconduct: The Case of Petrobras' Leaders

Author: **Suzanny Barreto Da Silva**, *U. Federal Fluminense*

Author: **Flavia Cavazotte**, *Pontificia U. Catolica de Rio de Janeiro*

Author: **Christopher Stehr**, *IAG-PUC Rio de Janeiro*

We analyze the case of the Brazilian oil and gas state-owned enterprise Petrobras after the corruption scandal that became public in 2014, with several repercussions over the following years. Based on documental data and interviews conducted in 2020, we investigate how the company's leaders faced these events and the sensemaking processes triggered in response to the crisis. We specifically analyze the executive leaders' sensegiving strategies, unveiling narratives and framing used to mitigate the event's consequences and recover the organizational identity damaged by the ethical crisis. We also examine the mid-level leaders' sensemaking process, describing the (re)construction of meaning and recovery of the organizational identity from the employees' point of view. We observe that the latter process seems to have been facilitated by the top management sensegiving strategy, which effectively supported identity recovery, as framing effectively tapped on mid-level leaders' self-concept needs. The analysis unfolds in distinctive theoretical contributions that help understand the interconnections between identity and sensemaking in the context of crises that undermine corporate reputation.

Panelist: **Dean Shepherd**, *mendoza*
Panelist: **Vangelis Souitaris**, *Bayes business school and U. of St. Gallen*

Emotions play a crucial role in the decision making and behavior of entrepreneurs, managers, and executives alike (Cardon et al., 2012; Huy, 2012; Kahneman, 2003). Despite scholarly efforts, there is still enormous and largely untapped potential in studying emotions in entrepreneurship and strategic management. An important reason preventing emotion-related research opportunities from being further developed is that accurately measuring emotions constitutes a major methodological challenge. To date, the majority of research has captured emotions using self-reported measures, which typically consist of asking individuals to rate their emotional experience. Although self-reported measures of emotions are important, their limitations are well documented. In this context, biometric measures of emotions (e.g., facial expression, electrodermal responses, heart rate variability, etc.) represent a new, promising approach to measuring and structuring emotional data. Although widely employed in other disciplines, such as psychology or medicine, biometric methods are still rarely used in entrepreneurship and strategy research. Our symposium intends to spur research in this vein. The symposium provides a platform for a moderated and interactive discussion on the opportunities and challenges in using biometric methods. Specifically, the panelists who are experts in this field will discuss (1) how emotion constructs that have been studied in entrepreneurship and strategy can be measured more precisely with biometric methods, (2) how biometric methods allow us to capture new or under-researched emotion constructs which present promising future research opportunities, (3) how biometric measures of emotions inform emotion theories, (4) what are the challenges with implementing biometric methods (research design, ethical aspects), and (5) what to consider when submitting papers with biometric methods from an editor's perspective.

Organizational Adaptation to Climate Change (In-Person)

Session Moderator: **Jonatan Pinkse**, *U. of Manchester*

ONE: The Role of Emotions and Cognitive Biases in Business Adaptation to Climate Change

Author: **Mercedes Blecha**, *Alliance Manchester Business School, U. of Manchester*

Author: **Jonatan Pinkse**, *U. of Manchester*

Author: **Eleni Christodoulou**, *Alliance Manchester Business School, U. of Manchester*

ONE Division Best Paper Award

There is increased recognition that physical climate impacts will become inevitable, so there is a need for climate change adaptation. In this paper, we argue that adaptation is a moral issue for many firms because a failure to do so now might not affect their own operations but will have detrimental impacts for others. We develop the argument that emotions can change the influence of cognitive biases in the decision-making process on firms' climate adaptation. Emotions modify how decision makers act on the issue's moral intensity and ultimately the decision to adapt to climate events. We develop a conceptual framework that examines how decision makers' emotions and cognitive biases interact and influence their decision making on climate adaptation. We draw on research on climate adaptation, (social) psychology, and managerial cognition and focus on three forms biases: availability heuristic, framing, and anchoring. We explain how each bias influences decision making on adaptation and theorize how emotions of different valence and arousal influence this process. We shed light on the underlying mechanisms that explain how emotions influence the role of cognitive biases in this decision-making process. Our analysis provides a new perspective on the ways in which decision makers come to decisions on how to act on the moral issue of climate change adaptation by considering both cognitive and emotional cognition.

ONE: The Paralysis of Perceived Powerlessness – How Emotional Tensions Influence Corporate Climate Action

Author: **Carina Keller**, *EBS U. für Wirtschaft und Recht*

Author: **Myriam Bechtoldt**, *EBS U. of Business and Law*

Author: **Karin Kreutzer**, *EBS U. für Wirtschaft und Recht*

In responding to the climate crisis, organizations navigate in an increasingly volatile emotional milieu in which feelings of fear, guilt and anger may influence corporate sustainability transformations and climate action. We conduct an eight-month ethnographic case study of an Energy Company (EnCo) in Germany to understand how intra-individual emotional tensions influence the externally visible corporate sustainability transformation process over time. Through analysis of observational, interview, and documentary data we explore emotional tensions that emerge from paradox corporate role expectations and emotional display rules which compete against corporate actors' true emotions and beliefs about climate change. We develop a dynamic leader-follower-interaction model that shows how the leaders' emotional display affects the perceived sustainability commitment and sustainability action of followers over time. We argue that emotional dissonance fosters the delegation of responsibility to act against climate change to authorities with more perceived power. The paper contributes to the literature of paradox theory and organizational responses to climate change by drawing attention to the relevance of emotions in navigating the corporate sustainability paradox over time.

ONE: California Wineries and Climate Change: Extreme Events, Resource-Supply Adaptation, and Wine Quality

Author: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*

Author: **Jorge Rivera**, *George Washington U.*

Current actions across countries to mitigate the impacts of climate change to the 2°C outlined in international climate agreements are currently insufficient, indicating an increasingly important need to understand both the impacts of climate change as well as how to adapt to the inevitable changes. This paper examines how extreme climate events impact firm product performance and resource-supply adaptation strategies. Using a dataset of 50,156 wine-winery-year observations for 535 wineries covering the years 1981-2019 in the California wine industry, we examine how extreme heat, cold, and precipitation events impact wine quality and winery adaptation strategies involving grape varieties and vineyard sources. We use a panel regression with firm-, region-, and year-fixed effects to test for the relationship between extreme climate events, winery resource-supply adaptation strategies, and wine quality. First, we find that there is an adaptation gap which is a mismatch between adaptation responses by wineries and the adaptation needs of wineries. Second, we find that extreme climate events can not only create adverse conditions for firms, but can also create advantageous conditions where the firms can prosper. Finally, we find that the impact of extreme climate events on performance and adaptation strategies differ by both the type of extreme climate event and the dimension of the extreme climate event.

Carolyn Dexter Award Nominee

Firms join institutions voluntarily to gain legitimacy and commercial benefits. In return, they submit to membership rules and practice standards. When external conditions such as climate change, such voluntary institutional membership can pose a dilemma: climate-sensitive firms may enjoy important benefits from their membership while having little room to implement the requisite adaptation measures. To explore this undertheorized tension, we build a comparative case study of strategic adaptation to climate change. We focus on the wine industry in France, where firms voluntarily join collectives with strictly defined membership rules and practices, in comparison to their peers in California, who do not face these strict membership conditions. We find that when institutions highly constrain the repertoire of corporate adaptation strategies, wineries advocate stretching institutional boundaries to reestablish a fit between their practices and the changing climate. Institutions then pool resources and develop innovative long-term solutions for their members which both maintain their identity and selectively accommodate corporate adaptations. The insight that voluntary institutional membership orients firms towards identity-preserving, long-term, innovative practices enriches the literature on corporate climate change adaptation, institutional maintenance, and intertemporal orientation.

RM: To Partial or Not? Re-Examining the Unmeasured Latent Method Construct (ULMC) 

Author: **Christopher Castille**, *Nicholls State U.*

Author: **Larry J. Williams**, *Texas Tech U.*

There is continuing interest in using statistical methods to address method variance in top management and applied psychology journals. One approach, the unmeasured latent method construct (ULMC), is versatile. One need not understand the role that method variance plays in order to apply a conservative test for method bias. However, scholars appear divided regarding its use. While many scholars criticize the ULMC, others rely on it as a defense against method bias. Sampling the literature over the past 10 years, we find that scholars who have used the ULMC often note that it detects common method variance, what is detected is negligible and, therefore, method variance is not likely to play a biasing role. This suggests some confusion surrounding both (i) whether the ULMC works and (ii) how well it works, particular under circumstances it is not designed for (i.e., there are multiple sources of method variance). To resolve this confusion, we embarked on two simulation studies. We examine the efficacy of the ULMC under both ideal circumstances (a single source of common method variance contaminates the data) and less ideal circumstances (two method factors contaminate the data). Our findings suggest that scholars often lack the power to reliably detect method variance when it is present. Also, although the ULMC works under conditions of common method variance, its performance is poor when distinct sources of method variance are present (in which case it can be better to ignore method variance rather than to partial).

RM: Probing Non-Linear Three-Way Interactions 

Author: **Jeremy F. Dawson**, *U. of Sheffield*

Testing of three-way interactions is increasingly common in the organizational literature. When linear three-way interactions are found, they are often probed and interpreted using the Dawson and Richter (2006) slope difference test. However, this test was developed only for linear regression. In this paper I develop an equivalent version of the test based on testing linear combinations of coefficients, and demonstrate how this can be used for other types of models, including multilevel and generalized linear models. I then extend the logic of the test to consider methods for probing three-way quadratic interactions, explaining why a formal slope difference test is less relevant here, and provide two different tests that can lead to more formal probing of such interactions. I provide syntax for conducting all of these tests in SPSS and R, and give examples of applying these methods to two data sets. Recommendations for researchers are given.

Paper is Available to Meeting Registrants Only.

RM: A Re-Analysis of Podsakoff et al. Using the Reliability-Adjusted Percentage Within-Variance. 

Author: **Rafael Wilms**, *Vrije U. Amsterdam, School of Business and Economics*

1) Do psychological constructs vary more between individuals or within them? 2) What study design characteristics predict within-variance? A recent analysis of Podsakoff et al. (2019) provided answers to these questions and examined the percentage within-variance (PWV) for intraindividual studies. Unfortunately, the PWV overestimates the proportion of within-variance under the condition of measurement error (i.e., non-perfect reliability; Wilms et al., 2020). The original results may be biased and the answers for question 1) and 2) may change after correcting for measurement error. Therefore, I re-analyze the original data with an estimator robust to measurement error. The average reliability-adjusted PWV was 0.45 across all construct categories and thus substantially lower than the original estimate of 0.52 (i.e., 15.56% lower). My results show that only time referent appears to play significant role in predicting the PWV. Implications for researchers and reviewers, and limitations are discussed. The reliability-based adjustment of the analysis of Podsakoff et al. (2019) contributes to the previous research by helping reviewers and researchers alike to interpret, assess and compare a study's results accounting for bias induced by measurement error.

RM: A Stepwise Guide on Mitigating Sample-Induced Endogeneity Using the Heckman Two-Stage Estimation

Author: **Jonathan Hoke**, *Westfälische Wilhelms-U. Münster*

Author: **David Bendig**, *Westfälische Wilhelms-U. Münster*

Sage Publications/RM Division Best Student Paper Award Nominee

Selection bias as a source of endogeneity is crucial to consider when searching for causal inferences in empirical research. The increasing awareness from scientific journals is accompanied by numerous statistical techniques to identify and mitigate endogeneity. One powerful method in this context is the Heckman two-stage estimation. Extant research shows that the Heckman two-stage estimation can mitigate selection bias concerns and significantly improve the validity of an empirical study if correctly applied. However, scholars' implementation of this advanced technique often diverges from the suggestions of the methodological literature. This paper offers a practical and comprehensive guide elaborating the fundamentals of the Heckman two-stage estimation in innovation and entrepreneurship research. This guide aims to enable applying the technique by Heckman (1979) to every researcher – despite the level of statistical expertise. We contribute to this topic by (1) providing a guide with a step-by-step description of the Heckman two-stage estimation, (2) suggesting practical tips on the application process using the statistical software package Stata, and (3) addressing common econometric pitfalls and providing measures and practical examples to mitigate them.

What to Do with Rejections?

What to Do with Rejections?

Panelist: **Gary Dushnitsky**, *London Business School*
Panelist: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*
Panelist: **Peter G. Klein**, *Baylor U.*
Organizer: **Yong Li**, *U. of Nevada Las Vegas*
Panelist: **Hart E. Posen**, *U. of Wisconsin, Madison*

Rejection is part of the academic life, yet how to handle rejections is seldom discussed, and how to turn a rejected paper into a better and even publishable paper is largely ignored. At the same time, some of the influential papers that have been published have gone through rejections. We thus raise the question: How do we as researchers and journal editors/reviewers handle rejections? The proposed panel symposium provides a platform to engage with a group of scholars with extensive publication, review and editorial experiences. First, while the panelists will discuss the common reasons for rejection, the symposium will center around “how to” handle rejections, including how to handle rejections rationally and emotionally, and how to turn a rejected research project into a better, and even publishable, paper. Second, the panelists will share their personal experience as both authors and editors to illustrate how they have handled rejections.

Creating a Better Cross-Cultural World Together:
GLOBE 2020 Exploratory Incubator
GLOBE 2020 Exploratory Incubator

Organizer: **Richard Cotton**, *U. of Victoria*

Organizer: **Mansour Javidan**, *Thunderbird School of Global Management at ASU*

This caucus will share preliminary findings of GLOBE 2020 and will provide a forum to discuss high potential future collaborations. The primary audience for this caucus is the over 400 qualified researchers (known as Country Co-Investigators or CCIs) worldwide who constitute the most inclusive GLOBE study to date who are part of what has become one of the largest, most diverse and wide-ranging management studies ever conducted. These CCIs used an on-line instrument translated into 138 versions of 60 languages to collect data in their countries. Data collection for GLOBE 2020 has now completed and we have a database of over 60,000 high quality responses from managers and professionals on cultural practices, antecedents of trust, and ideal leadership in 142 countries/societies. For AOM 2022, we plan on sharing interesting and generative findings from this unique research project. There is much to learn and much to gain.

Advances in Care Delivery

Session Moderator: **Timothy Hoff**, *Northeastern U.*

HCM: Implementing the COVID-19 Virtual Observation Unit in Emergency Medicine

Author: **Olivia Jung**, *Emory U.*

Author: **Ilana Graetz**, *Emory U.*

Author: **Stephen Dornier**, *Massachusetts General Hospital*

Author: **Emily Hayden**, *Massachusetts General Hospital*

The COVID-19 pandemic pushed hospitals to deliver care outside of their four walls. To successfully scale virtual care delivery, it is important to understand how its implementation impacts frontline employees. We conducted in-depth interviews of 17 clinicians and staff involved with the COVID-19 Virtual Observation Unit (CVOU) in the emergency department of an academic hospital. The program leveraged remote patient monitoring and mobile integrated healthcare. Implementing the CVOU resulted in increased frequency and scope of interactions among clinicians and staff, increased patient participation in care delivery, increased attention to non-medical factors, and expanded role of coordinators and paramedics in patient care, compared to the in-person care provided in the emergency department. These changes led to care team cohesion, professional job satisfaction, and positive attitudes towards virtual care. Our findings advance scholarly and practical understanding regarding reconfiguration of professional roles following technology implementation, virtual work interactions and coordination, and at-home care delivery.

HCM: Program Accreditation, Innovation, or Both? – The Interdependencies in Specialized Cancer Care

Author: **Tim Brand**, *U. Duisburg-Essen*

Author: **Eva Goetjes**, *U. Duisburg-Essen*

Author: **Katharina Elisabeth Blankart**, *U. of Duisburg-Essen*

Objective To understand (a) the determinants of hospitals' decisions to seek program accreditation and pursue innovation activities in specialized cancer care, (b) whether accreditation and innovation activities help hospitals reach their strategic goals, and (c) how program accreditation and innovation activities influence one another. Data Sources Semi-structured, in-depth interviews with hospital physicians and quality managers (n=25). Study Design Comparative case study of hospitals that provide specialized cancer care in Germany (n=19). Data Collection/ Extraction methods Inductive grounded theory approach and coding of interview transcripts across multiple waves to develop a conceptual model of the relationship between program accreditation and innovation activities, including determinants of both measures at the environmental and organizational levels. Principal Findings The hospitals in our sample engaged in program accreditation and innovation activities in order to achieve quality and financial goals. However, the strategic focus varied across different hospital types. For smaller hospitals, such accreditation was a necessary condition to be able to compete in competitive market environments. Regardless of competition, smaller hospitals benefitted from a positive effect of accreditation on incremental process and product innovation. For larger hospitals, obtaining accreditation was a necessary condition to acquire additional funding, but the influence on innovation activities was limited because these were generally already being pursued with high intensity. Conclusions Seeking program accreditation and pursuing innovation activities are not contradictory strategies for hospitals. Ideally, both can be aligned in such a way that the quality and financial performance outcomes achieved are superior to those that would be possible were only one of these strategies to be pursued or to predominate. Hospital decision-makers must align both activities while taking account of costs and benefits. Policy makers can support access to high quality care by setting incentives for hospitals to acquire accreditation.

HCM: Setting the Tone in the Operating Room: a Model Guided By Emotions as Social Information Theory

Author: **Hillary Lia**, *U. of Toronto*

Author: **Meena Andiappan**, *U. of Toronto*

Author: **Melanie Hammond Mobilio**, *U. of Toronto*

Author: **Frank Rudzicz**, *U. of Toronto*

Author: **Carol-anne Moulton**, *U. Health Network*

Team communication in the operating room is considered a key patient safety factor although communication failures continue to be exceedingly common. The attending surgeon is largely responsible for setting and modifying the tone of the operating room team. Existing literature suggests that the tone of the operating room may affect quality of communication, psychological safety, and ultimately, patient safety. Using Emotions as Social Information theory as a framework, we present a model which explains how emotional expression of the attending surgeon may be processed by other members of the operating room team to influence their behaviour. In response to the attending surgeon, the interaction of team members' behaviours produces (either through setting, maintaining or altering) the tone of the operating room which influences quality of communication. The model discusses contextual factors of the operating room (i.e. role, shared mental models, hierarchy, cultural norms, and team familiarity) to explain how the observer, that is, the operating room staff observing the behaviour of the attending surgeon, understands and processes information relayed by the attending surgeon. These contextual factors interact to produce the observers' affective reaction and inferences, in varying weights, about the situation at hand to shape their behaviour. We propose several directions for future research to advance team communication: expansion and empirical studies of the proposed model, investigation of how individual behaviours interact to produce tone, factors related to surgeon emotions, and how behaviours feedback into the proposed model to shape future behaviours.

HCM: Employee Engagement in Quality Improvement and Patient Sociodemographic Characteristics in FQHCs

Author: **Olivia Jung**, *Emory U.*
Author: **Janet Cummings**, *Emory U.*

Improving the quality of care is of paramount importance in federally qualified health centers (FQHCs). One strategy is to engage frontline employees by encouraging them to generate and share ideas for quality improvement. In a national sample of 54 FQHCs, we explore the relationship of employee engagement in quality improvement—via participation in innovation contests that sought ideas to improve patient care and offered opportunities to vote on shared ideas—and patients’ sociodemographic characteristics. Although all FQHCs deliver care to underserved populations, we find considerable variation in patients’ socioeconomic status in our sample. Furthermore, employees in FQHCs that serve a higher percentage of patients living in poverty and/or a higher percentage of Hispanic patients were less likely to participate in idea submission and voting. Our findings suggest that sociodemographic characteristics of the patients served in FQHCs may be important determinants of success when implementing quality improvement initiatives.

HCM: Recruiting Primary Care Providers Electronically as Research Subjects During the COVID-19 Pandemic

Author: **Olena Mazurenko**, *Indiana U., Indianapolis*
Author: **Lindsey Sanner**, *Indiana U. / Purdue U., Indianapolis*
Author: **Nate Apathy**, *Penn LDI*
Author: **Burke Mamlin**, *Regenstrief Institute*
Author: **Nir Menachemi**, *Indiana U., Indianapolis*
Author: **Meredith C.B. Adams**, *Wake Forest U.*
Author: **Rob W. Hurley**, *Wake Forest U.*
Author: **Chris A Harle**, *U. of Florida*

Background: Recruiting healthcare providers as research subjects often relies on in-person recruitment strategies. To date, little is known about recruiting provider participants via electronic recruitment methods. Objective: In this study, conducted during the COVID-19 pandemic, we describe and evaluate a primarily electronic approach to recruiting primary care providers (PCPs) as subjects in a pragmatic randomized controlled trial (RCT) of a decision support intervention. Design: We adapted an existing framework for healthcare provider research recruitment, employing an electronic consent form and a mix of brief synchronous video presentations, email, and phone calls to recruit PCPs into the RCT. Participants: We recruited 45 of 63 eligible PCPs practicing at ten primary care clinic locations over a 55-day period. Key Results: To evaluate the success of each electronic strategy, we estimated the number of consented PCPs associated with each strategy, the number of days to recruit each PCP, and recruitment costs. On average, it took 17 business days to recruit a PCP (range 0-48) and required three attempts (range 1-7). Email communication from the clinic leaders led to the most successful recruitments, followed by brief synchronous video presentations at regularly scheduled clinic meetings. We spent approximately \$89 per recruited PCP. We faced challenges of low email responsiveness and limited opportunities to forge relationships. Conclusion: PCPs can be efficiently recruited at low costs as research subjects using primarily electronic communications, even during time of high workload and stress. Electronic peer leader outreach and synchronous video presentations may be particularly useful recruitment strategies.

Teams and Team Performance

Session Moderator: **Farheen Fathima Shaik B**, *Indian Institute of Management, Tiruchirappalli*

HR: Flexibility-Oriented HRM and Team Performance: Mechanisms and Boundary Conditions

Author: **NAN XI**, *Capital U. of Economics and Business*
Author: **Hui Liao**, *U. of Maryland*
Author: **Ying Hong**, *Fordham U.*

Integrating the strategic human resource management (HRM) and team effectiveness literature, we examine the effect of a strategically targeted HRM system, the flexibility-oriented HRM (FHRM) system, on knowledge team performance. We draw from the dynamic capabilities theory and the Input-Mediator-Outcome team effectiveness framework to posit that FHRM will foster the knowledge acquisition and productive energy of teams, which in turn enhance team performance. Further, this relationship is moderated by two team leader characteristics, i.e., territorial behavior and short-termism. We test these relationships using a three-wave, multi-source survey, and multilevel research methods. Results show that leader territorial behavior diminishes the indirect effect of coordination FHRM on team performance and that leader short-termism weakens the indirect effect of resource FHRM on team performance, both via the mediation of knowledge acquisition and productive energy.

HR: Distributed Engagement and Distributed Disengagement in Global Virtual Teams

Author: **Farheen Fathima Shaik B**, *Indian Institute of Management, Tiruchirappalli*
Author: **Upam Pushpak Makhecha**, *Indian Institute of Management, Tiruchirappalli*
Author: **Biju Varkkey**, *Indian Institute of Management, Ahmedabad*
Author: **Sirish Gouda**, *Indian Institute of Management, Tiruchirappalli*

Global Virtual Teams (GVTs) have become a common form of team configuration in organizations today. In an effort to understand the effectiveness of the members of these teams individually and as a team, several measures are used by the Human Resource (HR) function of the organizations. One such measure is to understand the levels of employee engagement of the members and teams. Though there is extensive literature on understanding employee engagement in collocated context, we find scanty literature of the same in context of GVTs. Furthermore, it has been reported in the practitioner literature that the GVTs have reduced levels of employee engagement. Owing to the different context of GVTs, understanding and implementing employee engagement activities might be a challenging task for the HR department. Therefore, in this study we seek answers to the broad question of "What is the nature of employee engagement in context of a GVT?" The research site for this study was a global engineering, and digital technology solutions company, Cyient Ltd., which uses around 1500 GVTs across the globe to organize its work. This study is an ethnographic inquiry and was carried out in three phases across 21 months at the research site. The results of this study indicate that the GVT members chose to invest their selves, i.e., cognitive, emotional, and physical either exclusively or in various combinations, due to the overlapping nature of tasks in GVTs. Due to the distributed nature in which the member selves were invested either exclusively or in varied combinations, we characterize such engagement by the GVT member as 'Distributed Engagement'. However, member disengagement was found to be a state, where the GVT members withdrew all their selves from their roles either momentarily or for a sustained period of time from a single role or all the roles they are performing. Due to the distributed nature of the disengagement by the GVT member we denote it as 'Distributed Disengagement'.

HR: Unraveling the Relationship Between High Performance Work Systems and Team Performance

Author: **Alexandros Papalexandris**, *Athens U. of Economics and Business*
Author: **Konstantinos Christos Kostopoulos**, *U. of Piraeus*

This study develops a moderated mediation model examining the relationship between high-performance work systems (HPWS) and team performance. Adopting a dialectical view on the effects of HPWS, it posits for a dual -positive and negative- path between HPWS and team performance that is jointly mediated by team coordination and team relationship conflict. Further, it theorizes that a supportive and a competitive team climate can significantly shape these relationships. The proposed research model was tested using multisource data from a sample of 403 team members and 96 team managers from a total of 56 different firms. Results revealed that HPWS are positively associated with both team coordination and team relationship conflict and that both these relationships are moderated by supportive and competitive team climate. This paper contributes to the strategic human resource management (SHRM) literature by revealing that HPWS can be associated with team performance both through a positive and through a negative intermediary mechanism and that team climate constitutes an important boundary condition that can both amplify and inhibit the effect of HPWS on team performance.

Author: **Jeremy M. Beus**, *Washington State U.*

Author: **Shaun Parkinson**, *Washington State U.*

Author: **Jay Bates**, *Washington State U.*

Effective teamwork among all members of a team is important, yet team performance is often driven by star performers, or by a team's strategic core. Although research indicates that apportioning a greater percentage of financial resources to a team's strategic core—team members who encounter more team problems, have greater exposure to team tasks, and are more central to team workflow—is connected with greater team success, how those financial resources are disbursed among the strategic core should affect the manner and extent of contributions a team receives from its core role holders. Using a combination of equity theory and money priming theory as a conceptual basis, we posit that inequitable pay disparity among core role holders on a team is negatively associated with team performance and that this effect is stronger when strictly considering a team's strategic core as opposed to considering the team as a whole. We examine team effort and coordination as explanatory mechanisms for this expected effect and test our hypotheses in a sample of professional basketball teams from the National Basketball Association. Results support a negative connection between inequitable pay disparity and team performance, but only when the disparity exists among core role holders (as opposed to the entire team) and only via the mediating mechanism of team coordination (not team effort). These findings underscore the pervasive impact of core role holders on team performance, emphasizing that how core role holders are paid is meaningfully connected with team success.

Presenter: **Jennifer Lauren Nelson**, *U. of Illinois*
Participant: **Beth Bechky**, *UC Davis*
Participant: **Anne-Laure Fayard**, *NOVA School of Business and Economics*

'Meaningful work' has been defined by Rosso et al. (2010: 95) as "work experienced as particularly significant and holding more positive meaning for individuals". Previous studies have shown that meaningful work is beneficial for employees. For example, meaningful work has been found to be related to employees' well-being (Arnold et al., 2007), job satisfaction (Scroggins, 2008; Steger et al., 2012), and work engagement (Olivier & Rothmann, 2007; Steger et al., 2013). Meaningful work has also been associated with reduced burnout (Malach Pines, 2002) and less intentions of quitting (Scroggins, 2008). Due to the great impact of education on society (Brown & Lauder, 1991; Feinstein et al., 2006; Ozturk, 2001), and in line with the theme of this year's annual meeting, "creating a better world together", the proposed symposium focuses on meaningful work in educational workplaces (i.e., kindergartens, schools, and higher education institutions). More specifically, it concentrates on the perspectives of the employees (i.e., teachers and academic staff). Recent research on educational workplaces shows that educational workplaces are perceived as stressful (Lensen et al., 2021; Olsen, 1993). They are also experienced as insecure (Bristow et al., 2017; Rosenblatt & Ruvio, 1996). Educational workplaces are also characterized by high rates of burnout and attrition (Agarwal & Bansal, 2021; Friedman, 1991; Shub & Maaz, 2021). Furthermore, research demonstrates that educational workplaces affect the well-being and job satisfaction of employees (Aelteman et al., 2007; Bahtilla & Hui, 2021; Kinman et al., 2006; Olsen, 1993; Toropova et al., 2021), which in turn influence students' well-being and academic outcomes (Harding et al., 2019; Jennings & Greenberg, 2009). These troubling findings may indicate employees' difficulties in achieving meaningful work. Despite the importance of educational workplaces and the growing body of research on meaningful work (see Bailey et al., 2019 for a recent review), less research has been devoted to examining meaningful work in educational workplaces. The proposed symposium strives to fill this gap in the literature by addressing emerging research on meaningful work in educational workplaces. More specifically, the proposed symposium attends to a wide range of educational workplaces: kindergartens, elementary schools, middle schools and high schools (in the first two presentations), colleges and universities (in the last two presentations). The symposium also maintains an international nature, with each presentation relating to a different country: USA (in the first presentation), Israel (in the second presentation), Finland (in the third presentation), and India (in the fourth presentation). Finally, contrary to the few studies that have examined meaningful work in educational workplaces, and used quantitative methodology, the four studies presented in the symposium utilized qualitative methodologies.

HRM in the Pandemic Context

Session Moderator: **Cristen Dalessandro, O.C. Tanner Institute**

HR: **Work-Family Balance While Working from Home During Covid-19: Role of Job Crafting and Home Crafting**

Author: **Ayesha Tabassum, York U., Toronto**
Author: **Souha R. Ezzedeen, York U.**
Author: **Parbudyal Singh, York U.**

There has been a renewed interest in work from home (WFH) recently, as a result of the COVID-19 pandemic and the effect that it had in shifting many workers from the office to the home. Past research on WFH suggests contradictory outcomes of WFH in both the work and family domains. While a number of researchers have indicated that WFH can undermine work-family balance (WFB), others have suggested that WFB can be enhanced as a result of WFH. Drawing on multiple theoretical perspectives, including Job Demands-Resources (JDR), Person-Environment (PE) Fit, and research on work-family balance, this paper develops a conceptual model exploring the potential role of job crafting and home crafting in enhancing WFB through the mediating role of person-job fit and person-home fit. In the current paper, we theorize an indirect relationship between job crafting, home crafting, and WFB through person-job fit and person-home fit. Theoretical and practical implications, as well as the avenues for future research, are discussed.

HR: **The Pandemic-Stratified Workplace: New Work Models, Sense of Belonging, and Inequalities at Work**

Author: **Cristen Dalessandro, O.C. Tanner Institute**
Author: **Alexander Lovell, O.C. Tanner Institute**

In the wake of 2020, employees are currently diverging into groups of remote, hybrid, and completely on-site workers. However, questions remain regarding the impact of this stratification when it comes to organizational cohesion and employee sense of belonging at work. Thus, using an original dataset with employees across six continents (N = 6,497), we explored remote, hybrid, and on-site employees' sense of belonging at their organizations. Through multinomial logistic regression, we observed differences between continents and found that hybrid (RRR 1.40; 95%CI 1.16-1.71), and always remote (RRR 1.55; 95%CI 1.07-2.26)—but not newly remote—workers were significantly more likely to express a stronger sense of belonging. In addition, millennial (RRR 1.34; 95%CI 1.04-1.74), Generation Z (RRR 1.60; 95%CI 1.03-2.48), and salaried (RRR 1.37; 95%CI 1.15-1.63) workers were more likely to feel belonging. These results suggest that despite the potentially disruptive nature of work changes in the short term, new work models may not stifle employee belonging in the long-term. However, among those surveyed here, older employees, on-site employees, and those paid hourly generally lack a sense of belonging compared to other groups—a pattern that may point to pre-existing inequalities potentially exacerbated by the workplace upheavals of 2020.

HR: **Strategic HRM: A COVID-Test**

Author: **Dana B. Minbaeva, King's College London**
Author: **Steen Navrbjerg, U. of Copenhagen**

This paper explores the gaps in strategic human resource management research exposed by the COVID-19 pandemic with the aim of influencing future research on strategic human resource management (SHRM) in the era of environmental disruptions. Based on evidence from Danish companies and public organizations collected using a mixed-method sequential design, we discuss whether the existing theoretical frameworks in SHRM are capable of framing and delivering the academic knowledge needed to address the novel people-related challenges. We conclude that there is no need for new SHRM theory, as the main SHRM theoretical frameworks are still capable of framing the key challenges brought about by environmental disruptions like the COVID-19 pandemic. However, certain dimensions of those frameworks are becoming more relevant than others, some require minor adjustments, and it may be time to retire a few others.

Paper is Available to Meeting Registrants Only.

HR: **Does HRM Enhance Organizational Resilience? Evidence from Korean Firms in COVID-19 Pandemic**

Author: **Mijeong Kim, Korea U. Business School**
Author: **Inseong Jeong, Lingnan U.**
Author: **Johngseok Bae, Korea U.**

The Coronavirus disease-2019 pandemic arouses scholarly and practical interests in organizational resilience. During the pandemic, we have seen resilient organizations were less negatively affected and thrive despite countless challenges. However, literature remains with the dearth of empirical knowledge about what fosters organizational resilience and how. In this study, we explore the role of high-performance work systems (HPWS) in building organizational resilience. We suggest that the implementation of HPWS prior to crisis stimulates the context where employees are less threatened and persist in change-oriented behaviors in coping with crisis, which engenders core functions of organizational resilience – stability and flexibility. Analyzing quarterly sales of 268 Korean firms during the pandemic, we found that firms with a high level of HPWS had strong organizational trust and climate for innovation, which in turn protected from severe loss and enabled rapid recovery.

Job Design and Job Crafting

Session Moderator: **Anja Belte**, *Leibniz U. Hannover*

 **HR: Role Adoption and Role Retention: Role Flexibility as a Mechanism for Role Transformation Tensions**   

Author: **Anja Belte**, *Leibniz U. Hannover*

In recent years, Human Resource Management (HRM) scholars have become increasingly interested in conceptualizing tensions within the human resource (HR) function. However, while studies have focused on tensions of different value contributions, there have been few studies examining tensions with regard to the adoption and retention of new HR roles. Although the HR literature emphasizes that role transformation, for example, to a more strategic or even hybrid form is associated with challenges for HR professionals, it remains largely unknown how and why tensions emerge and how they are managed. Drawing on the hybrid literature on tensions and their management, this article aims to address this gap by means of a single-case study conducted in a nonprofit organization. The findings show that role transformation tensions emerge due to a low cognitive flexibility of HR professionals and at the same time and a high structural flexibility with regard to organizational strategy, structures, and processes. These tensions of cognitive and structural flexibility are subsumed under the construct of role flexibility, a mechanism that influences the adoption and retention of new HR roles. Moreover, findings suggest that to adjust role flexibility differentiation approaches and orientation resources are of importance.

HR: Job Crafting Translates High-Performance Work Systems into Employee Extra-Role Service Behavior  

Author: **Yao Song**, *Central U. of Finance and Economics*
Author: **Zhen Wang**, *Central U. of Finance and Economics*

With the rapid development of service economy, employees' extra-role service behaviors have become major competitive advantages of service organizations, thus how to trigger such behaviors has received increasing scholarly attention in HR research. This study intends to address this issue from a system perspective and an "employee-centered" view. Specifically, we examined whether service-oriented high performance work system (SHPWS) drive employee extra-role service behavior, and if yes, how and when employees take roles in such a process. Drawing on signaling theory, we speculate that employees, particularly when highly identified with their service professions, will positively respond to SHPWS by crafting their job and further demonstrating extra-role behaviors toward customers. We conducted the study in a healthcare context and tested hypotheses using data from 284 hospital nurses and their matched 568 patients. As with our predictions, results indicated that SHPWS is effective in eliciting job crafting among higher professional identifiers, which in turn leads to extra-role service behaviors. Taken together, these findings suggest an integrated HR system conducive to employee extra-role service behavior and showcase the roles of employee in the process. Theoretical and practical implications are discussed.

HR: Motivation to Improve Job Quality in Small to Medium-Sized Enterprises    

Author: **Elen Frank-Miller**, *Workforce & Organizational Research Center*
Author: **Samantha A. Conroy**, *Colorado State U.*
Author: **Margaret Jendrek**, *Workforce & Organizational Research Center*
Author: **Sophia Fox-Dichter**, *Workforce & Organizational Research Center*
Author: **Madison Ryan**, *Workforce & Organizational Research Center*

Frontline workers represent some of the most critical employees in an organization yet often experience low job quality (e.g., low pay, low autonomy, low job security). Some organizational leaders choose to intentionally improve job quality while others do not. Research provides little evidence about what drives organizational leadership to increase job quality through high quality human resource management practices. This is especially true for research on small to medium-sized enterprises (SME). We use a qualitative approach based on interviews with senior leaders, HR leaders, frontline supervisors and frontline employees across 10 organizations to increase understanding of the motivational factors behind improved job quality for front-line workers in SMEs. Our findings indicate that factors beyond the external and organizational environment play a key role in job quality improvement decisions. Specifically, leaders are motivated to improve job quality based on their personal values (i.e., doing the "right thing" the "right way" and a belief in basic human rights), their understanding of employees' lives, and the knowledge of "how" to improve job quality. Through this inquiry, we contribute to research on human resource management practices in SMEs, research on job quality for low-wage and frontline workers, and research on managerial HR philosophy.

Paper is Available to Meeting Registrants Only.

 **HR: How do I-deals Emerge? Exploring the Role of Temporality and Actors in I-deals Timing and Creation**   

Author: **Dotun Ayeni**, *U. of Edinburgh business school*
Author: **Maryam Aldossari**, *Aston Business School*
Author: **Sara Chaudhry**, *U. of London Birkbeck*

Extant literature suggests that opportunities for I-deals (idiosyncratic deals) mainly arise either during hire (ex-ante) or after hire (ex-post) – signalling variation in I-deals as a result of timing. However, very little research explicitly considers the impact of the temporal context on I-deals and how a range of organisational actors may react, and (re)construct, temporal conditions during the creation of I-deals. Therefore, our paper focuses on the invisible concept of temporality (that is, the broader temporal context, including temporal enablers and constraints) vis-a-vis I-deals through the specific theoretical lens of institutional entrepreneurship (IE). IE theory helps highlight conditions that impact the temporal context as well as the agentic role of actors (I-dealers, employer agents) in preserving or subverting temporal conditions. Drawing on 62 semi-structured interviews across three Nigerian organisations, our data revealed that i) field-level conditions and actors' social positions function independently and contemporaneously, ii) with differential impact on I-deals' timing, and iii) organisational actors (I-dealers and employer agents) adopt a combination of tactics to preserve and/or subvert temporal conditions, contingent on their social positions. Based on these findings, we offer a theoretical framework that reconceptualises I-deals by specifically highlighting their relationship with the invisible concept of time. Finally, we highlight the theoretical implications of our study for I-deals literature, future research directions, and practice.

HRM and Organizational Change

Session Moderator: **Martina Kohlberger**, *U. of Innsbruck*

HR: **Making Change Happen: How HRM Professionals Deal with Tensions in Times of Organizational Change** 

Author: **Martina Kohlberger**, *U. of Innsbruck*

This paper is an ethnographic study of HRM professionals who were engaged in organizational-change projects that conflicted with each other. I explore tensions that arose for HRM professionals when they were required to simultaneously attend to multiple projects—both short-term change projects and long-term strategic-change projects. Applying a practice-theory lens, this paper helps us better understand how HRM professionals make change happen. This paper looks at change management from the view of HRM professionals to investigate the resourcing practices they use to work through short-term-long-term-tensions that arise under conditions of resource scarcity. The first contribution is extending our knowledge of the HRM profession by identifying resourcing practices to deal with tensions during change-management projects. In investigating these conflicts, I identify three resourcing strategies that HRM professionals use to navigate and work through these tensions - situational reframing, organizational preframing and institutional deframing. The second contribution is adding to the HRM-as-practice literature by helping to bridge HRM practices with HRM practitioners (in this paper: professionals) and HRM praxis. By highlighting the everyday practices that HRM professionals engage in, I add to a better understanding of the intersecting elements and the situated social activities enabling HRM praxis. In doing so, I add to a more practice-oriented approach of HRM research with an increased focus on actors and their agency.

HR: **'Talent Sharing' as a Response to a Dynamic Environment—Implications for Learning and Development** 

Author: **Katharina Salmen**, *ESCP Business School*

Author: **Marion Festing**, *ESCP Business School*

To cope with the challenges of today's dynamic business environment, organizations are increasingly being forced to rethink their current ways of operating. This also includes renewal concerning talent management, and in this regard talent sharing has emerged as a novel but increasingly adopted talent development approach relying on interorganizational talent transfers. This paper explores how talent sharing meets the challenges of organizational learning and development and identifies important facilitating factors. We conducted 17 semi-structured interviews with talents and experts responsible for talent sharing in Germany and Austria. Our study demonstrates that organizations examined herein were able to (further) develop their human capital and cultural values, and that corporate culture, human resource management, supervisors, and individual characteristics represented key facilitating factors in gaining new resources. However, our data also show that organizations could have capitalized more on talent sharing by broadening and reconfiguring facilitating factors. Drawing on our rich data and arguments from the organizational learning domain, we suggest a framework for explaining the design and outcomes of talent sharing and clarifying the role of organizational and individual facilitators. As this is the first study to systematically explore talent sharing, we also provide a comprehensive research agenda and implications for practice.

HR: **Voluntary Turnover and Firm Performance: Firm-Specific Human Capital Loss and Organizational Change**

Author: **Owwon Park**, *The Catholic U. of Korea*

Author: **Yong-Yeon Ji**, *Towson U.*

Author: **Sangsuk Oh**, *National Cancer Center Korea*

Author: **Jong-Seok Cha**, *Hansung U.*

The purpose of this study is to explore the relationship between voluntary turnover and firm performance among Korean firms listed in the HCCP data collected in 2015. Based on the human capital view, we expect that voluntary turnover will have a negative impact on firm performance. The results obtained through the hierarchical OLS regression confirm the negative implications of voluntary turnover on firm performance, highlighting the importance of retaining human capital. In addition, from the contingency perspective, we examined the interaction effect of firm-specific human capital (FSHC) Loss and organizational change. Results show that organizational change alleviates the negative impact of voluntary turnover, implying that firms will suffer less when implementing a higher degree of organizational change. However, no significant result was found for FSHC Loss. Then, we found that the significant three-way interaction effect of FSHC and organizational change. The result suggests that the negative impact of voluntary turnover is neutralized when firms implement a higher degree of organizational change by minimizing the loss of FSHC. We also provide theoretical and practical implications.

Author: **Franziska Kriener**, *Hamm-Lippstadt U. of Applied Sciences*

Author: **Sebastian Fischer**, *Hamm-Lippstadt U. of Applied Sciences*

A good fit between person and environment (PE fit) is a fundamental criterion for successful recruitment and employment. However, what if an organization in change is looking for employees who fit the planned new organizational model, rather than the existing organizational characteristics, to deliberately drive the change? It remains unclear how personnel can be attracted during an organizational change process. Our study extends the knowledge on attraction mechanisms during change by treating PE fit as a dynamic construct. We use a metric conjoint experiment with 149 potential job seekers to explore the impact of individual advancement opportunities, leadership style, organizational climate and proactiveness of change on employer attractiveness as well as the moderating influence of personal initiative on the relation between proactiveness of change and employer attractiveness. The anticipated fit of individual advancement opportunities and leadership style affect employer attractiveness the most, followed by the fit of the organization's climate and proactiveness of change. Thereby, personal initiative moderates the relationship between proactiveness of change and employer attractiveness.

Social Networks and Social Capital

Session Moderator: *Sara Krivacek, Clemson U.*

HR: **The Influence of Advice and Friendship Ties on Self-Compassion Crossover in Police Platoon Networks**

Author: *Sara Krivacek, Clemson U.*
Author: *Thomas Joseph Zagenczyk, North Carolina State U.*
Author: *Kevin S. Cruz, Georgia Southern U.*
Author: *Russ Marion, Clemson U.*
Author: *Jane Layton, Clemson U.*
Author: *Gail DePriest, Clemson U.*

Suffering is an inevitable aspect of employees' professional lives, particularly for those in demanding and stressful occupations, such as policing. One way to combat employee suffering is through the practice of self-compassion. Traditionally conceptualized as a trait, researchers have discovered much about the benefits and outcomes of self-compassion. However, recent studies have shown that self-compassion can be more malleable, and as a result, we know much less about what may lead to self-compassionate states. In this study, we adopt the view of self-compassion as a state and investigate how an employees' social context may affect their self-compassion. Specifically, we draw from crossover theory to examine how employees' relationships (advice and friendship ties) and structure (group similarity) influence their similarity in self-compassion. We conducted a social network analysis among police officers in various platoons. Results of this study show that employees have similar self-compassion levels to those they share advice ties with, but dissimilar to those with whom they share friendship ties. Implications for theory and practice are discussed.

HR: **Peer Control Interactions: Boundary Spanners Upholding the Paradox of Self-Management**

Author: *Melissa Twemlow, Erasmus U. Rotterdam*
Author: *Maria Tims, Vrije U. Amsterdam*

Peer control is considered the process whereby team members notice and respond to their peers' behavior or performance. While peer control occurs during social interactions between team members, research is yet to uncover how team members use direct control tactics to coordinate their interdependent taskwork. We shadowed and studied the interaction dynamics of five agile scrum teams and their meetings over a 18-month period to explore how team members attempt to control each other's behavior, what drives these attempts, and how peers respond in these situations. Results show that team members in close contact with the customer, so-called Product Owners, controlled their peers most often during daily meetings. They used their position as boundary spanner, which holds information advantages and role ambiguity, to legitimize their coercive control tactics (i.e., threatening peers to quickly deliver high-quality work, directing unsolicited work instructions, and making overruling decisions). While peers responded relatively passively by ignoring, agreeing, joking, or conditionally taking responsibility for the tasks, it did impact the team's performance both positively and negatively. These findings are in sharp contrast with the principles of agile working (i.e., self-management, lack of hierarchy, and team/individual autonomy). Our study contributes to developing a better theoretical understanding of peer control interactions, sheds light on the influential control tactics of boundary spanners, plus reveals crucial trade-offs that peers make when formulating their reactions.

HR: **Employee Centrality in Workgroup Social Networks and I-deals: A Test of the Ledger Model**

Author: *Smriti Anand, Illinois Institute of Technology Stuart School of Business*
Author: *Farid Jahantab, Pennsylvania State U., Worthington-Scranton*
Author: *Prajya Rakshit Vidyarthi, U. of Texas at El Paso*

Individually negotiated customized work arrangements or idiosyncratic deals (i-deals) are an increasingly common phenomenon in contemporary organizations. We propose that these deals are created and implemented in the social context of the workgroup, such that one's location in the social network of relationships within the group plays a key role in encouraging or deterring any i-deals. Drawing on social network theory, we propose that being central in trust network is positively associated with i-deals whereas being central in hindrance network is negatively associated with i-deals. Further, both relationships are stronger for high TMX employees. Additionally, we propose that centrality in hindrance network is more strongly related to focal's i-deals than centrality in trust network. Finally, we suggest that the relative importance of centrality in hindrance network over centrality in trust network is of greater magnitude for high TMX than for low TMX employees. Results of hierarchical linear modeling and relative importance analyses on data gathered from 488 focal employees, 490 peers, and 32 principals supported our hypotheses. Implication and future directions for social network and i-deals research are discussed.

HR: **Egalitarianism and Employee Proactivity: The role of altruism and social capital**

Author: *Fiona Edgar, U. of Otago*
Author: *Nataliya Podgorodnichenko, U. of Otago*
Author: *Adeel Akmal, U. of Otago*

Employee proactivity is one of the important dimensions of work role performance. However, the literature lacks of research on the mechanisms through which proactivity is enhanced. To address this issue, we develop a conceptual model to examine how egalitarianism at both individual and organizational level affects employee proactivity through social capital. Specifically, we hypothesize that (1) individual level egalitarian mindset interacts with organizational level egalitarian HR practices to facilitate social capital; (2) egalitarian mindset enhances employee proactivity through altruism and then relational social capital mechanisms; and egalitarian HR practices improve relational social capital which, in turn, leads to employee proactivity. Using a sample of 511 employees from service organizations in New Zealand and Australia, we find support for our conceptual arguments. Theoretical and practical implications derived from our results are discussed.

Discussant: **Ashleigh Shelby Rosette**, *Duke U.*
Participant: **Eden King**, *Rice U.*

In this symposium, we demonstrate the importance of an intersectional lens in understanding inequity in organizations. How people experience and navigate organizations is unlikely to be singularly determined by one aspect of their identity. Rather, people are multifaceted, belonging to a number of identity groups, and more nuanced theory in diversity, equity, and inclusion aids in better understanding organizational behavior in light of this reality. Across four presentations highlighting the intersections of ethnicity, gender, and status, we demonstrate how inequity persists in organizations and the need for more intersectional theories in management scholarship.

Participant: **Celia Moore**, *Imperial College Business School*

Pursuing passion for work is highly valuable to both employees and their organizations. However, many employees struggle to pursue and maintain their passion over time, a challenge which may be exacerbated by underlying inequalities. The papers in this symposium demonstrate the pitfalls and underlying inequalities which complicate the pursuit of passion. Across four presentations, we show that (1) the experience of passion is fundamentally self-limiting, that (2) employees do not give up on a job with poor working conditions because of their passion, (3) gender inequalities in the household place an additional burden on women's pursuit of passion, and (4) mid-performing passionate men are better evaluated than mid-performing passionate women. Together, these presentations recast our understanding of passion, demonstrating that passion can at times drain employees, and may even exacerbate underlying inequalities.

SEAM, AI, and Social Capital

Session Moderator: **Jeremy Salmeron**, *ISEOR International Research Center, Écully, France*

MC: **Artificial Intelligence and Education: Case Study (Monsif National School)**  

Author: **Michael BAHAA Michael**, *U. of Balamand, U. Lyon 3, and ISEOR Research Center*
Author: **Omayya Kuran**, *U. of Balamand*

The following study attempts to explore the popular trend of artificial intelligence(AI) in the education sector. AI is defined as the automation of cognitive human behavior which has created infinite opportunities for businesses and organizations (Jarek & Mazurek,2019). The focus of this study is how AI can be integrated in the context of an educational institution. In particular, the study dives deep into juxtaposing AI in Monsif National School (M.N.S) as a case study. Nevertheless, AI will be implemented in MNS as a tool that improves organization effectiveness and efficiency without replacing its human capital. However, in this study, AI implementation requires a step backwards to test the organization foundation through the socio-economic approach to management (SEAM) to analyze and solve the dysfunctions of this 85-year-old school in order to equip teachers and administrators with the knowledge and confidence they need to transform M.N.S into an innovative, efficient, and sustainable school of the future.

MC: **Escaping the Double Bind Syndrome When Facing Contradictory Logics of Actions in Tourist Offices**

Author: **Xavier Bruno BORG**, *U. Paul Valery Montpellier*

Winner of the Information Age Publishing Outstanding Doctoral Student Paper Award

Double bind syndrome is more and more experienced in the field of management, due to the differences between logics of actions at governance and management levels (Bateson, 1960). In particular, working through the double bind syndrome requires at first to check out the lay of the land of the dysfunctions resulting from such conflicts prior to proposing a course of actions that management consultants might facilitate in organizations. The aim of this paper is to highlight deficiencies resulting from the mixed practice of political leadership and expert leadership in the field of public management, through the perception of a sample of directors of tourist offices, on their leadership practice and their relations with their elected officials. We argue that new insights combined with consulting management can help managers maximize efficiency and improve processes in public organizations.

MC: **Social Capital, Dynamic Capability and Management Consultancy Client Acquisition-a Case in China** 

Author: **Haibo Liu**, *Shenzhen Wondale Management Consulting Company*
Author: **Yuhong LIU**, *U. of Amsterdam*

In China, consulting companies usually take management training as an ordinary paid service or a mere free service beyond their consultancy business. However, management training can also function as an effective means for new business client acquisition. Omnibus training attracts new clients basically in project level consultancy, custom training brings new clients further in functional level consultancy, while leadership coaching magnetizes new clients intensively in corporate level consultancy. The authors conduct a case study of a Chinese management consulting company making use of the training opportunities in real estate industry, analyze its practice basing on the theories of social capital, dynamic capability and client acquisition.

Exploring Workplace Spirituality from Different Perspectives

Session Moderator: **Helen Chung**, *Seattle Pacific U.*

The papers in this session present a variety of perspectives on workplace spirituality, ranging from work/life balance, to decision-making, to employee resource groups (ERGs) with implications for creating a better workplace.

MSR: When Work and Family Life Mingles: A Model of Workplace Spirituality (WITHDRAWN) 

Author: **Madhu Lata**, *Indian Institute of Technology Patna*

In modern times employees are witnessing changes in their personal and professional lives fastest than ever in the history of human civilization. With the outbreak of the COVID-19 pandemic, employees' lives have been transformed greatly. Personal and professional lives are more or less interlinked and significantly influenced by each other. There has been an incessant demand on employees to cope up with the unprecedented changes at the personal and professional front which is only possible when employees' spirit is energized. Borrowing insights from the conservation of resources theory (Hobfoll, 1989), it is proposed that with the practice of spiritual values at the workplace, employees' souls could be energized which would have a positive impact on their professional and family lives. Theoretical and practical implications have been discussed.

MSR: Faith-Based Employee Resource Groups: An Understudied Aspect of Workplace Diversity  

Author: **Helen Chung**, *Seattle Pacific U.*

Author: **Alex Johnson**, *Seattle Pacific U.*

Author: **Benjamin Pitman**, *Seattle Pacific U.*

Author: **Christine Tan**, *Theology of Work*

Research on affinity and employee resource groups (ERG) in organizations is relatively sparse, particularly on religious or faith-based groups. This study is a phenomenological analysis of interview data from 26 individuals in organizations leading and managing faith-based employee resource groups in public and private organizations in the U.S. Based on a thematic review of the data across multiple ERGs in manufacturing, technology, sales, and consulting firms, the beginnings (origins), core activities, and perceived outcomes of the groups emerge. These aspects are then compared to other non-religious ERGs. Overall, the phenomenology of faith-based groups points to the implicit and explicit benefits and challenges of religious expression at work and underscores the evolving partnership between human resource professionals and ERG leaders.

MSR: Does Religious Affiliation of Owning Family Matter to Firm Performance? Study of Indian Family Firms  

Author: **Nupur Pavan Bang**, *Indian School of Business*

Author: **Tanisha Ghosal**, *Indian School of Business*

Author: **Sougata Ray**, *Indian School of Business*

Whether the religious antecedence of owning family has any influence on the performance of a family firm in a religiously diverse institutional context is an interesting yet unexplored area of research. Invoking the resource-based view and social capital theory we theorize why family owners' religious affiliation may impact firm performance and the moderating role of factors such as promoter shareholding, age, and size of the firm. Use a proprietary dataset of family firms in India, we find that firms with family owners affiliated to minority religions perform better and we also find support for the moderating hypotheses. India provides a natural setting for this study as several religions are practiced by its population and the business landscape is dominated by family firms. Our results run counter to the popular belief of dominance of majority religion in such institutional context. We conclude that micro level resources that accrue over a period due to religion based social network and religious practices are perhaps more dominant in comparison to macro level-institutional resources in impacting family firm performance. We find significant heterogeneity in performance amongst firms owned by different minority religions relative to the dominant religion adding further credence to our core thesis.

MSR: Responsible Leadership towards Garnering Stakeholder Legitimacy in India: An Institutional Perspective  

Author: **Sadhna Sargam**, *Indian Institute of Technology, Bombay*

Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

Using an inductive grounded theory approach, we aimed to understand the responsible leadership process (RL) in India which is an emerging economy, and put forth challenges to the business leaders different from those in the western institutions. We interviewed 26 executives from three organizations in India. The analysis of data revealed certain individual-level variables as a source of conferred legitimacy which further influence leaders' ability to reconcile dilemmas and conflicts of interest and equip them with the strategies to deal with the challenges posed by the institution and the uncertain business environment in which they operate. This results in prosocial decisions and outcomes which further builds on to sources of legitimacy and works recursively as a process. Findings of the study resolve a few inconsistencies and suggest unique factors responsible for driving the process and are not evident or figured importantly in the literature on RL so far. Amongst this paternalistic ownership is a necessary mechanism unique to the cultural context for the process to occur. Contrary to the previous studies this study suggests the presence of more ethical climate as insufficient and organization must build a constellation of holistic values climate to ensure the socially responsible behavior of employees.

Outcomes of Leadership

Session Moderator: **Armin Pircher Verdorfer**, *Amsterdam Business School, U. of Amsterdam*

OB: Who Displays Exploitative Leadership and Who Bears the Brunt?

Author: **Armin Pircher Verdorfer**, *Amsterdam Business School, U. of Amsterdam*
Author: **Frank D. Belschak**, *U. of Amsterdam*

This study examines the link between leader Machiavellianism, followers' perceptions of exploitative leadership, and follower wellbeing. Results from a study with 108 leader-follower dyads revealed that leader Machiavellianism, with its inherent focus on calculative and manipulative behaviors, predicted exploitative leadership. Exploitative leadership, in turn, was positively related to subordinates' level of emotional exhaustion. Invoking an interactionist perspective on destructive leadership and drawing on trait activation theory, leaders' evaluations of subordinate performance were found to amplify the effect of leader Machiavellianism on exploitative leadership.

OB: Transformational Leadership, Team Processes, and Surgery Outcomes

Author: **Michaela Scanlon**, *Smith School of Business, Queen's U.*
Author: **Julian Barling**, *Queen's U.*
Author: **Steve Granger**, *Concordia U., Montreal*
Author: **Shani Pupco**, *Smith School of Business, Queen's U.*
Author: **Nick Turner**, *U. of Calgary*
Author: **Amy Akers**, *Deloitte Consulting*
Author: **Darren Beiko**, *Queen's U.*

Existing research on transformational leadership is restricted by methodological and contextual limitations. Consequently, whether evidence for transformational leadership's effectiveness in traditional work environments generalizes to extreme contexts remains to be seen. We develop and test novel theory founded in Hannah et al.'s (2009) extreme context framework and situation strength theorizing (Mischel, 1978) to understand leadership in the operating room—an extreme context. Specifically, we sought to understand why transformational leadership might not always be enough for improving team and individual outcomes. We suggest that in weak situations, where the appropriate course of action is unclear (e.g., high complexity surgeries), transformational leadership interacts with directive leadership to predict team processes and patient outcomes. We combine observations of transformational, directive leadership, and surgical errors across 150 surgeries with team reports of psychological safety, collective efficacy, and surgical complexity, as well as objective reports of patient outcomes to advance theory on transformational leadership and extreme contexts. Findings demonstrate that when surgical complexity is high both transformational leadership and controlling leadership influence patient outcomes through team-level psychological safety. Importantly, the effects of leadership were not significant in medium or low complexity surgeries. Limitations, strengths, and both theoretical and practical contributions are discussed.

OB: Do Leaders Matter? Evidence from 56 Years of U.S. Governor Successions

Author: **Tyler Richard Kleinbauer**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **John Antonakis**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Societies are facing numerous grand challenges and leaders are increasingly counted on to provide solutions. Top-level institutional leaders are implicitly assumed to have an effect on important social and organizational outcomes. But can top-level leaders affect outcomes that unfold across space and time via various pathways? Some research streams have suggested that organizational outcomes may not be caused by, but are simply ascribed to the leader; leadership may merely be a social construction. We provide a rigorous test to determine whether leaders matter by exploiting a very controlled, though unusual leadership context, where leader discretion is large; that of U.S. state governors. This context allows us to estimate precisely what role top-level leaders may play in determining institutional outcomes, measured on a standard metric. We quantify the "leadership effect" in a sample of 500 governors across the 50 states of the U.S. and the district of Columbia. We use a custom likelihood function to implement state-of-the-science methodical advances in variance decomposition on a sample of 2,985 governor-time observations, covering the periods 1963 to 2019, to explain variance in real yearly Gross Domestic Product (GDP) growth. After having partialled out time effects (0.47 of the variance in real yearly GDP growth), we show that governors are responsible for 4.45% of the variation in real GDP growth, while state-effects only account for 1.45% of the variation in real yearly GDP growth. Our results contradict earlier research suggesting that top-level leadership may not matter (e.g., Salancik & Pfeffer, 1977). Keywords: Leadership, Variance decomposition, Economic growth, Leader performance, GDP, Political Leadership, Maximum likelihood, Autoregression.

OB: What Excitement Between Leaders Brings   

Author: **Hendrik Wilhelm**, *U. of Witten/Herdecke*

Author: **Michael Wittland**, *Hannover U. of Applied Sciences and Arts*

Author: **Ludwig Kuntz**, *U. of Cologne*

Psychological safety enhances information sharing and learning in organizations, and thus, performance. While we know that leaders matter for an organization's psychological safety to flourish, prior research struggles to separate social-exchange and social-learning based explanations. To address this shortcoming, we connect theory on relational affect and psychological safety. We theorize when and how leader relational excitement—i.e., the excitement that a leader experiences when working with another leader—shapes their organization's psychological safety, and eventually, the organization's performance trajectory. We test our theory using matched data on 66 leader dyads of 66 neonatal intensive care units in Germany with survey data from 1,500 subordinates, and objective organization performance data across three years. Our results largely support our theorizing. We derive theoretical implications for the literatures on psychological safety and relational affect. We also provide managerial implications.

Attachment to Work and Organizations

Session Moderator: **Don Ferrin**, *Singapore Management U.*

OB: Understanding Employees' Commitment to their Sector of Employment: A Qualitative Study 

Author: **Don Ferrin**, *Singapore Management U.*

Author: **Jinwen Chen**, *Singapore Management U.*

Author: **Dalvin Sidhu**, *Singapore Management U.*

Why do many people remain committed to their chosen sector of employment when they could obtain better working conditions, higher pay, improved career opportunities, heightened reputation, or other benefits by shifting to a different sector? More generally, what factors lead people to be more or less committed to their sector of employment? Research on commitment to work-relevant targets has extensively studied employees' commitment to their organization and occupation, but largely neglected employees' commitment to their sector of employment. To address these questions, we conducted focus groups and interviews with 218 present and former employees of the nonprofit social services sector in Singapore. Our analyses revealed that the factors that contribute to and undermine individuals' commitment to their sector of employment include not only the identity and characteristics of the sector itself, but also a range of other factors that reside within the person, their families, their clients, and their organizations. Our study illuminates an important but understudied target of work-relevant commitment, provides rich, qualitative insights into the foundations and development of commitment, contributes to emerging research on employee identity and careers, and offers valuable practical implications for employees and for organization and sector leaders.

OB: Is There a Dark Side to Divestitures? Employee Commitment after Corporate Divestitures

Author: **Natascha Loth**, *U. of Goettingen*

Previous empirical research on divestitures has mainly been interested in the financial perspective, which led to a one-sided, predominantly positive framing. Challenging these findings, we examine divestitures from the employees' psychological perspective and analyze the relationship between divestiture intensity and organizational commitment as well as the moderating effect of employees' culture-related preference for reciprocity. Based on unique, internal firm data from a highly diversified European MNE, which comprises 2,300,000 employee-year observations, we find that employees who remain in the firm respond to higher divestiture intensity by lowering their commitment, expressed by discontinued investments in the firm's share ownership. We also find that employees with higher preferences for positive reciprocity are relatively more likely to decrease their commitment in response to divestitures. Our results hold important implications for academics and practitioners.

OB: The Moralization of Intrinsic Motivation 

Author: **Mijeong Kwon**, *U. of Colorado, Denver*

Business research and practice have emphasized the value of intrinsic motivation for over 50 years. In this paper, I argue that this valuation can have unintended negative consequences for employees. Specifically, I suggest that employees may internalize the ways their colleagues, leaders, organizations, and society value intrinsic motivation and come to associate it with superior morality. I conceptualize this process as the moralization of intrinsic motivation and describe how it shapes employees' negative value judgments of and behaviors toward others and themselves in the domains of performance appraisal, cooperation, and engagement. This research contributes to the management literature by investigating (a) the social nature of intrinsic motivation, (b) the unintended negative intrapersonal and interpersonal outcomes of our long-standing emphasis on intrinsic motivation, and (c) the relative disadvantages for employees who do not—and cannot—experience intrinsic motivation. I end by discussing the role of business research and education in potentially reducing the moralization of intrinsic motivation and its negative impacts.

OB: Ideological Psychological Contracts and Performance Outcomes: The Role of Work Meaningfulness

Author: **Aeson Luiz Dela Cruz**, *Macquarie U.*

Author: **Chris Patel**, *Macquarie U.*

Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*

This study contributes to the psychological contracts literature by examining the consequences of ideological psychological contract (IPC) fulfillment in audit firm-auditor relationships. Drawing from psychological contract theory, we hypothesize that IPC fulfillment is positively associated with auditors' intentions to engage in skeptical actions and organizational citizenship behaviors (OCB). Moreover, we predict work meaningfulness to mediate these relationships. We tested our theoretical model by conducting a two-wave online survey involving 250 auditors in the Philippines. Results reveal that IPC fulfillment increases auditors' intentions to engage in skeptical action and OCBs. Work meaningfulness also acted as a significant explanatory mechanism that links these relationships. This study provides insights into how auditor-audit firm relationships anchored on ideologies reinforce aspects of auditor performance which contributes to the firms' audit quality initiatives. Our findings have theoretical and practical implications for audit firms, regulators, standard setters, and researchers.

Corporate Pro-Environmental Behavior (In-Person)

Session Moderator: **Roberto Ponce Oliva**, *U. del Desarrollo*

ONE: Moving from Intention to Action: Insights on Firms' Active Pro-Environmental Behavior

Author: **Roberto Ponce Oliva**, *U. del Desarrollo*

Author: **MARIA-JOSE IBANEZ**, *U. del Desarrollo*

Author: **Felipe Vasquez Lavin**, *U. del Desarrollo*

Organizations' pro-environmental intentions, like declaring environmental policies, are vital in determining organizations' pro-environmental behavior. However, the number of firms that move from intention to action is small. This study seeks to determine the organization's characteristics that influence firms' probability of declaring environmental policies and establish whether these policies or pro-environmental intentions are a good predictor of active pro-environmental behaviors. Findings suggest that large firms, managed by men, export-oriented, family-owned, and belonging to a corporate group have a higher probability of announcing environmental policies. Further, we found that pro-environmental intention (policy) strongly predicts firms' active pro-environmental behavior (invest). Moreover, our findings can facilitate public policy design targeted toward specific segments of the business ecosystem, thus more effectively promoting and stimulating active pro-environmental actions.

ONE: Impact of Transactional Leadership on Green Technological Innovative Behavior 

Author: **Ali NAWAZ Khan**, *School of Economics and Management Hubei Engineering U.*

Author: **Naseer Abbas Khan**, *U. of Sargodha*

Author: **Zhang Hui**, *School of Economics and Management Hubei Engineering U.*

The international community is increasingly concerned about environmental pollution and the degradation of natural resources, which has aroused the world's attention to the green technology innovation of the corporate sector and emphasized the role of leaders in responding to this situation. This study examines the impact of interceding mechanisms and influencing factors in the association between green transactional leadership and employees' green technological innovative behavior. We conducted two independent surveys to develop and test our hypotheses. In the first survey, we collected cross-sectional data from matched 43 project managers and 145 employees of small and medium-sized construction companies in Pakistan. In the second survey, we used a multi-waves approach to collect the data from matched 51 production managers and 165 their immediate subordinates from different small and medium electrical/electronic manufacturing firms in Pakistan. The results showed that green transactional leadership is associated positively with followers' green technological innovative behavior. This article also found that innovative climate and organizational learning mediates the association between green transactional leadership and green technological innovative behavior. Moreover, the contingency role of environmental dynamism was found significant on the mediating influence of organizational learning in the association between green transactional leadership and followers' green technological innovative behavior. The findings of this article help to improve our understanding of how green transactional leadership affects followers' green technological innovative behavior in the electrical/electronic manufacturing and construction industries, and how intervening and contingent mechanisms affect the associations.

ONE: The Impact of Green Psychological Climate on Organizational Citizenship Behavior for the Environment

Author: **Aurore Darmandieu**, *U. of Zaragoza*

Author: **Pilar Rivera-Torres**, *U. of Zaragoza*

Author: **Antoine Renucci**, *U. de pau et des pays de l'Adour*

Author: **Concepcion Garces-Ayerbe**, *U. of Zaragoza*

In this research, we extend the nascent literature on green psychological climate by studying how it translates into employees' organizational citizenship behavior for the environment. We argue that a green psychological climate, consisting in injunctive social norms individually perceived, can trigger directly employees' organizational citizenship behavior for the environment. We also argue that there exist two possible indirect paths: one through organizational identification (i.e., a cognition proximate to employees' self-concept) and the second through perceived organizational and supervisory support for the environment (i.e., an ongoing social exchange relation in which the employees are embedded with their organization and its representatives). The specificity of our methodology is that we maintain the analysis at the individual level only, as our interest lies in understanding how employees interpret organizational signals, make sense of their organizational milieu, and translate this into actual behavior. Using primary data from an Argentinian large retailing company, we find support for the indirect effects of the green psychological climate on employees' organizational citizenship behavior for the environment. We do not find support for the direct effect. Overall, this research contributes to uncovering the social-psychological determinants of employees' behaviors.

Digital Collaboration and Transformation

Session Moderator: **Jeppe Agger Nielsen**, *Aalborg U.*

This session explores the digital future of work in the public sector, including workers' and managers' approaches to virtual and remote work as well as community- and organization-level digital collaboration to achieve public outcomes.

PNP: Shaping the Future Through Anticipation Work. Exploring Digital Transformation in the Public Sector

Author: **Jeppe Agger Nielsen**, *Aalborg U.*
Author: **Kasper Elmholt**, *Aalborg U.*
Author: **Mette Strange Noesgaard**, *Aalborg U.*

Digital transformation is increasingly vital for public organizations yet articulating and envisioning the future state of the transformation while leading the process is inherently challenging. To understand this uncertain process, we zoom-in on anticipation work, that is how (top)managers use narratives to shape actors' digital technology understandings and expectations for the future. While current literature focus on the efforts by top managers in articulating appealing visions in the earliest stages of the transformation process, we provide a processual account revealing anticipation work as an ongoing activity. To develop our argument, we report from a digital transformation initiative in a Danish local government organization that involved high hopes, delays, and emerging conflicts. We show how anticipation work unfolded and altered over time and infer three types of forward-looking narratives: prognostic, setback and persisting narratives. This focus helps understand why digital transformation leadership in public organizations is a complex endeavor requiring ongoing anticipation work in which narratives need to be adapted to emerging and unforeseen situations.

PNP: Virtual Work as a Demand? Employees' Work Behavior in the Public Sector During COVID-19

Author: **Lena Lenz**, *U. of Hamburg*
Author: **Fabian Hattke**, *U. of Hamburg*
Author: **Janne Kalucza**, *U. of Hamburg*
Author: **Friederike Redlbacher**, *U. of Hamburg*

The need for rapid digitalization during the COVID-19 pandemic poses an ongoing challenge for the public sector and recent research reveals mixed effects of virtual work. This study models the abrupt introduction of virtual work during COVID-19 as a demand within the Job Demands-Resources (JD-R) model. Using survey data from 1,173 public employees collected during the second national lockdown in Germany, we assess how virtual work as a demand moderates the relationship between a number of organizational and personal job resources on organizational citizenship behavior (OCB) and counterproductive work behavior (CWB). Our results show that virtual work only moderates the relationship between self-discipline and CWB, while all other studied relationships between job resources and OCB and CWB are unaffected. These results contribute to the theoretical debate regarding the multiplicative or additive nature of the JD-R model and the practical debate around virtual work being a hindrance or a positive challenge in the public sector.

PNP: The Spontaneous Creation of Public Value: Open Digital Collaboration Among Public Professionals

Author: **Hongxia Peng**, *Rouen U.*

This article presents a study aimed to understand the role and effect of spontaneity in public value creation (PVC) by examining the process of spontaneous collaboration within open professional digital spaces (PDSs) in which public professionals interact regarding professional topics. It first describes the existing research that contributed to the construction of our research question and framework. It next examines the significance of focusing on spontaneous collaboration to study PVC in the digital era context. Using a framework built on process analysis, this study scrutinizes three microcases observed within two PDSs clustering public professionals working in the public territorial sector in France. The results show that first, in the context of open professional digital spaces, spontaneous collaboration could achieve PVC, although not systematically, and second, a balance between the spontaneity of demands and the spontaneity of responses is necessary for concretizing actors' spontaneity in PVC. The paper ends by suggesting further research avenues regarding spontaneous digital collaboration among public professional with the purpose of PVC.

PNP: Public Service Resilience on the Cloud: Digital Collaborations in China's COVID-19 Response

Author: **Xin Han**, *U. of Pittsburgh*

William H. Newman Award Nominee

Using the comparative case study method and qualitative data from interviews and online observations, this article examines how digital collaborations foster public service resilience under state mobilization and reveals what attributes of online communities contribute to successful collaborative emergency response. By furthering the literature on collaborative emergency management and public service resilience, this study argues that China's response to COVID-19 owes much to the self-governance of the emerging online communities. The self-organized collaborations within and between online communities—apart from public and private sectors—provide resilient services to combat the pandemic under authoritarianism, which have significant global implications for pre-crisis preparedness and post-crisis institution-building.

Public Bureaucracy and Red Tape

Session Moderator: **Rick Borst**, *Utrecht U., School of Governance*

This session explores red tape and its effects on government stakeholders. In addition to a review of the literature, papers explore the role of red tape in hindering the ability of public organizations to function effectively and promote wellbeing for stakeholders.

PNP: A Meta-Narrative Review of the Red Tape and Administrative Burden Literatures

Author: **Jesse Campbell**, *Incheon National U.*
Author: **Sanjay K Pandey**, *George Washington U.*
Author: **Lars Arnessen**, *United States Treasury*

A definition of red tape as rules that consume organizational resources but fail to contribute to legitimate goals has guided scholarship on public sector rule phenomena for over three decades. Administrative burden has recently emerged as an alternative perspective on divisive public sector rules and addresses a concern that red tape scholarship has neglected the impact of rules on citizens and overlooked the political dimension of rules. We take stock of the last decade of research on red tape and administrative burden using the meta-narrative review approach. We identify 5 narratives within the 2 research traditions, each guided by common research questions, theoretical mechanisms, privileged actors, and rule assumptions. We inspect these narratives and discuss their complementary strengths and weakness. This meta-narrative review provides an analytical tour of the public sector rule research traditions and makes recommendations to improve their conceptual foundations, methodological instruments, and scope.

PNP: Is Red Tape Hindering the HRM Value Chain in the Public Sector?

Author: **Rick Borst**, *Utrecht U., School of Governance*
Author: **Rutger Blom**, *Radboud U. Nijmegen*

Red tape is often framed as a characteristic deeply rooted in all subsystems of public organizations which significantly impacts the human resource management (HRM) process. According to the HRM process, for example transformational line managers implement HRM practices which subsequently will be perceived by employees and then lead to several outcomes on multiple levels (employee, organization, and society). While it is argued that red tape is deeply rooted in this process, studies only focused on the direct effects of red tape on leadership behavior, perceived HRM and employee/organizational outcomes, but never studied how it is really ingrained in the processes. We therefore fill this gap. Moreover, the HRM and red tape literature only focused on employee and organizational outcomes, while societal outcomes are understudied. The research-question therefore is: To what extent does red tape hinder the direct and indirect relations between transformational leadership, perceived HRM, and (employee-, organizational- and societal) well-being? Based on a representative sample of 4,688 Dutch public servants it can be concluded that red tape negatively moderates the relations between transformational leadership and both organizational and societal outcomes but in contrast to expectations positively moderates the mediation of transformational leadership through HRM satisfaction on these two outcomes.

PNP: Red Tape and Organizational Dehumanization

Author: **Constantin Lagios**, *Catholic U. of Louvain*
Author: **Nathan Nguyen**, *Catholic U. of Louvain*
Author: **Florence Stinglhamber**, *Catholic U. of Louvain*
Author: **Gaëtane Caesens**, *U. Catholique de Louvain*

This research investigates the extent to which employees facing unnecessary, ineffective, and burdensome rules (i.e., red tape) feel dehumanized by their organization, and examines the consequences of such a relationship for both employees and organizations. First, a cross-sectional study (N = 374) shows that red tape is positively related to organizational dehumanization which, in turn, negatively influences employees' well-being (decreased job satisfaction and increased psychosomatic strains) and attitudes (decreased affective commitment and increased turnover intentions). Going one step further, a second, experimental study manipulating red tape (N = 197) indicates that red tape has a positive causal effect on organizational dehumanization, hence decreasing job satisfaction and affective commitment, and increasing turnover intentions. Finally, a third, cross-sectional study (N = 479) replicates these findings and shows that these links do not differ across the public and private sectors. Directions for future research and practical implications are discussed.

PNP: Corporatization, Administrative Intensity and the Performance of Public Sector Organizations (WITHDRAWN)

Author: **Gianluca Veronesi**, *U. of Bristol*
Author: **Ian Kirkpatrick**, *U. of York Management School*
Author: **Ali Altanlar**, *Leeds U. Business School*
Author: **Fabrizia Sarto**, *U. of Naples Federico II*

The process of corporatization in public services has led to the emergence of new, more autonomous organizational forms. The aim has been to make public sector bureaucracies more business-like, in the hope that this will enhance performance. However, while previous research largely supports this assumption, we know far less about the impact of corporatization on the administrative intensity (AI) of public sector organizations. We address this gap focusing on the effects of Foundation Trust status on administrative intensity (AI) and performance in the acute care hospital sector in the English NHS. Based on a database of nine years (2008/09-2016/17) and dynamic panel data regressions, the results show that corporatization has two primary consequences: improved overall performance; and lower levels of AI. Further analysis reveals that lower levels of AI, in turn, positively mediate the relationship between corporatization and performance, although only in relation to efficiency outcomes. These findings highlight the crucial, but previously misunderstood, importance of lean administration as part of the corporatization reform package, with implications for research, theory, and policy.

Author: **Julia Andrea Trautendorfer**, *Johannes Kepler U. Linz*
Author: **Lisa Schmidhuber**, *WU Vienna U. of Economics and Business*
Author: **Dennis Hilgers**, *Johannes Kepler U. Linz*

Worldwide, increasing public pleas for freedom of information led more and more countries into committing to access-to-information (ATI) laws. These regulations oblige public officials to provide answers to citizen requests and thus grant citizens with the right to demand public information and gain insight into government data and processes. Yet, even though authorities are obliged to disclose upon request, not all citizen information requests are treated with equal bureaucratic attention. This study focuses on this sort of administrative discrimination and aims at examining potential determinants for varieties of bureaucratic responsiveness to citizen information requests. By drawing on a citizen-driven model of public responsiveness, we want to shed light on the exchange of information in the frame of citizen-state interaction and the human aspect behind these processes. Particularly, we argue that the topic citizens ask for as well as the way in which they communicate their requests may influence the corresponding authority's response. Results from applying text mining and regression techniques to over 150,000 citizen information requests from a German online ATI-platform support our hypotheses. Bureaucratic responsiveness is associated with the specific topic asked for and the way in which the communication tone of the request is formulated.

Values, Ethics, Social Responsibility and the Role of the Firm

Session Moderator: **Thomas J. Donaldson**, *The Wharton School, U. of Pennsylvania*

SIM: One Size Does Not Fit All: Health, Legal Services and Education Firms have Deeper Responsibilities 

Author: **Thomas J. Donaldson**, *The Wharton School, U. of Pennsylvania*

The most popular ways of measuring the social responsibility of a corporation, whether by stakeholders, stockholders, or “shared value,” adopt a one-size-fits-all approach. The theories make an important and convenient assumption about the basic, underlying measurement process, namely, that all firms, regardless of industry, can be measured against a generic pattern. It is time to rethink the one-size-fits all truism. Drawing on work by Donaldson and Walsh, I show why companies in industries denominated by intrinsic values such as health, knowledge and justice, must take on weightier responsibilities vis a vis the particular intrinsic value, such as health, that defines their industry. The reasons why, as I will explain, derive from a reframed, more accurate model of “value creation,” one that relies on practical reason. A reframed model of value creation shows why Moderna or Pfizer, for example, have special obligations to prioritize the equitable global distribution of Covid 19 vaccines.

SIM: From Generic Corporate Purpose to Generic Frameworks for Responsible Strategy  

Author: **Gaston De Los Reyes**, *Glasgow Caledonian U.*

I argue that the generic way that the purpose of the corporation has been debated and defined in the academy and public square fails to address the very real need for robust purpose in business in the 21st century. These generic statements mischaracterize the phenomenon, lack normative warrant, and have little to no bearing on the sense of organizational mission needed for robust corporate purpose. I target my critique towards several classics of the genre, including shareholder primacy and the stakeholder capitalism newly in vogue since the Business Roundtable’s 2019 Statement on the Purpose of the Corporation. Whereas the search for generic corporate purpose is futile, if not counterproductive, I argue that generic frameworks of practical reason are useful to help answer the concerns motivating the Business Roundtable’s Statement to help drive corporations towards net positive social and environmental impacts.

SIM: The (Im)possibility of Educating an Ethical Sense of Kairos in Organizations

Author: **Francois Duhamel**, *U. de las Américas Puebla*

Author: **Alexander Niess**, *Rennes School of Business*

Abstract: The question of timeliness, or kairos, is taken up in studies of practical wisdom in organization studies (Holt and Johnsen, 2019) to give it an ethical direction. It is important to link kairos with phronesis to avoid the temptation of devious opportunism. Developing an ethical sense of kairos in organizations depends on specifying the way it can be learned and taught. Some authors contend that this is simply not possible. Other authors trust that it is possible to train people in organizations about it, others that it can be developed only through experience and thanks to the inspiration from exemplar people. In this paper we argue that learning and teaching phronesis and the associated sense of kairos in organizations does not come from exemplarity per se, but as the outcome of a shared capacity of agents to mobilize and nurture the imaginary variations of their capacity to act. This must be made in an ethical way, aiming at “good life”, caring for others in just institutions (Ricoeur, 1994), to face singular circumstances in a timely fashion. Mobilizing the power of imagination to seize opportunities matters to depart from a pure rationalistic view that may not reflect the fullness of the human experience of kairos.

SIM: Moral Repair: Towards a Two-Level Conceptualization (WITHDRAWN)

Author: **Jordi Vives Gabriel**, -

Author: **Wim Van Lent**, *IESEG School of Management (LEM-CNRS 9221)*

Author: **Florian Wettstein**, *U. of St. Gallen*

Moral repair is an important way for firms to heal moral relationships with stakeholders and restore their legitimacy following a transgression. The concept is rooted in recognition theory, which is often used to develop normative perspectives, but recognition theory can also be used to develop a view of moral repair as premised on negotiation between offender and victim(s), which involves social construction of the transgression and the appropriate amends. From this perspective, the practice of moral repair is inherently problematic, especially towards multiple victims. Moral repair’s paradoxical conceptualization leads to unclarity regarding the extent of its normativity, which begs the question how offending firms should approach moral repair. Addressing this question, we refine its conceptualization, distinguishing between procedural and substantive levels of practice. Procedural moral repair reflects normative thinking, because firms can work to maximize the likelihood of success of their exchanges with victims, while substantive moral repair evinces socio-constructivism, since the appeal of amends depends on victim interpretation. Our two-level approach to moral repair promotes conceptual clarity, contributes to a more systematic “roadmap” for firms engaging in moral repair, and paves the way for more integrative analysis of the relationship between the making of amends and moral outcomes.

Beyond JV's and Alliances: Organizational Implications of Markets, Platforms and Clusters

Session Moderator: **Doerte Leusmann**, *U. of Passau*

STR: Towards a Socio-Cognitive View on Digital Platform Firms: An Organizational Identity Perspective  

Author: **Carolin Castell**, *U. of Passau*
Author: **Jasmin Kiefer**, *U. of Passau*
Author: **Andreas Sebastian Konig**, *U. of Passau*
Author: **Jan Schumann**, *U. of Passau*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Sebastian Schubach**, *U. of Passau*

In this paper we induce novel theory on the idiosyncratic nature and consequences of organizational identity in digital platform firms—i.e., intermediaries enabling interaction between market sides—such as Uber or Airbnb. Specifically, based on an inductive multi-case study, we distill four archetypes of organizational identities of digital platform firms, characterized by organization members' idiosyncratic construals of their firm's domain identity, i.e., traditional or transformative, and role identity, i.e., facilitator or connector, respectively: traditional facilitator, transformative facilitator, traditional connector, and transformative connector. We further induce nomological propositions as to how identity-infused patterns of interpretation render these firms to differ regarding their predominant multi-sided customer understanding and organizational structure as well as the openness of their platform design. Overall, we contribute by introducing a socio-cognitive perspective of digital platform firms, which enhances and challenges the so far predominantly transactional view on this central phenomenon of the digital economy, and show how this perspective opens up new ways to describe and explain differences between digital platforms. In particular, our organizational identity lens and thereon based theoretical framework provide hitherto unexplored cues into explaining interfirm variance in central elements of digital platform structure and patterns of behavior. Keywords: Digital platform; digital transformation; ecosystem; organizational identity; multi-sided market

STR: How Much Internal Agglomeration is Good in a Mediated Expansion?   

Author: **Serghei Musaji**, *U. of New Brunswick*
Author: **Julio O. De Castro**, *IE U. - IE Business School Madrid, Spain*

While strategic management research has put lots of effort into understanding the battle between the positive and the negative implications of geographical agglomerations, it has mostly been focused on the co-location of independent firms – external agglomeration. The implications of internal agglomerations remain underexplored. Even less attention has been paid to contexts, where agglomerations are mediated by independent firms. Platform markets and franchising firms are common examples. In those cases, the platform owner or the franchisor is making the agglomeration decisions, whereas private vendors/franchises are the ones who directly face their consequences. This is a problem since we do not know whether their interests are aligned. Building on the organizational ecology literature, we argue that a conflict of interest exists but mostly applies to the early expansion stages. We also discuss how spacing the entries in time and geography can mitigate it. We analyze our arguments using 5,955 market entry decisions made by an international money transfer platform organized as a franchising network while entering 426 metropolitan areas in 11 countries in 14 years (2001-2015). The implications for theory and practice are discussed.

STR: Defining Strategic Collaboration: Antecedents of Explicit Meaning (Re)-Negotiation

Author: **Doerte Leusmann**, *U. of Passau*
Author: **Marvin Hanisch**, *U. of Groningen*
Author: **Carolin Haeussler**, *U. of Passau*

Creating a shared understanding is essential in strategic alliances. To achieve this shared understanding, alliance partners can formulate explicit meaning by including definitions in their contracts. While explicit definitions reduce interpretive uncertainty, they can also question implicitly held meaning. This paper examines the antecedents of contractual definitions in alliance agreements and argues that partners will more likely resort to explicit definitions when their social and technological repositories overlap because overlaps (1) unleash the capacity for explicit definitions and (2) establish mutual appreciation of explicit definitions. We also argue that when technological uncertainty is high, the influence of social overlap on the inclusion of definitions is stronger, whereas when technological uncertainty is low, the influence of technology overlap is more pertinent. We test our conceptual model using a large panel data set of strategic alliance agreements in the biopharmaceutical industry. Our paper advances the literature on strategic alliances by drawing attention to the hitherto unexplored phenomenon of codified meaning in contracts and linking it to the literature on strategic communication.

Author: **Kevin Zheng Zhou**, *U. of Hong Kong*

Author: **Jiaxuan Li**, *School of Management, Huazhong U. of Science and Technology*

Despite the long recognition of the dyadic nature of interfirm trust, prior studies have not examined how trust asymmetry affects relationship outcomes. This study examines trust asymmetry in buyer-supplier exchanges from a dyadic perspective, predicting that when buyer trust is greater than supplier trust, trust asymmetry leads to a decrease in supplier performance over time. However, when suppliers trust more than buyers, the prediction is that trust asymmetry results in an increase in supplier performance. The study further incorporates an institutional view to examine the moderating roles of legal support and regulatory uncertainty. An analysis of a two-wave survey of 229 buyer-supplier dyads provides support for the effects of trust asymmetry. Moreover, legal support weakens the negative impact of buyer trust asymmetry and the positive role of supplier trust asymmetry, while regulatory uncertainty magnifies the influence of buyer trust asymmetry. These findings provide fresh insights into the dyadic nature of trusting relationships and offer important implications for trust research and for better management of firm exchange relationships.

This symposium discusses the perpetuation of societal defaults—assumptions favoring the majority category as opposed to specified linguistics which explicitly state the category—and how they maintain systems of structural inequality. The first presentation articulates the process through which linguistics constructively influence the default understanding of various identities in the workplace. The second presentation dives deeper into linguistic default assumptions that affect marginalized individuals by examining the affects of pronoun signposting during the hiring process. The third presentation expounds upon the minority/ally relationship by quantitatively exploring factors critical to its existence and communication of minority identity to allies. In the third presentation, a comprehensive framework on workplace allies elucidates factors preventing allyship and teases out the underlying mechanisms leading to stronger relationships between stigmatized employees (such as LGB employees) and their allies (heterosexual employees). The fourth presentation involves an intervention study looking at how diversity, equity, and inclusion (DEI) initiatives can influence dominant employees (e.g., whites, men) to change their default understanding of their membership to a privileged social identity group. Finally, the last presentation qualitatively explores alternatives to the default professional image and formulates definitions of Hood culture, Hood identity, and its presence in the workplace. This symposium speaks to a variety of stigmatized groups, not fully embraced by organizations, and argues that their inclusion into organizational norms is critical to advancing the DEI literature as a whole.

Participant: **Mo Wang**, *U. of Florida*

Over the years, the topic of gender and leadership has aroused considerable interest from organizational scholars, with research finding important gender differences across a range of outcomes relevant to leadership (e.g., Eagly & Karau, 2002; Paustian-Underdahl, Walker, & Woehr, 2014). For example, men and women differ in their propensity to attain positions of power within organizations (Gino, Wilmut, & Brooks, 2015), with women remaining substantially underrepresented in leadership (Catalyst, 2020). Once a leadership position is attained, important gender differences emerge in how male and female leaders are then perceived by others. For instance, female leaders often suffer significant social penalties for performing traditional male-oriented roles (e.g., Eagly & Karau, 2002; Koenig et al., 2011) and, as a result, experience a greater likelihood of sabotage, criticism, and undermining relative to their male counterparts (e.g., Ely, 1994; Heim, 1990; Rudman et al., 2011). Likewise, scholars have studied potential gender differences in the behavior of leaders, with meta-analytic evidence suggesting that men and women often differ in how they lead and treat their direct subordinates (Eagly et al., 2003; Mackey et al., 2017). Despite these fruitful findings and discussions, there is still much to be known at the intersection between gender and leadership. For example, little is known about how women's cognitive processes may affect leadership pursuit. Moreover, although research has investigated potential differences in how male versus female leaders are perceived by others, oftentimes such impressions are assessed using a single behavioral indicator (e.g., anger; Brescoll & Uhlmann, 2008). Likewise, while studies have shown that there may also exist important differences in the ways in which male and female leaders treat their direct subordinates, much of this work has focused somewhat narrowly on particular behavioral (e.g., transformational leadership) or decision-making (e.g., autocratic versus democratic) styles. Recent scholarship has taken notice of these limitations, and have called for additional insight into how gender effects the ways in which leaders emerge and are perceived, and for further research on the gender differences in "leader behaviors beyond transformational leadership and those that are highly agentic or communal in both intrapersonal and interpersonal leadership processes" (Shen & Joseph, 2021). Thus, it appears we may have only scratched the surface in understanding gender differences in leadership. Accordingly, there are likely important and interesting avenues still waiting to be explored within this area of research, such as the cognitive and structural underpinnings that can inform why men and women differ in their propensity to pursue leadership positions, the complex and evolving impressions formed about men and women once they attain leadership positions, and the potential differences in the ways in which male and females lead, react to, and potentially harm, their direct subordinates. Our symposium aims to tackle these questions and deepen our understanding of gender and leadership by bringing together four papers that explore a broad range of outcomes relevant to leadership. Moreover, the papers included in this symposium will explore a diverse set of contexts, theories, and conditions that further explain why, how and when gender differences in leadership manifest within organizations, thus providing exciting new directions for future research.

The COVID-19 pandemic has highlighted and exacerbated social inequality within the U.S. As a result, many organizations have attempted to increase the gender and racial/ethnicity diversity of their organizations to potentially help reduce social inequality. The papers in this symposium test assumptions regarding various diversity efforts to examine the effects of these efforts on organizational perceptions and on people's feelings of inclusion and belonging. The first paper investigates the effectiveness of asking applicants to provide diversity statements to see whether asking for these statements increases the diversity of applicants/hires and signals to applicants that the organization values equity, diversity, and inclusion. The second paper explores how disclosure of employee diversity data influences impressions of organizations. The third paper investigates concerns that dominant group members may have towards organizational diversity efforts and explores ways to garner support from dominant group members for diversity efforts. Finally, the fourth paper explores how structured evaluation processes may increase employees' perceptions of inclusion and belonging within organizations. Together, the papers in this symposium provide insights into how managers can potentially increase diversity, equity, and inclusion within organizations.

IM: Competitive Awareness of Emerging and Developed Economy Multinationals

Author: **Canan Mutlu**, *Kennesaw State U.*

Author: **Mike W. Peng**, *U. of Texas at Dallas*

Author: **Craig David Macaulay**, *California State U., Long Beach*

Author: **Sheen S. Levine**, *U. of Texas at Dallas*

In this article, we develop a framework to explore the differences of competitive awareness between emerging-economy multinational enterprises (EMNEs) and developed-economy multinational enterprises (DMNEs). First, we categorize the sources of competitive awareness into four quadrants based on the known or unknown information to both DMNEs and EMNEs. All four quadrants represent different challenges as firm strategy depends on how accurately firms perceive their competition. Second, we apply our framework to four different competitive landscapes as the home country of the EMNE, home country of the DMNE, another emerging economy, and another developed economy. Based on this framework, we develop our propositions by integrating the micro-foundations of the attention-based view. The rivalry between Alibaba and Amazon in their home countries (China and the United States) and third countries (India and Europe) is used to illustrate our model.

IM: The Impact of Organizational Ambidexterity on the Family Firm Internationalization  

Author: **Heng-Yih Liu**, *Yuan Ze U.*

Author: **Chia-Wen Hsu**, *National Chung Cheng U.*

This study seeks to investigate the effect of organizational ambidexterity on the internationalization of family-controlled firms from emerging economies. Analysis of a balanced panel dataset of 130 publicly listed family firms in Taiwan spanning 16 years (2000 to 2015) reveals that family-controlled firms have a lower degree of internationalization than nonfamily-controlled firms, and that this relationship is moderated by the level of organizational ambidexterity. The results contribute to answer the question that how does family control influence the internationalization of firms and also help us better understand the contingency role of organizational ambidexterity. Furthermore, these findings show that organizational ambidexterity supports the internationalization of family-controlled firms.

IM: Regional Geographic Diversification and Innovation: Moderating Roles of Environmental Dynamics

Author: **Chanhyuk Shin**, *Korea U. Business School*

Author: **DuckJung Shin**, *Korea U. Business School*

Regional geographic diversification helps multinational enterprises (MNEs) to obtain learning opportunities and dynamic capabilities for innovation. However, due to the turbulent environments associated with doing business internationally, the effectiveness of regional geographic diversification can be contingent on internal and external situations. Drawing on contingency theory, this study investigates whether the regional geographic diversification-innovation relationship is moderated by the MNEs' internal (organizational change and churn in human resources) and external environmental dynamics (industrial growth and instability). To empirically test the hypotheses, this research uses multi-source and time-lagged data obtained from 323 manufacturing companies and 850 observations in a nine-year period in Korea. We find that regional geographical diversification is positively related to organizational innovation. The effect of regional geographical diversification on organizational innovation is stronger under the high organizational change. The relationship between regional geographical diversification and organizational innovation is moderated by churn in human resources but in an opposite direction. The effect of regional geographical diversification on organizational innovation is positively moderated by industry instability. Theoretical and managerial implications of the study are discussed.

IM: Scaling Social Impact: The Internationalization Process of Social Enterprises  

Author: **Elisa Dries**, *KU Leuven*

Author: **Nazli Massihi**, *IESEG School of Management - KU Leuven*

Author: **Johan Bruneel**, *KU Leuven*

Author: **Filip De Beule**, *KU Leuven*

In recent years, a considerable amount of research focus has been revolving around social enterprises' internationalization as a means to scale their activity, yet not enough attention has been forwarded to how they would struggle to maintain the core social values and goals while also overcoming the challenges to their democratic governance. The present work, puts highlighted attention on scaling the social impact of social enterprises across borders in a qualitative multiple case study focusing on business model elements and other potential facilitators through seven open in-depth interviews with the CEO/founder or managerial team member of Belgian social enterprises. The findings of this research not only contributes to expanding the social entrepreneurship literature aided by analyzing the business model and governance of social enterprises, but also enlightens the influence of barriers and facilitators of the internationalization process of social enterprises.

IM: Institutions and FDI Attractiveness in Developing Countries: A Meta-Analysis  

Author: **Evgeniya Karpovich**, *TBS Business School, U. of Toulouse Capitole*

This meta-analysis aims to explore the relationship between institutions and foreign direct investment (FDI) attractiveness in host developing countries. By synthesizing empirical tests derived from 193 studies covering over four decades of research (1975-2018) across various disciplines, we attempt to further advance the contextualization of this relationship. We find support of previous theoretical arguments predicting that institutional factors such as rule of law, quality of regulatory environment, and democracy promote FDI in developing countries while political instability, corruption, and cultural distance deter FDI. Nevertheless, further evidence suggests a substantial heterogeneity in the strength and significance of the FDI-institutions relationship across regions of destination, investment source countries, and industry environments. We also discuss additional interesting findings and propose potential avenues for future research.

IM: How Divergent and Convergent Thinking Iterations Interact with FDI to Produce Technological Outcomes  

Author: **Edward Levitas**, *U. of Wisconsin, Milwaukee*

Author: **Tailan Chi**, *U. of Wisconsin, Milwaukee*

This study investigates a mechanism that potentially helps an indigenous firm to benefit from the spillovers from inward FDI and protect itself from the possible harms of intensified competition for markets and inputs that are also associated with inward FDI. The mechanism is iteration between divergent and convergent thinking in the firm's inventive and innovative endeavors. We theorize that a demonstrated capacity for such iteration enhances an indigenous firm's success in invention and innovation and the firm's chance of benefiting from rather than being hurt by inward FDI. Our empirical tests using data from the biopharmaceutical industry in the US provide support for our theory and hypotheses.

IM: Investment Motives of MNCs, FDI in Specific Sectors and Economic Growth  

Author: **Hanh Pham**, *Leeds U. Business School*

Author: **Mai Vu**, *Foreign Trade U.*

Drawing on mainstream theories on investment motives of multinational corporations (MNCs), known as eclectic paradigm (Dunning, 2000), and foreign direct investment (FDI)-growth nexus (Borensztein et al., 1998), this paper examines how different investment motives of MNCs affect the economic growth in host countries. It first constructs a theoretical framework in which different motives of MNCs drive FDI into different specific sectors and, in turn, affect host countries' long-term economic growth. The paper then tests the theoretical predictions on a panel of 16 least developed countries in Africa during the 2001-2017 period. Estimation results, obtained from the generalised method of moments, reveal significant and positive effects of FDI in manufacturing and FDI in agri-aquaculture but insignificant effects of FDI in utility supply and FDI in infrastructure construction on GDP growth. While the growth effect of FDI in extractive sectors is mostly negative, it is statistically insignificant. The results are robust across different regression specifications and proxies of FDI variables. They convey useful implications for research and public policy in FDI receiving countries.

Multi-dimensional View of Organizational Objectives

Session Moderator: **Joseph Yestrepky**, *Wayne State U.*

STR: The Interaction of Uncertainty, Threat and Opportunity During Strategic Issue Diagnosis

Author: **Joseph Yestrepesky**, *Wayne State U.*

Author: **Scott D Julian**, *Wayne State U.*

Author: **Amanuel G. Tekleab**, *Wayne State U.*

Author: **Tamme Quinn Grzebyk**, *Wayne State U.*

In strategic issue diagnosis, dimensions of perceived uncertainty (effect and response) have been linked with elements of environmental interpretation (threat and opportunity) and each cognitive perception has been proposed to impact managers' response. However, research examining the implied interactions between these perceptions has lagged. To examine these interactions, we theorized and tested using a scenario-based vignette study, where MBA students were asked to diagnose and respond to the strategic issue of NAFTA renegotiations. Consistent with our predictions, the relationship between uncertainty and response was contingent on perception of opportunity and threat, providing robust evidence for the presence of interactions across hypotheses. Our findings lend empirical support for conceptual frameworks suggesting the existence of links between uncertainty, interpretation, and response during strategic issue diagnosis.

