Scientific progress requires building upon many exponentially expanding foundations, and this massive combinatorial problem of synthesizing ideas across manifold publications needs a more efficient and effective methodology and supporting technologies. While citation indices and Google Scholar provide researchers with a wisdom of the crowd (Surowiecki 2004) perspective and accelerate the discovery of possibly pertinent research, these approaches do not encode knowledge, and scholars have to read the results of their search and extract the core knowledge. The failure to digitally encode knowledge inhibits the growth of many fields, including management. Casual and process models are the core of knowledge and the foundation of scientific reasoning (Pearl and Mackenzie 2018). In MIS, causal models are depicted in more than half of the more influential published articles in MIS Quarterly. The Theory Research Exchange (T-Rex) project is developing a new approach and supporting technologies that enable researchers to code causal and process models in publications as graphs and extract and synthesize ideas from the extant literature exhaustively and speedily. In this workshop, we will introduce the T-Rex project and invite Management scholars to apply and discuss the next generation of methodologies and tools for the accumulation, analytics, and synthesis of knowledge.

Precarity and Pay

Session Moderator: **Caroline Clarke**, *The Open U. Business School*

CMS: **Fighting Precarity: The Liminal Experiences of Female Activists**    

Author: **Lucia Garcia-Lorenzo**, *London School of Economics and Political Science*
Author: **Lucia Sell-Trujillo**, *U. of Sevilla*
Author: **Paul Donnelly**, *Technological U. Dublin*
Author: **Agus Perez**, *U. of Sevilla*

Women are increasingly active in the public sphere fighting precarity. However, current research shows that women still encounter exclusions and barriers when it comes to activism and that their experience of becoming active(ist) is still poorly understood. We propose to look at female activism through the lenses of liminality and embodied identity work by exploring how a group of Spanish female activists experience their activist journey when fighting against precarity. We use a qualitative study conducted over 11 years in Spain. We focused on the experiences of participants of two collectives in Seville, southern Spain, that emerged in consequence of the Great Recession. Our analysis illustrates how our female activists' performances against precarity were carried out as 'public liminal' acts using the body and embodied non-linguistic practices as part of their identity journey. Our results expand current understanding of activism in liminal conditions, especially among female activists, by looking at their experiences of activism and at the tensions emerging between potentially new and customary identities and behaviours as an important aspect of activist experiences of fighting precarity. Keywords: Equality/inequality, female activism, gender, identity, liminality, precarity, social change.

CMS: **Women Managers' Experiences of Work: Precarity and Overworking Under Neoliberalism**  

Author: **John S Hassard**, *U. of Manchester*
Author: **Catherine Farrell**, *Cardiff Business School, Cardiff U.*
Author: **Jonathan Morris**, *Cardiff U.*
Author: **Julie Wolfram Cox**, *Monash U.*

To answer the question 'does work have a future?' we must first understand the economic, political and social contexts of its recent past. We argue since the 1990s there has been a perceptible rise in employment precarity across professions, industries and economies, including for managerial grades. We contend this results from a neoliberal economic agenda promoting deepening career uncertainty amid a context of radical corporate restructuring and transformative digital innovation. Among the effects of such occupational, organizational and technological change have been managers experiencing longer working hours, greater work intensification, and worsening work-life balance – effects which we argue have been particularly acute for women managers, and notably under the coronavirus pandemic. Presenting information from three qualitative, interview-based, studies (conducted in 2002-2006, 2015-2019, and 2020-2021) we discuss the nature of women managers' work experiences since the millennium to frame discussion of their likely work prospects going forward. We claim, under neoliberalism, the enduring interaction of career precarity, organizational restructuring and technological surveillance will continue to effect, in adverse ways, the equilibrium between women managers' personal lives and professional work – notably given many confront increasing demands of technological connectivity and corporate availability whilst simultaneously managing significant responsibilities for parenting and care.

CMS: **Men, Masculinity and Unpaid Work: Experiences of Indian Millennials**

Author: **Arpana Rai**, *Indian Institute of Management, Udaipur*
Author: **Sagnika Datta**, *IIM Lucknow*

Are Indian millennial men more engaged in household chores? Are they resisting hegemonic masculinity and traditional gender norms? Do they practise masculinity that is characterised by higher engagement of men in household chores and gender-atypical division of household chores? In-depth interviews with 17 educated, married, middle-class urban Indian millennial men working at managerial positions in different Indian organisations provide interesting answers to the above questions. This study explores the changing notions of masculinity among Indian millennials from (un)doing gender perspective and the factors behind it. Findings suggest weakening perceptions of hegemonic masculinity tenets among Indian millennial men as they do not believe in the concepts such as 'men as primary breadwinner', 'men as the head of the family', and 'male privilege'. Though exposed to traditional gendered views and hegemonic masculinity ideals during their childhood as they saw their parents preach and practice doing gender for fulfilling household responsibilities, our respondents profess gender-neutral attitudes about household chores. Their accounts show that their masculinity is characterised by egalitarian division of household chores, i.e., they practice masculinity that retrenches hegemonic masculinity. Our findings suggest that several economic and demographic factors have reshaped Indian millennial men's attitudes towards gender norms and masculinity. Implications are discussed.

Author: **Dirk Lindebaum**, *Grenoble Ecole de Management*

Author: **Susanne Langer**, *Manchester Metropolitan U.*

Our essay problematizes the socio-economic conditions that give rise to cognitive enhancement at work. Unlike prior studies, we integrate the literatures on medicalization on the one hand, and human capital theory and cognitive capitalism (as core planks of neoliberalism) on the other, to propose the existence of a hitherto unrecognized phenomenon – the psycho-emotional deficitization of workers. We define it as an internalized version of external values of what it means to be a productive worker under given socio-economic conditions, which over time generates the affective experience of being deficient. We position this phenomenon as a direct response to medicalization and neoliberalism, and as an explanatory one for the interest in cognitive enhancement. It is, we argue, said deficitization that can only be remedied and psychologically redeemed through cognitive enhancement. Fromm's notion of social character provides the theoretical inspiration that helps us connect the aforementioned literatures and concepts, such that each round of enhancement strengthens the deficitization of workers. It is then this deficitization that shapes ever more profoundly the social character of the time. For this reason, in addition to teasing out theoretical implications, our essay is designed to help individuals see through the process of social character formation, and to articulate practical strategies for individuals wishing to resist the hype around enhancement.

Both the Covid-19 crisis and the emergence of innovative business models offer a powerful signal that the foundational assumptions of capitalism are increasingly in doubt. Business schools, however, appear to be followers rather than leaders in this historical moment of social change. While citizens, consumers and businesses are experimenting with new models of capitalism premised on balancing profits with social purpose and the private, public, and plural sectors (Mintzberg, 2015; Sachs, 1999; Sachs et al. 2021), business schools have been slow to change and appear to be struggling with their identity and purpose. What might be the foundational values of a post-pandemic market system? What might be the purpose of business organizations in a post-pandemic scenario? What would a post-pandemic business school look like? The aim of this Symposium is to explore the answer to these questions and their practical application in a conversation with three former Editors of the Academy of Management journals (Suddaby, Phan, Hollensbe) and two thought thinkers and innovators of management (Mintzberg), capitalism and sustainable development (Sachs, pre-recorded interview: <https://www.youtube.com/watch?v=42IU18Cy6ng&t=106s>).

This symposium is a continuation of the 2021 Symposium on the same topic, which gathered four influential leaders and innovators: • Jay Coen Gilbert, co-founder of B Lab and CEO of Imperative 21 • Raj Sisodia, co-founder of Conscious Capitalism • Charles Wookey, co-founder and CEO of A Blueprint for Better Business, and • Gerry George, former Dean of SMU Lee Kong Chian School of Business and professor at Georgetown University McDonough School of Business. We are thankful to the AOM Conference for allowing us to share the full video of the last symposium for you to watch: <https://bit.ly/3wK3a1x>. Looking forward to seeing you in Seattle! The Changing Boundaries of Work

Session Moderator: **Martina Hartner-Tiefenthaler**, *TU Wien*

OB: Gain vs. Strain: A Systematic Literature Review on Technology Based Work Extension

Author: **Julia Schoellbauer**, *U. of Vienna*
Author: **Martina Hartner-Tiefenthaler**, *TU Wien*
Author: **Clare Kelliher**, *Cranfield U.*

Workers engage in work-related communication and access digital work content outside of working hours. Scientific research on technology-based work extending behaviours has flourished in recent decades but has produced rather vague information about its relationship with workers' wellbeing. To answer this crucial question on wellbeing more clearly, we believe it necessary to recognize the complexity of this contemporary behavioural phenomenon and to differentiate its various time patterns. We systematically searched and analysed 81 questionnaire studies. Based on their measures, we were able to analyse the relationship between continuous (i.e., consecutive activities with a certain duration) and recurring work extending behaviours (i.e., activities with a certain frequency with a noticeable break in between) and various wellbeing indicators. Findings point towards three effects: a time-loss effect that is linked to both time patterns and relates to reduced time resources for private life and recovery, a straining effect of recurring work extending associated with negative affect and poor quality of life, and a gain effect of continuous work extending associated with higher levels of cognitive resources. We encourage future research to continue on this path and to systematically explore technology-based work extending in relation to all its temporal aspects.

OB: Construction of Work Centrality through Experiences at Work. 

Author: **Anuradha M V**, *IIM Visakhapatnam*

Work Centrality is defined as an individual's belief regarding the importance of work in one's life vis a vis other aspects like leisure, spending time with friends or family etc. (Kanungo, 1982, Paullay, Alliger & Stone-Romero, 1994). The concept has been measured in varied ways. The extant literature in this field looks at work centrality as an expression of work ethic and takes a passive view of the individual in ascribing centrality to work. Using the work narratives of 44 public sector bank employees in India, this study explored the process through which individuals define the role of work in their lives. The narrative analysis method and the grounded theory method were used in conjunction to develop a process theory to understand how people interpret work experiences to assign certain roles to work in their lives. All the participants said work was central to them. A deeper exploration revealed that people could state that work is central for them and yet mean different things. The heuristics and mechanisms used to assign these various roles to work are discussed.

OB: Neijuan: An Investigation of Overtime Work Among Chinese Urban White-Collar Employees

Author: **Mujie ZHAO**, *U. Nottingham Ningbo China*
Author: **Alim J. Beveridge**, *U. of Nottingham, China*

This paper focuses on the issue of overtime work among Chinese urban white-collar employees and aims to explain why employees are willing to work overtime and why the Red Queen Effect phenomenon (neijuan) has become so common in the Chinese workplace, from employees' subjective perspective. Through a review of prior research on overtime, we identified problems in the logic of supply and demand that has often been employed, and introduce Baudrillard's logic of social differentiation as an alternative. Semi-structured interviews were used to collect data about work, overtime, and daily life conditions from 22 white-collar participants from diverse backgrounds, who routinely work overtime despite relative material affluence. Our analysis of the data revealed the source of overtime work in a context of material affluence to be social differentiation processes constructed by signs with strong relevance with overtime activity including consumption, career ethic, interpersonal relationship, job keeping, and company market position improvement. Differentiation of professional capability was shown, on the other hand, to be an inadequate explanation for overtime work. Our findings are summarized in a conceptual framework describing the relationships between overtime and multiple forms of social differentiation.

OB: Out of Sight, But Not Out of Mind: When and Why Working Telecommuting Leads to Workplace Ties

Author: **Christian Troester**, *Kühne Logistics U.*

Meta-analytical results suggest a zero relationship between telecommuting and work relationships. However, non-findings do not mean that there are no effects but that there may be undiscovered moderators that sometimes lead to positive and sometimes negative effects of telecommuting on work relationships. The goal of this study is to test when telecommuting will have negative effects and when it will have positive effects on work relationships. In our study, we diverge from the dominant logic of telecommuting research to assume that physical distance has detrimental effects on work relationships. Instead, we assume that depending on the level of organizational identification, telecommuting can sometimes motivate employees to actively prevent a loss of work ties by engaging in more interpersonal OCB and other times lead to a loss of work ties. The findings of a longitudinal field study support this idea. The results also support our argument that it is important to account for the different dynamics between work tie retention and work tie creation. Finally, we find that while the effects of telecommuting were predominantly negative in the short-run (within-level), they could either be positive or negative in the long-run (between-level).

Author: **Saeedeh Shafiee Kristensen**, Aarhus U., Department of Management

The demand for success in the use of temporary organizations (TOs) within the functional hierarchies of permanent organizations (POs) requires serious attention in addressing tensions that emerge at the interface of the two organizations. Reintegration of the project workers back into their functional role in the PO after temporary project completion is one of these tensions. Although recently the experience of individual employees has received escalating interest in management research, studies dealing with reintegration phenomenon are scarce. This Grounded Theory study explores how the project workers of TOs experience their reintegration into the PO and resumption of their ordinary positions upon project completion and why they can have (un)successful reintegration experiences. The main result of this study is the empirically grounded identification of behavioral and contextual factors that affect reintegration. The theory is strengthened by providing a conceptual model that delineates how the project workers enact their reintegration by utilizing their behavioral resources and reflexivity and adaptability in interaction with the contextual factors. The model provides a theoretical basis for future empirical research on TOs as well as practical implications for practitioners and companies.

Leaders and their Followers

Session Moderator: **Xinxin Lu**, *Hunan U.*

OB: The Reciprocity of Shared and Empowering Leadership 

Author: **Kai Klasmeier**, *Federal Institute for Occupational Safety and Health (BAuA)*
Author: **Amelie Verena Güntner**, *U. of Zurich*
Author: **Joyce Elena Schleu**, *Radboud U. Nijmegen*

Leadership has mostly been considered as an unidirectional process centered on leaders influencing their followers. However, recent theoretical developments indicate that followers may also have an impact on their formal leader. In this pre-registered study, we investigate the interplay between shared leadership and formal team leadership (i.e., empowering leadership). We predict that leaders interpret their team's shared leadership as an investment to reach for common goals. Accordingly, their team's effort should improve the social exchange relationship with their team, reflected in higher trust which in turn should increase empowering leadership behavior of the leader. Further, we assume that this indirect relation is first-stage moderated by leader self-efficacy. We tested our assumptions in a longitudinal study with 721 team members and their leaders nested in 169 teams. Results from Bayesian cross-lagged panel modeling support our assumed mediation effect, while also pointing to a reverse effect of empowering leadership on shared leadership. The moderation effect was not supported. This study provides insights about the dynamic and reciprocal interplay between shared and formal leadership. Our findings underline that formal leaders do not perceive shared leadership as a threat, but rather value the team effort reflected in higher trust and decision latitude.

Paper is Available to Meeting Registrants Only.

OB: Effects of (In)Congruence in Leader-Team Proactive Personality 

Author: **Qi Shen**, *Xian Jiaotong U.*
Author: **Haoyu Wang**, *Xi'an Jiaotong U.*
Author: **Jinglin Bai**, *Xi'an Jiaotong U.*
Author: **Lijun Liu**, *INNER MONGOLIA MENGNIU DAIRY (GROUP) CO., LTD*

This research investigates the congruence and incongruence effects of leader-team proactive personality on team cohesiveness and collective team identification, which in turn affect team performance. Drawing on dominance complementarity theory, we propose that the incongruence of leader-team proactive personality exerts positive influence on team performance through team cohesiveness and collective team identification. In addition, we hypothesize that the congruence in leader-team proactive personality has an inverted-U shaped relationship with team cohesiveness and collective team identification, thus affecting subsequent team performance. Using a sample composed of 286 team leaders, 1,893 team members, and 286 manufacturing work teams, our hypothesized relationships received empirical support. Our findings provide a deeper understanding of how (in)congruence in personality traits functions differently at the team level. Our findings highlight both leader-team complementarity and a middle (rather than high/low) leader-team congruence in proactive personality facilitated key team processes and performance outcome.

Paper is Available to Meeting Registrants Only.

OB: Leader Narcissism and Team Burnout: A Longitudinal Moderated Mediation Study

Author: **Godbless Akaighe**, *U. of Sheffield*
Author: **Anna Topakas**, *U. of Sheffield*
Author: **Kristin Hildenbrand**, *U. of Sheffield*

There is evidence to suggest that leader narcissism is negatively linked to employee well-being. However, it is not known whether this effect also expands to team-level burnout. Given the team-based nature of work in many organizations, we explore this through drawing on social identity threat theory and using data from a three-wave longitudinal survey (293 employees in 87 teams from multiple organizations at time 3), we examined the effects of leader narcissism on team burnout via core self-evaluations (CSE) at the team level, using nested data (individuals nested in teams). We additionally explored the moderating role of team cohesiveness in the leader narcissism-team CSE link. Results generally supported the hypothesized relationships insofar as team member ratings of leader narcissism were negatively related to team CSE and team CSE was positively related to team burnout. However, team CSE did not mediate the leader narcissism-team burnout link. Interestingly, when accounting for the moderating effect of team cohesiveness, team CSE did mediate the effect of leader narcissism on team burnout. The effect of leader narcissism on team CSE was weaker for teams with high cohesiveness than for teams with low cohesiveness. Our findings emphasize that organizations should provide team-building opportunities to ensure teams enjoy high cohesiveness which is protective against the negative effects of leader narcissism.

OB: How and When Power Distance Oriented Leaders Shape Team Leader-member Exchange Configurations

Author: **Xinxin Lu**, *Hunan U.*
Author: **Yidong Tu**, *School of Economics and Management of Wuhan U.*

It is an untapped question "How do power distance-oriented leaders differentiate their relationships among the followers?" Integrating role theory and a configurational approach, the present research seeks to examine the effect of leader power distance orientation on different leader-member exchange (LMX) configurations and the relevant boundary conditions. With two-wave data among 645 employees from 119 groups, we tested our hypotheses using binary logistic regressions. The results suggested that leader power distance orientation is positively related to a solo-status high LMX configurations, but not significantly related to a bimodal or solo-status low LMX configurations. Moreover, we found support for the three-way interactions of leader power distance orientation, education diversity, and team task interdependence on LMX configurations, such that when team education diversity is high and task interdependence is low, the positive relationship of leader power distance orientation with the solo-status high LMX configuration and its negative relationship with the bimodal LMX configuration are significant. Theoretical and practical implications of the findings are discussed in detail.

Hostile, Moral, and Negative Emotions and Reactions

Session Moderator: **Jungwoo Ha**, *UCLy - ESDES - U. of Lyon*

OB: The Effects of Employment Status: Mediating Role of Relative Deprivation and Hostile Emotions 

Author: **Yiling Jin**, *Nankai U.*
Author: **Shan Shan Qian**, *Business School at Nankai U.*
Author: **Xun Cui**, *Nankai U.*

This study aims to understand why and when disadvantaged employment status relates to nonstandard employees' interpersonal behavior. Drawing on relative deprivation theory, this study proposes a sequential moderated mediation model in which disadvantaged employment status activates relative deprivation and hostile emotions toward standard employees (i.e., resentment, anger, and envy), and thereby spur interpersonal deviance. Further, this study posits that in-group identification moderates the relationship between relative deprivation and hostile emotions. Using multi-wave and multi-source data from a sample of 311 nonstandard employees in China, results showed that relative deprivation and hostile emotions towards standard employees sequentially mediate the effects of disadvantaged employment status on interpersonal deviance, and in-group identification enhances the positive effects of relative deprivation on interpersonal deviance through hostile emotions towards standard employees. These findings provide implications for theory and practice.

Paper is Available to Meeting Registrants Only.

OB: The Role of Moral Emotions in Reactions to Ethical and Unethical Leadership

Author: **So Young Jeong**, *Zayed U.*
Author: **Cong Sun**, *The Chinese U. of Hong Kong, Shenzhen*

Organizational leaders are increasingly viewed and evaluated through the lens of morality. Building on the Moral Foundations Theory and moralization of leadership model, we contend that ethical leadership will trigger other-praising emotions such as moral elevation leading to feedback-seeking behaviors. In contrast, unethical leadership will trigger other-condemning emotions such as disgust leading to interaction avoidance. We further predict that these affective processes of leadership moralizing will affect workplace attitudes and behaviors (OCB, voice, and turnover intention). Using a sample of 231 full-time employees based in China and a time-lagged survey design and structural equation modeling, we test and find support for our proposed relationships. Theoretical implications for ethical and unethical leadership and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Role of Leader Negative Emotions in Mitigating Employee Disgust Towards Leader Surface Acting

Author: **Yuchang Liang**, *Guanghua School of Management, Peking U.*
Author: **Xiaoyue Wu**, *Nanjing U. School of business*
Author: **Wei He**, *Nanjing U.*
Author: **Kong Zhou**, *Nanjing U. of Science and Technology*

Leading with emotional labor plays a vital role in the leadership process due to the functional social consequences of leaders' emotional displays. In this research, we advance this stream of research by focusing on employees' negative emotional response (i.e., disgust) to leader positive surface acting—displaying surface acting of positive emotions, and its downward implications for employee perceived leader effectiveness and leader-member exchange (LMX) quality. We also theorize that leaders' expressions of negative emotions during the display of positive surface acting could mitigate employees' negative affective and perceptual responses. The empirical results from an experience sampling study supported our hypothesized model, revealing that leader positive surface acting related less negatively to employee perceived leadership effectiveness and LMX quality via disgust when the leader expressed more (versus less) negative emotions. In addition, results from a vignette experiment replicated these findings and demonstrated perceived inauthenticity as a cognitive explanation for employees' negative affective responses to leaders displaying positive surface acting. Our research highlights the crucial roles of leader and employee emotional states in understanding the effectiveness of leader emotional labor.

OB: Thwarted Self-Promotion Attempts Lead to Counterproductive Reactions: The Role of Locus of Control 

Author: **Jungwoo Ha**, *UCLy - ESDES - U. of Lyon*

The current research examines instances in which individuals attempt to self-promote but are prevented from doing so (thwarted self-promotion). Using a measure and different manipulations of thwarted self-promotion and participants from three countries (the United Kingdom, the United States, and South Korea), I demonstrate that a lack of self-verification caused by thwarted self-promotion leads to uncertainty about one's competence (Studies 1), which generates various types of counterproductive cognitive reactions (Studies 2 and 3). Additionally, I show that these consequences of thwarted self-promotion are driven by individuals with an internal locus of control, but not by those with an external locus of control (Study 3). The current research contributes to the literature on impression management.

Paper is Available to Meeting Registrants Only.

Author: **Minyoung Cheong**, *Pennsylvania State U., Great Valley*

Author: **Jennifer Lee**, *Boston U.*

Author: **Jaehyung Ahn**, *Yonsei U.*

This research provides an alternative perspective to transactional cost theory through a study of the employee management relationship. We find an inverted U-shaped relationship between employees' task autonomy and their propensity for moral disengagement, showing task autonomy's positive impact on moral disengagement up to an inflection point and a negative one afterward. Additionally, employee's overall evaluation was found to moderate the relationship; both positive and negative impacts were strengthened for highly evaluated employees. The results suggest a detrimental impact of providing middling levels of task autonomy, which is especially more prevalent among the highly evaluated employees. We interpret the increased moral disengagement as the potential cost due to certain employees' exploitation of the locked-in relationship. Our work contributes to both theory and practice by adopting the known determinants of transaction cost and exploring the optimal level of autonomy given to employees in the effort to minimize employee's costly behavior.

People communicate constantly, in order to pursue different goals. One prominent goal in conversations and interactions is to make positive impressions on others, such as appearing trustworthy, warm, or competent. When successful at conveying positive impressions, people improve their chances of interpersonal and professional success. This symposium brings together novel research papers that theorize and empirically investigate the links among conversation goals, behaviors, and impression management. First, we identify the different—and often conflicting—goals that people may have in conversations, and the tradeoffs that people must make in managing their impressions. Next, across papers, we showcase several communication strategies that help people make positive impressions and effectively resolve the tradeoff that people face between appearing warm and appearing competent. Specifically, we identify when and why speech pauses, compliments to others, laughter, and ingratiating behaviors can help communicators achieve impression management and other interpersonal goals. Taken together, this set of research papers highlights the dilemmas we must navigate in conversation, and underscores the importance of communication for impression- and conflict management, and for organizational outcomes.

Entrepreneurship plays a critical role in society. Thus far, the academic focus on new ventures has almost exclusively been on how society affects entrepreneurship (i.e., amount and type of entrepreneurship, entrepreneurial opportunities, etc.) and entrepreneurship's contribution to socio-economic development. Yet, a new community of scholars is forming, developing a new stream of research that investigates how entrepreneurship has transformed and is affecting society. Specifically, scholarship in this new research stream investigates entrepreneurship through the prism of, for example, neoliberal ideology, future imaginaries, institutional change, and social movements to understand how entrepreneurship is affecting outcomes such as inequality, labor market changes, and the precarity of entrepreneurs. The need for this PDW emerges from the premise that a new research agenda will be instrumental in holistically assessing the societal outcomes in an entrepreneurial world to motivate new investigations into the changing role of organizations in society. Doing so, the output of this PDW will contribute to building a diverse research community and invigorate academic research by developing new perspectives on how entrepreneurs and their organizations (or the lack thereof) shape our social world to contribute to a better understanding of the AOM conference theme on how to create a better world together.

ONE Doctoral Consortium 
ONE Doctoral Consortium

Organizer: **Sara B. Soderstrom**, *U. of Michigan*
Organizer: **Grace Augustine**, *Cass Business School, City U. London*
Participant: **Stuart A. Allen**, *Robert Morris U.*
Participant: **Shelley F. Mitchell**, *Hult International Business School*

The ONE Doctoral Consortium aims to offer a networking, learning, and research reflection opportunity to doctoral students engaged in organizations and the natural environment (ONE) research. A maximum number of 24 doctoral students will be selected based on their research quality and representation of a diversity of academic institutions, geographic interests, and research topics. The aim of the doctoral consortium is to provide doctoral students with the opportunity to have faculty members reflect on their work, to integrate them into international research networks, and to create new networks of their own. The consortium will be cross-disciplinary and open to different theoretical perspectives and the faculty members involved coming from different cultural and research backgrounds. The format of the doctoral consortium is informal and open, but doctoral students will come well-prepared to optimize the interaction with other doctoral students and faculty. The format will integrate remote and in person programming. Students will participate in 1:1 feedback sessions with senior scholars prior to AOM, engage in workshops collectively during AOM, and then have a Fall “booster” session (joint with OB) for additional support and advice. Our aim across sessions is to ensure students are able to get profound advice, learn about the work of others, and get to know each other. Doctoral students will get to know and engage in dialogue with senior and junior ONE faculty from various parts of the world who will share their knowledge and experiences from their research, teaching, and careers.

The event is oversubscribed each year. We encourage participants to apply early. This is an application based doctoral consortium. Please email Sara Soderstrom at capasb@umich.edu with any questions.

**Co-creating ‘Decent Work’ Through Appreciative
Inquiry Methodologies and Tools**
Co-creating ‘Decent Work’

Session Chair: **Tony Wall**, *Liverpool Business School, Liverpool John Moores U.*
Facilitator: **Ann Hindley**, *Chester Business School, U. of Chester*
Facilitator: **Scott Foster**, *Liverpool Business School, John Moore’s U.*

‘Decent Work’ is a United Nations’ Sustainable Development Goal aspiration and psychological construct associated with ‘good’ employment conditions (e.g. stability, security, fair pay, social protection, equality of opportunity and treatment for all women and men). This session draws from a major international project to re-vision ‘Decent Work’ for and with those who are often most excluded from such opportunities – minority ethnic students and graduates. Using adapted processes and tools from Appreciative Inquiry, this session demonstrates how minority ethnic groups can practically work with each other and influential policy-makers, employers, and university seniors, to co-create visions and pathways towards enhanced graduate futures. We facilitate an experiential process which (1) demonstrates the adapted Appreciative Inquiry process applied to re-visioning Decent Work, and (2) outlines the framework of practical adaptations to enable inclusion (e.g. a youth advisory panel, ongoing cultural recognition and validation, and confidence building through chairing and public speaking). Evidence tells us the adaptations cross boundaries of teaching, research and knowledge exchange, and provide a platform for re-energized motivation, aspiration and practical skill for all involved. The session invites participants to imagine the application of the tools in their own contexts and explore the adaptations they might make to develop the inclusivity of these adaptations given wider, societal marginalization. This session is therefore fundamentally about teaching and learning approaches focused on “Creating A Better World Together”.

Embedding Employability in Hybrid Teaching and Learning: Engaging Internal and External Stakeholders
Hybrid Student Employability Development

Participant: **Xuan Feng**, *Nottingham U. Business School China*
Participant: **Martin Lockett**, *Nottingham U. Business School China*

Universities play an important role in equipping students with the competences required by future employers in a turbulent post-Covid job market. Building on the 2019 and 2020 successful “pre-Covid” AOM TLC workshops, we propose a session focusing on new ways of engaging faculty members, students, and external stakeholders (employers and alumni) to embed the real-world experience in hybrid learning. Participants can share and learn approaches to reduce or avoid the detrimental impact of the pandemic on graduates’ employment prospects. This workshop covers both the changing graduate skills gap and hybrid employability development. It starts with the results of the 2021 research project into the core post-Covid employability competencies with data from HR leaders in 110 multinational enterprises, including an employability competence roadmap and the major skill gaps viewed by global employers. Next, an award-winning hybrid student employability development framework will be shared that embeds real-world experience in hybrid curricular and extra-curricular activities. Through employer-sponsored hybrid experiential learning activities, global mentorship, career coaching and digitalized student projects, we identify new directions for employability development. The audience will actively participate in discussions to explore new ways forward to help students access real-world practice, global career resources and job opportunities in a time of restricted global mobility.

Lessons from the Pandemic: A Delphi Study on Technology-Enabled Business Education
Delphi Study on Tech-Enabled Business Education

Presenter: **Tiffany Bayley**, *Ivey Business School*
Presenter: **Robert Austin**, *Ivey Business School*
Presenter: **David Wood**, *Ivey Business School*
Panelist: **Michael Cusumano**, *Massachusetts Institute of Technology*
Panelist: **Yael Grushka-Cockayne**, -
Panelist: **Tawnya Means**, *U. of Illinois at Urbana-Champaign*
Panelist: **Bill Schiano**, *Bentley U.*

Many instructors have been incorporating technology in their classroom teaching, well before the COVID-19 pandemic accelerated the need for online meeting platforms and being proficient in asynchronous or hybrid lesson planning. Since March 2020, educators have been on a crash course on implementing new technologies and revamping their course designs, with some instructors looking forward to the return of their pre-pandemic teaching style and others embracing the radical changes they've made. Our Delphi study tapped into the opinions of 23 experts across all disciplines of post-secondary business education whose roles are in academia, publishing, and consulting, and whose responses shed light on the technologies that enhance student learning and are worth maintaining as we gradually shift back to in-person teaching. To sustain the implementation of sensible technologies that engage students and have positive effects on student learning, our expert panel identified several strategies to mitigate challenges many educators face, from willingness to adopt technology to scarcity of funding and time. This interactive session will allow participants to engage directly with members from our expert panel.

**(Re)evaluate the learning by doing experience Crossed Self-
Confrontation to Verbalize KSA: a Method**
(Re)evaluate the Learning by Doing Experience

Facilitator: **Sandrine LEPONTOIS**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*
Facilitator: **Stéphane Foliard**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*
Facilitator: **Joseph Tixier**, *EMLYON Business School*
Facilitator: **Laëtitia Gabay-Mariani**, *ESSCA School of Management*
Facilitator: **Jean Bibeau**, *U. de Sherbrooke*
Session Chair: **Helka Kalliomäki**, *U. of Vaasa*

For our students, it is sometimes difficult to find the words to express the knowledge, skills, and attitudes (KSA) they have developed through a learning-by-doing program. While they are able to describe what they have done, they often have difficulty to turn that particular situation into new KSAs. With regard to this reflective practice, teachers or trainers are actually facing the same problem themselves and it is also difficult for them to help students in this practice. More generally, it is difficult for a practitioner (student or trainer) to put words on his or her particular practice. Most of the time, learning-by-doing programs only focus on the concrete outcome: the project itself, instead of the learning outcomes. Yet, verbalizing one's skills seems to be of primary importance to value one's KSAs (Quinones, Ehrenstein, 1997; Kakouris, Liargovas, 2020). The purpose of this workshop is to train the trainers, using an intersubjective methodology (crossed self-confrontation –Duboscq, Clot, 2010). The use of this methodology will help them to verbalize their own KSA. Then, they will be able to replicate the methodology to help students to verbalize the KSA developed through action. They will also use this methodology in a professional development process. They will find the right expression of their practices in the dialogue with their peers. All the teachers and trainers from all the disciplines using learning-by-doing programs could be interested in this workshop. This workshop has been developed and tested for entrepreneurship teachers, trainers and students.

Attendees only need their smartphones to film their own interviews. Privacy concerns are addressed in the process. The recording will remain on the attendees' personal smartphone.

**Fusing of the Minds: A Novel Approach to Developing
Transdisciplinary Sustainability Curriculum**
A Novel Approach to Transdisciplinary Curriculum

Presenter: **Christine Hegarty Mooney**, *Northern Illinois U.*
Presenter: **David Szymanski**, *Bentley U.*
Presenter: **Rachel Elaine Wilson**, -
Presenter: **Otgontsetseg Erhemjamts**, *Bentley U.*
Session Chair: **FUHEJIN**, *Binghamton U.-State U. of New York*

Wicked problems exist in a world of interconnected natural and human systems, including commerce, the driver of economies. Issues of sustainability, from the management of fisheries (Jentoft and Chuenpagdee, 2009) to the “super wicked” problem of global climate change (Levin et al., 2012), are especially wicked because they involve the three domains of “people, planet, and profit.” Meeting sustainable development goals for a growing global population, in the face of energy, water, and mineral resource challenges, all situated within the super-wicked problem of climate change and steeped in earth system science and economics, requires reshaping the way we educate the next generation of decision-makers. In this session, we provide an overview of a novel approach to transdisciplinary sustainability curriculum. The session includes an overview of the approach, an experiential workshop engaging participants in the process of module design, and an access to two fully developed curriculum modules. At the end of the session, participants will be able to apply the framework for designing both common and course specific modules to develop a transdisciplinary sustainability curriculum at their own institutions.

Third Generation Coaching for Contemporary Workforce
Challenges: T&L Insights
Developing the Ted Lasso Leader

Participant: **Kate Joyner**, *Graduate School of Business, QUT*
Session Chair: **Eva Alfoldi**, *U. of Delaware*

The business imperative of engagement and retention of talent post-COVID brings renewed focus to the leadership skills of coaching and mentoring. Within this discipline, the third-generation coaching approach, which seeks to develop purpose and community in the workplace, is a useful frame for leadership and executive development programs. The character Ted Lasso of the recently popular series serves as a useful and well-known illustration of these leadership mindsets and skills. This session is designed to speak to the interest generated by the Leadership through Coaching and Mentoring (L-CAM) program of an Australian Graduate Business School in the corporate sector and from other universities. The session will focus on the application of 'third-generation coaching' approaches to leader development, and how this concept has evolved as a response to the changing world of work. It provides participants with an interactive experience with the learning design choices and core learning models of this Executive Graduate Certificate program.

**Transitional Entrepreneurship: The Case of Veteran,
Immigrant, Women, and Minority Communities**
Transitional Entrepreneurship

Organizer: **Kaveh Moghaddam**, *U. of Houston, Victoria*
Organizer: **Anil Nair**, *Old Dominion U.*

The goal of this caucus is to examine and describe the concept of transitional entrepreneurship and draw attention to entrepreneurship in the following communities: veterans, immigrants and refugees, women, minorities, and other historically marginalized groups.

This caucus will encourage the development of new ideas and address emerging topics on transitional entrepreneurship (entrepreneurship practices of Veteran, Immigrant, Women, and Minority Communities). It also provides an opportunity for future research collaborations among participants. Information about the "New England Journal of Entrepreneurship" special issue on transitional entrepreneurship and other publication opportunities will be discussed.

Green- and Brownwashing (Virtual Live)

Session Moderator: **A. Wren Montgomery**, *Ivey Business School*

ONE: The End of Greenwashing? A Renewed Infrastructure for CSR Information in the New Normal

Author: **Ariela Caglio**, *Bocconi U.*
Author: **Gaia Melloni**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Janet Su**, *U. of Lausanne*

Despite the negative consequences of the COVID-19 pandemic, economic recession, and climate crisis, increased public demand for transparency and credible corporate social responsibility (CSR) information represents a positive outcome of these recent disruptions. Such outcomes urge a re-definition of the CSR information infrastructure in the new normal, to allow for the incorporation of a novel system perspective of resilience and sustainability coupled with a more diffused awareness of sustainability, converging stakeholder expectations on CSR, and a widespread access to CSR information thanks to technological and regulatory factors. Our dynamic model suggests a transition from an old normal of opacity, where it is difficult to detect and punish greenwashing, to a new normal of higher transparency, where it is easier to accurately evaluate the degree to which CSR is implemented. We predict organizational responses maintaining a distinction between CSR information quality (substantive vs symbolic) and its timing (transitory vs enduring) and argue that in the new CSR information infrastructure, firms' incentives to implement and perpetuate opportunistic CSR information reporting, i.e., to greenwash, are constrained, as such behaviors impair their legitimacy and ability to survive. Our framework expands prior dynamic models on the implications of CSR information and transparency, and sheds light on the plausible positive outcomes of the COVID-19 crisis.

ONE: Why Firms Hide Their Light: Brownwash, Silence, and Bifurcated Stakeholder Communication

Author: **A. Wren Montgomery**, *Ivey Business School*
Author: **Jenifer Lynn Robertson**, *U. of Western Ontario*

In the face of rapidly increasing public pressure, numerous firms are rushing to trumpet their environmental and social achievements on net-zero, ESG metrics, and justice and inequality commitments to anyone who will listen. While claims of greenwashing abound and are the subject of increasing scrutiny, many firms making real changes have, paradoxically, chosen to downplay and understate their accomplishments. In this paper we draw on emerging literature on brownwashing and silence to offer a comprehensive study of why and how firms undertake such activities, linking extant insights as well as offering a novel model and reconceptualization. Our rich qualitative study with leaders at over 50 North American wineries allows us to offer in depth and in situ insights. Our findings, first, highlight new mechanisms of non-communication not yet identified in this emerging literature. Second, our analysis offers the important insight that firms don't simply hide their achievements in a reactive manner to avoid negative stakeholder pressures, as in current theory, but also do so when their practices are leading or more proactive than those of stakeholders. Finally, we examine three strategies by which firms divide and conquer through what we term bifurcated stakeholder communications: locational, channel, and temporal. This study also has important practical implications as society, policymakers, and NGOs seek to drive industry change on social and environmental grand challenges, and strive to engage firms publicly in leading change and addressing these challenges.

Paper is Available to Meeting Registrants Only.

ONE: Can Sticks And Stones Break Your Bones? A Cross-Country Study Of The State's Impact On Greenwashing

Author: **Svetlana Flankova**, *U. of Liverpool*
Author: **Valentina Marano**, *Northeastern U.*
Author: **Marc Van Essen**, *U. of South Carolina*

Governments are playing an increasingly important role in promoting corporate environmental sustainability. However, little is known about their ability to discourage firms from engaging in greenwashing by selectively disclosing more favorable and benign environmental information. In this paper, we explore two important mechanisms through which governments can affect firms' behaviors in this area – environmental regulations and state ownership. We also study whether presence of external audit impacts the effectiveness of environmental regulations and state ownership in greenwashing mitigation. Our preliminary analysis is based on a sample of 1,731 firms from 34 countries between 2007 and 2017 and shows that both environmental regulations and state ownership are effective in preventing greenwashing by exerting coercive pressures and creating governance structures that align state owners' and managers' objectives. We also find that while central state ownership has a negative mitigating effect on firms' greenwashing, ownership by local state entities or sovereign wealth funds does not have a significant impact. Lastly, we show that external audit of non-financial disclosure provides an additional layer of monitoring that can substitute regulations' mitigation effect on firms' greenwashing.

Sustainable Impact and Innovation (Virtual Live)

Session Moderator: **Bettina Becker**, *Durham U. Business School*

ONE: Regeneration Innovation: The Adventure of Innovation in Time and Place Towards Sustainability  

Author: **Mac Nguyen**, *Gustavson School of Business, U. of Victoria*

This paper explores how a sense of time and a sense of place shape the development of different innovation types to tackle sustainability challenges. Innovation which refers to new and potentially useful ideas, products, services, or processes is developed based on given cognitions (or cognitive frame). Such cognitive frames are influenced by time and place as fundamental cultural assumptions. Given that globalization and digitalization have fundamentally altered how organizations experience and value time and place, this paper proposes a typology of sustainability-oriented innovation and theorizes how two cognitive frames—a sense of time and a sense of place interact to shape the content and structure of multiple types of innovation for sustainability. In so doing, this study provides a spatiotemporal perspective to the sustainability and innovation literature by bringing together previously disconnected research streams on time and place. Moreover, this work also highlights the importance of understanding the origins, not just the outcomes, of innovation development.

Paper is Available to Meeting Registrants Only.

ONE: Environmental Additionality: The Effect of Innovation Support on Firms' Eco-Innovation Strategies 

Author: **Bettina Becker**, *Durham U. Business School*
Author: **Abel Lucena**, *U. of the Balearic Islands*

This paper examines the effect of generic innovation policy on eco-innovation rather than generic innovation. Hence in doing so, the paper analyses the existence of environmental additionality of generic innovation policy. The empirical analysis applies propensity score matching to account for endogeneity and unobserved firm heterogeneity, using Spanish firm level data during 2008-2016. We find that in the short term, regional policy is effective in stimulating eco-process innovation, and in complementing national policy in fostering eco-product innovation. Conversely, national policy is effective in increasing eco-product innovation. Both are similarly effective in incentivising the reduction of environmental impact in dirty industries.

Paper is Available to Meeting Registrants Only.

ONE: The Design of Incumbent-Sponsored Meta-Organizations for Sustainability-Oriented Innovation 

Author: **Sebastian Priestersberger**, *WU Vienna U. of Economics and Business*
Author: **Melanie Wiener**, *WU Vienna U. of Economics and Business*
Author: **Werner Helmut Hoffmann**, *WU Vienna U. of Economics and Business*

This paper empirically investigates the design of incumbent-hosted meta-organizations of leading electricity utilities in Europe. Meta-organizations have emerged as an important vehicle to create sustainability-oriented innovation through the cooperation of interdisciplinary agents. While the activities of meta-organizations for sustainability-oriented innovation are well studied, our understanding of the design of incumbent-hosted meta-organizations is still limited. The investigated sample of incumbent-hosted meta-organizations shows five dimensions in common: Identification and alignment, mutual chartering, task division, task allocation and implementation as well as reward distribution. This work contributes to two lines of research: Regarding the organization design literature we showcase the relevance of established dimensions for meta-organizations and identify two new ones (identification and alignment, mutual chartering). Regarding the meta-organization literature we showcase the relevance of having an organization design lens on meta-organizations for uncovering performance triggers. Lastly, concerning the incumbent adaption literature our findings highlight how the meta-organization design supports incumbents in adapting to changing environments.

Paper is NOT Available. Please contact the author(s).

ONE: Scaling Social Impact: A Qualitative Meta-Analysis 

Author: **Robert Frederic Penz**, *Leuphana U. Lüneburg*

William H. Newman Award Nominee

In this study, I investigated how organizations scale positive social impact. Therefore, I re-examined, collectively analyzed, and synthesized the findings of 25 case studies on scaling social impact in a qualitative meta-analysis. The results show that social impact scaling processes converge around four distinct process archetypes (the provider, the integrator, the transformer, and the catalyst) that lead to different types of social impact (breadth impact, depth impact, transformative impact, and systems change). By differentiating the four process archetypes, the respective pre-conditions, scaling mechanisms, and social impact types the study, first, provides valuable insights into the relation between scaling an organization and scaling social impact, and, second, contributes to building a more comprehensive and generalizable process theory of scaling social impact.

Facilitator: **Henrik Berglund**, *Chalmers U. of Technology*
Facilitator: **Katharina Hoelzle**, *U. of Stuttgart*

This Professional Development Workshop (PDW) on ‘Design Science in Entrepreneurship and Innovation’ gives scholars and practitioners an opportunity to learn how to conduct design science in entrepreneurship and innovation. Building on the successful PDW last year, this year’s PDW aims at digging deeper into methodical aspects of the design science approach. The aim is to share ideas and discuss different methodologies, the use of exploratory and creative methods for designing, and best practices for working in transdisciplinary design science teams. The PDW will be an interactive and engaging hybrid format with two parts. Part 1 will be an interactive presenter panel with experienced design science scholars from the fields of entrepreneurship, technology and innovation, and information systems. Part 2 will be a market-of-makers format to initiate discussions on burning questions, and to initiate novel design science research projects. Overall, this innovative PDW aims at getting participants inspired, learning from others, and building community.

Employee Perspectives in HRM

Session Moderator: **Karin Sanders**, *UNSW Business School, Australia*

HR: **Tightness-Looseness and Perceived HR Strength Research: Results from a Meta-Analysis**     

Author: **Karin Sanders**, *UNSW Business School, Australia*

Author: **Timothy Colin Bednall**, *Swinburne Business School, Swinburne U. of Technology*

Perceived HR strength—referring to employees’ understanding of HR within their organization—has been shown to mediate the relationship between bundles of HR practices and employee outcomes. However, we lack knowledge as to whether this mediating effect differs across cultures. In this paper, we examine the influence of the cultural dimension of tightness-looseness, which focuses on the strength of social norms and the degree of sanctioning across cultures, on the mediation effect of perceived HR strength for employee well-being and their discretionary behaviors. Results of a meta-analysis from 47 studies (comprising 70 samples and 31,229 unique participants) in 22 countries show that the mediating effect of perceived HR strength is stronger in tight cultures, even after controlling for the national cultural values of power distance, in-group collectivism and performance orientation. Theoretical and practical implications of these results are discussed.

Paper is Available to Meeting Registrants Only.

HR: **All Work Intensity is Not Created Equal: Effort Motives and Well-Being at a Grocery Chain** 

Author: **Argyro Avgoustaki**, *ESCP Business School*

Author: **Hans Frankort**, *City, U. of London*

Prior research has documented that in contexts in which work intensity is high, employee well-being varies with the extent to which different jobs afford discretion on how and when to carry out the work. We move beyond the job characteristic of discretion and argue in this paper that in high-intensity contexts, employee well-being also varies with employees’ motives for working intensively. Specifically, introducing self-determination theory to the domain of work intensity, we predict that job satisfaction is higher, and quit intentions are lower, when intensive work is motivated by explicit or implicit incentives rather than job demands, and by intrinsic reasons rather than explicit or implicit incentives. Original data from a Greek grocery chain – a setting in which work intensity is well above the European average – generate corroborative evidence. Our inferences are generally robust to adjustments for a rich set of individual, job, and workplace characteristics, and once instrumenting the motives for intensive work. We conclude that well-being in high-intensity work settings varies with employee motives independently from the job characteristic of discretion.

HR: **Differing Impacts of HR Attribution on Commitment: The Moderating Role of Self-Perceived Status**

Author: **Mijeong Kim**, *Korea U. Business School*

Author: **Inseong Jeong**, *Lingnan U.*

Author: **Johngseok Bae**, *Korea U.*

Service organizations pursue two goals of employee well-being and organizational performance as primary for their human resource management. Research has suggested that these two goals draw ambivalence attributions (i.e., HR well-being attribution and HR performance attribution) which have opposite impacts on employee attitudes. However, research has yet considered how to relieve the tension from the attributions. We attempt to elucidate the process of how a high-performance work system (HPWS) elicits employee affective commitment through HR well-being and HR performance attributions and to suggest how to attenuate the contrary effects. Specifically, drawing from theory on the psychological experience of status, we argue that employees’ self-perceived status moderates the relationship between HR performance attribution and affective commitment. With data from 475 nurses in 82 work units, we found that an HPWS exerts HR well-being and HR performance attribution simultaneously, but only HR well-being attribution, not HR performance attribution, was significantly related to affective commitment. We also found the moderating effect of self-perceived status such that HR performance attribution is positively related to affective commitment when self-perceived status is high. These findings offer critical theoretical insights with equally important practical implications.

HR: **Listening to Employee Voice: Expectations Content and Psychological Contract Process**

Author: **Vijaya Venkateswaran**, *Indian Institute of Management, Tiruchirappalli*

This paper explores the temporal and spatial dimension of employee expectations from two lenses. We have categorised those as temporal based on the time factor and those as spatial based on the context factor as related to the organisational sector or employee segment characteristic. The first is a literature review over three periods – 1990 to 1999, 2000- 2010 and 2011- 2021. The second is an attempt to synthesise our findings from primary qualitative and quantitative data-based research on employee expectations on a few employee segments undertaken from 2009-2020. We have identified common and unique expectations across temporal and spatial dimensions. We conceptualise and categorise employee expectations holistically as having a consistent, contemporary and /or contextual attribute at the surface level which reflects a standard generic understanding of employee expectations. At a deeper core level, employee expectations can be very specific to each individual. We propose that this is the set of personal PET expectations which could emerge as a combination of the three attributes. These expectations are very idiosyncratic and significant for each employee which depends on the personal life context of the employee. We discuss the implications of managing the psychological contract process based on the PET-SET-MET dimensions.

Employee Health and Emotional Well-being

Session Moderator: **Munmun Goswami**, *research scholar, XLRI Jamshedpur, India*

HR: “Remote Abusive Supervision – It’s A Reality!” Evidence from India

Author: **Munmun Goswami**, *research scholar, XLRI Jamshedpur, India*

The world has moved into mandated work-from-home options since the onset of the Covid19 pandemic. Brought into being due to external compulsions, many organizations have woken up to the ‘new normal’ way of functioning, a hybrid between offline and online workspaces. Abusive supervisory behaviour adversely affects a subordinate's work behaviour and outcomes (Tepper, 2000), even remotely (Liu, 2020; Valle et al., 2021). In this study, we explored the possibility of negative leadership behaviour (abusive supervision) occurring remotely and how it impacts the employee’s life satisfaction experiences in the long run. Drawing support from the Conservation of Resources Theory (Hobfoll, 1989, 2002), we specifically studied the impact of remote abusive supervision (RAS) on life satisfaction (LS) through the mediating roles of obsessive work passion (OWP), work-to-life conflict (WLC), and the moderating role of ICT usage during non-working hours (ICT-use). To empirically validate the hypothesized model, we collected data from 236 Indian working adults (married, staying in a nuclear family, and having dependant child/ children at home). Using SPSS AMOS (v.26), we conducted path analysis with SEM that supported the hypothesized model. Results supported our hypothesized model. Remote abusive supervision is negatively related to life satisfaction, and the relationship is positively mediated by obsessive work passion and work-to-life conflict. ICT-use moderates between OWP and WLC and also WLC and LS. Practical and theoretical implications are also mentioned herein.

HR: Exploring the Dreadful Agony and Combating the Hideous Shades of Workplace Loneliness 

Author: **Amitabh Anand**, *Excelia Business School, CERIM*

Author: **Prantika Ray**, *Indian Institute of Management Kozhikode*

Author: **Anjana Karumathil**, *Indian Institute of Management, Bangalore*

Scholars have explored the issue of loneliness and its impact on individuals and society for more over half century; yet, from a theoretical standpoint, the intellectual stance of workplace loneliness (WL) is nascent, having arisen in the previous decade. Despite several studies highlighting the rising frequency of WL and its harmful effects on individual and organizational performance, there has been a lack of scholarly effort devoted to analyzing the existing literature in this topic, resulting in a fragmented body of empirical insights. This paper fills a gap in the literature by doing a comprehensive analysis and synthesis of the WL literature from 1984 to 2021. Based on the findings of the literature research, this paper defines the causes of WL while also providing strategies that can be employed to reduce the occurrence of WL. This paper concludes by identifying promising areas for future research in efforts to progress scholarly research.

HR: The Relationship Between Employee Excess Weight and Turnover: A Longitudinal Field Study 

Author: **Dongyuan Wu**, *Fudan U.*

Author: **Mahl Geum Choi**, *Michigan State U.*

Author: **Mark V Roehling**, *Michigan State U.*

The global obesity epidemic, together with the high cost of employee turnover, makes it increasingly likely that employment decisions will be influenced by employers’ assessments of the risk of turnover associated with overweight and obese employees. There currently appears to be a widely held belief that both voluntary and involuntary turnover is greater among overweight and obese employees. This study puts that belief to the test. Based on our review of the literature, it is the first study to investigate the relationship between employee weight and both voluntary and involuntary turnover behavior using a nationally representative sample and longitudinal data (the National Longitudinal Study Youth 1979). We found that overweight and obese people are less likely to turnover voluntarily than their normal weight counterparts, whereas there is no relationship between excess weight levels and involuntary turnover. The study’s theoretical and practical implications are discussed, and future research directions are suggested.

HR: Working at Home to Living at Work: Ramifications of Digitalised Workplaces

Author: **Akhila Veldandi**, *Indian Institute of Management, Indore*

The rapid spread of coronavirus disease across borders throughout the globe changed the functioning of organizations. More specifically, organizations in the Information Technology (IT) sector had made significant changes in their organizational processes. One significant change was the shift towards working from home. This article aims to understand the experiences of employees working from home and the emotional consequences of those experiences due to digitalised workplaces. Our study is a qualitative inquiry of the unique experiences of 20 IT employees working in the digitalised workplace during a nationwide lockdown in India. The lived experiences of employees during lockdown elicited that work from home, which in general is considered a blessing in disguise was gradually turning into a curse because of paucity of social bonding, thereby leading to the melancholy of crisis among individuals. We observed distorted work-life balance among employees emerging from blurring boundaries between work and personal life. Hence, the employees resorted to coping through psychological adjustments to new routines. A majority of the workers felt that full-time work from home had taken a toll on their mental health, leading to frustration, stagnation, and depression. Organizational support emerged as a silver lining amidst chaos. This study is one of the early and novel accounts of the implications of digitalised workplaces on employees working virtually for a significant duration for the first-time. We collected the data from March, 2020 to May, 2020 when the outbreak of COVID-19 was at its peak. Hence, the accounts of these employees are genuine and first-hand experiences of the initial shift in organizational processes.

Star Performers and Human Capital

Session Moderator: **Richard Hunt**, *Virginia Tech*

HR: **Assessing the Crowding-Out Effects of Star Performers**  

Author: **Richard Hunt**, *Virginia Tech*

Author: **Eham Asgari**, *Michigan Technological U.*

The burgeoning literature on star performers has deep roots in and profoundly important implications for strategic human resource management. As the “war for talent” only becomes more concerning for HR scholars and managers, the importance of star performers – the uncommonly productive, innovative, seemingly indispensable sources of value-generating novel outcomes for organizations – has largely passed unquestioned. But stars in the human capital context exert complex influence across firm-level “solar systems.” Recent scholarly work has begun to shed light on the less desirable impacts of stars on their peers and organizations. Extending and enhancing this emergent stream, our study breaks new ground by developing and testing a crowding out theory of stars. Using a sample of 835 specialty contractors, we show that despite the many favorable impacts of star performers, the disproportionate attention and resources that flow to stars may actually leave firms worse off, especially among firms with star systems that emphasize hiring stars from outside the organization rather than developing talent internally. Our findings provide scholars and practitioners with new opportunities to reevaluate the potential role of remarkable individuals in the knowledge economy, thereby better illuminating the boundary conditions on how stars and star systems impact organizational outcomes.

HR: **Antecedents of Human Capital Erosion**

Author: **Tugee Yerlitas**, *ISM U. of Management and Economics*

Author: **Iona Buciuniene**, *ISM U. of Management and Economics*

Organizations have been increasingly challenged to evaluate and adjust their human capital to changing business demands and to fill in the skills gap required to maintain productivity. In this review, we analyze how human capital may erode within an organization. We define human capital erosion as human capital diminishment over time related to an individual’s knowledge, skills and abilities deviation from the required, leading to a lower value generation at a workplace. We gather antecedents of human capital value diminishment by looking at interdisciplinary strategic human resource management, management, and economics literature, and aim to develop a human capital erosion framework which integrates human capital erosion antecedents. Our theorizing contributes to strategic human resource management research by revealing how human capital erosion occurs in an organization and leads to reconsidering the meaning of human capital in strategic human resource management literature by demonstrating the importance of health as a component of human capital.

HR: **Star Employees’ Network Evolution and Dynamic Impact on Peer Performance**   

Author: **Hongzhi Chen**, *Nanjing U. School of business*

Author: **Benjamin B. Dunford**, *Purdue U.*

Author: **Matt Troup**, *Conway Regional Health System*

Author: **Wayne Boss**, *U. of Colorado*

In this study we address two important questions regarding the temporal dynamics of star employees. 1) How do star employees’ and peers’ networks evolve over time? 2) Does star employees’ impact on peers’ performance change over time? Integrating research on network dynamics and relational work, we argue that there are temporal variations in stars’ network evolution and their impacts on peers. Based on personnel and email network data from a health care organization in the United States, we found that internal formal status was positively related to tie creation in stars network and that the proportion of status stars in a group was positively related to tie creation in group members’ network. However, both network-expanding effects diminished over time. Further, we found that the proportion of stars in a group had a changing impact — it dampens group members’ performance in the short-term yet increases it in the long-term. Overall, this study extends research on talent management and network dynamics, offering important theoretical and practical insights.

HR: **The Interplay Between Star Players’ and Coaches’ Human Capital on Team Performance**

Author: **Tian-Jyun Gong**, *National Kaohsiung U. of Science and Technology*

Author: **Hsu-Chu Wu**, *National Sun Yat-Sen U.*

Although stars generate majority contributions and create competitive advantages for organizations, managing stars and optimize their contributions can be difficult. We explore the two boundary conditions of the stars’ general human capital, stars’ team-specific human capital and managers’ experience. By analyzing National Basketball Association (NBA) teams from 1996/1997 to 2016/2017 seasons, we found that stars’ team-specific human capital is complementary to their general human capital and managers’ human capital hinders the benefits of stars’ team-specific human capital. Our results highlight the importance of team-specific human capital and the interplay of stars’ and managers’ human capital in promoting team performance. This study also provides practical implications for recruitment, management, staffing, and retention of stars.

The Different Faces of Employee Ownership

Session Moderator: **Stephan Harms**, *Leibniz U. Hannover*

HR: The Multi-Level Nature of Psychological Ownership: Exploring its Antecedents and Consequences 

Author: **Stephan Harms**, *Leibniz U. Hannover*

Scholars emphasize the importance of psychological ownership (i.e., a feeling of possession towards an object independent of legal ownership) for desired behaviors and attitudes in corporate contexts. Psychological ownership is a multi-level phenomenon, meaning that the emotional attachment it implies might pertain to the overall organization as well as to organizational sub-units (e.g. business units). Hitherto, however, there is little empirical evidence on the antecedents, consequences, and vertical spillover effects of psychological ownership. To address this research gap, our paper presents arguments explaining how psychological ownership positively affects organizational performance by diffusing from higher levels of the organization towards lower levels. Furthermore, we suggest that error management culture and high affective commitment within teams, constitutes environmental conditions that let psychological ownership thrive. To test our theorizing, we created a unique dataset combining archival data with two surveys among 1,536 employees and 66 managers of an organization. Our results indicate that psychological ownership towards the business unit indeed enhances performance and mediates the effect of psychological ownership towards the entire organization. Additionally, our findings suggest that error management culture and the increase of affective commitment in teams pose mechanisms that can enhance psychological ownership towards the business unit. With these findings, our study yields important theoretical and practical implications.

HR: Employee Share Participation: The Anticipated and Unanticipated Outcomes on Employee Performance

Author: **Anasha Kannan Poyil**, *Indian Institute of Management Bangalore*

Author: **Debolina Dutta**, *Indian Institute of Management Bangalore*

Author: **Sushanta Kumar Mishra**, *Indian Institute of Management Bangalore*

Employee share participation schemes are increasingly popular practices but significantly under-researched in academia. A few studies have explored the motivations and demographics of participants; other studies have examined attitudinal outcomes of these schemes. Drawing from the Agency Theory and the Psychological Ownership theory, we addressed an essential yet neglected question: Does employee share participation impact their performance. We tested the model based on data collected through a temporal study design. We further examined if the relationship between employee share participation and employee performance varies for talented employees than others. The theoretical and practical implications of our study were discussed.

HR: An Empirical Examination of Predictors of Employees' Participation in Employee Stock Purchase Plans  

Author: **Joo Hun Han**, *Rutgers U.*

Author: **So Ri Park**, *Rutgers U., School of Management and Labor Relations*

Author: **Joseph Blasi**, *Institute for the Study of Employee Ownership and Profit Sharing at Rutgers SMLR*

The present study examined factors that predict employees' participation in employee stock purchase plans (ESPPs). Despite the plausible benefits of ESPPs for participating employees, the majority of employees do not participate in ESPPs even when they are eligible. To shed light on this puzzle, we investigated key plan (i.e., discount rates), firm (i.e., stock prices), and environmental (i.e., COVID-19 pandemic) factors in relation to employees' participation in ESPPs. Drawing on a unique, proprietary dataset on employee stock purchases from 40 publicly-traded companies, we found that the discount rates were linearly (vs. in a hypothesized J-shaped manner) related to employee ESPP participation and past stock price increases were positively associated with greater ESPP participation especially when the stock prices displayed stability (vs. volatility). In addition, we observed that the firms in our dataset had significantly higher ESPP participation rates during the pandemic period relative to those prior to the onset of the pandemic. These findings offer various research and practical implications, extending the compensation literature that has paid relatively little attention to the predictors of ESPP participation.

HR: Personality traits, ESOP attributions, and psychological ownership in the U.S. and South Korea 

Author: **Andrea Kim**, *Sungkyunkwan U.*

Author: **Joseph Blasi**, *Institute for the Study of Employee Ownership and Profit Sharing at Rutgers SMLR*

Author: **Yong Geun Kim**, *POSTECH, Corporate Citizenship Research Institute*

This study examines linkages from personality traits to employee attributions of employee stock ownership plans (ESOP) and to psychological ownership for the organization (POO) between the U.S. and South Korea. By analyzing survey data collected from 693 employees in two countries, we found that agreeableness, conscientiousness, extraversion, and openness to experience are positively related to POO directly as well as indirectly through commitment-focused ESOP attributions. Also, those mediational linkages are more pronounced among employees in South Korea, which is a collectivist society. Finally, our supplementary analyses confirmed these results by indicating the same pattern of results in the South Korean sample, but not in the U.S. sample. Our findings provide theoretical implications for diverse scholarships such as employee ownership, human resource attributions, and international human resource management.

Macro Talent Management: Creating a Better Future through Stakeholder Agency in Managing Talent
Macro Talent Management for a Better World

- Presenter: **Marion Festing**, *ESCP Business School*
- Presenter: **Shaista Ehsan Khilji**, *George Washington U.*
- Presenter: **Karin A. King**, *London School of Economics*
- Presenter: **Ibraiz Tarique**, *Pace U. - Lubin School of Bus*
- Presenter: **Vlad Vaiman**, *California Lutheran U.*

Macro Talent Management (MTM) is a recently emerging field of research focused on the overarching talent systems which exist nationally and globally (Khilji, Schuler & Tarique, 2015). Through these macro level systems, talent development is generated, talent supply flows, and talented employees themselves are engaged and deployed by organizations in workforces globally in service of business and societal requirements. Adding to the complexities of the global economy and the pressing search for global competence for competitive advantage, vast uncertainty is now an ever-present factor in societal and organizational structures resulting from the Covid-19 global pandemic. Governments, business organizations, their management and stakeholders, and society are now faced with addressing resulting challenges, which compels us to look for recent insights as organizations and management strive to adapt to new levels of uncertainty. Consistent with this year’s Academy Meeting theme – Creating a Better World Together – this professional development workshop presents an opportunity to extend scholarly engagement in MTM research which offers untapped potential to enable management agency (King & Vaiman 2019) in direct response to today’s global uncertainty. Each of the panellists will prompt innovative considerations in the potential role of Macro Talent Management in creating a better future through opportunities for active engagement with MTM to mitigate uncertainty, engage a broader range of stakeholders, and tackle societal challenges through the lens of macro talent management.

MED Best Symposium in Management Education and Development Award sponsored by McGraw Hill/Irwin for the symposium that offers the most significant contribution to advance management education and development.

Academic institutions are guided by science, with scholars and educators seeking ways to extend knowledge in different domains and establish their work on evidence. Yet, despite the fact that leadership development is at the core of many business schools’ mission statements, leadership development programs (LDPs) are not as evidence based as one might expect. Research shows that a variety of reasons is behind this inconsistency, such as relative scarcity and availability of leadership development research, low accessibility of existing work, challenges of conducting research to examine the effects of LDPs, and conflicting priorities in business schools themselves. This panel symposium will examine the main challenges academics and practitioners face in their efforts to make leadership development programs more evidence-based. It will further explore ways in which we can all work together to overcome these challenges and create more evidence-based LDPs that are crucial to equip leaders of today and tomorrow with the knowledge, tools, competencies, and abilities to effectively lead organizations and society as a whole.

Enhancing Group Mindfulness and Coherence: Practices for Connectedness and Celebrating Differences *Practices for Group Mindfulness and Coherence*

Presenter: **Stacey Guenther**, *Independent Consultant and Researcher*
Presenter: **Tojo Thatchenkery**, *George Mason U.*
Presenter: **Param Srikantia**, *Baldwin Wallace U.*

This PDW will enable participants to explore coherence, a group-level phenomenon wherein members experience a collective shift into a heightened state of connectedness marked by a quieting, slowing, and calming of the group climate, and a calling forth of members' best selves resulting in an acceptance and celebration of differences. The PDW will demonstrate how this transformation is enacted by members reframing and making sense of the experience through somatic, emotional, spiritual, and creative ways of knowing. Based on primary research that was recently concluded investigating the lived experience of coherence in the intersubjective field (Guenther, 2022), the PDW will help participants develop the conditions necessary for a group to enter coherence (group level), develop Appreciative Intelligence® (individual level) and inhabit a state of enlightened presence. Through practices such as meditation, reflection, dialogue, and co-sensing, PDW participants will reflect on their individual and collective experiences of connectedness and develop effective ways of generating deeper connections. The session will also showcase a prototype to promote individual and group mindfulness that has reached over 150K participants, by tapping into five sources of transformation namely, (i) appreciating the uniqueness of each person beyond their social masks, (ii) witnessing the continuous inner chatter in our minds even when the room is silent, (iii) observing the auto-pilot mode that transforms humanity into a mass of robots sleepwalking through life, (iv) transcending ego-based consciousness that disconnects us from each other and, (v) acquiring schemas of apperception that enable us to see deeply beyond the surface level world of appearances.

Presenter: **Garrett L. Brady**, *London Business School*
Presenter: **Valentino Chai**, *National U. of Singapore*

Understanding how the self perceives ‘the Other’, in both intergroup and interpersonal contexts, is essential to business and social interactions more generally. Though the psychological distinction between self and other is a fundamental categorization needed to navigate the world, some have questioned the need to distinguish between different ‘Others’ beyond the general categorization of “not me”. This symposium seeks to address this gap by exploring the specific relationships the self has with many more different kinds of ‘Others’: competitors, rivals, friendly rivals, trash-talkers, bigots, and more. The important commonality is each talk considers the underlying relationships at play; that is, exploring the self and other as a unit interacting with each other. The presentations in this symposium offer empirical work examining how relationships between both individuals and groups impact a variety of contexts with a particular emphasis on implications for managing organizations.

Panelist: **Allison S. Gabriel**, *U. of Arizona*

A wonderful aspect of the Academy of Management (AoM) Annual Meeting is the developmental opportunities it provides for doctoral students. For example, the New Doctoral Student Consortium helps new doctoral students begin to feel more comfortable in our field. In addition, the Organizational Behavior (OB) division sponsors a Senior Student Doctoral Consortium to help prepare more advanced doctoral students for the job market. The purpose of the “Halfway There” PDW is to bridge the gap between these consortia by providing information and advice relevant to doctoral students starting the 3rd or 4th year of their programs. “Halfway There” is designed to help these students begin establishing themselves as independent scholars. We have conducted this PDW at AOM each year since 2009 and it has been very favorably received on each occasion. Despite increasing the attendance cap to 120, we have still had several potential attendees waitlisted each year. Due to positive feedback from prior attendees, we have decided to conduct the PDW again in 2022 leveraging the meaningful modifications made to the format made in prior years; these modifications focused on providing a more holistic experience for the participants, as well as showcasing a more inclusive conceptualization of the various avenues towards career success. A number of prominent OB division members have agreed to participate in the 2022 PDW and provide students with their insights on topics such as (1) launching one’s dissertation (2) crafting a research project, (3) understanding the “job market” process, and (4) accomplishing your career goals.

Pre-registration is required; an email will be shared on the AoM Listservs.

The objective of this PDW is to engage in a conversation and exchange of knowledge and ideas between interested scholars, both junior and established, on the role of the rhetoric perspective for collective action in the context of grand challenges. We start from the observation that articulating such challenges, known for their complex and multifaceted nature, is key to stimulate dialogue among different actors (George et al., 2016) and promote collective action to help solve or manage them (Ostrom, 1990). Accordingly, numerous stakeholders at different institutions, ideologies and levels are competing for influencing the public and decision makers to champion their world view and interests. It is therefore surprising, that the rhetorical perspective is fairly absent from the debate on grand challenges. The rhetorical perspective has emerged as both a key theoretical construct and effective toolkit for practical application in organizational and social life and does provide insights on how social actors demarcate the boundaries of social relations to motivate collective action in navigating complex social problems. The theoretical agenda we propose can be viewed as the possible integration of currently disparate streams of research on collective action and rhetoric, as combining these theoretical traditions offers new theoretical, methodological and empirical research perspectives on adaptive responses to grand challenges. This agenda corresponds closely to the all-Academy theme of “Creating a Better World Together” as it aims at understanding how collective action can be stimulated among relevant stakeholders for contributing to solving grand challenges societies are facing today.

The 2022 version of the “Innovating How We Teach Innovation” Professional Development Workshop (PDW) builds on the success of five prior PDWs and addresses topics that will have a substantial impact on innovation education and pedagogy. This year, we propose to orient the three topics in line with the Annual Meeting’s theme “Creating a Better World Together.” As the pandemic mercilessly reinforces, there are problems we only can solve together. Consequently, we propose as our three topics for the 2022 PDW (i) a broader look on the role technology increasingly plays in innovation, (ii) a deeper look in how we can train students better to develop their innovation competence, and (iii) an extended look into innovation under extreme conditions across a variety of settings. The first topic explores how the technology dominance of our modern world requires innovation education in modern business schools increasingly to include a healthy dose of developing technology literacy in our students. The second topic takes a deeper dive into what it takes to develop innovation competencies in individuals and how educators can provide support by creating whole experiences. Finally, the third topic illustrates, through examples of extreme entrepreneurship from around the world, how innovations emerge even under severely constrained conditions. For each of the three topics, short presentations from faculty actively engaged in each area will set the stage. In the second half, round-table discussions among presenters and PDW attendees allow to exchange experiences around these three topics and report out findings to the group.

TIM: Seems Legit! Conceptualizing the Role of Legitimacy in Collective Action for Digital Innovation 

Author: **Corinna Bertling**, *LMU Munich School of Management*

The effect of digital transformation on organizing innovation as collective action is still underexplored. Organizational reality shows that nascent organizational units, which we label Digital Innovation Units (DIUs), emerge as actors driving the digital transformation of organizational innovation. Yet, DIUs' innovation endeavors and internal collaboration efforts still seem challenging for many organizations. We argue that the mere presence of DIUs challenges institutionalized innovation structures and actor arrangements, for instance regarding the legitimate roles of research and development (R&D) units or IT units (ITUs) in digital innovation processes, and impedes collective actions. This trend demands a theoretical reevaluation of how to think about collective action for digital innovation. Adopting an institutional perspective, we build on the collective action of institutional innovation model and consider the role of organizational legitimacy in constructing collective action of R&D, ITUs and DIUs for digital innovation. We offer a complementary intra-organizational dimension by modifying the model's four central elements and simultaneously transfer its theoretical base into the digital era. By elaborating on the contemporary challenges associated with organizing for digital innovation in general, and with collective action with DIUs in particular, our conceptualization offers crucial insights into the organizational underpinnings enabling collective action for digital innovation.

TIM: Firm Growth and Transformation: The Importance of Technological and Organizational Architecture (WITHDRAWN)  

Author: **Sam Ruiqing Cao**, *Harvard Business School*

Author: **Marco Iansiti**, *Harvard Business School*

The benefits to data analytics and machine learning have been distributed unevenly across firms around the world. Research on IT productivity points to intangible capital as a key driver of value creation from innovation in computing. We argue that a crucial component of intangible capital is organization-wide technological architecture, which is idiosyncratic and difficult to measure. We use a novel survey instrument to quantify large corporations' data architecture capabilities by their closeness to "best practices" of frontier digital companies. Using the prevalence of third-party maintenance as a proxy for legacy servers before 2016 and an instrument for data architecture coherence, we find that improving data architecture coherence leads to more intensive machine learning capabilities and substantially higher productivity growth in the subsequent three-year period. Legacy servers reduce data architecture coherence particularly at corporations with complex software systems, consistent with the hypothesis that costs of digital transformation are greater when workers need to develop more complicated co-invention processes to interact with technical systems.

TIM: The Parasite Within: The Evolution of an Innovation Unit

Author: **Lisa Canova**, *U. of Geneva*

Author: **Katherine Tatarinov**, *GSEM - U. of Geneva*

Author: **Tina C. Ambos**, *U. of Geneva*

Innovation units in large organizations are often mandated to follow different rules and dynamics than the rest of the organization, resulting in tensions and chaffing relationships. But our understanding about how such units evolve over time and integrate (or not) with the organization is scarce. This paper addresses the question of: How do tensions drive the evolution of an innovation unit and its relationship with the organization? Through a qualitative longitudinal single case study of an innovation unit in a large globally dispersed organization, the study finds that multi-level and reinforcing tensions drive the innovation unit's evolution as it adopts different charter (culture building, network building and platform building). We derive a process framework showing how tight and loose coupling (and eventually de-coupling) mechanisms shape the relationship between the unit and the organization. This study contributes to the broader literature on organizing and managing innovation in large organizations.

TIM: Paths of Multinational R&D in Emerging Markets  

Author: **VANIA DE DIVIDINO**, *Centro U. FEI*

Author: **Fernanda Cahen**, *ESPM - Brazil*

Author: **Erica Berte**, *Metropolitan State U.*

Carolyn Dexter Award Nominee

This paper investigates how Multinationals' R&D evolves in its subsidiaries in emerging markets and if they can affect the MNE's global R&D strategy. Inductive research focused on the automotive industry was carried out on the Volkswagen Group, covering the German headquarter and its R&D subsidiaries in the following emerging markets: China, Brazil, India, Mexico and the Czech Republic. The research analysis demonstrated that the R&D units followed two different evolution paths. The first evolution path identified was very conventional, involving adaptation and tropicalization of the R&D subsidiaries to local products. This traditional R&D evolution path was found in Brazil's, Mexico's, and Czech Republic's R&D Volkswagen subsidiaries. The second R&D evolution path was presented in China and India R&D subsidiaries, demonstrating a unique trajectory based on the abundance of qualified labor at low cost and specific knowledge of that particular site. The study also revealed how organizational factors (size, infrastructure, and expertise of R&D centers), and characteristics of emerging countries (market size, labor costs and level of technical qualification) with R&D centers, and how the MNE's global R&D strategy was affected by its subsidiaries R&D evolving path.

Blockchain technology is widely hailed as a disruptive technology that will not only lead to the emergence of new business models, but also redefine what constitutes an organization and how it can effectively operate. Concurrently to the widespread adoption of blockchain and its technological maturity, a vibrant community of scholars studying blockchain and its implications for management is emerging. Therefore, we believe that the time is ripe to bring together leading scholars with different research foci and diverse methodological preferences to discuss, provide direction, as well as debate, how blockchain will affect management theory and practice. This panel symposium will serve as a forum to elaborate on how blockchain related research differs from past work, what are the associated challenges and opportunities, as well as identify areas that future blockchain research should focus upon. In a facilitated discussion, we will raise these issues, providing ample opportunities for participants to engage, raise questions, and learn from their peers to design and conduct top blockchain management research.

HR Issues in Entrepreneurship and Family Businesses

Session Moderator: **Yenchu Lai**, *National Sun-Yat Sen U.*

HR: [Effects of Family Involvement on Succession Planning: Mediating Role of Socioemotional Wealth](#)   

Author: **Yenchu Lai**, *National Sun-Yat Sen U.*

Author: **Duong Tuan Nguyen**, *National Sun Yat-Sen U.*

Author: **Chiung-wen Tsao**, *National U. of Tainan*

Author: **Shyh-jeer Chen**, *National Sun Yat-Sen U.*

This study aims to clarify the paradoxical relationship between family involvement in ownership and management on succession planning and ascertain the mediating role of socioemotional wealth (SEW) in this relationship. Succession, which is considered as transfer of leadership and ownership from one generation to another, is a critical component within family businesses. Based on the SEW perspective, this study argues that family ownership and management positively influence succession planning via CEOs perceived SEW toward family business. Hypotheses were tested through structure equation modeling with a data set of 174 Taiwanese family controlled publicly listed firms. The results showed that family management positively impacts succession planning through the partial mediating effect of SEW. However, nonsignificant relation was obtained from the path of family ownership to succession planning. These findings contribute to clarifying the heterogeneity within family businesses in terms of the mechanism through which family involvement in management affects succession planning.

HR: [People Aspects of Entrepreneurship: A Meta-Analytic Review and Roadmap for Future Research](#)   

Author: **Joonyoung Kim**, *Cornell U.*

Best Student Paper Award for Human Resources-Entrepreneurship Research

Despite the proliferation of research on entrepreneurship and its success factors across disciplines, our understanding of the impact of people and people management on entrepreneurial performance is rather limited. In this article, I conducted a meta-analysis of the relationship between five people dimensions (HR systems, HR practices, HR investment/function, human capital, and social capital) and four outcome dimensions (HR outcomes, operational outcomes, financial outcomes, and new firm-specific outcomes) of entrepreneurial performance to (a) determine the magnitude of the relationship, (b) test moderators of the relationship, and (c) suggest future research directions. The results from 689 correlations (N = 375,221) show that the relationship between people dimensions and entrepreneurial performance is positive and significant ($r = .07$). More importantly, the meta-analytic correlation differs significantly across several moderators (e.g., types of people dimensions and outcome dimensions, region, and data structure). Among five people dimensions, HR systems are more strongly related to entrepreneurial performance than other dimensions, especially for proximal outcomes (HR and operational outcomes) than distal outcomes (financial and new firm-specific outcomes). Implications of these findings and directions for future research are discussed.

HR: [The Interplay of Different Types of Founders' Experience and Entrepreneurial Funding](#)  

Author: **Shifang Zhao**, *Xi'an Jiaotong U. & City U. of Hong Kong & National U. of Singapore*

Author: **Yoojung Ahn**, *City U. of Hong Kong*

Drawing on human capital theory, this study aims to explain how start-ups effectively signal prospects to acquire more financial capital. Based on early-stage start-ups that applied to 164 accelerators globally from 2013 to 2019, we examine the signals of three types of founders' experience (i.e., task-specific experience, firm-specific experience, and general-purpose experience) and their interplay impact on entrepreneurial funding acquisition. We find that founders' task-specific experience (i.e., prior entrepreneurial experience and CEO experience) positively affects entrepreneurial funding acquisition. Founders' firm-specific experience (i.e., the tenure of the previous job) enhances the relationship between task-specific experience and entrepreneurial funding acquisition. However, founders' general-purpose experience (i.e., education experience) doesn't always significantly affect the link between task-specific experience and entrepreneurial funding acquisition. This study contributes to our scholarly and practical understanding of how different types of founders' experience are associated with the success of acquiring financial capital.

HR: [Built to Last: A Human Capital Resource Formation Perspective on Diversity and New Venture Survival](#)  

Author: **Kyoung Yong Kim**, *Villanova U.*

Author: **Jake Messersmith**, *U. of Nebraska, Lincoln*

Author: **David G. Allen**, *Texas Christian U.*

Best Paper Award for Human Resources-Entrepreneurship Research

New venture team diversity and entrepreneurial success or failure remain critical topics in the field. Utilizing a strategic human capital resources framing, this study leverages data from the Kauffman Firm Survey to assess the degree to which racial diversity and human capital within the founding team affect new venture survival. In a study of 2,459 ventures, results indicate that industry-specific human capital (ISHC) moderates the relationship between racial diversity in the founding team and hazard of failure. The relationship is such that for teams with a high level of ISHC, racial diversity helps reduce the likelihood of entrepreneurial failure. Similar results did not hold for generic human capital (GHC) operationalized as percentage of team members with a bachelor's degree; however, an effect was demonstrated when the measure used the percentage of team members with a master's degree or higher. In addition, the three-way interaction between ISHC, GHC and racial diversity is significant, suggesting that teams benefit most from diversity when human capital stocks are high in the team. This result supports human capital resources theory by demonstrating the utility of the emergence of complex unit-level resources within the new venture team. Implications suggest that the make-up of the founding team plays a role in venture performance and that potential challenges associated with diverse teams may be countered with higher levels of human capital.

Presenter: **Kurt Motamedi**, *Pepperdine U. - GSB*
Presenter: **Pierre El Haddad**, *MACH Consultants*

A question often pondered by researchers working in universities is: how do I translate my published research into consulting offerings? Contrastingly, a question contemplated by practitioners working on the front lines of organizations is: why and how do I convert my consulting into published research? The purpose of this professional development workshop is to answer these questions. Researchers will gather with experienced scholar-practitioners and explore how they can build a consulting practice grounded in their research; Practitioners will assemble with practitioner-scholars and investigate how they can develop a publishing record based on their consulting expertise. The session brings together researchers, consultants, and doctoral students with seasoned scholar-practitioners and practitioner-scholars, creating a forum through which ideas can be shared and plans can be drafted to apply and disperse the research and practice achievements of scholars and practitioners in the field of management and organization consulting with the overarching goal of creating a better world.

Sustainability, Diversity and Sensitivity: Challenges and Opportunities

Session Moderator: **Valtteri Aaltonen**, *U. of Jyväskylä School of Business*

MED: Quality of Teaching, Immersive Experience, and Blended Learning Sustainability in Business Schools

Author: **Shahida Mariam**, *Faculty of Management Sciences, International Islamic U., Islamabad*

Author: **Kausar Fiaz Khawaja**, *International Islamic U., Islamabad, Pakistan*

Author: **Farooq Ahmad**, *Fatima Jinnah Women U., Rawalpindi, Pakistan*

Author: **Muhammad Nawaz Qaisar**, *National U. of Modern Languages, Islamabad, Pakistan*

This study examined how and when initial use of blended learning induces future intention for blended learning among management science students from the activity theory perspective on the use of technology in higher education. We used the mechanism of cognitive flexibility and two boundary conditions: perceived quality of teaching and the immersive experience to understand the relationship between students' initial use of blended learning in a mandatory setting and their intention for future use of blended learning. The data was obtained from 589 students enrolled in different degree programs at 22 leading business schools in Pakistan. The results unveiled that the initial use of mandatory blended learning positively predicted students' future intention to use blended learning and that cognitive flexibility mediated this relationship. The perceived quality of online teaching moderated the direct relationship between students' initial use of blended learning and their cognitive flexibility and future intention to use it. The students' immersive experience of the online component of blended learning further moderated the relationship between their cognitive flexibility and future intention to use blended learning. The findings offer valuable insights for successfully implementing blended learning in management education to meet future challenges and remain competitive amongst business schools in the emerging virtual world.

MED: How They Walk the Talk? Sustainability Education in Finnish Business Schools

Author: **Valtteri Aaltonen**, *U. of Jyväskylä School of Business*

Author: **Marjo Elisa Siltaja**, *U. of Jyväskylä*

There has recently emerged a growing requirement for embedding sustainability in the field of business school education. However, in literature the assessment of such developments tends to take place in single university context, placing less weight on examining sustainability in business school education in the context of one country. We examine sustainability in Finnish business schools and its vertical and horizontal embeddedness in educational curricula using extensive qualitative materials from school representatives and schools' curricula. Our findings acknowledge conditions and drivers that have influenced the chosen approach to sustainability among schools. Our study then discusses the weaknesses and strengths of both vertical and horizontal orientation for the development of sustainability education in business schools.

Paper is Available to Meeting Registrants Only.

MED: How to Develop Intuition in Management Education and Development

Author: **Eugene Sadler-Smith**, *U. of Surrey*

Practitioners and scholars agree on the importance of intuition in the practice of management. However, there is a paucity of guidance for managers and management educators and trainers on how managerial intuition can be educated, trained and developed. The main idea of this paper is that intuition is a developable skill. The main argument of this paper is that managers need more and better guidance on how to develop and use their intuitions. The main contribution of this paper is that it proposes several methods by which intuition can be developed in management practice, management training and development programmes and in business school curricula.

Paper is Available to Meeting Registrants Only.

MED: A Classroom Discussion Following Tragedy in the Community

Author: **Kirk Silvernail**, *U. of Nevada, Las Vegas*

Emotion and uncertainty following a tragic event in the community are common as survivors seek to reconstruct their understanding of the world. The same can be true whether an individual is a direct survivor of trauma, a bystander or just saw news coverage of it on television. An important aspect of helping those affected by tragedy is through social support. The classroom offers a unique opportunity for social support as it consists of many individuals affected by tragedy in various ways. It can therefore be beneficial to the healing process to discuss tragedies and address emotion in the classroom. Yet, instructors are often hesitant to teach outside their area of expertise and need to contend with other course constraints, and even their own uncertainty following tragedy. Using an autoethnographic approach, the current research provides an account of my thought process going into the first class I held following the Route 91 shooting in Las Vegas, NV as well as recap of the conversation in that class. The hope is this research helps instructors in the future with their decision making about how to handle post-tragedy classroom discussions.

Diversity in Organizations: Gender, Race, and Immigrant Status

Session Moderator: **Sandra Portocarrero**, *PhD student at Columbia U. - Sociology*

OMT: **A Qualitative Study of The Role of Race and Organizational Contexts on Status Beliefs**   

Author: **Sandra Portocarrero**, *PhD student at Columbia U. - Sociology*
Author: **James T. Carter**, *Columbia Business School*

We demonstrate how organizational contexts influence status beliefs. Specifically, we draw from in-depth interviews conducted with current and former Foreign Service Officers to explain how recipients of the Pickering Fellowship, a U.S. Department of State fellowship, learn to accept a devaluing status belief about this accolade once they enter the Foreign Service. Within this organizational context, there is an established belief that Foreign Service Officers who are not the prototypical “Male, Pale, and Yale” workers must have entered the U.S. Department of State through a “back door” and have a “leg up” because of their race. This racialized negative evaluation gets linked to the Pickering fellowship and affects all fellows. Our study offers insights into the intersection of racial diversity and status processes in organizations.

Paper is Available to Meeting Registrants Only.

OMT: **Who Cooperates with Whom in Diverse-Gender Teams: Paying to Cross the Gender Gap**     

Author: **Sheen S. Levine**, *U. of Texas at Dallas*
Author: **Charlotte Reypens**, *U. of Texas at Dallas*
Author: **David Stark**, *Columbia U.*

Today, people are likelier than ever to work in gender-diverse teams, yet effective teamwork requires cooperation. In three experimental studies, we investigate the link between one’s gender, the gender of peers, expectations, behaviors, and performance: Do men and women cooperate differently in gender-mixed versus gender-segregated settings? Using a public goods game, we find that diverse-gender teams elicit lower contributions than all-male or all-female teams. In particular, males in diverse teams give much less than females, reciprocate less, and act unfairly. As a result, females in diverse-gender teams fare the worst. Gender segregation is one solution, but we propose another: We offer participants the option of paying for the right of selecting their peers’ gender. When men pay to choose their counterparts, most select women. A costly selection, we find, is indicative of a credible cooperative intent, mitigating the cooperation gender gap. Men who pay are more likely to contribute, reciprocate, and act fairly. We tie the findings to conversations about organizational and entrepreneurial teams.

OMT: **The Need for Speed: The Role of Employers in Immigrant Work Visa Acceleration and Approval**   

Author: **Ben Rissing**, *Cornell U.*
Author: **Laura Carver**, *Cornell U.*

Why are some immigrant work visa applications processed and approved in a matter of days, while others languish for months before receiving a decision? We contend that the relative dissimilarity between a focal visa application and an employer’s past work visa filings is a key, yet unstudied, strategic value consideration affecting the sponsoring firm’s engagement with the regulatory bureaucracy. Using U.S. CIS administrative records obtained through the Freedom of Information Act detailing all H-1B visa applications from 2006 to 2015, we analyze employers’ acceleration of select applications through the “premium processing” program, which guarantees an initial visa decision in 15 days in exchange for a \$1,225 per-application payment. We find that employers are more likely to use premium processing for immigrants whose countries of birth, prospective jobs, and educational experiences are dissimilar relative to the applications previously filed by that employer. Further, employers less frequently withdraw or abandon dissimilar applications, and request longer employment durations in these dissimilar applications. In contrast to prior arguments regarding immigrants’ regulatory and employment success, we argue that immigrants identical on observables and migration inclination may fare differently in the U.S. immigration system depending on their dissimilarity within the context of their sponsoring employer.

Finalist for the Louis R. Pody Best Paper Based on a Dissertation Award

This paper develops grounded theory on how managers' gender shapes their implementation of practices and policies aimed at improving gender equality. I draw on ethnographic data of a policy aimed at improving gender equality—specifically, a flexible work policy—at a STEM professional organization. I identify how gendered constraints in role performances shape managers' policy implementation. Specifically, women managers encountered barriers to developing technical expertise and client relations, and their formal authority was often disrespected. Facing these constraints, they responded by focusing their day-to-day activities on subordinates, which allowed them to internally broker information (as an alternative to technical and client-facing tasks) and cultivate cooperation (as an alternative to formal authority). The flexible work policy threatened to undermine these interdependent activities, and women managers generally opposed it. In contrast, men managers generally did not experience these same constraints, and instead focused on technical and client-related work that was largely independent of subordinates. The policy maintained these activities, and they implemented it. By identifying gendered constraints in role performances, this study forwards theory on managers' implementation of gender equality-related practices and policies. It also furthers theory on gender, management, and leadership by demonstrating how gendered constraints in role performances shape managerial actions.

Finalist for OMT Division Best Paper on Environmental and Social Practices Award

Transparency on police use of force has been touted as a means to keep police accountable, yet evidence on its effectiveness has been elusive. This lack of evidence is concerning since police often wield significant professional autonomy, thereby plausibly remaining impervious to attempts by institutional outsiders (e.g., teaching officers) to influence police practices. **KEY TO SYMBOLS** → International oriented research oriented by an international diversity oriented populations, insofar as they infer the public to also favor such populations. Using difference-in-differences by exploiting the adoption of the Police Data Initiative that was introduced by the US federal government in May 2015 and subsequently adopted by the Seattle Police Department, we find that Seattle police made fewer traffic stops in response to the adoption of the transparency initiative, but the effect was concentrated on neighborhoods with fewer Black residents. Further analyses suggest that the effect is partly driven by relatively fewer unique officers being dispatched to neighborhoods with fewer Black residents after the adoption of the transparency measure. Ultimately, the inequality in police use of force based on the racial makeup of neighborhoods became greater after the Seattle Police Department adopted the transparency policy, contrary to the likely intent behind the policy.

Geographic Expansion in Strategy and Practice

Session Moderator: **JungYun Han**, *National Taiwan U.*

OMT: **Inter-state Political Risks, Types of Corporate Political Ties and International Joint Ventures** 

Author: **JungYun Han**, *National Taiwan U.*
Author: **Xiaowei Luo**, *INSEAD*

Inter-state political conflicts are an important source of political risks deterring firms' cross-border collaborations. We propose how two types of business leaders' domestic political ties, family ties and social ties, can have opposing effects on firms' capacity to cope with inter-state political risks, in a context where both types of ties are salient and have distinct social meanings. While both can help the firms navigate regulatory uncertainties at home, family ties can tarnish the firms' legitimacy in the host country by identifying the firms with the state, outweighing their benefits. We find empirical support in Korean business groups' entry into China through joint ventures during 1990-2005. Our study contributes to the literatures on political risks and corporate political ties by disentangling ties of different nature.

OMT: **Regional and Place-Based Institutional Drivers of Practice Adoption: The FSC Certificate**  

Author: **Konstantinos Pitsakis**, *London Metropolitan U.*
Author: **Tobias Goessling**, *Kedge Business School*

Scholars who study the adoption of management practices using institutional theory have rarely examined geographically bound institutional pressures. In this paper, we consider the impact of regional institutional pressures on firm adoption decisions and we use a place-based approach to examine firm headquarter (HQ) distance from a country's capital as a moderator to the above relationship. We, therefore, highlight regional institutional pressures and the differential responsiveness to such pressures by remote and, perhaps, isolated firms within the region, given the place where they are headquartered. Our analysis is based on 291 paper and paperboard manufacturers from five European countries at the NUTS-2 level who were considering adopting the Forest Stewardship Council certificate between 2000-2010. We find confirmation for most of our hypotheses at the regional level. Most importantly, we find that as HQ distance from capital increases, a) regional competitive institutional pressures reverse their impact on adoption decisions, b) regional social institutional pressures become more pronounced and c) regional regulatory institutional pressures also reverse their impact. Our paper contributes to institutional theory by examining fine-grained institutional drivers of geographical adoption decisions, thereby paying attention to heterogeneity (rather than homogeneity) in the mechanisms behind such decisions. It also contributes to the debate of conflicting institutional pressures facing firms by distinguishing the regional from the local levels of analysis. We discuss the theoretical and practical implications of the study in detail and we offer future research avenues for institutional theory, institutional logics and the field of sustainability.

OMT: **Industrial Policy Environment and Geographic Expansion Strategy**

Author: **Anni Chen**, *Peking U.*

How does local policy environment shape firms' geographic expansion strategy? Drawing on perspectives from institution-based view and political capability literature, we argue that the variance in firms' geographic expansion strategies lies in their political capabilities shaped by local policy environment. Specifically, we investigate the interaction of two dimensions of local policy environment—home-host policy similarity and policy uncertainty. Based on a unique dataset linking local industrial policies and geographic expansion strategies of publicly listed firms in China from 1998 to 2018, we find that the increase in home-host policy similarity leads to greater likelihood for the headquarter to establish subsidiaries in the host location. In addition, firms located in home environment with greater policy uncertainty develop specific political capability to cope with an everchanging environment, thus reducing the reliance on similar policy environment when seeking for geographic expansion.

Experimental Studies in Organization Theory

Session Moderator: **Stephan Billinger**, *U. of Southern Denmark*

OMT: **How Dyads Overcome Complexity and Misaligned Incentives in Imperfect Modular Decompositions** 

Author: **Stephan Billinger**, *U. of Southern Denmark*
Author: **Stefano Benincasa**, *U. of Southern Denmark*
Author: **Oliver Baumann**, *U. of Southern Denmark*
Author: **Terry R. Schumacher**, *Rose-Hulman Institute of Technology*

We investigate the search processes that dyads engage in when each human agent is responsible for one module of a complex task. Our laboratory experiment manipulates global vs. local incentives and low vs. high cross-modular interdependence. We find that dyads endogenously learn to coordinate their joint search efforts by experimenting with parallel and sequential search that, over time, give rise to coordinated repeated actions. Such collaborative search emerges despite complexity and misaligned incentives, and without a coordinating hierarchy.

Paper is Available to Meeting Registrants Only.

OMT: **Competitive Familiarity: Learning to Coordinate by Competing**  

Author: **Kenny Ching**, *Worcester Polytechnic Institute*
Author: **Enrico Forti**, *Manhattan College*
Author: **Evan Rawley**, *U. of Minnesota*

This paper develops and tests a simple theory of organizational learning, proposing that prior competitive interaction improves coordination amongst teammates. We test the theory using millions of quasi-experiments in the formation of high-level eSports teams. The results show that exogenously assigned teams of former competitors are highly effective—the returns to prior competitive interaction are at least three times the returns to prior collaborative interaction. The evidence suggests that teammates learn to coordinate by competing, a finding with implications for organizational design and the management of human capital.

OMT: **The Behavioral Implications of Legitimacy: An Experimental Approach** 

Author: **Moritz Gruban**, *Cambridge Judge Business School*
Author: **Matthieu Légeret**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Patrick Haack**, *U. of Lausanne, HEC Lausanne*

Legitimacy is assumed to have behavioral implications and to constitute an important antecedent of institutional stability and institutional change. Most research, however, focused on the perceptual component of legitimacy or studied intentions to act towards legitimacy objects through hypothetical experiments. To advance the understanding of the behavioral implications of legitimacy, we conducted three experiments to examine the effects of normative and instrumental concerns on support for a legitimacy object. Moreover, we compare the effects of normative and instrumental concerns on behavior with the effects of both concerns on two types of individual-level legitimacy judgments: propriety and validity beliefs. We found that normative concerns affect propriety beliefs and the degree of support for legitimacy objects. By contrast, instrumental concerns significantly influence the degree of support for legitimacy objects, but they seem to have no impact on propriety and validity beliefs. Importantly, eliciting individuals' propriety and validity beliefs reduced the influence of instrumental concerns on their support for a legitimacy object. Our findings demonstrate that the relationship between legitimacy judgments and behavior is more complex than commonly assumed and suggests that it is essential to include behavioral measures in experimental research on legitimacy.