STR: Employee Dilemmas from Competing Organizational Goals: Insights from Emergency Medical Services   

Author: **Timothy Gubler**, *Brigham Young U.*

Author: **Haibo Liu**, *U. of California, Riverside*

Author: **Alexandru Roman**, *CSUSB*

Organizations face unique challenges when simultaneously pursuing conflicting organization-level objectives. We study how frontline employees deal with competing financial and social objectives within the context of Emergency Medical Services. Using data from 31 US states, we find that even in the absence of direct financial incentives, emergency crews are responsive to the financial objective of their agencies by providing differential service to patients based on their ability to pay. Private insurance and Medicare patients receive more procedures (6.1% and 1.9%) and have longer transport times (5.3% and 4.0%) than Medicaid patients after controlling for call and patient characteristics. Importantly, we also find evidence suggesting that EMS crews vacillate between the financial and social objectives between calls, depending on the relative salience of the objective.

Paper is Available to Meeting Registrants Only.

STR: Multiple Goals and Learning 

Author: **Hyunjin Kim**, *INSEAD*

Firms often pursue and communicate multiple goals, although much theory recommends against doing so. I empirically explore the impact of communicating multiple goals, and propose that the type of learning involved drives the extent to which multiple goals hurt performance. I design and run a field experiment across 270 pairs of linemen in a multinational energy corporation as they are evaluated on a procedure, randomly varying (1) whether they are assigned to pursue a single goal (safety alone) or multiple goals (both safety and efficiency) and (2) whether they engage in learning-by-doing (no additional information) or vicarious learning from best practice information (observing best-in-class linemen). When linemen are engaged in learning-by-doing, communicating multiple goals improves performance compared to focusing. However, when paired with best practice information, multiple goals dissipate the gains from vicarious learning. The findings suggest that when choosing to communicate multiple goals, a key consideration for organizations may be whether the task involves vicarious learning and whether employees are inside the productivity frontier.

STR: Why do High-Status Firms Become Targets of Competitive Attacks? An Examination of Two Explanations

Author: **Tejaswi Channagiri Ajit**, *U. of Florida*

Author: **Walter J. Ferrier**, *U. of Kentucky*

Author: **Rhonda K. Reger**, *U. of North Texas*

Competitive dynamics research has often used the AMC framework—awareness, motivation, and capability—when theorizing how different factors influence firms' proclivities to launch competitive moves against other firms. However, this stream of research has mostly overlooked the role of social evaluations in determining which firms are targeted. We study how a specific form of social evaluation, relative status, impacts motivation to act competitively against other firms. Research is divided on how relative status affects competitive moves. Some research suggests that awareness mediates the relationship between relative status and motivation. Other research suggests that relative status moderates the relationship between awareness and motivation. It is important to resolve the relationship between relative status, awareness, and motivation because it can help firms take actions to lower the likelihood that they will become targets of competitive attacks by other firms. Teasing out the effects of the two competing explanations has been difficult, however, because relative status, attention, and motivation are typically not measured directly. We test both mechanisms in a unique dataset of food trucks in a mid-sized city in the U.S. that allows us to overcome this limitation. We find that high-status food trucks elicit greater competitive motivation from other food trucks primarily due to the greater attention the high-status food trucks garner. Further, we find no support for a moderation effect. Our study helps understand the interplay between awareness and motivation in the context of social evaluations.

STR: Organizational-Performance Pay and Compensation Dispersion 

Author: **Jiayi Bao**, *UNC-Chapel Hill*
Author: **Andy Wu**, *Harvard Business School*
Author: **Miaomiao Zhang**, *Harvard Business School*

We document the performance implications of compensation dispersion under organizational-performance pay, a scheme where individual compensation consists of a pre-designated share of rewards contingent on organizational performance. We examine the field setting of professional eSports athletes facing an exogenous change in the distribution of shares of team-based rewards. We find that unequal, heterogeneous share dispersion—relative to equal, homogeneous compression—results in lower organizational performance. While share dispersion aligns the incentives of high-share individuals with the organization's—motivating them to contribute more—it also engenders unfavorable social comparison among low-share individuals—demoralizing them into contributing much less. A complementary controlled experiment validates the findings and demonstrates that organizational-performance pay, relative to other payment schemes, exacerbates the consequences of dispersion, especially when reward-sharing is cognitively salient.

STR: Precursors to Workers' Perceptions of Human Capital Specificity 

Author: **Bukky Akinsanmi Oyedeji**, *U. of Texas at Austin*
Author: **Ilhwan Na**, *U. of Kansas*
Author: **Clint Chadwick**, *U. of Kansas*
Author: **Russell Coff**, *Wisconsin School of Business*

Recent work made the distinction between how individuals think about their skills and the actual usefulness of such skills, thereby demarcating between perceived and objective firm-specific human capital (FSHC). This divergence has important theoretical implications, because many theories in the strategy literature rely on the notion that FSHC functions as an isolating mechanism. Because classical human capital theory side-stepped the divergence issue by assuming that workers are informed, rational actors, how workers' perceptions of FSHC emerges is under-researched. Therefore, we examine when and why workers perceive their human capital as firm-specific. As could be expected, our empirical results suggest that workers develop perceptions of FSHC after unsuccessful forays into the labor market and when regional unemployment rates are high. Surprisingly, we also find that workers' perceptions of the firm-specificity of their human capital are associated with financial precarity that are unrelated to their human capital.

STR: Does Employing Skilled Immigrants Enhance Competitive Performance? Evidence from Football Clubs   

Author: **Britta Glennon**, *The Wharton School, U. of Pennsylvania*
Author: **Francisco Javier Morales**, *U. Diego Portales*
Author: **Seth Carnahan**, *Washington U. in St. Louis, Olin Business School*
Author: **Exequiel Hernandez**, *U. of Pennsylvania*

We investigate the effect of hiring skilled immigrant employees on the competitive performance of organizations. This relationship that has been difficult to establish in prior work due to theoretical ambiguity, limited data, and inherent endogeneity. We overcome these difficulties by studying European football (soccer) clubs in Germany, France, England, and Spain during 1990-2020. Detailed microdata from this setting offers unusual transparency on the migration and hiring of talent and their contribution to collective performance. Further, the industry is characterized by country-level changes in rules that govern the number of immigrant players clubs can hire and deploy. Using these rule changes as the basis for instrumental variables, we find a positive local average treatment effect of the number of immigrant players fielded by a club on the club's in-game performance. To examine the theoretical mechanisms, we explore whether immigrants cause superior performance because they are more talented than natives or because they enhance the national diversity of their clubs. We find strong evidence for the talent mechanism. We find contingent evidence for the national diversity mechanism: national diversity has a positive relationship with club performance only when the club employs an immigrant manager (coach). The presence of an immigrant manager also strengthens the positive relationship between the number of immigrant players and club performance.

STR: Shocks to Star Employees, Modular Collaboration Patterns, and Organizational Performance  

Author: **Francisco Javier Morales**, *U. Diego Portales*
Author: **Seth Carnahan**, *Washington U. in St. Louis, Olin Business School*
Author: **Exequiel Hernandez**, *U. of Pennsylvania*

We examine how the modularity of an organization's collaboration patterns affect how it performs in the wake of negative and positive shocks to the productive capacity of its star employee. Using remarkably fine-grained data from the European club football (soccer) industry from 2010-2019, we document that clubs with modular patterns of collaboration (measured using millions of passes in previous matches) experience smaller drops in performance when their star player is out with an injury. However, clubs with modular patterns of collaboration also benefit less when the star player experiences a positive shock to his motivation. Thus, modular organizational forms create an important tradeoff: while they may help buffer organizations from negative shocks, they may also make it more difficult for the organization to benefit from positive shocks.

Technology and Competitive Strategy Track: Management of Innovation and R&D Strategy

Session Moderator: **Julian Cortes**, *U. del Rosario*

TIM: What is the Message of Mission Statements?

Author: **Julian Cortes**, *U. del Rosario*
Author: **Juliana Duenas**, *U. del Rosario*

The mission statement (MS) is used by all types of organizations worldwide. It expresses environmental factors, formulates goals and targets to be achieved, selects differentiated competencies, and identifies the resources needed to carry out and assess its primary activities. Over the past forty years, research on the relationship between the MS and organizational performance has been prolific. Nevertheless, several empirical gaps remain, namely (1) small and national-based sample size; (2) a detailed look at research-innovation intensive organizations; (3) a lack of automated text mining appraisals; (4) and restricted access to previous compiled MS texts. With a view to closing these gaps, this study aims to map the MSs of private, public, and non-profit organizations worldwide. We examine two different organizational samples: a worldwide sample of research-innovation intensive institutions (n=1,955) and the firms listed in the NYSE (New York Stock Exchange) (n=1,330). We then conducted text mining techniques (i.e., semantic network analysis). Finally, we discussed the results by sector identifying the main word-clusters formed.

TIM: When Competition Delays Incumbent's Business Model Innovation - A Competitive Dynamics Perspective

Author: **Sascha Pascal Klein**, *U. of Kassel*
Author: **Patrick Spieth**, *U. of Kassel*

As business model innovation (BMI) is often associated with a competitive advantage and superior performance, novel business models (BM) revealed by new market entrants are subject to imitation by incumbents. Therefore, researchers frequently suggest competition drives the incumbent's business model innovations. However, despite these generic assumptions, we lack a coherent understanding of the contingencies that influence the time to adopt or imitate a new business model. However, this is an important aspect of understanding the implications of BMI. Drawing from research focusing on the competitive dynamics of competitors and the awareness-motivation-capability perspective, we theorize a set of hypotheses concerning competition and a CEO's temporal focus that captures an individual's attention to events. For testing the hypotheses, we collected longitudinal data on U.S. retailers that introduced an e-commerce business model in addition to a conventional store-based business model. Analyzing the unique dataset with Cox proportional hazard model, we find that a product market competition "delays" the imitation of BMIs for incumbents. Furthermore, the interaction analysis reveals that a CEO's future temporal focus decreases this relationship, leading to earlier imitation despite competition. With this study, we contribute to prior research that fails to offer an explanation why incumbents differ in the speed of imitating new BMs. Hence, despite explaining that competition drives BMI, we extend BMI literature by disentangling the mechanisms of how competition drives the timing of BMI, adding to the understanding of when incumbents imitate BMs.

TIM: How Science Shapes Alliance Portfolios with General-Purpose Technologies: Evidence from Graphene

Author: **Anavir Shermon**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

This paper examines how firms capture value from new general-purpose technologies (GPTs) via alliances. Due to GPTs' wide downstream applicability, firms can tailor the industry breadth of their alliance portfolios, defined as the range of downstream industries it forms alliances in to introduce the GPT. However, firms face challenges in alliance formation as potential partners in each downstream industry face uncertainty relating to the technology and the GPT-producing firm. This paper demonstrates how the number of GPT-related market applications spanned by the firm's scientific publications (i.e., "scientific market span") is positively associated with the industry breadth of its alliance portfolio. The main proposition here is that scientific publications by GPT-producing firms can signal the generality of their technology and quality as alliance partners. This relationship is positively moderated by the firm's scientific recombination. The empirical context is the emerging general-purpose technology, graphene.

TIM: Managing Interfirm Competitive-collaborative Dynamics as Stimuli for Innovative Value Architectures

Author: **Viktor Fredrich**, *U. of Bayreuth*

Complementarities from interfirm collaboration facilitate identifying and implementing innovative value architectures that may change entire industry structures. Specifically, the market overlap between collaborating firms increases opportunities from pooling resources and implicit competitive pressure. This study shows that innovative value architectures can take advantage of a simultaneous increase in market overlap and perceived competitive behavior. Such benefits through increased competition in collaborative relationships are augmented by relational intensity. However, greater trust among firms surprisingly limits such gains on innovative value architectures. We discuss these findings and raise attention to the dark side of trust in competitive environments.

This symposium showcases a set of four papers that adopt innovative approaches to uncover the inherent biases in describing and assessing women and racial minority leaders. The perspectives that the papers bring fill important gaps in existing literature by demonstrating surprising ways in which bias against women and racial minority leaders are external to the organization can also be perpetuated within it. They illustrate the way Asian CEOs are stereotypically depicted in social media, how previously established and validated personality assessments are unreliable in women and racial minority populations, how unconscious preferences for White standards of leadership and physical attributes (e.g., facial proportions) work against women, South-Asian, East-Asian, and Black leaders in how likely they are seen to be leader-like, and in how a group of Black women experience bias in a predominantly white corporate environment. The papers are novel in their methodology, use a variety of data sources (media narratives, field studies, experiments, and interviews) and examine leadership in different spheres (both politics and business) and across organizational ranks. They reveal the importance of assuming that women and racial minorities, or that their intersectional identities are an undifferentiated whole. They illustrate how research and practice in human resources should include diverse “others” when developing them as leaders in the organization. The chair and discussant will lead in a nuanced discussion of how researchers should examine leadership in these women and racial minority populations and how organizations should recruit, select, promote, and retain a multi-racial workforce.

Power and Performativity of Social Media Platforms

Session Moderator: **Hong Bui**, *Birmingham City U.*

CTO: **World Business Leaders’ Performativity of Twitter Language as Social Action**

Author: **Hong Bui**, *Birmingham City U.*
Author: **Lukasz Piwek**, *U. of Bath*

This large longitudinal qualitative study advances the theory of leadership language in the digital era by investigating the power of performativity and social action in softening the bust and constituting the boom of the world economy. More than a million tweets were collected from Twitter accounts of 70 CEOs or/and Chairmen of major global companies who had a total number of tweets above hundred and a total number of followers between 10,000 and 50,000,000 on their Twitter. This represents the entire collection of CEOs tweets between March 2006 (when Twitter was launched) and August 2019. We used those tweets to extract over 8.5 million linguistic tokens to analyze the frequency of words and hashtags, networks of bigrams frequency, and sentiments. Our findings show a possibility that the performativity of those leaders’ language on social media contributes to taking the world economy out of one of the toughest economic recessions to a record-long economic expansion built on social media influence and influencers’ impact.

CTO: **#GirlsWhoRide: Social Media Affordances-In-Practice and Their Role in Organization Creation**

Author: **Stormy Compeán Sweitzer**, *Weatherhead School of Management, Case Western Reserve U.*

Despite growing interest in the role social media plays in entrepreneurial phenomena, how social media users communicate and connect with other users in ways that facilitate such phenomena is little understood. I begin to address this question by using an affordance-in-practice perspective to explore how social media users employ features of the social network site Instagram to communicate and the role of such affordances in the process of entrepreneuring, a processual and relational understanding of organization creation. Drawing on the case of a local group of women motorcyclists which began with one woman’s online quest to find friends with whom to ride and the group’s sudden and rapid expansion into a global organization ten months later, I employ an inductive qualitative content analysis to explore patterns of communication visible in the group’s social media posts and comments by other users leading up to the group’s expansion. Emerging from this inquiry are findings that situated uses of hashtags and social tagging afford heterogeneous users both highly-targeted interpersonal and broadly-interconnective practices of communication which were instrumental in fostering growth of the group’s social media following. I theorize how these affordances-in-practice contribute to organization creation.

CTO: **Return of the Movie Night? Analyzing the Impact of Netflix Subscriptions on Offline Movie Spending**

Author: **Sihan Fang**, *Nanyang Business School*
Author: **Anand Gopal**, *Nanyang Business School*
Author: **Hyeokkoo Eric Kwon**, *Nanyang Business School*
Author: **Yongjin Park**, *City U. of Hong Kong*

The subscription-based business model is disruptive in the copy-right industries. More than a digitalized distribution channel, it fundamentally transforms both supply and demand sides. However, there is scant evidence about how and why it affects the local traditional industry. This study investigates the impact of the subscription-based business model on offline activity consumption in the motion picture industry. Leveraging a unique dataset with individuals’ every transaction record and a difference-in-differences estimation, we conclude that video streaming subscription increases offline movie consumption. We support the underlying mechanism that individuals have unmet social and hedonic demands with the imperfect disruptive technology. They, therefore, attend more social activities (i.e., movie, dining, and entertainment) to satisfy social and hedonic needs. In addition, the identified effect is more pronounced for individuals with more social (i.e., lower-income, female, and residents of smaller towns) and hedonic needs (i.e., young people). Theoretical and practical implications are discussed.

Digital Platforms, Leadership and Strategic Change

Session Moderator: **Andreas Ihl**, *Danube-U. Krems*

CTO: The Role of Online Platforms in Facilitating Freelancers' Self-leadership in the Platform Economy

Author: **Andreas Ihl**, *Danube-U. Krems*
Author: **Anne-Sophie Mayer**, *Vrije U. Amsterdam*
Author: **Kim Strunk**, *U. of Passau*

This paper investigates how online freelancing platforms can facilitate freelancers' self-leadership activities. An increasing number of freelancers use online freelancing platforms. On the one hand, such platforms offer freelancers extensive autonomy on where and when to work. On the other hand, freelancers need to cope with this autonomy and the associated challenges such as working virtually with limited contact to clients and other freelancers. In such a setting freelancers' engagement in self-leadership becomes crucial. Although rooted in the person, specific aspects of the work environment can act as important facilitators of self-leadership. Since platforms determine the work process and design the virtual work environment, we argue that they take a central role here. Despite self-leadership playing a crucial role and platforms possibly having a significant impact, research that investigates how online platforms can facilitate self-leadership, is lacking. Drawing on insights gained from a qualitative case study of a freelancing platform over one year, we derive five propositions concerning platform elements that facilitate self-leadership in terms of behaviour-focused, constructive thought patterns and natural reward strategies. Our model offers several contributions on the role of platforms in online freelancing and future directions on how to lead in virtual work settings.

CTO: Organizational Status as a Promoter and an Inhibitor of Transition to Digital Platform Business

Author: **Mengjin Gao**, *Korea U. Business School*
Author: **Young-Kyu Kim**, *Korea U.*
Author: **Jieun Kim**, *Korea U.*
Author: **Dongwon Lee**, *Korea U.*
Author: **SungYong Um**, *National U. of Singapore*

While prior research considerably expanded our understandings of the platform business and its success factors, scant attention has been paid to the cases of incumbents' strategic change from the product-based business model to the platform-based business model. Such a strategic shift may innovate value both beneficial for the firm and its stakeholders, yet it also poses a significant number of uncertainties for their constituents. Facing uncertainties, constituents are expected to find signals such as status and reputation. Thus, we examined the effect of a firm's status on the important strategic change of adding a digital platform, and the potential contingency of the effect. Exploiting a sample from the Fortune list of Top 500 companies in China, we found that high-status incumbents are more likely to add a digital platform than their low-status counterparts, thus indicating status can be seen as a promoter. After the digital platform addition, however, low-status firms are more likely to increase in performance than their high-status counterparts, thus suggesting that status can meanwhile be seen as an inhibitor. This research has contributed to our understandings of the social contingency of strategic change, digital platform business model and illuminated the need for revisiting the boundary condition of organizational status as an advantage and a constraint.

CTO: Quality vs Exposure Strategy of Platform Complementors: Simulations Using Agent-Based Model

Author: **JiYu Kim**, *UNIST, Korea*
Author: **Han-Gyun Woo**, *Ulsan National Institute of Science and Technology*

Complementors participating in the platform-based markets pursue either an exposure-oriented strategy to attract more users or a quality-oriented strategy to differentiate from others. In this research, we examine the effect of complementors' strategies on their performance and other stakeholders in the platform. Using agent-based model simulations, we model the behaviors of complementors and users in multiple market competition scenarios in the context of the mobile app market. Based on the simulation results, we derive a set of propositions on which strategy that complementors choose relates to the benefit of other stakeholders. For platform owners, maintaining a more quality-based competition landscape yields the best outcomes. However, in the early stage of the competition, exposure-seeking complementors outperform quality-seeking complementors, leading new entrants to allocate their resources into exposure strategies. In the long run, high-quality complementors are likely to win the game, but they have to survive the early stage when they are surrounded by exposure-seeking competitors. The results also suggest that complementors may be motivated to contract brokers, what we call an agency in the paper, when there is a mismatch between their strategy and capabilities. We identify the types of agencies that complementors are likely to hire, depending on their strategies and the market competition.

Author: **Sebastian Firk**, *U. of Groningen*

Author: **Jan Christoph Hennig**, *Groningen U. (RuG)*

Author: **Julian Meier**, *U. of Goettingen*

Author: **Michael Wolff**, *U. of Goettingen*

While the widespread diffusion of digital technologies forces incumbent firms to drive their digital transformation, many incumbents struggle to overcome inertial forces. In order to drive their digital transformation, incumbents increasingly turn to hiring outsider CEOs. However, while outsider CEOs are known to initiate change, their ability to implement those changes has been up for debate. We argue that in the context of digital transformation, both the initiation and implementation of change are essential for arriving at a new organizational mode suited for operating in a digital business environment. To test our hypotheses, we develop a contingency framework that assesses the influence of CEO outsiderness on the digital transformation of firms dependent on firm-level challenges with regard to initiating and implementing change. Employing a novel ML-based approach to measure digital transformation, our results show that outsider CEOs accelerate the digital transformation of incumbent firms struggling with their initiation, while outsider CEOs do not benefit the digital transformation of incumbent firms that are particularly challenged with their implementation.

Angels and Venture Capital

Session Moderator: **Daniel Blaseg**, *ESADE Business School*

ENT: Playing the Business Angel – The Impact of Business Angel Publicity on New Venture Performance 

Author: **Daniel Blaseg**, *ESADE Business School*
Author: **Lars Hornuf**, *U. of Bremen, Germany*

More and more celebrities appear as business angels (BAs) for young and innovative ventures worldwide. Celebrities, while well-known in the public eye, are typically less known for their venture valuation skills. The signaling function of celebrity affiliations through certification and quality assurance could therefore be less relevant. Nonetheless, a venture’s affiliation with a publicly known BA may still positively alter the quality perceptions of various stakeholders as publicity increases awareness, social recognition, and the ease of information processing, thereby improving the venture’s performance. Using a sample of more than 2,900 early-stage ventures that made a venture pitch during the Canadian, German, UK, or USA versions of the reality television show *Dragons’ Den*, we find that BA publicity has a positive impact on target firm survival, web traffic, and sales. The impact of BA publicity is particularly strong if the congruency between the investor and the target venture is high. These effects exist above and beyond potential selection effects, value-adding activities such as active involvement through board seats, and the mere fact that a funded venture has more financial resources. Our empirical findings have broader implications for BA financing and other nascent players in the entrepreneurial finance ecosystem. We also advance theories about signaling and reputation by providing a novel framework and empirical evidence regarding the role of investor publicity when studying new venture performance.

ENT: Value of Values for Startup Investors  

Author: **Rovian Dill Zuquette**, *Unisinos Business School (Unisinos U.)*
Author: **Iuri Gavronski**, *Ivey Business School*
Author: **Bruno Luis Avila Freischlag**, *UNISINOS U.*

To meet our present needs without compromising future generations, we need more firms with sustainable business model (SBM). However, these firms will flourish only if there are investors using financial, social, and environmental criteria in their decision-making process. To understand why invest in SBM startups, and the difference among investors that make socially responsible investment (SRI) and non-SRI, the first author participate-as-observer in an accelerator, including decision meetings about which startups to invest. We also interviewed investors of both types and collect secondary data about interviewees to validate our findings. We find that SRI investors have concerns about inequity, society, and environment, mostly because of their life history, leading to an other-regarding approach when investing, but also considering there is a better way to make business, meaning that SRI is a virtue and a practice to excel. In the other hand, non-SRI investors want to achieve financial gains, through an opportunity-seeking behavior, learn about new technologies and business models, and networking, increasing their opportunities and connections, indicating a self-interest approach. However, some non-SRI may perceive SRI as a virtue and decide to invest in SBM to achieve the good, indicating a mimetic behavior. Background play an important role as an antecedent on investment decision, and studies that evaluate other-regarding should consider individuals history. Finally, we identify that virtue and moral values play a significant role on SRI decision-making process. Future research can evaluate how background, other-regarding, and virtue can improve game, action, and behavioral theories.

ENT: Technological Novelty of Patents and Speed to IPO of High-Tech Startups 

Author: **Congshan Li**, *Xiamen U.*
Author: **Jieyu Zhou**, *School of Management, Xiamen U.*

As a signal of entrepreneurial success and a milestone for further development, high-tech startups are seeking an initial public offering (IPO) as quickly as possible. However, investors’ perceptions of technological innovation, which differs depending on its novelty degree, impact the IPO activities of startups. We theorize that the technological novelty of patents will increase public investors’ concerns and finally reduce startups’ IPO speed, because novel patents embrace a high level of market and technology risks in the commercialization process. Based on empirical data on 408 venture capital (VC)-backed healthcare startups in the US from 1990 to 2010, we find empirical evidence that the technological novelty of patents slows startups’ IPO speed. In addition, we find that the negative effect of technological novelty is weakened for startups with conventional technology, founder inventor, and prominent investors.

ENT: Government-Backed Venture Capital Investments and Performance of Companies: The Role of Networks 

Author: **Monika Köppl-Turyna**, *EcoAustria - Institute for Economic Research*
Author: **Stefan Köppl**, *Edinburgh Business School, Heriot Watt U.*
Author: **Dimitris Christopoulos**, *U. of Edinburgh business school*

In this paper we analyze how different types of venture capital investments – private, public and indirect public – affect performance of portfolio companies. We use data on more than 20,000 VC deals in Europe between 2000 and 2018 and we hand collected a unique dataset on the institutional setting (public/indirect/private) of almost 3,500 investors. We find that public VC investors perform consistently worse than purely private ones, while indirect public investments (such as the “Juncker Plan” investments) perform consistently better. We link these findings to the fact that public funds do not enter the best performing cliques of investments. On the other hand, indirect funds invest in the VC funds with the best network characteristics, which raises a question of whether indirect VC investments are associated with a high level of windfall gain, and not necessarily improve the value added by the VC funds.

Institutions and Entrepreneurship 5

Session Moderator: **Larry Plummer**, *Ivey Business School*

ENT: **Which Institutional Factors and Resources are Crucial to Foster High-Growth Entrepreneurship?** 

Author: **Ana Venancio**, *ISEG (Lisbon School of Economics & Management), U. de Lisboa*

Author: **Farzana Chowdhury**, *Durham U. Business School*

We explore which institutional factors and resources are necessary to foster high-growth entrepreneurship and whether these factors differ between countries. Using the necessary condition analysis (NCA) method, this study advances the understanding regarding which institutional factors and resources are crucial for promoting high-growth entrepreneurship, according to the level of development of a country. The results show that labor regulation is a necessary condition for the establishment of high-growth ventures. Although business regulation is also a necessary condition, the large majority of the countries have already implemented less stringent entry and exit regulations. The necessary conditions do not have the same degree of importance when a different subset of countries is evaluated. While access to finance and human capital are necessary conditions to foster high-growth entrepreneurship in low-income countries, flexible labor regulations represent a crucial prerequisite for high-growth entrepreneurship in high-income countries. These findings can be used to optimize policy formulations and resource allocation, in particular when targeting factors that constitute bottlenecks.

Paper is Available to Meeting Registrants Only.

ENT: **Exploring the Regional Factors Facilitating Industry Switching of New Ventures**

Author: **Naryoung Yu**, *Ivey Business School*

Author: **Larry Plummer**, *Ivey Business School*

New ventures faced with unsatisfactory outcomes are required to determine whether to remain committed to their initial business or exit. We conceptualize industry switching (i.e., a complete shift from one industry into another) as a unique form of entrepreneurial exit at the regional level and examine how the regional context in which it takes place either enables or constrains industry switching. More specifically, we hypothesize that industry diversity, trade openness, and skilled human capital affect industry switching. Using data covering 347 metropolitan statistical areas (MSAs) in the United States from 2003 to 2010, we find that both industry diversity and trade openness are positively related to industry switching, and the stock of skilled human capital mitigates the positive impact of trade openness on industry switching.

Paper is Available to Meeting Registrants Only.

ENT: **Institutional Dependence and Capability Erosion in New Venture Internationalization** 

Author: **Ziliang Deng**, *Renmin U. of China*

Author: **Shuai Meng**, *School of Business, Renmin U. of China*

Author: **Peter W. Liesch**, *U. of Queensland*

Entrepreneurial startups may opportunistically leverage supportive institutions to overcome liabilities of newness and even undertake risky international business venturing. Nonetheless, they may become overly dependent on revenue from these institutional sources and slide into “institutional dependence.” We situate our analysis in this context as most of the leading exporting economies have adopted tax rebate policies to promote exports. We hypothesize that the degree of profit dependence on tax rebates negatively affects technological innovation in the entrepreneurial firms. Empirical analyses based on a large panel dataset of Chinese manufacturing startups provide support for our hypotheses. This study contributes to the strategy literature by identifying the counterintuitively erosive effects of seemingly supportive institutions.

ENT: **Social Class and Entrepreneur Resilience: How Entrepreneurs Respond to Institutional Deterioration**  

Author: **Jianhua Ge**, *Renmin U. of China*

Author: **Fan Yang**, *Renmin U. of China*

Author: **Eric Y.-F. Zhao**, *Indiana U., Bloomington*

There has been a growing recognition of the role of social class in the field of entrepreneurship, and the prevailing view highlights that entrepreneurs from lower social classes will encounter more material deficiencies and cognitive constraints than those from higher social classes in their business. In this study, drawing on insights from social psychology, we argue that those lower-class entrepreneurs could also be more resilient in dealing with adverse situations. Specifically, our empirical analysis of Chinese private entrepreneurs reveals that while entrepreneurs with lower social class origins tends to invest less in long-term development activities (e.g., innovation and employee training), when encountering a deteriorating institutional environment that generally discourages long-term investment, lower-class entrepreneurs show greater resilience in embracing the challenges and the perseverance of their investments compared to those from higher social classes. This study bridges research on social class and entrepreneur resilience to reveal the dual impact of individuals' social class origins in entrepreneurship.

Entrepreneurship and Platforms 1

Session Moderator: **Per L. Bylund**, *Oklahoma State U.*

ENT: **Employee Entrepreneurs of Platforms** 

Author: **Ke Rong**, *Tsinghua U.*
Author: **Zhengyao Kang**, *Tsinghua U.*
Author: **Feng Zhu**, *Harvard U.*

The growth of platform firms today leads to a great spillover effect in employee entrepreneurship. Previous literature has pointed out that employee entrepreneurs who leave the incumbent firms will enter the same or similar industries and compete with their parent firms. Using a sample of new ventures founded by former employees from incumbent firms in the Chinese high-tech industries, we find that employee entrepreneurs from platform firms are more likely to enter different industries and become the platform complementors of their parent firms, rather than competitors. We also distinguish between employee entrepreneurs from innovation platforms and transaction platforms, and find that this effect is more pronounced among those from innovation platforms.

ENT: **Expanding Entrepreneurial Ecosystem Boundaries with Digital Architecture: A Resource Perspective** 

Author: **Leon Marquardt**, *U. of Bremen*
Author: **Aki Harima**, *U. of Bremen, Germany*

Despite the significant impact of digitalization on startups worldwide, the literature on entrepreneurial ecosystems has not fully considered the role of digitalization. The advancement of digital technologies enables entrepreneurs to engage in venturing activities independent from locations and therefore changes the traditional physical boundaries of entrepreneurial ecosystems. In particular, it remains unclear how digitalization enables new ways of resource acquisition and consequently opportunities to overcome regional resource scarcity. This study examines how and with what capabilities an entrepreneurial ecosystem can overcome resource scarcity by complementing its physical core with a digital sphere. Building on an exploratory qualitative single-case study of the Estonian entrepreneurial ecosystem, this study suggests a process model that captures essential ecosystem capabilities in acquiring and mobilizing resources to develop entrepreneurial ecosystem: (1) sensing opportunities to overcome ecosystem resource scarcity, (2) seizing opportunities by building a hybrid ecosystem architecture, (3) seizing opportunities by coordinating resource flows, and (4) reconfiguring ecosystem architecture. Our findings extend the literature on entrepreneurial ecosystems by integrating digital dimensions into analyses and by theorizing the capabilities of entrepreneurial ecosystems. Furthermore, this study provides valuable practical implications for policymakers and other stakeholders seeking to overcome regional resource constraints by utilizing a hybrid ecosystem architecture.

ENT: **The Cryptogameur: A New Approach to Entrepreneurial Design** 

Author: **Soumodip Sarkar**, *U. of Évora*
Author: **Satishwar Kedas**, *Indian Institute of Management Ahmedabad*

Cryptogames, blockchain-based games with play-to-earn mechanics, are paving the way forward for the Metaverse. As digital technologies, cryptogames are attracting a new breed of entrepreneurs, whom we refer to as cryptogameurs, whose entrepreneurial agency primarily manifests in the digital-asset based economies of the virtual worlds. Our pioneering study establishes the relevance of cryptogaming in the entrepreneurship literature, particularly in the digital entrepreneurship space. Through a conceptual framework, integrating the seemingly disparate theories of affordance-actualization and external enablers, with a novel characterization of the cryptogames as layered digital technologies, we illustrate the centrality of non-fungible tokens in entrepreneurial design. We identify six unique economic and social affordances of cryptogames which support cryptogameurs socio-economic goals. Proposing that cryptogameurial agency is manifested in the actualization of the cryptogame affordances, our study also offers theoretical insights into the enabling mechanisms of the socio-economic context. Through this study, we make significant contributions to emerging research on entrepreneurship theory and practice in the Metaverse.

 ENT: **Looking back to Speed Forward: Origins, Evolution, Path Forward for Corporate Accelerator Research** 

Author: **Andreas Leubner**, *TUM School of Management, Technical U. of Munich*
Author: **Siddharth Vedula**, *TUM School of Management, Technische U. München*

Corporate venturing (CV) plays a fundamental role in the strategic renewal of established companies. In the past decade, Corporate Accelerator (CA) programs have increasingly been adopted across industries as a more radical CV form of corporate experimentation. Yet, academic research on CAs is in its infancy, with a nascent but growing body of work only emerging over the past 5-6 years. This aims to accelerate CA research in academia by understanding the roots, and evolution of extant literature, and drawing a path for the future. We examine the scholar origins of CV research tracing the way from its roots to the nascence of CAs in 2016 and beyond. Along this track, we map the core literature, identifying main academic contexts, mechanisms, and outcomes across CV intermediaries so as to provide an organizing framework for the emerging field of CA. We do this by applying a structured mixed method literature review from 1981-2021, combining bibliometric analyses (co-citation and citation analysis) with a subsequent detailed qualitative analysis, following a CIMO (context, intermediary, mechanism, outcome) inductive framework. Through this process, we offer a framework and agenda with specific topics for future CA research.

ENT: **'Let's Build Bridges': A Bilingual Literature Review in the Field of Entrepreneurial Support**

Author: **Kerstin Kuyken**, *École des sciences de la gestion (ESG UQAM)*
Author: **Rosanna Schropp**, *ESG-U. du Québec à Montréal*
Author: **Kaoutar Bensitel**, *École des sciences de la gestion (ESG UQAM)*

This paper provides a bilingual (French and English) systematic literature review in the field of entrepreneurial support. When looking at its evolution, we observe that several new areas have been developed and that the field has been stimulated from a raising interest on entrepreneurial support in most societies (increasing number of incubators, accelerators and other supporting structures). However, recent papers also raise critical thoughts and suggest a reorientation of the field. Therefore, we argue that currently there is a lot of potential for the field of entrepreneurial support to attract scholars and to develop knowledge which could serve practitioners. However, the ground for such development would be to resolve an important divide within the field, to develop a common language and to connect different sub-strands. We suggest three bridges representing these possible connections: the holistic, contextual and relational bridge. Hence, this paper has a double objective: 1) mapping the field of entrepreneurial support and 2) laying out current tendencies and promising areas for research. We believe that this endeavor offers an important contribution to academia, since it can help strengthen the field as well as support practice.

ENT: **Peer Entrepreneur Networks in a Startup Accelerator Before and During the Covid-19 Pandemic**

Author: **Kai Becker**, *Amsterdam Business School, U. of Amsterdam*
Author: **Joris Ebbers**, *LUISS Business School*
Author: **Yuval Engel**, *U. of Amsterdam*

In response to the global spread of COVID-19, startup accelerators have shifted all activities online. To understand how this shift affects peer entrepreneur networks – a key constituent of accelerators value proposition to participating entrepreneurs – we draw on longitudinal network data from two editions of the same startup accelerator program before and during the COVID-19 pandemic. Based on interaction ritual theory and the physical proximity principle, we hypothesize and test how online acceleration limits social connectivity. We find that in the online, compared to the offline cohort, networks became less dense, entrepreneurs reached fewer peers via indirect connections; and clustering increased. We highlight the impact of physical distancing on entrepreneurship and discuss contributions to theory on peer networks and startup acceleration.

ENT: **A Resource-based View (RBV) of Entrepreneurial Sourcing Within the Pre-incubation Ecosystem** 

Author: **André NANA**, *TBS Business School, U. of Toulouse Capitole*
Author: **Eric Michaël LAVIOLETTE**, *Toulouse Business School, TBS Education*
Author: **Christina Theodoraki**, *Toulouse Business School*

The identification and selection practices of project owners during the pre-incubation phase in incubators remain understudied. While previous works have implicitly pointed out without any empirical evidence that these pre-incubation practices are part of a process that impacts the performance of incubators, it is theoretically relevant and practically useful to make this process explicit and substantiate it through an in-depth analysis. In line with the recent literature on the ecosystem approach to incubator activity, we propose in this research a processual and ecosystem analysis of project owners' identification and selection practices in different types of incubators using RBV theory as theoretical framework. We conducted a multiple case study (five types of incubators) in the south-western region of France (Occitania) by observing step-by-step the identification and selection practices of project owners. We collected data through 53 semi-structured interviews, participant and non-participant observation notes and secondary data. These data were analyzed with NVIVO 1.5 software following the Eisenhardt method. The results show that the identification and selection practices of project owners are part of an "entrepreneurial sourcing" process including identification and screening practices. We found that not all practices are observable in all types of incubators given the unevenness of the resource stocks that determine the capacity of these organisations to act in the pre-incubation ecosystem. A discussion of these results led to practical implications for incubators and public policy.

Participant: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*

Entrepreneurship is central to economic growth, particularly in emerging economies and other economically disadvantaged settings. This symposium features four papers that examine both the macro and micro determinants of outcomes for entrepreneurs in these contexts. The four papers use diverse theoretical frameworks, methodologies, levels of analysis, and geographical contexts spanning China, Tanzania, and India. Together, they address an interesting set of questions and advance our knowledge about how macro factors such as institutional changes as well as micro factors such as entrepreneurs' characteristics and capabilities affect their outcomes with implications for entrepreneurial actions, firms' choices, and policy decisions. The symposium should be of interest to scholars of entrepreneurship, institutions, and social issues in management.

Emerging Entrepreneurship 2

Session Moderator: **Markus David Taussig**, *Rutgers Business School*

ENT: The Privileged Rush In? Relational Ties and Starting Up Formal in an Emerging Economy 

Author: **Markus David Taussig**, *Rutgers Business School*
Author: **Ngoc Phan**, *Duke U.*

Why do entrepreneurs in emerging economies choose to start their business in the informal sector? The frequency with which growth-oriented emerging economy entrepreneurs make this decision contradicts conventional wisdom and economic and institutional theories, all of which posit that registering with government conveys much-needed legitimacy and access to external resources. Recent research, however, suggest that entrepreneurs can use the informal economy as safe ground within which to build up internal capabilities before registering with the government. In this paper, we resolve these competing views by proposing that the promise of formality at startup varies with firms' relational resources for filling institutional voids. Using a nationally representative, pooled cross-sectional dataset of firm survey responses in Vietnam, we show evidence that initial informality positively affects firms' performance post-formalization. More importantly, we find that it is firms that are large, politically connected, and male-owned that benefit from immediate registration.

ENT: Resourceful Behavior in Informal Entrepreneurship Contexts

Author: **Olga Kokshagina**, *EDHEC Business School*
Author: **Aziza Zhuparova**, *al-Farabi Kazakh National U.*

Resourcefulness is central to entrepreneurship and captures both the simultaneous pursuit of opportunities and mobilization of resources regardless of the entrepreneur's control. In this research, we explore how entrepreneurs in the post-USSR country - Kazakhstan navigate the complexity of starting and developing businesses without regard to resources they currently control. By engaging with 84 entrepreneurs in creative industries and analyzing in detail how founders of eight ventures develop their businesses in Kazakhstan, we explore how informality influences resourcefulness in emerging countries. Our analysis reveals three types of resourceful behavior leading to variance in resource mobilization purposes: community-, self-and impact-centered resourcefulness where entrepreneurs are motivated by different pursuits: developing their ventures to support community development, for their own good or for creating impact globally. We enrich the literature by developing further understanding of variations of entrepreneurial resourcefulness in the context of informality.

ENT: Examining Contemporary Emergent African Entrepreneurial Philanthropy 

Author: **Deji Adewoye**, *Doctoral Student, Brunel Business School*
Author: **Chima Mordi**, *Brunel Business School*
Author: **Hakeem Ajonbadi**, *Birmingham City Business School, Birmingham City U., Birmingham, UK*

According to research conducted outside the field of business, emergent entrepreneurs have long been active in large-scale humanitarian endeavours, and the world's media has awarded them celebrity-like notoriety. On the other hand, entrepreneurial philanthropy is mostly disregarded in the realm of entrepreneurship studies. This article addresses this gap both theoretically and empirically. It establishes projectivity theory as a viable theoretical lens through which to assess contemporary emergent African entrepreneurial philanthropy and presents fresh data on successful, emergent entrepreneurs engaged in significant humanitarian endeavours. The findings emphasise the active deployment of a distinctive blend of different forms of projectivity as a distinguishing characteristic of emergent African entrepreneurial philanthropy, and they contribute to emerging discourses on the nature of entrepreneurs, entrepreneurship as a socioeconomic process, and the dearth of empirical research on entrepreneurial bourgeois.

ENT: How do Social Stigma, Social Support and Role Modeling Incubate Entrepreneurship? 

Author: **Ying-Che Ali Hsieh**, *National Tsing Hua U.*
Author: **Gabriel Cwu**, *National Tsing Hua U., Hsinchu, Taiwan*
Author: **Li-Hsiang Yi**, *National Tsing Hua U.*
Author: **Wan-Jung Tsai**, *National Tsing Hua U.*

Entrepreneurial activities could boost the regional economy development. A lot of entrepreneurship researches discuss how to promote entrepreneurship, while there are also many factors that may discourage or restrain entrepreneurial activities that are not well explored in literature. The purpose of this research is to identify the key socio-cultural factors that affect entrepreneurs in both rural and urban areas in developing society during their entrepreneurship. Taking semi-structured interviews with 12 entrepreneurs (6 in rural areas and 6 in urban areas) in Honduras, we seek to explore the impact of both social stigma and role model of being an entrepreneur impact on these entrepreneurs and business development in both rural and urban areas in a developing society. The empirical finding of this research lead us to propose the models of the routine of entrepreneurship in both urban and rural areas in a developing society, which contribute to the entrepreneurship literature and also provide insights into the entrepreneurial endeavors in developing societies in both rural and urban regions.

Crowdfunding 3

Session Moderator: **James Bort**, *U. of Missouri, Columbia*

ENT: Crowdfunding Sustainable Projects: Cross-country Heterogeneity in Environmental Support Systems  

Author: **Ahmed Sewaid**, *Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC*

Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*

Author: **Shaker A. Zahra**, *U. of Minnesota*

Past research has shown that ventures focused on addressing environmental sustainability face considerable difficulties in attracting funds from “traditional” sources of finance (i.e., external equity investors, banks), while crowdfunding could ease resource attraction for such ventures. Nevertheless, although crowdfunding is a global phenomenon—with both projects and backers located across the globe in countries with fundamentally different environmental support systems—our understanding of how this heterogeneity influences fundraising success remains limited. To examine this issue, we invoke an institutional logic perspective and study 290,126 Kickstarter campaigns located in 139 countries. Our findings are broadly in line with our hypotheses: in crowdfunding, where a community logic often prevails, fundraising success is greater for environmental sustainability projects, particularly when these projects are located in countries with weaker environmental support systems. Moreover, these projects are also more likely to tap funding from backers located in countries with stronger environmental support systems. We discuss the theoretical implications of these findings, which challenge commonly-held assumptions on institutions and cross-border money flows in entrepreneurial finance developed from examining traditional investors who generally hold a market logic.

ENT: Open Innovation, Open Wallets? Innovation Strategy Congruence in Crowdfunding

Author: **James Bort**, *U. of Missouri, Columbia*

Author: **Azzurra Meoli**, *U. of Bologna*

Author: **David W. Sullivan**, *U. of Houston*

Author: **Joel Andrus**, *U. of Missouri*

New ventures using an external open innovation strategy face a more complex path to resource acquisition. On the one hand, openness removes the barriers for both collaboration and widespread adoption; on the other, openness offers little to no intellectual property protection, thus creating a scenario where virtually anyone can appropriate value from property as they without necessarily providing a benefit to the creator. As such, open innovation can be a disadvantage in early-stage resource acquisition because the strategy is incongruent with professional investor expectations, which typically seek to maximize returns. Despite these concerns, the rapid rise of crowdfunding has created a more communal and democratic method for innovators to access capital markets and have created opportunities for open innovation strategies. In this paper, we take a multi-methodological approach to test whether an open innovation strategy provides unique advantages in the crowdfunding context. We theorize that openness yields greater trust, which in turn leads to superior financing outcomes. Our results from an archival study using Kickstarter data and through a randomized experiment provide consistent support that an open innovation strategy is indeed advantageous in the crowdfunding context. These results are also mediated by perceptions of trust.

ENT: When Providing Support Can be Self-Destructive: Effect of Financial Slack on Backer Sentiments  

Author: **Chandresh Baid**, *Grand Valley State U.*

Author: **Arvin Sahaym**, *Washington State U.*

Author: **Devesh Baid**, *International Management Institute, Bhubaneswar*

One of the primary reasons for the death of a young entrepreneurial venture is the lack of financial capital. Extant research has been inconclusive regarding the role of excess financial capital or transient financial slack – in firm survival, profitability, growth, and stakeholder satisfaction. Drawing on VRIO and resource management framework, we argue that the presence of transient financial slack will negatively influence backer sentiments of crowdfunded firms. Availability of resources is a necessary but not sufficient condition for firm performance. Appropriate firm organization is required to exploit available resources. The presence of organizational and managerial capabilities/weaknesses can help or hinder the process of acquiring, bundling and leveraging resources. We further argue that the presence of entrepreneurial orientation is an organizational capability that can alleviate the negative influence of slack; however, its effect will be weakened if the firm is led by narcissistic entrepreneur. We find support for our arguments based on a dataset of 2055 crowdfunded firms from Kickstarter. The implication of this research for crowdfunding platforms, entrepreneurs, and backers is discussed.

ENT: Categorizing and Crowdfunding Vegan Ventures: An Empirical Enquiry on Nascent Market Categories 

Author: **Soumodip Sarkar**, *U. of Évora*

Author: **Satishwar Kedas**, *Indian Institute of Management Ahmedabad*

Author: **Stewart R. Clegg**, *U. of Technology, Sydney*

Resource acquisition for new market categories is an imposing challenge, and entrepreneurs overcome this by establishing legitimacy for the category and their ventures within. In the rising vegan food movement, to become a legitimate mainstream food offering, rather than a niche category, while moral legitimacy is a given to the believers, it requires cognitive and pragmatic legitimacy to be acquired through the cognitive and agentic roles of category entrepreneurs, through non-vegan practices. Utilizing narratives of 645 vegan ventures on Kickstarter, our study reveals the nuanced relationship of claims of cognitive and pragmatic legitimacy with the narrative distinctiveness leading to successful financial resource acquisition. We propose that the cognitive role of nascent category entrepreneurs draws upon internal venture development activities that can be identified across three primary phases of development – ideation, prototype, and commercialization, which they seek to build into their narratives as claims of cognitive legitimacy. Our study has both theoretical and practical implications for new market categories, particularly with strong cultural norms.

Gender and Diversity in Entrepreneurship 5

Session Moderator: **Andreas Schwab**, *Iowa State U.*

ENT: Going Green and Innovation in Small Businesses: Do Male-run Firms and Female-run Firm Differ?   

Author: **Bach Nguyen**, *Aston Business School*

For small businesses, the strategic objective of going green is a gendered process. Male and female entrepreneurs respond differently to intrinsic motivations (self-motivated) and extrinsic pressures (requirements from customers and governments) to go green. Analysing a dataset of more than 22,000 small businesses in 39 countries, we aim to establish whether female-run firms are more likely to go green and how this affects their innovation capacity. Findings indicate that female-run firms, compared to male-run ones, are more likely to go green because of both intrinsic motivations and extrinsic pressures. Also, while firms going green are more innovative than firms not going green, the positive association between going green because of extrinsic pressures and innovation is weaker in female-run firms. In sum, compared to male-run firms, female-run firms care more about the environment but the fruits (e.g., innovation capacity) they harvest from pursuing environmental values are smaller than those reaped by male-run firms.

Paper is Available to Meeting Registrants Only.

ENT: The Role of Collectivism and Gender Equality in Informal Entrepreneurship    

Author: **Esther Salvi**, *Technical U. of Munich*

Author: **Daniela Alejandra Gimenez Jimenez**, *TU Dortmund U.*

Informal entrepreneurship (IE) refers to the global portion of entrepreneurial activities, which are not registered with the government and yet operate within socially accepted values and practices. IE has attracted increasing attention from scholars and policy makers over the years because it produces negative externalities. To tackle IE effectively, it is important to understand its origins, which are rooted into collectivistic cultural practices. Drawing on new institutional economics, we hypothesize that in-group and institutional collectivism present curvilinear relationships with the prevalence of IE across countries, and that gender equality influences these relationships. We ran GEE panel regressions employing a dataset including 35 countries over 12 years (2006-2017). Our results support our hypotheses substantially and entail theoretical implications at the intersection of informal entrepreneurship, culture and gender equality, as well as relevant practical implications.

Paper is Available to Meeting Registrants Only.

ENT: Impact of Age and Gender on Entrepreneurial Self-Efficacy and Fear of Entrepreneurial Failure  

Author: **Andreas Schwab**, *Iowa State U.*

Author: **Annaleena Parhankangas**, *Iowa State U.*

Author: **HeyIn Gang**, *Iowa State U.*

This study applies life-stage theory to investigate the still ill-understood effects of age on the behavioral tendencies of male and female entrepreneurs. Hypotheses for effects on entrepreneurial self-efficacy and fear of entrepreneurial failure are tested in a gender-stratified cross-sectional random sample using U.S. Global Entrepreneurship Monitor data (2013 – 2018). Results support strong non-linear age effects and challenge the dominant assumptions in the established entrepreneurship literature that what we know about middle-aged entrepreneurs will more or less also hold for the increasingly important cohorts of junior and senior entrepreneurs. Age effects also differ substantially across gender. Taken together, these findings outline highly complex age effects and suggest the urgent need to account explicitly for both age and gender effects in models theorizing about entrepreneurial behavior and outcomes.

Paper is Available to Meeting Registrants Only.

ENT: Entrepreneurial Intentions of Female Students in the “New” Indian Context  

Author: **Maheshkumar P. Joshi**, *George Mason U.*

Author: **Deepak Pandit**, *BML Munjal U.*

Author: **Shalini Rahul-Tiwari**, *IMT Ghaziabad*

In the recent decade India has made strides towards an entrepreneurial economy with 37 “Unicorns” being reported in first half of 2021. This “new” Indian context offers the setting for examining the practice of entrepreneurship through the lens of entrepreneurial intention (EI). We assume equal exposure to EE (among male and female students) and apply the human capital and socially learned stereotypes (SLS) theories with respect to EE and EI relationships of 751 MBA students. EE and EI are found to be positively and significantly related and female students are less likely to exhibit EI, as hypothesized. We further examine the EE–EI relationship with operational excellence (OPX), an additional construct, as a moderating construct. We find that female students with high OPX, in the Indian economy, express EI more pronouncedly, a counter intuitive finding. Implications and future directions of these results with respect to EE are discussed.

New Venture Formation 2

Session Moderator: **Jeffrey Chandler**, *U. of North Texas*

ENT: **Shaping Start-Up Purpose: A Qualitative Investigation on the Role of Feedback**   

Author: **Viktoria Luise Unger**, *LMU Munich*
Author: **Gisa Todt**, *LMU Munich*

Purpose is at the core of every business. It drives organizations to succeed in today's challenging and complex business environment and has the power to make a difference, create a positive impact, guide decision-making, and give a sense of meaning to every action the organization performs. In the past decade, purpose has re-emerged as a prevalent theme and has become a buzzword in management theory and practice. However, little is known about which factors can shape start-up purpose within the entrepreneurship literature. As start-ups are confronted with uncertainty and information scarcity, they frequently make use of feedback to bridge information gaps, assimilate new knowledge, and successfully develop their venture. Thus, this study investigates how feedback shapes start-up purpose by applying an exploratory qualitative study design and interviewing ten start-up founders that participated in a German accelerator program. Evidence from grounded theory development highlights that feedback can shape start-up purpose depending on the feedback source, founder's attitude towards feedback, and state of start-up purpose when receiving feedback. Further implications of these findings are drawn for both theory and practice, thus, contributing towards a better understanding of the role of feedback in shaping organizational purpose in the field of entrepreneurship.

ENT: **When Age Differences Make a Difference: How Co-founder Age Dissimilarity Improves Performance**   

Author: **Jeffrey Chandler**, *U. of North Texas*
Author: **Vitaliy Skorodzyevskiy**, *Mississippi State U.*
Author: **Jeremy Collin Short**, *U. of North Texas*

In recent research, two arguments have emerged on how a founder's age might influence new venture performance through its innovative abilities. First, younger founders are more innovative in their new ventures in comparison to older founders due to their higher rates of creativity and exploration that stem from fewer cognitive constraints. Second, older founders are more innovative than their younger counterparts, which has been ascribed to their greater focus on the implementation of new ideas in their new ventures. This paper reconciles both streams of research by proposing that new venture innovation is improved when combining these benefits of both younger and older founders. Specifically, we show that new ventures led by co-founders with increasingly dissimilar ages (i.e., one younger and one older founder) are more likely to be innovative; however, this effect is mitigated by gender dissimilarities among these co-founders or when such founders identify as dissimilar genders (i.e., one younger female and one older male). Further, we also show that the increased ability of new ventures co-founded by founders with increasingly dissimilar ages to be innovative is an important mechanism through which they improve new venture performance. Using a sample of 1,237 new ventures recently started across the world, we find support for our theoretical arguments. We discuss the implications of these findings for the entrepreneurial age and new venture literature research streams.

ENT: **The Geography of Heterogeneous Entrepreneurial Activities**  

Author: **Petra M. Moog**, *U. of Siegen*
Author: **Christina Guenther**, *WHU - Otto Beisheim School of Management*
Author: **Sven Wolff**, *U. of Siegen*

The characterization of how entrepreneurial a region or country is has generally been shaped by a narrow view of what actually constitutes entrepreneurship. In the case of Germany, this has led to a characterization of Germany as not being particularly entrepreneurial. Such a view is at odds with the remarkable, high-performing family business, widely held to be the backbone of the economy. The purpose of this paper is to suggest that the interpretation prevalent in entrepreneurship literature is problematic due to a too narrow operationalization of the entrepreneurship concept. As Zahra (2007; 2014) emphasized, context matters. One particular organizational manifestation of entrepreneurship, family business, may be congruent in specific spatial and institutional contexts but not in others. Other geographic and institutional contexts may be congruent with the contrasting startups. Thus, an important and novel contribution of this paper is to analyze the geography of family business as distinct from startups: two ends of the entrepreneurship continuum, embedded in different kinds of entrepreneurial ecosystems. We generate innovative maps working with official data, showing the distinct distribution of both kinds of entrepreneurship in different ecosystems. These findings are connected with spatial effects, living conditions and lead to recommendations for policy measures.

ENT: **Maker Spaces, Entrepreneurship, and Institutions** 

Author: **Zhuoxuan Li**, *Engineering Dept., Stanford U.*
Author: **Charles Eric Eesley**, *Stanford School of Engineering*
Author: **Robert Neal Eberhart**, *Stanford Graduate School of Business*

The nascent research on the maker movement highlights implicit assumptions embedded in a model of closed traditional product development that frequently appears in entrepreneurship and innovation literature. In contrast to closed traditional product development, the maker movement emphasizes inclusiveness, openness, sharing, and collaboration. To date, we know little about how institutional-level factors (such as intellectual property rights protection, maker culture and access to makerspaces) impact the probability of a hobbyist maker becoming an entrepreneur. We leverage the institutional perspective to examine the differing regulatory, normative, and cultural elements with a cross-national study. Via a leading maker community, HacksterIO, we collected data from surveying 3,139 global makers from 99 countries during 2016, thus providing the first quantitative evidence about the maker movement's impact on firm creation. Our results suggest that makerspaces influence entrepreneurship by legitimating entrepreneurship and not by the provision of economic resources. This paper provides the first large quantitative evidence on maker entrepreneurship across the world, and how institutional factors impact the creation of maker-founded firms in different societies.

Session Moderator: **Alisa Boguslavskeya Jno-Charles**, *Babson College*

ENT: **After Achieving Legitimacy: When and How New Ventures Stop Acquiring and Start Confirming Legitimacy** 

Author: **Alisa Boguslavskaya Jno-Charles**, *Babson College*

The legitimacy threshold has been a predominantly-theoretical point at which new ventures have sufficient stakeholder acceptance to access resources and customers. Despite an abundance of research on how new ventures go about acquiring legitimacy, we still do not have a reliable way of knowing when they have in fact acquired it and what they do immediately afterward. Building on theories of legitimacy, linguistics, and entrepreneurial communication, the present research explores these gaps through a linguistic analysis of new venture communications. Using computer aided text analysis and change point determination to quantify social media activity of 105 crowdfunding ventures, I find that the point at which ventures complete and transition out of the legitimacy acquisition stage can be determined by reductions in linguistic markers of identity building, association making, and credibility establishment. Further, I find that this transition point is beyond successful resource acquisition and that after its crossing, ventures begin legitimacy confirmation. These findings provide insight into a previously understudied period in the legitimization process and makes a number of contributions to both legitimacy and venture communication research.

Paper is NOT Available. Please contact the author(s).

ENT: **Investigating Entrepreneurial Venture Resource Acquisition through the Lens of Media Dynamics**

Author: **Michael David Hudecheck**, *U. of St. Gallen*

Author: **Charlotta Agneta Siren**, *U. of St. Gallen*

Author: **Dietmar Grichnik**, *U. of St. Gallen*

Author: **Gerard George**, *Georgetown U., McDonough School of Business*

There is growing evidence that negative media coverage leads to positive resource outcomes in entrepreneurial ventures, which contradicts established organizational reputation theory. Drawing on reputational prominence, the reputational Matthew Effect, as well as the extensive literature on CEO power dynamics, we first examine the extent to which negative media coverage is positively related to entrepreneurial venture resource access. We then assess how CEO power moderates entrepreneurial venture resource outcomes through reputational prominence accrual, reputation transfer, and media platform dynamics. We test our theoretical arguments with a dataset of 4.3 million traditional media articles on 301 entrepreneurial ventures and venture CEOs, along with 400 thousand venture CEO tweets, retweets, and related digital trace metadata. Our results clarify the reputational resource effects of organization-level reputational prominence accrual through the lens of CEO power dynamics, extend the Matthew Effect to entrepreneurial ventures, and outline a reputational “forgiveness effect”.

Author: **In Hyeock Ian Lee**, *Loyola U. Chicago*

Author: **Moren Levesque**, *York U.*

This article investigates whether new firms that are resource constrained generate more sales revenues from allocating their resources to a variety of business activities or only one business activity. We first formulate a formal resource-allocation model to guide the development of hypotheses concerning the performance of these resource allocation strategies, and then test the hypotheses on a sample of 4,928 new firms from the Kauffman Firm Survey dataset. We show that the relationships between sales revenue and each pure strategy, whereby a firm’s constrained resources are all allocated to either marketing or R&D activity, are both inverted U-shaped, which translates into the resource-constrained firm achieving the most sales revenue using a balanced strategy whereby resources are distributed between marketing and R&D activities. These findings expand the strategic management and engineering management literatures by going beyond the current predominant focus on more mature firms and on a resource-allocation balance within marketing activities or within R&D activities.

ENT: **Unpacking the Role of Idiosyncrasy in Collective Bricolage**  

Author: **Ricardo Zozimo**, *Nova School of Business and Economics, U. Nova de Lisboa*

Author: **Andres Barrios Fajardo**, *U. de los Andes*

Author: **Magnus George**, *Lancaster U. Management School*

This paper aims to advance the understanding of idiosyncrasy in entrepreneurship theory, defined as the particular way of how entrepreneurs do things. To do this we investigate idiosyncrasy’s role in entrepreneurial collective bricolage process. A multiple-case study of the venturing process of FARC ex-guerrillas in Colombia—a highly idiosyncratic group—uncovers the multiple roles played by idiosyncrasy as a shaper, motivator, inhibitor, enabler, and deterrent of the collective bricolage process. Our conceptual and empirical analysis makes two main contributions. First, we show how idiosyncrasy operates as a powerful determinant for collective entrepreneurship. Second, we identify how idiosyncrasy shapes the process of entrepreneurial bricolage and its outcomes. Our findings offer implications for the promotion of entrepreneurship in highly idiosyncratic groups, as well as policies around the collective entrepreneurship process.

ENT: Pivoting Assessments in Entrepreneurial Firms.

Author: **Lilia Stratz**, *TUM School of Management, Technische U. München*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*

Drawing on the literature on social capital at its individual level, we develop a model toward entrepreneurs' pivoting assessments. We argue that entrepreneurs' perceived benefits from their available resources are contingent on the task environment surrounding the potential pivot as well as on the entrepreneurs' personality. We test these hypotheses using a metric conjoint experiment and data on 2,180 pivoting assessments nested within 109 entrepreneurs. Our findings reveal significant interactions between resource availability, characteristics of the entrepreneurs' task environment and the entrepreneurs' optimism in explaining their pivoting assessments.

ENT: Fear of Missing Out and Stakeholder Enrollment

Author: **Susan L. Young**, *Kennesaw State U.*
Author: **Birton Cowden**, *Kennesaw State U.*

Stakeholder theory suggests dishonest ventures would struggle with stakeholder enrollment, limiting resource access and ultimately failing. Yet cases exist where amoral entrepreneurs do enroll stakeholders through deceit. We propose "fear of missing out" on an opportunity facilitates enrollment by encouraging stakeholder acceptance of information asymmetry. To illustrate we use exemplar Theranos: a biotech firm which convinced stakeholders it would revolutionize healthcare, rising to a \$10 billion valuation through 15 years of sustained deceit. We contribute to theory by demonstrating the dark side of stakeholder enrollment, where opportunism increases venture power over stakeholders, and deceit can endure long past start up.

ENT: Pathways of Entrepreneurial Networking: Resource Mobilisation via Social Media

Author: **Josephine Gaza**, *U. of Southern Denmark*
Author: **Julia Brennecke**, *U. of Potsdam*
Author: **Tom Elfring**, *Nijmegen School of Management*

In this paper, using netnographic principles we collect and analyse qualitative interviews from entrepreneurs together with their unique Instagram posts collected over a period of six months to understand entrepreneurial networking processes online. Based on our in-depth inductive analysis, we find that entrepreneurial networking for resource mobilisation online occurs in three pathways – community building, engaged networking, and imperceptible networking. Community building is the creation of relevant content that adds value and connects entrepreneurs with their network audience at an emotional level, so as to trigger the audience's reaction and initiate engagement. Engaged networking is the concurrent process of interacting with the network audience. Finally, imperceptible networking is the process where network actors online acquire resources by engaging in lurking behaviours without contact with the network content providers. Carving out these three pathways of entrepreneurial networking, we contribute to the literature by accentuating that, first, entrepreneurs are able to gain access to the network outcomes without actual, direct interaction and contact with resource holders. Second, if direct interaction takes place, the direction in which resources flow when entrepreneurs network is modified online. Thus, there is an added direction through which networking is initiated. Thirdly, we highlight that the governance of resource exchange in networks differs online. We find that when networking online, consistency, authenticity and relatability are the 'lubricants' that serve as facilitators for eventual resource mobilisation.

ENT: Social Capital Dynamic in SME? Exploration of International Opportunities

Author: **Anh Luong**, *Sheffield Business School, Sheffield Halam U., UK*
Author: **Michael Wei Zhang**, *Nottingham Trent U.*
Author: **Michael Ehret**, *NTU*

This paper aims to contribute to the literature on network and international business (IB) by investigating the role of social capital in the exploration of international opportunities and international performance. Research on internationalisation has shown strong evidence for the positive impact of social capital on identifying opportunities and enhancing international performance of small and medium enterprises (SMEs). However, there is ambiguity in the process underlying the transformation of social capital into successful internationalisation. This paper examines the dynamic of social capital to capture its role in recognising of opportunities in foreign markets, using a survey of 157 British SMEs exporting to ASEAN. We argue that social capital can be considered as a useful resource which leads to capabilities development for small firms' international expansion. We also differentiate the potential resources embedded in social capital at both individual and organisation level.

ENT: **Entrepreneurial Team Conflict – The Associations With ADHD, Gender, Well-Being And Firm Performance** 

Author: **Mi Hoang Tran**, *Syracuse U. Whitman School of Management*

Author: **Johan Wiklund**, *Syracuse U.*

Author: **Wei Yu**, *National U. of Singapore (NUS)*

This study examines how entrepreneurial team conflict is influenced by Attention-Deficit Hyperactivity Disorder (ADHD) symptoms and gender factor as well as how team conflict impacts entrepreneurial well-being and firm performance. Surveying 1,053 entrepreneurs in the U.S and Australia, we found that ADHD symptoms are negatively associated with both cognitive team conflict and emotional team conflict. Moreover, although women entrepreneurs experience less both cognitive team conflict and emotional team conflict than men entrepreneurs, gender factor has no moderating effect on the relationship between ADHD and the two types of team conflict. In terms of the outcomes of team conflict, emotional conflict is negatively related to entrepreneurial well-being while cognitive conflict has no significant relationship with well-being. In addition, our findings suggested that both cognitive conflict and emotional conflict are negatively associated with firm performance. Overall, our study advances literature on entrepreneurial team (new venture team) as well as contributes to growing entrepreneurship research on ADHD, gender and well-being.

ENT: **The Entrepreneurial Founding Team - Unveiling the Dual Formation Strategy**

Author: **Willy Das**, *college of business, Lehigh U.*

Author: **Satyasiba Das**, *Indian Institute of Management Raipur*

The entrepreneurial founding team formation literature provides a continuum where the economics lens focuses on 'resource dependency and the social psychology lens focusing on 'interpersonal attraction' occupy the opposing ends. Subsequently, studies found that resource dependency and interpersonal attraction are not mutually exclusive. Instead, both them collectively explains the EFT formation. This is referred to as the 'dual formation' strategy. However, the existing studies do not solve the debate on how the 'dual formation strategy' reveals itself in the decision-making process. Considering this, we employ a temporal, longitudinal perspective to investigate EFT formation processes in the context of the emerging economy of India. We collected primary data from the founders and co-founders of 13 entrepreneurial firms each year for a period of three years (2017- 2019). Our provides insights that could inform both the literature on entrepreneurial team formation and practitioners involved in the design and delivery of founder pair-up and matching platforms.

ENT: **Uncertainty and Strategic Entrepreneurial Action- Scaling Patterns in Technology-Based New Ventures**  

Author: **Somayeh Taghvaei**, *ISM International School of Management*

Author: **Ali Marjovi**, *U. of Tehran*

By combining strategic and entrepreneurial action theories, we consider scaling as strategic entrepreneurial action and aim to explain how TMT's choice to deal with uncertainty and its two relevant knowledge problems enables them to design scaling patterns. To do so, we adopt an information processing perspective to investigate the uncertainty-relevant knowledge problems posed to TMT of ten technology-based new ventures throughout their successful and unsuccessful scaling efforts in a business setting wherein uncertainty is at its most extreme and imposed on firms by multiple sources. Our findings demonstrate that TMT's approach to dealing with uncertainty and relevant knowledge problems leads the firm to follow two different scaling paths: spiral and dynamic embedding. Spiral refers to a scaling trajectory in which the firm avoids dealing with high environmental uncertainties and chooses to switch between potential markets by adapting to existing environmental structures. In contrast, dynamic embedding refers to a scaling path wherein the firm tends to deal with high environmental uncertainty and chooses to engage in shaping new environmental arrangements to embed its technologies. We also show that spiral scaling is made through endogenously dynamic capabilities, and dynamic embedding scaling is produced through exogenously dynamic capabilities. We contribute to the literature by providing a deeper understanding of when and how strategic actors scale up the firm under uncertainty, as well as the origin of dynamic capabilities required for scaling in technology-based new ventures.

ENT: **Parental Leave Policies and Innovation Performance in SMEs**   

Author: **Lucia Naldi**, *Jönköping International Business School*

Author: **Evila Piva**, *Politecnico di Milano*

Author: **Massimo Bau**, *Jönköping International Business School*

When is the parental leave taken by top management team (TMT) members beneficial or detrimental for the innovation performance of SMEs? Drawing from upper-echelon theory and role theory, we advance a model that proposes that smaller TMTs and TMTs with longer tenures have a better potential for leveraging the benefits and reducing the shortcomings of parental leave-taking by their members. We test this model using unique data on a large sample of Swedish SMEs. We find that TMT members' parental leave has a weak positive impact on SMEs' innovation outputs. Conversely, the effect is strongly positive when TMT size is small and/or TMT tenure is high. Theoretical and practical implications of parental leave policies for SME intonation are discussed.

Diversity and Perspective Taking: Creating a Better World

Perspective Taking: Creating a Better World

Session Chair: **Jenny M. Hoobler**, *NOVA School of Business and Economics*

Distinguished Speaker: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*

The capacity to take the perspective of another, or to see the world from another’s point of view, is crucial to creating a better world, where the goal of inclusion in organizations can be realized. But what does perspective taking look like in a virtual world of work? We will hear from leading scholar Dr. Sharon Parker, John Curtin Distinguished Professor in Organizational Behavior in the Faculty of Business and Law, Curtin University, about her academic research on perspective taking, with an eye toward how to do this in dispersed workplaces. Please join us for this plenary that bridges the scholar-practitioner divide.

DEI Institutionalization in Health Care Organizations: Here Today, Gone Tomorrow?
DEI Institutionalization in HCOs

Moderator: **Geoffrey Silvera**, *U. of Alabama, Birmingham*

Panelist: **Cathleen O. Erwin**, *Auburn U.*

Panelist: **Courtney Nichole Haun**, *Samford U.*

Panelist: **Astin Cole**, *Auburn U.*

Panelist: **Carolyn Tory Harper Hogan**, *Ohio State U.*

Following the murder of George Floyd and the subsequent summer of racial reckoning of 2020, organizations in all industries have sought to address their efforts towards diversity, equity, and inclusion (DEI), seeking to address DEI through intense focus on equitable hiring practices, fairness in compensation and promotion, and public support of social justice and progress. In health care organizations (HCO), in particular, an additional call to action emerged as reports of race-based disparities in healthcare outcomes throughout the global COVID-19 pandemic. These reports confirmed a decades-long scholarly exploration of health care disparities in the U.S. Health Care System, and the insufficient progress in achieving equitable health outcomes that followed. Given the decades of inaction, or insufficient action, on these important issues preceding the summer of racial reckoning, there is concern regarding the sustainability of DEI initiatives. It remains a question whether DEI initiatives are a sustainable aspect of organizational reality or if addressing these issues is a trend or fad. The purpose of this panel symposium is to discuss the exploration of DEI institutionalization in health care organizations. The panel brings together a group of scholars who have each previously examined the influence of DEI-related concepts on various aspects of health care organizations. The symposium will foster a collaborative conversation to provide fruitful discussion around these concepts and the need for continued exploration within HCOs. We believe that a growing body of healthcare management researchers are motivated to engage in DEI research and the ultimate pursuit of health equity, and each of these scholars' previous engagements with DEI topics in HCOs uniquely qualify them to contribute to the panel and to advance scholarship in this worthy domain.

HCM: Organizational Factors Associated with Perceptions of Continuity during Post-Acute Transitional Care

Author: **Dori Amelie Cross, U. of Minnesota**
Author: **Julia Adler-Milstein, U. of California, San Francisco**
Author: **Carolyn Tory Harper Hogan, Ohio State U.**

Skilled nursing facilities' (SNFs) perception of information continuity with hospitals is a critical indicator of the staff's ability to provide safe and effective post-acute patient care. This perception depends on the quality of information sent by hospitals, and the transitional care environment in which information is received. Using a nationally representative survey of SNF Nursing Directors who reported transitional care relationships with two different hospital referral partners, we assessed this transitional care environment by first analyzing the extent of hospital-SNF integration behaviors (i.e. preferred network status) that could strengthen perception through relational familiarity. Second, we analyzed the presence of discordant or disruptive transitional care practices. SNFs with disparate information sharing behaviors across hospitals lack consistent routines and staff may experience additional cognitive or administration burden to their work that dampens perception of continuity. We found that perception of continuity mediates the relationship between hospital information sharing practices and transitional care outcomes (e.g. readmissions). Holding information sharing practices constant, some care integration practices increase perceptions of continuity while SNFs that experienced discordance across hospitals have lower perceptions of continuity. Improving transitional care quality requires that hospitals improve information sharing behaviors and help build capacity for process improvement in the SNF environment.

HCM: When and How Do Daily Mortality Cues Trigger Power-Seeking versus Helping Behavior?

Author: **Sejin Keem, Portland State U.**

Although extant research has shown that mortality cues provoke anxiety-related responses, theories provide diverging perspectives on how mortality cues might impact workplace behaviors. In a healthcare setting, we examine when and how mortality cues prompt power-seeking behavior versus helping behavior on a daily basis. We conducted an 11-day experience sampling study of 102 nurses at intensive care units. Results show that mortality cues experienced at work are related to two distinct pathways—death anxiety and death reflection; death anxiety in turn prompts power-seeking behavior at low levels of job meaningfulness, while death reflection promotes helping behavior when job meaningfulness is high. We extend the literature on workplace mortality cues by providing a balanced model explaining when and how employees demonstrate differential behavioral responses to mortality cues.

HCM: Reducing Treatment Errors in Hospitals: The Role of Employee Voice in Unsafe Clinical Practice

Author: **Nicole Hartwich, RWTH Aachen U.**
Author: **David Antons, RWTH Aachen U.**

HCM Division Best Theory to Practice Paper HCM Division Best Student Paper Award

Incorrect treatment in hospitals can lead to serious harm and can even result in the death of patients. This work theorizes and empirically investigates whether and under what circumstances employee-voiced concerns reduce fatal patient safety incidents over time. Integrating insights from the attention-based view of the firm with voice literature, we stress the importance of feedback from hospital employees for reducing treatment errors and theorize that increases in collective voice can reduce fatal patient safety incidents. Our study is based on a large, longitudinal data set of acute hospitals in the UK covering the newest available data from 2015 - 2019. The final data set contained 628 hospital-level observations (132 NHS-Trusts over 5 years), including a total of 1,347,617 hospital staff survey responses. We use hybrid regression analyses to test our dynamic theory. The results demonstrate that, within organizations, an increase in voice of one standard deviation reduces the number of fatal patient safety incidents by 9 percent over time. Between hospitals, a one standard deviation increase in voice reduces the number of fatal patient safety incidents by 30 percent. Moreover, we identified hospital's prior performance as a boundary condition of the within-hospital relationship of voice and patient safety incidents, in the way that the link is stronger for hospitals with a lower prior performance.

HCM: Physician Hospital Integration and its Effect on Hospital Performance: A Study of U.S. Hospitals

Author: **Soumya Upadhyay, U. of Nevada Las Vegas**
Author: **William Opoku-Agyeman, U. of North Carolina, Wilmington**

In a dynamic healthcare industry, aligning the goals and objectives of hospitals and physicians through integration has been suggested as a means of influencing performance. Physicians' leadership and active involvement in the governance as a result of integration, can direct resource usage, EHR implementation, price negotiation, better coordination and continuity of services for patients. All of the above can impact hospitals' quality and financial performance. A longitudinal study design was used to analyze the association between physician hospital integration and its impact on hospital performance. The independent variable explored three different dimensions of integration- high, low, and overall integration. The dependent variables consisted of quality outcomes (readmission rates) and financial outcomes (total and operating margins). Our dataset comprised of hospital level data from 2014 to 2018, and contained 6,000 U.S. hospital year observations. Findings showed no impact of physician hospital integration on quality outcomes and financial performance. High integration hospitals did not show any significant relationships with quality outcomes and financial performance as compared to hospitals that did not have high integration. Physician hospital integration may not have the potential to bring clinical integration even though vertical integration is present. A commitment to improving quality as a strategic priority may be key in impacting quality outcomes, followed by financial performance. A culture of safety needs to be fostered in hospitals, for quality and patient safety to improve. Organizational culture and mindset of quality and safety need to be nurtured through physician involvement in hospitals' decision-making.

Entrepreneurial Cognition: Identity, Problem Framing, and Learning

Session Moderator: **Chan Hyung Park**, *Washington U. in St. Louis, Olin Business School*

MOC: Origin of Value Creation: The Role of a Cognitive Shift in Entrepreneurial Problem Framing  

Author: **Chan Hyung Park**, *Washington U. in St. Louis, Olin Business School*

Highly successful entrepreneurial ventures and innovation often result from finding and solving problems that have not been solved before (i.e., entrepreneurial problems). The challenge in solving such problems is that value creators—individuals who intend to create value and solve entrepreneurial problems—often have incomplete information about the problems. The problem-solving perspective and entrepreneurship literature indicate that value creators benefit from relying on intuition or gut feeling to develop new problem frames or theories on the domains of problems. Novel problem frames are new, untested theories on the domains of problems. The frames provide the foundational assumptions about the problems so that problem-solvers can think of potential causes and solutions. Intuition is valuable given incomplete information and knowledge to form rational, analytic judgments and decisions. However, scholars caution that intuition often results in the exploitation of familiar experiences and mental models, which are rarely appropriate for entrepreneurial problems that often have unique traits and characteristics that differentiate them from previously solved problems. What can value creators do then to more effectively generate novel frames of entrepreneurial problems? This dissertation draws on Cognitive-Experiential Self-Theory (CEST) to propose that a cognitive shift from rational, analytic thinking to intuition is likely to generate novel frames for entrepreneurial problems. Evidence from an archival study and a randomized field experiment with samples of entrepreneurs provide support for the value of the proposed cognitive shift.

MOC: A Network Dynamic of Experimental Learning Cycle for Early-Stage Project Success   

Author: **Siwei Zhu**, *Minnesota State U., Moorhead*

Early-stage project success does not depend exclusively on network activities but on a dynamic that can switch cognitive structures to behave in ways consistent with the expectations of network needs. By using a quasi-field experiment, this study finds that two types of networks determine the relationship between network embeddedness and early-stage project success via two distinct mechanisms of the experimental learning cycle: Knowledge embeddedness in knowledge networks increases early-stage project success and this relationship is mediated by failure analysis of the experimental learning cycle; social embeddedness in social networks increases early-stage project success and this relationship is mediated by tolerance for failure of the experimental learning cycle. This study sketches out a simple network dynamic, “What–Who–How”, for early-stage project success and illuminates the idea of Learning by Networking.

 **MOC: Aspiring Entrepreneur Gone Intrapreneur: Entrepreneurial Identity Aspirations and One’s Current Work** 

Author: **Alexander Hamrick**, *Auburn U.*

Author: **Charles Murnieks**, *U. of Missouri - Kansas City*

Finalist for MOC Division Best Student-Led Paper Award

Aspirations to be an entrepreneur motivate individuals to take entrepreneurial action and engage in nascent entrepreneurial behaviors. It is unclear, however, how these entrepreneurial aspirations influence individuals’ current work-related behaviors and outcomes. Our research provides an initial investigation into this topic. Specifically, we integrate self-verification theory with the literature on possible selves to predict that entrepreneurial identity aspirations motivate individuals to engage in entrepreneurial behaviors within their current organization (i.e., individual-level intrapreneurial behaviors), which then subsequently increase individuals’ work performance. Additionally, we argue that individuals’ intentions to stay within their current organization will intensify the relationship between their entrepreneurial identity aspirations and their engagement in individual-level intrapreneurial behaviors. Results from a longitudinal and multi-source study support our predictions. Implications for theory, research, and practice are provided.

Finalist for MOC Division Best Symposium Award

This symposium showcases current research on workplace relationships – including focus on connection, disconnection, and dynamic transitions between the two – in order to improve our understanding of how workers experience and bridge the space in between themselves and others at work. The four papers presented (1) identify a novel phenomenon called “disrupted workplace socializing,” which includes changes in the friendly social interactions that occur among coworkers in reaction to abrupt changes to how, when or where work is conducted; (2) explore how workers maintain and create personalized co-worker relationships following a transition to virtual work; (3) discuss the dynamics and outcomes of relational challenges experienced by gig workers; and (4) examine how workers incorporate loneliness into their self-narratives, and how the ways in which they do so impact how they inhabit their work roles and relate to their history and to other people at work.

OB: Coworker Passion and Its Divergent Effects on Employee Work and Interpersonal Behaviors

Author: **Yaqi Gao**, *Guanghua School of Management, Peking U.*

Author: **Yue Zhang**, *Guanghua School of Management, Peking U.*

Adopting transactional theory of stress (Lazarus & Folkman, 1984), this research examines the differential effects of two types of work passion (harmonious vs. obsessive passion) shown by coworkers on the focal employee's work and interpersonal behaviors. We examined our research model by surveying 318 full-time employees in Mainland China at two time points. Our results reveal that perceived coworker harmonious passion increased the focal employees' challenge appraisal, which in turn increased their OCB towards coworkers and proactive behavior but decreased their CWB towards coworkers and psychological withdrawal behavior. By contrast, perceived coworker obsessive passion elicited the focal employees' hindrance appraisal, which in turn decreased their OCB towards coworkers and proactive behavior while increased their CWB towards coworkers and psychological withdrawal behavior. We further discussed the implications for theory and practices.

OB: Passion Amid the Pandemic: Does Dual-Domain Passion Facilitate Life Satisfaction?

Author: **Marina Astakhova**, *U. of Texas at Tyler*

Author: **Violet Ho**, *U. of Richmond*

While many employees have experienced sudden work changes due to the COVID-19 pandemic, those changes have been particularly unsettling for employees whose work is also their passion. We examine whether having passion for work and non-work activities (i.e., passion in dual domains) helps employees achieve life satisfaction amid the pandemic. Using multiple identity frameworks, we investigate which forms of dual-domain passion are associated with life satisfaction, and whether passion enhancement moderates those relationships. Further, to explore the possibility that some people may be more prone to experiencing dual-domain passion, we examine individual ambidexterity as an antecedent of dual-domain passion. We first conducted a preliminary study to empirically test the notion of dual-domain passion and the forms it can take. In the main study, we tested the proposed model using two samples: employees working from home or furloughed during the pandemic. We found that having same-form passion (i.e., harmonious passion for work and non-work domains, or obsessive passion for both domains) was more critical to bolstering life satisfaction than having different-form passion (i.e., harmonious work passion and obsessive non-work passion, or vice versa). Specifically, harmonious (obsessive) dual-domain passion enhanced life satisfaction when one had high (low) passion enhancement. By extension, the indirect link between individual ambidexterity and life satisfaction, as mediated by each of the two same-form dual-domain passion, differed depending on the nature of same-form passion and passion enhancement.

Paper is Available to Meeting Registrants Only.

OB: What Comes First: Self or Social? Occupational Identification in Emotional Dirty Work

Author: **Koustab Ghosh**, *Associate Professor Indian Institute of Management Rohtak*

Author: **Ayesha Irum**, *Indian Institute of Management, Rohtak*

There are certain occupations where the focal activity of the workers includes interacting with other's displayed emotions that act as a threat to the normal order of the society or individual. Engagement in such work is said to be classified as emotional dirty work. Emotional dirty work is marked with taint and stigma due to the kind of emotions the workers have to deal with. While there is a growing interest in the various challenges such workers experience in their daily lives, not much is known about how the emanating stigma affects the focal worker's occupational identification. Premised on the social identity theory and conservation of resources theory, this study empirically investigates the relationship between perceived occupational stigma consciousness and occupational identification for individuals engaged in emotional dirty work. Further, the mediating role of emotional exhaustion and moderating influence of perceived prosocial impact is also examined. The results based on data collected from 244 emotional counselors demonstrate a positive effect of stigma consciousness on occupational identification. Such a finding highlights the significant role played by social identity theory in emotional dirty work, thereby extending the literature in the domain. Further, practical implications and future research directions are also outlined.

OB: Putting Passion to Work: The Dualistic Effects of Hobby Job Passion on Emotions and Work Vitality 

Author: **Katelyn Zipay**, *Purdue U.*

Author: **Hudson Sessions**, *Southern Methodist U.*

Author: **Sophie Pychlau**, *U. of Oregon*

An increasing number of employees are following their passion by adopting hobby jobs—passion-driven hobby activities that generate supplemental income alongside primary jobs. The intrinsic motivation and career-like commitment associated with hobby jobs suggests that hobby jobbers experience enriching positive emotions by putting their passion to work. Although this conclusion is intuitive, we assert that the drive and commitment for hobby jobs may also be characterized as a compulsive and obsessive attachment that bogs down hobby jobbers with negative emotions. Integrating the dualistic model of passion (Vallerand et al., 2003) and theories of emotional appraisals, we build theory that distinguishes between the “life giving” and “life draining” potential of hobby jobs. We argue that the degree to which hobby jobbers experience harmonious versus obsessive passion for their hobby jobs elicits different emotional appraisals and discrete emotions—pride, guilt, gratitude, and anger—that, in turn, enhance or diminish hobby jobbers' vitality in their primary jobs. We test our model in a multi-wave field study of 293 hobby jobbers. Overall, we offer novel and important theory about the substantial population of hobby jobbers who walk the line between pursuing a passion that fuels their energy at work and one that consumes it.

Effects of Caregiving and Technology Use on Recovery

Session Moderator: **Wan-Jing April Chang**, *National Tsing Hua U.*

OB: Caregiver Emotional Exhaustion: On-the-Job Recovery from Co-worker and Client

Author: **Yan Li**, *Nanjing U.*

Author: **Yina Mao**, *Nanjing U.*

In the post-COVID-19 era, world's demand in caregiving increases dramatically. In such a highly challenging work circumstance, caregivers are more likely to have emotional exhaustion than many other service providers. Past research mostly focused on off-the-job recovery strategies and neglected on-the-job recovery strategies. Drawing on conservation of resources theory, we hypothesize that caregivers' compassion towards clients will cause them emotional exhaustion which in turn hurts their subjective personal accomplishment and well-being. Moreover, our research investigates on-the-job recovery by uncovering the moderating role of client interaction (client reciprocity) and co-worker interaction (experienced compassion from co-workers) to buffer from emotional exhaustion. Results from a two-wave field study in a large-scale hospital of China support most of our hypotheses. Theoretical and practical implications are discussed.

OB: The Mediating Role of Work Flow Between Recovery Level and Energy Level: An FSM Study

Author: **Wan-Jing April Chang**, *National Tsing Hua U.*

Author: **Ya Jen Joe Cheng**, *National Yang Ming Chiao Tung U.*

Author: **Kuo-Yang Kao**, *National Yang Ming Chiao Tung U.*

This study investigates the linkages between recovery at the beginning of the workday, flow state in the morning and energy level (i.e., exhaustion and vigor) at the end of the workday. Our research hypotheses used the effort recovery model and conservation of resources theory as a theoretical framework. We used an experience sampling method to collect data from 84 full-time employees. Participants received three survey links per workday during a two-week period. We employed hierarchical linear and structural equation modeling to test the hypotheses. The results show that the recovery level at the beginning of the workday benefits work flow in the morning and energy levels at the end of the workday. Higher recovery level at the beginning of the workday is negatively related to exhaustion and positively related to vigor at the end; recovery at the beginning is associated with work flow in the morning, and work flow is positively related to energy at the end of the workday. Additionally, work flow in the morning mediates the relationship between recovery level at the beginning and energy at the end of the workday. These findings reveal the importance of recovery process and the effects of work flow on employees' energy.

OB: Personal Internet Usage Behavior: Its Taxonomy and Episodic Impacts on Employee Outcomes

Author: **Yolanda N. Li**, *Lingnan U.*

Author: **Jin YAO**, *HKU Business School, The U. of Hong Kong*

Author: **Dandan LI**, *School of Software Engineering, Tongji U.*

Author: **Kenneth S Law**, *Chinese U. of Hong Kong*

Personal Internet Usage behavior (PIU), which denotes an employee's acts during office hours of engaging in personal activities that are not related to work tasks using the Internet or any Internet-based device, has been found to carry both cost and benefit for employees, yet we know little why. We argued that existing competing findings might be due to the existence of different types of PIU. Relying on machine learning techniques, in Study 1, we classified PIU into two types—hedonic PIU (HPIU, i.e., relaxing oneself) and utilitarian PIU (UPIU, i.e., solving others' problems). In Study 2, we further tested the episodic influences of HPIU and UPIU on employees' end-of-workday well-being and job engagement. A multi-level analysis of 1082 daily inputs from 127 employees across ten consecutive working days supported our hypotheses. It showed that daily HPIU contributes to employees' end-of-workday well-being by fostering recovery. UPIU reduces their end-of-workday well-being and job engagement by inducing depletion. Moreover, we found that the beneficial effect of HPIU on recovery only happened for employees who received supervisor support for such nonwork activities during work hours. For employees with low supervisor support, performing HPIU would impede their recovery at work, thereby reducing their end-of-workday well-being. We discussed the implications of our findings.

OB: Uncovering Cognitive Costs of Using Artificial Intelligence Tools at Work: A Daily Diary Study

Author: **Yiduo Shao**, *U. of Iowa*

Author: **Chengquan Huang**, *U. of Florida*

Author: **Young Ho Song**, *U. of Windsor*

Author: **Ruodan Shao**, *York U.-SSB*

Despite the growing implementation of artificial intelligence (AI) artifacts in the workplace, little is known about how utilizing AI in completing jobs may impact employees' productivity and wellbeing. Extending prior research that assumed the potential positive impact of AI usage, we drew on the cognitive load theory and conducted a daily diary study to uncover the cognitive demands employees may encounter when utilizing AI-based information tools at work. We collected data over five workdays from 231 call center representatives working for a major bank located in South Korea. These representatives utilize an AI-based supporting system to address customers' requests over phone calls on a daily basis. We found that on days of frequent AI usage, representatives were more likely to experience information overload, and thereby receiving poorer performance ratings from supervisors and having difficulty detaching from work in the evening. In addition, we found that the detrimental effect of using AI at work is exacerbated by job tenure and is mitigated by openness to experience. Our research has implications for understanding the AI-human collaboration dynamics as well as AI's impacts on employees.

OB: Taking Work Home: A Diary Study on Negative Cognitive-Affective Involvement During Off-job Time

Author: **Andrea Noja**, *U. of Graz, Austria*

Author: **Sara Tement**, *U. of Maribor*

Author: **Bettina Kubicek**, *U. of Graz*

Negative cognitions and emotions about work during off-job time (e.g., worry about work tasks) can hinder the necessary recovery from work and lead to impaired well-being. To better understand when this so-called negative cognitive-affective involvement arises, we considered simultaneous and interactive effects of external and individual factors. Specifically, we investigated whether job demands (i.e., time pressure, cognitive demands, emotional demands) and maladaptive thinking patterns are independently and jointly related to negative cognitive-affective involvement and whether this is in turn associated with work-related well-being (i.e., emotional exhaustion, cynicism). Using a diary study, we collected daily data from employees (N = 109) twice a day over two working weeks. Multilevel analyses showed that negative cognitive-affective involvement mediates the relationship between job demands (i.e., cognitive demands, emotional demands) and the two work-related well-being indicators. The relationship between cognitive and emotional demands, respectively, and negative cognitive-affective involvement is moderated by work-related maladaptive thinking patterns, with stronger relationships for employees reporting more frequent maladaptive thinking patterns. Moreover, work-related maladaptive thinking patterns moderate the indirect effects of job demands on work-related well-being via negative cognitive-affective involvement. Overall, we expanded the research on negative cognitive-affective involvement by providing a more comprehensive picture of its antecedents and outcomes.

OB: The Effect of Negative Feedback Types on Task Performance

Author: **Hamidreza Harati**, *U. of Queensland*

Author: **Neal M. Ashkanasy**, *U. of Queensland*

Author: **Justin Peter Brienza**, *U. of Queensland Business School*

Author: **Soroush Aslani**, *U. of Wisconsin*

In five studies, we investigated the effect of different types of negative feedback on task performance and tested mechanisms that explain why recipients of negative feedback are likely to improve their task performance. We showed competence-contingent self-esteem and self-enhancement strategies mediate the relationship between comparative negative feedback and task performance improvement. In Study 1, we conducted an experiment to investigate reactions to types of negative feedback (i.e., comparative, contemptuous, neutral, and instructional), as well as a positive feedback condition, on task performance. We found that participants who received comparative and contemptuous feedback after an actual task performance performed better in the following task than other participants. Next, in Study 2, we focused only on contemptuous and contemptuous feedback, finding that recipients of comparative feedback significantly performed better in the subsequent task performance. We conducted studies 3a, 3b, and 4 to investigate reactions of full-time employees to comparative vs. contemptuous feedback on task performance in the workplace. Findings of Study 3a, show that full-time employees predicted that their colleagues should perform better after receiving comparative feedback compared to contemptuous feedback. In Study 3b, we replicated and extended Study 3a findings by examining momentary ratings of competence-contingent self-esteem and self-enhancement as mediating mechanisms explaining the link between feedback and expected performance. In Study 4, we showed that, compared to contemptuous feedback, full-time employees who received comparative feedback perform better in their own task performance in the workplace.

OB: Capable yet Stingy, High Performance Evokes Knowledge Hiding 

Author: **Guangdi Tian**, *U. of International Business and Economics*

Author: **Min Cui**, *U. of International Business and Economics*

Author: **Mingpeng Huang**, *Peking U.*

The existing literature on job performance has largely neglected the effect of high performance on employees' own behaviors. Drawing on self-perception theory, we explored whether, how, and when employee job performance is related to knowledge hiding. We found that employee job performance has a positive relationship with perceived overqualification, and this relationship is stronger when supervisors show high level of humility. In turn, perceived overqualification is positively related to knowledge hiding behaviors. These findings offer some important theoretical and practical implications.

OB: When Are You Coming Home? A Study on Essential Worker Time Interference and Individual Performance

Author: **Andrew B. Blake**, *U. of Arkansas*

Author: **Hans Hansen**, *Texas Tech U.*

Author: **Yitzhak Fried**, *Texas Tech U.*

Author: **Cody Bradley**, *U. of Arkansas*

Author: **Steffen P. Raub**, *EHL Hospitality Business School, HES-SO*

This study investigates how essential workers may survive and thrive during the COVID-19 pandemic by unpacking the relationship between worktime interference with family and individual performance. Drawing from Conservation of Resource Theory, we hypothesize and find support for a process model indicating that essential workers experiencing worktime interference with family are more likely to engage in individual proactive behavior, increasing task efficiency, and in turn, individual task proficiency. We find that this relationship is strengthened by the context of accountability, which naturally creates increased opportunities for enhanced resource replenishment and protection. Following our quantitative analysis, we conducted a qualitative analysis of US-based nurses during the height of COVID-19 to add theoretical nuance to our findings. Findings from qualitative analysis illustrate how WTIF and accountability motivate workers to be proactive, what they do to become proactive, how WTIF stress affects them, and what psychological resources are salient in accountable contexts.

Cognitive Processes and Outcomes

Session Moderator: **Jessica Mariah Rivin**, *U. of Colorado, Boulder*

OB: State Epistemic Curiosity in Organizations

Author: **Jessica Mariah Rivin**, *U. of Colorado, Boulder*
Author: **Russell Cropanzano**, *U. of Colorado, Boulder*

Despite decades of research, epistemic curiosity and its consequences remain misunderstood. In a series of three studies, we develop a measure of state curiosity and explore the role it plays in organizations. We argue that curious states are proximal predictors to several relevant workplace outcomes. Specifically, we look at how state curiosity influences worker adjustment, including affect and task engagement, as well as worker behavior, including information elaboration, learning behaviors, resilience, and turnover intentions. In order to better understand these relationships, we investigate two types of state curiosity: interest and deprivation. We examine these dimensions in Study 1, demonstrating initial validation evidence of a new state measure of curiosity. In Study 2, we replicate our validation of our new measure, doing so using experience sampling methodology (ESM). Further, Study 2 finds these two states to be differentially related to positive and negative affect, job satisfaction, and task engagement. Finally, in Study 3 we expand these ideas in a panel investigation. For this study, we further examined the impact of the two dimensions of state curiosity on workplace outcomes, including task engagement, affect, information elaboration, learning behaviors, resilience, and turnover intentions. Theoretical and practical implications are discussed.

OB: Errors of Omission and Commission in Group Communication Networks

Author: **Kyosuke Tanaka**, *Aarhus BSS, Aarhus U.*
Author: **Leslie A. DeChurch**, *Northwestern U.*

We advance a novel theory of relational schemas on how formal and informal structures in communication networks explain why members misperceive and miss the existence of communication links in their networks. To test our hypotheses based on the theory, we collected data on 23, 12-person networks (N = 212 participants), measuring both the actual communication networks (who was actually connected to whom) and perceived networks (who was perceived by others to be connected to whom). Comparing the actual and perceived networks shows that members tend to overestimate the presence of communication links between members in formal groups and informal structures (e.g., reciprocity and two-path) and underestimate the presence of links between people in different groups and people who are part of an unclosed triad. There is a clear accuracy trade-off in using relational schemas for perceptions of communication networks. These findings provide insights into how members' perceptions of who knows whom hinder their ability to share information effectively.

OB: Anchoring on Historical Round Number Reference Points 

Author: **Scott Wiltermuth**, *USC*
Author: **Timothy Gubler**, *Brigham Young U.*
Author: **Lamar Pierce**, *Washington U. in St. Louis*

Buyers typically strive to negotiate low prices for durable goods. Psychologically-salient round number reference points (e.g., \$10,000) influence these purchasing decisions. However, existing research does not capture how these historical reference points influence the anchoring effect of previous sales prices on future valuations. We argue that the anchoring effect of prior sales prices on subsequent prices is discontinuous at round numbers, such that it matters disproportionately whether a previous sales price reached a round-number threshold. Buyers paying a price just below a round number may sacrifice money because they receive disproportionately less when reselling the good. We further argue that while market forces are unlikely to attenuate this effect, highly-experienced professional intermediaries may. Using data on over 13,000 repeat real estate transactions, we find that home buyers who previously paid just under a \$10,000 reference point subsequently list and sell their homes for about 1.3 percent (over \$2000) less on average than do buyers selling comparable homes who previously paid at or above a round number threshold. This drop is observable controlling for home characteristics and the general relationship between previous and current prices. Buyers who cross a \$10,000 threshold by paying \$1000 more therefore would earn a return of 215%. An experiment with 1010 participants replicates these findings and increases confidence in causality. Market mechanisms, the negotiation process, and organizational support provided to intermediaries does not correct substantively for these discontinuities: Lower initial listing prices persist to final sales prices. However, using a highly-experienced agent attenuates intergenerational pricing bias.

OB: Why and for Whom Cyber Incivility Affects Task Performance? The Intrapersonal Processes and Boundary 

Author: **Xing Wang**, *U. of Illinois at Chicago*
Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*
Author: **Hongli Li**, *Soochow U.*

Although cyber incivility (i.e., an interpersonal workplace stressor displayed through uncivil behaviors manifested in online working communication) occurs every day in the workplace, inadequate attention has been paid to its daily influence on employees' performance. To address this limitation, we conducted a daily diary study to determine the intrapersonal processes and a personal boundary condition of the within-individual relationship between cyber incivility and task performance. Results based on data collected from 112 full-time employees with 866 observations suggest that daily cyber incivility has a time-lagged effect on employees' task performance the following day, and this effect was found to be transmitted by induced negative affect of the following day and poor sleep quality the previous night. In addition, we found that employees with high self-leadership suffer less from cyber incivility, specifically, the positive effect of cyber incivility on negative affect is weaker for self-leaders.