Best Practices for Research on Unsettling and Unconventional Populations

Studying the Unusual in Organizations

Organizer: **Payal N. Sharma**, *U. of Nevada Las Vegas*
Organizer: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*
Speaker: **Kisha Lashley**, *U. of Virginia*
Speaker: **Felipe Gorenstein Massa**, *Loyola U. New Orleans*
Speaker: **Kristie Rogers**, *Marquette U.*
Speaker: **Trish Ruebottom**, *Degroote School of Business, McMaster U.*

There has been ongoing dialogue in our field regarding the value of examining extreme, unconventional, or unsettling contexts in management research. To further add to, and extend, such discussions, we have put together a panel of scholars who have conducted studies examining the unusual in organizations, succeeded in publishing it in top journals, and crafted their research identities in different ways. Importantly, this symposium not only includes discussion of the “dos and do nots” for data collection and paper writing, but also offers tips and reflections on managing one’s identity when doing work that others may perceive as different, odd, unconventional, or even taboo.

Overcoming the Challenges of Scale in Less Hierarchical Organizing *Scaling Less Hierarchical Organizing*

Organizer: **Michael Yanche Lee**, *INSEAD*
Organizer: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*

There is growing interest in alternative, less hierarchical forms of organizing, understood as forms of organizing that distribute formal authority more widely than in conventional hierarchical firms. A fundamental question about less hierarchical organizing is its ability to scale. At the center of this concern is the issue of coordination as typical coordination mechanisms in less hierarchical organizations become prohibitively costly at scale and even if efficient mechanisms are developed, they may fail to provide individuals the experience of empowerment and participation that attracted them to the organization and motivated their contribution to it. Bringing together four papers on the topic of scaling less hierarchical organizing, this symposium will present a vibrant picture of the current state of research on the topic and provide a compelling set of insights about how the challenges of scale can be overcome.

Participant: **Michael Deane Howard**, *Iowa State U.*

Research interests at the intersection of strategic management and market categories has grown significantly in recent years and current market environments have posed tremendous challenge for firms seeking to classify themselves and their offerings for competitive advantage in a rapidly changing market structure. This symposium invites scholars interested in strategic management and market categories to present and discuss their views on firms' strategic choice of category labels, meanings, and positions as they consider and engage with other key stakeholders in the marketplace. By examining factors associated with firms' strategic categorization, including motivations, occasions and contexts, we hope to open conversations and future research opportunities to clarify the multiple mechanisms through which categories and categorization processes in the market can be associated with firms' strategic choices. More broadly, we hope this symposium would also contribute to the understanding of market categories and firm strategy in dynamic market environments.

**The Role of Faculty Members in DEI: A Conversation Between
Faculty and Deans and Department Chairs**
DEI Panel

Facilitator: **Barbara B. Flynn**, *Indiana U.*
Panelist: **Maling Ebrahimpour**, *Roger Williams U.*
Panelist: **Mohan Gopalakrishnan**, *Arizona State U.*
Panelist: **Robert D. Klassen**, *U. of Western Ontario*
Panelist: **Kevin Linderman**, *Penn State U.*
Panelist: **Richard Metters**, *Texas A&M U., Mays Business School*
Panelist: **Xiaosong Peng**, *college of business, Lehigh U.*
Panelist: **Christopher O.L.H. Porter**, *Indiana U.*

This workshop focuses on how individual faculty members, deans, and department chairs can strive to create a better world together through diversity, equity, and inclusion. The intent is to hold a positive, candid conversation about actions operations and supply chain management faculty members (although participants from all areas are welcome) can take in their teaching, research, and service activities to foster a more diverse, equitable, and inclusive environment for themselves, their students, and their colleagues. A panel of deans and department chairs will share approaches from their universities and departments that they have found especially useful, as well as challenging issues they continue to struggle with. The bulk of the workshop will be an open discussion, where deans and department chairs will respond to questions and insights from participants. Specific topics may include creating an inclusive classroom, incorporating DEI into faculty recruiting, alignment with DEI efforts by their university's Provost, President, Faculty Senate, etc., the role of DEI in faculty evaluation and promotion decisions, mentorship opportunities, and research opportunities related to DEI in operations and supply chain management.

Adapting to Industry Change and Crises

Session Moderator: **Daniel Wilde**, *The Wharton School, U. of Pennsylvania*

STR: Driving Commitment: Cognitive Diversity and Emerging Technology Investment within the Auto Industry 

Author: **Daniel Wilde**, *The Wharton School, U. of Pennsylvania*

Strategically managing industry change is a pervasive challenge for firms and can have profound implications on firm performance, even survival. This paper asks whether a firm's cognitive diversity increases or decreases its responsiveness to industry change. I contend that this relationship is nuanced and depends on the mode of investment. I argue that a firm's internal research and corporate venture capital related to a focal emerging technology should increase with greater cognitive diversity regarding the technology, consistent with a learning perspective. In contrast, I hypothesize that acquisitions associated with an emerging technology should decrease with greater cognitive diversity, consistent with a political perspective. I explore these arguments within the setting of the global automotive industry between 1990–2020, a period characterized by significant industry change associated with the electrification of powertrains, autonomation of driving, connectivity of vehicles, and shared mobility. Utilizing a novel dataset of over 3.2 million automotive industry-related quotes as well as investment and patent activity of 56 major automobile manufacturers during this period, I find robust support for my theory. The study offers a novel account of how cognition within the firm may influence firm-level strategic decisions across firms over different stages of industry change.

Paper is Available to Meeting Registrants Only.

STR: COVID-19: Ways and Drivers of Value Proposition Transformation of Russian Airlines 

Author: **Maxim Aleksandrovich Fokeev**, *HSE U.*

The passenger air transportation industry is one of the most affected as a result of anti-coronavirus restrictions, and its post-crisis recovery will take place in the context of changes in consumer behavior and, consequently, the configuration of the value proposition. Similar transformations of the value proposition have already been observed in the past. Therefore, an analysis of the current situation is impossible without considering the evolution of the value proposition of airlines over the past 30-40 years. We determined directions of post-COVID-19 value proposition development, based on systematic literature review. The empirical study of domestic passenger air transportation market consisted of two stages. At the first stage, we determined directions of the post-crisis airline value proposition development using case study method. At the second stage, we conducted a survey of 808 passengers on domestic routes to identify their perception of value propositions changes and its significance for airline-choosing process. Empirical results demonstrated airlines transition to expand the list of available services available for passengers. It allows them to attract new groups of passengers and increase their loyalty. From the passenger's perspective, such extension, on the one hand, differentiates carriers and, on the other hand, complicates consumer choice.

STR: Managerial Capabilities and Strategic Renewal during the COVID-19 Crisis: A Generational View

Author: **Wunnam Basit Issah**, *U. of Witten/Herdecke*

Author: **Muhammad Anwar**, *U. of Witten/Herdecke*

Author: **Thomas Clauss**, *U. of Witten/Herdecke*

This study examines whether founding generation managed family firms are capable of responding proactively to the COVID-19 disruption via firm renewal. We used a unique global COVID-19 specific survey dataset comprising of 2130 family firm observations. Our findings indicate that in comparison to the later generations, founding generation-managed family firms only do better at strategic renewal as a response to the crisis when they have sufficient managerial capabilities. Our study recommends that family businesses, especially those managed by the founding generations should emphasize managerial capabilities, rather than merely focusing on socioemotional wealth (SEW) when deciding on crisis coping strategies.

STR: Fluctuations in Innovation after Natural Disasters: Evidence from Hurricane Katrina  

Author: **Luis Ballesteros**, *Boston U. Questrom School of Business*

Studies of the geography of innovation have focused on how spatial proximity to human and material resources and institutions affect collaboration, knowledge flows, the demand and competition for invention, and the economic value of invention. I study a different source of the geographical determinants of innovation: exposure to large shocks. I conduct an inductive assessment, theoretically grounded on recent evidence that large exogenous shocks produce enduring fluctuations in risk aversion, to explain why Hurricane Katrina in the U.S. could have changed innovation outcomes. The difference-in-difference estimates show that, after an immediate fall, affected counties exhibit substantial increases in the growth rate of patenting and the quality of innovation compared to counterfactual counties. This correlation persists 10 years after the shock and is robust to measures of agglomeration and urbanization, firm resources, wealth, actual and expected income, education, external assistance, public policy, business cycles, and other county- and state-level factors. To account for the confounds of selective migration and network affiliation, I use narrowly georeferenced information to construct histories of inventors between 1999 and 2015 that allow me to follow the “Katrina effect” across geographies. The estimates imply that shock-affected individuals not only were more likely to patent, but became more skewed toward high-technology sectors.

STR: Job Turnover in Times of Crisis: Family Firms and Rural Context  

Author: **Johan Karlsson**, *Centre for Family Entrepreneurship and Ownership*

Author: **Massimo Bau**, *Jönköping International Business School*

Author: **Kajsa Haag**, *Jönköping International Business School*

Author: **Francesco Chirico**, *Jönköping International Business School*

Financial crises inevitable leads to downturns in the labor market and increased unemployment. Family firms are known for their long-term orientation which help them to survive hardships. In times where short-term profit maximization is compromised, there are reasons to believe that family control can be a source to sustainable business behaviour. In the present study, building on the the nonfinancial logic and local embeddedness literatures, we theorize that that family involvement mitigates involuntary job turnover following an exogenous economic shock (in our case, the 2007–2009 global financial crisis), and especially in rural areas where local ties are likely to be strong. Relying on a panel dataset of Swedish firms, our study contributes to a better understanding of how companies react to employee layoff in times of crisis while shedding some further light on the link between regional economics and family involvement.

Platform Competitive Dynamics and Innovation

Session Moderator: **Thomas Draschbacher**, *Graz U. of Technology*

STR: To Solve or to Occupy: How Actors Address Hybrid Bottlenecks in Innovation Ecosystems

Author: **Thomas Draschbacher**, *Graz U. of Technology*
Author: **Michael Rachinger**, *Graz U. of Technology*

Bottlenecks have recently emerged as one of the key objects of inquiry in research on innovation ecosystems. This has given rise to new literature that describes different bottleneck types and strategies to address them. Whilst the broader literature clearly distinguishes between the two different types of technological and strategic bottlenecks, these two types can hardly be separated from each other in practice. As a consequence, existing recommendations regarding strategies to address bottlenecks fall short of explaining actors' strategic responses to hybrid bottlenecks, in which aspects of technological and strategic bottlenecks are combined. We fill this gap by conducting an exploratory multiple case study of strategies that actors apply to address the hybrid bottleneck of public charging infrastructure in the innovation ecosystem of battery electric vehicles. We combine resource dependence theory and resource-based theory to show that actors apply patterns of direct strategies or indirect strategies to address bottlenecks based on the expected future value of the bottleneck, their dependency on the bottleneck's availability, and the existing uncertainty in terms of predicting the ecosystem's future progress.

Paper is Available to Meeting Registrants Only.

STR: Platform Entry and Innovation: How Adjustment Costs Shape Complementor Innovation Strategies

Author: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*
Author: **Ahmadreza Mostajabi**, *London Business School*

Extant literature has made contrasting arguments regarding complementors' response to platform entry. Scholars have documented both higher and lower ex-post complementor innovation in domains affected by entry. We argue that a cross-platform study of complementors' response to entry and examining their resource redeployment adjustment costs to competing platforms can reconcile these contrasting findings and explain complementors' post-entry innovation strategies. We hypothesize that complementors with high adjustment costs will focus and increase their innovative effort on the focal platform and the affected domain, whereas those with low adjustment costs will shift innovation effort to the competing platform. We empirically test our hypotheses in the context of mobile app platforms and analyse Apple's entry in the App Store with the "Files" application in 2017. We use difference-in-differences and coarsened exact matching methods to analyse innovation outcomes of 340,474 affected and unaffected applications produced by 30,044 developers. Supporting our arguments, we find that high-adjustment-cost developers increase ex-post innovation on the focal platform (Apple App Store), whereas low-adjustment-cost developers redeploy resources to the competing platform (Google Play Store). We contribute to literature on platform innovation strategy by highlighting the heterogeneity in complementors' strategies in response to platform entry.

Paper is Available to Meeting Registrants Only.

STR: How Technology Characteristics Shape the Attractiveness of Platform Approaches

Author: **Katharina Gaertner**, *Department of Business Administration, Economics, and Law*
Author: **Joern Hoppmann**, *U. of Oldenburg*

Using digital platforms can significantly enhance the performance of firms, which has led firms in various industries to invest in platform approaches. Given that previous research has focused on the software industry, however, we know relatively little about how the attractiveness of platform approaches is shaped by the technological characteristics of physical complements. To investigate this question, we use a qualitative comparative case study in the mobility sector. We find that a higher complexity of physical complements reduces the feasibility and attractiveness of platform business models through three distinct mechanisms, namely the capital intensity of complements, the need for centralized planning and control, and the degree of regulation. By showing that these mechanisms in turn shape winner-takes-all dynamics, our study makes important contributions to the literature on platforms and strategic management.

Paper is NOT Available. Please contact the author(s).

STR: Is "Choose One" Policy Profitable?

Author: **He Liu**, *Central U. of Finance and Economics*
Author: **Yi Wei**, *Central U. of Finance and Economics*
Author: **Shouyang Wang**, *Academy of Mathematics and Systems Science, Chinese Academy of Sciences*

Some platforms with superior digital analytics service technology ask users to "choose one of two platforms" to restrict users' homing choices. We develop a game-theoretic model in a duopoly setting to investigate the impacts of the "choose one" policy and asymmetry in digital analytics service technology on platform competition. We first examine how the asymmetry in digital analytics service technology influences equilibrium market demands, prices, and profits of the two platforms under four different users' homing scenarios. We find that under scenarios influenced by the "choose one" policy, a small extent of asymmetry in digital service technology leads to large differences in platforms' profitability. In contrast, under the scenario without the "choose one", small asymmetry in digital analytics service technology cannot generate huge profit gaps between platforms. Comparing the profits of both platforms across different scenarios, we find that "choose one" cannot always benefit the platform with the superior digital analytics service technology, but it hurts the inferior platform. We also show that the "choose one" impairs social welfare and we offer implications for government to control this anticompetitive behavior.

Paper is Available to Meeting Registrants Only.

Author: **Wei CHANG**, *U. Nottingham Ningbo China*

Author: **Haibo Zhou**, *U. of Nottingham, China*

Author: **Jin Chen**, *U. of Nottingham, China*

This study explores the evolution of interdependence between platform owner and complementors under varying regulations. Using a longitudinal qualitative study on an Chinese online drug retailing platform and its online pharmacies during the period of 2005 to 2021 when they encountered both harsh and favorable government policies, our findings reveals that government regulations toward platform behavior may yield more complex consequences than regulators expected as the regulatory pressure would be transmitted to connected actors, reshaping the form of interdependence. Built upon our findings, we present a process model to elaborate three phases of shaping interdependence under varying regulations: experiment, intensification, and polarization. Our model contributes to the understanding of how platform owner reconciles the need for the continuity of value creation with radical changes in institutional environment. It also shows how complementors are involved into the reconstruction of relationships with platform under regulations—both proactively and passively.

**The Global Classroom: Using Feedback to
Enhance Intercultural Effectiveness in Diverse
Classrooms**

Using Feedback in Diverse Classrooms

Facilitator: **Catherine Wu**, *Nanyang Technological U.*

Facilitator: **Hui Teng Hoo**, *Nanyang Technological U.*

As diversity is increasing in classrooms around the world, instructors are faced with the challenge of creating the right conditions for students to benefit from these diverse environments. Indeed, while evidence support the benefits of exposing students to others with diverse backgrounds and perspectives to improve intergroup relations and intercultural competence, educators are recognizing that exposure to diversity alone is no guarantee to yield these outcomes and that classroom diversity must be actively managed. In this workshop, we examine one specific tool that educators can use to enhance the benefits of global classrooms to students, that is the use of feedback. The workshop will have three parts. First, we will share results from two sets of studies conducted in our diverse classes that used different feedback interventions to help students benefit from the diversity in their classrooms. Study 1 used social network feedback to encourage students to build diverse friendships. Study 2 used peer feedback and reflection journals to enhance multicultural teamwork and student feedback literacy. In part two, we will chair a roundtable discussion to leverage collective wisdom and brainstorm new ideas to incorporate feedback creatively in classrooms around the world. Finally, we will summarize key insights and learning points from the discussion and formulate actionable recommendations to implement in our classrooms following the workshop.

How to Reduce Feedback Fatigue Leveraging a Caring Perspective to Drive Learner Engagement

Reduce Feedback Fatigue via a Caring Perspective

Presenter: **April Rowsey**, *Union U.*

Instructor-provided feedback on student work is simultaneously one of the most developmental (for students) and daunting (for instructors) practices in teaching in higher education. Instructors devote many hours to careful review & assessment and the crafting of instrumental feedback that they know will contribute in meaningful ways to the growth and development of their learners. It is not uncommon for instructors to wonder if that feedback is read, much less applied, by learners in their courses. This is a particularly salient concern when dealing with online/hybrid learners or learners in courses with large class rosters who may be less inclined to carefully review and apply instructor feedback. Creating a caring and inclusive community that values feedback is possible through the implementation of several practices of care. Grounded in an Ethic of Care (EoC) perspective, and with heavy influence from the tenants of Appreciative Inquiry (Ai), this highly interactive conference session provides actionable strategies for educators looking to both increase learner-perceived inclusion and engagement in a variety of course disciplines and formats while decreasing instructor burden. In doing so, educators model healthy feedback perspectives and behaviors for the emerging leaders in business and management.

Session Chair: **Adrienne A. Reynolds**, *U. of California, Riverside*

Sustainability education is undoubtedly in dire need at business schools. This subject area in particular faces a number of serious challenges. First, management educators often tend to re-invent the wheel instead of harnessing synergies by using the contents, concepts and materials that others have created. Second, management education is often not as hands-on and inspired by practice as it could be. Third, management students often remain in a passive role instead of co-creating course contents or graded projects. TRANSFORM, a collaboration between five universities that focuses on how entrepreneurship and innovation promote sustainability, sets out to change this. First, by building up an open-source online platform, which does not only provide course materials to educators worldwide, but also invites them to share their own contents. Second, by building strongly on practitioner voices and experiences in teaching the contents that are featured on the platform. Third, by enabling a high degree of student co-creation in teaching the contents. We will present how the platform works and let students who have used it share their experiences. The largest part of the session will be dedicated to developing an agenda with the participants for how more educators could collaborate to expand the platform and its usefulness for the sustainability education community. We seek to build a community of practice of likeminded educators, who care about making higher education more open, collaborative and innovative.

Building Inclusive Student Teams   
Building Inclusive Student Teams

Organizer: **Tracey L. Rockett-Hanft**, *Texas Christian U.*
Participant: **Stacy Landreth-Grau**, *Texas Christian U.*
Session Chair: **Courtney E. Owens**, *Alliance Manchester Business School, U. of Manchester*

This talk will demonstrate how to best build and support inclusive teams for maximum performance. We will discuss types of diversity, how to build teams to maximize the positive impacts of diversity and minimize the negative impacts, and how to help diverse teams build cohesion. In addition to sharing best practices in the field and our experiences, we will also present data gathered from students about their perspectives on diverse teams and what they find works best for them. In short, we will help you think about how to build more diverse and inclusive teams student teams in your classes.

**Future-proofing Learning for Generation Z: Building Key Skills
Through Innovative Class Design** 
Future-proofing Learning for Generation Z

Participant: **Amanda Jones**, *King's College London*
Session Chair: **Michal Szymanski**, *Moscow School of Management Skolkovo*

The aim of this session is to demonstrate the need to develop desirable skills, including information and digital literacy, and collaborative skills, among Gen Z students. It also aims to provide a method of teaching core topics while effectively developing these skills by leveraging publicly available data sources with which Gen Z are familiar and engaged. In order to achieve these aims, an applied method of class design, based on both a flipped and interactive approach, and well-grounded in pedagogic research, is demonstrated. Specific information about class preparation and follow up is also provided. The session should be of particular interest to those responsible for engaging and educating 'Gen Z' students towards successful future learning and employment.

**Understanding Education/Teaching &
Scholarship-Focused Career Tracks: Applying
'The SEEL Model'**

Understanding Education-focused Career Tracks

Facilitator: **Ashley Roberts**, *Warwick Business School*

Facilitator: **Kate Black**, *U. of Northumbria*

Facilitator: **Lisa Anderson**, *U. of Liverpool*

Facilitator: **Claire Mallanaphy**, *U. of Liverpool*

Session Chair: **Sandrine LE PONTOIS**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*

While there has been a recent emergence of an Education/Teaching & Scholarship-focused career-track (HESA, 2021; Anderson and Mallanaphy, 2020; CABS, 2019), understandings of scholarship and promotion requirements remain scarce. This session will introduce participants to a British Academy of Management (BAM) model: 'Scholarship and Engagement, Education Practice, and Leadership' (The 'SEEL Model', see Anderson and Mallanaphy, 2020). The model was developed to inform career-progression on an Education/Teaching & Scholarship-focused track and has been informed/generated by responses from a questionnaire sent to all 109 UK University Business and Management (B&M) Schools. The purpose of this session is for participant teams to focus upon elements of the model and to then collate, communicate their reflections in order to better understand this important career-track. The presenters will then lead final discussion and reflection on these elements of 'The SEEL Model', and consideration of future directions of travel to advance a broader definition and understanding of the nature and outputs of education scholarship in Business Schools globally.

Presenter: **Jennifer Lynn Schultz**, *Saint Mary's U. of Minnesota*
Presenter: **Mary Sue Love**, *Southern Illinois U., Edwardsville*
Presenter: **Darryl Rice**, *Miami U.*
Participant: **Gregory K. Stephens**, *Texas Christian U.*

The three members of the Academy of Management Ethics Committee, Ombudsperson team, will present an interactive workshop designed to help scholars effectively navigate academic collaboration. This pragmatic session will present essential discussion ideas and guides for professional collaborators. Based on critical conversation scripts, attendees will be provided with discussion guides that address issues of complementary skills, personality compatibility, resources, work ethic, communication, intellectual property, conflict resolution, honesty, trust, and ongoing dialogs. As AoM Ombuds, we have experience and insight of common academic collaboration conflicts and will provide attendees with preventative tools and case study scenarios.

Presenter: **Dominic Michael Chalmers**, *U. of Glasgow*

The intent of this PDW is threefold. First, we want to briefly showcase the emerging significance of the essay as a genre of management scholarship. Second, through the insights of leading organization and management scholars with experience of essay writing, we explore the ways in which the essay can be nurtured and elaborated as a legitimate form of scholarly contribution. Thirdly, and as the primary element of the workshop, senior scholars will work with participants to help them learn about the objectives, conventions and potential of essay writing as a distinct form of academic output. As such this PDW seeks to provide a structured opportunity for participants to familiarize themselves with this genre, build an understanding of its fundamentals, and develop some ideas for their own potential essays.

Presenter: **Sippo Oskari Teofilus Rossi**, -

Bots, automated accounts in online social networks, have a significant presence on platforms such as Facebook and Twitter. They post messages rapidly and on a large scale and potentially impact communication processes and information diffusion on these platforms. Scholars have associated bots with political propaganda (Caldarelli et al. 2020) and the spread of false news (Shao et al. 2018), suggesting that their deployment imposes major threats to organizations and society (Ferrara et al. 2016). In addition, bots can threaten the validity of online social network research, especially if scholars fail to control for and eliminate confounding effects caused by the presence and activity of these bots (Salge and Karahanna 2018). In this PDW, we seek to shed light on researching bots in online social networks. More specifically, we discuss how to: 1. Design online social network research that considers, rather than neglects, bot implications. 2. Extend the frontier of human-bot sociotechnical research. 3. Understand and apply (through a demo session) a state-of-the-art technique to detect bots. We intend to contribute to the increasing prevalence, importance, and robustness of online social network research that appropriately identifies and controls for bots' impact. Insights from this PDW can benefit scholars within and beyond CTO interested in studying bots and online social networks at multiple levels of analysis. In addition, this PDW seeks to set the first steps towards building an interdisciplinary community of scholars who research the topic.

The "Researching Bots in Online Social Networks" session does not require special registration. For additional details, please contact: calsalge@uga.edu

**Studying Algorithms and Management: Reflections on
Data, Methods, and Theory**
Algorithms and Management

Organizer: **Mareike Mohlmann**, *Bentley U.*
Organizer: **Marta Stelmaszak**, *Portland State U.*
Panelist: **Ahmed Abbasi**, *U. of Notre Dame, Mendoza College of Business*
Panelist: **Samer Faraj**, *McGill U.*
Panelist: **Maytal Saar-Tschansky**, *U. of Texas at Austin*
Panelist: **Ola Henfridsson**, *U. of Miami*
Panelist: **Marleen Huysman**, *Vrije U. Amsterdam*
Panelist: **Natalia Levina**, *New York U.*

Due to advances in digital technologies, and increasing access to large amounts of data, algorithms are becoming increasingly commonplace. The ability of algorithms to mimic cognitive functions, traditionally considered the realm of human capacities, gave rise to Artificial Intelligence (AI) applications. Examples include autonomous cars, the algorithmic management and control of workers, health care robotics, or image recognition in security and predictive policing. A key challenge for CTO Division members with a management-focused background is how to research complex algorithmic technologies, while it remains a challenge for CTO Division members with a more technical or computational background to establish firm links with management research. In this workshop, we take stock of data, methods, and theory that we have available, and we discuss whether we need to seek novel approaches to investigate the intersection of algorithms and management. What kind of data can be drawn on to investigate the management of algorithmic technologies, and can we extend and combine more conventional sources of data to garner more insight into these systems? What kind of methods can be used to analyze humans and algorithms working together? What are the theoretical underpinnings that we have at our disposal to productively study the close interrelationship between algorithms and managers? These questions will be addressed in an interactive workshop that brings together scholars from multiple backgrounds.

Contextual Factors and Firm Internationalization

Session Moderator: **Jeongho Choi**, *U. of Wisconsin*

IM: Mitigating Institutional Distance Between IJV Partner Countries by Choosing a Governing Law 

Author: **Jeongho Choi**, *U. of Wisconsin*

Author: **Farok Contractor**, *Rutgers U.*

This study explores answers to the following questions: To what extent are the provisions in international joint venture agreements affected by the institutional distance between countries of partners? And how can IJV partners mitigate institutional distance? Using fine-grained data on 251 international joint venture contracts signed in between 2000 and 2016, we identified all contract provisions/clauses used in IJVs and classified them into three groups of clauses, namely (1) management & organization, (2) control, and (3) operation through factor analysis. We then linked the three groups to the multiple dimensions of institutional distance (i.e., cross-country differences in legal environment, the court, normative, and cultural-cognitive). Empirical results reveal that the control clauses are more frequently used when there is a greater degree of legal environment distance and court distance. However, the need to use the control clauses is mitigated by the choice of law clause choosing a governing law country that is different than the location of IJVs. Normative distance increases the frequency of operation and management & organization clauses. Finally, the use of management & organization and control clauses is increased when there is a greater degree of cognitive distance. These findings provide insightful implications to industry practitioners, extend the Transaction Cost Economics, and advance alliance governance literature as well as institutional theory.

IM: Market Institutions and Attitudes Toward State-Owned Companies  

Author: **Ilya Okhmatovskiy**, *Nova SBE, U. Nova de Lisboa*

State ownership and market institutions are usually perceived as substitutes: market reforms are described as the process of replacing state ownership with markets enabled by market institutions, while in situations of market failure, when market institutions do not function properly, state ownership is often considered as a feasible back-up solution despite its downsides. In this study, we challenge this view by demonstrating that market institutions (specifically, rules regulating market behavior), play an important role in alleviating negative “side effects” associated with state ownership. In particular, we suggest that the detrimental impact of state ownership on private business can be substantially reduced if state ownership is complemented with effective rules regulating market behavior. The dual function of market institutions that simultaneously enable market transactions and constrain behavior of market actors can explain a puzzling observation that in countries where public legitimacy of state ownership is high, state-owned companies are perceived as more threatening to private business than in countries where public legitimacy of state ownership is low.

IM: An Empirically Grounded Framework of Contextualized International Joint Venture Formation Processes

Author: **Alan MacCharles**, *Cranfield School of Management*

Author: **Monica Franco-Santos**, *Cranfield School of Management*

The purpose of this multi-case study of International Joint Ventures (IJV) is twofold: to examine how a Sino-Foreign Joint Venture Formation Process manifests itself and to identify which factors are more likely to influence this process. A rich description of an IJV formation process has often been called for in the literature, but the challenges of access and confidentiality remain. This study develops an empirically grounded model of the IJV formation process based on detailed study of eight cases of Sino-Foreign formation processes, identifying critical process and context factors like process iteration, negotiators and negotiation teams, their motivations, and alternative JV partners. This study makes two contributions to the literature and indicates future research in multiple directions. It breaks ground by developing the first empirically grounded framework of the contextualized IJV formation process. It offers insights by identifying the key factors and how they influence IJV formation.

Cross-Border Innovation

Session Moderator: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

IM: The Driver and Mechanism of Outsourcing Innovation to Developing Countries  

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

As firms have been increasingly outsourcing innovation activities in developing countries where they face the challenges of creating and capturing value due to weak protection of intellectual property rights (IPR), the answers to why they take the risk and how they manage it remain unclear. To bridge this gap, we conduct the research on offshore outsourcing innovation to argue that the availability of low-cost talent in a country with weak IPR protection increases the likelihood that a firm outsources an innovation activity to that country. In addition, we further propose that the main effect of human capital could be positively moderated by the designing of task specificity and project modularity which the firm uses to capture value and protect proprietary information from outsourcing innovation in developing countries. Using the data of Offshoring Research Network, Index of Economic Freedom, and World Economic Forum to test the hypotheses, we find our premises supported.

IM: Foreign and Domestic University Collaboration and Outbound Open Innovation 

Author: **Omid Aliasghar**, *Auckland U. of Technology*

Author: **Kazuhiro Asakawa**, *Keio U.*

Author: **Jarrood Haar**, *Auckland U. of Technology*

Author: **Annique A. Un**, *Northeastern U.*

This study compares the impact of research and development (R&D) collaboration with foreign versus local universities on outbound open innovation (OI). Despite the important role of university collaboration, firms find it difficult to externally commercialize scientific knowledge. By drawing on the knowledge-based view and national innovation system literature, we propose a conceptual model and examine how and under what circumstances a firm can reap the benefits from its links with universities and academic professors. Based on data from 541 New Zealand firms, we find that geographic proximity plays a critical role in benefiting from academic collaborations. Our findings show that R&D collaborations with foreign universities are related to the development of outbound OI, especially when the firms' partners are from developed countries. Conversely, our findings show that local university collaboration is associated with the development of outbound OI only if the firm collaborates with its local value chain partners.

Paper is Available to Meeting Registrants Only.

IM: Home-Host Country Demand Structure Gap and Reverse Innovation 

Author: **Ziliang Deng**, *Renmin U. of China*

Author: **Pei Wang**, *Renmin U. of China*

This study focuses an important yet underexplored question in reverse innovation literature, namely the antecedents of leading multinational enterprises' subsidiaries located in emerging markets to reversely transfer the innovation from emerging markets to developed markets. We combine the literature on reverse innovation with the demand-based view on innovation, and examine how the demand structure gap between home developed market and host emerging market can influence a subsidiary's reverse innovation decision. We propose an inverted U-shaped relationship by identifying two latent mechanisms: one is the opportunities for the innovation to be novel, and the other is the possibilities for the innovation to be applicable to developed markets. Empirical results based on panel data on subsidiaries with OECD nationalities in China support our hypotheses. This study contributes to reverse innovation literature by investigating demand-side factors, and enriches the discussion on demand-driven innovation by taking a locationally differentiated cross-border perspective and highlight the potential detrimental aspects of consumer heterogeneity.

Paper is Available to Meeting Registrants Only.

IM: Institutional Voids and Developed Multinationals' R&D Resource Commitments in Emerging Economies

Author: **Tabitha Muchungu**, *Morgan State U.*

Institutional voids influence the resource commitments to technology transfer that multinationals make to their local subsidiaries. Extant research primarily adopts a deterministic view of the institutional environment and gives contradictory findings in this relationship with little attention given to contingent factors. Using an institution-based perspective and the lens of institutional voids as opportunities, this conceptual paper examines the mediating mechanism of government R&D support between institutional voids and technology transfer, and the moderating role of digital readiness. I argue that (1) developed multinationals use government research and development (R&D) support to exploit opportunities from institutionally voided emerging economies, and (2) digital readiness of emerging economies positively moderates the relationship between government R&D support and technology transfer. The discussion contributes to a greater understanding of the interplay between institutions and firm's investment decisions across different international environments.

Digitalization in the International Context

Session Moderator: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*

IM: Trade-offs in the Internationalization of Digital Products: Export and Domestic Uptake of Apps  

Author: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*
Author: **Aqi Liu**, *School of Economics and Management Tsinghua U.*

Although digitization is increasingly important in international business, there is relatively less insight about the potential dark sides to the internationalization of digital products. Focusing on app exports, we argue that the export of an app can create a trade-off for app development in the domestic market and that this trade-off is contingent on the fungibility of an app's resources across domestic and foreign markets. We hypothesize that: (1) exported apps have lower domestic uptake than non-exported apps, but this difference is (2) lesser for apps that use multiple domestic app markets, and (3) greater for gaming apps. We test these arguments with a proprietary dataset constructed using Chinese apps in the Tencent Appstore. Linear regressions, supplemented by propensity score matching and instrumental variable estimations for endogeneity concerns, provide robust support for our hypotheses. By highlighting trade-offs between export and domestic markets for digital products, the paper extends recent discussion about the potential unintended consequences from the internationalization of digital products.

IM: Measuring Digital Globalization Competence 

Author: **Fernanda Cahen**, *ESPM - Brazil*
Author: **Felipe Mendes Borini**, *U. of Sao Paulo (FEA/USP)*
Author: **Charles Dhanaraj**, *Daniels College of Business, Department of Management*

The wave of digitalization sweeping the globe is dramatically shifting the manner for businesses to cross borders. While digitalization eases the transferability of a firm's competence to foreign markets, paradoxically, it increases the appropriability hazards. Our study focuses on the globalization of digital firms, narrowing on a novel construct – digital globalization competence (DGC) – which is critical for these firms to monetize their firm-specific advantages in foreign markets. Specifically, we define, operationalize, and test a measurement model for DGC. Drawing on theory, we build a five-dimensional construct comprising global orientation, digital intercultural skills, business model dexterity, business connectivity, and platform connectivity. We test our DGC model for internal consistency, reliability, construct validity, and nomological validity by modeling its impact on firm performance. We discuss the implications of the new measure for research on digital globalization research and the practical application of the new measure for digital entrepreneurs going global.

IM: Digital Technologies and Firm Internationalization: The Role of Regional Digitalization 

Author: **Yancheng Fan**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*
Author: **Victor Cui**, *U. of Waterloo*
Author: **Suling Feng**, *U. of Jinan*
Author: **Jinjing Wu**, *Shanghai U.*

The rapid diffusion of digital technology drives the application of related technologies in various sectors, and promotes the contexts of digitalization across national and regional boundaries. Whether such rapid digital penetration bring desirable outcomes to enterprises remains to be elucidated. In the context of digitalization from emerging markets, we examined the relationships among the degree of regional digitalization, and internationalization speed of enterprise by using the within-between random-effects model and 2009–2019 data from China. We also hypothesized and tested the moderate impacts of local embeddedness and institutional fragility on the above-mentioned relationships. Our results indicate that the effects of digital technology on the internationalization speed of manufacturing enterprises are complicated, influenced by both globalization- and deglobalization-driven forces rather than caused by simple positive or negative relationships. Moreover, local embeddedness means the enhancement of digital connectivity for the enterprise and stable support for enterprises' internationalization. While institutional fragility not only impedes the transformation of digital advantages, but also shows an escape-driven force for enterprise internationalization to some extent. The findings of this study contribute to the theory regarding enterprise internationalization in the era of digitalization.

EMNEs Internationalization

Session Moderator: **Ke Rong**, *Tsinghua U.*

*IM: **The Belt and Road Initiative, Economic Development and Terrorism Reduction: An Institutional Theory***  

Author: **Ke Rong**, *Tsinghua U.*

Author: **Fei Hao**, *Tsinghua U.*

Author: **Di Zhou**, *School of Economics & Management, Tongji U.*

The Belt and Road Initiative (BRI) brings opportunities for the participating countries to improve their institutional environment. Based on the Global Terrorism Database, this paper constructs a panel data covering 152 countries from 2004 to 2018, and analyzes the policy effects of the BRI on reducing terrorist activities using the Generalized Difference-in-Differences model. The main findings include: firstly, the BRI can supplement the local political institution directly, and not only reduces the number of terrorist attacks, but also reduces the casualty of such attacks. Secondly, the policy effect of the BRI can be achieved through the improvement of the economic institutions, such as trade, FDI, digital infrastructure and economic growth. Finally, the policy effect of the BRI is weakened in the countries having relatively poorer social institutions, such as when the countries are at civil wars. This paper contributes to the research on the institutional theory and country specific advantage theory, and provides practical guidance for firms doing international business in the BRI participating countries with weak institutions.

Paper is Available to Meeting Registrants Only.

*IM: **The Complementarity Between Imports and R&D for Emerging Market Firms***

Author: **Lanhua Li**, *zhejiang U. of technology*

Author: **Elena Golovko**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Author: **Can Huang**, *Zhejiang U.*

Innovation is vital to firms from emerging markets to compete successfully with more technologically advanced companies from developed economies. The primary focus of recent IB research has been on the unique strategies of emerging markets MNEs used in the final stage of the internationalization process, e.g. buying technological and market capabilities abroad, to overcome the latecomer handicap. We still know little about the early-stage strategies that emerging market firms can utilize to build up initial capabilities to enable internationalization. In this study, we focus on importing as an option for firms to build and accumulate the needed technological competencies. We argue that firms' importing and internal R&D activities are complementary for innovation performance in the emerging market context and such complementarity is contingent on external competition dynamics. We test our predictions using a large sample of Chinese firms from high-tech industries. We find that firms, which combine importing and in-house R&D efforts, achieve better innovation performance. This complementary effect is more salient for firms in industries with intense competition. The presence of inward FDI in an industry also enhances the synergistic effect of imports and R&D. Lastly, accounting for heterogeneity of local competitors along the technological dimension, we find that technology laggards are more likely to benefit from the complementary effect compared to technological leaders. Our findings highlight the importance of imports as a channel for emerging market firms to enhance innovation performance in their quest for internationalization.

*IM: **Pro-Market Reforms Complementarities and Firm Profitability (WITHDRAWN)*** 

Author: **Rajnish Rai**, *Indian Institute of Management, Ahmedabad*

Author: **Mitul Surana**, *Indian Institute of Management, Indore*

Four decades of pro-market reforms in emerging economies have produced highly different benefits for firms across nations. Drawing on the institution-based view, we introduce the idea of the complementarity of pro-market reforms as one of the key drivers behind the diversity of firm profitability across countries. Specifically, focusing on trade and financial reforms, we posit that trade liberalization harms profitability because it increases competition while financial reforms help profitability because it provides more funds for investments. Moreover, jointly they support firm profitability because of their complementarities. Additionally, we propose that the effect of their complementarity is stronger for firms that are more dependent on external finance. We test these ideas on a sample of 4,792 firms from 42 emerging economies during 1996-2018. Our study extends institutional economics by analyzing the role of complementarities among reforms and discussing their impact on firms.

Expatriation Management

Session Moderator: **Di Fan**, *Swinburne Business School, Swinburne U. of Technology*

IM: An Integrative Model of Sustainable Expatriation Management 

Author: **Di Fan**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Sihong Wu**, *U. of Western Australia*
Author: **Yiyi Su**, *Tongji U.*
Author: **Yi Li**, *U. of Sydney Business School*

Sustainable expatriation management is an important topic in cross-cultural research as it is pertaining to finding a ‘win-win’ managerial approach for improving multinational enterprises’ (MNEs) performance and expatriates’ satisfaction. Drawing upon the ability-motivation-opportunity framework, this study proposes ability-, motivation- and opportunity-attributes as a tripod of expatriate competence-enhancing practices (EC-Ps). Via a matched survey dataset from both 150 expatriates and their headquarters (HQs) managers, we examine the influences of adopting expatriate competence-enhancing practices on MNEs’ subsidiary performance and expatriate satisfaction. We also identify a sequential mediation mechanism of cross-cultural competence and subsidiary autonomy in-between the relationships. Important contributions for theory and practice are discussed.

IM: Making Friends Abroad: A Process Model of Expatriate Social Network Formation

Author: **Marian Van Bakel**, *U. of Southern Denmark*

Although the social context of expatriation is very important for expatriate success, little is known about how expatriates make friends abroad. Based on 72 interviews with expatriates around the world, a process model of expatriate social network formation is developed. This study shows that this process is less deliberate than usually assumed; expatriates do not always actively choose who they come into contact with, and contextual factors as well as alter characteristics also influence relationship initiation and development. Furthermore, several expatriate-specific drivers of this process have been identified. The main contribution of this study is that it explains how expatriates create a new social network abroad. Practically speaking, the model could guide expatriates in making friends abroad; organisations can facilitate this process and the expatriates themselves can influence the process in order to create a social network that supports them in their cross-cultural transition.

IM: Servant Leadership and Turnover Intentions of Self-Initiated Expatriates: A Moderated Mediation 

Author: **Caleb Lugar**, *Oasis International Schools*
Author: **Milorad Novicevic**, *U. of Mississippi*
Author: **Paul Johnson**, *U. of Mississippi*

We draw on conservation of resources and organizational identification theories to model and empirically examine the influence of servant leadership on the turnover intentions of self-initiated expatriates (SIEs) employed in a single multinational educational organization. We surveyed 168 SIEs working as self-initiated expatriates in English-speaking, American-style schools located in 13 countries around the globe. We found that servant leadership negatively affected SIEs’ turnover intentions through the mediating mechanism of SIE organizational embeddedness. The mediation was moderated by SIE organizational identification such that higher levels of organizational identification weaken the influence of servant leadership on organizational embeddedness. This suggests that servant leadership reduces SIE turnover intentions, especially during critical onboarding and socialization.

Export Internationalization

Session Moderator: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*

IM: **A Systematic Review and Agenda for Learning-By-Exporting Research**  

Author: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*
Author: **Ryan Federo**, *U. de les Illes Balears*

Over the past four decades, flourishing empirical research has attempted to establish the mechanisms and conditions underpinning improvements in exporters' innovation and productivity via the learning-by-exporting (LBE) effect, and the domain has gained legitimacy and empirical credibility. However, the literature's findings are largely fragmented and require systematic review and analysis to draw definitive conclusions on the factors that influence the subsequent realization of learning from exporting. To fill this void, we critically examine the extant LBE research for the period 1984–2021. We systematically review 167 articles to develop a system-based taxonomy and conceptual model of LBE, which comprises five major components: system outputs (productivity and innovation), inputs (e.g., institutional factors and resources), firm-level capabilities (e.g., absorptive capacity and innovation persistence), managerial competencies (e.g., entrepreneurship skills), and strategic internationalization decisions. In doing so, we uncover paradoxical tensions within the system brought about by the conflicting roles of some components of the LBE system, such as firm-, industry-, and country-level technological capabilities. Our review also reveals research gaps that open relevant opportunities for further research and conclusions that hold novel implications for managers and policymakers.

IM: **CEOs Gender, Institutions, and Exports**    

Author: **Farzana Chowdhury**, *Durham U. Business School*
Author: **Maksim Belitski**, *U. of Reading*

We investigate the institutional context proxied by two types of corruption - pervasive and arbitrary - associated with firm exports, focusing on how this relationship differs between men and women-led firms. Using self-reported micro-level cross-country data from 4,714 firms on arbitrary and pervasive corruption during 2008–2015 across 75 economies, we find that pervasive and arbitrary corruption types have different effects on firm exports. We also find that female Chief Executive Officers (CEOs) mitigate this effect of corruption in two distinct ways. Our results contribute to institutional and feminist theories and are robust when controlling for economic development and quality of gender institutional characteristics. Our study suggests that female CEOs in developing and emerging economies will be less vulnerable to predictably corrupt institutions rather than to uncertain institutions.

IM: **Firm Heterogeneity in Export Performance: Management Practices as Missing Link** 

Author: **Eda Aral Kilic**, *Faculty of Economics and Business, U. of Groningen*
Author: **Harry Garretsen**, *U. of Groningen*
Author: **Janka Ireen Stoker**, *U. of Groningen, Faculty of Economics and Business*

This paper examines how and to what extent firms' management quality is linked to firms' export performance. It is a stylized fact that exporters are more productive than non-exporters, but the drivers behind the variance of productivity across firms, leading to heterogeneity in exports have not been investigated extensively, to date. We use a detailed administrative dataset of manufacturing firms in the Netherlands, matched with their management practices information. Results indicate that firms with higher management quality earn higher export revenues. Firms' productivity is endogenous at their management practices, and this link between management and productivity explains a part of the heterogeneity in exports across firms. Though, management's link to exports seems to be not limited to its contribution to firms' productivity.

Panelist: **Suzanne Marie Gagnon**, *Asper School of business, U. of Manitoba*

In this panel symposium, we argue for the need to study language in international management from an intersectionality perspective. The purpose of this panel is to engage a group of panelists in a formal, moderated, interactive discussion of (1) the relationship between “language” and “gender” identities and effects on individual and organizational processes; (2) the implications of ignoring the role of gender in current language research; (3) the importance of drawing from intersectionality in IM research; and (4) how the combined effects of language and gender can be measured.

Panelist: **Ivo Zander**, *Uppsala U.*

The patterns and sources of knowledge development in international businesses have become increasingly complex with each techno-socio-economic paradigmatic period of the mechanical, electromechanical, and information ages. This has implications not only for researchers in the technological innovation and knowledge flows domain but also for global strategists and public policymakers. The purpose of this symposium is to engage a group of distinguished panelists in an informal interactive discussion of (1) theoretical approaches to examining technological innovation and knowledge flows and (2) how digitalization and advancements in communication technologies are affecting technological innovation and knowledge flows in the information age. Each panelist is an expert in this domain and views the phenomenon through the lens of evolutionary theory, economic geography, or human migration.

Creating Better Leaders Through Student Cases and Problem-Based Learning

Creating Better Leaders Through Student Cases

Organizer: **Elena Lvina**, *Saint Joseph's U.*

Organizer: **C. Ken Weidner**, *Saint Joseph's U.*

This workshop will be of interest to attendees who want to maximize students' ownership of their own learning by either starting or improving upon their use of cases that students write based on their own experiences. Student-written cases are novel situations which require novel solutions. The "right" answer is not published; the "best" answer must come from the group and in real-time, addressing the most urgent issues, such as pandemic-related challenges students and their organizations face. Cases written by a diverse class can be extraordinarily engaging, addressing the issues that are both timely and relevant to them, rather than to middle-age white male protagonists in many published cases. Using students' cases provides compelling content for problem-based learning, and has been used to achieve a variety of learning objectives in a wide range of courses (consulting, cross-cultural management, ethics, HR, leadership, OB, strategy) and settings at the undergraduate, graduate, and executive graduate levels, in corporate programs, and in both in-person and online courses. The use of student-written cases cultivates critical skills including writing, working in groups, applying course subject matter, critical thinking, analysis (problem identification and problem-solving), presentation and facilitation, and engaging in reflection. Student cases can also help meet multiple AACSB standards, including enhanced scholarship, societal impact and student engagement. This workshop will address faculty aspirations and concerns about teaching with student cases and provide tools to build faculty confidence from their first application of student-written cases.

William H. Newman Award Nominee

Korea's late industrialization, 1960-1990, exemplified state protection and promotion policies in favor of a few select entrepreneurs, chaebols, who cultivated big businesses across multiple sectors over the period. This article traces their social and business origins in the First Republic, 1948-1960, to study how early chaebols in the light industry earned a reputation as shrewd businessmen and regulatory rentiers before their subsequent state-business partnerships in heavy industries. Their social networks do not show deep ties with officials yet, known as 'seisho' in the earlier Japanese zaibatsu. Samsung establishes as the exemplar of chaebol, a financial clique, replacing the old manufacturing model by Kyongbang, once the largest corporation from the colonial period.

MH: **Tracing the Layers of Novelty Imprinting and Identity Continuity: Evidence from China**   

Author: **Hongqin Li**, *Nottingham U. Business School*

Author: **William Stopford Harvey**, *U. of Bristol*

Sage Publishers Award for Best Management History Division Paper in Leadership

We explore whether and how the unfolding and contested nature of organizational identity can co-exist with successive layers of novelty imprints over time. Grounded in an in-depth case study of a multi-billion-dollar Chinese fund management firm, our analysis reveals how key figures can jointly shape organizational identity through leadership ideology, organizational structure and culture. We show three corresponding yet dissonant CEO practices and explain how leaders can create, blemish, or refine cognitive, structural, and cultural imprints. Our emergent theoretical framework explains the paradox of how identity continuity and novelty imprinting can co-exist.

MH: **Coping with Devils and Climate Change with the Help of Asceticism? Exploring the Role of Asceticism** 

Author: **Suleika Bort**, *U. of Passau*

Author: **Alfred Kieser**, *Zeppelin U.*

Since Greek antiquity, humans have been practicing asceticism to overcome adversities and to change their lives for the better. Asceticism can be defined as the practice of self-discipline or self-restraint in order to achieve a particular goal. Asceticism not only enabled monks to live a life that prepared them for eternal salvation, but it also helped to generate groundbreaking technical and cultural innovations as well as societal transformation. Paradoxically, as Max Weber has shown, asceticism in form of Protestantism also fostered the emergence of capitalism. Nowadays, the term has developed multiple meanings. We identify and critically examine five modern variants of asceticism which can be found in social movements such as Voluntary Simplicity (VC) and in the work of philosophers such as Wilhelm Schmid, Peter Sloterdijk, Quentin Maillasoux and the sociologist Ulrich Beck. Drawing on recent developments in the climate ethics and social movement literature, we explore and critically examine whether and how these modern variants of asceticism can develop a similar transformative power by creating a broad social movement that triggers collective action and political activism and help us to cope with climate change. Preparing for these effects now might further help us when problems caused by the climate change become even more difficult to cope with.

 MH: **Multi-temporality and the Ghostly: Capturing the Spirit of Time Past and Yet to Come?** 

Author: **Mairi Maclean**, *U. of Bath*

Author: **Charles Edward Harvey**, *Newcastle U.*

Author: **Roy R. Suddaby**, *U. of Victoria*

John F. Mee Award for Paper with the Best Management History Division Contribution

Despite growing scholarly interest in time, history, and memory, we lack an understanding of the multi-temporal reality of organizations – how past, present, and future intersect to inform the lived experience of organizing. The lexicon of the ghostly can help in this regard. We offer a framework that focuses on core moments of organizational life: foundation, strategic change, and longevity commemoration, and illustrate this using a historical case study of consumer goods multinational Procter & Gamble (1930-2010). We extend explorations of the ghostly into the domain of long-lived multinationals. Departed leaders highlight the capacity for temporal interplay, representing a 'shorthand' for members to understand the organization's past, present, and future. It is their persistence and mutability that makes them ghostly, reaffirming the past yet remaining open to re-interpretation. Studying organizations through the lens of the ghostly turns the spotlight on the spiritual, highlighting the need for re-enchanting our theorizing of organizing.

Causes of Absenteeism and Turnover

Session Moderator: **Yunita Sofyan**, *Xi'an Jiaotong U. School of Management*

OB: Performance and Turnover Consequences of Goal Orientation Faultlines: A Self-in-Social-Setting View

Author: **Christopher O.L.H. Porter**, *Indiana U.*
Author: **Erzhuo Wang**, *U. at Buffalo, The State U. of New York*
Author: **Aleksander P.J. Ellis**, *U. of Arizona*

Teams are collections of interdependent people, each of whom bring their own personal motivational tendencies to their teams. Goal orientations are useful frameworks for categorizing the different motivational tendencies people have and that influence their interpretation of, and reactions to, achievement opportunities and outcomes. In this article, we examine the effects of differences in members' goal orientation profiles in teams. We draw on the self-in-social-setting regulation view of self-regulation, which suggests that team contexts are ones in which people with different motivational tendencies can present a social hindrance to one another and impede one another's goal pursuits. We argue that when that team members have different goal orientation profiles, goal orientation faultlines can emerge. We predict that teams with stronger goal orientation faultlines will report more stress (i.e., emotional exhaustion) than teams with weaker goal orientation faultlines and that emotional exhaustion mediates the effects of goal orientation faultlines on team performance and turnover. We tested our predictions using a sample of 131 teams (637 team members) in a field setting over 18 months, finding support for our hypothesized effects of goal orientation faultlines on emotional exhaustion and team turnover and suggesting a number of important theoretical, empirical, and managerial implications.

OB: The Effect of Community Support for Far-Right Political Parties on Immigrant Employee's Absenteeism

Author: **Benjamin Korman**, *U. of Konstanz*
Author: **Florian Kunze**, *U. of Konstanz*
Author: **Max Reinwald**, *LMU Munich*
Author: **David J. G. Dwertmann**, *Rutgers U.*

OB Division AOM Meeting 2022 Best Paper with International Implications Award

Both international migration and political polarization have seen widespread increases over the last decade. As immigration increases, community support for far-right political parties (and their xenophobic platforms) grows, begging the question of how a community's support for far-right political parties affects immigrant workers who serve these communities. Integrating macro-level research from economics and political science with stereotype threat theory at the individual-level, we argue that far-right political support in the community makes negative immigrant-related stereotypes salient, affecting immigrant workers' short-term absenteeism behavior. However, we predict that similarity to their team leader or coworkers (in terms of immigrant status) is associated with decreased short-term absenteeism because it lowers immigrant workers' perceptions of stereotype threat. Using both field and experimental designs, we demonstrate the interplay between subordinate's immigrant status, their similarity to fellow team members, and the political context in which they work.

OB: Impact of Hearing Negative and Positive Gossip about Supervisor: A Within-Person Investigation

Author: **Yufan Deng**, *Florida State U.*
Author: **Dishi Hu**, *Fox School of Business, Temple U.*
Author: **Shanna R. Daniels**, *Florida State U.*
Author: **Robin Mengxi Yang**, *School of Economics and Management, U. of Chinese Academy of Sciences*
Author: **Wansi Chen**, *East China U. of Science and Technology*

Although workplace gossip is ubiquitous in the workplace, organizational research has a limited understanding of its influence on the gossip receivers. Also, the valence (i.e., negative or positive) of workplace gossip remains understudied, leaving an incomplete understanding of its impacts on the receivers. Drawing on conservation of resources theory, we investigate the somatic, psychological, and behavioral effects of gossip on receivers when they hear negative workplace gossip about their supervisor. Specifically, we focus on the daily influences of workplace gossip. Results show that employees who hear negative gossip about a supervisor tend to have poor sleep quality at night and less vitality the next morning, and as a result, are likely to display more psychological withdrawal behavior, have lower work engagement, and engage less in supervisor-directed citizenship behavior. With an experience sampling methodology design, we capture the impact of daily experiences of hearing workplace gossip about a supervisor on receivers, which broadens our understanding of the temporal consequences of workplace gossip. We conclude by discussing implications and future directions of our work.

OB: Quitting a Job as Vengeance for Being Ostracized: The Role of Challenge-Hindrance Stressors

Author: **Yunita Sofyan**, *Xi'an Jiaotong U. School of Management*
Author: **Malika Richards**, *Pennsylvania State U.*
Author: **Elisabeth Mutiara Jemadu**, *Xian Jiaotong U.*

How does a counterproductive work situation affect employee turnover intention? Using conservation of resources (COR) theory, this study explores how the experience of workplace ostracism results in knowledge hiding and turnover intention. Based on three waves of data collection from several organizations in Indonesia, we find a support for our proposed model. Furthermore, this indirect relationship was stronger among employees with higher level of hindrance stressor, in contrast, was weaker among employees with higher level of challenge stressor. We conclude this study by discussing the theoretical and practical implication of these findings.

Evaluating Leaders

Session Moderator: **Gretchen Renee Vogelgesang**, *San Jose State U.*

OB: How Relevant is Irrelevant Information? The Effect of Irrelevant Information on Leadership Perception

Author: **Naeem Zakir**, *U. of Mannheim*

Author: **Irmela Koch-Bayram**, *U. of Mannheim*

Previous studies have provided conflicting evidence of whether irrelevant information can influence the processing of relevant information in behavioral judgments. Under the notion of the dilution effect, Nisbett, Zukier and Lemley (1981) suggest that non-diagnostic (irrelevant) information influences individuals' judgements such that it brings them to the mid-point of a scale. By using dilution effect mechanisms of irrelevant information from social psychology, we examine whether irrelevant information makes leadership perception ratings less extreme or not. We test our hypotheses in an experimental study with 406 participants in a 2 (positive vs. negative leadership attributes) × 2 (only relevant vs. relevant and irrelevant information) between-subjects design. Results of the present study demonstrate that the effect of irrelevant information was dependent on the context (positive or negative leadership attributes) in which baseline leadership behavioral information cues were administered: irrelevant information influenced leadership perceptions in such a way that the leadership perception ratings were drawn towards average. That is, leadership perception ratings of targets with positive behaviors information were reduced whereas leadership perception ratings of targets with negative behavior information were increased. These findings extend classical dilution results to the leadership context and have consequences for information processing mechanisms of leadership perceptions

OB: How Subordinates Evaluate and Respond to the Legitimacy of Leader-Member Exchange Differentiation

Author: **Sihong Huang**, *Hong Kong Baptist U.*

Author: **Siting Wang**, *Hong Kong Baptist U.*

Drawing on legitimacy framework and equity theory, this paper examines subordinates' evaluating process of leader-member exchange differentiation (LMXD) legitimacy and their subsequent responses. Specifically, we use LMXD deservingness (i.e., subordinates' perception that those who develop high-quality relationships with leaders make high contributions to their group) to capture subordinates' legitimacy judgments of LMXD. And we propose that LMXD deservingness will mediate the relationships of LMXD with subordinates' in-role performance and interpersonal helping. Furthermore, we expect that the cross-level effects of LMXD will be moderated by the characteristic of team context, that is, perceived team competition. Using surveys from 207 leaders and 1163 subordinates, we found support that LMXD deservingness mediated the effect of LMXD on subordinates' in-role performance but not on subordinates' interpersonal helping. In addition, LMXD's direct impact on LMXD deservingness and indirect impact on subordinates' in-role performance via LMXD deservingness were more negative when perceived team competition is high rather than low. Theoretical implications and future research directions are discussed.

OB: CEO Ethical Leadership in Promoting Ambidextrous Learning: Examining the CEO-TMT Interface

Author: **Wenchuan Huang**, *School of Economics & Management, Tongji U.*

Author: **Shouming Chen**, *Tongji U.*

Author: **Chang Liu**, *Jiangnan U.*

How can a firm develop and utilize knowledge more effectively and efficiently in ways that increase its learning ability to pursue an ambidextrous orientation? Based on the upper echelons theory and social learning theory, we provide a new theoretical insight that highlights the role of CEO, especially the ethical leadership of CEO. We argue that ethical leaders who are more likely to stress the importance of two-way communication and integrate knowledge can increase firms' ability to promote the process of ambidextrous learning. Moreover, based on CEO-TMT interface, we theorized and tested two mediating mechanisms from top management team (TMT) level, transactive memory system and behavioral integration. Using a sample of 204 firms in China, we find the indirect effect of TMT transactive memory system and behavioral integration on the relationship between CEO ethical leadership and ambidextrous learning coexist. The theoretical contributions, future research directions, and managerial practice implications of these findings are discussed.

OB: Romance of Leadership – Does Crisis Amplify the Over-Attribution to Leaders? 

Author: **Birgit Schyns**, *NEOMA Business School*

Author: **Gretchen Renee Vogelgesang**, *San Jose State U.*

Author: **Paul B. Lester**, *Comprehensive Soldier Fitness Office*

Romance of leadership theory describes over-attributions to leadership responsibility on organizational outcomes. Theoretically, ROL is stronger in times of crisis. This paper explores the impact of crisis on ROL, along with whether the type of crisis (human versus technical) matters when attributing responsibility to the leader or the situation. Study 1 explores the conditions of success compared to failure. Study 2 explores the human versus technical dimension along with turnaround versus downturn in addition to whether the outcomes were expected or unexpected. In both studies, beyond attributions to the leader or the situation, we collected additional outcome variables including participants' choices to allocate bonuses, recommend demotions or promotions, and whether the participant feels the leader has behavioral integrity and whether they would accept risk-taking by the leader. In study 1, we found the highest attribution to the leader occurred in the crisis success condition and highest attribution to the situation occurred in the crisis failure condition. However, leader effectiveness was strongest and bonuses were highest in the non-crisis scenarios. In study 2, we found that the technical and success conditions elicited the strongest romance of leadership, while non-crisis was stronger than crisis. Taken together, our results call into question whether crisis does elicit stronger romance of leadership. We discuss implications for the romance of leadership theory and broader leadership research.

In the last years, we have seen a rapid increase of alternative employment arrangements due to technological advances, the COVID-19 pandemic, and the changing expectations of workers. Alternative employment arrangements that include gig work, freelancing, side hustles, and microwork through digital platforms have become an integral part of the modern workforce and thus dramatically changed the nature of work. This symposium aims to explore the ways in which alternative work arrangements influence the daily lives and identities of individual workers, how workers respond to the algorithmic practices embedded in some of the largest gig worker platforms, and why traditional conceptualizations of commitment and human resource management fail to incorporate independent workers who are often outside the boundaries of formal HRM practices. Using different theoretical perspectives (Affective Event Theory, Identity Theory) and employing a variety of qualitative and quantitative research methods, we specifically focus on strategies that help workers to better realize the benefits and reduce the downsides of alternative employment arrangements and thus facilitate a creation of a better world for nonstandard workers.

SIM: Differentiating the Attitude-Behavior Gap: A Consumer Typology

Author: **Zara Berberyan**, *Hamburg School of Business Administration*
Author: **Sarah Jastram**, *Hamburg School of Business Administration*
Author: **Stefan Schaltegger**, *Leuphana U. Lüneburg*
Author: **Mark A Heuer**, *Susquehanna U.*

While most studies in the field of consumer research acknowledge differences between consumption patterns of distinct consumer groups, research dealing with the attitude-behavior gap has hitherto not been sufficiently linked with these findings. As a result, attitude-behavior gap has been often conceptualized as a uniform phenomenon for all consumer groups leaving variances across distinct groups largely unexplored. Based on a representative survey (N=1000) among German consumers, this paper challenges this assumption and presents five consumer clusters with different attitude-behavior gaps related to distinct demographic and socio-psychological characteristics. This typology enables analyzing the determinants of the attitude-behavior gap across different social groups and allows for more differentiated empirical research and managerial analysis. The findings contribute to the ethical consumption literature in that they differentiate applied ethics across distinct consumer groups as well as to the broader consumer research by demonstrating the relationship between individual characteristics and distinct attitude-behavior gaps.

SIM: The Role of Consensus in Legitimation through Deliberation: An Experimental Approach

Author: **Anna Jasinenko**, *U. of Lausanne, HEC Lausanne*
Author: **André Bächtiger**, *U. of Stuttgart*
Author: **Patrick Haack**, *U. of Lausanne, HEC Lausanne*

Previous research has advanced scholarly understandings of legitimacy formation at the individual level, yet has not taken into account that individuals develop their legitimacy beliefs in communication activities with others. Our study seeks to address this shortcoming by advancing a dialogical approach which construes legitimacy formation as an outcome of social interaction. We study the legitimacy formation process in the context of a deliberation experiment where we asked participants to discuss in small groups a controversial topic (i.e., the Swiss Responsible Business Initiative). Before and after the deliberation we measured participants' legitimacy beliefs, as well as their behavioral intentions to assess the degree to which these variables changed during the deliberation. Additionally, we manipulated the level of agreement within the deliberation groups to understand how group consensus affects the impact of deliberation on legitimacy formation. Overall, we find that deliberation results in a stronger change of legitimacy beliefs and behavioral intentions if participants deliberate in a low compared to a high consensus group. Our study contributes to legitimacy theory by conceptualizing and empirically testing legitimacy formation as a dialogical process. Moreover, we present and apply the deliberation experiment as a promising novel method for testing cause-and-effect relationships in the process of legitimacy formation.

SIM: Effects of Corporate Environmental Activities on Evaluators' Propriety Beliefs

Author: **Julia Herzum**, *U. of Mannheim*
Author: **Martin Sievert**, *U. of Mannheim*
Author: **Bernd Helmig**, *U. of Mannheim*

Citizens and consumers alike, as evaluators, seek to determine the legitimacy of businesses engaged in environmental activities, but their ability to assess organizational legitimacy is limited. Information cues can affect their propriety beliefs, which is the micro-level component of legitimacy, but it remains unclear how evaluators use various information cues related to corporate environmental responsibility. To shed light on the development of propriety beliefs, according to different information cues, this study presents a vignette experiment (n = 1,000) that distinguishes corporate information cues and validity information cues. The former indicate same- or cross-sector partnerships, in combination with substantive or symbolic collaborative actions; the latter instead feature a third-party rating. Our results suggest that evaluators react differently to corporate information cues, and pre-existing attitudes (i.e., attitudes towards greenwashing) affect the formation of propriety beliefs. In contrast, participants were generally responsive to validity cues. These theoretical insights suggest that evaluators establish an information hierarchy, such that they focus on seemingly reliable validity cues, and only a subsample of them incorporate more ambiguous corporate information cues. Thus, audience heterogeneity is critical information for understanding the formation of propriety beliefs. The results also warn businesses that they have limited opportunities to increase their legitimacy through self-initiated communications, so they need to pursue collective-level validity.

SIM: Examining the Relationship Between Grit and Preventative Behaviors and Well-being

Author: **Abira Reizer**, *Department of Social Sciences and Psychology, Ariel U.*
Author: **Bella Galperin**, *U. of Tampa*

Despite government mandates to wear face masks in some public locations, why do some people still refuse to wear a face mask in public? This paper examines the relationship between grit and well-being outcomes, namely COVID-19 preventative health measure and distress. Further, the mediating role of autonomous and controlled motivation is also investigated. The results suggest that grit is directly related to decreased distress and increased preventative behaviors. Autonomous and controlled motivated mediated the relationship between grit, distress and preventive behaviors, such that autonomous motivation mediated the association between grit and preventive behaviors; while controlled motivation mediated the relationship between grit and psychological distress. These findings suggest that grit can be an important growth mindset in increasing preventative behaviors and individual well-being during the pandemic. Implications for human resource managers in attempting to help employees cope effectively during the pandemic are discussed.

Paper is Available to Meeting Registrants Only.

Author: **Sydney Levine**, *Harvard U.*

Rules are crucial for any organization, but people are sometimes encouraged to break organizational rules. Doing so often leads to more efficient, more creative organizations. It is possible, however, for rule-breaking to go too far. How do employees figure out when and whether to break the rules? We model intuitive rule-breaking by drawing on a theory of social interactions -- "virtual bargaining" -- that assumes that actors engaged in a simulated bargaining process when navigating the social world. In this paper, we present experimental data which suggests that rule-breaking decisions are driven by virtual bargaining. We conclude by discussing implications for organizational structure and management.

STR Mid-Career Consortium: Managing Your Evolving Career 
STR Mid-Career Consortium

Session Chair: **Srikanth Paruchuri**, *Texas A&M U.*

Session Chair: **Ha Hoang**, *ESSEC Business School*

Panelist: **Roberto Vassolo**, *IAE Business School, Argentina AND Pontificia U. Católica de Chile, Ingeniería Industrial*

Participant: **Julian M Birkinshaw**, *11393*

Participant: **Gerard George**, *Georgetown U., McDonough School of Business*

Participant: **Tammy L. Madsen**, *Santa Clara U.*

Participant: **Jiatao Li**, *Hong Kong U. of Science and Technology*

The Strategic Management Division will once again sponsor a Mid-Career Consortium for the 2022 Annual Meeting of the Academy of Management. Following the Academy’s decision to hold the meetings virtually, the Consortium will also be organized virtually. The Mid-Career Consortium is for STR faculty members who are tenured on or before August 2021 and have at least five years of academic experience. The consortium is designed to be an interactive session where mid-career faculty members will interact with senior faculty in a set of small group discussions on the opportunities and challenges scholars face as they transition from junior to senior scholars. The objective is to facilitate networking and discussion around the unique professional challenges, problems and opportunities facing STR faculty moving into their “Associate Professor Years.” At the Mid-Career Consortium in the 2022 AOM Virtual Annual Meeting, participants will interact with a panel of senior faculty members including Julian Birkinshaw (London Business School), Gerry George (Georgetown University), JT Li (Hong Kong University of Science & Technology), Tammy Madsen (Santa Clara University), and Roberto Vassolo (IAE Business School, Argentina). The panelists and participants discussed a range of issues in small groups, including topics such as managing competing demands, changing your outlook/emphasis post tenure, launching a new research stream or reorienting your research focus, when to think about changing schools, supervising Ph.D. students, and taking on leadership roles. The 2022 STR Consortium will be co-chaired by Ha Hoang (ESSEC Business School) and Srikanth Paruchuri (Texas A&M University). Look for additional details in STR’s Spring 2022 Newsletter. For more information regarding next year’s consortium, or to express interest in participating, contact Ha Hoang (hoang@essec.edu) or Srikanth Paruchuri (paruchuri@tamu.edu).

CEO Succession: Internal and External Effects

Session Moderator: **Eric Y. Lee**, *Penn State Smeal College of Business*

STR: Steering the Intangible Wheel: The Effect of CEOs on Corporate Culture Change 

Author: **Xina Li**, *INSEAD*

Author: **Guoli Chen**, *INSEAD*

Author: **Shen Rui**, *The Chinese U. of Hong Kong, Shenzhen*

In this study, we provide large-scale empirical evidence that leaders have a substantial impact on corporate culture change. We hypothesize that CEO succession leads to a higher level of corporate culture change, compared with the pre-succession period. In addition, the impact of CEO succession on culture change is contingent on executives' commitment to the prior culture. Using novel measures of corporate culture based on machine learning, and 765 succession events in S&P 1500 firms from 2001 to 2018, we find an elevated corporate culture change following CEO successions. The effect of succession on culture change is robust in the subsample of predecessor death-driven successions, and stronger if (1) the predecessor does not stay on as board chair and (2) the successor is an outsider. Moreover, we measure corporate culture using both executive comments in earnings conference calls and employee reviews from Glassdoor and find that the culture change patterns are largely consistent across different levels of hierarchies. CEOs manage culture with "style" when they move across companies, and explain a substantial proportion of the variance in overall culture change. Overall, our study contributes to the literatures on strategic leadership and corporate culture by examining whether, when, and to what extent leaders affect corporate culture change.

STR: CEO Succession and Competitive Attacks from Rivals  

Author: **Eric Y. Lee**, *Penn State Smeal College of Business*

Author: **Wenpin Tsai**, *Pennsylvania State U.*

With likely disruptions in a focal firm's ongoing routines and processes, a CEO succession event may be an opportune time for rivals to engage in competitive attacks against the focal firm, particularly when the successor CEO is very different from the predecessor in professional experiences. We argue that the effect of predecessor-successor experience differential on rivals' competitive attacks is contingent upon whether the focal firm has a strong corporate governance stabilizing force such as a high presence of dedicated ownership or by keeping the predecessor on the board. Using archival data on CEO succession events of S&P 500 firms between the years 2010 and 2017, we find support for our propositions that strong corporate governance may ward off rivals' competitive attacks when a focal firm is hiring a new CEO that is drastically different from the predecessor.

STR: CEO Succession Timing & Post-Succession Firm Performance 

Author: **Diego Villalpando**, *U. of Nebraska Lincoln*

Author: **Robert James Campbell**, *U. of Nebraska, Lincoln*

CEO succession timing varies significantly across companies. Indeed, CEOs begin their tenures at different times throughout the fiscal and calendar years, regardless of whether appointed CEOs are insiders/outside or heir apparents. Despite the variance in CEO succession timing, little is understood regarding this succession aspect, which is problematic as it may explain important variance in post-succession firm performance. To advance research in this regard, we draw from kairology and the fresh start effect and theorize that successions that occur at the beginning of the calendar year, fiscal year, or fiscal quarter are positively related to post-succession performance. We further argue that heir apparent status and insider/outside status moderate this relationship. We find support for our arguments in the context of S&P 500 firm CEO successions and thus make important contributions to the CEO succession literature.

Paper is Available to Meeting Registrants Only.

STR: How New CEOs Use Strategic Topic Setting to Manage Capital Market Reactions to their Appointments

Author: **Jan Christoph Hennig**, *Groningen U. (RuG)*

Author: **Michelle Lang**, *U. of Goettingen*

Author: **Michael Wolff**, *U. of Goettingen*

Author: **Joseph Harrison**, *Texas Christian U.*

In this study, we examine new CEOs' use of strategic topic setting as an impression management tactic in response to legitimation pressure from the capital market. We propose that the dismissal of the predecessor CEO represents a distinct opportunity for the new CEO to gain legitimacy by departing from the predecessor's strategic agenda (i.e., strategic dissimilarity). Building on impression management literature, we argue that negative capital market reactions to CEO appointments can drive strategic topic setting in two opposing ways: (1) to strengthen the mandate, or (2) to deviate from the mandate. By drawing on a sample of U.S. companies listed in the S&P 1500 between 2003 and 2018, we use textual analysis in quarterly earnings conference calls transcripts to assess the use of strategic topic setting by new CEOs. We find that while new CEOs engage in mandate-oriented strategic topic setting, high pressure from negative capital market feedback can result in coping mechanisms that lead to non-role conforming CEO communication. Accordingly, our study makes important contributions to both the CEO succession literature and the impression management literature.

Panelist: **Elena Novelli**, *Bayes Business School*
Panelist: **Patryk Perkowski**, *Columbia Business School*
Panelist: **Phebo Derk Wibbens**, *INSEAD*
Panelist: **Tiona Zuzul**, *Harvard Business School*

Based on the very successful attendance we experienced at AoM 2021 (140+ attendees), we propose a second edition of this PDW, which aims to expose researchers in strategic management to novel and cutting-edge data and methodologies to address relevant questions in the field that are still missing an answer often due to empirical limitations. In this year's edition of the PDW, we focus on showcasing empirical approaches that can help researchers address the issue of causal identification in strategy and develop novel theories based on qualitative evidence. We also illustrate how the use of techniques such as stochastic modelling and qualitative analyses can complement and enrich more widespread empirical approaches based on the use of archival data. Finally, we also illustrate how to acquire novel datasets and leverage those to address traditional questions in the field. The first part of the PDW will focus on presentations by the invited panelists, who will showcase the use of novel data and methodologies within specific research projects. The presentations by the panelists will be followed by a Q&A session with the audience and further by a series of roundtables where participants can interact among each other and with the panelists/organizers and discuss their ongoing research projects.

New Ways Forward

Session Moderator: **Arturo E. Osorio**, *Rutgers U.*

CMS: **The Challenges of Coeliac Disease at Work: A Research Agenda towards Organisational Inclusion**  

Author: **Anne Steinhoff**, *U. of Essex Business School*
Author: **Rebecca Warren**, *U. of Essex*
Author: **David Carter**, *U. of Canberra*
Author: **Jason Glynos**, *U. of Essex*

Over the past decade, organisations have attempted to create more inclusive and open workspaces. Despite this, the understanding of what inclusive workspaces should accommodate and what they should look like are numerous and often contradictory. Terms such as ‘inclusion’ and ‘diversity’ rhetorically seem to become buzzwords in organisational discourse, with an increased employee experience of exclusion. This paper aims to understand how and why organisational practices, behaviours and norms promoted as inclusive reinforce barriers and inexplicit discrimination. In interpreting the experiences of employees living with Coeliac Disease as presented in United Kingdom (UK) employment tribunals, UK Parliamentary debates and in medical journals, we illustrate how ‘inclusive’ organisational practices pose challenges to the employees living with Coeliac Disease. The paper adopts a theoretical perspective as developed by the Essex School of Discourse Analysis to demonstrate that organisational practices mobilise logics of exclusion and inclusion. We contribute to current academic debates in critical management by challenging the discursivity of organisational inclusivity and promote further research into medical conditions at work.

Paper is NOT Available. Please contact the author(s).

CMS: **Identifying New Ways of Making Sense by Questioning the Philosophical Foundations of our Field**

Author: **Rene Wiedner**, *Warwick Business School*
Author: **Robin Holt**, *Copenhagen Business School*

Organization studies makes sense of its objects of study by grounding them in instrumental relations: organization arises, and becomes the object of management, as a structuring means of containing and controlling what is otherwise uncertain, unruly and unproductive. Advocates of sensemaking theory continue in this vein of thought: how best to recover order, prevent disorder, and thereby attain organizational resilience. Though their solutions are various, their unquestioned solution driven, instrumental epistemology remains consistent. In this paper we question the largely taken for granted assumption that sense is made only, or even primarily, via the recovery of order and prevention of disorder. We do so by bringing to the fore the philosophical foundations of sensemaking theory as conceived by Weick and, by drawing from Martin Heidegger and Hannah Arendt, imagining alternatives. Not only do we thereby show that viable alternatives to our understanding of sensemaking exist, but also that explicitly engaging with the philosophical underpinnings of our theories has the potential to question assumptions in our field that we may otherwise unwittingly reinforce when communicating within and beyond our scholarly communities.

CMS: **Introducing Reflexivity to Academic Writing on Business and Management**  

Author: **Iga Maria Lehman**, *U. of Social Sciences in Warsaw, Poland*

Taking as a point of departure some criticisms leveled at the negative influence of elite (or what Aguinis et al (2020) term ‘A’ level) management journals on individual scholars and institutions, this paper highlights the need for rhetorical change in scholarly writing on management issues. One effect of the current context of the communication of scientific knowledge in these journals is the tacit assumption that reporting scholarly work requires monologic and complex ways of expression based on fixed standards of what makes a text persuasive. I contend that the norm in academic writing on management is that publications are not reader inclusive and thereby, have a limited interest or attraction to a wider and global audience. This raises important ethical questions about the socialisation into scholarly publication of doctoral students and junior researchers, who increasingly face pressure to publish their research in peer-reviewed, English-language, ‘A’ journals. In order to address the lack of reader-inclusive publications in the field of business and management, I build on the notion of ‘communicative reflexivity’ (Archer 2003, 2007, 2012) which, in the case of writing, requires the writer’s consideration of the reader’s needs and expectations in the process of text construction.

CMS: **Developing the Ruruku Canvas: How Indigenous Theory Building in Practice Can Inform Current Debates** 

Author: **Jesse Pirini**, *Victoria U. of Wellington*
Author: **Stephen Cummings**, *Victoria U. of Wellington*

The past decade has witnessed a debate as to what might be the ‘best’ approach to the development of indigenous management frameworks and theories, given that concepts such as economic development have almost exclusively been applied with ‘mainstream’ Western or Eastern industrial-era belief systems in mind. This paper reflects on these debates by following the development of a ‘Ruruku Canvas’ used during community engagement to co-design an economic development strategy for a regional Maori community. After outlining the development of the canvas, we apply a Critical Management Studies lens to question some of the assumptions that permeate this debate. We conclude that many of its elements (e.g., a binary distinction between indigenous and non-indigenous theory; assumptions that indigenous peoples may be poorly educated and poorly resourced) may be patronizing to those they seek to serve, by obscuring the agency of indigenous peoples to take and apply management theories without marginalising their knowledge and value systems.

The recent pandemic reinforced a breakthrough in adopting digital technologies in the healthcare sector: Researchers increased their focus on the use of artificial intelligence, big data analytics, the internet of things, the next generation of telecommunication technology such as 5G and blockchains for uses such as the surveillance, detection, prevention, combat and mitigation of the impact of Covid-19 on the society. While much has been said about the adoption of digital technologies, the value created by and captured from digital platforms that integrate digital technologies to serve a social-purpose-driven ecosystem (such as the healthcare sector) is still veiled. By presenting the results from five simultaneous case studies of digital health platforms in Europe, this symposium explores the role of the embeddedness of digital platforms in social-purpose-driven ecosystem and how such embeddedness affects the value created by and captured from digital healthcare platforms. This symposium is based on a large study that used an explorative multiple-case study method, where both primary and secondary data from five cases of digital healthcare platforms were collected in Finland, France, Lithuania, Spain and Sweden. The multiple-case study illustrates that the value created by and from digital healthcare platforms is affected by the multi-sided nature of the platform itself, however also by the embeddedness of the platform in the social-purpose-driven healthcare ecosystem.

Virtual Teams and Team Innovation

Session Moderator: **Goran Kuljanin**, *DePaul U.*

OB: **Team Asynchronicity: A Costly Remedy to Facilitate Team Members' Multi-teaming** 

Author: **Mayssa Rishani**, *Erasmus U. Rotterdam*

Author: **Inga Jasmin Hoever**, *Erasmus U. Rotterdam*

Author: **Dirk Van Dierendonck**, *Erasmus U. Rotterdam*

Knowledge-based teams that work on challenging, nonroutine tasks typically have their members involved in multiple concurrent teams. Scholars have long advised these teams to leverage communication technologies for asynchronous work to facilitate their members' multiple team membership (MTM). The recent surge in MTM research however largely overlooked the application and soundness of this advice, and how teams organize their work in response to their members' multi-teaming. Using adaptive structuration theory, we develop a research model that specifies the link between members' multi-teaming, team asynchronous communication, and creative behavior in the team. We propose that team MTM number drives teams to communicate more asynchronously, and identify teamwork demands as a moderator of this effect. We further argue that team asynchronicity diminishes creative behavior that is important for knowledge work, and that this effect is moderated by teamwork demands. Results from a sample of 176 teams support the notion that team asynchronicity is both a common and costly remedy for multi-teaming when teamwork demands were at higher levels. Under this condition, team MTM number led to more asynchronous communication and the negative effect of asynchronous communication on members' creative behavior in the team intensified.

OB: **Stuck In The Middle: A Meta-Analysis On Innovation In Virtual Teams And The Role Of Media Richness**

Author: **Matthias Felix Sinnemann**, *Ruhr U. Bochum*

Author: **Matthias Weiss**, *Ruhr-U. Bochum*

Organizations increasingly rely on virtual teams, whose members are working together from different locations utilizing electronic communication media. Simultaneously, organizations are dependent on the generation and implementation of new ideas to keep solving the world's problems with innovative solutions. In this context, prior research approaches highlighted both positive and negative aspects of virtual team collaboration but has not come to a consensus of how it affects team innovation. Therefore, this meta-analysis synthesizes 178 independent samples including a total of 11,577 teams to obtain in-depth insights into the impact of virtuality on team innovation. Considering the integrated assessment of team virtuality through the dimensions of geographical dispersion, electronic dependence, and cultural distance, no significant effect on team innovation was revealed. Induced by the equivocal findings, factors that possibly moderate this relationship were investigated. In doing so, our emphasis was placed on the richness of the communication medium that transcends the virtuality between the team members and enables them to jointly work on innovative tasks. Our results indicate that the relationship between team virtuality and team innovation varies with using media of different kinds of richness. Thus, conclusions about media choice for innovative tasks in virtual teams can be drawn.

OB: **How can Dynamic Virtual Teams Use Boundary Spanning for Sustainable Innovation?**

Author: **Monika Maslikowska**, *U. of Lugano*

Author: **Michael Gibbert**, *U. della Svizzera Italiana*

Past research demonstrates that boundary spanning, e.g. in industry-academic collaboration, can lead to innovation but it can also be linked to challenges regarding coordination on a team level. Meanwhile, little is known on how can teams coordinate their boundary spanning activity in-between the team units to achieve innovation successfully. This is particularly important as the modern dynamic context of virtual collaboration on a global scale combined with the sustainability crisis requires novel coordination approaches. In this research, we explore this gap by studying how can dynamic virtual teams use boundary spanning for sustainable innovation in project collaborations between industry and academia. The results of our multiple embedded case studies (2 project editions involving 14 teams in total) based on triangulated qualitative data suggest that in dynamic virtual teams, "fluid coordination" based on inter and intra-team activities might be an important moderating factor that enables the positive effect of boundary spanning on sustainable innovation. Our findings can provide a new understanding and practical solutions to the current problems of global sustainability and virtual team management across boundaries, and open the possibilities for further industry-academia collaborations.

OB: **A Longitudinal Study of Team Compassion, Team Integrative Complexity, and Team Innovation** 

Author: **Linh Thi Thu Bui**, *Australian National U.*

Author: **Guihyun Park**, *Australian National U.*

Author: **Goran Kuljanin**, *DePaul U.*

Researchers have acknowledged the involvement of a temporal dimension in determining the links between team processes and team innovation. However, the extant literature has mostly treated team processes as static factors in team innovation processes. Specifically, scant research has examined how teams use team emotion to progress a systematic information processing and why some teams are more successful in transforming the systematic information processing into team innovation over time than some others are. Drawing on research on team integrative complexity and team life cycle, we address these questions and advance our knowledge about the dynamic roles of team compassion and team integrative complexity in team innovation processes. Using data collected throughout the project life of 87 teams, we find that team compassion predicts increased team integrative complexity. Moreover, team integrative complexity throughout the project life has a marginally positive effect on leaders' ratings of team innovation on average. Importantly, team integrative complexity occurring in the later phase of the project life is more likely to predict team innovation than that occurring in the early phase and at the midpoint. We discuss theoretical and practical implications and offer some directions for future studies.

Communication Misperceptions: Mispredicting the Outcomes of Interpersonal Interactions *Interpersonal Communication Misperceptions*

Session Chair: **Einav Hart**, *George Mason U.*
Session Chair: **Nicole Abi-Esber**, *Harvard Business School*
Presenter: **Michael Kardas**, *Northwestern Kellogg School of Management*
Presenter: **Nicole Abi-Esber**, *Harvard Business School*
Presenter: **Rachel Schlund**, *Cornell U.*
Presenter: **Einav Hart**, *George Mason U.*

We communicate with others constantly: in our work life, our family life, and beyond. However, emerging research suggests that these ubiquitous interpersonal communications are fraught with misperceptions. This symposium brings together novel research papers identifying communication misperceptions across various domains that are critical to interpersonal and organizational success such as interviews, conversations, contracts, and negotiations. We discuss the extent to which people rely on uninformative cues, and the misperceptions that arise when people attempt to reach agreements. In particular, the papers presented will show that people (1) overlook social forces such as responsiveness that promote connection in conversation, causing them to undervalue communication media that entail dialogue for connecting with others; (2) overestimate how helpful communication cues are for evaluating speakers' abilities; (3) overestimate recipients' subjective feeling of consent to undesirable agreements, which undermines their trust and organizational commitment; and (4) underestimate the normativity of negotiations and have exaggerated concerns about jeopardizing an agreement. Moreover, this set of papers shows the detrimental consequences of communication misperceptions, particularly for missed opportunities: We miss opportunities to form new and better connections, accurately evaluate others, as well as negotiate better terms and empower consent. Taken together, this symposium highlights the fraught nature of interpersonal communication, and points to avenues for improving communications. These papers underscore the importance of understanding and correcting these communication misperceptions in interpersonal and organizational contexts.

**Tensions, Trade-Offs and Complexity in
Sustainability Research (Virtual Live)**

Session Moderator: **Rosalie Luo**, *Ivey Business School*

ONE: **Framing the Change and Changing Frames: Tensions in Participative Strategy Development**   

Author: **Angelika Zimmermann**, *Loughborough U.*

Author: **Jasper O. Kenter**, *U. of York*

Participative strategy development serves to integrate the interests and perspectives of multiple stakeholders involved in today's complex environmental challenges, aiming at a better-informed strategy for tackling these challenges, increased stakeholder ownership, and more democratic decision making. Prior research has however observed inherent tensions between the need of such participative strategy to be open to stakeholders' input, and the need for closure and guidance. Drawing on case study evidence, we extend this reasoning and argue that tensions can emerge between strategy openness and several unintended consequences - the persistence of different interpretations of the strategy as well as stakeholders' perceptions of lacking knowledge, guidance, and control. These tensions are important because they affect stakeholders' willingness and ability for change and therefore counteract the strategy's aim for major change. We propose how multi-stakeholder workshops, as interactive spaces, have a key function in mitigating the tensions inherent in strategy openness and in facilitating stakeholders' willingness and ability for change.

ONE: **GAME OF GREEN THRONES. Sustainability Tensions and Power in Global Value Chains**  

Author: **Simone Carmine**, *Department of Economics and Management, U. of Padova*

Author: **Valentina De Marchi**, *Department of Economics and Management, U. of Padova*

A rising literature suggests the benefits for organizations to take a paradox perspective toward tensions emerging when aiming at increasing corporate sustainability performance. We suggest that if companies have not full agency in responding to such tensions, the effectiveness of this approach can be heavily undermined. We argue this is especially the case of suppliers part of Global Value Chains (GVCs), which characterize an increasing number of industries. Suppliers are significantly constrained by their powerful lead firms in deciding how to address sustainability challenges, so that even if they are willing to manage sustainability tensions, they might finally not to, resulting in poor sustainability performance. By the mean of an in-depth analysis of a specific tensions, we investigate the role of agency in coping with sustainability related tensions using a paradox lens and adopting a multi-level perspective, considering the different actors part of the chain. Our analysis suggests that considerable tensions are generated by working in GVCs, because of the different framing of sustainability of buyers and suppliers, worsening the overall sustainability outcomes of the system despite the best intentions and effort of the actors engaged. Furthermore, we show that the management of such tensions depends on the agency of the actors, resolving in actions that emphasizes one pole of contradiction – the one of the most powerful actor. Accordingly, we contribute to a critical reading of paradox theory in sustainability by i) taking a GVC wide (vs organizational wide) perspective, responding to the call for a systems approach in paradox studies; and ii) focusing on a critical contextual condition in influencing the response that actors can implement in managing tensions: bargaining power.

ONE: **A Maturity-Based Perspective on Sustainability Implementations**  

Author: **Enes Ünal**, *Cranfield U.*

Author: **Vikash Kumar Sinha**, *Aalto U. School of Business*

With the increasing number of firms adopting different sustainability practices, the theoretical and practical understanding of sustainability has been changing in depth and scope. This transition has fundamentally changed the way firms make sustainability trade-offs. The extant literature on trade-offs tends to focus on established firms that predominantly indulge in market-oriented decisions where economic priorities drive the deployment of scarce resources to "other" sustainability dimensions. In contrast to a market-oriented understanding, emerging studies on highly committed firms have demonstrated the importance of nonmarket-based factors that bolster the social, environmental, and political standings of firms. Such studies have cast doubts on our current understanding of the trade-off between different dimensions of sustainability. Aiming to inform the sustainability trade-off literature, we carried out a mixed-method study to explicate the rationale and dynamics of trade-offs between sustainability practices.

ONE: **Biodynamic in California: Organizational Cognition and Learning with Complexity** 

Author: **Rosalie Luo**, *Ivey Business School*

Author: **A. Wren Montgomery**, *Ivey Business School*

The convergence of social and environmental crises has urged organizations and institutions to apply systems-thinking principles as a way to better attend to ongoing issues and their inherent complexity. This qualitative empirical study inductively investigates the types of organizational-level cognition apparent in 20 sustainable wine producers in California applying different agricultural and organizational practices. We offer developments in the organizational cognition and learning literatures by presenting systems-thinking in the face of complexity as a unique empirical contribution. We differentiate between holistic (systems) and particularist (linear) cognition and dynamic ways of learning in organizations. Through semi-structured interviews, field observations, and secondary data from their website communications, we elaborate upon emergent findings and generalize a model of enacted cognition and organizational learning in a bidirectional manner with institutions. By focusing on producers with sustainable orientations, many implications related to responding to complex social and environment issues by applying holistic ontologies arise for further contemplation. Our insights serve as a foundation for understanding how organizations think in while dealing with ongoing complexity and long-term challenges, including climate change, biodiversity loss, and social inequality.

SIM: Political Ideology Distance, Firm Location, and Acquisitions 

Author: **Dong Shin Kim**, *U. of North Georgia*

Scholarly interests on the effects of the political ideology on firms' strategic choices have been burgeoning. While previous studies have shown evidence of the strategic choices of firms as a reflection of organizational or CEO's ideology, less attention has been paid as to ideological environments such as that of state or federal governments and their implications on firm strategies. In this paper, we introduce the concept of ideological distance between state and federal governments and examine the extent of its impact on firms' acquisition strategies based on their headquarter location. We further examine the moderating effects of prevailing ideology of federal governments and a geographical distance from firm headquarter to the political center of the U.S., Washington DC. Using a sample of S&P 500 firms between 2005 and 2011, we find that firms engage in more acquisitions when state and federal governments are ideologically more distant and even more so when the federal government is largely controlled by Democratic Party, but less so when their headquarters are geographically distant from Washington D.C.

SIM: Do US State Breach Notification Laws Reduce Firm Data Breaches?   

Author: **Brad Greenwood**, *George Mason U.*

Author: **Paul M. Vaaler**, *U. of Minnesota*

We ask whether US state laws requiring notification when firms suffer data breaches actually decrease data breaches. From 2003-2018, 50 states and the District of Columbia enacted breach notification laws (BNLs) mandating firms to notify states after suffering data breaches, undertake breach mitigation, pay fines for non-compliance, and be liable for damages to the public and private individuals. BNLs were supposed to reduce data breaches and create a market for data privacy, wherein firms could strike their preferred balance of data security for and cost to consumers. We find no evidence supporting this supposition. Results from multi-state difference-in-difference analyses indicate no significant change in annual breach counts or breach magnitudes following BNL enactment. Results also indicate no significant long-term change in rates of identity thefts, fraud, and related data misuse. These non-effects persist for different firms, time-periods, and types of BNLs. We conjecture that inconsistent state notification standards and inadequate state dissemination of information about firm leaders and laggards in data security explain BNL ineffectiveness to date. We propose a new US federal regime to address these shortcomings and let a national BNL achieve goals state BNLs clearly failed to meet.

SIM: Social Connection, Political Identity, and Employees' Labor Protest Propensity in China   

Author: **Ying Chen**, *U. of Rhode Island*

Author: **Jiayuan Zhang**, *Colorado State U.*

Scholars have long been interested in studying the effects of social and political control on collective action in China. However, few studies have investigated whether the relationship between social and political control and collective action changes over time. In this study, we examined the relationship between social connection, political identity, and employees' labor protest propensity with a comparative perspective of time. Using data from the Chinese General Social Survey, conducted ten years apart in the years 2003 and 2013, we found that the relationship between social connections, political identity indicated by Chinese Communist Party (CCP) membership, and labor protest propensity differ with these two samples. The relationship between the strength of social connection and labor protest propensity is significant in the 2003 sample, but becomes insignificant in the 2013 sample. The effect of employee's political identity on labor protest propensity also varies in the two samples. Further analysis shows that CCP members who rated themselves as having a similar social economic status with their peers have a higher intention to participate in a labor protest than party members who rated themselves as having higher social economic status than their peers. This study's findings demonstrate the importance of considering a time comparative perspective when studying what predicts employees' labor protest propensity.

SIM: Firm-Government Geographic Distance and Firm Compliance to Pollution Regulations

Author: **Wei Liu**, *Qingdao U.*

Author: **Jing Yu Yang**, *U. of Sydney*

Author: **Wen Helena Li**, *U. of Technology, Sydney*

The effectiveness of government regulations on firms' environmental practices is not always unitary and consistent. Based on a sample of firms in heavy-polluting industries in the context of China, we examine the role of firm-government geographic distance in affecting the firms' environmental pollution. The findings highlight that information asymmetry generated by firm-government geographic distance weakens governments' capability to monitor and control firms' compliance with government-prescribed environmental practices, and thus, firms located far from local governments are more likely to leverage such information asymmetry and pollute more to pursue their private interests. This positive relationship is negatively moderated when local government leaders prioritize environmental protection over local development, and they have longer career horizons. Our study contributes to the literature by exploring the role of geographic distance to local government as a potentially important source of heterogeneities in firms' environmental practices.

Author: Sameer Azizi, Roskilde U.

The study focuses on the mobile telecommunications industry in Afghanistan prior to the Taliban takeover in late 2021, and seeks to study how the mobile telecommunications corporations engage with the different area-specific governance systems in order to gain legitimacy to operate across Afghanistan. The study capitalises on mixed qualitative data to conduct an embedded case study of the Afghan mobile telecommunications industry as an extreme context for understanding business-society relations in South Asia. Theoretically, the article integrates insights from governance literature on areas of limited statehood to conceptualise business-society relations in Afghanistan beyond state-centric views and assumptions. The findings result in two modalities of business engagement that are conceptualised as a single vis-à-vis multiple governance system approach. Each of these modes of engagement implies a political nature and role for the businesses that are embedded in ethical dilemmas as discussed in the article. These findings contribute to the debate on the 'political turn' in the CSR literature and the governance literature on areas of limited statehood.

STR: Socioemotional Wealth in Family Business Research: A Systematic Literature Review 

Author: **Walther Reina-Gutiérrez**, *U. de Antioquia*
Author: **Cristina Villar**, *U. of Valencia*
Author: **José Pla-Barber**, *U. of Valencia, Spain*

This study aims to depict the current state of research on socioemotional wealth (SEW) in family businesses considering its definitions, roles and dimensions. We develop a systematic review of literature on SEW covering 56 studies published between 2007 and 2021 to propose a comprehensive definition of SEW based on four non-financial aspects, as well as an association model that reviews the roles of SEW as an antecedent, consequence or moderator. We also offer a new conceptual model for SEW comprising a general dimension and ten specific dimensions to facilitate empirical inquiries into areas beyond those considered by extant SEW models.

STR: Incumbent Response To Disruptive Business Model Innovation and CEO Opportunity Framing 

Author: **Yuliya Snihur**, *TBS Education*
Author: **Christoph Zott**, *IESE Business School*
Author: **Andreea Noemi Kiss**, *Lehigh U.*

We explore the role of CEO framing for the adoption of new business models by incumbent firms faced with disruptive business model innovation (BMI) in their industry. Our historical analysis of two extreme cases in the bookselling industry—Borders and Barnes & Noble (B&N)—reveals that in reaction to Amazon's entry the incumbents followed distinct logics. We find that CEOs' BMI opportunity framing, in particular intensity, precision, future orientation, and inclusiveness of opportunity framing, was associated with actions that incumbent firms took over time towards separation of new and legacy business models or their blending. Contrary to conventional wisdom, sustained separation accompanied by weak opportunity framing (Borders) was an inferior strategy while gradual blending supported by strong opportunity framing secured B&N's survival. We link and contribute to literatures on disruptive innovation, BMI, and framing.