 **ODC: Choosing When to go Undercover—How Employees Initiate and Drive Organizational Change**

Author: **Jana Maria Katharina Hermle-Boersig**, *WHU – Otto Beisheim School of Management*

Winner of ODC Division Best Doctoral Student Paper

William H. Newman Award Nominee

We advance research on emerging organizational change characterized by employees initiating and enacting change processes. While extant research has made strides in understanding such emergent change, it implicitly assumes that change is either induced or directly legitimated through an authority. In contrast, we focus on organizational change initiated and reinforced by employees—without legitimation from authority. We combine structuration theory and its core tenet of ‘scripts’ with an emergence perspective on change to study how and why employees derive legitimacy to initiate and enact small change, by drawing from existing structures in which they incubate. Moreover, we focus on how formalizing the change impacts its level of embeddedness in organizational structures. Building on an inductive, qualitative multi-case study within the machine engineering industry, our analysis draws from 85 interviews and secondary data. We propose that how and why employees derive legitimacy to initiate small change defines if they will subsequently act openly, drawing from existing formal and informal structures, or hiddenly, consciously circumventing formal structures only considering informal structures. Moreover, we found that change is finally embedded at different structural levels of an organization arguing that it is only deeply embedded if completely organizationally legitimized through routinization amplification and formalization.

ODC: Staff and Line Revisited: How Management Specialists Promote Change in Technical Work Settings  

Author: **Pedro Monteiro**, *Copenhagen Business School*

This paper explores the work of peripheral experts who lack formal authority to produce change operations in a bureaucratic organization. I theorize these dynamics in terms of staff-line relations and draw on fifteen months of ethnographic fieldwork to map the struggle of a team of process improvement, knowledge management, and project management specialists to influence the aircraft development work in an aeronautical company. While previous literature documents that close ties and awareness about the work context enables experts to influence operations, I find that these conditions may be necessary but not sufficient. Specifically, I find that experts drew on their ties and awareness to translate tools and services according to the work context and paced their offer in a stepwise manner. Yet, as line employees rejected or ignored their tools and services, they deployed stealthy ways to infiltrate operations, piggybacking opportunities to implement their ideas and trying to bait interest among technical workers and managers. I build on my findings to theorize the organizational challenges faced by experts to accomplish their professional mandate in complex organizations and translate ideas into practice, thus refining our understanding of expert work in organizations.

ODC: Consequences of Change Championing (A)symmetry on Group- and Individual-Level Change Outcomes 

Author: **Rouven Kanitz**, *Rotterdam School of Management, Erasmus U.*

Author: **Katerina Gonzalez**, *Suffolk U.*

Author: **Stefan Berger**, *U. of Groningen*

Author: **Hendrik Huettermann**, *BWU Munich*

Author: **Jennifer Franczak**, *Pepperdine U.*

The degree to which employees champion the change (i.e., discretionary behaviors used to promote change to others) is an important component of managing organizational change. The broader group context in which championing occurs has been largely absent from extant research on change championing. In this study, we adopt a multilevel perspective of change championing. 267 employees from 69 work groups undergoing an organizational change were surveyed at two points in time. We find that group championing asymmetry (i.e., the degree to which group members differ in their championing) reduces the positive effects of the average level of group championing on implementation effectiveness. We also shed light on the individual-level processes that underlie group championing dynamics. We find that individual championing asymmetry (i.e., the extent to which an individual differs in championing from the group’s championing level) influences an individual’s cognitive appraisal of (but not emotional responses to) change and later championing. This study contributes to the change championing literature by offering a multilevel perspective on championing dynamics between individuals and groups.

ODC: A Multilevel Study of Social Networks and Collective Reactions to Organizational Change 

Author: **Francesca Pallotti**, *Greenwich U.*

Author: **Daniele Mascia**, *Luiss U.*

Author: **Luca Giorgio**, *Alma Mater Studiorum U. di Bologna*

This study examines the role of professional networks in explaining reactions to, and outcomes of organizational change. Extending recent research on effects of social networks on organizational change, we investigate the conditions under which employees’ professional networks drive change implementation at the individual level and how, in turn, this conditional effect affects perceived performance at the unit level. We posit that contingent aspects of change, such as its actual impact on work units, account for variations in the degree to which employee networks affect individual contribution to change implementation. We also predict that change implementation at the unit level correlates with perceptions of unit performance after organizational change. We find general support for our arguments in an analysis of data on information sharing relations among 170 physicians in 29 units of a large teaching hospital that recently experienced a major restructuring intervention. We discuss the theoretical and practical implications of bringing a network perspective to bear on issues of individual and collective reactions to organizational change.

Updating Scholarly Practice: Action Research for Transformations at a Time of Eco-Social Crisis

Updating Action Research for Transformations

Speaker: **Hilary M. Bradbury**, *Action Research Plus AR+ Foundation*

Speaker: **Kenneth Jay Gergen**, *Swarthmore College*

Speaker: **William Torbert**, *Global Leadership Associates & Boston College Emeritus*

Speaker: **Aftab Erfan**, -

Speaker: **Miren Larrea**, *Deusto Business School*

Facilitator: **Chris Riedy**, *U. of Technology, Sydney*

Facilitator: **Cynthia Mitchell**, *U. Technology Sydney*

Facilitator: **Dana Carman**, *Integral Consulting*

Facilitator: **Kent Glenzer**, *Middlebury Institute of International Studies at Monterey and and The U. of Adel*

The symposium brings together global scholar-practitioners to discuss and illustrate action research as a contemporary scholarly practice. Over the past decade, action research for transformations (ART) illustrates a growing capacity for grappling with and achieving global sustainability goals. Participants will learn of its key conceptual underpinnings, namely constructivist pragmatism and adult development. These in turn are shown to animate a meta-model that combines concern for relational, conceptual and experimental spaces, guided and assessed by seven quality choicepoints. Key in the transformations support by ART is researchers' integrating objective perspectives with subjective reflexivity. As an expression of contemporary constructivist pragmatism, action research for transformations thereby illustrates and works with a deeper emphasis and respect for the relational nature of people within change contexts. In this integration ART may offer a revitalization of social science itself. The discussion of how concepts as well as objectivity, intersubjectivity, and subjectivity combine will be brought alive with two impactful cases from worlds of i) policy makers in government in Spain and ii) work of JEDI (justice, equity, diversity, and inclusion) with thousands of employees in Vancouver Canada. The symposium will be of interest to change leaders and educators concerned with transformative social change, as well as social scientists interested in new paradigms of social science.

Strategic Decision Making

Session Moderator: **Radek Nowak**, *New York Institute of Technology*

SAP: **When Speed in Decision Making Improves Firm Performance: The Role of Absorptive Capacity**

Author: **Radek Nowak**, *New York Institute of Technology*

Scholars have asked for more studies that would further clarify when speed in strategic decision-making could lead to positive organizational outcomes, such as improved firm performance. These calls have intensified lately, because past findings have revealed rather mixed – both positive and negative – effects of decision-making speed on performance. To help clarify such inconclusive past findings, the present paper investigates the relationship between decision-making speed and business performance in the context of absorptive capacity. In doing so, the study introduces a new model, which suggests that business organizations, operating in uncertain markets, may benefit from fast decision-making when one critical condition is met – such firms must also develop strong absorptive capacity.

SAP: **Timing and Emotions in Learning Practice Adoption**

Author: **Suvi-Tuuli Helin**, *Aalto U.*

Author: **Timo Olavi Vuori**, *Aalto U.*

SAP Best Student Paper Award

Reflecting on past performance is perceived as the core activity enhancing organizational learning because it helps organization members improve their cognitive understandings. Yet, reflection could also trigger emotional reactions that may influence organization members' subsequent actions. In this paper, we integrate such emotional mechanisms into current theories of organizational learning, building on a five-year qualitative study of a management consulting firm. Our model shows how reflection influences organization members' appraisals that generate emotions. Reflection changes organization members' thinking about their skills and actions, which triggers emotional reactions that may either support or inhibit subsequent actions. The timing of reflection, in particular, influences their appraisals of controllability. When reflection is performed after a project, appraisals of low controllability lead to low-arousal emotions that inhibit future action and undermine future learning. In contrast, reflection performed during or before a project generates appraisals of high controllability that lead to high-arousal emotions and benefit future actions and learning. Hence, the timing of reflection substantially shapes the emotional effects of reflection and influences whether reflection benefits organizational learning.

SAP: **Strategic Implications of Algorithmic Tools in Operational Decision-Making**

Author: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Tero Ojanpera**, *Aalto U.*

In this conceptual paper, we seek to explore how the use of algorithmic tools in operational decision-making shapes strategy formation. We detail how such tools are starting to perform some of the roles of strategic links between top management strategic vision and organizational action and how this affects the roles and dynamics of traditional strategic actors. We present a model detailing the influence of algorithms and middle managers on the top-down processes of strategy implementation and adaptation and the bottom-up process of innovation as strategic links. We also put forward a set of propositions on how algorithmic tools are likely to change how organizations create, implement, and adapt strategy. We contribute to the literature on strategy formation and to the literature on algorithms at work by explicating the important strategic implications of operational algorithmic tools that prior work has mainly left implicit.

Paper is Available to Meeting Registrants Only.

SAP: **The Role of Integration Managers in Post-Acquisition Integration: A Decision-Making Perspective**

Author: **Sniazhana Ana Sniazhko**, *U. of Vaasa*

Author: **Mark Thomas**, *Grenoble Ecole de Management*

Author: **Marcos Pereira Fernandes De Barros**, *Grenoble Ecole de Management*

Although the existing literature recognizes the role of integration managers in post-acquisition integration, it not only positions them as mere executors of the top management's targets, but also tends to disguise them under the overall term of 'integration manager' regardless of their area of expertise. Quite often integration managers and integration teams are positioned at the boundaries between top management and the rest of the merging organization where their role might include giving sense to a new strategy and structure and interpreting various unanticipated events that emerge during post-acquisition integration. They tend to play a very important but highly undervalued decision-making role. We have a limited understanding of how individual integration managers influence decision-making in an integration team setting during post-acquisition integration. The findings of this in-depth qualitative case study research illustrate the key performing role of integration managers at both the individual and team level, where the level of integration managers' contribution is being partly predetermined by the area of their expertise. The findings also showed that key decision-making activities were conducted at the team level. The paper presents a theoretical model of integration managers' decision-making processes during the post-acquisition integration phase and makes two key contributions to the M&A literature. First, this paper constitutes the particular importance of integration managers in the way the post-acquisition integration evolves. Second, this research complements the simplicity of the rationalistic perspective on post-acquisition integration incorporating the chaotic reality of integration managers' decisions-making who tend to fill in contradictory and/or equivocal cues of top management.

Corporate Governance, Strategy and Sustainability

Session Moderator: **Ina Karn**, *U. of Groningen, Faculty of Economics and Business*

SIM: Turning Up the Heat: A Multilevel Review on the Role of Corporate Governance in Climate Change

Author: **Ina Karn**, *U. of Groningen, Faculty of Economics and Business*
Author: **Esha Mendiratta**, *Groningen U. (RuG)*
Author: **Kerstin Fehre**, *Vlerick Business School*

Challenges of climate change have become one of the most critical problems for society. Governance scholars show increasing interest in understanding how internal and external corporate governance actors shape firm-level environmental sustainability. Moreover, effects of corporate governance actors at multiple levels such as the individual, team, firm and supra-firm level are critical in shaping firm-level environmental sustainability. We review the literature over the period from 1992 to 2021 to identify corporate governance actors' motivation, expertise and power required to shape firm-level environmental sustainability. Doing so, we highlight the theoretical mechanisms suggested in the extant stock of literature to examine the interfaces between levels in a multilevel synthesis. On the basis of this synthesis, we identify strengths and shortcomings in current knowledge. We present a future research agenda that identifies relevant gaps at single levels and calls for integrative research focusing on how internal and external corporate governance actors influence one another. Therefore, this study provides a conceptual basis for combining existing knowledge of corporate governance actors' multi-level effects in shaping firm-level environmental sustainability.

SIM: Corporate Purpose and the SDGs: Two Models to Explain Their Relationship

Author: **Kyoko Sasaki**, *Monash U.*
Author: **Wendy Stubbs**, *Monash U.*
Author: **Megan Farrelly**, *Monash U.*

Companies are expected to play "a greater role" in addressing the United Nations Sustainable Development Goals (SDGs) and broadening their corporate purpose beyond profit maximization. However, there is little research on the relationship between corporate purposes and companies' commitment and actions to address the SDGs. This study aims to develop an explanatory model of the relationship between broader corporate purpose and companies' actions towards the SDGs. Semi-structured interviews were conducted with managers of Fortune Global 500 companies in Japan to theorize how the broader corporate purpose and the SDGs mutually influence each other. We found that two aspects of corporate purpose: goal and duty, are determinants of the relationship between the corporate purpose and the SDGs. Companies with a sense of urgency and having activated the goal aspect of their purpose adopt the multi-layer model, in which the relationship between broader corporate purpose and the SDGs is structured and multi-faced. Contrastingly, the relationship is less structured and explained by the single-layer model in companies that only activate the duty aspect of their purpose. The research contributes to the corporate purpose and sustainability literature by linking the two theories and how they influence each other.

SIM: The Key Value Drivers of the Company's Sustainable Development Strategy: An Integrated Framework

Author: **Ivo Hristov**, *U. of Rome Tor Vergata*
Author: **Riccardo Camilli**, *U. of Rome Tor Vergata*
Author: **Matteo Cristofaro**, *U. of Rome Tor Vergata*

One of the greatest challenges facing the contemporary research and academic world is to review the relationship between sustainable development and performance management system (PMS). More and more companies are moving towards a strategic approach that includes sustainability issues into their corporate strategy. However, to date, sustainability and corporate strategy are still not adequately integrated in the organizations. Several criticisms are connected to its effectiveness and its practical implementation. In this context, in view of the numerous critical issues emerged in the literature, the aim of this paper is twofold: 1) to provide a clear view on the main sustainability dimensions considered relevant in the managerial practice, and 2) to identify a suitable approach to align the sustainability dimensions identified in the corporate strategy. To this end, we conducted a semi-structured interview with 70 middle and senior managers of Italian companies, specializing in sustainable development issues. Accordingly, the findings have revealed that to implement sustainable development strategy, organizations need to integrate five sustainability dimensions (environmental, social, economic, cultural and organizational) in the PMS execution. By incorporating these dimensions in an early stage of the PMS cycle, the strategic coherence and sustainable alignment are provided that can help companies to integrate sustainable development as integral into their corporate business models and decision-making processes.

A Cross-border Take on Innovation

Session Moderator: **Elisa Sabbadin**, *Department of Economics and Management, U. of Padova*

STR: Cross-border Acquisitions and Technological Spillover: Evidence from European Regional Clusters

Author: **Elisa Sabbadin**, *Department of Economics and Management, U. of Padova*

Author: **Ivan De Noni**, *U. of Padova*

Author: **Fiorenza Belussi**, *U. of Padova*

Relying on the M&A transaction-level dataset and adopting a more region-specific approach with a focus on industry-region pairs, this paper examines how cross-border acquisitions have an effect, in terms of technological spillover and collaboration, on European industrial clusters. Adopting an industry-regions pairs approach, the study is based on a quantitative analysis of 3039 regional clusters belonging to 262 European regions and 25 patenting industries. Invention performance at the regional cluster level is defined throughout two sets of different measurements to assess the impact of CBAs on invention quantity performance and internal and external technological collaboration, respectively. Our results reveal that CBAs have a positive and significant impact on the number of patents as well as the number of internal and external technological collaborations and this effect is persistent over time. Furthermore, in exploring the inter-industry technological spillover effect of CBAs registered in the same region of the cluster but outside the cluster, we found that CBAs in a regional cluster are inclined to produce technological spillovers within the cluster and no significant effects in the other industries of the region. The paper is an attempt to empirically explore CBAs and technological spillover in European regional clusters. Therefore, it contributes to the debate thanks to the use of an industry-regions pairs approach.

STR: The Effects of Temporal Distance on Intra-Firm Communication: Evidence from Daylight Saving Time  

Author: **Jasmina Chauvin**, *McDonough School of Business Georgetown U.*

Author: **Tommy Pan Fang**, *Jones Graduate School of Business, Rice U.*

Cross-border communication costs have plummeted and enabled the global distribution of work, but frictions attributable to distance persist. We estimate the causal effects of temporal distance, i.e., time zone separation between employees, on intra-firm communication, a critical means of coordination and knowledge transfer. We argue that temporal distance creates frictions for synchronous communication, which could be especially harmful for collaboration among employees engaged in non-routine tasks. Exploiting Daylight Saving Time (DST) as a natural experiment and detailed data from a large multinational firm, we show that among collaborators who experience an increase in temporal distance, total communication volumes drop by 9.4 percent on average, an effect fully driven by reductions in richer, synchronous communication. Further, we show that these declines are concentrated among employees in routine tasks. Employees in non-routine tasks, meanwhile, react to increased temporal distance by shifting synchronous communication across the boundary of their workday into leisure time. Additional tests show that workers' propensity to employ this adjustment mechanism is only partly explained by differences in their ability to work from home. Overall, our findings provide evidence that employees collaborating on non-routine tasks place a high premium on synchronous communication even at the cost of personal leisure. We present additional evidence and draw implications for how temporal distance relates to strategic considerations such as worker mobility, co-production of patents, and temporal boundaries of the firm.

STR: Human Capital and Learning from and by Exporting 

Author: **Annique A. Ün**, *Northeastern U.*

We analyze how knowledge and skills influence the impact of exporting on innovation. Building on the knowledge-based view, we propose separating two effects that previous literature has confounded: a direct effect of exporting on innovation called learning from exporting and an indirect effect of exporting on innovation via employees' skills called learning by exporting. We first argue that in learning from exporting, exporting has an inverse U-shaped relationship with innovation. This reflects the ease of incorporating explicit foreign knowledge in innovations at low levels of exporting, and the difficulty in incorporating tacit foreign knowledge at high levels of exporting once explicit knowledge has been incorporated. We then propose that in learning by exporting, employee skills modify the effect of exporting and innovation resulting in a U-shaped relationship with innovations. At low levels of exporting, employees suffer from the not-invented-here syndrome, a local mindset that favors internal over external knowledge and rejects foreign knowledge. However, at high levels of exporting, employees are more likely to develop a more global mindset and accept foreign knowledge as they shift their focus from the domestic to the foreign markets, supporting innovation.

STR: Paradoxical Practices and Product Innovation Performance  

Author: **Xiaoshi Xu**, *Aalto U. School of Business*

Author: **Carl Fey**, *Aalto U. School of Business*

Author: **Julian M Birkinshaw**, *11393*

New product development (NPD) is a complex non-linear process that requires effective management of continuous balance of managerial tensions. Scholarly efforts to balance tensions along the innovation process have left a disproportionate gap in our understanding of how multiple paradoxical practices can help achieve superior NPD performance. Leveraging the paradox theory, we hypothesize that the four pairs of paradoxical practices, namely the performing, organizing, learning, and belonging paradoxes, are positively associated with NPD performance (product effectiveness and process efficiency). Moreover, we assume firms' country of operation moderates the relationship between the paradoxical practices and NPD performance. Using empirical data derived from a survey of 200 firms in China and 164 firms in Finland and Sweden, we apply hierarchical linear regression to test our hypotheses. The results indicate that the performing paradox has a positive relationship with product effectiveness, whereas the organizing paradox is positively linked to process efficiency. In addition, the learning paradox was found to positively influence both product effectiveness and process efficiency. Lastly, the moderating role of firms' country of operation is significantly supported by several links between the paradoxical practices and NPD performance. This moderating result indicates that Chinese firms are better able to deal with paradoxical tensions present in NPD than Nordic firms due to Chinese cultural tradition of embracing yin yang and the fact that Chinese often prefer to find a way to pursue two seemingly conflicting ends of a tension rather than choosing one.

Race, Status and Interpersonal Conflict

Session Moderator: **Rahman Ullah**, *IAE Paris - Sorbonne Business School*

CM: The Moderating Effect of Goal Orientations on the Conflict and Innovative Performance Relationship

Author: **Rahman Ullah**, *IAE Paris - Sorbonne Business School*

Author: **Florent Noel**, *IAE Paris - Sorbonne Business School*

Research has found both positive and negative effects of interpersonal conflict on performance outcomes such as decision making, individual and group performance, employees' satisfaction, and individual and team creativity. However, little is known about the relationship between interpersonal conflict and employees' innovative job performance. Accordingly, in the current study, we investigated the link between task, process and relationship conflicts and employees' innovative job performance and the moderating effect of employees' mastery and performance goal orientations. We analyzed the data collected from 448 employees working in different organizations in Pakistan. The results indicated that task, process and relationship conflicts are all negatively related to employees' innovative job performance. However, employees' mastery goal orientation weakens while performance goal orientation strengthens this negative relationship. This study contributes to the debates on the outcomes of interpersonal conflict by highlighting the importance of employees' goal orientation for understanding the interpersonal conflict - innovative job performance relationship.

CM: How Conflict Strategies and Emotions Shape Technology Adoption in Family Business Organizations

Author: **Maria Carmela Annosi**, *Wageningen U.*

Author: **Davide De Gennaro**, *U. of Salerno*

Author: **Roberta Oppedisano**, *Parthenope U. of Naples*

Author: **Filomena Buonocore**, *Parthenope U. of Naples*

This study offers a longitudinal view on the social dynamics enacted in Family Business Organizations (FBOs) after the emergence of cognitive conflicts due to family members' confrontation on the decision to adopt a technological innovation. Our study answers the call for more research on the patterns connecting family-related conflicts, conflict management, and emotions on firms' technology adoption. We draw on a multiple case study involving seven FBOs operating in agricultural sector, as recently affected by the digitalization wave and with high propensity to display contradictory cognitions and unpleasant state among family members due to the digital divide.

CM: Reducing Class-based Prejudice with Reminders of How Socioeconomic Background Impacts Achievements   

Author: **Daniela Goya-Tocchetto**, *Fuqua School of Business, Duke U.*

Author: **Shai Davidai**, *Columbia Business School*

Individuals from low socioeconomic status (SES) often find themselves in a double bind, facing many obstacles for attaining "hirable" qualifications as well as biases in the hiring process once those qualifications are attained. Considering these biases, one may conclude that people ought to conceal their socioeconomic background when being evaluated. In contrast, we argue that explicitly highlighting how one's achievements may have been weighed down by one's SES can reduce or even eliminate the biases facing low SES job candidates. Across nine studies (seven main studies and two pilot studies; N = 2186), we find that explicitly emphasizing one's lower SES decreases social class biases in interpersonal judgments. Specifically, we find that a simple reminder of how SES can negatively impact one's achievements can attenuate (Studies 1a and 1b), reverse (Studies 2a and 2b), and eliminate (Study 2c) social class biases in hiring decisions. Moreover, in a two-step ecologically valid design that mimics different stages of hiring decisions, we find that people who are reminded of how a candidate's (lower) achievements may be due to their SES make more favorable hiring recommendations to their supervisors who, in turn, are more willing to interview and hire them (Study 3). We discuss the importance of our findings for tackling socioeconomic diversity, equity, and inclusion.

CM: Inequity Frames and the Perceived Fairness of Inherited Historical Advantage Versus Disadvantage

Author: **Elinor Flynn**, *New York U.*

Author: **L Taylor Phillips**, *NYU Stern*

Author: **Aerielle Allen**, *New York U.*

People often fail to consider how historic and structural racism reinforce present-day racial inequity. In four experiments (N=1317), we consider whether presenting evidence of race-based historical privilege versus disadvantage is more effective at shifting perceptions of inequity and policy support. Using a 2 condition (advantage vs. disadvantage framing) between-subjects design, participants were randomly assigned to read about a college applicant whose education goals are either significantly facilitated or extinguished due to accumulated family (dis)advantage dating back to the 1800s (e.g., descendant of a slave owner or a slave). To test whether effects persisted beyond motivational factors (e.g., ideology), we also manipulated the country context, such that half read about the legacy of slavery in the U.S. and half read about the legacy of the Indian caste system. Benefiting from race-based advantage was perceived as fairer than being burdened by race-based disadvantage. This held in a zero-sum context (Study 3) and a racially-balanced sample (Study 4). We also find some evidence that inequity framing influences policy support via negative affect and fairness. Overall, we contribute to emerging understanding of how informational interventions affect perceptions of present day inequities by demonstrating that effectiveness of such interventions depends upon how inequity is framed. In so doing, we suggest that a bias toward tolerating inherited historical inequity when benefits rather than burdens are made salient—even when the inequity derives from clearly immoral origins—is an important psychological barrier toward changing public tolerance of present inequity and motivating support for policy solutions.

Mentoring is an important organizational process that contributes to career development and personal growth. Mentors are uniquely positioned to provide opportunities for learning by sharing important feedback with their mentees, and research on mentoring has demonstrated its ability to help mentees cope with major organizational shocks. The goals of this symposium are to explore new insights and identify communication behaviors that can enable the creation of more positive workplace mentorship relationships. In pursuit of these two missions, in the proposed symposium we bring together four papers to reveal novel theoretical directions and important empirical insights about factors that may aid or hamper beneficial work mentoring relationships. Our discussant, Taya Cohen, will help integrate these papers and facilitate discussion. We hope the findings presented will reveal novel and important empirical insights, and aid business organizations and managers of the future in creating beneficial work mentoring relationships.

Presenter: **Einat Lavee**, *U. of Haifa, Department of Human Services*
Participant: **Lynn Shore**, *Colorado State U.*

Inclusive leadership has many angles and facets. This symposium aims to discuss these issues from varying perspectives—formal and emergent leaders, diverse and inclusive leadership, leader inclusive behaviors, and inclusive leadership in different organizational contexts. The presenters employ a variety of approaches (qualitative, quantitative, and theoretical) to explore inclusive leadership. The three initial papers provide empirical data examining issues of formal inclusive leadership in different organizational contexts, such as the service industry and the military. The final paper offers an original theory-based model of emergent or informal inclusive leadership. As the majority of the research so far has focused on leadership behaviors and how formal inclusive leadership can influence organizational climate, the final paper will explore gaps in the research and focus on future directions. The symposium will conclude with an examination of unanswered questions and explore future directions for research and theory development.

Best-Practice Recommendations for Designing and Implementing Thought Experiments

Designing and Implementing Thought Experiments

Organizer: **Jose R. Beltran**, *Iowa State U.*
Organizer: **Herman Aguinis**, *George Washington U.*
Organizer: **Estelle Archibold**, *Case Western Reserve U.*
Organizer: **Esther Lamarre Jean**, *U. of Texas At Arlington*

Thought experiments have been used in numerous scientific fields to produce important breakthroughs. For example, presenting hypothesized alternate explanations, extending extant theory to include new contexts, and providing counterexamples for prevailing theories, fields such as economics, public and international policy, physics, ethics, and others have utilized thought experiments to create novel and useful theoretical insights. However, thought experiments are virtually absent in management research. Accordingly, this PDW aims to offer best-practice recommendations regarding how to design and implement different types of thought experiments with the goal of advancing theory across management fields ranging from micro (e.g., organizational behavior, human resource management) to macro (e.g., strategy, entrepreneurship). Our recommendations are based on a review of 192 substantive and methodological sources. The recommendations go over each step of the process, from deciding whether to conduct a thought experiment to reporting results. The PDW will also include an interactive portion to give attendees opportunities to discuss specific research questions they can address by implementing thought experiments.

CAR: The Influence of Complexity, Chance and Change on the Career Crafting Strategies of SIEs ➔

Author: **Blanca Suarez-Bilbao**, *Maynooth U.*

Author: **Maïke Andresen**, *U. of Bamberg*

Author: **Marian Crowley-Henry**, *Maynooth U.*

Author: **Edward O'Connor**, *Maynooth U.*

Self-initiated expatriates' (SIEs) career trajectories are complex due to the transnational crossing of geographical boundaries as well as the idiosyncratic motivations for both global mobility and the careers they pursue. In this paper we focus on the combined influences of complexity, chance and change – constructs central to the chaos theory of careers – on SIEs' career management behaviour. In particular, we explore how participants, in response to/in managing (attempting to manage) the chaos of their unfolding careers in an international context, craft their careers according to their unique circumstances, experiences and relationships. To this effect, we propose a framework combining the chaos theory of careers (CTC) and literature on career crafting to further understand, from an individual standpoint, the influence of complexity, chance and change in the career motivations and career crafting strategies of 24 self-initiated expatriates (SIEs) from and working in three specific European host countries.

Paper is Available to Meeting Registrants Only.

CAR: We Are Not Tourists! The Identity Work of Self-Initiated Expatriates ➔ 🖨

Author: **Toke Bjerregaard**, *Aarhus BSS, Aarhus U.*

This paper aims to further academic understanding of the ongoing identity work through which self-initiated expatriate (SIE) identifications and meaningful mobility motives are socially (re)constructed during global career moves. A pertinent question of SIE research concerns how motives and distinctive characteristics influence SIEs' mobility decisions, adjustment and even performance. This study turns the question around by examining SIEs' identity work in (re)constructing and actively maintaining their categories of identification and motive configurations during global mobility. The paper is based on a field-based interview study of SIEs' identity work. This study shows how, as a consequence of engaging in many practices and experiences that resemble those of tourists, some SIEs devote considerable efforts to actively constructing, maintaining and communicating their identifications, motives and practices in direct opposition to that of tourists. SIEs may thus invoke stereotypes of tourists within their identity work of redefining their selves and resulting motivations abroad. SIEs' identifications and motives are constructed through ongoing identity work, during expatriation, where they often feel compelled to construct social categories that differ as much as possible from those of tourists. Such identity work is accomplished at multiple, potentially mutually reinforcing levels, from institutions of expatriate communities to SIEs' everyday identity work.

Paper is NOT Available. Please contact the author(s).

CAR: How Career Adaptability, Job Fit, and Job Characteristics Impact Expatriates' Career Success ➔ 🙌

Author: **Rodrigo Mello**, *U. of Vaasa*

Author: **Vesa Suutari**, *U. of Vaasa*

Author: **Michael Dickmann**, *Cranfield U.*

Expatriation is a highly developmental experience for individuals frequently amidst a context of higher autonomy, increased responsibility, and fewer support structures. Thus, this developmental experience impacts their future careers after the international assignment (IA). The next move – repatriation or re-expatriation to a new assignment – is an important transition that entails many changes in assignees' lives and represents both opportunities and threats for their career development. In order to analyse the implications of expatriation on the subjective and objective career success of two types of expatriates, assigned expatriates (AEs) and self-initiated expatriates (SIEs), we investigated data from 202 assignees five years after their initial work abroad. Our findings indicate that expatriate job characteristics, job fit after the IA, the degree of assignees' career adaptability, and expatriate type impact the career success of expatriates. We found that the expatriate type moderates the relationship between expatriates' career adaptability and objective career success. The work contributes to our understanding of boundaryless, international careers.

CAR: The local lingo: Influence of Host Country Language Proficiency on Psychological Contract Breach

Author: **Johannes Marcelus Kraak**, *Kedge Business School*

Author: **Yannick Griep**, *Radboud U., Netherlands*

Author: **Renaud Lunardo**, *Kedge Business School*

Author: **Yochanan H. Altman**, *WirtschaftsU. Wien*

Carolyn Dexter Award Nominee

The psychological contract and expatriate literatures suggest that the ability of employees to communicate with their employers will avoid misunderstandings and strengthen relationships, thereby limiting the effects of breach on negative and positive workplace behavior. Proficiency in the host country language is likely to facilitate communication for self-initiated expatriates who decide to move to another country and work there. This 3-wave study, using data from 300 self-initiated expatriates, shows that psychological contract breach at time 1 is positively related to counterproductive work behavior and negatively related with organizational citizenship behavior at time 3 through feelings of violation at time 2. Furthermore, host country language proficiency moderates the relationship between breach and feelings of violation, thereby amplifying the indirect relationships between breach and the outcome variables for those who have poor levels of host country language proficiency. We discuss implications for theory, practice and future research in the field of self-initiated expatriates.

CMS Keynote Speaker: Dr. Katherine Gibson

Strategies for ‘creating a better world together’ have long been at the centre of debate for critical scholars and activists alike. While the binary of reform or revolution retains purchase in 2022, these opposed strategies are no longer so clearly aligned with the liberal-mainstream and radical-left. Today the rise of a radical right wing for whom the language of revolution is not forbidden is no longer surprising. What is surprising is the recent commitment of \$40million by liberal philanthropic foundations (whose wealth is derived from private business) to the project of ‘[Reimagining Capitalism](#)’.

Gibson will consider the points of connection and difference between this liberal-mainstream intervention by economists at leading academic institutions, and the strategies that scholar activists J.K. Gibson- Graham and the Community Economies Research Network have pursued for ‘creating a better world together’.

Performance Evaluation and Platform Design

Session Moderator: **Jana Kim Gutt**, *Paderborn U.*

CTO: Speaking of Performance: Evaluating Team Members' Performance with Open-Ended Audio Comments

Author: **Jana Kim Gutt**, *Paderborn U.*

Author: **Kirsten Thommes**, *Chair of Organizational Behavior, U. of Paderborn*

Performance appraisals aim to reflect employees' performance and form the basis for far-reaching business decisions. However, research has shown that performance appraisals lack accuracy, are prone to bias, and increasingly lead to frustration. In exploring these weaknesses, research has focused on the influence of performance evaluations on the rater and the rating results, whereas format-related aspects have been overlooked. The benefits of qualitative comments over numerical ratings have been widely recognized, but little empirical research has been done on the content of qualitative comments and the identification of analysis methods. In this study, we find that words, sentiments, and topics significantly correlate with ratings of high and low performance. Based on this finding, we utilize a machine learning algorithm to make text-based rating predictions. Our results suggest that the predictions are a better reflection of actual performance as their distribution is considerably more nuanced and less skewed than the given numerical ratings. We also find evidence that the predictions reflect the distribution of assessed competences better than team members' ratings. Thus, this paper presents a meaningful contribution to the neglected intersection between numerical ratings and qualitative comments. Our results provide fruitful implications for improving the performance appraisal practice in organizations.

CTO: Effects of Meta-Knowledge on Team Adaptive Performance Comparing Manual and Automated Communication

Author: **Rebecca Müller**, *U. of Trier*

Author: **Conny Herbert Antoni**, *Trier U.*

Author: **Thomas Ellwart**, *U. of Trier*

Author: **Benedikt Graf**, *U. of Trier*

As part of a transactive memory system, meta-knowledge of "who knows what" reduces team members' effort to seek for experts, enables them to correctly request each other's expertise, and improves their performance compared to teams without meta-knowledge. As technology advances, software agents can be used to communicate between experts to reduce team members' cognitive demands. In this paper, we analyze the effect of meta-knowledge on expert seeking, mistakes in expert requesting, and (adaptive) team performance by comparing task phases with manual or full automated communication. 360 students in 120 three-person teams played an interdependent computer-based control-center simulation-task in three phases. We manipulated meta-knowledge, with 61 teams learning and 59 teams not learning meta-knowledge in advance. In phase 1 and 3, team members had to request experts manually. In phase 2, communication is fully automated. In line with our hypotheses, results showed that in phase 1 and 3, teams with meta-knowledge showed less expert seeking, made fewer mistakes in expert requesting, and performed better than teams without meta-knowledge. Results suggest that meta-knowledge improves performance and the ability to adapt to switching levels of automation underlining its importance for flexible applications of team support systems.

CTO: Digital Peer Interactions and Knowledge Transfers: Evidence from Online Business Education

Author: **Laura Rosendahl Huber**, *Erasmus U. Rotterdam*

Author: **Jacqueline Lane**, *Harvard U.*

Author: **Svenja Friess**, *Max Planck Institute for Innovation and Competition*

Author: **Haylee Ham**, *Harvard U.*

Author: **Karim R. Lakhani**, *Harvard U.*

Online learning and knowledge exchange have grown tremendously over the past decade and popularity has accelerated further during the recent COVID-19 pandemic. However, most platforms face common challenges of low user engagement and online education suffers from low course completion in addition. As it remains an open puzzle how these frictions can be overcome, we ask if and which social interactions can contribute to efficient knowledge exchange online. Using a unique dataset of 21,000 working professionals enrolled in business skills training courses of an elite U.S. business school over five years, we show a significantly positive relationship between social interactions and learning outcomes. To examine mechanisms, we develop a novel comment classification matrix of individuals' comments using cutting-edge NLP methods. Our results suggest that there is considerable heterogeneity in the way that learners communicate with one another and, in particular, disagreement as well as receiving 'likes' on one's content, can spark follow-on interactions. Our results have direct implications for fostering improved engagement and performance in online courses. Hence, designers of digital (learning) platforms may want to harvest the power of social interactions better to facilitate knowledge flows and peer-to-peer learning among users.

Institutions and Entrepreneurship 2

Session Moderator: **Walker Ray Dornisch**, *U. of Connecticut - Storrs*

ENT: **A Mixed Methods Study of Environmental Determinants of Entrepreneurship**   

Author: **Walker Ray Dornisch**, *U. of Connecticut - Storrs*

It wasn't until the 1960s that academic interest emerged to explore the relationship between organizations, such as entrepreneurial firms, and their respective natural environments (Starik & Marcus, 2000). Although the study of entrepreneurship and environmental conditions is a more recent scholarly focus, it continues to gain attention in academic research (Meek et al., 2010). Despite an increasing amount of high-quality research throughout the past decade, environmental conditions remain largely underappreciated in management theory (Whiteman & Cooper, 2011). Notable theories such as organizational imprinting, resource dependence theory, and absorptive capacity emphasize the relationship between firms and environmental conditions. However, common among such theories is the notion that environmental conditions are moderators of firm activities, rather than determinants. Furthermore, the theories typically speak to firms in general and do not necessarily reflect the unique qualities of entrepreneurship (Amezcuca et al., 2013; Cohen & Levinthal, 1990; Mathias et al., 2015; Tashman & Rivera, 2016). This study complements prior research by exploring the theories surrounding entrepreneurship and environmental conditions. In addition, this study advances the cumulative body of research by analyzing the multilevel determinants of entrepreneurship across environments. Using a mixed methods approach consisting of interviews and cross-sectional data, the results provide a descriptive illustration of the relationship between entrepreneurship and environmental conditions. The qualitative and quantitative findings offer novel insight to help answer the following research question: In what ways do environments influence entrepreneurship?

 ENT: **Innovative Entrepreneurship as Policy Concern: Geography, Evolution and Antecedents of Policy Mixes**  

Author: **Christoph Grimpe**, *Copenhagen Business School*

Author: **David Howoldt**, *The Fraunhofer Institute for Systems and Innovation Research ISI*

Innovation policies affect the costs of entrepreneurial individuals combining and adapting heterogeneous resources in the pursuit of profit. Yet, while studies of the effects of select policies in support of innovative entrepreneurship proliferate, little is known about the combinations of different policies in support of innovative entrepreneurship usually at play in a country. Moreover, what leads policymakers to focus their attention on select types of these policies remains unconsidered. In this paper, we map policy mixes for innovative entrepreneurship and study their variation in relation to entrepreneurial activity. We find that relative to other policies in support of innovation, innovative entrepreneurship policies tend to receive more attention in Europe than in the US. We also find that both innovative entrepreneurial activity and technological entrepreneurial activity are associated with select elements in policy mixes for innovative entrepreneurship. We contribute to the literature on entrepreneurship policy by introducing a "mix perspective" and providing evidence on possible antecedents of entrepreneurship policy choices. We also contribute to the literature on entrepreneurial ecosystems by illuminating the role of policy as a contextual factor for innovative entrepreneurship.

ENT: **How Entrepreneurial Experiences Foster Crises Resilience - Survival and Performance of New Ventures** 

Author: **Pontus Braunerhjelm**, *KTH, The Royal Institute of Technology, Stockholm Sweden*

Author: **Emma Lappi**, *Copenhagen Business School*

This paper estimates the relationship between entrepreneurial human capital (EHC) of employees in new firms and incumbents and their resilience to major global crises using individual and firm-level data for 1997-2016. EHC is measured as employees' previous experience being entrepreneurs. We use longitudinal register data for Sweden covering the IT-crisis 2001-2003 and the Great Recession 2008-2009. The results show that having employees with an entrepreneurial background decreases the probability of exiting especially for the new ventures, albeit the effect differs between these two crises. We elaborate with alternative measures of EHC, distribute it on occupational function, educational level, and the reason for employees quitting their previous entrepreneurial endeavors (closures, mergers and acquisitions). In addition, we implement three different estimation techniques. Our results remain robust to all these alterations. Besides providing new empirical insights, we argue that our findings are of theoretical interest as well as have practical and policy implications.

Paper is Available to Meeting Registrants Only.

 ENT: **Knowledge Problems: Fault lines in the External Enablement of Entrepreneurial Action?**  

Author: **Parul Manocha**, *Virginia Tech*

Entrepreneurial action takes place under conditions of unknowingness. While current literature is predicated on understanding how entrepreneurs act to resolve uncertainty and risk; entrepreneurial action takes place in environments characterized by a more pluralistic set of knowledge problems in addition to uncertainty and risk. Yet, research on the accurate diagnosis and sources of knowledge problem leading to entrepreneurial action remains underexplored. Identification of the sources of knowledge problems and incorporation of the mechanisms through which entrepreneurial action takes place constitutes the key for advancement of the entrepreneurial action theory. We build a middle-range theory of entrepreneurial action that identifies knowledge problems as a key link between the external environment and entrepreneurial action. Our conceptualization unveils the role of knowledge problems arising out of changes in the external environment on entrepreneurial action by specifying the mechanisms through which they lead to entrepreneurial action. We discuss implications of our theoretical insights for the state of entrepreneurship research.

Making DEI Stick in Business Schools: Guidance From Diversity, Equity, and Inclusion Leaders *Making DEI Stick in Business Schools*

Presenter: **Eddy S. Ng**, *Queen's U.*

Presenter: **Chantal Van Esch**, *Cal Poly Pomona*

Speaker: **Martin N. Davidson**, *U. of Virginia*

Speaker: **Sadaf Parvaiz**, -

Speaker: **Margaret Stockdale**, *Indiana U. / Purdue U., Indianapolis*

Speaker: **Cheryl Wyrick**, *Associate Dean*

Speaker: **Bernardo M. Ferdman**, *Ferdman Consulting*

In the aftermath of George Floyd's death and Anti-Asian xenophobia caused by the COVID-19 pandemic, universities and academics pledged to do a better job of incorporating diversity, equity, and inclusion efforts into our own practices. Many AOM members, having expertise in change management and/or diversity, were tasked with leading DEI efforts on campus. Building on last year's well received Guidance from Diversity, Equity, and Inclusion Leaders session which developed and familiarized individuals new to being DEI champions this 90-minute PDW includes speakers on: (1) update on the state of DEI on Campus, (2) proven DEI best practices, (3) overcoming resistance to DEI, (4) making DEI a path to tenure and promotion, and (5) sustaining DEI efforts on campus. Attendants will then get a chance to attend their choice of five mini-workshops on various maintaining DEI effort topics by established DEI leaders. The mini workshops are intended to be developmental with presenter directed activities and interactive learning/sharing. This format will enable presenters to offer advice, share experiences, and impart skills to current and prospective DEI champions. The PDW will also help participants establish a network of DEI scholars as academic practitioners.

Participant: **Russell Eric Johnson**, *Eli Broad School of Business, Michigan State U.*

People can have mental representations of situations, people, and tasks at different levels, focusing on the details (i.e., construing concretely) or the big picture (i.e., construing abstractly). Past research has demonstrated that abstract and concrete construals are adaptive in different situations to meet task-related needs. However, this research often fails to consider the complicated mental shifts that must occur in organizational contexts, wherein competing demands exert pressure on workers to shift based on business needs. To address this gap in the literature, recent research has taken a functional view of construal level, examining construal shifts across varying organizational contexts (beyond simple tasks) to explicate better when and how construal level can improve organizational functioning. This symposium presents five lines of research that use diverse methodologies and samples to explore when abstract and concrete construals are better suited to organizational demands, how people shift their construals to adapt to varying situations, and the outcomes of construal adaptations across several levels of organizational behavior, including communicators, entrepreneurs, teams, and firms. This symposium aims to provide an opportunity for knowledge sharing and discussion among researchers interested in examining the functions of construal level in organizations.

The Boundary Between Work, Home and Family

Session Moderator: **Miguel Pedro Moreira Almeida Fernandes**, *Nova School of Business and Economics, U. Nova de Lisboa*

OB: An Examination of the Effects of Sharing Work Events with the Spouse at Home

Author: **Ekaterina Netchaeva**, *Bocconi U.*
Author: **Remus Ilies**, *National U. of Singapore*
Author: **Katrina Jia Lin**, *Hong Kong Polytechnic U.*
Author: **Sherry Shi Yi Aw**, *National U. of Singapore*

While much research has examined how (positive and negative) events at work can spillover to influence employees' family lives, less research has been conducted examining how such events may crossover to affect the employee's spouse through social sharing. In this paper, we design one scenario-based experiment and one quasi-experimental experience sampling study to investigate how sharing work events with one's spouse influences familial outcomes through the crossover mechanism of spousal empathy, and go one step further to test the (counterintuitive) hypothesis that sharing negative events has stronger positive implications for employees' family lives compared to sharing positive events. In addition, we also test, in an exploratory fashion, how the effects of daily social sharing extend beyond same-day family outcomes to affect employees' psychological well-being at work on the following day. The results of our studies highlight the roles of social sharing and empathy in bridging the work-family domains.

Paper is Available to Meeting Registrants Only.

OB: Strategic Renewal at Home and Work: Exploring the Mechanisms and Boundary Conditions

Author: **Siqi Wang**, *School of Management, U. of Bath*
Author: **Can Ererdi**, *Henley Business School, U. of Reading, United Kingdom*
Author: **Mireya Las Heras**, *IESE Business School*
Author: **Yasin Rofcanin**, *School of Management, U. of Bath*

In this weekly diary study, we integrated research on strategic renewal and the Work-Home Resources model (i.e., W-HR model) to explore the associations between strategic renewal at home and strategic renewal at work domains through flow at home and self-efficacy at work. We also investigated the home domain outcomes of self-efficacy at work (satisfaction with work-family balance and family performance). Furthermore, we investigated the moderation effects of family climate for creativity (perceived by both the employee and the spouse) and organizational climate for creativity perceived by the employee. We tested our hypotheses with matched dual-earner couples' data collected over six weeks in the U.S.A. The results from multilevel analyses revealed that a) strategic renewal at home is positively related to strategic renewal at work via flow at home and self-efficacy at work, b) self-efficacy at work is positively related to satisfaction with work-family balance of the employee, and family performance of the employee, all measured at the week level. Furthermore, our results have shown that a) family climate for creativity moderates the relationship between strategic renewal at home and flow at home, and b) organizational climate for creativity moderates the relationship between self-efficacy at work and strategic renewal at work. Our results contribute to the strategic renewal literature by empirically establishing the untested mechanism of how strategic renewal at home leads to positive work outcomes through flow and self-efficacy at work.

Paper is Available to Meeting Registrants Only.

OB: Work Innovation Begins at Home: The Impact of Family-Work Conflict on Innovative Work Behaviors

Author: **Miguel Pedro Moreira Almeida Fernandes**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **Aníbal António López**, *NOVA School of Business and Economics*

The importance of employee innovation for the success of organizations is unquestionable. While research has significantly improved our knowledge of the work-related antecedents of innovative work behaviors, questions abound regarding the effects of antecedents situated outside the work sphere. This paper widens the current understandings of the non-work-related antecedents of innovative work behaviors by examining the impact of employees' family-work conflict. Drawing insights from the work-home resources model, we investigated the moderated mediation relationship between family-work conflict and innovative work behaviors through work dedication, moderated by supervisor support. We conducted two studies to test our hypotheses. In Study 1, a three-wave field study of employed individuals, we found that family-work conflict negatively affects employees' innovative work behaviors via reduced work dedication. Also, we found evidence for the moderator effect of supervisor support. In study 2, using an experimental design, we found further support for the moderation effect of supervisor support. Our findings suggest that that work dedication is an important explanatory mechanism in the relationship between family-work conflict and employees' innovative work behaviors, and that supervisor plays a critical role in tempering this relationship. Keywords: family-work conflict, innovative work behaviors, home-work resources model

Paper is Available to Meeting Registrants Only.

OB: When Working from Home Leads to Burnout: The Role of Work-Family Conflict and Job Stress

Author: **Hanna Kalmanovich-Cohen**, *Oakland U.*
Author: **Steven Stanton**, *Oakland U.*

The COVID-19 pandemic normalized working from home (WFH) for many employees across the globe. However, when individuals are forced to shift to WFH on a full-time basis, WFH might no longer be voluntary or flexible as previously studied. This paper investigates how new WFH arrangements may relate to work and family outcomes. Specifically, we draw on the conservation of resources (COR) theory (Hobfoll, 1989) to investigate the relationship between WFH and burnout. Across two studies, first we measured WFH endogenously, and then, we conducted an experimental manipulation of WFH arrangements, we demonstrate that changes to WFH arrangements can promote loss of resources (through work-family conflict and job stress), which consequently lead to employee burnout. The present research also examines the moderating role of one's partner's work arrangements. We discuss the implications of our theory and findings with respect to the remote work and work-family literature.

Paper is NOT Available. Please contact the author(s).

Author: **Mei-Ling Wang**, *Tamkang U.*

Author: **Ming-Chi Ming-Chi Lee**, *National Kaohsiung U. of Science and Technology*

By utilizing boundary theory and distraction-conflict theory, this study attempted to examine the influential process of supportive teleworking practices granting work scheduling autonomy on work-to-family conflict via the mediating mechanism of work interruption initiated from home. The study conducted two-wave online questionnaire survey to obtain a final sample of 277 remote knowledge workers in Taiwan during the peak period of COVID-19 pandemic. Regression analysis was used to examine the proposed relationships. The results revealed that supportive teleworking practices did not directly decrease the level of work-to-family conflict while home-sourced work interruptions fully mediated the negative relationship between supportive teleworking practices and work-to-family conflict. This provides a more nuanced explanation for how and why supportive teleworking practices are beneficial for employees to cope with the challenge of work-home interference under the new ways of working. Our findings simultaneously address evidence-based practices to better deal with mandatory teleworking during potential societal crisis beyond the Covid-19 pandemic.

Perceptions of Leaders

Session Moderator: **Yuyang Zhou**, *Florida International U.*

OB: Shall Leader Express Regret? Can Regret Expression Relate to Perception of Leadership Effectiveness 

Author: **Yuyang Zhou**, *Florida International U.*

Author: **Chaitali Kapadia**, *Florida International U.*

Author: **Hock-Peng Sin**, *Florida International U.*

Leaders occupy the most critical roles in organizations. They have to make decisions almost on a daily basis, and some decisions are challenging or unpopular. Feelings of regret can stem from looking back on past decisions and believing that a better outcome may have occurred if a different choice was made. Therefore, leaders could have higher chances of experiencing regret emotions and expressing their regret. However, the question of how leader's expression of regret influences their perceived effectiveness has been left untouched by researchers and practitioners for years. Drawing on implicit leadership theory, through an experimental study with 374 participants, we showed that leaders who express regret are perceived as less effective. This study also revealed that the negative impact of leader regret expression on perceived leader effectiveness was mediated by observers' perceived leadership prototypic violation. Moreover, we tentatively explored the leader gender's role in the relationships. We found promising information showing that male leaders who expressed regret received the highest ratings of prototypic leadership violation and lowest ratings of leader effectiveness. In addition, regarding the female leaders, who are generally perceived as being too emotional for effective leaders, when they don't express regret, they received the lowest ratings of prototypic leadership violation and highest ratings of leader effectiveness.

OB: Employee Evaluations of Leaders' Stigmatized Disclosures: The Moderating Role of Appropriateness

Author: **Amanda J. Hancock**, *Memorial U. of Newfoundland*

Author: **Kara Anne Arnold**, *Memorial U. of Newfoundland*

The intersection of organizational leadership and concealable stigmatized identities has not received adequate scholarly attention. In practice, leaders seem to disclose minority identities at a rate that exceeds research and theory. Idealist and conceptual perspectives suggest such disclosures are met with positive outcomes, but emerging research suggests this is not always the case. The consequences of disclosing a leader's concealable stigmatized identity from the employee's perspective are investigated using a sample of employed adults (N = 487). The conditional effects of disclosure appropriateness on followers' leadership evaluations of effectiveness and liking through followers' perceptions of affective trust in leader and perceptions of leader vulnerability are examined. Leaders' concealable stigmatized identity disclosures did not make a difference to how much employees liked their manager/supervisor, but leader disclosures of substance abuse disclosure were directly detrimental for employee ratings of leadership effectiveness - especially when the disclosure was perceived as inappropriate. When perceived as appropriate, leader disclosures of mental disorder/disease and minority sexual orientation produced positive effects on leader evaluations through affective trust in their leader. These results suggest a hierarchy of leaders' stigmatized disclosures may predict outcomes of leader disclosures from the employee perspective in organizational settings. Theoretical and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

OB: Constructing a Leader Identity: A Video Study of Teams in Interaction

Author: **Lyn Lanka**, *Cranfield School of Management*

Many leadership researchers now conceptualize leadership as a process of mutual social influence which is bound neither by formal roles nor hierarchy structures. This framing of leadership as inherently social and multi-directional in nature provides rich possibilities for new ways of understanding the interactional and relational processes which in turn lead to the construction of leader and follower identities. This qualitative study attempts to investigate the leader identity construction process through the use of video data. Teams of young adults engaged in an entrepreneurship program were video recorded during their team meetings in order to analyze the leader and follower identity construction process as it took place in real time. Leadership Identity Construction Theory was utilized as the theoretical lens with which to interpret the leader identity construction process, while interaction analysis was used to analyze the video data. Findings suggest that followers play critical roles in the leader identity construction process both as sources of support for leader identity construction as well as acting as challengers to this process. The findings also bring critical new insights regarding how individuals might resist unwanted identities. The paper also outlines how individuals make use of multimodal resources in the construction of their leader identity.

OB: Examining when Targets of Downward Hostility See Their Leader as an "Abuser" 

Author: **Robert B. Lount**, *Ohio State U.*

Author: **Woohee Choi**, *Ohio State U.*

Author: **Bennett J. Tepper**, *Ohio State U.*

We invoke leader categorization theory and labeling theory to examine the circumstances under which individuals come to perceive their managerial leaders as "abusers," as well as the consequences that the abuser label engenders. Results from field survey and laboratory studies suggest that the label, "abuser," is more likely to be triggered when targets of downward hostility perceive their managerial leaders to be lower performers. We also found that when performance was lower, the abuser label mediated the relationship between downward hostility and upward hostility. We discuss the studies' implications for theory, future research, and practice pertaining to downward hostility.

Among contemporary organizations that purportedly support an equal and equitable workplace, we often see mixed evidence involving employees' own experiences, particularly those of minority individuals, in response to issues involving racial inequality, such as racial discrimination and bias, that remain persistent in the workplace. These issues also point to the relevance of status of individuals and organizations on both the supply- and demand-sides of the labor market. While studies attempt to address the consequences of such issues, further work that focuses on current and more recent efforts to address issues of racial inequality, particularly from the vantage point of individuals of minority racial groups, needs to be explored. This symposium not only aims to provide further contribution to these areas with an empirical oversight of the interplay of organizational status, diversity, and racial stratification, but it also uniquely hones in on the salience of Asian Americans as a racial group that moves beyond the scope of a traditional focus on a Black/White dichotomy that has often been the subject of relevant literature. At the end of the presentation, Matthew Bidwell, a leading scholar on status and inequality in organizations, will facilitate an interactive group discussion about these papers with the audience and presenters with key commentary. Keywords: race, inequality, status, diversity, racial stratification, labor markets

Materiality, Visuality, and Temporality In Institutional and Organizational Processes

Session Moderator: **George Kuk**, *Nottingham Trent U.*

OMT: **Interstitial Spaces, Practices, and Boundaries: How Street Arts Transform a World Heritage Site**   

Author: **George Kuk**, *Nottingham Trent U.*

Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*

Author: **Rui Zhao**, *Nottingham Business School, Nottingham Trent U.*

Research on linking interstitial spaces with practices has foregrounded the significance of creating boundaries for new modes of social interaction. However, an oft-overlooked in-between aspect of interstitial spaces raises the question: how do in-between spaces contribute to the emergence of new practices without first fixing boundaries? By drawing on the notion of spacing, we conduct a 12-year longitudinal qualitative study of how the appropriation of interstitial spaces transformed a UNESCO world heritage site (WHS) into a city of street arts in the capital city of the Malaysian state of Penang. Our findings underscore several interstitial conditions and events that lead to three spacing trajectories – interstitial reconditioning, boundary crossing, and interstitial spreading. Interstitial reconditioning brings field actors in heritage management, museum, and tourism to exploit the heritage status by introducing the installation of 2-D wired sculptures on streetwalls. This transposed practice from museum to displaying arts outdoor reconditions the material and spatial-cultural contexts for unexpected allies including artists to experiment new interstitial practices, which trigger boundary crossing that interrupts existing boundaries, and interstitial spreading to other interstitial spaces. This study contributes to an ongoing multi-disciplinary conversation about two contrasting views of space, and more broadly to the knowledge of interstitial organizing.

OMT: **Magic Numbers, Figures, and Digits: The Power of Tricks and Wonder-full Quantifications**

Author: **Elena Giovannoni**, *Royal Holloway School of Business and Management*

Author: **Paolo Quattrone**, *Alliance Manchester Business School, U. of Manchester*

We draw on the history of magic and rhetoric to explore the interplay between the visible and the invisible underpinning calculative practices for management and organizing: the desire for order through quantification on the one hand, and the necessary uncertain jump required by the absent, the unknown, and the mysterious underpinning these practices, on the other hand. We intend to move the understanding of calculative practices from the emphasis on cognition (and therefore on positive, visibly present, realities), to the senses, illusion and mystery, and their drawing on the negative, the absent, the invisible and the ‘spells’ in between words, lines and numbers. We do so by offering distinct but related snapshots in the history of calculative practices. We start with accounting numbers and how the spread of double-entry bookkeeping intertwined with mathematical magic in the early Renaissance. We move to figures, and particularly to the analysis of data visualizations in modern financial reports and dashboards. We end with the current magical traits of cryptocurrencies and we discuss their promises for transparency, safety and speed, which rely on the magical appeal of technology. We show that, to understand the power of necessarily incomplete calculative practices, scholars have to research the opaque, mysterious and magical mechanisms through which these practices, despite or because of their imperfection, provide a pragmatic response to the uncertainty of management and organizing.

OMT: **The Look and Feel of The Iron Cage: On The Material Design Features of Formalization** 

Author: **Pedro Monteiro**, *Copenhagen Business School*

This paper outlines a path for recovering the relevance of formalization in organization theory. I develop a new perspective by integrating streams of organization research and expanding them via insights from art, design, and technology. Specifically, I connect research on formalization, materiality, and technology to re-conceptualize formalization as an artifact. Then, drawing on art and design principles, I identify three dimensions of the “look and feel” of formalizations (shape, color, and scale) and explore how they allow us to better grasp the characteristics of different types of formalization. I illustrate this frame of analysis with the example of a formalization for knowledge sharing developed in a bureaucratic organization. I discuss how this new perspective—by highlighting key elements in the way individuals experience and relate to formalizations—sheds light on conflicting ideas on the role of formalization in organizational processes and the connections among formal organization elements in complex work settings. I conclude by outlining the implications of a renewed understanding of formalization for research on work and (new) organizational forms.

OMT: **(Per)forming Assemblages and Institutional Maintenance: The Case of Mastic Growing in Greece** 

Author: **Andreas Georgiou**, *U. Ramon Llull, ESADE Business School*

Author: **Maria Daskalaki**, *Oxford Brookes U.*

Author: **Daniel Arenas**, *ESADE Business School*

Materials are increasingly considered to play a significant role in institutional work. The degree of their involvement and agency remains, however, disputed. Scholars refer to them as tools that human actors mobilize, as objects that embody the outcomes of institutional work and, lately, as entities that actively contribute to institutional change and maintenance. The first two perspectives have been explored and their ontology appears to be straightforward, but the last stance is underdeveloped and builds on assumptions that need to be empirically tested, such as that human and non-human entities form sociomaterial assemblages and engage in collective performances. Although studies on this stream have referred to such assemblages, they have not fully explored their formation, their collective performances and their contribution to institutional work. This paper delves into 24 rural communities in the Greek island of Chios, where agricultural practices of mastic growing have remained intact for hundreds of years, and unpacks three types of entanglements among humans and non-humans: spatial, temporal and affective. In analyzing these entanglements, it reveals how each of them emerges, brings about collective performances and contributes to institutional maintenance. Implications for the role of materials in institutional work and maintenance are discussed, along with contributions to the broader performativity literature and community studies.

Author: **Diego Coraiola**, *U. of Victoria*

Author: **Liv Egholm**, *Copenhagen Business School*

Our paper theorizes the process of intertemporal translation with implications for the management scholarship on temporality and materiality. We develop a historical case study of the South Bridge in Edinburgh that shows how the meanings and uses of objects, i.e. its affordances, change over time as groups of people situated in different temporal contexts enact the objects in novel ways. We describe the sedimentation process through which uses and meanings associated with the bridge are converted into an inventory of affordances that influences new interactions with the bridge. In addition, we show how changes in the temporal context and the materiality of the bridge stimulated the emergence of new bundles of practice associated with the development of new affordances. We describe how actors engage in processes of figuration, imagining new possible uses and meanings for the bridge as the present unfolding of action conflicted with descriptions of the past and expectations about the future. We then show how the interplay of figuration and sedimentation creates new affordances and new bundles of practices that may expand or contract the perceived affordances of an object.

SIM: Antecedents of Business Engagement in Partnerships for Sustainability

Author: **Maria Antonia Riegler**, *FHWien U. of Applied Sciences of WKW*

Author: **Anna M. Burton**, *FHWien der WKW U. of Applied Sciences for Management and Communication*

Author: **Markus Scholz**, *FHWien der WKW U. of Applied Sciences for Management and Communication*

Author: **Katharina Jarmai**, -

This article refines and expands the debate on antecedents of company engagement in business partnerships for sustainability. It extends Stadler and Lin's (2017) proposed Awareness-Motivation-Capability framework by means of an analysis of an in-depth qualitative study. It refines the debate by providing a more nuanced account of the underlying elements constituting the main categories to advance a more holistic understanding of the underlying factors influencing company participation in business partnerships for sustainability.

SIM: Can't See the Forest For the Trees: The Multivocality of the Zero-Deforestation Movement

Author: **Susan Cooper**, *King's College London*

Author: **Anakarina Pérez Oropeza**, *Forest Stewardship Council*

Author: **Juliane Reinecke**, *King's College London*

Author: **Gabriela Gutierrez Huerter O**, *Assistant Professor, King's Business School*

While scholars have argued that mobilizing collective action for grand challenges requires a level of multivocality to allow stakeholders with various interests to participate, mechanisms that facilitate multivocality such as over-simplification of complex issues may render multivocality impractical. In this paper, we examine this conundrum by focusing on the concept of zero-deforestation. Zero-deforestation captured the agenda of deforestation away from the existing field of sustainable forest management to become a standard for many private, public, and civil actors despite an initial lack of consensus around what the term means. This paper examines the emergence of the term and considers how the agenda was navigated by key field actors: environmental NGOs, multi-stakeholder initiatives, retailers, and manufacturers. Drawing from a longitudinal approach, we outline the timeline and dynamics of how this took place and unpack these findings to consider how multivocal concepts can lead to inter-field contests when organizing for grand challenges.

SIM: Scaling Across Communities: A Configurational Approach

Author: **Jana Coenen**, *U. of Wuppertal / Jackstädt Center of Entrepreneurship and Innovation Research*

Author: **Bjoern C. Mitzinneck**, *Groningen U. (RuG)*

Author: **Florian Noseleit**, *U. of Groningen*

Author: **Christian Rupiotta**, *U. of Wuppertal*

While community social innovation has been suggested as an important means to overcome regulatory and market failures in the transition to renewable energy, it is by design limited in scale. To truly represent a solution to large-scale sustainability problems, community-based innovations need to be diffused and adopted across communities. Leveraging practice diffusion research and the empirical example of the bioenergy-village concept in Germany, we investigate how the interplay of fit (between the diffusing community social innovation and the adopting community) and opportunities for adaptation enables successful adoption. Conducting configurational analysis, we identify four equifinal combinations of conditions that contribute to successful adoption and thus diffusion of community social innovation. Across these combinations, our results highlight the importance of fit. Moreover, we find that an initial fit needs to be combined with opportunities for adaptation, while financial resources only play a minor role in adoption success.

SIM: Cross-Sector Partnerships: Challenges and Opportunities of Partnering with the Informal Sector    

Author: **Kalyan Bhaskar**, *XLRI-Xavier School of Management*

Author: **Jennifer Griffin**, *Loyola U. Chicago*

Author: **Verena Radulovic**, *US EPA*

Hybridized cross-sector partnering can help solve complex issues. Informal sector partnerships, for example, have mitigated numerous negative health and environmental externalities mandated through India's extended producer responsibility (EPR) electronic waste (e-waste) rules. Yet, translating regulatory aspirations of recycling, selective reuse, and safe disposal of e-waste into effective on-the-ground results is particularly challenging due to the dominant and pervasive role of informal sector organizations in India's e-waste processes. Informal sector organizations, having no government authorization, cannot by law contribute to manufacturers' official waste reduction targets, yet, paradoxically, are efficient and effective partners, at scale, across all phases of recycling, sorting, distributing, and reclaiming wastes. In short, they could be true partners in creating a circular, extended recycling system in India. Using a mix-method approach, we augment extant theorizing on cross-sector partnerships by systematically examining partnerships within India's informal sector and e-waste management practices. We provide insights for engagement with efficient, yet unauthorized, informal sector organizations to meet compliance targets.

Paradox Studies: New Research 

Session Moderator: **Emily Truelove**, *Harvard Business School*

OMT: Technological Frame Tuning: How TMTs Give Sense to Employees about Radical Technological Change 

Author: **Emily Truelove**, *Harvard Business School*

Studies show that top management team (TMT) sensemaking influences technology adoption decisions, but less is known about how, once they have decided to adopt a new technology, TMTs give sense to employees about a new technology's relevance for organizational work. This is a critical step in implementing a strategy centered on a new technology, yet how it occurs is puzzling. The nature and meaning of new technologies is unknown ex ante; they evolve over time; and until they are used in organizational work, their precise relevance may be unclear to TMTs. In this paper, I draw on rare, real-time, multi-level ethnographic data collected over two years at an advertising firm to build theory on how TMTs give sense to employees about a new technology's relevance for organizational work when implementing a strategy intended to capitalize on it. My data show that TMT sensegiving in this condition is an iterative, dialectical process where the TMT introduces a narrative about a technology's relevance for organizational work for employees; senses tension between the narrative and the organization's ability to create value with it; then adjusts the narrative to accommodate this tension. I refer to this as technological frame tuning, and I observed three cycles of the TMT engaging in it at the firm. This study enhances our theoretical understanding of TMT sensegiving under conditions of uncertainty and offers a reconceptualization of the work of leading organizations through periods of radical technological change.

OMT: Recent Research on Paradox Theory: Emerging Themes and Mechanisms

Author: **Arjun Odedra**, *U. of Manitoba*

Author: **Parshotam Dass**, *U. of Manitoba*

Paradox theory is a burgeoning area of interest among organization and management scholars. In this paper, we explore two overlapping research questions: (a) What are the major emerging issues in research on paradox theory; (b) What are the fundamental mechanisms that individuals and groups use to navigate paradoxes. From the reviewed literature, first, we delineate six major research themes and highlight important issues that researchers have addressed in their studies. Second, we propose a $2 \times 2 \times 2$ matrix to categorize the mechanisms examined in the studies, and identify eight broad categories of mechanisms to navigate paradoxes in organizations. We hope our review will help integrate research findings and encourage theory testing in the future.

OMT: A Multi-Lens Perspective for the Management of Contradictions in Organizations

Author: **Mostafa Safar**, *U. College London*

Author: **Stefano Miraglia**, *UCL*

We perform theoretical elaboration and extension of research on contradictions and draw insights from studies of power and sensemaking to develop a multi-lens perspective on the management of tensions in organizations. Specifically, we combine together either/or, both/and, and more/than lenses to identify and illustrate a wide range of contradiction-management scenarios, each characterized by a specific set of power-related conditions, constraints and requirements. We contribute to a more complete and nuanced understanding of organizational responses to tensions, and offer novel elaborations on the interrelationships between power dynamics, modes of sensemaking, and the management of contradictions.

Paper is Available to Meeting Registrants Only.

OMT: Has Institutional Theory Lost its Way? From the Perspectives of Co-citation and Regression Analyses 

Author: **Zuyi Cao**, *Huazhong Agricultural U.*

Author: **Rui Xiong**, *Huazhong Agricultural U.*

Author: **Huiying Jia**, *Wuhan Textile U.*

Institutional theory is an important mechanism to explain the phenomenon of institutional stability and transformation in the context of transitional periods and the COVID-19, as well as the practical problems in many social sciences. As an important theoretical perspective of management, economics, sociology, political science and other disciplines, although this theoretical paradigm has attracted extensive scholar attention, experienced an early initial and development period, and has now successfully been developed into a mature and legitimate mainstream management theory from the beginning of 21st century, it turns out that institutional theory seems to have lost its way. In order to address questions such as whether the institutional theory is "lost", whether it is too all-inclusive and whether it has already deviated from the original intention of the paradigm, this article, adopting 2957 literature data from Web of Science in recent 20 years, identifies and reveals the paradoxical structure originated from both centripetal forces and centrifugal forces as well as its evolution dynamics of institutional theory through co-citation analysis and regression analysis, and accordingly investigates the impact of the main knowledge clusters generated around the paradoxical forces on the academic legitimacy of institutional theory. Therefore, this paper has important academic value and practical significance concerning theoretical contribution, logical thinking, research methods and research findings, not only to the scientific development of institutional theory, but also to clearing a path through the "Management Theory Jungle".

Networks and Creativity

Session Moderator: **S Wiley Wakeman**, *Stockholm School of Economics*

OMT: **Exploiting Bad Behaviors: Stigma and the Space for Innovation**  

Author: **S Wiley Wakeman**, *Stockholm School of Economics*
Author: **Mary Kathleen Burke**, *Stockholm School of Economics*
Author: **Gianluca Chimenti**, *Stockholm School of Economics*

Building on importance that peripheral niches play in the process of innovation, and incorporating the proposition that audiences perceive stigma as an aversive social condition, this paper suggests that understanding, maintaining, and developing stigma can help innovators effectively develop space for radical innovation. Three interdependent mechanisms explain this emergent process. First, innovators benefit from the dissociation inherent to stigma, allowing safe distance from homogenizing audiences, norms, and institutions that might undermine their radical ideas. Second, actors use diversity in stigma impressions to signal to supportive stakeholders who see past naïve interpretations of “bad” behaviors and recognize the value underlying second-order interpretations. Finally, underpinning the push and pull of relevant audiences is a process of engaging with moral emotions, using their ability to motivate behavioral change in support of radical innovation. An in-depth case study examining the rise of Punk music in the 1970s helps illustrate a process model where marginalized actors come to understand and profit from stigma’s divergent influence over both detractors and supporters. Together this research outlines the social functional benefits of stigma in oppressive contexts, suggesting disadvantaged actors can usurp control over pernicious evaluations to fashion a supportive niche for radical innovation.

Paper is Available to Meeting Registrants Only.

OMT: **Ties that Bind or Free? Core-Periphery Collaboration and Identity Shifting in US Film, 1985-2016**

Author: **Demetrius Lewis**, *Emory U., Gozuieta Bus Sch*
Author: **Ruo Jia**, *U. of Virginia*

A theme of networks research is that stronger relationships, including competitive ones, promote the stability of a system and its members. We argue that relationships, especially those involving exchange, are not necessarily stabilizing. This is because exchange introduces objects and elements that have the potential to disrupt the existing social order. Through an analysis of U.S. filmmaking, we find that collaborations between the core and periphery lead to core members taking on more distinctive identities within the network while pushing peripheral members further into the margins. These collaborations free core members to exhibit more unique identities, which results in the expansion of the market core. This encroachment reduces the viability of peripheral members, but also stimulates expansion of the creative frontier in search of less-mainstream ideas.

 OMT: **The Benefits of Power Asymmetry on Creativity: The Moderating Effect of Simmelian Friendship Ties**

Author: **Martha Topete**, *Amsterdam Business School, U. of Amsterdam*
Author: **Nathan Betancourt**, *Amsterdam Business School, U. of Amsterdam*
Author: **Zuzana Sasovova**, *Vrije U. Amsterdam*

This paper examines the conditions under which power (measured with formal rank) positively influences dyadic creative performance. Previous research has shown that high levels of power are beneficial for individual creativity but detrimental for team creativity suggesting that the positive effect of power on creativity does not aggregate linearly. We propose that power asymmetry, or interactions between individuals of different ranks, can enhance the creative performance of dyads by facilitating the emergence of effective creativity-relevant processes derived from social cues for dominance and deference accrued to hierarchy. Two network studies conducted in a biopharmaceutical company (Study 1; 458 dyadic relationships) and a market research organization (Study 2; 650 dyadic relationships) revealed that power asymmetric dyads are associated with higher levels of creative performance than power symmetric dyads. Moreover, the effect of power asymmetry on dyadic creative performance was found to be negatively moderated by Simmelian friendship ties (i.e., ties embedded in friendship cliques) of the interacting individuals while the direct effect of Simmelian friendship ties was positive. These findings suggest that while hierarchy and communal mechanisms can boost dyadic creative performance the social norms derived from hierarchy may conflict with communal norms that emerge from Simmelian friendship ties reducing role clarity for power asymmetric dyads.

OMT: **The Dilemma of Hybrid Work for Creativity: Autonomy of Telework or Face-to-face Network in Office?** 

Author: **Inamizu Nobuyuki**, *U. of Tokyo*

This study conducts a survey from the perspective of synthesizing four research fields (telework research, office research, organizational behavior research on creativity, and social network research), to examine the dilemma of hybrid work and propose a solution for it. The subject of this study was the Y division of Company X, which introduced a new method of working when it moved to a new office. We conducted a questionnaire survey to measure creativity and perceived autonomy among the employees of the division, and collected and analyzed their location data in the office using sensing technology to understand their behavior and working style. As a result, certainly, the more time spent in the office, the more face-to-face networking occurred between employees, leading to creativity. At the same time, the more time spent teleworking, the greater the perceived autonomy, which too led to greater creativity. Thus, the dilemma of hybrid work was observed. The result of this study also shows that Activity-Based Working (ABW: a way of working that moves to the appropriate place according to activity) could be a solution to this dilemma for jobs that require extensive face-to-face networking (e.g., for managers).

Organization Deviance and Stigma

Session Moderator: **Kaixian Mao**, *Hong Kong U. of Science and Technology*

OMT: [Winning a Prestigious Award and Unethical Behaviors of Chinese Pharmaceutical Firms](#)   

Author: **Kaixian Mao**, *Hong Kong U. of Science and Technology*
Author: **Bilian Ni Sullivan**, *Hong Kong U. of Science and Technology*

Building on institutional theories of legitimacy, this study explores the effect of winning a prestigious award on firms' unethical behaviors. We argue that enhanced legitimacy of a subgroup in an industry due to a prestigious award can lead firms in such a subfield to commit fewer bribery activities because increased legitimacy can bring more resources to these firms and the need for bribery as an alternative channel for acquiring resources is reduced. In the context of Youyou Tu's Nobel Prize win in 2015, where the use of traditional Chinese medicine (TCM) in her research was emphasized, we find empirical support for our theoretical hypotheses as our results reveal that compared with firms focusing on Western medicines, TCM firms tended to commit fewer bribery acts after the announcement of the Nobel Prize win. We also demonstrate that factors affecting the supply and demand of bribery, including state ownership, firm profitability, regional marketization, and regional memory of foreign influences, could moderate the impact of Nobel Prize winning on a firm's tendency to commit bribery. This study emphasizes the important role of legitimacy gained from winning a prestigious award in firms' choices of unethical actions. It makes significant contributions to the literature on legitimacy, prestigious awards, and firm ethics.

OMT: [Audience Diversity and the Transfer of Stigma: Evidence from the U.S. Luxury Hotel](#) 

Author: **Margarita Cruz**, *Ecole hôtelière de Lausanne, HES-SO / U. of Applied Science Western Switzerland*
Author: **Jan Goldenstein**, *Friedrich Schiller U. Jena*

Recent developments in the field of organizational stigma suggest that moral transgressions by an organizational actor can elicit stigma and thereby affect the way evaluators perceive organizations that appear somewhat similar or associated to the transgressing actor. However, this line of research assumes that evaluators share a unified assessment about the stigmatized organizational actor and attribute the same degree of stigma to other organizations that appear to be related or associated with the stigmatized one. To shed light in this direction, this study aims at exploring the role of diversity among evaluators and its impact on evaluators' attribution of stigma to organizations. Building on a dataset comprising over 20,000 guests' reviews of 129 luxury hotels in major U.S. cities and modelling Trump's election as president of the United States as an exogenous shock to the industry, we find that not only more negative ratings negative words are attributed to luxury hotels after the elections but also the evaluating population changed in regards of its demographical characteristics due to the transgression of having elected a President who was often associated with travel-bans and unwelcoming comments, and which violated the ideal of hospitality. Our results further show that because the reviewer population changed, stigma is attributed differently to Trump-associated hotels.

Paper is Available to Meeting Registrants Only.

OMT: [Doping as a Form of Institutional Maintenance in Professional Road Cycling](#) 

Author: **Tom McCrone Forbes**, *U. of Stirling*
Author: **Robin Fincham**, -

In this paper we explain the maintenance of a practice that departs from acceptable standards. Drawing on the case of professional road cycling we explore the use of doping as a kind of institutionalized practice. Sports doping in general has the potential to destroy public trust in sport and its wider positive effects. In cycling doping to enhance human performance became established in response to harsh working conditions and the demand for results, and despite disruption from anti-doping authorities, and many scandals, has hardly lessened. To explain this we use a model of institutional types that provides a critical account of this contested and contradictory activity. We confirm the importance of efforts both to normalize and conceal doping; we stress an often overlooked technical dimension of maintenance in the application of medical knowledge, and we show how doping across the sport relied on actor interactions and a system of institutional support.

OMT: [A Lost Cause? A Process Perspective on How Outsiders Overcome Stigmatization](#) 

Author: **Karina Reif**, *Albert-Ludwigs-U. Freiburg*
Author: **Thomas Karl Gegenhuber**, *Johannes Kepler U. Linz*
Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg / Indiana U. Bloomington*
Author: **Robin Buerger**, *Fraunhofer Center for International Management and Knowledge Economy IMW*

While we have a great deal of scholarship on legitimacy, our understanding of how stigmatized actors seek to (re-)gain legitimacy remains quite limited. We seek to enhance our understanding of such processes through a qualitative, in-depth case study of a radical soccer fan community that, when faced an identity-threatening event, launched a crowdfunding campaign that ultimately succeeded in enhancing their legitimacy for their cause and enabling them to have a voice in a central strategic decision on the redesign of their club's soccer stadium. We leverage this case to develop a model on how stigmatized groups might be able to enhance their legitimacy in the eyes of certain audiences. We show that first, the crowdfunding campaign created a digital and temporal space allowing them to disassociate stigmatized and associate legitimate elements (i.e. artifact-based affiliation). Second, we theorize how various association tactics were drawn upon over time, facilitating an interrelated set of dynamics between what we label manual and forced association. We conclude with a discussion of the implications of our study for future research on legitimation processes related to stigmatized groups.

Shareholders, Ownership, and Organization Theory

Session Moderator: **Romain Boulongne, IESE**

OMT: **Productivity Gains and Firm Ownership: The Case of the French Worker Cooperatives** 

Author: **Romain Boulongne, IESE**

In this study, we examine how different forms of ownership structure (worker cooperatives vs. traditional firms) affect firm productivity and performance. In particular, we analyze multi-method data from the French worker cooperatives' movement (e.g., "SCOP") to interrogate the relationship between ownership structure and productivity. We theorize, and find, that size and maturity are major predictors of the productivity of worker cooperatives. In a series of between and within-firm comparisons, we find that smaller and older SCOPs are more productive than comparable traditional firms. By contrast, larger and younger SCOPs face productive inefficiencies that hamper their overall performance. A survey of, and qualitative evidence gathered with, SCOP directors revealed the mechanisms that explain why productivity gains are associated with smaller and mature worker cooperatives. Specifically, workers in a limited in size and mature SCOP are (1) more motivated, (2) more productive, (3) more easily find a purpose in their job, (4) benefit more from higher group cohesion due to lower income inequalities, and (5) more likely to have clear and well-defined roles within the organization.

OMT: **Privilege and Prejudice: How Shareholder Primacy Affects the Role of Social Class in CEO Selection** 

Author: **Michelle K. Lee, Smith School of Business, Queen's U.**

Author: **Abhinav Gupta, U. of Washington, Seattle**

Prior research has found that contenders of upper-class backgrounds are favored for CEO positions in Corporate America over those of lower- and middle-class backgrounds. However, in the decades since the last study was conducted, Corporate America has undergone significant changes that have institutionalized shareholder primacy as the dominant organizing principle. This study examines the implications of these societal changes, theorizing that the upper-class bias in CEO selection has steadily become amplified since the 1970s. We further hypothesize that companies with concentrated institutional ownership are more likely to be beholden to the shareholder primacy principle and, as a result, exhibit a stronger preference for upper-class CEO contenders. In contrast, we posit that collective bargaining agreements with unions serve as a countervailing force to shareholder primacy, manifesting in a reduced class bias in CEO selection. Using a novel dataset that compares the social class backgrounds of 454 rival candidates who competed for 227 CEO selection events during 1970-2013, we find considerable support for our hypotheses.

OMT: **Worker Earnings Mobility and the Conception of Value in Private Equity Leveraged Buyouts**

Author: **Dylan Nelson, Massachusetts Institute of Technology**

Over four leveraged buyout (LBO) waves since 1980, private equity firms restructured thousands of large U.S. businesses with tens of millions of employees. At the same time, earnings for most U.S. workers stagnated despite rising corporate productivity. While private equity proponents argue that LBOs increase corporate competitiveness and create shared value, LBO critics argue that workers often bear the cost of high LBO debt. I argue that two main conceptions of value in private equity leveraged buyouts - operational and financial - have different implications for worker earnings mobility. I use administrative data on hundreds of millions of U.S. workers to show that LBOs on average increase the earnings of more-educated workers and lower the earnings of less-educated workers. The large negative LBO effects appear in the riskier LBOs enacted at the peak of the LBO waves, when the cost of high-yield debt is low and creditors offer debt with lower restrictions on organizational behavior. Findings from worker-level difference-in-difference models support this argument. I show that the cost of high-yield debt predicts higher leveraged deals and I match LBO-acquired companies to non-acquired companies based on timing, capitalization, size, industry, stock market, earnings, and level of financial distress. This study develops the organizational theory of economic inequality by explaining how the different value conceptions of corporate restructuring have different impacts on worker opportunity. Management theorists should continue to study LBOs and other organizational restructuring processes that reassign corporate control to impact diverse stakeholder groups.

OMT: **Do Executives Use Their Corporate Jets to Go Provide Private Information to Investors?** 

Author: **Yijia Ding, London Business School**

Author: **Freek Vermeulen, London Business School**

In this study, we use data on the flight paths of corporate jets to assess the likelihood that executives are engaging in private meetings to provide market-sensitive information to large investors ahead of key events, such as announcements of a share buy-back or earnings surprises. We find that shortly before making such market announcements, executives are indeed more likely to fly to places where their investors are located. Moreover, we find that investors seem to act on information provided to them: following the meetings, they tend to increase their shareholdings, in comparison to investors that have not been visited. Through these findings, we advance the literature that takes a socio-political perspective on corporate governance, including the relations between senior executives and company investors. We also contribute to the literature on corporate misconduct.

Adventures in Performance Feedback Theory

Session Moderator: **Xavier Sobrepera, XXX**

OMT: The Upside of Sugarcoating: Inaccurate Performance Reporting and Exploration in Organizations

Author: **Oliver Baumann**, *U. of Southern Denmark*

Author: **Franziska Lauenstein**, *U. of Southern Denmark*

Author: **Thorsten Wahle**, *Alliance Manchester Business School, U. of Manchester*

In this paper, we study how information asymmetries and specifically the opportunity to inaccurately report performance feedback in decentralized organizational structures influences exploration. In many organizations, exploration is characterized by a two-staged process, where a higher-level decision-maker selects a lower-level unit to engage in exploration efforts, and a lower-level unit reports back a performance outcome. Such decentralized structures are also prone to information asymmetries, which are generally seen as undesirable, and aimed to be reduced through monitoring. In this study, we provide experimental evidence that information asymmetries are not always undesirable for organizations and that monitoring can hinder exploration efforts in organizations. The key results from our two experimental studies are that, first, lower-level units that take advantage of information asymmetries and report performance outcomes inaccurately, explore more and experiment more with risky solutions. Second, at the higher level, monitoring, and the revelation of inaccurate reporting leads to the avoidance of particular units, less exploration and foregone gains of exploration in this domain. This is important as it enlarges our understanding on how decentralized structures can foster exploration – against the intuition – information asymmetries can be beneficial, and managers may rather accept them than trying to reduce them. These insights are particularly relevant considering recent interest in ‘flatter’ organizational structures with more decision-making authority to lower-level units and less control.

OMT: Organizational Response to Performance Shortfalls: The Role of Self-confidence and Time Slack

Author: **Xavier Sobrepere**, *XXX*

The behavioral theory of the firm (BTOF) states that performance shortfalls trigger organizational responses seeking to restore performance above the aspiration level. However, previous research has shown ambiguous support for this proposition. One explanation for this lack of support is subjective performance assessments: Performance shortfalls might not be perceived as problematic by decision makers, which leads them to underestimate the need for a response. In this paper, I argue that decision makers' self-confidence promotes optimistic interpretations of performance assessments when performance is ambiguous enough. However, when performance shortfalls are unambiguous, I predict that decision makers' self-confidence leads to the opposite consequence, strong organizational responses, due to risk-seeking behavior. In addition, in this paper I propose that organizational slack is a source of ambiguity in assessing performance feedback allowing for favorable interpretations. Particularly, I propose that decision makers prone to make optimistic performance assessments overestimate the value they can extract from slack, which leads them to underestimate the need for a response to performance shortfalls. I find support for my hypotheses by analyzing 101,146 first down decisions from the National Football League (NFL) between seasons 2009 and 2016.

OMT: Towards a Multi-Dimensional Perspective of Performance Feedback and Risk Taking 

Author: **Junjie Zhou**, *National U. of Singapore*

Author: **David Lehman**, *U. of Virginia*

Author: **Jungpil Hahn**, *National U. of Singapore*

This study investigates how different conceptualizations of aspiration and risk taking affect performance feedback theory. We review recent literature and find that: 1) aspirations are conceptualized as current performance and cumulative wealth, and 2) risk taking is conceptualized as the propensity to take risks and the amount to put at stake. We conduct simulation experiments to explore the implications of these different conceptualizations. We find that different conceptualizations lead to inconsistent organizational outcomes, such as long-term performance and survival rate. We also used data from Texas holdem to study decision-makers' risk taking behavior. We find that decision-makers' reactions in propensity and amount are not always aligned for a given current performance and cumulative wealth. Taken together, this set of results points to a significant gap in the literature with potential for much fruitful future work.

OMT: What Do Managers Change When Performance Falls Below Aspirations?  

Author: **David R. Clough**, *Sauder School of Business, U. of British Columbia*

Author: **Philipp Reineke**, *Stanford U.*

Author: **Henning Piezunka**, *INSEAD*

The theory of problemistic search has established that poor organizational performance can trigger organizational changes. However, the menu of possible changes is large. Prior theory provides limited guidance on how managers choose what to change when performance is unsatisfactory. We expand problemistic search theory by analyzing how managers generate causal interpretations of past events that attribute blame for poor performance amongst the organization's key inputs. We describe two heuristics—a recency heuristic and a contrast heuristic—that guide managers' causal interpretations. In an empirical study of Formula One motor racing, we find managers appear to attribute blame to input factors that they changed recently, especially when uncertainty over input quality is high. We also find that contrasting performance between two drivers helps guide managers' causal interpretations. Our research moves forward several key debates over the process and consequences of problemistic search.

Individual Networks and Diversity

Session Moderator: **Tatiana Lluent**, *ESMT Berlin*

OMT: **Preference or Persistence? The Origins and Implications of Homophily in Entrepreneurial Networks**  

Author: **Ethan Poskanzer**, *U. of Colorado*

Author: **Fiona Murray**, *Massachusetts Institute of Technology*

Homophily in social networks is common across a range of social settings. However, the particular processes through which people construct homophilous social networks are not well understood. We theorize that two processes could lead to homophily in an individual's social networks and test them using data from an entrepreneurial mentoring program. In one possible model, people are more likely to initiate relationships with similar others because they prefer those relationships. Alternatively, people could find that of the relationships they begin, homophilous relationships are more valuable, leading homophilous relationships to persist longer. Entrepreneurs in this program were given the opportunity to request which mentors they worked with and did not request mentors of their gender more frequently, indicating that were not more likely to initiate homophilous relationships. However, relationships between entrepreneurs and mentors of the same gender become more persistent working relationships and lead to more referrals on the entrepreneurs' behalf, indicating that homophilous relationships were more valuable. Men mentors disproportionately made fewer referrals on behalf of female entrepreneurs. The results indicate that homophilous networks could emerge endogenously as entrepreneurs seek relationships that can offer valuable resources and provide insight into inequality in access to network-based resources.

 OMT: **Befriend Thy Neighbor: Office Seating, Social Networks and Gender**    

Author: **Tatiana Lluent**, *ESMT Berlin*

Within organizations, women remain to this day underrepresented in leadership roles. One key explanation for this focuses on differences in the way men and women socialize at the office and build professional network. Women's networks are less likely to afford them early access to important and diverse information that would benefit their careers. In this paper, I investigate office spatial design as a managerial lever to shape employee networks, and its differential impact on male and female employees. Further, I study gender differences in the relationship between proximity in an office space, network tie formation, and network brokerage. Seating assignments that closely match the organization's functional groupings add spatial segregation to the pre-existing occupational segregation between men and women. I argue that breaking functional silos in seating assignments can allow women, to a larger extent than men, to diversify their ties and to access more advantageous network positions. I use data from a quasi-field experiment where the seating plan of a Mexican company's headquarters was manipulated with the aim to decrease work-interdependence between office neighbors. Following the office reconfiguration, I find that female employees are more likely than male employees to form friendship ties with their new desk neighbors and that women's friendship networks are more likely to become more brokerage-rich. I also find evidence that women whose networks see an increase of brokerage following the reconfiguration tend to see their wage increase.

OMT: **Organizations Role in Allocating Immigrants and Native-born Into Analytical versus Interactive Jobs** 

Author: **Mallika Banerjee**, *U. of Calgary*

Applying human capital and social networks-based explanations of the labor market matching framework, this study examines the role of organizational selection channels in allocating high-skilled immigrants and native-born into different types of jobs in the U.S. white-collar labor market. Specifically, it investigates the conditions under which academic organizations are likely to rely on strong versus weakly formalized recruitment channels to screen and hire candidates and its potential effect on sorting immigrants and native-born into analytical versus interactive jobs. Using a nationally representative pooled cross-section sample of PhD scientists and engineers, I demonstrate that when reliable performance records are not readily available such that organizational decision makers rely on faculty referrals to assess the potential of prospective candidates, no immigrant-native differences arise in the job matching process. However, when employment-relevant soft skills about candidates are hard to evaluate and organizations rely on peer referrals to screen applicants, a differential allocation of immigrants and native-born across analytical and interactive jobs are likely to arise because of the former's lower access to friendship ties than the latter. Thus, human capital-based explanations of labor market matching framework pertaining to the self-selection of immigrants and native-born into analytical versus interactive jobs may overstate individual preferences, knowledge and skills the extent to which employers' use of specific recruitment channels to hire candidates into specific types of position also contribute to this outcome. Implications of the finding for the representation of immigrant minorities at the upper echelons of organizations are discussed.

Work in Public Organizations**
Professionals in Public

Presenter: **Samantha Orlena Ortiz Casillas**, *EMLYON Business School*
Presenter: **Arvind Karunakaran**, *Stanford U.*
Presenter: **Jillian Chown**, *Northwestern Kellogg School of Management*
Presenter: **Rodrigo Canales**, *Yale U.*
Discussant: **Beth Bechky**, *UC Davis*

This symposium aims to present research that analyzes some of the current challenges professionals and frontline workers face in public organizations. Public organizations, from large organizations to small agencies, perform key tasks for the functioning of government and society. To do so, they employ workers with specialized skills and knowledge that face challenges on the way their work is understood, managed, and assessed. Some of these challenges involve interacting with different audiences; managing conflicting expectations, criteria, expertise, and mandates; interacting with citizens; and conducting expert work in bureaucratic settings. This symposium aims to identify common concerns and insights across this research and to provide avenues for future scholarship in this area. Presenters have conducted research on professional identity, expert work, accountability, and conflicting mandates in police departments, public hospitals, emergency management services, and regulatory agencies in different countries.

To understand institutional logics as complex, dynamic phenomena, we propose a research agenda that focuses on studying the governance dynamics of logics. This focus could be especially timely for both theoretical and empirical reasons. Theoretically, instead of assuming institutional logics as relatively stable and unchanging influences on organizations and fields, a focus on governance will redirect our attention toward an underexamined theme of how various actors may (or may fail to) maintain the coherence and durability of logics and their associated orders. Empirically, the market's encroachment upon communities, the decline and stigmatization of professions, and the rise and fall of states in different parts of the world, among other grand challenges, all point to the importance and urgency of studying how different institutional logics and orders may be governed and maintained—especially during societal crises. This symposium aims at developing this research agenda by exploring the governance practices and mechanisms that sustain institutional logics as ongoing efforts as well as the various actors who are motivated or affected by the unfolding of logics.

Reference groups are a central source of feedback and vicarious learning, and an important source of firm heterogeneity. Despite its importance, we have a limited understanding of reference groups and whom do organizations learn from. This symposium centers on the theme of reference groups, focusing on antecedents and processes of reference groups selection and social comparison by organizations. The symposium aims to extend existing research underscoring the importance of reference groups and provide directions for future research.

OSCM: Go Bold or Go Home: Measuring the Effect of Industry 4.0 Implementation on Firm Performance

Author: **Kevin Lau**, *Westfälische Wilhelms-U. Münster*
Author: **David Bendig**, *Westfälische Wilhelms-U. Münster*

OSCM Division Chan Hahn Best Paper Award

Despite one decade of intense research across various disciplines, the Industry 4.0 research field is still in its infancy. Particularly, the unclear return on Industry 4.0 technology investments remains one of the core barriers for an at-scale realization of this vision of future manufacturing. While early research on this IT-triggered phenomenon has found a positive association between Industry 4.0 technology and firm performance, recent practitioner reports indicate that many corporates remain in an Industry 4.0 piloting state and don't necessarily see these direct performance effects in industrial practice. This paper examines the impact of Industry 4.0 technology adoption on financial and operational firm performance based on a novel secondary data approach that systematically identifies Industry 4.0 technology events in the MD&A sections of large public U.S. firms. Drawing on digital options theory, our results indicate a 'renaissance' of the productivity paradox, the observation that IT investments do not always lead to increased performance. To the best of our knowledge, we are the first to demonstrate non-linear relationships between Industry 4.0 technology adoption and firm performance, which sheds new light on the current debate on returns on Industry 4.0 technology investments.

OSCM: Give me a Choice! A Field Experiment on the Performance Effects of Smartwatch-Based Task Assignment

Author: **Daniel Kwasnitschka**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Henrik Franke**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Torbjorn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*

We examine a switch of alternative digitalized task assignment systems that are based on a novel smartwatch-based technology. The established task assignment system delegates tasks directly to workers and should optimize productivity, assuming that workers act fully rational. However, the production faces challenges that are rooted in human agency and lack of autonomy. Combining theories on transparency in operational systems and psychological theory of self-determination, we alter the production system to stop “pushing” work to employees but enabling them to “pull” work independently from a pool of available work tasks. We observe changes in a 4-week long field experiment among 8,529 work tasks completed in a real manufacturing plant in central Europe. We find that the combination of increased operational transparency and individual autonomy improves workers' effectiveness and operational performance but yield a decrease in task responsiveness—against our assumptions. We find no differences in workers' efficiency. With these findings, we derive implications for production managers and intersect the theory of self-determination with operational theory on transparency.

OSCM: Supply Chain Awareness Increases Revenue Generation in Nonprofits

Author: **Sebastian Garcia-Dastugue**, *Florida International U.*
Author: **Horacio Enrique Rousseau**, *Florida State U.*

A pillar of supply chain orientation (SCO) is the level of awareness of implementing supply chain management (SCM) practices. However, the development of the 'awareness' dimension of SCO is scant. We propose the notion of supply chain awareness (SCA) to represent the degree to which management focuses on developing a SCO across the organization. We theorize that SCA helps organizations achieve strategic goals and use a mixed-methods study to test this contention in the context of nonprofits which do not necessarily have to demonstrate SCA. To unobtrusively capture SCA, we employ a novel procedure to obtain data from websites of 397 US-based nonprofits to perform a text analysis over the 10 years for which archival data were available. Overall, we find that SCA correlates positively with revenue generation – central to financial independence of nonprofits. Also, we tested two moderators relevant to nonprofits management. We found that the positive effect of SCA on revenue is stronger for nonprofits collocated in cities with headquarters of large corporations but weaker for those with larger boards. We discuss theoretical and empirical implications of SCA. Finally, we discuss managerial implications for nonprofits and examine ways in which SCA can inform policymakers.

OSCM: Pragmatism and Abductive Reasoning in Operations Management: Insights from Design Science

Author: **Akhil Bhardwaj**, *Tilburg U.*

To address managerially relevant problems, scholars in operations management are increasingly adopting a design science based approach, that is, a pragmatic problem solving approach undergirded by abductive and inductive reasoning. Despite its increased adoption, the full potential of the design science approach and range of its application remains underappreciated by operations management scholars. To elaborate on how the design science approach can usefully be employed by operations management scholars, the current study examines five studies that adopted it. Treating these studies as exemplars in the Kuhnian sense, this study identifies six analytic moves that can enhance the rigor and relevance of scholarship in operations management. The study concludes with some reflections on the implications of adopting the design science approach in OM scholarship.

Remote Work and Work-life Conflict

Session Moderator: **Jian Shi**, *Vrije U. Amsterdam*

CTO: **Distant But Engaged: The Impact of Remote Leadership Communications on Work Engagement** 

Author: **Jian Shi**, *Vrije U. Amsterdam*

As a result of the COVID-19 pandemic, over 50% of the working population in Europe, the United States, and China ever turned overnight into mandatory working-from-home employees. This led to a massive change in workplace dynamics, and particularly a shift towards remote leadership as the physical distance between supervisors and subordinates suddenly increased. We investigated the impact of remote leadership communications on employee's work engagement during this prolonged pandemic in both China and the U. S., with 641 full-time employees in total. Drawing on leader distance theory, we hypothesized that the frequency of regular communications from supervisors overcome the increased physical distance, positively affected work engagement among remote employees. This finding was supported in two field survey studies and a daily diary study. In addition, the frequency of remote communications enhanced the supervisor's prestige (yet not their dominance), which positively influenced employee's work engagement. Finally, interaction frequency was particularly important for employees who had a high level of social distance (i.e., low-quality LMX) with the supervisors, suggesting that regular contact offset both the physical and social distance between supervisors and subordinates in remote workplaces during the pandemic. We discuss the implications for increasing the effectiveness of remote leadership during and beyond the pandemic.

CTO: **Life Interrupted: The effects of IT-Mediated Interruption Overload After Hours on Work-Life Conflict** 

Author: **Feifei Yang**, *East China Normal U.*

Author: **Jiayi Zhang**, *East China Normal U.*

Author: **Xiting Wu**, *East China Normal U.*

With the ubiquity of information technologies (IT) such as phones, emails, and instant communication media, employees frequently receive work-related interruptions during non-work time. Sometimes, the interruptions can be excessive for individuals to handle, which impose significant consequences on their personal life. Drawing on conservation of resources (COR) theory, we examine IT-mediated work-related after-hours interruption overload on work-life conflict. We predict that after-hours interruption overload causes work-life conflict through the mechanism of psychological transition. Further, preemptive processing method will positively moderate the mediation relationship while sequential method will negatively moderate it. Empirical evidence is based on two time-lagged surveys from a final sample of 336 full-time employees. Our study extends the research focus to work-related interruptions during non-work time and add knowledge to the mechanism and boundary conditions of after-hours interruption overload.

CTO: **Exploring the Links Among Nondomicile Violence Against Women, Virtual Mobility, and Capabilities**

Author: **Ramesh Dangol**, *Youngstown State U.*

Author: **Deepa Iyer**, *Youngstown State U.*

Author: **Patrick J. Bateman**, *Youngstown State U.*

This study examines the role of virtual mobility in helping women develop employment capabilities when they face high levels of nondomicile violence. We hypothesize that nondomicile violence limits women's spatial mobility, reducing their ability to develop employment capabilities by limiting spatial mobility. Traditionally, spatial mobility is required for commuting to work, schools, colleges, and job training centers (capability development centers). Job training and education women receive at work and capability development centers, respectively, play a critical role in developing employment capabilities. However, nondomicile violence prevents women from accessing capabilities development centers and, consequently, reduces women's ability to develop employment capabilities. In addition, we hypothesize that, in the context where women face high levels of nondomicile violence, virtual mobility can allow women to develop employment capabilities by supplanting spatial mobility. We find that nondomicile violence against women negatively impacts women's employment capabilities. We also find that virtual mobility positively moderates the adverse effects of nondomicile violence on women's employment capabilities. Based on our findings, we recommend governments invest in virtual mobility infrastructures to help women living in high levels of nondomicile violence develop employment capabilities.

CTO: **Adaptations and Tensions in Remote Work: A Longitudinal Study of the Covid-19 Environmental Jolt**

Author: **Liana Razmerita**, *Copenhagen Business School*

Author: **Armin Peroznejad**, *Copenhagen Business School*

Author: **Dan Karreman**, *Copenhagen Business School Department of Management, Society and Communication*

Abstract Remote work provides alternative methods of working which in turn became the norm during the Covid-19 pandemic. In this, paper, we study adaptation practices introduced by both individuals and organisations as a way for managing the enforced remote work. The study draws upon 51 interviews of knowledge workers collected over two years during different phases of the Covid 19 pandemic. We apply adaptation theory and the concept of environmental jolt as lenses to examine the transformation of work as an adaptation process towards new digital working practices. We approach adaptation as a way of coping with a radical change or dynamic situation and building resilience. Based on the data analysis, we expand the adaptation theory in relation to different forms of adaptation to digital work practices (e.g. at technological, organisational, and behavioural level). We also find that remote work overall was a positive experience among knowledge workers, and it has increased their autonomy and accountability at the cost of a number of emerging tensions. Findings emphasize phases of adaptation and tensions that emerge over time in remote work at both individual and organizational level.

Physiological and Genetics Basis to Studying Organizational Actors

Session Moderator: **Fernando A R Serra**, *U. Nove de Julho - UNINOVE - São Paulo*

NEU: **The Influence of the Structure on the Attention of Organization Managers**    

Author: **Nairana Radtke Caneppele**, *Centro U. Unihorizontes*
Author: **Fernando A R Serra**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Luis Pinochet**, *U. Federal de São Paulo (UNIFESP)*

We aim to understand the aspects of the structural distribution of attention that influence the attention of individuals in organizations. We performed two distinct and interlinked studies considered experiments using an eye tracking tool. In the first study, we evaluated the effect of training (as a proxy for the function) on managerial care and the individual characteristics of future managers (n=151). In the second study, we evaluated the effect of function/position on managerial care and the individual characteristics of professionals (n=140) working in organizations. We conclude that the professional profile and the organizational environment (internship) influence the choice of information in the areas of interest (AOI) of future managers. About managers, we concluded that the professional profile influences the choice of information (AOI) for the allocation of care. The initial training of decision-makers (managers) becomes less relevant than their professional profile, which is shaped based on their professional experiences and practices.

NEU: **Job Attainment Characteristics: Genetic Basis Shared with Other SES Indices** 

Author: **Zhaoli Song**, *National U. of Singapore*
Author: **Wen-Dong Li**, *Chinese U. of Hong Kong*
Author: **Hengtong Li**, *National U. of Singapore*
Author: **Xin Zhang**, *Chinese U. of Hong Kong*
Author: **Nan Wang**, *Lingnan U.*
Author: **Qiao Fan**, *Duke-NUS Medical School Singapore*

Job attainment is an important component of socioeconomic status (SES). There is currently a paucity of genomic research on an individuals' job attainment, as well as how it is related to other SES variables and overall well-being. By incorporating O*NET occupational information into the UK Biobank database, we performed GWAS analyses of six major job attainment characteristics – complexity, autonomy, innovation, information demands, emotional demands, and physical demands – on 219,483 individuals of European ancestry. The job attainment had moderate to high pairwise genetic correlations, manifested by three latent factors: cognitive, emotional, and physical functions. The latent job function underlying job attainment traits represented a critical genetic path from educational attainment to income ($P < 0.001$). The higher job attainment was genetically correlated with better health outcomes (i.e., subject well-being, overall health rating, number of non-cancer illnesses etc. ($|rg|$: 0.14 to 0.51), similar to other SES indices; however, the genetic correlations exhibited opposite directions for physical demands ($|rg|$: 0.14 to 0.51) and were largely negligible for emotional demands. By adopting a fine-grained approach to capture specific job attainment phenotypes, our study represents an important step forward in understanding the shared genetic architecture among job attainment characteristics, other SES indices, and potential role in health outcomes.

NEU: **Physiological Synchrony in Virtual Teams: Prediction of Team Emergent States**

Author: **Sixiong Peng**, *U. of Tokyo*

NEU Best Student Paper Award

William H. Newman Award Nominee

A wide range of organizations has increasingly adopted virtual teams, particularly after the outbreak of COVID-19. Due to the limitations of virtual communication, such teams face challenges to cooperation. This calls for new tools to support teamwork through dynamic analysis. Physiological synchrony is a promising indicator for representing the real-time state of a team, but its application in organizational science is minimal, even less so for virtual teams. In order to verify physiological synchrony's relationship with teamwork and team emergent states in virtual teams, I formed 10 virtual teams of 4 members each. I asked each team to generate business ideas for post-COVID19 society, following a process based on design thinking, while measuring their electrodermal activities. The results show that three indicators of physiological synchrony, directional agreement, instantaneous derivative matching, and windowed cross-lagged correlation significantly differ between teamwork and resting. The indicators also differ between the real teams and hypothetical teams, but only for some teams. Also, physiological synchrony indicators during different periods correlate with psychological safety, collective efficacy, and cohesion. Psychological safety shows more strong correlation than the others. Among physiological synchrony indicators, windowed cross-lagged correlation most strongly correlates with emergent states. I discussed implications and future studies.

Gender, Race, and Wage Discrimination and Work Stratification

Session Moderator: **Julia D. Hur**, *New York U.*

OB: **The Look of a Good Pitcher: Role Prototypicality Contributes to Wage Discrimination**    

Author: **Julia D. Hur**, *New York U.*

Author: **Xu Han**, *New York U.*

Race or gender is a key component of determining role prototypicality in organizations. The current work examines the effect of role prototypes on one of the most critical social and organizational challenges: income inequality. We suggest racial minority members who occupy a less prototypical role would face more wage discrimination compared to racial minority members who occupy a more prototypical role. We analyzed the salaries of Major League Baseball (MLB) players from 1988 to 2019 and found that minority players are at disadvantage in salaries when they occupy a less prototypical role (i.e., pitcher), compared to other more prototypical roles. This effect was specific to minority players and was further moderated by status and centrality of the role. The current findings demonstrate how role prototypicality not only affects perception or evaluation of minority members but also influences how much money they make when they simply look less prototypical for their role.

OB: **Organizationally Imprinted Networks and Gender Disparities in the Labor Market**  

Author: **Thomas Lyttelton**, *Copenhagen Business School*

Author: **Lasse Folke Henriksen**, *Copenhagen Business School*

Author: **Emil Begtrup-Bright**, *Copenhagen Business School*

How do organizations gender network hiring? There is ample research suggesting that network hiring contributes to gendered outcomes for workers and organizations and that the hiring organization is key to this process. However, the hiring firm is not the only relevant organizational context for labor market networks, since workers' past labor market experiences are likely to have shaped the networks they carry forward as they search for new employment opportunities. The settings in which workers originally formed connections may therefore also influence the value of job movers' contacts. This paper uses administrative data on job moves across the Danish labor market from 2014-2016 and an innovative matching strategy to examine how the gender composition of two organizations - hiring establishments and the establishments in which a mover and their contact previously worked together - influences the value of contacts. We find that ties to male managers are particularly useful overall, and in both organizational settings, ties are most useful when employees are in the gender majority. Our findings show how successfully managing a diverse workforce is important for the long-term careers of workers and suggests that access to authority figures should be a priority of organizational networking and mentorship programs.

OB: **Race, Incivility, and Perceptions of Racial Discrimination** 

Author: **Maria Kraimer**, *Rutgers U., School of Management and Labor Relations*

Author: **Lawrence Houston**, *Rutgers U. SMLR*

Author: **Cheng-Huan Liu**, *Rutgers U., School of Management and Labor Relations*

Author: **Scott Seibert**, *Rutgers U., School of Management and Labor Relations*

We integrate selective incivility theory (Cortina, 2008) and attributional ambiguity theory (Crocker & Major, 1989) to examine the relationships among race, experienced incivility, perceived racial discrimination, and social integration. Based on the core tenet of selective incivility theory, we expect employees of color to experience higher levels of incivility than White employees. We further propose that social integration in the workgroup decreases experienced incivility, but only for employees of color as it minimizes social categorization processes. Based on attributional ambiguity theory, we then propose race to moderate the positive relationship between experienced incivility and perceived racial discrimination such that the relationship is stronger for employees of color than for White employees. To test these hypotheses using specific incidents of incivility, we collected weekly data from 150 staff at a U.S. university for six consecutive weeks. The results indicated no race differences in the experience of incivility. Further, social integration in the work unit decreased experienced incivility for employees of color only. Finally, for employees of color, but not White employees, there was a strong positive relationship between experienced incivility and perceived racial discrimination. These findings advance our understanding of selective incivility theory and connect incivility to perceptions of racial discrimination. We offer practical recommendations for reducing perceived discrimination and building more inclusive work environments for racial minorities.

Author: **Adam Storer**, *UC Berkeley*

How does the experience of workplace stratification affect well-being? The effect of social comparisons that result from the experience of stratification have typically been measured with respect only to pay. However, the workplace is a core site of stratification, and research has shown that workers consider a wide variety of job characteristics beyond pay in evaluating their jobs. This paper evaluates work schedule quality in low-wage foodservice and retail as a job characteristic that workers draw upon as a source of comparison, by analyzing an original employer-identified survey of 1,049 respondents from 10 large, national companies. I first establish through free-text responses that frontline workers have multiple pathways to access information regarding coworkers' schedules. Next, I find that frontline workers are more likely to compare schedule quality to their coworkers, and compare wages between employers. I hypothesize that this difference may be in part due to the visibility of schedules in the workplace, and develop a theoretical distinction between context-specific and context-agnostic positional goods. Further, I find evidence of steep declines in schedule satisfaction, overall job satisfaction, and increases in turnover intentions when frontline workers feel they have worse schedules than their coworkers. In contrast, I find limited evidence for small to modest improvements when workers feel they are treated better than average. These findings demonstrate a clear inflection point around feelings of being treated worse than the average coworker, rather than the linear, incremental effect that is typically assumed in measurements of relative deprivation.

**ONE Plenary (Hybrid): Resilience in Organizational Scholarship -
Lessons Learnt from COVID-19 and Future Forms of Resilience to Large-
Scale and Disruptive Change**
ONE Plenary (Hybrid Plenary Session)

Host: **Martina K. Linnenluecke**, *Macquarie U.*

Even a few years ago, the possibility of a large-scale infectious disease outbreak would have seemed highly unlikely and hypothetical at best. Fast forward to August 2022, and we are finding ourselves back at the first AOM conference with in-person attendance after the outbreak of COVID-19, while the world is still grappling to find pathways for managing the short- and long-term impacts of the pandemic on individuals, businesses, and society. But are we prepared for the next shock? Is our scholarship providing adequate guidance? Or are we again hoping that these risks will remain unlikely and hypothetical? Join us in this Plenary session to discuss future forms of resilience to large-scale and disruptive change.

This Plenary Session will explore the ‘lessons learnt’ from COVID-19, and new insights that have been gleaned into the resilience of organizations and institutions to large-scale and disruptive change. Resilience can be defined as the “inherent characteristics of those organisations that are able to respond more quickly, recover faster or develop more unusual ways of doing business under duress than others” (Linnenluecke, 2017: 4). Large-scale disruptive change refers to unexpected change that affect entire socio-economic systems. Hällgren et al. (2018) define this type of change as a “disrupted context”, involving change that occurs “outside the core activities of organisations or communities”, thus “catching organizations and/or communities off-guard” (pg. 135). The pandemic will likely and unfortunately not remain an isolated global occurrence of large-scale and disruptive change. We already know that society faces an increasing risk of exposure to a range of economic, social, and environmental risks. The latest edition of the Global Risks Report, released by the World Economic Forum in 2022, lists climate action failure, extreme weather events, as well as biodiversity loss and ecosystem collapse amongst the top three of the top 10 global risks by severity. The report points out that it is indispensable for businesses across sectors to formulate longer-term resilience strategies that allow flexibility in responding to a range of future threats. Our panelists will come together to explore scholarship around risk and resilience issues and will discuss related research from their various areas of expertise.

The Craft of Conducting Qualitative Research

Session Moderator: **Anne D. Smith**, *U. of Tennessee, Knoxville*

 **RM: Harnessing the Positive Side of Negative Cases: Exemplars and Queries for Qualitative Researchers** 

Author: **Christina Hymer**, *U. of Tennessee, Knoxville*
Author: **Anne D. Smith**, *U. of Tennessee, Knoxville*

A negative case refers to an alternative storyline that emerges during the data analysis process and challenges the dominant theoretical model. Scholars engage in negative case analysis by identifying, analyzing, and theoretically integrating alternative storylines within their theoretical model. Despite expansive instruction around negative case analysis within qualitative guides, we were frankly shocked at the limited discussion of negative case analysis within a 20-year review of empirical articles published in top management journals. The objective of this article is to open up discussion of negative case analysis and further sensitize researchers and journal editors alike to the value of negative case analysis. We provide a review of methodological guidance on negative case analysis and highlight insights from seven exemplary article that utilize negative cases in their theory development. We develop four questions and some preliminary responses that we hope will generate more rigorous, trustworthy, and refined theoretical insights from inclusion of negative cases.

RM: Where Is Time in Longitudinal Qualitative Research? 

Author: **Nele Langebraun**, *U. della Svizzera Italiana*
Author: **Michael Gibbert**, *U. della Svizzera Italiana*
Author: **Bareerah Hafeez Hoorani**, *Nijmegen School of Management*
Author: **Gizem Kadioglu**, -
Author: **Peter Seele**, *USI Lugano*

Time plays an integral part in the day-to-day running of organizations, and recently there were several calls for more theorizing based on qualitative longitudinal research. Despite these calls, what constitutes 'longitudinal' qualitative research can be interpreted in different ways, e.g. from a process perspective or a variance perspective. As such, while the academic community is under pressure to produce longitudinal research, the plurality of approaches often leaves us at a loss as to what to report and how to report it. Rather than curtailing this plurality by providing guidelines or templates, we focus on how time itself is used by analyzing all qualitative longitudinal papers published in *Academy of Management Journal*, *Administrative Science Quarterly*, *Organization Science*, and *Journal of Business Ethics* between 2016 and 2020. To provide analytical clarity we distinguish between two uses of time, either in the research design and/or the research process. This distinction allows us to reveal a taxonomy of existing practices including three levels of engagement with time, with only a minority of the papers effectively using time for theory-building, and some resorting to what we call longitudinal-washing. To rectify this, we use insights from the best practices in our sample to enhance the theoretical heft and mutual intelligibility of longitudinal research by reporting transparently on the usage of time.

RM: A Paradox Approach to Navigating the Tensions of Ethnographic Research  

Author: **Angela Greco**, *U. of Groningen*
Author: **Katrin Heucher**, *U. of Michigan*

Ethnographers embedded in organizational settings are confronted with competing expectations and tensions. By building on the scholarly work on paradox theory, we draw from our experiences conducting ethnography and from the narratives of other organizational ethnographers and offer insights on what we call "paradoxes of ethnography". Additionally, we offer a guiding framework to aid organizational ethnographers, by increasing current understanding of the challenges and opportunities of ethnographic research. Thereby, we contribute to methodological conversations around ethnography and highlight coping mechanisms known in paradox research.

RM: Existential Ethnography: What I Learned About Life While Studying Death – a Confessional Tale  

Author: **María Dolores Del Río**, *U. Austral*

Organizational ethnography, although a well-suited method to "touch" humanity in organizational contexts, needs to be rethought to grasp the wholeness of human experience. An oppositional and, thus, a dualistic conception of what I am going to refer to as the subject of, the subject in, and the subject by fieldwork was sustained in time in the ethnographic tradition. I propose an existential ethnography -deeply rooted in phenomenology- as a way to achieve the opposite effect of re-integrating the self in a new and perhaps unfamiliar way, but one in which we begin to reconstitute our humanity through the research process. This paper contributes to a deeper understanding of how philosophical foundations influence methodological choices and thus the topics that research can reach when we turn to focus on our humanity in organizations, taking into account that increasingly we spend most of our working lives in organizations and that we will die in organizations as well.

Discussant: **Daniel Spurk**, *U. of Bern*

Studying careers and organizational behavior using person-centered approaches like cluster analysis or more modern mixture modeling approaches like latent class/profile analysis is of great theoretical value for career and organizational research. The idea is that the responses contained in a sample consist of a “mix” of responses stemming from various subpopulations. After years of proliferation of mixture modeling research in our field, we now need to broaden our focus and ask ourselves: What more can be achieved using mixture modeling in careers and organizational research? How can mixture modeling be used beyond “internal” latent profile analyses by extending the latent profile analyses or using less common mixture modeling techniques? In this symposium, we present a selection of works using such more elaborate applications of mixture modeling. Our goal is to show attendees of our symposium how to go beyond internal latent profile analyses by adding covariates to their analyses and using less well-known mixture modeling approaches like mixture regression analysis to enhance the empirical and theoretical benefits of mixture modeling.

A Junior Scholar's Guide to Navigating the Trials & Triumphs of Qualitative Research

Qualitative Research Symposium for Junior Scholars

Moderator: **Alexandra Rheinhardt**, *U. of Connecticut*

Moderator: **Anna Elise Roberts**, *School of Management, U. of Bath*

Panelist: **Sarah Wittman**, *George Mason U.*

Panelist: **Tiffany Dawn Johnson**, *Georgia Institute of Technology*

Panelist: **Eliana Crosina**, *Babson College*

Panelist: **Kam Phung**, *Simon Fraser U.*

This symposium seeks to bring together a panel of junior (pre-tenure) faculty members to discuss the trials and triumphs of qualitative research. The panel discussion will focus on the personal, qualitative journeys that the panelists have embarked upon, uncovering personal processes for engaging in and managing qualitative research, the various challenges that have arisen in this process and individual approaches to dealing with these challenges, as well as the benefits and rewards of engaging in such research. The primary goals of this panel symposium are to: 1) provide a platform for sharing personal struggles and valuable insights related to qualitative research; 2) provide an opportunity for other junior scholars – at the doctoral, post-doctorate, and Assistant Professor stages – to seek advice and ask questions that are not typically answered in a classroom setting, and; 3) create a community of practice for junior scholars beyond the AOM Annual Meeting. By bringing together a group of junior scholars with different research interests and backgrounds, but who have spent the majority of their academic careers engaging in qualitative research, this panel is uniquely positioned to provide a diverse set of perspectives, tips, and tricks to other scholars in the early stages of their qualitative careers.

CAR: Social Class Differences in Job Search Process and Employment Success 

Author: **Xuan Liu**, *U. of Minnesota - Twin Cities*

Author: **Le Zhou**, *U. of Minnesota*

Author: **Abdifatah Ahmed Ali**, *U. of Minnesota*

Author: **Songqi Liu**, *Georgia State U.*

Author: **Shenjiang Mo**, *Zhejiang U.*

This study examines the impact of a job seeker's social class on their job search and employment success. We draw from a social cognitive perspective of social class to propose two dynamic mechanisms during job search process through which social class influences employment outcomes: goal persistence and compromising strategy. We followed 126 new job market entrants for up to 12 weeks when they searched for their first full-time jobs. We found that parent education was positively related to goal persistence, such that job search salary goal was more likely to fluctuate as perceived job search progress changed among job seekers whose parents had lower education whereas there was no significant relationship between perceived job search progress and job search salary goal among those whose parents had higher education. Goal persistence was, in turn, positively related to the number of job offers received. We also found that family income was negatively related to using a compromising strategy when making decisions about opportunities received in the job search process, such that job seekers from richer (versus poorer) families were less likely to accept job opportunities that they were dissatisfied with. Job seekers who used less compromising strategy were more likely to be employed in a satisfying job rather than stay unemployed until the end of their job search. Overall, our findings suggested that social class origins could influence new job market entrants' employment success through their social cognitive tendencies during the job search process.

Occupational change is a common and impactful career transition, but previous research has not yet clarified how employees' job satisfaction, health, and well-being develop after such a change, and which factors contribute to their favorable or unfavorable development. Addressing these issues, we analyzed panel data of young employees in Switzerland covering the first four years of entering the labor market after completing vocational education and training (N = 352). We examined different trajectories of changes in job satisfaction, health, and well-being indicators after an occupational change across four years, from one year before the occupational change to two years after the change. We also examined levels and changes in job demands, job resources, and personal resources over the same period as potential explanatory factors for these trajectories. Longitudinal growth mixture analyses (LGMA) revealed four trajectories of job satisfaction, health, and well-being variables: (1) favorable development—particularly in mental health, (2) favorable development—particularly in physical health, (3) unfavorable development, and (4) stable favorable. Different trajectories after changing occupation were explained by changes but not by levels in job demands, job resources, and personal resources in the new occupation. We discuss the implications of the results at the occupational and individual levels.

CAR: Early Emergence of Career Self-Management Skills among Adolescents: A Dynamic Perspective 

Author: **Madeleine Haenggli**, *U. of Bern*

In times of changing labor market and rapid technological development, career self-management is becoming increasingly important for individuals to manage the frequent and complex transitions within and between learning and work. This is particularly important in the earliest stages of career development, namely the career preparation phase, where career self-management skills need to be developed and applied. Drawing on different career theories, this six-wave longitudinal study investigates the dynamic link between motivational aspects (i.e., career clarity), knowledge (i.e., job market knowledge), and career self-management actions (i.e., environmental exploration) at an intra-person level and over time. Based on a sample of 1297 students of 7th-9th grades, I tested a random intercept cross-lagged panel model (RI-CLPM) to examine within-person dynamics across six time-points while accounting for stable between-person differences. The findings support the assumed dynamics in these variables in that increases in environmental exploration predicted subsequent increases in career clarity and job market knowledge. Moreover, increased career clarity and job market knowledge, in turn, predicted subsequent increases in environmental exploration. I discuss the findings taking into account a dynamic intra-person approach to understand key career preparation constructs.

CAR: Coming Home to Authentic Self: An Autoethnographic Study of Multiple Career Transitions 

Author: **Ajoy Kumar Dey**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*

Author: **Shreya Mishra**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*

Career studies on multiple transition that include transitions at early, mid and late life career are scarce. Further, there is little understanding on the intersection of Basic Values and Career Anchors in multiple career transitions. The purpose of this study is thus to provide a holistic view on multiple career transition through the lens of Schwartz's Basic Values and Schein's Career Anchors, during the life course of 30 years including. The study reveals how foundational Values and Career Anchors led the author to finding authentic self. The study concludes with a conceptual framework for multiple career transition, including transition at old age. The framework integrates career theories which resonated with the findings to give a bird's eye view of the phenomenon. We found, that strong values and career anchors, helps individual navigate through transitions without compromising, if the person stays career conscious to boundary situation and authentic to personal values. In addition, we found that although Dominant Career anchor may change in time, however, the original dominant anchor may emerge in late career transition if the dominant value remains the same throughout. Keywords: Autoethnography, Career Transition, Career Anchors, Values

ENT: Configuration Effect of Driving Corporate Digital Entrepreneurship 

Author: **Wei Li**, *Chongqing U. of Technology*
Author: **Wei Chen**, *Chongqing U. of Technology*
Author: **Xiaolin Zhu**, *Chongqing U. of Technology*

Corporate digital entrepreneurship (CDE) is an inevitable choice for incumbent companies to obtain and maintain competitive advantages in the digital economy era, and is an innovative activity for companies to seize digital opportunities; However, the current research on corporate entrepreneurship and digital entrepreneurship lacks integration, and there is still insufficient study on the promoting mechanism of CDE. From the matching perspective of organization and environment, this paper uses fuzzy set-qualitative comparative analysis (fsQCA) methods to explore the multiple factors and configuration mechanisms that lead to differences in the degree of CDE; The analysis of survey data from 367 companies shows that the TMT reflexivity is the necessary condition that drives CDE, while the lack of technology spillover is a necessary factor to inhibit the CDE; there are three paths that drive high-level CDE, and the three configurations of the six factors can drive high-level CDE; meanwhile there are two paths to inhibit CDE, and the two configurations of the five factors will inhibit CDE, and have an asymmetric causal relationship with the driving mechanism. These conclusions provide managerial implications for incumbent companies to carry out innovative activities and stimulate entrepreneurial vitality in the digital economy era.

ENT: Navigating the Opportunities and Threats in Constructing Corporate Entrepreneurs' Role Identity 

Author: **Aracely Soto-Simeone**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Marina Biniari**, *Aalto U. School of Science*

Established organizations increasingly rely on employees who span work boundaries to engage in entrepreneurial activities on their behalf. However, the ambiguity and uncertainty entailed by corporate entrepreneurial activities may challenge employees' work-related identity once they act autonomously. We draw on the identity and emotion work literature to understand how employees navigate their role as corporate entrepreneurs in developing a positive work-related identity. Based on the narratives of 25 corporate entrepreneurs, our qualitative analysis reveals that employees' entrepreneurial role simultaneously generates a threat as well as being an asset in constructing a positive work-related identity. Corporate entrepreneurs combine emotion and identity work to fashion a distinct and sometimes unfamiliar role—both to themselves and others—while reducing the downsides of its enactment. Our grounded theoretical model contributes to the extant corporate entrepreneurship and identity work literature by explaining how emotion and identity work can help employees cope with the threats and opportunities that permeate entrepreneurial roles in organizational settings.

ENT: Distant Reach, Focused Investing: An Examination of CVC Portfolio Configuration 

Author: **Zhuo Chen**, *China Europe International Business School (CEIBS)*
Author: **Anthea (Yan) Zhang**, *Rice U.*

While prior research has focused mainly on the consequences of firm CVC activities, little attention has been paid to how firms configure their CVC portfolios. We conceptualize firm CVC portfolio configuration in two dimensions – technological distance between a firm and its CVC portfolio and technological heterogeneity of the portfolio. We theorize that when a firm looks for new investment targets, a larger technological distance between the firm and its CVC portfolio directs the firm to choose an investee that will narrow its portfolio's technological heterogeneity while a smaller technological distance encourages the firm to increase its portfolio's technological heterogeneity. We further examine how CVC portfolio configuration may affect the firm's learning from its CVC portfolio. We propose that a firm learns more from a more technologically heterogeneous portfolio, however this effect is reduced if the firm has a larger technological distance from its portfolio. Using a sample that consists of 106 U.S. firms with CVC arms and their CVC investments, we find support for these hypotheses.

ENT: A Behavioral Perspective on External Corporate Venturing in Family Firms

Author: **Giovanna Campopiano**, *U. of Bergamo*
Author: **Mara Brumana**, *U. of Bergamo*
Author: **Massimo Bau**, *Jönköping International Business School*
Author: **Andrea Calabrò**, *IPAG Business School*

This study investigates the propensity of family firms to engage in external corporate venturing, namely investments, aimed at exploratory search, in ventures at their early stage of development. Relying on behavioral perspectives, we build hypotheses on the effect of family control on the likelihood to engage in such risky and unconventional initiatives. We also consider how key organizational contingencies (i.e., performance feedback and financial slack) shift socioemotional wealth preservation as reference point. We test our hypotheses on a sample of 12,320 firm-year observations gathered from 2,548 European listed firms in the period 2011-2018. We discuss the joint effect of the type of decision and the contingencies to explain family firms' risk attitudes and, thus, contribute to family business and corporate entrepreneurship literature.

ENT: A Rewarding Ride? How CVC Experience Influences New Venture's Dominant Design Establishment 

Author: **Xiumei Li**, *Asper School of business, U. of Manitoba*

Author: **Tianxu Chen**, *West Virginia U.*

Author: **Vadake Narayanan**, *Drexel U.*

New ventures often emerge based on disruptive technologies and enter dominance battles where one single technology among competing technological variants sponsored by different firms will become the dominant design (DD). The establishment of a technology as the DD is associated with enormous benefits to the sponsoring venture, but no study has explored factors that determine a new venture's chance of success in establishing its technology as the DD. In this study, we examine the role of corporate venture capitalist (CVC) experience. We distinguished between CVC generic industry experience and CVC standard-setting experience, and found that CVC standard-setting experience has a larger impact (positive impact) than CVC generic industry experience (negative impact) in new ventures' DD establishment. Further, we distinguished between two types of DD—DD based on end-user products and on intermediate technologies, and examined the moderating effect. Our study has important implications for the entrepreneurship literature, the DD literature, and the CVC literature.

ENT: What Role do Founder Experience, IP, and CVC Play in Creating Unicorn Ventures? A Process Model

Author: **Xi Zhang**, *New Jersey Institute of Technology*

Author: **Shanthi Gopalakrishnan**, *New Jersey Institute of Technology*

Author: **Raja Roy**, *New Jersey Institute of Technology*

Research suggests that the access to resources, experience of founders, and new ventures' innovation contribute to the entrepreneurship success. However, it is somewhat unclear how some startups go above and beyond being regular startups and receive unicorn status, i.e., at least one-billion-dollar valuation. In this study, we examine how founders' prior entrepreneurial experience, venture's intellectual property (IP), and access to corporate venture capital (CVC) influence a startup's likelihood of becoming a unicorn venture. We uncover that IP partially mediates the relationship between the founders' prior entrepreneurial experience and the likelihood of becoming a unicorn venture and that the presence of CVC investors negatively moderates the effect of founders' prior entrepreneurial experience on the venture's IP. Surprisingly, we find that the presence of CVC does not moderate the relationship between founders' prior entrepreneurial experience and the likelihood of becoming a unicorn venture.

ENT: Widening The Lens: Antecedents to Perspective Taking Among Corporate Entrepreneurs

Author: **Shelby Meek**, *Kennesaw State U.*

Author: **Matthias Alfred Tietz**, *U. of St. Gallen Institute of Management in Asia*

Taking the perspective of others is a crucial ability to identify the best entrepreneurial opportunities. In corporate entrepreneurship, constant effort goes into training and motivating employees to participate in entrepreneurial activities. What makes employees in corporate entrepreneurship better at perspective taking? How can employees widen their lens to better see others' viewpoints? Here I complement the cognitive work on perspective taking by focusing on possible antecedents to perspective taking in corporate entrepreneurship. I specifically focus on employee cognitive adaptability and beneficiary contact to provide the knowledge and motivation, respectively, that has been suggested as crucial to initiating entrepreneurial action. Additionally, I suggest that perspective taking is hindered when employees experience job burnout. I also investigate whether perspective taking among corporate entrepreneurs enhances their opportunity identification. I collect primary data in two separate samples, employing survey techniques with a randomized intervention to investigate these questions. The results of my study start important conversations about the central role that perspective taking can play in corporate entrepreneurship.

ENT: Employee Mobility: Leaver Vulnerability to Enforcement of Restrictive Covenants 

Author: **Sepideh Yeganegi**, *Wilfrid Laurier U.*

Author: **Andre O. Laplume**, *Ted Rogers School of Management, Ryerson U.*

Author: **Bradley Bernard**, *Ted Rogers School of Management, Ryerson U.*

Prior research suggests that the turnover of higher-ranking employees poses a greater threat to parent firms. This is expected especially when high-ranking leavers start a spinout company, rather than go to work for an established competitor. In this study, we examine the enforcement of restrictive covenants as recorded in 306 Canadian court decisions involving spinouts or mobility to competitors. Our analysis results point to a higher rate of enforcement of restrictive covenants in cases involving leavers in higher-ranking roles, especially when they leave to form spinouts as opposed to going to work for a competitor. Restrictive covenants are more potent enforcement tools when leavers threaten to replicate parent firm complementary assets; that is, when higher-ranking leavers form spinouts.

ENT: **The Role of FMK and HCI in Entrepreneurial Internationalization-Performance : A Meta Analysis** 

Author: **Dibyendu Sharma**, *Indian Institute of Management, Ahmedabad*
Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*
Author: **Saneesh Edacherian**, *Indian Institute of Management, Ahmedabad*
Author: **Amit Karna**, *Indian Institute of Management, Ahmedabad*

We study the influence of foreign market knowledge (FMK) and home country institutions on the entrepreneurial internationalization-performance relationship. The sample for the current study comprises peer-reviewed journal articles published between 1996 to 2020. Our sample consists of 115 independent samples having 101,475 firms. We extend the previous meta-analysis (Schwens et al., 2018) on international entrepreneurship, which studied the moderating role of knowledge intensity for the same relationship. As per our results, FMK positively moderates the relationships between degree and scope of internationalization and performance. Whereas home country institutions positively moderate the scope of internationalization and performance relationship.

ENT: **Do Country-level Institutions Influence YouTubers as Digital Entrepreneurs?** 

Author: **Sebastian Aparicio**, *U. Autònoma de Barcelona*
Author: **Maria Noguera**, *U. Autònoma De Barcelona*
Author: **Stephanie A. Scott**, *Durham U. Business School*
Author: **Juan Carlos Muñoz-Mora**, *U. EAFIT*
Author: **David Urbano**, *U. Autònoma De Barcelona*

Digital platforms have brought opportunities for individuals to undertake different initiatives and become entrepreneurs. For example, we observe YouTubers as digital entrepreneurs capable of creating content while making money. Their activity is inherent to creativity and digital skills. Yet, little is known about YouTubers' response to the external environment, hence, we analyze the effect of both the entrepreneurial and pro-market contexts on this type of entrepreneurship. To this end, we use information from three different sources: statistics from the Social Blade and Heritage Foundation websites, as well as the world development indicators (WDI) from The World Bank. We estimated nested models through OLS to observe that the entrepreneurial environment is positively associated with YouTubers' activity, whereas the pro-market environment negatively affects the number of YouTubers' views and subscribers. Our findings advance knowledge about the role of institutions in a different form of entrepreneurial activity and the potential substitution between traditional entrepreneurship and digital entrepreneurship. Thus, theoretical and policy implications are discussed.

ENT: **Start-up Context, Social Ties, and Growth Strategies of Second-Generation Immigrant Entrepreneurs**  

Author: **Sarika Pruthi**, *San Jose State U.*
Author: **Misagh Tasavori**, *Sharif U. of Technology*

Second generation immigrant entrepreneurs (SGIEs) in developed economies have contributed to the emergence of new areas of business activity. An understanding of their growth strategies can shed light on the role of individual immigrants in the founding of potentially global firms competing with large multinational enterprises. Based on eleven case studies of SGIEs of Indian origin in the UK, our findings reveal that SGIEs are heterogeneous in their growth strategies contingent on their start-up context and use of social ties. Founder SGIEs combining non-co-ethnic ties with non-family co-ethnic ties geographically expand outward to other foreign countries, including their country of origin. In contrast, successor SGIEs combining non-co-ethnic ties with family ties expand their product/ service scope within the UK; they exploit foreign market links, including their country of origin, to source supplies or customers through inward internationalization. These findings contribute to the immigrant entrepreneurship, international business and international entrepreneurship literatures.

ENT: **Embedded Action in Disembedded Markets: Restoring Balance Through Indigenous Entrepreneurship**  

Author: **Sebastián Andrés Barros**, *U. del Desarrollo*
Author: **Ignacio Pavez**, *U. del Desarrollo*

Previous research has shown the positive impacts on nature and society of indigenous venturing from remote contexts. However, tensions might emerge when social and ecological indigenous values drive entrepreneurs within market-based, disembedded settings. These tensions may compromise the maintenance of social and ecological well-being through venturing. To explore this, we conducted a qualitative study with urban Mapuche entrepreneurs from Chile. Key patterns and themes were identified using thematic analysis. We found a mutually reinforcing relationship between entrepreneurship and well-being. This reciprocal interaction allowed for defining entrepreneurship in terms of Mapuche Good-living (and vice versa), as they both sought to balance human, natural and spiritual well-being. Implications on relational worldviews, well-being and spirituality are discussed.

ENT: **Shame of Business Failure and Entrepreneurs' Psychological Well-being: A Moderated Mediation Model**

Author: **Heqi Jia**, *Central U. of Finance and Economics*
Author: **Jing Li**, *Kunming U. of Science and Technology*
Author: **Song Lin**, *Central U. of Finance and Economics*

The shame of entrepreneurial failure is a very common emotion for entrepreneurs, but its consequences have been limited to study. Based on the cognitive appraisal theory, this study investigates how the shame of entrepreneurial failure influence entrepreneurs' psychological well-being, as well as the mechanism. This paper collects the data by tracking 96 entrepreneurs in Shandong Province, China who have experienced business failures by questionnaire. The results show that the shame of entrepreneurial failure is positively related to perceived stress, which then decreases an entrepreneur's psychological well-being. Further, the indirect relationship between the shame of business failure and entrepreneurs' psychological well-being (via perceived stress) will be moderated by the number of ventures started, such a relationship is less positive for those entrepreneurs who have more experience. This study contributes to the research of shame of failure in entrepreneurship, entrepreneurs' well-being, and cognitive appraisal theory in entrepreneurship. In addition, this study also contributions to entrepreneurs, policymakers, and social media in practice.

ENT: **Good Soldiers and Good Generals: Organizational Citizenship Behaviors in Startups**

Author: **Eduardo Meléndez**, *U. of Oklahoma*

The first three years after launch are critical to the existence of startups. This is a turbulent period in which startups, as new and small organizations with limited resources, must compete under conditions of uncertainty and complexity against larger and established firms with already deployed resources. In this context, startups need employees who are willing to go beyond the call of duty. Management researchers have largely focused on the relationship between organizational citizenship behavior (OCB) and performance outcomes in established firms, and entrepreneurship scholars have mostly studied the characteristics and functions of entrepreneurs. However, little attention has been paid to the role of employees and OCB in startups. To fill this gap, this paper assesses OCB within a specific organizational setting to propose a conceptual framework that explains why nascent startups require early employees who demonstrate high levels of OCB and how these emerging organizations, through higher OCB levels, can increase their likelihood of survival.

ENT: **Exploring Entrepreneurial Affect From a Regulation Perspective: A Review and Research Agenda**

Author: **Lynn Schmodde**, *Heinrich-Heine U. of Dusseldorf*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

In entrepreneurship research, the entrepreneurial journey is commonly described as an emotional rollercoaster. At the same time, the question of how entrepreneurs can most effectively deal with the emotional “downs” to maintain their entrepreneurial activities has received limited attention so far by scholars and is investigated using different lenses and concepts, generating a fragmented state of the literature. Employing the umbrella term of affect regulation, we conduct a systematic review, and integrate research on emotion regulation, emotion-focused coping, and emotional intelligence. With a comprehensive framework, we synthesize the literature on the perspectives of affect regulation as an ability, trait, and strategy, as well as the accompanying surrounding conditions, antecedents and consequences. Drawing on that, we highlight existing gaps and point to future directions for affect regulation in entrepreneurship research.

Paper is Available to Meeting Registrants Only.

ENT: **A Cross-National Study of Entrepreneurial Intent: The Effect of Social Trust and Trust in Government**

Author: **Amir Hossein Maleki**, *Northeastern Illinois U.*
Author: **Charles Funk**, *Northeastern Illinois U.*
Author: **Kaveh Moghaddam**, *U. of Houston, Victoria*
Author: **Edwin Sanusi**, *SolBridge International School of Business*

This multilevel, cross-national study examines the influence of social trust and trust in government on latent entrepreneurs' intention to start a business. Building upon theory of institutional hierarchy and social relations, this research shows the negative impact of fear of business failure on entrepreneurial intention varies across countries. Results find such negative relationship is weaker in countries with higher levels of social trust and trust in government. In other words, in a trusting environment, a sense of uncertainty and lack of control of startup issues may be mitigated by conflict compromise and efficient exchange of information among agents.

ENT: Perceived Selective Incivility and Relational Trust for BAME SMEs during the COVID-19 Pandemic

Author: **Tolu Ifedapo Adebayo Olarewaju**, *Keele Business School, Keele U., U.K*
Author: **Jagannadha Tamvada**, *U. of Southampton*

The purpose of this article is to examine if perceptions of selective incivility reported by BAME SME owners were associated with a different relational trust preference compared to White SME owners, as they all engaged in external bricolage to navigate the uncertainty of the COVID-19 pandemic. Qualitative data were collected through in-depth interviews and an online questionnaire to 27 Black, Asian and Minority Ethnic (BAME) and 55 White small and medium-sized enterprises (SME) owners in the United Kingdom. The research finds that in comparison to perceptions of White SME owners in the sample during the same period, perceptions of selective incivility reported by many BAME SME owners were associated with a different preference of relational trust as they all engaged in external bricolage. Thus, this research indicates how perceived selective incivility could affect the relational trust preferences of BAME SME owners in times of crisis and support from such institutions might not get to SMEs during periods of crisis.

ENT: Reflective Analysis of Failure and the Performance of Subsequent Ventures

Author: **Tae Jun Bae**, *Hanyang U.*
Author: **Chong Kyoong Lee**, *James Madison U.*
Author: **Sharon Simmons**, *Jackson State U.*

Learning is a process that begins with the occurrence of concrete experiences that are reflectively analyzed and transformed into new knowledge that is tested using active experimentation. Although the notion that business failure provides an opportunity for learning is widely accepted, existing studies have not sufficiently paid attention to the entrepreneur's learning behavior. This study investigates learning with a focus on the relationship between the reflective analysis of prior business failure and the subsequent venture performance. We examine the efficacy of the entrepreneur's reflective analysis of the cause-and-effect of failure events. We also examine the boundary conditions of disruptive visions and industry changes, which may affect this relationship. Our sample is 286 entrepreneurs enrolled in a support program for reentry after business failure in Korea. We find that efficacious reflective analysis of failure increases the subjective positive perception of subsequent venture performance and that this relationship was weakened when entrepreneurs had disruptive visions for subsequent ventures or when there was low industry similarity between the failed and subsequent venture. These results inform entrepreneurship research on failure attribution, entrepreneurial learning, and reentry decision-making.

ENT: SME Survival Amidst Economic Crisis: The Role of Behavioral Logic

Author: **Oleksiy Osiyevskyy**, *U. of Calgary*
Author: **Galina Shirokova**, *National Research U. Higher School of Economics*
Author: **Mehrsa Ehsani**, *U. of Calgary*

Economy-wide crises create major challenges for small and medium enterprises (SMEs). Existing studies emphasize the crucial role of contrasting behavioral logics, effectuation, and causation, in SMEs' adaptation to crisis conditions. Yet, prior literature concentrated predominantly on exploring the impact of effectuation and causation on firm performance rather than survival. We present a theoretical model explaining how behavioral logics affect SME survival during an economy-wide crisis under different levels of environmental dynamism. The empirical results reveal that causation reduces the probability of firm survival in dynamic environments, while effectuation increases the chance of survival irrespective of the state of the environment.

ENT: Age and Size Effect on SME Performance: The Role of Structure, Legitimacy, and Formalization

Author: **Luiz Guerrazzi**, *U. of Algarve*
Author: **Fernando A R Serra**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Manuel Anibal Portugal Ferreira**, *Nove de Julho U.*
Author: **Vanessa Vasconcelos Scazzioti**, *CEFAGE - U. of Évora*

The purpose of this paper is to extend the knowledge on the threats of age and size to the literature on small and medium enterprises' performance (SME). We used formalization, legitimacy, and organizational structure to test mediation between size and age in performance. These variables are pointed as factors associated with vulnerabilities of small and young firms. This paper combines meta-analysis with structural equation modeling, using empirical findings of 62 studies and a sample of 241 effect sizes covering 20 years of research. The results provide evidence that organizational structure and mainly formalization and legitimacy play a key role in mitigating the liabilities of newness and smallness. The findings provide information on how managers should act to keep their firms alive. This paper contributes to the entrepreneurship and small business literature by clarifying that firms must build legitimacy, formalize processes, and build organizational structures to improve performance throughout their life cycle. Besides, we make a methodological contribution by integrating the literature using a method that is not commonly used to test a theory from evidence systematically collected from previous studies.

ENT: The Resource-Related Determinants of Academic Entrepreneurship: A Structural Equation Modeling Meta-  

Author: **Dirk Libaers**, *U. of South Florida*
Author: **Sergio Canavati**, *Sonoma State U.*
Author: **Andreea Noemi Kiss**, *Lehigh U.*
Author: **Martin Meyer**, *U. of Vaasa*
Author: **Donald William Hislop**, *Loughborough U.*

In this study covering 156 articles representing 76,835 observations, we meta-analyze the relationship between three distinct groups of resources and four outcomes of academic entrepreneurship. Using a resource orchestration perspective, we find that TTO resources have the strongest relationship with the number of licenses executed and academic startups created. Regional resources have a stronger relationship with the number of licenses executed than university resources. In addition, certain configurations of resources have a complementary effect on licensing revenues, while one combination has a substitutive effect on startup performance. We contribute to the literature by offering a robust resource-based account of academic entrepreneurship

ENT: An Evolutionary Approach To Academic Entrepreneurship: Foundings & Failures Among UK Spinoffs 

Author: **Konstantinos Pitsakis**, *London Metropolitan U.*
Author: **Aleksios Gotsopoulos**, *SKK Graduate School of Business*

We take an evolutionary approach to analyze competition and failure among university spinoff firms in the complete sample of all 1,731 spinoffs founded in England and Scotland between 1977-2017. We specifically aim to answer the question of whether too many or too few spinoffs have been formed by universities over the years. To do so, we juxtapose the effects of legitimacy and competition for resources at the level of the aggregate industry to similar effects within each individual university's spinoff portfolio. We find some evidence of crowding in the industry and discuss implications for technology transfer strategies.

Paper is Available to Meeting Registrants Only.

ENT: When Do Technology Transfer Offices Enter Into Association? Evidence From U.K. Universities 

Author: **Konstantinos Pitsakis**, *London Metropolitan U.*
Author: **Tobias Goessling**, *Kedge Business School*

Scholars have called for greater attention to intermediary organizations in the innovation and technology transfer processes. Despite some progress towards that front, there has been limited empirical attention to industry associations, key intermediaries that coordinate the actions of their members in order to advance a field. In this paper, we develop theory by focusing on the resource-dependence, social judgments and institutional determinants of an organization's decision to join an association. Using panel data on 83 Technology Transfer Offices (TTOs) in England and Scotland between 1994-2008, we test empirically whether TTOs are more likely to join the PraxisAuril association if a) they depend on government funding, b) they experience legitimacy-threatening events, c) they have little proven performance-driven reputation and d) based on mimetic institutional pressures, i.e. contagion. Although we find some surprising results, our paper contributes towards creating a research paradigm to study association entry and towards understanding the importance of associations as intermediaries in the technology transfer process. We also discuss practical and managerial implications for university commercialization managers and we suggest further avenues for research.

Author: **Jizhen Li**, *Tsinghua U.*

Identity transformation is of great importance to the technology commercialization of academic spin-offs and, more broadly, to entrepreneurial opportunity development. This importance may be attributed to individuals adhering to a specific role identity and conforming to relevant standards that might trigger resistance toward opportunity development. While extant literature has emphasized the importance of identity in predicting a venture's strategic choice, many of the studies have overlooked the dynamic process of one's role identity management and how identity work interacts with opportunity development. Through an inductive, qualitative study for 27 academic entrepreneurs in China, we highlight the differences of identity management approaches (i.e., decoupling, aggregating, deleting) in predicting one's opportunity development strategies and how such strategies inversely affect one's identity transformation. Our findings contribute to existing theory by uncovering that academic entrepreneurs' capability to explore opportunity is not only constrained by the field-level institutional logic but also by their role identities.

ENT: **Performing and (not) Surviving? The Roles of Founder Social Identity & Entrepreneurial Satisfaction**  

Author: **Ilija Braun**, *U. of Bern*
Author: **Philipp Sieger**, *U. of Bern*

Common sense would suggest that stronger financial performance increases the likelihood of new venture survival – but is that really true, and if yes, under which conditions? We suggest that while the main relationship between financial performance and new venture survival should indeed be positive, it crucially depends on two main factors. First, we argue that the strength of a Darwinian, Communitarian, or Missionary founder social identity moderates this relationship; and second, we theorize that entrepreneurial satisfaction mediates it. The analysis of a two-wave dataset of 107 entrepreneurs reveals that the relationship between financial performance and new venture survival is positive and weaker when the Darwinian or Missionary founder social identity are strong. In addition, it confirms the mediating role of entrepreneurial satisfaction. This study offers significant contributions to the literature on the relationship between financial performance and new venture survival and to the burgeoning stream of research on founder social identity.

ENT: **FinTech Loans, Self-Employment, and Financial Performance**

Author: **Douglas Cumming**, *Florida Atlantic U.*
Author: **Ahmed Sewaid**, *Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC*

Leveraging data from a leading FinTech peer-to-peer lending platform in the United States, this study investigates the effect of an unsuccessful FinTech loan application on subsequent self-employment decisions. Our analysis shows that a failed loan application increases the probability of a transition out of self-employment by 22%, this effect is stronger for individuals in the lowest income decile. Additionally, securing a FinTech loan enhances self-employed individuals' future financial performance. This enhancement is asymmetric, income enhancement is 3.11 larger for individuals in the lowest income decile, and credit-access enhancement is 1.85 times larger for individuals in the lowest credit-access decile.

ENT: **Examining Relation among Entrepreneurial Leadership, Innovative Work Behavior, & Innovation Support**  

Author: **Muhammad Salman Shabbir**, *UBD School of Business and Economics*
Author: **Rabia Imran**, *College of Commerce and Business Administration, Dhofar U.*

Due to the increased competition in today's business world and industrial revolution 4.0, many small and medium enterprises (SMEs) undergo swift and vigorous changes. For this reason, SMEs were expected to pay their attention to innovative work behaviors (IWB) to ensure survival in the competitive world. This research evaluates the effect of entrepreneurial leadership (EL) dimensions (including communicative, motivational, strategic, and personal) on innovative work behavior (IWB) of people employed in SMEs of Oman. Moreover, mediating role of innovation support (IS) is examined on the relationship of entrepreneurial leadership (EL) and innovative work behavior (IWB). Data were collected through personally administered survey questionnaires from the population of SME sector employees and managers in Oman. A total of 211 usable responses were collected and then further analyzed through SmartPLS 3.3.3 (PLS-SEM) software while a two-stage reflective-formative analysis of higher-order and lower-order constructs was conducted. The results exhibit that entrepreneurial leadership and innovation support have a significant positive impact on innovative work behavior (IWB). Additionally, a mediating role of innovation support was also confirmed on the relationship between EL and IWB. All four dimensions of entrepreneurial leadership (EL) were reported with a substantial direct and indirect effect on innovative work behavior (IWB) of people employed in SME sector in Oman. This is a pioneer study in Oman that examined the influence of entrepreneurial leadership (EL) dimensions on innovative work behavior (IWB) and mediating role of innovation support using a reflective-formative higher order analysis. Finally, practical and theoretical implications along with future research directions were suggested at the end of this research.

ENT: **How Do Firms Choose Legal Form of Organization?**

Author: **Rebel Cole**, *Florida Atlantic U.*
Author: **Tatyana Sokolyk**, *Brock U.*

: In this study, we analyze the firm's choice of legal form of organization ("LFO"). We find that only about one in three firms begins operations as a proprietorship, while almost as many begin as limited liability companies and as corporations. Moreover, this distribution is remarkably stable over the first seven years of the firm's life. Fewer than one in ten firms changes LFO during its first seven years. Those that do change LFO disproportionately move to a more complex form, primarily from proprietorship to a form with limited liability. Our analysis of the firm's initial choice of LFO reveals that a firm chooses LFO based upon factors that include access to capital markets, tax consequences, and personal liability and risk exposure. At start-up, the entrepreneur chooses a LFO that can accommodate the expected future complexity of her firm.

ENT: **Pivotal Mentorship: How the Type of Mentoring Feedback Influences Entrepreneurial Pivoting**

Author: **Miranda Welbourne Eleazar**, *U. of Iowa*
Author: **Toyah L. Miller**, *George Mason U.*

Mentoring can play a vital role in entrepreneurship, particularly in helping entrepreneurs realize the need to pivot, or make a fundamental change. As a result, many entrepreneurial development experiences like accelerators use mentoring relationships to help entrepreneurs understand the need to pivot to avoid potential blind spots. However, what makes some entrepreneurs more likely to pivot in response to mentoring feedback while others do not? We integrate the literature on feedback with entrepreneurial cognition to theorize how the interrelationships between the way feedback is provided, entrepreneurial experience, the amount of time to implement the feedback, and the mentor's area of expertise affect entrepreneurs' likelihood to follow pivoting feedback. Specifically, we hypothesize that entrepreneurs are more likely to pivot in response to concrete feedback, but that effect can be moderated by entrepreneurial experience, timing to implement the feedback, and mentor expertise distance. We test our hypotheses using a conjoint analysis of 277 early-stage entrepreneurs that recently participated in accelerators or incubators making 2216 decisions as to their likelihood to pivot. This study contributes to the literature on entrepreneurial mentoring, pivoting, and entrepreneurial cognition by demonstrating how the way mentors provide feedback affects entrepreneurs' decisions whether to pivot.

ENT: **Mentorship Processes within Startup Accelerators**

Author: **Eyal Rechter**, *Ono Academic College*
Author: **Gil Avnimelech**, *Ono Academic College*

The last decade has seen the development of a new support infrastructure in the entrepreneurial ecosystem: the startup accelerator. Accelerators offer a structured developmental process that includes an educational component, networks, and intensive mentoring. Despite the central place of mentoring in accelerators, current studies do not explicitly include mentors contribution to programs' impact. Moreover, there are no comprehensive descriptions of mentor types, roles and practices within accelerators, and how these should be integrated in their operation. This paper aims to fill this gap by presenting a comprehensive description and classification of mentors in accelerators and their roles, goals, characteristics and practices. Building on these characteristics, we suggest best practices in terms of mentoring style and mentor-mentee fit. Our review and suggestions are based on 45 in-depth interviews with accelerator managers and 269 structured interviews with mentors that participated in accelerator programs in Israel during the years 2011-2019. We believe this study has important implications for practitioners, researchers in the field and policy makers.

ENT: **An Integrated Conceptual Model of Entrepreneurial Leadership: New Frontiers for Research**

Author: **Scott Taylor**, *Babson College*
Author: **Danna Greenberg**, *Babson College*
Author: **Andrew C. Corbett**, *Babson College*
Author: **Keith Rollag**, *Babson College*
Author: **Jeffrey Shay**, *Babson College*
Author: **Wendy Marcinkus Murphy**, *Babson College*

We offer an integrative, multidisciplinary conceptual model of entrepreneurial leadership (EL) to explain the motivational dynamics of EL that enable follower entrepreneurial activity. We define entrepreneurial leaders as individuals who possess a growth mindset and demonstrate high levels of emotional, social, and cognitive competence to facilitate follower intrinsic motivation to act entrepreneurially. Drawing upon self-determination theory (SDT; Deci & Ryan, 2002a; Ryan & Deci, 2017), we propose EL is demonstrated when a leader, moderated by his or her entrepreneurial mindset, satisfies three inherent human needs in followers (autonomy, relatedness, and competence) to enable follower ability to recognize and exploit entrepreneurial opportunities. With our conceptual model of EL, we seek to establish new frontiers for scholars to advance scholarly work on entrepreneurial leadership.

ENT: Mentors' Motives and Mentoring Functions: Comparing Social and Commercial New Ventures

Author: **Ayna Yusubova**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Author: **Francois Pichault**, *U. of Liege*

Author: **Virginie Xhaufclair**, *U. of Liege-HEC*

While entrepreneurial mentoring research points to the potential advantages of mentors for new ventures, they have received little or no academic attention. The present study employed a qualitative research strategy to explore why and how new venture mentors help founders to grow and succeed. A total of eighteen mentors supporting social and commercial ventures from ten accelerator and incubator programs located in Belgium participated in in-depth interviews regarding their experience as a mentor. Based on Social Exchange Theory and the norm of reciprocity, we identified (1) mentors' motives, including gaining back that refers to mentors' self-interest in benefits from their relationship, and paying back that refers to altruistic reasons toward new ventures, factors that drive mentors to help new ventures, (2) and mentor functions that include career-related supports provided to new ventures. Further, we found interesting similarities and differences in mentors' motivations and mentoring functions between social and commercial ventures.

ENT: **Configurations of Optimal Identity Distinctiveness Among Entrepreneurs as Drivers of Legitimacy**

Author: **Marie Madeleine Meurer**, *EBS U. of Business and Law*

How can entrepreneurs achieve legitimacy from audiences? A growing literature stream on the legitimacy of entrepreneurial identities has identified a trade-off regarding "optimal distinctiveness": entrepreneurs need to claim distinctiveness to stand out from others, but also claim similarity to not break with social conventions. In this paper, we theorize how the interplay of individuals' distinctiveness and similarity claims creates "optimal identity distinctiveness", allowing entrepreneurs to gain legitimacy from audiences. Using a configurational (fsQCA) approach, we analyze conversation data (around 760'000 posts) from seven popular entrepreneurial online communities. Our results highlight three configurations that foster high levels of legitimacy and balance similarity as well as distinctiveness claims (creativity complements invention focus, purpose compensates unpopular high-performing, optimal similarity needs no additional attention). Hence, this paper contributes to the understanding of how entrepreneurs can achieve legitimacy and extends knowledge on outcomes of entrepreneurial identity at the sociocultural level.

ENT: **Will the COVID-19 Pandemic Hinder Your Entrepreneurial Footsteps? The Effect of Uncertainty**

Author: **Qingxiong Weng**, *U. of Science and Technology of China*
Author: **Ting Ting Niu**, *U. of Science and Technology of China*

Although scholars believe that entrepreneurial persistence may be weakened under the impact of COVID-19, this hypothesis has not been tested, and the underlying mechanism is unknown. Using environmental uncertainty as an entry point, we test this hypothesis based on Lazarus' appraisal theory (1991) and a two-wave survey of Chinese SME entrepreneurs. The results show that the sharp rise in environmental uncertainty during the epidemic prompted entrepreneurs to evaluate it as a threat and generate fear of failure, which in turn had a negative impact on entrepreneurial persistence. Psychological resilience modulates these relationships and can reduce the threatening assessment level of environmental uncertainty, thereby alleviating the negative emotions that will weaken entrepreneurial persistence and improving the possibility of entrepreneurial persistence. Implications for theory and research are provided.

ENT: **A GATE-d Perspective on Age in Entrepreneurship - Heterogeneous Types of Older Entrepreneurs**

Author: **Sabine Richter-Trummer**, *Bundeswehr U. Munich*
Author: **Sonja Sackmann**, *U. Bundeswehr, Munich*

Due to demographic change older adults are increasingly considering self-employment as an active aging endeavor. Though chronological age has been central in exploring the age-entrepreneurship link, predictions from age have yielded inconsistent conclusions for entrepreneurship intention and behavior. Based on a recent perspective of the Organizational Behavior literature enhancing predictions for the aging workforce, this research focuses on the value of actively aging individuals in entrepreneurship. First, it clarifies the age-entrepreneurship relationship on the basis of an integrative literature review. Second, it suggests age-related predictors for providing more consistent conclusions for key entrepreneurship outcomes based on different bodies of literature within entrepreneurship. These constructs include entrepreneurial Generation, life stage-related Age, Tenure in prior self-employment and Experience in the same industry of the entrepreneurship endeavor. While the first two constructs refer to age-based self-identification, the latter relate to the accumulated human capital. Third, this research highlights considerable heterogeneity exemplified by diverse profiles of potentially older entrepreneurs. The implications address existing concepts of age, socio-demographic intersectionality research and a time-sensitive perspective in entrepreneurship. Furthermore, avenues for future research and limitations are discussed.

Session Moderator: **Jan Keim**, *Bern U. of Applied Sciences*

ENT: Dark Sides of Entrepreneurship and Innovation: A Conceptual Typology and Research Agenda

Author: **Jan Keim**, *Bern U. of Applied Sciences*

Previous research on entrepreneurship and innovation has mainly focused on the positive aspects and neglected the negative ones. Moreover, the research that addresses the negative aspects of entrepreneurship and innovation is spread across different research streams, so the research findings are fragmented, and we do not have a clear idea of what we already know and what we do not know about the dark sides, downsides, and destructive sides of entrepreneurship and innovation (i.e., the Triple Ds). However, without a comprehensive understanding of the Triple Ds, entrepreneurs, businesses, and society are unprepared and without strategies to deal with the predicaments they will face during and after business creation and/or product/service innovation. Based on the literature we identified through extensive backward and forward snowballing, we develop a conceptual 3x3 typology of the Triple Ds of entrepreneurship and innovation. The typology illustrates the lack of knowledge about the antecedents, manifestations, consequences, possible interrelationships, and co-occurrence of the Triple Ds. Based on the typology, entrepreneurship and innovation researchers are provided with seven avenues for future research and recommendations on methodological approaches that will help generate valuable knowledge to advance the emerging research field. The proposed conceptual typology of the Triple Ds of entrepreneurship and innovation supports the development of an independent line of research that addresses the negative sides of entrepreneurship and innovation.

ENT: The Speed Ethic: Accelerated Entrepreneurship, Frenetic Standstill and Start-Up Deceleration.

Author: **Andre Spicer**, *City U. London*

Author: **Dan Kärreman**, *Copenhagen Business School*

Author: **Rasmus Koss Hartmann**, *Copenhagen Business School Department of Management, Society and Communication*

There is a widespread assumption that a valuable characteristic of entrepreneurs is speed. Entrepreneurs are good when they are quick at spotting opportunities, nimble in exploiting them, rapid in scaling their operations, and speedy in admitting failure. In short entrepreneurs are supposed to embody what we call the speed ethic. This is the valuation of hastefulness as a good in and of itself. Drawing on the work of Hartmut Rosa, we argue that this speed ethic is created by a wider process of social acceleration. We argue that speed ethic has a number of positives such as capturing first mover advantage and confirming to stakeholder pressure (particularly from investors). However, the speed ethic can lead to frenetic standstill. This happens when entrepreneurs become stuck in patterns of hyperactivity which leads to no significant change. An important part of frenetic standstill is ethical fragility, whereby entrepreneur's values seem increasing provision and empty. To address the problems with the speed ethic, we explore an alternative entrepreneurial ethic: slowness. We argue this involves nurturing a craft, long term commitment to an industry, and creation of substantive innovations. We illustrate this by drawing on some examples from the emerging 'slowpreneurship' movement. The paper concludes by suggesting that slow entrepreneurship could be nurtured by the creation of start-up decelerators.

ENT: How Do Entrepreneurs Respond to a Crisis? Approach-Avoidance and Broaden-and-Build Perspective

Author: **Inseong Jeong**, *Lingnan U.*

Author: **Yaping Gong**, *The Hong Kong U. of Science and Technology*

In the face of a crisis, some entrepreneurs seek opportunities to thrive, whereas others strive to protect themselves from threats to survival. Curiously, there has been little examination of when and how entrepreneurs respond differently to an entrepreneurial crisis, defined as an unanticipated, impactful, and urgent event in an entrepreneur's business operations. We posit that entrepreneurs respond in either a positive manner through creatively combining resources at hand (i.e., bricolage) or a negative manner through violating ethical values to protect the venture's short-term interest (i.e., unethical pro-organizational behavior or UPB). Drawing upon approach-avoidance motivation and broaden-and-build theory, we examine when and how an entrepreneurial crisis leads to these different responses. We conducted a five-month longitudinal study of 100 entrepreneurs (482 observations). We found that when entrepreneur's approach motivation was high rather than low, entrepreneurial crisis was related to an increase in bricolage and a decrease in intention to quit via increased interest. On the other hand, when entrepreneur's avoidance motivation was high rather than low, entrepreneurial crisis was related to an increase in UPB and intention to quit via increased anger. Our study advances research on entrepreneurial responses to crisis by showing when entrepreneurs respond creatively or unethically and the associated mechanisms of these responses.

Initial Public Offerings 1

Session Moderator: **Maximilian Kremer**, *TUM School of Management, Technical U. of Munich*

ENT: University Venture Capital – The Promise and Pitfalls of University Direct Investments

Author: **Maximilian Kremer**, *TUM School of Management, Technical U. of Munich*
Author: **Reiner Braun**, *Technical U. of Munich*
Author: **Ann-Kristin Achleitner**, *TUM School of Management, Technical U. of Munich*

Over the past three decades, universities in industrialized countries have become increasingly active as venture capital financiers. Here, we analyze if investments in university-affiliated portfolio companies, in the form of an institutional-personal relation between the university and the founders, are a commercially successful investment proposition. We use a hand-collected data set of 706 university portfolio companies in the United States and the United Kingdom to extend previous case-based evidence that investments in faculty and student-led start-ups are an elusive promise that rarely pays off commercially. Furthermore, we provide evidence that geographic proximity to a top venture capital ecosystem is a highly performance-relevant characteristic for university investors.

ENT: Why Unicorns Exist: Venture Scaling and the Valuation and Timing of Startup IPOs

Author: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*
Author: **Jingya You**, *U. of Illinois at Urbana-Champaign*

The number of “unicorns” worldwide—private VC-funded startups valued at a billion dollars or more—has risen dramatically in recent years. Since the main alternative to becoming a highly valued private company is to undertake an initial public offering (IPO), we relate the growth in unicorns to startups’ decisions to delay IPOs and only undertake them at high valuations. We focus on highly scalable ventures as an explanation for unicorns and examine how scalability, in combination with VC funding availability, affects IPO valuation and timing. We posit that becoming a public firm may have significant drawbacks for highly scalable ventures in executing their growth strategies, which may induce them to undertake IPOs later and at higher valuations, especially when more VC funding is available. Among U.S. VC-backed IPOs during 2010-2019, we find evidence that is largely supportive of our propositions. We contribute to the emerging literature on venture scaling and provide an explanation for the recent rapid growth of unicorns.

ENT: Who is Entrepreneurial? Evidence from Late Bloomer Firms with M&A strategies

Author: **Magnus Blomkvist**, *Audencia Business School*
Author: **Nebojsa Dimic**, *U. of Vaasa*
Author: **Sofia A. Johan**, *Florida Atlantic U.*
Author: **Milos Vulcanovic**, *EDHEC Business School*

The literature considers firms seeking finance through an initial public offering (IPO) as entrepreneurial. But are they? We hypothesize that firms in the latter stage of industry life-cycle, or late bloomer firms as less innovative, proactive, and risk-taking, signal entrepreneurial orientation with competitively aggressive M&A strategies. They strategically time an IPO to mitigate adverse selection. Analyzing U.S. data, we find that late bloomer firms are 37.5% more likely to engage in M&As four years following an IPO and acquire 38% faster following the IPO. This M&A pattern is more pronounced at the time of, and among firms with, capital constraints.

ENT: Growth as a Double-Edged Sword: Long-Term Performance of High Growth Initial Public Offerings

Author: **Mahdi Shahriari**, *Erasmus U. Rotterdam*
Author: **Yu Liu**, *Erasmus U. Rotterdam*

This study investigates the long-term performance of pre-initial public offering (IPO) high growth firms. Despite the extensive knowledge on drivers of high growth, we know little about the market outcomes and boundaries of such strategy. Our findings suggest a negative relationship between pre-IPO high growth and long-term performance. We also find that while growth-orientation and scalability reduce the negative reaction of investors to pre-IPO high growth, profitability-orientation and intensity of acquisition intensify their negative reactions. We use a sample of US IPOs during 2002-2015 to empirically test our hypotheses.

Session Moderator: **Fuli Li**, *Xi'an Jiaotong U.*

HR: **Proactive Personality, Flexible Work Arrangements, and Work- Family Conflict**

Author: **Yu-Shan Hsu**, *John Molson School of Business, Concordia U.*
Author: **Yu-Ping Chen**, *John Molson School of Business, Concordia U.*

Despite the prevalence of flexible work arrangements (FWAs), such as flextime and flexplace, offered by organizations around the world, there is still much to learn regarding who is more likely to use FWAs to alleviate work- family conflict (WFC) and under what conditions the use of FWAs actually reduce WFC. Drawing on conservation of resources theory and boundary theory, we developed a moderated mediation model regarding the relationships between proactive personality, FWA use, work-to-non work boundary permeability, and WFC. We tested the model using survey data collected at two time points from 217 employees. Results demonstrate that, regardless of their level of boundary permeability, proactive employees are more likely to use flextime to alleviate WFC. However, proactive employees' use of flexplace can exacerbate WFC. Only when proactive employees have a low work-to-nonwork boundary permeability does their use of flexplace alleviate WFC.

HR: **Newcomer Proactive Personality and Creative Behavior**

Author: **Fuli Li**, *Xi'an Jiaotong U.*
Author: **Jane Jiang**, *Nanjing U. School of business*
Author: **Jingyu Dong**, *Xian Jiaotong U.*
Author: **Hua Li**, *Xi'an Jiaotong U.*
Author: **Mike Crant**, *U. of Notre Dame*

Organizational socialization may have unintended outcomes for newcomers. To extend this line of research, we integrate the proactive process model and trait-activation theory to explore whether and when newly-graduated proactive newcomers express or suppress their creative behavior during the socialization processes. We hypothesize that this positive relationship between newcomer proactive personality and creative behavior is weaker during the early socialization stage, but it becomes positive and stronger during the later socialization stage. Further, we examine demands-abilities fit perception as a critical boundary condition in activating proactive newcomers to express more creative behavior during the early socialization stage. Based on 290 newly-graduated newcomers with data collected at four critical transition stages, including one month before entry, during the first month after entry, three months after entry (the early socialization stage), and six months after entry (the later socialization stage), the results supported our hypotheses. Our findings provide theoretical and practical implications on how and when newcomers' trait proactivity will be suppressed or released into creative outcomes during the socialization processes.

HR: **What can we Learn from Facets? A Comprehensive Meta-Analysis of Personality and Leadership Outcomes**

Author: **Nathan Baker**, *Michigan State U.*
Author: **William Scott**, *Michigan State U.*
Author: **Christopher D. Nye**, *Michigan State U.*
Author: **Olexander Chernyshenko**, -

Personality traits are key individual differences with validity for predicting a variety of leadership outcomes such as leader performance and emergence. Narrow personality facets have also shown predictive validity, often even above that of traits, but little systematic research integrated work on facets to identify their role in predicting leadership. This meta-analysis utilizes recent research on personality facets of the Big 5 to examine their relationship with leadership outcomes. We explored how these relationships differ across leadership levels within organizational hierarchies, as the responsibilities of leaders differ in important ways across these levels. The analyses are focused on other-report measures of leadership across leadership performance, emergence, and both transformational and transactional leadership for a range of personality facets. A final set of $k = 135$ studies were analyzed and corrected for unreliability and range restriction to identify relationships between personality traits and facets with leadership. This work expands existing understanding of personality facets and different leadership outcomes. The theoretical and practical implications of our findings inform future leadership and personality research, as well as applied issues such as selection and assessment.

HR: [Can Multiple Equilibria Increase the Prevalence of Cooperation Within the MNC?](#)  

Author: **Zhi Wang**, *Glasgow Caledonian U. London*

Although the indispensable feature of Social Exchange Theory (SET) is believed to induce cooperation, expatriate turnover in repatriation suggests several limitations of the theoretic concept. Taking a step advance, this paper introduces an equilibrium approach and exams how it impacts employee turnover intention (TI) on their reentry to the home Multinational Corporation (MNC). In this context, we develop an analysis by drawing on sample data 163 employees from over 31 MNCs who worked on company-sponsored international assignments for one or more years. The results show: 'multiple equilibria' through shared beliefs and preferences bring a positive association with social exchanges, thus, increasing the prevalence of cooperation within the MNC.

HR: [Dominance and Societal Effects in Human Resource Practice Transfer](#)  

Author: **Joey L. Soehardjo**, *Hitotsubashi U.*

This paper investigates how meso-level actors (MeLAs) contribute to human resources (HR) practice transfer in diffusion and adaptation processes, drawing on the System-Society-Dominance-Corporate Effects (SSDC) theoretical framework to interpret the role of MeLAs in the transfer of the Japanese management model to the Indonesian automotive industry. We focus on two issues: i) the way Japanese MeLAs' training regimes in Japan contribute to the understanding and diffusion of the model and ii) the coordinated strategy of both Japanese and Indonesian MeLAs in seeking procedural influence through intelligence-sharing and lobbying activities over how the Japanese model is adapted in Indonesia. Our research adds to our limited understanding of the significance of MeLAs in processes of diffusion-adaptation in emerging market economies characterized by weak regulatory regimes and asymmetric economic power relations. Drawing on interviews with 75 key informants in Japan and Indonesia, we explore the significance of MeLAs from corporate and labor spheres alongside those of non-corporate MeLAs such as non-governmental and quasi-governmental organizations. The study elaborates the SSDC framework by highlighting MeLAs' influence in both diffusing conceptions of dominant management 'best practice' (dominance effects) and their role – and that of dominance effects – in shaping societal effects that inform how the model is adapted. We theorize the complex processes through which the effects identified in the SSDC framework are experienced by local actors, showing that they are neither monolithic nor mechanical in nature and thereby elaborating the inter-relationship in how dominance effects inform societal effects.

HR: [Whatever IT Takes: Exploring HRM and Leadership Practices in Emerging Market SMEs](#)   

Author: **Ashish Malik**, *Newcastle U. Business School*

Author: **Pawan S. Budhwar**, *Aston U.*

Recent reviews of the literature on human resource management (HRM) on small-and-medium enterprises (SMEs) highlight several gaps including the impact of owner-manager or leader's philosophy of managing people in shaping HRM practices and on employee outcomes. This research addresses the above gaps and presents an in-depth qualitative case study analysis of two SMEs from India's IT and healthcare products industry that are serving a range of global clients. Using the theoretical lenses of empowerment-focussed HRM practices, ambidextrous leaders, contextual ambidexterity and strategic agility, semi-structured interview data of leaders, managers and employees of the two case organizations were analysed. We abductively developed a novel conceptual framework that is at the intersection of the above theoretical lenses through a two-staged analytical process. Our findings suggest that the SME's strategic agility, ambidexterity and empowerment-focussed HRM approach was influenced by the owner-manager or leader's ambidextrous leadership style and their philosophy towards managing people and had a positive impact in creating a culture of trust, participation, risk-taking and openness, and led to delivering innovative products and services as well as several positive employee-level outcomes. Implications for theory and practice are also discussed.

Author: **Nelarine Cornelius**, *QMUL*

Although macro-social influences on managerial and international HRM practices have been extensively reported in the literature, the alignments and contentions between these practices in post-colonial states are, however, poorly understood. This paper examines the HRM role and practices of traditional and Western-informed, non-traditional, elite managers in introducing and progressing universal HRM practices and agendas, under a Praetorian regime in post-colonial Pakistan. In-depth interviews were conducted with HRM professionals, union representatives, and managers working in the Pakistani public and private sectors and multinational organisations. Through the lens of Foucauldian discourse, analyses of the interviews revealed the coexistence of managerial global-HRM orientated elite and Praetorian post-colonial elite managers and how their HRM practices impacted employees' experience of equality and inequality within their organisations. This intertextual 'union' is predicated on the dynamics of hierarchical and heterarchical relations of power and resistance within the organisation, and the imbrication, or interleaving, of local history and culture, global culture, and influential HRM practices. Our findings suggest the need for greater consideration of social practices, including forms of subjectivity, meanings, and power relations, when managing human resources to achieve equality in organisations within post-colonial countries.

HR: The Grief-Work Interface: How Employees Navigate Work After Losing a Loved One

Author: **Yu Tse Heng**, *U. of Virginia*

Winner of HR Division Best Student Paper Award

William H. Newman Award Nominee

In the United States, employees receive an average of four days of bereavement leave following the death of a family member. When they return to work, their grief is unlikely to be checked at the office door, and is instead carried over into the workplace. Grief research, however, has largely been limited to the clinical and social psychological sciences, thus leaving unaccounted for work-related considerations of the grief experience. In this research, I address this gap by examining what the grief-work experience entails and how it impacts bereaved employees. Using a mixed-methods approach, I first conducted 31 interviews (inductive Study 1) to understand the bereaved employee experience. Based on these insights, I developed a theoretical model delineating the positive and negative impact that work experiences have on the bereaved employee. Then, I conducted a three-wave field study (deductive Study 2) with a broader sample of 500 recently bereaved employees to test this theoretical model. Across both studies, I find that work experiences may be helpful (grief diversion, experienced compassion) or harmful (grief intrusion, experienced callousness), and have the potential to replenish or exacerbate positive states (sense of normalcy, purpose, connection) that facilitate employee well-being (lower work impairment, lower distress). In sum, this research sheds light on the nuances of the bereaved employee experience.

HR: Dynamics of Organizational Responsiveness and Employee Dignity

Author: **Baniyelme D. Zoogah**, *DeGroote school of business*

Generally, employees are valuable to organizations' strategic objectives. However, they are often not treated with dignity. As a result, they often question not only work meaningfulness but also the ethicality of such treatment and the responsiveness of organizations to their needs. One major question in the literature is how responsiveness of organizations influences employee dignity. In this paper we attempt to answer that question based on data from one emerging economy. Specifically, we use the humanistic perspective to theorize that employee dignity will be determined by responsiveness and dynamic mechanisms of ethicality, worthiness, and generosity. In Study 1 we show that organizational responsiveness relates to perceived dignity through two paths – ethicality and benevolence (meaningful work practices). In Study 2, we examine the curvilinear interaction of ethicality, moral worthiness, and generosity in relating to organizational benevolence. The inverted u-shape effects show that organizational benevolence is optimal when ethicality is moderate; at low and high levels of ethicality, organizational benevolence is low. We discuss the implications of our findings for theory and practice.

HR: The Effects of Hybrid Work Choices and Worker Needs on Employee Wellbeing

Author: **Paul Lund**, *Swin*

Author: **Timothy Colin Bednall**, *Swinburne Business School, Swinburne U. of Technology*

Author: **Benedict Williams**, *Swinburne U. of Technology*

The COVID-19 pandemic has challenged many aspects of workers' lives including employee wellbeing and working from both home and the office, referred to as a hybrid work model. This study investigates whether employees' choice of work location influences wellbeing and how job role, specifically seniority and leadership responsibilities, are related to work location choice. Research was conducted within two technology and operations domains of a large Australian financial institution (n = 349) with 94% of participants under COVID-19 work from home lockdown restrictions. Our findings indicate that employees tend to experience decreased wellbeing if they desire to return to the office and that autonomy frustration contributes in part to decreased wellbeing if employees feel constrained in their ability to work from the office. In addition, our study shows that senior employees and people leaders tend to desire greater opportunities to work in the office during COVID-19 lockdown restrictions. We recommend that hybrid working arrangements, as a predictor of wellbeing, be tested outside workplace lockdown conditions, when employees have greater choice over work location. This study provides the baseline comparison for such research.

HR: Thriving is Not All Good: The Influence of Supervisor Thriving on Employees' Well-Being and Behavior

Author: **Xiaoyu Guan**, *School of Government, Beijing Normal U.*

Author: **Stephen J. Frenkel**, *U. of New South Wales*

Can the positive experience of thriving transfer from supervisor to subordinates in the workplace? Our study focuses on the supervisors' thriving experience in Chinese police organizations. Drawing on crossover research and job demands-resources theory, we explore the transfer process between supervisors and subordinates and consequences for subordinate behaviors and well-being. Using matched supervisor-subordinate longitudinal survey data, our multi-level analyses reveal surprising and disquieting results. We find that supervisor thriving leads to role overload among subordinates, which in turn results in subordinate burnout and supervisor-directed deviance behavior. In addition, arising from role overload, supervisor thriving diminishes subordinate thriving. Overall, our study shows how supervisor thriving exerts a negative rather than positive effect on subordinates with adverse consequences for supervisors and the organization. This dark side of workplace thriving serves as a foundation for future work.

HR: Business Groups' Internal Labor Markets and the Value of Human Resource Slack

Author: **Pablo Doucet**, *U. of Salamanca*
Author: **Ignacio Requejo**, *U. of Salamanca*
Author: **Isabel Suarez-Gonzalez**, *Salamanca U.*

Whether holding human resource (HR) slack creates or destroys value for firms is a hot topic, given that labor shortages and record high attrition rates are disrupting businesses everywhere. Our study adds to this conversation by exploring the so far neglected impact of the embeddedness in business groups on the HR slack–performance relationship. We find that HR slack lowers firm performance at diminishing rates. Further, we show that HR slack has a more negative effect on performance when the focal firm has an increasing number of other group firms in the same sectoral/geographical area—i.e., when the flexibility to share HR with other group companies increases. Our findings expand previous works by highlighting the role of interfirm networks in determining the performance consequences of HR slack for organizations.

HR: Advancement Opportunity in the Context of Workgroup: A Social Network Perspective

Author: **Farid Jahantab**, *Pennsylvania State U., Worthington-Scranton*

Drawing upon social exchange theory, I contend that a focal employees' centrality in the friendship network is associated with his/her advancement opportunity, which in turn relates to employees' organizational citizenship behaviors (OCB). Furthermore, I extend the theory to the workgroup context and assert that the workgroup structural attribute of task interdependence influences the indirect relationship between friendship network centrality and OCB via advancement opportunity. Multi-level modeling using multi-source data from 251 employees nested in 36 workgroups showed a positive relationship between friendship network centrality and advancement opportunity with advancement opportunity mediating the relationship between friendship network centrality and OCB. Moreover, moderation analysis revealed that workgroup task interdependence strengthened the relationship between friendship network centrality and advancement opportunity. Finally, moderated mediation path analysis showed that the indirect effect of friendship network centrality on OCB via advancement opportunity was stronger in workgroups with high task interdependence. Implications and directions for multi-level and social network research are discussed.

HR: How Promotion and Salary Decisions are Influenced by Evaluator Gender and Human Resource Status

Author: **Viva Nsair**, *Western Michigan U.*
Author: **Sebastian M Ugarte**, *U. of Chile School of Business and Economics*
Author: **Angel Martin**, *Alliance Manchester Business School, U. of Manchester*
Author: **Lyonel Laulié**, *U. of Chile*
Author: **Raúl Berrios**, *U. de Santiago de Chile*

Many scholars have explored the relationship between employee performance and promotion, concentrating on the employee's knowledge, skills, and abilities needed to successfully climb the career ladder. Less attention has been given to how managers likely recommend promotion components – upward mobility and pay raise – differently given the context of the industry they are in and their own characteristics. Drawing on social exchange theory, we investigate how evaluator characteristics including gender and human resource manager status interact to shape the relationship between performance and promotion decisions. Through a policy capturing design, recommendations from 93 line and human resource managers are collected for 23 different scenarios that range in contextual and task performance along with job type and applicant gender. Results show that human resource manager status of evaluators leads to a stronger relationship between task performance and pay raise recommendations compared to line manager evaluators and a weaker relationship between contextual performance and upward mobility recommendations compared to line manager evaluators. We find that these relationships are stronger when the human resource managers are men. We discuss implications of these findings for understanding the role of promotion decision-makers in and the performance indicators used to make those decisions.

HR: Helping But Also Deviance! Why Does Promotion-Oriented Job Crafting Lead to Two Distinct Behaviors?

Author: **Qiqi Wang**, *Wuhan U.*
Author: **Yiwei Yuan**, *School of Business, Renmin U. of China*
Author: **Jun Liu**, *Renmin U. of China*

Although the positive effects of job crafting on task performance have been documented, we know little about its detrimental impacts. Drawing from the cognitive-affective processing system framework, we propose an integrative model that simultaneously considers the beneficial and detrimental effects of promotion-oriented job crafting on employee outcomes. We test this model using a multi-wave data collected from 288 employees. We find that employees' promotion-oriented job crafting is positively related to positive affect, but it also incurs the perception of psychological entitlement. Positive affect then mediates the influence of promotion-oriented job crafting on helping behavior. And psychological entitlement mediates the impacts of promotion-oriented job crafting on workplace deviance. The implications of this study for the job crafting literature are discussed.

To advance our understanding of interdisciplinary teamwork in complex organizations, we present four papers that leverage diverse methods to identify processes that bridge the gaps across disciplines and support quality and innovation. The papers include a broad range of specific healthcare settings, countries (e.g., United States, Israel), and using different research methodologies and analyses (e.g., systematic literature review, qualitative, quantitative, multi-sourced surveys, multilevel models). We identify multiple teamwork processes (e.g. problem solving, mechanized patient follow-up, professional cooperation, and cooperation with patients) that are common across interventions and settings. Specifically, we begin with the current state of empirical evidence by presenting a systematic review that identifies roles and teamwork processes that improve quality outcomes in the peri-operative period. We follow with a paper exploring the paradox of lean management and innovation and if hospitals differ from R&D in their association with quality and innovation. We continue with a paper covering the different impacts of social compared to functional team processes to improve quality of care. We end with a qualitative investigation of individual compared to collective improvisation. Together these studies help advance the science of interdisciplinary teamwork towards supporting high-quality care and innovative performance.

HR Managers, Line Managers, and HR Implementation

Session Moderator: **Anna Sender**, *U. of Lucerne*

Author: **Hannah Mormann**, *U. of Lucerne*

Author: **Anna Sender**, *U. of Lucerne*

Organizational decision-makers are inherently confronted with paradoxical tensions because they need to simultaneously address contradictory strategic goals and stakeholder demands. Although research indicates that responding to paradoxes is challenging for decision-makers, some findings indicate that helpful strategies can include the adoption of paradoxical thinking, the involvement of supporting actors, and the use humor. In medieval times, it was the court jester, the paradoxical figure of a wise person and a fool, who operated with humor, exposing paradoxes and expressing alternative perspectives to the king and the court. Because human resource management (HRM) professionals have been identified as important actors in navigating paradoxes in organizations, in this study, we explored how court jester figure can inspire HRM professionals to reflect on their role as supporting actors in navigating organizational paradoxes. Using data from qualitative interviews with HRM professionals and decision-makers at senior levels, we identify effective techniques used by HRM professionals and other supporting actors to promote paradoxical thinking. We explore how these techniques are used by supporting actors to influence the decision-making process at three distinct levels: creating space at behavioral level, expanding horizon on cognitive level and providing relief and building up tension on emotional level.

HR: Answerable for What? The Role of Accountability Focus in Line Manager HR Implementation 

Author: **Rebecca Hewett**, *Rotterdam School of Management, Erasmus U.*

Author: **David Sikora**, *Georgia Southern U.*

Author: **Jeremy Ray Brees**, *Northern Arizona U.*

Author: **Rowan Moelijker**, *Rotterdam School of Management, Erasmus U.*

Consistent implementation of HR practices is important to provide clarity about organizational goals and ensure fair treatment of employees. So why do some line managers implement HR practices as intended but others do not? We draw on the concept of accountability focus to highlight that what managers feel accountable for drives their HR implementation behavior and examine how this accountability focus is shaped by managers' HR role. We test our theoretical model across two field studies: a three-wave survey with managers and a study with dyads of managers and employees. When managers experienced autonomy in their HR role, they felt more accountable for outcomes and were less likely to implement HR practices, but this was mitigated when managers felt competent in their HR responsibilities. More competent managers felt more accountable for processes and in turn were more likely to implement HR practices, which positively related to employees' discretionary effort at work. We offer theoretical insights about the motivational mechanisms which drive HR implementation, and the implications of this for employees. We also further research on managerial accountability by elaborating the nomological net of accountability focus and, by developing a measurement scale through several pilot studies, provide opportunities for further research.

HR: Implementing HR Practices: Line Manager's Cost Reduction HR Attribution and Extrinsic Motivation  

Author: **Fubin Jiang**, *Central U. of Finance and Economics*

Author: **Zhen Wang**, *Central U. of Finance and Economics*

Although substantive research has devoted increasing attention to effectiveness of HRM practices, the critical role of line managers' attribution and motivation has been overlooked. Drawing from social information processing theory, we investigate the content and process of HRM implementation and explore how employee attitudes and behavior are affected through perception. HRM content refers to the practices implemented by line managers. The process of HRM implementation entails line managers' cost reduction attribution and extrinsic motivation. This study further propose that line managers' cost reduction HR attribution and extrinsic motivation weaken the associations between implemented and perceived HR practices. Analyzing the matched data from 151 department managers and 996 employees, we found that employees who perceive high levels of implemented HR practices are more likely to commit to the organization and engage to work. Further, when line managers' cost reduction attribution and extrinsic motivation is higher, employees will perceive lower levels of implemented HR practices. These findings contribute to the strategic HRM literature by demonstrating the significant role of line managers' attribution and motivation in HRM implementation and explain why HR practices implemented may not achieve the expected effectiveness. Implications, limitations and future directions are discussed.

HR: HPWS Implementation and HR Strength on Relationship between Employability and Intention to Stay:

Author: **Huadong Yang**, *U. of Liverpool*

Author: **Beatrice Van Der Heijden**, *Radboud U. Nijmegen*

Author: **Budy Purnawanto**, *U. of Liverpool*

Employability helps organizations to sustain the supply and demand for talent, yet, it also encourages employees to move to a job with another employer. The purpose of this study is to understand the relationship between employability and intention to stay from a human resource management (HRM) perspective by focusing on team-level HRM and taking account of both HR content in the format of the implementation of High Performance Work Systems (HPWS) by team leaders and HR process in the format of team perceptions of HR strength. Building on the situational strength hypothesis, we propose that the relationship between employability and intention to stay will be stronger in the so-called weak situations where HPWS implementation and HR strength are not aligned with each other in comparison with the strong situations where they are aligned with each other. Using a sample including 158 employees and 48 team leaders working in five companies in Indonesia, the results largely confirmed our theoretical assumptions: While in the conditions where HPWS implementation is aligned with team perceptions of HR strength, the relationship between employability and intention to stay is non-significant, under the conditions in which HPWS implementation misaligned with team perceptions of HR strength, employability shows a significantly positive effect on intention to stay. Our study proposes an alternative view to understand the relationship between employability and intention to stay from HRM perspective, confirms the value of a HR process approach, and expands our knowledge on how HRM can help organizations to retain employees.

Pay Dispersion and Pay Inequality

Session Moderator: **David R. Hekman**, *U. of Colorado, Boulder*

HR: **How Illegitimate Pay Inequality leads to worse performance via aggression and coworker devaluing**  

Author: **David R. Hekman**, *U. of Colorado, Boulder*
Author: **Russell Cropanzano**, *U. of Colorado, Boulder*
Author: **Elsa Chan**, *Hong Kong Metropolitan U.*
Author: **Jessica Kirk**, *U. of Memphis*
Author: **Mark Lamb**, *U. of Colorado, Boulder*

This set of studies examines whether and how pay illegitimate pay inequality might motivate workers to perform worse. In a field sample of leaders, we found that illegitimate pay inequality predicted workplace aggression (peer-rated), which then predicted worse job performance ratings (boss-rated). We then conducted a second study of actual work teams in a highly controlled laboratory context to gain greater insight into why illegitimate pay inequality might motivate workplace aggression and worse performance. In this second study, we found that the linkage between manipulated illegitimate pay inequality and workplace aggression (peer-rated) was the degree to which individuals valued the contributions of their coworkers. Specifically, individuals in the illegitimately unequal pay condition tended to devalue the contributions of their coworkers. This, in turn, led both the advantaged and disadvantaged workers to express more workplace aggression toward their teammates. Ultimately, this aggression reduced these individuals' job performance (objectively measured). We discuss how our findings contribute to the pay inequality and workplace aggression literatures, and also consider how our findings help provide insight into solving the most pressing management "grand challenge" – reducing the harmful effects of workplace pay inequality.

HR: **The Peril of Paycheck Dispersion: When Fluctuations in Compensation Jeopardize Worker Retention**

Author: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*
Author: **Jirs Meuris**, *U. of Wisconsin-Madison*

Winner of HR Division Best Conference Paper Award

As employers sought to abdicate their role as the primary risk bearer in employment relationships, they increasingly relied upon variable compensation systems to shift market risks onto individual workers. In doing so, a substantial proportion of the current labor force became prone to experiencing paycheck dispersion, defined as variance in earnings from paycheck to paycheck. Here, we combine multiple sources of qualitative and quantitative data to explore the organizational consequences of paycheck dispersion. Exploratory interviews and surveys from a sample of ride-hailing drivers (N = 63) revealed that workers are broadly averse to paycheck dispersion and constantly look for strategies that could effectively mitigate it. Combining the insights from this data with cognitive appraisal theory, we subsequently proposed that paycheck dispersion will increase voluntary turnover, but only to the extent that workers appraise it as a threat to their welfare. Accordingly, we anticipated two boundary conditions to this relationship: (a) workers' perceived ability to manipulate their earnings through their own actions and (b) the economic composition of their household. Using matched individual-level survey and archival data from a sample of truck drivers (N = 711) employed by a national transportation company, we found that paycheck dispersion is positively associated with the likelihood of turnover, though this relationship varied along the predicted boundary conditions. Taken together, our findings demonstrate that shifting market risk onto workers through variable compensation can compromise organizations by jeopardizing the retention of human capital.

HR: **Does it Pay to Stand Out? Examining the Effect of Gender Dissimilarity on Women's Pay in Tech**   

Author: **Felice Klein**, *Boise State U.*
Author: **Kristie Lynne McAlpine**, *Rutgers U.*
Author: **Elizabeth McClean**, *Cornell SC Johnson College of Business*

In this paper, we examine how managers within firms respond to external pressures for gender equity, with a focus on women's pay in technology firms. While prior research has shown that firms respond to institutional pressure for gender equity, what remains unclear is what leads managers within firms to act on these pressures and how their actions may contribute to pay inequity within firms. We argue that the extent to which managers respond to external gender equity pressures will depend on their subordinates' gender dissimilarity from the workgroup. Specifically, we theorize that women who are more dissimilar from their workgroups will receive higher pay compared to those who are less dissimilar. We further theorize that this positive effect will be stronger for women in technical roles and is driven by managers' impression management concerns and perceptions of women's work-related capabilities. Using a multi-method approach with archival data on executives in large publicly-traded technology firms, experimental data, and field data from a public technology firm, we find support for our hypotheses. Our results have implications for the study of organizational responses to institutional pressure, relational demography, and the gender pay gap.

HR: The Effects of Merit Pay Increases via Organization-Based Self-Esteem 

Author: **Tae-Youn Park**, *Cornell U.*

Author: **David Jinwoo Chung**, *ILR at Cornell*

Author: **Aino Tenhiälä**, *IE Business School*

Although merit pay increase is a pay-for-performance practice that organizations popularly use, its effectiveness has often been questioned. Prior studies have primarily explored merit pay increase outcomes by adopting the idea that merit pay is a form of compensation that makes employees see a conspicuous link between pay and performance. Diverting from this approach, we investigate merit pay increase's effect on employee satisfaction and motivation using organization-based self-esteem as a key mechanism. We conducted two empirical studies that investigated the interactive indirect effect of merit pay increase and perceived pay dispersion on satisfaction and motivation via organization-based self-esteem. Study 1 analyzed 131 employee observations from two South Korean organizations. Results showed that merit pay positively affects satisfaction and motivation via organization-based self-esteem when perceived pay dispersion is low. In Study 2, 818 employee observations from six Finnish organizations were analyzed, and the findings were comparable to Study 1.

HR: [Deliberate Bedtime Procrastination Can Have Surprising Recovery Effects](#)

Author: **Alexander Emmanuel Eng**, *National U. of Singapore*

Author: **Kai Chi Yam**, *National U. of Singapore*

As a society that romanticizes busyness and working long hours, we do not have sufficient time to get enough sleep and engage in leisure activities which help us detach psychologically from work. In this paper, we explore the possibility that people can deliberately procrastinate their bedtimes to create more time for themselves. We propose that this can potentially increase the experience of psychological detachment, leading to positive outcomes despite a reduction in sleep. In an archival study (Study 1), we apply modern topic modelling techniques to Twitter data to demonstrate that deliberate bedtime procrastination is a prevalent phenomenon which differs from traditional conceptualizations of mindless bedtime procrastination. We then developed a theoretical model to examine possible benefits associated with deliberate bedtime procrastination and tested it with an experience sampling study (Study 2). Controlling for objective sleep hours, results suggest that deliberate bedtime procrastination increases the experience of psychological detachment and reduces cyberloafing. Combined, our results extend the literatures on sleep and work recovery by providing empirical evidence for the existence of deliberate forms of bedtime procrastination and showing that sleeping less does not always lead to negative outcomes if it means that people can create a temporal barrier between their work and personal time.

HR: [Workforce Trust in Leveraged Buyouts](#)

Author: **Nick Bacon**, *Cass Business School, City U. London*

Author: **Muhammad Umar Boodoo**, *Warwick Business School*

Author: **Kim Hoque**, *Warwick Business School*

Wealth transfer theory predicts that hostile takeovers such as leveraged buyouts (LBOs) will result in the abrogation of contracts with workers, which in turn will lead to a deterioration in trust in management, and thus have harmful long-term organizational consequences. Developing the alternative entrepreneurial perspective of value creation in LBOs, we propose an innovation-participation-trust (IPT) model whereby LBOs introduce operational innovation, enhancing employee participation, which in turn increases employee trust in management. Empirical analysis of nationally representative matched data supports hypotheses stemming from the IPT model, with higher trust in LBOs than non-LBOs being explained by operational innovation, which in turn is associated with higher employee participation. This suggests LBOs may enhance the ability of firms to contract efficiently with workers, and thereby develop relationship-specific capital for ex ante value creation.

Paper is Available to Meeting Registrants Only.

HR: [Forgive and Forget? How Ease and Desirability of Movement Impact Layoff Victim Goodwill](#)

Author: **Yuna Cho**, *HKU Business School, The U. of Hong Kong*

Author: **Rebecca M. Paluch**, *Sauder School of Business, U. of British Columbia*

With employee layoffs becoming a pervasive practice utilized by organizations to cope with environmental changes, layoff victims represent a growing class of ex-employees for organizations that deserve renewed attention. Existing research has assumed that layoffs essentially represent a permanent termination of the relationship between the employee and the organization, yet empirical evidence suggests that layoff victims may exhibit a willingness to recommend their former employer to others (organizational endorsement) and even an interest in returning for re-employment with the firm (boomerang intentions). We draw on and integrate March and Simon's voluntary turnover framework and concepts from boundaryless careers theory (physical and psychological mobility) to argue that perceived ease of movement and desirability of movement (person-organization fit) will differentially affect victims' willingness to endorse or return to a former employer. Specifically, we expect both perceived ease of movement and PO fit will be positively related to boomerang intentions, but only desirability of movement will influence organizational endorsement. Using three-wave longitudinal data collected from individuals laid off from multiple organizations, we find strong support for our hypotheses.

HR: [Work Effort: A Conceptual and Meta-Analytic Review](#)

Author: **Chad Van Iddekinge**, *U. of Iowa*

Author: **John D. Arnold**, *U. of Missouri*

Author: **Filip Lievens**, *Singapore Management U.*

Work effort has been a key concept in management theories for more than a century. However, there is little clarity and consensus regarding what effort is and how to measure it. We addressed these challenges by conducting a conceptual and meta-analytic review that synthesizes research on work effort. First, we reviewed conceptualizations of effort and provided an integrated definition that builds upon and subsumes existing ones. Second, we developed a taxonomy of operationalizations of effort that clarifies different measures and their nature. Third, we developed a nomological network to gain a better understanding of antecedents and outcomes of effort, as well as constructs that overlap with effort. Fourth, we conducted a meta-analysis that provides information regarding the nature and size of relations between effort and its proposed antecedents (e.g., conscientiousness, intrinsic motivation, self-efficacy, goal-setting) and outcomes (i.e., performance and results), as well as overlapping constructs (i.e., work engagement and grit). Finally, we delineated an agenda for future research on the measurement and effects of effort. We hope our work will be useful to researchers, as well as to organizations interested in implementing interventions aimed at enhancing work effort.

IM: Learning Beyond Technology: When do R&D Alliances Foster Organizational Innovation?