STR: When Do Chief Digital Officers Matter? An Examination of CDO Power and Firm Performance 

Author: **Endrit Ademi**, *Johannes Gutenberg U. Mainz*
Author: **Andranik Tumasjan**, *Johannes Gutenberg-U. Mainz*

Incumbent firms have been increasingly appointing a Chief Digital Officer (CDO) to centrally manage and coordinate digital transformation endeavors. While extant research focuses on understanding the responsibilities of CDOs, we know only little about whether and how different CDO role designs influence firm performance. Integrating upper echelons theory with the managerial power literature, we theorize on and empirically investigate the influence of CDO power on firm performance. Our sample consists of 321 CDOs that represent 286 firms from the S&P 500 and STOXX Europe 600 indices from 2010 to 2019. In line with our hypotheses, we find that CDO multifunctional power and expertise power positively influence firm performance. Moreover, while our results reveal that, in contrast to our expectations, CDO hierarchical power negatively influences firm performance, we find that it serves as an important contingency factor that amplifies the positive effects of CDO multifunctional and expertise power on firm performance. We advance the managerial power literature in the context of digital transformation and provide guidance on the role design of CDOs.

Paper is NOT Available. Please contact the author(s).

STR: History as a Source of Rhetorical Strategies in a Change Process: Case of Buddhist Temple 

Author: **Hee-Chan Song**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*

Contemporary Buddhist temples face a significant strategic dilemma. They must change to secure financial resources, yet the changes inevitably involve modifying their sacred traditions. This study investigates how a Master Monk—an organizational leader of the temple—addresses this dilemma. To deeply immerse myself into the context, I engaged in four months of fieldwork in a Korean temple where the dilemma was salient. In the data analysis, my focus moved from the changes to a set of historical narratives the Master Monk used to facilitate the changes. A systematic analysis of the narratives shows that the leader interpreted history in his own ways and strategically narrated it to reduce internal resistance to change. The findings join conversations about the role of history in a change context.

The Rise of Alternative Facts: Using MI to Strengthen Relationships in the Classroom
Using MI to Build Empathy in the Classroom

Facilitator: **Kristijan Civljak**, *The Chicago School*

Social media incivility and outright distortion and the related echo chamber of cable news have made many of us victims of alienation as facts are countered with alternative facts and conspiracy theories. This aggressive and inaccurate communication is reflected in classroom interactions as political divisions become personal and vice versa. Instructors may be caught up in controversial classroom discussions and need tools to ensure student well-being, as well as their own. Participants in this workshop will apply motivational interviewing techniques for respectful, empathetic, and appreciative interactions with others to share accurate information, build trust, and maximize learning.

**Introducing & Co-Designing a Course Pilot That Connects
Theatre / Film With Science**
Connect Theatre/Film With Science in Teaching

Presenter: **Franziska Marie Poszler**, *TUM School of Management, Technical U. of Munich*

This session will introduce a course pilot called “Reflecting and reshaping portrayals of technology”, a master’s seminar in which students critically draw parallels between representations of technology in popular culture and contemporary scientific discourses. In this course pilot, students are asked to develop own short stories / scripts that – based on current research findings and debates – draw a more realistic picture of technological developments. The aim of this session is to illustrate the need for offering such a course, summarize the course pilot as an exemplary curriculum format, share first reactions from students, discuss application possibilities for teaching in other disciplines and brainstorm the development of the course pilot. This session is targeted at any educators who are interested in connecting theatre / film and science in teaching, in developing innovative curricular that challenges students to produce practical, research-based outputs, as well as in sharing expertise and suggestions of how to extend the presented course pilot in order to push for knowledge diffusion from the classroom to the broader public. Attendees will learn about theoretical fundamentals and case studies (i.e., films) from the course pilot, important resources for further self-education on this topic as well as the building blocks and schedule of the course pilot. This way, attendees may be inspired to utilize the presented course pilot as a blueprint to develop similar courses in their particular discipline to ultimately, create a better world together with their students.

**Active Learning Pedagogies and Evidence-Based Practices in
Management Education and Development Post-Pandemic: Mapping the
Links and Looking Ahead**
Active Learning and Evidence-Based Practices

Participant: **Brett Paul Matherne**, *Georgia State U.*
Participant: **Tawnya Means**, *U. of Illinois at Urbana-Champaign*
Participant: **Christine Rivers**, *U. of Surrey*
Participant: **Jon W. Beard**, *Iowa State U.*
Participant: **Ricardo Gabriel Flores**, *U. of Victoria*
Participant: **Kate Elgayeva**, *U. of Minnesota, Duluth*

How many of us have plunged into course delivery with limited planning on how to actively engage students beyond posting course material to our university's learning management system (LMS)? The COVID-19 pandemic turned us all into reactive faculty. As we look to the academic year ahead, a focus on designing and facilitating active learning experiences in the post-pandemic teaching landscape is a critical and timely endeavor. Join the TLC organizers and representatives from the Management Education and Development (MED) Division to explore how active learning pedagogies have evolved and how this evolution yields opportunities and challenges for teaching effectiveness in the year ahead. Empirical evidence and data-driven course design and facilitation will set the stage for this highly interactive session. The session design will encourage participants to share innovative pedagogical techniques, data-driven curriculum development strategies, and engagement opportunities that have proven to be effective (and not so effective!) in maximizing student-centered learning. Through the lens of evidence-based practices and learning analytics, participants will gain a better understanding of how to (1) structure active learning approaches in evolving classroom modalities, (2) leverage data and learning technologies supporting these approaches, and (3) cultivate a mindset for teaching effectiveness in a post-pandemic landscape.

**Using Lived Experiences to Teach, Learn, & Create Courses
in Diversity, Equity, and Inclusion**
Lived Experiences to Teach DEI Courses

Presenter: **Shaista Ehsan Khilji**, *George Washington U.*
Session Chair: **Mona Itani**, *American U. of Beirut*

Teaching and learning are essentially intertwined. We learn mainly through our experiences. Following a racial awakening in the summer of 2020, many of us experienced uncertainty, curiosity, frustration, and reckoning. For some, like myself, this resulted in greater interest and advocacy for DEI-related issues. In this session, drawing upon my lived experiences with teaching, leadership, and advocacy at a large metropolitan university over 18-months (June 2020-Dec 2021), I will highlight how our interactions, observations, and reflections allow us to select the most appropriate content and pedagogy in our classrooms. Focusing on the TLC (Teach-Learn-Create) approach used in my DEI class in Fall 2021, I will engage participants in a discussion of the power of lived experiences and how our lived experiences and that of our students can be used to represent the messiness of DEI thus better prepare them for empathy of the human experience while also challenging power structures. Based on my experiences, I believe that the TLC approach engages students deeply in DEI issues and is valuable for creating a better world together (AOM Conference Theme, 2022). For a Teaching and Learning Conference, lived experiences offer a valuable approach to provide rich insights into how academics think, act, and utilize their experiences to inform their pedagogy.

**A Summer Social Entrepreneurship Program for
Developing Adventure Tourism in Rural Communities**
A Summer Social Entrepreneurship Program

Presenter: **Ian Norris**, *Berea College*
Presenter: **Peter H. Hackbert**, -
Session Chair: **Kelly A. Mollica**, *U. of Memphis*

An entrepreneurial mindset will become increasingly important in navigating long-term structural changes to work (Schoeniger et al., 2021), particularly in smaller, rural communities disrupted by the pandemic (Räisänen & Tuovinen, 2021). Indeed, small businesses that most greatly leveraged digital technologies recovered more quickly from pandemic disruptions (Connected Commerce Council, 2021). This presentation describes a long-standing social entrepreneurship program at a liberal arts college designed to facilitate entrepreneurial mindset and deliberate practice in college students. Most recently, the program partnered with local business and government in rural communities to develop adventure tourism opportunities. Summer 2021 students worked to build an interactive digital map for a newly developed US-designated transcontinental cycling route. Such maps allow cyclists to identify local businesses they can utilize for dining, lodging, and other hospitality services. As part of their training in entrepreneurship, students conducted research on local businesses along the route, several sections of which traverse highly economically distressed counties. Students worked in groups on various sections of the route to identify and categorize these businesses, obtain GPS coordinates, and create an inventory of each business's digital footprint. These data were utilized to create a beta version of an interactive digital map using Mapbox software. In addition to learning how to design a course that blends curricular and co-curricular elements, audience members will directly experience how design thinking can be utilized to approach creative problem-solving in the classroom and in the field, as well as how to leverage community partnerships in a service-learning and social entrepreneurship context.

**Humanizing HRM: Using Simulations as
Accommodation and Equalizer**
Inclusive Design with HRM Simulations

Presenter: **Toschia M Hogan**, *Chaifetz School of Business, Saint Louis U.*
Participant: **David Rahn**, -
Session Chair: **Alissa Dickey**, *U. of New Mexico*

A discovery-and-learn approach reflected in a human resource management (HRM) simulation meets a need to ensure that the current generation of employees are prepared for the perpetual uncertainty in the workplace with skills and experiences afforded by application-based learning. However, accomplishing this goal does not always yield inclusive designs and evaluations that accommodate the varied learning styles, cultural nuances, and disabilities in the classroom. For instance, human resource management courses cover a broad range of topics associated with managing talent in organizations. As a prerequisite in both undergraduate and graduate majors and minors, the topics and concepts explored in HRM cover the perspectives of human resource professions and that of the manager and employees. Stimulating curiosity and engagement with such a broad base of students while meeting inclusive course design and delivery needs is accomplished with a simulation. Using an HRM simulation as a wrap-around for applying concepts to real organizational challenges allowed students to explore HRM practices, to develop and demonstrate deeper and compassionate thought processes to solve ambiguous and complex problems confronting contemporary organizations, and the ability to effectively communicate ideas at the individual and group level while fostering the dynamics of inherently diverse teams. Importantly, the simulation provided a way of learning that other standardized tools do not, learning by doing in diversified situations. In this session, I will share my experience using a simulation with insights on the strengths and limitations of the pedagogy as an add-on.

Using Improvisation and “Yes, And” to Impact Teaching and Student Outcomes
Using Improvisation to Impact Teaching

Organizer: **Robyn A. Berkley**, *Southern Illinois U., Edwardsville*
Session Chair: **Robyn A. Berkley**, *Southern Illinois U., Edwardsville*

This session will guide participants in an experiential session to practice improvisation and address ways to be more improvisational in the classroom. Using the principles of applied improvisation, we'll discuss how we can manage uncertainty and guide classroom discussions to meet student learning goals. Often student questions go beyond our planned lessons. If our goal is to help students take responsibility for and achieve higher order learning, as teachers we need to adapt on the fly to address questions and guide their learning. Improv enables teachers to be present and shift gears as needed. As well, improv can be used in the classroom by faculty to help students develop skills to be more comfortable with uncertainty and use improvisation in their workplace activities.

HR Policy and Strategy

Session Moderator: **Brian Matthews**, *WU Vienna*

HR: **Employee Capabilities, Workplace Resonance, and Common-Good HRM**

Author: **Brian Matthews**, *WU Vienna*

Author: **Michael Muller-Camen**, *WU Vienna*

The challenge of economic, social and environmental sustainability is one of the most critical dilemmas facing society on an international scale and therefore needs to be a core priority for organizations. To date, businesses are still struggling to balance a future social-mission with established strategic business goals. This conceptual paper reflects on ambiguity surrounding the societal role and purpose of HRM relating to a range of internal and external dysfunctional relationships. Specifically, we develop further the recently proposed Common-Good HRM (CGHRM) paradigm (Aust, Matthews, Müller-Camen, 2020), and address the lack of an explanatory sociological foundation (Why?), a clearly defined definition (What?), and an operational framework (How?). We draw on two main streams of literature, and enrich Sen's Capability Approach with Rosa's Theory of resonance. We thereby reinterpret the challenge of sustainability as a crisis of resonance, and the workplace as a possible enabling zone of resonance. By synergistically defining the role of HRM in terms of a capability-enhancer with a special focus on creating resonant workplace relations and collective opportunities for achievement, we reconnect the individual, collective and institutional levels of analysis and infer a fundamental revaluing of the quality of both workplace social experiences and HRMs relations to the wider world. Finally, adapting Ibrahim's three-stage model, we describe the process through which HRM can move beyond methodological individualism towards collective sustainable organizational and societal transformation and illustrate our arguments with examples of alternative purpose-driven management approaches who are embracing human, societal and economic change.

HR: **Why Do Organizations Indulge in Sugar-Coated Human Resource Strategies?**

Author: **Juil Lee**, *U. of Ulsan*

Author: **Dongwon Choi**, *Ewha Womans U.*

This study delves into a question as to whether and how workforce composition can shape a HR system. Drawing from the premises of strategic human resource management, we postulate that firms take their own HR-related actions to make their workforce composition effective for their goals. In this vein, when firms develop an HR system in respond to what the dominant group of the workforce demands, the nature of the group attributes plays a crucial role. This indicates that a firm's HR system designed reflects the attributes of the dominant workforce groups. Given such, particularly we consider how firms' HR practices respond to aging workforce when the aging group becomes salient in workforce composition. While aging workforce are characterized as being skillful and full of experiences, the group is also understood as being less motivated and having less desire to grow comparing to others. This ambivalence leads firms to likely to exploit the current skills and abilities of the aging workforce, leading to short-sighted HR treatments for the group, called short-termistic HRM. From this standpoint, we argue that a firm with a high proportion of aging workers tends to employ short-termistic HR practices. To elaborate this relation, we consider two boundary conditions, the role of labor union and the contingency related to competition. As labor unions opt in to firms' decision making processes, the aging-induced short-termistic HRM can be less likely to unfold. However, when firms face severe competition, which requires cost-effective strategies, the aging-induced short-termistic HRM is likely to be reinforced. With a sample of 662 Korean firms between 2005 and 2013, we examine whether the proportion of aging workers in the given firm can increase the tendency of short-termistic HRM. And given this relation, the two moderation effects of labor union and market rivalry are examined. Our findings suggest how firms develop the HR-related approaches to the heterogeneous workforce composition.

HR: **Exculpating HR: Applying an Institutional Logics Approach to Employee Quits**

Author: **Imran Saqib**, *Alliance Manchester Business School, U. of Manchester*

Author: **Matthew Allen**, *Bangor Business School*

Many studies examine how human resource (HR) practices influence employee quit rates, implicitly assuming that HR policies and practices are the key determinants of voluntary labour turnover. Although the results of such studies often indicate a weak association between HR policies and practices and higher quit rates, the very assessment of a potential relationship between HR and quits assumes that labour turnover is something that HR can and should fix. The institutional logics perspective provides a powerful lens to examine how different institutional pressures influence managers' and employees' decisions and actions. Whilst these logics can reinforce one another, they are often in conflict. This complex interaction can provide insights into the variable success of HR practices in different contexts. Based on 54 interviews from Pakistani banking employees, this paper finds that employee perceptions of HR effectiveness only partially explain turnover intentions. The paper contends that competing logics of professionalism, the market, bureaucracy as well as employee's own logics based on family, societal and cultural imperatives are crucial to understanding HRM effectiveness. Consequently, we argue that mainstream HRM literature typically downplays the importance of institutional logics embedded within local contexts, and, as a result, overlooks how employees may blame HR managers and policies for outcomes which may be beyond their control and remit.

Author: **Yuliani Suseno**, *RMIT, School of Management*

Author: **Chunhou Chang**, *Xi'an Jiaotong-Liverpool U.*

This study examines how and when high-performance work systems (HPWS) contribute to better employee work outcomes. Based on the multisource three-wave data obtained from a sample of 102 employer-employee dyads in China, we investigated the role of HPWS in increasing the levels of employee work outcomes in the form of employee job performance and organizational citizenship behaviors. Drawing on person-job (P-J) fit theory, we argue that HPWS can improve employee work outcomes by increasing employees' perceptions of P-J fit. Furthermore, we find that the positive relationships between HPWS and employee job performance, as well as HPWS and organizational citizenship behavior, via P-J fit, are stronger when employees possess higher learning goal orientation. This is because individuals who have a higher level of learning goal orientation are more willing to learn new skills and knowledge to increase their competence and abilities. We discuss the implications of the findings as well as the limitations and future research directions.

Workplace Relationships and Job Embeddedness

Session Moderator: **Kenneth Nygaard**, *Aalborg U. Business School*

 **HR: Are You Smitten by a Amor: The Magical Ecstasy and Grey Shades of Employee Workplace Romance**   

Author: **Amitabh Anand**, *Excelia Business School, CERIM*

Author: **Piera Centobelli**, *U. of Naples, Federico II*

Author: **Roberto Cerchione**, *U. of Naples, Parthenope, Italy*

Author: **Sanjay Kumar Singh**, *Maynooth U., Ireland*

Despite the sensitive nature of organizational romance (OR), it has resulted in a limited quantity of empirical investigations, fragmented literary results, and an elusive understanding of how romance between employees may be managed in organizations by human resource managers. Thus, the aim of this paper is to review the extant literature on employee organizational romance and investigate the antecedents, outcomes, and direction for future research. This paper applies a systematic review and synthesis to review the extant and fragmented OR literature. This study identified the antecedents, outcomes, and gaps to address in future research in the OR literature. Based on this conceptual backdrop, we propose a CUPID framework, that may pave way for HR managers in dealing with OR.

HR: HR Practices and Work Relationships: A Systematic Review   

Author: **Anindita Roy Bannya**, *UNSW Sydney*

Author: **Hugh Bainbridge**, *U. of New South Wales*

Author: **Suzanne Chan-Serafin**, *UNSW Sydney*

We examine research at the nexus of HR practices and work relationships via a systematic review of quantitative studies published between 2001 and 2020. We report the prevalence and trajectory of change over time for conceptual and methodological elements central to examining the bi-directional relationship between HRM and work relationships (relational HRM). The review findings identify prevalent features of this literature along with aspects of study design that are rarely observed in published research. Findings indicate ongoing improvements in several key aspects of research design that constitute desirable approaches to examining relational HRM. These data on the field's characteristics and its trajectory suggest that researchers and practitioners can place increasing reliance on the findings of the expanding relational HRM literature. We outline specific directions for future research based upon our review, focusing on research design, and the conceptualization and measurement of work relationships, and HR practices.

Paper is Available to Meeting Registrants Only.

HR: Retention of skilled immigrants: Off-job-embeddedness on global workers' Likelihood to Remain in DK

Author: **Kenneth Nygaard**, *Aalborg U. Business School*

Author: **Anders Ryom Villadsen**, *Aarhus U.*

The globalization of labor markets has provided specialists opportunities to work around the world but little is still known about why they chose to leave, or stay in, a host country. This paper focuses on how two off-the-job embeddedness factors affect international retention. Contrary to existing research, we suggest that embeddedness off-the-job creates both pull-factors based on a sense of belonging, and push-factors, as it enables information, flows, and social comparison. We present a study based on population data covering all skilled immigrants in the Danish labor market across 9 years. Results indicate that embeddedness in professional multi-ethnic communities increases the likelihood of staying, while community embeddedness based on professional similarity is related to a higher likelihood to leave Denmark. The analysis also reveals that having a spouse limits skilled immigrants' likelihood to leave. In the study, we importantly find that children have a strong lock-in mechanism for skilled immigrants, and the effect is particularly strong for immigrants whose spouse is not from the host country. The study contributes new insights into the consequences of embeddedness as well as practical knowledge on the dynamics underlying the global mobility of highly skilled workers.

Paper is Available to Meeting Registrants Only.

HR: A Meta-Analysis of the Effects of Newcomer Proactive Behaviors on Socialization Outcomes

Author: **Teng Zhao**, *Auburn U.*

Author: **Jiayi Liu**, *Auburn U.*

Author: **Alissa Mary Zawacki**, *Auburn U.*

Author: **Jesse S. Michel**, *Auburn U.*

Author: **Hairong Li**, *School of Labor and Human Resources, Renmin U. of China*

The rapid changes of organizations (e.g., restructuring, mergers, and downsizing) and employees' boundaryless career development have raised the significance of newcomer proactivity in optimizing their socialization. Especially following the COVID-19 outbreak, the limited tactics taken on the organizations' part have led newcomer proactivity to be more salient in adjustment processes. Although newcomer proactive behaviors are gaining popularity in organizational socialization research, findings on the effects of these behaviors are fragmented and mixed. Rooted in the newcomer proactivity literature and leveraging Socialization Resources Theory (SRT), we proposed and meta-analytically examined how proactive behaviors that are frequently conducted by newcomers (i.e., sensemaking, relationship building, positive framing, and job change negotiation) relate to various socialization outcomes (i.e., role clarity, social integration, task mastery, job satisfaction, organizational commitment, job performance, and turnover intention). Based on 47 independent samples (total n = 12321), this meta-analysis indicates that, overall, newcomer proactive behaviors are beneficial for newcomer socialization. Relative weights analysis suggests that positive framing is the strongest predictor of six out of seven socialization outcomes, while relationship building accounted for the most variance explained in social integration. Finally, job change negotiation was the weakest predictor of socialization outcomes. The implications of the findings, limitations, and suggestions for future research were discussed.

Strategic HRM

Session Moderator: **Joonyoung Kim**, *Cornell U.*

HR: **To Fit in or Stand Out? Competing Priorities Shape the Adoption and Consequences of HPWS**

Author: **Joonyoung Kim**, *Cornell U.*

Building on institutional theory and the notion of vertical alignment in the strategic human resource management (SHRM) literature, I undertake a nuanced examination of the antecedents and consequences of high-performance work systems (HPWS). I suggest that firm age and market entry timing (i.e., first-mover vs. late-mover timing) jointly shape the strategic imperatives and resource constraints faced by focal firms – in turn influencing the relative attractiveness of legitimacy vs. distinctiveness as incentives for HPWS adoption. I further argue that industry peers’ HPWS use will differentially influence the effect of focal firms’ HPWS use on product sales based on the distinct needs of first-movers and late-movers. Using longitudinal data on 3,218 firm-year observations from seven waves of data between 2005 and 2017, I demonstrate that the effect of industry peers’ HPWS use on focal firms’ decision to adopt HPWS is contingent on the competing priorities firms face as a function of their age and market entry timing. The findings also indicate that firms benefit more from HPWS use in the form of increased product sales when HPWS investments align with the strategic imperatives associated with their market entry timing and the pressures exerted by the institutional contexts in which they are embedded. This paper advances our understanding of when firms adopt HPWS and under which circumstances HPWS benefit firm performance.

HR: **HRM and Research Performance in the Higher Education Context: Evidence from European Countries**

Author: **Jolanta Jaskiene**, *ISM U. of Management and Economics*

Author: **Ilona Bucuniene**, *ISM U. of Management and Economics*

Author: **Bernadeta Gostautaitė**, *ISM U. of Management and Economics*

This study examines the linkage between HRM practices and individual research performance in the higher education context. Guided by AMO theory, we identify ability-, motivation- and opportunity-enhancing HRM bundles specifically for the higher education context and we hypothesize their positive influence on both proximal HRM outcomes (research-oriented knowledge, skills and abilities (KSAs) and self-efficacy to conduct research) and distal HRM outcomes (individual research performance). We tested our hypotheses on a sample of 243 academics from European higher education institutions, matching survey and archival data using the Scopus database of scientific publications. The results of the study show that HRM strengthens self-efficacy to conduct research, which, in turn, affects research performance. Ability and opportunity-enhancing HRM practices positively affect individual research performance. Opportunity-enhancing HRM practices increase self-efficacy, which in turn has a positive effect on individual research performance. The study reveals the importance of self-efficacy to conduct research as a mediating mechanism in the relationship between HRM and research performance. We discuss the implications for theory and practice, note the limitations and suggest future research directions.

HR: **Is the Synergism Between SHRM and Firm Ambidexterity Still of a Matter?**

Author: **Hossein Heidarian Ghaleh**, *Phd candidate at allameh tabataba'i U.*

Author: **Mohammad Moradi**, *Graduate Student*

Author: **Gholamhossein Mehralian**, *Nottingham Business School*

Recent studies have addressed the significance of the HR system concerning organization ambidexterity and firm innovation performance, however, research overlooked the influential power of intellectual capital-enhancing HR configurations both on firm innovation performance and ambidexterity. We designed rigorous time-lagged research with three waves of data gathering. We have found that firm explorative and exploratory capabilities significantly mediate the relationship between human, social and organizational capital-enhancing HR configurations and firm innovation performance. In fact, our study mirrors that how such a specific form of HR system has the capacity to fuel firm ambidexterity toward innovation performance and answers the ongoing debates on firms’ contradictory demand for exploitative and exploratory capabilities. By well-articulating the importance of IC-enhancing HR practices and by identifying the mediation effect of firm exploitative and exploratory capabilities in linking IC-enhancing HR practices to firm innovation performance, this study extends prior research and contributes to the field of HRM and ambidexterity. We also provide a synthesis of future research suggestions.

HR: **A Contingent Configurational Perspective of HRM Systems, Contexts, and Organizational Effectiveness**

Author: **Meng Xi**, *Nanjing U.*

Author: **Yan Chen**, *Idaho State U.*

Author: **Kaifeng Jiang**, *Ohio State U.*

Strategic human resource management (HRM) literature suggests that multiple unique configurations of HRM practices can exist to achieve a horizontal fit and vertical fit and lead to optimal desired outcomes. However, prior studies have not adequately identified different HRM systems, nor examined how configurations of HRM systems with organizational contexts affect organizational outcomes. Using a sample of 481 organizations representing a range of industries, the present study found four distinct types of HRM systems, namely cost-minimizers, investment-maximizers, motivation-enhancers, and skill & opportunity-strengtheners. Moreover, by taking a contingent configurational perspective and utilizing fuzzy set qualitative comparative analysis (fsQCA), we found various configurations of HRM systems and multi-dimensional organizational contexts (i.e., firm ownership, firm size, innovation strategy, environmental uncertainty, local talent supply, and local government interference) when predicting firm performance and collective affective commitment. Our research findings contribute to an understanding of how different configurations of HRM systems and multi-dimensional organizational contexts affect organizational effectiveness. The theoretical contributions and practical implications of these findings are discussed.

Leader Behaviors and HRM

Session Moderator: **Amelie Verena Güntner**, *U. of Zurich*

HR: **Training Adaptive Leadership: On the Role of Leader Cognitions and Behaviors**  

Author: **Amelie Verena Güntner**, *U. of Zurich*
Author: **Anna Luca Heimann**, *U. of Zurich*
Author: **Pia Ingold**, *U. of Copenhagen*
Author: **Martin Kleinmann**, *U. of Zurich*

Leaders in organizations face manifold challenges requiring them to be adaptive. Adaptive leadership describes a leader's capability to respond with appropriate leadership behaviors to different situations. The present research investigates whether and how adaptive leadership can be learned. We propose that adaptive leadership is facilitated by both behavioral skills (i.e., the capability to engage in different leadership behaviors) and cognitive skills (i.e., the capability to perceive which leadership behavior is required in which situation) and tested this in two studies. Study 1 (N = 269) is an experiment that examined the effects of a leadership training using a 2 x 2 between-subjects design comparing four different conditions: a behavioral training, a cognitive training, a combined cognitive-behavioral training, and an active control group. Before and after the training, independent raters assessed trainees' cognitive and behavioral skills in simulated leadership situations. Study 2 (N = 79) is an empirical study with experienced leaders that assessed the effects of a combined cognitive-behavioral training on leader cognitions and behaviors using self-reports and behavioral observations. The results indicate that adaptive leadership can be improved by training leaders' cognitive and behavioral skills. These findings extend leadership theory and provide recommendations on how to train adaptive leaders.

Paper is Available to Meeting Registrants Only.

HR: **A Paradox Perspective on how HRM, Mindset and Leadership Interactively Shape Employee Ambidexterity**  

Author: **Sophie Kathrin Meier**, *U. of St. Gallen*

Prior research on contextual ambidexterity suggests that ambidexterity is realized by creating an organizational context that allows individuals to make their own decisions about how to best cater to exploration-exploitation demands. However, more insights are still needed about how employees can best be enabled to successfully handle such paradoxical demands. Building on paradox theory and signaling theory, I propose that by fostering employees' positive stress mindset, ambidextrous human resource management (A-HRM) builds the collective abilities required to facilitate employee ambidexterity. In addition, I contend that the effect of employees' stress mindset on ambidextrous behavior is contingent on the extent to which they are motivated and provided opportunity to enact ambidextrous behavior by transformational leaders throughout the organization. Results from a cross-sectional, multi-source study of HR representatives and 17520 employees nested in 92 organizations reveal a positive indirect relationship between A-HRM and employees' ambidextrous behavior, mediated by employees' positive stress mindset. Additionally, I find that transformational leadership climate positively moderates the positive effect of employees' stress mindset on employees' ambidextrous behavior. Thus, this study provides novel insights into the interplay of HRM, mindset and leadership as crucial levers for employees' ambidexterity.

HR: **Making Sure Everyone is on the Same Page: HPWS, Manager Proactivity, and Service Performance**  

Author: **Robin Mengxi Yang**, *School of Economics and Management, U. of Chinese Academy of Sciences*
Author: **Saehee Kang**, *Florida State U.*
Author: **Gang Wang**, *Florida State U.*
Author: **Andrew Keyes**, *Florida State U.*
Author: **Wansi Chen**, *East China U. of Science and Technology*

Managers play a critical role in implementing high-performance work systems (HPWS), yet surprisingly little research has examined their role in HPWS delivery. Drawing on the strategic human resource management (SHRM) and leadership literature, the current study theorizes and examines the role of manager proactivity in channeling manager-rated HPWS into employee-rated HPWS and desired employee outcomes including intrinsic motivation, in-role service performance, and extra-role service performance. Using multisource, multilevel, and multi-wave survey data from 68 managers and 1,394 employees in retail stores, we found that manager-rated HPWS was more strongly and positively related to employee-rated HPWS when managers are proactive. Further, the results revealed that manager proactivity strengthens the positive indirect effects of manager-rated HPWS on employees' in-role and extra-role service performance via employee-rated HPWS and intrinsic motivation. Theoretical and practical implications are discussed.

HR: **Congruence in Observed and Expected Leadership Behaviors and Employee Satisfaction**  

Author: **Chin-Ju Tsai**, *U. of London*

Building on person-supervisor fit and implicit leadership theories, we examined the effect of the fit between expected and observed leadership behaviors on employee satisfaction in a cross-cultural context. The data we analyzed had been collected from 237 Chinese employees who reported directly to 40 expatriate senior managers. The results of the polynomial regression analyses and response surface modeling showed that a high degree of fit was associated with a high degree of supervisor satisfaction and that such satisfaction was higher when the expected and observed leadership behaviors exhibited a high level of alignment. Our study's theoretical contributions to person-supervisor fit and leader-follower congruence literature and its finding's practical implications are discussed.

The COVID 19 virus has changed the way that institutions of higher education operate across the globe. The past few years have required great adaptations on the part of faculty, administrators and staff in delivering quality content to college students. This period of time has also necessitated changes on the part of students to adjust to different learning delivery systems and classroom formats. In this panel, we discuss the results of a survey that we administered to college students in 2022 to learn how they made adjustments to their behaviors as students in response to the COVID 19 virus. We will share the findings in this panel with the goal of informing college administrators and faculty about the processes and practices that students can use to succeed in their academic courses when faced with restrictions or limitations.

Grand challenges facing humanity such as climate change, social inequality, and bio-extinction, will not be solved from the same level of thinking that created them. As the Prime Minister of Barbados, Mia Amor Mottley, has rightly observed recently: “the pandemic has taught us that national solutions to global problems do not work.” We define quallaboration as operating together from a qualitatively deeper shared understanding and oneness among all the stakeholders. Artificial Intelligence and other innovations create powerful opportunities and challenges that will require business organizations and other entities to repurpose their strategies and operations to survive and thrive (Christensen, 2013). At the same time, there is a growing consensus that business has the responsibility to play a central role in creating a better world through more sustainable ways of managing their organizations (Laszlo, Cooperrider & Fry, 2020; Polman & Winston, 2021). The Academy’s theme for 2022 is Creating a Better World Together. The qualities needed in managers in such a world could be the empathizing and synergizing quality, the visionary and transformative quality, the moral quality, and more. All these and similar qualities can be subsumed under the idea of an integral (Wilber, 2000), holistic (Dhiman, 2017), higher consciousness (Maheshwari, 2021), quantum empathy (Pavlovich, 2020), or quantum management (Laszlo, 2020), towards the appreciation of the total interconnectedness (Tsao & Laszlo, 2019) and oneness of the world (Laloux, 2014). One of the challenges to be discussed on this path is what new concepts, holistic and functional, are emerging to model the future of collaboration in organizations? From an increasing convergence of quantum science and spirituality, we hope to offer a useful, grounded, and generative perspective called quallaboration that could offer a new ontology and epistemology for the new interconnected world. This may be the key to accelerating pro-social and pro-environmental behaviors for business-led flourishing.

SIM: CEO Divorce and Corporate Social Responsibility: Are Divorced CEOs More Generous?  

Author: **Ipek Kocoglu**, *Kean U.*

Author: **Murad A. Mithani**, *Rutgers U., Camden*

We build on the evolutionary psychology of generosity to understand how a CEO's divorce influences their firm's Corporate Social Responsibility (CSR) initiatives. Evolutionary psychology explains that the absence of a partner imposes adaptive constraints, and leaders that demonstrate concern for others as well as for the environment are likely to improve their fitness by attracting a new partner. This suggests that compared to married CEOs, divorced CEOs will be more positively inclined towards CSR. This effect, we argue, increases the longer it has been since the CEO went through a divorce, is stronger for female CEOs, and when CEOs have more children. Using a matched sample of female and male CEOs from leading US firms, we found strong support for our theoretical model. It offers new insights on the link between CEOs' personal values and firm-level actions that elaborate the role of evolutionary adaptations in the microfoundations of CSR.

SIM: Are Firms with Hometown CEOs Better Citizens? The Role of CEO Hometown Identity on Corporate Poverty

Author: **Xiaobo Li**, *Xiamen U.*

Author: **Min Huang**, *Renmin U. of China*

Author: **Mengyao Li**, *Harbin Institute of Technology*

The support from business force is an indispensable mode to alleviate poverty. Nevertheless, it is unclear what internal motivations drive firms to participate in poverty alleviation. Leveraging the theory of social identity and place identity on data from Chinese A-share listed firms from 2016 to 2019, we find that CEO hometown identity is positively correlated with corporate poverty alleviation participation. This effect is more pronounced for firms closer to CEOs' hometowns. Furthermore, CEO media appearance and environmental complexity strengthen the relationship between CEO hometown identity and corporate poverty alleviation participation, while the organizational slack weakens the relationship between the two. This study is among the first to identify the mechanism through which CEO hometown identity affects corporate poverty alleviation participation. The findings are helpful in guiding poverty-bound regions' anti-poverty program.

SIM: CEO Adverse Professional Experience, Emotions, and Stakeholder (Dis)Engagement

Author: **Pavithra Balaji**, *U. of Texas at Dallas*

Author: **Cuili Qian**, *UT Dallas*

Author: **Eunice Khoo**, *Australian National U.*

Author: **Louise Yi Lu**, *Australian National U.*

Recent studies have shown that managers who undergo adverse professional experiences become more conservative in their financial policies. In this paper, we study how CEOs' adverse professional experiences influence their decision-making on stakeholder management. We build on self-categorization theory and argue that CEOs' previous employment experiences of financial distress induce them to avoid repeating similar situations and to adopt resource-conservation strategies that may consequentially hurt the interests of certain stakeholders such as the community and general public. We also argue that this effect is moderated by two factors that can influence CEOs' self-categorization processes—firm financial performance and CEO positive emotion. Based on a sample of U.S. publicly listed firms over the 2003 to 2016 period, we find that adverse professional experience is negatively associated with corporate social responsibility and positively associated with tax avoidance. Further, these relationships are mitigated by better corporate financial performance and CEOs with higher positive emotion. Our study contributes to our understanding of stakeholder management strategies.

Paper is Available to Meeting Registrants Only.

SIM: CEO's Time Perspective Influence on Green Innovation

Author: **Mei Le Zhu**, *PhD Student at Xi'an Jiaotong U.*

Author: **Gaoliang Tian**, *Professor, vice president of management school, Xi'an Jiaotong U., China*

This study examines whether and how the CEO time perspective affects corporate green innovation. We document a significant positive relationship between the CEO time perspective (proxied by tenure and age) and green innovation in Chinese manufacturing-listed firms. Furthermore, consistent with the view that the CEO's time perspective is a significant factor influencing corporate green innovation when resources are plentiful, we find that this positive association is stronger when firms have less financial constraints. In addition, we find that the CEO time perspective also improves green innovation quality by increasing citation of green innovation patents. Overall, our findings indicate that the CEO time perspective significantly improves green innovation and green innovation quality in emerging economies.

Sustaining Performance

Session Moderator: **Andrew D Henderson**, *U. of Texas at Austin*

STR: Rising Complexity and the Gentrification of Sustained Superior Performance

Author: **Andrew D Henderson**, *U. of Texas at Austin*

Author: **Temitope Oladimeji**, *U. of Texas at Austin*

Author: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*

Resource complexity is a fundamental barrier to imitation, enabling some firms to achieve sustained superior performance (SSP). There is evidence the complexity of resources needed to implement new opportunities has risen through time, the result of increasingly sophisticated technical knowledge and rising customer demand for more sophisticated products. Through formal modeling and analyses of Compustat firms from 1967-2018, we explore this temporal trend and find that rising complexity has gentrified the attainment and renewal of SSP. As new opportunities have become more complex, less established firms have had a harder time achieving initial SSP, while firms in the corporate elite have increasingly renewed their sustained superiority, enabling the rich to stay rich. We discuss implications for Resource-Based theory and research on sustained advantage.

STR: Effects of Spatial Interconnectedness on Unit-Level Human Capital Performance

Author: **Bukky Akinsanmi Oyedeleji**, *U. of Texas at Austin*

Author: **Yea Hee Ko**, *Binghamton U.-State U. of New York*

Author: **David A. Harrison**, *U. of Texas at Austin*

Existing strategic human capital literature indicates that unit-level human capital performance depends on task complexity and the relational dynamics of a unit's social environment. However, physical work environments, where task execution and relational dynamics happen, may also matter to unit performance because they shape interactions. Therefore, we examine the effect of spatial interconnectedness, a spatial attribute which accounts for interaction and movement, on unit performance. Using interrupted time series quasi-experiment, multi-level mixed methods and a novel space syntax methodology, we find that spatial interconnectedness correlates positively with unit performance, but such gains diminish with increased coordinative task complexity. These findings contribute to the theory of human capital resource emergence which currently omits spatial factors. It also provides practical insights on human capital deployment in firms.

STR: The Value of Strategic Loss: When Does Persistent Accounting Loss Lead to Long-term Firm Success?

Author: **Changhyun Kim**, *China Europe International Business School (CEIBS)*

Author: **Yu Zhang**, *China Europe International Business School (CEIBS)*

Author: **Kang Niu**, *China Europe International Business School (CEIBS)*

Persistent accounting loss can be a harbinger of organizational decline, and therefore, strategy scholars seek to identify conditions by which a firm may turn itself around from such trend. However, in the U.S. public equity market, in which loss is prevalent and longer, the market sentiment for persistent loss is quite positive. In this study, we draw insights from the literature on threat rigidity and strategic intent to revisit existing perceptions and conceptualizations about loss and its consequences on a firm's long-term performance. We theorize about the cost of quick turnarounds caused by the perceptions of threat and about the long-term benefits of persistent loss driven by strategic intent. Using a propensity score matching technique, we find supporting evidence that the long-term performance of firms with strategic intents during a period of persistent loss is better than that of firms that make quick turnarounds. Also, the positive effect of strategic loss is more salient when firms have more intangible assets and when the industry has a more concentrated structure.

STR: Talent or Technology? The Antecedents of Performance in the Digital Era

Author: **Beauregard Berton**, *Amsterdam Business School, U. of Amsterdam*

Author: **Mohammad Taghi Ramezan Zadeh**, *Amsterdam Business School, U. of Amsterdam*

Digital transformation has been at the center of practitioners' and academics' attention, as firms aspire to utilize consequent waves of digital technologies to sustain long-term performance. Research identifies technological and non-technological antecedents of digital transformation. Employing resource-based view of sustained performance, we develop and test a sophisticated mediation model to shed light on under-explored mechanisms of digital transformation. We hypothesize about the complex effects of human, organizational and technological antecedents on the firm's performance. We test our model using a rich and unique dataset of 860 Dutch firms collected in 2020. The results of our analysis highlight the relatively greater role of human and organizational antecedents and the critical role of market orientation in digital transformation and performance. We discuss the results and present our study's theoretical and managerial implications. We suggest future directions for research on digital transformation and conclude at the end.

Path Dependencies in Innovation

Session Moderator: **Pablo Leao**, *FGV EAESP Sao Paulo School of Business Administration*

STR: Path-Dependent Firm Growth and the Paradox of Deepening Expansion Experiences 

Author: **Hitoshi Mitsuhashi**, *Waseda U.*
Author: **Naoki Yasuda**, *Rikkyo U.*

Firms have two growth orientations: resource deepening and broadening expansions. The former type of growth refers to resource deepening expansions that result from firms' specialization in certain production resources, whereas the latter relates to resource broadening expansions that enhance firms' repertoires of production resources. The growth orientation decision has an important influence on how firms explore markets and utilize experience-based knowledge. The purpose of this study is to conduct a joint analysis of the experiential effects on the likelihood and success of resource broadening expansions. Drawing upon the literature on organizational learning, exploration, and the pace of organizational change, we propose and test the paradox of deepening expansion experiences: deepening expansion experiences decrease the likelihood of resource broadening expansions but increase the rates of success. We analyzed the longitudinal procurement records of airplanes by airlines and the results support this paradox.

Paper is Available to Meeting Registrants Only.

STR: Learning from Generational Products: Effect on Rapid Utilization of Newly Introduced Resources

Author: **Naoki Yasuda**, *Rikkyo U.*

Although generational product introduction is crucial for organizations, existing studies on the products tend to focus on generational product launches by innovators. In addition, organizations learn from heterogeneity due to knowledge transfer effects; however, prior studies have found both positive and negative impacts of the heterogeneity for improving outcomes. This study resolves the conflict by focusing on generational overlap volume in generational products. This study investigates how the overlap is associated with the rapid resource utilization of newly introduced resources that contribute to competitive advantages. Using data on newly introduced aircraft between 1960 and 2019, this study found an inverted U-shaped relationship between generational overlap volume and rapid utilization. This study also considered learning errors in the learning processes and found generational overlap scope reflects proximity between old and new generations, and firm introduction experience moderates the inverted U-shaped relationship. When the generational proximity is moderate, a negative effect in the second half of the inverted U-shaped relationship is dampened. Moreover, when firm introduction experiences are higher, the inverted U-shaped relationship becomes flatter. These findings contribute to the literature on organizational learning and generational product launch.

STR: Developing Capabilities to Cope with Digital Transformation: The Case of Brazilian Multinationals

Author: **Pablo Leao**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **Thomaz Novais Rocha**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **Maria Tereza Leme Fleury**, *Fundacao Getulio Vargas*

Previous research has suggested that organizations need to develop dynamic capabilities to support their digital transformation, but there is still a lack of evidence on how firms develop and deploy these capabilities. This paper investigates how dynamic capabilities enable firms' digital transformation. We draw from the literature to develop a theoretical model, suggesting that dynamic capabilities are built upon resources, alliances, knowledge and learning, entrepreneurial orientation, and a dynamic environment. In turn, dynamic capabilities can support organizations to remain competitive in the digital era through a series of mechanisms that enable their digital transformation. We conducted a multiple case study with seven Brazilian multinationals from the manufacturing and service sectors. Our results showed that the firms' dynamic capability supports three main enablers of digital transformation: collaboration in innovative ecosystems, agility, and the development of an innovative culture. These mechanisms are necessary to enable these firms' digital transformation, allowing them to be more competitive in the digital era. We collaborate with the capabilities literature by connecting the antecedents of dynamic capabilities, its microfoundations, and digital transformation. Additionally, we fill a gap in digital transformation literature, offering a contextual example of how emerging multinationals are developing their capabilities to thrive in the digital era.

STR: VC's in an Emerging Market: Becoming Increasingly Diversified with Experience:  

Author: **Sukanya Roy**, *Indian Institute of Management, Bangalore*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

How do diversification strategies of Indian VCs change with time as they gain more experience? VC diversification literature has focused primarily on mature environments and suggests that VCs specialize with experience. However, literature on corporate diversification shows that emerging markets tend to have findings that contradict the trend in established markets towards greater specialization. In emerging markets, the presence of institutional voids in supply, labor, and capital markets and the importance of generalized skills results in firms diversifying over time and enjoying performance benefits from diversification. We propose that the same drivers apply in the context of VC diversification, and contrary to prior research on VC diversification, we predict greater diversification with experience in the emerging market context. In addition, we predict that, given the importance of generalized versus specialized skills driving VCs towards greater diversification, VCs focused on investments requiring more specialized skills (early-stage investments), the positive impact of experience on diversification will be less. We find support for both the above predictions using longitudinal data of 1080 investments made by 275 VCs on Indian start-ups from 1999 to 2018. Our findings suggest boundary conditions on prior research, which suggests that VCs specialize with experience, pointing to essential differences in emerging markets and adding to our understanding of entrepreneurship in emerging markets.

Author: **Moonsik Shin**, *Chapman U.*

While product failures are harmful to both consumers and firms, extant research in technology management and innovation does not provide sufficient answers for why they occur. In this research, I investigate what causes firms to experience product failures when they develop new products through the exploitation of their existing stock of technological knowledge. I examine an underexplored condition where a firm's existing technology has undiscovered flaws to show how these hidden defects affect its new product quality. I find that if a firm develops new products by building on its prior technology with hidden defects, the new products have a high risk of failure. I reason that a firm's bias toward exploitation leads the firm to fall into a competency trap and to overlook failures in its new product development process. Moreover, I argue that new products which recombine technologies across a firm's distant technological and/or organizational boundaries are less likely to fall into this persistence of failure. Using a unique dataset on medical device recalls and predicate devices, I provide empirical evidence supporting my arguments.

**Necessary Condition Analysis (NCA): Logic, Theory,
Methodology, and Publications.**
Necessary Condition Analysis (NCA)

Coordinator: **Jan Dul**, *Rotterdam School of Management, Erasmus U.*

Presenter: **Steve Gove**, *U. of Vermont*

Presenter: **Nicole Richter**, *U. of Southern Denmark*

Presenter: **Ricarda B. Bouncken**, *U. of Bayreuth*

In this workshop you will learn how to conduct Necessary Condition Analysis (NCA) and how to publish with NCA. This emerging method was recently published in the journal *Organizational Research Methods* (2016, 2020) and in the Sage book *Conducting Necessary Condition Analysis* (2020). NCA is now used in many fields including International Management, HRM, Strategy, Organizational Behavior, Operations, and Entrepreneurship. NCA understands cause-effect relations as “necessary but not sufficient” and not as additive and average logic that is used in regression analysis. “Necessary” means that an outcome will not occur without the right level of the condition, independently of the rest of the causal structure (thus the condition can be a “bottleneck”, “critical factor”, “constraint”). In practice, the right level must be put and kept in place to avoid guaranteed failure, and to allow the outcome to exist. NCA can be used as a stand-alone tool or in combination with regression and other approaches. By adding a different logic and data analysis approach, NCA adds both rigor and relevance to theory and data analysis. This interactive session familiarizes scholars with the method and has two parts. Part 1 is a general introduction discussing the diffusing of NCA and the importance of necessary conditions, illustrated with examples from different fields. Part 2 helps participants to become the first users of NCA in their field, with a practical demonstration about the application of NCA on how to build necessity theories, and how to analyze data for testing such theories using the NCA software and how to report the research in journal publications.

This session is open to everyone. For more information you can contact jdul@rsm.nl

Boards and (Social) Media: Governing Bodies and Firms' Strategies

Session Moderator: **Liang Wen**, *Xi'an Jiaotong-Liverpool U.*

STR: To Be or Not to be Tied on Social Media? TTF Effect of Interpersonal Guanxi and SM Strategies

Author: **Tingyu Lu**, *School of management, Northwestern Polytechnical U.*
Author: **Xubing Zhang**, *Faculty of Business, The Hong Kong Polytechnic U.*
Author: **Guijun Zhuang**, *Xi'an Jiaotong U.*

The adoption of boundary spanners' social media (SM) strategies are controversial. On the one hand, managers are always concerned about boundary spanners' heavy SM use in non-productive activities, which reduces their work efficiency. As a result, access to SM is discouraged. On the other hand, work-based SM encourages firms to advocate incorporating boundary spanners' work-related tasks because SM can enhance communication and expand information exchange. To further clarify the different effects of work-based and social-based SM strategies and drawing on task-technology fit (TTF) theory, this study examines how SM strategies influence the efficacy of interpersonal guanxi by exploring the moderating effects of work-based SM strategies (WSM) and social-based SM strategies (SSM) in China's emerging economy. We surveyed 550 valid respondents of industrial manufacturing firms in China to validate the research framework. The results of statistical analysis show that there exist TTF fit effects between interpersonal guanxi and SM strategies. Specifically, interpersonal guanxi is positively associated with interfirm coordination and exchange performance. Furthermore, work-based SM strategies strengthen the effects of interpersonal guanxi on interfirm coordination while weakening the effects of interpersonal guanxi on exchange performance. However, social-based SM strategies enhance the effects of interpersonal guanxi on exchange performance while deterring the effects of interpersonal guanxi on interfirm coordination. The findings endorse the importance of prior literature supporting the use of interpersonal guanxi. Theoretical and practical implications are discussed by the end.

STR: Out of Bound, Out of Control: Corporate Wrongdoing and the Process of Media Disapproval

Author: **Liang Wen**, *Xi'an Jiaotong-Liverpool U.*
Author: **Jingyu Yang**, *U. Of Sydney*
Author: **Wei Liu**, *Qingdao U.*

This paper introduces a process model that identifies limitations in media's corporate governance role to explain why and how not all corporate wrongdoing is subjected to media disapproval. Media disapproval involves three stages: detection, interpretation, and response. Corporate wrongdoing that falls within media's perceptual field can be selected for reporting. Past social performance that signals an altruistic orientation accumulates moral capital that can temper media interpretation of observed corporate wrongdoing. Media employ a cost-reward analysis to guide their response, state ownership increasing the opportunity cost of disapproval, which could damage favorable media relations with the government. Empirical results of analyses of a panel data sample of 3,202 Chinese publicly listed firms between 2012 and 2017 provides support for this process model of media disapproval of corporate wrongdoing.

STR: The Power of Likes: The Role of Media Approval in the Relationship Between CSR and CFP

Author: **Liang Wen**, *Xi'an Jiaotong-Liverpool U.*
Author: **Jingyu Yang**, *U. Of Sydney*
Author: **Wen Helena Li**, *U. of Technology, Sydney*

An abundance of research examines the relationship between firms' social and financial performance. Corporate social responsibility (CSR) research suggests that corporate social performance (CSP) elicits social approval, reflected in positive coverage in media that confers legitimacy and reputation. The media literature shows media approval increases stakeholder reciprocity, which translates to a higher level of CFP. Linking these streams of literature and drawing on stakeholder theory, we posit that social approval as reflected in media, mediates the relationship between a firm's CSP and CFP by enabling the firm to benefit more from CSP to improve its CFP. More specifically, considering media's selective coverage and the increasing scrutiny and contestability of higher levels of CSP, we propose that the relationship between CSP and media approval is nonlinear, such that the positive impact of CSP on increasing media approval is at a decreasing rate, and CFP is positively influenced by media approval. The curvilinear relationship between CSP and media approval flattens when firms' top managers are found to be excessively wealthy, which we argue can change stakeholders' expectations of the firm and thereby influence media approval. Our analysis of a panel data set of 1,809 Chinese publicly listed firms from 2012 to 2017 lends support to these arguments.

STR: Getting Mixed Signals? How Top Executive Communications about Firm Strategy Shape Market Evaluations

Author: **John Eklund**, *U. of Southern California*
Author: **Michael J. Mannor**, *U. of Notre Dame*

Markets have a fundamental information asymmetry problem in evaluating public organizations, as market actors lack detailed firsthand knowledge about organizational capabilities and strategies. Top executive communication helps to address this asymmetry by providing information about firm strategies that signal firm quality and intentions. In this study we use signaling theory to examine how top executive communications about different parts of their firm's strategy provide signals to securities analysts that shape their evaluations of the company. We hypothesize that analysts, working on behalf of shareholders who are interested in stock growth, positively evaluate communication related to externally-oriented strategies that signal alignment with analyst goals for growth, and negatively evaluate communication that focuses on internally-oriented maintenance strategies that signal concerns about firm capabilities and market positioning. We then explore the potential moderating influence of factors that reduce signal efficacy through lower signal intensity or weaker signal consistency. We find support for our arguments using a novel text analysis tool in a random sample of S&P500 companies. In supplemental analysis we find that several contextual factors can also magnify or suppress signal impact, assess which specific strategies have the biggest impact, and identify different patterns for high and low performing firms.

Emerging Technologies, Work Relationships, and The New Role of Middle Managers

Technology, Work Relationships, & Middle Managers

Organizer: **Raquel Renee Kessinger**, *Massachusetts Institute of Technology*

Organizer: **Katherine C. Kellogg**, *MIT*

Presenter: **Paul Leonardi**, *UC Santa Barbara*

Presenter: **Jeffrey T Polzer**, *Harvard U.*

Presenter: **Evan DeFilippis**, *Harvard Business School*

Discussant: **Nancy Rothbard**, *U. of Pennsylvania*

Presenter: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*

This symposium showcases recent research projects on how organizations are implementing emerging technologies and how these technologies are changing relationships at work as well as the role of middle managers. Emerging technologies are enabling managers to measure employee performance in more finely grained ways, hire employees anonymously, and observe employee interactions via digital communications and by tracking calendar entries. We will present new insights into how middle managers and employees respond to emerging technologies, how work relationships are impacted by these technologies, and the consequences that emerge. This symposium will have three primary goals: (1) explore how middle managers are using emerging technologies to observe and direct employee activities, (2) highlight new findings and theory around how emerging technologies are changing both work relationships and the role of middle managers, and (3) discuss some of the employee outcomes associated with middle manager use of these emerging technologies including stress, psychological safety, and ethical decision-making.

Presenter: **Krithika Randhawa**, *U. of Technology, Sydney*
Presenter: **Hannes Rothe**, *ICN Business School*

The purpose of this symposium is to bring together scholars to discuss data governance in digital ecosystems from different perspectives. In particular, we will focus on opportunities and challenges involved in data governance when heterogeneous actors (having different expectations and motives) interact to co-create value in digital ecosystems. This symposium aims at providing a deeper understanding of data governance tradeoffs in the sustainable development digital ecosystems from strategic, organizational, innovation, infrastructural and practice perspectives. Building on presented papers, this symposium serves as a platform to discuss data governance challenges and issues that may occur during the formation and development of digital ecosystems. In recent years, national and international initiatives on data spaces and infrastructures have attracted the attention of both scholars and practitioners. Thus, we believe a wide variety of scholars could benefit from a holistic understanding of data governance in digital ecosystems, especially when data are exchanged and processed by diverse actors to create value.

OB: The Effects of Safety-Related Abusive Supervision and Gender on Attributions and Safety Outcomes

Author: **John Edward Fiset**, *Memorial U. of Newfoundland*
Author: **Alyson Byrne**, *Memorial U. of Newfoundland*

While most research implies the harmful effects of abusive supervision, we argue that there are specific contextual factors where abusive supervision is more likely to be attributed to performance promotion intentions as opposed to injury initiation ones. We present the concept of Safety-Specific Abusive Supervision, which we define as perceptions of abusive supervisory behaviors related to safety that occur in hazardous work environments. We theorize that leaders who engage in Safety-Specific Abusive Supervision are more likely to have their behaviors attributed to performance promotion motives such that their actions are perceived to keep employees safe and motivate safety performance. We suspect that those performance promotion attributions act as a mediator between safety-specific abusive supervision and safety performance outcomes, namely safety voice and safety climate. However, we predict that this relationship is only true for male supervisors and not female supervisors. Across three studies (two experimental studies and one field study), we largely find support for our hypotheses. We conclude with a discussion of the importance of examining contextual factors for examining the attributions of abusive supervision and implications for managers of work safety relevant environments.

OB: Empowering Leadership, Psychological Safety, and Task Performance: A Moderated Mediation Model 

Author: **Donghun Seo**, *Seoul National U.*
Author: **Yoonju Cho**, -
Author: **Seokhwa Yun**, *Seoul National U.*

ABSTRACT This study examined the mediating effect of psychological safety on the relationship between empowering leadership and employee task performance based on psychological engagement theory. The results suggests that empowering leadership induces higher psychological safety, which in turn is associated with higher employee task performance. This study also examined the moderating effect of promotion focus motivation and prevention focus motivation. The empowering leadership had lesser positive effect on employee task performance via psychological safety when employees exhibited higher prevention focus. On the other hand, empowering leadership had stronger positive effect on employee task performance through psychological safety when employees were promotion focused. The conditional indirect effect of empowering leadership was strongest when employees displayed higher promotion focus and lower prevention focus. Implications, limitations, and future research area is presented.

OB: Why Pushing Your Employees Too Hard Can be Dangerous? Performance Pressure and Workplace Safety 

Author: **Mengyuan Wang**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Shuhui Guo**, *Peking U.*
Author: **Nan Li**, *Peking U., School of Psychological and Cognitive Sciences*

Employers are eager to enhance employees' performance and place a strong emphasis on high performance. Employees thus are facing performance pressure at work, which has important effects on job performance and unethical behaviors. However, less is known regarding how performance pressure might influence workplace safety. Can employees still maintain their own safety behaviors when they are struggling with high-performance demands? Drawing upon the Job Demands-Resources model, we develop and examine an integrative model that identifies why and when employees' safety behaviors can be impacted by performance pressure. Specifically, we investigated a health-impairment process through which performance pressure damaged safety behaviors (i.e., safety compliance and safety participation). Moreover, we examined whether employees' job self-efficacy, an important personal resource, buffered this health-impairment process. Using a two-wave lagged design to collect data from 279 frontline workers in a Chinese manufacturing company and a three-wave lagged design to collect multisource data from 220 frontline workers in another Chinese manufacturing company, we obtained support for our hypothesized model. The results indicate that performance pressure increased emotional exhaustion, which in turn led to fewer safety compliance and safety participation. However, this indirect effect was only significant among employees with low job self-efficacy. Given that employers have ethical responsibilities to protect their employees from risks in the workplace, our findings suggest that decision makers should take cautions when they are setting performance benchmarks for employees. Interventions to protect employees' psychological well-being and trainings on job skills to promote employees' job self-efficacy are also needed.

OB: The Implications of Power Struggles on Voice and Silence on Patient Safety: A Qualitative Study of Surgeons and Anaesthesiologists 

Author: **Emmanuel Kwasi Mawuena**, *Sheffield Business School, Sheffield Halam U., UK*

Scholars have predominantly examined voice and silence in formal unequal hierarchies leaving a dearth of knowledge on how the phenomenon unfolds among high power groups in less hierarchical power relationships. Drawing on insights from functional and conflict theories of power, 28 in-depth interviews of surgeons and anaesthesiologists were thematically analysed with the aid of NVivo. The study found that expertise and perceived informal power interrelate with equal hierarchical power leading to intense power struggles. While this promotes effective voice on safety concerns in each speciality, it undermines voice across specialities. Power struggles also give rise to voice as a source of power for control that may not necessarily be in the real team and patient safety interest. These fluid effects of power on voice and silence suggest that while voice is essential to work outcomes, active voice among such groups may not always be constructive and beneficial.

Job Crafting and Job Design

Session Moderator: **Felix Lorenz**, *EBS Business School*

OB: **Enriched Job Design, Formalization and Adaptive Personality Predicting WLB: A Three-way Interaction**  

Author: **Amadeja Lamovšek**, *School of Economics and Business, U. of Ljubljana*
Author: **Ivan Radevic**, *U. of Montenegro, Faculty of Economics Podgorica*
Author: **Katerina Božic**, -

The COVID-19 outbreak has blurred the boundaries between work and personal life, making the concept of work–life balance (WLB) even more important. Based on a three-source (employees, family members, and supervisors) sample (n = 436) of working professionals, we investigated the importance of enriched job design for employee WLB. In addition, on the basis of the job demand-control (JD-C) model, we examined whether organizationally imposed formalization and employees' individual adaptive personality traits (proactive personality and resilience) act as boundary conditions that strengthen this positive relationship. First, we conduct a supplementary analysis to further investigate which of the enriched job design characteristics play the most important role in our three-way interaction models predicting WLB. Then, we discuss implications for theory and practice.

OB: **The New Kid on the Block: Chief Digital Officers and Three Ways of Political Job Crafting**  

Author: **Felix Lorenz**, *EBS Business School*
Author: **Marjo-Riitta Diehl**, *Aalto U. School of Business*

Chief Digital Officers (CDO) are expected to fulfill a strategic role in the digital transformation strategy and its implementation. Although research on digital transformation is growing steadily, we lack a coherent understanding of the extent and the nature of the CDO role as the scope of the CDOs' responsibilities remains unclear and there are potential redundancies with reference to other IT executives. Based on 53 interviews with CDOs, we examine how they as strategic leaders engage in defining their jobs. In our analysis we draw on job crafting theory as a theoretical lens. We identify that CDOs face pressures to define a role narrative and engage in political job crafting practices. Specifically, we reveal change of existing power dynamics, shift of perception as well as enhancement of job credibility as political job crafting practices. These practices help strategic leaders, CDOs in particular, to maneuver strategically and politically in the beginning but also throughout their tenure to gain sufficient authority to execute their mission. In so doing, we extend the present understanding of job crafting as a political activity at the level of strategic leadership, specifically in the context of digital transformation.

OB: **Implications of Daily Relational Job Crafting in the Context of Task Interdependence**

Author: **Wiebke Doden**, *King's College London*
Author: **Uta K. Bindl**, *King's College London*
Author: **Dana Unger**, *UiT The Arctic U. of Norway*

Social interactions and connections are ubiquitous in organizations. Yet, our understanding of how and when employees' efforts to adjust social interactions and connections at work (i.e., relational job crafting) are linked with relevant work outcomes (e.g., task performance) is limited. Building on proactivity and conservation of resources theory, we developed a framework that explains how individuals' engagement in promotion-oriented vs. prevention-oriented relational job crafting increases their energetic resources, which positively influence their task performance. In our theoretical development, we further argue that implications of such bottom-up relational job crafting for task performance are contingent on the top-down relational job design (i.e., task interdependence). To test our research model, we conducted an experience sampling study (10 workdays with two daily measurement points; Nday-level = 845) with 126 full-time employees across various occupations and industries. In support of our theorizing, multilevel path modeling indicated daily promotion-oriented relational job crafting was positively associated with subsequent energy levels and task performance on the next day, but only when overall task interdependence in the job was low. In contrast, daily prevention-oriented relational job crafting was positively associated with energy levels and task performance on the next day at high levels of task interdependence in the job. Our findings suggest the relevance of considering different forms of bottom-up relational job crafting for performance-related outcomes in the context of top-down job design.

OB: **Encouraging Public Service Ethos and Job Crafting in Public Organizations**  

Author: **Domenico Berdicchia**, *U. of Ferrara*
Author: **Giovanni Masino**, *U. of Ferrara*
Author: **Enrico Bracci**, *U. of Ferrara*
Author: **Mouhcine Tallaki**, *U. of Ferrara*

This study shows that performance management systems (PMS), if perceived as accurate by public employees, have a positive influence on their public service ethos. However, this relationship is negatively moderated by task uncertainty: when activities are less predictable, such positive influence is reduced. Also, higher levels of public service ethos increase the employees' propensity to engage in expansive job crafting behaviors through which they try to increase both their resources and their challenging job demands, while they also become more resilient to hindering job demands. The results of this study provide new insights about the potential positive effects of PMS in the public sector and, more specifically, about how PMS should be designed and implemented to achieve them. The study was conducted in 12 Italian municipalities through a multi-waves research design.

Positive Individual and Team Work Outcomes

Session Moderator: **Rohit Subhash Piplani**, *U. of Connecticut*

OB: Effect of Team Co-membership Change on Change in Interpersonal Affect in the Workplace

Author: **Rohit Subhash Piplani**, *U. of Connecticut*
Author: **Travis Grosser**, *U. of Connecticut*
Author: **Virginie Lopez Kidwell**, *U. of North Texas*
Author: **Brian R. Dineen**, *Purdue U.*
Author: **Stephen P. Borgatti**, *U. of Kentucky*

Given that teams are complex dynamic adaptive systems, membership change is prevalent in them and can have a significant impact on interpersonal relationships. However, much of the research on team co-membership change has focused on its effect on team-level outcomes like overall affective tone. Thus, little is known about its influence on the change in interpersonal affect between team members at the dyadic level. Drawing on social identity theory, the current study investigates the effect of two team co-membership change conditions – 1) commencement of team co-membership and 2) conclusion of team co-membership on change in interpersonal affect and the moderating role of emotion regulation ability in this relationship. A randomized natural experiment is adopted to test the hypotheses. Results of multilevel modeling confirm that focal employee's interpersonal affect for the co-member increases on commencement of team co-membership (i.e., when co-member joins the same team as the focal employee) and it decreases on conclusion of team co-membership (i.e., when the co-member is removed from the same team). Additionally, focal employee's and co-member's emotion regulation ability moderated the relationship between the conclusion of team co-membership and focal employee's decrease in interpersonal affect for co-member such that the decrease was smaller when both their emotion regulation abilities were high. Overall, our findings challenge the implicit assumption in the teams literature that team membership change influences affect between team members uniformly or as a shared phenomenon that is experienced consistently by all members.

OB: Are We Proactive? Supporting Proactivity in the Shop Floor by Developing a Shared Mental Model  

Author: **Michela Carraro**, *Department of Economics and Management, U. of Padova*
Author: **Andrea Furlan**, *Department of Economics and Management, U. of Padova*
Author: **Torbjorn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*

All continuous improvement initiatives ultimately rely on employees' proactivity, yet the operational excellence literature rarely addresses it. In this study, we adopt a multilevel framework to investigate the effects of shared mental models on individuals' proactivity and team proactive performance. Drawing on the organizational behavior, applied psychology, and shared cognition literature, we distinguish between proactivity at the individual level and at the aggregate level to explain how individual efforts should be coordinated to support team operating performance. We suggest that shared understandings of the task and team functioning represent an important antecedent for encouraging self-starting behaviors and achieving coordination between teammates. We employ multilevel path analyses with empirical Bayesian predictions to test our theoretical model using survey data gathered from 266 shop floor employees in 48 teams. Our findings indicate that the extent to which individuals share their task- and team-related mental models affects team members' propensity to adopt a proactive approach at work (individual proactivity) and to coordinate their efforts with those of teammates (team proactivity) to leverage team operating effectiveness. This study expands the understanding of the antecedents of both individual and team proactivity and sheds light on the impact of aggregated individual behaviors on team outcomes.

OB: How and When Employees Proactively Extend the Benefits of Past Positive Work Events to Coworkers

Author: **Trevor Watkins**, *U. of Oklahoma*
Author: **Catherine Kleshinski**, *Indiana U. Bloomington*
Author: **Natalie Longmire**, *Tulane U.*
Author: **Wei He**, *Nanjing U.*

Positive work events are ubiquitous and benefit employees in myriad ways. Notwithstanding, dominant theories of work events portray events as temporally bounded external happenings, and employees as immediate and reactive beneficiaries of events. Moreover, mainstream management theories suggest that positive work events are advantageous to direct beneficiaries, but not to others. In this paper, we challenge these existing theoretical tenets by integrating theory on self-conscious emotions and capitalization to posit that employees who engage in workplace interpersonal capitalization experience pride and subsequently share knowledge with their coworkers. Going further, we suggest that these effects are bounded by whether the disclosed positive work events are attributed to effort, and whether disclosers perceive responsiveness in their coworkers during capitalization. Stated differently, we maintain that employees can "rekindle the fire" of positive work events in terms of generating pride, which in turn motivates employees to "spread the flames" by sharing knowledge with coworkers. A source- and time-separated field study provides support for our hypotheses. Our work broadens current conceptualizations of positive work events by developing theory regarding how employees can proactively extend their past positive event benefits to themselves and ultimately to others.

OB: Effects of Employee Perspective Regarding Managers Emotional Intelligence on their Turnover

Author: **Abdulmajeed Albalawi**, *Victoria U.*

Author: **Shahnaz Naughton**, *Victoria U., Melbourne*

The current study has two main aims: to investigate to what extent Emotional Intelligence (EI) of managers of SMEs can be shown to affect employee turnover and Job satisfaction in Saudi SMEs and to examine the role of leader- member exchange (LMX) as a mediator between EI and turnover and Job satisfaction. a questionnaire was used to collect data to a random sample of employees in Saudi SMEs. 169 responses from employees of Saudi SMEs were collected and examined by using structural equation modelling (SEM). The present study's results revealed a positive relationship between emotional intelligence and LMX. Further, a negative relationship was found between perceived emotional intelligence and employee intention to leave, which suggests that emotional intelligence has a role in retaining employees and reducing their desire to leave. In addition, a positive relationship was found between emotional intelligence and job satisfaction. However, the results did not support a hypothesised interaction between LMX and turnover intention. Last, LMX was found to mediate the relationship between emotional intelligence and job satisfaction, but not the relationship between emotional intelligence and turnover intention

Organizer: **Selin Selin Kesebir**, *London Business School*

Feedback is an integral part of organizational life. It is a crucial process through which individuals can improve their learning, growth, and development (Ashford & Cummings, 1983; Higgins & Thomas, 2001). Past research has highlighted how the influence of feedback on employee attitudes and behaviors can depend on the approach through which feedback is delivered (Brutus, 2010; Ilgen et al., 1979; Kluger & DeNisi, 1996; Shute, 2008; Zhou, 1998). This symposium aims to deepen our understanding of the antecedents and consequences of different feedback styles and approaches. The presented work offers insights from the giver perspective of providing different forms of performance feedback, as well as the receivers’ perspective regarding preferences for and receipt of different forms of feedback. Altogether, this symposium highlights two primary aspects of feedback in organizations, using a variety of methodologies. First, papers 1 and 2 demonstrate how givers’ work experiences and goal frames influences the type and delivery of feedback offered, which can lead to different employee attitudes and perceptions. Subsequently, papers 3 and 4 turn to feedback receivers, and highlight gender differences in the types of feedback women and men receive and prefer. Overall, this symposium offers insights into how givers’ experiences and attitudes can meaningfully impact the type of feedback offered, and how recipient gender can shape the experience of receiving different types of feedback.

Authenticity, Moral Identity and Moral Disengagement

Session Moderator: **Nils Kruse**, *Institute for Business Ethics and Sustainable Management (FHWien der WKW)*

SIM: Authentic Corporate Social Responsibility Pays: Organizational Practices and Salary Requirements 

Author: **Chloe Kovacheff**, *U. of Toronto*

Author: **Matthew Feinberg**, *U. of Toronto, Rotman School of Management*

Corporate social responsibility (CSR) programs can be a source of societal aid (external CSR) or employee benefit (internal CSR). Yet, not all CSR practices are created equally, with many organizations decoupling their formally stated goals from their behavior. Thus, the extent to which organizations truly implement these programs varies, with some acting in line with their socially responsible claims (authentic CSR), while others fail to take concrete action (inauthentic CSR). Drawing from a multi-motive theoretical framework, we propose that these macro-level CSR practices will yield different micro-level results due to the particular needs they each fulfill (or fail to fulfill) for prospective employees; authentic external CSR practices fulfill morality-based needs, authentic internal CSR practices fulfill self-interest-based needs, and inauthentic CSR practices fail to fulfill either of these needs. Furthermore, in contrast to self-interest-based models, we draw from moral psychological theory to predict that authentic external CSR practices will have the strongest impact on employee outcomes because they fulfill morality-based needs, which often supersede self-interest-based needs. To test our theorizing, we explored the impact these different CSR practices have on prospective employees' required annual salaries, allowing us to monetarily quantify the value of each type of CSR. Across two experiments (Study 1a, 1b) and a field study (Study 2), we find that authentic CSR practices lead to lower required salaries among prospective employees and active job seekers than organizations without CSR practices or with inauthentic CSR practices. Furthermore, we find that authentic external CSR practices lead to the lowest required salaries – an effect mediated by moral-need fulfillment. Our results suggest that when implemented authentically, CSR practices can lead to both positive social change and quantifiable organizational benefits.

SIM: "I'm sorry."—"No, you're not!" Experimental Evidence of the Effect of Hypocritical CSR Communication

Author: **Nils Kruse**, *Institute for Business Ethics and Sustainable Management (FHWien der WKW)*

The amount of micro-level corporate social responsibility (CSR) research focusing on employee behavior has been continually growing over the past two decades. While most of the research has been focusing on positive behavioral and attitudinal outcomes of CSR, adverse effects have been largely neglected. Applying social and moral identification theory, this research project explores how hypocritical communication, i.e., the misalignment between CSR and a company's crisis response strategies in the aftermath of a corporate scandal, affects worker misbehavior. Based on field experimental data from an online labor market (n = 478), I find evidence that perceived hypocrisy increases undesirable worker behavior, such as shirking and withholding job effort. Given the immense financial cost caused by employee misbehavior managers and company leaders should make managing CSR perceptions a key priority. My contribution to our understanding of microlevel CSR theory, in this case the link between hypocritical CSR and employee misbehavior, thus, can provide a basis for cost savings and risk mitigation.

Paper is Available to Meeting Registrants Only.

SIM: Processing Inconsistent CSR Information: The Role of Discrepant Moral Identity Dimensions 

Author: **Ramona Demasi**, *U. of Zurich*

Author: **Christian Voegtlin**, *Audencia Business School*

Inconsistent information between an organization's corporate social responsibility (CSR) commitments and its perceived CSR (in-)actions is a big challenge for organizations because it is typically associated with corporate hypocrisy perceptions and related negative stakeholder reactions. However, contrary to the prevailing corporate hypocrisy literature, we argue that inconsistent CSR information not always relates to perceptions of corporate hypocrisy but depends on individual differences in processing CSR-related information. In this study, we investigate how an individual's moral identity shapes reactions to inconsistent CSR information. The results from our three studies show that individuals who symbolize, i.e., display their moral identity to the public more than they internalize moral values react less negatively to inconsistent CSR information. These individuals perceive the organizations as less hypocritical because they interpret it in light of their own identity, which, we show, weakens their anger and willingness to change the company's behavior. Furthermore, we find that this effect is amplified for extraverted but weakened for neurotic individuals. Our findings underline the importance of individual differences in processing CSR information.

SIM: Team Moral Identity: A Theory of Its Antecedents, Contingencies, and Implications 

Author: **Young Won Rhee**, *U. of Washington*

Author: **Scott Reynolds**, *U. of Washington*

In this paper, we introduce the concept of team moral identity, a team-level construct that represents the shared cognition that morality is a central, distinctive, and enduring attribute that defines the team. We draw from the theory of moral self, social identity theory, and self-verification literature to develop a model of the antecedents and outcomes of team moral identity. This model has theoretical implications for scholarship focusing on moral identity, collective identity, and behavioral ethics, and it holds numerous practical implications for those working in teams.

Paper is NOT Available. Please contact the author(s).

Author: **Jake Telkamp**, *Iowa State U.*

Author: **Marc H. Anderson**, *Iowa State U.*

We critique research on moral disengagement (MD), which presumes widespread agreement about what is right and wrong. While it is appropriate to label justifications of ethical lapses concerning non-contentious issues (e.g., corruption) as MD, many real-world ethical issues, particularly in organizations, are unclear or contested, and subject to reasoned disagreement about what the moral course of action is. We argue that research on MD is less applicable to situations involving moral disagreement, unless fundamental changes to how it is tested are adopted. Moral disagreement arises both because people have different underlying moral foundations that affect how they evaluate situations, and because there are moral dilemmas in which no response can avoid harm or a violation of other deeply-held ethical principles. In this essay, we discuss two important consequences created by assuming moral consensus, and suggest ways to study MD that relax this assumption and allows for disagreement. We argue for the importance of making research on ethics more realistic and applicable to the kinds of moral dilemmas that confront organizations and their members on a more regular basis.

Innovation, Institutions and Stakeholders

Session Moderator: **Mac Nguyen**, *Gustavson School of Business, U. of Victoria*

STR: Institutional Investors and Corporate Innovation: Executive Pay and Competition as Key Contingencies 

Author: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*

Author: **Su Yaxin**, *School of Management and Economics, Beijing Institute of Technology*

Innovation financing is crucial to corporate technological development and national innovation construction, yet how does institutional investors affect corporate innovation behaviors, and the contingent impacts of executive remuneration and market competition on this relationship, are still unclear. In this paper, drawing from literature on institutional investors, corporate governance and innovation, we empirically study the impact of institutions on corporate innovation and the moderation effects of executive remuneration and product market competition by employing a multiple panel dataset. Results show that 1) there is an inverted U-shaped relation, instead of a linear one, between institutional shareholding and corporate R&D investment, and 2) executive remuneration and market competition can enhance this correlation. Additional analysis finds that 1) the curvilinear relation remains regarding on innovation performance, and furthermore 2) product market competition has a positive impact on sales costs and marketing activities. This study reveals the double-edged sword impact of institutional ownership on corporate R&D, facilitating in-depth understanding of the role of institutional investors in corporate strategic management. And it fills the gap between executive remuneration and market dynamics on institutions and innovation, providing meaningful practical evidence for relevant theory and fields. Practically, this paper suggests that the government should properly encourage institutions to participate in corporate governance and the reform of development pattern, and firms need to further perfect executive remuneration system and take full advantage of market competition and external dynamics to support technological innovation.

STR: Stakeholder Orientation and Organizational Adaptation 

Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*

Author: **Kerstin Neumann**, *U. of Innsbruck*

Author: **Peter Maria Snoeren**, *Amsterdam Business School, U. of Amsterdam*

Author: **Maurizio Zollo**, *Imperial College Business School*

This paper examines the conditions under which stakeholder orientation facilitates (or hinders) firms' efforts to adapt to environmental disruptions, particularly technological shocks. To do so, we apply evolutionary economics to develop a theoretical framework on how variation, selection, and retention processes might differ in firms with a high vs. a low level of stakeholder orientation and how these differences can positively or negatively influence their adaptive capacity. We subsequently apply this reasoning to develop theory regarding four boundary conditions of the effectiveness of stakeholder orientation as an adaptation mechanism: two of these conditions are related to characteristics of the technological disruptions, and two are organizational characteristics. The proposed model offers a first application of evolutionary thinking to explain the dynamic fit between stakeholder orientation and organizational adaptive responses, under conditions of environmental (technological) disruption. A research agenda for future scholars in stakeholder theory, organizational evolution, and adaptation to radical change concludes.

STR: Temporal Ambidexterity: Synchronizing Rhetorical History and Strategic Foresight

Author: **Mac Nguyen**, *Gustavson School of Business, U. of Victoria*

This conceptual work seeks to re-examine the organizational ambidexterity concept (the balance between exploitation of current knowledge and exploration of new knowledge) from the temporal sensemaking perspective—constructing and reconstructing the relationship of past, present, and future. Firms compete in a dual environment—technical environment (labor, capital, and input commodities) and institutional environment (symbolic resources, such as legitimacy). Yet, organizational ambidexterity has been largely conceptualized in the technical environment only. I argue that the institutional environment matters, hence symbolic resources (e.g., legitimacy) are substantially invaluable for firms. In this paper, I explore the ambidexterity paradox in which firms reconcile the sensemaking of both their history and future in search of legitimacy (history-based and future-based legitimacy) in the institutional environment. Particularly, I propose two approaches to temporal sensemaking to gain and preserve legitimacy, namely rhetorical history (a means by which firms solidify the past with persuasive strategies) and strategic foresight (heuristic processes to grasp the environmental discontinuities to devise strategies). By underscoring the symbolic resources that firms can strategically capitalize on, this work provides a nuanced understanding of the ambidexterity concept while delineating new future research avenues.

STR: How Innovation Impacts Firm Growth Dynamics in Natural Resource Industries

Author: **Angel Sevil**, *U. del Desarrollo*

Author: **Alfonso Cruz-Novoa**, *Pontificia U. Católica de Chile*

Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*

Author: **Roberto Vassolo**, *IAE Business School, Argentina AND Pontificia U. Católica de Chile, Ingeniería Industrial*

Growth has generally been considered a crucial objective for a firm and, consequently, it has become one of the most researched subjects in economic sciences. This paper aims to provide an in-depth study of how incremental innovation, a ubiquitous factor, affects the growth of small and large-sized firms differently. Specifically, this work examines firm growth dynamics in natural resource industries. In these industries, innovation is mainly based on processes in the form of incremental changes, and adoption of innovations has significant sunk costs. We argue that, before incremental process innovation, firm growth is directly proportional to firm size. However, in the presence of incremental innovation events, firm growth is indirectly proportional to firm size, since smaller firms pose higher strategic flexibility and can adopt innovations faster. Our empirical findings not only confirm the dependency of growth rate on firm size, rejecting Gibrat's Law of Proportionate Effect, but highlight the relevance of incremental innovation as an inflection point of firm growth, creating a competitive opportunity window for small firms.

Corporate Investment in Innovation

Session Moderator: **Hanei Son**, *HEC Paris*

STR: Can Firms be More Innovative by Investing in Uncertain Portfolios?

Author: **Hanei Son**, *HEC Paris*

In this study, I examine the relationship between early stage Corporate Venture Capital(CVC) investments and the innovation. Although investing in early stage ventures is considered to be more uncertain, there may be potential knowledge-based advantages that can be captured. Drawing from the organizational learning perspective, I propose that increasing early stage CVC investment enhances the innovativeness of these firms. I also posit that the knowledge of investees in the early stage can be relatively more accessible for investing firms as it is mostly intangible and not yet embodied in products. I analyze a panel of 91 U.S. high-tech firms in the 1993-2018 period and find empirical evidence suggesting a positive association between early stage investment and firm innovation, in the short-term. However, greater industry diversity of a firm's CVC portfolio attenuates this relationship. Contrary to my prediction, it was found that greater investment experience in early stage is not sufficient to develop absorptive capacity in exploiting knowledge from other investment in early stage ventures. This paper contributes to literatures in CVC, organizational learning and firm innovation.

Paper is Available to Meeting Registrants Only.

STR: How Organizational Structure Shapes Explorative Innovation in CVC Investment-Relationships

Author: **Tom Orben**, *European Business School, Wiesbaden*
Author: **Holmer Kok**, *Stockholm School of Economics*

Engaging in exploration is an important source of competitive advantage for established firms. However, exploration is challenging, as it requires the utilization of knowledge outside of firm boundaries. To address this challenge, firms increasingly engage in corporate venture capital (CVC) investments, which allow for assimilation of knowledge held by young ventures. Existing findings on the relationship between CVC and firm exploration remain inconclusive, calling for the investigation of contingency factors. We address this gap by drawing from the knowledge-based view and empirically examining the effect of the organizational structure of CVC units. Further, we consider the interplay of CVCs organizational structure and firms' diffusion and recombination capabilities for exploration performance. In doing so, the study contributes to our understanding of CVC as external knowledge sourcing mechanism, highlights limitations to this approach, and offers practical insights for corporate investors.

Paper is Available to Meeting Registrants Only.

STR: Whose Money Should I Take? Investments in Renewable Energy Ventures by Oil and Gas Incumbents

Author: **Yoon Jung Kwon**, *Rice U.*

I study the conditions under which new ventures are more likely to receive corporate venture capital (CVC) investments from incumbents that operate in substitutive business domains and thus pose extremely high competitive and reputational risks. Using a sample of CVC investments in the energy industry in 2001-2019, I find that on average, renewable energy ventures are less willing to receive investment from O&G incumbents when the incumbent has a stronger commitment to its current businesses in O&G and faces more shareholder concerns on environmental issues. However, renewable energy ventures are more likely to receive investment from O&G incumbents that are located in institutional environments with higher standards towards environmental issues. Through this study, I aim to bring in the perspective of new ventures into CVC investment relationships and explore how they take their own precautionary measures against the anticipated risks.

Paper is Available to Meeting Registrants Only.

STR: Economic Experimentation: Fitting Experimental Strategies to Entrepreneurial Theories

Author: **Jana Thiel**, *ETH Zürich*
Author: **Ann-Kathrin Leiting**, *Eidgenössische Technische Hochschule Zürich*

While experimentation in entrepreneurial ventures has become a broadly accepted means to validate ideas and optimize business models, recent conceptual work has argued that experimentation within the scientific entrepreneurship method with its strong focus on customer feedback may be inappropriate to support the generation of novel and unique business theories. Our research looks at the practice of entrepreneurial experimentation within the context of a corporate entrepreneurship program. We find that instead of using experiments solely for causal learning and related adaptive processes to pre-existing customer preferences some entrepreneurial leaders emphasize experiments as a commitment scoping vehicle with the purpose to proactively bias responses into their favor and hence elevate the entire value function of the idea. We also find initial evidence that different experimental strategies may generate more or less effective decision-making for projects of different levels of economic theories. Our findings contribute to the literature on entrepreneurial experimentation and strategy.

CEO Personality: Methods and Strategic Implications

Session Moderator: **Daniel F Gass**, *U. of Cologne*

STR: **Better Safe Than Sorry: How CEO Neuroticism Affects Time-To-Recall in Product Recalls**

Author: **Daniel F Gass**, *U. of Cologne*

Author: **Andreas Fügener**, *U. of Cologne*

Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*

Extant research on product recalls provides substantial insights on the determinants of recall frequency, but less is known about what determines time-to-recall, i.e., how quickly firms issue a recall once a defect surfaces. Building on upper echelons theory and personality theory, we argue that CEOs' personality impacts time-to-recall. Specifically, we propose that more neurotic CEOs are more vigilant when they face uncertainty, as they do when making recall decisions, and strive to avoid the potential threat of social disapproval from recalling late, leading to lower time-to-recall. We contextualize this argument by taking a configurational approach to personality to hypothesize that another personality trait, CEO agreeableness, increases the salience of the threat of social disapproval and thus positively moderates the main relationship. Further, we invoke trait activation theory to argue that more negative recent CEO media tenor provides a trait-relevant situational cue which reinforces CEOs' neurotic tendencies and thus also positively moderates the main relationship. We find broad support for our theory in analyses on a sample of 1,573 product recalls in the U.S. healthcare industry.

STR: **The differential Effects of CEO Personality on Strategic Conformity** 

Author: **Steffen Burkert**, *LMU Munich*

A growing literature shows that CEO personality influences firm strategy. While this work has provided important evidence that differences in CEO personality explain observed strategy differences among firms, the literature has largely overlooked the five factor model (FFM) and its influence on strategic conformity behavior of firms. This is an important omission given that personality research has shown that the FFM is a comprehensive and core measure of individual personality; and given that research on inter-organizational imitation has largely overlooked the influence of the characteristics of the decision-makers for imitation behavior. To fill this gap, this article examines the influence of the FFM of CEOs—a well-established and comprehensive model of personality—on strategic conformity of publicly traded U.S. firms over multiple years. The results show that the personality traits of CEOs are related with less conformist strategies (openness, agreeableness) and more conformist strategies (conscientiousness, extraversion, neuroticism). I derive avenues for future research and practical implications of the findings.

STR: **Mining CEOs' Big Five Personality Traits from Twitter**

Author: **Giovanni Visentin**, *ESCP Business School*

Author: **Fabrizio Zerbin**, *ESCP Business School*

Author: **Sandrine Macé**, *ESCP Business School*

The idea of top managers' personality traits influencing their strategic choices is emerging in the marketing management literature, although direct measurement of personality traits remains limited due to the scarcity of primary data. Using publicly available secondary data, we introduce a novel, linguistic measure of CEOs' Big Five personality traits, specifically developed and validated using CEOs' Twitter texts (tweets). We provide an empirical test of this measure's validity by applying it to a sample of CEOs of major U.S. companies to explore the direct effects of CEOs' Big Five Traits on R&D and Advertising budgeting decisions. Our results show how CEOs' personality traits can influence their budgeting choices from year to year, and our novel, linguistic measure provides a valuable tool for developing Upper Echelons research in marketing.

STR: **Corporate Sustainability Reporting and Managerial Agency Problem in Global Firms: A Chicken or Egg?**  

Author: **Hanh Pham**, *Leeds U. Business School*

Author: **Hien Thi Tran**, *VNU U. of Economics and Business, Vietnam National U., Hanoi*

This paper examines the causality between the managerial agency problem and sustainability reporting of a firm. The research uses the dataset of 621 global corporations based in 31 countries from 2012 to 2018 and the two-stage least square instrumental variable method to analyse the data. The managerial agency problem is proxied by four indicators (i.e., the total assets per sales ratio adjusted by the ratio of CEO salary to country-average CEO salary, the expenditure per sales ratio adjusted by the ratio of CEO salary to country-average CEO salary, the CEO cash bonus to income ratio and CEO perk to income ratio). Corporate sustainability reporting is proxied by Bloomberg ESG scores. The paper reports a significantly negative two-way association between the managerial agency problem and sustainability reporting. The results are consistent across three proxies for the agency problem and hold across robustness check models. The results indicate that the managerial agency problem leads to less sustainability information reported by a firm, which, consequently, makes the managerial agency problem more severe due to a lack of transparency. The study highlights the benefits of sustainability reporting as an effective corporate governance instrument to mitigate the managerial agency problem.

STR: Business is Personal: How CEO Personality Influences Agency Costs

Author: **Zeyu Zhao**, *W. P. Carey School of Business, Arizona State U.*

Author: **David H. Zhu**, *Arizona State U.*

Corporate governance scholars have provided a host of governance mechanisms to control agency cost but have largely ignored how personality traits inherent to CEOs may influence their self-serving behavior and the resulting agency cost. In this study, we draw upon the most influential and comprehensive framework in personality psychology, the five-factor model, and theorize that more agreeable and conscientious CEOs incur lower agency cost while more neurotic CEOs incur higher agency cost. We examine the effect of these personality traits on two important manifestations of agency cost—unrelated diversification and the decoupling of CEO pay from firm performance. Using an open-language machine learning program, we operationalize Big Five personality traits of CEOs from S&P 1500 firms. We find that a CEO's agreeableness and conscientiousness reduce agency costs, while the CEO's neuroticism increases agency costs.

STR: Come Together? Cooperativeness, Heterogeneity, and the Structure of Collective Action   

Author: **Farzam Boroomand**, *U. of Minnesota*
Author: **Aseem Kaul**, *U. of Minnesota*

We examine the antecedents of successful collective action among heterogeneous actors. Using a simulation-based approach, we explore the effect of three parameters—cooperativeness, heterogeneity of claims, and heterogeneity of capabilities—on the extent to which actors in a population contribute towards their collective good in the long run. Our results show that cooperativeness is neither necessary nor sufficient for collective action; where actors are heterogeneous, collective action fails even with full cooperativeness. Further, we find that in contexts with high actor heterogeneity, a meritocratic system that links claims to capabilities while prioritizing self-interest may produce a collective outcome that is not only superior to the outcome with high cooperativeness, but more stable than the first-best outcome with fully cooperative homogeneous actors. Our study thus offers a rigorous and systematic theoretical framework for understanding how collective action within and between organizations may be successfully sustained.

Paper is Available to Meeting Registrants Only.

STR: Toward Peaceful Resolution of Company-Community Conflicts    

Author: **Chang Hoon Oh**, *U. of Kansas*
Author: **Jiyoung Shin**, *Groningen U. (RuG)*

Drawing on resource dependency theory, this study investigates how the involvements of civil society organizations and state actors with different orientations toward mining projects affect the conflict intensity between mining companies and communities. We theorize that different combinations of these actors' involvements can shape the relative balance of power between companies and communities, as well as communities' perceptions of justice, which have important effects on conflict intensity. We also examine how vertical and horizontal inequalities can worsen power imbalances and increase conflict intensities. By using a hand-collected, multi-source dataset of 317 global mining conflicts between 2002 and 2013, we found that the involvement of state actors who have pro-social orientations lowers conflict intensity, while the involvement of state actors who have pro-business orientations when combined with the involvement of civil society organizations, increases conflict intensity. We also found that societal horizontal and vertical inequalities increase conflict intensity when both civil society organizations and state actors are involved, as these inequalities may weaken collaborations among the parties.

STR: Why Firm-NGO Collaborations Fail to Spread? An Answer from the Competitive Dynamics' Perspective 

Author: **Yue Wang**, *Jones Graduate School of Business, Rice U.*
Author: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*
Author: **Prashant Kale**, *Rice U.*

This paper investigates an empirical puzzle that only a small number of firms enter firm-NGO collaborations although such relationships have proved beneficial in many ways. To shed light on this, we focus on firm-NGO conflict that often precedes the collaboration and examine how it slows the spread of follow-on collaborations among peer firms. From the competitive dynamics' perspective, firms pursue inter-organizational relationships, such as firm-firm alliances, to gain a competitive advantage. When firms observe industry peers forming new collaborations that potentially create a competitive advantage, they often imitate that move to avoid losing ground to those competitors. In this study, we propose that firm-NGO conflict preceding a collaboration is interpreted by peer firms as a signal that the collaboration is formed to address firm-NGO conflict instead of being a means to seek competitive advantage. Such perceptions decrease the competitive pressure felt by peer firms and lead to fewer follow-on collaborations. Using a 25-year dataset on interactions between environmental NGOs and Fortune 500 firms, we find that firms are less likely to form collaborations with NGOs following a leading firm when its collaboration is preceded by conflict with NGOs. We also find that firms will adjust their response based on their future expectations of NGO contention.

STR: Local Shareholders, Corporate Community Responsibility, and Shareholder Value 

Author: **Hyoseok (David) Hwang**, *U. of Wisconsin, Eau Claire*
Author: **Hyun Gon Kim**, *Rutgers U.*
Author: **Jung Yeun Kim**, *Rutgers U.*

This paper shows that local shareholders lead firms to engage in corporate social activities locally – corporate community responsibility (CCR). Using an extensive U.S. sample, we find that mutual funds investing in local firms tend to increase CCR. Further analyses suggest a causal effect of local shareholders on CCR. Stakeholder theory and socially conscious (community) investing explain the benefits of CCR for local shareholders as well as their firms. Our results indicate that CCR tends to increase firm performance measured with Tobin's Q and operating cash flow, especially in the consumer-oriented industries where customer relations are critical. In addition, local shareholders (i.e., local funds) of higher CCR firms enjoy greater fund flows. Our study is the first to investigate the role of local shareholders as a driving force of a firm's community investments.

**Toward Future Research Agenda From the Integration
Between Accounting/Finance and IM**
Integration between Accounting/Finance and IM

Session Chair: **Chang Hoon Oh**, *U. of Kansas*
Organizer: **Jaesang Shin**, -
Panelist: **Thomas Lindner**, *U. of Innsbruck*
Panelist: **Martina K. Linnenluecke**, *Macquarie U.*
Panelist: **Jakob Müllner**, *WU Vienna U. of Economics and Business*
Panelist: **Toru Yoshikawa**, *Singapore Management U.*

This panel discussion aims to advance dialogues and collaboration on integration between accounting, finance, and international management (IM) as a new interdisciplinary research area. The primary purpose of the panel session is to discuss how theories and methodologies in accounting and finance can advance research on multinational enterprises (MNEs) and studies in a cross-country setting. The panel session also aims to address critical research questions about factors in accounting and finance that affect firms' competitive advantage, capital structure, and sustainability that MNEs deploy to deal with challenges or opportunities, and how to examine new paradigms of interdisciplinary research.

Global Mobility of People

Session Moderator: **Alfred Presbitero**, *Deakin U.*

IM: International Career During Pandemic? Individual-Level Determinants of Global Talent Mobility

Author: **Alfred Presbitero**, *Deakin U.*
Author: **Mendiola Teng-Calleja**, *Ateneo de Manila U.*
Author: **Jem Mari P. Villagrancia**, *U. of Santo Tomas*

The prospect to pursue an international career and participate in global talent mobility has been challenged by the pandemic. So what prompts an individual to remain interested in pursuing an international career during such a disruptive global event? In this study, we provide some answers to this timely question. We ground our assertions on Social Cognitive Career Theory to theoretically explain how an individual's international career self-efficacy would relate to interest in international career during pandemic. We then assert the critical role of international career optimism as a mediator and risk taking as a conditional moderator which can influence interest in international career. To test these assertions, we conducted two studies in Australia (Study 1; one wave of data; n=340 and Study 2; two waves of data; n=245) and our findings provide contextualized insights on critical individual-level determinants of global talent mobility in time of global crisis. Our findings also offer practical insights for international management particularly for individuals who aspire to engage in global talent mobility as well as for firms that aim to recruit global talents during pandemic.

IM: Employer Attractiveness of MNEs - A Cross-National Conjoint Analysis on the Role of COO and CSR

Author: **Bich Ngoc Le**, *U. of Fribourg*
Author: **Dirk Morschett**, *U. of Fribourg*

In today's globalized world, multinational enterprises (MNEs) have increasingly expanded worldwide, meaning they need to recruit talent abroad. Nevertheless, the extant recruitment literature lacks an international perspective, as most research has been conducted in a single context and in developed countries, creating a gap regarding how MNEs can develop optimal international recruiting strategies. Based on a cross-national conjoint analysis in an emerging country (Vietnam) and a developed country (the US), we calibrate the relative importance of organizational/job attributes, especially those with symbolic value such as MNEs' country-of-origin (emerging vs. developed) and CSR, together with other instrumental factors (e.g., pay, career opportunities), to young applicants in the two countries. Our results reveal some differences, particularly in that the way applicants from an emerging market attach more value to the economic dimension of CSR, but less value to the social and environmental CSR dimensions. Despite the persistence of certain cross-national differences, the overall influential structure on job choice remains largely similar across countries, opening up the possibility for a global employer branding strategy. Our results, moreover, suggest that symbolic attributes are as important as instrumental attributes to applicants; most interestingly, the economic dimension of CSR and country of origin are even considered more important than salary in Vietnam.