Author: **Jill Juergensen**, *Henley Business School, U. of Reading*

Author: **Rajneesh Narula**, *Henley Business School, U. of Reading*

Author: **Irina Minodora Surdu**, *Warwick Business School*

We continue to witness the growing importance of R&D alliances, mainly in the pursuit of technological innovation. In parallel, we are witnessing firms' efforts to constantly alter their internal practices and routines in order to enhance competitiveness. Yet relatively little is known about whether and how R&D alliances influence a firm's organizational routines and practices by triggering organizational innovation (OI). We draw on panel data from the Mannheim Innovation Panel to examine how different types of (international and domestic) R&D alliances affect a firm's propensity to engage in OI. Our findings show a nuanced relationship between R&D alliances and OI, in that: firms with a diverse international R&D alliance portfolio are not significantly more likely to engage in OI efforts; firms with vertical international R&D alliances (i.e., alliances with customers and suppliers) are more likely to engage in OI; and firms with horizontal international R&D alliances (i.e., alliances with market rivals) are less likely to engage in OI. Taken together, our findings offer a finer-grained and more realistic depiction of the likely organizational learning potential that arises from participating in inter-firm R&D cooperation, shedding light on the behavioural gains and biases associated with different types of R&D alliance partners.

IM: Exploring Motivating Moderators in The Government RD Support-Innovation-Export Mediated Relationship  

Author: **Priit Tinitis**, *Aalto U. School of Business*

Author: **Jingtao Yi**, *Renmin U. of China*

Author: **Carl Fey**, *Aalto U. School of Business*

Author: **Shuang Meng**, *Central U. of Finance and Economics*

How and under what conditions does government R&D support lead to innovation and in turn increased export activities? We examine the relationship between government R&D support and export intensity, mediated indirectly by innovation, in a balanced panel of 289 innovative exporters in China. Leveraging the knowledge-based view, we also explore the role of moderator variables in relation to bonus incentives (extrinsic motivators) and employee suggestions (intrinsic motivators). We extend our knowledge of the motivators in the government R&D support-innovation-export mediated relationship, where we found that extrinsic motivators facilitate the R&D support-innovation link, and intrinsic motivators turned out to be effective in innovation-export link. These results have relevance for both innovation and export literature.

IM: The Dark Side of the Boom: The Impact of Foreign Competition on R&D and Technology Upgrading

Author: **Lee Branstetter**, *Carnegie Mellon U.*

Author: **Ricardo Laverde**, *Inspira Institute of Education and Research*

The natural resource boom of the 2000s spurred growth in income and consumption in commodity-exporting nations. However, this paper brings together a previously unused combination of data sets from Colombia to document evidence of a downside – the currency appreciation associated with this boom led to a significant decline in R&D and technological upgrading of Colombian manufacturing firms. Our empirical strategy exploits differences in firms' sales across products and export destinations to create firm-specific measurements of exchange rate appreciation that gauge firms' exposure to exchange rate shocks both abroad and at home. We link these new measurements of exposure with Colombian micro data on R&D investment and technology upgrading. The key finding is that real exchange rate appreciation drives significant reductions in firm-level R&D investment and a broader measurement of technology upgrading that includes expenditure on machinery, equipment, and ICTs. The estimated effects are quite large: a one-standard deviation increase in the real exchange rate (a shift that lies well within the experience of some firms over our sample period) induces a R&D investment reduction of 12% to 43% and a technology upgrading reduction of 18.8% to 37.6%, depending on the specification. Currency appreciation generally exposes Colombian manufacturing firms to greater foreign competition, but we find the firms that experienced greater exposure to Chinese competition saw even greater declines in R&D. Our estimated effects suggest that the resource boom and associated appreciation could have a significant and persistent negative effect on the productivity growth and technological development of Colombian manufacturing firms. Similarities between Colombia and other commodity-exporters suggest that these effects may be widespread.

Fostering Leadership in Academia To Create a Better (Scientific) World Together

Fostering Leadership in Academia

Presenter: **Irmgard Mausz**, *Ludwig Maximilian U. of Munich (LMU)*
Presenter: **Sonja Kugler**, *TUM Institute for LifeLong Learning, Technical U. of Munich*
Facilitator: **Dieter Frey**, *Ludwig Maximilian U. of Munich (LMU)*

To create a better world together, we need value-based and visionary leaders. This kind of professional leadership and teamwork is essential for academic success. Surprisingly, leadership development to foster these essential skills is still rare in academia. Thus, we want to address this shortcoming by offering a PDW on leadership development in an academic context. The aim of the PDW is twofold: firstly, participants will reflect on their own leadership skills, and secondly, participants will receive knowledge and practical tools on how to conduct leadership training themselves. Hereby this year's topic on 'Creating A Better World Together' as more effective management scholars as well as educators will be taken into account. Participants are around 40 people across divisions and career stages. The PDW consists of a well-proven personnel development approach combining short input sections on leadership concepts and practical tools as well as interactive parts, such as self-reflection and roundtable discussions to foster transfer of learning. Participants gain insights and reflect on their own self-leadership as well as task- and person-oriented leadership skills. And finally, on a meta-level, recommendations and hands on tools on how to plan and conduct management training will be passed on.

Session Moderator: **Laura Fritsch**, *U. of Oxford*

MOC: Meaning as Use: Linguistic Foundations for the Behavioral Theory of the Firm 

Author: **Laura Fritsch**, *U. of Oxford*

Author: **Alan D. Morrison**, *Oxford U., Saïd Business School*

The Behavioral Theory of the Firm has generated deep insights into the ways that individual actions shape, and are shaped by, organizational structures. But, almost sixty years after the theory was introduced by Cyert and March (1963), there is still no agreed-upon unified microfoundation that bridges the gap between the internal workings of the firm and its engagement with the external environment. This article suggests that, in order to find that bridge, researchers should take a linguistic turn. The argument starts from Wittgenstein's (1953) insight that linguistic meaning derives from social use rather than from private mental models or from more foundational algorithms. We deploy this insight to explain, first, how organizations build categorical models of their environments, and, second, how they attach use-meanings to those categories. We present a process model in which those activities can become decoupled and, hence, organizational routines naturally deviate from classical means-end rationality. Organizations may need to deliberate over categories and their meanings. We model the associated language work. In our framework, firms search their environments when they feel to meet their aspirations; their searches start locally and cease when they are able to meet their aspirations; such searches are "problemistic." Our model yields a natural characterization of technological adjacency that is organization-specific and also historically contingent. We show how our model explains two case studies involving social and technological change.

MOC: Can Social Capital Unlock Diversity? Examining How External Relations Enhance Task-related Diversity 

Author: **Tingting Lang**, *School of Business, Renmin U. of China*

Author: **Jason D. Shaw**, *Nanyang Technological U.*

Author: **Haoyuan Li**, *U. of International Business and Economics*

Author: **Ravi S. Kudesia**, *Fox School of Business, Temple U.*

The benefits of task-related diversity on team performance are both intuitive and theoretically justified, but empirical work reveals only a weakly positive relation. Much of the extant literature focuses on how diversity affects the internal functioning of the team and the presumed contextual moderators tend to focus on task-related and situational characteristics. But teams are not isolated units. We advance the notion that the theorized benefits of task-related diversity are not fully realizable in and of themselves, but rather are contingent on the social-relational context in which teams are embedded. In this study, we integrate team diversity and social-capital research to theorize that task-related diversity within teams can be "unlocked" by external social capital, that is, by the structure of relations a team has throughout the broader organization and the resources embedded in those relations. Using data from 36,488 analyst reports by a leading brokerage house from 2011 to 2019, we find that obtaining heterogeneous external social capital amplifies the positive relationship between team task-related diversity and forecast accuracy. We further establish structural boundary conditions around this moderation effect, whereby the benefits of heterogeneous social capital diminish as the number and strength of a team's external relations increase.

MOC: Team Reflexivity, Team Adaptive Behavior, and the Role of Tensions in Agile Teams 

Author: **Anastasia Grass**, *LMU Munich*

Author: **Julia Backmann**, *U. College Dublin*

Engaging in reflective practices and consequently adapting their behavior is essential for agile teams to be successful. However, the mechanisms and contextual factors on how team reflexivity translates to team adaptive behavior are still rather unexplored. Building on social cognitive theory, we argue that transactive memory systems (TMS) might have an explanatory impact, i.e., that team reflexivity positively affects team adaptive behavior through TMS, and that this effect is contingent on the level of agile tensions that the teams experience. We draw on a multi-respondent, time-lagged quantitative team study with 100 agile teams working in large German organizations. We find that team reflexivity enhances teams' TMS, which consequently has a positive effect on team adaptive behavior. Moreover, our results reveal that the relationship between team reflexivity and TMS and the indirect effect are moderated by the level of agile tensions that the studied agile teams experience such that a lower level of agile tensions is more beneficial for agile teams than a higher level.

MOC: Gratitude Disparity, Team Psychological Safety Climate, Performance & Customer Satisfaction    

Author: **Ussama Ahmad Khan**, *U. of Washington, Seattle*

Author: **Ryan Fehr**, *U. of Washington, Seattle*

Author: **Eli Awtrey**, *U. of Cincinnati*

Author: **Ameer A. Basit**, *GIFT U.*

Research on expressions of gratitude has shown that they have many positive effects for both the expresser and the receiver. However, most of the literature has focused on individuals and dyads while overlooking the broader team-level contexts in which many workplace gratitude expressions occur. We examine this team context and argue that high levels of received gratitude expression disparity—wherein a small number of people receive most gratitude expressions within the team—is associated with low psychological safety climate, ultimately hurting team performance and customer satisfaction. We further propose that these effects are strongest when friendship disparity in the team is also high. We tested our model in a sample of teams from a large microfinance organization, employing a cross-lagged, multisource design. Our results supported our hypotheses, emphasizing the nuanced impact of received gratitude expressions within teams and highlighting the importance of patterns of affective expression on team outcomes. Implications for theory and practice are discussed.

In Pursuit of (Sometimes Opposing) Values: Exploring the Intersection of Values and Paradox

Values and Paradox

Organizer: **Derron Bishop**, *U. of Delaware*

Organizer: **Wendy K. Smith**, *U. of Delaware*

Panelist: **Ann Langley**, *HEC Montreal*

Panelist: **Marc Hoffman Lavine**, *U. of Massachusetts, Boston*

Panelist: **Marianne W. Lewis**, *U. of Cincinnati*

Panelist: **Lilach Sagiv**, *Hebrew U. of Jerusalem*

Panelist: **David A. Waldman**, *Arizona State U.*

Discussant: **Wendy K. Smith**, *U. of Delaware*

Values serve as life-guiding principles for individuals, groups, and organizations as they address persistent challenges to survive and thrive. Given this complexity, the values landscape is fertile ground for uncovering and theoretically identifying and exploring fundamental paradoxes—persistent contradictions between interdependent elements. Seeking insights from leading scholars, this symposium aims to unpack the relationship between values and paradox and explore the mutual implications of these concepts for one another and for various applicable domains (e.g., organizational governance, leadership, organizational change, technology commercialization, identity, ethics).

**Transcending Materiality: Flourishing Collaborative
World with Spirituality**
Transcending Materiality with Spirituality

Session Chair: **R Ray Gehani**, *Akron U.*
Session Chair: **Anil K. Maheshwari**, *Maharishi U. of Management*
Discussant: **Vikram Gulati**, *Maharishi International U.*
Participant: **Ellen L. West**, *Portland State U.*

A persistent COVID pandemic has shaken and disrupted many organizations around the world by laying bare naked many systemic disparities and inter-personal disputes. We will share with participants how world-wide contagion and global supply chain interdependencies and delays have made us realize that the world is spiritually an interconnected family. We will explore how this is demanding a ‘new normal,’ by creating a better and flourishing world interconnected in innovative unprecedented ways. We will explore how some materially driven leaders and organizers stunned and shaken from ‘coping’ with COVID related requirements, responded with more material greed, isolation, and segregation. On the other hand, we will highlight that COVID pandemic has also enthused some other progressive leaders ‘hoping’ for new innovative collaborations and cooperations across diverse populations using spirituality and consciousness. Many organizations and their leaders in the United States in particular, and around the world in general, have primarily focused their attention and efforts on their materiality as they maximized their own and their stockholders’ returns. We will share, exchange, and explore how spirituality and consciousness can provide us new and innovative lenses for creating a flourishing a better agile world with peace and prosperity for all strata of an organization and society.

Leadership Effectiveness

Session Moderator: **Hanna Aileen Genau**, *U. of Bonn*

OB: Fearless Dominance and Leader Effectiveness: Lykken's Socialization Hypothesis (WITHDRAWN) 

Author: **Hanna Aileen Genau**, *U. of Bonn*
Author: **Gerhard Blickle**, *U. of Bonn*
Author: **James A. Meurs**, *Kennesaw State U.*

We tested Lykken's (1995) hypothesis that fearless dominance can lead to both adaptive and antisocial behaviors. According to Lykken, the direction of the career path of individuals high on fearless dominance is mainly influenced by their level of socialization, and prior research has found encouraging results for this hypothesis. However, research also shows that the presence of fearless dominance increases at higher levels of an organization's hierarchy. Therefore, our goal was to test Lykken's socialization hypothesis in a leadership context. By linking Lykken's hypothesis to socioanalytic theory and a recent process model of leadership, we suggest that fearless dominance and successful socialization (i.e., higher educational level) influence leadership outcomes via political skill. Our sample comprises 239 leaders, their superiors (N = 239), and a total of 457 subordinates. Using moderated mediation analyses, we show that leaders high on both fearless dominance and educational level possessed greater political skill, mediating improved job performance, transformational leadership, and team performance. However, with low educational level, this mediated relation is negative. We discuss these results regarding Lykken's hypothesis and provide an outlook for future research.

OB: A Dual-Specificity Model of Leader-Associated Relational Identification 

Author: **Jie Li**, *U. of Southern Maine*
Author: **Suzanne S. Masterson**, *U. of Cincinnati*

In the leader-follower role context, a follower's leader-associated relational identification exists at two levels of specificity. One is the particularized level often represented by leader identification. The other is the generalized level reflecting one's identification with the self-authority role-relationships in general. Past research almost exclusively focused on the particularized level, with little research facilitating an understanding of this broader concept that includes both levels. Using a dual-specificity leader-associated relational identification model, operationalized as the interplay of leader identification and the individual value of traditionality, we examine how different types of leader-associated relational identifications predict supervisory social and economic exchange relationships, which in turn affect organizational citizenship behavior benefiting the supervisor (OCBS). Data were collected at three time points from 664 working adults across the United States. Polynomial regression and response surface analyses showed that followers of four different types of relational identification enacted supervisory social and economic exchange in distinct patterns that were consistent with their respective relational identification. Supervisory social and economic exchange mediated the effects of dual-specificity relational identification on OCBS in opposing directions.

OB: The Direct and Indirect Effects of Leader-Star Exchange on Nonstar Individual and Team Performance

Author: **Jingfeng Yin**, *U. of Illinois at Chicago*
Author: **Sandy J. Wayne**, *U. of Illinois at Chicago*
Author: **Ying Wu**, *U. of Science and Technology of China*
Author: **Rui Guo**, *China U. of Geosciences (Wuhan), Wuhan, China*

Current research highlights the importance of workplace relationships (e.g., leader-member exchange and team-member exchange) on individual and team performance. However, there is a lack of understanding of the effects of leader-star exchange relationship (LSX), defined as the dyadic relationships between team leader and team star performer. Drawing on theories of justice, we empirically examine both direct and indirect effects of LSX on nonstar individual and team performance in a three-wave multi-source, multi-level study of 190 teams, consisting of 190 leaders and 798 employees. Our findings suggest that through impacting the collective justice climate (CJC), LSX is positively related to both nonstar individual and team performance. In addition, through CJC, LSX moderates the relationships of leader-member exchange (LMX) and leader-member exchange differentiation (LMXD) on nonstar individual performance such that it significantly influences the direction of these relationships. Specifically, LSX strengthens the positive relationship between nonstar LMX and nonstar individual performance. On the other hand, LMXD is positively related to nonstar individual performance when there is high LSX between the leader and star performers and negatively related to nonstar individual performance when LSX is low. Implications of the effects of the leader's relationship with star performers are discussed.

OB: Brokerage and Leadership Emergence: A Mediating Role of Individual Work Performance 

Author: **Jegoo Lee**, *U. of Rhode Island*
Author: **Kiho Jun**, *Beijing Normal U.-Hong Kong Baptist U. United International College*

The question of why some people emerge as leaders has been one of the main topics in organization studies. In this study, drawing from recent literature on leadership emergence and social networks, we propose a mechanism whereby actors with brokerage positions are perceived as leaders through their work performance. The core hypotheses in the present study are: (1) An individual who bridges various subgroups emerges as a leader in the eyes of others; and (2) The individual actor's work performance mediates the relationship between her or his brokerage and leadership emergence. We empirically test proposed hypotheses, using a unique dataset from 176 musicians from four amateur orchestras in South Korea. Overall, the results support all proposed hypotheses, indicating that individuals with brokerages across subgroups tend to be perceived as leaders by others when they present a desirable work performance. We will discuss the theoretical implications provided by this study.

Paper is NOT Available. Please contact the author(s).

Author: **Daria Naieli Hernandez Ibar**, *Sheffield U. Management School*

Author: **Anna Topakas**, *U. of Sheffield*

Author: **Sam Farley**, *Leeds U. Business School*

Although leader behavioral adaptability is generally considered a strength, there may be situations where abrupt changes in behavior send the wrong signal to followers, resulting in diminished perceptions of leader effectiveness. We draw on social information processing and signaling theory to argue that within-person behavioral inconsistency following nonleader to leader role transitions will be interpreted negatively by followers. We hypothesize that overt changes in relationship- and task-oriented behaviors when transitioning into a leader role will negatively influence follower perceptions of leader effectiveness and that this effect would be stronger when followers have a heightened behavioral awareness. To test our hypotheses we conducted a randomized controlled experiment with 191 student teams split into a control group and an intervention group. Results from multilevel polynomial regression showed that significant behavioral deviation negatively affected leader effectiveness ratings and that increasing relationship-oriented behaviors as a leader is more detrimental to effectiveness ratings than increasing task-oriented behaviors. Interestingly, behaviors observed prior to taking the leader role were more significant in predicting leader effectiveness ratings once in role, than the person's behavior while in the role. Implications of these findings for research theory and practice are discussed.

OB: Understanding Effective Shared Leadership from a Task Interdependence Network Perspective

Author: **Thao Phan Hanh Nguyen**, *Cornell U.*

Extant research has recognized the moderating effect of task interdependence on the applicability of shared leadership. Much of such work, however, has implicitly assumed that work resources and constraints within a team are distributed in an undifferentiated manner among members while it is not always the case. In reality, members of the same team are likely to experience varying degrees of interdependence by design, making the interplay between task interdependence and shared leadership potentially more complex than it has been theorized. Drawing from a resource-based approach and the social network literature, I view task interdependence as a network and utilize it to address questions regarding how leadership responsibilities should be shared and how shared leadership as a whole should be structured. Specifically, I first propose that an individual's position in the team workflow determines the extent to which they are well-positioned to become leaders. I then discuss the implications of different task interdependence configurations for shared leadership. While examining these research questions, I emphasize the need to treat shared leadership as a multidimensional construct and illustrate the nonuniform implications of task interdependence for the dimensions.

OB: Sustainable Leadership, Justice Climate And Organizational Citizenship Behavior Towards Environment

Author: **Qaisar Iqbal**, *Sichuan U. of Science & Engineering, China*

Author: **Katarzyna Piwovar-Sulej**, *Wroclaw U. of Economics & Business*

Drawing upon the social exchange theory, this study aims to explore how sustainable leadership at team level triggers employees OCBES by fostering procedural justice climate and affective commitment to supervisor. Authors used online survey form to collect multi-wave and multi-level data from 251 employees, clustered into 47 teams, from 17 Pakistani large manufacturing firms. Authors employed multilevel-modelling via Mplus to test the multilevel teams to individual-level hypotheses. This study has empirically confirmed that procedural justice climate functions as the upper-level mediator of the cross-level relationship between sustainable leadership and employees OCBE. Moreover, it was found that cross-level effect of sustainable leadership on employees OCBE was mediated by affective commitment to the supervisor. Sustainable leadership has also significant cross-level direct impact on employees' OCBE. This article is first in its nature to assess the role of both cross-level mediation-lower mediator (affective commitment to the supervisor) and cross-level mediation-upper mediator (procedural justice climate) on the relationship of sustainable leadership at team level with OCBE simultaneously.

OB: Leader-Follower Emotional Entrainment and Daily Interaction Quality: The Role of Follower Attachment

Author: **Jakob Stollberger**, *VU Amsterdam*

Author: **Wladislaw Rivkin**, *Trinity Business School, Trinity College Dublin*

Followers' high-quality interactions with their leader are a cornerstone of leadership research. Despite a growing understanding of leader emotions as static predictors of high-quality leader-follower relationships, research has yet to pay attention to the micro-level, dynamic interplay of leader and follower emotions for the emergence of daily interaction quality. We develop an episodic emotional entrainment perspective stating that leaders' expressions of positive (joy, calmness) and negative emotions (fear, sadness) serve as affective events influencing corresponding follower emotions. Over the course of a day, this manifests in affective entrainment patterns (i.e., the leaders' and followers' affective states fluctuating in a common rhythm), which in turn predict followers' perceived interaction quality with their leaders. The strength of the entrainment process, however, is influenced by the follower's attachment style. We conducted a daily diary study across ten workdays with four measurements each day (N=72 employees; N=497 daily responses). Results of within-day multilevel latent growth models support an emotional entrainment process such that followers' felt emotions oscillated with the observed leader emotional expression over the course of the day. Within-day changes in followers' felt high-activated emotions (i.e., joy, fear) predicted perceived end-of-day interaction quality, whereas changes in low-activated emotions (i.e., calmness, sadness) did not. The relationship between leaders' expressions of joy (fear) and corresponding follower felt emotions at the end of the day via emotional entrainment was weaker (stronger) for followers with high attachment avoidance (attachment anxiety), which in turn was positively (negatively) associated with end-of-day interaction quality.

OB: Double-edged Sword of Leader Workaholism: Subordinate Cognitive Appraisals and Work Outcomes 

Author: **Sang-Hoon Lee**, *U. of Illinois at Urbana-Champaign*

Author: **Sunjin Pak**, *California State U., Bakersfield*

Author: **Yaqing He**, *U. of Illinois at Urbana-Champaign*

Author: **Amit Kramer**, *U. of Illinois at Urbana-Champaign*

Grounded on the challenge-hindrance stressor framework, this study examines how subordinates appraise work stressors, hence shaping their behaviors toward the organization. We especially argue that leader workaholism is a double-edged sword for employees, such that they may appraise leader workaholism as both a challenge and hindrance, and in turn, leader workaholism will be positively associated with organization-directed organizational citizenship behaviors (OCBO) and negatively related with organization-directed counterproductive work behaviors (CWBO), respectively. Further, we contend that prototypical leader traits, namely trait agency and communion, will moderate the positive relationship between leader workaholism and subordinate challenge appraisal, while moderating the positive association between leader workaholism and subordinate hindrance appraisal. Results suggest that leader workaholism has a positive indirect association with subordinate OCBO via subordinate challenge appraisal, while leader workaholism did not have a significant indirect effect on subordinate CWBO. In addition, the indirect relationship between leader workaholism and subordinate OCBO via challenge appraisals was conditional on both leader agency and communion, while the indirect relationship between leader workaholism and subordinate CWBO via hindrance appraisals was moderated by leader communion.

Barriers to Addressing Social Issues in Organizations and How to Overcome Them

Barriers to Addressing Social Issues

Discussant: **Scott Sonenshein**, *Rice U.*
Organizer: **Julia Lee Cunningham**, *U. of Michigan*
Organizer: **Laura Sondag**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Organizer: **Madeline Ong**, *Texas A&M U.*
Organizer: **Izzy Gainsburg**, *Harvard Kennedy School*

Organizations are increasingly involving themselves in social issues such as sustainability, racial justice, and COVID-19 safety measures. But in order to engage in a formal effort to help such causes, someone must first raise awareness of these social issues within the organization. Two relevant processes through which this can be done is issue selling and allyship. Issue selling refers to employee efforts to raise awareness of and direct attention of higher-ups toward issues that the organization can address (Dutton & Ashford, 1993). Initial research on issue selling focused on employees selling issues that were more directly relevant to organizational performance, but as employees have gained comfort advocating for issues in the workplace, issue selling research has expanded to include employees' selling of social issues that are not directly related to an organization's core business (Mayer, Ong, Sonenshein, & Ashford, 2019; Sonenshein, 2006, 2009). Allyship refers to dominant group members taking actions to order improve the experiences of nondominant group members (e.g., reducing experiences of discrimination; promoting diversity, equity, and inclusion). Allyship can take many forms, including advocacy of relevant issues in the organization, providing social support to nondominant group members, and educating oneself on issues connected to allyship. Collectively, issue selling and allyship are important because they both capture important ways that people make progress on social issues in organizations, broadly speaking. People interested in issue selling and allyship, however, often face many barriers, such as fatigue, a lack of self-confidence, local norms discouraging these behaviors, and competing workplace demands. These barriers prevent individuals from taking actions to address social issues they care deeply about and prevent organizations from addressing social issues that they have taken a purported interest in undertaking. Therefore, it is critical that research continues to understand the barriers that people face when advocating for social issues and the factors that allow them to overcome these barriers. The proposed symposium brings together interdisciplinary and multimethod research that collectively identifies new barriers to people's advocacy for social issues and/or new individual-level and institutional-level considerations for promoting social issues in organizations. The four papers use a variety of methodologies to understand how people advocate for social issues: ethnography, interviews, surveys, and archival sources. In addition, they focus on a number of pressing issues that our society faces today: sustainable development, climate change, diversity and inclusion.

Public Service Motivation: Psychological Effects

Session Moderator: **Wisanupong Potipiroon**, *Prince of Songkla U.*

This panel on public service motivation (PSM) explores links between managerial and/or worker PSM and adverse outcomes such as burnout, emotional exhaustion, and psychological distress.

PNP: **Testing A Curvilinear Effect of Leader Public Service Motivation on Employee Emotional Exhaustion** 

Author: **Wisanupong Potipiroon**, *Prince of Songkla U.*

Past research has shed light on the dark sides of individuals' public service motivation (PSM) in relation to their well-being. This study draws attention to this important construct and proposes that it could have a curvilinear (U-shaped) effect on employee emotional exhaustion. It further argues that this curvilinear relationship will be linearly moderated by employee PSM and mediated by perceptions of fit with the leader (i.e., person-supervisor [P-S] fit). In both the field and experimental vignette studies, the results showed significant curvilinear effects of leader PSM and employee emotional exhaustion. In particular, higher levels of employee emotional exhaustion were observed at low and high levels of leader PSM, whereas a moderate level of leader PSM was associated with the lowest level of employee emotional exhaustion. The results further revealed that this curvilinear effect was mediated by P-S fit. Moreover, in the experimental study, the results showed that those with high PSM, in comparison with those with low PSM, were less negatively affected by leaders who are perceived to have moderate to high levels of PSM. Theoretical and practical implications are discussed.

PNP: **Ethical Leadership, PSM, Witnessing Workplace Bullying, and Psychological Distress**  

Author: **Diep Nguyen**, *Northumbria U.*
Author: **Nhung Nguyen**, *U. of Economics Ho Chi Minh City*
Author: **Stephen Teo**, *Northumbria U.*

Witnessing workplace bullying could result in negative perceptions of work and increase psychological distress among bystanders. This study contributes to the scarce literature on bystanders of workplace bullying in public administration by examining the interplay of ethical leadership (EL) and public service motivation (PSM). In line with the Conservation of Resources (COR) theory, we argue that EL and PSM are critical organizational and personal resources in bolstering meaningful work (MNW) and the psychological well-being of public servants. A two-wave study involving 246 public sector employees in the United States supports our hypotheses. We find that witnessing workplace bullying is negatively associated with MNW while positively relating to psychological distress. This study also shows that MNW has a negative association with psychological distress. Interestingly, high PSM is found to strengthen the impact of high EL on the negative relationship between witnessing workplace bullying and MNW, consistent with the COR perspective. We discuss the theoretical contributions and managerial implications for the specific public sector and general organizations.

PNP: **Burnout & Work Engagement on the Front Lines: Public Service Motivation & Law Enforcement Officers** 

Author: **Daniel Baker**, *Appalachian State U.*
Author: **Shahidul Hassan**, *Ohio State U.*
Author: **Kevin Teaford**, *State of Ohio?*
Author: **Bradley E. Wright**, *U. of Georgia*

Drawing on job demands-resources theory, our study investigates the role of public service motivation can play maintaining high engagement and lowering the likelihood of burnout among frontline officers. Although there is extensive literature on how PSM affects public sector employees generally, less research looks at PSM and law enforcement officers especially in the U.S. As enforcement organizations continue to respond to calls for improvements in accountability and expand their community engagement efforts, they must also take steps to guard officers against the emotional exhaustion and burnout associated with serving the public in difficult jobs and under high pressure and scrutiny. Using survey data collected from large state-level law enforcement organization at multiple time periods, we find consistent evidence supporting the expected positive association between PSM and officer work engagement. Contrary to our expectation, we also observe a weak positive relationship between PSM and reports of burnout among frontline officers in 2019 and no evidence of a relationship in 2021. These findings suggest that PSM can serve as a lever to improve officer engagement and that there may be potential conditions under which PSM may exacerbate rather than mitigate employee burnout.

Issues in Health Care Governance

Session Moderator: **Yevgen Bogodistov**, *Management Center Innsbruck*

This session explores the issues facing the healthcare industry from multiple perspectives—including different sectors, structures, and national contexts.

PNP: **Flying with Clipped Wings: Dynamic Capabilities of Publicly Owned Health Care Providers**   

Author: **Yevgen Bogodistov**, *Management Center Innsbruck*
Author: **Daniel Beimborn**, *U. of Bamberg*

To implement change effectively and efficiently, private firms require strong dynamic capabilities, consisting of sensing, seizing, and reconfiguration capacities. In the public sector, however, the concept of dynamic capability might be of less use because opportunity recognition (sensing) and strategic decision making (seizing) are taken over by the government. In this work, we discuss the only part of the dynamic capability left to highly regulated non-profit organizations: the reconfiguration of the resource base in order to meet the expectations of the regulator. Using a sample of general practitioners from public hospitals in Ukraine (n = 237; 81 per cent of the entire population of general practitioners from two Ukrainian cities), we apply structural equation modelling to legitimize the construct of reconfiguration-centred dynamic capability (reconfiguration capability) and test its impact on hospitals' performance. First, we show that reconfiguration capability explains the effects of the lack of resources even at the local level. Second, we show that reconfiguration capability is a strong predictor of performance.

PNP: **Blending Individualistic and Collective Leadership in a University-Healthcare Partnership**   

Author: **Roman Kislov**, *Manchester Metropolitan U.*
Author: **Gill Harvey**, *U. of Adelaide*
Author: **Michael Bresnen**, *U. of Manchester*

This paper reports a qualitative longitudinal study conducted in a large-scale UK-based collaborative research partnership to examine how collective leadership develops over time, what implications this evolution has for the tension between production and implementation of research, and how the transition from individualistic to collective leadership can be supported. It shows that this transition can be both enabled and constrained by the asymmetrical power relationships within a leadership team, whereby upward, downward and lateral directions of agency are exercised by multiple actors. It also demonstrates that the development of collective leadership can provide a clear direction for the partnership as a whole, whilst allowing for a plurality of approaches to enact this direction at the level of individual programmes of work. Finally, it argues that the development of collective leadership can be enabled by a combination of process-focused, reflection-focused and action-focused interventions.

PNP: **Public Health Care in Pakistan: A People Management Solution?**

Author: **Muhammad Faisal**, *School of Management, College of Business, RMIT U.*
Author: **Pauline Stanton**, *RMIT U.*
Author: **Michael Muchiri**, *RMIT U.*

An efficient and effective public health care is critical in developing and underdeveloped countries. Pakistan, a developing and populous country is under severe pressure to provide such health care to its population due to inadequate financial and human resources and limited management capabilities. This study explores the role and practice of human resource management in two tertiary care public hospitals in Punjab, Pakistan by adopting a case study design method. Using qualitative methods, twenty-two key informants were interviewed in both hospitals to gain a better understanding of the context, challenges, and opportunities for HRM. Our findings indicate that there were no specialised HR departments at the two hospitals, and many HRM functions and practices were centralised and carried out at the provincial level. Our informants also expressed a lack of autonomy from the provincial government over decision making. However, the informants believed that HR could play a significant role in influencing employees' attitudes and behaviours to provide quality care and services to more patients. These findings are discussed, and we draw conclusion which highlight theoretical, and practical and managerial implications for the public health care sector in Pakistan. Keywords: High-performance work systems, human resource management, attitudes and behaviours, public health care system, Pakistan.

Paper is Available to Meeting Registrants Only.

Author: **Alberto Peralta**, *U. of Alcalá & Abu Dhabi U.*

Author: **Luis Rubalcaba**, *U. of Alcalá (Spain)*

The characteristics approach of the service innovation studies underpinned the new concept of public service innovation networks (PSINs). From there, we theorize a novel conceptual framework for health PSINs based on three dimensions: social characteristics, multiple actors, and functioning mode. This comprehensive approach supported a partial least squares structural model and an empirical experiment. Its results, from a sample collected in the first wave of the COVID-19 pandemic, confirm the adequacy of the proposed dimensions for better understanding health PSINs. Health PSINs positively correlate with nontechnical innovations and conventional innovation outcomes. Additionally, the model reveals significant criteria for the meta-governance of networked innovation strategies. Finally, both the theoretical framework and the accompanying empirical model support the voices for an extended use of the networked strategy for collaborative policy and service innovation.

Individual Behavior and Organizational Outcomes

Session Moderator: **Robin Schimmelpfennig**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

This session employs economic, behavioral, and sociological lenses to explore the relationships between individual behavior and organizational outcomes.

PNP: **The Evolution of Behavioural Science in Public Policy**  

Author: **Robin Schimmelpfennig**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Author: **Michael Muthukrishna**, *London School of Economics and Political Science*

Interventions are to the social sciences what inventions are to the physical sciences—an application of science as technology. Behavioural science has emerged as a powerful toolkit for developing policy interventions and public programs for changing behaviour. Such behavioural change intervention can support societies in creating a better world together. However, the translation from principles to practice is often moderated by contextual factors—such as culture—that thwart attempts to generalize past successes. Here we discuss cultural evolution as a framework for addressing this contextual gap. We describe the history of behavioural science in public organisations and the role that cultural evolution plays as a natural next step. We review research that may be considered cultural evolutionary behavioural science in public policy, illustrating concrete applications in fields such as public health, corruption, and sustainable development. We synthesize the promises and challenges for designing cultural evolution informed interventions and assess their impact. Finally, we discuss the value of applied research as a crucial test of basic science: if theories, lab, and field experiments don't work in the real world, they don't work at all.

PNP: **Avoidance As Recover to Self: Exploring Why and When Feedback Avoiding Behavior Promote Volunteering** 

Author: **Yu Zhu**, *Jinan U.*

Author: **Meilan Nong**, *Jinan U.*

Author: **Wenjuan Mei**, *Jinan U.*

Author: **Yanfei Wang**, *South China U. of Technology*

Feedback avoiding behavior has been endorsed as destructive behavior. However, how the employees respond to such behavior remains unclear. Drawing upon conservation of resources theory, we explore why and when participating in feedback avoiding behavior may benefit employees. Results from a three-wave survey study illustrate that engaging in feedback avoiding behavior was associated with decreased emotional exhaustion, and ultimately, increasing employee volunteering behavior. Moreover, prevention focus moderated the observed effects. Specifically, the negative relation of feedback avoiding behavior with emotional exhaustion and the positive indirect effect of feedback avoiding behavior on volunteering behavior via emotional exhaustion will be stronger when employee prevention focus is high. Theoretical implications, practical implications, and future research directions are discussed.

PNP: **Relationship of Appraisal, Coping, and Personal Resources on Four Outcomes of COVID Related Stressor**

Author: **Laura Riolli**, *California State U. Sacramento*

Author: **Victor Savicki**, *Western Oregon U.*

Author: **Joseph Richards**, *California State U. Sacramento*

The COVID-19 pandemic thrust a wide variety of stressors on people. We looked at four possible measured outcomes to those stressors across three different groups: individuals continuously employed, individuals whose employment was disrupted by the COVID-19 pandemic, and non-employed university students. No significant differences were found between those groups on the outcomes of negative affect, positive affect, subjective wellbeing, and thriving. However, unique patterns of association were found for the different outcomes in perceived stress, personal resources (psychological capital (PsyCap) and loneliness), stress appraisal, and coping styles. Both bivariate correlations and multiple regression analyses showed significant results. PsyCap and loneliness were significant for different outcomes. An approximate mirror image of coping styles was evident between negative affect and subjective wellbeing. Threat appraisal was the only stress appraisal to rise to the level of significance. Although different patterns of appraisal and coping were significant for most outcomes, thriving only correlated with the internal resource of PsyCap. The different patterns of perceived stress, personal resources stress appraisal and coping indicate that the four outcomes measure different constructs and have different patterns of association following the cognitive-phenomenological framework of stress and coping.

PNP: **When Unproductive Employee Behaviors are Ignored: Effects on Job Satisfaction**  

Author: **Gustavo Tavares**, *Inspere Institute of Education and Research*

Author: **Bradley E. Wright**, *U. of Georgia*

Author: **Filipe Sobral**, *EBAPE/FGV*

Management's failure to address performance problems is often the reality in public organizations and the costs of that may not be restricted to the lost productivity of poor-performing employees. In this article, we investigate the extent to which the job satisfaction of public employees may be negatively affected by the perception that unproductive employee behaviors (such as low productivity, poor quality of work, absenteeism, lateness, missing deadlines, etc.) are systematically ignored in their organizations. We propose that this effect is mediated by both perceived rewards and recognition received and employee-organization value congruence (a parallel mediation model). To test our hypotheses, we surveyed 256 government employees from varied public organizations in Brazil. In line with our predictions, we find that perceived organizational failure to address unproductive employee behaviors is negatively related to job satisfaction and that both perceived rewards received and value congruence mediate this effect.

PNP: **Price-Cap Regulation, Price Elasticity of Demand, And Quality of Service** 

Author: **Mu-Yen Hsu**, *National Chengchi U.*

Author: **Shu - Hua Li**, *National Chengchi U.*

Price-cap regulation is aimed at limiting price increases by the significant market powers and prevent the decrease in consumer surplus. Therefore, studies on price-cap regulation have implicitly neglected the theoretical possibility that firms might lower their prices to increase revenue when the price elasticity of demand exceeds 1. Using Chunghwa Telecom (CHT), the largest mobile phone service provider in Taiwan, as a case study, we estimated the price elasticity of residual demand faced by CHT and found that it was higher than 1. Therefore, CHT's continual lowering of price, which improved its revenues during 2010–2013, was reasonable. Because telecommunication service providers are characterized by high fixed costs and low variable costs, these firms have the incentive to increase revenue and subsequently maximize their profit. However, lowering the prices attracts more subscribers while the capacity remains unchanged, thereby congesting communication channels and reducing service quality. For public utility regulators, our results reiterate that price-cap regulation should be combined with quality control, particularly when the price elasticity of demand exceeds 1.

Distinguished Speaker: **Joep Cornelissen**, *Erasmus U. Rotterdam*

Contemporary strategy and entrepreneurship research are typically seen as occupying distinct domains. Yet, the distinction between distinct domains blurs when considering the premise and promise of adopting practice theory to investigate what and how practices underpin and explain taken-for-granted and yet consequential actions of strategizing and entrepreneuring. This Symposium explores the intersection of the two by linking the strategizing of entrepreneurship with the entrepreneuring of strategy. The symposium discusses the potential of practice theory to examine how strategizing practices may be critical to the formation and scale up of entrepreneurial firms, and also how even large or stable firms may show entrepreneuring practices in their quests to keep their strategies relevant. We invite leading scholars in both fields to put their point of view, engage in a dialogue, and/or reflect upon the pros and cons of a joint or separate trajectory for strategy-as-practice and entrepreneurship-as-practice over time.

Ecosystems and Platforms Track: Addressing Grand Challenges in and Through Ecosystems

Session Moderator: **Lukas Falcke**, *U. of St. Gallen*

TIM: Tackling the Grand Challenge of Climate Change with Ecosystem Innovation   

Author: **Lukas Falcke**, *U. of St. Gallen*
Author: **Ann-Kristin Zobel**, *U. of St. Gallen*
Author: **Stephen Comello**, *Stanford Graduate School of Business*

Reflected in the United Nation's Sustainable Development Goals (SDGs), global climate change is one of the grand challenges faced by humanity. While substantially more progress is required, technological developments in renewable electricity generation and complementary digital technologies in the electricity sector are opening up a path towards reaching climate-related SDGs. Yet, how heterogeneous actors innovate and coordinate to translate these interdependent technological developments into value propositions at the necessary speed and scale remains elusive. To make sense of this puzzle we introduce an ecosystem innovation perspective incorporating multiple interdependent dimensions at both the technology and strategy level, enabling us to better capture the complex structural changes within the electricity sector. We calibrate our analysis through the study of 57 different collaborative pilots between 10 large international incumbent electric utilities and startups over a four-year period, in which they collaboratively experiment with different alignments of technologies and strategic roles adopted by incumbents, startups and customers (i.e. ecosystem configurations). Using Qualitative Comparative Analysis and additional interviews we identify three ecosystem configurations that contribute highly to climate-related SDGs: (1) digital platform innovation enhancing resource efficiency, (2) physical complementor innovation enabling renewable generation scaling, and (3) new orchestrator innovation allowing actors to share, trade and leverage information and resources. In a complementary analysis we further illuminate trade-offs that incumbents face between allocating resources towards ecosystem innovation for grand challenges versus linear value chain enhancements for capturing short term economic value. This study contributes to the literature by elaborating on (1) how ecosystem innovation may help to tackle the inherent interdependencies of grand challenges (2) the role of incumbent firms and their approach to innovation for managing grand challenges, and (3) the management of platform-based ecosystems in infrastructure-intensive settings. For managers we offer insights regarding how to innovate ecosystems for tackling grand challenges.

TIM: Profile Gating? Addressing Congestion to Improve Women's Wellbeing on Online Matching Platforms  

Author: **Sabari Rajan Karmegam**, *George Mason U.*
Author: **Anand Gopal**, *Nanyang Business School*
Author: **Jui Ramaprasad**, *U. of Maryland*

The problem of worsening gender skew is particularly damaging in the context of dating and matrimonial matching platforms since it affects the wellbeing and user experience of women participants. Gender skew could result in an odd-based approach by men, resulting in search frictions, congestions, and thus disempowerment for women participating on these platforms. If platforms do not ensure the equitable participation of women, it could lead to the unraveling of the platforms. In this paper, we look at how a platform-level intervention could reduce the congestion for women and thus improve their overall user experience on the platform. We specifically look at a form of "gender gating" intervention in a leading matrimonial platform within one of their sub-domains. The intervention restricts the profile visibility of women users based on age, education, income, and marital status related to social norms. The intervention provides a quasi-experimental setup comparing the treatment sub-domain with a control sub-domain. Our analysis shows that the platform-level intervention had the desired effect – women in the treatment group received fewer unwanted requests for contacts, experienced more matches, and initiated more contacts themselves, representing a better user experience. Our work highlights the challenges women face on online platforms because of existing social norms and platform design. Furthermore, our work extends the platform literature by studying how platform owners through market design have to take a larger role in reducing online harassment and thus ensuring that women can exercise their choice to improve their wellbeing on online dating and matrimonial platforms.

Author: **Roland Ortt**, *Delft U. of Technology*

The evolution of innovation ecosystems is an important topic for scholars and practitioners alike, as externalities such as market changes, competitive landscapes, and regulatory pressures demand the delivery of new customer-facing value propositions. In this paper we aim to enhance our conceptual understanding of ecosystem evolution by shining a socio-technical lens upon the innovation ecosystem. Through this perspective we understand ecosystem evolution as a socio-technical transition resulting from the emergence and resolution of development-retarding social or technical components referred to as 'reverse salients'. Our case study of a food innovation ecosystem in regional Australia identifies numerous reverse salients that inhibit ecosystem reconfiguration and transition from its current state delivering high-quality agricultural produce, to a new state marked by greater output capacity and higher number of value-added offerings. We categorise these reverse salients as 'actors', 'connections' between actors, and 'resources' flowing between actors. While these categories align with the ecosystem-as-structure perspective, our findings additionally underscore the role of ecosystem 'leadership' and 'rules of engagement' within the ecosystem as further sources of reverse salience. We subsequently present a conceptual model that integrates our study findings along with a set of propositions to guide future empirical research.

TIM: **Bounded to the Buy Box: Entrepreneurial Strategies and Power within Platform-based Ecosystems**

Author: **Anna Elise Roberts**, *School of Management, U. of Bath*

Contemporary entrepreneurs operate in a consumer culture mediated by a growing number of platform ecosystems. Furthermore, platform survival is dependent upon attracting such entrepreneurial complementors to their ecosystems. Yet, scholars are only recently beginning to grapple with the fundamental differences between traditional and platform-dependent entrepreneurship, particularly the fundamental power asymmetry between platform owners and platform dependent entrepreneurs. To explore power within platform ecosystems, I conducted a field-level ethnography of Amazon seller conferences, complemented by "zooming into" interview and archival data of platform-dependent entrepreneurs. Qualitative analysis revealed ambiguous understandings by all ecosystem members about the domains of actions and interests between the seller, Amazon as the platform owner, and other members of the ecosystems, such as third-party Amazon couriers and overseas manufacturers who often operate on other platforms such as Alibaba. Seller strategies for coping with the ambiguity required manipulation of the boundaries of the platform ecosystem to create a domain for action and shared interest. This research is particularly relevant because the impact of entrepreneurial firms' embeddedness in platform ecosystems is largely unknown from a sociological perspective.

Innovation and Entrepreneurship Track: Corporate Entrepreneurship and Growth

Session Moderator: **Jukyeong Han**, *U. of Kansas*

TIM: Growth Dilemma: When Should Startups Pursue Rapid Growth?

Author: **Jukyeong Han**, *U. of Kansas*
Author: **Minyoung Kim**, *U. of Kansas*

Startups face growth dilemma: rapid growth helps startups to gain visibility and legitimacy, while it can also force them to face diseconomies of time compression. We maintain that the nature of the macro-level temporal forces or the speed of time in industries constitutes an important contingency to reconcile the dilemma of startup rapid growth. Results of empirical analysis using 537 US-based startups corroborate the main thesis of this study that startups pursuing rapid growth are more likely to succeed in high-velocity industries, while the opposite is true for startups operating in low-velocity industries.

TIM: Internal Corporate Venturing - A Systematic Review and Theoretical Framework of Salient Dimensions

Author: **Mert Merde**, *Rennes School of Business*
Author: **Hamid Mazloomi Khamsheh**, *Rennes School of Business*
Author: **Dirk Schneckenberg**, *Rennes School of Business*
Author: **Gerald Retali**, *Rennes School of Business*

Internal corporate venturing (ICV), an essential form of corporate entrepreneurship, has recently gained scholarly attention. While strategy and innovation research extensively covered corporate diversification and entrepreneurship, few studies address the main dimensions of ICV. To address this gap in the literature, we systematically review ICV top journal articles from 1977 to 2020 to explore the past, present, and future research avenues by investigating two complementary questions: How has ICV literature evolved throughout the years, and which predominant themes does it comprise? Our systematic review surfaces two main findings. First, we summarize the various ICV definitions and their evolution over time. Second, we organize three dominant themes of ICV strategy, organization, and process in a theoretical framework.

TIM: Entrepreneurial Renewal through Corporate Moonshot Design and Acceleration

Author: **Cristobal Garcia Herrera**, *Imperial College Business School*
Author: **Nicolas Rebolledo-Bustamante**, *Royal College of Arts, London*

Using an action-research case study of a prominent telecom incumbent that established a moonshot factory, whose one of three missions was to explore distant and uncertain transformational bets to re-think digitally-enabled massive mental healthcare provision, we uncover and address the epistemological limitations of the lean startup heuristic in addressing such 'wicked problems' and related bets, involving heterogeneous, multiple stakeholders, operating at different time scales. We derived a novel epistemologically grounded and design-led framework for entrepreneurial renewal through corporate moonshot design and acceleration, i.e., wicked acceleration that might be applicable in different industrial contexts. In so doing, we extend the design science-based lean startup heuristic and contribute to the streams on design and entrepreneurship, experimentation vs. transformation, and corporate innovation acceleration to address wicked challenges.

Open Innovation Track: Understanding Organizational Openness

Session Moderator: **Milena Leybold**, *U. of Innsbruck*

TIM: Organizing Openness in (Response to) Grand Challenges: The Case of the Medicines Patent Pool     

Author: **Milena Leybold**, *U. of Innsbruck*

Author: **Leonhard Dobusch**, *U. of Innsbruck*

Tackling grand challenges requires collaborative efforts among diverse actors. In the case of Covid-19, public health relies on innovative medical products that are developed by the pharmaceutical industry and accessible worldwide. Increasing organizational openness in an environment that is biased by closure poses an organizational challenge. Investigating the case of the Medicines Patent Pool (MPP), we explore how organizations constitute openness collaboratively. Analyzing decision-making processes within the collaborative architecture of the MPP, we show how organizations create a system to increase organizational openness to address issues of broad societal importance.

TIM: The tensions between Openness Dimensions in Explaining Innovation Performance

Author: **Stefano Li Pira**, *Warwick Business School*

Author: **Anna Cabigiosu**, *Cà Foscari U.*

Author: **Diego Campagnolo**, *U. of Padova*

While there is growing importance attributed to open innovation collaborations, the existing framework does not provide clear directions on how firms should distribute their attention to the depth and breadth of their external search strategy. To navigate this tension, we extend the open innovation framework to explore how the value of external search depth on customers for the firm innovation performance may be contingent on two key factors that generate relational and informational benefits: how firms coordinate their activities with clients and the external search breadth of their open innovation strategies. In a sample of Italian firms operating in knowledge-intensive business sectors (N = 358), the study shows that excessive involvement of clients can weaken the benefit of the external search depth yielding an inverted U-shaped relationship with innovation performance, but also that coordination mechanisms and the breadth of the external search strategy can, both separately and jointly, provide informational and relational opportunities that might help to deal with an excessive reliance on customers. This article proposes a novel perspective on open innovation that, exploring the tension between integration with a single source and differentiation with a variety of sources, suggests how firms can leverage multiple types of external collaborations, combining the depth and breadth components of the openness in their external search strategies, and situating them in an integrated relationship with customers.

Paper is Available to Meeting Registrants Only.

TIM: The Timing to Go Open: Evidence from Startups' Open Source Innovation Activities before Acquisition

Author: **Yuping Li**, *U. of Colorado, Boulder*

Prior studies on firms' motivation to participate in open innovation have primarily paid attention to established firms, this study complements prior studies by investigating when startups will be motivated to go open. We propose that selecting the correct timing to go open is critical in startups' open innovation strategy, as it shapes both the costs and benefits of going open. Leveraging IT startups' participation in the open source collaboration platform GitHub in their pre-acquisition period as our empirical context, we show that startups first increase and then decrease their technology disclosure and collaborations on GitHub in the pre-acquisition period, and such changes are moderated by both the complexity and novelty of the technological knowledge.

Technology and Competitive Strategy Track: Patents and R&D Strategy

Session Moderator: **Christian Sternitzke**, *Sternitzke Ventures*

TIM: **Unclear Patent Boundaries and Patent Infringement**

Author: **Christian Sternitzke**, *Sternitzke Ventures*
Author: **Sascha G. Walter**, *U. Wuerzburg*

Legal scholars have long speculated that unclear boundaries of patents lead to patent infringement. However, the debate in economics on improving patent quality has mostly ignored this. This study is one of the first to explore how claim clarity, per se and together with claim limitations (a driver of patent scope), affect the likelihood of patent litigation and of winning a litigation lawsuit. Our findings suggest that clearer patents are litigated significantly less, in particular if they are narrow in scope, and that claim clarity increases the chances of winning in court.

Paper is Available to Meeting Registrants Only.

TIM: **Continuation Patents and Litigation**

Author: **Cesare Righi**, *U. Pompeu Fabra*

Continuations allow patentees in the United States to modify the scope of previous patents, leading to concerns about patent disputes generated by changes in patent boundaries. I show that continuations are litigated more often than original patents, even after controlling for patent and invention characteristics. I also exploit the pre-grant publication of patent applications and the timing of continuation grant to show that continuation grant increases litigation. The effect is stronger when the textual distance between the claims of a continuation and those of its original patent is greater, suggesting larger changes in scope lead to more disputes.

TIM: **Intellectual Property Rights Enforcement and Firm Performance of International New Ventures in China**

Author: **Liangxing Shi**, *Tianjin U.*
Author: **Yuemei Ren**, *Tianjin U.*
Author: **Feng Guo**, *Tianjin U.*

How does intellectual property rights (IPR) enforcement influence innovation and performance of international new ventures (INVs)? According to the literature on IPR enforcement, innovation, and internationalization, we predict that IPR enforcement directly and indirectly (via innovation speed and innovation quality) impacts firm performance of INVs, and international intensity (INT) moderates the indirect effects. Based on both primary data and secondary data, the empirical results indicate that IPR enforcement promotes firm performance. In addition, innovation speed and innovation quality partially mediate the relationship between IPR enforcement and firm performance. Moreover, the relationship between IPR enforcement and innovation quality is weakened with high levels of INT. Theoretical contributions, practical implications, limitations, and future research avenues are discussed.

Paper is Available to Meeting Registrants Only.

TIM: **Measuring the Value of Patents Where it Matters Most**

Author: **Giacomo Marchesini**, *IESE Business School*
Author: **Giovanni Valentini**, *IESE Business School*

The ability to measure patent quality is essential to evidence-based innovation strategy and public policy, to contrast costs with benefits. Traditionally, a patent's quality has been proxied by the number of its forward citations. More recently, Kogan et al. (2017) proposed a more direct (and immediately available) measure of patent quality based on stock-market reactions. In this paper, we show that forward citations and Kogan et al. (2017) measure, while being largely correlated around the median as assumed by prior literature, are only marginally overlapping around the tails of the distribution, i.e. for breakthroughs and for failures. Arguably, these are the most interesting outcomes for organizational scholars. We then theorize regarding the potential origin of this lack of overlap at the extremes of the two distributions, and find evidence consistent with the idea that this divergence is not driven by a misvaluation from the financial market, but rather from the fact that forward citations and market-based measures of patent value proxy for different and complementary dimensions of patent value. Our results present important implications for the literature. Specifically, we show that a firm could rarely develop an innovation that is highly impactful from both an economic and a technological perspective. Managers and public policy makers need to recognize and acknowledge an inherent trade-off between the private and the public benefits of innovation. What improves the chances of reaching an innovation breakthrough in terms of economic value can also hamper the likelihood of reaching highly relevant technological and scientific advancements.

Paper is Available to Meeting Registrants Only.

Author: **Maria Kurakina**, *U. of Utah, David Eccles School of Business*

Strategic patents have been defined as patents whose sole objective is neither to foster technological innovation and protect said innovation from imitation, but to block competitors from innovating in the same technological area. In this paper we provide empirical evidence on a negative impact of strategic patenting on a firm's competitors. Consistent with theoretical implications of strategic patenting, we find that when firms strategically patent to defend their market position, overall market competition declines, as shown by the increase in HHI and significant drop in market entry. Additionally, we observe that strategic patenting reduces total factor productivity and patenting activity of firm competitors, especially in more technological and product-similar cases. Our results thus confirm that strategic patenting helps protect a firm's market niche by preventing competitors' entry. These findings in turn lend further support to the theories regarding a generalized impact of strategic patenting on competition.

People and Innovation Track: Institutions, Markets and Innovation

Session Moderator: **Sarah Cheah**, *National U. of Singapore*

TIM: Translating New Scientific Knowledge from Public Research Institutes into Innovation

Author: **Sarah Cheah**, *National U. of Singapore*
Author: **Yuen-Ping Ho**, *National U. of Singapore*
Author: **Shiyu Li**, *National U. of Singapore*

Both Open Science (OS) and Open Innovation (OI) espouse broad participation and effective collaboration in the process of converting new scientific knowledge into innovation. Despite their growing importance in enhancing the societal impact of science and innovation, the extant literature on their collaborative processes in science remains fragmented. This study therefore aims to examine the characteristics of these processes in the context of collaboration between public research institutes (PRI) and firms that seek to commercialise the former's new scientific knowledge. Based on an empirical study of 153 PRI-firm knowledge and technology transfer collaboration through IP licensing in Singapore, we establish a firm's prior licensing experience is negatively related to its innovation outcome. Our findings demonstrate that among firms with high levels of prior licensing experience, those having high levels of reliance on basic R&D and commercial officer resource from PRIs are more likely to report high levels of innovation outcome.

TIM: The Process Mechanism and Effectiveness of the Indigenous Innovation Policy in China

Author: **Si Zhang**, *Associate Professor, U. of Chinese Academy of Sciences*
Author: **Yang Peipei**, *U. of Chinese Academy of Sciences*
Author: **Xielin Liu**, *Chinese Academy of Sciences*

On the way of China striving to become an innovative country, the National Middle and Long-Term Plan for Science and Technology Development 2006-2020 (MLP) released in 2006, in which "indigenous innovation" initiative was promulgated, is recognized as the most influential policy that contributes substantially. However, there is no consensus as to whether the institution is the root cause of technological and economic growth. A top-down strategy such as the MLP for a spontaneous indigenity is inundated with discrepancy, the mechanism of which is unclear to policy-makers and puzzles researchers. Based on an integrated perspective of institutional logics and agency theory, we develop a framework to elucidate the conduction process of the indigenous innovation initiative and the intrinsic mechanism where policy interacts with organizational strategies and individual interests within its bounded actors. By combing primary data that was collected during the past 15 years with secondary data, case analysis and patent analysis are performed, the results of which capture the chain of changes provoked by the transmission, interpretation, distortion, and adaptation to the policy during their responses to multiple institutional logics and agency issues.

TIM: Mapping Markush

Author: **Stefan Wagner**, *ESMT Berlin*
Author: **Christian Sternitzke**, *Sternitzke Ventures*
Author: **Sascha G. Walter**, *U. Wuerzburg*

Markush structures are molecular skeletons containing not only specific atoms but also placeholders to represent broad sets of chemical (sub)structures. They allow a vast number of compounds (e.g., 10^{16} different compounds within patent EP 0810 209) to be claimed in a patent application without having to specify every single chemical entity. While Markush structures raise important questions regarding the functioning of the patent system, innovation researchers have been surprisingly silent on the topic. This paper summarizes the ongoing policy debate about Markush structures and provides first empirical insights into how Markush structures are used in patent documents in the pharmaceutical industry and how they affect important outcomes in the patent prosecution process. While not causing frictions in the patent prosecution process, patent documents containing Markush structures have an increased likelihood to restrict the patentability of follow-on inventions and to hamper the entry of generic competition in the product market.

TIM: Leading in Experimental Markets: Market and Institutional Infrastructure in the UAV Industry

Author: **Dian Yu**, *Engineering & Public Policy (EPP), Carnegie Mellon U.*

We study the infrastructure that can help explain the emergence of experimental markets (e.g., markets with both unclear institutional and technological trajectories). China's rise as the commercial drone industry leader is an indicative example of such a market. We find that market-input infrastructure that clarifies know-how needed for inputs has a greater association with upstream founding (component firms). Market-output infrastructure that clarifies market fit for resulting products has a greater association with downstream founding (end product firms). These effects are substitutive; local governments focus only on one of these forms of market infrastructure to reduce the risks involved in such experimentation and to reduce competition with other cities. Finally, the institutional infrastructure that clarifies the rules increase founding, especially in cities with more market infrastructure.

Paper is Available to Meeting Registrants Only.

Author: **Gaurav Dilip Tikas**, *Institute of Management Technology Ghaziabad, India*

Abstract Academic research-driven organizations (ARO) are increasingly building capabilities for advanced research, innovation, commercialization and entrepreneurship, with a vision to translate their scientific findings into 'societal impact'. Such organizational capabilities can help them in consistently transforming their scientific knowledge into innovations which can be translated from academic labs to industrial markets. However, their definition, composition and the process to build such organizational capabilities appears to be nebulous at multiple levels within organizational settings. To overcome these shortcomings, we attempt to develop a theoretically-grounded multilevel framework to measure, compare or predict 'academic research translation capability' of academic research-driven organizations. Our framework consists of five independent constructs, two mediating constructs and one dependent construct along with relevant theoretical evidences. Empirical validation of this multilevel framework can help academicians as well as practitioners in identifying those antecedents which tend to significantly influence academic research translation capability (ARTC). Top Management Teams (TMTs) can use this framework for developing strategies to improve their innovation performance.

AI and Emerging Technologies Track: Web 3.0

Session Moderator: **Esko Hakanen**, *Aalto U.*

TIM: Forming Digital Commons: The Role of Signaling and Sociology of Translation in Decentralized Systems 

Author: **Esko Hakanen**, *Aalto U.*

Author: **Ville Eloranta**, *Aalto U. School of Business*

Author: **Claire Shaw**, *Aalto U. School of Business*

Decentralization technologies, such as those based on blockchain technology, provide exciting possibilities to coordinate cooperative actions and contributions of multiple, independent actors, and facilitate the emergence of digital commons. This new organizational form faces unique challenges in the formation of trust and a shared identity, as digital commons are largely asocial ecosystems. We draw on signaling theory and sociology of translation to explain how narratives and protocols are formed in decentralized communities. We illustrate our main arguments by presenting the case of Tracey, a blockchain-based application for incentivizing sustainable tuna fishing and trade in the Philippines. We articulate how digital storytelling, as a mechanism of translation, supports in setting a preliminary shared set of protocols and identity for the digital commons. We explain why signals between the members further amplify and evolve the identity of the digital commons. Our conceptual paper contributes to discussions on decentralized technologies, digital commons, and ecosystem research.

TIM: Theoretical Considerations Concerning the Adoption of Blockchain as a Competitive Strategy

Author: **Mark Ronald Grambo**, *UNC Greensboro*

With an increasing focus on blockchain technology, this paper synthesizes competitive dynamics and the resource-based view of the firm to consider the impacts of blockchain technology on strategic decision-making. This paper offers an expanded and reconceptualized version of the AMC framework to propel both management considerations for and academic research on blockchain. Additionally, the paper considers potential drivers and barriers to blockchain technology adoption and usage. It presents three propositions detailing how a combination of a firm's specific internal resources and external competitive environment influences strategic managerial decision-making surrounding blockchain.

TIM: Can Blockchain based Supply Chain Create a Stock Market Reaction? Evidence from an Event Study  

Author: **Alyaa Saleh**, *The American U. in Cairo*

Author: **Sherwat Elwan Ibrahim**, *American U. in Cairo*

Author: **Chunguang Bai**, *U. of Electronic Science and Technology of China*

Author: **Joseph Sarkis**, *Worcester Polytechnic Institute*

This study investigates Blockchain based Supply chain (BC-SC) announcements impact on the stock market. Using a sample of 104 announcements between 2016 and 2021, we conduct an international event study to determine the market reaction. We find that an overall positive market reaction of 1.45% to all BC-SC announcements on the announcement day. In addition, we find that the stock market reaction slightly differs when different SC challenges are targeted by the announcing firm. When blockchain is used for traceability purposes, the market response is less positive when compared to other SC challenges like resolving disputes, maintaining cargo integrity and data security. We further find that firms that are part of BC industrial collaborations experience a more positive stock market response, when compared to firms using private or public BC networks. When looking into firm characteristics, we find that innovative firms experience greater positive reaction to BC-SC announcements. Interestingly, we find that smaller firms do not experience a strong positive market response. Leveraging the diverse industries in our sample, we investigated the effect of early adoption of BC-SC with respect to the industry. The late BC-SC adoption in the manufacturing sector only received a significantly positive market reaction. Overall, it seems that the market views many BC initiatives as adding to the competitiveness and long-term profitability of organizations. It also shows that BC, as a multi-stakeholder technology should be evaluated from both a strategic and operational perspective. Other implications and research directions are also identified; especially given the limitations of the study and the relatively early BC-SC supply chain developments.

TIM: Transaction Costs, Institutions and Blockchain Technology: Toward A New Paradigm

Author: **Rui Torres de Oliveira**, *Queensland U. of Technology*

Author: **Daniel Rottig**, *Florida Gulf Coast U.*

Author: **Marta Indulska**, *U. of Queensland*

Blockchain technology has the potential to disrupt many of the assumptions that we currently hold about market transactions, the role of institutions and the nature of the firm. As a result of this new technology, market transactions may be conducted between decentralized, autonomous economic actors at much lower costs, with less uncertainty, and without central control by governments in the form of formal institutions. The latter aligns with the vision of Adam Smith two and a half centuries ago (Smith, 1776 [1976]) and so, possibly for the first time, markets could become true price-driven exchanges between suppliers and consumers. Blockchain technology also challenges the key assumptions underpinning the existence of the firm (Coase, 1937) as it has the potential to reduce the cost of search, contracting, coordination and the establishment of trust. When realized, this potential may lead to the emergence of new ways to organize economic activities. Accordingly, blockchain technology may be the next wave of disruption for intermediated transactions in many contexts, by reducing and possibly eliminating the need for market agents. Due to its relative novelty, however, discussions about blockchain technology have so far predominately centered on technical aspects and its first application - the cryptocurrency bitcoin. This paper attempts to elevate the discussion beyond those confines and into the realm of organization and management theory by exploring how the diffusion and application of blockchain technology may advance well-established theories, namely transaction cost economics, agency theory, and institutional theory.

Technology, Policy and Society Track: Stakeholder Governance and Regulation

Session Moderator: **KwangWook Gang**, *Salisbury U.*

TIM: Corporate Governance Reforms, Ownerships and Innovation Strategies  

Author: **KwangWook Gang**, *Salisbury U.*

Author: **Jihyun Eun**, *Salisbury U.*

Author: **Byungchul Choi**, *Hankuk U. of Foreign Studies*

Institutional changes such as market reforms transform concentrated governance structures, which prevail in emerging economies, to distributed governance structures, which are popular in developed economies. Within this context of transition, this study investigates how different types of ownership structures motivate distinctive technological capabilities and how increased ownership competition resulting from institutional changes influence firm performance. Our findings suggest that CEO, affiliated, and foreign types of ownership are negatively associated with technological exploration (i.e., positively associated with technological exploitation), whereas domestic institutional and individual ownership is positively associated with technological exploration (i.e., negatively associated with technological exploitation). Furthermore, we find that ownership competition has a U-shaped relationship with firm performance, showing that firm performance immediately decreases as more shareholders become involved because of potential goal conflicts. However, firm performance will eventually improve as the mechanism of checks and balances between major shareholders begins to work.

 **TIM: How does Regulatory Uncertainty Shape the Innovation Process? Evidence from the Case of Nanomedicine**

Author: **Seokbeom Kwon**, *Sungkyunkwan U.*

Author: **Jan Youtie**, -

Author: **Alan Porter**, *Georgia Institute of Technology*

Author: **Nils Newman**, *Search Technology Inc*

This study investigates the effect of regulatory uncertainty on the translation of scientific discovery on emerging research topics to technical applications in science-driven industry. Our empirical analysis using the case of the US Federal Drug and Food Administration's release of the report on the regulatory approach to nanomedicine in 2007 shows that; (1) the regulatory uncertainty decelerated the translation of nanomedicine research to technical applications, (2) this effect was particular for the nanomedicine research on emerging topics in the field. Our further analysis suggested that the effect of the regulatory uncertainty originated from the suppressed business activities in the field where the regulatory uncertainty presents. Contributions to the literature on the relationship between governmental regulation and innovation and the implication for science policymakers are discussed.

Paper is Available to Meeting Registrants Only.

TIM: Cooperating with the Opposition: The Influence of Skeptical Stakeholders on Urban Innovation Success   

Author: **Julia Kroh**, *Kiel U.*

Author: **Carsten Schultz**, *Kiel U.*

Cities are high consumers of energy and therefore, there is a need for innovations to develop sustainable cities. However, the development and implementation of such urban innovations require knowledge, behavioral changes, and resources from public and private stakeholders. As a result, stakeholder skepticism may influence urban innovations' success that is defined as high levels of innovativeness and implementation. The goal of this research is to analyze the under-researched influence of skeptical stakeholder involvement on the innovation success, and to show whether established stakeholder management capabilities are valid for skeptical stakeholder management. The results of this study rely on a unique combination of text mining, text analysis, and survey data drawn from 107 publicly funded, urban innovation projects in Germany and show that (i) skeptical stakeholder involvement positively influences innovativeness and implementation intention and that (ii) moderate levels of formal management and a rich resource base ease skeptical stakeholder involvement.

Paper is Available to Meeting Registrants Only.

TIM: Innovation, Institutional Development, and Insider Trading

Author: **Katrin Hussinger**, *U. of Luxembourg*

Author: **Lorenzo Palladini**, *U. of Luxembourg*

A positive stock market valuation of a firm's innovative assets grants the firm credibility as an innovator, facilitates the financing of future R&D, and is, therefore, an important step towards a firm's ability to create and sustain a competitive advantage. Using a dataset of publicly listed firms in China, we show that in weak institutional environments, characterized by weak property rights protection, insufficient law enforcement, and inefficient information disclosure and capital allocation, innovative assets face a lower market valuation. We, further, show that insider trading acts as a signal for the value of innovative assets. Insider trading mitigates the stronger information asymmetries in lesser developed institutional contexts and increases the stock market valuation of innovative assets.

Panelist: **Michael L. Tushman**, *Harvard U.*

Existing research has explored the profound impact technologies may have on individuals, organizations, and industries. Recently, scholars have emphasized that multiple groups of actors—many with varying perspectives—participate in the field surrounding a new technology. The existence of different perspectives on the technology influences outcomes for the technology and the involved individuals, organizations, and industries. As the actors that participate in technological fields often reside within different organizations, it becomes important to explore how technologies are used and understood across organizational boundaries. Therefore, we seek to facilitate a conversation around how organizational members and market participants understand and use technologies across organizational boundaries. This perspective across boundaries helps scholars to consider the broad implications of new technologies which span boundaries more frequently, such as digital technologies that gather data across organizations and individuals. In this panel symposium, we bring together experts in technology to facilitate discussions on the impact of technologies across boundaries.

**Innovation Processes Track: The Ambiguity of Failure: How
Innovation Failure Affects New Industry Emergence**
Innovation Failure and New Industry Emergence

Organizer: **Hee Yeul (Tom) Kwon**, *U. of Southern California*
Organizer: **Violina Rindova**, *U. of Southern California*
Panelist: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*
Panelist: **Nathan Furr**, *INSEAD*
Panelist: **David A. Kirsch**, *U. of Maryland*
Panelist: **Mahka Moeen**, *U. of North Carolina, Chapel Hill*
Panelist: **Tiona Zuzul**, *Harvard Business School*

Failure plays an undeniable role in shaping firms' innovation trajectories and the evolution of industries. Its impact is even more pronounced in the early period of industry emergence when new entrants and stakeholders experience extreme multidimensional uncertainty and ambiguity (Moeen, Agarwal, and Shah, 2020; Zuzul and Tripsas, 2020). This panel symposium aims to expand the theoretical conversation around the role of failure in new industry emergence. To this end, we have convened a panel of leading scholars in the field of new industry emergence to explore a set of directions for future research on the intersection between failures and new industry emergence based on various theoretical lenses, including technology management, entrepreneurship, learning and knowledge development, and entrepreneurial identity and cognition. It is intended to generate valuable discussions by highlighting a) the definition of failure at different levels of analysis, b) the ambiguity associated with the causes and consequences of failures, and c) temporal aspects of failures in industry emergence. Addressing these themes will fuel future inquiry into the role of failure in developing new technologies and creating new industries.

FDI in Emerging Markets

Session Moderator: **Keld Laursen**, *Copenhagen Business School - Department of Strategy and Innovation*

IM: **Increased Competitors' Presence and Speed of Abandoning Large-scale Investments in Emerging Markets**

Author: **Keld Laursen**, *Copenhagen Business School - Department of Strategy and Innovation*

Author: **Ram Mudambi**, *Temple U.*

Author: **Larissa Rabbiosi**, *Copenhagen Business School*

Taking the competitive dynamics approach, we study firms' exit in response to the threat of entry or expansion in the presence of sunk costs. We define firms' exit when firms abandon ongoing major investment projects. Due to their more limited access to financial, brand-related, technological and managerial resources, we argue that domestic firms are weaker than are foreign firms when facing increased presence by competitors. Specifically, domestic firms will exit faster when facing threats of increased presence by both domestic and foreign firms, while foreign firms only exit faster when facing increased presence by other foreign firms. However, due to the liability of foreignness the increased presence by foreign firms is more likely to lead to faster exit for both foreign and domestic firms when it happens as an extension of existing production capacity as compared to de novo entry. Finally, due to labor market dynamics, we posit that investments by foreign rivals within the same geographical cluster matters only for the speed of exit of domestic firms, not for the time to exit of foreign firms. Using survival model on a panel dataset of 3,325 investments in India from 1995 to 2015, we find overall support for our expectations.

IM: **Intellectual Property Court and Firm Innovation in China**

Author: **Aurora Genin**, *Indiana U. - Kelley School of Business*

Author: **Wenting Ma**, *U. of Massachusetts, Amherst*

Author: **Huijuan Cao**, *Hong Kong Polytechnic U.*

Author: **Xiaoning Song**, *Business School, Sun Yat-Sen U.*

As a notable reform of the intellectual property (IP) system in China, specialized IP courts enforce independent jurisdiction from local administration. We posit that IP court establishment fosters firm innovation by reducing judicial protectionism for misappropriation, which local governments may implicitly sanction. Using a natural experiment of the Guangzhou IP court that affects municipalities in Guangdong except Shenzhen, we find significant increases in firm R&D intensity and patent filing in response to IP court establishment, especially in municipalities with high ex ante judicial protectionism. Consistently, we find stronger innovation responses from firms with greater prior dependence on judicial protectionism—namely, state-owned firms (compared to private-owned firms) and non-high-tech firms (compared to high-tech firms).

IM: **Corporate Investment in the Context of Rising Populism: Domestic Firms, MNEs and Emerging Markets**

Author: **Alfonso Carballo-Perez**, *Bocconi U.*

Author: **Margherita Corina**, *Department of Management and Technology, Bocconi U.*

This paper analyzes the impact of growing populism on national and multinational investments. Combining insights from international business and political science, various hypotheses are developed about how a populist government and firm's geographic scope shapes corporate investment decisions. By testing these hypotheses on a global dataset of firms from 1994 to 2020, we show that firms in populist countries reduce investment more than those in non-populist countries. However, our findings highlight that the type of populism matters, as left-wing populism amplifies this negative effect on investment compared to right-wing populism. Furthermore, the effect of populism on business investment is exacerbated in emerging markets compared to developed economies. Finally, the investment activity of multinationals is less sensitive to the presence of populism in their own country than domestic firm's investment. However, multinationals withdraw their investments when a populist government arrives in the host country. This paper, in addition to considering institutional frameworks in the study of political uncertainty and firm's investments, also recognizes the ability of actors to exacerbate uncertainty by generating institutional volatility. Overall, our results provide new evidence in the literature on the influence of populism on corporate investment activities.

Pride, Meaning, and Resilience

Session Moderator: **Michael Darin McDaniel**, *Louisiana State U. Shreveport*

OB: **Measuring Resilience in Organizations: The Employee Resilience Scale**

Author: **Elisa Fattoracci**, *Rice U.*
Author: **Danielle D. King**, *Rice U.*
Author: **Shannon Cheng**, *Rice U.*
Author: **Frederick L. Oswald**, *Rice U.*

Resilience, or the ability to “bounce back” after adversity (King, 2016; Vogus & Sutcliffe, 2007), has become an important and popular topic to organizational researchers and practitioners alike. However, resilience research in the organizational sciences is still nascent, benefitting from questioning its foundations further. Specifically, multiple definitions of resilience have resulted in countless scales, to the detriment of developing a consistent body of research in this increasingly necessary area of study. Addressing these limitations, the current project describes the conceptual and psychometric development of the Employment Resilience Scale (ERS). Subject Matter Experts (N = 21) provided feedback on an initial pool of items, which were then pilot-tested on a subset of working adults (N = 29). In the final stage of this project, to be completed by June 2022, a large sample of working adults (N = 1,000) will be recruited via Prolific to assess and refine the psychometric properties of the scale via EFA (N = 500) and CFA (N = 500). Through the improved multidimensional assessment of resilience via the ERS, researchers and practitioners alike will contribute to the AOM theme to “create a better world together” by enhancing employee resilience.

OB: **The Power of Purpose: How Perceptions of Purpose Influence Individual Outcomes**

Author: **Michael Darin McDaniel**, *Louisiana State U. Shreveport*
Author: **Doug Grisaffe**, *U. of Texas At Arlington*
Author: **Jeffrey E McGee**, *U. of Texas At Arlington*

Aligning human and financial resources to a compelling purpose can produce benefits for organizations and society. Thus, increased attention in the popular business press has focused on becoming a “purpose-driven” organization. Yet surprisingly, there is a notable absence of academic research on organizational purpose. We begin to address this gap by presenting the results of three studies focusing specifically on micro employee-level perceptions of organizational purpose. The first study improves upon previously unvalidated approaches to employee-level measurement of purpose. The second study demonstrates how corporate social responsibility (CSR) efforts influence purpose, making organizations more attractive to prospective employees. In the third study, we test a moderated mediation model with existing employees, emphasizing controllable ways organizations can instill purpose and demonstrating meaningful influences on individual outcomes. Using cross-sectional, experimental, and longitudinal methodologies, we establish organizational purpose as a central mediating construct through which antecedent forces like CSR and transformational leadership translate into positive employee outcomes, including organizational attractiveness, commitment, and decreased turnover intentions. We make several contributions to the organizational behavior and leadership literatures, advancing an emergent empirical focus on the power of purpose in organizations.

OB: **Using Machine Learning to Advance Theory: Pride in Work as a Novel Antecedent of Job Satisfaction**

Author: **Abhishek Sheetal**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Yi Huang**, *Nanyang Technological U.*
Author: **Krishna Savani**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Management researchers typically identify new constructs by analyzing existing theories, generalizing from observations, and making connections with neighboring social sciences. We propose that machine learning methods can serve as yet another tool for generating novel hypotheses. We used lasso regression and deep learning to identify potential antecedents of job satisfaction in the World Values Survey. Both models identified pride in work as the top predictor. A literature review revealed that no management research to date has conceptualized pride in work as a construct. A three-wave survey found that pride in work predicted job satisfaction above and beyond meaning in work, a long-known predictor, and pride experienced at work. Further, the effects of skill variety, task identity, and task significance on job satisfaction were simultaneously mediated by pride in work and meaning in work. The findings suggest that pride in work is a missing construct in the literature, both as an antecedent of job satisfaction and as a mechanism through which core job characteristics influences job satisfaction. This research thus demonstrates that machine learning methods can be used to identify novel constructs and to extend theory in the organizational sciences.

OB: **Meaningful Work: A Review, Synthesis and Research Agenda**

Author: **Moumita Roy**, *XLRI-Xavier School of Management*
Author: **Rahul Chandra Sheel**, *XLRI-Xavier School of Management*

Changes in work and workplaces in a pandemic-stricken world, has increased the importance of finding meaningfulness in work and changed the understanding of what is meaningful. Although prior literature has focused on conceptual and empirical foundations of meaningful work, they did not seem to have given adequate effort towards a cohesive understanding of meaningful work. This paper consolidates the literature on meaningful work by providing a comprehensive review of its definitions, antecedents, and consequences. We review more than sixty definitions of meaningful work and offer ten specific approaches, that is further categorized under three broad operationalization of the concept. Next, we review the antecedents and outcomes that have been widely studied in the literature. We conclude by proposing an agenda for future research by offering five specific potential areas followed by theoretical contribution, that is likely to extend our understanding of meaningful work to create a better world together.

Macro-level changes such as globalization and outsourcing have motivated employers to search for more flexibility in their relationships with employees, increasing the prevalence of nonstandard, low-wage, or precarious employment (Kalleberg, 2009). It is now more crucial than ever that organizations and society understand how socioeconomic disadvantage influences the way workers think and behave. Research suggests that socioeconomic disadvantages such as low-income levels, low socioeconomic status, and precarious work arrangements can affect workers' perceptions, motivation, and behavioral patterns in ways that decrease others' judgment of their performance and promotability, further exacerbating pre-existing inequalities (e.g., Meuris & Leana, 2015; Pitesa & Pillutla, 2019; Wang & Ford, 2020). More notable is that inequality associated with one's socioeconomic status is often invisible to others at work (Bapuji et al., 2020), and both theory and practices targeting socioeconomically disadvantaged workers have been understudied and delayed. The invisibility of socioeconomic status may also lead some to neglect the situational burdens on workers, resulting in their disadvantageous outcomes and reinforcing the inequality stratified by workers' socioeconomic disadvantages. This symposium aims to make such invisible inequalities more visible, with particular attention to how socioeconomic disadvantages affect the ways workers think and act. To this end, three research papers are assembled, each illuminating the effect of socioeconomic environment on individuals' perceptions, judgment, personality, and behavioral patterns. Findings from these studies altogether shed important light on the mechanisms that maintain and reinforce workplace inequality and act as invisible barriers to workplace inclusion.

Then and Now: Psychological Contracts *Then and Now: Psychological Contracts*

Distinguished Speaker: **Denise M. Rousseau**, *Carnegie Mellon U.*
Panelist: **Violet Ho**, *U. of Richmond*
Panelist: **Samantha D. Hansen**, *U. of Toronto*
Session Chair: **Craig D. Crossley**, *U. of Central Florida*
Session Chair: **Robert C. Ford**, *UCF & Roy E. Crummer School of Business, Rollins College*

Over the years, the management field has had many important contributors to its theoretical development and practical application of major concepts. As a relatively young academic discipline, we are fortunate to have access to many of the pioneers responsible for its foundation, history, and evolution. The “Then and Now” program actively involves these people and provides a forum to engage with those who are following in their footsteps. “Then and Now” is an annual symposium that appeals to new and seasoned scholars across the Academy. Prior sessions have centered on goal setting (Locke, Latham & Piccolo, 2011), expectancy theory (Vroom & Ellingson, 2012), leadership (Schriesheim, Gardner & Antonakis, 2013), positive OB (Luthans, Welsh & Peterson, 2014) organizational justice (Folger, Bies & Rodell, 2015), trust (Sitkin, Gillespie & de Jong, 2016), turnover (Lee, Kraimer & Halvorsen, 2017), job design (Oldham, Kulik, Wrzesniewski & Baer, 2018), and entrepreneurial orientation (Miller, Lumpkin, Wiklund & Wales, 2019). This year’s session focuses on Psychological Contracts. The symposium will begin with Denise Rousseau describing how she became interested in this topic, who collaborated/supports her, and how this construct developed. Dr. Ho will talk about her research on psychological contracts, and how it spans generations and extends ideas. The “Now” panelist Dr. Hansen will describe how her recent research on psychological contracts has evolved from the original body of work, and where it is likely to go next. The symposium concludes with audience discussion.

Innovating with Conversational AI Agents

Session Moderator: **Edona Elshan**, *U. of St Gallen*

CTO: Does Similarity Breed Connection? Examining the Role of Social Competencies in Conversational AI   

Author: **Shalini Chandra**, *S P Jain School of Global Management, Singapore*
Author: **Shirish C. Srivastava**, *HEC Paris*
Author: **Anuragini Shirish**, *U. Paris-Saclay, U. Evry, IMT-BS, LITEM, Evry-Courcouronnes, France*

COVID-19 pandemic has accelerated firms' interest in designing and implementing AI-based tools such as chatbots and conversational agents that allow seamless customer service without person-to-person contact. Despite its huge potential, the current uptake of conversational-AI for complex customer-service-related tasks is rather limited—primarily because organizations are unsure if the users will perceive conversational-AI tools to be of adequate quality and engage with them. Grounding our arguments in the IT mindfulness literature, we theorize the significant role of AI users' IT mindfulness in influencing their AI quality judgments. Next, situating our arguments in the I-Thou theory of communication and social competency literature, we posit that unlike the one-way instrumental use of traditional IT tools, the success of conversational-AI is dependent on users' perception of a two-way homophily. Building on this argument, we hypothesize the mediating role of social competencies of social awareness and social influence in the relationship between AI users' 'IT mindfulness' and 'AI quality judgments.' We test the theorized model through a sequential mixed-methods approach comprising a quantitative two-wave survey and qualitative interviews with a sample of conversational-AI users. Results from our study largely support the theorized model. We discuss the implications of our study for research and practice.

CTO: How Conversational Agents Relieve Teams from Innovation Blockages

Author: **Edona Elshan**, *U. of St Gallen*
Author: **Naim Zierau**, *U. of St. Gallen*
Author: **Andreas Janson**, *U. of St. Gallen*
Author: **Jan Marco Leimeister**, *U. of St. Gallen and U. of Kassel*

Innovation is one of the most important antecedents of a company's competitive advantage and long-term survival. Prior research has alluded to teamwork being a primary driver of a firm's innovation capacity. Still, many firms struggle with providing an environment that supports innovation teams in working efficiently together. Thereby, a team's failure can be attributed to several factors, such as inefficient working methods or a lack of internal communication that leads to so-called innovation blockages. There are a number of approaches that are targeted at supporting teams to overcome innovation blockages, but they mainly focus on the collaboration process and rarely consider the needs and potentials of individual team members. In this paper, we argue that Conversational Agents (CAs) can efficiently support teams in overcoming innovation blockages by enhancing collaborative work practices and, specifically, by facilitating the contribution of each individual team member. To that end, we design a CA as a team facilitator that provides nudges to reduce innovation blocking actions according to requirements we systematically derived from scientific literature and practice. Based on a rigorous evaluation, we demonstrate the potential of CAs to reduce the frequency of innovation blockages. The research implications for the development and deployment of CAs as team facilitators are explored.

CTO: Consequences of AI Agents Communicating on One's Behalf for Impression Management 

Author: **Camille Endacott**, *U. of North Carolina Charlotte*

Artificially intelligent communication technologies (AICTs) that can operate autonomously with high degrees of conversational fluency can make communication decisions on behalf of their principal users and communicate with those principals' audiences on their behalf. In this study, I explore how the involvement of AICTs in communication activities shapes how principals engage in impression management and how their communication partners form impressions of them. Through an inductive, comparative field study of users of two AI scheduling technologies, I uncover three communicative practices through which principals engaged in impression management when AICTs communicate on their behalf: interpretation, diplomacy, and staging politeness. I also uncover three processes through which communication partners formed impressions of principals when communicating with them via AICTs: confirmation, transference, and compartmentalization. I show that communication partners can transfer impressions of AICTs to principals themselves and outline the conditions under which such transference is and is not likely. I discuss the implications of these findings for the study of technological mediation of impression management in the age of artificial intelligence and present propositions to guide future empirical research.

Author: **Kristina Algas**, *UC Santa Barbara*

Social chatbots are increasingly designed to offer companionship to humans to improve their psychological well-being. Can they develop social relationships with the technology? How are people influenced by chatbots? Studies testing whether humans will adapt their communication when interacting with a chatbot have provided somewhat mixed results. Applying Communication Accommodation Theory (CAT), this study takes a longitudinal, quantitative approach to answer these questions. It employs natural language processing (NLP) techniques to compare the linguistic patterns in 29,885 conversations between human users and their social companion chatbot, Replika, scraped from Reddit. The results showed that people's linguistic styles gradually converged with that of the chatbots. This convergence was positively related with the relationship development between the user and their Replika companion. These findings suggest that human behavior can be influenced by chatbots through interaction and people can develop relationships with their technological companions.

Academic research on entrepreneurial founding teams has experienced the proverbial hockey-stick-like growth that founding teams so often envision for their ventures, yet is still in an emergent state. This symposium takes a deep dive into two pivotal challenges facing the field: advancing relevant theoretical developments and mobilizing rigorous methods, with interactive panel discussions among six expert scholars. Participants will also have the chance to engage more closely with panelists through breakout sessions, offering a beneficial opportunity to build a community of multidisciplinary, collaborative, and innovative scholars working together to advance research on founding teams.

How Do We Do Inclusion?

Session Moderator: **Chiara Trombini, INSEAD**

GDO: **Receiving Social Support Motivates Prosocial Behaviors Developing Diversity, Equity, and Inclusion**    

Author: **Chiara Trombini, INSEAD**

Author: **Zoe Kinias, INSEAD**

Extant research has focused on individual characteristics and contextual factors driving prosocial behaviors, mainly examining same or proximal context dynamics occurring within a brief period of time. Building on attachment theory and generalized exchange theory, we theorize that an interpersonal factor—receiving social support—can foster prosocial behaviors beyond the immediate environment and over years. Receiving social support enhances a sense of relational security which in turn increases motivation to engage in behaviors that benefit others, including attitudinal and behavioral backing of diversity and inclusion efforts. Across three studies, we test our hypotheses with cross-sectional, longitudinal, and experimental data. In Study 1, data from a culturally diverse sample of international business school alumni show a significant positive relationship between receiving social support and engaging in prosocial behaviors both within and outside organizations. Study 2 leverages data of US adults in a multi-wave study to show that receiving social support predicts prosocial activities nineteen years later. Study 3 experimentally manipulates social support with a sample of working US adults and finds that receiving social support fosters prosocial behaviors through boosting a sense of security which in turn increases prosocial motivation. Taken together, our findings suggest that receiving support in different forms and from various sources can have a long-term prosocial effect on organizations and society, with cross-cultural generalizability.

GDO: **Enhancing Employees’ Daily Inclusion at Work: A Multilevel Temporal Approach to Social Context**   

Author: **Yixuan Li, U. of Florida**

Author: **Chengquan Huang, U. of Florida**

Author: **Jessica Rae Methot, Rutgers U., School of Management and Labor Relations**

Author: **Guiyao Tang, Shandong U.**

The mission of inclusive organizations is to create a positive work environment that makes every employee feel like a valued part of the organization. Achieving this goal relies upon not only inclusion initiatives that reduce overall bias and conflict, but also, more importantly, the crafting of day-to-day social context that ultimately enhances employees’ inclusion experiences. Yet, we have a limited understanding about the nature of social context that engenders daily employee inclusion. Integrating the functions of positive work relationships model with inclusion research, we adopt a multilevel temporal approach to investigate how coworker social interactions at the daily level interact with inclusive climate at the unit level to impact employees’ daily inclusion, and subsequently their activities during and after work. We surveyed 97 employees from 31 pharmacies in China over 10 consecutive workdays (N = 911). Results showed that daily support-related coworker interactions enhanced employees’ daily inclusion, which translated into enhanced task proficiency at work and problem-solving pondering after work. The positive association between daily coworker interactions and perceived inclusion was stronger for employees working in stores with higher (vs. lower) inclusive climates, and employees’ socioemotional attribution of coworker interactions mediated the moderating effect of inclusive climate.

 GDO: **Investigating Marketplace Accessibility Through A Service Provider Lens**    

Author: **Katharina Husemann, King's College London**

Author: **Anica Zeyen, Royal Holloway, U. of London**

Author: **Leighanne Higgins, Lancaster U. Management School**

Marketplace accessibility refers to the creation, maintenance, and experience of a barrier-free market environment for disabled consumers’ independent market participation. So far, extant research focused on capturing the experiences of disabled customers and their coping strategies. Yet, research on understanding the service provider view is limited. In this study, we address this gap through an ethnographic study of museums and their access programs for visually impaired visitors. By analyzing our findings through a post-human lens, we uncover that service providers facilitate three forms of access: autonomous, embodied, and social. Autonomous access refers to facilitating an independent marketplace experience at the customers’ own discretion. Embodied access refers to providing a safe market environment that allows customers to engage in multi-sensory experiences. Social access enables building and creating a sense of belonging in the marketplace. We further identify, inclusionary challenges that service providers employ to overcome challenges of exclusion inherent in each form of access

Author: **Sina Alessa Kraus**, *ESCP Business School*

Author: **Marion Festing**, *ESCP Business School*

Author: **Helen De Cieri**, *Monash U.*

We are in an era of massive global disruption, and individuals are often expected to navigate complex and volatile situations with diverse colleagues whilst at work. Despite decades of research on inclusion in workplaces, we know surprisingly little about how to identify and measure individuals' capability to relate and work in inclusive ways. Drawing on optimal distinctiveness theory and building a bridge between research in the fields of inclusion and intercultural management, by considering the concept of cultural intelligence, we introduce a definition and conceptualization of 'inclusion competence'. We build on this conceptualization by developing and validating a 20-item inclusion competence scale, using three interlocking studies with five samples (total N = 2051) across four countries (UK, Sweden, Australia, USA). We confirm the scale's dimensionality and measurement invariance as well as provide evidence for convergent and discriminant validity. We contribute to scholarship across the fields of inclusion and capability development by offering a theory-driven construct and scale that assesses individual capability for inclusion at work. Our scale could be applied in many organizational settings as a diagnostic tool or for self-reflection. Overall, our work offers new directions for scholars and practitioners to understand and foster employees' contributions to inclusion.

Effects of Being (Dis)Similar at Work

Session Moderator: **Zhu Feng**, *HEC Paris*

GDO: **I Trust You as a Colleague, but Maybe Not as a Friend- Multicultural Experiences on Trust**  

Author: **Zhu Feng**, *HEC Paris*

Existing literature has explored various intrapersonal outcomes of multicultural experiences but little in interpersonal consequences. The present paper aims to investigate how monocultural people perceive cultural in-group peers' multicultural experiences as an evaluative cue in trust decisions. Based on social cognitive theory, I argue that individuals' multicultural experiences positively influence cognition-based and affect-based trust. Based on social identity and similarity attraction theory, I also propose that individuals who highly identifies with their cultural group would affectively trust peers without multicultural experience more than those with such experiences. Two experiments with two different cultural group samples generally supported the hypotheses. Both theoretical and practical implications are discussed.

 GDO: **Political Dissimilarity Effects at Work during U.S. Elections: A Dynamic Perspective**  

Author: **Max Reinwald**, *LMU Munich*

Author: **Rouven Kanitz**, *Rotterdam School of Management, Erasmus U.*

Author: **Julia Backmann**, *U. College Dublin*

Author: **Peter Bamberger**, *Tel Aviv U.*

Author: **Martin Hoegl**, *LMU Munich*

Dissimilarity research has paid little attention to the consequences of political belief differences in the workplace. This oversight seems surprising, given the polarized political landscapes in many Western societies that may significantly alter organizational behavior. During the 2020 United States presidential election, we conducted an experience sampling study on 147 employees across ten consecutive workdays. We examined the relationships between political dissimilarity and trajectories of experienced interpersonal conflict at work using a discontinuous growth curve modeling approach. The findings revealed that an individual's perceived political dissimilarity had no significant impact on interpersonal conflict before the election day. However, the effect became significant on the election day, and remained present for six days of the observed post-election period. Moreover, post hoc analysis revealed that interpersonal conflict harmed next-day work engagement only when leaders were not perceived as collaborative in their conflict response. This indicates ways of mitigating the negative consequences of politics-induced conflict. Taken together, our study reveals political identity as a critical but under-explored dimension of workplace dissimilarity that becomes salient with political macro events. We also demonstrate spillover effects of political macro events on organizational behavior and advance dissimilarity research from a multilevel-dynamic perspective.

Paper is NOT Available. Please contact the author(s).

GDO: **Birds of a Feather Seek Help From Each Other: A Control-Motivated Account of Similarity Attraction**

Author: **Anyi Ma**, *Tulane U.*

Author: **Jessica Jee Won Paek**, *Fuqua School of Business, Duke U.*

Author: **Jae Yun Kim**, *Asper School of business, U. of Manitoba*

Author: **Fangzhou Liu**, *Huazhong U. of Science and Technology*

Research on compensatory control theory (CCT) has found that people who lack personal control are especially likely to seek coherent and structured environments. Drawing on CCT, we propose that seeking help from coworkers who employees perceive to be more similar (vs. dissimilar) to themselves affords help-seekers a greater sense of structure and predictability. Thus, when employees' sense of personal control is threatened, they would be more likely to seek help from similar others, and this behavioral pattern would be mediated by a higher need for structure. Given that the tendency to affiliate with similar others reduces the likelihood that employees would be exposed to diverse perspectives that are crucial for creativity, we also predicted that the increased similarity attraction (elicited by a lack of control) would be associated with reduced employee creativity. Six studies (N = 89, 273, four pre-registered), including field and experimental studies, support our predictions. Taken together, these findings have important implications for employees' abilities to harness the power of diversity and differences at work.

Social and professional networks are consequential for professional success because who individuals are connected to determines access to valuable resources and opportunities that facilitate career advancement. Problematically, there is evidence of gender differences in networks, which are thought to be a contributing factor to persistent gender gaps in the workplace. Evidence of inequality in the returns men and women experience even from equivalent network structures underscores the importance of going beyond structure to understand how men's and women's networks impact their experiences at work and their career trajectories. This symposium contributes to this growing area of research by bringing together four projects that speak to gender differences in how men and women perceive, experience, and utilize their social and professional networks.

HCM: Surrounded by Time: The Patient at the Center of Intersubjective Time Relationships 

Author: **Paul Gemmel**, *Ghent U.*
Author: **Bert Meijboom**, *Tilburg U.*
Author: **Melissa De Regge**, *Ghent U.*

The notion of time is frequently approached from an absolute perspective. Yet there has also been an increase in interest in subjective views of time. In this paper, we discuss the theories of temporal schemata (of individuals) and temporal structures (of organizations), and how the two interact—i.e., intersubjective time relationships. Empirically, we address this interplay in the context of oncology patients. Data was collected through interviews with patients and their relatives and from patients' diaries of their treatment journey. We contribute to the conceptual knowledge of subjective time by empirically studying how cancer patients experience multiple temporal structures in their care process. We find evidence that the interplay of the individual time schemata of the patient and informal caregiver on one hand, and the temporal structures of multiple organizations in which they are involved on the other, encompasses a complex network of intersubjective time relationships. This goes largely beyond the one-on-one patient–physician encounter. Moreover, this interplay is not only perceived and interpreted in current practice, but also in the past and an imagined future. The study further shows that some patients entrain to the hospital's temporal structure, whereas others resist it. We conclude that the design of temporal structures, such as appointment systems, should be based on a better understanding of the network of intersubjective time relationships in which a patient is embedded.

HCM: Do Patient Engagement Functionalities impact Quality Outcomes? The Mediating Role of EHR Presence  

Author: **Soumya Upadhyay**, *U. of Nevada Las Vegas*
Author: **Neeraj Bhandari**, *U. of Nevada Las Vegas*

Engaging patients in their own care through information technology has the potential to improve healthcare quality. We examine how the intensity of adoption of EHR functionalities (“EHR presence”) mediates the direct effect of patient engagement functionalities on quality outcomes, represented by readmission rates. Our cross-sectional pooled study design employed hospital-level data (2014-2018) containing 3,547 observations for general acute care hospitals. The independent variable measured the breadth of patient engagement functionalities adopted at a hospital and the mediating variable measured the comprehensiveness of EHR implementation at a hospital. The dependent variables were mean time to readmission for Acute Myocardial Infarction (AMI), Pneumonia (PN), and Heart Failure (HF). We used Baron and Kenny method to test mediation effects. We found patient engagement is associated with reduced AMI readmission rates, both directly and via the EHR presence. EHR presence was found to mediate the effect of patient engagement on AMI readmission rates; a one-unit increase in patient engagement via EHR presence is associated with a 0.33% decrease in AMI readmission rate ($p < 0.05$). However, for other disease categories, findings were not significant (HF) or contradicted the hypotheses (PN). Patient engagement through IT in hospitals that have implemented comprehensive EHR has the potential to reduce readmission rates in some disease categories. Patient engagement functionalities work better through synergistic effects with EHR in influencing quality outcomes. Hospitals should leverage the investments they have made in EHR infrastructure, and use it towards engaging patients in their own care.

HCM: Beyond Ingress: Analyzing and Extending the Meaning of Access to Healthcare 

Author: **Lynn Sudbury-Riley**, *U. of Liverpool Management School*
Author: **Philippa Hunter-Jones**, *U. of Liverpool Management School*
Author: **Ahmed Al-Abdin**, *U. of Liverpool Management School*

We argue that continuing to accept current views of healthcare access not only confines our appreciation of what access actually involves, but also restricts management understanding of what is required from healthcare organizations in order to tackle access barriers currently hindering the realization of health benefits for many people. Consequently, we proffer a new theoretical framework that conceptualizes healthcare access as a journey towards benefit realization. At each journey stage are myriad contrivances which enable or constrain progress. Illustrating our framework with data from an extensive multimethod mixed methods approach to the study of hospice and end of life care, we show how it overcomes the limitations inherent in current access frameworks, broadens our understanding of what healthcare access actually means, and provides a context that enables the identification of previously concealed barriers. As such, our framework offers a new way of considering healthcare access that can contribute to overcoming the numerous obstacles and spatial inequalities currently found when people attempt to access many healthcare services.