IM: A Qualitative Study of Bangladeshi Diaspora in Malaysia: The Role of Social Networking

Author: **Farhad Uddin Ahmed**, *Lecturer at Brunel Business School, Brunel U. London*
Author: **Mentaz Jahan Benozir**, *Nestlé Bangladesh*
Author: **Roisin Lyons**, *Kemmy Business School, U. of Limerick*
Author: **Manjit Singh**, *RMIT International U. Vietnam*
Author: **Mohammad Jasim Uddin**, *Monash U.*

The theoretical exploration of diaspora entrepreneurship is still in its infancy stage, and hence the underlying mechanisms underpinning strategic behaviours such as resource attrition and networking in this context remain limited. We thus explore the social networking behaviours of diaspora entrepreneurs, and the effect of these networks on entrepreneurial determinants. In doing so, we investigate Bangladeshi diaspora communities and their social interactions and network ecosystem in the Malaysian context. Noting the nuanced and contextual underpinnings of such a study, we examine diaspora entrepreneurship qualitatively, by employing a series of interviews with Bangladeshi diaspora entrepreneurs in Malaysia. Our study demonstrates that the Bangladeshi diaspora entrepreneurs in Malaysia benefit from two types social networking: (i) ethnic-tie, and (ii) non-co-ethnic tie. Our findings additionally establish that these social ties are built on specific network motivators: (i) friendship and personal/familial tie, and (ii) economic interest and mutual benefits. Our study highlights a number of conditions which can help to support entrepreneurship in the diaspora community.

IM: (Not) Keeping up with the Joneses: Income Inequality, Social Cohesion and Crimes Against Businesses (WITHDRAWN) 

Author: **Sorin Kramer**, *U. of Exeter Business School*
Author: **Addisu A Lashitew**, -
Author: **Jonathan P. Doh**, *Villanova U.*

Rising inequality is one of the grand societal challenges of our time. Yet, its effects on firms – including multinational enterprises (MNEs) – and their operations have not been widely examined by IB scholars. In this study we posit that income inequality within a country is positively associated with the incidence and severity of crime experienced by businesses. Further, we propose that this relationship will be negatively moderated by social cohesion (in the form of greater societal trust and lower ethno-linguistic fractionalization) in these countries, such that social cohesion helps to offset the negative impacts of inequality on crime against businesses. We test these hypotheses using a comprehensive data set of 114,000 firms from 122 countries and find consistent support for our theses. Our findings, which are robust to different alternative variables, model specifications, instrumentation, and estimation techniques, advance our understanding of the intricate ways through which inequality affects societies worldwide, specifically via business organizations, and the challenges this may pose to MNEs and other businesses. They also offer important managerial and policy insights regarding the consequences of inequality and potential mitigation mechanisms.

IM: Acquirer’s Corporate Social Irresponsibility, Deal Rumor and Cross-Border Acquisition Completion

Author: **Shan Zhu**, *School of management, Zhejiang U.*
Author: **Jian Du**, *Zhejiang U.*
Author: **Jie Lu**, *School of management, Zhejiang U.*
Author: **Qiuxia Zheng**, *Zhejiang U.*

We draw on signaling theory to examine how foreign acquirers’ corporate social irresponsibility (CSI) affects the outcomes of cross-border acquisition completion and how this impact varies according to the existence of deal rumor. We argue that foreign acquirers’ CSI is a negative signal that not only makes firms more likely to be rejected when they seek foreign acquisitions but also leads to longer times to completion even if they are approved. Deal rumor has warming-up effects that amplify the signaling effects of CSI, thereby putting foreign acquirers with CSI in a more unfavorable position. Analyzing a sample of 939 manufacturing sector cross-border acquisitions by firms from European developed countries in the United States during 2000–2019, we find strong support for our arguments.

Paper is Available to Meeting Registrants Only.

IM: James Bond Chief Executive Officer and Firm Internationalization: 

Author: **Javad Esmaeili Nooshabadi**, *Maynooth U.*
Author: **Audra I. Mockaitis**, *Maynooth U., Ireland*
Author: **Richa Chugh**, *Victoria U. of Wellington*

By integrating upper echelon perspective (UEP), dynamic capability view (DCV) and international entrepreneurship (IE) literature, a conceptual model is developed to illustrate how the interaction between Chief Executive Officer (CEO) dark personality traits (narcissism, psychopathy, Machiavellianism) and firm-level factors including entrepreneurial orientation (EO), opportunity exploration and opportunity exploitation may influence the firm internationalization. The interaction between these variables can stimulate firm internationalization activities, potentially resulting in following an early and accelerated internationalization (Born-Global) rather than traditional internationalization (e.g., Uppsala model) by firms run by CEOs high in dark personality traits.

Global Innovation

Session Moderator: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

IM: Direct Benefits, Hidden Costs, and Accelerated Effects of Dispersed Innovation  

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

While prior studies have shown that the impact of dispersed innovation on firm innovativeness is mixed, we assert that the relation between dispersed innovation and firm innovativeness can be captured in a sigmoid curve and determined by direct benefits (D), hidden costs (H), and accelerated effects (A). Based on the DHA model, we find that firm innovativeness increases with the increasing direct benefits such as location-specific advantages at lower levels of dispersion. At intermediate levels of dispersion, firm innovativeness begins to decrease because the direct benefits can be overshadowed by the hidden costs of coordinating complexities across dispersed locations. At higher levels of dispersion, firm innovativeness resumes increasing returns since the new added complexities could bring accelerated effects to performance. More than that, we go further to explore the contingent value of a corporate strategy in dispersed innovation and provide additional explanation of why some firms have higher innovativeness than others.

IM: Learning from International Joint Product Development Work: The Role of Resources

Author: **Metin Onal Vural**, *CUNEF*

International joint product development projects have gained much attention in recent years. In analysing factors that contribute to the successful completion of such projects, I tease out the effects of geographical dispersion, resource limitations, alliance capabilities and learning on project performance. International joint product development forces organizations to face a key decision between developing products in house and outsourcing the development process while managing project costs and coordinating project tasks across borders. Utilizing a data set spanning 20+ years in drug development, I observe the effects of geographical dispersion, learning from joint work and resource limitations on the performance of joint product development projects. I examine project characteristics that relate to resource fungibility and complexity and how organizations streamline their work activities while working with multiple international locations. My findings show that there is a commensurate cost of managing joint product development projects across multiple international locations, however, such dispersion also brings about the benefits of accessing resources in distinct locations. Furthermore, the negative impact of geographical dispersion on project performance can be overcome when the lead organization has learned to manage such projects through prior experience. I detail these findings and elaborate on its implications for theories on internationalization, learning, coordination and resources.

IM: Innovation, Technology, Knowledge Sharing in Agribusiness 

Author: **Velma Lee**, *Florida International U.*

Author: **Marjorie A. Lyles**, *Florida International U.*

International transfer of knowledge is a significant currency in IB. However, the ethical and legal issues that surround the grey area of innovation, technology, and knowledge sharing is seldom addressed in a systemic manner. Using Boisot's Information Space model in knowledge management, literature review and semi-structured interview with field experts, we constructed a theoretical framework that captures the dynamics of data treatment (exploitation/exclusion), data value (high/ low) and data flow characteristics (undiffused/ highly diffused) of knowledge sharing in a global industry - Agribusiness. Four legal cases are employed to illustrate the respective quadrants' characteristics. Building on this fundamental framework, further elements and characteristics in knowledge sharing are captured using professional imaginaries and selected dimensions of the technology acceptance model. The resultant framework is useful for management of innovation, data valuation, patenting strategy, knowledge sharing, and further research into technology adoption and knowledge sharing in both agribusiness and other global industries.

Governance Within the MNE

Session Moderator: **David Weng**, *California State U., Fullerton*

IM: A Social Capital Perspective to Explain Internationalization of Business Group Affiliated Firms

Author: **Anish Purkayastha**, *U. of Sydney Business School*

We construct a theoretical framework that offers two different forms (primary and secondary) of social capital to explain the mechanisms behind internationalization of business group (BG) affiliated firms. We propose that BG level interorganizational network ties creates domestic focus opportunity-motivation-ability in affiliated firm which is detrimental to affiliate level degree of internationalization. We further propose that affiliate level internal network configuration (combined effect of network density and network hierarchy) and external network relation (combined effect of trust and identification) create international focus opportunity-motivation-ability and alleviate negative effect of network ties on affiliate’s degree of internationalization. Our theoretical framework contributes to the global strategy of BG research where the key concepts of networks, social capital, and organizational international strategy intersect.

IM: How Family and Business Group Controlling Shareholders Affect CEO Power Differently

Author: **David Weng**, *California State U., Fullerton*
Author: **Kuo-Pin Yang**, *National Dong Hwa U.*

This study examines the effects of family and business group controlling shareholders on CEO power. We draw on the literature on comparative corporate governance to maintain that families and business groups shareholders have distinctive preferences for CEO power. Specifically, family shareholders prefer to have a CEO with a clearer, stronger image as such an image is commensurate with their expectations for corporate leaders. Alternatively, business group shareholders tend to grant a CEO with less direct influence on a firm as the group emphasizes economic goals. These distinctive views prompt boards to grant varying power to their CEOs. We furthermore argue that the effects of families and business groups on CEO power would be altered by certain contingencies. Results based on a sample of public firms in Taiwan support our predictions. Implications for theories are discussed.

IM: Foreign Subsidiary Governance: Toward A Research Agenda

Author: **Yuxue Luo**, *U. of Nottingham, Ningbo, China*
Author: **Lei Li**, *U. of Nottingham, China*
Author: **Young Un Kim**, *U. of Nottingham, China*

Foreign subsidiaries have been well-studied in the field of management and international business. A small but growing research niche addresses on the governance of foreign subsidiaries particularly looking into board and top management team (TMT) compositions and roles. This paper aims to systematically review and integrate the literature on foreign subsidiary board and TMT. We first identify key parts of foreign subsidiary governance based on an examination of 58 relevant articles published during the years of 1990-2021. Second, we construct a framework to organize the articles with regard to antecedents and consequences of foreign subsidiary board and TMT structure and functioning. Third, we discuss the findings and identify the gaps in the current literature. We stress that foreign subsidiary governance is understudied and is quite fragmented across various business disciplines and institutional contexts. In particular, the complexities of how foreign subsidiary boards and TMTs are structured in conformance to home and host country challenges are not yet rigorously examined. Finally, we conclude by proposing new theoretical directions and research avenues. Keywords: foreign subsidiary corporate board, foreign subsidiary TMT, emerging markets, institutions.

Institutions and Internationalization

Session Moderator: **Maximilian Stallkamp**, *Virginia Tech*

IM: Inverted legitimacy: Institutional theory in the Age of Multinational Platforms 

Author: **Maximilian Stallkamp**, *Virginia Tech*
Author: **Liang Chen**, *U. of Melbourne*
Author: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*
Author: **Sali Li**, *U. of South Carolina*

We examine the novel challenges of establishing and maintaining legitimacy in the burgeoning context of multinational platforms (MNPs). Prior organizational legitimacy research has studied conventional multinational enterprises (MNEs) that seek regulative, normative, and cognitive legitimacy for their subsidiaries in diverse foreign markets. MNPs, however, internationalize by orchestrating networks of independent complementors, rather than hierarchically controlled foreign subsidiaries. This exposes MNPs to novel legitimacy challenges and diverges in several ways from the premises and predictions of extant theorizing on MNE legitimacy. In particular, we argue that for MNP legitimacy, the liability of outsidership is more important than the liability of foreignness, and establishing regulatory legitimacy is more challenging than normative and cognitive legitimacy. We further explore how ecosystem characteristics and MNP governance choices shape the establishment and maintenance of MNP legitimacy.

Paper is Available to Meeting Registrants Only.

IM: M&A Under Financing Friction: Evidence from Credit Supply Shortfalls 

Author: **Lucas Macoris**, *Inspere Institute of Education and Research*
Author: **Luiz Ricardo Kabbach De Castro**, *U. de Navarra*

Despite empirical evidence showing that firms' investments decrease during periods of credit supply shortfalls, little is known about how firms can eventually circumvent such financing frictions, thereby attenuating the adverse effects of negative credit supply shocks. In this paper, we show that firms can relieve financing frictions during banking crisis periods by selling equity stakes to outside investors. We examine mergers and acquisitions (M&A) transactions worldwide between 1990-2019 and the outcomes of targeted firms ex-post the deal. By exploring cross-sectional variation in the supply of credit induced by banking crises, we find that firms that have higher levels of expiring debt maturities in the year of the credit shock are more likely to become targets in M&A deals. Moreover, we find strong evidence that target firms invest more and issue more debt after the deal relative to other financially constrained firms that did not undergo such transactions. Our results remain robust after controlling for alternative explanations and show that M&As can work as leeway to relieve financing frictions in periods when credit supply frictions are more prevalent.

IM: The Culprit Behind Bootleg Music Release: The Diverging Roles of Institutions   

Author: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*
Author: **Weiqliang Tang**, *U. of South Australia*
Author: **Jingyu Yang**, *U. of Sydney*

Digital technologies enable bootleggers to anonymously release digital bootleg music, a form of illegitimate digital activities. In this paper, we examine the institutional divergence in influencing the release of digital bootleg music across countries. Specifically, we posit that informal institutional environments offering attractive demand-side opportunities to bootleggers may continue attracting digital bootleg music releases, even in presence of strong digital regulations. By analyzing a large dataset on bootleg music releases across 40 countries, we find evidence supporting our theoretical contentions. Our study extends institutional theory in a digital age by shedding new light on the divergent interplay between formal and informal institutions, which influences the prevalence of illegitimate digital activities in a country.

IM: Venture Legitimacy in South-North Internationalization  

Author: **Everlyne Misati**, *George Washington U.*
Author: **Fred Ochieng Walumbwa**, *Florida International U.*
Author: **Mary Ann Y. Von Glinow**, *Florida International U.*
Author: **Bani Orwa**, *Stirling Consultants*

Accessing foreign markets presents many opportunities for businesses. However, small entrepreneurial firms remain underrepresented in international trade. Specifically, entrepreneurial firms from developing markets (DMEFs) lag their counterparts from developed markets in export revenues. We contend that this is partly due to liabilities of origin (LORs), which stem from institutional voids in firms' home-countries and have adverse implications for the firms' legitimacy abroad. Thus, LORs hinder many DMEFs' (South-North) internationalization to developed countries: the main consumer markets for their primary commodities. How, then, can DMEFs mitigate LORs when seeking new customers in developed markets? Our findings, based on a qualitative study, indicate that, to "get their foot in the door," DMEFs tap their networks for referrals and invoke their product's international appeal and favorable reputation. However, it is face-to-face interaction with potential customers that ultimately "seals the deal." Our study illustrates the role of DMEFs' home-country institutional voids in shaping their developed market customers' legitimacy perceptions, which then influence firm strategy.

IM: The Impact of Cycles of De-internationalization and Re-internationalization on Innovation  

Author: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*
Author: **Josep Rialp**, *Autonomous U. of Barcelona*
Author: **Fernando Angulo-Ruiz**, *MacEwan U.*

This study examines the impact of firm de-internationalization and re-internationalization activities on product and process innovation, by drawing on an average sample of 2,857 Spanish manufacturers over the period 1990–2016. Consistent with the learning-by-exporting hypothesis, we find that de-internationalization and re-internationalization have respectively a negative and positive effect on both innovation outcomes. The analysis by host market shows that exiting or re-entering the same trade bloc (European Union) does not have an impact on any innovation outcome. Outside the EU, the effects vary based on the innovation form and market characteristics. The results hold theoretical and managerial implications.

IM: Knowledge Management in Multinationals: Boundary Spanning Activities of Regional Headquarters

Author: **Jiin Lee**, *Henley Business School, U. of Reading*
Author: **Jongmin Lee**, *Henley Business School, U. of Reading*

As multinational enterprises (MNEs) have become knowledge driven and dispersed across many locations, the role of regional headquarters (RHQs) in managing knowledge between headquarters (HQ) and subsidiaries has become increasingly prominent. Yet, few studies have comprehensively examined their role in MNE knowledge management. This study builds on the boundary spanning perspective to investigate the specific roles and activities played by RHQs in knowledge management of the MNEs. Based on an in-depth qualitative study of seven Korean large MNEs, this study reveals how RHQs affect the knowledge flows in MNEs by performing four different activities, labeled transfer, translation, transformation, and facilitation. RHQs not only enhance efficiency in knowledge transfer between HQ and subsidiaries, but also enlarge the usefulness and application scope of the knowledge by interpreting cultural and contextual factors. RHQs also create new solutions by transforming subsidiary knowledge and facilitate knowledge sharing by restraining knowledge hiding of subsidiaries. Based on these findings, we develop an integrated framework, specifying the conditions under which each of the four activities is more likely to occur and showing how each activity disproportionately affects HQ and subsidiaries.

IM: Technological Assets and High-tech Chinese Firms' OFDI to DEs - a Techno-Nationalism Perspective

Author: **Honghui Zou**, -
Author: **En Xie**, *Tongji U.*
Author: **Alex Junyi Fang**, *School of Economics & Management, Tongji U.*

This study investigates the association between technological assets and Chinese high-tech firms' OFDI to developed economies (OFDI-to-DE) through a techno-nationalism perspective. In China, absorbing advanced technologies from developed economies has been summarized as an important approach to achieve economic prosperity, so a belief that enhancing technological connectedness benefits the country's survival and development may drive Chinese high-tech firms to increase their OFDI as they accumulate richer technological assets. However, the positive association would be impaired by a belief in developed economies that their governments need to take efforts to reduce technological exchanges with China, as the country has gained an increased capacity to challenge the hegemon of the U.S. with an incompatible institutional framework. Leveraging data collected from 1234 Chinese listed high-tech firms, we found accumulated technological assets impels Chinese high-tech firms to increase their OFDI-to-DE, while the effect is weakened by firms' state ownership and innovation subsidies acquired from Chinese governments. In addition, general competitiveness of China reflected as the reduced GDP lag against the U.S., and specific competitiveness of the country in technological arena also weakens the positive influence of technological assets on Chinese high-tech firms' OFDI-to-DE.

Surviving COVID-19: Resiliency and Entrepreneurial Success in Africa
Surviving COVID-19 in Africa

Session Chair: **Jean Dibondo Kabongo**, *U. of South Florida, Sarasota-Manatee*
Panelist: **James Abugre**, *U. of Ghana Business School*
Panelist: **Thomas E. Becker**, *U. of South Florida, Sarasota-Manatee*
Panelist: **Shepherd Dhlwayo**, *U. of Johannesburg*
Panelist: **Olawale Fatoki**, *U. of Limpoo*

The purpose of this panel discussion is to consider how entrepreneurs in developing economies survive during extreme adversity such as the COVID-19 pandemic. To achieve this goal, we will first consider the existing literature on entrepreneurial resilience, particularly that on its antecedents and consequences. In this context, we will argue that the effects of entrepreneurial resilience are particularly far-reaching in developing economies where a supply of entrepreneurs who constantly renew themselves to overcome adversity is urgently needed. Entrepreneurs in these economies are often faced with political corruption, persistent economic instability, societal turmoil, and other serious and chronic conditions. The COVID-19 pandemic and related conditions, including the relative scarcity of vaccinations and lack of government support, have exacerbated adversity in Africa. Thus, in addition to prior literature, we will use the findings from a new study on entrepreneurial resilience during COVID-19 to inform our discussion. This longitudinal study was conducted in Ghana and South Africa by four of the panelists, two of whom live in the countries in which the data were collected. Through our discussion and contributions from the audience we hope to advance theories of entrepreneurial resilience and offer practical suggestions for fostering effective entrepreneurship during extraordinary adversity.

Beyond the First Offer: A View of Academic Job Negotiations from Both Sides of the Table

How to Succeed at Academic Job Negotiations

Session Chair: **Christopher Bauman**, *U. of California, Irvine*

Session Chair: **Leigh Anne Liu**, *Georgia State U.*

This PDW is open to all Academy members—including junior & senior faculty and PhD students—who would like to learn how to successfully negotiate academic job compensation packages. This session will provide a unique perspective on academic job negotiations by including panel discussions that provide information about how each side tends to view the process. One panel will comprise senior faculty who will offer information from the perspective of deans, department chairs, and other administrative roles involved often involved in negotiations with job candidates. Another panel will comprise faculty members who will shed light on the negotiation process from the perspective of job candidates based on recent experiences. The goals of this PDF are to (1) identify components of contracts that tend to be negotiable for rookies on the job market, (2) identify components of contracts that may become negotiable for more senior hires or experienced faculty taking on a new role or responsibilities, (3) provide suggestions about strategies and tactics that participants should use or avoid, (4) familiarize participants with the general structure of the negotiation process and how it feels to go through each part. The format will include two panel discussions, Q&A, and an experiential exercise.

Computational methods that allow to identify multifarious dependencies in social systems, such as through social network analysis, sequence analysis, text analysis, and agent-based simulations, are now increasingly used in organizational research. Some scholars leverage these methods for the explicit purpose of building theory by combining them with manual approaches known from grounded theory and case study research methods. While combining computational and manual approaches promises to improve our capacity to build novel theory for complex social phenomena, it is not without challenges for our research practices. Various questions arise in relation to the specific combination of manual and computational techniques, such as the legitimacy of knowledge claims, algorithmic biases of computational tools, reporting computational theory development in research articles, as well as reviewing this type of work. This PDW is a follow-up workshop to last year’s PDW on “The Rise of Computational Methods for Theory Development,” which focused on exposing participants to new methods and provide a collaborative forum to help establish legitimacy for this new type of research. In this follow-up workshop, we aim to (a) present practical examples of how researchers address struggles associated with combining manual and computational approaches to theory building, (b) help authors who are facing those struggles, (c) discuss how this novel type of work can be reviewed, and (d) provide a forum to discuss the next steps in developing this new methodological stream.

Registered participants must submit a short vignette until July 25 (approx. 1-2 pages as PDF to stefan.seidel@uni.li) highlighting how they combined computational and manual analysis techniques in their research, and what struggles they faced in understanding, using, or considering using computational methods in their theory development work. Those who have not conducted any such research, but are planning to do so, can submit short descriptions of their intended work, also focusing on their planned combination of manual and computational techniques or related questions.

What Are We Talking About? Natural Language Processing in Organizations

Natural Language Processing in Organisations

Speaker: **Michael Yeomans**, *Imperial College Business School*

Speaker: **Lara Yang**, -

Speaker: **Joshua Jackson**, *Northwestern Kellogg School of Management*

Speaker: **Ada Aka**, *The Wharton School, U. of Pennsylvania*

This symposium is designed to advance research on organizational communication by bringing together leading scholars examining state-of-the-art applications of natural language processing. Language is endemic to almost every aspect of an organization - we talk and write to each other all the time. However, the dominant paradigms for studying social interactions involves indirect measures of communication - for example, by manipulating language in a lab experiment, or by surveying people about their previous interactions. These methods allow researchers to structure their data in advance. But naturally occurring data from communication - the text and speech itself - is unstructured, and presents many common analytical challenges for those who care about the consequences of that communication. The presentations in this symposium demonstrate how that communication can be measured directly. Each presenter considers natural language data from common and difficult conversations throughout an organization. And in each case, natural language processing is used to show that the content of the communication has direct consequences for organizational outcomes. Across different field settings, we show how our analyses can also provide evidence for biases and information gaps that can inform behavioral models of decision-making in an organization.

Creating a better world together; Creating a more entrepreneurial world together... emphasis on together. Building that more entrepreneurial world requires connecting and leveraging a diverse array of experts (and newcomers) from multiple disciplines, multiple countries, and from both macro and micro perspectives. Isn't it plausible that a great entrepreneurial ecosystem has profound effects on entrepreneurial learning? Isn't it plausible that a great entrepreneurial ecosystem arises from broad, deep diffusion of entrepreneurial mindset & skills? Audretsch years ago argued that the entrepreneurial capital of a community necessarily included both entrepreneurial human capital and entrepreneurial social capital. Isn't time to "Assemble the Avengers" and bring together all the right people to test how they interact? To have intense, joyous conversations about this? Such "Meetings of the Minds" grew out of the Kauffman Foundation's ESHIP initiative to nurture grassroots efforts that support healthy entrepreneurial ecosystems. These conclaves have happened at the last 3 AoMs, at ICSB, and at practitioner events. Bring together top entrepreneurial champions (drawing on Seattle's fascinating ecosystem), top policy experts like Victor Hwang, OECD & UN, the very best educator experts like Andy Penaluna with a diverse roster of top scholars (stars and rising stars). One very important example: Promoting diversity/inclusion, connecting under-represented problems helps the ecosystem mightily – what are the key mechanisms? And how might an ecosystem best support the engagement of underrepresented groups? (The US SBA's new Community Navigator is one such strategy that requires both macro and micro– we invited its architects to join this PDW.)

Please contact the organizers whether you expect to attend in-person or virtually (we will have breakout 'rooms' for both modalities AND if there is a specific topic that intrigues you! [Tell us virtual or in-person here and PLEASE leave your name and email here: <https://forms.gle/HLcf7tbxBUD1Hb77>] Thanks!

Diverse Perspectives on Organizational Cognition

Session Moderator: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*

MOC: **Too Many Moving Pieces: Parallel Acquisitions and Forecasting Bias in Acquisition Integration** 

Author: **Di Bian**, *U. of St. Gallen*

Although firms often conduct multiple acquisitions simultaneously with overlapping procedures running in parallel, little is known about the consequences of parallel acquisitions on a focal acquisition’s integration planning. Drawing on information overload research and the attention-based view of the firm, we propose that parallel acquisitions may result in information overload in which managers with bounded rationality have constrained capacity to proceed the amount, the characteristics, and the flow of information. Leveraging a novel measure of integration decision quality – the underestimation of integration costs, we find that parallel acquisitions are associated with significantly higher likelihood of integration cost underestimation. Our paper advances acquisition research by introducing the effect of activity load on integration and by illuminating the cognitive challenges in managing parallel activities.

MOC: **An Integrated Model of Management: Why it Would be Valuable and How it Can be Built** 

Author: **Andrew Carton**, *The Wharton School, U. of Pennsylvania*

Disciplines with strong paradigms, in which scholars reach consensus about their field’s most important theory, have greater stature and accumulate knowledge more efficiently. Yet the prevailing standpoint among management scholars is that a strong paradigm would be too abstract for an applied field, and would stanch the development of thousands mid-range theories that emerge organically each year (letting “a thousand flowers bloom”). I argue that this perspective rests on a misconception. Strong paradigms do not stifle the development of mid-range theories, but rather help scholars generate and refine them. Accordingly, the lack of a strong paradigm in organizational research is not a question to be pondered, but an opportunity to be seized. I outline a guide for building a unified theory composed of between eight and fifteen meta-constructs that explain the greatest amount of variation in the thousands of published findings in management journals. Modern tools can enable this unified theory to be “living” so it is automatically updated to reflect the latest research, helping scholars avoid informational constraint (when a strong paradigm quells “out-of-the-box” thinking) and normative constraint (when stakeholders have a vested interest in preserving, rather than updating, the unified theory).

MOC: **How a Reenacted Racial Violation Shifts How Organizations Manage Race**    

Author: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*

Author: **Tiffany Smith**, *Harvard U.*

Finalist for MOC Division Best Paper on Diversity and Cognition Award

Some research suggests that organizations proactively respond to social issues through social activism and, more broadly, to large-scale cultural, political, or commercial events that attract significant media attention. Yet, more recently, other research has suggested that community-based racial issues enter the workplace primarily through the consciousness of minority group members who struggle cognitively and emotionally with these events as opposed to through active organizational-level response. Our inductive, qualitative study of 13 corporate organizations illustrates the conditions under which these organizations integrate racial issues more deeply into their consciousness and actions following a racial incident in the community. We define this incident as a reenacted racial violation. Ultimately, our theory of the organizational integration of race following a reenacted racial violation in the community extends beyond existing research in that we focus on a racial violation that closely resembles one or more past racial violations, and triggers a number of organizational-level actions over time. We also offer practical insights for responding to reenacted racial violations from an organizational perspective.

MOC: Consciousness as a Mediator Between Green HRM Practices and Pro-Environmental Behaviors 

Author: **Qurat Ul Ain**, *National U. of Sciences & Technology*

Author: **Muhammad Zeeshan Mirza**, *National U. of Sciences & Technology*

Author: **Mumtaz Ali Memon**, *NUST Business School National U. of Sciences & Technology*

The research seeks to consider the impact green HRM activities on the pro-environmental behavior of employees. The research examines the mediating role of environmental consciousness and moderating effect of employees' age and experience on green HRM practices and environmental consciousness. Data was obtained from employees of manufacturing industry; textile, oil and gas, automobile and automotive, foundry, and heavy mineral mining. Data was obtained in two-time lags with the gap of 6 months. In phase 1 (T1) the questionnaire was filled by white-collar employees about green HRM practices and their environmental consciousness. In phase 2 (T2) the questionnaires were filled by the relevant managers about their employees' pro-environmental behavior. A total of 202 useable questionnaires were obtained for the final data analysis. Partial least squares structural equation modeling (PLS-SEM) was performed to test the hypothesized relationships. The findings indicate that not all green HRM practices have a positive impact on the pro-environmental behavior of employees. These are important findings for the advancement of literature on Green HRM. It is also mediated by environmental consciousness. While the organizational experience and age of employees moderates the relationship between green HRM practices and environmental consciousness. Practical implications – Research proves that not all Green HRM practices create environmental consciousness among employees, therefore, companies should focus on the identified Green HRM practices that have more impact on raising environmental consciousness, thus enhancing their morale and desire to do work that ultimately increases their productivity. Organizations can use the factor of age and organizational experience to their advantage while implementing Green policies within their organization, thus changing their behavior and level of acceptance towards changes in organizational policies and practices. Green HRM has received rather limited attention regarding the role of environmental consciousness and its transformation into pro-environmental behavior. The nature of the relationship between GHRM and environmental consciousness is affected by organizational experience and age of employees. The research elaborates the impact of different green HRM practices and their contribution and importance in promoting pro-environmental behavior among employees. This research gives theorists and practitioners a better understanding about Green HRM practices that articulate their pro-environmental behaviors.

MOC: Capital Market Reactions to Managerial Framing of Emerging Strategic Issues  

Author: **Joern Hoppmann**, *U. of Oldenburg*

Author: **Kerstin Lopatta**, *U. of Hamburg*

Author: **Thomas Tammen**, *U. of Hamburg*

Author: **Sebastian A. Tideman**, *U. of Exeter*

Emerging strategic issues in firms' environment, such as trends toward sustainability or digitalization, may threaten organizational survival and require strategic responses. The recent literature shows that a critical challenge in times of emerging issues is to convince external stakeholders, such as investors, of the need for strategic change. Thus far, however, we know little about how managers should frame emerging strategic issues vis-à-vis external stakeholders, such as analysts or investors, to achieve positive resonance and garner support for their strategies. To address this shortcoming, in this paper, we investigate how the managerial framing of environmental sustainability as an important emerging issue shapes capital market responses. We find that while a higher frequency of mentioning environmental sustainability is linked with a more negative capital market response, a positive tone is linked with a positive one. Contrary to expectations, we find that a positive tone is particularly effective in driving positive capital market responses for firms with low performance in terms of environmental sustainability. Moreover, we show that more uncertain language positively moderates the relationship between a positive tone and capital market responses when managers frame the issue of environmental sustainability. Overall, by showing how managers can elicit positive capital market responses to emerging strategic issues through framing, our study makes significant contributions to the literature on strategic change, framing, and corporate sustainability.

Entrepreneurship and Spirituality

Session Moderator: **Marcel Hechler**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

These papers offer a diversity of perspectives on the intersection between entrepreneurship and spirituality.

MSR: **Entrepreneurial Passion in Emerging Markets: Unveiling the Role of Spirituality and Happiness**

Author: **Marcel Hechler**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

The influence of secular norms and values, spiritual-religious belief systems, happiness and satisfaction in shaping human cognition, emotion, and behavior has fascinated scholars from psychology and sociology for decades. Empirical evidence of their implications for management research, however, is scarce. Using primary survey data collected from 1,087 business owners in seven developing and emerging economies between February and August 2021, combined with secondary national data, we take a cross-cultural approach to examine spiritual capital and happiness as explanatory variables for entrepreneurial passion, as well as the moderating effect of the cultural dimension of uncertainty avoidance. Our results provide empirical evidence that both spiritual capital and happiness are positive determinants of entrepreneurial passion. Moreover, we find that the relationship between happiness and harmonious passion is less pronounced among business owners living in societies with high levels of uncertainty avoidance. Following Self-Determination Theory, we theoretically discuss why entrepreneurs with high spiritual capital appear to be agnostic to some of the cultural influences of the societies they live in. Because these findings go beyond traditional understandings of religion, they are relevant to researchers and practitioners such as individual business owners, investors, and policymakers alike, and open up avenues for conversations about the question how diversity with regard to culture, beliefs, norms, and values may contribute to building better management teams and work environments.

Paper is Available to Meeting Registrants Only.

MSR: **The ‘Why’ of the Effect of Spirituality in the Workplace on Entrepreneurial Behavior of Employees**

Author: **Meba Tadesse Delle**, *Addis Ababa U.*

Spirituality and entrepreneurship are shown to be related. However little research has analyzed the relationship between spirituality in the workplace and entrepreneurial behavior of employees. With the aim of filling this gap, this study hypothesizes that spirituality influences entrepreneurial behavior of employees. In addition, the pathway from spirituality to entrepreneurial behavior of employees is poorly understood. To address this, a model is developed where psychological ownership – feeling of ownership regardless of legal ownership – mediates the relationship between spirituality in the workplace and entrepreneurial behavior of employees. To test the model, empirical analysis based on survey data is used and structural equation modeling is applied. Results suggest that spirituality in the workplace is associated with entrepreneurial behavior of employees, and psychological ownership fully mediates the relationship. The findings highlight that psychological ownership is the missing link that connects spirituality in the workplace and entrepreneurial behavior of employees.

MSR: **Religion and Entrepreneurship: A Deep Institutional Relationship. A Systematic Literature Review**

Author: **Andrea Sottini**, *U.Cattolica del Sacro Cuore*

Religion engages with multitude activities of humans, including entrepreneurship. In the last decade, research on the nexus between religion and entrepreneurship has grown significantly. Scholars offer a comprehensive understanding of the influence of religion on entrepreneurship at the individual and organizational level, yet they say little about the role of the institutional environment. This paper advances a literature review focusing on how entrepreneurship is influenced by institutional framework where religion plays a central role, offers a conceptual model, and an agenda for future research. This literature review is based on 39 articles published in leading business, management, and entrepreneurship journals between 1998 and 2021.

Paper is Available to Meeting Registrants Only.

MSR: **Entrepreneurial Opportunity Revelation as the “Anti-Antenarrative”.**

Author: **R. Duncan M. Pelly**, *McMurry U.*

Discussions of entrepreneurial opportunity revolve around two competing constructions – opportunity as discovered vs. opportunity as created. Those in the discovered approach are predominantly in the Austrian Economics camp and postulate that entrepreneurs achieve opportunities through expertise or superior knowledge to spot gaps within the market place. Alternatively, created approached in entrepreneurial opportunity thrive in processual approaches, such as effectuation, bricolage, and even the awakening of social capital. Each of these orientations is nonetheless built upon different antenarratives. In the discovered approach, astute entrepreneurs are able to successfully navigate between competing antenarratives to select the “correct” choice, or that which emulates a more faithful interpretation of a supply and demand curve, or best approaches to a metaphysical source as shown in the undifferentiated individual ontology. In the created approach, entrepreneurs choose antenarratives embodied in personal networks, material objects, and preexisting knowledge to create new future oriented narratives as embodied in the differentiated individual ontology. Based on the selected antenarrative, actions occur such as new venture and organization formation.

Inequality in Labor Markets and Organizations

Session Moderator: **Dylan Nelson**, *Massachusetts Institute of Technology*

OMT: **Job Upgrading and Earnings Growth for Non-college Workers**

Author: **Dylan Nelson**, *Massachusetts Institute of Technology*
Author: **Nathan Wilmers**, *Massachusetts Institute of Technology*
Author: **Letian Zhang**, *Harvard Business School*

Workers without a college degree have faced slow wage growth for nearly four decades. Some employers organize work in ways associated with higher pay for these workers, by implementing job enrichment, high-performance work systems, or structured management practices. However, these job upgrading strategies can be biased toward higher-skill workers and in some cases actually reduce employment opportunities for workers without a college degree. We clarify this trade-off by specifying several pathways through which job upgrading can affect pay, some of which are more or less skill-biased. We then test these ideas by matching restricted-use linked employer-employee data to the near-universe of online job postings. This allows us to assess shifting worker selection and to compare among different types of job upgrading. We show that jobs listing more valuable tasks pay more, but that around half of this premium is due to more positive worker selection. We then show that jobs that specifically involve higher discretion and more tasks involving on-the-job learning have higher starting pay.

Winner of the OMT Division Best Paper on Environmental and Social Practices Award

Work-life policies designed to accommodate mothers often undermine their career advancement. We propose a theory of “organizational policy universalism,” arguing that work-life policies will be more effective at reducing gender inequality when they are universally applied. We examine tenure-clock extensions, adopted to mitigate career penalties faced by faculty who are caregivers. We suggest that tenure-clock extensions will better reduce inequality when they reduce the salience of motherhood through policy universalism. Three types of tenure-clock extensions embody policy universalism—tenure-clock extensions available to men and women rather than only to women, extensions that apply automatically to all parents rather than requiring parents to opt in, and extensions with guidance for promotion reviewers to evaluate policy users and non-users equally. We examine the effects of tenure clock extension policies with and without features of universalism on faculty diversity at 508 U.S. colleges and universities. The findings show that universal policies are more effective at increasing the share of women among tenured faculty. While decision makers often seek to help disadvantaged groups with targeting policies, universal policies may be more effective at mainstreaming these initiatives, reducing gender inequality in organizations.

OMT: **Exploitation at the frontier of Europe: Workers’ Alienation and Emancipation in Amazon Poland**

Author: **Milosz Miszczynski**, *Kozminski U.*
Author: **Patrizia Zanoni**, *Hasselt U. & Utrecht U.*

This paper investigates workers’ exploitation in contemporary global logistics. Relying on Marx’s concept of alienation, we examine the case of an Amazon warehouse in Poland, at the eastern frontier of the European Union. In line with existing studies, our analysis shows how algorithmic Taylorism and casualized employment alienate workers from the work process, social relations with other workers, the commodities they handle, and ultimately themselves as human beings. At the same time, we highlight how these modalities of work and employment integrate workers into the global circuit of capital, reconstituting them as universal, undifferentiated, global waged labour and as consumers. This integration at once emancipates workers located at the eastern frontier of the European market from more ‘locally embedded’ exploitative capital-labour relations prevalent in that context. Our study contributes to the growing literature on global logistics and Amazon by pointing to the key role of the ‘emancipating effects’ of alienation, which Marx theorized. This complements current explanations of labour’s exploitation which focus on workers’ structural vulnerability and coercion. We conclude by reflecting on the implications of our findings for the possibilities of these workers’ mobilization.

Simulation Studies in Organization Science

Session Moderator: **Maximiliane Sachenbacher**, *U. of Lugano*

OMT: **Maladaptation - The Unintended Outcomes When Organizations Can Shape Their Environment**

Author: **Maximiliane Sachenbacher**, *U. of Lugano*

Author: **Dirk Martignoni**, *U. of Lugano*

Exogenous environmental turbulence produces a misfit between the organization and its environment. This can harm organizational performance. In contrast, shaping induces an endogenous form of environmental turbulence, leading to a better fit of the organization and its environment. This generally benefits organizations. We, however, look beyond this taken-for-granted belief about the benefits of shaping and highlight its dark side: The organization's own beliefs render the alternatives perceived as less attractive and induce the organization to stick to slightly improving, yet inferior, alternatives. This leads to hazardous performance outcomes. We call this effect maladaptation. Further, we show how this endogenous environmental turbulence operates through a different mechanism than exogenous environmental turbulence. With a modified n-armed bandit model we systematically examine the effects of shaping on organizational knowledge and performance. For this purpose, we introduce two dimensions of shaping: shaping depth and shaping scope.

OMT: **Remote Access Memories: How Remote Work Will Impact Organizational Learning and What Firms Can Do**

Author: **Dong-Nghi PHAM**, *ESSEC Business School*

Author: **Luis Rios**, *The Wharton School, U. of Pennsylvania*

Author: **Maciej Workiewicz**, *ESSEC Business School*

Is the increase in the popularity of remote work something organizations should resist or embrace? Which organizations stand to gain from this new trend, and how can they prepare for or mitigate negative consequences of remote work? Using a computational model, we show that complexity and turbulence in the organizational environment as well as the structure of organizational knowledge networks play a crucial role in determining the benefits of employees working remotely. Our results suggest that remote work is beneficial for organizations operating in simpler and less turbulent environments. These organizations also benefit from more disconnected knowledge networks, while those operating in complex and turbulent environments should consider switching to flatter and more interconnected networks when implementing remote work. We shed light on the likely effects of the rise in remote work among organizations and highlight the role organizational design can play in preparing organizations for this new reality.

OMT: **Intra-organizational Vicarious Learning, Organizational Resilience and its Trade-off With Efficiency**

Author: **Ekin Ilseven**, *INSEAD*

Organizational learning is a double-edged sword when it comes to determining an organization's efficiency in tranquil times and resilience in crisis times simultaneously. Through an agent based simulation, this work identifies malleability, attractiveness of next best action, and diversity, similarity in attractiveness all alternative actions, as two fundamental mechanisms driving an organization's post-shock search behavior, consequently resilience response. High density symmetric intra-organizational vicarious learning patterns among agents are shown to preserve diversity while reducing malleability. Meanwhile, less dense and asymmetric patterns lead to higher levels of malleability and less diversity. The short- and long-term performance consequences of these search behavior and exogenous factors such as organizational age at shock and shock duration offer boundary conditions to when a trade-off between efficiency and resilience may emerge; this refines our understanding regarding the efficiency consequences of pursuing organizational resilience mediated by organizational learning.

Categories and Categorization

Session Moderator: **Andy Chen**, *Seattle Pacific U.*

OMT: Focus? Or Span? A Meta-Analytic Approach to Category Spanning 

Author: **Andy Chen**, *Seattle Pacific U.*

Author: **Donghun Lee**, *Seattle Pacific U.*

Author: **Joon Woo Sohn**, *Seattle Pacific U.*

The purpose of this paper is to unveil the existing complexities in the relationship between organizations' category spanning behavior and their performance. In our study, we find two major gaps in prior studies. First, category spanning research has somewhat undervalued the importance of differentiating the role of audiences' perceptions towards spanning activities from measures of organizational performance. Second, past research mostly focused on one single industry at a time, which limits our knowledge of how industry-level characteristics shape an audience's evaluation of spanning activities. Our meta-analytic structural equation modeling (MASEM) shows that mixed results are partly due to the failure to differentiate perception-based performance such as customer ratings or reviews from outcome-based performance (e.g. sales, revenues, market share, and so forth). That the relationship between spanning and performance is weak but positive in industries such as law firms, technology, academia, and finance, where quality assessment is relatively standardized and clear than others such as wine, film, or restaurants. Our results imply that audience evaluative perceptions should be treated as a mediating path to organizational performance rather than the performance outcome itself.

OMT: Informative Promotional Claims and Authenticity: A study of COVID Highlights in Restaurants

Author: **Alicia Barroso**, *U. Carlos III de Madrid*

Author: **Samira Reis**, *U. Carlos III de Madrid*

Author: **Xiaofei Qu**, *U. Carlos III de Madrid*

Authenticity commonly refers to a key attribute of organizational identity and a source of competitive advantage. Promotional claims on attributes associated with authenticity, such as geographic place of origin or traditional production methods, have been identified as a potential successful strategy as they make consumers more aware about the organization's authentic attributes. But organizations often have to communicate features not associated with authenticity including open hours and delivery services. In this paper we hypothesize and empirically study the effect of informative promotional claims on attributes not associated with authenticity on consumer perception of authenticity and on organizational performance. Drawing on a quantitative study of restaurants and taking advantage of a quasi-experiment in Yelp online reviews platform—new highlights launched in response to the pandemic about food pick-up and delivery services—we show that these informative promotional claims increase the popularity of restaurants making use of those claims, but paradoxically reduce their perceived authenticity. In addition, we show how the informative claims only improve restaurants performance when they are perceived as little authentic or inauthentic.

OMT: Exemplar Similarity: A Tale of Two Countervailing Mechanisms 

Author: **Majid Majzoubi**, *Schulich School of Business, York U.*

Author: **Eric Y.-F. Zhao**, *Indiana U., Bloomington*

Author: **Greg Fisher**, *Indiana U.*

In this study, we explore the relationship between firm positioning and performance in dual benchmark settings where audiences can evaluate firms against two distinct reference points: category prototypes and exemplars. We argue that firms benefit from exemplar similarity—positioning near category exemplars—through association with an outstanding firm. However, such benefit comes with the cost of comparison against an exceptionally high-performing firm. We also argue that the impact of exemplar similarity on a firm's market value depends on firm typicality, i.e., its degree of similarity to category prototypes. An analysis of publicly listed U.S. firms from 1997 to 2018 provides strong support for our predictions. Our findings suggest that firms need to balance between the association benefits and comparison costs of exemplar similarity.

OMT: Things Fell Apart: Categorization During a Foreign Currency Market Crisis

Author: **Abiodun Ige**, *U. of Detroit Mercy, CBA*

Author: **Vern Glaser**, *U. of Alberta*

Author: **Marvin Washington**, *Portland State U.*

While prior studies underscore how categories facilitate market stability, little is known about categorization processes during market instability. This study examines how actors categorize in unstable markets. We conduct an inductive inquiry into a foreign currency market instability in Nigeria using data from the nation's central bank, news articles, and interviews from actors in the foreign currency market. We propose that market instability is a form of category crisis. We further identify two mechanisms of category shifting (the process of attributing causes to category crisis) and category sifting (the enactment of inferences of the category shifting) as important components of categorization processes during market instability. We examine the implications of our findings from category in market literature and illustrate how market instabilities can provide unique contexts for categorization processes.

Author: **Stanislav D. Dobrev**, *U. of Wisconsin, Milwaukee*

Author: **Kim Claes**, *Sungkyunkwan U.*

We analyze the position moves of U.S. auto firms between the industry's three main market segments over time and find support for arguments that sort out the relationship of scope with search, inertia, and crowding. Our predictions build on structural and behavioral considerations related to broad scope as concomitant to internal variation (which facilitates moves) and to buildup of inertia (which deters them). We reconcile the opposing predictions that broad scope both drives and impedes search by decoupling the direct positive effect of broad scope on likelihood to move positions from its second-order negative effects. The analyses support our conjectures and highlight the advantages of analyzing (changes in) market positions among all firms in an industry and of building cumulative specifications that facilitate theory integration.

Panelist: **Leroy White**, *Warwick Business School*

Panelist: **Giuseppe Labianca**, *U. of Massachusetts, Amherst*

This workshop aims to provide participants (in particular junior faculty and PhD students) with an understanding of how to publish organizational network studies in management journals. The study of networks within and between organizations is a growing field of research with its own unique opportunities and challenges. It is unusual in that it has theoretical relevance at the individual, team, organizational, and industry level; and can be integrated with a broad range of management theories. Therefore, it has broad applicability across the members of many of the academies divisions and interest groups. The opportunity to apply an organizational network framework across a broad range of topics also provides challenges. For example, understanding what research questions are relevant for a broad management audience is not always obvious. Network analysis has seen new statistical methods that provide opportunities and challenges, such as how to convey these new models to a wider management audience. This workshop sees the unique opportunity to bring together 15 leading academics from the LINKS Center for Social Network Analysis of the University of Kentucky, and the University of Exeter Centre for Social Networks; who have published in a wide range of top management journals. The format of the workshop includes a panel session and small roundtable discussions where individual papers from participants (submitted prior to the workshop) will be discussed.

Participants would be required to register and to submit a draft paper/proposal to Cecile Emery, c.emery@exeter.ac.uk, two weeks prior to the PDW. As we want to ensure a good amount of time to discuss each paper we would like to limit participation to a maximum of 45.

The concept of organizational fields occupies a central position in organizational studies and strategy research. A rich array of scholars has studied the emergence of fields bottom-up, through the actions of grassroots activists. Others have called attention to the importance of top-down intervention to preclude framing contests and hasten field emergence, especially in the case of urgent and pressing grand challenges. Still others have focused on dynamics that operate in the wider ecosystem and on how these influence the emergence of fields. This symposium brings together scholarly contributions from all these different points of view to answer the question, How do such dynamics that occur at different levels (micro, macro, ecosystem) interact to influence the emergence and reconfiguration of fields from their origins to their maturation? In particular, what are the limits of bottom-up field emergence and when might top-down intervention be warranted? What are the advantages and disadvantages associated with top-down field emergence especially in the case of grand challenges, and when might such top-down initiatives be challenged or fall apart? Finally, how do dynamics in the wider ecosystem (e.g., norms, biases, developments in adjacent or distant fields) influence a focal field's emergence and, at times, require its radical reconfiguration?

Corporate Political Activity and Social Responsibility

Session Moderator: **Michael Greiner**, *Oakland U.*

SIM: The Narcissist's Guide to Corporate Political Activity

Author: **Michael Greiner**, *Oakland U.*

Author: **Jaemin Kim**, *Oakland U.*

Author: **Jennifer Cordon Thor**, *Oakland U.*

Scholars have called for further research into the antecedents of CPA, particularly those related to CEO characteristics. In this article, we consider one CEO characteristic that has seen increasing attention in the management sciences but has yet to be applied to CPA research: CEO narcissism. We argue that while CEO narcissism might not be related to CPA in general, it will be related to a specific kind of CPA, namely CPA aimed at more ideologically extreme politicians. Using two different estimators to address endogeneity bias inherent to much CPA research, we found partial support for our hypothesis regarding CPA in general and strong support for our prediction that narcissistic CEOs will be related to ideologically extreme CPA. In this way, we add nuance to the debate over why firms engage in CPA.

Paper is Available to Meeting Registrants Only.

SIM: Codifying Responsible Corporate Political Action: Insights from an Extreme Context

Author: **Wendy Dobson**, *Gordon Institute of Business Science*

The concept of Responsible CPA is not well-defined despite the costs that CPA can impose on society. This is problematic for scholars investigating the political responsibilities of firms, as well as for practitioners interested in responsible conduct, and for citizens concerned with the political influence of corporations. A code of practice for Responsible CPA is presented to address this gap. This code is the outcome of research conducted amongst CPA practitioners in an extreme context where CPA is not fully regulated nor codified.

Paper is Available to Meeting Registrants Only.

SIM: Corporate Political Activity, Corporate Social Responsibility, and Firm Competitiveness

Author: **SAMUEL ADOMAKO**, *Birmingham Business School*

Author: **Sondos Gamal Abdelgawad**, *IE Business School*

Author: **Mujtaba Ahsan**, *San Diego State U.*

In this study, we examine the relationship between corporate political activity (CPA) and corporate social responsibility (CSR) on firm competitiveness (FC). We find broad support for the relationship between CPA, CSR, and firm competitiveness. Furthermore, we highlight the moderating role of economic adversity, marketing capability, and foreign ownership on this relationship. Our findings also indicate that CPA and CSR have strong combined effects, which in turn enhances firm competitiveness.

SIM: Green Product Portfolio and Environmental Lobbying

Author: **Jihyun Eun**, *Salisbury U.*

Author: **Minjung Lee**, *U. of Texas at Dallas*

Author: **Young Hoon Jung**, *Montclair State U.*

Nowadays, a growing number of firms utilize corporate lobbying in favor of more environmental-friendly policies and regulations, deviating from the traditional lobbying mainly used to minimize regulatory burdens. In this study, we investigate what motivates firms to engage in such an unusual type of corporate lobbying—environmental lobbying. Focusing on the product portfolio strategy of the firms, we suggest that firms increasing their production of “green products” are more likely to engage in environmental lobbying. When environmental lobbying raises environmental hurdles in the market, firms with intensive focus on green products can easily bear adjustment costs with little effort, making other “less green” firms relatively disadvantaged under the newly regulated market conditions. Moreover, those firms can also address demand-side issues more easily by lobbying the government to provide greater incentives for purchasing green products or to request subsidies that can be used to improve their cost structure. Our analyses based on the U.S. light vehicle market indicate that, indeed, the more electric vehicles automakers produce in their product portfolios, the greater environmental lobbying they make. We also find that such a positive relationship between green product intensity and environmental lobbying becomes more salient when a firm has greater market share.

STR: A Two-Side Approach to Acquisition Pricing and Completion 

Author: **Sergio Grove**, *U. of Texas at El Paso*

Author: **Mengge Li**, *U. of Texas at El Paso*

Author: **Miguel Ramos**, *U. of Texas at El Paso*

Author: **Jinxin Yang**, *U. of Texas at El Paso*

Prior literature on acquisition premiums has mainly focused on the potential participation and impact of the acquiring firm's CEO while overlooking the prospective underlying role of the target firm's CEO. We argue that buyers and sellers jointly explain and determine the price in the process of acquisitions: The Acquirer's CEO offers a premium that the target's CEO assesses to see whether it is acceptable. Consistent with this notion, we propose that the psychological characteristics of CEOs on both sides of the negotiation collectively influence the determination of the final price (premium) and the conclusion of the M&A transaction. We develop several predictions about CEO-specific optimism on both sides of acquisition transactions, and its effect on premiums offered, premiums paid, and acquisition completion. Based on a sample of 192 non-hostile acquisitions between 2012 and 2016, we find that the acquirer firm CEO specific optimism correlates with higher acquisition premiums offered, while the target firm CEO specific optimism predicts the final premium and transaction completion. This research adds to the acquisitions literature by taking a two-sided approach pricing these types of strategic transactions.

STR: Better Safe than Sorry? CEO Integrity and the M&A Decision Process

Author: **Jan Christian Bauer**, *U. of Goettingen*

In this study, we explore how the personality trait of CEO integrity unfolds in different stages of the Merger & Acquisition (M&A) process. Drawing on upper echelons theory and advances of applied psychology research, we argue that, in addition to formal rules, CEOs with high levels of integrity increasingly adhere to generally accepted informal norms. Therefore, they have a broader set of rules and norms that guide their behavior even, or particularly in discretionary situations. We conjecture that CEO integrity is associated with a lower latitude of action, affecting strategic M&A decisions. To obtain more nuanced insights, we apply a process perspective and derive suggestions on how CEO integrity unfolds in the different stages of the M&A process. Using data from S&P 1500 firms between 2006 and 2019, we find results consistent with our arguments. We conclude that CEO integrity attenuates opportunistic managerial behavior in the business context but at the expense of partially missing valuable strategic options.

STR: Hard to Let It Go: The Role of Extraverted Target CEOs in Completing Acquisitions 

Author: **Yunke WU**, *Peking U. Guanghua School of Management*

Author: **Zhe Xing**, *Santa Clara U.*

This study examines how the personality trait of the target firm's CEO influences the acquisition completion likelihood and duration. Using a sample of 621 acquisitions undertaken between U.S. public firms, we find an acquisition involving an extravert target CEO is less likely to consummate and takes more time to complete. Further, we suggest that such effect is contingent on target CEOs' anticipated retirement because retiring extraverted target CEOs tend to suffer less from losses caused by the acquisition. In addition, prior shareholding ties can foster familiarity and trust, which mitigate extraverted target CEOs' resistance, while the tight integration following related acquisitions could make them feel more threatened by being taken over. Our theory and findings provide a novel explanation of difficulties in completing an acquisition and enrich research on the behavioral aspects of acquisitions.

Paper is NOT Available. Please contact the author(s).

STR: Balancing Both Sides of the Equation: Exploring the Joint Effects of Acquirer and Target CEO Hubris

Author: **Temitope Oladimeji**, *U. of Texas at Austin*

Management scholars and colleagues in related fields have consistently identified CEO hubris as a significant factor in acquisitions. However, little attention has been devoted to target-CEO hubris as researchers have focused predominantly on acquiring CEOs. Given that research shows that target CEOs and their attributes are critical for acquisition outcomes, a more complete understanding of the role of executive hubris in acquisitions requires considering both acquirer and target sides. Building on prior works on hubris and related psychology research, this paper explores what the joint effects of acquirer and target CEO hubris might be for specific acquisition outcomes. It explains that the association between acquirer-CEO hubris and acquisition deal completion would be positive only when target-CEO hubris is low. When target-CEO hubris is high, that relationship would more likely be negative. The paper further clarifies that the positive relationship between acquirer-CEO hubris and acquisition premium will be stronger when target-CEO hubris is high. Moreover, it argues that if a pair of more hubristic acquirer and target CEOs remain with a merged firm, the joint effect of their hubris on firm performance would more likely be positive. Overall, the paper has important implications for research on executive characteristics more broadly.

Entrepreneurial Business Models and Decision Making

Session Moderator: **Dong Wang**, *Communication U. of China*

STR: Demand Pull versus Resource Push Approaches to Entrepreneurship: A Field Experiment  

Author: **Simone Santamaria**, *National U. of Singapore*
Author: **Niloofar Abolfathi**, *National U. of Singapore*
Author: **Ishtiaq Pasha Mahmood**, *NUS Business School*

Despite the proliferation of entrepreneurship training programs, the question remains if and how such programs can add value to nascent entrepreneurs. To answer it, we compare two broad approaches that have inspired various entrepreneurship methodologies: resource push and demand pull. Although there are some commonalities, each approach focuses on different starting points and sources of competitive advantage for entrepreneurial ventures. We argue that entrepreneurs can benefit more from one approach than the other depending on their idea stage and educational background. To test our ideas, we conduct a randomized field experiment within a 6-month startup accelerator program in Singapore. Our findings reveal that demand pull training is more effective for early-stage and STEM entrepreneurs than resource push training as it helps them overcome their weaknesses and prioritize the activities that create the most value in the initial steps of startup launch.

STR: The Positioning Strategy for Specialized Incubators: A Dual Optimal Distinctiveness Perspective

Author: **Yonghui Li**, *School of Economics and Management, Communication U. of China*
Author: **Hai Guo**, *Renmin U. of China*
Author: **Donghan Wang**, *Communication U. of China*

Drawing on the burgeoning research on optimal distinctiveness and specialized incubators, we focus on the issue of dual optimal distinctiveness in incubation context and explore how specialized incubators position themselves through referring to prototypes in dual competitive spaces to achieve optimal distinctiveness. We identify the regional context in which specialized incubators compete for geographically adjacent resources and are dependent on local governments, as well as the industrial context in which specialized incubators attract specialized resources and are subject to professional audiences, as dual competitive spaces for specialized incubators. Using the data of specialized incubators in China from 2016 to 2018, we find an inverted U-shaped relationship between strategic distinctiveness in the regional context and specialized incubators' performance, and a U-shaped relationship between strategic distinctiveness in the industrial context and the performance of specialized incubators. Furthermore, we examine the synergy between two core components of the entrepreneurial ecosystem and find the strategic effectiveness can be strengthened by the location in high-tech development zones of specialized incubators. These findings contribute to fine-grained understandings of dual optimal distinctiveness and further the accumulation of knowledge about specialized incubators from a systematic perspective.

STR: AI-Driven Entrepreneurship in Data Sensitive Markets: A Study of UK Fintechs  

Author: **Dize Dinckol**, *Oxford U., Saïd Business School*

In this inductive qualitative study, we analyze business model design and evolution of UK fintechs to explore the market entry and growth challenges of AI-driven firms in regulated, data-sensitive industries. Our findings show that data access is a key component of business model design for AI-driven start-ups in such contexts, as we find that challenges in data access due to data sensitivity force them to make significant changes in their business models (i.e., pivoting from B2C to B2B). We identify the variances in client selection component of B2B business models and document associated trade-offs, by specifically explaining their advantages and disadvantages in terms of data scope and competitive tensions. This study contributes to our understanding of business model design and evolution, interdependencies across business model components, and strategic growth potential of different business models in the context of AI-driven new ventures in a data-sensitive and regulated market.

Stakeholder Theory and Strategy

Session Moderator: **Marco S. Giarratana**, *IE Business School, IE U.*

STR: Closer or Further? Tightly or Loosely Coupled? Experiment-based Evidence from distinct CSR Actions  

Author: **Marco S. Giarratana**, *IE Business School, IE U.*

Author: **Martina Pasquini**, *IE Business School*

This paper investigates empirically the types of CSR investments that can create a higher perceived value to focal stakeholders (i.e., customers and employees). Differently from stakeholder theory, which conceives social investments as a signal to respond to stakeholders' pressures, our theory focuses on mechanisms of value creation via social identity relationship between the corporation and the focal stakeholders. We investigate qualitative characteristics of CSR investments that could strengthen identity-based mechanisms and increase the value perceived by the stakeholders. We present empirical evidence via six scenario-based experiments conducted with 126 participants each. We find that CSRs that are geographically closer to focal stakeholders, geographical closer to the firm, and more proximate to a company's core business have a more positive impact on company employer and consumer brand value.

Paper is Available to Meeting Registrants Only.

STR: Stakeholder Orientation as a Quality Signal in the Labor Market

Author: **Jang Woo Kim**, *National Taiwan U.*

A firm's stakeholder orientation is an instrument to acquire, govern, and retain human capital. This paper particularly focuses on how a firm utilizes its attention and activities with various stakeholders to prevent leakage of its newly acquired human capital through mergers and acquisitions (M&As). The findings from my analyses of a sample of 10,728 corporate scientists from 1,463 unique acquirors indicate that an acquiror's stronger stakeholder orientation delays its target corporate scientist's departure. Such an empirical setting helps solve the potential biases from self-selection and information asymmetry, and I thus conducted several supplementary analyses to rule out multiple alternative mechanisms (e.g. using different stakeholder orientation measures, using target's stakeholder orientation). The main effect is moderated by the corporate scientist's quality as an inventor, the pre-M&A alliance experience between the acquiror and the target, and the pre-M&A co-patenting experience between the acquiror and the acquired corporate scientist.

STR: Pathways To Materiality: Environmental, Social & Governance (ESG) Factors And Financial Performance   

Author: **Michael Gavin**, *Colorado State U.*

Author: **Marco Túlio Pacheco Coelho**, *Colorado State U.*

Author: **James McGlinch**, *The Wharton School, U. of Pennsylvania*

Author: **Witold Jerzy Henisz**, *U. of Pennsylvania*

ABSTRACT Building on recent extensions of stakeholder value-based strategy and findings linking higher Environmental, Social and Governance (ESG) performance by corporates to better intermediate accounting outcomes (i.e., revenue growth, cost margins and labor productivity), we use piecewise structural equation modeling to further unpack the relationship across industries and to link ESG, intermediate accounting outcomes and end-state financial performance in the same model. More formally, we test the degree to which the effects of ESG on financial performance are mediated by sales growth, employee productivity, and cost reductions in the panel of S&P 1500 firms inclusive from 2007-2018. We find evidence that ESG has both direct impacts on end-state corporate financial performance (CFP) and indirect impacts mediated via each of these three pathways. Critically, the pattern of these direct and indirect pathways differs dramatically by industry.

STR: Who and Why do Stakeholders Trust when They Trust Firms? 

Author: **Gijs Van Houwelingen**, *Amsterdam Business School, U. of Amsterdam*

Author: **Jan-Willem Stoelhorst**, *U. of Amsterdam*

Author: **Katinka J.P. Quintelier**, *Vrije U. Amsterdam, School of Business and Economics*

A key assumption in stakeholder theory is that stakeholder-oriented firms will be better able to build and maintain trusting relations with their stakeholders than profit-oriented firms. However, this assumption remains to be tested. Moreover, the arguments that recent work in behavioral stakeholder theory has developed to support this assumption is based on yet another key assumption: that stakeholders cognize and experience their relations with stakeholder-oriented firms in ways that are comparable to how they experience and cognize about interpersonal relations. This would suggest that firm humanization, i.e., the attribution of human-like characteristics (agency and experience) to firms, may be an important mechanism to explain why stakeholders may trust stakeholder-oriented firms more than profit-oriented firms. At the same time, other research suggests that dehumanization (i.e., the denial of humanity) of employees of profit-oriented firms may drive mistrust in such firms – providing a potential alternative explanation of the trust differential between stakeholder- and profit-oriented firm. Over a series of experimental studies (total N = 950), we find supporting evidence for stakeholder theory's assumption that people will tend to trust stakeholder-oriented firms more than profit-oriented firms, and for both explanations of this effect: the trust differential seems to be in part driven by stakeholders' tendency to humanize stakeholder-oriented firms more, and in part driven by their tendency to dehumanize the employees of profit-oriented firms.

‘We Should Really be Careful About This!’ Using Experiential Pedagogy Effectively and Ethically
Experiential Pedagogy Effectively and Ethically

Participant: **Kathy Lund Dean**, *Gustavus Adolphus College*

Participant: **Jennifer Leigh**, *Nazareth College*

While there is much advocacy for using experiential teaching practices in business schools, there is less support for faculty who use experiential pedagogies than there should be. This interactive session explores the gap between stakeholder advocacy and encouragement for business school educators to use experiential pedagogies, and the recognition that experiential learning requires unique educator skills and engenders unique student outcomes. After introducing the topic and current research coverage, Kathy and Jen will facilitate small group conversations for the in-person and online participants about some of the ethical challenges associated with using experiential teaching practices. We will challenge participants to identify instructional and institutional practices, policies, and procedures that can impact robust and ethical use of experiential learning. We end the session by sharing how experiential educators would benefit from creating an experiential learning community of practice, including how a community of practice encourages robust peer development and support.

Advanced Methods for Online Research

Session Moderator: **Fran McKee-Ryan**, *U. of Nevada, Reno*

RM: **Getting More Bang for Your Buck on MTurk**  

Author: **Fran McKee-Ryan**, *U. of Nevada, Reno*

Author: **Tory D. A. Taylor**, *U. of Nevada, Reno*

Over the last several years, researchers have increasingly engaged online panels such as Amazon's Mechanical Turk (MTurk) and Prolific to distribute surveys for academic research. This trend has sparked much debate over the quality of data generated from such panels. Thus far, researchers have overwhelmingly blamed panel participants for quality issues (e.g. worker distraction or deception); very little attention has been paid to the role that researchers may be playing in the matter. This paper considers the relation between the design and distribution of online surveys and data quality. In study 1, we review a sample of 5 Qualtrics surveys retrieved from the Open Science Foundation (OSF) platform, summarizing their strengths and weaknesses to identify common characteristics of survey quality—or lack thereof. In study 2, we empirically test whether three survey quality characteristics (title comprehensibility, device compatibility, and scale quality) affect sample composition (age, gender, ethnicity, education level, employment status, household income, or HITS completed) and data quality (attention check pass rate, item completion rate, and survey submission rate.) We also look more broadly for differences in means among responses between conditions. Our results indicate that title comprehensibility does not affect sample composition; device compatibility has a significant effect on attention check pass rates and means for multiple items; and scale quality has a significant effect on the reported level of psychological safety in participants' place of employment. We conclude with a discussion of the results, post-hoc observations, and recommendations for researchers conducting online surveys.

RM: **Would I Lie to You? Using Markov Chains to Detect Careless Responding in Survey Data** 

Author: **Torsten Biemann**, *U. of Mannheim*

Author: **Irmela Koch-Bayram**, *U. of Mannheim*

Author: **Madleen Meier-Barthold**, *U. of Mannheim*

Sage Publications/RM Division Best Paper Award Nominee

Although careless response behaviors by survey participants bear considerable threats to the quality of the data, scholars often do not sufficiently address this issue in their analyses. This might be partially because existing approaches to detect careless responding are specialized to detect a certain type of careless response patterns, but fail to detect others. We develop a post-hoc measure, the Lazy Respondents (LazR) index, that is based on first-order Markov chains and the idea that careless respondents' last response can be used to predict their next response. Using large, publicly available datasets to compare our LazR index to the most common precautionary and post-hoc measures, we find that (1) the LazR index correctly identifies patterns of careless respondents that some or all of the other indices overlook and (2) the LazR index avoids false positives (i.e., patterns that are flagged by single other indices, but which seem to capture truthful answering behavior). Furthermore, we suggest an approach to find a sample-specific cutoff value for careless respondents via kneedle algorithm. Finally, we introduce an R Shiny application that provides scholars a simple and readily available means to implement the LazR index.

RM: **Like and Subscribe: Opportunities for Qualitative Social Media Research in Management**

Author: **Alex Wilson**, *Loughborough U.*

Author: **Josh Morton**, *U. of Leeds*

Author: **Jade Wendy Brooks**, *Loughborough U.*

Management scholars have paid greater attention to social media as a phenomenon than as a method used to interrogate organisations and organising. While social media has emerged as a rich source of data, it has been used predominately to increase the quantity of data rather than enrich the quality of data for researchers to analyse. In this paper we argue that, as a result, many advantages of qualitative social media data remain latent. Our aim is to provide a more substantial definition of the domains of social media as a phenomenon and as means for data collection before we define types of social media for data collection. This provides a discussion of social media data and the nature of user generated digital texts. We then highlight four main choices for researchers: (i) intensive vs. extensive research and temporality, (ii) the potential of digital ethnographic research designs, (iii) who SM can reach in terms of accessing research participants, and (iv) options for integrating SM research. We conjecture that this opens-up new possibilities for qualitative research in management by providing a more granular assessment of how social media can be used to collect insightful and previously unavailable, data for qualitative research.

Author: **Anjana Karumathil**, *Doctoral Student at Indian Institute of Management Bangalore*

Author: **Ritu Tripathi**, *Indian Institute of Management, Bangalore*

Survey bots represent an emerging threat to online survey research given their ability to generate vast quantities of fraudulent data within seconds. Despite rising scholarly cognizance of this threat, mitigation strategies remain fragmented and confined to the specific domains in which bots were encountered. Our paper investigates extant literature on survey bots using an integrative literature review and thematic analysis to analyze how they may be managed. Integrating categories from extant literature, we offer a series of seven guidelines for scholars to reduce the probability of being subject to a survey bot attack. In addition, we offer a pragmatic decision tree that academics and practitioners may use as a handy guide while developing and deploying online surveys.

Navigating Conflict in Alliance Formation

Session Moderator: **Insa Kramer**, *Leibniz U. Hannover*

STR: **Internal Dynamics of Business Ecosystems: A Network Approach** 

Author: **Insa Kramer**, *Leibniz U. Hannover*

Author: **Steffen Triebel**, *Leibniz U. Hannover*

Author: **Julia Brennecke**, *U. of Potsdam*

Author: **Christiana Weber**, *Leibniz U. Hannover*

Scholarly interest in business ecosystems has seen a steady increase over the past decades. Surprisingly, while many studies have dealt with theoretical approaches, the architecture or outcomes of ecosystems, literature on their internal dynamics remains scarce. Without understanding these dynamics, however, our understanding of business ecosystems remains incomplete. In this paper, we investigate the dynamics of business ecosystems in the pharmaceutical sector, arguing that firms exhibit different partner selection mechanisms depending on which attribute they choose their partners on. Specifically, we propose that firms will show tendencies for aspiration when considering the size of potential partners, homophily when considering their inventiveness and conformity when considering their profitability. Applying a longitudinal network approach, we empirically test our hypotheses on the business ecosystems of four major US-based pharmaceutical firms, which we observed over a 4-year period from 2016 to 2019. Our results give a nuanced depiction of the mechanisms underlying the creation and dissolution of partnerships in business ecosystems. With the exception of conformity as the dominant mechanism regarding profitability, our results support our predictions.

STR: **Big Picture Thinking in Small Pieces: Disentangling the Multi-Partner Collaboration** 

Author: **Seyed Mohammad Taghi Hosseini**, *HEC Paris*

Author: **Bertrand V. Quelin**, *HEC Paris*

We study partnership within multi-partner collaborative projects. Multi-partners closely collaborate such as sponsors alliance and loan syndicate for financing big projects. A big challenge is to form a multi-partner collaboration. It involves tough and delicate financial negotiations between partners before ending the financial closing period, incurring huge ex ante transaction costs and deferring the provision of public services to citizens. Our hypotheses are tested by using an original database containing about 1,100 projects across 80 countries and eight different sectors between 2001 to 2019. Our study makes three contributions to research on inter-organizational collaboration. It contributes by extending the unit of analysis from collaboration between firms to collaboration between alliances. Inter-alliance collaborations are not like a dyadic alliance. Our study advances research on multi-partner collaboration by investigating their formation and composition. It also contributes to inter-organizational relationships by analyzing the different aspects of multi-partner roles and functions, exposure to risks, and monitoring ability.

STR: **The Effect of Litigation Experience on the Scope of R&D Alliances**

Author: **Dutt Dev Harsha Tadikonda**, *Indian School of Business*

Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

Author: **Hugo Leenders**, *PhD student at CU Boulder*

This paper examines the role of partnering firms' litigation experience on their proclivity to enter into broad scope R&D alliances. Although prior alliance research proposed factors that will likely influence partnering firms' preference for engaging in a broad scope alliance, these studies have focused on product market and capability linkages between partnering firms that are likely to intensify competitive concerns, while understudying how partnering firms' prior experience can generate similar concerns. In this study, we attempt to fill this theoretical gap by unpacking partnering firms' prior litigation experience as a novel dimension of experience that has been hitherto not considered in alliance research. We suggest that partnering firms' greater litigation experience will be negatively associated with their choice of a broad scope alliance. Furthermore, we argue that insofar as partnering firms' litigation experience intensifies competitive concerns and induces them to opt-out a broad scope alliance, such concerns will allay for partners when partners share dyadic experiences such as common technological experience and collaborative experience. Using a sample of R&D alliance agreements in the biopharmaceutical industry we furnish evidence for our theory.

Paper is Available to Meeting Registrants Only.

STR: **Starting off on the Wrong Foot: The Formation of Licensing Agreements in the Shadow of the Court**

Author: **Dutt Dev Harsha Tadikonda**, *Indian School of Business*

Prior research on contract design and interorganizational governance has emphasized how the grant of exclusive licenses help reduce transactional hazards between parties. While these licensing deals are typically negotiated and signed on their own volition, the literature is scant on the inclusion of exclusivity provisions when parties are forced to negotiate and come to an agreement. We fill this gap by comparing the inclusion of exclusivity in volitional licensing agreements and those that are signed as a result of settlement of patent litigation between parties. It is likely that negotiations between both parties for a licensing agreement post settlement happen in an environment of mistrust caused by their involvement in a patent lawsuit. We suggest that licensing agreements signed post settlement are less likely to include exclusivity provisions due to an increase in transactional hazards between the parties.

Additionally, evidence from our data suggest that while exclusivity is used as a contractual safeguard to protect licensee investments in complementary assets especially when there is uncertainty in the technology, this relationship is adversely impacted in the deals signed post settlement. Finally, we also examine the inclusion of exclusivity provisions in settlement contracts signed between parties that relied on relational governance mechanisms such as past licensing relationships. Evidence on these comparisons between contracts are provided from licensing deals in the biopharmaceuticals industry.

Session Type: **PDW Workshop**
Program Session: **834** | Submission: **14799** | Sponsor(s): **(STR, ENT, RM)**
Session Format: **In-person Only: Seattle**
Scheduled: **Sunday, Aug 7 2022 1:15PM- 3:15PMPT (UTC-7)** at **Seattle Convention Center in Yakima 2**

**Survey Methods PDW: Designing Surveys to Collect
Individual and Firm Level Data**
Survey Methods PDW

Organizer: **Benjamin King**, *U. of Illinois at Urbana-Champaign*
Participant: **Wesley Cohen**, *Duke U.*
Participant: **Victor M. Bennett**, *U. of Utah, David Eccles School of Business*
Participant: **Michael Roach**, *U. of Illinois at Urbana-Champaign*
Participant: **Daniela Scur**, *Massachusetts Institute of Technology*
Organizer: **Evan Penniman Starr**, *U. of Maryland, College Park*

The purpose of this PDW is to enhance participant's understanding of how and when to use survey methods to answer important questions in the field of Strategic Management, or the related fields of entrepreneurship and technology management. The session aims to instill within participants the tools to know when survey methods should be used, and how to gather firm and individual level data in a manner that allows for statistical inference and hypothesis testing. The PDW advances the argument that survey methods can provide unique, primary datasets that offer several advantages over secondary datasets (i.e., government surveys, data scraped from the web). These include establishing novel facts and elucidating new mechanisms. Moreover, in-so-far-as these new facts and mechanisms are not explained by existing theories; survey methods also provide an important avenue for theory development and testing. Developing a careful and reliable survey is not easy, however, and so this PDW highlights several of the potential pitfalls in survey work and how to avoid them. Finally, the PDW provides interactive elements to assist participants in uncovering the extent to which survey methods can be used to further their research stream, and provide answers to specific methodological questions.

All are welcome to attend the first 80 minutes of the PDW. If you would like to attend the small group discussion portion of the PDW (about 40 minutes), please fill out this form (<https://forms.gle/EKcMxmFsPAHyYn3B7>) to preregister before July 29, 2022. For consideration, fill out the form by submitting 1 or 2 questions about survey methods or about your own specific survey that you would like answered by an expert. We plan to have up to 15-20 participants in the small group discussion and will give priority to those who sign up first, those who are earlier in their careers, and/or those with good questions. Please email Ben King at bck8@illinois.edu with any questions.

The objective of this PDW session is to respond to the AAT call to create a better world together. More precisely how to develop a research that may have impact for both scholars and practitioners? To do so, the self-imposed dichotomy between rigor and relevance still remain as one of the most important to be overcome. This requires to broaden our sight regarding the way we practice research in the AOM communities. Whereas many initiatives such as AOM discoveries were launched by AOM, DBA and e-Ph.D programs stand as a most promising way to create synergies between these two professional communities with strong professional identities which are too often separated by barriers that are detrimental to the creation of impactful management knowledge. The PDW will focus on DBA programs and other professional doctorates because these programs gather executives from companies and institutions willing to increase their knowledge about research in management in order to create a better world. In particular, practice-oriented doctoral dissertations bring evidence that applied management research contribute to create systems and processes that are different from the past and that can solve problems such as environmental degradation, inequality and poverty .

Participant: **Svetlana Khapova**, *Vrije U. Amsterdam*
Participant: **Scott Fitzgerald**, *Curtin Business School*
Participant: **Deirdre Anderson**, *Cranfield School of Management*

How working-from-home was presented in the media changed during the pandemic. Importantly, media framing can shape opinions about workplace practices, with longer-term implications. This caucus will explore media framing of working-from-home pre and during the pandemic and will discuss the implications for wider public discourse, future practice and post-pandemic research.

The Covid-19 pandemic put a premium on remote working as many governments mandated employees to work from home where possible to control the spread of the virus. This “Great Remote Work Experiment” (Lufkin, 2021) received significant attention in the general and business press with opinions about working-from-home notably changing from scepticism pre-pandemic, to a more positive outlook on individual and organizational performance. The portrayal of working-from-home in the media is important since it influences public discourse, and organizational and public policies, which in turn have consequences for wider social outcomes (Klein & Amis, 2021). Flexible working has become increasingly common in many countries in the 21st century, where employees are able to exercise some choice over where, when, and how much they work. The opportunity to work remotely, usually from home, for some working time has been seen as a way to help employees achieve a better work-life balance. However, the way in which working-from-home has been reported in the general and business press has been mixed, including coverage of both benefits (e.g. improved performance, greater employee commitment, enhanced employee well-being) and problems (e.g. employee motivation, work outcomes), with suggestions that unmonitored employees may engage in non-work activities during working time, distracting them from work. In early 2020 many governments introduced mandatory working-from-home to minimize further spread of the virus, resulting in a significant growth in the number of employees working-from-home. This dramatic change in working patterns attracted significant media attention and much airtime and column inches were devoted to it. Analysis shows that the content and tone of this coverage differed from previous approaches, with a greater focus on positive outcomes for both employers and employees. Furthermore, the framing of the consequences of working-from-home for individuals also appeared to change over time. The focus on mostly beneficial consequences (e.g. saved commuting time improving work-life balance) in the early stages shifted to increasingly negative outcomes, such as blurring boundaries and social isolation. In today’s heavily mediated world, framing is a powerful tool that can drive and shape opinions about societal events and processes (Steidley & Colen, 2017). Yet, understanding of how media framing of societal events and processes is shaped and why framing changes is limited. Using framing theory, it is important for media framing of working-from-home to be examined and investigated in a more systematic and detailed way, including identification of the drivers and mechanisms that influence changes in tone and content. This caucus will bring together scholars interested in how the practice of work-life policies is portrayed in the media and the implications for business practices and perceptions of these policies in the broader social domain. It will 1) explore how working-from-home has been portrayed in different countries (pre-pandemic, as working-from-home was mandated, and as restrictions were lifted; 2) discuss the implications of how workplace practices are framed in the media for wider public discourse and future organizational practice; 3) discuss the implications of 1 and 2 for future research on working-from-home in the post-pandemic world.

Decolonial Perspectives

Session Moderator: **Liela A. Jamjoom**, *Dar Al-Hekma U.*

CMS: Decolonizing-Recolonizing Curriculum in Management and Accounting with Southern Praxis   

Author: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*
Author: **João Paulo Lima**, *USP*
Author: **Alexandre Faria**, *EBAPE/FGV*

The study emerged from collective everyday struggles for decolonization in Brazil, particularly against the myth of racial democracy we embody, aiming to understand how a local scholarly community engaged with decolonial perspective from Latin America or other origins enact the northern project of curriculum decolonization in management and accounting. We start with the assumption that the predominantly white Westernized university and its business school system we reproduce and refute in the south embody the *longue durée* of dynamics of decolonization-recolonization that decolonize without decolonizing. In this first phase of a broader rehumanizing project, we reflexively engage scholars with a semi-structured online questionnaire searching for post-abysal interknowledge and inter-intelligibility. Through a praxistical perspective, we recognize ourselves as part of conditions of (im)possibility for doing decolonization from the perspective of the wretched of the earth in both South and North. Results reveal tensions in everyday individual practices, which reproduce and refute the pattern of curriculum decolonization that does not decolonize and hopes for recuperation-renewal of collective praxistical projects from within and outside the westernized plantation academy. We hope our southern praxis contributes to paving the way for collective everyday rehumanization of management and accounting for the dehumanizing agendas we embody in both South and North.

CMS: GMO in Brazil as Political-Discursive Struggle: Approximating Hegemony and Decolonial Epistemology 

Author: **Yuna Fontoura**, *FGV/EBAPE*
Author: **Morgana Krieger**, *Federal U. of Bahia*
Author: **Alketa Peci**, *EBAPE/FGV*
Author: **Flávia Naves**, *UFPA - Federal U. of Lavras*

In the past decades, Genetic Modified Organisms (GMO) became the flagship of agro-neoliberalism in Brazil, despite the opposition of environmentalists and social movements advocating other forms of production. GMO status quo seems inevitable and unquestionable which turns resistance or any type of systemic change impossible. Our aim is to promote a reflection upon GMO hegemony formation in modern-colonial rural Brazil, hence we ask: how can we understand hegemonic formation in postcolonial realities? We endorse an approximation between the neo-Gramscian Political Discourse Theory (PDT) and decolonial epistemology for a deeper understanding of unquestioned norms in the periphery of the modern capitalist world-system. Through a longitudinal analysis of the formation and perpetuation of GMO hegemony in Brazil throughout the past decades, we identify that the hegemony is based on the dyad: a) ‘The expected role of GMO and Brazil in the international geopolitics’ and b) ‘The Western civilizing knowledge’. This analysis provides two main contributions to Management and Organization Studies: it promotes a deeper comprehension of how hegemonies consolidate over time in peripheral states and fosters the approximation between PDT and decolonial epistemology applied to unveil dynamics of in- and exclusion in political rural settings.

CMS: Nourishing the Methodological Debate on Critical Management Studies Through a Decolonial Perspective

Author: **Teresa Harari**, *FGV EAESP*
Author: **Marlei Pozzebon**, *HEC Montreal & FGV/EAESP*

There is a growing number of academic scholars that anchor themselves in decolonial concepts, seeking to break with the so-called coloniality of knowledge. However, research that proposes to be decolonial must think not only about the theoretical frameworks on which it is based, but also about the methods with which it intends to elaborate. This is not a simple task, since it often clashes with conventional assumptions assimilated and crystallized within the scientific field. The main goal of this study is to uncover the main paths presented in the literature regarding methodologies from and for a decolonial perspective. To this end, we conducted a selective review of articles, theses, and dissertations published in Google Scholar and Scielo to identify research strategies and how they are put into practice. Our analysis shows that, although it is still not easily understood how to break with the modern/colonial matrix methodologically, it is possible to identify some principles underlying decolonial practices: (a) critical attitude, reflexivity and place of enunciation, (b) political commitment, (c) dialogue and interculturality, (d) affectivity and (e) “*escrevivência*”. We conclude that the concern lies less in what the research instruments are and more in how they are used, seeking to present the paths of knowledge on the margins and question the hegemony of Eurocentric methodologies and their linearities.

Teaching Students How to Team: Perspectives from Team Science

Teaching Students How To Team

Presenter: **Tera Webb**, *U. of Alabama, Birmingham*
Presenter: **Anthony C. Hood**, *First Horizon Bank*
Presenter: **Michelle Brown**, -

Although students often have little to no training in how to effectively work with other students in a team environment, team-based assignments are commonly used in higher education courses. This sink-or-swim model leads to misunderstandings, dissatisfaction within student teams, conflicts, and frustration among students and faculty. This workshop will: 1) describe how to develop a team training session for students prior to initiating team projects and 2) illuminate key concepts that should be covered in team training for effective team performance. This will be an interactive experience where participants will engage with hands-on exercises that could be used to develop a structured team training for students.

Voice, Leadership, and Crises

Session Moderator: **Nan Guo**, *U. of Texas at Dallas - Jindal School of Management*

OB: **Death Awareness and Employee Voice: Two-study, Multi-Wave Investigation**

Author: **Nan Guo**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Riki Takeuchi**, *U. of Texas at Dallas*
Author: **Jason Kautz**, *U. of Texas at Dallas*
Author: **Ryan Scott Teschner**, *U. of Texas at Dallas*

Crises create an environment in which death becomes salient to the general population. This death awareness is associated with negative outcomes such as aggression or burnout. However, more recent studies have shown that death awareness can lead to two different psychological states (death anxiety and death reflection), the latter of which can be associated with positive outcomes, such as creativity. The current study extends this research by examining employee voice, a behavioral outcome considered critical during times of crisis, and perceived organizational support, an important boundary conditions associated with the relationships between the two psychological states of death awareness and employee voice. Two longitudinal studies (ten-wave, daily sampling and four-wave, weekly sampling) are used to measure employees' reaction to increases in death awareness. Specifically, this study differentiates the two psychological states—death anxiety and death reflection—in terms of how they relate to employee voice. In both studies, death awareness is significantly related to death reflection and death anxiety. However, death reflection is found to be positively related to employee voice while death anxiety is not. Death anxiety appears to be moderated by perceptions of organizational support such that the relationship between death anxiety and employee voice was significant and negative at high levels of perceived organizational support. These findings provide new insights into the death awareness literature by underscoring the importance of death reflection and perceived organizational support in enhancing positive behavioral outcomes such as employee voice. Implications of our findings are also discussed.

OB: **Impact of Collective Affect on Employee Voice at Onset of Crisis: A Social Identity Perspective**

Author: **Niranjan Srinivasan Janardhanan**, *London School of Economics*
Author: **Uta K. Bindl**, *King's College London*
Author: **Chris Stride**, *U. of Sheffield*

Employee voice behaviors—the discretionary provision of ideas and suggestions to improve organizational processes—have significant benefits to organizations, particularly in times of crisis. Yet, we know less about how external crises affect employees' voice behaviors within organizations. In this research, we examine the effect of crisis onset on employee voice behaviors and investigate how and when employees will engage in this important type of behavior during crisis. Integrating insights from social identity theory and research on crises and threat rigidity, we examine how collective positive affect during crisis and perceived opportunity for organizations from the crisis jointly influence employees' perceptions of self-worth and their voice behaviors during crisis. We test our hypotheses using a seven-wave longitudinal study spanning before and after the onset of the COVID-19 pandemic on 548 working professionals across a wide range of organizations in the UK, and using piecewise latent growth curve modelling. Our findings enable a better understanding of temporal dynamics of voice in organizations, situates employee voice within the broader socio-emotional organizational context during a crisis, and extends social identity theory through the consideration of emotional (in addition to cognitive) cues as guides to employees' proactive behavior.

OB: **Will You Hear Me Now?: Empowering Leadership's Role in Minimizing Hierarchical Barriers to Voice**

Author: **Oguz Gencay**, *Robert H. Smith School of Business, U. of Maryland*
Author: **Gilad Chen**, *U. of Maryland*
Author: **Subrahmaniam Tangirala**, *U. of Maryland*

Organizations adopt hierarchies to promote coordination; however, hierarchies also decrease the flow of critical information – especially voice from lower-level employees to upper-level leaders. Building on relative deprivation theory (Crosby, 1976) and the voice, hierarchy, and empowering leadership literatures, we argue that employees at lower hierarchical levels engage in less leader-directed voice than those at higher hierarchical levels due to reduced agency (i.e., lower perceived voice impact). However, we also propose that empowering leadership can (a) directly increase employees' perceived voice impact and (b) attenuate the influences of hierarchical position on employee perceived voice impact and voice. As a result, empowering leadership can minimize the hierarchical differences in work units for perceived impact and leader-directed voice. We tested our theoretical model using multi-source field data collected from 531 employees and their leaders in 148 units of a bank in Turkey. We found support for our expectations that, in each unit, more junior employees felt less perceived voice impact and thus spoke up to the unit leader less. However, empowering leadership increased perceived voice impact and nullified the influences of employees' hierarchical position on perceived voice impact and voice. Results also showed less support for psychological safety as an alternative mediator, and provided robustness evidence for alternative measures of hierarchical differences among employees.

OB: Reciprocal Effects of Team Members' Collective Voice and Perceived Leader Voice Internalization

Author: **PAN FAN**, *Xi'an Jiaotong U. School of Management*

Author: **Ze Sheng Wei**, *Xi'an Jiaotong U. School of Management*

Author: **Zhiyuan Yan**, *Yashili International Group Co.,Ltd.*

Drawing from the social movement and social information processing theory, we investigated the lagged reciprocal relationship between team members' collective voice and perceived leader voice internalization. We predicted that team members' collective voice (collective promotive voice and collective prohibitive voice) is positively related to their perceptions of leader voice internalization and that conversely perceived leader voice internalization is positively related to the collective voice. We tested our hypotheses with a longitudinal study of 554 individual employees of 71 teams who were assessed 5 times over a 5-month period. Findings from the results showed that team members' collective promotive voice (but not collective prohibitive voice) predicted the subsequent perceived leader voice internalization, and team members' perceived leader voice internalization predicted the subsequent collective promotive and prohibitive voice. Because the reciprocal effects depict a virtuous cycle with the collective voice, findings provide theoretical and practical importance.

Participant: **Pamela Hinds**, *Stanford U.*

Over the last decade, data workers have increasingly made their way not only into technology and born-digital firms but also in incumbent firms in long-standing industries. Organizational scientists, management scholars, and information systems researchers have started paying attention to data workers as an emerging occupational group, who tend to embody expertise in collecting, organizing, analyzing, and generating insights from data that may help in explaining as well as predicting various phenomena that are of interest to business managers or policy makers. Scholars have started examining data workers at the field level, inter-organizational level, as well as intra-organizational level. Building on this emerging literature, this symposium sets out to explore what data workers do, how they do, and why they do it, in the context of economic forecasting, medical science, as well as banking and financial services.

**Classics of Organization and Management Theory:
Approaches to the Study of Work**
Classics of OMT: Approaches to the Study of Work

Organizer: **Pedro Monteiro**, *Copenhagen Business School*
Organizer: **Greetje Frankje Corporaal**, *U. of Oxford*
Presenter: **Stephen Barley**, *U. of California, Santa Barbara*
Presenter: **Gina Dokko**, *U. of California, Davis*
Presenter: **Ingrid Erickson**, *Syracuse U. School of Information*
Presenter: **Davide Nicolini**, *U. of Warwick*

This PDW explores key approaches to the study of work in organization and management theory. It represents the fourth edition of a standing series showcasing the enduring relevance of earlier organizational research. We believe that continually re-visiting the 'classics' may complement the strong emphasis (at AOM and beyond) on new/fashionable ideas, enable cumulative insights, and promote the value of research committed to theorizing core organizational dynamics. This is particularly relevant since current debates about "the future of work" in management often overlook insights from earlier studies and research traditions. The event is structured through a mix of expository and interactive moments. The first part features an introduction by the organizers, a panel discussion among speakers, and presentations by Steve Barley on the Chicago School, Davide Nicolini on the Tavistock Institute, Ingrid Erickson on Computer Supported Collaborative Work, and Gina Dokko on employment and careers research. The second part (requiring registration) will include roundtables mediated by the speakers and a plenary discussion led by the organizers. All presentations will be recorded and made available via the Talking About Organizations Podcast.

Managing Stigma in Business and Society

Session Moderator: **Neva Bojovic**, *Kedge Business School*

SIM: Reducing Stigma: The Process of Destigmatization in Groups Embedded Within Groups

Author: **Aminat Muibi**, *U. of Victoria*

Stigma has always been an almost permanent and significant challenge for society. Past literature has extensively theorized its beginnings and the mechanisms through which stigmatization occurs. Yet, the question of how stigma fades has largely been left unexplored. This article begins to fill this gap in our knowledge by examining how the stigmatizer can initiate the destigmatization process. Specifically, I explore how groups embeddedness can create an avenue for cognitive complexity to occur in the non-dominant group through experiences that foster an expansion of cognitive structures. The nature of cognitive complexity gives the non-dominant group the ability to engage in nuanced thinking that departs from perceiving stigmatized entities using established schemas derived from societal norms. Rather, the non-dominant group is able to evaluate the reason for the stigma and recognize the complexity of individuals who bear the mark of stigma. I propose that acquiring cognitive complexity can aid in the initiation of the destigmatization process by giving individuals more schemas to draw from and the ability to engage in nuanced thinking regarding stigmatized entities. I present an avenue to understand the destigmatization process from the audience perspective- an often-forgotten actor in stigma dissipation.

SIM: Social Entrepreneurship in Stigmatized Settings: The Case of Fem-tech

Author: **Neva Bojovic**, *Kedge Business School*

Author: **Padmaja Argade**, *IUM Monaco*

Author: **Raghu Garud**, *Pennsylvania State U.*

Author: **Rachel Scherl**, *No Affiliation*

Social entrepreneurs work in different domains, while some domains remain socially accepted others are situated in more challenging and stigmatized contexts and industries. This paper explores how social entrepreneurs manage to create value in those settings and the role of entrepreneurial efforts in alleviating stigma. Drawing on a dataset of 111 interviews of fem-tech entrepreneurs we identify the multiple ways they work towards alleviating stigma associated with products that address women bodies, sexual and reproductive health. Our findings highlight that stigma can act as a motivator to address unmet needs and create social value, yet many challenges remain for social entrepreneurs in such settings. We uncovered that these challenges bring entrepreneurs together in addressing them, no matter the source of stigma. Finally, we identified practices of social entrepreneurs in alleviating stigma.

SIM: Understanding Event Stigma: A Configurational Approach

Author: **Sun Hye Lee**, *Surrey Business School*

Stigma is not fair. While some firms get permanently stigmatized, others emerge untamished by the same or a similar event. However, such unfairness may not necessarily be a bad thing for firms. This study claims that repeated media coverage of a negative event over time is symptomatic of organizational stigma, and pathways exist to encourage the development or avoidance of this stigma. Using a fuzzy set qualitative comparative analysis, I navigate the configurations of stigma for an event of corporate social irresponsibility in the global supply chain. The findings of the study suggest the confluence of multiple factors around a stigmatizing event, the media and the firm on stigmatization of a negative event. Most importantly, to effectively avoid stigma, the firm's immediate response to a negative incident should be strategically directed based on the understanding of the other factors. The main purpose of this study is to address a gap in the event stigma literature where there is a paucity of research on what contributes to its development. This study has important implications for practitioners as it offers concrete suggestions on how to avert event stigma.

SIM: From Vile to Virtuous: Challenging Animal Rights Stigma in Canada's Wild Fur Industry

Author: **Jose Carlos Marques**, *Telfer School of Management, U. of Ottawa*

Author: **Johnny Boghossian**, *FSA ULaval (Laval U.)*

This paper contributes to the stigma management literature by examining the viability of stigma-challenge strategies in mature, harm-based industries – contexts characterized by intense public scrutiny and threats to the continued survival of the industry category. Drawing on a case study of the Canadian wild fur industry's response to anti-fur, animal rights activism and a possible ban on its products, we show how such intense core-stigmas may be managed via industry-government collective action. Based on our findings, we develop the concept of virtue transfer to describe a stigma-challenge mechanism whereby a virtuous identity – the positive attributes of a sub-group – is effectively transferred onto an entire industry category, in order to counter core-stigma and ensure the industry's survival.