Author: **Ingrid Nembhard**, *The Wharton School, U. of Pennsylvania*

Research suggests that using insights from patient narratives ? stories about care experiences in patients' own words ? has the potential to improve care. Qualitative reports, however, largely indicate that narratives have evoked mixed response among healthcare providers. Systematic study of which individuals and settings perceive narratives to be useful versus not to offer a clearer account of the variance in perceived usefulness has been lacking. Such analysis is critical because perception of value often dictates if and how information is used, which shapes the opportunity to leverage narratives for quality improvement. Our objective in this study was to assess perceived usefulness of patient narratives in primary care and identify individual- and clinic-related correlates of perceived usefulness. To do this, we conducted a cross-sectional study of 276 clinical and administrative personnel in nine primary care clinics affiliated with a health system in the United States. We collected their impressions of narratives, individual characteristics, and perceptions of some of their clinic's characteristics. We used multilevel regression to examine possible correlates of perceived usefulness suggested by prior qualitative research. Perceived usefulness of patient comments was high overall (3.92 out of 5). Of the individual-related characteristics examined: burnout ($\beta=0.128$, $p=0.045$) and professional role were associated with perceived usefulness. Care team roles (e.g., physicians) reported greater usefulness than administrative support roles ($\beta=0.242$, $p=0.027$) and similar usefulness as administrators/supervisors ($\beta=0.191$, $p=0.420$). Job dissatisfaction, tenure, and sex had no association with perceived usefulness. Of the clinic-related characteristics reported by participants, frequency of seeing patient comments was not associated with perceived usefulness ($\beta=0.003$, $p=0.948$), whereas greater belief that their clinic engaged in more improvement efforts linked to patient feedback ($\beta=0.225$, $p=0.001$) and had a learning orientation ($\beta=0.171$, $p=0.080$) were associated with higher perceived usefulness. Overall primary care staff perceive narratives to be useful. However, perception varies by individual characteristics and clinic-related perceptions. Therefore, organizations should continue collecting and sharing narratives with their personnel, and ensure that structures and resources are available to support initiatives to learn from and respond to patients' narrative feedback, as much of the variance is linked to organizational support.

Society, organizations, and individuals inevitably face crises that threaten their functioning and even survival. As a result, crisis management scholars have sought to explain both the nature and impact of crises and how organizations effectively prepare for, respond to, and overcome various forms and degrees of challenges (Williams, Gruber, Sutcliffe, Shepherd, & Zhao, 2017). In response to a rise of grand challenges (e.g., Covid-19 pandemic), there have been a number of calls for management research to further explore the crisis-organization interaction, including how to develop resilience not only to respond to adversity but also to use it as an opportunity for future growth (van der Vegt, Essens, Wahlström, & George, 2015; Williams & Shepherd, 2016). Following this, our symposium aims to provide a unique and critical perspective that focuses on relational practices as the approach to address grand challenges as well as the relational capability to respond to and recover from adversity. In the context of crisis management, relational practice has been considered an important approach to shape immediate response to disturbances and ultimately enhance reliability to challenging events (Williams et al., 2017). For example, Gittel (2008) found that relational coordination—communicating and relating for the purpose of task integration—is critical in overcoming challenges. The coordinated collective response across multiple functions or roles create a relational system that enables and strengthens resilient responses to external pressures. Similarly, Shepherd and Williams (2014) and Colquitt et al. (2011) found that trust is an elemental capability to enable a more effective response to a disaster.

Organizational Theories and E-management

Session Moderator: **Jiayin Qi**, *Shanghai U. of International Business and Economics*

MC: Untangling Organizational Change in a Chinese State-Owned Company: A Grounded Theory Case Study 

Author: **Tiantian Yan**, *Shanghai U. of International Business and Economics*
Author: **Jiayin Qi**, *Shanghai U. of International Business and Economics*
Author: **Sabine Khalil**, *ICD Business School*
Author: **Nataliia Korotkova**, *Norwegian U. of Science and Technology*
Author: **Elisabeth Joyce**, *Edinboro U.*

In its zeal for organizational change, a Chinese state-owned enterprise encountered a myriad of impediments. This inductive case study aims to examine and untangle the roots of those impediments through grounded theory. The research results suggest that employees' attitudes towards change, organizational aspiration for change, and change context affect the process of change. In particular, (1) employees with higher adaptive capability on change and lower professional status are inclined to have a more positive attitude towards change; (2) higher organizational performance and poor communication of reforms decrease organizational desire or inclination for change; (3) informal influence of internal information spread promotes acceptance of reform; and (4) external influence of consultants accelerates acceptance of change. As a result, S Group implemented corresponding unfreezing change strategies, which eventually won the support for change of a majority of employees. This engaged case study also provides new insights into Bourdieu's Practice Theory as applied in the context of Chinese state-owned companies.

MC: e-Managers: Out of Sight, But Still in Mind - A New Era of Management     

Author: **Laura Khachan**, *U. Paul Valery, Montpellier*

The COVID-19 crisis has made telecommuting the answer to sustain the economic activity, preserve jobs, and keep organizations functioning remotely and scrambling to stay afloat. The pandemic's substantial impact has led to a new normal, hence fostering the digital e-Management era. But how do we manage at a distance? Little attention has been given to how distant management is requiring new-fangled e-skills and putting some old managerial practices on their deathbed. e-Managers need to overcome the hurdles engendered by the complementarity between human and digital collaboration. This paper explores the COVID-19-fueled trends inside organizations in a Socio-economic Approach to Management. Going from the dysfunctions and hidden costs detected during an Intervention Research in a company in the Middle East, this paper folds some managerial experience into an e-Manager Assistance Kit. It gives a shortcut to best managerial practices and draws on the important reskilling to reflect upon in the Work-From-Anywhere WFA era through a Management Consulting process. A successful e-Manager reinforces an Unbossed culture, empowers people, cuts them some slack, boosts Tech literacy programs, supports flexible and asynchronous schedules beyond the "Fordist" 9-to-5 culture, and helps people reach some work-life balance.

MC: Bourdieu's Practice Theory as Framework for Grasping Organizational Change: A Case Study in China 

Author: **Elisabeth Joyce**, *Edinboro U.*
Author: **Tiantian Yan**, *Shanghai U. of International Business and Economics*
Author: **Jiayin Qi**, *Shanghai U. of International Business and Economics*
Author: **Nataliia Korotkova**, *Norwegian U. of Science and Technology*
Author: **Sabine Khalil**, *ICD Business School*

Efforts to enact organizational change in a Chinese state-owned group faced impediments. This study examines the roots of those impediments through Bourdieu's Practice Theory's attention to Habitus, Field, and Capital. In so doing, this case study finds that centers of Economic Capital are inhibitory to organizational change, while centers of Social and Cultural Capital embrace it. Those enmeshed in the Field are also more likely to support change, as are those who work to convince others about its benefits, through the action of Moves in the Habitus. As a result of these findings, the authors propose solutions, based on Bourdieu's principles, to ensure successful organizational change, including recognition of influencers with Social Capital and working more intensively with those low in Economic Capital.

The Experience of Nontraditional Work

Session Moderator: **Tina Saksida**, *U. of Prince Edward Island*

OB: Should I Stay or Should I Go? Ride-hail Driver Reactions to Uber's Covid-19 Response 

Author: **Tina Saksida**, *U. of Prince Edward Island*

Author: **Katarina Katja Mihelic**, *U. of Ljubljana School of economics and business*

Author: **Michael Maffie**, *Pennsylvania State U.*

Author: **Barbara Culiberg**, *U. of Ljubljana, School of Economics and Business*

Author: **Ajda Merkuž**, *School of Economics and Business, U. of Ljubljana*

While the COVID-19 pandemic has been a disruptive event for most workers, it has disproportionately affected low-skilled occupations; one such example are platform (gig) workers contracted by ride-hail companies (e.g., Uber, Lyft) to transport passengers. Grounded in psychological contract theory and platform labor research, the purpose of this study was to develop and test a conceptual model of ride-hail drivers' affective and cognitive reactions to Uber's (lack of) commitment to safe working conditions after the onset of the COVID-19 pandemic. Employing a sample of Uber drivers from the United States ($n = 202$), we show that when drivers' perceptions of Uber's commitment to safety were unfavorable, they were more likely to experience feelings of psychological contract violation, which in turn increased their cynicism toward Uber and decreased trust. But while trust in Uber was negatively related to drivers' intentions to withdraw from their occupation, organizational cynicism only predicted withdrawal intentions for those drivers who did not believe that they had many job alternatives available outside of platform work. We draw on the emerging literature on situational diversity and economic dependence among platform workers to discuss this unexpected finding.

OB: The Individual Differences and Competencies of Hybrid Workers: A Systematic Review

Author: **Samantha Jones**, *U. of Calgary*

Author: **Thomas Alexander O'Neill**, *U. of Calgary*

Author: **Cristina Gibson**, *Pepperdine Graziadio Business School*

Author: **Matthew McLarnon**, *Mount Royal U.*

Despite the significant increase in employees working away from the traditional office (i.e., hybrid work), our understanding of the individual differences that support hybrid workers' success remains fragmented, limiting theoretical development and practical applications. To remedy this gap in the literature, we conducted a systematic review of the individual differences and capabilities (i.e., traits, abilities, skills) related to hybrid work outcomes (e.g., job performance, job satisfaction). We identified 53 studies published in 49 published and unpublished sources. Then, to gain an understanding of common clusters of individual differences and capabilities, we inductively grouped the extracted study variables to identify three trait and ability clusters (e.g., Big Five Personality, other personality constructs, abilities) and four higher-order competency clusters (e.g., self-management, interpersonal-focused, leadership-specific, technology-based). To aid in practical applications and future research directions, we connected these trait and competency clusters to two computer-mediated work theories (e.g., media richness theory, social presence theory) and two organizational behavior theories (e.g., trait activation theory, role theory).

OB: What Motivates Gig Workers? An Integrative Review and Research Agenda

Author: **Anjana Karumathil**, *Doctoral Student at Indian Institute of Management Bangalore*

Author: **Ritu Tripathi**, *Indian Institute of Management, Bangalore*

Shaped by transformations in technology, economic structures, and organization settings, gig work has received increasing scholarly attention for the past two decades. Our integrative review provides a synthesis of extant scholarship connected to the motivation of individuals in this new world of work. Through bibliometric analysis, we approach gig worker motivation from four perspectives: the traditional organization scholar perspective, the technocentric control perspective, the flexibility perspective, and the identity perspective. In doing so, our review article offers a landscape of extant scholarship on gig worker motivation in terms of theoretical frameworks, anomalies, and opportunities for future research.

OB: Experiencing the Pull and Push: Influences on Independent Contractor Motivation and Job Satisfaction

Author: **Andrew Miller**, *James Madison U.*

Author: **Adam J. Vanhove**, *James Madison U.*

The number of individuals engaging in non-standard employment is increasing. Drawing on self-determination theory (SDT), this study examines the motivation and job satisfaction of independent contractors, a prominent alternative work arrangement subgroup. Specifically, we examine how the rationale for workers entering contracting work arrangements affects in-role contractor motivation and job satisfaction. Based on a sample of $N = 241$ adjunct instructors from two universities, we find that the positive relationship between those entering contracting because they perceived the work would offer autonomy, flexibility and the ability to pursue personally interesting work (pull factors) and their resultant job satisfaction is fully mediated by the level of autonomous motivation actually experienced in their work. The degree to which individuals entering contract work because of an inability to secure a desired work role or pursue their preferred career path (push factors) was inversely related to job satisfaction, which was not mediated by autonomous nor controlled motivation. Finally, the level of perceived supervisor and organizational support that contractors experienced did not moderate the relationship between either push or pull factors and autonomous motivation. This study demonstrates the importance of recruiting and selecting contractors that value the benefits of contract work (e.g., autonomy, flexibility). It also highlights the need for future research to understand the role of leadership in autonomous, alternative work arrangements.

Despite decades-long efforts investigating organizational justice by researchers and practitioners—and the vast and vibrant literature that has developed accordingly—justice is a complex issue and the quest to achieve a perfectly just workplace remains elusive. To this point, recent studies discovered three challenges that remain to be addressed; 1) some managers tend to adhere to interpersonal justice rules sometimes but violate them at other times, which takes a toll on employees, 2) supervisors’ rule adherence does not quite align with employee’s fairness perceptions, implying that they are likely not on the same page, and 3) achieving a just workplace involves more than just the employee-supervisor dyad—specifically, both context and coworkers add additional complexity and nuance. The goal of this symposium is to draw insight and inspiration from each of these challenges to demonstrate the ways in which researchers can contribute to “creating a better world together.”

Adversity is a common occurrence in organizational life. Challenging, unexpected events can undermine organizational functioning and disrupt performance. A large portion of research on this topic, within management literatures, focuses on adversity faced by organizations as an entity. However, adversity also has a significant, debilitating impact on employees, hindering their ability to go about their daily work. Yet surprisingly few efforts are made to identify how employees face, manage, prepare for, and potentially grow from their adverse work experiences. In supporting the conference theme of “Creating a Better World” this symposium brings together international experts to build and test new theoretical insights about how experiences of adversity are managed at work. Four presentations introduce novel contexts for the study of adversity at work (teams and team performance, employee perceptions of customer-related safety behavior, work-life inclusion inequality and perceptions of unfairness), exploring sources of adversity both outside (e.g., COVID-19) and within (e.g., work-life inequality) organizations. Reactions to adversity are captured at individual, team, customer and climate level, with each paper integrating research on adversity with theories from wider management literatures (e.g., self-expansion theory, Conservation of Resources theory, regulatory theory) and empirically testing propositions based on these theories. We aim to contribute to a more comprehensive understanding of this topic so that our findings can be of value to employees who have endured harm, to organizations who can be better positioned to support their human capital, and to scholars within organizational behavior, conflict management and human resources through fostering new avenues of research.

Voice—employees' discretionary communication of ideas or identification of potential problems—is a key driver of innovation, enhanced productivity, and greater status for voicers. With the benefits of voice well-documented, nascent inquiry has begun to elucidate essential elements of the voice lifecycle—i.e., its emergence, adoption and implementation, and eventual decline into silence. The proposed symposium features four empirical papers that address novel and theoretically interesting aspects of the voice lifecycle. Related to voice emergence, we examine the effects of power dynamics in leader-follower dyads on constructive and destructive forms of voice, as well as the relationship between misfit and voice. Related to the adoption of voice, we consider the effects of the perceived novelty and usefulness of creative ideas on their perceived cost and adoption by managers. Related to the decline of voice into silence, we consider the potentially detrimental effect of silence on employees' ruminative thinking and subsequent negative behavior. Taken together, our symposium offers an expanded view of the voice lifecycle.

Aligning the Stars: Theoretical and Empirical Advancements in Star Performer Research

Advancements in Star Performer Research

Organizer: **Alexander Hamrick**, *Auburn U.*

Organizer: **Pauline Schilpzand**, *Oregon State U.*

Presenter: **Alexander Hamrick**, *Auburn U.*

Presenter: **Haibo Liu**, *U. of California, Riverside*

Presenter: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*

Presenter: **Daniel Tzabbar**, *Drexel U.*

Presenter: **Jonathan Hendricks**, *U. of Nebraska, Lincoln*

The papers included in this symposium aim to shed light on some of the current theoretical advancements and knowledge creation related to star performers. The papers draw from a diverse set of theories (e.g., self-conscious emotions, trait-activation, conservation of resources, etc.) and deploy a broad set of methodologies (e.g., field-based, experimental, qualitative, archival, conceptual) to investigate novel research topics related to how stars behave towards their peers, how stars' presence within work teams impact team members, what factors influence the decline of stardom, and the performance implications of star mobility. Additionally, these papers investigate these topics in a diverse set of samples, such as real estate agents, NBA players, students and project teams, and lead portfolio fund managers to garner holistic insights related to star phenomena. Through the presentations and discussions associated with this symposium we hope to feature some of the current advancements and findings within the star literature while also illuminating the need for extending this growing constellation of research.

SAP: Serendipitous Learning in Collaborative Innovation in the Fight Against Severe Hypoglycemia

Author: **Pernille Smith**, Aarhus U., Department of Management
Author: **Susan Hilbolling**, Aarhus U., BSS

SAP Best Paper Award

In the past decades we have witnessed an increase in collaborative innovation projects in the healthcare industry, and more recently some of these projects are of a broad pre-competitive nature where universities, research institutions, pharmaceutical, biotech and device companies work together to solve grand challenges in health. In this paper we investigate what organizations learn from participating in these non-commercial collaborations. Studies on open innovation, when assessing the benefits from such collaborations, have thus far focused on purposeful knowledge creating activities that lead to the achievement of planned objectives. However, in complex innovation where problems are often ill-defined, a focus on planned objectives and final outcomes, we risk ignoring important learnings that were not planned, but that instead emerged in the process. This paper argues that underneath the intentional knowledge building mode there is a more subtle ‘dwelling’ mode where intent is immanent in adaptive action and where new knowledge emerges in a non-deliberate way through everyday practices. To better understand the non-deliberate emergence of knowledge we apply a serendipity lens, suggesting that innovation and new knowledge creation can be seen as emerging and as accidental, unrelated side effects in collaborative processes leading to unexpected and beneficial discoveries. To investigate how organizations can embrace such serendipitous learnings emerging in inter-organizational collaborations, we carried out a 3-year study of an inter-organizational R&D project in the healthcare industry. We found several instances of distributed serendipitous learning and relate them to four organizational features (organizational setup, future-oriented mindset, sustained involvement, and heterogeneity in participants) that appeared to foster knowledge transfer from the inter-organizational settings to the focal company. The paper contributes to prior research on the roles and practices in knowledge absorption from inter-organizational innovation activities.

SAP: Constructing a New Organizational Form: One is not Born an Institutional Entrepreneur, but Becomes One 

Author: **Romain Slitine**, IAE Paris - Sorbonne Business School
Author: **Didier Chabaud**, IAE Paris - Sorbonne Business School

The consequences of the crisis are particularly felt at the local level, and the Covid 19 pandemic has accentuated this trend. Accordingly, we observe the emergence of new collective organizational forms in response to local crisis and to ‘create a better world’. We conducted a longitudinal case study of the Archer Group located in Romans-sur-Isère (France) based on a life story of the CEO and various additional data gathered during 10 years. We scrutinized how the founder and leader of the group gradually transformed a work integration social enterprise (WISE) into a ‘territory enterprise’ whose ambition is to mobilize the entire community to serve sustainable local development. Our findings revealed how an organizational form mutates under the activity of an institutional entrepreneur. Using a practice-based perspective, we explain how an actor becomes progressively equipped for institutional action. We identified the different constellations of practices that an institutional entrepreneur develops over time to bring about this new organizational form. Our practice-driven lens makes it possible to propose a new approach of institutional entrepreneurship. Contrary to the view of a ‘hypermuscular institutional entrepreneur’ we show that his skills are not given at the outset, but are built over time.

SAP: Collective Strategy, Industry Legitimation, and Discourse: Institutional Work of Trade Associations 

Author: **Thomas Greckhamer**, Louisiana State U.
Author: **Katelynn M. Sell**, West Texas A&M U.

SAP Best Practice-Oriented Paper Award

The importance of building and sustaining legitimacy for firms and industries alike is well established. An industry’s legitimacy is a collective good that accrues to all firms in the industry, thus firms commonly pursue collective industry interests through trade associations. However, our understanding of how trade associations work to manage their industry’s legitimacy is limited. Thus, in this study we investigate a trade association’s process of legitimating an industry’s core product, and by extension the industry itself, through discursive institutional work over 45 years. Our findings from discourse analysis identify key discursive moves used (and reused) by the focal industry association in their institutional work toward legitimacy and we delineated three key phases in the process of legitimation (i.e., building, maintaining, and defending legitimacy). We discuss the implications of our findings for understanding discursive processes of legitimation, the institutional work of trade associations, and industry legitimacy.

SAP: Advancing Knowledge Creation in Collaborative R&D: Counterintuitive Dynamics of Individual Strategy

Author: **Pernille Smith**, Aarhus U., Department of Management
Author: **Andrea Carugati**, Aarhus U.

How can knowledge be efficiently exchanged in an inter-organizational R&D collaboration where people have to work towards shared goals and simultaneously safeguard individual interests? In this article we present the results of a longitudinal case study of an inter-organizational innovation team in which new knowledge was developed despite collaborative issues and individual strategic behaviors. Our analysis identified five interrelated practices at the individual level (interpreting, assessing, strategizing, expanding, and tolerating), that are enacted in the ‘trading zone’ (Galison, 1997) facilitating collaboration and knowledge exchange despite their different objectives, interests, and work practices. The study contributes to the trading zone and knowledge exchange literature by showing how highly strategic behavior of individuals can lead to collective knowledge creation. We thereby show how cognitive processes affect shared practices in the trading zone and how the trading zone practices affect the cognitive processes.

STR: Political Connections Formation as A Mixed Gamble: Evidence from Family Firms in China 

Author: **Qiao (Stella) Wei**, *Nankai U.*

Author: **Weiting Zheng**, *U. of New South Wales*

Author: **Salih Zeki Ozdemir**, *U. of New South Wales*

The pursuit of potential benefits is an important motivation for firms to form connections with political actors, however, such connections may also create costs and risks for firms, dampening firms' motivation in forming such connections. We extend the political strategy literature and conceptualize the formation of political connections as a mixed gamble wherein firms would selectively form political connections to pursue the potential gains while avoiding the potential losses to their endowment. We apply the mixed gamble model on family firms and propose that compared with their nonfamily peers, family firms will likely avoid connections that may result in a loss of their most important endowment (i.e., socioemotional wealth [SEW]) even if such connections may bring them potential financial gains. Instead, family firms are more likely to form the type of connections that are expected to bring future SEW gains despite limited potential financial gains from such connections. These relationships are amplified when family-based goals become more important for firms, and weakened if firms' financial performance is threatened. Our analysis of listed non-state-owned firms in China between 2004 and 2016 lends support to our theory. This study extends research on political strategy and family business.

STR: Janus-faced Effects of Political Connections on Corporate Insider Trading

Author: **Danyang Chen**, *National U. of Singapore*

Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Author: **Bin Liu**, *School of Management, Xiamen U.*

Whether political connections trigger or inhibit financial misconduct is yet to be concluded. We contend that politically connected firms do evil and good simultaneously. Based on the status attainment perspective, we propose that those firms are Janus-faced in respect of insider trading such that they commit illegal insider trading (substantial misconduct) and voluntarily report the legal insider trading (symbolic compliance) simultaneously. Contextualized in a panel dataset of Chinese private listed firms, we found strong support for Janus-faced effects. Moreover, those organizational substantial misconducts become restrained under a greater stringency of anti-corruption whilst symbolic compliance tends to be stronger given more government subsidies. Overall, the study advances the literature of financial misconduct by unveiling the Janus-faced effects of political connection. It also presents new evidence of the contextualized view of corporate governance while unveiling that government subsidies exacerbate the inclinations of symbolic compliance.

STR: Global Supply Chains and Domestic Lobbying: Evidence from the U.S.-China Trade War  

Author: **Bo Yang**, *U. of Southern California*

This study integrates the political lobbying and market strategies in the setting of protectionism. I argue that multinational firms are incentivized to employ political lobbying to address disruptions to their global supply chains caused by domestic protectionist policies. I further theorize that the lobbying strategy critically hinges on firms' market strategies including the use of specialized inputs and level of commitments to foreign markets. Empirically, I examine the U.S.-China trade war using a novel firm-level panel dataset and a difference-in-differences design. In addition, I investigate how firms benefit from lobbying and find that lobbying firms gain greater access to policy formulation and more favorable regulatory enforcement in the exclusion process.

STR: Caring but Sharing Unintentionally: Lobbying for Innovations and the Leakage of Knowledge 

Author: **Michael Park**, *U. of Minnesota*

When firms engage in lobbying, their intended outcome is a regulatory change that benefits them. However, prior literature suggests that there may also be an unintended outcome of lobbying---the leakage of knowledge to competitors. In this paper, I explore when the intended and the unintended outcomes are more likely by theorizing about the relationship between lobbying and innovation. I predict that innovations that are novel are more likely to benefit from the intended regulatory changes. However, innovations that use knowledge uniquely possessed by a few firms are more likely to be compromised by the leakage of knowledge that happens during lobbying. I use new data from 1999-2013 on public U.S. firms that engaged in lobbying to federal agencies, the regulatory changes made by federal agencies, and the 16,000 patents applied for by those firms. I employ unsupervised machine learning (Doc2Vec) to measure knowledge leakage and an instrumental variable 2SLS mediation analyses to test the theory. The results suggest that the intended regulatory changes that follow lobbying can benefit innovations by facilitating wider adoption. However, unique technological knowledge that only a few firms possess may be expropriated by competitors during the process of lobbying. Overall, this paper demonstrates that fundamental aspects of innovation---such as institutional change, knowledge transfer, and technology adoption---are closely related to lobbying, a form of nonmarket activity.

Social Movements, Digital Platforms and Boundary Work

Session Moderator: **Elena Raviola**, *U. of Gothenburg*

CTO: Online Boundary Work: Performing Participatory Practices in News Production

Author: **Elena Raviola**, *U. of Gothenburg*

Author: **Kajsa Lindberg**, *U. of Gothenburg*

In modern democracies, the journalistic profession has traditionally been organized to maintain an exclusive jurisdiction over the mandate to watch democratic processes in the service of citizens, hold the powerful accountable and inform citizens. This exclusivity has been possible by upholding a solid boundary between journalists and readers through mass news production and distribution and in practice exercising every citizen's freedom of expression. Over the last 25 years, digitization has made possible for many to take part in news production, in different ways questioning the role and boundaries of the journalistic profession. This paper analyzes the online boundary work performed by journalists and readers in the development of an online participatory news practice. The ethnographic study of the French news website Rue99 shows the role of digital technologies as boundary infrastructures where organizational, professional and political boundaries between journalists and users are configured, collaborated across and contested in an ongoing and recursive process. The analysis of this case shows how the participatory digital infrastructure lasted over a long period of time and was made transparent, but never finished nor invisible. We thus suggest the notion of boundary infrastructuring to capture the performative role of digital technologies in online boundary work.

CTO: Can We Change the Climate? A Study of Issue Boundary Spanning and Digital Action Outcomes

Author: **Carol Lee**, *Northeastern U.*

Author: **Pratyush Bharati**, *U. of Massachusetts, Boston*

This paper investigates digital issue boundary spanning dynamics in social movements and their impact on digital action outcomes. The issue boundaries in social movements are fluid and depend on the actors' identities and the themes pertaining to the social movement. This study adapts the theoretical lenses of boundary spanning and conflict dynamics from social movement literature to address a knowledge gap in understanding the impact of social dynamics on movement outcomes over social media. An inductive data analysis approach with natural language processing is employed to analyze messages from Twitter related to nine climate-focused SMOs. This study also identifies the issue boundary spanning activities, such as norms support and awareness spread, that impact the dynamics and digital activism in social movements. This paper contributes to the understanding of issue-based boundary spanning by identifying the association and contention dynamics and the impact on digital action outcomes.

CTO: Promoting Cross-Boundary Collaborations for Breakthrough Discoveries

Author: **Neelam Modi**, *Northwestern U.*

Author: **Alina Lungeanu**, *Northwestern U.*

Author: **Leslie A. DeChurch**, *Northwestern U.*

Author: **Noshir Contractor**, *Northwestern U.*

This study examines the factors determining which cross-boundary collaborations in science are successful at obtaining funding and whether and how funding investments shift in favor of cross-boundary collaboration over time. We use research on groups and teams and social network theories to address these issues in the context of a NIH Clinical and Translational Science Award Pilot Grant Program, which allows us to observe heterogeneity among researchers along gender, ethnicity, race, knowledge, and network position. Among our findings, we show that teams with higher proportions of female investigators are generally more likely to be awarded grant proposals, and that the number of female investigators in teams both submitting and awarded proposals increases over time. On the other hand, a higher proportion of Hispanic investigators does not lead to being awarded a grant. Interestingly, although teams with higher proportions of White investigators are more likely to be successful, we find that such teams typically do not receive a high score in the first stages of the review process. Finally, teams with high knowledge diversity and brokerage positions in the ecosystem of prior collaboration are more likely to be successful. We discuss the policy implications of this work.

Author: **Christina Yong Jeong**, *U. of Minnesota*

Author: **Jason Chan**, *U. of Minnesota*

Author: **Yue Guo**, *southern U. of science and technology*

Increasing number of firms are adopting enterprise social media (ESMs) for their day-to-day communication. Despite the spending made on these IT tools, participation levels on ESM are not high. Under this background, it would prove to be helpful to understand the impact of basic features on ESM affect usage. Thus, we investigate the role of social groups on participation levels in workgroups on ESMs. Social groups can be considered a psychologically safe environment, where users are allowed to make mistakes and take risks. In addition, casual conversations within social groups make it easier for users to start conversations with other employees that they do not know. The study results provide guidelines to companies and developers on how to use and design social features in an environment where personal and professional lines would become blurred. To empirically test this, we relied on the usage data of users from thousands of companies. A difference-in-difference estimation approach was used to contrast users who participate in social groups to those who do not. We used the matching methods to alleviate endogeneity concerns and constructed various control groups to difference out the selection effects in the DID technique. To conclude, we found evidence of a positive impact of social groups on user participation in workgroups on ESMs. The comfort levels and shared experience gained from social groups spilled over to the workgroups, particularly for lower-ranked employees as uncertainty and concerns of being criticized are reduced. Study implications are discussed.

Motivating and Enacting Effective Allyship

Motivating and Enacting Effective Allyship

Organizer: **Hannah Birnbaum**, *Northwestern Kellogg School of Management*
Organizer: **Kaylene McClanahan**, *U. of California, Los Angeles*
Discussant: **Margaret Shih**, *U. of California, Los Angeles*
Presenter: **Lyangela Gutierrez**, *U. of Virginia*
Presenter: **Riana Brown**, *New York U.*
Presenter: **Lucy De Souza**, *U. of British Columbia*

This symposium considers how to motivate and sustain effective allyship, while recognizing some of the potential shortcomings of some types of allyship. In the first two talks of the symposium, the authors will present evidence on barriers and motivators of allyship. The first paper will provide evidence that advantaged group members consistently underestimate the appreciation of allyship behaviors. The second paper will examine how individual differences in motivation drive people to engage in different forms of allyship. In the second two talks of the symposium, the authors will touch on the effectiveness of different forms of allyship. One paper will explore the unintended negative consequences of one form of allyship—ally presence in affinity groups designed for minority group members. The final paper will demonstrate how different types of allyship are seen as more or less effective in creating long-term change in organizations. Following the talks, Professor Shih will integrate the findings, comment on their contributions, and suggest future research for practitioners in diversity management.

Advantaged Groups Misperceive How Allyship Will Be Received

Supporting Teams to Support Health Care Delivery

Session Moderator: **Yufan Deng**, *Florida State U.*

HCM: Multidisciplinary Teams and Quality of Care: The Experience of Breast Units During COVID-19 ➔

Author: **Roberta Laurita**, *Catholic U. of Rome*
Author: **Federica Morandi**, *Catholic U. of Rome*
Author: **Americo Cicchetti**, *U. Cattolica Sacro Cuore*

In the last two years, health care organizations worldwide have faced many challenges due to the COVID-19 pandemic. In the area of breast cancer, multidisciplinary teams, involved in the management of breast cancer patients, suffered disruptions due to changes in work organization and in membership composition. Moreover, the entire health care workforce—including Breast Unit team leaders—has been impacted by a high degree of stress. To understand how these challenges affected the perceived quality of care received by BU patients, the present study tested several research hypotheses using a sample of 366 patients within 68 breast units. The level of stress experienced by the Breast Unit team leaders positively affected the quality of care, while changes in team composition and social distancing among team members negatively affected the perceived quality of care. Given these results, healthcare managers should develop new training paths useful to help professionals to adapt to new ways of working. Moreover, managers should ensure teams to develop repository tools to share knowledge and practices, to avoid the loss of these contents in the chance of team members changes. Finally, from a policy-making perspective a higher interest for mental health of healthcare workers should be paid.

Author: **Nainwant Singh**, *Stanford U. / VA Palo Alto*
Author: **Odette Spruijt**, *U. of Melbourne Victoria*
Author: **Karl Lorenz**, *Stanford U. / VA Palo Alto*

Background: The Palliative Care: Promoting Access in International Cancer Experience initiative (PC-PAICE) partnered with seven regionally diverse Indian palliative care (PC) sites to foster locally initiated quality improvement (QI) projects by training local teams on QI methods. We aimed to identify facilitators of QI team cohesion around team goals. Methodology: A quota sampling approach captured the perspectives of 44 stakeholders across 3 strata (organizational leaders, clinical leaders, and clinical team members) through a semi-structured interview guide informed by the Consolidated Framework for Implementation Research (CFIR). We used a combination of inductive and deductive approaches informed by theory to identify themes. Results: Theme 1: Allow a process to formalize and re-negotiate team roles and coordinate transfer of roles within the interdisciplinary PC team. Theme 2: Foster cross-disciplinary role agreement around shared and bounded QI project goals. Theme 3: Prioritize a non-hierarchical organizational climate of equity and respect for all PC team member involvement and input in the QI project work. Implications: Leveraging CFIR with role and team theories allowed us to identify facilitators of team cohesion, such as promoting a culture of equity and setting clear project goals. These insights demonstrate the value of team and role theories in implementation evaluation.

HCM: Does Interdisciplinary Care Team Care Management Demonstrate Cost Effectiveness 🗨️ 🖨️

Author: **Frank Cardwell Feagin**, *U. of Alabama, Birmingham*
Author: **Larry R. Herald**, *U. of Alabama, Birmingham*
Author: **Nathan Carroll**, *Virginia Commonwealth U.*
Author: **Stephen O'Connor**, *U. of Alabama, Birmingham*
Author: **Bisakha Sen**, *U. of Alabama, Birmingham*

Interdisciplinary care team care management programs hold great potential to improve quality, yet relatively little research has examined if these programs are cost effective. Using program and administrative claims data from a large health plan, this study evaluated an interdisciplinary care team (IDCT) care management program that utilized a data-driven algorithm to identify 400 high-risk enrollees out of 48,235 Medicare Advantage beneficiaries. Due to a lack of IDCT resources available to manage these members, 252 members were enrolled in the IDCT care management program, while the remaining 148 members were not enrolled and constituted the control group. Multivariable analyses found that quality improved, with a 56 percent reduction in inpatient admissions, and healthcare costs were reduced by \$1,121.76 per member per month. Moreover, the healthcare cost reduction from the program generated enough savings to cover the program's cost and a return on investment of \$1.9MM (\$614.88 per member per month).

Caring for Those Who Care for Patients

Session Moderator: **Derrick Paul Bransby**, *Harvard Business School*

HCM: Breaking the Cycle of Silence: The Role of Emotion Awareness on Turnover / Future Silence

Author: **Anya Madeleine Johnson**, *U. Of Sydney*

Silence is endemic in organizations and is particularly consequential in contexts such as healthcare. In this paper, we examine whether and how different types of silence (disengaged, defensive, prosocial) are associated with employees' turnover behavior. For those who stay with the organization, we also examine whether these types of silence can create a cycle, with employees repeating their silence, in the same context. Finally, we examine whether emotion awareness (an individual difference) helps to break these cycles. We investigate these questions with two waves of linked survey data from nurses, in addition to hospital turnover data. As expected, we found that disengaged silence leads to increased turnover, and prosocial silence to reduced turnover. For those who stay, previous disengaged, defensive and prosocial silence is associated with the same pattern of future silence and more overall silence. We also found that emotion awareness breaks some of these cycles: low emotion awareness strengthened the association with turnover for disengaged silence and, for those who stayed, led to stronger associations between silence types over time (for disengaged and prosocial silence).

HCM: Is It Safe Yet? Perceptions of Psychological Safety Among Organizational Newcomers

Author: **Derrick Paul Bransby**, *Harvard Business School*

Author: **Michaela Kerrissey**, *Harvard U.*

Author: **Amy C. Edmondson**, *Harvard U.*

Healthcare delivery organizations face immense pressure to rapidly integrate new employees into their workforce. Because it facilitates learning, psychological safety may be essential to new employee integration, but little is known about how organizational newcomers perceive it. We leverage a sample of nearly 26,000 healthcare workers to measure and explore organizational newcomers' experience of psychological safety using multivariate regression. Counter to our expectations, we found that newcomers experienced significantly greater psychological safety than their more tenured counterparts ($b = 0.06, p < 0.001$); particularly, we found that moderately tenured staff with between six months and five years of service perceived significantly less psychological safety than newcomers. We found some evidence that the longest-tenured employees, by contrast, experienced more psychological safety than newcomers, though the significance did not persist when including covariates. Among newcomers, role and demographics explained some variance in psychological safety. Overall, our findings suggest that psychological safety may decline as organizational newcomers adjust to the demands of their jobs, with particular vulnerability between six months to five years of tenure. Targeted efforts to promote psychological safety in these groups may help healthcare organizations maintain learning and performance after onboarding new staff.

HCM: Healthcare Personnel Mental Health During COVID-19: Lessons from Employee Occupational Health

Author: **Karleen F. Giannitrapani**, *Stanford U. / VA Palo Alto*

Author: **Cati Brown-Johnson**, *Stanford U. / VA Palo Alto*

Author: **Cheyenne DeShields**, *Case Western Reserve U.*

Author: **Matthew McCaa**, *VA Palo Alto*

Author: **Susan Giannitrapani**, *Wilmington VA Medical Center*

Author: **Wendy Thanassi**, *Stanford U. / VA Palo Alto*

Author: **Elizabeth M. Yano**, *VA Greater Los Angeles Healthcare System*

Author: **Karl Lorenz**, *Stanford U. / VA Palo Alto*

Background: Employee occupational health (EOH) in healthcare settings during the COVID-19 pandemic has been challenged with the near-impossible task of keeping healthcare personnel (HCP) safe and healthy in the face of real risks. In addition to physical risks, HCP mental health has been negatively impacted by COVID-19; this brought significant role demands on Employee Occupational Health (EOH) providers. Approach: To understand EOH perspectives on COVID-19 mental health impacts on HCP as well as role needs to address these impacts, we conducted semi-structured interviews with 43 Veterans Health Administration (VHA) EOH providers from 29 VHA sites throughout the US between July 2020 and May 2021. Results: 1) EOH found themselves needing to support HCP mental health concerns including home-related anxiety, fear, and family concern; work-related health concerns impacting mental health; COVID-19 bereavement; 2) New EOH roles included facilitating employee assistance and wellness programs, and enacting crisis management protocols, for instance for acute HCP suicidal ideation; 3) EOH mental health concerns revolved around burnout, work volume, and assuming responsibility for the health and welfare of HCP employees. Implications: A best practice for preparedness is to enhance interdisciplinary efforts between EOH and other departments (e.g. for access to chaplain for bereavement support).

COVID-19 has burdened the healthcare system and exposed nurses to immense stress. The current study therefore investigates nurses' mental well-being who are working with COVID-19 positive patients. Burnout leads to decreased productivity and manifests as emotional exhaustion, depersonalization (cynicism) and low personal accomplishment (professional efficacy). Authentic leadership is built on a humanistic value system which is the core value of nurses and other healthcare professionals. The current study therefore, used authentic leadership as the independent variable. There were two objectives in this study; first, to determine whether there is a relationship between authentic leadership and the three sub-constructs of burnout. Second, to determine whether there is a relationship between authentic leadership and job stress; and job-stress-related presenteeism. A cross-sectional quantitative research method was adopted by distributing validated online questionnaires to 1334 nurses in a private pathology laboratory and 241 questionnaires were analyzed. Multiple regression analyses showed statistically significant negative correlations between authentic leadership and emotional exhaustion, cynicism, job stress, and job-stress-related presenteeism, and a positive correlation between authentic leadership and professional efficacy. The study provides empirical data to encourage organizations to focus on positive psychology by developing authentic leaders to decrease nurses' burnout, job stress, and presenteeism.

Participant: **Paul Isaac Green**, *U. of Texas at Austin*

Unethical behavior has disastrous consequences for organizations and society. Inspired by the conference theme “Creating a Better World Together”, this symposium brings together novel empirical insights on how people prompt and punish others’ unethical behavior. How does one person’s actions and emotions affect another’s unethical behavior? How do people react to others’ unethical behavior with constructive or counterproductive responses? The first two presentations examine how individuals intentionally or unintentionally prompt others to act unethically by giving advice (Helgason & Effron) and displaying anxiety (Yip & Lee). The next three presentations examine how people respond, often unfairly and counterproductively, to others’ unethical behavior with punishment (Kundro, Nurmohamed, Kakkar, & Affinito), ostracism (Smith-Crowe & Burns), and feedback (Frey & Green). By focusing on behaviors available to individuals regardless of their formal role, such as advice, feedback, and ostracism, this symposium provides implications for how ethically-conscious employees can not only behave ethically themselves, but also inspire ethical behavior from others in their organization.

Organizational Networks and Political Processes

Session Moderator: **Jue Wang**, *Penn State U.*

OMT: [How Contributions to the Common Good Help with Individual Goals](#)

Author: **Jue Wang**, *Penn State U.*

Author: **Virginia Herbst**, *Technical U. of Munich*

Most studies have shown that firms' collective efforts in nascent industries can help them achieve collective goals; however, few studies have explored whether firms' commitment to collective actions will contribute to their individual goals. This paper extends collective corporate political activity literature to theorize how a firm's commitment to collective actions fasten its process to get regulatory approvals. We argue that when a firm is more committed to collective actions, it learns more about regulators' expectations of the nascent industry. Such information enables the firm to adjust products and services so that they will be approved by regulators faster. However, a firm at high risk of competitive information leaks is less likely to benefit from committing to collective creation because of a hesitancy to share information during such creation, thereby limiting its ability to learn effectively from regulators. By examining firms' commitment in collectively creating regulations for the U.S. unmanned aircraft industry and their regulatory approvals from 2012 to 2020, we find general support for our theory.

OMT: [The Activation of Social Networks: Evidence from Corporate Political and Family Connections](#)

Author: **Danyang Chen**, *National U. of Singapore*

Political connections are critical social capital to modern business, especially in emerging markets. Whether political connection triggers cost or benefits to connected firms is yet to be concluded. Instead, based on the theory of social status attainment, we propose that firms commit symbolic compliance (i.e., high-quality information disclosure) to activate the political rewards capital from political ties (i.e., state bank loans or government subsidies). We further theorize the complementary relationship between family and political capital in such an activation process. Contextualized in a panel dataset of Chinese private listed firms, we found solid supports for the compliance-exploitation actions by politically connected firms. Moreover, the political rewards become restrained whilst symbolic compliance tends to be stronger when the firm already has family capital. Overall, the study advances the literature on corporate political strategies by introducing the concept of political capital activation. It also presents new evidence of the complementary relationship between the political capital and family capital to corporate strategies.

OMT: [How Goal-Based Categorization Shape Negative Spillovers Among Firms: The Role of Political Connection](#)

Author: **Yusen Dong**, *China Europe International Business School (CEIBS)*

Author: **Han Ming Daniel Chng**, *China Europe International Business School (CEIBS)*

This study advances and tests the notion that the phenomenon of negative spillovers—whereby bystander firms are penalized due to their similarity to perpetrator firms—is shaped by two distinct forms of categorization. We analyze how and why medias' interpretative process following instances of corporate crisis will likely include not only prototype-based categorization but also goal-based categorization. We highlight the role and relevance of this neglected distinction by extending negative spillover predictions to include two unique predictions based on goal-based categorization. First, we propose an amplifying effect: if the perpetrator firm has political connections, which may trigger media's goal-based categorization, then that bystander firm will suffer a more significant negative spillover effect. Second, we also posit a mitigating effect: if the bystander firms have political connections, then the negative spillover effect to bystander firms will be lessened. We find support for our hypotheses in analyses of the tenor of media coverage to corporate crisis for all China listed firms. We discuss the implications of our theoretical perspective and empirical findings for research on negative spillovers and political connections.

OMT: [Strategic Leadership and Multiple Networks: Theory & Evidence](#)   

Author: **Suyash Garg**, *U. of Texas at Dallas*

Author: **Zhiang Lin**, *U. of Texas at Dallas*

Author: **Haibin Yang**, *Chinese U. of Hong Kong*

Stakeholder norms originating in developed economies influence firms' board composition, including board diversity. However, less is known on firms in emerging economies, specifically India—a heterogeneous institutional context where firms' strategic choices are subject to unique institutional forces and social structures. In his study, we bridge the stakeholder theory with the institutional perspective to examine Indian firms' strategic choices regarding board caste diversity. Specifically, we contend that Indian firms' exposure to stakeholder norms from developed economies does increase board caste diversity in India. However, such adaptations can face constraints and opportunities embedded in multiple social structures of India. Our panel regression analyses of three large Indian datasets between 2010 and 2018 suggest that Indian firms' board caste diversity is indeed driven by their exposures to stakeholder norms from developed economies. Further, such adaptations are strengthened when firms occupy key positions—prominence (centrality) and brokerage—in a network with market-based affiliation (i.e., banks), but are weakened when firms occupy prominence (centrality) and brokerage in a network with a tradition-based affiliation (i.e., family and kinship). As one of the first studies to systematically investigate Indian firms' board caste diversity, our findings have important implications for corporate governance in emerging economies.

Understanding Emotions in Organizing, Occupations, and Work

Session Moderator: **Kerstin Rego**, *Assistant Professor, U. of Regensburg, Germany*

OMT: **Spaces of Compassion: Organizing Care at Good Samaritan Hospice** →

Author: **María Dolores Del Río**, *U. Austral*

Author: **Pablo Daniel Fernandez**, *IAE Business School Argentina*

Author: **Ignasi Lanuza Martí**, *ESADE Business School-Ramon Llull U.*

Author: **Alberto Willi**, *IAE - U. Austral*

Finding a balance between work-related emotional demands and protecting the self is a challenge for all organizations, but it is critical for organizations that face, in their everyday activities, suffering and death. Drawing on an ethnographic study at Good Samaritan Hospice, an end-of-life organization supporting poor, terminally ill patients, we investigate the creation and repair of spaces of compassion. In examining this case, we add to the literature of compassion by identifying four sets of practices contributing to the creation and reparation of such spaces. These practices are: embracing death, demarcating places, enacting spirituality, and reconfiguring time. Together they highlight how compassion and care of demanding others go beyond the individual, deviant or heroic episodes but is sustained in time within an organization.

OMT: **Emotion Management and Professional Socialisation in the Medical Field**

Author: **Kerstin Rego**, *Assistant Professor, U. of Regensburg, Germany*

While a plethora of research has studied emotion management and its antecedents, the role socialisation plays in emotion management is underestimated in recent research. Additionally, scarce emotional socialisation research limits itself to the focal organisation. Therefore, this paper examines how emotion management is framed through a professional, cross-organisational socialisation process. Based on a qualitative study of the emotion management and socialisation of gynaecologists, I show how the professional socialisation phase of future gynaecologists comprises different organisations, of which each provides one important learning step towards the specific emotion management of gynaecologists. The profession-specific socialisation of gynaecologists places medical feeling rules in the foreground in such a way that these might shape every handling of emotions, although organisational feeling rules and individual decisions on how to deal with emotions are able to supplement it later. Finally, I discuss Bourdieu's nexus of field and habitus as a promising conceptualisation to further theorize on the phenomena.

OMT: **Organizational Control and Altruistic Interest in Workers' Emotional Well-Being**

Author: **Minh Hoang Vo**, *INSEAD*

Much empirical research on organizational control argues to serve workers' psychological needs to the extent doing so induces their cooperation. Today, many organizations go beyond this extent to serve those needs as a fundamental goal of its existence. This sustains a context for workers' attempts at upward influence to be seen as legitimate and tolerated, an implication currently under-explored in organizational control theory. This paper explores the implications for control system design through a three-year in-depth study of a social enterprise that employs marginalized people to advance their well-being. My findings show how workers resist work demands through emotive storytelling ("dramatizing"), raising psychological risk ("catastrophizing"), and invoking a feeling rule of happiness-maintenance ("tone policing"). Further investigation reveals that most of those workers construe happiness to be an entitlement and the organization to violate this right when it directs them to handle stressful work. Others, however, construe happiness as an effortful accomplishment and take stressful responsibilities as occasions for competence building. The difference in their appraisals points to whether they had the intense experience being socialized to adopt a self-evaluative motive for going to work, as opposed to a self-protective motive. Given prevalent interests in how organizations simultaneously enable and control workers, this study develops a control system perspective and highlights the role of emotional socialization in sustaining a productive tension between the two actors.

OMT: **Negotiating and Sustaining Temporary Organizing Through Affective Practices**

Author: **Christina Andrea Lüthy**, *Copenhagen Business School*

In this study I investigate how collaborative relations in temporary organizing are mobilized and aligned towards a creative vision using affective practices. Building on the current literature, I argue that affective relations are a central to understanding the tension ridden negotiations of collaborative relations in temporary organizing. I draw upon the notion of affective practices to conceptualize how collaborative relations are shaped through joyful and sad affects in organizational practices. These affective practices are then analyzed based on an affective ethnography of an artistic enterprise and one of its long-term participative art projects which creates a modular growing picnic blanket in public space with the support of a shifting configuration of partners, collaborators, volunteers and participants. The analysis carves out enticing, articulating, attuning and opposing as four affective practices that are used in the collaborative process to mobilize support and address resistance in temporary organizing and shows how these practices work with affecto-material presences to inflect collaborators affectively towards the collaborative process. With this study I advance the literature on temporary organizing, by theorizing how affective practices shape and sustain and collaborative relations through forging affective coalitions, and by discussing how affect theory creates inroads to a more embodied understanding of how temporary organizing is negotiated towards transformation.

Author: **Vinayak Ram Tripathi**, *IMT Ghaziabad*

Author: **Neha Arora**, *IMT Ghaziabad*

Author: **Ankita Singh**, *U. of Graz, Austria*

In this study we address two important questions: (1) why professionals go beyond the technical jurisdictions of their profession to enter physically dangerous situations; and (2) how they resolve these dangerous situations through partnership building with the local communities. We explore these questions in the empirical context of dangerous and conflict ridden big cat rescue operations conducted by wild-life veterinary doctors in Northern India. These veterinarians lead rescue teams formed to safely catch and release leopards or tigers which stray into human settlements, leading a tense and conflict ridden situation, with inherent physical dangers for the animal, villagers and the rescue team. Our findings show that veterinary doctors are driven by their deep sense of moral calling, rooted in their ethics of environmental conservation and protection of these apex predators, to enter these dangerous crisis situations. In de-escalating the placial conflict, the veterinarians and rescue team engages with spatial, material and relational work. Further, we also find that the veterinarians deploy an array of transient moral emotions to build temporary partnerships with the local community, allowing them to resolve the crisis and prevent the killing of the animal. Our findings contribute to the literatures on ethics of encounters, professional calling and moral emotions.

Understanding Organizational Identity From An Institutional Perspective

Session Moderator: **Anna Fahlgård-Lahache**, *Stockholm School of Economics*

OMT: **Organizational Identity Formation Under Hybridity Unawareness and Inelasticity**

Author: **Anna Fahlgård-Lahache**, *Stockholm School of Economics*
Author: **Magnus Mahring**, *Stockholm School of Economics*
Author: **Lotta Hultin**, *Stockholm School of Economics*

The formation of organizational identity for new types of government agencies are especially challenging due to their institutional context. Drawing on in-depth longitudinal data from the first 2.5 years of an agency for digital government, we induce an empirically grounded model of how organizational identity is formed when hybridity is pre-defined and inelastic due to strict institutional boundaries. In this process study, our findings run counter to prevailing models of organizational identity formation who proposes a convergent process of dual logics, that through the enactment of practice experimentation end up with a blended identity. Instead, we found an organization that was assigned hybridity from the start by mission duality, with no way to escape the tension it brought with it due to the inelasticity provided by the institutional context. Our findings showed a divergent process emerging from an initial unawareness of hybridity and ending with structural separation. Our theoretical model of organizational identity formation in unaware hybrids has a number of direct implications for ongoing research on elasticity in hybrid organizations and organizational identity formation.

OMT: **When Symbols Matter: Uncertainty, Entrepreneurial Identity and Firm Performance in Mexico**  

Author: **Peter Polhill**, *Brigham Young U.*
Author: **Grady Wallace Raines**, *Cornell SC Johnson College of Business*
Author: **Wesley Sine**, *Cornell U.*

Extant research reveals conflicting empirical results on the performance implications of firm names. We propose that the inconsistent findings in the literature are due in part to prior studies not considering the role of environmental uncertainty in a firm's social environment. We argue that the symbolic value of a firm name on performance will be higher in uncertain conditions because these conditions encourage audiences to rely more on subjective symbols of a firm's internal identity. We test our hypotheses in the context of Mexico from 2001-2006 which corresponds with increasing rates of homicides of women, largely brought on by warring Drug Trafficking Organizations. We find that firm names that align with key institutionalized values are associated with higher firm performance in uncertain times, but that younger firms benefit to a great extent from this strategy. We contribute to the literature on cultural entrepreneurship and organizational identity.

Paper is NOT Available. Please contact the author(s).

OMT: **How Social Enterprises Present Their Identities in Entrepreneurial Narratives**

Author: **Yoojeong Shin**, *U. of North Carolina at Chapel Hill*

Social enterprise offers an interesting context for organizational identity research since social enterprise combines two contrasting institutional logics – social logic and economic logic – to construct its identity. This paper attempts to explore how social enterprises build and present their identities in entrepreneurial narratives by combining the contrasting identity elements from social and economic logics. Using Korean social enterprises as an empirical setting, the research finds that the social performance relative to aspiration and the resources received from the social sector influence the identity management of social enterprises. Specifically, the results show that when social performance is below aspiration, social enterprise reduces the presentation of social identity but increases the presentation of economic identity. In addition, the amount of resources received from the social sector has a positive relationship with the social identity presentation but has a negative relationship with economic identity presentation.

Hybrid Organizations and Logics

Session Moderator: **Robert Wayne Gregory**, *U. of Miami*

OMT: [A Productive Tension Decoupled: An Institutional Account of the Boeing 737 MAX Disaster](#)

Author: **Mark Keil**, *Georgia State U.*

Author: **Robert Wayne Gregory**, *U. of Miami*

Author: **Juan Almandoz**, *IESE Business School*

Author: **Sean Dougherty**, *Georgia State U., J. Mack Robinson College of Business*

Author: **Bob Walrave**, *Eindhoven U. of Technology*

Two fatal crashes of Boeing 737 MAX airplanes occurred on October 29, 2018 and March 10, 2019 killing 346 people, but what exactly were the forces that led to the commercialization of such an obviously flawed design? We provide an institutional logics perspective of this large-scale failure, which complements existing accounts of disaster. After Boeing's merger with McDonnell Douglas, and because of growing competitive pressure from Airbus, the corporate logic of managerial rationalism became dominant and the professional logic of scientific control became subordinated and decoupled from central organizational aims. Internal processes within Boeing reinforced this subordination as the professional logic simply became a means to obtaining the ends of corporate efficiency and cost control by obtaining regulatory approval and thus external legitimacy. We show how altering the balance of institutional logics may trigger a series of changes that accentuates the subordination, resulting in an increased likelihood of disaster. Complexity in this organizational context benefitted from a productive tension between logics, which was relaxed through a decoupling strategy with disastrous consequences. This story about organizational risk and large-scale disaster has implications for research on complexity, decoupling, and the architecture of institutional logics as means and ends.

Paper is Available to Meeting Registrants Only.

OMT: [Rhetoric Paradox in Organization's Logic Hybridization Process](#) 

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*

Author: **Lujun Xie**, *Beijing Information Science and Technology U.*

Author: **Yuxiaoqian Cheng**, *Xi'an International Studies U.*

Many organizations were born in single institutional logic dominating forms, while later they incorporate extra logics and turn to hybrid (i.e., multiple institutional logic) forms. However, we know little about the challenges and managerial approach during organization-level logic hybridization process. In this study, we present a rhetoric paradox in lone-founder firm's familization process, during which an entrepreneurial logic dominating organization transit to entrepreneurial-family hybrid form. Our findings suggest lone-founder firm's familization transition leads to both internal (i.e., greater turnover rate of top managers) and external destabilizations (i.e., lower recommendation score rated by security analysts). Organization's socioemotional wealth rhetoric, which stand for typical family logic, plays paradoxical roles. It likely mitigates external destabilizations while intensifies the internal ones, vice versa. The above findings enable us to declare contributions to institutional logic (hybrid organization), entrepreneurship and family firm literature.

OMT: [The Legal Infrastructure for Hybrid Organizations: The Case of Portugal, 1990-2019](#)   

Author: **Tomé Guerreiro De Oliveir Salgueiro**, *Nova School of Business and Economics, U. Nova de Lisboa*

Author: **Stephen Mezas**, *INSEAD Abu Dhabi*

Author: **Ricardo Zozimo**, *Nova School of Business and Economics, U. Nova de Lisboa*

Author: **Miguel Alves Martins**, *Nova School of Business and Economics, U. Nova de Lisboa*

In this study we present, measure, and test a theoretical model of how the legal infrastructure for hybrid organizations emerged from the parliamentary system of Portugal over three decades. To develop this model, we begin with an organized anarchy representation, describing the policy process as the confluence of four distinct streams: choice situations, participants, problems, and solutions. We suggest a theoretical distinction between anarchic policy processes, along the lines of the garbage can, where the streams remain relatively independent, and more structured policy processes, where institutional and political orders create more interdependence among the streams. We develop hypotheses that link the observed outcomes of legal deliberations, categorized as oversight, flight, or resolution, with a characterization of the policy process as more anarchic or more structured. Our findings suggest that the process is more structured than anarchic and show that mechanisms related to a dynamic mix of temporal, institutional, and political orders significantly affect legal outcomes. We close with a review of the findings and some implications for institutional theories of regulation and managers and advocates of hybrid organizations.

OMT: [From Legitimation to Failure: The Downfall of a Temporary Hybrid Organizing in Smart City Project](#)

Author: **Hami Yousefdehi**, *PhD candidate*

Organizational hybridity refers to operating in a context of institutional plurality due to a combination of multiple, often conflicting elements of institutional logic. To be successful, organizations must develop strategies to combine logic and sustain their hybrid forms. Success, however, is not inevitable. The simultaneous pursuit of dissimilar and oftentimes conflicting logics causes hybrid arrangements to experience divergent pressures from various stakeholders and, in many cases, fail. This study illustrates that hybridity failure is not always the reverse of succeeding. Instead, failure may occur through a complex trajectory of de-settlement. Utilizing archival data, we empirically examine Toronto's new Quayside smart city projects as the case of temporary organizing in which a public-private partnership between Waterfront Toronto (public) and Google's affiliate Sidewalk Labs organization (private) has been failed. Drawing on an in-depth field study, we develop a framework to track distinct hybridity trajectories, including complementary, separation and contestation trajectories that all together led to the hybridity failure. We reveal mechanisms associated with each trajectory and show how the pathway led to the hybridity failure.

Institutional Voids, Persistence, Complexity, and Repair

Session Moderator: **Juan Francisco Chávez R., U. of Victoria**

OMT: Unpacking Institutional Complexity: A Configuration Approach of Organizational Success

Author: **Juan Francisco Chávez R., U. of Victoria**
Author: **Matthew Murphy, U. of Victoria**
Author: **Belaid Moe, U. of Victoria**

This study investigates the conditions that influence organizational success in protecting the legitimacy of large capital investment projects in plural and complex institutional contexts. Following a bottom-up approach, we distinguish and measure the different components that characterize plural and complex institutional contexts. Then, we investigate under which context-specific conditions are different organizational responses linked to low organizational success? Our results show that contexts of volatile complexity lead to low success irrespective of the type of organizational response. Additionally, we find that incompatibility alone, a key feature of complex institutional contexts according to prior research, does not seriously compromise organizational success. Our dataset is comprised of the hearing transcripts of the regulatory review processes of 35 oil pipeline project proposals in Canada (1993 – 2018). Our research design combines topic modeling and fuzzy set Qualitative Comparative Analysis (fsQCA).

Paper is Available to Meeting Registrants Only.

OMT: Caught in a Trap: Media's Role in the Creation of a Paradox of Legitimacy Repair

Author: **Iris Seidemann, U. of Hamburg**
Author: **Daniel Geiger, U. of Hamburg**

The paper examines the role of media in (failing) legitimacy repair processes. It builds on an analysis of the media discourse that emerged around the legitimacy crisis of the State Office for Health and Social Affairs (LAGeSo) during the so-called German “refugee crisis”. Our findings reveal that the media were constructing three paradoxes impeding legitimacy repair: the transformation paradox, the alliance paradox, and the transparency paradox. These paradoxical tensions result from media’s framing of the solution as a new problem thereby simultaneously triggering and evaluating changes of the legitimacy object. Hence, our paper contributes first, to legitimacy theory by highlighting the role of media not as a passive spectator but as a failing agent that creates a vicious circle of legitimacy repair. Second, the paper contributes to the dark sides of paradox debate by showing why paradox management might fail even despite the best intentions of managers.

OMT: Mobile Money as a Steppingstone: Addressing Voids in Institutions through Enabling Innovations

Author: **Aparajita Agarwal, The Wharton School, U. of Pennsylvania**
Author: **Valentina Assenova, The Wharton School, U. of Pennsylvania**

Technological innovations often emerge to meet the needs left unaddressed by underdeveloped or missing institutional infrastructure or voids in market-based institutions. Many of these innovations, particularly those based on digital technologies have an “enabling nature”, which allows them to spawn other innovations and have broader societal and economic benefits. We argue that such digital enabling innovations can address voids in market-based institutions not just by substituting for missing and underdeveloped institutional infrastructure and filling the unmet demand left by the voids but also by complementing the existing institutional infrastructure, thereby expanding the capacity of market actors to undertake more transactions. We study these effects and the underlying mechanisms in the context of mobile money in emerging economies with voids in credit-market institutions. Our findings suggest that enabling innovations like mobile money become steppingstones that bolster existing institutional infrastructure, rather than undermine or completely replace it.

OMT: Hooked on a Thread: The Craft of Institutional Persistence in the Context of Koniaków Lacemaking

Author: **Monika Zebrowska, U. of Cambridge**
Author: **Jochem Kroezen, U. of Cambridge**

Through an in-depth, qualitative study of Polish folk craft of Koniaków Lacemaking, we investigate its surprising, long-term, institutional persistence. While most places have historically developed rich, folk craft traditions, economic development and related societal changes have led to incremental vanishing of such practices. Yet, community of Koniaków remains faithful to its traditional craft that is still vividly practiced for almost 150 years. Our findings suggest that persistent institutions, such as Koniaków Lacemaking, require a collective of dedicated and caring actors that are personally invested in the institution and deeply committed to its persistence. Such collective is then capable to “flexibly control” the institution, which involves effectively protecting the essence of the institution while enabling for adaptive change. Based on our case analysis, we conceptualize the recurring relation between, what we call, “institutional caring” and “dynamic grounding” as an important precondition to long-term institutional persistence.

Session Moderator: **Anthea (Yan) Zhang**, *Rice U.*

OMT: **Get into Uncharted Waters: The Asymmetric Imitation Between State-Owned and Non-State-Owned Firms** 

Author: **Anthea (Yan) Zhang**, *Rice U.*

Author: **Yu Li**, *U. of International Business and Economics*

Prior literature has documented that firms tend to imitate each other in entering new product/geographic markets. We advance this line of research by examining how the nature of the risk that firms aim to address may affect the pattern of inter-firm imitation. We examine this question in the context of Chinese firms' foreign direct investment (FDI) location choices. First, we argue that the number of investments made by Chinese firms in a country is positively related to the likelihood that a Chinese firm will make a new investment in that country, especially that country has a higher level of political risk. Based upon this baseline argument, we propose that state-owned enterprises (SOEs) and non-SOEs will differ in their imitation behaviors, in terms of both tendency of imitation and imitation targets. Regarding tendency of imitation, we propose that non-SOEs' location choices are more sensitive to the number of Chinese investments in a country than SOEs' location choices since the former are more vulnerable to the host country's political risk than the latter. Regarding imitation targets, we propose that non-SOEs tend to follow SOEs than following non-SOEs in their location choices whereas SOEs may follow SOEs but do not care about non-SOEs in their location choices. With data on Chinese firms' FDI location choices in 90 countries during or period of 2001 to 2013, we find strong empirical evidence to support our arguments.

OMT: **Architects of Markets: The Creation and Diffusion of the Bus Rapid Transit Market, 1969-1999** 

Author: **Leandro Rodrigo Canto Bonfim**, *John Molson School of Business, Concordia U.*

Author: **Diego Coraiola**, *U. of Victoria*

Author: **Andréa Paula Segatto**, *Federal U. of Parana*

Delivering quality public services to cities' inhabitants is an increasingly pressing issue. With limited resources to address citizens' needs, local governments increasingly find the need to engage in entrepreneurship to develop novel solutions for old urban problems. However, we lack an understanding of the entrepreneurial efforts of local governments. Specifically, we lack an understanding of how local governments embrace urban entrepreneurialism to foster private market participation in urban development. We investigate this question through the case of the creation of the bus rapid transit market in Brazil. We develop a process model that explains how local governments architect the creation and diffusion of new markets through relational, material, and symbolic practices, and clarifies the connection between specific micro-institutional practices and market development over time. Our research contributes to the study of state entrepreneurship and market formation.

OMT: **The Impact of Institutional Logic: Intensified Significance of Technology Independence and VC firms** 

Author: **Tan Li**, *Tsinghua U.*

Author: **Delin Yang**, *School of Economics and Management Tsinghua U.*

Before evaluating the performance of government venture capital firms, we need to understand how their behaviors are different from private venture capital firms and why. Based on institutional logic perspective, government venture capital firms' behavior would be deviant from private ones because of the additional state logic they embody. Leveraging the ZTE crisis, an exogenous event that strengthened the state's pursuit of technology independence, we compare how government and private venture capital firms' tendency to invest in high-tech high-trade startups is changed. Using 18,164 investment events in mainland China, we found that government venture capital firms significantly increased their investment in high-tech high-trade startups after the ZTE crisis. In contrast, private venture capital firms present no significant change. However, as related experience and same province condition positively moderate the impact for private venture capital firms, they can hardly moderate the impact for government venture capital firms. Focusing on how organizations cope with dynamic tensions, we extend institutional logic studies by demonstrating that hindrance comes from contesting logic and other goals of the same logic. As these two sources hinder in different ways, we emphasize the role of audiences in how logic works.

OMT: **Why do Firms Self-Regulate?**

Author: **Janice M. Gordon**, *Florida State U.*

In management research, regulatory structures are generally associated with formal regulations such as laws, rules, and sanctions (North 1990; Scott 1995). However, this limited association discounts the importance of informal regulations and firm self-regulation. This paper develops a process model to clarify the relationships between regulatory structures in order to provide an explanation as to why firms self-regulate. The process model outlines the impacts of (1) formal regulations on firm self-regulation, (2) informal regulations on firm self-regulation, (3) firm self-regulation on norms and the institutional environment, and (4) the institutional environment on the creation of and firm compliance with new formal regulations. I develop propositions that outline these relationships based on specific tactics and contexts.

Understanding Myths in Organizations

Session Moderator: **Rachel W. Mui**, *Kansas State U.*

OMT: Composing Beethoven: Not All Organizational Rhetoric is Equal

Author: **Rachel W. Mui**, *Kansas State U.*

Author: **Jake Duke**, *Kansas State U.*

While there is a growing body of research on the benefits of rhetorical history, we know considerably less about the degree to which a firm's chosen rhetorical history strategy successfully produces a firm benefit, especially when history may be retold using a variety of mnemonic tools for the storage and retrieval of historical content and organizational memories. Through the qualitative investigation of the most historically elite peer group of U.S. orchestras coined the "Big Five," rhetorical history strategies emerge in the form of four distinct mnemonic practices – articulation, action, attribution, and artifactualization. The insights from this study have both theoretical and managerial implications for how these practices help mythologize personal histories, while further preserving collective beliefs and traditions.

OMT: Dis/ableism in the Workplace: The Power Positionalization Dynamics of Institutional Myths.

Author: **Daniel Semper**, *WU Vienna U. of Economics and Business*

Author: **Alexander Fleischmann**, *IMD Lausanne*

Institutional theory has long been criticized for black-boxing power or pursuing research from a privileged and seemingly neutral standpoint. We respond to calls to scrutinize institutional forms of inequality by attending to the underlying power dynamics of institutional processes. We thereby draw on insights from power theories and phenomenologically grounded neo-institutionalism. In so doing, we conceptualize how institutional workplace myths positionalize typified actors, i.e., groups of individuals with common ascribed features, along a categorical distinction that depicts them as either able or disabled. We present a process model that aims at informing future research and help identify the 'flipside' of institutional arrangements. We then discuss three approaches to undermine the categorical nature of power positionalization inherent in institutional myths.

OMT: The Role of Organizational Myth in Institutional Persistence: The Case of Magnum Photos

Author: **Anastasia Sergeeva**, *Erasmus U. Rotterdam*

Author: **Matthew Kraatz**, *U. of Illinois*

Institutionalized organizations are pervaded by myths, that is, loosely factual historical narratives expressing organizational values. Yet, we scarcely understand how such organizations cohere around their myths over time, thus maintaining their distinctive characters and demonstrating institutional persistence. In this study, we explore how organizational myth fosters institutional persistence over a long period of time, even in the face of potentially disintegrating crises. We examine the case of Magnum Photos, a legendary photo agency founded in 1947. Our analysis of rich manually collected archival data covering more than half a century of Magnum's existence allows us to unpack a mechanism that we term mastering the art of crisis. In mastering the art of crisis, any organizational crisis is transformed into an existential one and organizational myth is invoked for charting a course of action that would ensure the continuous organizational cohesion around the values expressed in the myth. As a new course of action is bounded by the logic of the myth, it does not disrupt the distinctive character and historic legacy of the organization. As organizational myth, by virtue of its symbolic nature, affords multiple frames of reference, it allows for reprioritization and reinterpretation of the values constituting it, thereby providing a room for successful adaptation to new circumstances. Our findings contribute to the historical turn and revival of old institutionalism in organization studies.

Presenter: **Shelby Gai**, *Michigan State U.*
Organizer: **Michelle K. Lee**, *Smith School of Business, Queen's U.*

The role of corporate leaders has changed vastly in the past few decades. In particular, the past decade has been marked by the rise of stakeholder pressures from activist shareholders looking to extract shareholder value, social activists seeking social participation, and increasing consumer and media attention on corporate leaders. As societal issues have gained recognition and stakeholders are increasingly powerful in governance, organizations and their leaders are held to a level of accountability never seen before in new areas including stakeholder governance and diversity. Corporate leaders are more diverse than they have been in the past, expected to be attune to stakeholder pressures, and presumably more capable of promoting a social agenda within their own organizations. The symposium seeks to understand how increasing pressures from stakeholders, as well as ensuing calls for diversity in the business elite have affected organizational decisions concerning the careers of corporate leaders. The studies explore the interplay of these newer societal pressures on organizations and uncover the degree of accountability imposed on their corporate leaders.

OSCM: Transparency in Buyer-Supplier Relationships: The What and When of Sensitive Information Exchanges

Author: **Daive Burkhart**, *U. of Mannheim*
Author: **Christoph Bode**, *U. of Mannheim*

Enhancing transparency in buyer-supplier relationships is not only necessary to address increased consumer and societal awareness but also to tackle supply chain disruptions and shortages. Yet, due to the risk of information leakage or opportunistic behavior, suppliers are reluctant to share certain (sensitive) information. We apply a sequential multi-method research design, including a qualitative study followed by a supplier survey and a scenario-based experiment to investigate how firms do and should collaborate with suppliers to increase transparency in the relationship. Building on the social exchange and resource theory, the qualitative study suggests that various information is perceived sensitive, antecedents of “transparent” and “opaque” suppliers, and tactics to induce the sharing of sensitive information. The later studies show that commitment and relationship length are significant antecedents of transparent suppliers. In line with resource theory, we also show that the counterparts of buyers prefer to be reciprocated with information, money, or status incentives when being asked for sensitive information. This study contributes to research in buyer-supplier exchanges and transparency by studying sensitive information sharing and providing valuable insights to practitioners on improving collaboration with their suppliers.

OSCM: Exploring Codes of Conduct in the Supplier Selection Decision at Financially Distressed Firms

Author: **Christian Felix Durach**, *ESCP Business School*
Author: **Mary Parkinson**, *U. College Dublin*
Author: **Frank Wiengarten**, *ESADE Business School*
Author: **Mark Pagell**, *U. College Dublin*

Building on the ethical decision-making literature and the concept of decision frames, this study provides an exploration of the decision-making process of purchasing managers at financially distressed firms. Codes of Conduct (CoC) and the way they are enforced are explored in terms of their ability to inform and guide purchasing managers in their decisions. Four experiments involving a total of 648 purchasing managers at manufacturing firms were conducted. The results indicate that purchasing managers at firms in financial distress were 2.67 times more likely to select unethical suppliers. As a potential remedy, it is found that the enforcement of the firm's CoC can decrease this tendency by between 64 and 79 percent. However, enforcing CoCs is not straightforward and the simultaneous presence of enforcement methods that induce opposing decision frames was found to harm, rather than support, ethical supplier choices vis-à-vis situations where only one enforcement method is present. These findings develop an improved understanding of purchasers' decision-making processes and offer insights on how to effectively guide these decisions.

OSCM: What Do They Want? The Effect of Logistics Quality on Direct-to-Consumer Customer Satisfaction

Author: **Mike Goulder**, *Case Western Reserve U.*
Author: **Yunmei Wang**, *Case Western Reserve U.*
Author: **Kalle Lyytinen**, *Case Western Reserve U.*

Direct to consumer (D2C) business models, characterized by firms that design, source, and sell products directly to consumers bypassing traditional retail channels, are a relatively new phenomenon. One aspect we know little about is under what conditions consumers are willing to utilize a D2C channel, specifically, the degree to which the logistic service quality and information quality of user experience matter in choice of channel. Moreover, as these firms directly compete with Amazon's delivery capability, we need to ask to what extent the so called “Amazon effect” impacts customer expectations. This study addresses these questions by conducting a scenario-based experiment which evaluates the effect of logistics service quality (LSQ) and online user experience (OUX) on customer satisfaction (CS), as moderated by price relative to Amazon (PRA). We find that LSQ has the largest positive effect on customer satisfaction, followed by OUX. Price moderates negatively (lessens) the effect of LSQ on customer satisfaction. Paradoxically, price also moderates the effect of OUX on CS, but counter-intuitively, strengthens it. The findings are reviewed in light of the so-called “Amazon effect”, the tendency of consumers to set their expectations for logistics at the levels of performance consistently provided by Amazon.com. Potential implications of the findings for the further evolution and growth of the D2C industry are presented.

OSCM: Using Deep Learning to Improve Inventory Record Accuracy: Concept and Application

Author: **Javier Ricardo Amaya Silva**, *Oxford U., Saïd Business School*

Maintaining accurate inventory records has been, and remains, a central problem for managing retail operations. Discrepancies between the physical and recorded stock lead to poor reordering decisions, the over- or understocking of products that increase waste or lost sales, respectively. In this study, we revisit this classic inventory management problem by investigating whether novel machine learning algorithms provide an improvement over established methods. Specifically, we explore the application of deep learning as a method to identify and correct impactful inventory record errors – those that may affect future reordering decisions – by leveraging product level, store level and inventory quality data. Our results show that a deep learning-based decision model outperforms traditional stock auditing strategies. We validate our model by running a field experiment on 450 large stores of a leading grocery retailer. The results demonstrate that a deep learning-based decision model can provide a significant improvement over traditional corrective strategies by refining the representation of the inventory record inaccuracy problem. More generally, our study highlights how generic algorithms, like deep learning, can be applied successfully to improve performance over existing specific methods, yet also, we identify the wider challenges that emerge when deploying those algorithms.

Author: **Jesus Diego Castillo**, *U. Carlos III de Madrid*
Author: **Maria J. Montes-Sancho**, *U. Carlos III Madrid*
Author: **Zhaohui Wu**, *Oregon State U.*

Recent supply chain operations studies have made strides in understanding the structural and relational embeddedness of firms in the supply base and their impact on the performance of the focal buyer. Yet, the theory on cognitive and cultural embeddedness remains unclear. Understandably, cognitive and cultural embeddedness of firms are less observable. Indeed, cognitive and cultural embeddedness explains the deep motivations of firms' actions - why firms do certain things and why they pursue certain kinds of relationships in the first place. This study takes an incremental step in this direction. We propose and empirically examine the relationships between shared cognition among firms in a supply base and the financial performance of the focal buying firm. Through analysis of a sample of 240 ego-networks of buying firms, our overall theoretical argument is supported, and we find a nuanced understanding of how such network-shared cognition functions. More specifically, in a supply base, cognition shared among a buyer and suppliers is positively associated with the buyer's financial performance (ROA). However, when the network becomes cognitively homogeneous, it has a detrimental effect on the buyer's financial performance, revealing the "dark side" of cognitive embeddedness. We also identified the moderating effect of network interconnectedness, which allows the buyer to benefit from suppliers' network shared cognition. That is, only in the presence of a very interconnected network, the potential benefits from supplier-supplier shared cognition will materialize for the buyer; otherwise, its potential remains dormant.

When CEOs and Boards Interact

Session Moderator: **Shuaijun Zhang, UTRGV**

STR: A Game of Checks and Balances: When Celebrity Director Meets Celebrity CEO 

Author: **Shuaijun Zhang, UTRGV**

Author: **Wanrong Hou, U. of Texas Rio Grande Valley**

Previous findings on the relationship between celebrity CEO and risk-taking present a double-edged sword effect. Synthesizing agency theory and resource dependence theory, we hypothesize that the relationship may depend on celebrity directors. Further, we hypothesize that CEO duality would allow further enhancement of the moderating effect of celebrity directors in the relationship between celebrity CEO and risk-taking. Conversely, we hypothesize that an increase in the number of independent directors will weaken the moderating effect of celebrity directors in the relationship between celebrity CEO and risk-taking. Based on the sample of S&P 1500 companies between 2010 to 2016, our empirical analysis shows that the relationship between celebrity CEO and risk-taking is contingent on celebrity directors. Moreover, the moderating effect of celebrity directors depends on CEO duality and board independence. We conclude with a discussion and implications for theory and research.

STR: The Effects of Board Chairs' Political Ideologies on Board Chair Orientations

Author: **Matias Kalm, Tilburg U.**

Author: **Ryan Adam Krause, Texas Christian U.**

Author: **Matthew Josefy, Indiana U. - Kelley School of Business**

Prior research has shown that board chair governance orientations affect firm performance. Yet, how board chairs choose or are predisposed to adopt specific governance orientations has largely remained unexplored. Integrating research on behavioral governance and political psychology, we propose that board chairs will gravitate toward different governance orientations based in part on their political ideologies. Specifically, we posit that conservative-leaning chairs, relative to their liberal-leaning counterparts, are significantly more likely to adopt a collaboration orientation toward their CEOs and less likely to adopt a control orientation. We propose that CEO's personal characteristics, namely political ideology and gender, moderate these relationships. Our analyses of sampled S&P 500 firms lend support to our predictions. Our theory and findings contribute to literatures on behavioral corporate governance and emergent research on ideological foundations of executive decision-making.

STR: The Configurational Effect of CEO Power and Personality on CEO Overpay

Author: **Radina R. Blagoeva, U. of Georgia**

Author: **Mirko Benischke, Erasmus U. Rotterdam**

Author: **Michael C. Withers, Texas A&M U.**

When attempting to explain why some CEOs receive much higher compensation than is objectively justifiable, scholars have largely relied on the managerial power hypothesis, which poses that excessive executive pay reflects the ability of CEOs to exercise their power over the board of directors. However, mixed empirical findings regarding the relationship between CEO power and pay call into question the validity of the managerial power hypothesis. We integrate two streams of research that recognize that power is a complex and multidimensional construct, and that CEO personality could affect their ability to leverage different dimensions of power. Using fuzzy set qualitative comparative analysis (fsQCA), we find that multiple configurations of CEO power and personality attributes lead to their overpayment. Our findings shed new light on the managerial power hypothesis assumption that having power is synonymous with being willing and able to leverage it to extract personal benefits.

STR: Mitigating Negative Effects of CEO Overconfidence: An Attention-based View

Author: **Jun Xu, U. of California, Riverside**

Overconfident CEOs are more likely to overinvest if they have sufficient cash flow (Malmendier and Tate, 2008) and pay higher premiums to their acquisition targets (Hayward and Hambrick, 1997). Based on the attention-based view of the firm (Ocasio, 1997), I argue one of the ways to mitigate the negative effects of CEO overconfidence is to direct their attention to larger areas, improving their perception and interpretation of information. I assume that better-connected boardrooms and more diversified top management teams can achieve these purposes. My empirical results show that both boardroom network centrality and TMT diversity can mitigate overconfident CEOs' problems of overinvestment and overbid during acquisition.

CAR: Boundaryless Careers' Dark Side: Orientation, Plateauing, Exhaustion, Exit Intentions and Personality

Author: **Uday Bhaskar**, *Institute of Management Technology Ghaziabad, India*

Author: **Nidhi Yadav**, *Institute of Management Technology Ghaziabad, India*

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

Author: **Sherry E. Sullivan**, *Bowling Green State U.*

Substantial research has been conducted to understand the dynamics of contemporary careers, yet relatively little is known about the complexities of these theoretical models or about their potential dark side. Applying the theories of boundaryless career and conservation of resources, we examine the relationships between the two dimensions of the boundaryless career orientation (BCO), namely the boundaryless mindset (BM) and mobility preferences (MP), with what are generally considered negative career variables. A moderated serial mediation model was tested using data from 196 Indian public sector employees who completed surveys at two points in time (6 months apart). The predicted direct relationships of BM and MP with turnover (TI) and early retirement (ERI) intentions were significant. Career plateau and emotional exhaustion mediated the relationships between the BM-TI and MP-TI when moderated by the dark triad of personality. This study's findings offer a more nuanced understanding of boundaryless career theory.

CAR: The Career Consequences of Employee Activism: Evidence from the NFL "Take a Knee" Protest Movement

Author: **Alexandra Rheinhardt**, *U. of Connecticut*

Author: **Ethan Poskanzer**, *U. of Colorado*

Author: **Forrest Briscoe**, *Pennsylvania State U.*

Despite recognizing potential ramifications for employees who protest in the workplace, researchers have rarely explored the career consequences that stem from such instances of employee activism. We integrate research on employee activism and worker norms to theorize that workplace protest represents a perceived deviation from workplace norms that can influence an individual's organizational and labor market outcomes. We investigate this premise with the 2016 National Football League (NFL) "Take a Knee" protests as a strategic research setting. Using a difference-in-difference methodology comparing players who protested police brutality by kneeling during the US National Anthem to matched non-protesters, we find that protesting was associated with more rapid exits from NFL employment. We find a heterogeneous relationship between protesting and compensation by the presence of managerial allies, or those who share a social (racial) identity with the protesting employee. Players who protested on teams with few black coaches saw reduced compensation while players on teams with many black coaches did not. Overall, the findings offer contributions for research on careers, workplace deviance, and employee activism.

CAR: The Dark Side of Organizational Identification: Voluntary CEO Turnover During Poor Firm Performance

Author: **Lukas Berger**, *U. of Goettingen*

Author: **Yannik Gehrke**, *U. of Goettingen*

While scholars have provided empirical evidence that CEOs' organizational identification reduces agency costs, this study examines various aspects to the contrary. We focus on times of poor firm performance, when CEO turnover is often considered a remedy. However, due to conflict of interests, it remains an open question whether CEOs with organizational identification act in the best interest of the firm in these situations and voluntarily resign. Based on 10,837 firm-years of non-financial U.S. firms between 2003 and 2017, we find a negative relation between CEOs' organizational identification and voluntary turnover in times of poor firm performance. Importantly, we also find conditions in which CEOs with high organizational identification continue to hold on to office during poor firm performance, thus causing high agency costs. In sum, our findings indicate that CEOs' organizational identification can cause unintended detrimental firm outcomes.

Digitalization Strategy and Professional Identity

Session Moderator: **Rosanna Schropp**, *ESG-U. du Québec à Montréal*

CTO: [A Model of Identity Crafting among Novice and Experienced Journalists in an Era of Transformation](#)

Author: **Rosanna Schropp**, *ESG-U. du Québec à Montréal*

As numerous transformative forces - notably the prevalence of a new business logic, the emergence of new actors and the penetration of new technologies - transcend traditional newsroom practices, journalists of all ages see the cornerstones of their professional identity being disrupted. Conceiving their profession as a calling, and having different conceptions of their work depending on their generation, journalists tend to apply a variety of strategies to respond to these changes and re-craft their journalistic identity. Based on the literature on professional identity, generations and the transformation of journalism, this paper proposes a multi-dimensional model presenting the strategies of identity crafting applied by novice and experienced journalists. The model explains the differences in their strategies by juxtaposing their distinct views on calling, alongside three facets of generational identity (year of birth, life stage, nature of work). The main proposition is that novice journalists adopt a strategy of liquid identity crafting characterized by a willingness to integrate transformative elements in their work, while experienced journalists prefer a strategy of solid identity crafting, shaped by a desire to preserve traditional journalism practices. With the digital transformation of journalism as major driver, the paper contributes to the literature on professional identity with an original perspective on calling, and adds to research on generations by unpacking differences in the process of identity crafting among novice and experienced journalists.

CTO: [Enacting Identity Work and Identity Regulation in the Digitalisation of Industrial R&D](#)     

Author: **Abderrahim Nekkache**, *Alliance Manchester Business School, U. of Manchester*

Author: **Barbara Ribeiro**, *Alliance Manchester Business School, U. of Manchester*

Author: **Andrew James**, *Alliance Manchester Business School, U. of Manchester*

This paper draws on professional identity theory to explain how industrial R&D scientists within a large UK firm reconstruct their identities in the context of digitalisation. Whereas scientists routinely conducted most of their experiments manually, the firm's digitalisation strategy introduced advanced laboratory robotics and data analytics tools which disrupted routine R&D work. We unpack the processes of identity regulation and identity work to identify key factors shaping acceptance and resistance to the firm's digitalisation efforts. We show how scientists negotiate and adapt to challenges such as a steep learning curve, as well as how managers and co-workers developed strategies to address emerging issues. By examining the interplay between identity regulation and identity work, we argue that R&D scientists undertake three types of identity work to reconstruct their professional identity, namely positive reframing, learning, and technology shaping. We contribute to the literature by offering an analysis of identity construction in the context of the digitalisation of science and developing a conceptual framework that reveals the complex interplay between identity regulation and identity work in the context of digitalisation.

CTO: [Processual Approach to Data Quality: The Case of 'Task-Based Tuning' In a Professional Organization](#) 

Author: **Roxana Ologeanu-Taddei**, *Toulouse Business School*

Author: **Lauri Kristian Wessel**, *European Uni Viadrina, Frankfurt (Oder)*

We develop an empirically grounded understanding of how data quality emerges and changes over time in the practices of professionals working in an organization. This is important because literature on data quality focuses on how 'good' quality data informs managerial decision making. However, in professional organizations, somewhat independent professionals make key decisions based on their expertise. Our process model speaks to these issues, highlights the importance of data quality for digital innovation more generally, and informs literature on heterogeneous professions in organizations.

CTO: [How IT Professionals' Digitization Work Shapes Jurisdiction Transfer Among Occupational Groups](#)

Author: **Rebecca Hinds**, *Stanford U.*

Author: **Melissa Valentine**, *Stanford U.*

Prior research has characterized technology's role in shaping occupational jurisdictional change as involving direct conflict as occupational groups enact technology to compete over who has the right to perform particular tasks. In this study, we find and theorize a process of jurisdiction transfer through technology, wherein one occupational group develops a digital technology that results in jurisdictional changes among adjacent occupations, but with no intent to claim jurisdiction over the newly digitized tasks. We draw on a 14-month ethnography of a U.S. government lab to show how an occupational group made design choices when developing a new digital technology that shaped who could use the technology and for which tasks, in ways that altered adjacent groups' jurisdictions. We analyze three design choices that the IT professionals made—unstructured text fields, open-ended workflow approval, and decentralized dashboard access—that accomplished a transfer in jurisdiction over remote work contracts from the HR professionals to front-line managers. These decisions ultimately aligned with some powerful managers' preferences for the lab's remote work strategy but were framed as neutral IT development decisions and unfolded with minimal direct interaction or conflict between the original and new task claimants and without the IT professionals gaining expanded jurisdiction.

Session Moderator: **Jaemin Kim**, *Oakland U.*

 CTO: [Impression Management for Instantaneous Responses from Online Audience](#) 

Author: **Jaemin Kim**, *Oakland U.*
Author: **Michael Greiner**, *Oakland U.*

The worldwide imposition of lockdown measures to control the COVID-19 outbreak in 2020 has moved most of executive communications with external stakeholders online. This paper aims to understand how the presentational styles shown in online executive presentations affect audiences in a form of impression management and empirically test the effectiveness of the tactics. We analyze the presentational styles during the executive presentations by using the MP3 files that contain the communications between executive managers and stakeholders during the earnings calls held by S&P 100-listed firms after June 2020, a quarter after the WHO declared the COVID-19 outbreak to be a pandemic on Mar 11, 2020. The total number of the utterances we used was 14,452. The results show that impression management tactics done via online presentations lead to positive and immediate audience responses only when presenters rely on informational presentation styles. Meanwhile, executive managers tend to give more emphasis to relational and promotional presentation styles rather than informational presentation styles when earnings are above market forecasts. This research provides new insights into how managers can elicit immediate and positive responses from audiences during online presentations and suggest the effectiveness of short-term impression management tactics in association with a firm's short-term earnings.

CTO: [Resilient Users and Emerging Infrastructural Relations: The Making of Digital Resilience](#)

Author: **Angelos Kostis**, *Department of informatics Umea U.*
Author: **Jonny Holmström**, -
Author: **Stefan Haefliger**, *Bayes Business School (formerly Cass)*

Exogenous shocks propel organizations to pursue resilience to absorb strain, adapt to disruption, and continue performing their work. While prior research has offered insights into how resilience is activated to bounce back in the light of a shock, we turn our attention to digital resilience: the sociotechnical processes through which organizations cope with adversity, maintain operations, and ultimately pursue transformative activities by deploying and engaging with digital technologies. The absence of significant prior digital transformations leaves many organizations scrambling to build resilience during a shock, such as the pandemic, and opens an opportunity for theorizing the process and implications for digital infrastructure. Through a 2-years longitudinal qualitative study of how Greek primary school teachers practiced digital resilience in the face of COVID-19, we identify three distinct mechanisms of digital resilience and develop a grounded model on how these mechanisms cultivate the emergence of settled or contested infrastructural relations. Our study extends theory on the emerging field of digital resilience by highlighting its processual, sociotechnical, and generative nature and offers a relational view on digital infrastructure evolution.

CTO: [The Effect of Governors' Resilience Tweeting on Community Compliance during COVID-19 Pandemic](#)  

Author: **Reza Mousavi**, *U. of Virginia - McIntire School of Commerce*
Author: **Bin Gu**, *Boston U. Questrom School of Business*

When managing major disasters, authorities may ask residents to comply with certain guidelines that may require making changes to community members' daily routines. In these situations, resilience, which includes behaviors and actions that result in adapting to a new normal during or after disruptions, can help community members to adapt and comply with the guidelines released by the authorities. In this research, we examine whether embedding resilience-related words (resilience messaging) in governors' social media posts increase community compliance to government guidelines in the context of COVID-19 disaster. We first conducted a secondary data analysis using a panel data set of U.S. states using community mobility data, governors' tweets, official county tweets, approval ratings, COVID-19 cases, and states' response data for the period between February 2020 and August 2021 (81 weeks). We use the time residents spent at home and the time they spent at retail places from community mobility data to measure community compliance. We also conducted an online controlled experiment to complement our secondary data analysis to identify the underlying mechanism. We show that governors' resilience messaging increases community compliance (12.5% increase in spending more time at home and 11% increase in avoiding unnecessary trips). We also find that the effect of resilience messaging on community compliance is partially mediated through residents' perceptions about their governors as inspirational leaders.

 CTO: [Gendered Information in Resumes and its Role in Algorithmic and Human Hiring Bias](#)  

Author: **Prasanna Parasurama**, *NYU Stern*
Author: **João Sedoc**, *New York U.*

We study the extent and nature of gendered information in resumes, and its role in hiring bias using a predictive modeling approach. We first train a series of machine learning (ML) models to inductively learn gendered information in resumes using a matched sample set of resumes from technology firms (348k resumes). We then use these models to quantify the extent and nature of gendered information in resumes and develop a measure of gender incongruence -- a predictive measure of how much the self-presented gender characteristics in the resume deviate from the gender of the candidate. Using this measure of gender incongruence along with historical hiring data from technology firms, we test whether applicants whose resume gender characteristics deviate from their actual gender (i.e. male resumes with feminine characteristics, female resumes with masculine characteristics) are less likely to receive a callback. Our results show that (1) there is a significant amount of gendered information in resumes -- even among applicants that apply to the same job opening with similar job-relevant characteristics, ML models can learn to differentiate between genders with a high degree of accuracy (AUROC=0.81). (2) This gendered information has an impact on hiring outcomes -- women whose resume characteristics deviate from the norms of their own gender are less likely to receive a callback after controlling for job-relevant characteristics. We discuss these findings in light of algorithmic and human bias in hiring.

Team Processes and Outcomes

Session Moderator: **Lili Bao**, *Eastern Washington U.*

OB: Giving a Good Relationship and Taking Surrogacy: Exploring the Effects for Team Performance 

Author: **Liliane Furtado**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*
Author: **Filipe Sobral**, *EBAPE/FGV*
Author: **Urszula Gabriela Lagowska**, *NEOMA Business School*
Author: **Eduardo Cardoso De Moura**, -

The leader-member exchange (LMX) literature proposes that leaders tend to differentiate the quality of relationships among their followers, but it remains unclear how establishing high LMX with some followers may facilitate a positive image of a leader across all team members, and ultimately, a superior team performance. Drawing on data from a three-wave study with 249 healthcare professionals (physicians and nurses), we explore the impact of LMX on employees' surrogate behaviors and, in turn, team performance. Specifically, using a social exchange perspective, we postulate that high-quality LMX relationships make employees especially motivated to build support for the leader through behaviors that reflect surrogacy (i.e., promoting the leader, defending the leader, and/or modeling followership) as a form of reciprocity. By managing others' impressions of the leader, surrogate behaviors are able to eliminate many of the barriers that might hinder team performance. Our findings corroborate our theoretical model showing that LMX increases employees' surrogate behaviors and, in turn, team performance. Moreover, the results indicate that the amount of prestige within the team is an important boundary condition of the LMX-surrogacy relationship, such that the effects of LMX on surrogate behaviors are stronger when employees have higher levels of prestige in their teams. Overall, the study provides evidence that the social facilitation and impression management effects of surrogacy phenomenon, enacted as a result of the "give and take" nature of LMX relationships, is associated to team performance.

OB: The Effects of Team Structural Adaptation on Team Problem Solving Performance 

Author: **Lili Bao**, *Eastern Washington U.*

Using a computer simulation, I explore how different team structural adaptations relate to team performance and investigate the intervening mechanisms and process by which different degrees of centralization of team decision making serve to balance the tradeoffs between flexibility and stability. I find that the permanently decentralized team has the short-run advantage compared to the permanently centralized team, while the permanently centralized team outperforms significantly the permanently decentralized team in the long run. Teams that couple decentralization that fosters flexibility with eventual centralization that promotes stability outperform those that rely exclusively on decentralization or centralization or those that rely on decentralization eventually. The reintegrated and elastic adaptation perform the best because they gain the benefits of efficiency and exploration realized by decentralization, while they also achieve the benefits of integration for internal fit caused by centralization. The elastic structure is more appropriate to respond to the high stability demands, while the reintegrated structure is more appropriate to respond to the high flexibility demands.

OB: How Motivation Fluctuates During Virtual Team Work: The Role of Team Characteristics and Dynamics 

Author: **Tobias Blay**, *U. of Goettingen*
Author: **Fabian Jintae Froese**, *U. of Goettingen*

Motivation is an essential factor in achieving high-level outcomes in virtual teams (VT). Using a dataset of 3,071 individuals nested in 614 VT, we examine whether distinct individual motivation-change patterns coexist during VT work and how team context (e.g., team characteristics and team dynamics) relates to such motivation-change patterns. Based on a problematization approach and social motivation theory, and using the latent class growth analysis, we identified three distinct classes of individual motivation-change patterns (i.e., constant high motivation, decreasing motivation, increasing motivation) over time. Interestingly, while team dynamics (e.g., transition/action process, collective efficacy, interpersonal process, team cohesion) are related to motivation-change patterns, team characteristics (e.g., the average age of team members, team size, homogeneity of intrateam nationalities, gender diversity) are not related to individual motivation-change patterns in VT. This suggests, in contrast to face-to-face work settings, that team characteristics may play a different role in VT because people do not meet in person. Thus, to improve and/or maintain the motivation of VT members over time, it would be beneficial to focus on task- and relational-focused processes (e.g., team dynamics), regardless of team characteristics.

OB: Affect and Team Adaptation   

Author: **Max-Antoine Renault**, *Rotterdam School of Management, Erasmus U.*
Author: **Murat Tarakci**, *Erasmus U.*

These are especially turbulent times for teams, and failing to respond during crises can be costly. Prior work on team adaptation has unveiled many cognitive and structural adaptive mechanisms. Yet, the affective workings of team adaptation remain a blur despite crises being emotionally-charged. Through a 24-month field case study of nurses who experienced flooding, restructuring and the COVID-19 pandemic, we develop a multilevel theory of how team camaraderie and care emerge from successive help cycles. We reveal how these emergent affective states that had accrued or depleted over initial crises differentially shaped how teams coped and adapted to the pandemic. Thereby, we offer an affective-laden theory of team adaptation to advance research on team adaptation, emergent states, and help.

Destruction of Workers and Roles

Session Moderator: **Anna Van Der Velde**, *WHU - Otto Beisheim School of Management*

OB: Classification and Base Rate of Destructive Follower Behavior: A Mixed-Methods Approach

Author: **Anna Van Der Velde**, *WHU - Otto Beisheim School of Management*
Author: **Fabiola Heike Gerpott**, *WHU - Otto Beisheim School of Management*

Anecdotes from the daily working lives of leaders often include reports of destructive followers, such as employees intentionally underperforming, blaming others for their own mistakes, or undermining the leader's authority by constantly doubting the leader's decisions. However, such real-life experiences of many leaders who are confronted with destructive follower behaviors have not yet been reflected in a rigorous scholarly understanding of the behavioral building blocks of this phenomenon and its prevalence. Accordingly, we aimed to develop a classification of destructive follower behaviors that can guide future research on this multifaceted phenomenon. To achieve this goal, we conducted 40 semi-structured interviews with organizational leaders and utilized topic modeling to map out five categories of destructive follower behaviors (i.e., entitlement, contact seeking/avoiding, effort minimization, emotionally fluctuating communication, and undermining team cohesion). We then conducted a second study with 1,229 leaders to obtain an impression of the base rate of the phenomenon (i.e., how often do these categories of destructive follower behaviors occur?) and exploratively assessed leader-level correlates. We outline how our categorization and the explored correlates can build the foundation for behavioral coding methods and rigorous experiments. We also discuss potential consequences of destructive followership and reflect on role spillover effects.

OB: Clarifying a Fragmented Theoretical Landscape: A Process Model Approach to Workplace Bullying

Author: **Jason R. Pierce**, *U. of North Carolina, Greensboro*
Author: **Linda M. Dunn-Jensen**, *California State U. Stanislaus*
Author: **Nancy Pierce**, *UNC*

Frequent reports around the globe continue to fuel scientific and social interest in the pandemic of workplace bullying. Despite this interest, reviewers of the literature still lament difficulty identifying a conceptualization that clearly differentiates bullying from other forms of workplace aggression and victimization (e.g., abusive supervision, harassment, social undermining, etc.). We diagnose the problem underlying this lack of clarity and propose a solution for it. First, we explain how inconsistent and imprecise integration of four qualifiers—incidence, interpretation, intent, and imbalance of power—result in too much distinctiveness between definitions of bullying as well as too little distinctiveness from definitions of other types of workplace aggression and victimization. We then propose and demonstrate how taking a process-theoretical approach to conceptualize workplace bullying mitigates both distinctiveness issues. Doing so leads us to provide a conceptually distinct definition of bullying: a response to goal conflict in which perpetrators falsely convince targets that they are too defenseless and powerless to refuse illegitimate outcomes. We conclude with a discussion regarding how clarifying the concept of workplace bullying this way facilitates progress in developing theories and practical interventions for it.