Platform Structure and Governance

Session Moderator: **Georg Reischauer**, *WU Vienna & JKU Linz*

STR: Governing Ecosystems to Generate Digital Innovation  

Author: **Georg Reischauer**, *WU Vienna & JKU Linz*
Author: **Alexander Engelmann**, *WU Vienna U. of Economics and Business*
Author: **Annabelle Gawer**, *U. of Surrey*
Author: **Werner Helmut Hoffmann**, *WU Vienna U. of Economics and Business*

In this paper, we study how to govern ecosystems that are not based on digital platforms to generate digital innovation. Drawing upon an in-depth case study of an ecosystem in the automotive industry, we identify distinct ecosystem governance activities, generative effects of the parallel engagement of these activities, and antecedents in the ecosystem's technological environment. Based on these insights, we develop a contingency framework of ecosystem governance for digital innovation. We propose that the parallel engagement of governance activities generates digital innovation as it strikes an ecosystem-wide balance between exploration and exploitation as well as between multilateralism and unilateralism. Our study advances research on the governance of ecosystems that are not based on digital platforms.

STR: Platform Sponsor Scope, Ecosystem Structure and Heterogeneity: A Configurational Approach

Author: **Ramya Krishna Murthy**, *Indian Institute of Management Bangalore*
Author: **Anoop Madhok**, *Schulich School of Business*

The literature on platform-based ecosystems has focused extensively on the influence of platform structure and governance on the growth of the ecosystem. However, such a focus has remained largely discrete with little understanding of the nature and implications of the platform sponsors simultaneous choice of ecosystem structure and governance elements. We develop a configurational approach to holistically understand how elements of platform ecosystem structure and platform sponsor scope combine to shape performance. We examine how such choices differ across different types of platform ecosystems and at different stages of the ecosystem lifecycle. Our findings shed light on heterogeneity in platform ecosystems in terms of their structure and governance and contribute to the platform literature by advancing a configurational approach to understanding platform ecosystems.

STR: How to Channel Knowledge Coproduction Behavior in an Online Community

Author: **Jialing Liu**, *School of management, Zhejiang U.*
Author: **Yang Liu**, *Zhejiang U.*
Author: **Duo Jin**, *School of management, Zhejiang U.*

Generally with ambiguous role definitions and without traditional organizational control or coordination mechanisms, how do knowledge coproduction behaviors of participants with heterogeneity roles in online community are channeled for value creation? By using a novel theory-building method combining machine learning and narrative analysis, we investigate the heterogeneity of participant roles and knowledge coproduction channeling behaviors in a Chinese self-organizing online community—Miiu.com, launched by Xiaomi Inc. Using latent Dirichlet allocation topic modeling analysis and a complementary qualitative analysis of community participants' online forum posts, we initially identify three types of participant role in the community, namely, leaders, supporters, and integrators, and find that (a) conceptualizing narrative practice is adopted to promote knowledge collaboration for leaders; (b) serializing and anthologizing narrative practices are used to promote knowledge collaboration for supporters; and (c) anthologizing narrative practice is adopted to promote knowledge collaboration for integrators. Our study advances the theoretical understanding of the knowledge coproduction and value creation in online communities.

STR: Win from Within: An Internal Fit Perspective of CSR Models Applied in Digital Platforms  

Author: **Dongdong Huang**, *Business School, Nankai U.*
Author: **Wang He**, *Sun Yat-Sen U.*

Based on the internal fit perspective from contingency theory, this study unveils the latest CSR models applied in digital platforms and finds out the internal forces that drive the adoption of those models. We select four representative cases in China and conduct detailed within- and cross-case analyses. Four distinctive CSR models emerge from the results: the platform-embeddedness model, the platform-leverage model, the platform-outsourcing model, and the platform-generation model. We also discover three major internal contingency factors behind the selection of those CSR models: resource commitment, relevance of CSR practices to core businesses, and social-orientation. Our study supports the active agent role championed by the internal fit perspective in that firms can selectively design a strategy based on its internal contingencies rather than passively responds to external constraints.

Paper is Available to Meeting Registrants Only.

Author: **Anil R. Doshi**, *UCL School of Management*

Author: **William Schmidt**, *Cornell SC Johnson College of Business*

False information, which can include disinformation, misinformation, and other 'fake news,' is persistent on digital content platforms. Research and strategies for constraining exposure to false information have focused on interrupting its spread within a platform, rather than its initial entry into a platform. We propose expanding the boundaries of the platform's functions to include monitoring and identifying false information internet domains. There are few burdens on establishing a domain, which has the unintended consequence of making it quick and inexpensive to create, replicate, and distribute false information through domains. To counter some of these advantages, we examine whether a platform can identify problematic domains before users engage with the domains' content on the platform. To establish the feasibility of such a strategy, we show that (1) a platform can predict false information domains at the time of registration, (2) the predictions are valuable under different platform governance types, and (3) the platform can exploit a false information creator's low transparency to sustain the efficacy of the prediction models.

A Cognitive and Behavioral View of Organizational Decision-making

Session Moderator: **Rajyalakshmi Kunapuli**, *Southwestern U.*

STR: Unpacking the Impact of Overconfidence on Firm Performance  

Author: **Wayne Borchardt**, *U. of Cape Town, Graduate School of Business*
Author: **Dan Lovallo**, *U. of Sydney*
Author: **Mikael Samuelsson**, *U. of Cape Town Graduate School of Business*
Author: **Ayrton Da Silva**, *U. of Cape Town*

We report a surprising finding where one-third of a firm's asset value is explained by the overconfidence of the group making the firm's strategic decisions. This result emerges from an empirical analysis of a group-level overconfidence construct and its impact on firm performance using a real-world data set. Our overconfidence construct examines the behavior of the group, not just the CEO, and it allows us to simultaneously analyze the impact of two facets of overconfidence – overestimation and overprecision bias. Using proxies derived from management earnings guidance we find that overestimation has a sizeable, negative impact, which is uncorrelated with overprecision's sizeable, positive impact on firm performance, and we show that these relationships are plausibly causal.

STR: Effect of Expertise on Cognitive Complexity: The Case of Security Analysts 

Author: **Rajyalakshmi Kunapuli**, *Southwestern U.*

I examine how security analysts' prior expertise influences the complexity of their evaluations in the context of a new technology. Drawing from research on managerial cognition, I argue that analysts with prior experience or status engage in schematic information processing that affects the complexity of their evaluations. Further, I develop the construct of evaluative complexity, which is an indicator of comprehensiveness of analyst evaluations. Historical data from the early internet industry (from 1995 to 2005) of approximately 1800 analyst reports on the initial public offerings in the internet industry support my predictions that analysts with either prior experience or status demonstrate less complexity in their evaluations of internet firms. Specifically, in new technology contexts experienced or high-status analysts are more likely to assess new technological firms from unitary perspectives and convey more certainty in a context that calls for caution. My research aims to contribute to our understanding of the role of intermediaries in the emergence of new technologies and the paradox of experience and status in these contexts.

STR: Delegation of Decision Rights and Inertia in Capital Reallocation  

Author: **Nauman Asghar**, *HEC Paris*
Author: **Tomasz Obloj**, *HEC Paris*

In this paper, we investigate the antecedents of inertia in capital allocation decisions in organizations. Despite the importance of flexible capital reallocation, empirical evidence points to remarkably high levels of stability in these decisions. Adopting a behavioral perspective, we focus on information processing demands faced by boundedly rational decision makers as a driver of such inertia. In particular, we argue that centralization of decision rights, which increases the information processing demands on relevant decision makers, results in an increased inertia in capital reallocations. To empirically test our proposition and explore the causal effect of centralization on reallocation flexibility, we take advantage of an exogenous variation in decision rights among municipalities located in the state of Illinois in the US. Our findings indicate that the delegation of decision rights for capital allocation significantly decreases inertia in reallocation decisions. Additional analyses further provide evidence that a likely mechanism explaining our findings is that of decentralization reducing information processing load on relevant decision makers.

STR: The Power of Open-Minded Simplicity in Mental Models 

Author: **Daniel Albert**, *Drexel U.*
Author: **Dirk Martignoni**, *U. of Lugano*
Author: **Anoop Menon**, -
Author: **Nicolaj Siggelkow**, *U. of Pennsylvania*

The mental models held by managers – their cognitive representations of the real world – have an important effect on decision making and influence the way experiences are encoded. Mental models contain performance expectations of different actions, and higher-level beliefs of contingencies, i.e., whether prior experiences in one setting are applicable in other settings, a contingency model. While a growing literature has explored how first-order learning of performance expectations is affected by fixed contingency models that do not reflect reality correctly, relatively little is known how second-order learning with respect to the higher-level contingency model affects decision outcomes. Using a computer simulation built on prior theory and models of learning and cognition, we find that a simple mental model that is refined over time tends to lead to higher performance than a complex mental model that is simplified over time. Our findings suggest that the ubiquity of relatively simple mental models may not only be a reflection of cognitive limitations, but also an evolutionary advantageous outcome of a dynamic learning process.

Motherhood and Work: Broadening Our Perspective
Motherhood and Work: Broadening Our Perspective

Organizer: **Serena Sohrab**, *Ontario Tech U.*
Organizer: **Nada Basir**, *U. of Waterloo*
Discussant: **Eden King**, *Rice U.*

In this symposium, we present research that broadens the notion of motherhood and its intersection with work. While past research has highlighted the many challenges that mothers and pregnant women experience at work, the studies presented in this symposium show that challenges arising from women's motherhood intentions and the societal expectations of women may reach far beyond pregnancy and actual mothering. We hope this symposium inspires management scholars to pursue questions that tackle the nuanced complexities of a working woman's life.

**Meeting the Editorial Team of Asia Pacific Journal of Management
(APJM)**
Meet the Editors of APJM

Session Chair: **Jintong Tang**, *Saint Louis U.*
Panelist: **Liqun Wei**, *Hong Kong Baptist U.*
Panelist: **Chinmay Pattnaik**, *U. Of Sydney*

Asia Pacific Journal of Management (APJM) is the official journal of the Asia Academy of Management published by Springer. The mission of the journal is to provide a platform for the communication of rigorous scientific management research with Asia Pacific relevance among interested researchers. The most recent APJM citation impact factor (i.e., year 2021) as stated in the ISI Journal Citation Reports is 5.616 with a five-year citation impact factor of 6.721. Researchers who are interested in academic research that has Asia Pacific relevance are invited to attend this workshop to meet the Editors-in-Chief, Senior Editors, and Editorial Review Board members. The editorial team will explain the mission and editorial policy of the journal. Statistics of the journal (e.g., number of submissions received per year, acceptance rate) will be presented. Editors will present the scope of the journal (e.g., strategic management, human resource management, organizational behavior, entrepreneurship, and international business) and the meaning of “Asia Relevant Management Research.” Examples of accepted papers will be discussed and participants are welcome to discuss whether their research projects are suitable for the journal.

The Business of (Im)migration: Bodies Across Borders *The Business of (Im)migration*

Facilitator: **Marco Distinto**, *The Open U.*
Facilitator: **Vijayta Doshi**, *Indian Institute of Management, Udaipur*
Facilitator: **Arturo E. Osorio**, *Rutgers U.*
Facilitator: **Paulina Segarra**, *U. Anáhuac México*
Facilitator: **Martyna Sliwa**, *Durham U. Business School*

This PDW will provide a workshop to discuss matters of (im)migration in the context of the upcoming special issue entitled “The Business of (Im)migration: Bodies Across Borders ” in the Journal of Business Ethics (JBE). (Im)migration is the phenomenon of the movement of bodies from one's place of origin or last residence to another for various voluntary or involuntary reasons ranging from education, work, marriage, ambition, or crisis. To (im)migrate, bodies move across places and spaces where the discourse of diversity and internationalization might be found even when the reality is that migrant bodies are systematically excluded; this exclusion directly affects migrants' human rights, which cannot and should not be overlooked. Moreover, dealing with (im)migrants has become a very profitable business all around the world. Indeed, the business of (im)migration can be observed in different contexts: from higher education institutions to the food sector. No matter the context, (im)migration brings consequences of exclusion, abuse, exploitation, precariousness, and vulnerability which we urgently need to question in order to ethically enrich the (im)migrant experience.

Speaker: **Martin Lackeus**, -

Entrepreneurs operate in contexts characterized by high degrees of complexity and uncertainty that cannot be effectively examined using traditional cross-sectional surveys. For over a decade now, researchers have identified the Experience Sampling Method (ESM) as having methodological strengths that can overcome many of the challenges in studying the dynamic, multi-level, psychological and organizational processes inherent in entrepreneurship. In ESM studies - known in some disciplines as Ecological Momentary Assessment (EMA)- researchers can sample the lived experiences of participants by having them answer questions “in the moment” with high ecological validity and low recollection bias. Advances in mobile technologies have made it both a cost-efficient and accessible method, resulting in an explosion of ESM-based studies in organizational behavior and medicine. Despite the interest in the method however, entrepreneurship has yet to fully leverage the potential of experience sampling. This workshop brings together researchers who are conducting innovative studies utilizing ESM to examine emotions, well-being and education in the context of entrepreneurship. Preliminary findings from a structured literature review of ESM in entrepreneurship will also be presented. Methodological issues including the limitations and challenges will be addressed by invited speakers. Scholars and practitioners who are new to the method will have the opportunity to ask questions and discuss how ESM can advance their research and practice. We pay tribute to Mihaly Csikszentmihalyi (1934-2021), the psychologist who pioneered the method through his studies on creativity and flow.

We will provide additional logistical information about the PDW through this URL: <https://bit.ly/AOMESM-PDW>

Rooting Out Racism in Organizations

Session Moderator: **Jay Hardy**, *Oregon State U.*

GDO: **Racial Stratification in Organizational Hierarchies as an Emergent Phenomenon**   

Author: **Jay Hardy**, *Oregon State U.*

Racially stratified organizational hierarchies are prevalent in modern society. In this paper, we draw upon theories of emergence to argue that this phenomenon can be explained, in part, as a byproduct of the combined behavior of many individuals who express only small biases against persons of color (POCs) in promotability evaluations. Compounding this problem, we contend that commonly used, seemingly “color-blind” promotion policies can have the unintended side effect of exacerbating and institutionalizing racial disadvantage. To test these propositions, we developed a dynamic, agent-based model designed to simulate the structure and staffing decision-making policies of a typical, mid-sized Fortune 500 company. We then used this model to run a series of simulated experiments exploring the combined impact of racial bias and promotion policy on POC representation within the organizational hierarchy. Simulation results highlight the largely untapped promise of structural solutions to the problems of racism at work.

GDO: **An Occupational Source of Racial Inequality: The Roles of Conscientiousness and Education**   

Author: **Hee Man Park**, *Pennsylvania State U.*

Author: **Timothy A. Judge**, *The Ohio State U. Fisher College of Business*

Author: **Seunghoo Chung**, *The Hong Kong Polytechnic U.*

Author: **Yuhan Zhan**, *Western Kentucky U.*

The literature on racism in the workplace has shed much light on the impact of racial discrimination on career outcomes, especially with respect to psychological processes (e.g., biases, attributions, perceptions, and decision-making). However, there has been relatively little research on the role of the occupational environment in racial inequality. Because the focus of most previous studies has been on income or types of occupations, a comprehensive understanding of the occupational contexts associated with racism has remained elusive. We argue that certain occupations tend to confer significant systemic, and often implicit, advantages and that racial minorities have less access to occupations with high privilege. Invoking the theory of work adjustment, status process theory, and racial stereotyping, we theorize that the socially desirable occupational characteristics of status, recognition, authority, and advancement constitute occupational privilege and are distributed unevenly across racial groups. Furthermore, we propose that occupational privilege serves to create racial disparities in extrinsic and intrinsic career outcomes. Finally, it was argued that educational level and conscientiousness, two robust predictors of career outcomes, are positively associated with occupational privilege but that the positive associations are weaker for members of racial minorities than for the racial majority owing to negative racial stereotypes. We tested these hypotheses with a large (N = 4,445) longitudinal sample created from two comprehensive datasets collected over 20 years. Results of multi-level regression supported our hypotheses. Thus, our research demonstrates that occupational privilege is a fundamental aspect of racism in the workplace.

GDO: **The Influence of Social Norms on the Endorsement of Anti-Black Attitudes**  

Author: **Abby Corrington**, *Providence College, School of Business*

Author: **Naomi Fa-Kaji**, *Rice U.*

Author: **Michelle Hebl**, *Rice U.*

Author: **Anamely Salgado**, *U. of Southern California*

Author: **N. Derek Brown**, *Haas School of Business, UC Berkeley*

Author: **Linnea Ng**, *Rice U.*

The last few years have been a testament to the fact that anti-Black racism is alive and well in America. It manifests not only in macro-level indicators of social inequity (e.g., housing, education) but also manifests within individual organizations. Importantly, individuals in organizations can express anti-Black and other racist sentiments that influence the attitudes that others express. In the current research, we examine the power of proximal organizational norms in two studies. In Study 1, 269 participants heard a member of their institution condone or condemn anti-Black racism and were then asked to give their own attitudes about that same group. Results revealed that participants were strongly influenced by the racist or anti-racist sentiments they heard; compared to those in the control condition, those who heard an organizational peer condone racism were also more likely to condone, and those who heard an organizational peer condemn racism were also more likely to condemn. In Study 2, we continued to examine the expression of anti-Black racism by investigating the influence of proximal norms (within an organization) in comparison to distal norms (within a more socially and physically distant reference group, i.e., country). Consistent with Study 1, results showed that the proximal norms (but not the global norms) strongly influenced the extent to which 217 participants expressed anti-racist sentiments. We discuss the results by considering the critical role that both individual workplace allies and collective organizations can play in shaping the expression of anti-Black racism.

Author: **Terrance L. Boyd**, *Louisiana State U.*

Author: **Douglas A. Franklin**, *U. of St. Thomas*

In the wake of the tragic deaths of Breonna Taylor, Ahmaud Arbery, and George Floyd, many organizations issued statements proclaiming #BlackLivesMatter. Nonetheless, management scholars have highlighted the various ways that organizations show that Black employees do not matter and have called for a greater emphasis on Black scholarship. Black scholarship refers to the epistemic practices grounded in the social realities of Black people at work or in society. We seek to extend Black scholarship research by integrating insights from the Trump effect literature. Subsequently, we rely on social cognitive and organizational resentment theories to explain why Trump-supporting supervisors have an anti-Black racial bias and why they model the abusive leadership style of former United States President Donald J. Trump that elicits organizational resentment from Black employees. Across two studies (an experimental-causal-chain study and a field study), we find that perceived Trump-supporting supervisors, in comparison to perceived Trump-opposing supervisors, are more likely to abuse their Black employees. In turn, as Black employees experience abusive supervision, they develop resentment toward their employers. We also find that the impact of abusive supervision on organizational resentment is weaker when Black employees' organization-based self-esteem (OBSE) is low compared to high. This is because Black employees with low OBSE are more likely to blame themselves for the abuse. Theoretical contributions, practical implications, limitations, and future research are discussed.

High-performance Work Systems

Session Moderator: **Peipei Bai**, *Hongik U.*

HR: Self-Sacrificial Leadership and the Dark Side of High-Performance Work Systems

Author: **Peipei Bai**, *Hongik U.*

Author: **Longzhen Li**, *Hongik U. College of Business Management*

Author: **Jongwook Pak**, *Trinity College Dublin*

Although the dark side of high-performance work systems (HPWS) has been recognized among researchers, few studies have inquired about how negative employee-level HR experiences could be alleviated. To fill this void, we investigate how self-sacrificial leadership (SSL) interacted with HPWS in explaining variance in such individual experiences as employee exhaustion and turnover intention, using a multilevel sample of 209 employees nested in 37 teams from a large real estate company in China. The findings showed that HPWS was positively related to the two experience measures. More notably, we found that such a dark side of HPWS is mitigated under the condition of high SSL. The findings contribute to the HRM literature, underlining the roles of SSL over the implementation processes of HPWS. We discuss the theoretical and managerial implications and propose future research directions.

Paper is Available to Meeting Registrants Only.

HR: Antecedents of Use of High-Performance Work Systems: A Meta-Analysis

Author: **Dishi Hu**, *Fox School of Business, Temple U.*

Author: **In-Sue Oh**, *Fox School of Business, Temple U.*

Author: **Joo Hun Han**, *Rutgers U.*

Author: **Yan Pan**, *Rutgers U., School of Management and Labor Relations*

Strategic human resource management scholars have examined whether and how the intensity with which firms utilize high-performance work systems (HPWS) affects firm outcomes (e.g., firm productivity and profitability). However, our understanding of the conditions under which HPWS are used is limited. This opens the question of what external and internal factors are related to HPWS use in firms. In the current study, we (a) identify and classify essential antecedents of HPWS use based on the ability-motivation-opportunity (AMO) perspective and (b) conduct a comprehensive narrative and meta-analytic review of previous studies. After controlling for common method/source variance, our meta-analytic results show that past operational performance and past financial performance are the two strongest ability-related antecedents of the use of HPWS. Management's emphasis on the HR function and management's emphasis on the HR function are the two strongest motivation-related antecedents; and industry complexity is the strongest opportunity-related antecedent. Furthermore, our second-order meta-analysis indicates that the motivation-related category has the strongest association with HPWS use, followed by the ability- and opportunity-related categories. We discuss the theoretical and practical implications of these results along with study limitations and future research directions.

HR: Going Beyond the Firm Perspective: What Do Employees Think of the High-Performance Work Systems?  

Author: **Jimin Kwon**, *Yonsei U.*

Author: **Sun Wang Kim**, *Doctoral Student at Yonsei U.*

Although research on High-Performance Work Systems (HPWS) has been measured from the perspective of organizations, recent work calls for the need to focus on the perceptions of HPWS by employees. Drawing on assertions from social exchange theory and signaling theory, we propose that perceptions of HPWS (PHPWS) will generate innovative behavior among employees via perceived organizational support (POS), which could be even more strengthened when they are supported by their leader. Based on a sample of 800 employees from 10 firms across different industries, results indicate that employees' PHPWS have positive associations both with their POS and innovative behavior, and that POS mediates the positive relationship between PHPWS and innovative behavior. Moreover, we further found that a positive relationship between their POS and innovative behavior and the indirect effect of PHPWS on innovative behavior via POS were even more strengthened by leader support, confirming its moderating effect. We discuss theoretical and practical implications for human resources management and innovation in organizations.

HR: High-Performance Work Systems and Innovation Performance Link: How Dynamic Capabilities Mediate

Author: **Shiva Sheikhi**, *Shahid Beheshti U. of Medical Sciences*

Author: **Christopher D. Zatzick**, *Simon Fraser U.*

Author: **Hossein Heidarian Ghaleh**, *Phd candidate at allameh tabataba'i U.*

Author: **Gholamhossein Mehralian**, *Nottingham Business School*

In this study, we develop and test a framework that theorizes how high-performance work systems (HPWS) - a set of interrelated HR practices - build dynamic capabilities (i.e., learning, integration, and reconfiguration capabilities), which in turn lead to innovation performance. We also hypothesize that organizations with a stronger innovation culture will be better able to convert resources and capabilities into innovation performance. We test our hypotheses using time-lagged, multisource data from 173 companies in the Iranian pharmaceutical industry, a knowledge-intensive, high-velocity environment highly dependent on human resources to innovate. We found that the relationship between HPWS and innovation performance was mediated by dynamic capabilities. Further, consistent with our prediction, innovation culture moderated the relationship between dynamic capabilities and innovation performance such that innovation culture strengthened the relationship between dynamic capabilities and innovation performance. The theoretical and practical implications of our findings are discussed.

The Use of Artificial Intelligence in HRM

Session Moderator: **Brent Clark**, *U. of Nebraska Omaha*

HR: **Artificial Intelligence in Hiring and Applicant Attraction: The Role of Ethical Perceptions**  

Author: **Serge P. Da Motta Veiga**, *EDHEC Business School*
Author: **Maria Figueroa-Armijos**, *EDHEC Business School*
Author: **Brent Clark**, *U. of Nebraska Omaha*

The ethics of using artificial intelligence (AI) have been of concern for a generation, but interest in the topic has sharply increased in recent years. Yet, we do not fully understand how ethical perceptions about AI influence both applicants and the organizations that use it. In this paper, we build on the person-organization fit model (Kristof, 1996), social identity theory (Tajfel & Turner, 1979), and applicant attraction research (Chapman et al., 2005) to investigate whether and how ethical perceptions of using AI in hiring are related to applicant attraction. We conducted two studies with both job seekers and employed individuals with hiring experience and found that ethical perceptions of using AI in hiring are positively related to perceptions of organizational attractiveness both directly and indirectly via perceptions of organizational innovativeness. We found no differences in these relationships between job seekers and employed individuals with hiring experience. Interestingly, the influence of ethical perceptions of using AI in hiring are not consistent across hiring methods. For instance, we found that individuals who consider it ethical for organizations to use AI in intrusive ways, such as analyzing social media information for traits and characteristics, viewed such organizations as more innovative and attractive.

Paper is Available to Meeting Registrants Only.

HR: **Warmth Matters, Not Competence: AI Recruiting and Applicants' Organization Attraction**  

Author: **Federico Magni**, *ETH Zürich*
Author: **Yaping Gong**, *The Hong Kong U. of Science and Technology*

Organizations are increasingly using artificial intelligence (AI) in recruitment and selection to enhance their hiring, but little research has been conducted on how and when having an AI recruiter influences recruitment outcomes. Basing our hypotheses on signaling theory and theories of algorithm aversion, with four experimental studies we tested (a) whether perceptions of the organization's (reduced) warmth and (increased) competence mediate the effect of the recruiter's identity (as AI rather than human) on organization attraction, and (b) the applicants' technophilia as a moderator of these indirect effects. We found consistent support for the hypotheses about the warmth pathway, but not for the ones about the competence pathway. With these findings, we extend recruitment research by applying signaling theory to human-machine interactions in the recruitment process. We also extend signaling theory and research by identifying AI recruiter as a signal that job applicants use to infer an organization's characteristics, which influence their attraction to the organization.

Paper is NOT Available. Please contact the author(s).

HR: **Robot Recruiting: The Impact of AI Evaluators on Justice, Trust and Company Perceptions**  

Author: **Nathan Meikle**, *U. of Kansas*
Author: **Agnes Andor**, *Southern Methodist U.*
Author: **Ann Tenbrunsel**, *U. of Notre Dame*

Organizations are increasingly utilizing artificial intelligence (AI) to evaluate job candidates. While much is known about how job candidates perceive companies based on human-to-human interaction in the personnel selection process, little is known about how the use of AI to evaluate candidates affects company perceptions. In a field study (N=179), we find that candidates perceive companies more negatively when they use AI evaluators compared to human evaluators. This result is partially explained by decreased perceptions of fairness and trustworthiness on behalf of the candidates. In Study 2 we conducted a field experiment (N=307) replicating these findings. Our research demonstrates that while it may be more efficient for companies to use AIs to evaluate candidates this approach may come at a significant cost to companies.

Paper is Available to Meeting Registrants Only.

HR: **An Integrated Strategic Architectural Framework for AI-Augmented HRM**   

Author: **Prikshat Verma**, *cardiffmet*

Scholars currently lack a conceptual framework that explains, from a technology-driven HRM perspective, how Artificial Intelligence(AI) techniques can be acquired, deployed, integrated, and reconfigured to fulfil HRM objectives. To bridge this research gap, this study presents an integrated strategic architectural framework for AI-Augmented HRM. Drawing on management theories and integration process of AI from information management literature, this research presents an integrated strategic architectural framework for HRM(AI) exploring organisational antecedents, the processual mechanism of HRM(AI) architecture, its linkage with HRM domain-specific outcomes, organisational level outcomes and resultant organisational performance. The proposed integrated strategic architectural HRM(AI) framework has the potential to be explored in the form of multiple testable research propositions for future research.

Participant: **Larissa R. Garcia**, *U. of Houston*

The political landscape in the U.S. has become increasingly negative as members of major parties dislike each other more than at any time in the recent past. Some researchers characterize the dynamics as the “age of rage” (Webster, 2020). Against this backdrop we bring together four papers that outline the pervasive implications of political affiliation/ideology at work. Two papers suggest that political discourse at work, even if one is not engaging in it, has negative effects such as job dissatisfaction, rumination (on negative events), and insomnia as well as engaging in counterproductive work behaviors. A third paper addresses the explanatory variables that help understand why political affiliation/ideology related variables influence hiring. Results suggest that suspicion and trustworthiness are key variables such that suspicion helps predict negative outcomes such as expected CWBs while trustworthiness helps explain positive outcomes such as expected task performance. Our last paper addresses the issue of how political affiliation influences reactions toward anti-racism programs and shows that political affiliation was the strongest antecedent of reactions toward such programs and toward organizational attraction. All told, the papers suggest political affiliation/ideology is a critical variable with pervasive effects on employees’ cognitions, emotions, and well-being, as well as consequences for organizations.

Decades of research at the nexus of economics, management, and public policy suggest that entrepreneurship spurs innovation (Acs & Audretsch 1990; Baumol, 2002), creates jobs (Davidsson, Delmar, & Wiklund, 2006), and drives economic growth (Malecki, 2018). Given the importance of entrepreneurship, it is no surprise that over the past decades, academic institutions worldwide have invested extensive resources in developing an array of entrepreneurship offerings (Katz, 2003). Despite the growing popularity of entrepreneurship education, some continue to question whether entrepreneurship can be taught in a formal educational setting, particularly given the traditional structure of higher education vis-à-vis the fluid needs of aspiring entrepreneurs (Aronsson 2004; Bhatia & Levina, 2020; Fiet, 2000). In addition, there remains a paucity of evidence supporting the link between entrepreneurial education and entrepreneurial outcomes, and most notably, the creation of new ventures (Pittaway & Cope, 2007). As a result, the relationship between entrepreneurship education and new business formation remains inconclusive (Patzelt, Williams, & Shepherd, 2014). In this symposium, we bring together an international group of entrepreneurship education scholars who will lead us in discussion to explore the value of entrepreneurship education and consider pedagogies and approaches that best support the learning of students aspiring to engage in entrepreneurship. These questions are particularly pertinent to the 2020 AOM Theme of “Creating a Better World Together” as entrepreneurship and entrepreneurship education have an important role to play in building new organizations that are poised to partner to address societal challenges, environmental degradation, and build a “new normal.”

**Business Ethics, Corporate Historic Crimes and Religious Identity in
Management History**

Session Moderator: **James M. Wilson**, *U. of Glasgow*

MH: A cursory Overview of Business Ethics  

Author: **Aleta Sanford**, *Minnesota State U., Moorhead*

Author: **Gokce Serdar**, *Minnesota State U., Moorhead*

Author: **Siwei Zhu**, *Minnesota State U., Moorhead*

The ethical dimension of business has long been acknowledged; however, specific frameworks for implementing ethics in business contexts have arisen and garnered attention. This paper aims to provide a brief overview of the evolution of business ethics throughout history, beginning with broader normative ethical theories that can be applied to businesses and then moving to business-specific theories. An understanding of the past, including both ethical theories and the history of modern business, can illuminate the current situation and layout potential future directions for the discipline and practice of business ethics. The paper takes a literature review approach, conducting several searches with no time restrictions, to summarize and understand critical movements in business ethics that impact the practice of modern business. The contributions of this paper include a high-level overview of the current status of ethics in business as well as future directions for both the research and practice of business ethics.

MH: Accounting, Religious Identity, Control and Discipline in the Quaker Lead Company, c.1800–c. 1860

Author: **Tom McLean**, *Durham U. Business School*

Author: **Tom McGovern**, *Newcastle U.*

Business histories of Quaker firms have generally presented them as enlightened employers and providers of industrial welfare. Quaker labour management and industrial welfare practices during the British Industrial Revolution (BIR) have been relatively neglected by accounting and business historians. We conduct a ‘macro’ study of the roles of accounting in labour control and discipline and the provision of industrial welfare during the BIR in the religious, social and institutional contexts of the Quaker Lead Company. The research draws upon literature and data which present divergent views of the Company’s employment practices. The research finds that the historical construction of Quakers as enlightened employers and industrial philanthropists must be viewed with much caution. There was little that was uniquely and distinctively ‘Quaker’ in the Company’s approaches to labour control and discipline and its use of accounting in these respects.

MH: Situational Influences on how Daisy Douglas Barr turned from Quaker Minister to Ku Klux Klan Empress  

Author: **Jay J. Janney**, *U. of Dayton*

Author: **Terry L Amburgey**, *U. of Toronto*

Author: **Della Stanley-Green**, *U. of Dayton*

Famed Quaker minister and pastor Daisy Douglass Barr did not change her message but she changed her audience in the 1920s, from Friends Meetinghouses to Ku Klux Klan rallies. We argue three situational influences contributed to her decision. First, the rise of paid pastors (1870s) increased ministerial turnover, as paid ministers moved to larger congregations. In addition, Friends became more open to allying with non-Quaker organizations. Second the 1902 merger of the Men’s and Women’s Monthly Meeting for Worship and Business decreased networking opportunities for ministers. Finally, the Ku Klux Klan formally adopted several social activism values consistent with protestant denominational values, including temperance. A minister who advocated for temperance did not have to change their message, while enjoying the potential for larger audiences and more compensation.

MH: Why Do Organizations Respond Differently When Accused of Historic Crimes?  

Author: **Andrew D A Smith**, *U. of Liverpool*

Author: **William Foster**, *U. of Alberta*

Author: **Jason Russell**, *State U. of New York Empire State College*

Author: **Emily Buchnea**, *Newcastle Business School, Northumbria U.*

This paper contributes to the growing literature on corporate historic crimes by challenging the ways of thinking about moral evaluation that have hitherto informed research on this topic. We do so by examining managers’ responses to the ongoing campaign for corporate reparations for slavery. In recent years, social movements such as BLM have called upon the firms that historically profited from African slavery to apologize and pay reparations. We show that these firms have responded in strikingly different ways when confronted by activists who produced irrefutable evidence that they had once profited from slavery. Some of these firms apologising profusely and announced they would spend on restorative justice measures, while other firms facing essentially similar accusations refused to apologize or even comment on the accusation. We explain this difference in response with the Social Intuitionist Model (SIM) of moral reasoning. We find that while part of the observed difference in firm responses can be easily explained by looking at their current business models, firm responses were also strongly influenced by political ideology, a factor largely ignored by the extant literature on historic corporate responsibility. In the model we develop to explain firm responses to accusations of immoral behaviour in the past, a key factor is the nature of the moral universe inhabited by the firm’s managers and stakeholders. When a firm’s core stakeholders and managers inhabit the “moral universe” associated with the present-day Anglo-American left, the firm is much more likely to apologise for its historical connections to racial slavery than if its core stakeholders and managers inhabit the moral universe associated with political conservatism. We identify important implications for business ethics researchers and practitioners.

Dysfunctional Work Contexts

Session Moderator: **Wen Xu**, *U. of Nottingham, China*

OB: Antecedents of Abusive Supervision: A Trait Activation Perspective

Author: **Zengxin Li**, *Renmin U. of China*

Author: **Ge Li**, *School of Business, Renmin U. of China*

The prevalence and destructiveness of abusive supervision call for attention on its antecedents to prevent its occurrence. Drawing on general aggression model, this study examines the combined effect of personal traits (i.e. supervisor trait anger and subordinate trait anger) and situational factors (i.e. group interpersonal justice climate and group positive emotion climate) on abusive supervision. Data analysis from a two-wave data from 113 teams (each with one supervisor and four subordinates) in one property management company in southern China showed that : At the team level, supervisor trait anger was positively related to the team-level abusive supervision, and this relationship was negatively moderated by group interpersonal justice climate and group positive emotion climate; at the individual level, subordinate trait anger was positively related to the individual-level abusive supervision perception, and their positive relationship was strengthened by supervisor trait anger, while the moderating effect of supervisor trait anger was negatively moderated by group interpersonal justice climate.

OB: The Antecedents to, and Outcomes of, Workplace Leader Arrogance

Author: **Graeme Keith Mitchell**, *Flinders U.*

Author: **Adela Jana McMurray**, *Flinders U.*

Author: **Ashokkumar Manoharan**, *Flinders U.*

Author: **J. Irudhaya Rajesh**, *Flinders U.*

Legislation enacted in the past two decades has been designed to address unacceptable behavior at work to protect people from harm. Yet little attention has been given to a specific behavior that contributes to the detrimental treatment of people at work that can seriously impact both individuals and organizations. That behavior is arrogance, both workplace and workplace leader arrogance. This study conducts a systematic literature review into how workplace and workplace leader arrogance is understood and defined in the literature, and what the antecedents to, and outcomes from it, are. Our purpose is to examine and clarify research into this behavior in the workplace, with the intention that potential gaps in the literature be identified to create opportunities for future interventions and research. Arrogance, including workplace and workplace leader arrogance, is generally defined in terms of an individual's misplaced sense of superiority manifested in disparaging behaviors targeting others. The systematic literature review identified that from 2000-2021, thirty-seven scholarly papers were published addressing arrogance, workplace arrogance and workplace leader arrogance. Of these, fourteen papers investigated workplace and workplace leader arrogance, seven being empirical studies and seven non-empirical. Analysis revealed the common antecedent was self-esteem and variables reflecting organizational culture were the most common outcomes studied over the past two decades. Our findings inform the development of a new model identifying the antecedents and outcomes to workplace arrogance, which to date is not found in the literature.

OB: The Online Self-Disclosure of Workplace Mistreatment: A Novel Construct 

Author: **Chelsie Josephine Smith**, *Sprott School of Business, Carleton U.*

Author: **Angela M. Dionisi**, *Sprott School of Business, Carleton U.*

Anecdotal evidence suggests that employees who are mistreated at work are speaking out about these incidents online, despite the risks to both themselves (e.g., social retaliation, professional consequences) and their organizations (e.g., reputational damage). Throughout this paper, the construct of online self-disclosure is borrowed from the literatures of social, clinical, and media psychology, and applied to the context of speaking out about workplace mistreatment. Online self-disclosure of workplace mistreatment is differentiated from the established constructs of voice and silence, and expectancy theory and cognitive heuristics are integrated to suggest when a target may choose to disclose their experiences of workplace mistreatment online. Finally, propositions are presented to support future investigations into this unique behavioural response. Scholars and practitioners who are invested in eradicating workplace mistreatment are advised to pay attention to online self-disclosures, as these communications signal inadequate workplace voice mechanisms, and thus multiple workplace mistreatment-related problems that need to be addressed.

OB: How Does Customer Mistreatment Lead to Employee Retaliation? From The Lens of Self-Threat   

Author: **Xi Chen**, *U. of Nottingham, China*

Author: **Wen Xu**, *U. of Nottingham, China*

Author: **Sathyaprakash Balaji Makam**, *U. of Nottingham, China*

Customer mistreatment is a serious issue faced by employees and significantly undermines their service behaviors. Previous studies have identified two mechanisms underlying the negative effects of customer mistreatment—by generating negative emotions and injustice perceptions. In this paper, we advance a new mechanism and argue that customer mistreatment engenders a threat for how employees feel about themselves—defined as self-threat—which further undermines their customer-oriented behaviors and leads to sabotage against customers. With an online experiment, we show that self-threat mediates the effect of customer mistreatment on reduced customer-oriented behaviors and increased customer-directed sabotage, especially for those whose self-worth is contingent on their workplace performance. A field experiment with medical professionals further shows that self-affirmation intervention attenuated the effect of patient mistreatment on medical professionals' self-threat and further decreased their sabotage against patients. This paper contributes to research of customer mistreatment by illuminating a new mechanism, highlighting the risk group impacted by customer mistreatment and suggesting a new way to alleviate negative impacts of customer mistreatment.

Coworking, Platforms and Flexible Work

Session Moderator: **Stefano Rodighiero**, *U. of Bologna*

OB: Flubber Teams: The Emergence of Dynamic Platform-Enabled Teams in Business Organizations 

Author: **Michał Szymanski**, *Moscow School of Management Skolkovo*

Author: **Ivan Smagin**, *Moscow School of Management Skolkovo*

Author: **Eugeny A. Kaganer**, *IESE Business School*

Digitalization is changing how organizations do business and organize their activities. New digital technologies have transformed sales, marketing, human resource management and other organizational processes. In this study, we examine the effect of digital transformation and the introduction of platform-enabled collaboration on the functioning of teams in organizations. We use the grounded theory method to analyze data collected during a year-long collaboration with a leading gas and oil company, which has introduced a proprietary freelance platform. We observe a novel approach to project and teamwork management resulting in a formation of new form of collaboration, which we call flubber teaming. Such teams have the ability to dynamically change their shape, form, hierarchy, and other properties, making these structures an attractive approach to teaming for large organizations. However, their emergence introduces additional pressures on organizational structures and culture.

Paper is Available to Meeting Registrants Only.

OB: A Longitudinal Study on Weekly Flexibilization, Boundaryless Work, and Presenteeism  

Author: **Ute Poethke**, *TU Dortmund U.*

Author: **Kai Klasmeyer**, *Federal Institute for Occupational Safety and Health (BAuA)*

Author: **Elvira Radaca**, *U. of Wuppertal - Schumpeter School of Business and Economics*

Author: **Stefan Diestel**, *U. of Wuppertal*

In the face of technological advancements, flexibilization and boundaryless work have become integral parts of modern occupational settings. Simultaneously, current research indicates a considerable increase in presenteeism—the behavior of working while sick. Meta-analytic findings indicate two main drivers for presenteeism: a high work motivation and an impaired state of health and psychological well-being. Research on flexibilization and boundaryless work shows that these job conditions enhance employees' work motivation but also impair employees' health. Based on conservation of resources theory and Miraglia and John's (2016) dual-path model on antecedents of presenteeism, we investigate how both job conditions affect attendance behavior (absenteeism and presenteeism) via motivation and well-being by conducting a weekly diary study over the course of nine weeks. In total, 284 people provided data on flexibilization, boundaryless work, flow experience, well-being, absenteeism, and presenteeism. Multilevel mediational analyses revealed that flexibilization prevents presenteeism, whereas boundaryless work can increase presenteeism (N = 2284 week-level). The results further revealed support for the health impairment path at the within-person and between-person levels whereas the motivational path was not supported at the within-person level. Our results offer several theoretical and practical implications for how modern work shape attendance behavior.

OB: Trouble in Paradise? How Competition and Sense of Community Affect Satisfaction in Coworking Spaces 

Author: **Till Marius Gantert**, *U. of Bayreuth*

Author: **Viktor Fredrich**, *U. of Bayreuth*

Author: **Mahmood Aslam**, *U. of Bayreuth*

Coworking spaces allow collaboration, knowledge exchange, and offer opportunities to develop social and professional networks. Our study of 182 users across 39 coworking spaces indicates that competition among users predicts users' overall satisfaction embedded within the space. By using data from two different sources and using structural equation modeling, we show that the combination of competition, sense of community, and self-efficacy positively influences users' satisfaction. In this paper, we contribute to the competition and sense of community literature by proposing how the reciprocal relationship with both factors can be crucial to user satisfaction and thus to the success of the CWS.

Paper is Available to Meeting Registrants Only.

OB: Thriving While Working Remotely: An fsQCA Application in Coworking Spaces 

Author: **Stefano Rodighiero**, *U. of Bologna*

Author: **Daniele Scarpi**, *U. of Bologna*

Author: **Cristina Boari**, *Department of management, Bologna U.*

The present study investigates what drives thriving at work for remote workers in coworking spaces. Coworking spaces are flexible workspaces involving individuals from various occupational backgrounds that work in shared work environments that are usually deemed as vibrant and supportive. Coworking spaces reflect significant changes in economic activity due to the increase in digital and location-independent knowledge work. These changes have been further accelerated by the COVID-19 pandemic, with many companies relying on coworking alternatives for their employees who work remotely. Within this scenario, acknowledging the complexity and importance of coworking spaces, recent literature calls for a more fine-grained understanding of how coworking spaces help achieve positive psychological outcomes such as thriving at work (e.g., represented by a joint sense of vitality and learning at work). A greater understanding of what drives remote workers' thriving in coworking spaces can help coworking providers and employing companies define work arrangements and environments that suit the different – and sometimes conflicting – needs, motives, and psychological experiences of remote workers. Acknowledging the complex set of interrelationships underlying thriving at work, this study leverages complexity theory and qualitative comparative analysis to uncover six different, yet equifinal, configurations of antecedents driving remote workers' thriving in coworking spaces.

Developing Teams

Session Moderator: **Joo Hun Han**, *Rutgers U.*

OB: When Variability Becomes a Liability: Team Incentive Composition and its Multilevel Influences   

Author: **Joo Hun Han**, *Rutgers U.*

Author: **Hui Liao**, *U. of Maryland*

Author: **Aichia Chuang**, *U. of North Carolina at Greensboro*

Author: **Karen Lynden**, *U. of North Carolina, Greensboro*

In the present study, we propose the concept of team incentive composition that involves the average level of team members' team incentive levels and the variability in the team members' team incentive levels, and examine its influence processes at the individual and team levels. We suggest that, especially in project team contexts, teams may consist of members who receive varying levels of incentives based on team performance (termed team incentives). Despite the well-documented motivational effects, we hypothesize that team incentives may not adequately motivate individuals and teams when the variability of team incentives among the members is high. Drawing on expectancy theory and the free-riding concept, we theorize how such team incentive variability induces pervasive motivational loss for both individuals and teams, thus weakening the effects of team incentives on team performance. Analyses of data from 720 teams conducting business consulting projects reveal robust support for our hypotheses, underscoring the importance of aligning the intensities of team incentives among the team members to more fully unlock the motivational potential of the team incentives.

OB: Magnets of Collaboration: When Salary Disparity is a Draw Rather Than a Drag for Teaming  

Author: **Kevin M. Kniffin**, *Cornell SC Johnson College of Business*

Author: **John Angus Hildreth**, *Cornell SC Johnson College of Business*

Salary differences within teams have been studied in relation to a range of operational conditions and outcomes; however, whether and how the formation of teams is influenced by salary disparity has not been closely examined. Through a set of three replicated and pre-registered studies, we show evidence that teaming decisions are influenced by salary disparities. Study 1 finds – contrary to extant theories – that people tend to choose co-workers who are relatively high paid; however, the tendency relies significantly upon an assumption that salary is positively associated with co-workers' knowledge, skills, abilities, and experience (KSAE). In Study 2, we show that the prospect of teaming-up with higher-paid co-workers is associated with more favorable dispositions towards higher-paid co-workers, suggesting that organizations that foster collaboration enjoy greater flexibility with respect to their compensation structures. Study 3 indicates that people are more inclined to select a higher-paid co-worker when there will be generalizable skills; and, such decisions are mediated by the favorable dispositions expected of such a teammate. In contrast with frameworks that predict salary disparities should be a drag on teaming with higher-paid co-workers, we build new theory while identifying multiple conditions when people are more likely drawn to working with higher-paid co-workers.

OB: A Closer Look at Team Interdependence: A Review and a Research Agenda

Author: **GERMAN CESPEDES**, *IPADE Business School*

Author: **Monica Franco-Santos**, *Cranfield School of Management*

Author: **Patrick Reinmoeller**, *IMD*

We conduct a systematic literature review addressing the question on what we know about team interdependence and its relationship to teams' performance. For that purpose, we select 114 peer-reviewed journal articles published in the last 21 years (1999-2020) that meet our inclusion and quality criteria and synthesize the knowledge presented in these papers advancing the team interdependence debate in three different ways. First, we provide an in-depth and updated analysis of the research on team interdependence to identify past and emergent trends. Second, we offer a summary of what we know about the relationship between interdependence and team performance. Third, we identify some of the gaps in the literature and opportunities for future research.

Paper is Available to Meeting Registrants Only.

OB: Taking the Emergent in Team Emergent States Seriously: A Review and Preview

Author: **Bård Fyhn**, *NHH Norwegian School of Economics*

Author: **Vidar Schei**, *NHH Norwegian School of Economics*

Author: **Therese Egeland Sverdrup**, *NHH Norwegian School of Economics*

Team emergent states are properties that develop during team interactions and describe team members' attitudes and feelings (e.g., cohesion, trust, and psychological safety). However, these states' "emergent" aspects have largely been neglected, as most studies do not examine the temporality of team phenomena. We review the empirical literature on team emergent states and demonstrate that while these states do emerge, there are no universal patterns in how they emerge. The review highlights the importance of studying the emergence of these states to enhance our knowledge of the causal directions, antecedents, and outcomes of team emergent states. We suggest that further research can advance our understanding of team dynamics by clarifying the concept of team emergent states, connecting to theories that can guide our search for temporal dynamics, adopting more qualitative studies to answer the "why" question, improving the methods used to study team emergent states, and including dynamics in our research models.

The Flow of Information through Organizations: Exploring Multilevel Theorizing and Future Directions *The Flow of Information through Organizations*

Organizer: **Elizabeth Nguyen Trinh**, *U. of Michigan, Ross School of Business*

Panelist: **Ethan Scott Bernstein**, *Harvard Business School*

Panelist: **Brandy Aven**, *Carnegie Mellon U.*

Panelist: **Nir Halevy**, *Stanford U.*

Panelist: **Daan Van Knippenberg**, *Rice U.*

Panelist: **Markus Reitzig**, *U. of Vienna*

Organizer: **Derek Harmon**, *U. of Michigan*

The massive influx of information flowing through organizations has completely changed the landscape of work. The abundance of information offers both exciting and promising opportunities as well as creates workplaces that have become increasingly complex and difficult to navigate, presenting counterproductive and even harmful challenges. Therefore, how do (or should) individuals, teams, and organizations better process, harness, and influence the flow of information through hierarchies and other organizing structures? This question is especially relevant in the context of a greater push for transparency that we are seeing in society as well as in times of severe organizational uncertainty and instability (e.g., in light of the pandemic and its economic fallout)? In this moderated panel symposium, we seek to engage in meaningful discussion on how individuals, teams, and organizations can fully realize potentials and detriments of the increased information flow. Our symposium consists of a panel of five leading scholars -- Brandy Aven, Ethan Bernstein, Nir Halevy, Markus Reitzig, and Daan van Knippenberg (in alphabetical order by last name) -- who hold diverse perspectives and who were chosen due to their expertise on this topic. This symposium will highlight important insights into the potential possibilities and issues confronting scholars on information flow and information management, which we hope will guide future organizational research.

The Organization & Management Theory Division is hosting a “Global Consortium” for the fifth consecutive year at the 2022 Annual Meeting of the Academy of Management, titled “Doing Organizational Research Around the World”. The objective of the workshop is (1) to expand the organization and management theory scholarship from global perspectives, with questions, issues and practices based on alternative cultural and historical backgrounds; (2) to obtain high quality and specific feedback on research, based in international settings, from experienced mentors; and (3) to discuss common challenges and opportunities of planning, implementing, and publishing high quality organizational research using international settings. This PDW is sponsored by OMT and supported from regional organizations in a spirit of global collaborations: Africa Academy of Management, Asia Academy of Management, Iberoamerican Academy of Management, and Japanese Academic Association for Organizational Science.

SIM: The Lure of Greed Beyond the Business School Popular Wall Street Narratives and Future Work Selves     

Author: **Inge Marije Brokerhof**, *The Open U., Netherlands*
Author: **Matthijs Bal**, *U. of Bath*
Author: **Omar Solinger**, *Vrije U. Amsterdam*
Author: **Paul G W Jansen**, *Vrije U. Amsterdam*

Popular Wall Street narratives displaying greed and wealth, such as *The Wolf of Wall Street*, have become large box-office successes, reaching wide audiences. In three exploratory mixed-method experiments, this study investigates how popular Wall Street narratives relate to students' and sales employees' future work selves - who they aspire to become in their future job or career. The findings indicate that, for business school students as well as sales professionals, characters in greedy Wall Street narratives are considered more desired future work selves in comparison to characters in critical or realistic narratives. Participants perceived morally ambiguous characters in greed narratives through a "winner frame" of self-made success and wealth. Greed narratives were also associated with lower levels of empathy, indicating an activation of the psychological mechanism of "self-reliance". In contrast, narratives adopting a "victim perspective" - in which the main characters suffer as a result of financial malpractice - were associated with higher levels of empathy. This study demonstrates the appeal of greedy characters on the future work selves of people who (aspire to) work in the field of financial sales. It sheds new light on the underlying mechanisms with which popular narratives can perpetuate a culture of greed in Wall Street.

SIM: Means versus Ends in Business Ethics: A Behavioural Trade-off Between Compliance and Achievement

Author: **Leonie Decrinis**, *Copenhagen Business School Department of Management, Society and Communication*

William H. Newman Award Nominee

The academic discussion on decoupling commonly centres on the macro level, distinguishing between policy-practice and means-ends decoupling. The former concerns the merely symbolic adoption of policies; the latter refers to compliant adopters not achieving intended goals. I build on prior propositions of a trade-off between policy-practice and means-end decoupling in highly opaque fields where causal complexity undermines the understanding of institutional actors. Specifically, I argue that a similar tension exists on the micro level regarding the ethical behaviour of employees. Norm ambiguity in organisations is prone to trigger ethical blindness among ethically bounded humans, whereby their moral values and intentions fade away. This drives corporations to introduce tight control elements in form of clear rules, stringent monitoring and sanctioning to induce substantive compliance with specific aspects of ethics programmes. However, such tight controls fail to address overall field opacity by undermining the moral awareness of target individuals. Thereby, they hinder the achievement of an organisation's broader value-oriented ethics goals. The resulting tension points towards an inherent trade-off: addressing policy-practice decoupling may aggravate means-ends decoupling and vice versa. I conceptualise this tension and define conditions for a behavioural ethics approach in corporations under which the trade-off can be reduced.

SIM: Extreme Organizational Identification: Evidence from a Modern Day Corporate Cult

Author: **Antonio Sadaric**, *U. of Ljubljana, School of Economics and Business*
Author: **Nina Pološki Vokic**, *Faculty of Economics & Business, U. of Zagreb*
Author: **Miha Skerlavaj**, *U. of Ljubljana, School of Economics and Business*

ABSTRACT After observing modern organizations experiment with spirituality and organizational culture, we revisit corporate cultism nearly 20 years after its initial conceptualization. We argue that strong and high-performing organizational cultures risk transforming into corporate cults without strong ethical standards, and propose a mixed-methods research approach to explore corporate cultism in a modern organization. In our qualitative study, we examine how many characteristics of destructive cults the observed organization exhibits. We summarize interviews with five middle managers from a single organization and conclude that 12 out of 14 characteristics of destructive cults are present in the studied organization. This suggests that occult behaviors can manifest themselves within a high-performing multinational company with a strong organizational culture, strong market brand and numerous international employer excellence certifications. By surveying 304 employees within the observed organization in our quantitative study, we test the empirical model of transformational leadership, organizational identification, and employee engagement within a corporate cult. Results indicate that the positive effects of transformational leadership on employee engagement are partially mediated by organizational identification. We conclude with theoretical and practical implications of corporate cultism as a salient ethical dimension of modern leadership.

SIM: The Congruence Effect of Ethical Values of Leaders and Followers on Ethical Climate

Author: **Saleem Azhar**, *XJTU*
Author: **Zhe Zhang**, *Xi'an Jiaotong U.*
Author: **Aditya Simha**, *U. of Wisconsin, Whitewater*

Although research on organizational ethical climate (OEC) has attracted ample attention, research on antecedents of OEC remains relatively scarce. This study focuses on the critical internal drivers of OEC: leaders and followers. Specifically, integrating social cognitive theory and balance theory, we use a dyadic approach to consider leaders' and followers' ethical values in predicting OEC. We investigate whether and how the congruent ethical values of leaders and followers predict OEC. We conducted a multilevel field study with 164 leader-follower dyads and used polynomial regression with three-dimensional surface analysis. Our results reveal that leaders' and followers' ethical values predict OEC as independent ethical identities. They also determine OEC when their ethical values are more congruent and vice-versa. Furthermore, the incongruent ethical values of counterparts are vital in predicting OEC. We discuss the theoretical and practical implications of these findings.

Author: **Steven William Day**, *North Carolina Central U.*

In effort to extend duty orientation research, we focus on identifying an antecedent and two leadership outcomes of duty-oriented behavior. Across two studies (an experimental-causal-chain study and a multi-source field study), we rely on deonance and behavioral plasticity theories to explain how the institutionalization of ethics impact ethical leadership and abusive supervision. We argue that the institutionalization of ethics operates as an ethical ought force that triggers leader duty-oriented behavior. In turn, the demonstration of leader duty-oriented behavior impacts followers' evaluations of ethical leadership and abusive supervision. Given our deontic framework and the its emphasis on behavioral expansion and constriction, we integrate behavioral plasticity theory to examine and explain when leader organization-based self-esteem impacts the reactivity to the effect of the institutionalization of ethics. Specifically, we find that the impact of the institutionalization of ethics on ethical leadership and abusive supervision via leader duty-oriented behavior is stronger when leader OBSE is low. Theoretical and practical implications are discussed.

STR: Improving the Efficiency of Firm's Environmental Strategy Through Environmentally Oriented Corporate 

Author: **Setiadi Umar**, *INSEEC Business School*
Author: **Qiao (Stella) Wei**, *Nankai U.*

This study analyzes how corporate governance drives greener company performances by motivating and monitoring managers' actions in conducting company's environmental strategy. By testing 600 companies listed in the U.S. Newsweek 500 during 2012-2014, this study found that firms could rely on a group of corporate governance controls that specifically target managers' incentives and efforts associated with environmental strategy (i.e., linking managers' compensation with environmental productivities, establishing a sustainability-oriented committee, and deploying third-party auditors for environmental metrics reports) to promote multidimensional environmental performances (i.e., energy, water and waste productivities). Then, these manager-driven environmental performances would positively influence both financial and nonfinancial performance.

STR: "Silence is Not an Option!" Is (Liberal) CEO Activism Beneficial to Firm Performance? 

Author: **Alessandra Rizzi**, *Texas Christian U.*
Author: **Vilmos F. Misangyi**, *Pennsylvania State U.*

This study frames CEO activism as a sensegiving process and focuses on the effects of CEO activism on organizational outcomes. We propose that the effects of CEO activism on firm performance are contingent upon whether CEO activism is perceived as congruent with employees' dominant political ideology. As a symbolic action, CEO activism has the power to influence employees' values and goals; therefore, when it is aligned with employees' political ideology, it will engender a positive employees' cognitive, affective and behavioral response in the organization, which will ultimately benefit firm performance. However, such positive outcomes will be hindered when the executive is perceived as not invested in the activism. By contrast, CEOs who are also firm founders tend to amplify the beneficial effects of CEO activism. All of these findings were derived from tests of a sample of 236 CEOs who engaged in activism between 2015 and 2018 and a total of 880 firm-year observations. Through a set of post-hoc and supplementary analyses we also tested for endogeneity concerns, treatment effects, and the plausibility of our theoretical mechanism.

STR: Executive Pay and CSR: How Pay Components Influence Executive Attention towards CSR 

Author: **Steffen Burkert**, *LMU Munich*

Prior work has emphasized that top executives are a key predictor for the observed variance in firms' corporate social performance (CSP). While much work has investigated the implications of specific pay components for corporate social responsibility (CSR) behavior of top executives, only little is known about the underlying process that explain how these relations occur and how they can be influenced. In particular, prior work has commonly assumed that executive pay influences firm CSP through executive attention. In order to integrate prior work and provide important evidence for the attention-effect of executive pay, the present study examines how pay components are related with executive attention. I test these predictions on a sample of large, publicly traded U.S. firms between 2007 and 2018. The findings suggest a significant relation between salary, short-term pay, long-term pay and CSR attention. The implementation of CSR performance goals is not statistically significantly related with CSR attention, however, this relation depends on the substance of the goal, the distinctiveness of the goal, and executive tenure. I discuss these findings and provide potentially promising avenues for future research.

STR: Firms' Commitment to Sustainability: To What Extent is the Presence of Women on Boards Important?

Author: **Pedro Torres**, *U. of Coimbra*

Many firms are committed to Sustainable Development Goals, such as climate change, but their performance differs. Boards' attention to sustainability might influence strategic decision making and consequently firms' practices and ESG performance. Inspired by upper echelons theory, this study aims to examine the extent to which female board representation is important for ESG performance, considering board-management interactions. Building on past research, this study argues that women can enhance board monitoring and board strategy involvement, which can influence ESG performance. A configurational analysis is used, including different corporate governance mechanisms: board independence, female board representation, board orientation, CEO power and ESG-related executive compensation. The findings suggest that the presence of women on boards is important to firms' ESG performance; however, it is not mandatory. A well-defined CSR strategy combined with ESG-linked executive compensation can make the presence of women on boards indifferent, if firms have high levels of board independence, CEO non-duality and a CSR Sustainability Committee. The results also show that a high ESG scores can be achieved with a combination of board-management mechanisms, which does not include executive alignment incentives, thereby contributing to the debate on whether monitoring and executive alignment incentives act as substitutes or complements. In addition, the results reinforce the notion that CSR Sustainability Committees are important, but should be combined with other conditions to be effective.

Author: **Ronei Da Silva Leonel**, *Salisbury U.*

Author: **Michael Seth Nalick**, *U. of Denver*

Author: **Frances H. Fabian**, *U. of Memphis*

Author: **Scott Kuban**, *Tulane U.*

Research has extensively documented how executives' personality traits, experience, and personal values shape firm behaviors and outcomes. Narcissism in Chief Executive Officers (CEOs) has been convincingly associated with pursuing risky market strategies but has not been explored in regard to influencing a firm's nonmarket strategies. We investigate narcissistic CEOs' involvement with contentious sociopolitical issues (SPIs) to understand whether they also engage in risky nonmarket actions. Drawing from the wider constructs on narcissism in personality psychology research, we argue narcissistic CEOs steer firms toward risky nonmarket actions due to: insensitivity to risks, search for attention, and the need to expose socially desirable identities. Testing for interactions with celebrity status and the degree of national public opposition to the SPI also reflect the likelihood that such involvement is driven strongly by selfish motives. We tested our theoretical model examining firms' support to the same-sex marriage from 2004-2015 with a random sample of 209 S&P 500 firms. We found support for our model showing that narcissistic CEOs were more likely to engage in SPI, and both low celebrity status and high degree of public opposition strengthen this involvement.

Boards and Their Effectiveness

Session Moderator: **Kalin D. Kolev**, *Marquette U.*

STR: The Board Committee Chair Effect: How Much Does It Contribute to Firm Performance? 

Author: **Kalin D. Kolev**, *Marquette U.*

Author: **Donald Joseph Schepker**, *U. of South Carolina*

Author: **David B. Wangrow**, *Marquette U.*

Author: **Vincent L. Barker**, *U. of Kansas*

Boards of directors rely on committees to perform important specialized monitoring and advising tasks. While there is general consensus that committees and their chairs influence board outcomes and, thus, firm performance, we know little about the magnitude of these effects. Using variance decomposition, we show that audit, compensation, and nominating committee chairs explain a significant portion of variance in firm performance that prior research might have inaccurately attributed to other levels. Results show that committee chairs have much stronger influence on firm performance than board chairs, illustrating a need for more research on the critical role committee chairs play in the functioning of committees, boards, and firms. Furthermore, drawing on managerial discretion research, we find evidence that the committee chair effect on performance is stronger in low discretion industries than in high discretion industries.

Paper is Available to Meeting Registrants Only.

STR: The Missing Link? A Meta-Analysis of Board Processes and Their Mediating Role 

Author: **Fabian K. Ahrens**, *U. of Groningen*

Author: **Niels Hermes**, *U. of Groningen, Faculty of Economics and Business*

Author: **Dennis Veltrop**, *U. of Groningen*

Author: **Laetitia Mulder**, *U. of Groningen*

Author: **Chuk Yan (Edwina) Wong**, *Faculty of Economics and Business, U. of Groningen*

Scholars and practitioners alike are interested in understanding what distinguishes well-functioning boards of directors from malfunctioning ones. One way to further this understanding is through the study of social-psychological processes inside the boardroom. These board processes are assumed to translate the influence of board characteristics into board effectiveness and may provide an often-referenced missing link to inconsistent findings of the characteristic-effectiveness relationship. Our meta-analysis of 84 board process studies is the first explicit examination of this assumption. Using one-stage meta-analytic structural equation modeling, we show that board processes are not per se the missing link that explains why characteristics impact effectiveness. Instead, on a bivariate level, most characteristics are only weakly or not at all related to board processes whereas board processes strongly relate to board effectiveness. Path model results show that board processes independently influence board effectiveness and that board processes only mediate the effect of board capital on board effectiveness.

Paper is Available to Meeting Registrants Only.

STR: When Does Chair-CEO Separation Work? The Influence of Formal and Informal Forces in the Dyad 

Author: **Jinyu He**, *China Europe International Business School (CEIBS)*

Author: **Yan Ling**, *Oakland U.*

Author: **Xinhao QIAO**, *Hong Kong U. of Science and Technology*

Author: **Wei Guo**, *China Europe International Business School (CEIBS)*

This study intends to examine the conditions under which firms that separate chair and CEO roles can really benefit from this governance practice and achieve higher firm performance. We reason that to help the chair to navigate his or her official domain and the CEO to better understand what to expect when working with the chair, it is necessary for the firm to articulate and institutionalize chair's authority through formal channels. Accordingly, we predict that in a firm with chair-CEO separation, formalization of chair's authority is positively related to firm performance. Meanwhile, we argue that the performance effect of this formal force is subject to the influence of informal force between chair and CEO. Particularly, we expect chair-CEO demographic similarity to strengthen the performance effect of formalization of chair's authority and chair-CEO achievement similarity to weaken it. Data from an unbalanced panel of 285 S&P 500 companies with 1884 observations from 2010 to 2019 supports our hypotheses. The results indicate that chair-CEO separation is a more nuanced phenomenon than the extant literature would suggest.

Paper is NOT Available. Please contact the author(s).

STR: Opening The Black Box Between Board Characteristics And Firm Performance: A Meta-Analysis Study 

Author: **Dinesh Hasija**, *Augusta U.*

Author: **Aten Zaandam**, *Kent State U.*

Author: **Tatiana Romanova Stettler**, *Kent State U.*

Author: **Alan E Ellstrand**, *U. of Arkansas*

Author: **Orhun Guldiken**, *Florida International U.*

Decades of corporate governance research have explored the relationship between board characteristics and firm financial performance; yet, empirical findings are either weak or contradictory. To address this, our study investigates how the board of directors in general and board characteristics in particular, influence firm financial performance by examining the mediating mechanisms in this relationship. Using meta-analytic structural equation modeling (MASEM) and drawing from 139 primary studies (N=45,889), this study theorizes a process model to explain the relationship between board characteristics and firm financial performance. We find no significant direct relationship between board characteristics and firm performance. Instead, we find this relationship to be serially mediated by the enactment of board roles (monitoring and resource provision) and the alignment of managerial risk profiles with shareholder interests. These findings help reconcile the age-old debate between agency and resource dependence theorists, by examining the comparative and complementary performance implications of board monitoring and resource provision.

Diversity in Corporate Governance

Session Moderator: **Seung-Hwan Jeong**, *U. of Georgia*

STR: Do She-EOs Still Experience Gender Bias? Examination of Market Reactions to Female CEO Appointments 

Author: **Kalin D. Kolev**, *Marquette U.*

Author: **Junghyun Mah**, *Michigan State U.*

Author: **Gerry M. McNamara**, *Michigan State U.*

We conduct replication and extension of Lee and James (2007) study on market reactions to female CEO appointments. Utilizing the same time period (1990-2000), we replicate the findings of market bias against female CEOs. We then extend the replication to a broader and more recent time period (2000-2019) and find evidence of a negative market reaction to female CEO appointments. Yet, this bias disappears in more recent years suggesting that temporal context serves as an important contingency affecting how investors view female CEO appointments.

Paper is Available to Meeting Registrants Only.

STR: How do Investors Really React to the Appointment of Black CEOs?  

Author: **Seung-Hwan Jeong**, *U. of Georgia*

Author: **Ann Mooney Murphy**, *Stevens Institute of Technology*

Author: **Yangyang Zhang**, *Stevens Institute of Technology*

Author: **Timothy J. Quigley**, *U. of Georgia*

A recently published study found that markets react negatively to the appointment of Black CEOs, with an average cumulative abnormal return of -4.21%. The authors argue this is caused by investors invoking racial biases and stereotypes. In contrast, using a comparable sampling period and analytic approach, we find markets react positively to the appointment of Black CEOs with an average abnormal return of +3.1% (or +2.0% after conservatively addressing outliers). Our results are consistent across several alternative analyses, sample adjustments, and robustness tests. We argue racial biases and stereotypes in markets are outweighed by investor appreciation for the higher bar for advancement that Black CEOs face and the exceptional attributes they must exhibit as a result. To conclude, we discuss implications of our findings.

Paper is Available to Meeting Registrants Only.

STR: Bringing in a Neutral Party: Demographic Faultlines and the Appointment of an Outsider Board Chair   

Author: **Rob Langan**, *U. of Geneva*

Author: **Ryan Adam Krause**, *Texas Christian U.*

Author: **Markus Menz**, *U. of Geneva*

Sociopolitical models of board governance posit that directors split into factions, often along demographic lines, potentially increasing conflict that hurts the board's functioning. Yet little knowledge exists about how boards adapt their composition or leadership to reduce conflict. In this study, we develop theory to propose that boards with strong demographic faultlines between factions will seek a compromise by appointing an outsider board chair. We further argue that the strength of this relationship depends on the likelihood of conflict across faultlines, the availability of an alternative impartial leader on the board, and the salience of pressures from outside the board. Analyses on a sample of 1,345 non-CEO board chair appointments at S&P 1500 firms between the years 2003 and 2017 support our hypotheses.

STR: Information and the Gender Gap in the Market for Top Managers: Evidence from a Quasi-Experiment 

Author: **Ulya Tsolmon**, *Washington U. in St. Louis*

This study examines the role of information on the gender gap in the executive labor market from the market frictions perspective. We examine whether increases in objective and reliable information about managerial quality improve the promotion rates of women managers. To obtain exogenous variation in the availability of information, we exploit a natural experiment provided by the adoption of the International Financial Reporting Standards (IFRS) in 2005 by the European Union countries. Consistent with statistical discrimination theory, we find that when performance information is more available and reliable, the promotion rates of women executives almost double. These increases are driven by both internal and external promotions. However, the gains in advancement rates are dampened in regions where societal views on women in the workplace are less favorable. This study rectifies the data and empirical challenges in identifying sources of discrimination in the executive labor market and offers implications for theory development and firm policy.

Corporate Diversification and Integration Strategies

Session Moderator: **Sam Arts, KU Leuven**

STR: Related Product Diversification and Firm Performance: The Role of Brand Equity

Author: **Nan Zhou, Tongji U.**
Author: **Xingyao Ren, Nankai U.**

This study integrates the supply- and demand-side perspectives to explore the impact of brand equity on the relationship between related product diversification and firm performance. Although brand equity is a valuable resource which could create competitive advantages for firms, it could hinder the benefits of related product diversification if a focal firm's brand equity in its existing product is strong, or rival firms' brand equity in its new product is strong. Both would prevent customers from establishing a new association between a focal firm and its new product in customers' minds, and thus influence their intention to buy the new product and dampen the potential benefits of related product diversification. Particularly, we perform complementary studies with different methods (secondary data analysis of 183 listed firms in China from 2004 to 2019 and lab experiments). We reveal that brand equity of a focal firm in its existing product and that of rival firms in its new product attenuate the relationship between related product diversification and firm performance.

STR: Technology Differentiation, Product Market Rivalry and M&A Transactions

Author: **Sam Arts, KU Leuven**
Author: **Bruno Cassiman, KU Leuven**
Author: **Jianan Hou, KU Leuven**

Prior work has mostly studied the relation between product market competition and M&A deals. In this paper, we study how competition and differentiation in technology space relates to M&A transactions. Relying on a new text-based method to map each firm's competitive position in technology space and to measure the differentiation of a firm's technology portfolio relative to all other firms, we find that firms with unique and differentiated technology are typical targets while firms with less differentiated technology are more likely to become acquirers. Moreover, firms with unique technology are particularly targeted by close competitors in the product market and receive a higher acquisition price, particularly in case of M&As with close product market firms. Our findings illustrate that a unique and differentiated technology portfolio is an important resource traded in the market for corporate control and a key driver of M&A deals, particularly between close competitors in the product market.

STR: Vertical Integration and Downstream Resource Allocation: An Empirical Study in the Movie Industry

Author: **Yu XIA, U. of Hong Kong**
Author: **Hailiang Chen, U. of Hong Kong**

How does vertical integration affect resource allocation and economic efficiency in downstream channels? By analyzing a fine-grained screen-level panel dataset of 78 domestic movies shown in 47 theater chains in China, this study examines the impact of vertical integration on the screen allocation of theater chains. We find that vertical integration between movie producers or distributors and theater chains results in preferential screen allocation. Although there is no significant difference in the share of overall screens, theater chains allocate more large-sized and less small-sized screens to their integrated movies than nonintegrated movies. Furthermore, the impact of vertical integration on screen allocation is conditional on movie popularity. Specifically, only popular integrated movies gain preferential resource allocation, and unpopular integrated movies get even fewer screens. Our investigation on the economic efficiency of resource allocation shows that, for each seat of the screening room, integrated movies generate lower box office revenues than nonintegrated movies. Our findings suggest that vertical integration brings benefits of preferential resource allocation for upstream suppliers but leads to resource underutilization for downstream firms.

STR: Firm Quality and Acquisition Performance

Author: **Fan Xia, Rennes School of Business**
Author: **Gordon Walker, Southern Methodist U.**

Firm Quality and Acquisition Performance Abstract In this paper we study the operating performance of acquisitions where the buyer and target are in the same industry. Arguing from the resource-based view and other theories of heterogeneity among firms in an industry and year, we partition acquirers and targets according to their quality, which denotes their degree of valuable idiosyncratic capabilities relative to each other. We define four types of deal: Low-High, High, High-Low and Low-Low, consistent with a wide body of research in finance and strategy. Drawing on the extant literature on resource transfer in horizontal deals, we argue that in some types of acquisition, integration costs may overwhelm the benefits from transferring quality between the acquirer and target and test five hypotheses to examine the implications of this argument. Using a differences-in-differences design with propensity score matching over twenty-six years of data on U.S. public firms, we show that contrary to much research without a control group, the most profitable type of acquisition is Low-High, with High-High second. This finding potentially conflicts with the large literature on synergy. Issues of generalizability and implications for management are discussed.

Author: **Miriam Zschoche**, *U. of Erfurt*

Prior research remains divided whether social approval assets are a benefit or burden when external observers make sense of firm behavior. By drawing on expectancy violation theory in the context of announcements of different types of restructuring decisions (i.e., downsizing and upsizing), we examine the conditions under which high and low social approval assets provide a benefit and burden. We do so by assessing the corresponding media coverage about these decisions. Our results of all restructuring announcements of firms in Germany between 2006 – 2019 suggest the following: high social approval firms face a burden in negatively perceived situations (i.e., downsizing announcements), whereas low social approval firms enjoy a buffer as media coverage is not as negative. In contrast, in positive situations (i.e., upsizing announcements), high social approval is of benefit as it translates into more favorable media coverage, whereas low social approval is a burden. The results of this study contribute to the discussion about the equivocal effects of social approval assets on external observers sensemaking. Our theorizing and empirical results explain in which situations, high or low social approval can be beneficial and burdensome for the same organization. Specifically, the context in which a high or low social approval actors are evaluated by external observers helps explain which mechanisms is more dominant.

Innovation, Incentives and Top Management

Session Moderator: **Umair Khan**, *U. of Neuchatel*

STR: General Managerial Skills and Organizational Ambidexterity

Author: **Umair Khan**, *U. of Neuchatel*

Using insights from Upper Echelon Theory and human capital literature, the study establishes a link between the general managerial skills and organizational ambidexterity. I theorize that executives with higher general managerial skills gathered over their life time work experience have an inverted U-shaped relationship with organizational ambidexterity. Using a sample of firms from Drugs and Medical Device industries from 1993-2003, I find the support of the hypothesis. I find that general managerial skills positively moderate the relationship between organizational ambidexterity and firm performance. The results contribute to our understanding of antecedents of organizational ambidexterity as well as to the Upper Echelon Theory.

STR: CEO and TMT Incentives and Organizational Ambidexterity

Author: **Djordje Zivkovic**, *U. of Liechtenstein*

Author: **Alexander Zimmermann**, *U. of Liechtenstein*

Author: **Susan Anne Hill**, *Bayes Business School (formerly Cass)*

We study the effects of senior executives' incentive systems on firms' abilities to exploit and explore simultaneously (i.e., to become ambidextrous). Perhaps surprisingly, given the importance and attention accorded to the role of executives in shaping organizational ambidexterity, CEO and TMT incentives have received scant consideration to date in this literature. Based on archival data and computer-aided textual analysis (CATA) of company filings from 176 manufacturing companies between the years 2006 and 2018, we find that firms headed by CEOs receiving lower performance-based pay demonstrate higher rates of ambidexterity. However, this effect is weaker for female than for male CEOs. Furthermore, we provide evidence that the overall configuration of CEO and TMT pay (and particularly the variance between their incentives) is important to understanding how executive compensation might enhance firm-level ambidexterity. By doing so, we contribute to the literature by (1) introducing incentives as a contextual antecedent of ambidexterity at the senior management level, (2) demonstrating that "inconsistent" senior team incentive systems (i.e., incentive heterogeneity between CEOs and TMTs) are associated with balanced strategic outcomes, and (3) showing that executive attributes and incentives act in tandem to influence strategic decisions.

STR: The Symbolic Effect of Granting Employee Stock Options to R&D Professionals

Author: **Jingyu Li**, *Chinese U. of Hong Kong*

Author: **Wan Cheng**, *Shanghai Jiao Tong U.*

Author: **Daphne Yiu**, *U. of Oklahoma*

While prior research primarily focused on the impacts of executives' stock options, we explore how granting stock options to R&D professionals may be an attention attractor that affects the firm innovation. Going beyond the agency view that stock options motivate innovation by aligning long-term benefits between employees and their companies, we propose that the frequency of granting stock options to R&D employees promote innovation by attracting their attention to innovation. The proportion of rewarded R&D employees weakens this relationship. In contrast, the proportion of industry peers that offer employee stock options to R&D professionals reinforces the relationship. We empirically tested our theory. We also compared our attentional perspective with the interest-based agency perspective on stock options and found consistent support.

STR: An Awareness-Motivation-Capability Perspective of Competitive Nonconformity 

Author: **Hai-Trung Nguyen**, *International U., Vietnam National U.-HCM*

Author: **Hao-Chieh Lin**, *National Sun Yat-Sen U.*

Author: **Yannick Turkier**, *FHNW School of Applied Psychology*

This study employs the Awareness-Motivation-Capability (AMC) perspective to explore the antecedents and consequences of competitive nonconformity, as perceived by a firm's top management team (TMT). Analytical results based on a two-stage sample collected from Taiwanese firms and analyzed by the Mplus approach show that a TMT's perception of its direct rivals' competitive inertia (awareness) exerts a negative effect on competitive nonconformity while organizational slack (capability) produces a positive effect. Moreover, environmental dynamism and munificence, respectively, positively moderates the effect of competitive nonconformity on firm performance. The study contributes to the field of competitive dynamics, or specifically the AMC perspective, by incorporating the institutional perspective to examine how TMTs' interpretations of their own and competitors' socio-psychodynamic processes affect a firm's deviant behaviors in the competitive contexts.

Using Incentives and Goal-setting to Achieve Strategic Objectives

Session Moderator: **Richard J. Arend**, *U. of Southern Maine*

STR: **The Costs of Ambiguity in Strategic Management Contexts** 

Author: **Richard J. Arend**, *U. of Southern Maine*

We contribute to the study of ambiguity by analyzing it how it can be handled in a rational, objective manner across the main strategic decision-making contexts that organizations face. Differentiating from previous managerial studies, we conduct the analysis apart from behavioral concerns, and illustrated by a robust-yet-simple decision problem. Significantly, the analysis sets a clear benchmark to use when assessing the impact of an ambiguity level of information against cases where more precise information is available. We identify the many costs of ambiguity, including direct absolute and relative maximums and indirect possibilities. We discuss the strategic managerial implications.

STR: **The Impact of Formal Incentives on Teams: Micro-Evidence from Retail**

Author: **Francisco Brahm**, *London Business School*

Author: **Marcos Singer**, *Pontificia U. Católica de Chile*

Author: **Antoine Feylessoufi**, *UCL School of Management*

While the impact of formal incentives on individuals is well understood, their impact on teams is less clear. A handful of field experiments document a small or null impact of incentives on teams. However, these studies do not contrast their results with the impact of incentives on individuals, and thus, cannot rule out the possibility that the null/small results on teams are due to incentives being ineffective on individuals to begin with (for example, due to organizational culture). In this paper we perform a full comparison: we estimate the impact of incentives both on individuals and on teams, within the same setting. Concurring with the extant literature, we observe that incentives on individuals generate approximately a 20% productivity increase, but that such a gain disappears in teams. Exploiting the details of our setting, and guided by a formal model, we show that this is not because incentives do not work in teams, but because teams in our setting do not need them. This is because: i) effort complementarities strongly counteract free-riding in teams (so incentives do work), and ii) teams without incentives display larger social incentives than teams with them (and this asymmetry is large enough so that teams without incentives catch-up with those with incentives). We conclude that, under plausible conditions, having only an estimate of the impact of incentives on teams, without having an estimate for individuals, one cannot say much about the presence and magnitude of the generic mechanisms of free-riding, effort complementarity and social incentives.

STR: **Goal-setting in Organizations** 

Author: **Stephan Billinger**, *U. of Southern Denmark*

Author: **Michael Christensen**, *U. of Southern Denmark*

Author: **Thorbjørn Knudsen**, *Frankfurt School of Finance & Management gGMBH*

Goal-setting can be a powerful driver of performance and many hierarchical organizations rely on it to improve organizational performance. When tasks and task-interdependencies are well-understood, goals can facilitate coordination as much as motivation. In contrast, when tasks are not well-understood and involve non-trivial interdependencies – as typically observed in complex or changing business environments – it is rarely possible to assign goals in a way that avoids some level of goal-conflict. While specific and ambitious goals may still motivate individuals, the same goals are likely to create conflict among organizational members. We employ a series of computational simulations to analyze how organizations should set individual-level goals and define an organizational goal structure that supports the pursuit of these goals. Specifically, we show that the joint choice of goal distribution (how many goals, specific or vague) and goal priority (whose goals are most important) in combination with the choice of goal structure (in terms of breadth and depth) results in an efficiency frontier. Different choices become optimal depending on the need to balance the quality of the outcome and the effort spent obtaining it. The results have significant implications for organization designers and the management of organizations.

 STR: **Towards a Process Theory of Digital Transformation through Mixed Ownership Reform**  

Author: **Bin Zhang**, *Beijing U. of Posts and Telecommunications*

Author: **Jiacong Li**, *Beijing U. of Posts and Telecommunications*

Author: **Tazeeb Rajwani**, *U. of Surrey*

Various privatization modes were designed to improve the efficiency of state-owned enterprises (SOEs) by overcoming resource and routine rigidity. Mixed ownership in China, for example, is regarded not only as a reform for improving SOEs' efficiency, but also as an opportunity for digital transformation (DT) in this digital era. However, the potential link between ownership and DT is neglected in the existing literature. We draw on a six-year qualitative study of the dynamic process of achieving DT through mixed ownership reform. It shows that desire alignment plays a great role in promoting DT, as well as resource synergy and governance improvement. Our findings show that there are three interactive relationships among desire, resource and governance according to the different phases for DT, which is defined as desire-pushed, resource-led and governance-inspired transformation in this paper. We conclude these findings together into a tripod helix model of desire-resource-governance that contributes to the DT literature by integrating the interactions among desire, resource and governance as a dynamic process of DT.

Panelist: **Ryan L. Raffaelli**, *Harvard Business School*

Panelist: **Mary Tripsas**, *U. of California, Santa Barbara*

Panelist: **Timo Olavi Vuori**, *Aalto U.*

Current technological and societal changes often require incumbents to consider their strategic identity and embark on a process of transformation. The purpose of this panel is to stimulate a conversation around different ways in which managerial agency across different hierarchical levels has been theorized in the context of organizational transformation. We will address different cognitive, behavioral, organizational, and cultural aspects that enable or constrain managerial actions during strategic transformation. This panel symposium will bring together scholars working in this area to reflect on the current state of research into strategic transformation with the intention to: (a) develop a common future research agenda, and (b) generate new conversations on the role of managers during transformation processes.

Presenter: **Axel Zeijen**, *ETH Zürich*

This symposium features five research papers that explore nonlinear evolutionary trajectories of new industries. Studies of industry emergence often describe the temporal progression of a potential industry, in terms of linear stages of industry incubation, pre-firm takeoff, and pre-sales takeoff. Although these linear and stylized patterns shed light on how technology pioneers and entrepreneurial leaders shape new industries, not all industries exhibit a smooth progression toward commercial viability. Using detailed historical and quantitative data across different empirical contexts, the five papers in this symposium investigate the causes, processes, and consequences of nonlinear patterns in industry emergence. Together, they highlight the strategic importance of studying the complexities and setbacks masked behind smooth trajectories.

Corporate Underground: Bootleg Innovation, and Creative and Constructive Deviance *Corporate Underground Projects*

Organizer: **Anika Stephan**, *HEG School of Management Fribourg / HES-SO // U. of Applied Sciences Wes*
Participant: **Philipp Bubenzer**, *HES-SO / ETH Zurich*
Participant: **Charalampos Mainemelis**, *ALBA Graduate Business School*
Participant: **Peter Augsdorfer**, *TH Ingolstadt*
Organizer: **Evy Sakellariou**, *Kingston Business School*
Organizer: **Dietfried Globocnik**, *Alpen-Adria U. Klagenfurt, Austria*

This PDW sheds light on a relatively under-researched and underrepresented research topic within the broad field of innovation and technology management. The objective is to increase our understanding about the corporate underground with particular focus on R&D and general innovation activities. Employees often have to escape into the organizational underground, which is called bootlegging or creative deviance. It is defined as a non-formalized and non-declared bottom-up innovation process for the benefit of the bootlegger's firm. It violates - deliberately or not - corporate norms (Augsdorfer, 2021). It is a kind of constructive deviant behavior (Galperin, 2003) but for the benefit of the organization (Stephan and Bubenzer, 2021). Underground activities have no formal support and are otherwise rejected by the leadership of the organization or decided to start in the underground before showing to senior management. However, underground projects have the potential to bridge the link between individual creativity and formal innovation. To handle individual creativity within the company, management can accept this form of covert R&D as a source for new innovations and to give actively creative people an outlet. This imposes a certain legitimacy of the underground and reflect a new product creation process (Stephan and Bubenzer, 2019). It reflects a basic axiom of the evolutionary perspective: change and creativity are reliant upon elements of redundancy, waste and inefficiency. Based on different short presentations/keynotes by the organizers of the PDW we will invite different papers for presentation before and in the roundtables. In the roundtables we will focus on different contexts, methods and approaches about the underground: covert projects, bootlegging, creative and constructive deviance, unsponsored activities and unconventional methods of innovation. After the presentations the experts will discuss the different papers with a Q&A session. This will give the participants the opportunity to explore their research ideas in a dialectic process. In a final discussion, an expert will share her thoughts, reactions and concerns as well as suggestions for methodological and theoretical progress and fit in the current TIM literature.

Lean Startups and Innovation Strategy: Building a Research Agenda

Lean Startups and Innovation Strategy

Organizer: **David R. Clough**, *Sauder School of Business, U. of British Columbia*
Organizer: **Sourobh Ghosh**, *Harvard Business School*
Organizer: **Andy Wu**, *Harvard Business School*
Presenter: **Charles Eric Eesley**, *Stanford School of Engineering*
Presenter: **J.P. Eggers**, *New York U.*
Presenter: **Daniel Walter Efenbein**, *Washington U. in St. Louis*
Presenter: **Emily Cox-Pahnke**, *U. of Washington*
Presenter: **Chiara Spina**, *INSEAD*
Presenter: **Noam Wasserman**, *Yeshiva U.*

In the decade since ‘The Lean Startup’ was published, the method outlined in this book has been widely adopted by entrepreneurs and the principles it embodies have guided many new venture launches and product innovations. Established corporations have attempted to adopt these practices for their in-house innovation efforts with varying levels of success. This has prompted a surge in academic interest in the Lean Startup and associated methodology. While some underlying principles of the Lean Startup method are present in established streams of literature, a flourishing body of research has emerged to address remaining gaps between theory and the practices inspired by the Lean Startup method. Thus, we ask: What new research questions does the Lean Startup movement open up? In the seventh iteration of this highly popular workshop, we continue our discussion of these issues by assembling a panel of leading scholars who will share their current work and their perspectives on interesting directions for future research.

Panelist: **Florenta Teodoridis**, *California Southern U.*

Management scholars have used scientific publications to investigate a broad range of topics, including the production and management of knowledge, university-industry linkages, and firms' R&D strategies. The emergence of new data sources and recent methodological advances represent both exciting research opportunities and challenges. The workshop's main objective is to provide an introduction to the use of scientific publication data to tackle existing and open research questions. Experts in the field will present data sources, discuss state-of-the-art methodologies, and review applications to research. The workshop also intends to promote a forum and foster a community of scholars to discuss best practices and share data, software, and methods.

It is the nature of human beings to think about the future. We know that new approaches - ones that do not start linearly from today to design tomorrow - are needed to create better futures when the problems to be solved are “wicked” (Buchanan, 1992; Rittel and Webber, 1973) and the challenges are “grand” (Ferraro, Etzion and Gehman, 2015). This year’s All-Academy theme “Creating a Better World Together” puts a spotlight on our responsibilities and opportunities as academics to contribute to and enrich these essential organizational discussions. Multiple scholars have argued that we have failed to meet our obligations here. Gümüşay and Reinecke (2021) challenge the academic community to support the management of uncertain futures by stressing the role of research in which “acts of (disciplined) imagination become input for theory-building.” Garud, Gehman and Tharchen (2018) in their work on Performativity, argue for a role for scholars as “embedded-embodied actors” who participate in crafting more desirable futures, rather than adopting a normative perspective. But as we attempt to do so as academics, are we each reenacting the dilemma of the blind men and the elephant, seeing only through our own scholarly perspectives? Where are the unseen intersections and missed opportunities that result? This PDW aims to explore these interstitial spaces and accelerate future-focused research across disciplines. In this PDW, we plan to accomplish this by bringing together a collection of scholars, each well-recognized in their own field, to share their perspectives, with a goal to identify collectively opportunities to work together across disciplines to meet the challenge of creating a better world.

**Pop-Quiz with a Twist: Boosting Student Learning and Engagement
with Enhanced Two-Stage Quizzes**
Pop-Quiz with a Twist

Facilitator: **Uthpala Senarathne Tennakoon**, *Mount Royal U.*

Pop quizzes are a strategic tool commonly used to keep students connected to the class and the content. Traditional pop quizzes, even with their known advantages, still add to student anxiety levels, and can promote cram, test, and dump approach. This session introduces Pop-quiz with a twist (PQT), an enhanced pop-quiz design which has shown to boost student learning and engagement, while addressing some of the drawbacks of traditional form. PQT is designed as a two-stage assessment with immediate feedback and discussion, combined with student grading. The approach has been implemented in multiple content-heavy business courses over several semesters as low-stake in-class quizzes. This hybrid session, with both in-person and online audiences, is designed as three-part workshop to (i) enables participants to learn about this enhanced technique for pop quizzes, (ii) see empirical evidence regarding the effectiveness of the approach, and (iii) have an opportunity to experience the implementation during the session both an in-person and online classroom setting. Considering that pop-quizzes are a common tool used in undergraduate assessment, understanding the effectiveness of an easily implementable enhanced pop-quiz approach could have widespread benefit across multiple disciplines.

**Resources for Self-Assessment and Development of
Learning Routines and Resilience**
Learning Routines and Resilience in the Classroom

Presenter: **D Christopher Kayes**, *George Washington U.*
Participant: **Jing Tian**, *George Washington U.*
Participant: **Phil Wirtz**, *George Washington U.*

This session introduces participants to five factor concept of learning routines, defined as factors that support the initiation, sustaining, and increased effort towards learning. Learning routines were identified from a multi-disciplinary literature review of antecedents of learning and include: positive emotional engagement, creative problem solving, learning identity, flexibility, and social support. Participants will complete a self-report questionnaire that identifies the intensity of these five factors in two distinct learning situations: when frustrated with learning and when making progress towards learning. The session has four parts. In part 1, participants will complete a an online survey through laptops and smartphones and review their scores. In part 2, participants will compare their scores on the five factors under each condition, looking for situations where the intensity of the scores were higher under one condition versus the other. In part 3, participants will generate ideas for strategies to help them sustain learning routines when frustrated. In part 4, participants will learn how to replicate the exercise in their classroom. Participants will have unlimited access to the online questionnaire for a period of 1 year after the session to use with their students. Resources such as a digital workbook, short descriptive videos for students, and a slide presentation will also be made available to participants for future application in classrooms.

Bringing Your Whole Self to an Academic or Institutional Research Practice- Exploring the Framework and Findings of an Inclusive Research Curriculum Pilot Program

Bringing Your Whole Self to Your Research Praxis

Participant: **Ginger Grant**, *Humber College Institute of Technology and Advanced Learning*

Participant: **Sharon McIntyre**, *Humber College Institute of Technology and Advanced Learning*

Session Chair: **Tracey L. Rockett-Hanft**, *Texas Christian U.*

Growing a teaching-oriented college’s research culture presents both challenges and opportunities. Challenges include shifting institutional and personal preconceptions of who and what can be included in an “official” research program. Opportunities include designing innovative learning programs to engage non-traditional and emergent researchers in developing meaningful and viable research practices. For research and innovation learners, developing self-awareness is critical. Studies have pointed to a lack of self-awareness as a hindrance for students, recent grads, and emerging researchers when they attempt to design and build useful research and innovation projects; develop formal research practices; and/or optimize helpful community relationships to support their initiatives. Inspired by elements of existing graduate-level programs, self-awareness models, and insights on related undergraduate program challenges, this one-year pilot of an innovative research curriculum design engaged a purposive sample of recent graduates, employees, and faculty. Pilot results will be shared. Conference participants will experience interactive activities from the program. Handouts and resources will be shared.

**Curriculum Design of an Inter-disciplinary Hands-on
Social Innovation Program**
Social Innovation Program Design

Participant: **Mona Itani**, *American U. of Beirut*

Session Chair: **Ankit Agarwal**, *U. of Adelaide*

High schools and universities are continuously striving to bridge the skills gap between education and the needs of 21st-century jobs by providing progressive and innovative practice-based programs for their students. Based on several years' experience in designing and delivering social innovation programs, this session will guide innovation and entrepreneurship teachers through a step-by-step process to deliver a unique community and tech-based entrepreneurship program that was repeatedly proven to be effective. The program design lies on the three pillars of community engagement, technology, and entrepreneurship. The approach utilizes project-based, team-based, and hands-on learning through one holistic program design that groups interdisciplinary students in the same project. In a nutshell, students create a technology-based solution to a social or environmental problem in their community and apply entrepreneurship concepts to make it a sustainable social enterprise. Utilized frameworks include the UN 2030 agenda, the design thinking framework, and the lean startup methodology. By the end of the program, students pitch their solutions in a social entrepreneurship competition which boosts motivation. Gained skills throughout the program include design thinking, opportunity recognition, empathy, technology development, market research, prototyping and testing, community engagement, teamwork, entrepreneurship, thinking out of the box, and pitching among others.

How To Make Social And Not-For-Profit Topics And Projects Relevant To Business School Students

Social And Not-For-Profit Topics And Projects

Presenter: **Katarzyna Bachnik**, *Hult International Business School*

Presenter: **Tessa Misiaszek**, *Hult International Business School*

Session Chair: **Carrie A. Bulger**, *Quinnipiac U.*

The session promotes the idea of integrating social considerations, whether it be to apply business practices in non-profit management or considering a mission-driven business purpose within a management/marketing course, by adopting a more interactive and applied approach. We want to discuss various technology-enabled formats that help to raise interest among students and promote their buy-in. The relevance of the session results from the latest developments in education systems, that have put an emphasis on sustainability, as well as diversity, equity and inclusion (DEI), requiring professors to include these topics into the course curricula.

Participant: **Janis Wardrop**, *UNSW Business School, Australia*
Participant: **Nibu John Thomas**, *IIT Madras*
Participant: **Rupashree Baral**, *IIT Madras*
Session Chair: **Charleata Battle**, *California State U., Los Angeles*

In the first part of the session, an international group of management educators will share their experiences on the challenges they faced during the pandemic: what worked, what did not work and what had to be changed during the rapid shift to online synchronous and asynchronous teaching during the lockdowns. The authors of the three papers focus on sharing the novel means they developed to maintain and enhance student engagement when teaching moved to synchronous and asynchronous spaces. These include building student communities to maintain social learning, creating novel ways to assess students in an online learning environment (e.g., tic-tac-toe and collective mural) and the use of Gamification principles to create flow experiences during learning. In the second part, audience will break into small groups, with authors joining these groups, which will discuss audience members’ experiences and how the lessons learned in the session can be applied to members’ various learning environments. It is hoped that this co-creation will encourage a diversity of thoughts from a global audience and that we can learn from each other’s shared experiences.

IM Division Thought Leadership Cafe on the Ukrainian Crisis *IM Division Thought Leadership Cafe*

Organizer: **Grazia D. Santangelo**, *Copenhagen Business School*
Session Chair: **Alexander Settles**, *U. of Florida*
Speaker: **Valentina V. Kuskova**, *NRU Higher School of Economics*
Panelist: **Juha Väätänen**, *LUT U., School of Business and Management*
Panelist: **Taras Danko**, *National Technical U. Kharkiv Polytechnic Institute*

In this session, we will explore the impact on the geopolitical framework and international business environment of the Russian “Special Military Operation” in Ukraine. Is this the end of Globalization and a return to a period of interstate military conflict? The February 2022 invasion was further widening and deepening of the conflict between Russia and Ukraine that started in 2014 with the invasion and annexation of Crimea. Economic sanctions, international agreements, and official warnings were not enough to deter Russia. This crisis also has its roots in the rise of nationalism and the development of state capitalism.

Internationalization and Performance

Session Moderator: **Yunok Cho**, *Southern Methodist U.*

IM: How Saying Goodbye to a Foreign Owner Affects Performance for Divested Affiliates?

Author: **Yunok Cho**, *Southern Methodist U.*

I investigate the consequences of foreign divestment for divested affiliates sold to local firms. Extending the insights from the literature on MNE firm-specific advantages and the liability of foreignness, I identify the circumstances that affect post-divestment performance for divested affiliates. Using data of foreign affiliates in Korea, I combine the difference-in-differences approach with propensity-score matching to create an appropriate control group of ongoing foreign affiliates. The results show that, while the overall effect of foreign divestment is not entirely clear, well-performing foreign affiliates are more likely to experience performance degradation with the termination of foreign ownership than poorly-performing foreign affiliates. This relationship, however, is negatively moderated by a characteristic of new local owners, business group affiliation. I also find foreign affiliates with sister affiliates owned by the same MNE in a given host country are less likely to experience performance degradation than sole affiliates. The findings imply that well-established theories of foreign direct investment may provide a theoretical basis to explain the consequences of foreign divestment, and that the role of local firms should not be overlooked in such research.

IM: Global Multi-Teaming: A Theoretical Model of its Effects on Team Performance

Author: **Tuuli Hakkarainen**, *U. of Liverpool Management School*

Author: **Niina Nurmi**, *Aalto U. School of Business*

Author: **Kristiina Makela**, *Aalto U.*

Global multi-teaming—participating in multiple globally distributed team collaborations concurrently—is ubiquitous in MNCs, but little is known about its effects on team performance. This study integrates the previous literature on global teams and multi-teaming to conceptualize global multi-teaming as a team compositional feature and proposes its effects on team performance. Our model describes how different aspects of global multi-teaming may decrease team performance by complicating the creation of shared understanding in the team. We also suggest that the negative effects of global multi-teaming may be mitigated by members’ prior global multi-teaming experience. This study extends the literatures of global teams and multi-teaming by introducing the notion of global multi-teaming and explaining its effects on team performance.

IM: Re-examining the Relationship between Internationalization and MNEs’ Performance with CSR

Author: **Yu-Ching Chiao**, *National Chung Hsing U.*

Author: **Yu-Chen Chang**, *National Chung Hsing U.*

Author: **CHUN-CHIEN LIN**, *National Chin-Yi U. of Technology, Taiwan*

Author: **Tang-Shun Chuang**, *Department of Business Administration National Chung Hsing U.*

Author: **Wen-Hao Yang**, *National Chung Hsing U.*

This study explores the effect of internationalization and corporate social responsibility (CSR) on firm performance by drawing on the stakeholder and resource-based theory perspectives. We took organizational slack and long-term orientation as moderating variables. We conducted multivariate analysis on a sample of award-winning corporates of excellence on CSR held by the Commonwealth Magazine and Taiwan Economic Journal (TEJ) data bank with 364 observations between 2015 and 2019. Our empirical findings indicate the following: (1) the degree of internationalization influences firm performance through CSR; (2) organizational slack enhances the positive relationship between the degree of internationalization and CSR; and (3) long-term orientation will enhance the positive relationship between the degree of internationalization and CSR.

IM: Corporate Social Responsibility and Performance Relationships in Advanced and Emerging Countries

Author: **Saptarshi Purkayastha**, *Indian Institute of Management, Calcutta*

Author: **Kannan Ramaswamy**, *Thunderbird School of Global Management at ASU*

The responsibility of business in society in general and whether corporate social responsibility (CSR) pays off, in particular, have generated a lively, ongoing debate. We suggest one solution to the debate by building on the theory of shared value creation. We argue that although CSR supports performance, the effect of the components of CSR (environmental, governance, and social) on performance varies in advanced and emerging countries because each of the CSR components addresses different infrastructure challenges in the context. Specifically, we argue that in advanced economies, environmental CSR has the highest impact on performance, followed by governance CSR, and then social CSR. In contrast, in emerging markets, social CSR has the highest impact on performance, followed by governance CSR, and lastly, environmental CSR. We illustrate the argument by comparing the CSR-performance relations in large advanced (USA, Germany) and emerging economies (China, India).

Leaderships and Political Ideology in IB

Session Moderator: **Grigorios Livanis**, *Ohio U.*

IM: Evolving National and Institutional Leadership in International Business Research   

Author: **Grigorios Livanis**, *Ohio U.*
Author: **J Michael Geringer**, *Ohio U.*

This study employs an in-depth, time-series analysis of the evolution of IB research over a 45-year period, 1976-2020, to examine trends in institutional and national productivity globally. Despite declines in overall dominance of U.S. authors and institutions, the extent varies by type of journal and U.S. impact remains profound through Ph.D. training and collaboration. A typology of business strategies is identified by which non-U.S. institutions have enhanced their global rankings in publication of IB research.

IM: Political Ideology in Internationalization Research and International Business 

Author: **Anran Li**, *NEOMA Business School*
Author: **Paresha N. Sinha**, *U. of Waikato*

For nearly fifty-years, international business (IB) research has long acknowledged the role of managerial characteristics as a driver of multinational success. Yet existing perspectives in this research stream has remained fairly limited, casting Multinational Corporation (MNC) managers' perceptions, demographic characteristics, and risk preferences as dominant and unique for guiding decisions. Largely absent is a consideration of the role of managers' values by which managers' decision-making process is driven – rendering prior literature incomplete for understanding the role of managers' values in the intensive and information-overloaded decision-making environment. Integrating different strands of literature on political ideology from strategy and political science fields with the firm internationalization research, the current paper illustrates the importance of managerial values by offering a theoretical model of how managers' political ideology plays out in influencing internationalization decisions situated at different stages, backed by set of propositions. It highlights the need for IB scholars to consider managers' value as a crucial predictor and systematically brings the notion of managers values into the IB space. The article concludes with drawing implications for future IB research.

IM: Leadership in the Arab World: Islamic Principles and Tribalism Traditions 

Author: **Zaid Alqhaiwi**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Timothy Colin Bednall**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Eva Kyndt**, *U. of Antwerp & Swinburne U. of Technology Melbourne*

ABSTRACT This paper aims to provide a deep understanding of leadership in the Arab World. It follows the leadership theory of which leadership prototypes varies systemically across cultures. This paper reviews the literature and unpacks the Islamic leadership principles and tribal Arab values that influence perception of ideal leadership. The paper also offers insights into which the Arabs traditions are inconsistent with Islamic teachings and discusses implications of these values for management practices.

Managing GVCs

Session Moderator: **Ari Van Assche**, *HEC Montreal*

IM: Recurrent Formation of Vertical R&D Alliances and Value Network Reconfiguration in Automotive GVCs  

Author: **Yoo Jung Ha**, *U. of Sheffield*

When a lead firm is undertaking business-model innovation, it invites selected upstream partners in its global value chain (GVC) to its R&D alliance network. We argue that the upstream partner’s network advantages determine its likelihood to join the lead firm’s R&D alliance. Our analysis, based on data about automotive GVC, shows that having current ties increase the likelihood of R&D alliance formation. It further increases when the current ties cover multiple knowledge domains. It is also found that the effect of current ties is positively moderated by the upstream partners’ national institutional distances from the lead firm, but is independent of external ties it has with rival GVCs. Our finding shows an upstream partner can maximise its network advantages as a broker of flows between technological and geographic boundaries.

IM: Building and Transforming to Achieve Social and Environmental Compliance in Global Value Chains

Author: **Luke Fiske**, *Smith School of Business, Queen's U.*

Author: **Anthony Goerzen**, *Queen's U.*

Author: **Ari Van Assche**, *HEC Montreal*

Multinational corporations (MNC) are under increasing pressure to improve social and environmental standards in their global value chains (GVC). “Cascading compliance,” the process by which MNCs distribute codes of conduct and request their suppliers to “cascade” those standards to their suppliers, has become the primary method of achieving improving compliance. Yet, even firms strongly motivated to improve compliance may be exposed to supplier compliance shortcomings, and we find that these MNCs have little guidance on how to improve their compliance systems. We build a dynamic capability framework to conceptualize higher-order routines MNCs need to orchestrate their GVC social and environmental compliance. We establish three key MNC roles—the internal prioritizer, external developer, and network transformer—that align with Teece’s (2007) concepts of sensor, seizer, and transformer, and we highlight four crucial capabilities associated with each role by drawing upon prior research in operations, sustainability, and supply chain management. Our framework has significant practical value for both scholars and managers as it delineates between levels of analysis as well as temporal considerations.

IM: When is Value Chain Strategy More Powerful?: GVC Management in the Korean Fashion Apparel Industry 

Author: **Jin-Ju Lee**, *Hitotsubashi U.*

Author: **Hyojung Kim**, *Sangmyung U.*

Our research hypothesized and empirically examined different types of GVC management strategies and the impact of those on the focal firm’s export performance. We collected data from 142 South Korean fashion apparel firms from 2006 to 2016, and conducted panel regression analysis. The two main effects of GVC management strategy – vertical integration and horizontal expansion of value chain – was found to be positively associated with the focal firm’s export performance. We found R&D investment to be negatively associated with the focal firm’s export performance. Results of the impact of two different combinations of strategies on the focal firm’s export performance demonstrated interesting contrast. On the one hand, vertical integration created a strategic trade-off, weakening the positive impact of horizontal expansion of the value chain on export performance. On the other hand, vertical integration created appropriable rents and weakened the negative impact of R&D investment on export performance.

Non-Market Strategies I

Session Moderator: **Nan Zhou**, *Tongji U.*

 **IM: Overcoming the Liability of Outsidership Through Different Partnerships**  

Author: **Nan Zhou**, *Tongji U.*

This study investigates how emerging-market multinationals (EMNEs) overcome the liability of outsidership (LOO). We first argue that the LOO that EMNEs face has two sources: the lack of access to a local network and the lack of access to their preferred position in the global network. We then propose that EMNEs suffer more from LOO than do developed-country multinationals (DMNEs). Next, we argue that allying with different types of partners helps EMNEs overcome different sources of the LOO. We test these arguments with a database consisting of mobile money services provided by EMNEs, DMNEs and local firms in 93 countries in 2001–2015, finding support for most of our hypotheses.

IM: Economic Distance, Legitimacy (in)Consistency, and MNEs' Disclosure of Foreign CSR at Home   

Author: **Du Yongzhi**, *School of Management, Northwestern Polytechnical U.*

Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Author: **Ming Jia**, *Northwestern Polytechnical U.*

Author: **Zhe Zhang**, *Xi'an Jiaotong U.*

Little is known about how the economic distance influences multinational enterprises' (MNEs) disclosure of foreign corporate social responsibility (CSR) at home. We provide a new mechanism of legitimacy (in)consistency to examine this neglected question. We argue that when home country is more developed than the host country, there is legitimacy consistency of MNEs' foreign CSR between home and host country, so that MNEs are more likely to disclose their CSR conducted in those host countries at home, and the opposite applies. We further propose that the MNEs' domestic CSR and Buddhist atmosphere around their headquarters may moderate the relationship between economic distance and the MNEs' disclosure of foreign CSR at home, because these two contingent factors may influence the (in)consistency of home country- and host country-stakeholders' perception on the legitimacy of MNEs' foreign CSR. Data on Chinese MNEs' foreign CSR disclosures from 2008 to 2018 largely supported our hypotheses. Our study contributes to the global strategy literature by developing a new framework of legitimacy (in)consistency to explain MNEs' disclosure of foreign CSR at home.

IM: Social License to Operate: Developing Stronger Social Activities at Home 

Author: **Marina Gama**, *FGV-EAESP*

Author: **Cyntia Vilasboas Calixto Casnici**, *U. of Leeds*

Author: **Mariana Bassi Suter**, *Toulouse Business School, TBS Education*

Author: **Maria Tereza Leme Fleury**, *Fundacao Getulio Vargas*

Author: **Maria Alejandra Gonzalez-Perez**, *U. EAFIT*

Non-market strategy is an area under current exploration in international business. Several studies focused on the political side of this theory, highlighting how important political connections can be for international expansion of emerging market multinationals (EMNEs). However, the social side is still requiring more attention, especially the role of philanthropy and the partnership with the third sector such as NGOs. In this study, we argue that multinational firms that had previously engaged with social activities will present a better performance in the short-term. We claim that social initiatives can be understood as a firm-specific advantage for EMNEs and it can help firms to overcome country-specific disadvantages from their home countries. Therefore, firms that developed familiarity with policymakers and social activities can be less affected by the institutional uncertainty than firms without such experience. In order to test our assumptions, we investigated Brazilian multinationals under the covid-19 pandemic crisis through panel data by analyzing 3,790 social initiatives. Our findings showed that social initiatives at home can lead to better performance, specially pressured by foreign investors.

IM: Managing Attribution: The Effects of Ethnic and Religious Diversity on Deal Completion (WITHDRAWN)

Author: **Tian Wei**, *Fudan U.*

Author: **Lei Shi**, *U. of international business studies*

Researchers have observed that diversity has conflicting effects on foreign investment. This study explores how a host country's ethnic and religious diversity influences its cross-border acquisition (CBA) deal completion. We propose that an announced CBA deal may be terminated not only because of new information released during the public takeover period but also its differential interpretation by deal stakeholders. We use attribution theory to confirm the negative effects of ethnic and religious diversity on CBA deal completion. Two social elements—political competition and media freedom—are observed to strengthen this negative attribution. Furthermore, we emphasize the positive moderating role of an internal factor—the acquirer's knowledge based on prior CBA experience and the employment of local advisors—in mitigating the negative effects of ethnic and religious diversity on CBA deal completion. Our study thus highlights the role that within-country diversity plays in acquisition outcomes, accounting for both the external environment (i.e., social situation) and internal factors (i.e., acquirer's knowledge) for a more nuanced understanding of the underlying causality of within-country diversity on foreign investment.

Policy and FDI

Session Moderator: **Abdul-Kadir Ameyaw**, *Saint Petersburg State U.*

IM: The Role of Intergovernmental Relations in Shaping Outward foreign Direct Investment from China   

Author: **Abdul-Kadir Ameyaw**, *Saint Petersburg State U.*
Author: **Shenglong Chen**, *Graduate School of Management Saint Petersburg State U.*
Author: **Andrei Panibratov**, *Graduate School of Management, St. Petersburg State U.*

Prior research on outward foreign direct investment (OFDI) has emphasized the role of factors such as market size and institutional quality in enhancing investment to a destination. However, the literature has not adequately considered how intergovernmental relations influence the decision to invest in a country. In this article, we explore the role of intergovernmental relations in Chinese OFDI decisions in the context of the “Belt and Road Initiative (BRI)”. We use emerging research on institutional and global political economy theories to address this prominent issue by examining Chinese OFDI to twelve countries. Based upon our qualitative analysis, we find that better intergovernmental relations reduce the negative impact resulting from competing institutional logics, enhance agglomeration economies and increase Chinese OFDI to different industries in a host country. This study contributes to the literature on the role of politics and non-market strategies in the internationalization of emerging market multinationals through amelioration of the institutional framework and global political economy perspectives.

IM: Global Trends in Policies Toward Foreign Direct Investment by State-Owned Enterprises   

Author: **Anastasia Ufimtseva**, *Beedie School of Business Simon Fraser U.*
Author: **Jing Li**, *Simon Fraser U.*
Author: **Daniel Shapiro**, *Simon Fraser U.*

Carolyn Dexter Award Nominee

The rapid internationalization of state-owned multinational enterprises (SOMNEs) in the last decades has been met with a rise in restrictive foreign direct investment (FDI) review policies by different host countries specifically targeting SOMNEs. However, a systematic comparative analysis of the nature, diffusion, and convergence of these policies across countries is still lacking. Informed by the policy convergence literature, we expect that there would be policy convergence among a policy leader (the US) and other advanced economies sharing common institutions and values. We employ natural language processing to analyze the FDI review policies targeting specifically SOMNEs in the US and a sample of developed countries and evaluate the degree to which these cross-country policies exhibit convergence on common concepts over time. Using US FDI review policy as a base, we find that the US underwent a major policy change in 2007 and 2018 that put measurably more emphasis on national security relative to commercial concerns regarding foreign investments by SOMNEs. Contrary to our expectation, we find only limited evidence of policy convergence between the other countries and the US. We conclude that the role of a hegemonic power is limited in promoting FDI policy convergence where national security is at issue, but policy convergence on commercial considerations appears more widely acceptable in the international community.

IM: MNEs and the Duality of Institutions: Regulatory Pressures, Social Responsibility Pressures and FDI

Author: **Huimin Liang**, *Warwick Business School*
Author: **Irina Minodora Surdu**, *Warwick Business School*
Author: **Nigel Driffield**, *Warwick Business School*

Given the constant changes taking place in the international business (IB) landscape, a firm’s institutional environment is recognized as a key source of uncertainty. Addressing calls to explore how multinational enterprises (MNEs) strategize to manage complex institutional pressures, this paper examines the effects of institutional duality on entry mode choices. We explore how key institutions – both at home and abroad - affect MNEs’ foreign direct investment (FDI) decisions. In practice, country of origin still matters as MNEs seek to manage the pressures exerted by their host institutional environments, whilst also strategizing to maintain home market institutional legitimacy. Further, we propose and show that regulative and normative institutional pressures affect the choice of FDI mode differently. Using a sample of 44,881 FDI events between 2013 and 2019, we show that higher degrees of FDI such as wholly owned subsidiaries, tend to be used by MNEs when the distance between normative institutions, i.e., home and host CSR norms and practices, is high. Whilst regulative distance is managed through setting up joint venture relationships, wholly owned subsidiaries are chosen to control whether, and to what extent, MNEs adapt to different, host market CSR standards and practices.

Subsidiary Strategies and Operations

Session Moderator: **DuckJung Shin**, *Korea U. Business School*

IM: The Impact of Sister-City Relationship on Foreign Subsidiary CSR

Author: **Yixue Wu**, *U. of Hong Kong*

Author: **Christine M. Chan**, *U. of Hong Kong*

Author: **Yusen Dong**, *China Europe International Business School (CEIBS)*

This article extends social identity theory to research on corporate social responsibility (CSR) of foreign subsidiaries. We complement prior research on CSR by emphasizing the significance of city-identity in stakeholders' identification and exploring factors that influence this process. Our empirical analysis of 90 foreign subsidiaries in China from 2009 to 2018 shows that the sister-city relationship promotes local CSR of foreign subsidiaries. The positive relationship is weakened when foreign subsidiaries are older or two countries have high political affinity, while it is strengthened when foreign subsidiaries are large. Our findings suggest that inter-city relationships influence CSR of foreign subsidiaries and host cities can benefit themselves by signing treaties of sister-city relationship.

IM: Organizational Identification in Local Subsidiaries of Foreign Multinational Enterprises  

Author: **DuckJung Shin**, *Korea U. Business School*

Author: **Jeonghun Kim**, *Chung-Ang U.*

Author: **Changbum Choi**, *Chung-Ang U.*

We investigate organizational identification in small and medium-sized local subsidiaries of foreign multinational enterprises (MNEs). Organizational identification – a sense of oneness with their organization – is a strong predictor of positive employee attitudes and behaviors. However, due to the 'foreignness' and 'smallness' associated with small and medium-sized local subsidiaries of foreign MNEs, low-level host country nationals (HCNs) working for the small and medium-sized local subsidiaries exhibit low levels of organizational identification. In this study, we consider the role of HCN CEOs in overcoming the low organizational identification of low-level HCNs. Unlike low-level HCNs, HCN CEOs closely work with the headquarters, developing a good understanding of MNEs' business strategies, activities, and policies, and the strategic importance of local subsidiaries for MNEs. To approach the issue, we develop and test a model on organizational identification in local subsidiaries based on multi-sourced data from small and medium-sized subsidiaries of MNEs in South Korea, using a sequential mixed methods design. First, we reviewed archival data on organizational identification from exit interviews of low-level HCNs, and also conducted interviews with HCN CEOs. As a result, we identify key antecedents and outcomes of organizational identification. Second, from a survey of both HCN CEOs and low-level HCNs, we test our hypotheses and validate our model. Implications are discussed in the paper.

Paper is Available to Meeting Registrants Only.

 **IM: Decomposing Subsidiary Performance: The Role Of Subsidiary Managers**

Author: **Jaykumar Padmanabhan**, *Faculty of Management studies, Jain U., Bangalore*

In this paper, we study the relationship between subsidiary manager's demographic characteristics and performance, while incorporating the subsidiary context. We draw upon upper echelon theories and International Business (IB) theories to understand this relationship. Though the upper echelon's theory (UE) has been the subject of intense research, much of it has happened in the American context and the role of top management in subsidiaries of multinational enterprises has largely been understudied. Using a dataset based on listed MNE subsidiaries in India we distinguish between subsidiary external performance (host market performance) and subsidiary internal performance. With our data set we find a positive relationship between percentage of Parent country nationals (PCNs) in the Top Management Team (TMT) and subsidiary internal performance in the initial stages of the operation of the subsidiary. We also find an inverted U-shaped relationship between PCN tenure and subsidiary internal performance that is moderated by years of operation of the subsidiary. However, we do not find support for our hypothesis about a strong relationship between percentage of home country nationals (HCNs) and subsidiary external (host market) performance.

Unethical Behaviors and Leadership

Session Moderator: **Lei Wang**, *Dongbei U. of Finance and Economics*

OB: Relative Leader-member Exchange and Unethical Pro-leader Behavior: A Cross-level Moderated Mediation

Author: **Han Li**, *Peking U.*

Author: **Shimin Zhang**, *Hong Kong Polytechnic U.*

Author: **Shenjiang Mo**, *Zhejiang U.*

Drawing upon social comparison theory and the social functional view of emotions, we developed and tested a cross-level model to examine how and when relative leader-member exchange (RLMX) may result in employees' unethical pro-leader behavior (UPLB). Data was collected from a sample of 514 employees in 102 divisional teams in a large retail corporation. Results of the multilevel moderated mediation modeling showed that the experience of envy fully mediated the negative effect of RLMX on UPLB. Furthermore, the indirect relationship was moderated by team-level distributive justice climate. Specifically, employees with low RLMX standings were more likely to experience envy and subsequently engage in UPLB when the distributive justice climate is low. Theoretical and managerial implications are discussed.

OB: Different Roles of Dual Authoritarian Leadership on Unethical Pro-supervisor Behavior

Author: **Lei Wang**, *Dongbei U. of Finance and Economics*

Author: **Huiyu Song**, *Dongbei U. of Financial Economics*

Author: **Angela Jie Xu**, *Jinan U.*

Despite the emerging interest in and importance of unethical pro-supervisor behavior, the underlying mechanism of unethical pro-supervisor behavior is still in its infancy. Based on social identity theory and uncertainty management theory, this study explores whether task-related and people-related authoritarian leadership (i.e. dual authoritarian leadership) would affect unethical pro-supervisor behavior differently and what the underlying mechanisms are. Through data from 260 employees in China, this study reveals that employees working with task-related rather than people-related authoritarian leadership engage in more unethical pro-supervisor behavior. Supervisor identification and uncertainty played differential mediating roles underlying the relationship between dual authoritarian leadership and unethical pro-supervisor behavior. Further, the positive indirect effect of dual authoritarian leadership on unethical pro-supervisor behavior was weaker when the organization has high principle-based ethical climate. Contributions, limitations, and future research directions are discussed.

OB: When Do Supervisors Punish Unethical Pro-organizational behaviors: the Role of Identity and Goal  

Author: **Feng Gao**, *School of Business, Renmin U. of China*

Author: **Yao Wang**, *Renmin U. of China*

Author: **Jiaojiao Zhang**, *School of Business, Renmin U. of China*

Given that unethical pro-organizational behavior (UPB) violates moral standards but benefits the organization at the same time, responses to this behavior could be equivocal although it is supposed to be punished. Previous research, however, has centered on antecedents of UPB, less is known about its consequences, especially how subordinates' UPB is responded by supervisors. Drawing on the human information processing model, this paper aims to explain when supervisors perceive subordinate UPB in a negative way, and further engage in negative leading behaviors as punishments for UPB. Results of a multi-wave, multiple-source survey suggest that subordinates' UPB are most negatively related to supervisors' trust when supervisors' moral identity is prominent and their goals are congruent with the group. Furthermore, results show that reduced trust ultimately elicits abusive supervisor behavior. These findings extend knowledge on consequences of UPB and provide important insights into supervisors' leading behavior from a bottom-up perspective.

Paper is Available to Meeting Registrants Only.

OB: How Leaders Drive Followers' Unethical Behavior 

Author: **Salar Mesdaghinia**, *Eastern Michigan U.*

Author: **Robert Eisenberger**, *U. of Houston-Main Campus*

Author: **Xueqi Wen**, *Tongji U.*

Author: **Zihan Liu**, *U. of Houston*

Author: **Blaine Austin Lewis**, *U. of Houston*

Author: **Debra L. Shapiro**, *U. of Maryland*

Numerous organizational scandals have implicated leaders who have encouraged employees to advance organizational objectives through unethical means. However, leaders' encouragement of unethical behaviors is under-examined in leadership research. We define leader immorality encouragement (LIE) as an employee's perception that his or her leader encourages unethical behaviors on behalf of the organization. Across four studies, we found that: (1) LIE promotes employees' unethical pro-organizational behavior; (2) this relationship is mediated by employees' moral disengagement and reward expectancy; (3) LIE, via moral disengagement, promotes employees' self-serving unethical behavior; and (4) the association between LIE and unethical behavior is stronger when the leader and the employee have a high-quality exchange relationship and the employee perceives the leader as having high organizational status. Our set of findings shed light on leaders' attempts to further organization objectives by encouraging unethical behavior.

**Trustworthy MTurk-based Research: Best-Practice Recommendations
for Authors and Reviewers**
Conducting Trustworthy MTurk-based Research

Presenter: **Ravi Ramani**, *Morgan State U.*
Presenter: **Isabel Villamor**, *IESE Business School*
Presenter: **Herman Aguinis**, *George Washington U.*

Amazon’s Mechanical Turk (MTurk) is the most pervasively-used online marketplace for conducting research in management and related fields. However, there are significant concerns that call into question the validity of research conclusions based on MTurk data. Accordingly, the goal of our professional development workshop (PDW) is to offer best-practice recommendations regarding how to design, implement, and report MTurk studies. Our recommendations are aimed at researchers planning on using MTurk and those who evaluate manuscripts describing MTurk-based research (i.e., journal reviewers and editors). Based on a review of 146 sources, our PDW will provide a summary of MTurk’s practical and logistical benefits and a detailed analysis of 10 particularly salient features of MTurk research and their concomitant threats to internal, external, construct, and statistical conclusion validity (e.g., participant inattention and misrepresentation, vulnerability to web robots, MTurker non-naiveté, perceived researcher unfairness). We will then offer 10 best-practice recommendations to address those threats during research planning, research implementation, and reporting of results (e.g., decide qualifications used to screen MTurkers, formulate compensation rules, approve or deny compensation). Also, our session will offer participants opportunities to discuss specific questions or concerns they have about conducting research on MTurk. Finally, we will provide a hands-on demonstration of how to implement each of these recommendations and conduct an MTurk study that minimizes the validity threats of associated with this data collection method. This PDW relies, in part, on our highly attended and very positively rated RMD PDW on MTurk that we conducted at the AOM 2021 meetings.

Corporate Social Responsibility, Stakeholder Engagement and Social Impact in Supply Chains

Session Moderator: **Rita Mota**, *Oxford U., Saïd Business School*

SIM: Towards Responsible Global Value Chain: A Conceptual Framework

Author: **Anna Mineeva**, *U. of Lyon, UJML3, iaelyon School of Management, Magellan*
Author: **Marielle Payaud**, *MAGELLAN, IAE Lyon, U. of Lyon, France*

Global value chains (GVCs) take a prominent position within the modern global economy as well as within the international business (IB) research field. However, despite the increasing importance of corporate social responsibilities (CSR) considered at the global scale, our understanding of how the concept of CSR plays out at the level of GVC remains limited. Yet, given the decoupling of ownership and control caused by disaggregation of multinational enterprises (MNEs), the issue of organisational boundaries in regards to social responsibilities of business gains more and more relevance. The objective of this conceptual study is to contribute to the discussion on full-chain responsibility through the development of the concept of responsible global value chain. Seeking to integrate theoretical insights from the literature on CSR and on GVC we develop a conceptual framework of a responsible GVC comprised of four distinct dimensions that shape the integration of CSR throughout the GVC: (1) institutional environment, (2) governance, (3) CSR conceptualization and (4) stakeholder management. Our framework enables us to highlight the conceptual shift emerging along four proposed dimensions underpinning the move from conventional GVC towards responsible one.

SIM: Supply Chain Irresponsibility: The Role of Stakeholder Orientation and Institutional Distance

Author: **Muhammad Umar Boodoo**, *Warwick Business School*
Author: **Sara Hajmohammad**, *Telfer School of Management, U. of Ottawa*
Author: **Alok Choudhary**, *Loughborough U., School of Business and Economics*
Author: **Robert D. Klassen**, *U. of Western Ontario*

Global supply chains of goods and services frequently span developed and developing countries and, unfortunately, are often associated with poor environmental, social, and governance (ESG) practices. Drawing on the construct of corporate social irresponsibility, we focus specifically on supply chain irresponsibility (SCI) in global supply chains. Strategically developing and nurturing relationships with multiple stakeholder groups (i.e., strong stakeholder orientation) is one mechanism that might help attenuate the frequency and severity of a firm's SCI. However, doing so also might raise expectations among stakeholders, thereby priming and amplifying the reach of SCI. We also draw from institutional theory to hypothesize that the regulatory institutional distance between the firm's home country and that where SCI occurred moderates the stakeholder orientation-SCI relationship. Using a large multi-country panel dataset, our findings show that stakeholder orientation is positively related to frequency, severity, and reach of SCI incidents. Higher regulatory institutional distance increases SCI and strengthens the positive relationship between stakeholder orientation and SCI. Our findings provide novel evidence about the unintended consequences of stakeholder orientation and develop insights into the challenges that the degree of regulatory institutional distance between a firm and its globally scattered supply chain poses to managing ESG responsibility.

Paper is Available to Meeting Registrants Only.

SIM: Human Rights, Multinational Enterprises, and Legitimacy

Author: **Rita Mota**, *Oxford U., Saïd Business School*
Author: **Alan D. Morrison**, *Oxford U., Saïd Business School*

This paper attempts to explain why, in similar contexts, multinational enterprises (MNEs) respond differently to human rights questions, and why external audiences appear to tolerate these differences. Our explanation focuses on the perceived legitimacy of MNE human rights actions. This approach recognizes that organizations are actors that make legitimacy assessments, rather than mere legitimacy objects. We conceptualize organizational human rights attitudes and reasons for action, and we show how the two interact. We relate the norms that are used in legitimacy judgments, and the way that they are interpreted in different contexts, to different MNE human rights attitudes. Our analysis yields new predictions of the factors that might lead MNEs to adopt active, passive, or non-engagement human rights attitudes.

SIM: Retail Firm Social Compliance Integration as a Precondition for Supply Chain Effectiveness

Author: **Mevan M. Jayasinghe**, *Michigan State U.*
Author: **Yinyin Cao**, *U. of Michigan, Dearborn*

Global supply chains research has shown that advanced economy retail firms using codes of conduct to enforce suppliers' compliance with labor standards has had limited effects on working conditions in developing economies. However, it is not known whether the management and organizational context within the retail firm itself may be responsible for their ineffective social compliance enforcement. In fact, recent evidence suggests that retailers' social compliance enforcement may be undermined by conflicting demands originating from siloed functions within the retail firm. We adopt a management and organizations perspective to describe social compliance integration among supplier-facing functional units within the retail firm as a prerequisite for effective social compliance enforcement and subsequently for supply chain effectiveness and social responsibility. We develop a theoretical framework that defines the cross-functional components of social compliance integration and its organizational determinants, and explains how it creates more effective and responsible supply chains. Our work uncovers necessary organizational conditions for the effectiveness and sustainability of global supply chains, emphasizes the importance of cross-functional coordination in the management of an organization's business ecosystem, and explains how socially conscious organizations can minimize decoupling of non-financial sustainability goals.

Author: **Diana Jue-Rajasingsh**, *U. of Michigan*

Firms often engage in strategic framing contests to appeal to stakeholders' interests, shaping their beliefs and expectations of the industry and the firms themselves. One type of strategic framing that has only been recently explored is the strategic framing of social impact. In this study, I study the effect of social impact framing on the exchange partners of a socially responsible firm that is asymmetrically dependent on these value chain intermediaries (e.g., retailers) to create value for end customers. I pursue the following questions: 1) To create and appropriate value, can a firm use social impact framing to persuade exchange partners to not only participate in the market but also relinquish value while doing so? 2) How do exchange partners react to the perceived misalignment of social business' profit-seeking with social impact? 3) How does the emphasis of a social impact frame affect these responses? 4) How does information about suppliers' costs and profits affect when frame is most effective? I attempt to answer these questions through an online experiment and a lab-in-the-field experiment.

STR: Cognitive Diversity in Strategic Decision Making: A Contextual Contingency Perspective 

Author: **Neil Gareth Shepherd**, *Aston Business School*
Author: **Bowen Lou**, *Lancaster U. Management School*
Author: **John Rudd**, *Warwick Business School*
Author: **Andreas Strobl**, *Lancaster U. Management School*

The riddle of diversity remains unresolved; it can spur innovation and creativity, yet also give rise to hostile conflict. Indeed, disagreement abounds as to whether cognitive diversity—which represents differences in ideas, preferences and beliefs among top managers concerning firm strategy—leads to positive or negative outcomes. While meta-analyses have concluded that the consequences of cognitive diversity among upper echelons executives are largely negative; the fact remains that the effects of diversity vary considerably across different studies, indicating the presence of unknown moderators and mediators. Hence in this study, recognizing the embeddedness of top managers within their firm and broader environmental context, we build new theory concerning moderating and mediating influences on the effects of cognitive diversity. We test our theory on a multi-informant, multi-source sample of 117 strategic decisions. We find a main negative effect of cognitive diversity on top management team behavioral integration, and that behavioral integration mediates the negative effects of cognitive diversity on decision comprehensiveness. We further develop new knowledge by drawing on resource-based theory, and we theorize that firm size and environmental hostility moderate the effects of cognitive diversity on behavioral integration and on comprehensiveness.

STR: The Learning of Machine Learning: The Effect of Human Capital on the Performance of Algorithms

Author: **Artyom Yepremyan**, *SKEMA Business School*
Author: **Francesco Castellaneta**, *SKEMA Business School*
Author: **Bruno Cirillo**, *SKEMA Business School*

Strategy formulation hinges on managers' ability to formulate accurate predictions about developments in external environments. As managers face various cognitive limitations that bias their predictions, strategy scholars suggested artificial intelligence, in the form of machine learning, as a solution to improve firms' predictive ability. Notwithstanding these insights, we still know little about machines' predictive ability in uncertain external environments, where information about future trends is limited. We maintain that machines' prediction accuracy can be improved by leveraging specific dimensions of human capital as input in their training sets. To test our theory, we created a unique machine learning algorithm that forecasts the earnings of publicly listed firms by leveraging financial data and financial analysts' past earnings predictions. Contrary to prevailing views, we demonstrate that machine learning algorithms that are trained on past predictions by high human capital analysts – who are likely to be biased in various dimensions – yield more precise predictions than similar machines that are trained on predictions by low human capital – less biased – analysts, as well as those that are trained only on financial data. Our theory and results provide fresh insights on how firms could leverage their human capital to improve machine learning's forecast accuracy

STR: Social Comparison and the Value of Performance Trajectory Information: A Workplace Field Experiment   

Author: **Hugh Xiaolong Wu**, *Washington U. in St. Louis, Olin Business School*
Author: **Yucheng Liang**, *Carnegie Mellon U. - Tepper School of Business*
Author: **Shannon Liu**, *U. of Toronto, Rotman School of Management*

New workers often compare themselves to their high-achieving senior coworkers, but they often do so without knowing how senior workers performed in the early stages of their careers. This upward social comparison under incomplete information can have adverse effects on new workers' well-being and employee turnover. We study whether providing performance trajectory information to new workers mitigates the negative consequences of performance comparison. In a large-scale randomized control trial at a leading multinational spa chain in China, we sent workers twice-weekly messages on the performance trajectories of their high-performing senior coworkers. This information treatment reduces the attrition rate of new workers by 12%, and the effect is most pronounced for the more productive workers. The lower attrition rate is mostly driven by an improvement in new workers' stress levels and mental health due to the lowering of their beliefs about senior coworkers' past performance. Overall, this study demonstrates that showing junior workers the "Curricula Vitae" of senior workers mitigates social comparison costs within firms.

Paper is Available to Meeting Registrants Only.

STR: Time Horizon in Corporate Resource Allocation—Investment Horizon, Investor Horizon, and Stakeholders 

Author: **Dhvani Badwaik**, *U. of Connecticut - Storrs*

Research in strategic management emphasizes that managers struggle with decisions that require an intertemporal tradeoff between short-term success and long-term performance. With respect to corporate resource allocation, this tradeoff also manifests itself via short-term versus long-term investments; via investors that exhibit heterogenous time horizons; and via the time horizon of the firm's stakeholders. I contribute to this literature by reviewing and synthesizing extant findings on time horizon in strategy; identifying relevant, emerging themes for future lines of inquiry; and highlighting logical inconsistencies at the intersection of time horizon and stakeholder theory. More empirical and theoretical extensions are warranted on this topic, which is characterized by inherent complexity.

Paper is Available to Meeting Registrants Only.

Author: **Xiwen Zhao**, *U. of Kentucky*

Author: **Zhi Huang**, *U. of Kentucky*

This study seeks to establish that having a distinct name can help firms attract investors' attention, leading to better stock market performance. Furthermore, we examine the moderating effects of firm size, firm age, industry size, and industry performance. By studying all publicly traded firms in both CRSP and Compustat, our results show that there is a positive relationship between firm name distinctiveness and firm annual stock return, and this relationship is stronger for younger firms, small firms, firms in small industries, and firms in high-performance industries. Supplemental analyses are performed to address the endogeneity issue.

Politics and Regulations in Corporate Strategy

Session Moderator: **Margherita Corina**, *Department of Management and Technology, Bocconi U.*

STR: Volatility of Political Affinity and Subsidiary Investments  

Author: **Christopher Albert Sabel**, *WWU Münster*

Author: **Fladina Zilja**, *Copenhagen Business School*

Author: **Gilbert Kofi Adarkwah**, *BI Norwegian Business School*

We investigate the effect of volatility in political affinity on multinational firms' foreign subsidiary investments. We extend prior work that focuses on the level of political affinity and argue that volatility in political affinity equally affects multinational firms' foreign investments. While research showed that levels of affinity are positively related to multinational firms' investment, we argue that volatility negatively affects subsidiary investment as it increases environmental uncertainty for multinational firms in foreign locations. Further, we show that the interplay of the level and the volatility of affinity and firms' experience in high-volatility countries affects overall investment, providing greater insight into multinational firms' investment patterns. Analyzing 1,078 U.S. public firms and their subsidiaries in 106 countries from 2000 to 2015, we find support for our hypotheses.

 STR: The Impact of Protective Takeover Regulations on Acquiring Firms

Author: **Ipsita Sahoo**, *Smith School of Business, Queen's U.*

Author: **Abhirup Chakrabarti**, *Smith School of Business, Queen's U.*

This study explores how protective takeover regulations indirectly affect acquiring firms. Protective takeover regulations, such as the new bid regime introduced in Canada in 2016, provide targets more time to respond to takeover offers and offer greater protection to minority shareholders. Yet, such strategies could also influence acquiring firms to change their strategies over time. Using a sample of Canadian manufacturing firms that operated between 2012-2020 we find that the new bid regime had no impact on reducing hostile acquisitions, but that it increased the tendency of acquiring firms to undertake unrelated and cross-border acquisitions. In turn, it indirectly reduced the ability of acquiring firms to successfully complete their acquisitions. The findings suggest that protective takeover regulations may have broader and unintended effects by driving acquiring firms to undertake riskier acquisitions and experience poorer acquisition outcomes.

Paper is Available to Meeting Registrants Only.

STR: Alliance or Acquisition During Political Uncertainty? The Importance of Partner Selection

Author: **Margherita Corina**, *Department of Management and Technology, Bocconi U.*

This study shows the trade-off between acquisitions and alliances in the context of elections by looking at the costs and benefits of companies' business configurations. By testing my assumptions on a dataset of US companies during government elections between 1990 and 2018, I show that companies in states that hold elections, and therefore subject to greater political uncertainty, prefer alliances to acquisitions. I then show that this result varies according to the similarity and complementarity of business between the two companies: during political elections, companies whose business is similar prefer to engage in acquisitions or alliances - as opposed to internal development - and prefer acquisitions as opposed to alliances. On the contrary, companies whose business is complementary prefer to engage in alliances - as opposed to internal development - and prefer internal development - as opposed to acquisitions. Overall, my findings provide new insights into the importance of political uncertainty in shaping business strategies.

STR: The Need for Speed: The Impact of Capital Constraints on Strategic Misconduct 

Author: **Fulton C. Eaglin**, *Harvard Business School*

Under what conditions do firms engage in strategic misconduct? Why do they undertake actions that increase profitability yet break laws or violate strong norms often with costly consequences for public welfare? The strategic management literature offers two external constraints that might explain these actions. First, firms in highly competitive environments with few options for differentiation turn to strategic misconduct for survival. Second, firms that operate in weak regulatory environments adopt strategic misconduct to overcome market frictions that lack of regulation creates. This paper offers a third explanation – access to affordable financing. Existing research on capital constraints has demonstrated firms benefit greatly from additional capital but has yet to investigate its impact on strategic misconduct. I examine the impact of capital constraints on strategic misconduct in the minibus taxi industry in South Africa. Exploiting a natural experiment in which a financing company changed their interest rates due to nation wide protests, I assess the impact of declining interest rates on over 5000 firms from 2015 to 2020. Using an instrumental variable analysis, I find that firms given lower interest rates decrease strategic misconduct, measured by speeding alerts and aggressiveness with other firms, and are more likely to survive. Exploring potential mechanisms through survey and qualitative analysis, I find suggestive evidence that binding capital constraints and high penalties for default might drive these results. My findings suggest that the reduction of capital constraints for firms under duress might increase both firm survival and public safety presenting implications for how we might approach building sustainable and resilient firms and communities.

New Directions in How Alliances Can Benefit Firms

Session Moderator: **Jens-Christian Friedmann**, *Bocconi U.*

STR: Knowledge Spillover and Knowledge Spillover in Alliances

Author: **Jens-Christian Friedmann**, *Bocconi U.*

Research on alliances suggests that exposing knowledge to partners can restrict a firm's appropriation of value from that knowledge. The current study examines the possibility that knowledge spillover to a partner can instead provide opportunities for the firm to learn from the partner's inventions that build upon the spilled knowledge, thereby enabling the firm to regain value that would otherwise be lost. This is termed "knowledge spillback." Analyses of 1,089 alliances formed during the period 2000–2015 by 323 firms in the global electronics and machinery industries show that knowledge spillover to a partner induces subsequent knowledge spillback, yet knowledge spillback diminishes as knowledge spillover intensifies. I demonstrate that the positive association of knowledge spillback with spillover is reinforced by the cumulateness of the firm's knowledge. In turn, this positive association is weakened by the firm's reliance on prior industry knowledge and by the relatedness of the firm's and partner's knowledge bases. Exploratory post-hoc analyses also show that knowledge spillback from partners increases the technological value of the firm's inventions, and thus can contribute to the firm's value gain from its alliances.

STR: Walking a Tightrope: Balancing Centralization and Decentralization in Enterprise Blockchain Networks

Author: **Marvin Hanisch**, *U. of Groningen*

Author: **Curtis Goldsby**, *Rotterdam School of Management, Erasmus U.*

Author: **Vasileios Theodosiadis**, *IBM Corporation*

Blockchain technologies represent a promising opportunity to manage complex intra- and interorganizational networks. A critical decision for founders of blockchains is whether blockchain activities should be governed in a fully decentralized, consensus-based way, or in a more centralized and controlled way, supported by mechanisms of hierarchical control. While a decentralized, consensus-based approach may result in lower upfront administrative costs for managing a blockchain network, it may also complicate the subsequent coordination, control, and adaptability of the network that can be achieved by introducing a consortium as a centralized governance structure in an otherwise decentralized system. Based on extant governance research, we hypothesize that founders of enterprise blockchains will evaluate this strategic tradeoff more in favor of adopting a consortium as the number of founders, rivalry of founders, and dynamism of founder industries increase. We test our theorizing on a unique sample of 127 blockchain initiatives and find support for the two former but not for the latter hypotheses. Our study advances theories on network governance and the emerging literature on blockchains.

STR: Choosing Your Partners Wisely: Investigating the Role of CSR in Strategic Alliances

Author: **Ei Sandi Nwe**, *Purdue U., West Lafayette*

In the face of growing concerns over climate change and current COVID-19 crisis, interest in corporate social responsibility (CSR) issues has been growing significantly among academics and practitioners alike. However, the role of CSR in strategic alliances has yet to receive considerable attention from management scholars. This study investigates whether and how CSR of a partner in a strategic alliance, has an effect on the focal firm's value. Drawing on the stakeholder-based view of strategic alliances and advancing relational capabilities perspective on CSR, we posit that, faced with information asymmetry and collaborative challenges, focal firm can rely on CSR performance or stakeholder relationships of a prospective partner firm to make judgements about value creation potentials of the alliance. We argue that CSR of a partner has a positive effect on the focal firm's value by optimizing partner selection and embodying relational capabilities that focal firm can leverage on during the partnership. Empirical evidence is established by using a sample of bilateral alliances between publicly traded firms in the US during the period of 1999-2013. Our results show that CSR of a partner is positively associated with the focal firm's announcement returns. The positive effect of partner's CSR on the focal firm's returns is found to be more salient when information asymmetry is high. In addition, the marginal effect of a partner's CSR on the announcement return is attenuated by the focal firm's previous general alliance experience.

STR: Learning in Strategic Alliances  

Author: **Marko Kohtamäki**, *U. of Vaasa*

Author: **Rodrigo Rabetino**, *U. of Vaasa*

Author: **Tuomas Huikkola**, *U. of Vaasa*

Learning in strategic alliances is examined in a growing stream of literature with multiple substreams of research. The present study builds on a literature review of 207 articles and uses bibliometric structuring to identify four research streams: 1) alliance learning, 2) relationship learning, 3) learning in innovation networks, and 4) learning in social networks. We conduct a content review of the research streams, analyse the communities of alliance learning research, and develop a research agenda to facilitate novel avenues of research about learning in strategic alliances. This systematic review provides a rich ground for future studies to continue research on learning in strategic alliances and its four substreams of research.

Paper is Available to Meeting Registrants Only.

STR: Strategic Alliance Outcomes: Consolidation and New Directions (WITHDRAWN)

Author: **Tadhg Ryan-Charleton**, *Queen's U. Belfast*

Author: **Devi R. Gnyawali**, *Virginia Tech*

Author: **Nuno Oliveira**, *Tilburg U.*

The pursuit of outcomes is the *raison d'être* for strategic alliances, yet the literature is on outcomes rather fragmented. Moreover, conceptual and empirical confusion exists between strategic alliance outcomes and how the alliance is working. Important behavioral terms, such as conflict and tension, are also used without conceptual clarity. We tackle these issues by laying out a consolidated spectrum of strategic alliance outcomes and explaining how outcomes are often intertwined. We distill how well the alliance is working into three indicators of functioning and highlight their conceptual distinctiveness vis-à-vis outcomes. We disentangle definitions and implications for three important behavioral issues in alliances—tradeoffs, frictions, and tensions—and discuss how they are rooted in partner interdependence. Lastly, we offer an 'outcome-centric' perspective of strategic alliances, which shifts the emphasis from outcomes as an end result to pursuit of outcomes as an explanatory starting point. This perspective opens up interesting opportunities to theorize about functioning; behavioral manifestations of interdependence; and the pursuit of multiple outcomes in strategic alliances. Overall, our paper offers contributions in terms of conceptual clarity, a behavioral view of partner interdependence in strategic alliances, and an outcome-centric perspective resulting in novel opportunities for theorizing about strategic alliances.

Presenter: **Leandro S. Pongeluppe**, *The Wharton School, U. of Pennsylvania*

Presenter: **Sinziana Dorobantu**, *NYU Stern School of Business*

Scholarly work in strategy and corporate governance is increasingly converging to explore the implications of firms moving beyond the shareholder-centric governance modes towards stakeholder governance approaches that consider the interests of a broader set of heterogeneous stakeholders. This shift calls for new thinking in at least two core areas of strategic management: (i) the conceptualization of a firm's fundamental function of creation and distribution of economic value within a stakeholder governance set-up, and (ii) the rules and patterns of organizing that underpin the enfranchisement and identification of stakeholder interests. In this symposium, we propose to engage in conversations that cut across work in stakeholder theory, corporate governance and social issues in management to advance further research on these important topics. The symposium will open with introductory keynote comments by two prominent scholars in the field, it will continue with four paper presentations, and it will conclude with a brief question-and-answer session with the audience. The ensuing discussion is envisioned to help advance both conceptual and empirical work at the intersection of novel, stakeholder-centric forms of governance. We also hope to shed light on promising areas for further research that leverages both novel approaches to theory and explores new empirical settings.

The understanding of how institutional environments shape entrepreneurial formation and innovation activities is essential to enhancing participation and success of entrepreneurs and inventors, which are important avenues for creating sustainable competitiveness through economic growth, job creation, and high-impact discoveries. The intersection of business, government, and society has long been a focus for entrepreneurship, economics, and strategy scholars. A large body of research has explored extensively the business legislative pathways to foster entry into entrepreneurship. A separate strand of research has paid great attention to how innovation activities and outcomes are influenced by various regulations. Recently, researchers have started to pay attention to institutional changes that can simultaneously affect entrepreneurial entry and innovation activities. The papers in this symposium aim to facilitate conversations between entrepreneurship and innovation scholars to identify institutional factors that spur and affect innovative entrepreneurs, as well as the mechanisms and boundary conditions.

Diffusion and Adoption

Session Moderator: **Panita Surachaikulwattana**, *U. of the Thai Chamber of Commerce*

OMT: **High-fidelity Adoption of a New and Ambiguous Practice** 

Author: **Panita Surachaikulwattana**, *U. of the Thai Chamber of Commerce*

Adoption of a practice has been an important area of study in organizational research. While most prior research focused on practice adoption and diffusion within the same environment, I argue that cross-national adoption of a practice has been underexplored. An inevitable corollary is that little is known of why variation in adoption of such practice occurs. This paper drew on the institutional theory perspective to examine variation in the adoption of a new and ambiguous practice in a new receiving context. Through an inductive-qualitative study of a social entity in Thailand that has imported and promoted the adoption of an American practice, this study examined what caused variations in organizational adoptions, which, following organizational scholars, is conceptualized in this study as level of fidelity, in order to ultimately develop a model that presents what accounts for high-fidelity adoption. For high-fidelity adoption of a new and ambiguous practice to occur, this inductive study shows that it requires co-existence of four components, including knowledge transfer through the approach of communal involvement, reassurance of legitimate actors, leaders' involvement and attention, and outcome realization. This study makes theoretical contributions by developing a process leading to high-fidelity adoption of a new and ambiguous practice, shedding light on the role of agency, and discussing practical implications and avenue for future research.

OMT: **Heterogeneous Response to Governmental Mandate in Chinese Listed Companies** 

Author: **Lisi Xiong**, *School of Management, Huazhong U. of Science and Technology*
Author: **Zhi Yang**, *School of Management, Huazhong U. of Science and Technology*

In institutional theory, most prior studies suggested that the organizations respond homogeneously in compliance with governmental regulations. We argue that the organizational status within a field might have a heterogeneous effect in response to institutional pressure, for which the probability of organizational compliance is stronger at either end of a status order and weaker at the middle. We attempt to explain this U-shaped relationship by two causes 1) willingness of compliance and the 2) resistant ability of firms with different organizational status in an institutional field. Using Chinese listed firms from 2001 to 2007, during which Chinese CSRC announced mandated independent director reform, we find that the affiliation level of listed companies leads to a U-shape compliance with the mandate. Regulated industry and peer compliance in the industry differently moderate the U-shaped effect of organizational status within a field.

OMT: **Features of Inter-enterprise Knowledge Recombination in China's Heavily Polluting Industry**   

Author: **Yue Chang**, *School of Public Policy and management Tsinghua U.*
Author: **Chen Luyi**, *School of Public Policy and management Tsinghua U.*
Author: **Zhou Rong**, *School of Public Policy and management Tsinghua U.*
Author: **Jiamin Yu**, *School of Public Policy and management Tsinghua U.*

In recent years, knowledge recombination has become a hot topic in green innovation adoption (GIA) research. However, previous studies have mainly discussed the knowledge recombination within a single enterprise but ignored inter-enterprise knowledge recombination (Inter-KR). In this paper, a theoretical framework of Inter-KR is developed, and the three features of Inter-KR are discussed, which are elements, characteristics, and performances. Natural language process, patent analysis, and econometric regression are used to analyze the above three features. Firm-level data from patents, annual survey, and sewage discharge of Chinese textile enterprises between 1998 and 2013 are matched and analyzed. The empirical results indicate that enterprises can effectively improve their environmental performance by participating in Inter-KR, and the characteristic of comprehensiveness of Inter-KR has a significant promoting effect on GIA. In summary, the Inter-KR trigger more green innovation in both R&D and the manufacturing process of enterprises, and the construction of relevant framework is an effective way to further explore the knowledge recombination of enterprises, which has guiding significance for future GIA research. Our findings provide several new insights for research on knowledge recombination, the literature on collaboration innovation, and green innovation adoption research.

OMT: **The Diffusion of Problem and Solutions and Heterogeneity in Organizational Fields** 

Author: **Ivana Naumovska**, *INSEAD*
Author: **Erdem Yilmaz**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Vibha Gaba**, *INSEAD*
Author: **Henrich Greve**, *INSEAD*

Although research on diffusion processes has made significant progress, its focus on institutional practices and technological innovations implies an emphasis on solutions to organizational problems rather than on whether organizations recognize problems to begin with. Problem recognition is a precondition for adopting a solution, and behaviorally it is a diffusion process that is interdependent with solution diffusion. Moreover, a given problem typically has multiple alternative solutions that are in competition, while also providing legitimacy to each other by legitimizing the problem they solve. Diffusion analyses of 221 innovations that address eight problems in online newspaper publishing show that the adoption and abandonment of solutions by peers alter the likelihood of recognizing the problem and adopting the specific solution, as well as alternative solutions. This theory and empirical support have important implication for the study of diffusion processes of institutions and technological innovations alike, as it questions the assumption that practices have independent diffusion trajectories. Analysis of a solution without attention to problem recognition is problematic, especially if multiple solutions to the same problem exist.

The Dynamics of Categories

Session Moderator: **Taehyun Lee**, *U. of Amsterdam*

OMT: Growth and Decline of the “Sharing Economy” Category: The Double-edged Sword of Central Examples 

Author: **Taehyun Lee**, *U. of Amsterdam*

A category’s meanings are shaped by the properties and ideals of its central example. However, existing studies have rarely paid attention to the role of the central example in categorical dynamics. Using qualitative research methods, I examine the sharing economy category and its central examples used by the category promoters (i.e., movement) and the press between 2004 and 2019 during stages of category obscurity, growth, and decline. I illustrate which examples are used as the central example of a category, how the central example can be interpreted in different ways by various actors, which leads to discrepancies between the original meanings of the category and how it comes to become understood and used, and ultimately to the decline of a category. I highlight the importance of a category’s central examples in understanding the dynamics of category change and dissolution.

OMT: Games of Norms: Why Category Switching Is Penalized in Crowdfunding Platforms

Author: **Horacio Enrique Rousseau**, *Florida State U.*

Author: **Guangzhi Shang**, *Florida State U.*

While strategic change is key to the effective adaptation of new organizations, it often breeds doubt and assessment by resource holders. This study explores this dynamic by studying how resource holders guided by a community logic respond to category switching, a critical change in a producer’s positioning. Using reward-based crowdfunding as an empirical context, we theorize that backers assess category-switching creators as less trustworthy and committed to the values, ideals, and advancement of a specific community than nonswitching creators, therefore reducing their funding and support. The extent of these penalties, however, may vary depending on the attributes of both creators and backers. We hypothesize that backers may reduce the severity of sanctions to category switchers who demonstrate trustworthiness and competence either by indicating past success or presenting a more typical identity. In contrast, we expect that experienced backers, who hold a stronger sense of belonging and identification, will penalize switchers more harshly than new audience members and be less lenient toward competent or typical creators. We test our hypotheses using an extensive longitudinal sample of 34,701 entrepreneurial projects in Kickstarter from 2009 to 2016 and find support for most of our hypotheses. We discuss implications for studying how change affects resource acquisition when resource holders are guided by a community logic and for research studying categorical nonconformity.

OMT: The (un)Making of Digital IT Services? Category Work and the Dynamics of Plausible Categories

Author: **SHAIENDRA KUMAR**, *Doctoral Student at IIM Calcutta*

Author: **Anirvan Pant**, *Indian Institute of Management, Calcutta*

Our interpretive study of the contested rise of ‘digital’ services in the global information technology (IT) services industry during 2011-20 sheds light on how the ordinary and autonomous engagement of producers with a plausible category may shape the formation of the said category, i.e., its meaning and distinctiveness. Focusing on a subtler form of producer agency than the purposeful agency of category promoters often discussed in the existing literature, we analyze the claims made to the plausible ‘digital IT services’ category by eight IT services firms in their quarterly earnings calls over the span of a decade (2011-20). We argue that the articulation of category claims constitutes category work towards the settling or the unsettling of the meaning and the distinctiveness of the focal category. Apart from identifying four mechanisms (juxtaposition, projection, reproduction and revision) of such category work that is distinct from the better-understood and more conspicuous acts of category entrepreneurship, our study also contributes to developing a vocabulary to understand plausible categories which may linger in a liminal state of emergence and, thus, do not neatly align with the binary sensibility of emergence / non-emergence extant in the category formation literature.

OMT: Coherence Within and Across Categories: The Dynamic Viability of Product Categories on Kickstarter 

Author: **Jean-François Soublière**, *HEC Montreal*

Author: **Jade Lo**, *Drexel U.*

Author: **Eunice Yunjin Rhee**, *Seattle U.*

Winner of the OMT Division Best Paper on Entrepreneurship Award

How does the viability of a product category evolve over time? Studies abound on how categories emerge and become established, or fall out of use. However, extant research assumed that categories evolve independently of one another. In contrast, we consider both intra- and inter-category dynamics. Extending the insight that categories are dynamically shaped by actors’ efforts to position their products, we argue that these efforts not only alter the degree of coherence that products exhibit within a focal category (i.e., what a category is about), but also across a set of related categories (i.e., what a category is not about). We explain shifts in a category’s viability by theorizing the ‘classification’ and ‘valuation’ benefits that intra-category coherence affords, and how these benefits are contingent on inter-category coherence. Importantly, the interaction between both forms of coherence may flip the effect of intra-category coherence. We find support for our argument by examining 170 categories on a daily basis over an 11-year period on Kickstarter, one of the most important crowdfunding platforms. By providing a nuanced understanding of category dynamics, our research sheds new light onto the evolving viability of categories.

Examining the Social Science Underpinnings of Organizations and Markets

Session Moderator: **Gokce Sargut**, *Governors State U.*

OMT: **Truth Or Dare: Exploring the Origins Of Ontology And Epistemology In Organizational Research**

Author: **Gokce Sargut**, *Governors State U.*

Author: **Ali Selami Sargut**, *Baskent U.*

The field of Organizational Behavior owes some of its major theoretical challenges to the legacy of dichotomies handed down from the social sciences (micro-macro, agency-structure, subjective-objective, etc.). These are manifested in our field as fundamental problem areas regarding ontology and epistemology. In this paper, we explore one such area, the logical positivist philosophy that has dominated research through its influence on various anti-realist perspectives such as methodological individualism. After discussing the origins and limitations of this view, we explain why realism offers a more promising philosophical context for scholarly research.

OMT: **Poetic Organizing: Ontology of Practice, and Sensemaking in Craft-based Firms**

Author: **Maxim Ganzin**, *Macquarie Business School, Macquarie U.*

This paper offers philosophical insights into the ontology of practice of production which provides theoretical grounding to the ideas on the poetic organization. To conceptualize the poetic, we turn to examining craft manufacturing, which, in its pure form, displays the principles of poetic organizing. We draw on the philosophy of Martin Heidegger to distinguish the deep reasons behind craft- and industrial manufacturing, illuminating the building blocks of the ontology of practice. Equipped with these tools, we show that once we have a better grip on understanding the ontology of practice, we can have a more nuanced comprehension of organizational processes, including sensemaking. We argue that the different ontologies of practice, whether steeped in the poetic or not, shape the sensemaking regimes in organizations. By using the Heideggerian lens to consider the ontology of practice of craft, we offer philosophical underpinnings to the nascent theory of craft approaches to work.

Paper is Available to Meeting Registrants Only.

OMT: **Placing Value Creation at the Core of Strategy**

Author: **Sheldon Dunn**, *SHIDLER COLLEGE OF BUSINESS*

Most strategic management scholars still use Adam Smith's conceptual framework of value-in-use and value-in-exchange. However, many modern scholars fail to recognize that Smith's model of wealth creation was based on a normative model that targeted contemporary policy makers, rather than being an attempt to create positive theory of value. This paper represents an historical and cross-disciplinary integration of positive theories of value and value creation. A new typology is proposed which consists of two types of cross section value (hedonic value, and systemic value) and two types of longitudinal value (past value, and potential value). It is argued that these positive theoretical insights should be foundational to strategic management research, rather than the normative framework inherited largely intact from Adam Smith.

Session Moderator: **Sara Mahabadi**, *McGill U. - Desautels Faculty of Management*

OMT: How Investors Shape Who and How Startups Hire

Author: **Sara Mahabadi**, *McGill U. - Desautels Faculty of Management*
Author: **Lisa Ellen Cohen**, *McGill U.*

Early hiring decisions have important immediate and enduring effects on developing startups. Yet startups often struggle with hiring because they lack the resources, networks, and routines that enable effective hiring. Investors can help startups overcome these deficits. To understand how investors help startups overcome this struggle, we analyzed interviews and observations with startup investors, founders, hiring managers, actual and prospective employees, and other experts. We find that the advice and action of angel investors, VCs, accelerators, and other investors influences startup hiring. We show that investors have clear expectations and that these are made known to entrepreneurs through both targeted and diffuse means. For the most part, the targeted influence leads to the implementation of specific practices in startups where investment has already been made and encompasses four distinct spheres: why there should be a hiring plan, how to hire, who to hire, and what jobs to hire for. The diffuse influence happens when without targeting a specific startup, investors and others in the ecosystem communicate investors' expectations around team composition: e.g., demographic and skill diversity as well as work commitment. In anticipation of these investor expectations, founders make specific decisions about hiring. We also saw evidence that hiring-focused interactions between entrepreneurs and investors affected more than these immediate hiring outcomes. By guiding their hiring, investors enhanced startups ability to attract additional investments in subsequent rounds of fund raising.

OMT: How Status Disparities Motivate Entrepreneurial Decisions and Reproduce Status Disparities

Author: **Chunhu Jeon**, *Morgan State U.*

Employee entrepreneurship entails a transition from an employee in one organization to a founder/leader of a new organization. To understand why employees aspire to transition to a leader of their own organization, this study examines how status disparities between the employees and their leader and resultant advantages and disadvantages can influence entrepreneurial motivation. The empirical analysis of entrepreneurship of jazz musicians between 1950 and 2018 suggests that i) the status gap between a leader and an employee and ii) the status distinctiveness of the leader from the collective employees affect the employee's entrepreneurial decision. Furthermore, I found that the employee entrepreneurs driven by the status disparities are more likely to replicate such disparities when they found the entrepreneurial team. This study proposes a novel explanation of why mobility in social hierarchies can play a critical role in entrepreneurship.

OMT: Performative Standardization in the Evaluation of Startup Ideas

Author: **Natasha Overmeyer**, *Stanford Graduate School of Business*

A long line of literature has examined how gatekeepers evaluate individual and products, making decisions about where to allocate important economic resources and rewards. While these studies importantly shed light on evaluative processes that are based upon existing, backward-looking information, this study instead turns the focus to how evaluation processes operate in an under-examined context that is forward-looking and anticipatory – the evaluation of startup ideas. Using a unique data set of interviews and longitudinal data consisting of observations and archival materials, this study explicates the unique constraints that evaluators face when assessing an idea and its future potential with little information to base decisions upon. I introduce the process of performative standardization – in which first evaluators and those whose ideas are being assessed engage in an interactive process of constructing a shared vision for the future of the idea, and second the extent to which evaluators rely upon this constructed vision and its adherence to expected standards when assessing and selecting ideas for funding. I further examine why evaluators rely upon this process when assessing startup ideas.

OMT: Chasing Stars: Two-Sided Matching Between Startups and High-Status Candidates

Author: **Tristan L. Botelho**, *Yale School of Management*
Author: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*

Hiring is a two-sided matching process between employers and job candidates. A key challenge is information asymmetry where employers and candidates have difficulty evaluating the quality of the other side. This issue is exacerbated in the context of startup hiring given the importance each hire has for a startup and the lack of objective information about the startups available to candidates. In this study, we theorize about how startups evaluate star candidates and how star candidates approach the labor market across the hiring stages: from initial contact to accepting an offer. We test our theory using data from Venture for America, a program that helps match startups and job candidates. From the startup's perspective, we find that startups exhibit a star preference when reaching out to candidates for initial interviews but that this relationship attenuates in successive stages of the hiring process. From the candidate's perspective, we find that star candidates internalize their status and are more selective when searching for job opportunities. As a result, observed matching outcomes reflect the net effect of startups' pursuit of stars and stars' self-selective search behavior.

Changes in the Boardroom: The Present and the Future
The Present and the Future of the Boardroom

Organizer: **Jiyeon Kang**, *Pennsylvania State U.*
Organizer: **Georg Wernicke**, *HEC Paris*
Panelist: **Scott Graffin**, *U. of Georgia*
Panelist: **Donald C. Hambrick**, *Pennsylvania State U.*
Panelist: **Corinne A. Post**, *Villanova U.*
Panelist: **Christine Shropshire**, *Arizona State U.*

The last several decades have witnessed dramatic changes in the boardroom, including increased public pressure and legal requirements for board diversity and director overboarding, media scrutiny, and the influence of activist investors and stakeholders. While scholars have started to dedicate a great deal of attention to studying this trend, much is still to be understood. What are the theoretical and empirical implications of this recent trend for the roles of directors and corporate governance? How would this trend shape the career trajectories of individual directors, board interlock, and norms of the corporate elite? What are the exciting new developments and opportunities for future exploration? This symposium plans to bring together leading scholars in the area to 1) revisit the established understanding of the board of directors; 2) highlight emergent research and perspective on the board of directors; 3) discuss their insights about theoretical and practical implications of the relatively nascent trend; and 4) propose directions for future research efforts.

Temporality: How Past, Present, and Future Matter for Organizations

Session Moderator: **Emma Sandström**, *Aalto U. School of Business*

OMT: **The Three Loci of Organizational Identity Work: Prospective, Current and Former Members**

Author: **Maria Blomgren**, *Dept of Business Studies Uppsala U.*

Author: **Stefan Arora-Jonsson**, *Dept of Business Studies Uppsala U.*

Organizations work continuously to form, maintain and change their identities. This identity work has thus far been assumed to be carried out only with respect to the members of an organization. In this longitudinal study of identity formation, maintenance, and change we show that the identity work of some organizations has multiple loci. The Swedish secondary school that sought to form and maintain an identity of an 'excellent school' directed its identity work not only at its current staff and students, but also towards its prospective as well as former students. Multiple loci of identity work, we argue, is typical for organization where the characteristics of the members are important to its identity. Ignoring the identity work directed at prospective members ignores its fundamental importance in setting the scope for any identity work that can be carried out with the members of an organization. Re-conceptualizing identity work to also include efforts directed outside the organization, furthermore, address the critique that the organizational identity literature is too narrow in its focus on the formal boundaries of organizations and it opens up for an understanding of the sometimes competitive interactions across the identity work of several organizations.

OMT: **Configuring a Shared Temporal Trajectory: The Temporal Embeddedness of Collaborative Innovation** 

Author: **Jonathan Feddersen**, *Copenhagen Business School*

Studies of collaborative innovation processes tend to hold a unidirectional view of time in showing how actors pursue a shared future. Pursuing a temporal view of organisations as a trajectory of events, I report the findings of a longitudinal ethnographic field study, showing how actors connected back and forth between their respective pasts and futures in order to pursue a shared future. The findings reveal how actors initially pursued one future projection, switched to pursuing another projection, and eventually abandoned the emerging shared trajectory. I develop a model from the analysis that explains the interplay of five different modes of connecting past, present, and future, describing the becoming of a shared trajectory as a process of 'temporal abduction'. The findings contribute to an understanding of the temporality of collaborative innovation processes, and interorganisational relations more generally.

OMT: **Temporal Structuring in Sensemaking – How an Entrepreneurial Team Deals with Radical Uncertainty**

Author: **Emma Sandström**, *Aalto U. School of Business*

Author: **Henri Schildt**, *Aalto U. School of Business*

Understanding ways in which teams and organizations manage, negotiate and navigate uncertain futures is paramount, as high uncertainty can significantly harm employee and volunteer engagement. Recently, scholars have taken a keen interest in exploring collective sensemaking in uncertain contexts. Previous studies have examined how teams restore action after disruptive events and retrospectively make sense of the disruptions. However, the strategies teams utilize to deal with dynamic uncertainty "on the ground" have been largely missing. In this study, we examined team-level sensemaking during high uncertainty. We identified three strategies of temporal structuring that helped the team cope with and tame the uncertainty that could cripple their organizing efforts: (1) freezing the future (2) bracketing the future and (3) abstracting the future. Our study contributes to the literature on sensemaking and uncertainty by demonstrating the significance of temporal structuring as a way of moving forward and dealing with uncertainty as well as mitigating the potentially paralyzing effect of radical uncertainty. In addition, our study contributes to the literature on prospective and temporal sensemaking by focusing on the present-future connection and showing how a team constructs sensemaking anchors in the future rather than retrospectively in the past.

 OMT: **How the Past Matters For Organizations** 

Author: **Christopher Marquis**, *Cambridge Judge Business School*

Author: **Kunyuan Qiao**, *Cornell U.*

To understand historical influences on organizations more systematically, we decompose organizations' past into two distinct stages—junctures and processual periods. We refer to junctures as relatively short periods when organizations develop certain structures and routines, which in turn have a lasting influence. We then define processual periods as longer and more stable periods, and that processes then may strengthen, preserve, or weaken those structures and routines and thus the resulting past influence formed in prior junctures. We provide a framework to identify these elements, elaborating six ideal types of past influence—cohort effects, imprinting, imprinting decay, increasing-return path dependence, stable path dependence, and dissipation—with underlying processes and exemplar phenomena. Overall, our research contributes to a more comprehensive and cumulative understanding of how the past matters for organizations. Our study also clarifies confusion over different perspectives in the prior literature, sheds light on practical implications of managing the past, and connects and extends theories in this area.

Tackling Grand Challenges

Session Moderator: **Annika Ehlers**, *Jönköping International Business School*

OMT: [From Moral Struggles to Regulatory Discussions – The Case of Plant-Based Meat Substitute Labels](#) 

Author: **Annika Ehlers**, *Jönköping International Business School*

While there is a growing literature on moral markets that aim to create social value through market exchange, much of the research focused on how social movements and activist-producers initially create and legitimate new moral markets. What we currently know little about is how moral markets scale up and what happens when established organizations enter the market, following mainly economic goals. Additionally, we do not know much about the reactions of members of the 'conventional' market and their effect on moral struggles and the legitimacy of the market. To shed light on the effects of the economic growth and conventionalization of moral markets, I study moral struggles as they play out in the contestation of labels in the market for plant-based meat alternatives in Germany. Based on extensive archival data and 17 interviews with field actors, I show how incumbent actors initiate a regulatory contestation of product labels and therefore de-moralize the public discussion around the moral market. Doing so, they shift the focus of the struggle from moral legitimacy towards cognitive legitimacy, giving them larger margins to bring out 'conventional' arguments in politics and media. I discuss the implications of my study for research on moral markets and social movements.

OMT: [MNE Buyers of Local Firms as an Opportunity Structure: How NGOs Promote Sustainability in China](#)   

Author: **Wenjie Liu**, *Erasmus U. Rotterdam*
Author: **Purseu Heugens**, *Erasmus U. Rotterdam*

This paper presents new theory and evidence on how multi-stakeholder institutions affect the diffusion of sustainable practices in autocratic contexts. By highlighting the embeddedness of multinational enterprises (MNEs) in global supply chains, we study how this embeddedness helps non-governmental organizations (NGOs) promote sustainability in power-imbalanced institutional environments. Drawing on social movement and resource dependence theories, we argue that global supply chains that tie MNEs to foreign suppliers offer NGOs an opportunity structure to shift the balance of power across geographic boundaries by establishing MNE-NGO collaborations. This helps NGOs leverage competencies and resources to facilitate the adoption of sustainable practices by local firms within MNEs' global supply chain networks. However, this mediated stakeholder effect decreases when governmentally produced structural conditions reduce the perceived effectiveness of this opportunity structure: greater priority given to environmental protection by governments substitutes private governance arrangements involving MNEs and NGOs. Additionally, greater curtailment of civil liberties suppresses their synergistic potential. To test our theory, we examine the relationship between Chinese NGOs' collaborations with 168 MNEs across 25 countries and these MNEs' local green supply chain ratings in the period 2014-2020. This study contributes to the literatures on multi-stakeholder institutions, social movements, and corporate sustainability.

Paper is NOT Available. Please contact the author(s).

OMT: [Understanding Organizational Boundaries in an Interorganizational Context](#)  

Author: **Sunny Mosangzi Xu**, *Copenhagen Business School*
Author: **Ghita Dragsdahl Lauritzen**, *U. of Copenhagen*

Grand challenges and wicked problems call for interorganizational collaboration strategies to understand problem complexity and identify potential solutions. Such strategies push forward beliefs that multiple stakeholders and societal organizations collectively can create better and more desired futures. This conceptual paper advances our understanding of organizational boundary in the context of interorganizational interaction by asking and answering: What organizational boundaries are in an interorganizational context and what happens to organizational boundaries when two organizations interact? Cross-fertilizing boundary literature with a metaphysical debate in philosophy about the relation of contact when a boundary demarcates two entities, we identify three scenarios that could happen to their organizational boundaries when two organizations interact: 1) one of the organizational boundaries dissolve into context, 2) organizational boundaries remain separate, and 3) organizational boundaries merge into one. In addition, we propose clarifying, separating, and assembling as three main processes to transmute different individual and subjective categorization of "us" and "them" from different organizations into a collective and objective demarcation of responsibilities and patterned behaviors across organizations. We discuss how our conceptual propositions contribute to understanding and facilitating interorganizational collaborations.

Paper is Available to Meeting Registrants Only.

OMT: [Creating Inclusive Value in Cross-Sector Collaborations](#) 

Author: **Samuli Patala**, *Aalto U. School of Business*
Author: **Arne Kroeger**, *Aalto U. School of Business*

Urban grand challenges call for novel cross-sector collaborations between public, private, and social sectors. While such cross-sector collaborations have the potential to generate broader systemic solutions to sustainability challenges, the diversity of the organisations involved demands constant realignment of collaborators' goals, projected outcomes, and concomitant degrees of involvement. However, current research lacks an understanding of how cross-sector collaborations that aim to tackle GCs manage such diversity of actors and interests. To address this gap, we conducted an inductive, three-year longitudinal case study of a cross-sector collaboration aimed at generating new solutions for grand challenges in cities. We identify three different phases of development, each of which is characterised by alternative shared narratives, common practices, and joint outcomes. While the phase shifts were triggered by perceived dysfunctionality in public and private value creation, stability was maintained through inclusive value, which was determined by the interplay of narrative and practices. We contribute to the research on cross-sector collaboration, grand challenges by introducing inclusive value creation as a new type of collaborative value, and we propose and explicate three alternative processes that can create inclusive value. We also contribute to research on robust action by presenting an integrated form of robust action.

Paper is Available to Meeting Registrants Only.

Distinguished Speaker: **Youngjin Yoo**, *Case Western Reserve U.*

Digital technologies such as platforms and artificial intelligence as well as social phenomena they enable, such as online communities, are (re-)shaping the fabrics of organizations and organizing. In recent years, scholars from various camps made great progress in explaining how and why. Information systems scholars showed how digital technologies shape organizational practices and how those technologies take different forms and create new affordances as they are embedded in organizations. Organizational scholars detailed how digital forms of organizing are driven by actors with different purposes. However, insights from these fields of inquiry have seldom found common forums. Our symposium provides an interdisciplinary space to discuss plural perspectives on digital organizing and reflect on ways to move forward. Together, we will shed new light on how the affordances of digital organizing shape and are shaped by organizational practices and purposes.

Participant: **Tatevik Harutyunyan**, *NHH Norwegian School of Economics*
Participant: **Chanchal Balachandran**, *U. of Liverpool Management School*
Coordinator: **Thomas J. Howard**, -

Venture boards are theoretically important and economically relevant. Thus, we seek to better understand the impact of venture boards as a mechanism of corporate governance in the development of entrepreneurial firms. The majority of the knowledge about board performance stems from research on corporate boards, which are very different in nature to venture boards. Although we have seen a growing number of publications focusing on the board of directors in new ventures and its contrasts to large corporate boards as well as its impact on overall venture performance, a substantial variety of phenomena remain uninvestigated. Particular knowledge gaps exist around understanding venture board behavior and processes, or around the evolution of venture boards and changing board dynamics throughout the different life-cycle stages of the venture. Therefore, this proposed PDW aims to broaden the discussion of the growing scholarly community and investigate most pressing, future challenges of venture boards and how scholars may close research gaps with novel research methodologies to unlock the “black box” of venture boards. Specifically, this PDW aims to provide a stimulating environment, featuring a panel debate at the intersection of practitioners and leading academics. Moreover, the agenda follows with interactive roundtables on a variety of topics to set an exciting future research agenda. A particular focus of the PDW is to facilitate networking opportunities among scholars from different disciplines and career stages

The agenda for the workshop begins with a keynote setting out the state of the art and future directions in venture board research and practice. Following the workshop we will have different round table discussions on topics relevant to venture boards. While we have a short list of preferred topics for the round tables, we would like to hear from you about your topics of interest and attempt to include them as part of the round table discussions. Please reach out to Max Vellguth (maxve@dtu.dk) with your proposed topics of interest.

Looking Back and Moving Forward: Developments in Economic Stress Research

Developments in Economic Stress Research

Session Chair: **Tahira M. Probst**, *Washington State U. Vancouver*
Session Chair: **Laura Petitta**, *Sapienza U. of Rome*
Presenter: **Hyun Jung Lee**, *Washington State U. Vancouver*
Presenter: **Baylor Graham**, *Clemson U.*
Presenter: **Andrea Bazzoli**, *Washington State U. Vancouver*
Presenter: **Tiffany Kriz**, *MacEwan U.*
Presenter: **Laura Petitta**, *Sapienza U. of Rome*

The last few years have highlighted the intertwined nature of the coronavirus pandemic and economic stressors that many individuals face globally. Economic stressors refer to income- and employment-related sources of stress and include: economic instability (e.g., number and duration of periods of unemployment, downward mobility), economic deprivation (e.g., loss of income and financial resources), employment uncertainty (e.g., job insecurity), and economic strain (e.g., financial insecurity). As the COVID-19 pandemic raged, it was often the most economically vulnerable who lost their jobs, were forced to choose between protecting their health and protecting their livelihoods, and faced growing food and income insecurity. Unfortunately, much pre-pandemic research highlighted the numerous adverse negative effects that these stressors can have on workers and their families, including reduced physical and mental health, poorer long-term career outcomes, and impaired marital, family, and social relationships. The purpose of this symposium is to respond to the AOM 2022 call for research that can enable us to create a better world together; indeed, our presenters bring valuable perspectives from multiple countries (Canada, the Republic of Korea, Italy, and the United States) and continents (Asia, Europe, and North America). Topics include: the impact of technology-induced job insecurity and benefits of organizationally-provided training; the relationship between childhood economic stress and the experience of adulthood subjective economic stress; a textual statistics analysis of the past 40 years of job insecurity research; the impact of managerial listening quality on affective commitment trajectories in response to job insecurity; and, an examination of the cross-level effects of organizational financial strain climate on employee-level reactions to job insecurity. Our symposium's theme of "Looking Back and Moving Forward" captures the thread underlying the session's five presentations with the aim of understanding how we can leverage prior and current research on economic stressors to improve the well-being of today's employees and what steps organizations might take moving forward to facilitate this.

Editor Panel of Public and Nonprofit Management Journals
Editor Panel of Public and Nonprofit Journals

Participant: **Jaelyn Piatak**, *U. of North Carolina, Charlotte*

The Editor Panel of Public and Nonprofit Management Journals offers an opportunity for conference attendees to learn about potential outlets for their work. This panel provides conference attendees with the opportunity to learn about public and nonprofit management journals and ask questions about the peer review and publication process. Participation in this PDW is open to all conference attendees. The session will include the following journals: An Associate Editor of The Journal of Public Administration Research and Theory seeks to advance public administration scholarship by publishing the highest quality theoretical and empirical work in the field. The journal is multidisciplinary and includes within its scope organizational, administrative, managerial, and policy-based research that improves our understanding of the public sector. JPART is committed to developing diverse and rigorous research that extends and builds public administration theory. Lewis Faulk, American University, Editor of Nonprofit Management & Leadership, a quarterly peer-reviewed journal that publishes quality scholarship on all aspects of management and leadership important to nonprofit organizations and leaders. Jessica Sowa, University of Delaware, Editor of Review of Public Personnel Administration (ROPPA), that presents timely, rigorous scholarship on human resource management in public service organizations. Articles cover both traditional and emerging topics, including analysis of the effects of specific HR procedures or programs on the management function and assessment of the impact of HR management on the broader areas of public policy and administration. Co-editor of Perspectives on Public Management and Governance (PPMG), the newest journal of the Public Management Research Association. PPMG is dedicated to theory development and conceptual work challenging and advancing the field of public affairs. Jaelyn Piatak, University of North Carolina at Charlotte, Co-editor of Nonprofit and Voluntary Sector Quarterly (NVSQ), an international, interdisciplinary journal for nonprofit sector research dedicated to enhancing our knowledge of nonprofit organizations, philanthropy, and voluntarism by providing cutting-edge research, discussion, and analysis of the field.

How to Conduct and Publish Open Science in Management Research

Open Science in Management Research

Organizer: **Gernot Pruschak**, *Bern U. of Applied Sciences*

Serious misconduct cases have shattered public trust in business research. Multiple scholars have already discussed how to overcome the credibility crisis and restore public trust in research. Hereby, they highlighted the importance of open science practices, especially in empirical and experimental research, to ensure rigor and ethical conduct through transparency and replicability. This symposium takes up this notion by showing participants how to conduct and publish open science in management research. First, Gernot Pruschak starts the symposium by introducing the theme and the presenters and providing a short motivation for the need of open science practices in empirical and experimental management research. Second, Andrew Timming highlights the needs for registered reports and presents advice on how to generate and submit registered reports to management journals. Third, Roman Briker introduces the participants to study pre-registration at the Open Science Framework and AsPredicted.org. Fourth, Christian Hopp highlights the necessity of conducting replication studies and exemplarily shows how to conduct a replication study combining experimental and empirical methods. Fifth, Nicolas Bastardoz gives insights into the editorial view on publishing registered reports and replication studies in top management journals. Hereby, he shares advice for authors on which types of replication studies editors seek and why they are important for journals and scientific stakeholders. Sixth, Jermain Kaminski discusses data sharing among management researchers and explains how research data can be openly shared.

Technology, Organized Immaturity and Emancipation

Session Moderator: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*

SIM: How do Digital Platforms Organize Immaturity: Towards an Integrative Framework for Platform Power

Author: **Martín Harraca**, *Surrey Business School*
Author: **Itziar Castelló**, *Surrey Business School*
Author: **Annabelle Gawer**, *U. of Surrey*

The power of digital platforms is increasingly raising concern in civil society and in policy circles. A recent surge of research has separately documented various forms of platform power and power abuse. However, there are surprisingly scant attempts in providing a holistic perspective on platform power. We address this issue by developing a socio-symbolic perspective on platforms' power dynamics, and by asking the guiding question of how platforms organize immaturity. Drawing on Bourdieu's concepts of field, capitals, and habitus, we explain how socio-symbolic structures shape power relations and transform the field in which platforms operate. We characterize the digital habitus and identify three stages in field transformation, each explained by the predominance of specific forms of power. Our analysis derives that while a subset of these forms of power increase organized immaturity, another subset can also empower the field's actors. Thus, we make two main contributions: (1) We develop a novel socio-symbolic view of platforms' power dynamics and an integrative framework conceptualizing the multifaceted dimension of platform power. (2) We exploit and enrich the concept of organized immaturity.

SIM: Dependency on Your Own: Organizing Individual Autonomy Through Expertise Delegation

Author: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*

The current surge in the technologization of business practices unavoidably widens knowledge asymmetries between market actors and increases the need to delegate expertise. The ethical concerns regarding the dependency of those who remain impaired in this process lie in the implicit assumption that the delegation of expertise comes in inverse proportion to individual autonomy and, eventually, disempowers individuals. However, this paper revisits this widespread assumption and argues that there are two conditions under which the delegation of expertise can convey substantial degrees of individual autonomy: 1) the pervasiveness of dissensus and 2) the right to withdraw. Therefore, it is not inconceivable to cohabit with (and even emancipate from) the unavoidable pressure of socio-technical systems on business relations.

SIM: The Utility of Trust: Interpersonal, Institutional, and Technological

Author: **Tobey Scharding**, *Rutgers U.*

Building on research establishing the value of trust in business, including interpersonal and institutional trust, I evaluate a new conceptualization of trust, technological trust, associated with technologies like blockchain. The point of doing so is to contribute to understanding what role such technologies should play in business, ethically speaking. I focus on the business of executing and authenticating financial transactions. Scholars have shown that technological trust does not fulfill certain, foundational functions associated with traditional conceptualizations of trust, such as motivating people to form transacting relationships in the first place. I consider the extent to which such characteristics affect technological trust's overall utility. After conducting utilitarian evaluations of interpersonal, institutional, and technological trust via a series of novel thought experiments, I argue that institutional trust creates greater overall utility than interpersonal trust and technological trust has the potential to create greater overall utility than institutional trust. As long as certain conditions are met regarding the foundations of trust, then, businesses need not entrench in strategies related to interpersonal or institutional trust, ethically speaking; rather, they may invest resources to develop business strategies related to technological trust.

Carolyn Dexter Award Nominee

In this paper, we investigate organized emancipation, i.e. the process of emancipation orchestrated within dedicated organizations. On the one hand, Critical Management Studies (CMS) scholars have shown the risk of being fooled by truncated project of emancipation in the context of organization, and the particular importance of safeguarding an integral idea of emancipation in management studies. On the other hand, recent research on organization shows the potential of alternative organizations as privileged vehicles for collective action for societal challenges and for emancipation. However, the question of how organizations can promote the emancipation of their beneficiaries remains largely unexplored. In this paper, we integrate CMS insights into an organizational perspective. Using Nancy's Fraser theory of social justice, we develop a framework for the study of organized emancipation. We apply this framework to a network of alternative organizations: Maisons familiales rurales (MFR). For more than 80 years, MFRs have been successfully delivering professional education to underprivileged youth in rural areas. Through qualitative study based on 69 interviews and 200+ archival documents, allows us to map out challenges of and to propose a three-stage model of organized emancipation.

Author: **Jennifer Woolley**, *Santa Clara U.*

Work on craft production has examined a wide range of topics from x, y to z. So far, however, the intersection of craft production and entrepreneurship has been overlooked, such that we know little about the people who found companies around craft or their motivations. Entrepreneurship scholars have also neglected craft production as a discrete entrepreneurial form, which tend to be of small scale. We fill both of these gaps in the literature simultaneously by investigating the phenomenon on craft entrepreneurship in the context of bean-to-bar chocolate in the U.S. Through qualitative analysis, we find that founders of craft firms engage in a form of entrepreneurship centering on a specific meaning of both their product and the production process and incorporating non-market goals. In turn, this orientation generates limits to organizational scale, resulting in a specific organizational form that defines craft entrepreneurship.

Ecosystem and Platform Governance

Session Moderator: **Juliet Vink**, *Vrije U. Amsterdam*

STR: Power at the Heart of Business Ecosystem Evolution: An Integrative Meta-Synthesis

Author: **Juliet Vink**, *Vrije U. Amsterdam*
Author: **Eco Van Burg**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Omar Solinger**, *Vrije U. Amsterdam*
Author: **Brian Vincent Tjemkes**, *Vrije U. Amsterdam*

This meta-synthesis reconsiders the business ecosystem literature through a power lens and provides an integrative model of power and business ecosystem evolution. Whereas most studies adopt a learning perspective to understand business ecosystem evolution, the backdrop of power relationships against which evolution takes place is often ignored. Power influences the manner in which mutual adjustments are made that drive ecosystem evolution as well as processes of learning. Disregarding power hinders comprehension of why change does or does not happen and thus limits the ability to predict ecosystem evolution. Accordingly, accounting for power provides a more complete conceptualisation of ecosystem evolution, understanding it as actively constructed by participating actors as opposed to being prescribed. A meta-synthesis of 52 qualitative case studies reveals that actors and systems of power (1) enact power via specific sets of power practices to (2) reproduce or transform the dominant value creation and value capture of the ecosystem. The developed integrative model stipulates that ecosystem actors enact ecosystem-specific practices of power to prevent, defeat, negotiate, and impose ecosystem change. The model contributes to the literature by recasting ecosystem evolution – including both stasis and change – as the dynamic interplay between processes of power and learning.

STR: From Hierarchies to Markets: Placing Platform-Based Governance Forms Into The Governance Space

Author: **Kenan Guler**, *Rochester Institute of Technology*
Author: **Ettore Spadafora**, *Rochester Institute of Technology*

We create a taxonomy of platform-based governance forms and show how they alter our understanding of traditional hierarchies and markets. Specifically, we place these new hybrid forms into the governance space and discuss how the emergence of some of these forms brings market features inside the firm. Our theoretical examination also points out a “reverse evolution” among platform-based governance forms, where platform participants remove the platform-providing firm from the ecosystem and split ownership and control rights among themselves. Finally, we provide an examination of factors yielding the emergence of platform-based governance forms.

Paper is Available to Meeting Registrants Only.

STR: Firms, Markets and Platform Ecosystems: Economic Organizing in the 21st Century

Author: **Anoop Madhok**, *Schulich School of Business*
Author: **Rishiraj Kashyap**, *Ivey Business School*
Author: **Nudrat Mahmood**, *Schulich School of Business*

Fundamentally new organizing forms such as digital platform-based ecosystems (DPEs) have begun to dominate the 21st-century business landscape and sparked renewed interest in economic organizing. In this paper we propose a novel theoretical framework that advances generativity as the primary organizing logic employed in DPEs to create desirable output variety by facilitating innovative activities of autonomous external actors. We synthesize existing knowledge of economic organizing principles to conduct a comparative generativity analysis of DPEs, markets, and hierarchies. We mirror this analysis by conducting a comparative efficiency analysis of the three organizing forms. Finally, we explore the crucial link between the efficiency of adaptation and generativity optimization by the platform firm in the face of evolutionary forces. The paper bridges dominant thinking of the industrial era with the latest digital era thinking.

STR: How Political Factors Shape Ecosystems: An Analysis of Electric Mobility Policy in China and the EU 

Author: **Rick M.A. Hollen**, *Amsterdam Business School, U. of Amsterdam*
Author: **Liam Owen Goodman**, *Amsterdam Business School, U. of Amsterdam*

In recent years business scholars have undertaken efforts to move the ecosystem concept from a catch-all phrase to a distinct value system. This study contributes to contemporary ecosystem theory by considering the role of political factors in shaping ecosystems, which has remained underexposed and poorly understood. A qualitative approach is employed to investigate the electric mobility ecosystem in China and Europe, the Chinese and EU policies for this ecosystem, and the commercial implications of these policies. The analysis is conducted using data compiled from industry reports, legal documents and expert interviews. The results show that political institutions play a role in shaping the electric mobility ecosystem primarily through three distinct policy categories – that is, coordination policies, competitiveness policies and capacity policies – each of which are subdivided into more specific types of policies. These policies may also be relevant in the context of other ecosystems. We show how each of these policies affect the ecosystem and discuss implications for our current understanding of ecosystem structure and dynamics.

Author: **Dovev Lavie**, *Bocconi U.*

The modern economic system has promoted corporate value creation and capture as well as national growth, but is not lacking imperfections. Platform owners such as Amazon, Facebook, Apple and Google have become dominant, but their stakeholders have suffered under their grip, with loss of privacy and private choice, increased wealth concentration and economic inequality, and overconsumption and abuse of natural resources. I discuss the societal grand challenges linked to these caveats of the economic system, noting that current efforts to remedy this system are unlikely to suffice. I then identify the root cause of these problems, which I attribute to greed and consequent opportunistic behavior. Countering such behavior is a first step towards a solution.

OSCM: The Shareholder Value Implications of Data Breaches

Author: **Maximilian Klöckner**, *ETH Zürich*

Author: **Christoph Schmidt**, -

Author: **Stephan M. Wagner**, *Swiss Federal Institute of Technology Zurich, ETH*

Digitalization in operations and supply chain management entails various opportunities for performance improvement. However, the increasing reliance on data introduces new risks for firms, such as data breaches. In this study, we assess the financial implications of data breaches and identify a set of factors influencing these implications. Based on a sample of 219 data breach announcements by publicly traded U.S. firms, we conduct an event study to examine the stock market reaction to data breaches. We further estimate a series of regression models to identify important influencing factors in the stakeholder environment of the firm, including several robustness checks and post-hoc analyses. We find a significantly negative stock market reaction to announcements of data breaches within a two-day event window. Our post-hoc analysis indicates a sustained negative impact on shareholder value. The negative stock market reaction is stronger when customer data is breached, the breach occurred along the supply chain, and the firm receives more media attention in general. This study adds to the emerging topics of cyber risk in operations and supply chain management, and to the literature on data breaches specifically.

OSCM: A Cross-Country Analysis of Risk and Resilience in SMEs of Agri-food Supply Chains in COVID-19 Era     

Author: **Imran Ali**, *Central Queensland U.*

While the unprecedented COVID-19 has undoubtedly disrupted numerous businesses across the globe, SMEs of agri-food supply chains (AFSC) were deemed more vulnerable due to their unique operational challenges. With the financial support of the FAO of the United Nations, this study explores how SMEs of AFSCs across three countries were disrupted and what useful measures were embraced to cultivate resilience amid COVID-19. A qualitative research approach, with 24 semi-structured interviews from the two developing (Pakistan and Tanzania) and a developed (Australia), was employed. The cross-country comparative analysis unveiled a noticeable difference in risk and resilience profiles between developing and developed countries. A systematic account of critical risks and corresponding resilience strategies was devised to survive and thrive amid the current pandemic and similar future incidents. The findings would facilitate practitioners and policymakers to enhance firms' resiliency, ensuring food supply amid the pandemic. This is among the few studies in exploring risk and resilience in SMEs of AFSCs across developing and developed contexts; thus, drawing key lessons from the strategies applied by some leading firms to build effective supply chain resilience. The proposed conceptual framework offers a roadmap to build more resilient SMEs of AFSCs in the wake of the pandemic.

OSCM: Does Geographical Distance Impact Safety Audit Outcome in Socially Responsible Operations?    

Author: **Somak Paul**, *California State U., East Bay*

Author: **Nivedita Sharma**, *California State U., East Bay*

The formation of supply chain consortiums to jointly address workspace safety violations in developing economies, such as Alliance and Accord in Bangladesh, has been praised as a paradigm shift in socially responsible operations and supply chain contract. While the legally binding nature of the contract and the use of collective leverage as a means of enforcement have made Accord particularly interesting, the effectiveness of the consortium's safety audits has not been studied empirically. In this paper we focus on the effect of geographical distance between the consortium and suppliers on the safety audit outcome. Analyzing the data from 1,805 suppliers in Bangladesh we find that geographical distance increases the likelihood of positive safety audit outcome. Furthermore, we note that the size of the supplier distinctly impacts this probability. Based on our findings we recommend the consortiums hold all suppliers to the same high standard of workspace safety uniformly regardless of their distance from the consortium. We also suggest the small-sized suppliers to seek financial support from the government to develop a safe work environment to stay in business. Our research has serious policy implications including more frequent and diligent auditing of suppliers farther away from consortiums and having a clear funding scheme to help small suppliers offer a safe workspace to their workers. Borrowing from the auditing literature in accounting we extend the supply chain literature on proximity to include safety audit effectiveness in socially responsible operations.