OB: Organizationally Terrorist Supervisor and Employee's Fit with Organization: A Conceptual Framework

Author: **Gul Afshan**, *Sukkur IBA U.*
Author: **Niaz Bhutto**, *Sukkur Institute of Business Administration*
Author: **Mansoor Ahmed Ahmed Khuhro**, *Shaheed Benazir Bhutto U., Sanghar, Pakistan*
Author: **QuratulAin Memon**, *UNIMAS*

This conceptual paper has presented propositions by explaining the relationship through self-determination theory. With the help of self-determination theory, this study explains the relationship between organizational terrorism and employee well-being with the mediating effect of person-supervisor fit. We propose that person-organization fit could buffer not only the negative relationship between organizational terrorism and person-supervisor fit but also the indirect effect of organizational terrorism on employee well-being via person-supervisor fit. The study extends the research on organizational terrorism and makes several contributions to the literature. To the best of our knowledge, this is the first study, which has proposed the effects of organizational terrorism on employee well-being.

Paper is Available to Meeting Registrants Only.

OB: Managing Without Managers: How Self-Managing Organizations Fulfill the Functions of Managers  

Author: **Frank Martela**, *Aalto U.*
Author: **Tuukka Kostamo**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Jori Mäkkeli**, *Aalto U.*

Middle managers play an important function in organizations, taking responsibility for many crucial roles in decision-making, leadership, and communication. Synthesizing existing literature, we identify ten task-oriented, people-oriented, and systems-oriented functions that managers in a typical organization fulfill. Self-managing organizations, however, challenge the necessity of managers by demonstrating that an organization can function and thrive even without any middle managers. In a case study of a self-managing IT service company from Finland with 550+ employees but no middle managers, we identify the alternative practices and solutions through which the ten key functions of managers are fulfilled in this organization. The organizing was built around self-managing teams with high levels of autonomy and served by dedicated supportive roles, such as coaches supporting team development, and a specific salary team negotiating the salaries. The remaining managerial functions were replaced by a strong culture and shared cultural practices such as agile team practices and an advice process for bigger decisions ensuring the necessary coordination and coherence. The investigation expands the functional approach to leadership and managerial work by highlighting the alternative practices through which managers can be replaced, while also offering a new way of understanding how self-managing organizations are able to function.

The interpersonal and social aspects of modern work have made envy – the painful emotion experienced at work when one lacks and desires one or more work others’ superior qualities, achievements, or possessions – a practical phenomenon to study in organizational science. With scholarly interest in envy on the rise, this symposium introduces fresh perspectives and further advances scholarly discussion regarding the nature of envy by showcasing four cutting-edge studies. In particular, these studies provide new insights regarding envy, its outcomes, and factors influencing these outcomes across different contexts (e.g., leadership, job search, different cultures), for different targets (the envier, the envied, and the organization), and using diverse methodological approaches (e.g., meta-analysis, experiencing sampling). Attendees will thus learn current directions in workplace envy research from researchers with expertise in the topic area. Following the presentations, Dr. Yochi Cohen-Charash will synthesize the papers in the symposium and lead an interactive discussion on the current state of envy research. As envy is commonly experienced as an undesirable emotion, our symposium seeks to offer a comprehensive understanding of workplace envy, its various outcomes (both the “good” and the “bad”), and strategies to manage envy in ways that can benefit employees and organizations alike, in line with the Academy of Management 2022 theme of “Creating a Better World Together”.

Presenter: **Rebecca Ponce de Leon**, *Columbia Business School*

The importance of allies—broadly defined as those who “actively work toward the eradication of prejudicial practices” (Sue et al., 2019)—in organizational contexts has been increasingly evident with the rise of #MeToo and Black Lives Matter. In highlighting the persistence of sexism and racism, these social movements have encouraged broader participation in efforts to reduce existing social inequalities. For instance, the Black Lives Matter protests following the murder of George Floyd in May 2020 constituted the largest social movement in United States history with an estimated 15 to 26 million participants (Buchanan, Bui, & Patel, 2020). Companies responded to this societal reckoning with an outpouring of statements and commitments, with the biggest 50 companies in the U.S. pledging nearly \$50 billion to combat racial inequality (Jan, McGregor, & Hoyer, 2021). Given increased attention on allyship behaviors in organizational settings, this symposium brings together five presentations that explore diverse yet interconnected facets of allyship. Spanning experimental, archival, and observational methods, these five papers examine the psychological, identity-based, and contextual factors that affect both decisions to engage in social justice efforts and ultimate evaluations of allyship efforts. By considering how individuals come to participate in advocacy as well as how onlookers perceive and appraise allyship, this symposium helps to shed light on both sides of allyship efforts. In turn, this symposium offers insights into strategies to increase participation in allyship that truly makes marginalized groups feel supported.

From systematic racism to climate change, institutions in contemporary American society are increasingly expected to wake up to and take a stance on major social and political issues that challenge our societal well-being. Yet such communicative efforts are not always met with unanimous positive reactions. The public, or some social groups, may question the underlying motivation for such efforts, seeing them as nothing more than political performance (Anderson & McClain, 2020). Certain narratives may backfire, too, especially when the effort is described as intending to benefit the bottom line rather than supporting social justice (Carlos & Lewis, 2018; Kim, 2014). Finally, despite the unprecedented wave of public support for BLM in summer 2020, many people were hesitant to rejoice over the “victory” because promises may never become progresses, especially considering that the past sixty years have witnessed a decrease, rather than an increase, in racial equity despite all the talking (e.g., a greater racial wealth gap; Miller, 2011, Shapiro, Meschede & Osoro, 2013). Stating an organization’s intention to contribute to a better, more equitable society is a must, but a deep understanding on how organizations should communicate such intentions, and how their words influence the public’s perception is still lacking. In response to the need for more rigorous and systematic research on how organizations communicate their intention to engage in social justice and how the public responds, this symposium has curated five interrelated empirical papers on this timely topic. Embracing a mixed method approach, these papers have combined the strength of archival analysis with experimental methods to showcase various aspects of an organizations’ decisions around rhetoric and communication style, how these decisions are perceived, and why certain strategies are perceived more favorably than others.

Municipal and Urban Governance

Session Moderator: **Emilene Leite**, *Örebro U. School of Business*

This session on municipal and urban governance examines processes and effects in local public services (such as libraries and water utilities) and urban planning processes.

PNP: When Nothing Happens: Understanding the Lack of Agency in Degrading Water Utility Systems (WITHDRAWN) 

Author: **Amelie Bennich**, *KTH Royal Institute of Technology*

Author: **Mats Engwall**, *KTH Royal Institute of Technology*

Author: **David Nilsson**, *KTH Royal Institute of Technology*

The water utility sector is usually perceived as a conservative sector. However, in times of major investment needs an opportunity to change the otherwise rigid infrastructure systems appears. The transition literature has gained extensive attention for studies on transitions of established socio-technical systems. In this research stream, the concept of the socio-technical regime, which constitutes the highly institutionalised formal and informal rules that control the system, plays a central role. In this paper, the regime is conceptualised as constituting of multiple sub-regimes, which are used to examine what is preventing the transition of a degrading socio-technical system. This is illustrated by a case study of the water utility sector in Sweden, which face significant needs to upgrade its infrastructure systems. The findings show that the key regime actors, i.e., the water utilities, are currently prevented from managing this situation. By studying the sub-regimes, lock-ins and possible responses to them are identified.

PNP: Measuring Library Efficiency and Effectiveness: A Mixed Method Study of Public Library Districts 

Author: **Alicia Schatteman**, *Northern Illinois U.*

Author: **Li-Yin Liu**, *Northern Illinois U.*

This study examines public municipal libraries and public library districts at the local government level, in the U.S. and specifically Illinois, the state with the most units of local government and public library districts in the country. This study contributes to the study of special districts by providing a comprehensive comparison between district and municipal libraries. Based on a national survey of public libraries and interviews with public library staff, we found that, on average, special district libraries, as previous studies indicated, received more financial inputs, provided more programs and services, and generated higher service output than their municipal counterparts. However, the differences between these two types of libraries may vary by states. Using Illinois as an example, district libraries may, in fact, receive less revenue than municipal libraries. District libraries in Illinois also provides fewer services and programs and generated less service output than municipal libraries.

PNP: Exploring Board Behaviour in a Public Context - Experiences from a Swedish Municipal Corporation

Author: **Elin Marianne Smith**, *Kristianstad U.*

Author: **Timur Uman**, *Jönköping International Business School*

Author: **Sven-olof Collin**, *Free U. of Scania*

Based on an eclectic theoretical approach of board behaviour and longitudinal case-observations of a local municipal corporation this study aims at exploring what constitutes board behaviour in the public setting. Whereas private sector board research tend to highlight the tasks of control and service we have identified multiple board tasks in Swedish MC i.e. control, decision-making, service, conflict resolution, education, MC legitimization, and key value implementation. Moreover, our study has emerged four contingencies of board task, i.e. board composition, board leadership, presidium empowerment, and board processes, that further the knowledge on the emergence of specific board tasks in MC. Finally, relying on institutional logics our study theorises how and why different board behaviour emerges from an institutional frame. By doing that our findings contribute to the nascent field of research on public boards and contribute with empirical insights of public board behaviour.

PNP: Actor Roles Shaping and Influencing Innovation in Smart City Development 

Author: **Emilene Leite**, *Örebro U. School of Business*

Innovation networks are organized and shaped by their members. This study investigates actors' roles influencing innovation for smart city development. Combining actors' roles with the innovation network literature and insights gained from two cases of smart city innovation, our empirical analysis shows four roles associated with smart city innovation network activities: i) coordinators, ii) contributors, iii) facilitators and iii) builders. These actor patterns recognize how actors collaborate in networks characterized by heterogeneous actors (public and private), the coexistence of individual and collective motivations, a certain degree of openness, and users' participation. Furthermore, actors' ability to change their network position is dependent on a shared interpretation of network roles between the network actors. Hence, scholars and practitioners of innovation networks learn that the understanding of role patterns in smart city development can contribute to the building, utilization, and coordination of an open innovation network that positively impacts business and society.

PNP: Making Sense of Competing Expectations – Paradoxes in Strategic Spatial Planning (WITHDRAWN)

Author: **Lisa Källström**, *Kristianstad U.*

Author: **Elin Marianne Smith**, *Kristianstad U.*

Societal challenges have made strategic spatial planning an up-to-date topic. Strategic spatial planning tends to be of participatory character, where diverse stakeholders' expectations need to be acknowledged, understood and handled. Sweden is offering an interesting complex case on participatory planning, origin from reforms aiming at strengthening regional planning. This research aims at capturing diverse stakeholders' expectations through paradox identification and understand these paradoxes through sensemaking theory. The main empirical material are observations and interviews. The study concludes with pinpointing the importance of creating a shared understanding among stakeholders where sense giving stand out as especially important.

Carolyn Dexter Award Nominee

Through more intense international polling activity and implementation of large-scale opinion surveys, the possibilities of applying comparative micro-level data for examinations of public values and perceptions expanded. However, despite broad usage of survey data in various academic disciplines, international comparative opinion analysis remains scarce in public administration research. Particularly in terms of research on citizen-state interaction, analyzing survey data could contribute to a more thorough understanding of public experiences with government and administration. This study sheds light on publicly available survey data concentrating on variables which may be valuable for public administration scholars researching citizen-state encounters. Applying a systematic search approach, we provide an overview on 23 comprehensive opinion surveys. As major contribution, we discuss the shortcomings and gaps in existing research and develop an agenda for future research on citizen-state interaction based on this data.

Paper is Available to Meeting Registrants Only.

Author: **Orla Stapleton**, *Indiana U., Bloomington*

An unresolved challenge facing organizations, particularly those with a social role such as environmental stewardship, is how to navigate contention between organizational values and operating goals. Research has established that organizational values are commonly displaced as organizational actors struggle with pressing operating goals. Value displacement influences organizational actors' responses to the local population's needs. Using the case of the Gowanus Canal Superfund cleanup, this project asks, how can organizational values, once they have been displaced, be put back into place (value replacement)? I argue that, in the case of the Gowanus Canal cleanup, the process of value replacement hinged on a boundary organization that provided the setting for a unique relational space where organizational values could be reconsidered and reenacted. I create a typology of interaction settings and value replacement based on the presence or absence of a boundary organization and relational space. Overall, the research illustrates that despite the pervasiveness of operating goals, organizational actors can draw on an organization's values to make decisions, based on interaction with the local population. Furthermore, it shows the connection between the space in which organizational actors interact with the local population and the way they deal with organizational values.

Author: **Katharina Dinhof**, *WU Vienna U. of Economics and Business*
Author: **Jurgen Willems**, *Vienna U. of Economics and Business*

In three subsequent studies, we identified stakeholders that are considered influential in urban governance processes and uncovered certain stakeholders' characteristics ('attributes') that are regarded as more assertive in trade-off situations. We chose our research setting in Vienna, Austria, given its consistently high position in various livability rankings. Our first study consisted of a large representative survey (n=1,787) and probed for citizens' opinions on the stakeholders that are influential to make Vienna a livable city. To narrow our research focus, we examined in our second study thirty-nine conflicts between five stakeholder types. Using an abductive media analysis, we find certain stakeholder characteristics reemerge and win over dilemma situations. In line with stakeholder theory, we find that respondents in our third study, five choice-based conjoint experiments (n = 1,354), show a sizeable preference for stakeholders with attributes of power, legitimacy, and urgency. Our research contributes to the theoretical understanding of urban governance structures and stakeholder theory, and provides insights on the role of different stakeholders and their trade-off decisions.

Presenter: **Shaul Oreg**, *Hebrew U. of Jerusalem*

In the present symposium we bring together advances in our understanding of the link between personality and leadership. The symposium includes four sets of studies, each highlighting a novel aspect of dispositional leadership research: (1) Dimitri van der Linden will discuss connection between the General Factor of Personality (GFP) and leadership; (2) Noam Keshet, Shaul Oreg, Yair Berson, Reinout de Vries, and Marcella Hooigeboom will present set of studies, based on the lexical approach for uncovering basic dimensions of leader personality; (3) Emma van Gerven, Annebel de Hoogh, Deanne den Hartog, and Frank Belschak will talk about leaders' narcissism and gender and their link to followers' task performance; and (4) Noga Sverdlik, Shaul Oreg, and Yair Berson will talk about the joint effect of leaders' power and benevolence values on follower-focused leader behavior and follower outcomes. Our discussant, Christian Resick, will help us integrate insights from these studies and facilitate our discussion of them.

**Ecosystems and Platforms Track: Contextualizing Ecosystem
Orchestration Efforts**

Session Moderator: **Nina Teng**, *London Business School*

 **TIM: Digital Entrant Scaling & Dynamics: How Grab Transformed & Transcended the SE Asian Mobility Industry**

Author: **Nina Teng**, *London Business School*

Author: **Michael G Jacobides**, *London Business School*

Our inductive case study of the Southeast Asian mobility industry reveals that an innovative digital platform entrant had the advantage of being able to scale and transform itself, its focal industry and other industries. Rather than trying to adapt to the existing industry architecture of traditional value creation and capture, the entrant repositioned its business model with little regard for the focal industry or its incumbents, who ultimately clamored to support it even as it expanded beyond the focal mobility industry into other industries. Instead, the successful digital platform entrant focused on competing with other digital entrant rivals to capture a larger user base by transcending focal industry boundaries to enter and transform multiple industries through a digital superapp business model. Our study contributes a process model on entrant–incumbent dynamics to research on disruptive innovation, digital platform ecosystems, and startup scaling.

TIM: Cognitive Leadership, Systemic Innovation, and the Formation of Innovation Ecosystems

Author: **Nicolai J. Foss**, *Copenhagen Business School*

Author: **Jens Schmidt**, *Aalto U.*

We analyze how innovators facilitate and shape the formation of innovation ecosystems around a systemic innovation. We argue that the ability to engage in cognitive leadership—the ability to influence others’ beliefs, in particular owners of complementary assets, in order to achieve coordination and cooperation—is central to the development of nascent innovation ecosystems. Our approach shifts the unit of analysis from the innovation and the underlying (eco)system to the beliefs about the innovation, the ecosystem (including interdependencies) and the different players. Our model is built on three elements: beliefs as targets for successful cognitive leadership, the mechanisms by which innovators can influence others’ beliefs, and the enablers as underlying skills for cognitive leadership. We discuss implications of our analysis for our understanding of the formation of innovation ecosystems and the emergence of ecosystem leadership and also highlight managerial implications.

Paper is Available to Meeting Registrants Only.

 **TIM: The Process of Internalizing and Externalizing for Complementarity in Innovation Ecosystems**  

Author: **Julian Lehmann**, *Vrije U. Amsterdam*

Author: **Nicholas Berente**, *U. of Notre Dame*

Author: **Hans Berends**, *Vrije U. Amsterdam*

Innovation ecosystems consist of many loosely coupled autonomous actors who jointly create value for customers. A key challenge for ecosystem orchestrators involves coordinating complementors and their contributions through a technical architecture and interfaces. Existing research emphasizes that technological architectures are critical for implementing ecosystem strategies because architectures determine how components offered by different organizations may function together to have complementary value. Interfaces determine how ecosystem value is generated. They come into being as firms open up stable architectures to integrate complementors. But how do firms create ecosystems in the absence of stable technical architectures? Drawing on a longitudinal field study of the emergence of the professional 3D printing industry, we distinguishing two processes—internalizing and externalizing. Through internalizing, firms generate knowledge about the nature of complementarity within an ecosystem that is instructive for defining exactly how complementors can be aligned to create value for customers. Externalizing imbues an ecosystem with flexibility so it can accommodate a new architecture that amplifies the complementarity of complements.

Paper is Available to Meeting Registrants Only.

TIM: Uncovering Roles of Core and Complementary Technologies in Controlling Open Technology Platforms  

Author: **Masanori Yasumoto**, *Yokohama National U.*

Author: **Shangke Wang**, *Ph.D Student*

Author: **Tohru Yoshioka-Kobayashi**, *Hitotsubashi U.*

Controlling an open technology platform (OTP) of a shared standard helps firms to secure competitive advantage under consensus-based collaborative standardization. Technical specifications and related patenting are said to help firms control shared OTPs, but they can cause technology spillovers to other firms. This study investigates how firms in the mobile telecommunication sector shape capabilities to control the shared OTP by accumulating knowledge. It examines citations for standard and non-standard essential patents for core and complementary technologies. It is presumed that firms nurture and secure internal core platform technologies, but our results show that the citation of complementary peripheral technologies, rather than core ones, tends to contribute to controlling the OTP in terms of the citation received by other firms. Besides lead firms are more likely to exploit core technologies from other firms while increasing the self-citations of complementary peripheral technologies. Findings indicate that firms’ knowledge to control OTPs is shaped through internally and externally derived core and complementary technologies. These findings expand the debate surrounding the disclosure of technology platforms shared by multiple-firms.

Organizational Learning and Search Track: Digital Transformation - New Theory and Methods

Session Moderator: **Nazlihan UGUR**, *Nyenrode Business U.*

TIM: The Long March: The Quest for Valid Text-Based Indicators of Exploration and Exploitation

Author: **Stijn Kelchtermans**, *KU Leuven*
Author: **Rene Belderbos**, *KU Leuven*
Author: **Nazlihan UGUR**, *Nyenrode Business U.*
Author: **Bart Leten**, *KU Leuven*

Since March (1991) outlined the importance of balancing exploration and exploitation in organizational learning, the exploration-exploitation paradigm has received much attention in the management literature. Recent studies have used content analysis, in particular computer-aided text analysis (CATA), to construct measures of firms' inclination towards exploration or exploitation, using the original set of keywords proposed by March. Utilizing the series of tests to assess the validity of CATA-based measures proposed in Belderbos et al. (2017), we demonstrate that the approach used in prior studies is unlikely to deliver valid indicators. Our study contributes to the literature on construct validity and has broader implications for the development of CATA-based indicators in management research.

TIM: Boundary Decisions for Coordination and Control Based on Generalized Trust

Author: **Ying-Ying Hsieh**, *Imperial College Business School*
Author: **Anu Wadhwa**, *Imperial College Business School*

Blockchain shows great potential to transform organization designs by enabling generalized trust to facilitate organizational coordination and control. This generalized trust replaces, fully or partially, the need for traditional coordination and control mechanisms, such as formal contracts, authority, and relational trust. Blockchain, a novel form of organizing that entwines its organizational architecture with technology, renders extreme forms of decentralization and autonomy. We conceptualize how blockchain enables generalized trust without hierarchy based on two key boundary design decisions—permeability and transparency. Taking an architectural view with a focus on information processing, we propose a typology of boundary decisions of blockchain systems and formulate propositions linking boundary decisions with the extent of generalized trust in blockchain systems. Further, we propose that complementarity among activities performed in the blockchain system amplifies a trust-enabling organization's ability to generate generalized trust. Finally, based on the alignment of boundary decisions with goals of adoption, we present two heterogeneous and contrasting modes of adoption—actor-centric vs. technology-centric. Taken together, these two modes form the opposite ends of a continuum, offering potential adopters the flexibility of choosing from a wide range of hybrid modes.

Paper is Available to Meeting Registrants Only.

TIM: R&D Strategy, IT Resource, and Radical Innovation Performance

Author: **Tian Mu**, *Xi'an Jiaotong U. School of Management*
Author: **Jianjun Yang**, *Xi'an Jiaotong U.*

How do firms in mature manufacturing industries manage their resources to adjust to the emerging trend of digital transformation and increase radical innovation (RI) performance? We start from Resource Orchestration Theory (ROT) to answer this question. ROT suggests that flexible resource management actions such as resource structuring and resource bundling could significantly contribute to the attainment of firms' competitive advantages. Based on ROT, this study explores how different knowledge resource structuring strategies (explorative or exploitative R&D strategy) improves firm's RI performance. In addition, firms could bundle IT resources with the knowledge resources produced by R&D, creating additional value and increasing RI performance. We collect survey data of 288 manufacturing firms in China to empirically investigate how different R&D strategies affect firms' RI performance, and how IT resources (IT infrastructure and IT usage) moderate above relationships. The empirical results urge practitioners to pay attention to the differential roles of R&D strategies in fostering radical innovation. Bundling different types of IT resources with R&D strategy would also exert different results on firms' radical innovation performance.

Author: **Asta Pundziene**, *Kaunas U. of Technology, School of Economics and Business*

Author: **Lukas Geryba**, *Kaunas U. of Technology, School of Economics and Business*

In contrast to the digital transformation of the incumbents, born-digital SMEs embrace digital logic in organisation's design, processes and governance from the very start. So far, the scholars have focused on the digital transformation of the incumbents, thus, little is known about how dynamic capabilities, collaborative innovation and firm performance interact in the context of born-digital SMEs, which has no legacy of the incumbent firm. Therefore, the research question is how dynamic capabilities and collaborative innovation affect the performance of born-digital SMEs. We aim to investigate the impact of dynamic capabilities of born-digital SMEs on their performance when collaborative innovations mediate it. The empirical research was based on 268 complete viable responses from born-digital SMEs in the US, Sweden and Lithuania. The study results show that the effect of dynamic capabilities on born-digital SMEs performance is more significant when mediated by collaborative innovations. Furthermore, the study highlights that although the impact of dynamic capabilities on partnership networks and relational collaboration is significant, only relational collaboration significantly affects the performance of born-digital SMEs.

Innovation and Entrepreneurship Track: Startups and Venture Capital

Session Moderator: **Damiano Maria Morando**, *Imperial College Business School*

TIM: Showcasing Strategies in Entrepreneurs' Quest for Venture Capital Funding: Evidence from Twitter

Author: **Damiano Maria Morando**, *Imperial College Business School*
Author: **Stefano Breschi**, *Bocconi U.*
Author: **Anne L.J. Ter Wal**, *Imperial College Business School*

It is widely established that entrepreneurs' social capital is a valuable asset in their search for external funding. However, relatively less is known about how entrepreneurs can actively engage in networking strategies to improve, or exploit, their social capital to attract investment. In this study, we examine two such strategies – showcasing visibility and showcasing similarity – and assess their effect on entrepreneurial ventures' ability to obtain a first round of funding. We argue that showcasing visibility behavior increases a venture's salience among prospective investors, whilst showcasing similarity vis-à-vis high-status role-model entrepreneurs facilitates legitimacy. Based on a comprehensive dataset of London-based technology entrepreneurs combining Crunchbase and Twitter data, we find that showcasing visibility and similarity strategies increase the likelihood of obtaining venture capital funding, particularly for entrepreneurs with a peripheral position in the informal network of London's entrepreneurial ecosystem.

TIM: The Professionalization of Innovation at a Scale-up: The Case of a Founder-led Unicorn

Author: **Laurens Vandeweghe**, *ETH Zürich*
Author: **Bart Clarysse**, *ETH Zürich*
Author: **Aleksandra Petersone**, *Six*

While professionalization of a firm's top management team has received much scholarly attention, we know very little about professionalization at a scale-up led by a founder-CEO. Drawing on the analysis of interview and ethnographic data from a fast-growing unicorn, we illustrate how innovation managers navigated the scale-up context to professionalize the innovation function, i.e., turned it into a structured function that had significant influence on the innovation agenda. We find that the innovation managers first implemented best practices in innovation management focused on optimizing the process for minimal internal cognitive bias, which resulted in them having little influence on the innovation agenda at the scale-up. As the innovation managers gradually adjusted their approach to how the founder-CEO had been running the scale-up, their influence on the innovation agenda increased. Our findings show that an organizational function at a founder-led scale-up can be professionalized by means of a sedimented professionalization process involving founder-mitigation and founder-navigation mechanisms.

TIM: Digital Innovation Entrepreneurship: A Review and Research Agenda

Author: **Ferdinand Mittermeier**, *U. of Bamberg*
Author: **Axel Hund**, *U. of applied sciences neu-ulm*
Author: **Daniel Beimborn**, *U. of Bamberg*

Digital innovation and digital entrepreneurship are two research streams that focus on the intersection of digital technologies with traditional entrepreneurship or innovation processes, respectively. In this sense, both streams can cross-fertilize each other when it comes to theorizing about digital technologies and their distinct characteristics in the context of entrepreneurship. However, recent studies show that there seems to be a large gap between these two fields of research. By analyzing 86 articles from four different disciplines, this review synthesizes the current knowledge on the intersection of digital entrepreneurship and digital innovation through a digital technology-perspective. The contribution of this paper is threefold: (1) Providing an overview of current knowledge about the relationship between digital entrepreneurship, digital innovation and digital technology, (2) Building a framework of digital innovation entrepreneurship, which describes how digital entrepreneurs engage in continuous digital innovation through the use of digital technology, and (3) identifying avenues that guide future research.

TIM: Never Give Up! How to Respond Effectively to Post-M&A Failure with a Recovery Strategy   

Author: **Luca Pistilli**, *UCD Dublin*
Author: **Alessio Cozzolino**, *U. College Dublin*
Author: **Gianmario Verona**, *Bocconi U.*
Author: **Ferdinando Pennarola**, *Bocconi U.*

Existing literature has investigated how to approach post-merger and acquisition (M&A) integration right after the deal, but has been relatively silent on how to recover from a failed post-M&A several years after the deal. We fill this theoretical lacuna by examining an initially failed merger of a leading biotech company (Amgen) with an Italian pharmaceutical firm (Dompé Biotech). By relying on a unique combination of restricted material, face-to-face interviews, and private and public data, we show how the new entity—Amgen Italy—devised a recovery strategy that not only produced task and human integration and a positive organizational climate but also exceeded financial performance targets, seven years after an unsuccessful merger. Our data show that a post-merger recovery process requires socialization, disambiguation, and alignment, and we suggest some specific operational mechanisms to implement such a process. Our study contributes to the literature on post-merger integration by defining and characterizing the process of recovery after a failed M&A.

TIM: Trade Secret Protection and Firm Acquisitions: Evidence from the Uniform Trade Secrets Act 

Author: **Marta F. Arroyabe**, *U. of Essex Business School*
Author: **Christoph Grimpe**, *Copenhagen Business School*
Author: **Katrin Hussinger**, *U. of Luxembourg*

Strategic factor markets allow firms to access knowledge and technology, yet their institutional underpinnings and the effect of changes in the institutional framework on firm behavior are poorly understood. We address a change in institutions regarding the strength of trade secret protection, more specifically the staggered implementation of the Uniform Trade Secrets Act (UTSA) in the U.S. We show that stronger trade secret protection increases the likelihood of firms to engage on the market for corporate control, a consequence unintended by the UTSA. We identify two mechanisms. First, the UTSA limits knowledge outflows through employee mobility which makes knowledge-intensive firms more attractive acquisition targets. Second, stronger trade secret protection grants acquiring firms better protection of the acquired knowledge and technology.

TIM: Examining the Influence of Competition Networks Structure on Firm's Out-Licensing Strategy  

Author: **Keld Laursen**, *Copenhagen Business School - Department of Strategy and Innovation*
Author: **Solon Moreira**, *Fox School of Business, Temple U.*
Author: **Vivek Tandon**, *Fox School of Business, Temple U.*

Based on a competition network perspective and the licensing literature, we argue that who competes directly with whom in downstream markets, and how competitive ties are distributed among firms are critical for firms' upstream R&D strategies and in particular their decisions regarding technology offerings for out-licensing. We focus on industry network centralization or the concentration of competitive ties in many or a few firms. We argue that this aspect is especially relevant for potential licensor firms since it affects the pool of less-threatening exchange partners and the motivations to transfer knowledge to other firms via licensing. High levels of centralization concentrate competitive pressure on a few firms, increase the shared competitive threats within a given industry, and increase the incentives for potential licensor firms to reshape their competitive environments by selective strengthening of other firms through knowledge transfer. We argue also that this effect of industry centralization on the number of technologies offered for out-licensing will be stronger for firms with higher numbers of direct competitors, and that this interaction effect will be particularly strong if competitive threats are non-redundant. We find support for our ideas from an analysis of bio-pharmaceutical industry firms.

TIM: Keeping Invention Confidential 

Author: **Colleen Cunningham**, *London Business School*
Author: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*

This study investigates use of a prevalent but rarely studied form of intellectual property protection: trade secrets. Building on existing survey evidence of firm-level, cross-sectional use of secrecy, we document the effect of stronger legal trade secret protection on the use of trade secrets, and the rate and nature of secret innovation. Our setting is the US oil and gas hydraulic fracturing (fracking) industry, from 2013 to 2018, in states where firms are required to disclose fracking ingredients to regulators barring substantiated claims of trade secrets. We examine how the enactment of the federal 2016 Defend Trade Secrets Act (DTSA) affects well-level trade secret use across states with varying levels of pre-DTSA trade secret protection. We find substantial increases in the use of secrets, the generation of new secrets, the use of both external and internal secrets, and breadth of secret invention, as well as project complexity. Our results provide rare systematic empirical evidence on actual trade secret use and document how stronger formal appropriability shapes secret innovation.

Author: **Pyung Nahm**, *U. of Minnesota*

Author: **J. Myles Shaver**, *U. of Minnesota*

Author: **Russell James Funk**, *U. of Minnesota*

This study leverages a unique research design, a proximate industry peer's outbound relocation, to examine how knowledge spillover drives the positive association between agglomeration with industry peers and firm innovation. We expect a firm's innovation performance to decrease when a proximate industry peer moves to another region because knowledge spillover from the industry peer to the focal firm is disrupted. Contrary to our expectation, we find that a proximate industry peer's outbound relocation increases the focal firm's innovation performance. Taking an abductive approach, we investigate the nature of the impact of outbound relocations of industry peers and provide a theoretical explanation to our unexpected finding. We argue a proximate industry peer's outbound relocation creates an inter-region knowledge channel, which creates opportunities for firms to absorb distant knowledge from the relocated peer's new region. To evaluate these ideas, we utilize novel data on relocations of nanotechnology R&D firms over 24 years. This study provides evidence on the association between a proximate industry peer's outbound relocation and a focal firm's innovation performance and on the creation of inter-region knowledge channels.

People and Innovation Track: Leadership in Innovative Firms

Session Moderator: **Tariq H. Malik**, *Liaoning U.*

TIM: Managerial Departure and the Firm's Performance Loss: A Contingent Role Partners, Techs & Regions

Author: **Tariq H. Malik**, *Liaoning U.*

While the arrival of the TMT (top management team) expands the firm's technological capability and performance, the departure of the TMT should adversely affect the firm's performance. The research on the departure of the TMT and the firm's performance is missing in the organisational research. In exploring the adverse effects of the TMT's departure on the firm's performance, this study tests the moderating role of the firm's context on the departure of the TMT towards the firm's strategic losses. A two-step process tests the direct effect of the TMTs departure and the firm's ROA (return-on-assets) and NI (net income) in the study period. Then it uses three organisational moderators: (a) the firm's technological portfolio, (b) the firm's partners portfolio, and (c) the firm's regional orientation—Europe versus America. Based on a large sample of biopharmaceutical firms, the analysis traces the number of TMTs departed from the firm and links it to the firm's performance directly (baseline) and indirectly (moderators) in the study period (averaged 1997 to 2005). GLM and Mixed Method show that the technology portfolio negatively moderates the ROA performance and the NI performance positively. The partners' portfolio positively moderates the ROA and NI performance. The European firm positively moderates the ROA and negatively moderates NI performance. Among the direct net effects, the TMTs' departure negatively influences ROA and positively influences NI. The article contributes to the organisational context, AC theory and general policies.

TIM: Daring to Approve Radical Innovation Projects at the Front-End

Author: **Rasim Serdar Kurdoglu**, *Bilkent U.*

Author: **Oguz A. Acar**, *King's College London*

Author: **Daan Van Knippenberg**, *Rice U.*

Author: **Lale Gumusluoglu**, *Bilkent U.*

While innovation decisions are critical for organizations, our understanding of how managers make innovation decisions under high uncertainty is limited. We develop a theory on how goals guiding innovation decisions can vary depending on the level of uncertainty in the process, which increases along a continuum from the front end to launch and from incremental to radical projects. By using analytical or heuristic calculations, managers can assess innovation projects aligned with organizational goals. However, in case of high levels of uncertainties (i.e., front-end of radical proposals), such intendedly rational calculations are impaired by drastic information scarcities, which reduce self-efficacy beliefs pertaining to organizational goals. In such conditions, we posit that decision-makers self-regulate their goals and shift their focal goals from organizational to personal goals. We argue that approval of innovation proposals (i.e., go decisions) is possible under high levels of uncertainty only if the manager has a promotion-oriented focus supported by facilitatory organizational context, but they are not enough. In the absence of any reliable cues about the success of the innovation project, managers need additional impetus, such as provided by impulsiveness or passion for innovation, to dare risk-taking for a highly uncertain innovation project.

Paper is Available to Meeting Registrants Only.

TIM: TMT Heterogeneity in Breakthrough Innovation: The Role of Strategic Decision-making Logics

Author: **Xuecheng Yang**, *U. of Electronic Science and Technology of China*

Author: **Yunfei Shao**, *U. of Electronic Science and Technology of China*

Breakthrough innovation can create new technological trajectories, new markets and even change the competitive landscape, which serves as the driving force of firms' competitive advantages. Based on Upper Echelons Theory, we focus on how TMT heterogeneity affects breakthrough innovations, and examine how strategic decision-making logics (causation & effectuation) adopted by members of top management teams moderate the relationship between the TMT heterogeneity and breakthrough innovation. By using a sample consists of 227 respondents from China, we use linear hierarchical regression analysis to test the hypotheses on the TMT heterogeneity-innovation relationship. Our findings show that TMT heterogeneity has a positive impact on breakthrough innovation. Both causation and effectuation positively moderate the positive relationship between TMT heterogeneity and breakthrough innovation. In addition, compared with causation, effectuation has a stronger moderating effect on the relationship between TMT heterogeneity and breakthrough innovation. We follow and extend the interpretive logic of strategic decision-making underlined by Upper Echelons Theory in explaining the relationship between characteristics of top management teams and organizational outcomes. Combining perspectives of information processing and core competence, our work mainly reveals the relationship between TMT heterogeneity and innovation, and explore the contingency effect of decision-making logics (causation & effectuation) in that relationship. Our research conclusions help TMTs deeply understand the generation as well as its mechanism of breakthrough innovation, and provide new perspectives and guidelines for them to carry out breakthrough innovation as well.

TIM: CEO Construal Levels, Cognitive Flexibility, and Firm Ambidexterity

Author: **Mehdi Samimi**, *City College - City U. of New York*

Author: **Younggeun Lee**, *California State U., Los Angeles*

Author: **Marc H. Anderson**, *Iowa State U.*

Author: **Andres Felipe Cortes**, *Sacred Heart U.*

Author: **Pol Herrmann**, *Iowa State U.*

We examine how two cognitive characteristics of a CEO—their construal level and cognitive flexibility—affect a firm's ambidexterity, which is its ability to simultaneously pursue exploration and exploitation. Drawing on construal level theory and the paradox perspective in leadership, we argue that CEOs who think at more abstract levels are better able to flexibly adapt to the changing conditions of exploration and exploitation, and are thus more effective at achieving ambidexterity. We examined the proposed hypotheses in a sample of 344 Korean small- and medium-sized enterprises, using two-round (one-year lagged) and multi-respondent (CEOs and executives) survey data. We find that CEO construal levels lead to CEO cognitive flexibility, which in turn influences firm ambidexterity. This study provides new insights on how CEO cognitive capabilities can foster firm ambidexterity.

Blockchain technology (BCT) has the potential to revolutionize many industries by enabling transactions among individuals anywhere in the world without relying on intermediaries (e.g., banks, agencies, and institutional actors) that historically have been required to establish trust between transaction parties. Many people associate BCT primarily with cryptocurrencies. However, BCT applications have now permeated a wide range of industries and contexts, such as food logistics, healthcare, insurance, and many others. This panel symposium assembles a group of management scholars that have research related to blockchain technology. Our intent is to highlight some of the first research on blockchain technology and have these researchers explain some of the possibilities that exist for high-quality research on blockchain technology.

The evaluation of novel technologies is central to ensuring that resources are allocated properly in addressing society's problems. Despite its importance, challenges still exist that lead to promising innovations not getting properly evaluated and dying prematurely. Instead of a static, linear, box-ticking exercise, the evaluation process for novel innovations is mired with complexities. To address the current gaps in this growing research area, this presenter symposium will bring together top scholars to clarify current challenges in assessing novel innovations. The four presentations will holistically cover different aspects of novelty evaluation: evaluators' advice-seeking with biased seekers and informants, evaluator's thinking processes that rely on different information processing strategies, the way evaluations are affected by innovators' social position, and how the process of entrepreneurial strategy formation unfolds under complex uncertain situations. This symposium will encourage future research in underexplored areas such as the role of the evaluators, the innovators, the context, and the idea itself in this process.

Blockchain Governance and Technology Use

Session Moderator: **Barry Varys-Scudder-Davis**, *Bentley U.*

CTO: **Power Dynamics in the Evolution of Blockchain**  

Author: **Barry Varys-Scudder-Davis**, *Bentley U.*

Author: **Ja-Nae Duane**, *Bentley U.*

Author: **Marco Marabelli**, *Bentley U.*

In this paper, drawing on past IS research on how IT affects power dynamics in organization and networks, we focus on blockchain technologies. After describing and analyzing two mini-cases of blockchain creation and use, we critically discuss the power of all actors involved: blockchain code, creators, developers, maintainers, institutional forces and users. We therefore contribute to the literature on the governance of blockchain creation and use in organizations and networks. We do so by exploring the power dynamics among key socio-technical actors involved in significant decision-making processes in the early lifecycle stages of blockchain. The insights gain from this exploratory study support prior literature that indicates that developers may sit in a privileged position in blockchain ecosystems, while also demonstrating the unique power dynamics among other socio-technical actors present. By contrasting these dynamics with those found in other technologies, e.g., ERP and AI, we help to expose the unique power dynamics that exist in these blockchain-enabled decentralized settings. Potential avenues for future theoretical testing and development, as well as practical implications for managers or organizations engaging with emerging blockchain technologies are provided.

CTO: **Projecting and Infrastructuring: Designing Cryptocurrencies for the Solidarity Economy**

Author: **Bruno Henrique Sanches**, *Fundação Getulio Vargas - EAESP*

Author: **Marlei Pozzebon**, *HEC Montreal & FGV/EAESP*

Author: **Eduardo Henrique Diniz**, *Fundacao Getulio Vargas*

Solidarity cryptocurrency is a recent phenomenon that connects the social perspective of community currencies with the technological architecture of the cryptocurrencies. By dealing with logics coming from different universes, the social perspective of community currencies with the technological architecture of the cryptocurrencies, designing a solidarity cryptocurrency is about making possible the connection between these two distinct worlds. To investigate the designing of solidarity cryptocurrency, this paper develops an alternative view of the cryptocurrency design that emerges from a Solidarity Economy experience, showing how the process of designing a solidarity cryptocurrency holds a dialogic tension between two ways of design. Our conceptual background integrated elements of two theoretical traditions. First, the *tecnologia social*, a Latin American concept that sees the development of technologies for social transformation built and/or appropriated by the population affected by them. Second, the concept of infrastructuring, which denotes a multi-relational and processual perspective of information infrastructures design. We adopt a design ethnography strategy to examine the design of a solidarity cryptocurrency, an infrastructure that adapts the digital payment platform held by the solidarity organization Instituto E-Dinheiro Brasil into a blockchain platform. Our study reveals the importance of connecting local resources and knowledge through developing located accountability by experts, direct community participation, and integrating local technologies. We unveil how process of reconfiguration of artefacts, imaginaries and social practices unfold towards a solidary economy landscape.

Paper is Available to Meeting Registrants Only.

CTO: **Age and Technology Use: A Dual Pathway Model of Motivation and Capability**   

Author: **Ulrike Fasbender**, *U. of Hohenheim*

Rapid technological advancements and global workforce aging shape the future of work. Drawing on the technology acceptance model, our study aims to connect the literature on age diversity with the research on technology use in organizations. At its heart, the technology acceptance model suggests that two core components, namely perceived usefulness and perceived ease of use, predict attitude toward new technology. We connect these components with two age-related processes to suggest a motivational pathway via future time perspective (future opportunities and remaining time at work) and a capability pathway via cognitive constraints (processing speed difficulties and organizational difficulties). Moreover, we explore digital leadership as a potential buffer to the detrimental effects of age on technology acceptance. We pre-registered our hypotheses and tested them using three-wave data of 643 employees. Our findings support our hypotheses for the motivational pathway showing that age is negatively linked to attitude toward new technology via future time perspective, and subsequent perceived usefulness and perceived ease of use. Digital leadership buffered the negative indirect effects of age on attitude toward new technology. For the capability pathway, the results were opposite to what we expected. Specifically, age was negatively related to organization difficulties, which in turn were negatively linked to attitude toward technology via perceived ease of use and perceived usefulness. Together, our findings put the link between age and technology acceptance into a more positive light than previous research and suggest that motivational and capability-related forces are interwoven in predicting attitude toward new technology.

SIM: The Strength of Trust, Social Norms and Entrepreneurship for Trade Networks      

Author: **Kingsley O. Omeihe**, *U. of Aberdeen*
Author: **Ibiyemi Omeihe**, *U. of the West of Scotland*

This paper suggests that the key to entrepreneurial success lies in the ability to maintain trust-based networks and respect social norms. In elaborating this proposition, this article draws on the results of an exploratory study of 30 Nigerian traders to demonstrate how using an ‘institutional’ lens provides new insights into the influence of trust and indigenous norms on entrepreneurial behaviour. The concept of morality which presupposes an understanding of entrepreneurial behaviour, is introduced to offer a supple and adaptable explanation for how actors rely on social norms to build trade networks. At the centre, trust was found to be indispensable to networks relationships and necessary for enforcing sanctions. The results facilitate a rich understanding of how a range of trust-based networks relationships and hybrid indigenous norms underpin entrepreneurial behaviour in Nigeria. The study contributes by providing well founded insights into the entrepreneurship within an African context.

SIM: Indigenous Peoples’ Rights and Intellectual Property: From the Knowledge Commons to ABS Agreements (WITHDRAWN)      

Author: **Camille Roger Meyer**, *U. of Cape Town*
Author: **Kiruben Naicker**, *South African Department of Forestry, Fisheries and the Environment*

Intellectual property rights (IPRs) on biological resources and traditional knowledge are criticized for increasing corporate control and lacking ethical considerations for Indigenous peoples and local communities. Access and benefit sharing (ABS) agreements are considered useful policy instruments for addressing issues of bioprospecting and biopiracy by securing developing countries and Indigenous peoples’ rights on their biological resources and traditional knowledge. Building on the theory of knowledge commons, we examine the international governance regimes for access to genetic resources and the fair and equitable sharing of benefits arising from their utilization. We then investigate three case studies of bioprospecting and biopiracy in South Africa to examine the processes of designing and implementing ABS agreements in favor of Indigenous peoples. Highlighting the wide-ranging consultation that needs to take place as part of this process, our analysis of these ABS agreements provides useful insights for the development of innovation and intellectual property policies that include traditional knowledge in a spirit of social justice, economic development and biodiversity conservation and sustainable use. In doing so, we contribute to ongoing debates about IPRs impacts by establishing that IPRs can be beneficial for society when provided to Indigenous peoples for protecting their traditional knowledge. Moreover, we provide a more nuanced understanding of the knowledge commons by determining how ABS agreements promote collective forms of ownership that regenerate traditional knowledge commons in line with customary rights.

SIM: From Stakeholder to Rightsholder – Principles of Inclusion and Participation in Mining Governance

Author: **Johanna Jarvela**, *Copenhagen Business School Department of Management, Society and Communication*
Author: **Andre Spicer**, *City U. London*
Author: **Ville-Pekka Sorsa**, *U. of Helsinki*

This article examines the evolution of participatory governance in mining and how stakeholder inclusion impacts mining project development. The article is based on a historical case study of mining licensing in Finland and the data includes archival materials, official documents, media texts, and supporting interviews. The article finds that the institutional complexity of the governance processes has increased throughout time as more permits, public institutions and rightsholder groups have been introduced as part of the licensing process. As the stakeholder inclusion has expanded to include virtually anyone, only those groups who hold a particular position by law are able to have meaningful participation and are included in the decisions. This has profound implications for the principles of participatory governance and stakeholder inclusion. These findings contribute to the stakeholder engagement literature by theorising upon the difference of rightsholding and stakeholding for inclusion and participation in governance processes and the role of state for provision of rights.

CMS: Do you Want to Trade Shares, Poultry or Education? The Marketization of Higher Education in Brazil

Author: **Sergio Wanderley**, *Unigranrio Afya*
Author: **Ana Bauer**, *EAESP - FGV*
Author: **Davi Dos Santos Marques**, *Unigranrio - U. do Grande Rio*

We investigated the marketization of the higher education market (HEM) in Brazil. We analyzed the top 10 higher education institutions (HEI), and main mergers and acquisitions operations during the covid-19 pandemic. The objective was to bring to the fore empirical evidences of marketization. What we found out is that seven out of the top 10 HEIs are listed. They operate in the HEM in Brazil like any other global corporation in any other business sector around the world. We found clear traces of marketization, globalization and commoditization. From this empirical locus of investigation, we embraced Paulo Freire's concepts of banking education and dialogic pedagogy to discuss the effects of the HEM structure in management learning and education, largest undergraduate program in the country. Teachers' agency is dwarfed and dialogic pedagogy becomes constrained, in what Freire would denominate as banking education. We have to create spaces within the content to be delivered/deposited in class to forge a dialogic pedagogy that is reflexive in its essence. We have to recover students and teachers' agency by bringing into the classroom students' context/reality to challenge the delivered content. This is the only way to form qualified/critical professionals and citizens and to become better educators. We have to maintain our epistemological curiosity, and to walk, asking and questioning, as Paulo Freire would suggest. The alternative is to let the algorithm teach.

CMS: Marxism, Socialist Transition, and the Productivity of China's Academic Faculty

Author: **Chao Ren**, *U. of New South Wales Canberra*

The much-repeated claim that China has abandoned its long march to communism has become increasingly problematic with commentators from both the left and the right questioning the validity of the claim. Joining this discussion, we center on the issue of workplace inequality and the two-track performance and remuneration arrangements when accounting for public university academic performance. Given the Chinese government has institutionalized this arrangement as part of its strategy for building a socialist market economy, we posit that this performance evaluation is consistent with the worker evaluation model that Marx and Engels advised should be engaged as part of the traditional path to communism. In brief, we suggest the duality of performance metrics is consistent with Marx's understanding of how workers should be rewarded during the initial stage of the transition from capitalism to communism. The multiplicity of discipline versus control societal values that emerge through this study is particularly relevant given the long-held attention to inequality in China.

CMS: Instructors as Mediators in Students Learning    

Author: **Daniela Petrovski**, *York U., Toronto*

The internalization and globalisation of higher education has led to new demands and social situations that require educational reforms because the existing structure is insufficient to fix the current issues. Analyzing current issues in pedagogy such as power in grading, I draw on the work on Vygotsky and Bandura to propose a possible start for future solutions. One of the main issues analysed in this paper is criticisms of the current focus on grading and individual characteristics such as agency for evaluating learning. I argue that this individualistic perspective may only keep the same problems in higher education instead of solving them and it is better to view the higher education as means for enhancing collective agency, solidarity, and reducing inequality. Employing epistemological caution, I am not saying that agency theory does not have merits, but that the space for action with human agency is limited by situational factors. One situational factor is understanding learning and teaching styles as well as how knowledge develops in classrooms so that learning can occur. Instructors are mediators in students' learning because they have the power to motivate them to learn or disengage them from learning.

OB: How New Employees' Supervisor Relationship-Building Behavior Affect Coworker Helping Willingness?

Author: **Fan Zhang**, *U. of Science and Technology of China*
Author: **Song Wu**, -

Drawing from attribution theory, this study explores the mechanism of new employees' supervisor relationship-building behavior on their coworkers' willingness to help. Adopting a situational simulation experiment involving 233 in-service workers, we found that coworkers attribute the supervisor relationship-building behavior of new employees to two distinct motives: organizational concern motives and impression management motives. Coworkers' attribution of new employees' organizational concern motives positively affects their willingness to help new employees, whereas coworkers' attribution of new employees' impression management motives has a negative effect. Under the condition of high cooperative goal interdependence, people are more likely to attribute the motives of new employees' supervisor relationship-building behavior to organizational concern motives. Furthermore, the indirect effect of new employees' relationship-building behavior on the coworkers' willingness to help through coworker-attributed organizational concern motives is stronger.

OB: Is Job Crafting Always a Good Thing? An Examination of Interpersonal Consequence of Job Crafting

Author: **Haibo Wang**, *Guangdong U. of Foreign Studies*
Author: **Shengwen Li**, *Jinan U.*
Author: **Ming Nick Yan**, *Jinan U.*
Author: **Mengsang Chen**, *Lingnan U. / Sun Yat-sen U.*
Author: **Haibo Wu**, *School of Business Administration, South China U. of Technology*

While numerous studies have revealed the beneficial effects of job crafting for crafters themselves, little is known about its interpersonal consequences. Drawing upon role theory, we take a unique recipient-focused approach to investigate how and when engaging in job crafting may elicit responses from coworkers. Utilizing the 275 dyads of supervisor-subordinate data collected at three-time points, the results indicate that job crafting is positively related to interpersonal conflict, which, in turn, causes workplace victimization from coworkers. Furthermore, the political skill was found to mitigate the positive indirect linkage between job crafting and workplace victimization. Our study contributes to the job crafting literature by advancing our understanding of the interpersonal outcomes of job crafting.

OB: How Does the Volatile Nature of Gig Work Affect Workaholic State and Work-Related Behaviors?

Author: **Jeonghun Kim**, *Cornell U.*
Author: **Junhyok Yim**, *City U. of Hong Kong*
Author: **Heeun Jang**, *Yonsei U.*

In the emerging gig economy, platform workers' pay is volatile and fluctuating as they work on a real-time basis. This paper examines how specific types of pay volatility and daily income goal achievement ratio—shape individual workaholic impulses on a daily basis, and how this workaholic state leads to important work-related behaviors. Drawing on the motivational approach to addiction (Köpetz et al., 2013), we examine how daily income achievement ratio and pay volatility jointly shape individual workaholic states—uncontrollable inner compulsion or pressure to work beyond what is expected despite its negative consequences. Specifically, we argue that on days platform workers gain higher income than they have expected, these workers are more likely to feel higher workaholic impulse and that this relationship becomes stronger for those with higher volatility in terms of daily income. In addition, we go on to argue that these workaholic impulses lead to enhanced daily goal progress, but also higher deviance. In sum, we develop a theoretical model that suggests an interaction effect of pay volatility and daily income goal achievement ratio on workaholic state, which, in turn, leads to important work-related behaviors.

OB: Leading Future Work Self to Progress: the Role of Proximal Goals and Self-reflection

Author: **Anastasiia Popelnukha**, *school of management, USTC*
Author: **Qingxiang Weng**, *U. of Science and Technology of China*
Author: **Lincoln Jisuwei Sungu**, *school of management, USTC*

Goal pursuit literature suggests that to facilitate one's goal progress, a long-term goal should be divided into proximal goals; however, little is now about what long-term goal characteristics trigger proximal goal planning. Based on construal level theory, we hypothesized that a salient long-term goal such as salient future work self predicts proximal goal planning, resulting in perceived progress towards future work self. In addition, we proposed that improvement-oriented self-reflection moderates the indirect effect. Using a correlational field study (N = 208) and an experimental study (N = 110), we found that salient future work self combined with improvement-oriented self-reflection plays an influential role in boosting perceived progress through proximal goal planning. We discuss the theoretical and practical implications of the findings.

OB: Performance Benefits of Employees' Own and Their Coworkers' Nonlimited Willpower Beliefs 

Author: **Yun Bai**, *Huazhong U. of Science and Technology*
Author: **Zhiyu Feng**, *School of Business, Renmin U. of China*
Author: **Veronika Job**, *Technical U. of Dresden*

The limited-resource perspective provides a primary account of whether people fail to keep persistent in the face of difficulties. A well-documented idea is that any act of self-control efforts will consume people's willpower (i.e., their capacity to exert self-control) and impair their further self-regulation attempts in persistence. Extending this limited-resource perspective, the present research first brings in implicit theories about willpower to the work context by arguing that whether people believe willpower is a limited or nonlimited resource will affect their job persistence and subsequent job performance. By examining one's own and interpersonal influence of implicit willpower beliefs, we explore how focal employees' and coworkers' willpower beliefs, respectively, affect focal employees' job performance. Specifically, focal employees' willpower belief affects job performance through job persistence. In parallel, to examine how coworkers' willpower belief influences focal employees' job performance, we theorize a behavioral contagion process whereby coworkers' job persistence triggered by their willpower belief can be learned by the focal employee to exhibit job persistence themselves, which in turn increases job performance. Further, we theorize that such behavioral contagion effect is stronger when there is lower variance of coworkers' job persistence. Results based on two multi-wave, multi-source field studies provide consistent support for our hypotheses. We discuss how our findings contribute to the literatures on implicit theories about willpower and behavioral contagion, and provide practical implications for organizations.

OB: Status Growth Rate and Work Behaviors: The Moderating Role of Internal Attribution of Status Gain

Author: **Hae-Lyeng Rose Kim**, *Robert H. Smith School of Business, U. of Maryland*
Author: **Rellie Rachel Derfler**, *U. of Maryland*
Author: **Kathryn M. Bartol**, *U. of Maryland*

We examine the impact of high status growth rate (SGR), defined as higher-than-average status changes within an organizational hierarchy, on the behaviors and attitudes of high status individuals at the workplace. We propose that high SGR will positively predict psychological entitlement, and that psychological entitlement would positively and negatively mediate the relationship between SGR and unethical behavior and helping behavior, respectively. We further posit that the key boundary condition would be the individual's attribution orientation of success (i.e., status gain) and argue that the positive relationship between SGR and psychological entitlement will be strengthened for those who have a high level of internal attribution of status gain. We find support for our predictions across two multi-method studies. We discuss implications of our findings and future directions.

Paper is Available to Meeting Registrants Only.

OB: Trickle-Down Effect of Supervisor's Job Insecurity: Moderating Role of Supervisor's Goal Striving 

Author: **Eryue Teng**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Ming Lou**, *School of Management, Harbin Institute of Technology*

By integrating conservation of resources theory and allocation preference theory, we propose two pathways to illustrate the trickle-down effect of supervisors' job insecurity on employees' job insecurity: a resource generation path via leader-member exchange (LMX) differentiation and a resource conservation path via abusive supervision. In a two-wave, multi-source study using 365 employees nested in 34 groups, we found that supervisors' job insecurity has positive indirect effects on employees' job insecurity via LMX differentiation and abusive supervision. In addition, the trickle-down effect of supervisors' job insecurity via abusive supervision is contingent upon supervisors' communion striving, such that supervisors' high-level communion striving weakens the positive indirect effect via abusive supervision. Our study extends the job insecurity literature by explaining how, why, and when supervisors' job insecurity trickles down to their subordinates, which opens avenues for future research.

Paper is NOT Available. Please contact the author(s).

OB: Daily Effects of Perceived Leader's Overqualification on Subordinates' Work Behaviors

Author: **Sukanya Sangar**, *Research Associate Indian Institute of Management Ahmedabad*
Author: **Neha Tripathi**, *Assistant Professor Indian Institute of Management Ahmedabad*
Author: **Ashneet Kaur**, *Doctoral Student at IIM Ahmedabad*
Author: **Sudhanshu Maheshwari**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Overqualification is prevalent in today's global workplace. Yet, the scholarship attending to potential benefits from the overqualified workforce is scarce. In this paper, drawing on equity theory, we develop a theoretical model of perceived overqualification on subordinates' daily work behaviors. We elaborate on a poorly understood upward comparison process, in which subordinate's perceptions about their leader's overqualification evokes positive social behavior and in turn positive in-role work behaviors. The results from a daily repeated measures study provided empirical support for the hypothesized model. By shedding light on the potential bright side of overqualified managers from a third-party perspective, we provide useful insights for the future management research and practice on how organizations can leverage on the overqualified leaders harnessing workplace productivity through their subordinate's social and proactive behaviors.

Discussant: **Christopher C. Rosen**, *U. of Arkansas*

Despite growing research interest in presenteeism, broadly understood as the behavior of working in the state of ill-health, and its verified importance for many organizations and employees, presenteeism is still in need of both theoretical and empirical work. On the one hand, it is of high importance not only to understand the antecedents of presenteeism but also to (better) understand the underlying process that will result in a specific attendance behavior. On the other hand, the long-term consequences of presenteeism have been in the focus of research, while evidence on the short-term mechanisms that lead to these consequences are vastly unexplored. Therefore, in this symposium, we focus on the formation of presenteeism as well as its short-term consequences for extra-role behaviors and entitlement cognitions. Evidence collected from different countries (e.g., Germany, the Philippines, Singapore, the UK, and the USA) and analyzed using a variety of methods will be used to discuss both formation and consequences of presenteeism within organizations. In particular, we will 1) describe a novel conceptual model about the formation of presenteeism; 2) share empirical evidence concerning presenteeism of teleworkers; 3) investigate the role of gender as a moderator in the relationship between presenteeism and extra-role behaviors; and finally, 4) present a daily diary study focusing on the short-term effects of presenteeism. Across the symposium, methodological challenges and theoretical developments in the field of presenteeism will be addressed. In conclusion, the discussant Christopher C. Rosen will discuss the results and go beyond the presentations to conceive diverse avenues for potential future research.

Presenter: **Jacob Whitney**, *U. of Oklahoma*

Participant: **Qi Zhang**, *Oregon State U.*

We propose a symposium that showcases fit research that addresses the issues of employee attraction, engagement, and retention, in hopes of identifying new skills and strategies organizations can adopt to successfully navigate the Great Resignation. We start by investigating how experiencing how misfit during the recruitment process can actually help both employees and organizations maximize their PO fit (Sullivan and Barrick). Next, we discuss how individual differences may buffer the positive effects of hiring for fit in a group setting (Whitney and Li). Finally, we present two perspectives on the experience of misfit and explore how and why the strategies employees adopt to navigate misfit depend on how their attributional tendencies and their experience of fit overtime (Li and Zhang and Tirol-Carmody, respectively).

Social Media Platforms and Market Dynamics

Session Moderator: **Wael Jabr**, *Pennsylvania State U.*

CTO: **When Trading Becomes Social: How Social Trading Platforms Affect the Disposition Effect**

Author: **Wael Jabr**, *Pennsylvania State U.*

Author: **Arun Rai**, *Georgia State U.*

With a market size in the multibillion of dollars, social trading platforms have, over the last decade or so, been gaining a strong foothold in individual investment. Users on these platforms can observe traders' detailed transactions over time. They can also “follow” anyone of those traders, just like with other social media platforms, investing own money in accordance with the strategies of their trader of choice. In turn, traders have access to an abundance of real-time data, including those that view and follow them. In this paper, we investigate the intriguing question as to whether the disposition effect bias those individual traders typically experience in offline investment setting – i.e., exhibiting risk aversion for gains and risk seeking for losses, manifests in the social trading platform context. We also examine the impact on the disposition effect of two social features of the platform: (i) views to the traders' page, which reflects the visible allocation of platform users' attention to individual traders and (ii) followers of the traders, which reflects the allocation of money to mirror the trading allocations of traders. We construct a dataset of 400 traders and 80,000 trades over the period between January 2019 and May 2020 that we collect from Zulutrade, a leading social trading platform. Using a survival analysis methodology, we evaluate whether gains vs. losses exhibit different hazard rates for to sell transactions, and whether and how views and followers interact with gains vs. losses in impacting those hazard rates. We find traders to exhibit the disposition effect in the social trading context, with the disposition effect amplified with an increase in views and reduced with an increase in followers. Our findings have important implications for the design of social trading platforms and more broadly for the literature on decision-making biases in online contexts characterized by social features.

CTO: **Digital Commitment, Investment, and Firm Innovation: The Moderating Role of Market Dynamics**

Author: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*

Author: **Zhaohui Wang**, *School of Management and Economics, Beijing Institute of Technology*

Author: **Ryan Scott Coles**, *U. of Connecticut*

Author: **Jiang Yu**, *Chinese Academy of Sciences*

Digitalization is both a challenge and an opportunity for a firm's competitive advantage in the post-COVID-19 volatile environment. However, scholarship investigating how a firm's digital strategy influences its innovation performance and profitability are scant. We address this limitation in the literature by proposing that shareholder commitment to digitalization promotes a firm's innovation performance and, subsequently firm profitability. Employing a multiple-sources panel dataset consisting of 1,116 China's publicly listed firms from 2011 to 2019, text-mining techniques and negative binomial empirical models, the main hypotheses testing and subsequent robustness checks support our argument. Specifically, our study shows that 1) a firm's digital commitment significantly increases its innovation performance, 2) digital investment partially explains digital commitment's impact on innovation performance, and 3) Market dynamics positively moderate the effect of digital commitment on innovation performance by enhancing the impact of digital investment on innovation performance but has no significant effect on the relationship between digital commitment and digital investment. In addition, analysis shows that the impact of digitalization is long-lasting and promotes the firm's profit from innovation. In addition to developing theory on digitalization as it relates to firm innovation and financial performance, this study also generates practical insights for managers and policymakers with regards to firms' digital transformation in today's post-COVID-19 dynamic world.

CTO: **Emojis to Conversion on Social Media: Insights into Online Consumer Engagement and Reactions**

Author: **Dušan Mladenovic**, *Masaryk U.*

Author: **Kamil Košťál**, *ROI Hunter*

Author: **Nikolina Ljepava**, *American U. in the Emirates*

Author: **Ondrej Částek**, *Masaryk U.*

Author: **Yash Chawla**, *Wroclaw U. of Science and Technology*

Emojis have become popular in online marketing communications. Marketers use emojis to humanize brand voice and elicit an emotional response from target audiences. However, little is known about how emojis are perceived and what kind of reactions they evoke. The aim of this study was to examine whether exposure to emojis leads to an increased intention to purchase, and whether the use of emojis impacts campaign effectiveness. Surprisingly, it found that the use of emojis had a negative effect on purchase intention, while the effect was positive when mediated by positive affect. Emojis increased the effectiveness of marketing campaigns for hedonic products and had a strong impact on the return on advertising spend. The findings of this study have both theoretical and practical implications in the observed domains, particularly in relation to the type of products emojis are most effective in promoting, gender differences, and real-life consumer behavior.

CTO: Trust Building in the Sharing Economy: Proposition and Test of an Integrated Model 

Author: **Bruno Fernandes**, COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro

Author: **Roberto Nogueira**, -

Author: **Paula Chimenti**, COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro

The objective of the study is to propose and test an integrated model to explain how trust is built in sharing economy transactions. Initially, prior literature was systematically selected and synthesized to develop a comprehensive framework applicable to multiple trust-building perspectives and categories of sharing economy platforms. Then, a survey was conducted to validate the constructs and test the model with Airbnb guests. A sample of 351 responses was collected and analyzed using Structural Equation Modeling. As a result, the study provides evidence that Third-Party Evaluation, First-Party Interaction, and Social Motivation do have a significant role in driving Trust. In addition, it was found that the strength of these effects is moderated by the respondent's Propensity to Trust.

CTO: Online Networking at Virtual Conferences: Feature Usage and Relational vs. Structural Social Capital

Author: **Lukas Falcke**, U. of St. Gallen

William H. Newman Award Nominee

Nowadays, online networking takes place not only on Social Media Networks (SMNs) but also at virtual conferences - preliminary versions of a "metaverse", recently introduced as the future of making social connections by Mark Zuckerberg. But how can individuals effectively network at virtual conferences and build relationships that go beyond LinkedIn connections? Networking refers to individuals' strategic behavior to accumulate social capital (SC) – the number of relationships (structural) and the trust and reciprocity thereof (relational). Prior research has often neglected the relational dimension and virtual conferences as relevant settings for SC accumulation. In response, we combine prior insights from social capital theory, online and offline networking, and digital features and affordances to develop a theoretical framework of online networking at virtual conferences. To test and substantiate it, we conduct a longitudinal mixed-methods study based on digital trace and survey data of 74 participants at four sequential virtual conference events in the energy sector, complemented with 19 interviews and 120 hours of observations. We find that, visiting booths relates to increases in structural SC. Bi-lateral and multi-lateral webconferencing and direct messaging, instead, to increases in relational SC. Our qualitative insights substantiate the theorized mechanisms, shed light on discrepancies between framework and empirics and provide relevant contingency factors. With an empirically qualified framework of online networking at virtual conferences, we contribute to the literature by confirming the "theory of active feature utilization" for SC accumulation in the context of virtual conferences and extending it by (1) differentiating between structural and relational SC, (2) expanding the set of investigated features, and (3) introducing contingency factors. Thereby, we shed light on virtual conferences as relevant online networking phenomenon and provide practical insights for participants and organizers of virtual conferences.

CTO: Inter-organizational Information Systems and Trust: A Study of Pharmaceutical Outsourcing 

Author: **Henrik Agndal**, U. of Gothenburg

Author: **Zehra Sayed**, U. of Gothenburg

Author: **Ulf Nilsson**, Sabanci U.

The abilities of increasingly sophisticated inter-organizational information management technologies to monitor vendors' work processes have led many organizations to overcome the fears traditionally associated with non-hierarchical exchange arrangements for sensitive and complex functions like research and development. In this paper, we explore how the properties of information technology influence the conditions for trust building in the outsourcing of R&D. The paper draws on affordance theory to analyze how the IS creates conditions for rational-economic trust and social trust. We perform an interview-based study of the role of laboratory management systems in pharmaceutical drug development outsourced by Western big pharma to contract research organizations in India. Empirical findings show how the IS reduces the need for rational-economic trust by affording real-time and retrospective monitoring as well as by largely eliminating the threat of appropriation by affording modularization of work. The findings also show attempts to circumvent the monitoring elements of the IS, illustrating the limits of the information system. This creates space for social trust and the findings show how the IS affords social trust building by structuring interaction and promoting transparency.

SIM: Studying the Intellectual Evolution of Grand Challenges Research

Author: **Shena Shaikh, IIT Hyderabad**
Author: **Zhiwen Zheng, Australian National U.**
Author: **Pradeep Kumar Hota, LM Thapar School of Management Thapar U. Patiala (Punjab) India**
Author: **Babita Bhatt, ANU College of Business and Economics**
Author: **Israr Qureshi, Australian National U.**
Author: **Ganesh MP., Indian Institute of Technology Hyderabad**

Grand Challenges are some of the most pressing issues of our times. There is an urgent need to understand ways in which they can be successfully and sustainably addressed to actively build a better, more equitable world. In this study, we explored the current grand challenges research to better understand the evolution of the field and scope for future research. We conducted a multi-period bibliometric analysis and a systematic literature review of the grand challenges research to chart the intellectual evolution of the field. Our bibliometric analysis comprised of 815 articles containing 48,501 cited references across three periods: 1993-2012, 2013-2016, and 2017-2020. Our systematic literature review was based on 37 recent (2017-2020) influential articles. Based on our results, we propose an integrated framework to help guide future research across six dimensions: organizational, policy, community, ethics, impact and collaborative.

SIM: Value Creation in Equivocal CSR Environments: A Configuration Approach

Author: **Olivia Aronson, U. of Richmond**
Author: **Irene Henriques, York U.**

Firms are increasingly expected by their stakeholders to tackle the “wicked problems” of society. These new pressures have created a highly equivocal corporate social responsibility (CSR) environment whereby firms face competing stakeholder perspectives regarding their expected level of financial and social value creation. To reduce CSR environmental equivocality and determine a CSR strategy, organizations need to effectively and efficiently identify, evaluate, and exploit CSR initiatives to create mutually beneficial outcomes (i.e., financial and social value). In this paper, we explain how organizations can optimize their financial and social value creation and promote the construction of intersubjective agreement, which can resolve CSR environmental equivocality. A framework is proposed that explains how the proper alignment of an organization’s level of CSR environmental equivocality, which is comprised of varying amounts of “unknowingness”, entrepreneurial strategy, which encourages and facilitates experimentation, and stakeholder engagement process, which encourages and facilitates information gathering, supports the construction of intersubjective agreement. We offer a typology of organizational value creation in equivocal CSR environments with four “ideal types” of organizations—Container, Explorer, Embracer and Manager—and posit how organizations might move from one ideal type to another.

SIM: Advancing Refugee Employment through Bilateral Collaboration: The Role of Businesses

Author: **Eun Su Lee, U. of Newcastle**
Author: **Priya Roy, U. Of Sydney**
Author: **Betina Agata Szkudlarek, The U. of Sydney Business School**

The facilitation of refugee employment is a grand challenge that requires well-coordinated action among many stakeholders. However, research on refugee employment is yet to develop recommendations on coordinating stakeholder engagement across sectors and on aligning their resources. Our paper positions businesses at the center of a multi-stakeholder effort, focusing on the creation of bilateral collaboration and reciprocal value between businesses and each of the key stakeholders engaged as the key to the sustainable response to the social issue. By providing an understanding of how businesses can work with these key stakeholders, our paper highlights that sharing of resources and knowledge across sectors enables a sustained collaborative effort. In our theorization, we explain that the stakeholders bring different resources and knowledge to the businesses (and vice versa) in a complementary way that leads to the creation of reciprocal value for both parties and contributes to achieving greater social value.

TIM: Legitimation through Optimal Distinctiveness: Evidence from Emerging Technology-based Start-ups 

Author: **Wen Mu**, *Zhongnan U. of Economics and Law*

Author: **Xu Jiang**, *Xi'an Jiaotong U.*

Author: **Ruiyun Xu**, *The Chinese U. of Hong Kong, Shenzhen*

How can emerging technology-based start-ups attain legitimacy from external stakeholders? This question is critical as emerging technology-based start-ups face dual liabilities of newness arising from both a short history and the radical novelty of emerging technologies themselves. Drawing on optimal distinctiveness perspective, we propose that emerging technology-based start-ups can obtain legitimacy through optimal business proximity to their counterparts. We further construct a multi-level contingency framework at venture (i.e. venture age), third-party (i.e. media attention), and country (i.e. information and communication technology (ICT) development) levels. With a sample of 3670 blockchain start-ups, we discover an inverted U-shaped influence of business proximity on legitimacy attainment of emerging technology-based start-ups. We also reveal that venture age, media attention and country-level ICT development will attenuate the inverted U-shaped relationship. Overall, this study contributes to the literature on legitimation of emerging technology-based start-ups by extending optimal distinctiveness perspective.

TIM: First Ideas Matter: A Selection Loop Process for Business Model Adaptation

Author: **Alberto Nucciarelli**, *U. of Trento*

Author: **Feng Li**, *Cass Business School, City U. London*

Author: **Kiran Fernandes**, *Durham U.*

Author: **Nikolaos Goumagias**, *Newcastle U. Business School*

Experimentation plays a vital role in firms' activities and strategies. Yet, we still have a scant understanding of the processes underpinning experimentation for business modelling in startups. Through a qualitative longitudinal case, we investigate how a startup reshapes its value proposition and engages with external market stakeholders – in this case end customers – when their heterogeneity could not be catered by the first business model designed by the entrepreneur. We look at cases where a business model, originally envisioned with a single value proposition, needs to cater different groups of customers (i.e., product users, buyers, and beneficiaries) with diverse expectations in terms of value and engagement. Our study identifies a 'selection loop' process formed of three different experimentation phases – environment-based stress, cognitive-driven adaptation, and stakeholder-led evolution. This process contributes to better understand how managerial cognition drives business model design and experimentation towards a "fit" between the entrepreneur's cognitive model and the stakeholders in the external environment. We also advance the cognitive perspective on business models as we take a cognitive lens to explore experimentation as a process to identify and adapt a business model to emerging evidence about a startup's customers.

TIM: Does Executive Reputation Promote Innovation Quality?—Research Based on Patent Citation Data 

Author: **Ning XU**, *School of Management, Shandong U.*

Author: **Yingjie Bai**, *School of Management, Shandong U.*

Author: **Yutong Li**, *School of Management, Shandong U.*

Compared with explicit incentive contracts such as salary and equity, can reputation incentive, which are both long-term and binding, curb management's short-termism and enhance the innovation quality of enterprises? Based on the principle-agent theory, we empirically tested the impact of executive reputation on corporate innovation quality and the mechanism of its effects accordingly. Based on the panel data of Chinese listed companies from 2008 to 2020, there are three major findings emerging from the data analysis: (1) executive reputation has a significant positive effect on corporate innovation quality; (2) in terms of technological innovation path, executive reputation promotes corporate innovation quality by increasing the level of corporate independent research and development (R&D) investment rather than external technology purchasing; and (3) this driving effect is stronger for firms with more executives who have academic experience. The findings enrich the research on the governance utility of reputation incentives in the context of China and shed light on how to enhance the level of high-quality corporate innovation by optimizing executive incentive contractual arrangements.

TIM: Gender Disparities in Patent Review Outcomes are More Pronounced for More Novel Patent Applications

Author: **Nikhil Madan**, *Indian School of Business*

Author: **Deepa Mani**, *Indian School of Business*

Author: **Rohin N Vrajesh**, *Department of Management and Technology, Bocconi U.*

We examine how the magnitude of disparities against female inventors in patenting outcomes varies based on novelty of the patent application. An analysis of approximately 2.8 million applications reveals that gender disparities in terms of the likelihood that an application is granted a patent, the intensity of examination it is subject to, and, conditional on it being granted, the reduction in its scope, are systematically larger for more novel applications. In line with the possibility that these disparities are driven by differential treatment of applications authored by female inventors, we find that (a) female inventors of more novel applications are more likely to file requests for continued examination following rejections, and (b) the magnitude of these disparities and their variation along the novelty continuum is larger for applications authored by inventor teams with common (vs. rare) names. These findings suggest that the social and private costs of differential recognition of the work of female and male inventors are higher than previously believed.

TIM: Global Cooperation Framework to Mitigate a Technology-Regulation Gap in Blockchain    

Author: **Kibae Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*
Author: **Jung Hweon Jeon**, *Eduhash Global*
Author: **So Young Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

The research investigates the sunrise issue of the financial regulations for virtual assets from the architectural perspective. The Financial Action Task Force's revision of recommendations transits virtual assets from a vague area between legal and illegal economies. However, lawmakers and regulators warn that the stretching adoption of the regulations might invalidate the financial regulations for virtual assets, called a sunrise issue. The research explains the unsatisfying regulatory compliance, relying on the gaps between technological architecture and regulatory framework. Furthermore, it recommends a modular architecture in the regulatory framework and elaborate message format. The research contribute technology-regulation gaps to regulation compliance studies and global cooperation to blockchain-based financial sectors.

Paper is Available to Meeting Registrants Only.

TIM: More Freedom, Less Exploration: Evidence from Chinese CVC units 

Author: **Yundian Xie**, *Shanghai U. of Finance and Economics*
Author: **Jing Dong**, *Shanghai U. of Finance and Economics*
Author: **Ruchunyi Fu**, *Shanghai U. of Finance and Economics*

Separating corporate venture capital (CVC) unit from its parent company has become the prevailing view in the structural design of CVC programs. However, such a separation may come at a cost. We draw on institutional view, arguing that the CVC program's structural independence may incur its concern for lack of legitimacy in the eyes of the parent. To mitigate the risk of illegitimacy, an external CVC unit will decrease exploratory investment in unfamiliar industries and concentrate in the industry that the parent firm operates in. The negative relationship between structural independence and exploratory investment is further contingent on the CVC unit's experience of exits via IPO, the parent firm's number of subsidiaries and the regional collectivism where unit is located. The analysis of an unbalanced panel of 363 CVC programs in China from 2007 to 2019 provides empirical supports for our arguments.

TIM: Escaping the Patent Trolls: Impact of Non-Practicing Entity Litigation on Firm Innovation Strategies   

Author: **Kenneth Guang-Lih Huang**, *National U. of Singapore*
Author: **Mei-Xuan Li**, *National Taiwan U.*
Author: **Carl Hsin-han Shen**, *Macquarie U.*
Author: **Yanzhi (Andrew) Wang**, *National Taiwan U.*

Non-practicing entities (NPEs) are firms that amass patents to assert their intellectual property rights but have little or no intention of further developing these patents (a practice known as patent trolling). NPEs tend to initiate lawsuits not for actual patent infringements but for the potential profits derived from out-of-court settlements. In this study, we examine how firms shift their innovation strategies in response to heightened NPE litigation risks. We theorize that firms targeted by NPEs who become defendants in NPE-initiated litigation (i.e., target firms) will subsequently draw more upon their in-house technologies to reduce the potential legal ground for such lawsuits. We further hypothesize that the non-target firms in related technology areas will shift the locus of their innovation activities away from those of the target firms to avoid the areas with high NPE litigation risks. These effects are more pronounced when research and development (R&D) expenses for the patented technologies are higher and when the product markets are more competitive. Results from our difference-in-differences estimates and instrumental variable regression analyses provide support for these hypotheses. Overall, our results suggest that firms facing NPE litigation risks would shift their follow-on innovation trajectories and distance themselves from the existing network of innovation activities in an attempt to escape patent trolling. Our study yields important managerial and policy implications for firms and policymakers.

Paper is Available to Meeting Registrants Only.

TIM: Litigation versus Spillovers

Author: **Heesang Ryu**, *Department of Management and Technology, Bocconi U.*

This paper studies how patent litigation affects innovation and technology spillovers across firms. Using a unique data set on patent litigation from the United States, this paper shows that litigants are active innovators and share complementary knowledge assets with each other, creating spillovers. However, as a result of litigation, firms reduce follow-on innovation, thus impeding the effects of spillovers. Moreover, litigants fall behind the frontier, resulting in a divergence of productivity growth, which suggests a reduction of their role as intermediaries of knowledge diffusion. These findings imply that litigation, in contrast with the original objective of the intellectual property rights (IPRs) enforcement systems, can obstruct technological diffusion, which not only decreases cumulative innovation and spillovers, but also slows down productivity growth.

TIM: Multinational Enterprise Intellectual Property Right Strategies in Emerging Markets

Author: **JiaMin Zhang**, *Fudan U. School of Management*

Author: **Renfei Gao**, *U. of Manchester*

While scholars have long recognized the key role of intellectual property rights (IPR) in value appropriation from innovation, less is known about foreign multinational enterprise (MNE) IPR strategies in emerging markets with weak IPR institutions. We examine how foreign MNEs evaluate the relative effectiveness of secrets and patents in response to their partnership and collocation with local emerging market firms (EMF), contingent on regional IPR development levels in the host country and IPR institutional distance between MNE home and host countries. Using data on 407 MNEs from the China Innovation Survey, we find that both partnership and collocation with local EMFs increase MNEs' perceived effectiveness of secrets relative to patents. These effects are mitigated by regional IPR development levels in emerging markets and are strengthened by IPR institutional distance between MNE home and host countries.

Paper is Available to Meeting Registrants Only.

TIM: Can Third-Party Environmental Information Disclosure Promote Firm's Environmental Innovation? 

Author: **Helin Sun**, *Central South U.*

The Pollution Information Transparency Index (PITI) was developed jointly in 2008 by the Institute of Public and Environmental Affairs (IPE) and the Natural Resources Defense Council (NRDC). Using PITI as a quasi-natural experiment and a sample of China's listed industrial firms from 2005 to 2011, this study explores the impact of third-party environmental information disclosure on firm's environmental innovation. The results show that the PITI has a positive effect on firms' environmental innovation and that the positive impact of third-party environmental information disclosure is higher for state-owned than non-state-owned enterprises' environmental innovation. Slack resources can strengthen the positive relationship between the PITI and firm environmental innovation. However, the moderating effect of industrial pollution levels on this positive relationship is not significant. We find also that cities with higher quality third-party environmental information disclosure have higher levels of environmental innovation. The findings provide implications for policy related to public participation in environmental protection and firms' sustainable development.

TIM Best Paper Award Finalist

We present results from the first ever randomized control trial on independent inventors at the United States Patent and Trademark Office. This experiment, called the Pro Se Pilot, led to an 8 percentage point increase in the likelihood of receiving a patent. We exploit the random assignment of treatment to identify causal impacts of receiving a patent on short term independent inventor outcomes. Our results suggest that patenting is key to inventive, innovative, and entrepreneurial activity. We find large effect sizes of patenting on reducing financial frictions, participating in markets for technology (18.7 pp), and signaling inventor value to established firms (24.8 pp).

TIM: Scientific Imprints, Commercial Footprints: The Paradox of Resources in Prod. of Science & Scientist

Author: **Jeannette Anastasia Colyvas**, *Northwestern U.*

Author: **Kaisa E. Snellman**, *INSEAD*

Author: **Vincent Yung**, *Northwestern U.*

How do universities contribute to the economy? Despite elaborate efforts in policy and practice, academic research institutions struggle to fully realize their contribution to economically-relevant innovation. And the public is short changed in gaining access to the kinds of metrics that truly reflect the myriad of ways that academic science contributes to the economy. Doctoral recipients represent a vital role in the economy, by populating the scientific workforce, facilitating the transfer of technical and tacit knowledge among industry, government, and academia, and replenishing the intellectual stock of universities. And yet, our performance metrics reflecting university contributions to the economy largely overlook the production of scientists, which is arguably our most important source of technology transfer. Our current technology transfer metrics, either by design or in use, do little to acknowledge the people, practices, and relationships that are so critical to universities' contributions to the economy. Furthermore, whereas the conditions for innovation, commercialization, and publication of science are well-studied, the conditions for the cultivation of scientists remains black boxed. We contend that the academic enterprise has ready access to a wealth of information to gauge their own standing, communicate their contributions to the public, and even improve local institutional performance with potentially less controversial, one-size-fits-all interventions. Policy and practice, however, have not made use of these data as much as they could. The challenge for academic institutions resides with how performance is measured or analyzed than what contributions academics make to the economy. We examine productivity among 1,205 scientists affiliated with Stanford University Medical School over a 16-year period in terms of 5 forms of scientific output, including (1) scholarly publications, (2) doctoral students, (3) participation on doctoral committees, (4) invention disclosures, and (5) licenses obtained from innovation disclosures. While science and commerce may go hand-in-hand between publications, and inventions, the relationship between corporate grants and other forms of scientific production is less clear. We find that the number and total size of corporate awards a scientist receives is associated with neither disclosure nor publication. Furthermore, the number of corporate awards has a negative association with doctoral student advising and committee membership, yet a positive association with successful licensing.

OSCM: **Examining the Role of Single versus Dual Decision-Making Approach for Patient Care** 

Author: **Deepa Goradia**, *Georgia State U., J. Mack Robinson College of Business*
Author: **Aravind Chandrasekaran**, *Ohio State U.*

Decisions related to patient treatment during their hospital stay are done by two key decision-makers: The attending physician (AP) and the operating physician (OP). Under the single decision-making approach (S-DMA), the AP and OP are the same, whereas, under the dual decision-making approach (D-DMA), the AP and OP are different. In recent years, hospitals have seen an increasing trend towards D-DMA over S-DMA approach to accommodate physician schedules. While research outside healthcare operations management has argued for benefits from both S-DMA and D-DMA approaches, very little knowledge exists on what is effective during healthcare delivery. In this study, we address this gap by investigating the DMA within a hospital through physicians effectively improves patient care outcomes. Using detailed data from the state of Florida on cardiology patients over three years, we find that a S-DMA is associated with reduced patient length of stay, treatment cost, and mortality. This runs counter to some of the trends observed in practice. Further, we find that the effect is more significant for patients with greater disease complexity. A follow-up post-hoc analyses also reveal interesting insights: (1) S-DMA is more beneficial for community hospitals than teaching and academic hospitals (2) S-DMA is more critical than physician specialization. Our results are robust to alternate explanations and demonstrate the role that physicians can play in effective care treatment during a hospital stay.

OSCM: **How Managers’ Cognitive Frames Affect the Use of Process Improvement Approaches in NPD** 

Author: **Rima Al Hasan**, *U. of Jordan*
Author: **Pietro G. Micheli**, *U. of Warwick*

This paper explores how managers’ cognitive frames provide knowledge structures that affect the use of process improvement approaches (PIAs) in new product development (NPD) processes. A qualitative multiple case study method was used. Interviews with informants from different functional specialisms (R&D, product creation and development, design, engineering, and manufacturing) were conducted, and internal and online documents were collected and analyzed. Two main findings emerge. First, we identify three types of managers’ cognitive frames: conflicting, paradoxical, and supporting. Second, these cognitive frames are found to influence managers’ decisions over whether to promote, adapt or prevent the implementation of PIAs. This study helps explain conflicting findings in the literature regarding the implementation and effects of PIAs in NPD by identifying managers’ cognitive frames as a key antecedent. This paper generates insights into the importance of managerial decision-making in determining the scope and depth of implementation of PIAs in NPD.

OSCM: **Overoptimism is a Bottleneck for Effective Price Communication**

Author: **Atabak Mehrdar**, *Erasmus U. Rotterdam*
Author: **Behzad Rezaee**, *U. of Lausanne*
Author: **Ting Li**, *Erasmus U.*

Overoptimism happens when we choose from a set of alternatives. People overestimate the value of the best alternative and underestimate the worst one. In pricing, firms often use starting prices (or starting-from prices) as a representative of range of prices to signal the attractiveness of their products. These price cues inform the consumers about the value of the worst available product without reference to the rest of the available prices or their distribution. This paper focuses on the cases in which estimating the value of the worst product and comparing it with the communicated starting price lead to consumer disappointment through overoptimism, which leads to lower purchase intentions. We first use a Bayesian estimation framework to show that if (1) the price range skewness decreases and (2) the number of available products increases, the degree of overoptimism will increase. Second, we collect multichannel data from a European storage company to examine how price range skewness and product availability impacts a customer’s purchase intention. Our empirical results show that customers are less likely to purchase when price ranges are negatively skewed, and this effect is stronger when product availability is higher. In this case, purchasing customers tend to ask for higher discounts to compensate for the instilled disappointment by overoptimism. Last, we conduct online experiments to study overoptimism as the primary underlying mechanism and to rule out other possible explanations. We discuss the theoretical and managerial implications of our findings.

Author: **Hamsa Bastani**, *The Wharton School, U. of Pennsylvania*

Author: **Osbert Bastani**, *U. of Pennsylvania*

Author: **Park Sinchaisri**, *Haas School of Business, UC Berkeley*

A key aspect of human intelligence is their ability to convey their knowledge to others in succinct forms. However, despite their predictive power, current machine learning models are largely blackboxes, making it difficult for humans to extract useful insights. Focusing on sequential decision-making, we design a novel machine learning algorithm that conveys its insights to humans in the form of interpretable "tips". Our algorithm selects the tip that best bridges the gap in performance between human users and the optimal policy. We evaluate our approach through a series of randomized controlled user studies where participants manage a virtual kitchen. Our experiments show that the tips generated by our algorithm can significantly improve human performance relative to intuitive baselines. In addition, we discuss a number of empirical insights that can help inform the design of algorithms intended for human-AI interfaces. For instance, we find evidence that participants do not simply blindly follow our tips; instead, they combine them with their own experience to discover additional strategies for improving performance.

Technology Strategy and Competition Track: The Antecedents and Consequences of Entry

Session Moderator: **Katharina Cepa**, *Vrije U. Amsterdam*

TIM: Market Entry, Capability Development, and Innovation: External Technology and Complementary Assets

Author: **Xiaoshu Bei**, *U. of Colorado, Boulder*
Author: **Frank T. Rothaermel**, *Georgia Institute of Technology*

Should firms reconfigure their complementary assets to capture value from innovation? And, if so, which firms stand to gain most from altering complementary assets? Combining fine-grained data from the Division of Innovative Labor Survey with the U.S. Patent and Trademark Office data, we study innovator firms' strategic choices in three distinct categories of complementary assets: equipment and employee skills, sales and distribution, and trademarks. We correlate changes in specific complementary assets with market entry, external sourcing, and innovation outcome. The results suggest that when entrants commercialize external technology, they are more likely to reconfigure their complementary assets and, in turn, have better innovation outcomes. The relationship is more robust for younger firms.

TIM: Disruption-by-Proxy: A Collaborative Approach to Multi-industry Disruption

Author: **Katharina Cepa**, *Vrije U. Amsterdam*
Author: **Chris Ford**, *Lancaster U. Management School*

Extant literature shows two types of disruption: disruption-by-entry, where new entrants into an industry drive disruption, and disruption-from-within, where incumbents drive disruption. In this paper we break new ground by revealing and unpacking a third, untheorized process: disruption-by-proxy. We conceptualize disruption-by-proxy as a deliberate strategy whereby a technology provider creates a sustaining innovation in their core industry, secures technology adoption by powerful incumbents in their target industry, and thereby disrupts that industry and, potentially, other adjacent industries. The powerful incumbents act as disruptive proxies for the technology firm, which effectively drives business model change in one or more industries yet never seeks to extend beyond its core industry. To theorize this conceptualization, we explore the research question: “How does disruption-by-proxy unfold?” Our ethnographic study of a small technology firm shows how a disruptor engages in iterative phases of proxy testing of selected product-market bundles, (re)envisioning the disruptive process and potential industry end states, and advancing the technology whilst seeking to optimize its fit with emergent understandings of incumbent tolerance for adoption and disruption. Our process model theorizes disruption-by-proxy as an inherently collaborative and industry-spanning strategy that locates the instigator and driver of disruption permanently outside the disrupted industry or industries.

TIM: On the Strategic Use of Product Modularity for Market Entry: Theory and Empirical Evidence 

Author: **Jose Pablo Arrieta**, *U. of Amsterdam*
Author: **Roberto Fontana**, *U. of Pavia & Bocconi U.*

We model the conditions under which firms should enter the market with multiple modular products instead of a single product. Product modularity enables firms to broaden their portfolios and increase their chances of investing in the “right” technologies early in a technology cycle, a time of high uncertainty. Entry with integral products instead occurs later in the technology cycle. We test the model's predictions on a sample of entrants from the Local Area Network (LAN) industry during the 1990s.

TIM: Entry Mode Choices of Platform Companies Seeking Expansion in International Markets

Author: **Jaykumar Padmanabhan**, *Faculty of Management studies, Jain U., Bangalore*

Firms use platform strategies to offer a broad portfolio of products. Development of platforms has become dispersed across locations and partner firms as technological platforms enable co-creation of value in the platform ecosystems by complementors. In this paper, we look at the entry mode choices for platform firms when expanding abroad. We study the relationship between modular architectures and determinants of choices for selection of complementors. The link between architectural modularity and this decision is important as this enables us to examine questions related to success of task partitioning at an industry level. Our findings suggest that besides modularity, factors such as access to specialist expertise, availability of complementary skills and experience of the complementors in a varied range of technologies and systems play a significant role in the the entry mode choice

Strategy & Supply Chain Management

Session Moderator: **Jörg Grimm**, *Bern U. of Applied Sciences*

Author: **Liangliang Zhang**, SEM, Tongji U. & FEB KU Leuven
Author: **Taoyong Su**, School of Economics & Management, Tongji U.
Author: **Rui ZHANG**, Hong Kong U. of Science and Technology
Author: **Xin Zhao**, Anhui U. of Finance and Economics

The learning strategy of supply chain members is a key determinant of adapting to long-term, structural market, and environmental changes. Drawing upon the organizational learning and dynamic capability theory, this study aims to examine the effects of different ambidextrous supply chain strategies on supply chain adaptability and their boundary conditions in a congruence approach. A survey research design is conducted to collect primary data from 241 Chinese manufacturing firms. We use the polynomial regression and response surface techniques to test the impacts of ambidextrous supply chain strategies on supply chain adaptability. The findings show that the higher the congruence degree between supply chain exploitation and exploration, the more it contributes to supply chain adaptability; when the two are highly congruent, the supply chain adaptability under the high-exploitation/high-exploration strategy is significantly higher than that under the low-exploitation/low-exploration strategy. Under a certain degree of incongruence between the two kinds of strategies, the low-exploitation/high-exploration strategy produces significantly higher supply chain adaptability than does a high-exploitation/low-exploration strategy. We also demonstrate that competitive intensity and government support indeed play moderating effects. This research contributes by identifying four kinds of ambidextrous supply chain strategies and exploring the heterogeneous impacts on supply chain adaptability.

Author: **Ruth Schültken**, U. of Mannheim
Author: **Steffen Kokozinski**, U. of Mannheim

In the development of new products that are characterized by high uncertainty and high adaptivity, an agile new product development process is often used. The benefits of an agile new product development process are often reduced when applying a traditional procurement process (e.g., Van Weele (2001)). Drawing on contingency theory, we predict that procurement processes must fit with their contingencies, task uncertainty and task interdependence (product uncertainty and adaptivity), to maximize performance. Furthermore, procurement processes need to be aligned to related processes such as the new product development process. We apply a design science approach to design an agile procurement process that is aligned with the agile new product development process and is capable of attaining the important new product development goals such as low costs, short time-to-market, and high quality. We develop the initial solution based on semi-structured interviews, implement the initial solution at a case company to refine the solution, and refine and validate it with further interviews. We contribute to the literature by developing an agile procurement process with its explanatory mechanisms and application domain, and by showcasing that the procurement process has to match its contingencies and related processes to maximize performance.

Author: **Elisabeth Altmayer**, U. of St. Gallen
Author: **Jörg Grimm**, Bern U. of Applied Sciences

This paper aims at investigating the effect of inter-organizational strategic consensus on a strategy group level between buyer and sub-supplier regarding its effect on sub-supplier performance. The authors analyze empirical connected multi-tier data (matched-triplets) within a structural equation model applying Bayesian estimation of parameters. This analysis takes into account both a competitive method consensus and consensus on objectives between supply chain actors on category group level, sub-supplier performance (regarding on-time delivery and quality) under the influence of relevant contingency factors. Results confirm a cause-effect between buyer-sub-supplier consensus on objectives on category group level and sub-supplier performance regarding quality and on-time delivery. Furthermore results indicate, that inter-organizational strategic consensus on objectives between buyer and sub-supplier on category group level fully mediates the effect of buyer-sub-supplier competitive method consensus on sub-supplier performance.

Author: **Daniela Roldan Carranza**, ESPOL - ESPAE Graduate School of Management

Smallholder farmers and micro-retailers are critical actors for the supply chain continuity in food and beverage industries. In developing economies these actors operate in the Base of the Pyramid. Global companies are aware of the risk the lack of capabilities of these actors represent for the supply chain continuity. Consequently, they are undertaking capabilities' development programs. Previous research suggests that capability development is an adequate mechanism for poverty alleviation of these actors. Yet, there is little research on the assessment whether this type of programs achieve the development of productive capabilities. This research conducts two studies, one in the context of smallholder farmers and other in the micro-retailing sector to test whether capability development program enhance productive capabilities.

STR: The Effectiveness of Dynamic Governance in Peer-to-peer Platforms: An Agent-Based Simulation 

Author: **Takahiro Inada**, *Kyoto U. of Advanced Science (KUAS)*

Author: **Inamizu Nobuyuki**, *U. of Tokyo*

With the widespread use of social media, there is a need for content moderation, that is, regulating radical content while ensuring freedom of speech. This study uses agent-based simulation to analyze the fine-tuning of governance in such peer-to-peer platforms. Specifically, we examined the impact of three governance scenarios (open, closed, and dynamic) with varying levels and timing of participation constraints on the outcomes of quantity, quality, and diversity of participants, as well as the performance of platform companies. Comparing those scenarios shows that dynamic governance, which has a better balance of outcomes, results in the highest company performance. This result shows the significance of not only the level of constraints, but also the timing of their modification. This study also points to new research directions, such as diversity within platforms and distributed content moderation.

STR: Exploring the Role of Managerial Learning in Sustained Catch-up: A Case Study in China    

Author: **Nana Zhang**, *School of Economics and Management, Beijing Jiaotong U., China*

Author: **Liang Mei**, *National School of Development at Peking U.*

As the spreading uncertainty with the COVID-19 global pandemic challenged many organizations and social structures, many firms began to think about how to achieve sustainable development. Latecomers face challenges of sustained catch-up, and many of them fail into the dilemma of “aborted” catch-up. Management constraint is considered to be a key obstacle for latecomers to achieve sustained catch-up with forerunners but is rarely discussed. Based on the previous research in the field of latecomers and managerial learning, this study takes Huawei Company of China as a case to explore the role of managerial learning in sustained catch-up with the method of case study. It is found that the catch-up process of latecomers is not only the process of accumulation and improvement of technology and marketing capability but also the process of continuous accumulation of management capability; managerial learning provides a management foundation for latecomers to achieve sustained catch-up, which is embodied in organizational foundation, method/tool foundation and management cognitive foundation.

STR: Avoiding Relapses After Crises and the Influence of Investors. A Resource Dependence View.

Author: **Elena Mellado García**, *U. de Granada*

Author: **Juan-Alberto Aragon-Correa**, *U. of Granada*

Author: **Natalia Ortiz-de-Mandojana**, *U. of Granada*

During the recovery from an organizational crisis, firms intensely depend on provision of resources. Building on a resource dependence perspective, we argue that investors’ diversity, patience, and concentration during the crisis and recovery process influences the risk of relapses in the future because they facilitate the appropriate orientation for a resilient approach (fostering flexibility, stability, and commitment, respectively). Our sample includes data from 33 countries of 359 recovered firms, that is, firms that were rated in a stressful financial situation in 2015 and normal in 2016 according to their Altman Z-Score’s values. After analysing the firms’ financial situation from 2014 to 2019, we find that while both investors’ diversity and patience reduce the risk of relapsing into crisis, the risk grows when the large investors gain share in the firm capital during the crisis and recovery period. Our study contributes by showing how investors can be a source or a constraint for building organizational resilience in firms and the importance of the investors to analyze dependence in financially difficult situations for firms.

STR: Performance Feedback, Multiple Goals at the Same and Different Levels, and Internationalization (WITHDRAWN)    

Author: **Elizabeth Lim**, *Georgia State U.*

Extending the behavioral theory of the firm and using a sample of diversified firms from the Russell 3000 index 1998–2016, we examined changes in their scopes of internationalization based on performance feedback on multiple goals with different importance at the same level and across hierarchical levels. We posited that negative feedback on (primary) profitability and (secondary) sales growth goals at the corporate level influences problematic search and internationalization in diverse ways, resulting in decreasing and increasing rates of internationalization, respectively. We also posited that feedback on secondary goals can modify responses to feedback on primary goals at the same corporate level. We found that corporate managers responded to corporate profitability shortfalls by increasing internationalization as BU profitability exceeded aspirations and BU growth fell below aspirations but by decreasing internationalization as BU profitability fell below aspirations and BU growth exceeded aspirations. Our study contributes to the literature by connecting multiple goals to problematic search and testing changes in scopes of internationalization in response to the separate interaction effects of profitability and growth goals at the same corporate level and across hierarchical levels. The hypotheses were largely supported.