OSCM: The Role of Visibility in Sustainable Performance: Understanding the Effect of Institutional Forces 

Author: **Beatriz Acero**, *IE Business School*

Author: **Pieter Spaarwater**, *IE Business School*

Author: **Elena Revilla**, *IE U. - IE Business School Madrid, Spain*

In past years, sustainable performance has become a key demand for shareholders and customers. However, there has been limited attention to the enabling effect of supply chain capabilities on sustainable performance. Focusing on the food industry, this study expands the notion that visibility is a dynamic capability that mediates the relationship between information sharing and sustainable performance. Furthermore, our mediation analysis is extended to understand how institutional forces, and more specifically Halal food requirements, influence such mediation process. The results from our analysis of data collected from 89 of the most important suppliers of two large food retailers in the Kingdom of Saudi Arabia indicate that information sharing enhances sustainable performance by facilitating visibility. They also indicate that the magnitude of such facilitation depends on institutional forces. These findings extend the existing academic literature and provide guidance to managers by creating a better understanding of how information sharing can lead to higher sustainable performance.

Raising Young Entrepreneurs by Using Innovative Teaching Methods

Raising Entrepreneurs by Using Innovative Tools

Session Chair: **Andrea Honal**, *Duale Hochschule Baden-Württemberg, Mannheim*
Presenter: **Alexandra Toth**, *DHBW Mannheim / Germany*
Presenter: **Michael Ewald**, *DHBW Mannheim / Germany*

As entrepreneurship education cultivates innovative talents that are a success driver for future business development across the globe, teaching innovation management is a core module of the curriculum. Since the pandemic, innovation-driven development strategies put new demands on entrepreneurial education. Moreover, recent studies have confirmed that the personal traits and the environment of learners have a positive impact on successful entrepreneurship education. It is a useful way to enhance the innovative ability and entrepreneurial personality by different teaching techniques, and build various learning channels for students via a modern educational mix-approach. Entrepreneurial competence refers to the ability to find opportunities and develop the necessary resources and capital, in addition to technical, financial, and legal knowledge. Thus, entrepreneurship education is concerned with improving creative skills being applied in different practice settings. Moreover, teachers play a significant role in developing entrepreneurial ways of thinking and acting. Despite having entrepreneurial competencies and a positive attitude towards entrepreneurship, they need to reconsider what content to teach, which technology to apply, and how to become more entrepreneurial in their academic work to cope with the growth and dynamics in entrepreneurship education. Based on this, this PDW demonstrates successfully implemented teaching methods from German educators to shape future entrepreneurs by promoting self-management skills in challenging times and gives guidelines for the higher education field.

Seeing Business Through a Proscenium Arch: Improving Business Communications through Process Drama *Seeing Business Through a Proscenium Arch*

Presenter: **Sonja Johnston**, *Werklund School of Education, U. of Calgary*
Presenter: **Harrison Campbell**, *Werklund School of Education, U. of Calgary*

Have you ever wondered how to reframe art in the art of the pitch? In an era where entrepreneurship is becoming ubiquitous with popular culture due to the influence of Dragon’s Den™ or Shark Tank™, the art of presentation is deeply critical. Looking towards process drama as a discipline encompassing multiple art forms (including drama, music, dance, and visual arts), has the potential to create a stronger foundation for essential communication and presentation skills within business education. This directly connects teaching and learning to community and practice while also exploring and strengthening the foundations of communications skills to enhance student capabilities (and graduate competencies in the business ecosystem) informed by process drama. Through a dynamic mini-lecture and theatre sports activities, which are small-scale targeted games and activities that can be completed in short timeframes and adapted easily to fit a multitude of themes, categories, and source material, participants will actively engage with process drama and explore opportunities for implementation in their own entrepreneurial education practices.

Exploring Dynamic Difficulty Adjustment (DDA) for Summative Assessment in Management Education *DDA for Assessment of Learning*

Participant: **Ronald A.D Dyer**, *U. of Sheffield Management School*

Session Chair: **Ginger Grant**, *Humber College Institute of Technology and Advanced Learning*

This session explores the utilization of dynamic difficulty (DDA) adjustment for summative assessment in management education specifically through the lens of a project management module at the Advanced Manufacturing Research Centre (AMRC) - University of Sheffield. DDA is a common mechanism in game play, which provides an opportunity to automatically change parameters, scenarios and behaviours within videos games in real time based on player ability. A major component/challenge of project management education is an understanding of a significant amount of terminology associated with the project life cycle. To improve learning and retention amongst final year engineering students a DDA approach was utilized with the following objectives in mind: 1. Introduce the terminology to students in an engaging manner 2. Utilize DDA to identify students pain points with regards to retention of core project management concepts 3. Utilize data from DDA activity to inform curriculum improvements. In this session we explore the appropriateness, design and efficacy of the DDA approach with an aim to disseminate technologically innovative pedagogical practices to support curriculum design and assessment.

Does Teaching Sometimes Feel Like a Chore? Ways to Bring Joy to Your Pedagogical Approach

Ways to Bring Joy to Your Teaching Approach

Presenter: **Karen MacMillan**, *Wilfrid Laurier U.*

Presenter: **Tawnya Means**, *U. of Illinois at Urbana-Champaign*

Many instructors report feeling de-energized by the teaching aspects of their academic duties. They can face a number of challenges, such as: students can be difficult to engage (especially in a blended, online or remote environment); class prep and teaching time can take away from other duties; teaching is not always aligned with college, departmental, or personal professional expectations and reward systems; and proper evidence of quality teaching outcomes can be hard to identify and document. This dynamic, engaging, and interactive session will focus on ways that instructors can infuse joy into their teaching practice. Participants will explore a number of things, including: strategies that bring enjoyment, community, and interaction into the face-to-face, blended, or online/remote classroom; methods of building a pedagogical community that support growth in a personal teaching practice; and the benefits of joyful teaching.

Panelist: **Joshua Gans**, *U. of Toronto*
Session Chair: **Muhammad Burdbar Khan**, *U. of Lincoln, UK*

Building on over two decades of award-winning research, more than a decade of classroom development, and working with hundreds of start-ups, the Entrepreneurial Strategy framework not only synthesizes but reconceptualizes and reorients practical and academic insights to focus squarely on the practical and grounded choices facing founding teams. These course materials offer students and entrepreneurs a practical and systematic approach for how to undertake the process of exploring and evaluating the core choices that entrepreneurs need to make as they translate their ideas into a reality. By putting founder choices center stage, Entrepreneurial Strategy offers a guide for entrepreneurs as they make the key decisions shaping their ventures, and a process for making choices in a way that enhances the potential for venture scalability and success. This TLC@AOM session will introduce a range of new tools and techniques, including tools for the process of entrepreneurial decision-making (Test Two Choose One) and a novel start-up strategy template (The Entrepreneurial Strategy Compass). After an introduction to the framework and course materials, leading entrepreneurship educators will share their perspectives on incorporating these resources into their courses – a junior faculty who successfully launched the full course as a first teaching experience, an experienced scholar who supplemented their established entrepreneurship course, and an academic leader within an entrepreneurship program who used these materials to guide seed-stage, science- and technology-based startups. A series of breakout tracks will provide ample opportunity for participants' engagement and discussion.

Strengthening Pracademic Competencies through Management Education

Pracademic Competencies in Management Education

Presenter: **Helka Kalliomäki**, *U. of Vaasa*
Session Chair: **Swapan Ghosh**, *Menlo College*

Increasing the societal impact of scientific research is being increasingly highlighted in academia and science policy as a means to face grand societal challenges, and researchers are being encouraged to communicate the societal relevance of their work. Societal impact is also pursued through various collaborative arrangements attempting to bridge the gap between research and real-world problems. Instead, practitioners' competencies to utilize scientific knowledge in their everyday work and operate at the science-society interface have not received equal attention. The objective of this interactive session is to discuss about the conference topic of creating a better world together from the perspective of "pracademic competencies" of practitioners operating at the science-society interface. The objective is to explore the topic from the perspective of teaching and learning, i.e., how pracademic competencies could be strengthened through management education. In addition to collaborative skills that have for long been at the core of educational programs in various disciplines, pracademic competencies refer, e.g., to abilities to reconcile targets and skills to reflect and spar on the usability of the research at the different phases of collaboration. Even though collaborative arrangements between academia and practice have become more common, collaboration is not easy due to different ways of perceiving knowledge and learning. Management education has an important role to play in preparing students to the working life in which practitioners' competencies are essential in leveraging the societal impact of scientific knowledge production.

Entrepreneurs create what does not yet exist, and they do so within an entrepreneurial ecosystem. In keeping with AoM’s 2022 theme of Creating a Better World Together, this caucus explores how judgments made at both the micro- and macro- levels of the entrepreneur and ecosystem, together, affect creation.

Both an entrepreneur and their entrepreneurial ecosystem make decisions under conditions of Knightian uncertainty (Knight, 1921), or extreme uncertainty. Their decisions are based on types of judgment. To the extent that an entrepreneur and their ecosystem rely on the outcomes of each other’s decisions, their judgments affect each other’s outcomes. How can we better understand these judgments and make sense of their connectedness? This caucus presents some views at the micro- and macro- level of entrepreneurial decision-making, and provides activities for attendees to discuss and share views on research questions that arise.

CMS: Space, Gender, and Class: Spatial Mobility Work in Women Entrepreneurship   

Author: **Vijayta Doshi**, *Indian Institute of Management, Udaipur*
Author: **Srinivas Venugopal**, *U. of Vermont*

Spatial mobility constraints such as, safe place and space, safe time, safe distance, safe travel and legitimate size/location of the business are pervasive in the lives of women entrepreneurs yet understudied in the literature. We therefore ask the questions: How do gendered spaces constrain (or enable) women entrepreneurs in initiating or expanding their venture? How are these spatial constraints negotiated by women entrepreneurs? Using an intersectional spatial approach to women entrepreneurship and based on interviews with women entrepreneurs in India, we show the enactment of spaces via spatial mobility constraints and the enactment on spaces through forms of spatial mobility work such as safety work, temporal work, body work and perceptual work in women entrepreneurship. The study contributes to the women entrepreneurship literature by first, introducing a novel intersectional spatial approach to women entrepreneurship through the concepts of spatial mobility constraints and spatial mobility work, remaining sensitive to the class-based differences. Second, the study contributes by presenting the everyday lived experiences of women entrepreneurs from the context of the Global South, specifically India, thereby, de-centring the ‘first world’ issues and assumptions in the women entrepreneurship literature to highlight the relevant local issues in women entrepreneurship in India.

CMS: Refugee Entrepreneurship and the Limits of Inclusion: Syrian Refugee Entrepreneurs in Turkey 

Author: **UGUR YETKIN**, *Graduate School, Istanbul Technical U.*
Author: **Deniz Tuncalp**, *Istanbul Technical U.*

Refugee numbers nearly doubled in the last ten years, exceeding 30 million worldwide. Turkey hosts close to 4 million refugees, mainly from Syria. Syrian refugees are highly active in the Turkish business system and opened more than 10,000 firms. Refugee entrepreneurship literature argues it has an emancipatory impact. It helps people overcome their constraints, act more independently, and make their own decisions in transforming their lives, making social inclusion easier. Our study aims to critically examine refugee entrepreneurship’s limits and boundary conditions leading to inclusion and integration with the host country environment. We qualitatively studied how Syrian refugee entrepreneurs experience their entrepreneurial process concerning their embeddedness, inclusion or exclusion. We interviewed 42 Syrian refugee entrepreneurs and key informants in seven Turkish cities. A qualitative analysis of these interviews identified three types of refugee entrepreneurs facing different conditions for inclusion or exclusion: survival, ethnic-targeting, and integrating refugee entrepreneurs. Entrepreneurs in each category are embedded in multiple contexts, i.e., social, political, institutional, spatial, at different levels. However, unlike prior literature, our findings indicated that as integrating refugee entrepreneurs become more embedded in a host country, they also potentially face more exclusion. As a result, they develop several strategies to respond to exclusionary actors and structural barriers. The study also discusses practical implications for policymakers.

Paper is Available to Meeting Registrants Only.

CMS: Becoming Confident: A Model of Women’s Confidence Embodiment in the Workplace   

Author: **Estelle Archibold**, *Case Western Reserve U.*
Author: **Diana Bilimoria**, *Case Western Reserve U.*

Recent and persistent focus on the self-confidence of women in the workplace, particularly in popular and practice literature (Kay & Shipman, 2014; Warrell, 2016), has prompted a new surge of empirical research on self-confidence and gender. Few historical studies address self-confidence in organizational contexts and investigate gender’s influence on confidence (see for example Lenney, 1977; McCarty, 1986). The pervading theory on core confidence (Stajkovic, 2006; Stajkovic, Lee, Greenwald & Raffiee, 2015) attempts to re-establish confidence (vs. self-confidence) as a second order construct related to more familiar theories of general self-efficacy (Chen, Gully, & Eden, 2001), hope (Snyder, Cheavens, & Sympson, 1997), resilience (Wagnild & Young, 1993), and optimism (Scheier & Carver, 1985). However, the situational nature of confidence (i.e., that confidence emerges differently or not at all depending on the environmental and relational context) has not been adequately investigated and requires researchers to consider a broader scope of phenomenological dimensions in order to examine the gendered nature of confidence. Using qualitative survey responses of the confidence experiences of 300 women, we investigate how women in the workplace experience confidence to unveil dimensions of the phenomenon that are not well defined in the extant literature. We advance a conceptual model of the sensemaking process of women’s confidence embodiment in the workplace. Keywords: Confidence; Enactment; Embodiment; Gender; Sensemaking

Developing and Enhancing Managerial Skills

Session Moderator: **Qiumei Jane Xu**, *Northeastern Illinois U.*

MED: The Future is Relational: Management Development for Today and Tomorrow   

Author: **Jenny M Hoobler**, *NOVA School of Business and Economics*
Author: **Kim Elizabeth Dowdeswell**, *U. of Pretoria*

In a series of two studies we tested a possible turn toward relational, as opposed to agentic, management development program (MDP) content. First, we conducted a content analysis of the MDP literature since Collins’ (2002) seminal work, finding a larger focus on relational as compared to agentic MDP content. Second, we conducted qualitative interviews of 14 management coaches/consultants from South Africa and the United States. The interviews revealed practice to be focusing more on relational, but also agentic, and interwoven relational and agentic skills. From the interviews we share how relational skills are being done in management development practice today, the focus being primarily on development self-awareness in managers. Our conclusion is that, in contrast to the enduring “think manager, think male (agency)” paradigm, leadership today may require, and leaders and followers value, relational, more so than agentic, skills.

MED: Developing Oral Communication Skills: A Multi-component, Multi-source and Multi-stage Course Design    

Author: **Qiumei Jane Xu**, *Northeastern Illinois U.*
Author: **Charles Funk**, *Northeastern Illinois U.*

We present an innovative, experiential management communication course design that incorporates four sources of communication self-efficacy to develop three components of oral communication (presenting, listening and conversing). Our pedagogical strategy includes a multi-stage skill development with elements of three self-assessments, weekly mini-communication workshops, weekly prepared and impromptu student speeches, one short listening exercise, one interview exercise, one final presentation and immediate instructor and peer feedback. This course design enhances student oral communication in three important ways. First, it provides a non-threatening, experiential learning environment for students to develop oral communication self-efficacy while addressing business topics. Second, it provides students multiple opportunities to simultaneously practice oral communication’s presentation, listening and conversing elements. Finally, our course design maximizes students’ experiential learning with timely and constructive “360 degree” (instructor, peer, and self) feedback both inside and outside of classroom.

Paper is Available to Meeting Registrants Only.

MED: Variance in the Self-Assessment of Cultural Intelligence Development: The Role of Reflection

Author: **Maike Andresen**, *U. of Bamberg*
Author: **Isabel De Sivatte**, *IE Business School*

In a global environment, cultural intelligence (CQ) becomes a key ability for employees. Intercultural experiential learning interventions are considered promising ways to acquire CQ. While learning research has mainly reported on the positive effects of reflection on learning in general, empirical CQ research to date has not considered the role of reflection. In this study, we consider potential drawbacks of reflectivity in self-assessed CQ development among participants in an intercultural experiential learning intervention. Survey results of 198 (wave 1) and 106 (wave 2) learners before and after participation in the intervention show that, on average, participants significantly increased their self-assessed CQ. However, higher levels of reflection – as expressed in learners’ reflection ability (reflective observation) and disposition to reflect (environmental sensitivity) – correlated with lower self-assessed CQ development. Prior international experience of high-sensitives did not change the result. Results are interpreted with reference to the overestimation effect. Implications for research and practice are discussed.

Teaching Entrepreneurship: Is There a Better Way?

Session Moderator: **Marise Uemura**, *U. of São Paulo*

MED: Effects of Entrepreneurship Education on Entrepreneurial Skills of Young High School Students 

Author: **Marise Uemura**, *U. of São Paulo*
Author: **Liliana Vasconcellos**, *U. of Sao Paulo (FEA/USP)*

The effectiveness of entrepreneurship education (EE) initiatives aimed at young students in basic education has aroused the interest of researchers. International studies have also investigated the effects of cognitive and non-cognitive skills, competences, and entrepreneurial intentions. In Brazil there is a gap in this regard, so this research assesses the effects of the mini-company initiative offered by Junior Achievement (JA) Brasil on high school students' perception of their entrepreneurial skills. A questionnaire assessed 10 entrepreneurial skills using a 7-point Likert scale, in addition to demographic and profile variables. Participants from five Brazilian states answered the questionnaires before and after participating in the JA Brasil initiative in 2019. The 287 questionnaires were statistically analyzed using the Wilcoxon test and regression models. There was a positive effect on four skills: entrepreneurial self-efficacy, analytical ability, creativity, and risk management. The results support decisions to expand EE initiatives in the curriculum of public, private, or third-sector educational institutions.

Paper is Available to Meeting Registrants Only.

MED: The Appropriateness of Design Cognition for Entrepreneurship Education of Engineering Students    

Author: **Imran Muhammad Ilyas**, *U. of Jyväskylä School of Business*
Author: **Juha Kansikas**, *U. of Jyväskylä School of Business*
Author: **Alain Fayolle**, *EMLYON Business School*

The study argues that the needs of engineering students for managerial education are distinct and evolving over time towards entrepreneurial mindset due to new industrial and technological trends. Consequently, managerial education of engineering students is shifting towards Science and technology entrepreneurship education (STEE). Moreover, considering the relevance of design cognition in entrepreneurship and engineering, it is argued that STEE can tackle the challenge more effectively by incorporating design cognition in the education process. Propositions are derived from research literature, and a teaching model approach is proposed that elaborated on the incorporation of cognitive acts of design in various aspects at ontological, didactical, and contextual levels in STEE. The proposed framework views education as a process of co-construction, centered on students where the role of teacher is like a coach. Students work in teams and practice the cognitive acts of design that lead to the development of interpersonal, entrepreneurial, and managerial skills. For this purpose, open-ended questioning, real life case studies, problem and project based learning, and lean methodology are proposed as effective content and pedagogies to promote the entrepreneurial behaviors required in the current industrial scenario.

 **MED: The Fellows Approach - Fostering a Desire to Contribute**    

Author: **Ghita Maria Alexandra Wallin**, *Aalto U. School of Science*

William H. Newman Award Nominee

Complex problems such as climate change, pandemics, and political polarization require mental flexibility. Entrepreneurship education has an essential role in providing such flexibility. This paper provides reflections from a course in entrepreneurship, which has received high ratings from the students and vitalized stakeholder collaboration. Through rigorous self-study, group work and contact sessions, as well as continuous personal guidance the students are guided to explore entrepreneurship from many different perspectives. Contemporary ideas from entrepreneurial education literature are used to strengthen the pedagogical foundation for the advocated approach.

MED: Dark, Down, and Destructive Side: Unveiling Negative Aspects of Unsuccessful Entrepreneurial Action     

Author: **José Osvaldo De Sordi**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*
Author: **André Rodrigues Dos Santos**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*
Author: **Marcia Azevedo**, *U. Federal de São Paulo (UNIFESP)*
Author: **Carlos Jorge**, *Univeridade de Marília - UNIMAR*
Author: **Marcos Hashimoto**, *Millikin U.*

Studies associated with critical analyses of entrepreneurship education (EE) highlight the predominance of literatures that focus greatly on the positive aspects of entrepreneurship. This can lead to cognitive bias, resulting in students developing more favorable and even enthusiastic perceptions of entrepreneurial action. To reduce this information asymmetry, the intention of this study was to identify and classify the diversity of negative aspects resulting from unsuccessful entrepreneurial action. For this purpose, we applied the content analysis technique to the transcripts of interviews with former entrepreneurs and stakeholders associated with entrepreneurial action, in addition to the texts of articles from important journals of Entrepreneurship and Small Business identified through a scope literature review. The analyses resulted in an artifact in the form of a taxonomy tree (available in <https://thetriplets.com>), comprising 3 super codes, 10 codes and 38 sub-codes, with definitions and examples of a wide range of negative aspects resulting from unsuccessful entrepreneurial actions. The focus of the artifact is to instruct, discuss and raise the awareness of future entrepreneurs regarding the risks of entrepreneurial action. Therefore, it is useful for professors of disciplines involving EE, as well as managers and technicians at incubators and other entities that provide support for entrepreneurs.

We explore the question of whether entrepreneurial education matters for medium-sized venture performance. We do so to better understand the conflicting evidence where such education appears to have significant positive micro-level effects while also indicating no significant macro-level effects. The growing investment in entrepreneurial education increases intentions and start-up rates in treatment effects studies, but such investments in that education do not appear to increase national start-up or survival rates. We apply a different empirical approach – based on the capabilities view – of surveying venture entrepreneurs about their performance and their education in order to determine whether their skills-enhancing entrepreneurial training is a driver of success. We find that while that training significantly increases their confidence, when taken as a whole – as a multidimensional measure – it is not a significant influence on venture performance. We discuss the implications for research, policy and education.

A panel of organizational teams scholars will discuss why we have developed into a literature that only publishes work that has 80+ teams in the sample, what implications this has on the organizational team literature, and whether there is space and need for small sample size team research. Indeed, reviews of the literature regarding team research conducted in the field (i.e., within organizations versus lab-based or archival samples) indicates that in some of the premier management outlets over the past five years the average number of teams in articles published was 81 teams. It appears that the number of teams needed for publication in premier outlets is increasing as work based on earlier time periods would suggest the sample size needed between 2000 and 2010 was closer to 50 teams. In part, this trend is being accentuated by some journals requiring power analyses prior to articles being sent out for review which is also raising the sample size bar. While such approaches have their benefits including allowing for certain methodological techniques to be utilized, there may be rich and interesting scenarios (e.g., unique contexts) where only small sample sizes are possible (or needed).

Ethics, Governance and Corporate Social Responsibility in Top Management Teams

Session Moderator: **Sebastian Schneck**, *U. of Innsbruck*

SIM: Diversity in Top Management Teams 

Author: **Hanna Jäschke**, *Leibniz U. Hannover*
Author: **J. Nils Foege**, *Leibniz U. Hannover*

Over the past decade, diversity in organizations has become a central theme of management practice and research. Given the importance of the top management team (TMT) for firms, management scholars have increasingly examined the role of diversity for TMTs by shedding light on its antecedents, contingencies, and consequences. These endeavors have led to a meander of studies published in academic journals. As diversity grows and becomes ever more important in all parts of an organization, it is important to take stock of current research and navigate the meander to identify current conceptual gaps and pave theoretical pathways forward. In this study, we combine a literature review with a machine learning approach, i.e., topic modeling, to structure the research landscape of diversity in TMTs. For our topic modeling, we analyzed the text of 1,454 articles published in peer-review journals between the years 2010 and 2021. Our findings provide an overview of the research landscape of diversity in TMTs and its 19 topics, and carve out four communities of topics – i.e., (1) TMT characteristics, (2) TMT responsibilities, (3) dimensions of diversity, and (4) quantitative empirical research. By combining a qualitative and a quantitative literature review, this study contributes to the literature about diversity in TMTs by identifying current research streams and underrepresented topics, and providing directions for future research.

SIM: TMT Horizontal Pay Dispersion and Corporate Misconduct: An Intrinsic Motivation View 

Author: **Lu Ye**, *U. of Melbourne*
Author: **Daejeong Choi**, *U. of Melbourne*

Executive pay dispersion has emerged as an important and significant predictor of corporate misconduct. However, extant upper echelon research on corporate misconduct mainly relies on economic man assumption but fails to capture psychological complexity of executives. In this article, we draw on behavioral agency model to underscore individual's underlying intrinsic motivation and develop a dynamic theoretical model of (1) the horizontal pay dispersion acts as an extrinsic incentive to suppress TMT members' intrinsic motivation to different levels, and (2) the emerging process by which TMT member's different emotions, motivations, and cognitions interact and evolve to corporate misconduct. Our model has theoretical and practical implications for scholarship concerning TMT horizontal pay dispersion, intrinsic motivation, emergent states, and corporate misconduct.

SIM: CEO Overconfidence and Corporate Social Performance: The Moderating Effect of TMT Overconfidence 

Author: **Sebastian Schneck**, *U. of Innsbruck*
Author: **Sahar Nejadhossein Soudani**, *U. of Innsbruck*

Overconfident CEOs play a key role in shaping corporate strategies by making biased and risky strategic decisions. In contrast, corporate social performance is initiated by firms to reduce corporate risks and to enhance their reputation. This study, therefore, aims to explore the impact of CEO overconfidence on firms' corporate social performance. In addition, we investigate how the interplay with other top management team (TMT) members' overconfidence moderates this relationship. Based on a sample of publicly traded US firms from 2003 to 2017, we find that CEO overconfidence increases the levels of corporate social performance. Remarkably, our findings show that the overconfidence of the other TMT members mitigates this effect. Our study thus contributes to a better understanding of the CEO-TMT interface research by investigating the interactions between the CEO and the other senior executives' overconfidence in the context of corporate social performance.

Corporate Governance and Compensation

Session Moderator: **Cameron Jay Borgholthaus**, *Southern Illinois U., Edwardsville*

STR: Discounting Diversity While Pursuing Diversity: TMT Composition Effects on Executive Compensation    

Author: **Cameron Jay Borgholthaus**, *Southern Illinois U., Edwardsville*
Author: **Christina Matz Carnes**, *Indiana U. - Kelley School of Business*
Author: **Nikos Dimotakis**, *Oklahoma State U.*
Author: **Chris Tuggle**, *U. of Central Arkansas*

Despite there being a significant amount of practical and academic interest regarding the absence of gender diversity among top management teams (TMTs), the conditions under which it is most prevalent and why it persists remain poorly understood. We use abductive reasoning to propose a link between gender homogeneity in team composition and pay disparity in TMTs, investigating this relationship and its effects. Applying a multilevel compositional technique, we find that team composition associates with pay disparity, but that these effects are contingent on CEO gender. This pay disparity, in turn, triggers higher turnover rates, providing support for one explanation as of why a lack of gender diversity persists in TMTs. Finally, we discuss theoretical and practical implications of team compositional effects on TMT compensation and turnover.

STR: Corporate Governance, Board/CEO Ties and New Outsider CEO Compensation

Author: **Andrew Valentine**, *UNSW Sydney*

The role of company directors in setting new CEO compensation has become more complex in recent times with the creation of a new CEO labor market. Directors can potentially utilize their relationships with prospective CEOs to determine new CEO compensation in the interests of investors. Conversely, new outsider CEOs can potentially be empowered by their relationships with directors to negotiate compensation in their own interests and against that of investors. This study explores this issue through examining the impact of board/CEO ties in 1,173 outsider CEO successions on a range of fixed and short- and long-term, performance-related CEO compensation ratios across a range of developed and developing markets where there are varying approaches to corporate governance. Results show that new outsider CEOs in the United States and other Anglo-American institutional environments are able to leverage their relationships with directors to restructure compensation in their own interests and against those of investors.

STR: CEO as the One-Line Liaison between Board and TMT: Substantially Powerful CEO and CEO-TMT Pay Gap

Author: **Zonghui Li**, *Jacksonville U.*
Author: **Zhonghui Wang**, *California State U. San Bernardino*

Since the pass of Sarbanes-Oxley Act (SOX) in 2002 and the subsequential changes in NYSE/NASDAQ, publicly traded firms in the United States have adopted the policies that increase board independence. Eventually, one phenomenon emerges when such governance practices go to an extreme—a CEO becomes the lone inside director on board. Furthermore, in the circumstance that the CEO also serves as board chair, the CEO becomes the “one-line liaison” between the board and the firm, possessing substantial power due to increase information asymmetry. While extant studies have shown that CEO power is among the critical determinants of CEO pay, little is known regarding how this corporate governance practice (CEO serving as both board chair and lone inside director) has an impact on top executive compensation design. This study is an effort to explore such impacts by developing competing theoretical arguments based on tournament theory and agency theory. The analysis of 2,093 observations of S&P 500 firms between 2006 and 2013 reports interesting findings. We find that, when a CEO serves as both board chair and lone inside director and becomes the “one-line liaison” between the board and the firm, the CEO receives much higher pay than their non-CEO TMT peers and such CEO-TMT pay gap is detrimental to firm performance. Our findings suggest that it is important to take a more nuanced approach when we examine the relationship between CEO pay gap and firm performance by considering the significant contingent effect of CEO power.

STR: Executive Severance Pay: A Review and Research Agenda

Author: **Conor Callahan**, *U. of Illinois at Chicago*

Following changes to the disclosure of executive compensation adopted by the SEC in 2006, researchers have taken a renewed interest in studying the influence of severance pay. The current literature on executive severance agreements consists of a loosely connected research stream across multiple disciplines— including management, accounting, and finance. While the insights from these various fields have advanced our knowledge of severance, this lack of integration presents a challenge for scholars seeking to familiarize themselves with this form of compensation and understand how they too can contribute to this dialogue. To address this issue, in this article we provide an integrative review of prior research on executive severance pay as well as an agenda discussing novel ideas for future research in this area. Our research agenda highlights how severance can inform a wide array of theory and phenomena essential to management research. We also discuss key methodological issues identified in our review and how these can be addressed moving forward. Our aim is for this review to both serve as an important reference for scholars new to this topic as well as highlight promising new avenues for research for scholars already interested in executive severance pay.

Author: **Sabra Khajehnejad**, *ESSEC Business School*

Author: **Amin Sofla**, *Assistant Professor at KU Leuven, Belgium*

Author: **Oscar Stalnacke**, *Umeå School of Business, Economics, and Statistics*

Author: **Peter Edlund Frii**, *Umeå School of Business, Economics, and Statistics*

We examine how going public via an IPO impacts the compensations of the CEO and average employees and the resulting pay disparity, and what board characteristics matter for this relation. Using a sample of Swedish firms from 2005 to 2017 and the difference-in-difference method, we find that pay levels of employees and the CEO is higher after IPO compared to the pre-IPO in IPO firms than in matched private firms, but the increase in the compensation of the CEO is substantially higher than that of average employees, leading to an increase in the CEO-employee pay dispersion. Examining the board characteristics, we find that venture capital board membership and board IPO experience can mitigate the increase in CEO-worker pay dispersion after the IPO. The results suggest the board characteristics that allow for more effective monitoring of the firm compensation system during and after IPO and have important theoretical implications for the literatures on IPO and pay disparity.

Inventor Mobility

Session Moderator: **Ihwan Na, U. of Kansas**

STR: Star Departure, Employees' Experience Working with Stars, and Firm Performance

Author: **Ihwan Na, U. of Kansas**

To appropriate value from star employees' tacit, transferrable knowledge and skills, star-owned firms in mostly knowledge-based industries may have employees work with stars as a team. Yet an important but still under-explored question is as to what knowledge and skills employees would really learn from this peculiar team experience. This study seeks an answer to this question in the context of star departure. Conventional wisdom from the knowledge-based view suggests that stars may transfer their tacit knowledge and skills to peers through experience working together, so the experience would function as buffers to the negative impacts of potential star departure ex-post. Counterintuitively, I extend human capital theory by submitting that the experience also shapes star-specific human capital, which deteriorates firm performance further once the star leaves. Evidence from lobbying firms in the United States lobbying industry supports the latter prediction: The more employees' experience working with stars, the greater declines in firm performance after the stars depart.

STR: The Ties That No Longer Bind: Inventor Mobility and Patent Litigation

Author: **Daniel Jay Brown, Harvard Business School**

Author: **Maria Roche, Harvard Business School**

The retention of inventor-employees represents a core strategic concern for firms in innovative industries. In this paper, we examine the impact of reduced patent enforceability on the mobility of inventor-employees, and explore alternative retention methods firms can employ when legal instruments become less effective. To analyze the relationship, we use the US Supreme Court ruling *eBay Inc. v. MercExchange, L.L.C.*, which decreased the use of injunctions in patent infringement cases and, consequently, the risk firms faced from being sued for patent infringement. Our analyses rely on difference-in-differences specifications that include state-year, firm, and technological fixed effects, and a host of other controls. Using patent application data to track the movements of 59,765 early career patent inventors before and after the ruling, we find that in the post period, inventor-employees at firms with higher litigiousness experience an increase in the likelihood to move. In accordance with job embeddedness theory, we hypothesize that inventor-employees with greater firm fit and links will be less affected by the ruling. Upon testing, we find that both fit and links mitigate the impact of the ruling, providing alternative retention strategies that can insulate firms from legal shocks.

Paper is Available to Meeting Registrants Only.

STR: Collaboration and Knowledge Spillovers by Mobile Inventors

Author: **Eunkwang Seo, Oklahoma State U.**

This paper examines how collaboration influences knowledge spillovers by mobile inventors. Although prior research has offered many insights on mobility-induced knowledge spillovers, whether mobile employees can transfer the knowledge generated by other employees in their previous firms remains underexplored. In this paper, I propose that pre-mobility and post-mobility collaboration jointly affect knowledge spillovers by mobile inventors. Using a difference-in-differences approach with matching, I find that collaborators' knowledge is more likely than non-collaborators' knowledge to be transferred by mobile inventors, and this effect is strengthened by the intensity of the post-mobility collaboration of the mobile inventors and the knowledge similarity between their pre- and post-mobility collaborators. The results of this paper make important contributions to the literatures on collaborative innovation and employee mobility.

STR: When Do Firms Learn By Hiring? How Complexity Moderates The Value Of Distant Knowledge

Author: **Dong-Nghi PHAM, ESSEC Business School**

Author: **Luis Rios, The Wharton School, U. of Pennsylvania**

Author: **Maciej Workiewicz, ESSEC Business School**

Hiring employees from high-performing rivals is a common channel for transferring knowledge and enhancing firm's capabilities. But while the literature on learning-by-hiring posits that new knowledge can be a powerful source of improvement and rejuvenation for a firm's knowledge stock, evidence for whether firms actually benefit from hires with knowledge that is very distant from their own is mixed. With the help of a computational model, we explore how the knowledge distance of a new hire shapes the benefits of learning-by-hiring. The analysis of the model allows us to reconcile opposite findings and predictions found in the literature and provides further nuance to our understanding of this important phenomenon. Specifically, we show that knowledge complexity has a critical impact on the benefits of hiring an employee with distant knowledge. We also show that the level of refinement of the hiring firm's knowledge shapes benefits from hiring, and we identify the mechanisms responsible for these outcomes.

Antecedents of CSR

Session Moderator: **Leandro Nardi**, *HEC Paris*

STR: Corporate Social Responsibility, Financial Materiality, and the Challenges of Forced Migration 

Author: **Leandro Nardi**, *HEC Paris*
Author: **Marieke Huysentruyt**, *HEC Paris*

Carolyn Dexter Award Nominee

Forced migration is a critical social challenge of our time. Corporate responses to social challenges of this magnitude have inspired a growing body of literature in management and strategy. In particular, prior work has investigated companies' responses based on specific CSR policies with high financial materiality—e.g., energy firms' policy commitments to climate change mitigation. However, the literature has yet to understand whether and how exposure to a social challenge influences the composition of a firm's portfolio of CSR policies, comprising both more and less financially material actions and distinct social dimensions. To address this question, this paper studies the challenges of forced migration to Europe. We propose a novel empirical strategy leveraging headquarter proximity to tragic refugee incidents as a source of variation in the salience of forced migration as perceived by companies. Employing a phenomenological approach, we show that firms more exposed to forced migration adjust their portfolios of social CSR policies by progressively increasing the adoption of less material policies, vis-à-vis more material actions. In line with the argument that firms may see such responses as a means to strengthen their ties to nonfinancial stakeholders, we then show that responses are driven by firms with higher pre-existing social performance who, according to the literature, are more prone to use CSR to manage stakeholder relationships. Finally, we also show that firms' responses are concentrated on dimensions related to employees and communities. Our paper contributes to literatures on corporate responses to social challenges, strategic CSR, and financial materiality.

STR: Does Overburdened Top Management Team Compromise Corporate Sustainability? A Study of Indian Firms

Author: **Manish Popli**, *Indian Institute of Management, Indore*
Author: **Mehul Raithatha**, *Indian Institute of Management, Indore*

In this study, we analyze the role of the complexity of the top management team's task environment on the corporate sustainability actions of a firm. Using recent advances of the upper echelon theory, we hypothesize and find support that executive job demands, representing both endogenous and exogenous complications, swamp a firm's top executives, limit their cognitive capacity, centralize the locus of decision-making thus jeopardizing corporate sustainability actions. Furthermore, we theorize the impact of two contextual factors. First, we argue and find support that the negative influence of executive job demands is weaker for firms with experienced TMTs, as greater experience brings vast cognitive capacities, which may help weather greater job demands. Second, we theorize that because of the provisions of intra-group coordination and resource allocation in a family-owned business groups, the negative relationship between executives' job demands and corporate sustainability initiatives gets weakened. This study aims to advance the influence of the strategic leadership's objective task environment on corporate sustainability activities.

STR: The Impact of Consistent and Inconsistent Performance Feedbacks on Corporate Social Responsibility 

Author: **Nishant Kathuria**, *U. of Texas at Dallas - Jindal School of Management*

Behavioral theory of the firm (BTOF) remains under-utilized to understand the impact of firms on the society. This study pays attention to the effects of multiple performance aspirations and develops a more holistic view about how performance feedback influences social behavior of firms. Leveraging the global trend that forces firms to perform CSR activities, this study integrates BTOF and prospect theory to reveal that firms become risk averse by spending more on CSR activities when they fail to meet both historical and social aspiration levels. The analysis also shows that firms exhibit risk-seeking behavior by spending less on CSR activities when they: (1) perform better than both historical and social aspiration levels, and (2) meet historical aspiration level but fail to meet social aspiration level.

Paper is Available to Meeting Registrants Only.

STR: Competition, Market Institutions, and CSR Specialization  

Author: **Limin Fu**, *U. of Newcastle*
Author: **Dirk Boehe**, *Africa Business School*

Does competition foster or stifle corporate social responsibility (CSR)? The current corporate social responsibility (CSR) literature featuring this debate mainly centers on the two opposing mechanisms of competition with respect to CSR—declining resources available for CSR and increasing strategic incentives for differentiation from CSR. Moreover, this debate also largely rests on a dichotomous assumption that firms only increase or decrease CSR under competitive pressure. Relaxing this assumption, in this study, we develop a finer-grained concept—CSR specialization—to describe to what extent a firm is focused on a selective few CSR dimensions under competition. Further, we posit that the two opposing mechanisms coexist and interact, leading to an inverted U-shaped relationship between competition and CSR specialization. We further predict that market institutions, namely, market openness and capitalism type moderate this relationship through strengthening the differentiation mechanism. Employing Multilevel Linear Modeling (MLM) estimation technique on a global dataset that includes 1,586 firms in the year 2002 to 2017, our findings support our hypotheses with robustness tests. Our study points to reconciling the debate in firms' CSR response in strategic management literature and makes meaningful contributions CSR literature.

CEO Compensation: Antecedents and Effects

Session Moderator: **Lindsey Yonish**, *Texas A&MU*.

STR: [The Greed-Based Path From CEO Compensation to Job Seekers' Perceptions](#) 

Author: **Lindsey Yonish**, *Texas A&M U.*

Author: **Tyler Sabey**, *Arizona State U.*

Author: **Steven Boivie**, *Texas A&M U.*

Author: **Anthony Klotz**, *UCL School of Management*

Large CEO pay packages have become the subject of increased negative scrutiny among the media and general public, suggesting that CEO compensation may affect the firm by influencing stakeholder perceptions and behaviors. Although some recent research has begun to study the association between high CEO compensation and CEO greed, whether and how CEO greed is perceived by stakeholders remains to be examined. We develop theory on CEO compensation and broaden our understanding of its consequences by examining whether and how CEO compensation leads to perceptions of CEO greed. Focusing on job seekers, a population especially likely to attend to information about firms and CEOs, we find evidence that high CEO compensation leads to perceptions of CEO greed among job seekers and that such perceptions lowers job seekers' attraction to the CEO's firm. Moreover, we find that these relationships are weakened for job seekers who themselves exhibit high levels of greed.

STR: [Government Frugality Campaign and SOE Executive Compensation: The Influence of Non-State Ownership](#)   

Author: **Jingyuan Li**, *Hong Kong U. of Science and Technology*

Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Strategic management research has well recognized the heterogeneous effects different types of shareholders can have on a firm. However, the implication of having them coexisting has not been clearly understood, although it is common for firms to have multiple large shareholders at the same time. We investigate this question in a unique context where a governmental regulation exogenously influenced state owners' goal, making them more likely to cut the executive salary of the firms they controlled. We examine how the presence of two significant types of non-state ownership—domestic private and foreign ownership affects how CEO compensation was affected by the initiative of state-owners. Using data on Chinese listed firms, we find that after the governmental regulation promoting a more frugal work style in state-affiliated organizations, CEO compensation of state-controlled firms significantly decreased. The decrease after the regulation is attenuated if a firm also has a domestic private blockholder, but accentuated if a firm has a foreign blockholder. Our findings extend the literature on firm ownership and institutional theory.

STR: [CEO Compensation Complexity and Firm Performance](#)  

Author: **Tobias Oberpaul**, *LMU Munich School of Management*

Author: **Nicolas Tichy**, *LMU Munich School of Management*

Author: **Ingo Weller**, *LMU Munich*

How does the complexity in CEO compensation affect firm performance? With unknown consequences, the complexity of executive compensation contracts is rising. In this study, we explore how the complexity of executive compensation relates to firm performance. We conceptualize and operationalize the objective constituents of complex compensation contracts and find negative outcomes on both accounting- and market-based measures of firm performance for CEOs. Based on these findings, we furthermore offer and explore theoretical explanations for the relationship, namely multitasking and cognitive limitations. We link these findings to the top management team (TMT) and suggest that compensation complexity is an important extension for the TMT pay dispersion and behavioral integration literature. We discuss these findings and close with potential research opportunities in the nascent research field of compensation complexity.

STR: [Inside Debt and Risk: Is There A Link?](#)

Author: **Mahdi Forghani Bajestani**, *Alabama State U.*

Author: **Mahdi Moeini Gharagozloo**, *Old Dominion U.*

Author: **Chen Chen**, *Old Dominion U.*

The disclosure of CEOs' pension benefits and deferred compensation in 2007 provided scholars with the opportunity to test agency theory predictions on these long-term compensations, also known as inside debt. While the studies showed this form of payment as an effective tool in controlling excessive risk, they all overlapped with the financial crisis of 2007 and its aftershocks. Drawing on behavioral agency model and focusing on corporate mergers and acquisitions as a high-risk investment strategy, we demonstrate that neither CEOs nor shareholders remain sensitive to inside debt after the economy recovers. Our analysis of nearly 4000 observations in a post-crisis period (2011-2017) reveals that the previous findings are heavily influenced by the collapse of financial markets. Disproving agency theory arguments on debt-like compensation, our results point to the more realistic assumptions of behavioral decision models and call for more contingency approaches to theoretical inference. Practical implications are also discussed for designing executives' compensation packages as a means of mitigating the next potential crises.

Adapting to the External Environment

Session Moderator: **Goce Andrevski**, *Queen's School of Business, Canada*

STR: **Situational Experience, Expertise, and the Janus-face of Forbearance** 

Author: **Goce Andrevski**, *Queen's School of Business, Canada*
Author: **Danny Miller**, *HEC Montreal*
Author: **Ndubuisi Richard Ugwuanyi**, *Smith School of Business, Queen's U.*

We study the drivers and performance outcomes of strategic forbearance – a purposeful decision not to respond to a rival's competitive attack. Leveraging theories of skill development, we argue that forbearance can be strategically beneficial or not depending on competitors' situational experience and level of expertise. We find that competitors with extensive experience in dealing with specific competitive situations are more likely to choose forbearance over response; however they benefit from forbearance only when they are skillful enough to create long-term positional advantage; otherwise, forbearance leads to inferior performance. Additionally, expert competitors with the highest skills favor response over forbearance, but benefit from both forbearance and response, whereas forbearance by those of limited expertise hurts performance. We operationalize forbearance as gambit decline in chess and test our propositions on a sample of 3,515 chess players making 236,767 decisions to accept or decline a gambit offer.

STR: **Pro-market Reforms and Green Innovation in China: A Dynamic Institutional Perspective**

Author: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*
Author: **Xu Jiang**, *Xi'an Jiaotong U.*
Author: **Adnan Ali**, *PhD Student at Xi'an Jiaotong U.*
Author: **Ramiz Ur Rehman**, *Faculty of Business, Sohar U., Oman*

Do pro-market reforms facilitate firms to conduct green innovation or create hindrance to the adoption of such risky strategies? We seek to answer this question evaded by previous studies. Based on a dynamic institutional perspective, we uncover how scope of pro-market reforms (degree of market liberalization in a given year) and speed of pro-market reforms (rate of market liberalization achieved over time) affect firms' green innovation subsidies and their subsequent conversion of such subsidies into green innovation output. Results from a sample of Chinese publicly listed firms from 2008 to 2018 indicate that scope and speed of pro-market reforms both facilitate firms to obtain more green innovation subsidies. The conversion of green innovation subsidies into green innovation output is positively moderated by scope of pro-market reforms, such that a greater scope of pro-market reforms enables firms to achieve higher green innovation output. However, this conversion is negatively moderated by speed of pro-market reforms, such that reform speeds exert an inverted U-shaped effect on green innovation output, implying that a gradual reform speed is most suitable for firms to achieve high green innovation output. These findings provide implications to the dynamic institutional perspective by explaining whether pro-market reforms serve as a facilitator of or a burden on firms' green innovation in a major transitioning economy.

STR: **Institutional Voids and Innovation**  

Author: **Aditya Milind Ketkar**, *Ohio State U.*
Author: **Mona V Makhija**, *Ohio State U.*
Author: **Kiran Avate**, *Virginia Tech*

Economies fall short to varying degrees in providing the institutions necessary to support market mechanisms. These limitations, known as institutional voids, are generally thought to reduce the effectiveness and performance of firms operating in such environments. To explain how firms deal with institutional voids, scholars have pointed to various strategies such as corporate social responsibility (CSR), internalization, information substitution, institutional borrowing, and signaling. These resource-intensive strategies are utilized primarily by very large firms. SMEs have limited resources that reduce their degrees of freedom for enacting such complex strategies. Given the significant contribution of SMEs to worldwide businesses, employment as well as national income, particularly to the emerging economies, it is important to understand their strategies in overcoming institutional voids. We suggest that SMEs will be more likely to undertake innovation to deal with institutional obstacles. Findings highlight the importance of innovation for SMEs even in environments thought to have less developed innovation-supporting systems. The connections we demonstrate between SMEs, institutional voids and innovation are new to the literature.

STR: Online Reviews, Legitimacy, and (In)Formal Entrepreneurship

Author: **Fabian Diaz**, *U. of Louisville*

Author: **Maria Minniti**, *Syracuse U.*

Online reviews found on websites like Yelp are an increasingly popular source of information for consumers. While an increasing number of studies find that online reviews influence firms' financial performance, less is known about their effect as a viable alternative to formal legitimating mechanisms such as licensing on the distribution of entrepreneurs between the formal and informal sectors. Using an original dataset of the California moving industry between 2004-2016, we find a curvilinear association between the number of unlicensed firms and the likelihood that informal entrepreneurs will apply for a license (i.e., transition from the informal to the formal sector). We also find that likelihood to be negatively associated with that firm's online ratings, and with the popularity of online reviews in the area. These findings suggest that entrepreneurs may now rely more on online mechanisms to legitimate their firms than more traditional formal legitimating mechanisms such as licensing.

The Underlying Challenges of Partner Relationships

Session Moderator: **Viktoria Judith Salomon**, *LMU Munich*

STR: Name Your Price: Platform Design Change and Service Providers' Responses   

Author: **Jovana Karanovic**, *Rotterdam School of Management, Erasmus U.*

Author: **Mark Boons**, *Vrije U. Amsterdam*

Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*

When designing a platform, platform owners face a delicate choice of control vs autonomy relative to their service providers. Price-setting is one of the key platform design choices, yet seldom explored in the literature. To the date, literature suggested that platforms should retain control over price-setting when services are relatively homogenous; on the contrary, they should pass the control to service providers in the case of heterogeneous offerings. In order to test this theoretical assumption, we explore the case when price-setting control was granted to workers in a relatively homogenous market. In a quasi-experimental setting, we examine service-providers price-setting behaviour following the platform design change (when the price-setting control was passed on to service providers). We find that in the post-design change period providers were able to leverage their personal characteristics (e.g., higher ratings, job experience) for higher hourly rates. In addition, we find that providers charged higher hourly rates for longer duration jobs and for working on weekends. Taken together, these suggest that service providers are in a position to discover heterogeneity in demand that goes beyond the knowledge of the platform owner. We offer contributions to the broader platform governance literature and the literature on two-sided markets.

STR: Turning Down the Heat – Interfirm Rivalry Erosion and Its Implications for Competitive Dynamics

Author: **Viktoria Judith Salomon**, *LMU Munich*

Author: **Simone Maria Eulitz**, *LMU Munich*

We introduce an underexplored phenomenon of competitive dynamics that we call ‘interfirm rivalry erosion’, i.e. the evolution from long-running hostile rivalry towards an economically sensible competition. Drawing from social identity theory, we develop a theoretical model including main drivers, mechanisms, and implications of interfirm rivalry erosion. We put forth a series of propositions on how the rivalry between firms can gradually erode under certain historical and ongoing circumstances. Moreover, we develop a set of propositions on how rivalry erosion can affect former rivals’ competitive word and action moves vis-à-vis one another. By introducing interfirm rivalry erosion, we aim to complement dominant theories on the rise and persistence of interfirm rivalry, striving to offer a more complete, balanced, and de-escalation-oriented theory of interfirm rivalry.

STR: Commitment under Asymmetric Dependence: Supplier-buyer Dynamics in the Automobile Industry

Author: **Kyun Kim**, *Pusan National U.*

In this paper, we examine the supplier-buyer relationship based on resource dependence theory. When suppliers are asymmetrically dependent on buyers, those suppliers are subject to opportunistic behaviors of the buyers. Under this kind of an industry setting, suppliers’ enhancement in commitment to the asymmetric relationship, however, can help them resolve problems associated with asymmetric dependence and enhance performance. Such performance improvement can be lessened when a buyer forms a new exchange relationship, or magnified when a supplier forms a new exchange relationship. A supplier’s industry diversification and technological capability also affect the dynamics. Examining the Korean automobile industry, we discover strong support for our argument.

 STR: Manipulating Perceptions of Asset Specificity in Alliances: A Microfoundational Approach

Author: **Russell Coff**, *Wisconsin School of Business*

Author: **Libby Leann Weber**, *U. of California, Irvine*

In interfirm exchanges such as alliances and joint ventures, transaction cost economics theory (TCE) argues that asset specificity, a key contracting hazard, largely determines specific attributes of hybrid governance, namely control mechanisms. Despite the importance of this concept, asset specificity is often unobservable. Instead, governance decisions largely rely on negotiator perceptions of asset specificity. While traditional TCE assumes negotiators are intendedly accurate to mitigate transaction costs, they are motivated to manipulate perceptions to maximize value capture for their firm. Thus, theory does not incorporate the impact of manipulated perceptions on governance attributes. Taking a microfoundational approach, we explore the impact of suppliers manipulating buyer managers’ perception of task characteristics to inflate their perceived asset specificity, on hybrid governance attributes. We offer a theoretical framework to predict the direction of asset specificity perception manipulation and when perceptions are most malleable. As a result, we incorporate negotiator cognitions and motives (maximize their firm’s value captured), leading to a more complete understanding of hybrid governance design.

The Making of CEOs: The Influence of Individual and Relational Characteristics

Session Moderator: **Andrew Valentine**, *UNSW Sydney*

STR: Conditional Information Asymmetries and Board/CEO Ties in Outsider CEO Successions

Author: **Andrew Valentine**, *UNSW Sydney*

Author: **Massimiliano Tani**, *U. of New South Wales*

Author: **Keiran Sharpe**, *UNSW, Canberra, Australia*

The role of directors in CEO succession events has evolved in recent decades with the emergence of the newly created CEO labor market. In this context, directors can potentially assist companies to identify prospective CEOs in the interests of investors or use their expanded role to serve their own and management's interests. We explore this issue through examining the impact of professional director/CEO relationships in 1,136 outsider CEO successions over the past three decades, spanning a range of institutional environments in developed and developing markets and across a range of company accounting and market-based financial indicators. We find that these relationships can serve both investors' and management's interests subject to the specific approach taken to corporate governance in Anglo-American, European, and Asian national institutional environments. Effects also differ across accounting- and market-based measures of financial performance. These findings reflect a previously unexplored conditional theoretical relationship between information asymmetries that affects investors, boards and CEOs. In characterizing the conditional nature of this relationship, this paper makes a unique theoretical contribution to the CEO succession literature's understanding of the role of information asymmetry and its effect on board/CEO ties in the CEO labor market.

STR: Extraversion, Charismatic Attribution, and CEO Heir Apparent Promotion

Author: **Zeyu Zhao**, *W. P. Carey School of Business, Arizona State U.*

Author: **Wei Shen**, *Arizona State U.*

Author: **Xiwei Yi**, *Peking U.*

Our study investigates how personal characteristics of CEO heirs apparent influence their likelihood of promotion, either internally at their current firms or externally at other firms. Drawing upon theories and research on Big Five Personality Traits and charismatic leadership, we theorize that more extraverted heirs apparent are more likely to get promoted because they are more likely to receive charismatic attributions, both internally and externally. Using data from a sample of 293 CEO heirs apparent at 240 firms between 2002 and 2015, we found that charismatic attribution mediates the positive relationship between extraversion and heir apparent promotion. By highlighting the importance of the personality trait of extraversion in the context of heir apparent promotion, our theory and supportive results have important implications for research on CEO succession, executive personality, and corporate governance.

STR: Bringing Honor to Your Ancestors: CEO Early-life Exposure to Clan Culture and CSR

Author: **Yue Wang**, *the Economics and Management School of Wuhan U.*

Author: **Yi Tang**, *U. of Hong Kong*

Author: **TAO WANG**, *the Economics and Management School of Wuhan U.*

In this study, we examine a CEO's early-life exposure to an environment characterized with strong clan culture and its implications on corporate social responsibility (CSR). Grounded in the upper echelons theory and imprinting theory, we propose that CEOs' motivation to bring honor to their clansmen can influence their firms' engagement in CSR activities. We further examine the boundary conditions governing the above relation. Using a longitudinal data of the Chinese publicly-listed firms for 2010-2016, we find that this positive relationship between CEO early-life exposure to clan culture and CSR is weakened when the CEO has oversea experience and when the institutional development in the region where the firm is headquartered is better. Implications to the strategic leadership literature and CSR research are discussed.

STR: Personality Similarity, Demographic Similarity, and Heir Apparent Promotion

Author: **Zeyu Zhao**, *W. P. Carey School of Business, Arizona State U.*

Author: **Yunke WU**, *Peking U. Guanghua School of Management*

In a relay CEO succession, the heir apparent may exit from the firm when the incumbent CEO are reluctant to relinquish power as initially planned, causing crisis to the firm. This study examines how the personal attributes of the heir and the incumbent can jointly influence the outcome of a relay CEO succession. Specifically, we propose that heir extraversion increases the likelihood of heir promotion by influencing the way an heir is liked and evaluated, especially when the incumbent is also high in extraversion, which can trigger similarity-based interpersonal attraction, thus magnifying the effect of heir extraversion. We further suggest that such a similarity in extraversion plays a more salient role when the incumbent and the heir are demographically different, indicating that personality similarity can to some degree compensate for the lack of demographic similarity in generating mutual like. Our empirical results based on 363 incumbent-heir dyads from publicly listed S&P 1500 companies between 2002 and 2015 provide support for the theoretical arguments.

Corporate Entry and Exit Strategies

Session Moderator: **Yeongsu Kim**, *Western Kentucky U.*

STR: **Do Prominent CEOs Favor Riskier Foreign Country Entry Modes?**  

Author: **Yeongsu Kim**, *Western Kentucky U.*

One of the most commonly used international strategies is cross-border acquisition and cross-border alliance. While both strategies are essential in entering foreign countries, each strategy is associated with different risk levels. However, the theoretical basis for an explanation of a firm's choice of foreign country entry mode in light of the CEO prominence is somewhat limited. In this paper, I argue that a firm's choice of entry mode in a foreign country can be influenced by the CEO's level of prominence. In particular, I contend that prominent CEOs would be more likely to be oriented towards increasing cross-border acquisitions while reducing cross-border alliances. Additionally, I also contend that such a relationship has the potential to be moderated if the CEO is a generalist or possesses equity ownership. As a means of testing these relations, I collect data from S&P 1500 U.S based firms and empirically examine how CEO prominence influences a firm's decision between cross-border acquisition and cross-border alliance. Results indicate that prominent CEOs are more likely to increase cross-border acquisitions while decreasing cross-border alliances. In addition, I find that this tendency tends to increase when the CEO is also a generalist, whereas it diminishes when the CEO has high equity ownership.

STR: **Corporate Venture Capital Investment Practices and the Exit Puzzle** 

Author: **Michael Klitzka**, *Technische U., Darmstadt*

Author: **Petrit Ademi**, *Justus-Liebig-U. Giessen*

Author: **Dirk Schiereck**, *Technische U. Darmstadt*

Author: **Vareska Van De Vrande**, *Erasmus U. Rotterdam*

This study analyzes the effect of corporate venture capital (CVC) investment practices on the subsequent exit outcomes of portfolio companies. Specifically, we draw upon institutional theory to examine the role of CVC investment relatedness, commitment, timing, and syndication for exiting portfolio companies through subsequent acquisitions vis-à-vis IPOs. Studying 1,093 CVC investor-investee dyads followed by a portfolio exit between 2010 and 2019, we provide empirical evidence that CVC investors are more likely to acquire their portfolio companies if they follow endo-isomorphic investment practices, while exo-isomorphic practices increase the likelihood of an exit via IPO. Our study contributes towards a better understanding of CVC units as 'hybrid' investors and can help both CVC units and entrepreneurial ventures to anticipate exit outcomes that result from specific investment practices.

STR: **Multimarket Contact, Rivalry Deterrence over Technological Resources and International Market Exit (WITHDRAWN)**  

Author: **Claudio Giachetti**, *U. Ca' Foscari of Venice*

Author: **Ergun Onoz**, *Ozyegin U.*

Research shows that the higher a firm's level of multimarket contact (MMC) with its rivals in a country, the lower the likelihood the firm will exit that country, because MMC leads to mutual forbearance, which deters rivalry and protects a firm's survival. Yet, recent studies suggest that in technology-intensive industries MMC may increase rivalry, since MMC increases familiarity of a focal firm's technological resources, leading to a greater threat of knowledge spillovers and imitation from multimarket rivals, which increases a focal firm's incentives to protect its technological resources by attacking multimarket rivals. Grounded in the research on MMC in international markets and the resource-based view of the firm, we propose and test hypotheses suggesting that a firm's MMC with its rivals in a country increases the likelihood the firm will leave that country if competition over technological resources among country rivals escalates, unless the firm has strong capabilities to protect its technological resources. We found robust support for our hypotheses by testing them with a sample of 84 mobile phone vendors operating in 45 countries from 2003 to 2015.

Paper is NOT Available. Please contact the author(s).

STR: **Status Heterophily, Market Entry and Market Performance**

Author: **Xuan Sun**, *Shanghai Jiao Tong U.*

Author: **Runtian Jing**, *Shanghai Jiao Tong U.*

Drawing on the status and market entry literature, we propose and empirically test hypotheses that dynamic changes in the size of different status groups in the target market influence the focal firm's market entry decisions and post-entry performance. Our research utilizes operational data at the project level of China's listed real estate enterprises to explore how the relationships among members of different status groups in the submarket affects the probability of firms' market entry and subsequent market performance, as well as the moderating effect of the degree of multimarket contact. This study shows that, as the size of the status-heterophilous group in the submarket continuously increases, the consequences of forming ties with incumbents of different status have shifted from more advantages to more disadvantages. There is an inverted U-shaped curve between the status-heterophilous group's size and the probability of the firm's market entry and post-entry submarket performance. Moreover, the degree of multimarket contact between status groups weakens the two relationships. Specifically, the greater the degree of multimarket contact between two status groups in the market is, the smaller effect on market entry possibility and submarket performance the status-heterophilous group's size has.

Organizer: **Hila Lifshitz-Assaf**, *New York U.*

Presenter: **Arnaldo Camuffo**, *Bocconi U.*

Presenter: **Chiara Spina**, *INSEAD*

Presenter: **Daniella Laureiro Martinez**, *ETH Zürich*

Presenter: **Vaibhav Krishna**, *Scientist, ETH ZURICH*

Problem-solving—which includes problem framing, problem formulation, and solution generation—is perhaps one of the most important activities for managers, entrepreneurs, and innovators. Still, existing research on problem-solving largely focuses on solution generation and overlooks the roles of problem framing and formulation, even though problem frames and formulations fundamentally determine the course of problem-solving. This symposium tries to illustrate and specify the roles of problem frames and formulations in problem-solving. The five papers in the symposium proposal build models on how problem frames and formulations influence solution generation and outcomes such as innovation in online communities, effective strategies, and entrepreneurial success. The papers also rely on a wide range of methods, from inductive research, simulations to experiments that provide valuable guidance for future empirical research on problem framing and formulation.

Organizational Search and Learning

Session Moderator: **Sanghyun Park**, *INSEAD*

STR: Decision Centralization and Learning from Experience in Groups 

Author: **Sanghyun Park**, *INSEAD*
Author: **Cleofilde Gonzalez**, -
Author: **Phanish Puranam**, *INSEAD*

Organizational learning frequently involves groups that learn from feedback on decisions over time. While it is frequently assumed that this process resembles that of individual learning by doing, there is limited evidence to validate the assumption. Further, groups in organizations often have centralized rather than decentralized decision rights but we know little about how they differ when learning by doing. We compare individuals, decentralized and centralized groups undertaking learning by using experiments and computational models. We find that centralized groups behave like hyper-individuals: they update more rapidly and explore more than individuals (who in turn update and explore more than decentralized groups). Our evidence shows that not only do groups differ from individuals because of aggregation processes, but also individuals change how they behave simply by virtue of being in a group (a context effect). Implications are drawn for how this might alter the way we conceptualize and model organizational learning.

Paper is Available to Meeting Registrants Only.

STR: Technology Landscapes: Recombination and Innovation

Author: **Tara Li**, *Drexel U.*

What attributes of firms experienced landscapes lead to recombinant search in the innovation process? Building on the complex theory, this paper identifies two key dimensions for a firm's experienced landscapes, namely, knowledge complexity and knowledge concentration and investigates their roles in organizational search. I hypothesize that the complex knowledge can inspire new ideas in recombination and positively affect a firm's innovation, whereas knowledge concentration negatively affects a firm's innovation outcomes. I also theorize a firm's search breadth can attenuate the positive effects of knowledge complexity due to uncertainty in the combining process, whereas asymmetric knowledge of the firm can mitigate those negative effects caused by concentrated knowledge. To test the theory, I draw on a widely accepted search framework, the NK landscape, using combined datasets from the FDA new granted drug and USPTO patent data on 212,128 patents, 21,564 distinct subclasses and 2,273 firm-years. Empirical analysis supports the theory and prediction above

STR: When Artificial Intelligence Solves Problems: A Technology-Based Theory of Organizational Search 

Author: **Sebastian Raisch**, *GSEM - U. of Geneva*
Author: **Kateryna Fomina**, *GSEM - U. of Geneva*

Technology use is pervasive in organizations but has been underexamined in theories of organizational search and problem-solving. This is puzzling, given that Artificial Intelligence (AI)-based technologies enable machines to analyze problems and search for solutions under conditions of uncertainty. Our paper addresses this lacuna by introducing a framework that conceptualizes the key types of technology-based search that organizations use. We advance that organizations engage in hybrid problem solving by drawing on both AI-based machines and humans in the search process. Our theoretical model unpacks these hybrid problem-solving processes for three technology-based search types: automated (i.e., machines search independently, humans select from the machines' solutions), augmented (i.e., machines and humans search sequentially), and interactive search (i.e., machines and humans search jointly). We further identify how these processes affect organizations' search outcomes and specify that time and expertise availability moderate these effects. Together, our conceptualizations reveal how hybrid problem solving changes organizations' search processes and outcomes. We discuss these insights' implications for a range of perspectives on how organizations conduct search, paying special attention to technology-based search's potential for reducing organizations' traditional search constraints.

Paper is NOT Available. Please contact the author(s).

STR: Firms as Influencers: Shaping Industries through Search and Collaboration 

Author: **Mana Heshmati**, *U. of Washington*

Firms often engage in shaping the various dimensions of an industry's competitive landscape. While the actions by which firms are able to shape an industry has received increased attention, research has yet to examine the knowledge antecedents of firms' shaping behavior; that is the knowledge that allows firms to create a persistent change to the competitive landscape. This paper takes a first step at quantitatively examining the information processing antecedents of industry shaping by employing a novel methodology using computational linguistic tools to provide evidence on how firms can engage in industry shaping. Specifically, I examine how a firm's shaping of the positioning space depends on its depth and breadth knowledge search and the extent to which they collaborate with other firms. I study this question using machine learning techniques in combination with 2.4 million USPTO patents and 585,133 firm descriptions. The results show that search breadth and depth are positively associated with industry shaping while the effect of collaboration is contingent on a firm's level of breadth and depth. Overall, the findings suggest that depth enables a structural understanding of the environment allowing other firms to learn from the focal firm in collaborative relationships, enhancing their credibility. Meanwhile, breadth lowers the level of expertise, decreasing the amount of useful knowledge that other firms learn from collaboration.

Women academics face challenging circumstances in their professional lives. Relative to their male colleagues, they can expect longer review times (Hengel, 2016), less credit for their research contributions when working in a team (Sarsons, 2017), biased evaluations of their teaching from students (Mengel, et al., 2017; Boring, et al., 2016), and cultures that are more likely to frame men through a professional lens and women through personal and physical lenses (Wu, 2017; Wolfers, 2017; Rivera, 2017). Many of these effects have been shown to be heightened where gender intersects with other marginalized demographics such as race (Miller and Roksa 2020). In the face of this rough terrain facing women in academia, it can be easy to lose sight of the institutionalized barriers to success as a women academic and personalize negative experiences. Through this PDW, we offer a three-pronged approach to helping women academics and allies broaden their sight to develop and grow a feeling of community, support, and self-efficacy. This approach has proven effective in overcoming barriers that prevent clear understanding of bias in business schools: barriers of isolation, ignorance, shame, and silence. This PDW builds off the success of the past four years of “Nevertheless she persisted” PDWs to emphasize the ways in which women working together help each other to succeed.

Abusive Supervision and Supervisory Feedback

Session Moderator: **Akvile Mockeviciute**, *Vrije U. Amsterdam, School of Business and Economics*

HR: Abusive Supervision and Work-Home Consequences: An Experience Sampling Study

Author: **Julia Backmann**, *U. College Dublin*

Author: **Stefan Razinskas**, *Freie U. Berlin*

Author: **Julia Wimmer**, *LMU Munich*

Author: **Martin Hoegl**, *LMU Munich*

The impact of abusive supervision on subordinates is devastating, but research on the mechanisms and mitigating factors in this relationship remains scarce. Drawing on conservation of resources theory, we argue that the depletion of energy and the subsequent reduced work absorption caused by abusive supervision are contingent upon the frequency of interactions with the supervisor and the preferences of subordinates for keeping work and private life domains apart. We applied an experience sampling methodology and surveyed 132 employees in Germany twice per day over 14 workdays. Our results show that more frequent interactions with their leaders prevent employees from suffering in their work absorption through prework energy the following day despite leader abuse. Moreover, we found that these supervisor interactions are particularly important for subordinates who hold stronger preferences for separating their work and private life domains. With these findings, we contribute to an understanding of the conditions under which the consequences of supervisor abuse on subordinates may be alleviated.

HR: The Curvilinear Relationship between Supervisor Negative Feedback and Employees' Job Performance

Author: **Song Wu**, -

This study examines the curvilinear relationship between supervisor negative feedback and employees' job performance, and the moderating effects of leader-member exchange (LMX). Using two-wave data from 259 dyads of employees and their immediate supervisors, we find that the inverted U-shaped curvilinear relationship between supervisor negative feedback and employees' job performance is significant. In addition, the result reveals that such curvilinear patterns only exist when LMX is low. Finally, we discussed the implications, limitations, and future research.

HR: When Is Supervisory Negative Feedback Most Effective? The Role of Temporal Framing

Author: **Simon Anthony Tarantelli**, *U. of Melbourne*

Author: **Michelle Brown**, *U. of Melbourne*

Author: **Jooyeon Son**, *U. of Melbourne*

Author: **Anne L. Lytle**, *Australian Graduate School of Management*

In organisations, supervisory negative feedback has mixed (i.e., deleterious and beneficial) effects on subsequent subordinate task performance. The goal of our research is to reconcile the mixed effects by examining the role of supervisory temporal framing of negative feedback—that is, the extent to which a supervisor communicates negative feedback in a past- or future-focused manner. Drawing on feedback intervention theory, we demonstrate—across two experimental studies involving working participants—that supervisory past-framed negative feedback has a null effect on subsequent subordinate task performance, whereas supervisory future-framed negative feedback has a positive effect. Moreover, we show that (a) supervisory past-framed negative feedback shifts subordinates' attention to the self, (b) supervisory future-framed negative feedback keeps subordinates' attention focused on the task at hand, and (c) subordinate attention to task processes mediates the positive relationship between supervisory future-framed negative feedback and subsequent subordinate task performance. We discuss the theoretical and practical implications of our findings.

HR: Feedback as a Risk or an Opportunity: How Organizational Context Shapes Negative Feedback Perception 

Author: **Akvile Mockeviciute**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Sabrine El Baroudi**, *Vrije U. Amsterdam*

Author: **Sergey Gorbatov**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Svetlana Khapova**, *Vrije U. Amsterdam*

Answering a growing call from researchers to investigate the context of feedback in organizations, i.e., organizational factors that can potentially affect how feedback is given and received within the organization, we conduct a qualitative study across three organizations to explore how organizational characteristics shape employees' perceptions towards negative feedback. We find that three organizational characteristics shape employees' perceptions towards negative feedback: accountability for performance, feedback reinforcement, and relational norm of politeness. We discover how the interplay between these organizational characteristics shapes individual perception of negative feedback as a risk of damaging relationships or as an opportunity to improve performance. Specifically, we find that feedback reinforcement alone is not sufficient to outweigh the perception of negative feedback as a risk to relationships in organizations where individuals perceive the relational norm of high politeness with each other and low accountability for performance. With this, we contribute to the literature on negative feedback and the context of feedback by empirically identifying how organizational characteristics coexist to shape employees' perceptions towards negative feedback, which helps explain the wide heterogeneity in the way employees give feedback across organizations.

The Changing Nature of Work and HRM

Session Moderator: **Sjanne Marie Elyse Van Den Groenendaal**, *Tilburg U.*

HR: **The Future of Work and the Changing Role of HR(M): A Model and Research Agenda**

Author: **Sjanne Marie Elyse Van Den Groenendaal**, *Tilburg U.*
Author: **Charissa Freese**, *Human Resource Studies, Tilburg U.*
Author: **Jeske Van Beurden**, *Tilburg U.*
Author: **Irmgard Borghouts - Van De Pas**, *Tilburg U.*

In this article, we explore how technological developments such as the use of Smart Technologies, Artificial Intelligence (AI), and robotics influence the role of the HR function. Due to technological developments jobs disappear, new jobs arise, and existing jobs change. This leads to a lack of clarity regarding the role of the HR function in the future of work. More specifically, it remains unclear how HR professionals are supposed to design and align HR practices on a strategic, tactical, and operational level in organizations. This study aims to explore how technological development impact the role of the HR function in terms of strategic, tactical, and operational HRM. In addition, we construct a conceptual model to display the influence of technological developments and how they translate into macro (societal), meso (organization/HRM) and micro level (individual workers) work themes. Finally, our findings lead to a future research agenda to gain more insight into the issues surrounding technological development that are relevant for HR professionals. By means of a narrative literature review, we apply a holistic approach.

HR: **Voice Mechanisms for Platform-Based Gig Workers**

Author: **Ekta Johar**, *Indian Institute of Management, Ahmedabad*
Author: **Biju Varkkey**, *Indian Institute of Management, Ahmedabad*

New forms of work, including Platform-based Gig Work and its implication to different stakeholders is at the centre of contemporary academic and practitioner discourse. With the rising popularity of platform-based gig work and an increasing number of workers forming part of the digital workforce, it becomes imperative to identify various challenges encountered by them. Literature has pointed out that the disruption of traditional work structures has led to challenges in form of unfair employment contracts, job security, collective organisation and unionisation. Along with these, absence of voice mechanisms contributes to precariousness and exploitative work conditions. Our paper looks into such challenges faced by the platform-based gig workers in voicing their concerns with respect to various actors namely: platform owners, service requesters, co-workers and regulatory authorities. We propose alternate voice mechanisms and policy signals relevant in context of the new work arrangements.

HR: **Training and Development in Times of Automation: A Conceptual Roadmap for HRM**

Author: **Volker Stein**, *U. of Siegen*
Author: **Carolin Uebach**, *U. of Siegen*

As automation of machines proceeds with high acceleration, human resource management (HRM) is challenged to prepare the organization for a “real” collaboration of humans and machines. In order to develop appropriate coping strategies and control systems for HRM, we design a conceptual roadmap for training and development in times of automation in the near and far future. We equally draw from management and computer science research by combining technical-centered and human-centered approaches for training and development. By conceiving humans and machines as complementary actors in the organizations of the future, we suggest four training directions. Our roadmap emphasizes that a fully integrated management of human and machine resources enables HRM to optimize and evaluate the collaborative development of machines and humans. Our research underlines the importance of combining human resource training and development with the progression of automation.

HR: **The Formation and Repercussions of Routine Resistance in Online Labor Platforms**

Author: **Anju Kamal**, *Amrita School of Business, Amrita Vishwa Vidyapeetham*
Author: **Rajiv Krishnan Kozhikode**, *Simon Fraser U.*
Author: **Rekha Krishnan**, *Simon Fraser U.*

There is growing research into worker resistance in organizations that focuses on routine or mundane forms of resistance, and this study attempts to advance this field by examining the formation and repercussions of routine resistance on an online labor platform. Several studies suggest that workers cannot resist the control imposed by technology in modern organizations such as online labor platforms, which encourage independent work. But another set of studies suggests that some characteristics of these organizations encourage worker resistance. In this paper, we examine this paradox through a detailed ethnographic investigation of routine resistance and its ability to limit the management control of an online labor platform. Using the findings of Netnography - ethnographic fieldwork conducted in online environments, we examined routine resistance of the labor platform's contract workers against the platform's appointment of a vice president for community. The routine resistance was discursively formed and restricted the control mechanism of the online labor platform by confirming the identities of independent business owners and renegotiating the dominant discourse by the management.

Performance Implications of HR Practices and HR Systems

Session Moderator: **Ryan Terry**, *Texas A&MU, Corpus Christi*

HR: Human Resource Practices and Operational Effectiveness in a Managerial Sample

Author: **Chathuni Jayasinghe**, *PhD Student at Surrey Business School*
Author: **Samuel Aryee**, *U. of Surrey*
Author: **Chidiebere Ogbonnaya**, *Kent Business School, U. of Kent*

Anchored in an integration of social exchange and contingency theories, we propose and examine a moderated mediation model of processes linking a high-commitment HR system to operational effectiveness. Time-lagged data were obtained from a sample of managerial level respondents (N=320) drawn from 112 establishments in Sri Lanka. Our findings show that high-commitment HR system relates to operational effectiveness but indirectly through a serial mediation involving psychological need satisfaction and gratitude toward the organization. Furthermore, organizational structure interacts with a high-commitment HR system to influence psychological need satisfaction such that the serial mediation to operational effectiveness is stronger when organization structure is high (organic) but not low (mechanistic). We interpret these findings in terms of their implications for the effective implementation of a high-commitment HR system and the resulting employee-based resources to create sustained competitive advantage.

HR: When and How Training Programs Influence Organizational Performance? A Meta-Analytic Investigation

Author: **Joonyoung Kim**, *Cornell U.*
Author: **Huikun Chang**, *Seoul National U.*
Author: **Bradford S. Bell**, *Cornell U.*

Despite the proliferation of research on the relationship between human resource (HR) systems and organizational performance, our understanding of the impact of training programs on organizational performance is rather limited. In this article, we conducted a meta-analysis of the relationship between training and organizational performance to (a) determine the magnitude of the relationship, (b) test a set of moderators of the relationship, and (c) suggest future research directions. The results from 613 correlations (N = 328,635) show that the relationship between training and organizational performance is positive and significant ($\rho = .12$). More importantly, the effect size differs significantly across several moderators (e.g., training dimensions, inclusion of training, outcome dimensions, outcome measures, causal orders, industry, and region). Also, in a meta-analytic path analysis, we found support for the serial mediation model where the direct effect of training is stronger for more proximal outcomes than for more distal outcomes. Finally, in a post-hoc analysis, we found moderating effects of national culture in the relationship between training and organizational performance. Implications of these findings and directions for future research are discussed.

HR: Just Calling Balls and Strikes: The Impact of Business Travel on Individual Performance

Author: **Ryan Terry**, *Texas A&MU, Corpus Christi*
Author: **Deniz Gevrek**, *Texas A&MU, Corpus Christi*

This study explores the employee work performance impacts of business travel activities at the individual level. Using the unique data set created by combining 8 seasons (2012-2019) of Major League Baseball data, we utilize a pooled OLS framework where we control for detailed stadium, game, city, home and visiting team characteristics. Our results suggest that direction of travel and the number of time zones crossed significantly impacts individual cognitive performance. The findings underline the importance of time between assignments and how it influences these impacts. Our results offer insights for enhancing individual performance as organizations depart the constraints of the COVID impact and business travel begins to resume.

HR: Socially Responsible Human Resource Management and Employee Job Engagement: A Moderated Mediation

Author: **Kamran Iqbal**, *U. of Lahore*
Author: **Xin Deng**, *U. of South Australia*
Author: **Jie Shen**, *Shenzhen U.*

While socially responsible human resource management (SRHRM) has received markedly growing research attention, research is lacking on how the general CSR facilitating SRHRM-employee workplace attitudes and behavior relationship is weakened or strengthened by contextual factors. Drawing upon stakeholder theory (Freeman, 1984), in the current study we examine the conditional effect of job insecurity on the indirect relationship on between SRHRM and employee job engagement through the mediation of organizational pride. A high level of job insecurity is perceived to be a lack of organizational support. The analysis of the two-waved data with a sample of 255 fulltime employees in the banking sectors in Pakistan revealed that job insecurity and SRHRM interactively affect employee job engagement through the mediation of organizational pride. This study advances the understanding of the contextual condition under which SRHRM affects employee work attitudes and behavior.

Individuals are exposed to critical developmental experiences that shape their leadership identities throughout their life span. Yet, there is limited empirical research that clearly differentiates processes and variables tied to key life stages rather than broadly ascribed to “adults.” This symposium includes five presentations that offer unique insights on leader identity development via a lifespan lens. We specifically examine leader identity processes in four critical life stages: adolescence, emerging adulthood, adulthood and late adulthood. The research questions posed in the symposium address key leader identity antecedents, highlight the role of developmental interventions and cast light on leader identity dynamics during leadership transitions. The presentations integrate different theoretical foundations that emphasise the importance of cognitive processes, emotions, goals and self-regulatory processes for leader identity development in critical life stages. The results showcase multinational samples and diverse methodologies. Collectively, our symposium offers important lifespan insights on leader identity development and raises new directions for further research.

MED: Learning to Manage as Learning to Fail: The Lessons of Managers' Running 

Author: **Russell Paul Warhurst**, *U. of Northumbria*

Author: **Kate Black**, *U. of Northumbria*

Management education and development self-evidently aim to enable managers to be successful and while the possibilities of failure are acknowledged, the emphasis is on ensuring that managers learn from failures to ultimately achieve success. However, in the contemporary world of grand challenges and big uncertainties, managers might be better equipped for their careers by learning to fail, that is, by learning to live with failure rather than attempting to immediately learn lessons from failure. Management involves not merely knowing or doing but also, importantly, ways of being. Therefore, identity theorising is used to examine how managers learn to fail. While the focus is on physically active managers, the implications have broader relevance. A significant percentage of managers worldwide regardless of age, culture, or gender, are physically active through running. Running can serve to bolster managerial identities involving as it does, competition and achievement. Running can alternatively, provide an additional or substitute identity to those managers wishing to reduce their attachment to work. Running can, though, serve to colonise and exploit managers' leisure lives through extending the pervasive performativity discourses of neo-liberal organisations. However, results of the qualitative empirical research reported here reveal that running provides managers with agency to learn to fail. Failure in running was found to be as much as characteristic of running as failure is in managerial work. Nonetheless, running enabled running-managers to define themselves more autonomously and to cultivate a healthier relationship with failure and this conclusion has relevance to all managers.

MED: Innovative Behavior, Emotional Competencies, and Experiential Learning

Author: **Marco Furlotti**, *Nottingham Business School, Nottingham Trent U.*

Author: **Ghazal Vahidi**, *Nottingham Business School, Nottingham Trent U.*

Author: **Helen Shipton**, *Human Resources*

Despite literature acknowledges that emotional and social competencies (ESCs) favor various dimensions of work performance, research has scarcely investigated if they influence innovative behavior. Moreover, most studies that investigated the usefulness of experiential learning for the development of ESCs, have focused on classroom-based interventions and on interventions that had the development of ESCs as their primary purpose. Limited attention has been paid to the competency development impact of work related to a student major career interest. To address this void, we analyze the direct and mediating effects of ESC competencies on innovative behavior. Results from a sample of university students demonstrate that sandwich work placements (long-term, full-time internship) help developing ESCs; that higher levels of ESC competencies predict innovative behavior; and that sandwich work placement also directly promote innovative behavior. This study offers insight to the debate on how to foster innovative behavior, and on competency development in business education.

MED: Craft, Reflexivity, and the Clinical Practice of Management

Author: **Rasmus Koss Hartmann**, *Copenhagen Business School Department of Management, Society and Communication*

Author: **Dan Kärreman**, *Copenhagen Business School*

Author: **Ninna Meier**, *Aalborg U.*

Author: **Thor Hauberg**, *NTT Data*

Author: **Karen Ingerslev**, -

Management is a craft and reflexivity can enhance how this craft is practiced. Alas, organizations seldom provide circumstances that are conducive to reflexivity and individualize responsibility for reflexivity. This paper posits that the clinical practice of medicine provides an instructive example for how reflexivity can be organized for, i.e., formalized and routinized, in craft-based work. Clinical practice is defined by systematic analysis, on-going peer review and routinized teaching and these features of clinical practice embed reflexivity in organizational processes. We show how systematic analysis, on-going peer review and routinized teaching can be organized for with varying intensity in a management context, and how leading-edge organizations seem to have already embrace quite sophisticated versions of them (albeit in a piecemeal fashion). Some of these activities already happen unsystematically in organizations, but we make the case that practicing management according to a clinical model may benefit organizations in substantive ways. Most notably, these benefits are likely to include a reduction of unnecessary interventions, an improvement in the quality of interventions, a facilitation of organizational coordination, and a reduction in the need for managerial talent.

MED: Inside Out, Outside In: An Experiential Pedagogy for Personal Growth In Management Education

Author: **Lata Dhir**, *S.P. Jain Institute of Management and Research*

Author: **Madhura Gondhalekar**, *S.P. Jain Institute of Management & Research*

The volatility of the current business environment makes it imperative to manage people effectively in the process of achieving organizational goals. Understanding our own and others' behavior helps in developing competencies necessary for effectively managing people which is an essential prerequisite for managerial effectiveness. Competencies that have direct implications for the self and the interpersonal context are essentially relational at their core. Thus, an experiential pedagogy is justified for optimal learning outcomes. The article explores how an experiential Personal Growth Lab a core curriculum at the onset of the MBA journey, raises students' self-awareness, develop their ability to understand others and grasp the key aspects of group dynamics by using a mix of experiential and task-based creative pedagogical and logistical approaches.

Participant: **Jessi Hinz**, *Case Western Reserve U.*
Participant: **Ace Volkmann Simpson**, *Brunel Business School*
Participant: **Linda Tallberg**, *Hanken School of Economics, Finland*
Participant: **Monica C. Worline**, *Stanford U. Center for Compassion and Altruism Research*

This workshop uses combined insights from positive organizational scholarship (POS) and critical management studies (CMS) to generatively approach the scholarship and practice of teaching and learning. The premise of this juxtaposition is that considering these somewhat disparate-- but in some fundamental ways overlapping-- perspectives together can better equip educators and researchers to address systemic challenges and injustice with approaches that are not naïve but still aspirational and hopeful. While critical and positive perspectives have been brought together rarely, this session builds on recent efforts to do so and aims to equip attendees with a series of tools and practices that adopt this approach. The aims of the session are also to engage attendees in a process of considering the implications for their own research and practice of adopting a simultaneously critical and positive perspective. The workshop uses a roundtable design to allow for deeper discussion. The roundtables showcase a deliberately diverse range of research and practice that highlights a combined critical and positive lens. Roundtable leaders include Arran Caza from University of North Carolina Greensboro, Jessi Hinz from Case Western Reserve University, Ace Simpson from Brunel University London, Linda Tallberg from Hanken School of Economics, Helsinki, Finland; and Monica Worline from the University of Michigan. The PDW organizer and host is Marc Lavine from the University of Massachusetts Boston.

Archival research has for a long time been used to supplement qualitative research. However, recently the use of archival research—the analysis of textual traces that actors (e.g. people, organizations or markets) leave behind when they go about their daily business—in qualitative analysis has dramatically increased due to the digitalization of textual data. The availability of archival data raises new methodological opportunities and challenges for qualitative researchers who aim to generate organizational theory particularly in terms of the abundance and the heterogeneity of the data. To rise to this challenge, this PDW aims to bring together qualitative scholars who work with archival data to both create a community of scholars engaged in these methods and to begin a collective conversation about the tools and methods that we need to develop to push research forward in this domain.

 **SIM: A Process Model of Organizational Repair Efforts: The Case of U.S. Universities and Antebellum Slavery**

Author: **Jordi Vives Gabriel**, -

Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*

The purpose of the paper is to enrich existing models of reintegration after organizational transgressions by analyzing the types of repair efforts and their effects on regaining organizational legitimacy. Historical transgressions are a particularly interesting context for examining repair efforts, because they have been gaining traction in the management literature in recent years, but remain unexplored in existing models of organizational reintegration. To this end, we use the case of U.S. universities and their involvement in antebellum slavery and slave trade. Drawing on this case, we present a five-step process model of organizational repair efforts to legitimacy restoration for organizational transgressions. We highlight that, even though most universities engaged in repair efforts, those that offered a holistic approach to their past were more likely to avoid reproblematicization of their slavery past and thereby re-establish their legitimacy.

There were many policies that the Government of India framed to help migrant workers during the pandemic period with work, food, travel, and shelter needs that arose by virtue of their informal nature of work. These policies and schemes included Free Food Grains, MGNREGA, shelter homes, and shramik trains to help the migrant workers tide over joblessness and hunger. The authors are intrigued by the decision of the migrant workers to return to cities of work destination even in light of the poorly performing and reforming policies that intended facilitation but remained disconcerting. Witnessing an increase in the trend of returnee migrant workers, we are motivated to understand the decisions made by these workers to return and re-join, or recreate previous or new work with an unanticipated change in factors that led to their decision to leave (circular migration). Our interviews with a sample of 30 returnee migrant workers helped us enlist the push and the pull factors that led to the decisions to return to work cities amidst their experience of supportless governance systems. The study exposes us to the informal migrant workers' core vulnerabilities and the governance ecosystem's insensitivities that grossly overlook citizens' plight due to their bias towards denizens.

SIM: Modelling Modern Slavery Interventions Using a System Dynamics Approach    

Author: **Selim Cakir**, *U. of Bristol*

Author: **Elvan Gokalp**, *U. of Bath*

Author: **Ioannis Kougkoulos**, *American College of Greece*

Author: **Nathan Kunz**, *U. of North Florida*

Modern slavery is a complex problem which poses grand challenges to society. Despite numerous efforts to eradicate it, modern slavery is still a widespread practice in global supply chains. There is a consensus in the literature that stakeholders need to coordinate their actions for tackling this practice. However, they often lack the tools which would enable them to take a holistic approach incorporating varying stakeholder views and expectations. In this study we adopt a socio-technical perspective to examine complex interactions among root causes of modern slavery. To do so, we develop a system dynamics (SD) model and apply it to the Turkish hazelnut industry where modern slavery and child labor are of particular concern. We develop multiple intervention scenarios inspired by our discussions with stakeholders and test their effects on tackling modern slavery. Our results show that under the right conditions, government audits and fines, child prevention subsidy, and agricultural mechanization are effective mechanisms to reduce the incidence of modern slavery and child labor. Our recommendations provide stakeholders with specific suggestions on how to address this problem and improve labor practices in the hazelnut industry. Overall, our results underline that SD is a useful method for involving different stakeholder perspectives and for taking a holistic approach on complex sustainability problems, such as modern slavery.

SIM: Media Shaming and Supply Chain Labor Transparency in the Fashion Industry 

Author: **Veronica Haydee Villena**, *W. P. Carey School of Business, Arizona State U.*

Author: **Li Cheng**, -

The fashion industry's labor scandals have drawn wide attention, with incidents such as the Rana Plaza in 2013 and Boohoo in 2020. Several multistakeholder initiatives have called for more transparency in fashion brands' efforts to address their supply chains' labor issues. While recent studies have started to examine some institutional forces (e.g., corporate customers, peer firms, and regulators) driving environmental transparency (primarily on the carbon dimension), we focus on transparency about four problematic labor issues (i.e., modern slavery, living wages, gender disparities, and unionization) and draw attention to a less-studied institutional force: media. We ask whether media exposure might prompt a fashion brand to publicly disclose its policies, initiatives, and outcomes regarding its suppliers' working and labor conditions—what we call supply chain labor transparency—and when this pressure would be more effective depending on the firm's board. We used data on 132 fashion brands and retailers provided by the UK not-for-profit organization Fashion Revolution and supplemented it with four archival data sources. The results show that firms whose boards comprise directors with short-to-medium tenure length or include more female directors tend to exhibit more supply chain labor transparency in the wake of media controversies in a previous year. Conversely, firms whose boards are either long-tenured or mainly male have less transparent supply chains. Interestingly, while the effect thresholds for board tenure length are relatively consistent across the four labor issues studied, the thresholds for female representation differ by issue—it takes markedly more female directors to increase transparency about living wages than it does to increase transparency on gender issues. Thus, our study suggests an alternative path for using the broader social system that would advance supply chain labor transparency: media shaming can be more effective when the firm has a “fresh, diverse” board. We also provide guidance for multiple stakeholders including brands, supply chain workers, and social activists.

STR: Inflated ESG Ratings: An Inverse Relation to Non-Financial Performance     

Author: **Bram Van Der Kroft**, *Maastricht U., School of Business & Economics*

Author: **Dennis Bams**, *Maastricht U., School of Business & Economics*

Socially responsible investors rely on ESG ratings to allocate their investments. This reliance under asymmetric information incentivises firms to overstate their ESG ratings for cost of capital benefits. By segregating what firms promise to contribute to society from what they actually realise, we show that Refinitiv, MSCI and FTSE ESG ratings are inversely related to non-financial performance. Specifically, ESG ratings solely capture what firms promise in terms of non-financial performance, while these promises do not materialise up to ten years in the future. As a result, socially responsible investors prioritise unsustainable firms, effectively increasing the cost of capital for sustainable investments. In aggregate, firms with superior ESG ratings have lower non-financial performance.

STR: Board Political Ideology Polarization and the Resolution of Social Activism  

Author: **Francois Neville**, *McMaster U.*

Author: **Jonathan Nicholas Bundy**, *Arizona State U.*

Author: **Daniel Gamache**, *U. of Georgia*

Given increasingly polarized political environments around the world, it is important to understand whether and how the polarization of political ideologies among corporate leaders shapes organizational decisions and actions. We focus on how political ideology polarization in the board influences the resolution of social activism targeting the organization. Contrary to what we observe in the political realm and society at large, where political ideology polarization acts as a source of division, our theory suggests that political ideology polarization among directors will enhance the board's information-processing capacity and increase its ability to respond to social activism. To provide additional evidence for our proposed mechanism, we examine the moderating effect of three variables central to the ability of boards to effectively process information: CEO-to-board relative power, organizational diversification, and the competitive intensity of the organization's industry. Overall, we find support for our arguments; political ideology polarization in boards seems to improve information processing and strategic decisions, as reflected in resolving social activism. However, the positive effects of polarization are also subject to the influence of important contextual factors. Our study contributes to organizational research by considering the important influence of political ideology polarization in corporate leadership and its implications for understanding strategic leadership and governance dynamics, strategic decision making, stakeholder management, and other organizational outcomes.

STR: Social Goals Diversification within Firm's Product Portfolio: The Effects on Corporate Performance.

Author: **Marco S. Giarratana**, *IE Business School, IE U.*

Author: **Martina Pasquini**, *IE Business School*

This paper investigates to what extent the diversification and variety of social actions - Sustainable Development Goals (SDGs) – pursued by firms and associated to their products (or services) could affect the corporate performance. To achieve our purpose, we use more than 500,000 trademarks registered between 2012-2020 by a sample of 114 for-profit firms. Exploiting a well-defined social vocabulary, we perform a text analysis on the sampled trademarks, and we assess the characteristics these firms' products portfolio by tracking for every year the presence of social products or services associated to one of the 17 SDGs established by the United Nations. Our evidence shows that the impact on firm performance of firm's SDGs diversification is negatively moderated both by the importance of social products in a firm's product portfolio and by the level of firm's product diversification. These negative relationships are stronger when firm communication is based on generic over-arching messages, rather than detailed descriptions of tangible and intangible features.

STR: Vertical Integration in Social Value Creation: Exploring Make-or-Buy Decisions in Social Ventures  

Author: **Adam Clark**, *Chapman U.*

Author: **Steven Kofford**, *U. of Utah*

Author: **William S Schulze**, *U. of Utah*

An emerging body of work examines the governance of activities that create social value in private organizations. While this line of research examines firm boundary (i.e. make-or-buy) decisions in commercial ventures, it does not yet address the strategic goals of hybrid organizations, such as social ventures. Similarly, strategic management research examines the organization of commercial operations in developed markets but not the organization of social operations in highly inefficient markets. To fill these gaps, this paper examines the differences between the strategic goals and market conditions faced by social and commercial ventures. This paper argues that, in addition to extant make-or-buy logic, vertical integration of social operations in social ventures is recommended when it resolves ex-post information asymmetries about the value captured by beneficiaries, or when it protects beneficiaries from negative externalities. In making this argument, this paper provides a strategic approach to organizing social operations that can limit the waste of scarce resources and maximize social value creation.

Accessing The Knowledge and Resources of Allied Firms

Session Moderator: **Navid Asgari**, *Fordham U.*

STR: The Effect of Competition among a Firm's Partners on its Knowledge Production Structure and Outcome 

Author: **Navid Asgari**, *Fordham U.*
Author: **Deepak Nayak**, *Fox School of Business, Temple U.*
Author: **Vivek Tandon**, *Fox School of Business, Temple U.*
Author: **Ram Ranganathan**, *U. of Texas at Austin*

A large body of research suggests that firms benefit from alliances by recombining knowledge obtained from different alliance partners. However, this strategy is premised on the ability of the firm to cross-pollinate knowledge by sharing information freely within its boundaries. But such unrestricted knowledge flows can create leakage concerns for the firm's alliance partners when the firm's portfolio of alliance ties includes partners who compete with each other. Even inadvertently, interactions and communications among the firm's knowledge workers can create a conduit for spillovers to competing partners. This opens up the possibility that to address its partners' concerns, the firm might segregate its knowledge workers, in effect establishing structural safeguards. Using a sample of public bio-pharmaceutical firms, we demonstrate how competition among a firm's alliance partners leads to such segregation among its knowledge workers, and show that the effect of such segregation is to undermine the very benefits of recombination by reducing the firm's overall inventiveness. In doing so, our study contributes to the literature at the intersection of corporate strategy, organization design, and innovation.

STR: Are Sharks More Dangerous at Dusk or Dawn? Timing of CVC and Ventures' Commercial Performance 

Author: **Christopher Albert Sabel**, *WWU Münster*
Author: **Francesco Di Lorenzo**, *Copenhagen Business School*

The evidence on how corporate venture capital (CVC) investments affect investee ventures' commercial performance is mixed. An examination of the timing of CVC investments can offer new insights on this contention. Previous studies showed that the timing of ventures' resource acquisition is crucial for venture outcomes. However, these studies have overlooked the role of incumbents as a resource channel and the tradeoffs associated with timing. Building on resource dependence theory (RDT), we explore how the timing of CVC investments alters the power balance between investors and backed ventures, significantly influencing ventures' commercial performance. We further examine how the timing of venture board seats obtained by CVC investors affects this relationship. Using a dataset of 294 Norwegian ventures active in knowledge-intensive industries from 2004 to 2015, we offer evidence for a differential effect of early- vs. late-stage CVC investments, showing that late-stage investments significantly increase commercial performance. We also find that associating a venture board seat with a CVC investment moderates this effect; ventures are associated with greater commercial performance when late-stage investments come without board seats. We suggest that board seats prevent ventures from forming investment ties with additional CVC investors, limiting ventures' external ties crucial for market success.