Pushing the Boundaries: Theoretical Developments in Strategic Leadership

Session Moderator: **Murad A. Mithani**, *Rutgers U., Camden*

STR: Seeing the Elephant: Cross-Disciplinary Review of the Use of Text Analysis of Firms' Disclosure

Author: **Anke Piepenbrink**, *Rennes School of Business*

The purpose of this study is to cross-fertilize the use of text-based analysis of firms' disclosure - annual reports, letters to shareholders and conference calls - across disciplines within business. It reviews the use of textual analysis of firms' disclosure in top journals of six business disciplines in the period from 2010 to 2021. The screening of 3389 articles results in 410 articles using automated text analysis. Furthermore it shows a dominance of accounting and finance in the use of textual measures of firms' disclosure, an increase of text-based measures since the mid of the decade and a group of central articles whose measures are used across disciplines. It furthermore provides a comprehensive list of dictionaries using disclosure text as well as an overview of automated text-based measures. Based on broad categories of the text-based measures the study concludes with a multi-level framework that can guide researchers in their understanding of firms and their disclosure environment.

Paper is Available to Meeting Registrants Only.

STR: Understanding Far from Equilibrium Behavior in Economic Markets

Author: **Murad A. Mithani**, *Rutgers U., Camden*

Management theories rely on the Walrasian assumption of equilibrium as a persistently accessible market state. Any environmental disruption that induces deviation from equilibrium is deemed temporary; most organizations promptly return to the equilibrium. But what happens when the market is pushed too far away from equilibrium? In this study, I advance the discussion of post-Walrasian economics to discuss how markets operate far from equilibrium. I discuss how disruptions caused by extreme threats such as climate change and pandemic introduce instabilities that undermine market's capacity for self-regulation, limit information dissemination, make it difficult to account for externalities, and misdirect tâtonnement. The resulting far-from-equilibrium dynamics expose organizations to multiple equilibria, localized logics of exchange, and non-price coordination mechanisms. They require a choice between replication, exploitation, and integration of which only the latter is mutually beneficial for organizations and the society. The study teases apart the new normal by examining the shifts in markets and how organizations can use these shifts for a positive impact on the society.

STR: Underpinnings of Conceptual Development: How to Select a Theory to Address a Research Question

Author: **Tianyu HOU**, *City U. of Hong Kong*

Author: **Juan Li**, *City U. of Hong Kong*

Theories are essential for addressing research questions and extending knowledge boundaries. However, in the area of strategic management, disciplines such as economics, politics, and sociology create pressure on researchers who endeavor to develop theories for argumentation and theorization. In this paper, we extend and revitalize the phenomenological /ontological /rhetorical approach to dealing with theory development. Specifically, we suggest that a research question should first clarify its central focus on the fundamental phenomenological questions it is attempting to address in the strategic management field. Then, the premise should clearly identify the ontological assumptions and premises that link the research question to existing theories. Finally, the identification and abstraction of rhetorical concepts derived from these assumptions and premises lead to theory selection criteria: connectedness, reliability, parsimoniousness, and falsifiability.

Paper is Available to Meeting Registrants Only.

STR: Dynamic Capabilities and the Nature of Organizational Agility: Towards Managerial Theory

Author: **Ciaran Heavey**, *U. College Dublin, Smurfit*

Author: **Zeki Simsek**, *Clemson U.*

One of the most overused words in the popular management lexicon over the past two years of the pandemic has been strategic agility. Despite the widespread use (and abuse) of the term, strategic agility remains an understudied phenomenon that has received little in the way of systematic theoretical or empirical treatment. In this paper, we outline a conceptualization of strategic agility as an umbrella construct and develop a theory of how management teams can develop the requisite capabilities to promote strategic agility. Specifically we develop an integrative framework that links the conceptual elements of top management groups (TMGs) with the capabilities underpinning strategic agility. We use the framework to trace implications for future theory and research.

Social Media, Misinformation, and Adaptive Learning

Session Moderator: **Behzad Rezaee**, *U. of Lausanne*

CTO: Ratioing and Credibility: The Effect of Like to Comment Ratio on the Perceived Credibility of Tweets  

Author: **Behzad Rezaee**, *U. of Lausanne*
Author: **Tobias Schlager**, *U. of Lausanne*
Author: **Markus Christen**, *U. of Lausanne*

We are living at the apex of the communication era where people can easily share their news, experiences, and thoughts on social media which has created a lot of opportunities for us. However, wherever there is an opportunity, we will see opportunism as well. One of the current issues on social media is fake content and how to deal with them. In this article, we will show that cues such as the number of likes and comments of a tweet can play a significant role in its perceived credibility. More specifically and with analyzing both field and experimental data, we will demonstrate that the more like to comment ratio a post has, the more it is perceived as credible. We will also show that this perceived credibility comes from the channel of consensus cue which could be moderated by the susceptibility to the social influence of the user, their motivation, and their cognitive load. Moreover, as the boundary condition, we will show that only ratio matters for the perceived credibility and the order of magnitude of numbers don't play a role in our conceptual model.

CTO: Crowdsourcing and Misinformation on Social Media

Author: **Sameer Borwankar**, *Purdue U.*
Author: **Jinyang Zheng**, *Purdue U., West Lafayette*
Author: **Karthik Kannan**, *Purdue U., West Lafayette*

All content-sharing sites, including social media platforms, face the creation and spread of misinformation, which leads to wrong beliefs, a hyper-partisan atmosphere, and public harm by the users. Given the dire consequences of the misinformation on society, government agencies, academic researchers, and industrial entities address misinformation creation and distribution on social media platforms. Experts have suggested leveraging the "wisdom of crowds" to identify misinformation to address the scalability issue in other solutions such as professional fact-checking. However, the implication of such crowdsourcing programs on its participants is not carefully studied in the field. We take the first step and leverage the quasi-field experiment of Twitter's Birdwatch program to investigate the causal effect of participating in the crowdsourcing program on the subsequent activities of the participants, especially on the propensity to generate content and create misinformation. We use cognition in writing to reflect the misinformation given the well-documented strong correlation between cognition and the lessened generation or spread of misinformation and the absence of a direct misinformation measure. Our results show a positive treatment effect on such cognition, suggesting the success of the program in dampening the generation of content with misinformation. However, we find that the users decrease the frequency of content creation and the diversity of the content. Also, more importantly, we find a lowered average content engagement from other users, suggesting that the diminished misinformation is built on a cost of lowered volume, diversity, and interestingness of the user-generated content. All these results would be of concern to the platform owners. Our empirical research contributes to the literature on crowdsourcing and misinformation and provides significant implications for social media platform managers.

CTO: Shortcut Taking Under Time Pressure: A New Theoretical Prediction Based on Adaptive Learning Theory

Author: **Jong Seok Lee**, *U. of Tennessee, Knoxville*

Shortcut taking is a deliberate choice made by software developers to save time and meet a tight deadline, but it tends to result in reduced software quality. Prior research examined a link between time pressure and software developers' shortcut taking and, by using a game-theoretical model, concluded that shortcut taking can be reduced when a greater level of time pressure is induced. This study adopts a new theoretical perspective by drawing on adaptive learning theory and aims to shed new light on software developers' shortcut taking under time pressure. By using computer simulations, this study illustrates how creating time pressure by setting tight deadlines can actually promote software developers' shortcut taking. Specifically, when there is no time pressure, choosing to produce high-quality work is a safe alternative that guarantees the timely completion of an assigned task with no additional cost. Therefore, under no time pressure software developers prefer the high-quality work alternative over the shortcut taking alternative which entails risk (e.g., incurring technical debt). However, as time pressure increases both the high-quality alternative and the shortcut taking alternative entail the risk of not meeting the estimated net value (e.g., missing a deadline, incurring technical debt, etc.), albeit the latter is a riskier alternative. When neither alternative represents a sure, safe option, software developers become more willing to choose the riskier alternative.

CTO: Governments as Strategy Framers: Exploring Digital Transformations Policies

Author: **Tobias Mettler**, *U. of Lausanne*

Author: **Gianluca Miscione**, *Michael Smurfit Graduate School of Business, Ireland*

Author: **Claus Jacobs**, *U. of Bern*

Author: **Ali Guenduez**, *U. St. Gallen*

The digital transformation (DT) is not only forcing companies to rethink their business models but is also challenging governments to address the question of how information technology will change society today and in the future. By setting the legal boundaries and acting as an investor and promoter of the domestic digital economy, governments actively influence in which ways this transformational process takes place. The vision and objectives how DT should be realized on state level is portrayed in well-crafted DT policies. Yet, little is known how governments, as strategic actors, see their role in the DT and how they frame these documents. In this paper, we argue that policymaking about DT is isomorphic in the global context, rather than a differentiator for countries to gain a competitive edge. Using machine learning to analyze a vast text corpus of policy documents, we identify the common repertoire of narratives used by governments from all around the globe to picture their vision of the DT and show that DT policies appear to be almost context-free due to their high similarity.

CTO: Exploring the Timebanking in Traditional Societies: Would Unemployed Women Exchange their Time?    

Author: **Nada Beshir**, *The American U. in Cairo*

Author: **Seham Ghalwash**, *The Technical U. of Denmark - DTU Entrepreneurship*

A timebank is a non-monetary service exchange system that empowers marginalized groups and enhances social capital development in local communities. Timebanks create a time-based mechanism that values work which is often unrecognized in the default economy, particularly under the care economy umbrella. There are many popular and successful timebanks in developed countries. However, the model is practically unheard of in the Arab World. Research that focuses on the system's application in a developing country, especially in the Middle East is non-existent. Through analysing how virtual communities of Facebook groups mediate social capital development for 20 unemployed women, this exploratory, inductive, and qualitative research analyses the potential and feasibility of the timebank model in developing countries context of Egypt. Using Yuan, Hanrahan, and Carrol (2018) framework on social capital operationalization, this study confirms the strong relationship between trust and reciprocity as dimension variables, self-efficacy, and communication (requests and offers) as predictor variables and sense of community. Considering each concept's context-specific definition and factors, findings suggest that trust is the most important factor in the Egyptian context which could hinder or enable building social capital through a timebank.

CTO: The Corporate Governance of Digital Transformation: The CEO's Digital Orientation and Board Impact

Author: **Igor Filatotchev**, *King's College London*

Author: **Gianvito Lanzolla**, *Bayes Business School (formerly Cass)*

Author: **Evangelos Syrigos**, *Department of Business and Management, LUISS Guido Carli U.*

Building on the sociology-grounded perspective on capital markets we argue that in conditions of technological change, investor perceptions about firm value are enhanced by the CEO's orientation towards digital technologies. This base relationship is moderated by the extent to which boards allow and support experimentation with, and implementation of, new technologies. To test our theory, we focus on the early phases of the so-called "digital transformation" (2003 to 2016). We test our hypotheses using a sample of S&P 500 companies and a unique, hand-collected, set of measures associated with digital technology orientation by the CEO, as well as board members' digital expertise. We suggest that: (a) board monitoring power is not always positively perceived by investors as widely implied in the extant agency-grounded literature; and (b) effective board monitoring is associated with complementarities between digital expertise of independent directors and the knowledge requirements underpinning CEO's strategic orientation.

CTO: In Search of Social Justice: The Role of Digital Technology in a Government Information System   

Author: **Xinlin Tang**, *Florida State U.*

Author: **Myeong Lee**, *George Mason U.*

Author: **Forrest Hangen**, *Northeastern U.*

Author: **Daniel T. O'Brien**, *Northeastern U.*

Author: **Ping Wang**, *U. of Maryland*

In producing and providing services to local residents, municipal governments increasingly incorporate digital technology into their Information Systems (IS). In these digitally-enhanced government IS, how does digital technology affect social justice in the use and outcomes of the systems? By applying theories of distributive justice and analyzing data collected from Boston's 311 system for residents to request non-emergency services, we have found significant and lasting disparities between wealthy and poor communities in the use of the system's digital channels (mobile app and website). While digital channels helped all communities make more service requests and receive faster responses, heavy use of the digital channels exacerbated the disparities between wealthy and poor communities in both service request volume and response time. This unexpected finding may be explained by the uneven technology adoption trajectories and distributions of repeat users in different communities, as our post-hoc analysis shows. By exposing previously hidden inequalities in the outcomes of IS, this study justifies the need to bridge digital divide at multiple levels, so that efficiency can be gained without sacrificing justice. These insights can help reconcile different theories of social justice, as well as develop effective government IS.

Normative and Behavioral Perspectives on Ethics of Work and Well-Being

Session Moderator: **Rowdy Bryant**, *Vrije U. Amsterdam*

SIM: The Meaning of Meaningful Work: Advancing the Normative Thesis

Author: **Rowdy Bryant**, *Vrije U. Amsterdam*

Albeit that meaningful work is conceptually ambiguous (Both-Nwabuwe et al. 2017), scholars do not usually attempt to answer questions such as “what is the meaning of meaningful work?” However, Michaelson (2020) recently advanced a normative conception and added to the literature that meaningfulness should include i.e., “the good” that is independently, or objectively valued. In this paper we question the normative thesis and point to four ambiguous elements. First, due to an overly broad definition of work, the theory is more related to meaning in life compared to the organizational context. Second, the normative thesis presupposes a restrictive social-liberal moral account on objective value. Third, the distinction between meaning of work, and meaningfulness is not clear enough. Fourth, the difference between first-person and independent (third-person) accounts on meaning is not addressed. Subsequently we present our theoretical framework that advances the normative thesis and solves the four ambiguous elements. We bridge meaningful work with justification theory and argue that the bearer of meaning is the employee whose job activities and experiences are justified in orders of worth. As such, meaningfulness is a measure of the richness of an employee’s job, multiplied by its objective value. We extend the latter as we include market, industrial, inspired, fame, civic, and domestic worth. With our theory we provide better understanding on what counts as a meaningful contribution for the employee, and for society.

SIM: The Difference Between Meaningful Work, Ethical Work, and Eudaimonic Work

Author: **Samuel Mortimer**, *The Wharton School, U. of Pennsylvania*

Two scholarly traditions have developed on the subject of meaningful work: one originating in philosophy, the other in the organizational sciences. These two traditions make divergent and conflicting assumptions about the nature of meaningful work. As more scholarship seeks to bridge these traditions, the fundamentally different assumptions they make about the central construct of meaningful work risk leading to scholarly confusion. In this paper, I clarify the foundational assumptions of the two traditions and argue that each captures an important construct that is separate from, though closely related to, meaningful work. The philosophical tradition is concerned with ethical work: work that is socially valuable and that enables workers to exercise autonomy and dignity in the workplace. The psychological tradition is concerned with eudaimonic work: work that workers perceive as meaningful, with deep personal significance and positive meaning for the individual. Drawing insights from both literatures, I develop and defend a new account of meaningful work: someone’s work is meaningful when they are committed specifically to their own participation in their work. Finally, I discuss the implications of this account for both workers and organizations.

SIM: How Does CSR Promote Value Co-creation and Well-being? A Multi-stakeholder Model of Ethical Values

Author: **Jingjing Weng**, *National Taiwan U. of Science and Technology*

Author: **Yi-Hsuan Lee**, *National Central U.*

Author: **Ying-Che Ali Hsieh**, *National Tsing Hua U.*

Author: **Min-Ts Yang**, *National Central U.*

This study aims to investigate how corporate social responsibility (CSR) promotes employees’ value co-creation (EVCC) through altruistic and egoistic ethical perception, and how EVCC and employees’ well-being (EWB) influence customers’ value co-creation (CVCC) and customers’ well-being (CWB). Adopting hierarchical linear modeling (HLM) with 875 valid samples from 35 CSR-leading companies in Taiwan, this study suggests that both the altruistic and egoistic values of supervisors influence CSR. Our finding reveals that employees’ perceptions of the organizational ethical climate influences their individual ethical values, typically altruistic and egoistic values, which also influence their value co-creation, and thereby provide them with well-being. Meanwhile, those employees experiencing well-being will influence CVCC through their interaction with them, and thereby promote the customers’ well-being (CWB). Our results integrate both the organizational and individual levels, and provide important implications for CSR and value co-creation literature.

Corporate Political Strategies

Session Moderator: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

STR: Environmental Uncertainty Participative Corporate Political Activity and Radical Innovation in China

Author: **Meige Song**, *Xi'an Jiaotong U.*
Author: **Longwei Wang**, *Xi'an Jiaotong U.*
Author: **Li Wang**, *Xi'an Jiaotong U. School of Management*
Author: **Wan Chen**, *Xi'an Jiaotong U. School of Management*

Drawing on a sensemaking perspective, this study aims to theoretically and empirically investigate the effects of PCPA on radical innovation and how regulatory uncertainty and technological uncertainty affect firms' choice of PCPA as well as its effectiveness on radical innovation. Hierarchical regression analyses are conducted to test the research model based on survey data collected from 227 manufacturing firms in China. The results indicated that PCPA has a significant positive effect on radical innovation. Both regulatory uncertainty and technological uncertainty relate positively to PCPA. In addition, regulatory uncertainty strengthens the positive relationship between PCPA and radical innovation, while technological uncertainty weakens the relationship. Our findings offer fresh insights into the use of PCPA to manage the uncertain external environment when pursuing radical innovation activities in China.

Paper is Available to Meeting Registrants Only.

STR: The Role of Political Marketplaces in the Selection of Corporate Political Strategies

Author: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Author: **Maria Andrea De Villa**, *EAFIT U.*

Much of our understanding of corporate political strategies implicitly builds on firms' experience in advanced democratic political systems and the use of legal political strategies to shape public policies, limiting theorization. We extend this research stream by analyzing how the diversity of political contexts influences the selection of corporate political strategies. To do so, we first clarify the dispersed variety of political strategies in the literature and classify them by their aim (shaping, adapting, avoiding) and legality (legal, illegal) into six types: lobby, bribe, comply, disguise, escape, and circumvent. We then build on the structure-conduct-performance paradigm of industrial organization to study the selection of corporate political strategies. This paradigm argues that the structure of the marketplace determines firm conduct, which in turn drives performance. Applying the same logic, we conceptualize political systems as political marketplaces and explain how three types (competitive, oligopolistic, monopolistic) drive firms' selection of political strategies to achieve desired political outcomes.

STR: Synergy or Antagonism? How Corporate Political and Social Strategies Influence Firm Innovation

Author: **Huiying Li**, *School of management, Northwestern Polytechnical U.*
Author: **Yu Chang**, *Northwestern Polytechnical U.*
Author: **Nan Zhang**, *Xi'an Jiaotong U. School of Management*
Author: **Kaichen Huang**, *School of management, Northwestern Polytechnical U.*

Although the increasing research interest on non-market strategy, the relationship between non-market strategy and firm innovation as well as the combinative impact of engagement in CPA and CSR are not well researched or understood. In this study, we integrate institutional perspective and multi-stakeholder perspective to analyze how the CPA and CSR independently and interdependently affect a firm's innovation performance. With 3938 firm-year observations of China's A-shared listed private firms between 2014 and 2018, we find support for the predictions that CPA strategy and CSR strategy both can exert a positive effect on firm innovation performance. We further develop competing hypotheses for the interactive effect of CPA and CSR on firm innovation from synergistic versus antagonistic view, and the findings are consistent with the antagonistic view. This study not only enriches our knowledge regarding the independent and joint influence of non-market strategies on firm innovation performance, but also highlights the necessary to pay attention to the heterogeneity of non-market stakeholders when integrating non-market political and social strategies.

STR: Ascribed Political Connections and Firms' Bribery in the Aftermath of Anticorruption Campaigns

Author: **Han Jiang**, *Tulane U.*
Author: **Yi Peng**, *Shanghai U. of Finance and Economics*
Author: **Xiaogang He**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*

We construct a theoretical model to understand how firms adapt their corporate political strategy when political officials reshuffle in the aftermath of anticorruption initiatives. We delineate two types of bribery, i.e., greasing bribery and paving bribery, and posit that in the aftermath of anticorruption campaigns, firms with ascribed political connections, i.e., state-owned enterprises (“insiders”) reduce their expenditures on greasing bribery, while firms without ascribed political connections, i.e., family firms (“outsiders”) increase their expenditures on paving bribery. These effects are strengthened when firms are more reliant on government. Our theoretical predictions are supported by the evidence from Chinese listed firms between 2007 and 2018.

Technological Change Track: Adaptation, Response, and Implementation

Session Moderator: **Aleksandra Klein**, *WU Vienna*

TIM: Symbolic or Substantial? A Firm Response to Government Innovation Policies From Institutional Logic

Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*
Author: **Xiaolei Wang**, *School of Economics & Management, Tongji U.*

What influences a firm response to government innovation policies? The stakeholder perspective suggests that firms should commit to government substantially because the government is a legitimate and powerful stakeholder. The agency perspective suggests that some firms may instead respond opportunistically. This study draws institutional logic perspective to reconcile these conflicting arguments. We propose that China's state-owned enterprises, guided by state logic, are more likely to make a substantial response to government innovation policies. Private firms guided by market logic are more likely to make a symbolic response. In the context of China's Medium- and Long-Term Plan for Science and Technology Development (2006–2020) (MLP), we took a quasi-experimental approach to test the above arguments by using data on publicly listed Chinese companies from 2003 to 2009. MLP stimulated an increased volume of invention patent applications from state-owned enterprises (SOEs), and a larger percentage were granted. Private-owned enterprises (POEs) also submitted more applications, but a smaller percentage were granted. MLP increased POEs' market-related expense and revenue but not for SOEs. These findings make important theoretical contributions to government innovation policy and stakeholder theory.

TIM: Individuals in Idea Implementation: Ability, Motivation, and Learning as Determinants of Success

Author: **Alena Valtonen**, *Lappeenranta-Lahti U. of Technology LUT*
Author: **Jaan-Pauli Kimpimäki**, *LUT U., School of Business and Management*
Author: **Iryna Malacina**, *Lappeenranta-Lahti U. of Technology LUT*

Successful companies recognize the importance of innovation implementation and the pivotal role of their employees in this process. But what internal individual-level factors influence the idea implementation stage of the innovation process? Despite the significant body of research on the importance of individuals in the innovation process, the individual-level factors necessary for successful idea implementation have to date received limited scholarly attention. In this paper, we begin filling this gap with a systematic review of 129 articles investigating the individual-level factors influencing the idea implementation stage of the innovation process, synthesizing our findings into a conceptual framework. Our conceptual framework advances understanding of how distinct bundles of individual-level characteristics and factors carry differential influences on the back-end of implementing ideas as part of the innovation process. On the practical side, our findings contribute to the improvement of organizational innovation performance through informing the development of human resource management (HRM) practices catering specifically to the idea implementation stage.

TIM: Building Adaptive Capacity: The Role of Advanced Analytics in Risk Management

Author: **Evelyn C. Braumann**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Aleksandra Klein**, *WU Vienna*
Author: **Arthur Posch**, *U. of Bern*

In this study, we theoretically argue for a potential trade-off between risk information integrated into the strategy and the use of advanced analytics for risk management purposes with regard to the adaptive capacity of organizations. Furthermore, we investigate whether the adoption of an advanced analytics strategy helps overcome this suggested substitutive interrelationship by giving direction and communicating a clear strategic focus to employees, including senior management. To test our hypotheses, we collected survey data in summer 2020 from 174 non-financial companies that allows us to exploit the challenging setting of the Covid-19 pandemic for organizations and their risk management. Our results support both the substitutive relationship between strategy integration of risk management and the use of advanced analytics for risk management purposes, as well as the three-way complementarity between the two risk management design choices and advanced analytics strategy with regard to adaptive capacity. Thus, we contribute to the literature with new insights into the potential benefits of linking risk management practices to business intelligence and analytics in light of better decision-making and control.

TIM: Managing Agentic Technology: Distinguishing and Equalizing Human and Material Agencies

Author: **Virginia Leavell**, *UC Santa Barbara*
Author: **Bei Yan**, *Stevens Institute of Technology*

Organizations are increasingly deploying algorithmic agents to accomplish their core functions. Thus, a critical question is how to manage algorithmic agents to achieve organizational goals. Agentic technologies act without human intervention. The human management of algorithmic agents is, in its most basic form, a practice of managing material agency. Through qualitative analysis of 16 years (2005-2021) of archival data on English Wikipedia, the study explicates the process of managing algorithms in organizations. Our analysis revealed five principles that either prioritized human agency over material agency or equalized the two. To prioritize humans, the organizational structures, norms, and policies are designed to support human work while limiting the speed and space of algorithmic actions. When humans and algorithms are treated equally, the consequences rather than mechanisms of actions are scrutinized and algorithms are managed only after negative impacts occur. These findings provide initial insights regarding the management of algorithms in organizations through the agency perspective.

TIM: Enhancing Students' Interaction with AI Teaching Assistants: Roles of Novelty and Innovativeness 

Author: **My-Trinh Bui**, *Vietnam National U., Hanoi - International School*

Artificial intelligence (AI) can transform student learning behaviour. When students adapt to multiple digital platforms and environments, it is necessary to understand student's using AI assistants in higher education. A conceptual model was developed to investigate the impact of spatial novelty value and innovativeness on interaction and behavioural loyalty to using AI teaching assistants. Smart PLS version 3.3.3 were employed to analyse data acquired from a sample of 165 students utilising the AI-enabled solutions as teaching assistant. According to the data, innovativeness and novelty value have a significant positive impact on interaction with AI, generating loyalty to AI teaching assistants and attitude to AI teaching assistant-based education sequentially. The effect of innovativeness on the novelty value of utilising AI solutions in higher education was discovered to generate a higher level of interaction, which influence the loyalty to using innovative AI teaching assistant.

TIM: Blockchains and NFTs: Tragedy of the Digital Commons or Anticommons?   

Author: **Chetan Chawla**, *North Central College*

The literature on property rights and associated commons has expanded in recent decades to incorporate the rise of the internet and the prevalence of digital goods. The more recent developments in technologies like blockchain and non-fungible tokens (NFTs) have further complicated the landscape of digital property rights. In this paper I argue that the rise of Non-Fungible Tokens (NFTs) as the latest technical innovation of blockchains is not merely a frivolous application, but a serious development that merits scholarly attention. I theorize that NFTs represent a very different approach to property rights compared to not only prior digital technologies, but also prior innovations such as blockchains which provide their infrastructural underpinnings. By introducing the attributes of subtractability and exclusion to digital goods – hitherto missing – blockchains and NFTs represent a new era to the rise of the digital commons and risk converting it to an anticommons. I end by explicating implications of my theorization for future research and practice.

TIM: An Interdisciplinary Systematic Review on Artificial Intelligence in Management and Technology 

Author: **Zequn Cui**, *Brunel Business School, Brunel U. London*
Author: **Xiaoqing Li**, *Brunel U.*
Author: **Andreas Robotis**, *ALBA Graduate Business School*
Author: **Georgios Batsakis**, *ALBA Graduate Business School*
Author: **Ashley Braganza**, *Brunel U.*

Research on artificial intelligence has escalated in recent years as an increasing number of researchers are systematically involved in explaining the application, impact, and relevance of artificial intelligence across fields. Although the number of research studies with a core focus on artificial intelligence has considerably increased over the years, little is known about how scholars from different fields view, use, and interpret artificial intelligence. As a consequence, artificial intelligence has become a buzzword with wide and multiple interpretations and applications across disciplines. This study aims at (a) providing a comprehensive understanding of the term artificial intelligence and (b) explaining whether the term relates to increased convergence/divergence across fields (i.e., technical vs. nontechnical/management studies). We answer these questions by conducting a systematic literature review and employing advanced bibliometric and topic modeling methods on a total of 791 studies drawn from leading technical and nontechnical/management scholarly journals over the period 2006 – 2021.

GDO: The Insidious Gender Promotion Gap: Gender Differences in Promotion Patterns in a Multi-Unit Bank

Author: **Monika D. Hamori**, *IE Business School*
Author: **Denis Monneuse**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Zhaoyi Yan**, *IE Business School, IE U.*

Although diversity management has gained momentum, gender inequality persists in the workplace, in particular glass ceilings. We explore the drivers of gender differences in promotions using a multi-stage process model and distinguishing between supply- and demand-side factors. Analyzing nine years of personnel records of a multi-unit European bank, we find that gender differences are driven both by supply- and demand-side factors. Women are less likely to indicate a motivation to move to a new job or to a new unit within the bank than men. Nevertheless, they are just as likely to be moved to a new role once they indicate a motivation to do so. Yet these moves are less likely to represent a promotion than men’s moves. Moreover, this gender promotion gap is greater for women far from the headquarters (HQ): a) women’s motivation to change jobs is lower in the branches overall than in the HQ; b) it is the lowest in branches that are further off from the HQ; and c) gender-based inequality in promotions among those who change jobs or units is greater in the branches than in the HQ. Our findings contribute to the literature on gender inequality and career advancement by highlighting the theoretical importance of examining promotions as a multi-stage process, of disentangling supply-side and demand-side factors, and of distinguishing promotion patterns across business units.

GDO: Gender Differences in Alumni Networks

Author: **Hyeyeon Gong**, *Yonsei U.*
Author: **Hongseok Oh**, *Yonsei U.*

Although gender differences have been decreased, women still have difficulties in career developments in organizations. To further explore the sources of those difficulties for women’s advancements, we examine gender differences in alumni networks with the relational perspective and investigate the two social aspects of the perceived benefit in relationships with the opposite sex and the strength of the relationships with male alumni. We test our hypotheses using the survey data from 179 MBA students in a structural equation modeling (SEM) approach. Our results show that women perceived higher benefits from the relationships with the opposite-sex alumni than men did. We also show that the tie strength between male alumni is stronger than that between female and male alumni and, thus, relatively weaker relationships between female and male alumni caused less benefit to women in the alumni network. Focusing on alumni networks, which are informal networks that emerged from outside of organizations, we expected that alumni networks could help women overcome their limited access to the internal informal networks within organizations. Our results show that there still exist gender differences in alumni networks and women are disadvantaged from informal networks from inside and outside of organizations at the same time.

GDO: Speaking Up & Speaking Out: How Presence of Calling Can Impact Women Academic’s Voice Behavior

Author: **Tina Sharifi**, *York U., Toronto*

Voice behavior has the capacity to generate a host of benefits including role modeling of change-oriented behaviors, creative problem-solving, and overall organizational effectiveness. Despite its powerful implications, exercising voice within organizational settings can present significant challenges. Within academic settings, open dialogue and freedom of speech is strongly encouraged. However, utilizing voice can result in less than favorable outcomes—particularly for women academics. Perceived lack of status and power derived from socialized gender roles have led women academics to exhibit reduced voice behavior. Drawing on social role theory and social cognitive theory, this paper proposes that women academics can develop greater voice self-efficacy when they identify their work as a calling, leading to their enhanced voice behavior. This relationship is examined given the meaningfulness prescribed to academic work. Hence, this paper presents the first investigation of presence of calling as a buffering component between women academic’s voice self-efficacy and voice behavior. Furthermore, improved voice self-efficacy is examined in relation to the individual-level traits strongly associated with presence of calling: prosocial motivation and greater self-efficacy. This exploration will have important implications both for theory and practice as it pertains to issues of leadership, gender, calling, academia and voice behavior in the workplace.

Paper is Available to Meeting Registrants Only.

GDO: Constraints, Competencies, or Choices? Lay Theories of the Gender Gap and Diversity Attitudes

Author: **Elinor Flynn**, *New York U.*

Best Student Paper Award

Despite a large literature documenting evidence of gender inequality, lay beliefs about why gender gaps in career attainment persist, and their consequences for diversity support, have not been directly examined. I propose three primary lay theories exist for the gender gap in organizations: organizational barriers, dispositional factors, and personal choices. I hypothesize that each is associated with distinct attributions about the locus and controllability of the gap, which in turn affect women’s perceived responsibility, and ultimately attitudes toward diversity initiatives. I test these ideas in four studies using qualitative and quantitative methodologies. I find that my proposed lay theories are the primary explanations for the gender gap and each is associated with divergent attributions regarding the locus and controllability of the gap: the organizational barriers theory with more external and uncontrollable attributions, the dispositional factors theory with internal and moderately controllable attributions, and the personal choices theory with internal and highly controllable attributions. Attributions predict greater responsibility assigned to women for the gender gap, which, in turn, has a negative effect on the perceived efficacy of diversity initiatives. Thus, this work demonstrates that, above and beyond ideological factors, attitudes toward diversity initiatives are shaped by cognitive beliefs about the primary factors driving inequalities.

Paper is Available to Meeting Registrants Only.

Author: **Camille Desjardins**, *Toulouse School of Management*

Despite important advances in women's career development over the past few decades, recent data suggest that the progress toward closing the gender career gap remains slow and might even be scaling back. Over the last decade, and in the recent context of the COVID-19 pandemic, organizations have witnessed a shift in workplace practices that are associated with potentially harmful consequences for women's careers. These developments motivated us to take stock of the current state of the literature on women's careers. Obtaining a better understanding of the underlying mechanisms placing women at a career disadvantage and unveiling the unanswered questions on this important topic are critical to reducing gender career inequality in the future. In the present research, we review 178 articles on the topic of women's careers from top-tier journals in the management, applied psychology and career disciplines and categorize them into five distinct perspectives, namely, relational, decision-making, gender bias, temporal and intersectional. We present the perspectives' premises, summarize the key findings for each perspective and highlight their associated major research gaps. Based upon an analysis derived from these perspectives, we delineate four directions for future research to advance the field on women's careers.

Geography and Strategy in Developing Countries

Geography and Strategy in Developing Countries

Organizer: **Stefan Dimitriadis**, *U. of Toronto, Rotman School of Management*
Discussant: **Lamar Pierce**, *Washington U. in St. Louis*
Presenter: **Solene Delecourt**, *Haas School of Business, UC Berkeley*
Presenter: **Kyle Schirmann**, *Harvard Business School*
Participant: **Tarun Khanna**, *Harvard U.*
Participant: **Christos Makridis**, *MIT Sloan School of Management*
Presenter: **Fulton C. Eaglin**, *Harvard Business School*
Presenter: **Rembrand Michael Koning**, *Harvard Business School*

Geography plays a central role in firms' strategic choices. Deciding where to locate operations and employees, as well as whether to move or not, can have critical performance implications. At the same time, a growing literature in strategy shows that conditions in developing economies often necessitate different firm strategies. This raises an important question at the intersection of these literatures: how do choices about geography shape firm strategy in developing economies? In this symposium, we explore this new area of research through a set of cutting edge studies, each of which examines a different way in which geography and firm strategy interact in developing economies. Our discussant, Professor Lamar Pierce, will build on these presentations and his own expertise on firm strategy in Africa to synthesize and critique the studies. Following this, the host will encourage a lively debate about how geography matters for strategy and organization theory in developing economies.

Innovation and R&D through Partnerships

Session Moderator: **Laura Poppo**, *U. of Nebraska, Lincoln*

STR: Learning or hitchhiking? The Externality of Partner Innovation

Author: **Yusi Jiang**, *Donghua U., Glorious Sun School of Business and Management*
Author: **Wan Cheng**, *Shanghai Jiao Tong U.*

The innovation literature has emphasized the important role of interorganizational networks in facilitating firm innovation through knowledge transfer and integration. I extend this literature by identifying a novel but overlooked determinant factor of firm innovation: the innovation level of partners in board interlock networks. By combining learning theory with the strategic leadership literature, I argue that a firm tends to adjust its own innovation level based on the innovation level of interlocking partners through two opposing forces—a learning effect vs. a hitchhiking effect, which further depends on the comparative innovation level of partners relative to that of the focal firm. Using a sample of Chinese publicly listed firms from 2008 to 2017, the results show a U-shaped relationship between a firm's innovation tendencies and the innovation level of interlocking partners. Moreover, partners with different innovation levels compared to those of the focal firm affect its innovation tendency in distinct ways.

STR: The Effects of Multi-Dimensionality and Context-Dependency of Patent Signals on Alliance Formation

Author: **Jung-Hyun Suh**, *Chinese U. of Hong Kong*
Author: **Kwangjun An**, *McGill U. - Desautels Faculty of Management*

We extend the literature on the signaling role of patents in terms of unveiling innovative capabilities of the firm by investigating the multi-dimensionality and context-dependency of patent signals in the setting of research and development (R&D) alliance formation. While prior work has largely focused on the signaling effects of the level of patent performance, we argue that such effects are conditioned by the consistency of patent performance (which is another quality dimension of a patent signal) as well as technology overlap and prior ties between prospective partners (both of which constitute a signaling context). Based on empirical analysis on R&D alliances formed between high-technology firms from 1990 to 2000, we find that the tendency of homophilous matching around the patent performance level is positively, curvilinearly, and negatively moderated by the similarity in patent performance consistency, by technology overlap, and by prior ties, respectively. We discuss the implications of these findings for research on alliance formation and quality signals.

STR: Network Community, Institutional Development, and Firm Performance

Author: **Xiaoteng WU**, *NUS Business School*
Author: **Arzi Adbi**, *NUS Business School*
Author: **Ishtiaq Pasha Mahmood**, *NUS Business School*

Conventional wisdom in network research attributes superior firm performance to social connectedness. However, a high degree of connectedness is not necessarily beneficial if the connections are not dependable. Drawing on a relational embeddedness perspective, this study examines the effect of network connections through communities on firm performance. Firms differ in the extent to which they are affiliated across overlapping network communities. Our goal is to investigate whether and how network community affiliations affect firm performance. Leveraging recent advances in community detection technology, our analyses of 15,767 firm-year observations from the Chinese venture capital industry suggest that community-affiliated firms are likely to perform better than non-community-affiliated firms, especially in regions with less developed institutions. Importantly, we find an inverted U-shaped relationship indicating that firm performance improves with community affiliations up to a certain threshold, after which the costs of multiple affiliations outweigh the benefits. The more developed the local institutions where firms operate, the earlier the turning point is reached. By integrating social network and institutional perspectives, this study highlights not only the promises but also the limits of community affiliations in affecting firm performance.

STR: Just Like Me? How Reciprocal Judgements of Trust Underlie Innovations in Buyer-Supplier Exchanges  

Author: **Laura Poppo**, *U. of Nebraska, Lincoln*
Author: **Zheng Cheng**, *U. of Wisconsin, Milwaukee*

The cognition underlying buyer-supplier judgments and the symmetry of those perceptions, which influence collaborative innovations, remain understudied. In this study, we examine three specific forms—competence, benevolence, and calculative trust—along with their impacts on tacit knowledge sharing and product and process innovations between buyer and supplier. Based on a sample of 250 buyer-supplier dyads, our results show that the amount and degree of product and process innovations for both parties increase as a function of like-minded perceptions of benevolence and competence, but fail to support the contention that calculative trust supports innovation. Our overarching conceptual model of innovation, which we empirically confirm, demonstrates two additional findings: (1) Technological uncertainty is an important exogenous factor impacting innovation, as it creates opportunities for each firm to improve its competitive positioning through product and process innovations, and (2) tacit knowledge mediates this relationship, as it fosters innovation by enabling the novel recombination of knowledge.

Values at the Top: Political Ideology, Ethics, and Virtues

Session Moderator: **Heewon Chae**, *Arizona State U.*

STR: Lemons Market for Corporate Strategy? Political Ideology and Strategy Uniqueness  

Author: **Wenxin Wu**, *Guanghua School of Management, Peking U.*

We theorize that firms' predilection for strategy uniqueness vs. commonness is a function of executives' political ideologies and that the strategic fit between strategy uniqueness (vs. commonness) and liberalism (vs. conservatism) further explains the variation of firm value. The literature suggests that strategy uniqueness contributes to superior economic rent, whereas the difficult-to-evaluate characteristic hinders the executives' selection of a unique strategy. It is called the uniqueness paradox resulting in managerial adverse selection. Although scholars have been attaching importance to unpack drivers of strategy uniqueness, they typically revolve around agency-centered explanations, and overlook managerial inner preferences for circumventing strategy uniqueness. To fill this gap, we explore how CEO political ideology shapes corporate strategy uniqueness. We find that CEO conservatism results in circumventing strategy uniqueness that is an adverse selection of corporate strategy. The negative relationship between CEO conservatism and strategy uniqueness is further moderated by social- and economic-based incentives. The social-based incentive is about how CEOs are evaluated, captured by board attribution tendency, while the economic-based incentive is about how CEOs are motivated, captured by compensation contract design. We also find that the fit between CEO political ideology and firm strategy (i.e., conservatism-commonness fit and liberalism-uniqueness fit) is associated with stronger financial performance. We test these hypotheses on a sample of S&P 1500 CEOs and find support for our predictions.

STR: Playing it Ethical or Safe? Exploring Earnings Management by Military Executives 

Author: **Yekun Xu**, *Liaoning U. Business School*

Author: **Yameng Zhang**, *Xi'an Jiaotong-Liverpool U.*

Author: **Guangyuan Ma**, *Shanghai U. of Finance and Economics*

The majority of studies argue that military experience makes executives more ethical and then reduces firms' misdeeds. What remains unclear is whether this is due to higher ethical values of ex-military executives or their preference in "playing it safe". We propose that executives depend more on risk-aversion preference than their ethical values when making earnings management decisions. This is because the ethicality of earnings management is ambiguous and thus military executives may not perceive it as unethical. By examining a sample of 2,135 listed firms in China, a risk-avoidance culture (2006-2018), our results find military executives reduce higher-risk method (i.e., accrual-based earnings management) but increase lower-risk method (i.e., real earnings management). In a post-hoc test, we find that this risk-aversion characteristic is still significant when the external environment is subject to less litigation or auditing risk, and corporate risk-taking level mediates the effects of military experience on earnings management.

STR: Virtuous Leader, Virtuous Firm: How Humble CEOs Build Good Firms by Fostering Virtuousness 

Author: **Fangmei Lu**, *Nanjing U.*

Author: **Shuyang You**, *Dongbei U. of Finance and Economics*

Author: **Liangding Jia**, *Nanjing U.*

The rise of positive organizational scholarship has brought virtues back to business studies, applying a positive lens to organizations. While some scholars highlight the importance of individual virtues in promoting human flourishing, others have emphasized a set of "organizational virtues" that create both individual and collective benefits. These studies, however, are quiet on how and when individual virtues may help to build good firms. We address the how by examining the role of CEO humility in fostering organizational virtuousness — a constellation of virtues that manifest in collective behaviors, activities, processes, and policies in organizations — which in turn leads to positive firm outcomes, including improved financial performance and external stakeholder support. To explicate when, we specify firm status as a moderator of the positive effect of CEO humility on firm outcomes via organizational virtuousness. Using a sample of 253 firms from China, we find support for our main hypotheses. We discuss important implications for research on humility and organizational virtuousness.

Paper is Available to Meeting Registrants Only.

STR: Conservative versus Liberal CEOs: Shareholder Reactions to New CEOs' Political Ideologies 

Author: **Wookyung Lee**, *Arizona State U.*

Author: **David H. Zhu**, *Arizona State U.*

Author: **Heewon Chae**, *Arizona State U.*

CEO political ideology is more visible now than ever. We ask whether shareholders react differently depending on the conservatism or liberalism of a new CEO. We suggest that more conservative CEOs will be positively received by shareholders and more liberal CEOs negatively. In addition, we theorize that the negative market reaction to a new CEO's liberalism is stronger when 1) more security analysts cover the firm, 2) pre-succession financial performance is worse, and 3) pre-succession social performance is better. Using a large sample of S&P 1500 firms between 2001 and 2019, we find support for our theoretical expectations. This study highlights the importance of individual political ideologies of new CEOs to the market. It also advances strategic leadership research by showing the effect of CEO political ideology on market valuation, beyond its effect on strategic decisions of CEOs.

CAR: Becoming an Entrepreneur: How Trait Grit Affects Aspiring Entrepreneur’s Opportunity Recognition

Author: **Eric Adom Asante**, *Hong Kong Metropolitan U.*
Author: **Hamid Kurs hid**, *Hong Kong Metropolitan U.*
Author: **Emmanuel Affum-Osei**, *Kwame Nkrumah U. of Science & Technology, Kumasi*
Author: **Collins Opoku Antwi**, *Zhejiang Normal U.*

Becoming an entrepreneur is a goal that may take a long time to achieve. One of the first hurdles for aspiring entrepreneurs to cross is to identify business opportunities. Drawing on the social cognitive theory of self-regulation, we hypothesize that the two dimensions of dispositional grit (consistency of interests and perseverance of effort) may enhance aspiring entrepreneurs’ entrepreneurial self-efficacy and subsequently make them recognize more business opportunities. The effect of entrepreneurial self-efficacy on opportunity recognition may be strengthened by entrepreneur identity aspiration. Furthermore, the indirect effects of consistency of interests and perseverance of effort on opportunity recognition via entrepreneurial self-efficacy are stronger when entrepreneur identity aspiration is high. The results across two quasi-experimental studies provide consistent and strong support for our hypothesized model. Theoretical and practical implications of our findings are discussed.

CAR: Exploring the Formation of Social Entrepreneurs’ Exit Intention via Life Satisfaction

Author: **Jianing Dong**, *Xi’an Jiaotong-Liverpool U.*
Author: **Xiao Wang**, *Xi’an Jiaotong-Liverpool U.*
Author: **Xuanwei Cao**, -
Author: **David Higgins**, *Liverpool U.*

We explored whether two dimensions of life satisfaction would affect the relationship between prosocial motivation and entrepreneurial exit intention. Our proposed results delved into the “inner layer” (psychological status) to unveil the mechanism of how social entrepreneurs decide to exit. Findings from a sample of 317 entrepreneurs revealed that prosocial motivation decreased entrepreneurs’ financial satisfaction, which increased entrepreneurial exit intention. But health satisfaction doesn’t have a mediating effect on the relationship between job-related stress and exit intentions. At the same time, we further reported that among our sample, the negative impact of prosocial motivation on financial satisfaction largely is stronger for males than females meaning males’ entrepreneurs are more likely to experience lower financial satisfaction due to prosocial motivation. Among the relationship between prosocial motivation and health satisfaction and exit intention, there is no evidence of this contrast exist.

CAR: Career Shock Narratives during COVID-19: How the Self-Employed Reconstruct their Future Work Selves

Author: **Inge Marije Brokerhof**, *The Open U., Netherlands*
Author: **Maral Darouei**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Marjolein C.J. Caniels**, *The Open U., Netherlands*
Author: **Diana Yerlikaya**, *Vrije U. Amsterdam*

The COVID-19 crisis has triggered uncertainty for entrepreneurs. In this study, we conducted narrative interviews among 45 entrepreneurs from Germany and the Netherlands during the first COVID-19 wave to explore in-depth how they made sense of their career identity during this career shock. Entrepreneurs were all impacted by the crisis, but made sense of this in different ways. Six prototypical identity narratives emerged, which were labeled as ‘defeat’, ‘battle’, ‘chaos’, ‘bricolage’, ‘opt out’, and ‘seizing opportunity’. Findings explore in-depth how these narrative plots either represent resilience or despondence and whether participants were maintaining their identity and current work, transitioning into new identities and work roles, or progressing to new ventures, either as entrepreneurs or opting out of entrepreneurship. Findings provide new insights into how self-employed workers make sense of their career identity during a career shock, i.e., a changing business world due to the COVID-19 pandemic. Keywords: Possible Future Work Selves, Work Identity, COVID-19, Self-employed workers, Narrative analysis

CAR: When Work Doesn’t Work: Cognitive Factors Impacting Employees Transition to Entrepreneurship Review

Author: **Yolanda Christophe**, *Morgan State U.*
Author: **Honghua Li**, *Morgan State U.*
Author: **Golshan Javadian**, *Morgan State U.*

Cognitive factors are useful in explaining employees’ transition from the workplace to entrepreneurship. The potential for understanding the factors that explain how and why some individuals opt to be entrepreneurs while others choose to remain employees is relevant; yet, little systematic effort has attempted to accumulate knowledge of cognitive related factors that underpin these transitions. The purpose of this review is to identify the cognitive factors that impact employees’ transition from the workplace into entrepreneurship and to identify the conceptual gaps in the literature. This review aims to extend theory on employee career transitions by systematizing this broad body of research using the Kaleidoscope Career Model (KCM). Analysis of 69 articles revealed that individuals tend to fall into the challenge dimension when leaving the workplace to pursue an entrepreneurial career. Further, research outlining has paid very little attention to longitudinal design and mixed methods. Based on our findings, this review offers several avenues for future research.

CAR: **How STEM-based CI and Leadership Support can Turn Possibly Bad Situations Into Opportunities?** 

Author: **Ali NAWAZ Khan**, *School of Economics and Management Hubei Engineering U.*

Author: **Khalid Mahmood**, *School of Economics and Management Hubei Engineering U.*

Author: **Naseer Abbas Khan**, *U. of Sargodha*

In this study, we examined how science, technology, engineering, and mathematics (STEM) professionals' perceptions of themselves as overqualified influence their career anxiety and career decidedness through their career identity under supportive leadership. To test our hypotheses, we conducted two time-lag studies in the fields of education (Study 1, N = 530) and engineering (Study 2, N = 515). Using role identity theory, our results showed that STEM employees' perceived overqualification was positively related to their career identity. Based on the internal dynamics of role identity theory in terms of self-processing, we also found that STEM employees' career identity reduced their career anxiety and increased their career decidedness. We showed that career identity mediated the effect of perceived overqualification on career anxiety and career decidedness. We also found that leader support moderated this mediating effect, based on the symbolic interactionist perspective of role identity. Specifically, overqualified STEM workers had a stronger career identity when their managers were more supportive. Overall, our findings indicate that in the presence of supportive leadership, perceived overqualification may positively affect the decision-making and career development of early-career STEM employees, as well as their organizations. The theoretical and practical implications of our findings are discussed.

 CAR: **Career Agency in Intersecting Gender-Class Structures** 

Author: **Lea Katharina Reiss**, *WU Vienna*

Arnon Reichers Best Student Paper Award Nominee

The unique challenges and experiences of women with regard to their social class backgrounds have largely been overlooked in the study of careers. To shed new light on the role that intersectionality plays in professional careers of women with different social class origins, this study uses a critical realist approach in the analysis of biographic-narrative interviews with 46 women. Results reveal how structural factors affect the women's agency in their life and career paths as well as how they shape the reproduction and elaboration of gender-class structures. The study contributes to current discourses on women's career agency and the development of intersectionality theory by suggesting a theoretical model of career agency in intersecting gender-class structures. The model highlights mechanisms that influence women's careers and thereby deepens the understanding of how different dimensions of gender and social class interact to influence careers of women with different social class backgrounds.

CAR: **Getting In and Getting On: An Intersectionality Approach to Career Narratives of Female ECRs**  

Author: **Mabel Kyeiwaa Torbor**, *Doctoral Student, Brunel Business School*

Author: **David Sarpong**, *Brunel Business School*

Author: **Chima Mordi**, *Brunel Business School*

Drawing on career construction theory and intersectionality scholarship, we focus on the self as actor, agent, and author of one's career to explore the career narratives of female Early Career Research Scientist (ECRs) from developing countries. Using data obtained from past recipients of the OWSD-Elsevier Award for early career female scientists from the developing world, findings suggest intersectionality enables the manifestation of a coherent career identity in three ways: as a relational career dependent on the opinions of introjecting guides (family, mentors, role models), a totalitarian career contingent on self-resilience, grit and perseverance, and a fluke career orientation based on fate, luck, and chance. The paper highlights the need for a dynamic that enables the development of a flexible self-concept which embraces continuous adaptation, and cogent commitment to pursuing and succeeding in a traditionally male dominated career under contexts of patriarchy and underdevelopment.

Paper is Available to Meeting Registrants Only.

CAR: **The Interaction Role of Self-reflection and Self-distancing in Predicting Career Planning**

Author: **Anastasiia Popelnukha**, *school of management, USTC*

Author: **Lincoln Jisuvei Sungu**, *school of management, USTC*

Future work self salience has been identified as an important predictor of career planning, yet very little is known about how future work self salience can be achieved. We hypothesized that improvement-oriented self-reflection engenders future work self salience that predicts career planning based on the self-regulation and goal attainment model. In addition, we proposed that self-distancing moderates the indirect effect. Using a correlational field study (N = 309) and an experimental study (N = 225), we found that improvement-oriented self-reflection, combined with self-distancing, plays an influential role in increasing career planning through boosted future work self salience. We discuss the theoretical and practical implications of the findings.

Participant: **Phyllis Moen**, *U. of Minnesota*
Participant: **Earnest Gonzales**, *New York U.*

Over the past decades, considerable research has been devoted to generating a better understanding of the impact of the aging population and workforce. At the request of the Alfred P. Sloan Foundation, the National Academies of Sciences, Engineering, and Medicine convened the Committee on Understanding the Aging Workforce and Employment at Older Ages (the Committee), an interdisciplinary panel of scholars, to assess what is known about the aging workforce in the United States, identify gaps in current knowledge and data infrastructure, and make recommendations for future research and data collection efforts. This symposium presents the findings of the Committee’s forthcoming report *Understanding the Aging Workforce: Defining A Research Agenda*. The symposium is designed to highlight important research findings from the Committee’s report and outline a new research agenda that is focused on further elucidating the heterogeneity of older workers’ experiences and outcomes and identifying the role of workplaces in enabling and constraining work behaviors at older ages. To this end, the discussant will demonstrate how the conclusions reached by the four presentations together reveal a future research agenda and the methodological and data infrastructure needed to make this research agenda a reality.

Writing Together for Change    
Writing Together for Change

Participant: **Marjana Johansson**, *Critical Management Studies*
Organizer: **Sara Persson**, *Södertörn U.*
Participant: **Ruth Slater**, *Solent U.*
Participant: **Julia Storberg-Walker**, *George Washington U.*
Participant: **Kristin Samantha Williams**, *UEF Business School, U. of Eastern Finland*
Participant: **Ella Henry**, *Auckland U. of Technology*

“Loving: keeping alive: naming” (Cixous, 1976, p. 2). This PDW builds on the vibrant writing differently movement (Helin, Kivinen and Pullen, 2021; Boncori et al. 2021; Kostera, forthcoming) and the hope and inspiration that it provides in academic environments dominated by metrics, competition and precarity. Taking our cue from Hélène Cixous we want to provide a space where we, as a community, name the things we love; as a way to keep them alive in hostile environments; as a way to make them grow and flourish. Honouring the words of bell hooks, we acknowledge, through this practice that: “Communities sustain life – not nuclear families or the “couple”, and certainly not the rugged individualist” (bell hooks, 2001). Based on experiences from the collaborative autoethnographic workshop we organized during AoM 2021, we want to again provide a platform where scholars can explore alternative ways of naming, knowing and acting together in a safe and supporting environment. The workshop will start prior to AoM with participants sharing texts on a Padlet platform on the theme ‘Writing for Change’. During the two-hour event, these initial texts will be expanded on by peers in small writing groups. The aim is that the writing exercises will become long-lasting conversations that will move from personal thoughts to collaborative discussions on how we as academics can keep focusing on practices we value and cherish and engage in dismantling oppressive structures that hinder their expansion.

To participate in the workshop, please send a maximum 300-word text on the theme ‘Writing together for change’ in a format of your choice (including poem/autobiographical reflection/fictional imagination) to sara.persson@sh.se AND Marjana.Johansson@glasgow.ac.uk AND kristin.williams@uef.fi latest by 15 July 2022. We encourage you to send in texts as soon as you can since we will accept participants on a first-come basis and places are limited to 40. On 1 August 2022 participants will receive further information about the workshop and will be asked to read each other’s texts which will be posted in a closed Padlet group. These individual reflections will then form the basis for continuous work in the writing groups during the workshop. If you would like to get in touch before submitting, feel free to email Sara, Marjana and Kristin. Please note that this workshop is part of the 82nd Annual Meeting of the Academy of Management and requires that you have paid membership and conference fees to participate.

Designing for the Future in the Metaverse

Session Moderator: **Marco Marabelli**, *Bentley U.*

CTO: **Everything You Always Wanted to Know about the Metaverse* (*But Were Afraid to Ask)**   

Author: **Marco Marabelli**, *Bentley U.*

Author: **Sue Newell**, *Warwick Business School*

In this perspective paper we discuss the metaverse, a sociotechnical system aimed at providing users with immersive, synchronous 3D experience of reality through interoperable platforms and sensor devices. We first examine the metaverse’s technology and its underlying processes and mechanisms, at the individual, organizational (providers companies) and institutional level. We then move to considering some mainstream theories built in the past decades that explain online behaviors (with social software etc.) and questioning their validity within the metaverse. In the concluding section of the paper, we propose meaningful research questions and lay out a research agenda, mainly addressed to IS scholarship but that may be considered by other neighbor fields such as communication and computer science. Throughout the paper we think of the metaverse as a phenomenon involving relevant business opportunities as well as ethical challenges and we thereby present our theoretical reflections along this overarching conceptual idea.

CTO: **Using Sci-fic to Predict Future Societal Impacts of New Technologies: An Innovative Methodology**

Author: **Jingyao Li**, *Bentley U.*

Author: **Mareike Mohlmann**, *Bentley U.*

Author: **Marco Marabelli**, *Bentley U.*

The motivation for this methodological paper rests on the importance for researchers to be able to foresee societal impacts of the use of emerging technologies, because they may potentially have important ethical implications (cf. biases problems associated with AI/ML). However, we also recognize that it is extremely difficult to a priori identify unintended uses of future technologies, especially before they are unleashed to society. Laws and regulations addressing problematic uses of technologies come generally after these technologies have already made enough damages to people. We therefore propose an innovative methodology to assess the potential future risks of emerging technologies, which concerns the analysis of social science fiction (SSF) such as movies and tv shows. We showcase how this approach can inform researcher on potential future scenarios concerning emerging technologies and society. We contribute to extant IS scholarship by developing a detailed roadmap of how to use SSF in meaningful ways. We substantiate our claims with an example of analysis in the context of the tv show “Black Mirror”.

Paper is Available to Meeting Registrants Only.

CTO: **Design Principles for Coordination in the Metaverse** 

Author: **Jeffrey V. Nickerson**, *Stevens Institute of Technology*

Author: **Stefan Seidel**, *U. of Liechtenstein*

Author: **Gregory Yepes**, *Electronic Arts*

Author: **Nicholas Berente**, *U. of Notre Dame*

The Metaverse represents the next generation of the Internet that, at this instant in time, is still a concept. It is envisioned to provide interconnected experiences that are immersive and varied. This vision challenges both designers and users to understand its possible coordination architecture and develop strategies for participation. One way to understand the concept and affect its instantiation is to take a design science approach that articulates design principles that might guide the exploration of different architectures. We apply concepts related to platforms and business ecosystems as well as ideas about facilitating technologies including choreography and orchestration as ways of blending together experiences, providing transitions between virtual locations. We derive three design principles from an analysis of Metaverse scenarios: Narrative composability, social assortativity, and path discoverability. Thinking through these aspects of design leads to a discussion about the tradeoffs that will face designers of the Metaverse.

Decision-making 3

Session Moderator: **Anna Söderblom**, *Stockholm School of Economics*

ENT: How do Founders' Imprinting of Being Only-Children Impact Product Innovation in New Ventures?

Author: **Gaoyu Yue**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Hongquan Chen**, *Shanghai Jiao Tong U.*
Author: **Saixing Zeng**, *Shanghai Jiao Tong U.*

The differences between only-children and children with siblings have been discussed for centuries and has captured the attention of the general public and researchers alike. However, limited knowledge is available about the imprinting effect only-children background has on individual's strategic decision in business context. This study endeavors to fill this research gap by examining how founders' background of being only-children impact product innovation in new ventures. By drawing on insight of imprinting theory, we theories that only-children founders have higher risk-aversion and less self-efficacy generating from interaction pattern with parents and the lack of peer competition in early family life, which contribute to lower motivation to pursue product innovation. We test our hypothesis using a sample of 422 Chinese new ventures. The empirical result support the negative relationship between founders' only-children imprint, and product innovation. We also find that the negative relationship is strengthened when founders secure financial support from their families and is attenuated when they obtain strong faith in effort through experience outside family. From imprinting perspective, this study extends our understanding about the non-ignorable effect of early life family environment on individual's strategic decision in business context and has implications for family science and entrepreneurship.

ENT: Post-entrepreneurial Wage-employment: Signaling Effects from Entrepreneurial Experience

Author: **Anna Söderblom**, *Stockholm School of Economics*
Author: **Mikael Samuelsson**, *U. of Cape Town Graduate School of Business*
Author: **Rickard Sandberg**, *Stockholm School of Economics*
Author: **Alexander McKelvie**, *Syracuse U.*

While there is a growing body of research examining the labor market value for former entrepreneurs, the theoretical and empirical evidence so far provides surprisingly mixed conclusions. Building on signaling theory, we provide novel explanations for earnings differences among individuals who enter paid employment after periods of entrepreneurship. Based on a unique and homogenous sample of 213 Swedish former entrepreneurs, we test hypotheses concerning how various signals of human capital, individually and collectively, affect the former entrepreneurs' wages as employees. We find that ex-entrepreneurs' salary levels prior to their entrepreneurial endeavors and when longer time has passed since their last employment offer important signals of their general capabilities when returning to wage work. We also find that an individual who signals higher level of entrepreneurship-specific human capital through longer entrepreneurial experience or a proven capability to grow a venture receives higher wages than other ex-entrepreneurs. Moreover, we document that third-party endorsement emanating from the receipt of government subsidies results in higher salaries. Most importantly, we find that signals of stronger general capabilities, represented by higher wages prior to being an entrepreneur, are magnified by successful entrepreneurship and by endorsements from external fund providers. These findings are consistent with the signaling literature arguing that complementary signals are particularly useful to reducing uncertainty in noisy environments, such as situations when employing ex-entrepreneurs.

ENT: Search and Validation: How Individuation Drives the Opportunity Evaluation of Founders

Author: **Farsan Madjdi**, *GSB, U. of Cape Town*
Author: **Badri Zolfaghari**, *GSB, U. of Cape Town*

This paper adds to the ongoing debate on opportunity evaluation, entrepreneurial action and founder identity theory. By presenting 34 first-time founders with 3 business scenarios, we explored the influence of distinct social founder identities on their cognitive processes during opportunity evaluation. Through the use of verbal protocol analysis, we theorized a model that highlights the use of different judgment categories during distinct stages, namely search and validation. We contribute to the entrepreneurship literature by showing how individuation drives the opportunity confidence of individuals and leads to decisions about the abortion or commencement of opportunities. Lastly, we highlight reciprocal relationships between emotions and cognition during opportunity evaluation.

Paper is Available to Meeting Registrants Only.

ENT: Achieving Productive Contradiction: How Entrepreneurs Manage Role Identity Tension

Author: **Nico Klenner**, *Aalto U.*
Author: **Gerda Genser**, *Faculty of Business and Economics, U. of Melbourne*
Author: **Ingo Karpen**, *Karlstad U.*

Entrepreneurs often play different roles that can cause identity tension. Prior research suggests that identity tensions have negative consequences, which can be reconciled through managerial intervention. However, we know only little about how entrepreneurs manage identity tensions through self-mandated identity work. Through a qualitative study of 43 designer-founders, we find that entrepreneurs may attenuate role identity tensions through either/or approaches or may leverage these tensions through both/and approaches. Our study highlights that individuals' construction of roles as competing or complementary and framing of identity tensions as a problem or an opportunity informs their identity work. We extend theory by creating a grounded model of self-mandated identity work; identifying triggers of identity tensions; uncovering individual-level conditions scaffolding entrepreneurs' pathways of identity work, and delineating practices for structural and behavioral identity work.

Crowdfunding 7

Session Moderator: **Simon Kleinert**, *Maastricht U., School of Business & Economics*

ENT: The Role of Entrepreneurs’ Ambitions in the Acquisition of Early-Stage Funding

Author: **Simon Kleinert**, *Maastricht U., School of Business & Economics*

This study examines the display of high ambitions – intentions to achieve extraordinary financial growth – as an impression management (IM) tactic used by entrepreneurs to attract early-stage investors. Drawing on social psychology research, the authors contend that expressing too high ambitions invokes a self-promoter paradox so that credibility concerns render this IM tactic ineffective. Complementing the theorizing by a signaling perspective, the authors further propose that entrepreneurs can leverage signals to turn the promise of high ambitions into an effective IM tactic. Two empirical studies, including observational data from equity crowdfunding and a conjoint experiment with equity investors, support the arguments. Too high ambitions backfire but become an asset when entrepreneurs signal their credibility by managerial experience or granted patents. These findings draw attention to critical boundary conditions for effective impression management in the entrepreneurship context.

ENT: When Positivity Pays Off: Rhetorical Complementarity and Crowdfunding Performance

Author: **Yin-Chi Liao**, *U. of South Carolina at Upstate*

This study examines how different linguistic styles of entrepreneurial pitches complement one another to enhance the persuasion of pitches, which in turn, affects crowdfunding performance. Combining rhetoric theory and signaling theory, I posit that rhetoric that evokes emotional appeals—optimistic languages in particular—increases crowdfunding performance when combined with rhetoric of reasoning and credibility. The model was tested in a sample of 20,709 Kickstarter campaigns in 2016. Results show that optimistic languages, when employed with the rhetoric elaborating on the rationality of the campaign, improve crowdfunding performance. Crowdfunding performance is also increased when optimistic languages are coupled with the rhetoric that strengthens entrepreneurs’ credibility. This study shows that the signaling effects of rhetoric lie in the complementarity of multiple linguistic styles.

ENT: The Spillover Effect of Category Performance on Existing Entrepreneurial Crowd-Fundraising 🌐

Author: **Charson CanCan Dong**, *Ph.D Candidate in Entrepreneurship & Innovation*

Author: **Megan Yuan Li**, -

Studies of entrepreneurial crowdfunding typically focus on the role of entrepreneurs’ traits and storytelling capability in promoting campaigns’ fundraising, while paying less attention to the spillover effect from other fundraising projects. We propose that the consequences assembled from the previous entrepreneurs’ actions within the same industry can be a source of category legitimacy for subsequent entrepreneurial fundraising. We further decompose this legitimacy spillover effect into two types: accumulated versus immediate effects and study their distinct influences on fundraising. Our empirical data, collected from 31,767 Kickstarter projects of four basic categories from 2010 to 2020, confirmed the legitimacy spillover effect of past categorial performance on the fundraising of existing crowdfunding projects. We further show that the accumulated legitimacy spillover effect is much stronger than the immediate legitimacy spillover effect and that this spillover effect weakens in the case of entrepreneurs with past successes. Our study contributes to the crowdfunding and legitimacy spillover literature.

Session Moderator: **Kim Lai Kuan Wong**, *Singapore Management U.*

ENT: **Inter-Generational Socio-Emotional Wealth and Succession In Family Firms During Adversity** ➔

Author: **Kim Lai Kuan Wong**, *Singapore Management U.*
Author: **Daniel Z. Mack**, *Singapore Management U.*
Author: **Toru Yoshikawa**, *Singapore Management U.*

Despite research underscoring socio-emotional wealth as a core consideration in decision making among family firms, results on whether such considerations affect leadership succession during periods of adversity such as crises remained mixed. Our qualitative interviews of 20 family firms during the COVID-19 pandemic reveal that such mixed findings can be attributed to the insufficient attention paid to the heterogeneity of SEW priorities and concerns among family members within the firm. Because of the gap in SEW priorities, leadership succession can be challenging. We find that whereas the older generation of family members have implicit plans for succession, the young-er generation of family managers and employees engage in strategic communications to gain the trust of the older generation. Moreover, that the adversity of the COVID-19 pandemic could either facilitate the alignment or exacerbation of the differences of SEW priorities between the older and younger generation. Our grounded model presents a more nuanced understanding of how SEW priorities affect succession planning in family firms during times of adversity.

ENT: **Selling Brownies or Formal Education: A Breakpoint for Entrepreneurial Learning in Family Firms**

Author: **Luz Elena Orozco**, *U. de los Andes, Colombia*
Author: **Estefania Hernandez**, *School of Management, U. de los Andes*

Purpose- The purpose of this study is understanding the entrepreneurial learning in family firms, from a process perspective and focused on next generation family members (NGFM), who were exposed to entrepreneurial learning processes in their family firms. While the relationship between family firms and entrepreneurship has captured a lot of research interest, the processes that entail the transfer of entrepreneurial knowledge and skills between family members have received less attention. This paper contributes to fill this gap by analyzing the learning experiences and relationship with previous generations that originated entrepreneurial learning in next generations. Design/methodology/approach – This study is based on 24 Colombian cases of NGFM, who were diverse in terms of ages, entrepreneurial achievements, and connections to the family firms. Findings – Entrepreneurial learning is a continuous and incremental process with multiple mechanisms to learn, which are defined by the previous generation. There is a temporal dimension associated with life stages, which defines the type of mechanisms more useful to learn about entrepreneurship. Early involvement is a key factor for entrepreneurial learning, but it requires further comprehension than what current literature has reached. Originality/Value – By applying the process perspective of entrepreneurial learning to the context of family firms, the study identifies unique dynamics to transfer entrepreneurial knowledge and skills among generations, which help understanding the diversity of entrepreneurial performance of these firms.

Paper is Available to Meeting Registrants Only.

ENT: **What is Your Reference Point? (WITHDRAWN)** 🙄 🖥️

Author: **Nicole Gottschalck**, *WHU - Otto Beisheim School of Management*
Author: **Evelyn Stommel**, *WHU*
Author: **Andreas Hack**, *U. of Bern*
Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*
Author: **Kimberly A. Eddleston**, *Northeastern U.*

The availability of information and framing effects play an essential role in research on reference points and prospect theory. Our study extends this research by introducing price volatility as an essential determinant of reference points and by expanding prospect theory by taking contingency effects at the organizational level into account. At the example of the family business context, we discuss how the organizational context determines how risk-related information such as price volatility, purchase price, current price, and average price affect the level of reference points. The findings of our experimental study suggest that price volatility has a direct effect on reference points while the family business context serves as a special decision frame.

Paper is NOT Available. Please contact the author(s).

Author: **Myung-Seon Song**, *National U. of Singapore*
Author: **Marleen H. Dieleman**, *National U. of Singapore*

The family office acts as an intersection of wealthy families and their enterprise to manage the family wealth behind them. Extended from the previous literature examining how family firms differ from non-family firms, we investigate how entrepreneurial financing practices of family offices (i.e., family investors) differ from those of institutional venture capitalists (i.e., non-family investors), based on the mixed gamble perspectives. Moreover, we investigate how eponymy – a distinct characteristic of family organization, moderates such relationships. Using a natural experiment coupled with coarsened exact matching, we found that family offices make entrepreneurial investments (1) in the later stage of entrepreneurial financing, (2) in a narrower industry portfolio of venture firms, and (3) with a fewer number of syndicate members, compared to institutional venture capitalists. Furthermore, eponymous family offices (i.e., the name of the family office includes or derived from the family's surname) have a longer investment horizon, while making investments in the later stage and in a narrower industry portfolio of venture firms, compared to institutional venture capitalists. Consistent with the well-accepted premise that family firms have a long-term investment orientation, these results suggest that eponymous family offices serve as a “patient capital” to preserve their family's socioemotional wealth. At the same time, they extensively engage in investment practices that can counteract the possible financial loss caused by their long-term investment horizon. Overall, this paper contributes to research at the intersection of family business and entrepreneurial finance.

Self-employment 4

Session Moderator: **Pomme Theunissen**, *Maastricht U, School of Business & Economics*

ENT: Self-employment and Motherhood: Labor Market Outcomes of Self-employment in Early Childhood Years

Author: **Pomme Theunissen**, *Maastricht U., School of Business & Economics*

Author: **Annemarie Kuenn**, *Maastricht U. School of Business and Economics*

Author: **Kate RYBCZYNSKI**, *U. of Waterloo*

Self-employment is a career choice that may offer the flexibility to take care of children whilst remaining active on the labor market, and can therefore be seen by mothers as an alternative to wage employment during early childhood years. Using data from the German Socio-Economic household panel (SOEP) between 1995 and 2018, we investigate the success of this strategy, by studying wage earnings and the labor force status of mothers seven years after childbirth, once the child reaches school age. Taking account of self-selection into self-employment, we find that the consequences of self-employment experience in the early years after childbirth are no different from being inactive in terms of hourly wage for mothers who return to wage employment, while each additional month of wage employment after childbirth increases this wage by 0.4%. However, each additional month of self-employment experience does increase the odds of being active in the labor market by 22%, compared to inactivity. Analogously, for each additional month of wage employment, the odds of being employed increase by 6%. Self-employment in the early years after child birth thereby seems to keep mothers attached to the labor market to a greater degree than does wage-employment.

Paper is Available to Meeting Registrants Only.

ENT: Managing People in Micro-Firms: The More, the Merrier? 

Author: **Ana Cláudia Rodrigues**, *CEOS.PP, ISCAP - Porto Polytechnic*

Author: **Antonio Caetano**, *ISCTE - Instituto U. de Lisboa*

Author: **Helena Carvalho**, *ISCTE - Instituto U. de Lisboa*

Author: **Susana Correia Santos**, *Rowan U.*

This study explores the configurations of people management practices in micro-firms and their relation with entrepreneurial orientation and firm performance in a four-year window. Based on the ability-, motivation- and opportunity-focused practices framework (Appelbaum, Bailey, & Berg, 2000), we employ an inductive data analysis strategy to identify configurations of HRM practices used in micro-firms and, in conjugation with entrepreneurial orientation, how they affect employee growth and net income. We analyzed primary data collected from 114 micro-firm owners in the Enterprise Resource Planning selling sector in combination with secondary data on firm objective performance over a four-year period using Multiple Correspondence Analysis and Cluster Analysis. Results show a taxonomy of three different configurations of HRM practices that are associated with different entrepreneurial orientation strategic postures in micro-firms: "Financial centric HRM practices", "Operations centric HRM practices", and "People centric HRM practices". We assume that configurational methods can help uncover the complexity of the interplay between HRM practices and strategic postures on micro-firm performance. This study contributes to the literature in micro-firms by revealing innovative results in the most effective people-related managerial practices on the performance of micro-firms.

ENT: Are Work-Family Initiatives an Asset or a Liability for Innovation?

Author: **Katerina Vasilevska**, *U. degli Studi di Bergamo*

Author: **Tommaso Minola**, *U. of Bergamo*

Author: **Mara Brumana**, *U. of Bergamo*

Through the lens of the signaling theory, this study uses survey-based data from manufacturing SMEs in Northern Italy to test whether the adoption of work-family initiatives (WFIs), formal and voluntary actions undertaken by a firm to support the work-life balance of its employees, affects the likelihood of an SME to engage in innovation. Additionally, we explore whether family (versus non-family) SMEs that adopt WFIs are more likely to innovate, because of their stewardship culture. Our results show that WFIs affect SME's innovation outputs when they are extensively adopted. Counterintuitively, our results indicate that the family ownership downplays the effect of WFIs on innovation, i.e., that family SMEs that adopt WFIs are less likely to innovate than non-family SMEs. Overall, our findings support the view of SMEs as firms in which the employee's potential and the ownership type are crucial elements for enhancing innovation.

Paper is Available to Meeting Registrants Only.

ENT: A Resource Management View on How and When HPWS Lead to Corporate Entrepreneurship in SMEs 

Author: **Fangjian Wu**, *China Europe International Business School (CEIBS)*

Author: **Guiyao Tang**, *Shandong U.*

Author: **Haina Zhang**, *U. of Aberdeen*

Author: **Jianfeng Jia**, *Northeastern U. China*

Author: **Stephen Xu Zhang**, *U. of Adelaide*

Despite the proliferation of corporate entrepreneurship research, only a small fraction examines the context of small and medium-sized enterprises (SMEs) in emerging economy. This study conceptualizes a process grounded in the resource management framework to explain how HPWS may influence corporate entrepreneurship by a key organizational capability in strategic flexibility in emerging context. The study further posits that this process will be accelerated by CEOs' empowering leadership and dampened by state-ownership. Using data on 140 firms from multiple-informant, multiple-wave surveys, we found that CEOs' empowering leadership acted as a moderator of the effects of HPWS on strategic flexibility such that CEOs' strong empowering leadership enhanced the effects. State ownership also moderated the relationship between strategic flexibility and corporate entrepreneurship such that for state-owned firms, the positive association of strategic flexibility and corporate entrepreneurship was attenuated. The study contributes to the better understanding and integrated model-building of both the strategic human resource management literature and the strategy literature using the resource-based view.

ENT: The Impact of Local Deviance from National-Level Norms on a Community’s Entrepreneurial Activity 

Author: **Walker Ray Dornisch**, *U. of Connecticut - Storrs*
Author: **Essam M. Boraey**, *U. of Connecticut*

Institutional theorists have begun to explore how deviance, or the extent to which institutions are violated, impacts entrepreneurial activity. However, the literature has thus far focused on formal deviance, or the extent to which regulatory institutions are violated, concluding a negative relationship between formal deviance and entrepreneurship due to heightened mistrust in the community. Drawing from Durkheimian Sociology, we postulate that the relationship functions differently for informal deviance, or the extent to which normative institutions are violated. Specifically, we argue that increasing levels of local deviance from national-level norms will foster greater entrepreneurial activity within communities due to informal deviance’s impact on community social capital. We test this argument using longitudinal data on all 2448 municipalities in Mexico. The results, and a series of robustness checks, confirm our hypotheses. Overall, our study contributes to research within the institutional approach to entrepreneurship by demonstrating that the impact of deviance on entrepreneurial activity operates differently across institutional pillars.

Paper is Available to Meeting Registrants Only.

ENT: Ego-Centrists, Collaborators, and Socializers: How Tie-Forming Motivations Impact Pivoting    

Author: **Ameer A. Basit**, *GIFT U.*
Author: **Michael Johnson**, *U. of Washington*
Author: **Ussama Ahmad Khan**, *U. of Washington, Seattle*
Author: **Alex Michael Murray**, *U. of Oregon*

We examine how entrepreneurs’ tie-forming motivations impact their ventures’ pivoting outcomes. Through an inductive analysis of 15 ventures over the course of a start-up incubator’s six-month lifecycle, we found entrepreneurs had three primary motivations for forming ties with other entrepreneurial teams in the incubator: rational self-interest, reciprocal exchange, and homophilic similarity. Based on these distinct motivations, we typologize the entrepreneurs as Ego-centrists, Collaborators, and Socializers, and theorize on their unique roles in facilitating the flow of information within a start-up incubator as well as the impact of these roles on their ventures’ pivoting outcomes. Ego-centrists and Collaborators attained information from outside their core knowledge domain(s) to reduce myopia and mitigate boundedly rational behavior, whereas Socializers attained information from within their core knowledge domain(s) to increase myopia and reinforce boundedly rational behavior. As a result, Ego-centrists and Collaborators were more apt to pursue pivots while Socializers were more likely to pursue incremental process and product adjustments. Our study contributes to the literatures on entrepreneurial pivoting and agency in entrepreneurial network evolution.

Paper is Available to Meeting Registrants Only.

ENT: Environmental Jolt and Experimentation in A Nascent Industry 

Author: **Jue Wang**, *Penn State U.*
Author: **Wenpin Tsai**, *Pennsylvania State U.*

Environmental jolts on the one hand open up new market opportunities for firms to engage in experimentations, but on the other hand pose a threat of experimentation failure by disrupting existing routines and processes. We argue that whether or not environmental jolts would motivate a firm to engage in experimentations depends on the firm’s network diversity that shapes how the firm access and process information for decision making under uncertainty. We collected data on how firms in the nascent drone industry responded to the environmental jolt brought by the COVID-19 pandemic from 2020 to 2021. We find that the regional manifestation of an environmental jolt is positively associated with the likelihood of firm experimentation when firm network diversity is moderate but negatively associated with the likelihood of firm experimentation when firm network diversity is very high.

ENT: Founding Team Human and Social Capital and Strategic Reorientation 

Author: **Li-Wei Chen**, *Old Dominion U.*
Author: **Habib Ashraful Islam**, *Old Dominion U.*

Strategic reorientation has long been considered pivotal for the long-term survival of new ventures. However, despite prescriptions regarding the usefulness of strategic reorientation, very few ventures, in fact, reorient. In this paper, we illustrate the antecedent conditions of strategic reorientation. Using the mechanism of problemistic search and screening theory, we hypothesize that a venture’s human and financial capital have different effects regarding strategic orientation. We test our theory using a sample of firms who had applied to be a part of an accelerator program and find support for our assertions.

ENT: **Engaged or Addicted? Exploring the Effects of Entrepreneurial Fear of Failure on Work Investment**

Author: **Martin Siebrand**, *RWTH Aachen U.*
Author: **Sebastian Kruse**, *WIN Lehrstuhl RWTH Aachen*

Entrepreneurial fear of failure is a frequent though often concealed experience in the entrepreneurial process. Prior research has shown that fear of failure does not only inhibit entrepreneurial activity but can also act as a motivator. However, it is still unclear what kind of implications this type of motivation might have, especially whether it is a positive or negative motivation and to which specific behaviors it leads. In our study, we therefore explore whether fear of failure motivates entrepreneurs to be more engaged or addicted. We empirically test our hypotheses with a sample of 519 entrepreneurs in Germany. Our findings reveal that entrepreneurial fear of failure is negatively related to work engagement and positively related to workaholism. We thereby show that entrepreneurial fear of failure can spur increased activity but results in undesirable work practices and poorer well-being for entrepreneurs. Moreover, we find support that a tolerance for failure culture can act as a coping mechanism, as it mitigates both effects in more desirable directions. Implications for scholars and practitioners are discussed.

ENT: **Psychological Flexibility for Entrepreneurs: A Validation of the Wishing-Experiencing-Doing Scale**

Author: **Zainab Noor El Hejazi**, *PhD student at U. of Antwerp*
Author: **Johanna Vanderstraeten**, *U. of Antwerp*
Author: **Arjen Van Witteloostuijn**, *Vrije U. Amsterdam*
Author: **Joeri Van Hugten**, *Vrije U. Amsterdam*
Author: **Wim Coreynen**, -

Entrepreneurs face high levels of risk and uncertainty on a daily basis. To cope with this, the internal resource "Psychological Flexibility" is put to the foreground. It is a well-known construct from Psychology measuring whether a person is able to adapt to fluctuating situational demands, reconfigure mental resources, shift perspective, and balance competing desires, needs, and life domains. It proved to be positively related to mental health and well-being of individuals, but given that it incorporates repeated interaction between people and their environmental contexts, it does require context-specific measurement instruments. In the Entrepreneurship field, such an instrument is lacking. This study focusses on the development and validation of a Psychological Flexibility measure, tailored to an entrepreneurial context. For this, we applied a rigorous scale development process on a dataset of 875 entrepreneurs. From two studies (study 1, n=532; study 2, n=343), two consecutive formative, multidimensional constructs emerge: A 15-item Wishing, Experiencing and Doing (WED) scale (study 1), and a shorter 6-item measure, the WED-S scale (study 2), appropriate for time-constrained measurement initiatives. Both scales exhibit good psychometric properties and are proven to be reliable and valid measures.

ENT: **Do You Feel What I Feel? Shared Cognition, Shared Affect and Co-Founder Exits**

Author: **Nicola Anne Thomas**, *U. of Liverpool Management School*
Author: **Philip Cash**, *Technical U. of Denmark*
Author: **Carina Lomberg**, *Technical U. of Denmark*

Extant research on co-founder exits presents contradicting results: exits can either lead to venture failure or enhance the effectiveness of the remaining team. Using in-depth, qualitative case studies of dynamic affective interactions and follow-up interviews from nine founding teams over twenty months, we examine how differences in team shared affect and cognition before a co-founder exit subsequently impacts how cofounders exit, and the impact of their exit. We develop a model of affective and cognitive dynamics in the co-founder exit process and identify how patterns of shared affect and cognition cause different team vulnerabilities leading to differing team behaviours which in turn influences team conflict, exit speed, co-founder commitment and co-founder relationships. Our findings have important implications for co-founder exit literature, we propose why some exits lead to failure while others improve the venture overall.

ENT: **"Entrepreneurizing" College Programs to increase Entrepreneurial Intentions: A Mediation Framework**

Author: **Mahmoud Fallatah**, *Umm Al-Qura U.*
Author: **Tahar Lazhar Ayed**, *Umm Al-Qura U.*

The impact of entrepreneurship on the development of emerging economies is widely recognized. Research has focused on studying factors that increase entrepreneurship in societies, including the role of education in increasing entrepreneurial intentions among students. In this paper, we contribute to the entrepreneurship and education literature by examining the impact of entrepreneurial college programs on entrepreneurial intentions. Further, we study the mediating roles of perceived benefits and individual creativity. Using a sample of 438 students from a public university in Saudi Arabia, our findings reveal that students enrolled in entrepreneurial programs have higher levels of entrepreneurial intentions than those enrolled in non-entrepreneurial programs, and that perceived benefits and individual creativity partially mediate the aforementioned relationship. The paper opens the door for future research in the entrepreneurship and education literature and provides several managerial implications.

Entrepreneurial Cognition 4

Session Moderator: **Alireza Aghaey**, *U. of Central Oklahoma*

 **ENT: Entrepreneurs' Eudaimonic Well-being: Multiple Roads Lead to Rome**

Author: **Evelien PM Croonen**, *U. of Groningen*

Author: **Florian Noseleit**, *U. of Groningen*

Author: **Michael Wyrwich**, *U. of Groningen*

We contribute to recent entrepreneurship and well-being research by shedding light on the role of individuals' value priorities in explaining their occupational choices and, ultimately, their well-being. Our theoretical framework accounts for the heterogeneity of individual value priorities and of entrepreneurship contexts to explain two important dimensions of entrepreneurs' eudaimonic well-being: perceived autonomy and meaningfulness in life. Through analyzing European Social Survey (ESS) data, we empirically demonstrate that individual value priorities for benevolence and self-direction distinctively affect individuals' engagement in entrepreneurship in 'socially-oriented' sectors and in 'commercially-oriented' sectors, which in turn differentially affect their perceived autonomy and meaningfulness in life.

ENT: New Venture Decisions of Corporate and Independent Entrepreneurs 

Author: **Alireza Aghaey**, *U. of Central Oklahoma*

Opportunity evaluation is a critical step in the process of entrepreneurship and is the main precursor to entrepreneurial action. This is true for both corporate entrepreneurs and independent entrepreneurs. However, these two groups may evaluate entrepreneurial opportunities in different ways because they operate in different contexts and have different decision-making schemas. In this study, I use an "entrepreneurial cognition" perspective to explore such differences. By using two major theoretical lenses – i.e. resource availability and tolerance for uncertainty – and employing a conjoint experimental design, I compare and contrast decision policies of corporate and independent entrepreneurs captured in real time. The findings of this study shed light on differing cognitions of entrepreneurs in corporate and non-corporate contexts and explain their decision-making priorities. Findings provide evidence that the four opportunity attributes studies – i.e. knowledge of customer demand, resource-relatedness, novelty, and entry scale – significantly affect willingness of entrepreneurs to pursue opportunities but that the effect for all attributes is stronger among independent entrepreneurs. Findings of this study also demonstrate that gender and entrepreneurial experience have significant impacts on opportunity assessments of corporate and independent entrepreneurs, but with varying levels.

ENT: You Must Be Joking! How Humor in Business Pitches Influences Young Ventures' Pitching Success

Author: **Christian V. Baccarella**, *FAU Erlangen-Nürnberg*

Author: **Lukas Maier**, *FAU Erlangen-Nürnberg*

Author: **Daniel A. Gerhard**, -

Author: **Kai-Ingo Voigt**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Startups need access to capital to grow and thrive. In this work, we present two complementary studies to examine whether and how the use of humor in business pitches influences funding success. In Study 1, we use data coded from 130 business pitches of the television show "Shark Tank". Findings show that using humor (vs. no humor) in business pitches increased funding likelihood by up to 25%. In Study 2, we aimed to provide further insights into the role of humor in business pitches and performed an experimental study with 253 financial experts that evaluated one of three scripted and recorded business pitches. Findings showed that the use of positive (negative) humor significantly increases (decreases) funding amount. Moreover, we reveal perceived competence of the pitcher as the underlying process and find that the effects work for experienced as well as unexperienced pitchers. Taken together, this research provides new insights into how humor influences pitching success and offers important insights for entrepreneurs and investors.

ENT: Deconstructing Entrepreneurial Ethical Decisions Down the Ethical Slippery Slope 

Author: **Miranda Welbourne Eleazar**, *U. of Iowa*

Author: **Emily W. Choi**, *U. of Texas at Dallas*

Entrepreneurs face the potential for great success and financial gain with the realization that most new ventures fail. Those possibilities put pressure on entrepreneurs to quickly develop and commercialize their products, sometimes at all costs. That pressure has the potential to make entrepreneurs take steps down the slippery slope toward unethical behavior. We examine how the process of thinking may affect such missteps. We integrate literature on dual-process cognition, ethical intuition, and ethical decision-making. We also draw on the lean manufacturing failure mode effect analysis (FMEA) and strategic management's use of scenario planning to develop an intervention to make entrepreneurs think about the consequences of ethical decision-making in the commercialization of their product. We test that intervention in an intricate ethical vignette and find that slow thinking has more nuanced consequences than previously theorized depending on whether entrepreneurs prioritize short-term vs. long-term consequences, where they are on the slippery slope, the moral intensity of the situation, and the stakeholders involved. In doing so, we contribute to the literature on entrepreneurial cognition and ethics and expose areas of future research.

Gender and Diversity in Entrepreneurship 7

Session Moderator: **Lei Xu**, *U. of Wisconsin, Whitewater*

ENT: **Diverse but Separate? The Role of Social Capital on the Diversity-Entrepreneurship Relationship**

Author: **Arkangel Miguel Cordero**, *U. of Texas At San Antonio*
Author: **Alexander Lewis**, *UTSA*

Extant theory posits that ethnic diversity promotes entrepreneurship by increasing the novelty of information available for recombination in a locality. This view presupposes the flow of novel information among potential entrepreneurs. Yet, we know comparatively little on how localized social structures (e.g., collective social capital and residential segregation) that affect information flows condition this effect. We build on the sociological literature to theorize how the interplay between collective social capital and residential segregation moderates the ethnic diversity-entrepreneurship relationship. We test, and find empirical support for, our hypotheses among all new ventures started in the United States between 1990 and 2018.

ENT: **New Venture Performance: Specific Innovativeness, Digital Entrepreneurship and Gender**

Author: **Clyde Eirikur Hull**, *Rochester Institute of Technology*
Author: **Samuel Adomako**, *U. of Bradford*
Author: **Jintong Tang**, *Saint Louis U.*
Author: **Francis Donbesuur**, *Loughborough U., School of Business and Economics*

We build on strategic choice theory to predict 1) that specific innovativeness impacts new venture financial performance, 2) that a high degree of digital entrepreneurship enhances this effect by providing more room for strategic choices, and 3) that female entrepreneurs make better use than male ones of the opportunities offered by a high degree of digital entrepreneurship. We confirm our hypotheses using primary data from Ghana and Vietnam. We conclude that strategic choices among new ventures yield best results if bounded by prior strategic choice and specific innovativeness, enabled by a high degree of digital entrepreneurship, and enacted by women.

ENT: **How Women Use Network Strategies to Break Male Elite Cliques and to be Elected on Venture Boards**

Author: **Anna Gisela Leuenberger**, *U. of St. Gallen*
Author: **Manuel Hess**, *U. of St. Gallen*
Author: **Joakim Wincent**, *Luleå U. of Technology*
Author: **Dietmar Grichnik**, *U. of St. Gallen*

Based upon a qualitative study of 120 interviews and a statistical analysis of women active in the board scene around VC-backed ventures, we contrast previous claims and the agenda of network programs by and for women who highlight fighting network disadvantages by homophily. By forming cliques with other women, minority disadvantages persist, and these networks are losing rather than gaining efficiency. We outline how women networking with males, and how alternative networking styles break network cliques of men that act as barriers to women. Such networking strategies also contribute to progressive change in the total network reducing stereotypes that are restricting women entrepreneurs.

Paper is Available to Meeting Registrants Only.

ENT: **Does Female Representation in Top Management Teams Increase Support of Women-Led Businesses?**

Author: **Lei Xu**, *U. of Wisconsin, Whitewater*
Author: **Amy Y. Ou**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*
Author: **Han Jiang**, *Tulane U.*

In view of growing attention to unintended consequences of seemingly beneficial gender equality practices, we investigate whether and when female representation in top management teams (TMTs) affect firms' decisions about whether to support women-led businesses. Extending the social categorization framework, we argue that when women executives are the tokenistic minority, TMTs with more female representation are less likely to support women-led businesses; however, the negative effects can be reduced when the TMT has more politically neutral members or when they share prior employment affiliations. Our hypotheses are supported by a longitudinal panel dataset of investment decisions by 779 TMT members in 172 U.S.-based venture capital firms.

Family Business and Individual Differences 1

Session Moderator: **Laura Elizabeth Marler**, *Mississippi State U.*

ENT: Social Capital in Family Firms: The Roles of Trust and Openness

Author: **Jonas Soluk**, *Stockholm School of Economics*
Author: **Julia Katharina de Groot**, *WHU - Otto Beisheim School of Management*
Author: **Sabrina Schell**, *Bern U. of Applied Sciences*
Author: **Andreas Hack**, *U. of Bern*

Organizations can accumulate knowledge through social relationships and thereby attain competitive advantages. Especially for family firms, these social relationships are relevant to bridging resource constraints and developing entrepreneurial opportunities through complementary knowledge. We approach this research gap by building on rich data taken from 92 interviews and further data sources from seven case firms. All case firms were family firms from Switzerland in which the owning families had significant influence on the management of the company. Building on within-case and cross-case pattern analysis, we show how family influence affects family social capital in family firms. This capital, in turn, affects levels of trust and control, which have stimulating and inhibiting influences, respectively, on openness and resistance to strengthening and expanding social relationships. As a result, multiple forms of social capital emerge at different levels of analysis, namely, organizational social capital and external social capital.

ENT: The Role of Family-Friendly Workplace Practices in Preventing Nonfamily Employee Turnover Intentions

Author: **Taewoo Kim**, *U. of Louisiana Monroe*
Author: **Laura Elizabeth Marler**, *Mississippi State U.*

Non-family employees are indispensable resources for family firms as they grow and often face unique challenges related to the idiosyncratic nature of family firms because they are a part of the business but not the family system. This study highlights the role of family-friendly workplace practices as a resource in preventing turnover intentions of non-family employees based on the conservation of resources theory. Drawing on a sample of 116 dyadic data (family business owner – non-family employee), this study shows that perceived family-friendly workplace practices prevent turnover intentions of non-family employees through decreased burnout. Moreover, it is found that the implementation of family-friendly workplace practices in family firms is affected by family influence. Thus, this study not only creates avenues for future research on non-family employees but also provides insight into the critical role of family-friendly workplace practices in family firms.

ENT: Family Dynamics in Family Businesses: An Evolutionary Perspective

Author: **Krishnan Nair**, *Northwestern U.*
Author: **Edward J. Zajac**, *Northwestern U.*

We begin by noting an apparent contradiction in assumptions regarding family businesses: Scholars tend to see the business-owning family as a mostly harmonious unit dedicated to the pursuit of collective financial and non-financial interests, while the business press tends to emphasize destructive conflicts between family members. We seek to provide a contingency perspective to reconcile these contrasting perspectives, building upon principles from evolutionary biology. Specifically, we highlight how two fundamental forces (genetic relatedness and kinship certainty) can predict greater family harmony versus family conflict both across business-owning families and within a business-owning family over time. We conclude by discussing the empirical implications of our theoretical perspective, particularly for work on the role of family relations in shaping business outcomes.

Paper is Available to Meeting Registrants Only.

ENT: Bifurcation Bias in Executive Compensation System and Family Firm Performance

Author: **Weiwon Li**, *Sun Yat-Sen U.*
Author: **Xiaotong Li**, *Sun Yat-Sen U.*
Author: **Hanqing Chevy Fang**, *U. of Missouri / Rolla*

Family firms tend to provide preferential treatment toward family members vis-à-vis nonfamily members. Prior studies defined such practices as bifurcation bias, and suggested that bifurcation bias can trigger nonfamily members' perceptions of unfairness, and thus is detrimental to family firm performance. Drawing upon a social categorization approach to distributive justice, we extend this line of research by suggesting not all bifurcation bias practices have the same impact on firm performance, given that nonfamily member may perceive some bifurcation bias practices as unfair, whereas view other bifurcation bias practices as just. With data on family firms publicly traded in China, we found that bifurcation bias in salary compensation and bifurcation bias in equity compensation have divergent impacts on family firm performance.

ENT: International Investment and Social Hierarchy of Local VC Firms: Evidence from China

Author: **Tao Wang**, *U. of Bristol*

This study investigates the role of local VC firm in nurturing entrepreneurial companies in emerging market and how social hierarchy of local VC firms can affect the relationship between syndicating with international VC firms and entrepreneurial companies' performance. I analyze a comprehensive data set of 4070 entrepreneurial companies in China and find that both status and reputation of local VC firms moderate the relationship between syndicating with international VC firms and entrepreneurial companies' performance. More specifically, entrepreneurial companies which are invested by high status or highly reputable Chinese VC firms are less likely to benefit from prior syndicating experience with international VC firms. The underlying mechanism is explored and I find that high status VC firms are more likely to add value to entrepreneurial companies, whereas highly reputable VC firms and syndicating with international VC firms are more likely to select and add value to entrepreneurial companies at the same time. Overall, the results indicate both social hierarchy of local VC firms and international VC investment provide similar and substitute effect on entrepreneurial companies' performance.

ENT: How Private Equity-Backed Buyout Contracts Shape Corporate Governance

Author: **Luc Wynant**, *Vlerick Business School*

Author: **Sophie Manigart**, *Ghent U. and Vlerick Business School*

Author: **Veroniek Collewaert**, *Vlerick Business School & KU Leuven*

This paper explores how contracts in private equity-backed buyouts shape corporate governance in portfolio companies. Drawing upon agency theory and incomplete contracting theory, 34 actual contracts are analysed in detail. Contracts focus on reducing information asymmetries, mainly during the due diligence process, and aligning the goals of managers and PE investors during the investment period and at exit. Residual powers and contingencies are mainly used to deal with incomplete contract designs due to uncertainties. While some contractual mechanisms are comparable to those used in VC contracts, others are idiosyncratic to PE.

Paper is Available to Meeting Registrants Only.

 **ENT: Are Angel Investors More Likely than Venture Capitalists to Drive Entrepreneurial Experimentation?**

Author: **Amir Sariri**, *Purdue U.*

William H. Newman Award Nominee

Although angel investors and venture capitalists (VCs) both participate in the supply side of the same market providing capital and advice to startup firms, they are distinct in several ways. The differences in when they choose to deploy capital are well studied. The differences in when they choose to provide advice are not. Using a sample of 7,914 mentoring decisions by seed-stage investors from which I construct a novel typology of startup activities, I report among the first empirical findings on systematic differences in angel versus VC advice. Angels are more likely than VCs to provide advice on the design and execution of experiments, whereas VCs are more likely than angels to provide advice on business analysis and planning. While analysis is a skill that can be learned through studying, hypothesis testing is a skill developed via learning-by-doing. I report evidence consistent with the hypothesis that angels are more likely to mentor experimentation because they have a skill advantage in that domain due to operational experience. I also provide evidence that is inconsistent with alternative explanations, including financial incentives and selection.

Paper is Available to Meeting Registrants Only.

ENT: Managers' Mobility as a Bridge to Alliance Formation: A Study of Venture Capital Syndication

Author: **Qingyun Lu**, *School of management, Zhejiang U.*

Author: **Rui Shen**, *School of management, Zhejiang U.*

Author: **Qixin Lin**, *School of management, Zhejiang U.*

While abundant evidence has highlighted the importance of resource dependency and social networks in inter-firm alliance formation, the potential obstacles for them to take effect remain unanswered. In this study, we contend that information asymmetry resulting from the geographic distance and competitive concerns induced by status similarity pose two obstacles for a pair of firms to form alliances. Managers' mobility plays an active role in addressing the two concerns and bridging isolated firms. Using investment data of 1,015 venture capital (VC) firms in China over 1985-2016, we find that both geographic distance and status similarity between a pair of VC firms decrease the likelihood of syndication between them. The mobility of venture capitalists serves as a bridge by weakening the negative effects of geographic distance and status similarity on VC syndication.

Discussant: **David Tan**, *U. of Washington*

Human capital of firms is a key resource that drives new knowledge creation and firm performance. Firms present heterogeneity in their human capital resources; this heterogeneity arises from differences in the knowledge held by individuals and forms the basis of why some individuals are able to identify entrepreneurial opportunities sooner than others or innovate more than others. Research in the fields of management and entrepreneurship has made significant strides in understanding how differences in human capital drives important firm-level strategic choices and outcomes. Through this symposium, we seek to contribute to these fields by bringing together current research that studies how the human capital resources of firms drive new venture creation, success and innovation. We bring together four papers that look at four different dimensions of human capital resources of firms and how they ultimately contribute to firm-level outcomes.