STR: The Choice Between Alliances and Acquisitions: A Knowledge Recombination Perspective 

Author: **Manish Kumar Srivastava**, *Michigan Tech U.*
Author: **Sai Krishna Yayavaram**, *Indian Institute of Management, Bangalore*

When searching for external knowledge firms often face this dilemma: should they ally with or acquire a target firm? Prior literature has examined how the choice between the two governance modes is driven by the dissimilarity in knowledge with a target or partnering firm but without distinguishing between domain knowledge and architectural knowledge. In this study, we examine how the choice between the two modes is driven by dissimilarities in domain and architectural knowledge and how this choice affects the knowledge gains from the chosen mode. Our results show that firms are more likely to choose acquisitions over alliances and obtain the intended benefits when seeking domain knowledge. Further, we find that alliances are more conducive to acquiring new architectural knowledge than acquisitions.

STR: A Theory of Network Resource Slack in a Firm's Dyadic Relationships 

Author: **Sara Ryoo**, *City U. of New York, Baruch College*
Author: **Won Kyung Min**, *Fordham U.*

Extant literature on slack resource has concentrated on examining excess resources that reside within the firm boundaries. We study the resources that are created within a firm's alliance network but not fully utilized within the duration of a focal alliance. We term these unused resources network resource slack in this paper. We build a novel theory on how different types of network resource slack affect the focal alliance value and how firms can reach out to and connect with other partner firms in order to utilize the network resource slack.

Re-examining Transaction Cost Economics in Corporate Strategy

Session Moderator: **Dongil Daniel Keum**, *Columbia Business School*

STR: Purposeful Disownership: Paying Contract Manufacturers to Reduce Ownership and Termination Cost  

Author: **Dongil Daniel Keum**, *Columbia Business School*

Firms often persist with failing products due to excessive organizational ownership and relational commitments to suppliers. We propose that firms make strategic use of contract manufacturing to purposefully reduce ownership and termination costs. Using detailed data on 249,705 products (or designs) in the fashion industry, we show that firms are more likely to contract manufacture new products that have a high risk of commercial failure even when they can be readily produced in-house. In exchange, firms pay production costs that are 10 to 16 percent higher. Organizational hierarchy, which reduces ownership, significantly moderates the increase in contract manufacturing. Our findings suggest that firms actively manage escalating commitment and path-dependence through make vs. buy decisions and revise the prevailing view that contract manufacturing is a myopic strategy that trades learning opportunities with short-term cost savings. We show that our theory generalizes and successfully explains decisions between direct capital investment and rentals by US public firms.

STR: Capital Structure and the Strategies of Innovation and Internationalization  

Author: **Grigorios Livanis**, *Ohio U.*
Author: **J Michael Geringer**, *Ohio U.*

Taking a transaction costs economics perspective of the financing behavior of firms, we propose that the firm's innovation strategy relative to its peers is associated non-linearly with its demand for leverage. Specifically, demand for leverage is negatively related for firms with low emphasis on innovation relative to peers but positively related for firms with high emphasis. We further propose that the firm's international diversification strategy moderates this relationship, resulting in the two strategies being substitutes or complements, depending upon the level of innovation strategy. These arguments are tested with data from U.S. public firms during 1980 to 2018.

Paper is Available to Meeting Registrants Only.

STR: Firm Information Environment & The Uniqueness Challenge of Corporate Strategy 

Author: **Kamyar Goudarzi**, *Smith School of Business, Queen's U.*

This paper examines how a firm's information environment influences the uniqueness of its corporate strategy. Because unique strategies impose a greater information burden on investors to assess, they can be discounted on the market, leading managers to compromise on the uniqueness of their strategies. While richer information environments can allow investors to more accurately value—and thus, firms to adopt—more unique strategies, they can also signal the strategy's value to competitors and immediately invite imitation or retaliation, which can erode the expected competitive advantage. Therefore, I examine the challenge faced by managers in adopting unique strategies and in response to changes in their firm's information environment. I find that better information environments increase strategy uniqueness, but not for complex firms and not when competition is intense. Exploiting a plausibly exogenous shock to the information environment that accounts for its potentially endogenous nature provides further evidence of the effect.

STR: Capturing Value by Overcoming Entitlement Constraints: Evidence from Franchise System Acquisitions 

Author: **Nicholas Argyres**, *Washington U. in St. Louis*
Author: **Janet E.L. Bercovitz**, *U. of Colorado, Boulder*
Author: **Hugo Leenders**, *PhD student at CU Boulder*

In studying the determinants of successful acquisitions, strategy scholars emphasize the roles of relatedness, complementarity and innovation opportunities, while finance scholars emphasize the reduction of agency costs. In this paper, we investigate an understudied mechanism: overcoming entitlement constraints. We maintain that in franchising systems, prior commitments and psychological contracts between franchisors and franchisees limit franchisors' ability to capture (and possibly create) additional value from the system by changing written contract terms. The reason is that such terms act as reference points by which franchisees determine whether franchisors have undermined their entitlements. If franchisees perceive that their entitlements are being undermined, they retaliate by underperforming, hurting franchisor profits. New owners, however, are less subject to such retaliation, because they did not make such prior commitments. This difference creates gains from trade through an acquisition. We provide empirical evidence consistent with this theory from a sample of 186 acquisitions of franchise systems.

Our world is becoming increasingly visual. Organizations and individuals alike increasingly communicate through visual means by posting images, photos and memes on social media, websites, and embedding them in emails. Organizational scholars are therefore faced with a new challenge: How do we make sense of visual data? In particular how do we collect, analyze, theorize and represent visual data? All of the methods that organizational scholars have at their disposal to engage in qualitative analysis takes for granted that data are textual in nature. However, a large literature in the social sciences suggests that visuals processes very differently than text. The goal of the second edition of this PDW is to further provide some needed assistance and sharing of best practices for qualitative scholars who would like to use visual data to generate theory about organizational phenomena.

Platform Complementors and Competition

Session Moderator: **Shihao Zhou**, *Nanjing U.*

STR: [Platform Categorization and Complement Performance: Evidence from Mobile Apps](#) 

Author: **Shihao Zhou**, *Nanjing U.*

Author: **Yuchen Zhang**, *Tulane U.*

Author: **Zhilei Qiao**, *U. of Alabama, Birmingham*

Managing complement heterogeneity has a salient impact on value creation in platform markets, but remains largely underexamined in the platform governance literature. Local homogenization (i.e., increasing complement homogeneity within a product category) can improve customer-complement matching efficiency, without weakening the network effect of the entire platform market. However, although local homogenization enables customers to better identify potentially fitted complements, the presence of more fitted complements makes customers more selective in making payments. Thus, we hypothesize that local homogenization increases digital complements' new installs, but reduces revenue generation from each installed customer. By exploiting the removing of shopping mobile apps from the lifestyle category on Apple's App store as an exogenous shock which increases local homogeneity of the lifestyle category, our empirical findings support for our propositions. Since new installs and revenue are both strategically important for digital complementors, this research illustrates a nuanced relationship between platform categorization and complement performance.

STR: [Network Effects and Competitive Response Timing](#) 

Author: **Jin-Su Kang**, *National Yang Ming Chiao Tung U.*

Author: **Sanjay Goel**, *U. of North Dakota*

Author: **Stephen Thomas Downing**, *U. of Missouri*

Traditional attack-response research suggests that successful attacks are those with delayed responses or those that go unchallenged by competitors while suggesting target firms respond immediately. However, this long-standing claim may not be generalizable to emerging digital platform markets characterized by indirect network effects, the interconnectedness between customers and complementors. This simulation study based on a Bayesian game-theoretic model uncovers temporal market dynamics among market participants with the given attack under indirect network effects and derives several contexts in which nonresponse can be a target firm's winning strategy.

Paper is Available to Meeting Registrants Only.

STR: [Platform Governance in the Presence of Within-Complementor Interdependencies](#) 

Author: **Hyuck David Chung**, *U. of Michigan*

Author: **Yue Maggie Zhou**, *U. of Michigan*

Author: **Sendil Ethiraj**, *London Business School*

Existing studies suggest that platform access restriction may reduce complement quantity on the restricted platform and increase complement quantity on competing platforms as restricted complementors switch from restricted to competing platforms. We re-examine this prediction by accounting for the impact of cross-platform synergy on complementor responses to platform access restriction. We argue that restricting a complementor's access on a platform may prevent it from achieving synergy from multihoming, thereby incentivizing it to abandon both the restricted and unrestricted platforms. Using rideshare data in New York City, we compare the numbers of trips made by Lyft and Uber drivers, respectively, before and after Lyft restricted drivers' access on its platform. We find that Lyft's access restriction reduced trip numbers not only on the Lyft platform but also on the Uber platform. In addition, both Lyft's and Uber's trip numbers decreased not only during the restricted low-demand periods (e.g., non-rush hours) but also during the unrestricted high-demand periods (e.g., rush hours). These results highlight the importance for platforms to account for interdependencies across complementor activities when designing access restriction policies.

Paper is NOT Available. Please contact the author(s).

STR: [Two Goliaths, Same Difference? The Impact of Platform Architecture on Social Networking Start-ups](#)   

Author: **Soni K. Jha**, *Fox School of Business, Temple U.*

Author: **C. Jennifer Tae**, *Temple U.*

We study how platform architecture affects different aspects of the performance of a multihoming social media complementor that is not the leader in the industry. There is a paucity of empirical evidence that disentangles either the different aspects of complementor performance on platforms or the attributes of platforms themselves. Using proprietary data on a new social networking app, we examine how platform openness and complexity impact the app's user performance, functional performance, and how the performance measures interact. We find that platform openness has a negative relationship to user performance, just as platform complexity does. However, for functional performance, we find a positive relationship for openness but a negative one for complexity. We also show a negative relationship between functional performance and user performance. Controlling for this negative relationship, we find that the platform architecture's main hypothesized effects on user performance and functional performance remain unchanged. The study has important implications for platform competition and for start-up apps reliant on user-generated content that are considering growing their user base through multihoming and are not the leaders in the industry.

Teaching In The Metaverse: Using Virtual Reality (VR) to Improve Student Engagement and Retention

Teaching in the Metaverse

Presenter: **Shalini Sabharwal Gopalkrishnan**, *Golden Gate U.*
Presenter: **Jamey Darnell**, *Penn State Smeal College of Business*

Student engagement and retention have been a challenge for educators for decades. Management professors have several traditional options for promoting engagement including (but not limited to) cases, simulations, games and other active learning techniques. The COVID-19 global pandemic has significantly illuminated that teaching remotely creates additional challenges and can often result in “Zoom fatigue” among students. In this session two experienced management educators will demonstrate how they have successfully taught management courses remotely in a virtual reality space. Surprisingly, this does not require significant tech skills on the part of the instructor or students.

Narrative Structures in Assignment Writing**
Visualizing and Developing Narrative Structures

Facilitator: **Ashley Roberts**, *Warwick Business School*

Facilitator: **Kiran Trehan**, *U. of York*

Session Chair: **Saloni Sinha**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*

Achieving the objective of creating successful narrative structures within student essays can pose challenges. Open Space Learning and play-based learning can help students to visualize and better understand astute, considered narratives in an accessible manner. This interactive workshop will experientially engage physical participants with an innovative tool, one that generates conversation and reflections on academic writing structures. Co-located delegates will use marble runs to create physical manifestations of either 'good' or 'bad' essay structures. Online participants will observe the interactions and offer their thoughts on the process/object outcomes before openly discussing how participants could use this concrete visualization approach to support students in their academic writing.

Developing Empathy in the MBA Classroom: A Theater-based Approach

Developing Empathy in the MBA through Theater

Participant: **Marco Aponte**, *Saint Mary's College of California*

Session Chair: **MUHAMMAD ALI**, *School of Economics and Management, Dongguan U.*

Empathy is often defined as the ability to comprehend another's feelings and to re-experience them oneself. Although empathetic skills have commonly been recognized as essential in leadership, its teaching and development have not received a lot of attention in the management and leadership literature. But with the recent challenges that employees around the world are facing as a result of the COVID-19 pandemic, empathy has taken center stage in business and management. This interactive session introduces a theater-based exercise aimed at developing leaders' empathetic skills. The exercise, which requires that students write and perform a fictitious story in the first person, consists of four stages: researching, imagining, writing, and telling the story. Through this process, the exercise allows students to empathize with a fictitious person who is facing a serious challenge in their life. The exercise targets the empathetic skills of both the students telling the stories and those listening to the stories. The goal of this interactive session is not only to introduce the exercise, but especially to allow participants to experience it and hopefully adopt it in their teaching.

Teaching and Assessing Reflective Practice in Executive Education Programs

Teaching and Assessing Reflective Practice

Presenter: **Courtney E. Owens**, *Alliance Manchester Business School, U. of Manchester*

Speaker: **Carl Gavin**, *Alliance Manchester Business School, U. of Manchester*

Speaker: **Irene Roele**, *Alliance Manchester Business School, U. of Manchester*

Session Chair: **Felicetta Iovino**, *U. of London, Unicaf*

Reflective practice is important to learning, especially in Executive Education programs. However, we have found that many executive education learners struggle with writing self-reflection. We have also found that educators can struggle with assessing reflective assignments as a subjective exercise. Thus the challenge lies in how to teach, and systematically assess, reflective practice. A central feature in our Executive Education programs since 2006, we share our best practices for teaching and assessing reflective practice assignment papers, including a newly developed tool. Simple yet powerful, the tool has been helpful to learners and assessors alike. The session will include an introduction to the tool, individual activities, small group discussions, and plenary discussions. This session will be of interest to conference attendees who teach or assess reflection, and/or are involved with executive education programs.

Learning Effectiveness of Virtual Entrepreneurship Programs: A Multilevel Evaluation Framework
Online Entrepreneurship Program Evaluation

Presenter: **FUHEJIN**, *Binghamton U.-State U. of New York*
Participant: **Mikiko Shimaoka**, *Waseda U.*
Participant: **Tomomi Kito**, *Waseda U.*
Participant: **Hiroki Sayama**, *Binghamton U.-State U. of New York*
Participant: **Chun-Han Chao**, *Binghamton U.-State U. of New York*
Participant: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*
Session Chair: **Marco Van Gelderen**, *Vrije U. Amsterdam*

With the expansion in entrepreneurship, the number of entrepreneurship education programs worldwide has increased significantly. Meanwhile, the advancement of computer information technology and the COVID-19 pandemic have contributed/forced immensely to the implications of virtual tools in entrepreneurship education programs. This rise forces entrepreneurship educators to overcome challenges associated with technology-mediated communications that limit social participation and interactions that substantially constitute students' learning and cognitive development. To address the needs of evaluating the effectiveness of virtual entrepreneurship education, we measured students' learning and growth in a Zoom-based entrepreneurship education program. With a longitudinal design, we applied machine-learning algorithms with network analysis and growth modeling to analyze the program's effectiveness in student learning. The results from network analysis indicated that high-performing teams displayed more equally distributed communication structures, while those of low-performing teams were more centralized. Growth modeling successfully captured students' enhanced entrepreneurial intentions at the end of the program; such growth patterns were distinctive between students with different personal characteristics (i.e., perspective-taking and imaginative capability). In sum, the proposed multilevel analytical framework and the current study's findings can be used to offer the best practices for entrepreneurship education programs and applicable methodologies for educators utilizing virtual learning systems.

Dynamics of Field-Level Diffusion and Adoption: Legitimacy, Status, and Culture

Session Moderator: **Moritz Gruban**, *Cambridge Judge Business School*

OMT: **How Do Organizations That Advance Commodification Overcome Losses in Moral Legitimacy?**

Author: **Moritz Gruban**, *Cambridge Judge Business School*
Author: **Aurélien Feix**, *HEC Paris*

Commodification, i.e., the expansion of market values in social life, has been criticized for undermining social values, corroding societal cohesion, and increasing inequalities. However, little is known about how commodification progresses despite violating normative expectations and generating resistance from stakeholders. To develop an explanation of how commodification becomes accepted, we draw on the organizational legitimacy literature, which differentiates between moral, instrumental, and relational dimensions of legitimacy. Using the example of professional soccer as an illustrative case, we argue that four effects facilitate stakeholders' support for an organization that advances commodification by introducing a market practice: compensation, buffering, dependence, and adjustment. High levels of instrumental and/or relational legitimacy may compensate and buffer losses in moral legitimacy. Furthermore, it is more likely that an organization, which advances commodification, withstands these losses if disapproving stakeholders' dependence on the organization is high because this dependence decreases the likelihood of stakeholder defections. As the market practice diffuses, organizations that introduced the practice may regain moral legitimacy because stakeholders adjust their evaluations to the increased importance of the practice for organizational performance. Our theoretical model elucidates the interplay of legitimacy dimensions and improves the understanding of how stakeholders come to view norm-breaking market practices as acceptable.

OMT: **Actorhood in Institutional Dynamics: Directors, Social Problem Film Genre, the Korean Film Industry**

Author: **Dongyoub Shin**, *Yonsei U.*
Author: **Bo Kyung Kim**, *Yonsei U.*
Author: **Sunhyuk Kim**, *Korea U.*
Author: **Hongseok Oh**, *Yonsei U.*

This study examines the social dynamics underlying the institutionalization of a particular movie genre, that is, social problem films (SPFs) in a particular setting, that is, the Korean film industry. We focus on the role of movie directors as social critics who have strategic intentions in institutional dynamics and answer the questions of which directors are more likely to choose SPF genre for their films and how and when they do so. Based on recent developments in institutional theories, such as actorhood, institutional work, and strategic action field, we empirically analyzed the micro-level factors related to movie directors and their actions that may have affected the institutionalization of SPF at the field level in the Korean film industry. The findings of this paper in the Korean film industry between 1994 to 2017 suggest that the irreversible status of directors, such as their educational degrees, the reversible status, such as their achievements in the field, and their experiences in SPF positively affect the odds of choosing SPF genre. In addition, the effect of reversible status reduced as the institutionalization of SPFs had been more fully established, while the effects of the other two were not affected by the different levels of the SPF institutionalization.

OMT: **Emergence of Islamic Finance Organizations, 1948 – 2016**

Author: **Abdullah Shahid**, *Cornell U.*

In this paper, I show two mechanisms of the emergence of non-Western organizations: demonstration of contracts and cultural resurgence. For illustration, I use the case of Islamic finance, an alternative economic organization for Muslims who are about 24% of the world population. With additional transaction costs and illegitimacy concerns, Islamic finance contracts do not usually take a formal form. However, my analyses with duration models, regressions, and semi-natural experiments over 1948 - 2016 and in 186 countries suggest that the Islamic finance contracts between national and supranational authorities inspired confidence among entrepreneurs and stakeholders that Islamic finance is socially and economically appropriate. This gave rise to Islamic finance organizations to enact such contracts, reducing the transaction costs for realizing Islamic principles in financial transactions. Also, Islamic finance organizations grew earlier in countries with aspirations for Muslim cultural resurgence in the post British colonial times.

The Covid-19 Pandemic and Organizational Crisis Responses

Session Moderator: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

OMT: **The Temporal Unfolding of Crises: Synchronizing Rhythms and the Construction of Urgency**

Author: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*
Author: **Elisa Lehrer**, *European Uni Viadrina, Frankfurt (Oder)*
Author: **Yanis Hamdali**, *European Uni Viadrina, Frankfurt (Oder)*
Author: **Jochen Koch**, *European Uni Viadrina, Frankfurt (Oder)*

Despite the continuing interest in studying crises, our knowledge of how these adverse situations unfold over time is still fragmented. Based on an empirical study of the German government agency Robert Koch-Institute, which is responsible for disease control and prevention in Germany and hence for the ongoing COVID-19 pandemic, we develop a process model of the constitution of urgency to act in the unfolding of crises based on music theory. In this paper, we argue that such urgency to act, i.e., the tact of a crisis, enables actors to synchronize temporal rhythms of responses to the crisis. In particular, we describe four temporal synchronizing practices—initiating, highlighting, releasing, and aligning—through which actors in organizations synchronize different rhythms of responses to a crisis and aim to create urgency to act. The main contribution of our paper is a more nuanced understanding of the role of temporality in crises in general, and the proactive role of organizations in particular.

OMT: **Oscillating Crises: Elaborating the Impact of Non-linear Crisis Progression**

Author: **Nooa Nykänen**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Jukka Luoma**, *Aalto U.*

The COVID-19 pandemic has made it obvious that sometimes crises progress in an oscillating fashion where the intensity of the crisis varies non-linearly and unpredictably. However, most crisis research tacitly assumes away the oscillating nature of crises. In this paper, we introduce a model of crisis oscillation which challenges the assumption of linear crisis progression embedded in existing theoretical work on organizational crisis processes. Our theoretical discussion focuses on the ways in which non-linear crisis progression produces increased levels of temporal ambiguity and results in deviating crisis management practices in contrast to crises which follow a linear trajectory. We identify four central elements which condition the crisis management responses and organizational development in the context of oscillating crises and address how these effects related to cognitive framing, temporal orientations, strategic adaptation, and distal outcomes affect organizations facing oscillating dynamics of crisis intensity. Overall, our paper contributes to theoretical understanding of non-linear crises which are likely to characterize the development of business environments in the future.

OMT: **Taming a Flow of Contamination: A Constitutive Approach to Flows in an Emergency Context**

Author: **Kathleen Ann Stephenson**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Elena Tavella**, *International U. of Monaco*

This article explores flows as a key feature of emergency contexts and how various actors manage them. Based on a single-case study of the Papa Giovanni XXIII hospital in Bergamo, Northern Italy, this article shows how actors manage a flow of contamination during the COVID-19 pandemic by shifting and sharing authority, manipulating space, and developing and coordinating a flow of treatment and safety protocols. This study contributes to the literature on emergency contexts and organizational flows by highlighting their importance in emergency contexts and challenging widely shared assumptions about flows and how they are managed. We elaborate a constitutive approach to study organizational flows that can be utilized in other areas of management and organization research, and propose future avenues for emergency context research that focuses on flows.

Paper is Available to Meeting Registrants Only.

OMT: **Temporal Alignment During the Covid-19 Pandemic: The Emergence and Disruption of Collective Action**

Author: **Sanaz Kateb**, *Vrije U. Amsterdam*
Author: **Rebecca Christin Ruehle**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **David Kroon**, *Vrije U. Amsterdam*
Author: **Elco Van Burg**, *Vrije U. Amsterdam, School of Business and Economics*

Although there has been substantial research on collective in crisis situations, there is a need for more knowledge on how temporal (mis-)alignment can influence the emergence, disruption and continuation of collective action. To study this question, we conducted 69 interviews to study the collective action between four organizations in the social care sector and their partners during the Covid-19 pandemic. We observed two temporal patterns: temporal alignment and temporal misalignment induced by the crisis. Existing collective action can break down during a crisis due to differences in temporal length and a disruption of joint pacing despite joint interest and a need for collaboration. This temporal misalignment can be repaired during the post urgency phase. In contrast, new collective action can arise during a crisis through temporal alignment, as urgency creates joint pacing and a joint understanding of short temporal length. This temporal alignment could lead to a breakdown during the post urgency phase. The theoretical implications of this study are twofold: first, it deepens our understanding of collective action in crisis situations by exploring the role of temporality for its emergence, disruption, and continuation. Second, the paper aims to expand our knowledge on temporality. It provides new understanding of the effect, interaction, and importance of 'temporal length' and 'pacing' for collective action in crisis. Keywords: Collective action, Temporality, Covid-19, Longitudinal, Crisis

Network Change: Theory and Evidence

Session Moderator: **James Mellody**, *MIT Sloan School of Management*

OMT: **Consolidation or Fracturing: Network Change and Real-World Events** 

Author: **James Mellody**, *MIT Sloan School of Management*

How do organizational networks respond to changing environments? Specifically, do networks fracture, with organizational actors and units splitting into balkanized clusters, or do they consolidate, becoming more connected? This study seeks to address this question by examining network change in the online community Reddit in response to two major events, the 2008 US Presidential Election and the 2009 Swine Flu Pandemic. To do so, this study focuses not just on change in structural networks, but also change in cultural networks. In doing so, the aim of this study is to paint a more complete picture of network change. Findings are largely consistent across both events, with structural and cultural networks consolidating around the time of the events. While structural and cultural trends resemble one another, differences emerge, painting a fuller picture of network change. Notably, some elements of cultural change appear to be longer-lasting compared to corresponding elements of structural change.

OMT: **Sliding Doors of Network Change: An Attention-Based Theory on The Evolution of Innovation Networks** 

Author: **Maria Rita Micheli**, *IESEG*

How and why do companies change their interorganizational networks over time? Research has traditionally focused on structural characteristics of ties to explore this evolutionary process. More recently, the focus has shifted to deliberate choices of network actors to change ties or maintain existing ones. In particular, research has explained that these choices are influenced by actors' innovative performance, which determines how network ties evolve over time. In this paper, we deepen the understanding of this issue; specifically, we develop an attention-based theoretical model to explore how managers first focus on the innovative performance and then decide to pursue change or stasis in their network. We explain that having an internal focus of attention (focus on company's own performance) or an external one (focus on partners' performance) leads to different patterns of network change. In both instances, having a below-expectations innovative performance leads to change the network, but the specific pattern depends on the focus of attention. We argue that attention also influences the change of company practices, in combination with network change; in particular, it determines if managers have a big enough attention span to change both the network and the practices and how they focus on specific practices.

OMT: **How Vicarious Learning Shapes Firms' Relationship Networks with Third-Party Experts**

Author: **Jillian Chown**, *Northwestern Kellogg School of Management*

Author: **Sunasir Dutta**, *U. of Minnesota*

In some markets, firms can compete by forming relationships with experts outside the boundary of the firm—what we call third-party experts—who can serve to both legitimize the firm and influence demand for its products. Developing and maintaining relationships with these third-party experts is, however, a complicated endeavor and how they go about doing so is a core strategic decision for firms in these markets. Taking a network perspective (where we consider firms to have networks of relationships with third-party experts), and focusing on both tie formation and dissolution, we find that firms learn vicariously from their close competitors when determining whether to grow (or shrink) their relationship networks and which particular experts they should target. Furthermore, firms' network-altering behaviors differ depending on whether a firm's attention and resources are directed to relationships or are pulled toward an alternative strategic focus. Firms whose attention is focused elsewhere engage in less tie formation and tie dissolution but end up more reliant on what they learn vicariously from their competitors. This study contributes by highlighting how firms approach building relationships with third-party experts, by providing a dynamic perspective to firms' strategic network building behaviors, and by generating further insight into the role that managerial attention and resource allocating play in shaping firm behavior.

Organizational Provocations: Theories of Disorganization, Incompetence, and Apocalypse

Session Moderator: **Luca Carollo**, *U. of Bergamo*

OMT: **Apocalyptic Organizing as a Way to Build Better Organizational Worlds (WITHDRAWN)**

Author: **Luca Carollo**, *U. of Bergamo*
Author: **Roberta Sferrazzo**, *Audencia Business School*

The main aim of this essay is to encourage organizational scholars to engage with the topic of the apocalypse in a more systematic and reflexive way. Indeed, a growing apocalyptic fervor is spreading in organization and management studies (OMS). Nevertheless, scholars have mainly focused so far on the catastrophic implications of the concept of apocalypse, overlooking its creative and generative possibilities. We have thus developed a specific path to help organizational scholars think through the apocalypse. Building on its ambivalent character, we illustrate the possibilities related to speculation, action, and cultural analysis opened up by the apocalypse along with their implications for OMS.

Paper is NOT Available. Please contact the author(s).

OMT: **Disorganization At Work: What Is It, How Does It Work and Why Does It Matter?**

Author: **Dinuka Herath**, *U. of Huddersfield*
Author: **Davide Secchi**, *U. of Southern Denmark*
Author: **Fabian Homberg**, *Department of Business and Management, LUISS Guido Carli U.*

“Disorganization” also referred to as ‘mess’, ‘deviation,’ or ‘disorder’ is a concept embedded in the view of organizations as complex human systems. The word hints at organizational phenomena that deviate from organizational schema and procedures in an unplanned and unstructured manner. This is a concept that is yet to be given full attention by management scholars, despite its continuous appearance partially under different labels throughout the history of the discipline for over five decades. Currently, there is a need for contributions that synthesize these various branches of management thinking into a coherent narrative. In addressing this gap, this article presents a review that synthesizes and integrates these various strands of literature on disorganization with the intent to explore whether and to what extent disorganization can contribute to management theory and practice. As such in this paper we systematically gather, review, organize and integrate the extant literature (n. 157) around the concept of disorganization to map the evolution of the concept. In so doing, we lay out a foundational body of literature that highlights the importance of enhancing our understanding of management through the integration of disorganization into our conversations about modern business. As such this paper presents the theoretical infrastructure for the definition, analysis, and treatment of disorganization management. Through the exploration and analysis of the literature, we propose new conceptualizations while mapping out the development of the concept over time. This is followed by exploring the implications these developments present to both management theory and practice.

Paper is Available to Meeting Registrants Only.

OMT: **Incompetence and Organization Studies**

Author: **Minjie Gao**, *Imperial College Business School*

This essay invites reflection on the notion of (in)competence in organization studies. Existing research tends to posit incompetence as harmful and counterproductive to organizational life and often excludes it from being the focal point. This essay argues that this negligence of incompetence reflects assumptions that incompetence is unworthy of serious attention that is questionable. This essay first organizes existing scholarship on competence by reviewing relevant literature that captures the existence of (perceived) competence and its consequences for individuals and organizations. It also offers a systematic view of incompetence by focusing on three distinguishing aspects: actual incompetence, perceived incompetence and performed incompetence. Most importantly, this essay brings to attention the notion of performed incompetence and provides a platform upon which future empirical studies of performed incompetence may be conducted.

Digitalization and Algorithms in the Workplace

Session Moderator: **Elmira Van Den Broek**, *Vrije U. Amsterdam*

OMT: **Fairness in Flux: The Role of Algorithms in Reconfiguring Moral Values**  

Author: **Elmira Van Den Broek**, *Vrije U. Amsterdam*
Author: **Marleen Huysman**, *Vrije U. Amsterdam*
Author: **Anastasia Sergeeva**, *Vrije U. Amsterdam*

While the rise of intelligent technologies like artificial intelligence in the workplace has sparked debates about the role of technology in serving and threatening moral values, such as what is fair and just, strikingly less attention is paid to how morality is shaped by technology. Building on a three-year ethnography of a human resources department of a large international organization that introduced algorithmic hiring to promote the value of fairness, we draw inspiration from values work and sociomateriality studies to enrich our understanding of the moral role of intelligent technologies. We find that algorithmic hiring does not mitigate or exacerbate fairness concerns, but instead reconfigures what is understood as fair over time: from something seen as unquestioned and centered on bias, to something comprising multiple and conflicting meanings for which a technical solution does not always exist. We explain this outcome as resulting from a process of sociomaterial values work, which involves stakeholders inscribing, performing, and reflecting on moral values in interaction with intelligent technologies. This study therefore argues for the need to include intelligent technologies in the study of reconfigurations of moral values in the workplace.

 OMT: **Digital Tedious Work and Developing Novel Outcomes with Digitization**

Author: **Elizabeth Long Lingo**, *Worcester Polytechnic Institute*
Author: **Hille C. Bruns**, *Groningen U. (RuG)*

Digital technology is pervasive in creative work, yet how it shapes the process of making novel outcomes remains underexamined. Drawing from a comparative ethnography of two settings in which digitization prevails—Nashville music production and systems biology cancer research—we present a model of digital tedious work in developing novel outcomes. We discover that exploiting digitization's potential for unlimited experimentation and refinement amplifies digital tedious work. Digital tedious work is highly repetitive, time-intensive, requires substantial expertise, and is inherent to creating with digitization. If not managed deftly, digital tedious work undermines the generation and synthesis of novel ideas. We find that actors engage in three curbing practices—truncating technology, automating, and zooming in and out—to limit digital tedious work and move the creative process forward. Our study offers three contributions: First, we develop a model of how digital tedious work arises throughout the creative process, why it becomes problematic, and how actors engage in curbing to respond. Second, we demonstrate the essential role of curbing practices as a necessary complement to exploiting digitization. Third, we provide evidence of how digital technology not only supports but also undermines the development of novel outcomes by exposing the pitfalls of digitization's unlimited possibilities.

OMT: **Imprinting Interrupted? Examining the Role of Remote Onboarding on Newcomers' Work Socialization**

Author: **Sarah Bankins**, *Macquarie U.*
Author: **Stephen Brammer**, *U. of Bath*
Author: **Layla Jayne Branicki**, *U. of Bath school of management*
Author: **Senia Kalfa**, *Macquarie U.*

Socialization of new employees, involving the imprinting of workplace norms and practices, has long been recognized as a driver of organizational performance through mechanisms such as employee-workplace fit. Yet the COVID-19 pandemic has triggered a rapid, and potentially long-run, move to remote working practices for organizations that has interrupted the well understood processes of socialization that occur through face-to-face onboarding. Drawing on unique interview data (n= 30) from employees who started a new role during the pandemic, we build an inductive model of the effects of remote onboarding on newcomer socialization experiences. We explore a multi-stage model of how a lack of early physical and social immersion in the workplace triggers processes of individualization and reduced workplace identification for newcomers. Further, we highlight how these processes are driven by the degree of digital mediation, and attenuated by organizational investments in technology, the initial resources provided to the new employee, and the employee's prior experience of remote work. We find that in contexts of high digital mediation newcomers experience reduced access to both formal and informal resources, such as opportunities to shadow colleagues or to form social connections. The absence of these resources heighten experiences of work intensification and lead to a reduced orientation of the employee to their new workplace. We discuss the implications of these insights for the research on imprinting and socialization, as well as the practice of remote onboarding.

OMT: **How Content Creators Respond to the Metric-Based Control of Platforms Over Their Career** 

Author: **Yun Ha Cho**, *U. of Michigan*

Quantification and the metrics form the fundamental basis of the algorithmic control exercised by the platforms on the platform workers. For content creators, not only are the metrics linked to the financial gain and status, but also to their coupling with the sense of self-worth of content creators grows over time. While the “game of metrics” takes the center-stage in the early- and mid-stage of content creators’ career, this study finds that the fixation on the metrics prove unsustainable to the content creators. As their performance inevitably plateaus and declines, content creators shift their attention to individual audience comments and distance themselves from the pursuit of the metrics. In response to the perceived opacity and their inability to decipher the feedback in the form of metrics, they experience frustration and mistrust towards the metrics and the platform’s algorithms. These are accompanied by the discursive strategy of drawing a symbolic dichotomy between the inauthentic “sellouts” who chase the metrics, exploit their audience, and continuously change to fit the mold of what is popular today and the authentic selves who prioritize the personal connection with the audience. These evolution in their beliefs over the course of their career paints a comprehensive picture of how platform workers relate to the metrics and other forms of feedback. Finally, this study contemplates the abovementioned findings in the light of the growing competition for talent by the social media platforms that continue to believe that the lack of transparency regarding the metrics and the algorithms sustains the power differential between them and the platform workers, preserving their control over the workers.

Paper is Available to Meeting Registrants Only.

OMT: **Managing the entanglement of Algorithms: Enabling Traveling Algorithms Across Time and Space**

Author: **Verena Timmer**, *Witten/Herdecke U.*

Author: **Erik Robert Strauss**, *U. of Witten/Herdecke*

An increasing number of organizational practices become digitalized through the implementation of algorithms which enhance processes, complement human activities, and complete tasks efficiently. Following a performativity-inspired approach literature suggest that algorithms’ entanglement in their contexts complicates the translation of them across time and space. However, literature also points to the relevance of translating algorithms into other contexts. To understand algorithms’ translation, this study seeks to analyse how the entanglement of algorithms can be resolved and how translation of algorithms can be managed. We will present findings from an inductive, ethnographic study of how an IT consultancy which implements document management software (DMS) reuses mostly the same algorithmic scripts to design multiple algorithms for multiple contexts. Drawing on our findings, we consider translation as an integral part of all biographical moments. Practices involved are the decomposition of complex algorithms to the level of algorithmic scripts, as part of a standardized scripting approach, the expertise of the programmers to envision and channel how algorithmic scripts will evolve in different contexts, and the search for sameness and similarities between different algorithms. This empirical study contributes to our understanding of traveling algorithmic scripts, organizational phenomena like routine replication, and performativity.

Effects of National Diversity-Related Policies

Session Moderator: **Charlie Wall-Andrews**, *Ted Rogers School of Management, Ryerson U.*

GDO: Canadian Arts and Culture: Gender and Race in Leadership  

Author: **Charlie Wall-Andrews**, *Ted Rogers School of Management, Ryerson U.*
Author: **Rochelle Wijesingha**, *Ryerson U.*
Author: **Owais Lightwala**, *Ryerson U.*
Author: **Wendy Cukier**, *Ryerson U.*

Representation in leadership is important not only because it often shapes the ways in which priorities are set and decisions are made but it also signals who belongs and shapes the aspirations and assumptions about what is possible. Extensive research across sectors has exposed the under-representation of women, racialized people, Indigenous peoples, persons with disabilities and members of the LGBTQ2S+ community in leadership roles in Canada. A range of initiatives have been introduced including legislation, voluntary codes, educational programs and procurement and funding priorities to improve representation. In Canada, the arts and cultural sector is significant not just because it employs more than 851,456 people and receives hundreds of millions of dollars in government funding but because it plays a profound role in shaping values and culture with impacts far beyond its boundaries. While in recent years, organizations have been under growing pressure from communities and funders to address diversity and inclusion, there is often a gap between statements and actions. This paper examines dimensions of diversity and inclusion in the largest and most influential arts and cultural organizations in Canada (n=125). First, it examines the extent to which they have expressed commitments or aspirations to diversity and inclusion. Then it examines the representation of women and racialized people in leadership roles. Finally, it recommends the elements of a comprehensive strategy, grounded in the critical ecological model, to promote change at the sectoral, organizational and individual level.

GDO: The Whiteboard: Decoupling of Diversity Reporting and Practice in Corporate Australia  

Author: **Claire Wright**, *Macquarie U.*
Author: **Corinne Cortese**, *U. of Wollongong*
Author: **Searat Ali**, *U. of Wollongong*
Author: **Abdulla Al Mamun**, *U. of Wollongong*

Diversity of company leadership is one of the most important governance issues currently faced by corporations around the globe, and yet the uneven treatment of diversity priorities remains a major challenge. Using a mixed-methods approach, we explore the extent and change over time of both gender and ethnic diversity in leadership, and diversity disclosure in company annual reports, for Australia's largest firms (ASX100) between 2005 and 2020. We interpret our findings with institutional theory, comparing the institutional isomorphisms driving change in each organisational form, and examining the extent to which there is rhetorical decoupling between them. Our findings suggest a disconnect between public commitment to diversity and Indigenous engagement, and the practice of appointing non-white corporate leaders. A lack of regulation surrounding diversity reports has contributed to this uneven disclosure and practice, with different outcomes for gender and ethnic diversity the result of different institutional isomorphisms. These findings can inform policymakers and corporations, highlighting the importance of a range of institutional pressures for encouraging both disclosure and practice regarding ethnic diversity in corporate leadership.

GDO: The Effect Of Female Employees Employment On Corporate Performance Study Under The Two-Child Policy

Author: **Aolin Leng**, *Northwestern Polytechnical U.*
Author: **Fuli Kang**, *Northwestern Polytechnical U.*

The adjustment of the birth policy also influences the organization's performance and female employment. Under the background of the birth policy, the discrimination of female employees in work and its underlying mechanism are the core issues of the academic community and concern. Based on the data of listed companies in China from 2010 to 2020, using ROA and TobinQ as performance indicators and empirical research methods examines the relationship between female employee employment and corporate performance under the two-child policy. The results show that: (1)Female employees positively affect corporate performance; the two-child policy has a negative regulatory impact on female employees and corporate performance; (2)The employment of female employees by enterprises has increased; (3)State-owned enterprises have a positive regulatory effect on female employees and corporate performance; (4)The marketization index and private enterprises have a negative regulatory impact on female employees and corporate performance. This research has significant reference value for achieving gender equality in the labor market and promoting the employment of female employees.

Presenter: **Marwa Halwani**, *Saint Joseph U. of Beirut*

This workshop explores the roles of management consulting and scholarship in the titanic task of rebuilding a nation from the municipal locus. Countless attempts to reform a centralizing administration did not withhold the downward spiral of ineffective government, deteriorating economy, and degrading social and natural environments. The use of mega consultants to advise central government policies and isomorphic solutions proved ineffectual if not outright demeaning. Theory and practice have shown that localism works, and that government reform in Lebanon has a mandatory passage through local action (El Haddad, Auffret, & Grishina, 2020). Municipal leadership, citizen empowerment, and contextual solutions provide the path forward. This entails finding the right balance between the contingent and the generic, the practical and the scholarly. The present workshop explores the roles, alignment, and balance of engagement between municipalities, management consultants, and scholars to steer local government transformations towards a better world.

HRM and Sustainability

Session Moderator: **XINYU HU**, *Renmin U. of China*

HR: Is There a Role for HRM in Corporations' CSR Strategies? An Analysis of the Sustainability Reports

Author: **Essi Saru**, *U. of Turku, Finland*

Author: **Hannele MJ Seeck**, *U. of Turku, School of Economics*

A significant degree of confusion regarding the relationship between human resources management (HRM) and corporate social responsibility (CSR) persists in research and practice. Drawing on sustainability reports of large European companies, we examine how HRM's role is presented in connection to CSR. The links between sustainable HRM and CSR are scarce but exist. Our analysis makes three contributions. First, HRM fulfills its CSR role toward employees as internal stakeholders through implementing standard human resources (HR) practices that ensure employee employability, safety, health, and wellbeing without playing a strategic role in CSR. Second, employees are seen as objects of CSR activities rather than active subjects. Third, the CSR-HRM relation is ad hoc and unsystematic; the system-level integration of CSR and HRM remains obscure; and the incorporation of CSR and sustainable HRM does not take place. We suggest that sustainable HRM characteristics would allow HRM to play a more active role in the development and implementation of CSR strategies. Sustainable HRM characteristics could elevate the role of HRM and different HR activities toward a more substantial and strategic role in CSR that is more externally orientated. We call for more empirical research on CSR strategy-sustainable HRM linkage.

HR: A Meta-Analysis of Green Human Resource Management: The Effectiveness and National Conditions

Author: **XINYU HU**, *Renmin U. of China*

Author: **Yu Zhou**, *Renmin U. of China*

Green human resource management (HRM) refers to HRM policies and processes that promote organizations' green outcomes. Using the meta-analysis method, we examined the effects of green HRM's effects on organizational and individual outcomes. We also explored green HRM's heterogeneous country-level moderators. The results confirmed that green HRM have positive impacts on the outcomes. Furthermore, we found that a national culture, national innovation capacity and environmental pollution moderate the effects of green HRM on outcomes.

HR: Team Perceptions of Green HRM and Team Performance: The Mediating Role of Green Team Behaviors

Author: **Sabrina El Baroudi**, *Vrije U. Amsterdam*

Author: **Wenjing Cai**, *Vrije U. Amsterdam*

Organizations are increasingly pressured to contribute to a greener society and to improve team performance. Research shows that by adopting green human resource management (green HRM), organizations foster green work behaviors and improve green workplace performance. However, whether this also applies to non-green workplace outcomes such as performance in a team context remains a question that is unexplored. This research addresses this gap by examining whether green HRM is related to performance through the mediating effect of green work behaviors at the team level. Analyses of the multi-sourced data from 63 teams show that team perceptions of green HRM are indeed related to team performance through the mediating effect of green team behaviors (i.e., in- and extra-role behaviors). This study discusses how the findings offer important implications for green HRM research and practice.

HR: How Sustainable Human Resource Management Practices Enhance Employee Performance? A Multilevel Study

Author: **Ying Lu**, *Macquarie Business School, Macquarie U.*

Author: **Mingqiong Mike Zhang**, *Monash Business School*

Author: **Miles M. Yang**, *Macquarie U.*

Author: **Yue Wang**, *Macquarie Business School, Macquarie U.*

A distinguishing feature of sustainable human resource management (HRM) research is that it emphasizes the mutual gains of HRM practices for firms and employees. Yet, how sustainable HRM practices may enhance employee performance remains understudied in the HRM-performance outcomes literature. Drawing on the job demands-resources (JD-R) model, we argued that sustainable HRM practices provide valuable workplace resources for enhancing employee resilience as a crucial personal resource, which in turn help to improve employee performance through its' positive impact on work engagement. A multilevel and multisource study of a Chinese sample offers support for our theoretical predictions that employee resilience and work engagement serially mediated the cross-level relationship between sustainable HRM practices and employee performance. The paper contributes to our knowledge of how factors related employee wellbeing, namely employee resilience and work engagement, provide the underlying mediation mechanisms through which sustainable HRM practices influence the performance of employees.

HR: [Factors Leading to Interview Question Decisions: Model of Interviewer Question Preferences](#)  

Author: **Andrew Speer**, *Wayne State U.*

Author: **Lauren Wegmeyer**, *Wayne State U.*

Author: **Angie Delacruz**, *Wayne State U.*

This study expands upon interview research by developing a tentative model to explain interview question preferences. The Model of Interviewer Question Preferences highlights interviewer factors that occur along two causal paths: job relevance factors that leads to identification of questions that accurately differentiate applicants in terms of hireability and social factors and past experiences. When combining both the job relevance path and social exposure path, nearly 48% of the variance in preference for interview questions was explained in a sample of 186 employees with experience conducting interviews. Factors such as question job relevance and question exposure were highly related to question preference. Most generally, results suggest that people prefer to ask questions they are familiar with and think are job-relevant.

Paper is Available to Meeting Registrants Only.

 HR: [The Impact of Past Underdog Experiences on Making Hiring Decisions: A Cross-Cultural Perspective](#)

Author: **Liuxin Yan**, *National U. of Singapore*

Author: **Shiyao Bao**, *IESE Business School*

Author: **Kai Chi Yam**, *National U. of Singapore*

People often react positively towards underdog stories, in which individuals who were expected to fail overcome odds and unexpectedly achieve success. Because of the widespread popularity of underdog stories, people who have a successful and desirable present state may strategically signal their past underdog experiences to improve their interpersonal standings. While some research indeed suggests that those who overcome an undesirable past to achieve current success are viewed more positively, the present research documents and examines potential downsides of having past underdog experiences. Across two studies, we found that in an instrumental context (i.e., workplace), holding the same desirable present state, people display decision-making biases (i.e., hiring decisions) against successful individuals who have past underdog experiences compared to those who consistently do well and are always expected to succeed. These effects are driven by ascribed future performance expectations. We furthermore investigate the potential role of cultural tightness-looseness in altering these relationships, such that people from tight (versus loose) cultures display greater aversion towards those who have past underdog experiences despite their present success.

HR: [Development of Person-Organization Fit Perceptions Within Asynchronous Recruitment Process Contexts](#) 

Author: **Femi Aiyegbusi**, *Degroote School of Business, McMaster U.*

Although the development of applicant Person-Organization (PO) fit perception has generated interest in the recruiting literature in recent times, most studies have conceptualized it in simple contexts involving only one organization, a single stage in the process, or two synchronized stages. Consequently, very little is known about fit perceptions of many applicants (e.g. job switchers), who go through complex processes across multiple organizations on an asynchronous timeline. This paper explores the development of applicant Person-Organization (PO) Fit Perception within a complex context of multiple organizations running parallel asynchronous recruitment processes. It hypothesizes on a set of useful constructs pertaining to recruitment stages, career stages, direction of fit perception, financial capacity, and business cycles, grounded in Differentiation and Consolidation Theory (DCT) from the decision-making literature. The association between PO Fit perception updates and job choices, as well as that between the frequency of fit perception updates and likelihood of job switches are also hypothesized by extending the Behavioral Consistency Theory (BCT) from Organizational Behavior. This paper contributes to the emerging PO Fit literature and the more established recruitment literature by introducing necessary complexity to accommodate the realities of many job seekers who experience staggered process timelines. It also extends and integrates two established theories of decision-making, DCT and BCT, with those literatures.

Paper is Available to Meeting Registrants Only.

HR: [The Effect of Attracting Job-Seekers Using Diversity Certification](#)

Author: **Sarah-Alena Rössig**, *Otto-von-Guericke U. Magdeburg*

Research on employee recruitment shows that job-seekers use multiple signals to infer organizational characteristics. Diversity certification can signal organizations' commitment to diversity to present organizations as attractive employers to job-seekers. However, previous research scarcely addresses how job-seekers perceive diversity certification. We propose that job-seekers with positive attitudes about diversity perceive organizations with diversity certification as attractive and hypothesize that diversity as an organizational value mediates the relationship between exposure to diversity certification and organizational attractiveness. In an online study with 190 respondents, we manipulated the exposure to diversity certification on company web pages to find support for the hypothesized relationships.

As management educators developing the next generation of leaders, our responsibility is to ensure that our students graduate with the skills and mindsets needed to “create a better world together.” Design thinking offers a process for curriculum development which allows for the inclusion of a variety of different voices, encourages prototyping and experimentation, and shifts the focus from an emphasis on teaching to an emphasis on learning. This PDW will begin with a panel discussion in which we share our own experience with using design thinking to redesign our MBA program, and to build a new Master in Management program. Our panelists include faculty members and program directors, as well as design thinking professionals, and we will explore why, how and when to use design thinking to gain the commitment of faculty, students, and industry, while increasing the pace of curriculum development and encouraging experimentation. After a Q&A session with the panelists, participants will move to breakout sessions where they will be guided through a series of design thinking tools, which they can integrate into their own curriculum development at either the course or the program level. This PDW will be of interest to instructors looking for innovative ways to approach their own course development, along with faculty members, program administrators and industry members interested in working collaboratively to ensure that business curricula remain relevant and useful in an increasingly turbulent environment.

Management scholars have been increasingly interested in how institutional factors, especially the government, affect innovation in emerging markets. This symposium brings together a unique set of papers exploring different ways governments contribute to firm and scientific innovation in the important emerging market of China. Specifically, the first paper investigates how government-led innovation policies can affect patent growth, including the absolute number of patents and patent novelty, and how policies can yield different results across the country. The second paper describes the effect of government industrial priorities on firm innovation, including targeted firms that lie in prioritized industries as well as non-targeted firms. The third paper examines the effect of talent returnee programs on scientific innovation and explains the performance gaps between returnee scientists and their overseas peers. The last study builds on the institutional view to investigate how the COVID-19 pandemic affects change in innovation between SOEs and non-SOEs and considers the contingent roles of regional R&D funding and firm digitalization. As a set, the papers offer new insights into how institutional factors contribute to the firm and scientific innovation in an emerging market, which can inform organization and management theories and strategic management research.

In this session, members of the Critical Management Studies Executive Committee will facilitate a discussion around 'being critical of violence'. We begin our discussion with the words of Yashar Mahmud (who won the AOM 2021 CMS Division Best Critical Dissertation Award): "By revealing what refugees go through, I ... show their vulnerability and, thus, humanize what has been dehumanized". In this session, we stand in solidarity with refugees around the world and all who experience dehumanization and violence.

HR: **Food for Thought on Eating While Meeting Virtually**  

Author: **Katherine A Karl**, *U. of Tennessee, Chattanooga*
Author: **Joy VanEck Peluchette**, *Lindenwood U.*
Author: **William R. Evans**, *U. of Tennessee at Chattanooga*

This study examines the impact of employees eating during virtual meetings on observers' perceptions of this behavior. Participants (N=732) were randomly assigned to one of three eating conditions including no one eating, target eating, and everyone eating. While existing research has demonstrated many positive consequences of sharing food in the traditional workplace, our results suggest that individuals who eat during virtual meetings are perceived as less professional, less competent, and less likely to experience career success. Additionally, observers' perceptions of the eater's professionalism are negatively impacted, regardless of whether the target is the only one eating or everyone is eating. The need for HR professionals to facilitate the development of employees' virtual meeting skills is discussed.

HR: **Effects of an Electronic Monitoring System on Employees' Productivity in Telecommuting Arrangements**  

Author: **In Gyun Baek**, *National U. of Singapore*
Author: **Yea Hee Ko**, *Binghamton U.-State U. of New York*

When employees work from home, organizations have traditionally placed a stronger reliance on output-based controls due to the inability to physically observe their employees. Due to recent advances in technology, however, many organizations now use input-based controls. One such input-based control is an electronic monitoring system, which records the number of hours spent working and leaves out any time in which an employee does not perform work activities. On the one hand, an electronic monitoring system may provide productivity-enhancing benefits by reducing the likelihood of employees engaging in opportunistic behavior, such as their self-control problems. On the other hand, an electronic monitoring system may motivate reduced effort by increasing employees' stress and decreasing their autonomy and job satisfaction, all of which decrease productivity. We take advantage of a field-research setting in which the organization adopts an electronic monitoring system for its telecommuting employees. We find the electronic monitoring system leads to a productivity increase for telecommuting employees. We also find the electronic monitoring system reduces employees' self-control problems. Our results suggest technology can play a significant role in expanding organizations' management control choices when achieving controls in telecommuting arrangements.

HR: **An Investigation of Job Attribute Preferences of Disadvantaged Beneficiaries of Hybrid Organizations**

Author: **Liang Shang**, *Lingnan U.*
Author: **Yanto Chandra**, *Hong Kong Polytechnic U.*

While scholarship in hybrid organizing of social enterprises has gained maturity in recent years, most existing studies have examined hybrid organizing at the internal and organizational level, and lesser is known about the tensions, balance and trade-offs within individual beneficiaries that served by social enterprises. Given the centrality of the employment of marginalized individuals served in the value creation of social enterprises, it is necessary to deepen our theoretical understanding of whether, how, and to what extent disadvantaged beneficiaries of social enterprises make employment decisions. Adopting an individual-level perspective, this study embarked on a quantitative exploration by testing how disadvantaged employees of social enterprises evaluate different job attributes and their attribute levels using the discrete choice experiment method. We found that opportunities to build social relations, employee recognition, potential earnings, career advancement opportunities, and workplace support had positive and significant influences on disabled individuals' job preference decisions. Among all, the economic dimension had the greatest importance. This paper contributes to social entrepreneurship research by examining job attribute preferences of disadvantaged employees within the theoretical logic of hybridity as it is nested within individuals. We also stimulate a new conversation on an understudied domain of "individual preferences" within the discourse on social entrepreneurship.

HR: **Surviving Remotely: How the Forced Shift to Remote Work Impacted Work Behaviors and Well-being**

Author: **Liuba Belkin**, *Lehigh U.*
Author: **Sarah Tuskey**, *Virginia Tech*
Author: **Samantha A. Conroy**, *Colorado State U.*

This paper investigates the impact of job control and work-related loneliness on employee work behaviors and well-being during the massive and abrupt move to remote work amid the COVID-19 pandemic. We draw on job-demands control and social baseline theory to link employee perceived job control and work-related loneliness to emotional exhaustion and work-life balance and posit direct and indirect effects on employee counterproductive work behaviors, depression, and insomnia. Using a two-wave data collection with a sample of U.S. working adults to test our predictions, we find that high job control was beneficially related to emotional exhaustion and work-life balance, while high work-related loneliness showed detrimental relationships with our variables of interest. Moreover, we find that beneficial impact of high perceived job control was conditional on individual segmentation preferences such that the effects were stronger when segmentation preference was low. Our research extends the literature on remote work, job control, and workplace loneliness. It also provides insights for organizations to manage widespread remote work that is likely to persist long after the COVID-19 pandemic.

Perspectives on Business Philanthropy

Session Moderator: **Xiaolian Ke**, *School of Management, Guangzhou U.*

SIM: Social Media Usage and Entrepreneurial Philanthropy: The Stewardship Theory Perspective 

Author: **Xiaolian Ke**, *School of Management, Guangzhou U.*
Author: **Jiawen Chen**, *School of Management, Guangzhou U.*

This paper aims to investigate how entrepreneurs' social media usage may affect their entrepreneurial philanthropy. Existing literature has relied on an instrumental stakeholder theory and suggests that social media usage motivates entrepreneurial philanthropy as entrepreneurs can better communicate their social initiatives with stakeholders to gain social and financial supports. This study draws on stewardship theory and extend that entrepreneurs' social media usage promotes their ethical and prosocial motivation for entrepreneurial philanthropy. Particularly, we theorize that entrepreneurs' social media usage enhances their perceived status and social identification in their ventures' engagement in philanthropy. Our analysis of a sample of Chinese private ventures offers empirical supports for the mediating effects of self-perceived status and philanthropic identification on the relationship between entrepreneurs' social media usage and their ventures' philanthropic propensity and intensity. Our study has implications for the role of social media in promoting corporate social initiatives and adds to the literature on stakeholder theory.

Paper is Available to Meeting Registrants Only.

SIM: Donation versus Dividend: Inter-Stakeholders' Competing Expectations  

Author: **David M. Gomulya**, *Singapore Management U.*
Author: **Junichi Yamanoi**, *Waseda U.*

How much to donate? The existing perspective suggests that as corporate philanthropy (CP) acts as an insurance, how much a firm should donate depends on how much assets it has to protect. Our study offers a different but complementary view, an inequity-aversion perspective. We examine whether shareholders expect more dividend when a firm donated more previously. This is because shareholders engage in social comparison and act when they suffer inequity. Yet, this comparison can be weakened when firms' industry is stigmatized as those firms need CP as insurance. Examining these questions in a stakeholder-oriented context, our results support both arguments.

Paper is NOT Available. Please contact the author(s).

SIM: How Entrepreneur Status Variance Affects Corporate Philanthropy: Evidence from Chinese Private Firms  

Author: **Yapu Zhao**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Haifeng Wang**, *Shanghai International Studies U.*
Author: **Megan Yuan Li**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Shuoying Liao**, *Shanghai International Studies U.*

We examine the effects of entrepreneur status variance across multiple status hierarchies on corporate philanthropy. We argue that status variance among multiple status hierarchies drives corporate philanthropy by triggering anxiety and empathy among entrepreneurs. The analysis of a national survey of Chinese private firms shows that entrepreneur status variance has a positive effect on corporate philanthropy. This effect was further amplified when the firms are located in less developed provinces or when the entrepreneurs once have unemployment experience. We contribute to the literature on corporate philanthropy by highlighting the role of entrepreneur status inconsistency as a significant non-financial driver.

Innovation, Technology Strategy and Competition Track: Organizational Relationships that Matter

Session Moderator: **Luisa Gagliardi**, *Department of Management and Technology, Bocconi U.*

TIM: How do Complementors React to a Change in Platform Openness? Evidence from YouTube (WITHDRAWN)  

Author: **Anna Kerkhof**, *ifo Institute*
Author: **Johannes Loh**, *BI Norwegian Business School*

Openness refers to the degree to which a platform grants users and complementors access to its features and other ecosystem participants. Prior studies highlighted trade-offs between securing a large and diverse set of complementors and protecting the integrity of their offerings, and how this can drive between-platform difference. However, less is known about how incentives and behaviors are affected if a platform's degree of openness changes. We therefore investigate a rule change that significantly increased the eligibility criteria to participate in the YouTube Partner Program, excluding a subset of prior participants, and depriving them from the possibility to monetize their content. Consistent with a deterioration of financial incentives, we find that affected YouTubers exited the platform at higher rates compared to those who are just unaffected. Among those who did not leave the platform, we find increased activity levels after the rule change, suggesting that they strove to regain access to the program. We do not find evidence that affected YouTubers produced more mainstream or high-quality content.

TIM: The Challenger Victories in The Asymmetric Technology Competition under The Network Externality

Author: **Lianjia Sun**, *Xi'an Jiaotong U. School of Management*
Author: **Jun Lin**, *Xi'an Jiaotong U. School of Management*

In what condition, the challengers of the market would gain the support of the very incumbents they disrupt. This seemingly impossible logic often occurs in reality. By establishing a model of technological competition with asymmetric characteristics under network externalities, we provide a correlation possibility to serve as a warning for incumbent enterprises. We find that under the joint influence of technological competition and network externalities, a dangerous area would be created. In which, the network externality would paralyze the judgment of the enterprise on the profit and lead to the wrong decision of the enterprise in the face of technology competition. Moreover, this paper believes that, enterprises should focus on the changes in the overall value of the market due to the introduction of technology, rather than making the related decisions based on their own profit demand. Our research has contributed to the studies of both the interpretation of the innovator's dilemma and the direction of risk research considering network externalities.

TIM: Near and Far: R&D Strategies of Business Groups

Author: **Luisa Gagliardi**, *Department of Management and Technology, Bocconi U.*
Author: **Nilanjana Dutt**, *Bocconi U.*
Author: **Grigorios Spanos**, *GSEM - U. of Geneva*

Understanding how multi-location firms organize their global research and development (R&D) networks has implications for their innovation performance. Among various drivers of innovation, geographic distance plays a critical role in determining the benefits and costs of conducting R&D in different locations. Prior research has suggested firms typically invest in geographically proximate subsidiaries that can transfer knowledge via spillovers and are relatively easy to monitor. Yet, there is also evidence of highly distant subsidiaries providing access to specialized knowledge. We test which organizational structures are most prevalent using data from a globally comprehensive sample of business groups. To account for the endogeneity of geographic distance, we employ a Regression Discontinuity Design (RDD). While both proximate and highly distant subsidiaries are equally likely to be active in R&D, business groups use different strategies to manage subsidiaries based on their geographic distance. Our findings suggest that business groups that invest in highly distant R&D-active subsidiaries tend to have higher patenting activity and productivity. These results yield concrete recommendations for business groups on how to balance the tension between the costs and benefits of geographic distance for R&D strategies.

TIM: How Firm's Choice of User Involvement Affects NPD in the Digital Economy 

Author: **Keying Lu**, *School of management, Zhejiang U.*
Author: **Jian Du**, *Zhejiang U.*
Author: **Shu Kong**, *Meituan*

Despite the increasing attention of firms to user involvement, there is no consensus about the impact of firms' choice of user involvement on new product development (NPD) performance. Drawing on knowledge-based view and two aspects of benefit and cost, we argue that firms' choice of different digital user involvement patterns has a distinct effect on NPD performance, and the effectiveness depends upon firms' dynamic selections, that is, different NPD stages. Our study offers insight about whether, how, and when to involve users in the NPD process.

People and Innovation Track: CEOs, and Access to Human Capital

Session Moderator: **Andreea Noemi Kiss**, *Lehigh U.*

TIM: Which Industries Benefit More from the Agglomeration Effect?

Author: **Daewu Ju**, *Bayes Business School (formerly Cass)*

This paper advances the literature on the relationship between geographical industry agglomeration and industry performance by revealing the industry variances in this relationship and by proposing industry characteristics that drive such variances. Using unique data of 28 consumer-facing industries over 1,496 commercial areas in Seoul, South Korea between 2014 and 2018, from which about half a million observations on the agglomeration–performance relationship was gathered, we found that such relationship is weakened in industries that provide high value products or tangible goods but is strengthened in industries that offer low value products or intangible services. Our findings enrich the industrial agglomeration literature by not only identifying those industries that benefit more from agglomeration but also providing a theoretical explanation on why these industries have more agglomeration advantages than others.

TIM: CEO Liberalism, Firm Governance, and Innovative Behavior

Author: **Andreea Noemi Kiss**, *Lehigh U.*

Author: **Qianqian Yu**, *Lehigh U.*

Author: **Andrew Ward**, *Lehigh U.*

We draw on upper-echelons literature recognizing the important role of CEOs in firm strategy, and corporate governance research, to examine the role of CEOs’ political ideologies, in particular their degree of liberalism, on firm innovative behavior. We suggest that firms run by liberal CEOs engage in more exploratory innovation search, and produce more breakthrough innovations, but also more low-quality innovations. Internal and external governance mechanisms such as CEO compensation, board independence, institutional ownership, antitakeover provisions, and competition moderate these relationships. We test our hypotheses on a sample of 411 public firms and use firms’ patenting activities to capture innovative behavior. Our study provides a more nuanced perspective on the role of CEO values and their interplay with governance mechanisms on firm innovative behavior.

TIM: The Effect of CEO Social Capital on Corporate Innovation – Evidence from Chinese Listed Companies

Author: **Helin Sun**, *Central South U.*

Author: **Jia Zhu**, *Central China Normal U.*

Using a sample composed of all the non-financial firms listed on the Shanghai and Shenzhen Stock Exchanges in China between 2007 and 2016, this study explores the effect of CEO social capital on corporate innovation. To properly grasp this effect, we have dissected the effects of CEO social capital into its internal and external dimensions. Rooting our study in social capital theory, we propose and provide empirical evidence that the internal and external social capital of CEOs plays a crucial role in the innovation of firms. In addition, we have also explored the boundary conditions of these effects, considering the way CEO duality and state ownership moderate the effects of CEO internal and external social capital on corporate innovation. In so doing, we contribute to social capital theory by breaking down the role CEO internal and external social capital plays in firm innovation. Moreover, our findings expand understanding regarding the boundary conditions in which CEO social capital may benefit firm innovation.

Paper is Available to Meeting Registrants Only.

TIM: CEO Attribute Configurations and Managerial Attention to Digital Transformation

Author: **Fabian Reck**, *U. of Bamberg*

Author: **Alexander Fliaster**, *U. of Bamberg*

In this paper, we examine how CEO attributes affect managerial attention toward digital transformation, i.e., the degree to which the firm’s top management team (TMT) recognizes and cognitively digests new digital technologies. In contrast to previous research which largely focused on the isolated effects of individual CEO characteristics, we argue that CEOs each represent a specific configuration of demographic, personality, and network attributes, and suggest that it is the conjunction of those attributes that explains managerial attention. Based on multi-source data from 126 industrial firms, we conduct exploratory fsQCA and reveal three major configurational patterns linked to high levels of managerial attention, and four patterns linked to low attention. Subsuming the gained insight, we develop a comprehensive typology of CEOs and interpret each configurational profile in light of previous top management research. On the one hand, our findings replicate and refine the results of past works, e.g., by demonstrating that the combination of personal need for acclaim and intra-industry social contacts consistently result in high levels of attention. On the other hand, we expand existing theories by uncovering attention-inducing CEO attribute configurations that were not previously discussed in the literature.

Contemporary Issues in Operations & Supply Chain Management

Session Moderator: **Marianna Frangeskou, Tilburg U.**

OSCM: **How do Dynamic Capabilities, Information Symmetry, Performance Evaluation and Trust Contribute**   

Author: **Sushil S. Chaurasia, U. of New Brunswick**
Author: **Dhirendra Shukla, U. of New Brunswick**
Author: **Manoj Motiani, Indian Institute of Management, Indore**
Author: **Nivedita Bhanja, Indian Institute of Management Kozhikode**

The identification and understanding of value creation attribute in a strategic buyer-supplier relationship can help both international retailers and SME manufacturer in strengthening ties. With an objective to contribute to emerging literature in the international retailer-SME manufacturer's outsourcing relationship, the investigation aims to address three main research questions: (i) which are the critical drivers of BSR value? ii) How the identified drivers (i.e. dynamic capabilities, information symmetry, performance evaluation and trust) affect relationship value? (iii) which configurations of these factors can lead to high relationship value? The multi-level investigation, uses the Delphi technique to identify the critical drivers of buyer-supplier relationship value, followed by covariance based-SEM and fsQCA to give detailed insights into the causal patterns of relationship value in retailer-manufacturer relationship. Based on the paths toward building relationship value, two combinations were identified. First, along with performance metrics, the combination of information symmetry and trust creates value in a retailer-manufacturer relationship. Second, along with performance metrics, dynamic capability creates value in a retailer-manufacturer relationship.

Paper is Available to Meeting Registrants Only.

OSCM: **Exploring the Role of Job Crafting in Managing the Tensions of Standardized Work in Healthcare Opera**  

Author: **Marianna Frangeskou, Tilburg U.**
Author: **Rweyemamu Ndibalema, U. of Birmingham**
Author: **Alice Erthal, FDC - Fundação Dom Cabral**

Combining both HOM and organizational research, this paper examined how a bottom-up approach to job design termed job crafting, manifests in standardized work procedures and how it affects the performance of standardized operations. The research is built upon an in-depth longitudinal case study that investigated the adoption of national standardized stroke care process in a UK general hospital. This study identified many multi-level tensions of standardized work in healthcare operations previously discussed in the HOM literature, reinforcing the idea that any implementation mechanism must be multi-faceted and dynamic. Detailed observation of pathway implementation confirms the vital influence of professional autonomy on the pathway performance by crafting their work. The study found that all the different forms of the initial model of job crafting i.e. task, relational and cognitive were present among different groups of staff during standardized work operations at the hospital. Positive and negative consequences of job crafting to both the staff and the operational procedures were clearly observed. Drawing on organizational and HRM literature interventions to facilitate positive job crafting to improve the performance in standardized operations were discussed. Directions for further studies are also suggested. Keywords: standardized work, healthcare operations, implementation tensions, autonomous professionals, job crafting

OSCM: **Implications of Online-Buying to Store-Pickup (O2S) for End-to-End Supply Chain Strategy**  

Author: **Shardul Phadnis, Asia School of Business**
Author: **Charles H. Fine, MIT Sloan School of Management**

A growing body of literature examines the demand effects of the increasingly popular retailing strategies of integrating digital sales channels with brick-and-mortar stores, allowing customers to buy goods online and pick them up in a store (termed BOPS) or by the store's curbside. Typically, however, implications of such strategies are explored for the retail channel alone while ignoring the sourcing strategy, which affects a key driver of their influence: product availability. We study such online-to-store (O2S) strategies using an analytical model of the end-to-end supply chain for two cases: a brick-and-mortar retailer expanding its market via O2S, and a retailer integrating its independent brick-and-mortar and online channels via O2S. We derive rational expectations equilibrium product availability, involving sourcing strategy and consumer choice, in pre and post-O2S cases to provide three insights about the interdependence of O2S and sourcing strategies. First, market expansion via O2S is moderated by the retailer's sourcing strategy: it is achieved only if the equilibrium pre-O2S product availability is below a certain threshold. Second, introduction of an O2S strategy can affect the feasibility of retailer's suppliers: it can render an existing supplier economically infeasible and make a previously-infeasible supplier feasible. Third, cost-efficient processing of goods returned by the retailer's O2S and online consumers is necessary not just for retail profitability but also to ensure supplier feasibility. For practice, this highlights the need to plan the retail and sourcing strategies in a multi-channel environment jointly as interdependent components of an end-to-end supply chain. Managers are thus forewarned of pitfalls from separating the decision-making in retailing and sourcing strategies.

Technology Strategy and Competition Track: On the Innovative Paths to Business Success

Session Moderator: **Yanting Guo**, *School of Management, Xiamen U.*

TIM: Paths to Success: How Does Entrepreneurial Orientation Enhance Product Innovativeness of SMEs? 

Author: **Ya-Hui Lin**, *National Taipei U. of Technology*
Author: **Lin-Hua Lu**, *National Taipei U. of Technology*
Author: **Hsiao-Yen Tang**, *Ministry of Economic Affairs, Taiwan*

This study aims to examine the roles of technology diversity capability and intellectual property (IP) protection capability in mediating the relationship between entrepreneurial orientation (EO) and product innovativeness of SMEs. Based on survey-based data from 119 Taiwanese SMEs, this study finds that EO can enhance product innovativeness of SMEs indirectly through the development of technology diversity capability and IP protection capability. This study also finds that market uncertainty negatively moderates the relationship between EO and IP protection capability. In addition, market uncertainty positively moderates the relationship between technology diversity capability and product innovativeness, while it negatively moderates the relationship between IP protection capability and product innovativeness. This study enriches the body of knowledge in SMEs and product innovativeness literature.

TIM: Understanding the Drivers of International R&D Outsourcing and the Role of Firm Age

Author: **Anna Izotova**, *Autonomous U. of Barcelona*
Author: **Maria Teresa Bolivar-Ramos**, *Autonomous U. of Barcelona*

Due to increased globalization, fast information technology growth and trade liberalization over the last years, the tendency to outsource knowledge is becoming more important for firms as a strategy to nurture innovative activities. This paper contributes to the literature by studying the main drivers of international R&D outsourcing, in terms of technological resources and international experience. In addition, the research discusses how this innovation behaviour differs between young and more mature firms. To achieve this goal, an empirical study using PITEC database was conducted, based on a sample of 3720 Spanish manufacturing firms over the years 2009 to 2016. The results show that technological resources and international experience positively affect the propensity to outsource international R&D. Further, the strength of these relationships varies depending on the level of maturity of a firm. In this sense, the younger firms are, the stronger the positive relationship between international experience and international R&D outsourcing. Regarding the relations between internal technological resources and international R&D outsourcing, there is only partial support for the negative moderating role of firm age. This paper concludes by discussing the implications of the study for researchers, manager, and policymakers.

TIM: How Do Latecomers Catch Up Fast in CoPS? A Study of CIMC in Marine Equipment Manufacturing Industry

Author: **Yanting Guo**, *School of Management, Xiamen U.*
Author: **Gang Zheng**, *Zhejiang U.*

Catching up in Complex Product Systems (CoPS) requires systematic integration from several advanced technological fields and usually demands a strong reputation based on an existing record of success in project delivery. It thus makes entry and capability development extremely challenging for latecomers. Through a longitudinal, exploratory case study spanning 13 years, this study investigates how firms that lack prior experience in developing CoPS can survive and catch up fast. It finds that latecomer firms can adopt the synergy strategy to address multiple problems collectively over time and thus achieve rapid catch-up. In the entry stage, latecomers implement the resource-synergy strategy to overcome great market risk and latecomer disadvantages, realizing capability legitimizing for survival. In the gradual catch-up stage, driven by the needs of strategic transformation, latecomers utilize the routine-synergy strategy for capability structuring and thus enhance their market position and technological know-how. In the leapfrogging stage, to seize innovative opportunities in the sectoral system, latecomers carry out the value-synergy strategy and thus improve capability dynamics required for sustaining industrial leadership. The occurrence of the rapid catch-up process is mainly attributed to firms' acute awareness, strong motivation, and asymmetric capability. Our study offers a process framework that shows how latecomer firms realize fast catch-up in CoPS sectors, providing managerial implications for other emerging economies to overcome high barriers to entry and then to build the capabilities that are required for developing CoPS.

Author: **Thomas Gillier**, *Grenoble Ecole de Management*

Author: **Olga Kokshagina**, *EDHEC Business School*

Author: **Cayrol Alex**, *Grenoble Ecole de Management*

To resolve complex scientific challenges, scientists increasingly collaborate with online communities. However, maintaining a high level of participation in crowd-science projects is difficult. This research aims to understand how leaders' expressions of emotions can enhance voluntary participation in crowd-science projects. This research is based on Polymath, a crowd-science project where professional and non-professional mathematicians collaborate to solve very difficult problems. Drawing on Emotion As a Social Information (EASI) Theory, we explore the influence of leaders' emotions on subsequent participation with a multi-level count analysis. We find that (1) leaders' positive emotions have a positive relationship through participants' positive emotions with participation's quantity and quality, and (2) leaders' negative emotions have a negative relationship through participants' cognitive complexity. By examining the role of leaders' affective dimension in crowd-science projects, our research brings theoretical contributions to crowd science and online community leadership literatures. Our research also extends the EASI theory through the exploration of its mechanisms, through its application in text-based communication contexts and highlights the importance of emotional intensity. Limits and future directions are discussed.

STR: Downsizing and Financial Performance: A Multi-level and Longitudinal Meta-Analysis

Author: **Alyson House**, *Athabasca U.*
Author: **Piers Steel**, *U. of Calgary*

Controversy over downsizing's financial performance outcomes, paired with its ongoing pervasiveness in practice, motivates a meta-analysis on the downsizing-financial performance relationship and vice-versa. Using recent meta-analytic techniques developed specifically for multi-level, longitudinal data, this study assesses the size and direction of both within- and between-firm effects, while also testing for organizational, methodological, and temporal moderators. The results from 894 effect sizes in 113 sources show that between-firm financial performance shortfalls exceeding one year are more likely to influence downsizing adoption than within-firm performance decline over the same period. Both within-firm market and accounting performance suffer in the period immediately surrounding the downsizing event, while post-downsizing financial outcomes are generally negative and, at best, highly heterogenous and centered around zero. We find positive managerial perceptions toward downsizing's financial outcomes, which supports a sociocognitive perspective of downsizing – whereby managers believe downsizing is effective, despite empirical evidence to the contrary. We critique the practical implications of the findings, arguing that downsizing is not always the necessary evil many believe it to be, and offer directions for future downsizing research.

STR: Strategic Resource Decay: Evidence from the Upstream Oil and Gas Industry

Author: **Reha Karadag**, *U. of Minnesota Duluth*
Author: **Laura Poppo**, *U. of Nebraska, Lincoln*

According to the strategic resource decay framework, most strategic resources lose their value endogenously (over time and/or upon deployment), a process that potentially threatens firm performance and competitive advantage. On the other hand, firms might be able to deal with this threat by taking the appropriate resource-related actions. To date, the relationship between strategic resource decay and firm performance as well as the moderating role resource management plays in this relationship have not been empirically examined. In this first empirical investigation of the strategic resource decay framework, we find support that, regardless of its predictable nature, the decay of their oil and gas reserves negatively affects the financial performance of upstream oil and gas companies. Further, we take a nuanced look and analyze how resource structuring and bundling activity of the firm affect this relationship, respectively. Our results indicate that, while both action types have significant main effects on firm performance, only the resource bundling activity of the firm attenuates the negative SRD-firm performance relationship and that resource structuring is not a viable way for the firms in our sample to counter strategic resource decay.

STR: Non-Disclosure Agreements and Externalities from Silence

Author: **Jason Sockin**, *U. of Pennsylvania*
Author: **Aaron Sojourner**, *U. of Minnesota*
Author: **Evan Penniman Starr**, *U. of Maryland, College Park*

We examine how non-disclosure agreements (NDAs) influence the flow of information in labor markets, leveraging workers' reviews of their employers on the website Glassdoor. Beginning in 2019, three states passed laws that 'narrowed NDAs' by prohibiting firms from using NDAs to restrict workers from sharing information about unlawful conduct at work and strengthening anti-retaliation protections for workers who speak out. On average, these laws reduced ratings of firms by approximately 5%, with stronger effects in industries where NDAs are more prevalent. The rise in negative information pertains to many dimensions of jobs, including a 22% increase in reviews related to problems with harassment. The laws also reduced the likelihood that workers who write negative reviews conceal aspects of their identity—consistent with reduced concern about retaliation risks. Finally, there's some evidence the laws increased dispersion in firm ratings within a market, suggesting that broad NDAs may facilitate equilibria where firms with worse employment practices can 'pool' reputations among firms with better practices. Our results highlight how firms can use broad NDAs to preserve their reputation by silencing workers, but doing so imposes negative externalities on jobseekers who value such information and competing 'high-road' employers who are less able to distinguish themselves.

 STR: **Pioneering Resource Bundling for Business Model Innovation**

Author: **Karolin Frankenberger**, *U. of St. Gallen*

Author: **Christoph Zott**, *IESE Business School*

Author: **Wouter Stam**, *Vrije U. Amsterdam*

Business model innovation (BMI) is pervasive, yet still many firms fail to develop and implement radically new business model innovations (BMI). To better understand why some firms achieve BMI while others don't, we focus on the unique resource management challenges associated with BMI in mature firms. Specifically, we analyze how firms can pioneer resource bundling to achieve business model innovation. We move beyond the firm level and "zoom in" on the initiative level, where we conceptualize resources bundling as a three-stage process including (1) endowing (2) embedding, and (3) enabling. Subsequently, we develop and test a model that explains how the degree of novelty in the resulting new business model depends on the interaction of the three resource management processes. We test our model using data from a unique hand-collected set of 141 business model innovation initiatives in large established firms. Collectively, our theory and findings make an important contribution to the growing literature on resources orchestration. IN addition, our study also advances the BMI literature.

Sustainability in Operations & Supply Chain Management (1/2)

Session Moderator: **Vikram Bhakoo**, *U. of Melbourne*

OSCM: **Capping Mobile Data Access Creates Value for Bottom-of-the-Pyramid Consumers – Experimental Evidence**   

Author: **Alp Sungu**, *London Business School*
Author: **Kamalini Ramdas**, *London Business School*

Smartphones have enabled the delivery of life-improving information services to bottom-of-the-pyramid (BOP) consumers. However, little is known about how the poor interact with the digital world. Through a novel app we developed to investigate real-time smartphone usage, we identify a heretofore unnoticed barrier to digital information access by the poor – data shortages. We offer a practical operational solution to this problem, in the form of a commitment device that curbs data binge usage. Based on analyzing over 9.4 million minutes of smartphone usage data from 929 residents of a Mumbai settlement, we find that entertainment consumes 61% of their phone time. We randomly assign participants to a ‘capped plan’ – with daily data usage caps – or a standard plan. Our data reveal that absent usage caps, participants binge on YouTube and social media, resulting in subsequent data shortages. Assignment to the capped plan increases late-plan access of invites to health camps sent via WhatsApp, increases attendance at these in-person camps by 27%, and reduces social media checking. Our results are consistent with users prioritizing entertainment even when data is scarce, or facing data stockouts. Most participants (particularly those with low self-control and high fear of missing out) prefer the capped plan, even at a higher price – a clear signal of demand. Because capped plans are also inherently cheaper to provide, offering such plans could enable providers to increase BOP customer value and expand access. Subsidizing capped plans could amplify the impact of life-improving services targeted at the poor.

OSCM: **The Role of Social Intermediaries for Addressing Modern Slavery in Supply Chains**  

Author: **Miriam Michiko Wilhelm**, *U. of Groningen, Faculty of Economics and Business*
Author: **Vivek Soundararajan**, *U. of Bath*
Author: **Vikram Bhakoo**, *U. of Melbourne*
Author: **Andrew Crane**, *U. of Bath*
Author: **Alin Kadfak**, *Swedish U. of Agricultural Sciences*

In this paper, we conceptualize modern slavery as a boundary problem leading to restrictions for some workers to access fundamental core labor rights, making them the least powerful actors within the supply chain. Based on an in-depth case study of the ‘modern slavery crisis’ in Thailand, we first uncover cognitive and power boundaries that exist between some workers and supply chain firms, which increase the risk of enslavement for workers across three phases in their employment journey. Next, we identify several boundary-spanning activities that social intermediaries such as NGOs engage in to bridge these boundaries. Our findings show that informational boundary spanning activities by social intermediaries can successfully bridge cognitive boundaries that workers often face with respect to their labor rights in supply chains across all phases. By contrast, relational boundary spanning activities by social intermediaries are less successful when it comes to the bridging of power boundaries that exist between workers and supply chain firms. Our boundary spanning perspective on modern slavery sheds light on novel approaches to tackling this complex issue beyond traditional compliance approaches.

OSCM: **Drivers and Roadblocks for Maquiladoras’ Journey to Sustainability**  

Author: **Christian Brian Bautista**, *U. of Texas Rio Grande Valley*
Author: **Hale Kaynak**, *U. of Texas Rio Grande Valley*

U.S. manufacturing firms are leaving operations in China because the Covid-19 pandemic, high tariffs, rising labor and transportation costs, and long distance have started to develop a near-shoring trend, making Mexican Maquiladoras their main destination. Consequently, this decision has the potential to significantly harm sustainability in the U.S. and Mexico because currently 10% of worldwide trade pollution and emissions have been produced by Canada, Mexico, and the United States. Not only are social stakeholders in the Mexican territory the main recipients of this negative effect, but also are those in the US, given maquiladora proximity to American soil. Because of the limited research on sustainability practices in Maquiladora firms, I investigate what attributes enable or impede the sustainability management practices (SMPs) adoption by Maquiladoras. I offer a conceptual framework of attributes – maquiladora firms’ operational mode, perceived benefits, position in the supply chain, product market destination, and current information communication technologies (ICTs) status – and propositions drawing from neo-institutional and natural resource view theories.

OSCM: **Sustainability Transitions in Supply Chains: Augmenting Agency in Response to Political Tensions**   

Author: **Sajad Fayezi**, *U. of Adelaide*
Author: **Helena Varkkey**, *U. Malaya*
Author: **Lydia Bals**, *Mainz U. of Applied Sciences*

We aim to advance the theory of sustainable supply chains by investigating politically induced structural transitions for sustainability using the case of the palm oil supply chain. We elaborate sustainability transitions mechanisms resulting from key supply chain stakeholders’ efforts to augment their agency for influence in response to political tensions from states and corporations. We find that political tensions render latent influence gaps salient as key supply chain stakeholders feel pressured to respond to criticisms either to fill the institutional gaps or to advance transparency regimes. Our findings contribute to theory, practice, and policy associated with the governance of sustainability transitions in supply chains considering its political economy.

Emergence and Evolution of Digital Transformation

Session Moderator: **Cristiane Matsumoto**, *U. of Sao Paulo (USP)*

CTO: Key Organizational Changes as Digital Transformation Unfolds

Author: **Cristiane Matsumoto**, *U. of Sao Paulo (USP)*
Author: **Ana Paula Paes Leme Barbosa**, *U. of Sao Paulo*
Author: **Mario Salerno**, *U. of Sao Paulo (FEA/USP)*

In this study, we performed a qualitative-inductive methodological approach aiming to identify organizational changes unfolding as Digital Transformation (DT) progresses at incumbent companies. DT is understood as a dynamic and strategic process, centered by the widespread use of digital technologies, triggering major changes in organizations. Aiming to gain a deeper view of the transformational phenomenon in firms facing DT, this research adopted grounded theory approach. The research provides key organizational changes unfolding at incumbents organized in three main themes - digital empowerment, organization of work, and digital mindset. Moreover, it provides a broader view of DT progression process, characterized by continuity and influence of external environment dynamics.

CTO: Digital Mess Up- Why Digital Organization Initiatives Fail

Author: **Maximilian Deist**, *U. of Bayreuth*
Author: **Andreas Johannes Reuschl**, *U. of Bayreuth*
Author: **Roman Barwinski**, *U. of Bristol*

Incumbent firms in pursuit of digital transformation (DT) often struggle with the implementation of adequate organizational structures. In response, some firms implement separate organizational units for exploring digital technologies or shift digital innovation projects to a separate space to facilitate organizational digital transformation. However, such initiatives often suffer from high failure rates and therefore fall short of their expected goal to foster DT. This research paper explores reasons why such initiatives are prone to failure by applying a flexible pattern matching approach on qualitative data gained from 11 interviews through 7 case studies. From a theoretical standpoint, digital transformation initiatives are examined through a dialectical process theory and corporate venturing lens. The study offers insights into the emerging phenomenon of digital units and digitalization projects with an entrepreneurial character and shows that the most prevalent reasons for failure are poorly designed governance structures and a lacking digital mindset among employees. Finally, a DT roadmap is presented that reconciles the strategic, individual, and operational level of digitalization in incumbent firms.

CTO: A Retrospective Study of 360 Digital Transformations and a Combined Prospect Theory

Author: **Lars Hamberg**, *Halmstad U.*
Author: **Jeaneth Madeleine Johansson**, *Luleå U. of Technology*

In this paper, we present a mixed-method retrospective study of 360 digital transformations and the reasons for the respective success or failure in each case, as perceived and explained by 180 domain experts from 42 countries. The purpose of the study is to investigate why actual digital transformations succeeded or failed, in order to develop insights, critical reflections, theories, and future research paths. Using open-ended questions, we ask the experts to think of one failed and one successful digital transformation. We ask them to describe the projects, and to provide their own explanations for the success or failure in each case. We analyze the qualitative data using cutting-edge language technology, network analysis, and machine learning. The findings reveal that small number of factors dictates the outcome for a large majority of cases, and a couple of those factors predict success or failure with a high degree of confidence. We theorize a mechanism for organizational behavior. We suggest that the findings can have important theoretical and practical implications for how organizational change is understood, and, ultimately, managed. We discuss whether the findings may provide new research questions on the essence of management and its impact on performance of business organizations, both during transformational change and under normal conditions.

Making Sense of Work, Care and Justice in a Pandemic Era

Session Moderator: **Hong Bui**, *Birmingham City U.*

SIM: An Ethics Of Embodiment Account Of Disability At Work During The Global Pandemic

Author: **Anica Zeyen**, *Royal Holloway, U. of London*

This study combines an ethics of embodiment perspective with recent insights on the sensorial and physiological influence of bodies on adaptation to enduring crises. We explain how bodies mediate the meaning of future work by foregrounding accounts of objective, subjective, and bipartite meaning making during the global pandemic. Using a 15-month longitudinal study of 22 disabled workers navigating paid (self)employment during COVID-19 in the UK, we abductively discover the central role of bodies in redressing meaningfulness misfit in their jobs. Disabled workers compose, incarnate, and calibrate meaning when they repeatedly experience negative events, violated expectations, and needs-supply incongruence at work.

SIM: Zero-sum Fault Attribution During Emergency. Evidence from Retirement Homes Scandal during COVID-19

Author: **Paula Ungureanu**, *U. of Modena and Reggio Emilia*

Author: **Carlotta Cochis**, *U. of Modena and Reggio Emilia*

How multiple constituents of the civil society make sense of disruptive events which entail wrongdoing allegations during times of systemic emergency plays an important role in how these events are taken into collective account and ultimately addressed at the societal level. By combining qualitative and topic modeling techniques, we analyze the case of residential homes contagions in Italy during the COVID-19 outbreak to investigate how a wrongdoing event regarding an industry is collectively problematized during an emergency situation by insiders (i.e., organizations, employees, governments, and regulatory bodies) and outsiders (press and general public). While previous literature highlighted that emergency framing may amplify wrongdoing framing, we document a pattern of collective frame attenuation resulting from a zero-sum attribution game consisting in insiders' and outsiders' alternate use of specific and generalized blaming, and from the tendency to background faults as to foreground emergency sensemaking and resilience. We advance literature on issue framing and connect research on organizational scandals and emergency framing by discussing the mechanisms and conditions whereby a wrongdoing episode is either collectively fired or attenuated by a backgrounding state of generalized emergency.

SIM: How Metaphors Make Sense of Crisis: The Case of South African #FreeHigherEducation# Movement

Author: **Linda Du Plessis**, *North-West U.*

Author: **Hong Bui**, *Birmingham City U.*

Public universities in South Africa are embroiled in an era of unplanned radical change driven by violent student protests between 2015 and 2018 to ask for free higher education for poor students and overcome past inequalities amidst a broader, unstable economic climate. This paper uses a discourse dynamics approach to metaphor analysis to contextualize how higher education leaders experience and respond to a crisis. The power of metaphor analysis lies in the fact that it can help organize, interpret, and make sense of matters that are difficult to verbalize, particularly under constant pressures from many directions. Data were collected through 37 semi-structured interviews with senior managers from different portfolios within 16 public universities during a violent student protest and the instant implementation of free higher education policy in South Africa, which are combined and called #FreeHigherEducation# movement. The findings from this study advance the literature of leadership language in crisis by subtly understanding leaders' emotions via the way they use metaphors to convey what is truly felt and develop a framework of crisis adaptation. They also suggest recommendations for policymakers and higher education managers to steer change better.

Ecosystems and Platforms Track: Towards a Better Understanding of Innovation Ecosystems

Session Moderator: **Wein-Hong Chen**, *National Dong Hwa U.*

TIM: How Does Partner Diversity Matter for Service Innovativeness?  

Author: **Wein-Hong Chen**, *National Dong Hwa U.*
Author: **Kamontip Lohanavakul**, *National Dong Hwa U.*
Author: **Kamontip Suteenoppakul**, *Yanghubteng 1 Goldsmith Limited Partnership*

The global and digital economy has witnessed a rising importance of the service sector. Along with this trend, service innovation has attracted growing academic attention. Service innovation is distinctive from product innovation in the manufacturing sector because service innovation involves more intangible characteristics and requires intensive interaction with partners. Previous studies on the linkage between partner diversity and product innovation indicate that partner diversity is a double-edged sword. How partner diversity matters for service innovativeness remains unclear. Utilizing a sample of 709 service firms in Taiwan, this study investigates how partner domain diversity and geographical diversity influence service innovativeness, and how firm absorptive capacity and scope of firm internationalization moderate the relationship between partner diversity and service innovativeness. The empirical result suggests that firm absorptive capacities and scope of firm internationalization matter for realizing the positive impact of partner diversity on service innovativeness. The study advances research in service innovation and has key implications for management practice.

TIM: Effect of Innovation Community on Innovation Performance in the Multi-layered Innovation Ecosystem  

Author: **Guannan Xu**, *Beijing U. of Posts and Telecommunications*
Author: **Lulu Chen**, *Beijing U. of Posts and Telecommunications*
Author: **Weijie Hu**, *Beijing U. of Posts and Telecommunications*
Author: **Yuan Zhou**, *Tsinghua U.*
Author: **Yuanyuan Qiao**, *Beijing U. of Posts and Telecommunications*

The existing literature on innovation ecosystems either focuses on whole-network at the macro-level or emphasizes a firm's ego-network at the micro-level, while few studies have investigated network community analysis at the meso-level. Additionally, innovation ecosystem studies overlook the differences between knowledge ecosystems and business ecosystems and mostly focus on a single-layer analysis of the ecosystem. Therefore, the current paper aims to explore the mechanism of knowledge-business community connectivity in a two-layered innovation ecosystem on firm innovation performance. Based on multi-source heterogeneous data such as patents and VAT invoices, using social network analysis, Newman topological clustering and multiple regression, we analyze community connectivity and firm innovation performance. We find that the connectivity of within-knowledge communities and cross-business communities significantly positively affect firm innovation performance; the connectivity of cross-knowledge communities and within-business communities has a significant negative impact on firm innovation performance; in addition, the interaction of knowledge-business community connectivity has a significant negative effect on firm innovation performance. This study deepens and enriches the study of the mechanism of innovation communities on innovation performance at the meso level, and expands innovation ecosystem research from the perspective of knowledge-business two-layer networks; it provides insights for China to construct and improve innovation ecosystems and promote innovation-driven development.

TIM: Transforming Matters of Concern into Platform Worth

Author: **Maria J. Bustamante**, *Stockholm School of Economics*

As platforms proliferate across industries, there is growing recognition that they have the potential to impact societal goals, not just economic ones. Using the concepts of matters of concern, perceived affordances and perceived worth, this study focuses on how platform owners construct the value of a digital platform by considering both economic and non-economic values during the initial phases of its conceptualization and development. The paper presents and discusses the findings from a qualitative study of an emerging agricultural data-sharing platform under development through a multi-actor collaboration in Sweden. It shows that by starting with matters of concern and matching those with potential data-based solutions, a number of perceived affordances could be articulated and transformed into potential worth of the platform from economic, environmental and social perspectives. The research proposes that viewing digital platforms beyond their economic potential during platform emergence is important for constructing platforms that go beyond single firm interests and include industrial and societal worth.

TIM: The Microfoundations of Innovation in Complex Ecosystems: Evidence from Linux Kernel

Author: **Mo Chen**, *Robert H. Smith School of Business, U. of Maryland*

This paper investigates how innovation evolves in a complex ecosystem. While innovation outcomes have been extensively studied in strategy and related literature, prior studies often abstract away from the interdependent nature of innovation within broader assemblies or systems of technologies. In this study, I examine those factors that shape the probability of innovation becoming integrated within a complex ecosystem in the context of Linux Kernel. This setting allows me to observe the complete history of both successful and failed innovations and the evolution of technological and actor interdependence. The final sample consists of over 600,000 innovations proposed by tens of thousands of different innovators between 2005 to 2019. I provide evidence of how technological interdependence and heterogeneous interests between system participants negatively impact innovation integration. The results also show that the uniqueness of innovation has a U-shaped relationship with innovation integration.

TIM: Does Eco-Innovation now Help Mitigate Future Climate Change Risk? Recent Evidence from Europe.  

Author: **Muhammad Azeem Qureshi**, *OsloMet - Oslo Metropolitan U.*
Author: **Tanveer Ahsan**, *Rennes School of Business*
Author: **Anmar Ali Gull**, *ESSCA School of Management*

Climate change and eco-innovation intertwine time and social life in current political, social, environmental, and economic debates. Although, the complexity surrounding this interdependence across time and space and consequent short-term versus long-term trade-offs experienced by the firms and the societies and ensuing public discourse has created social demand specifically in Europe. However, we do not find any significant literature that investigates the impact of country-level eco-innovation now on reduction in corporate CO2 emissions that will help mitigate future climate change risk. To fill this gap, this study investigates the potential impact of the eco-innovation index, comprising 16 indicators grouped into five dimensions, on the CO2 emissions of 903 firms from 17 European countries during 2010-2018. Using a dynamic regression analysis (GMM-System), we obtain quite encouraging evidence that the innovative country culture provides a conducive environment to profitable European firms to adopt eco-innovative policies to make their value chains eco-friendly that help improve their short-term as well as long-term financial performance appreciated by investors in the market. Our results also indicate the motivation of larger European firms to reduce their CO2 emissions to improve their image in response to social demand in society. At the governance structural level, financial development brings in environmental monitoring that cultivates a supportive culture for the corporates to promote corporate efforts to reduce CO2 emissions and mitigate climate change risk.

TIM: Embracing the Institutional Complexity of Design Outcomes with Democratic Characteristics  

Author: **Sonja Huotari**, *National Audit Office of Finland*
Author: **Jouni K. Juntunen**, *U. of Vaasa, School of Technology and Innovations*

The Covid-19 pandemic has impacted our societies with unprecedented magnitude. Various social rules and technological solutions have been designed to limit the spread of the virus. We have seen that governments have chosen very different approaches in utilizing mobile tracking software products to control the pandemic. By utilizing fuzzy set qualitative analysis, we investigate the interplay of institutional conditions in 48 case countries, and the design outcome. We focus especially on democratic and autocratic characteristics of design outcomes. This study's contribution to the design research is two-fold. First, we advance the theorization on institutional conditions influencing design outcomes. Second, we demonstrate how qualitative comparative analysis can provide a rigorous method to analyze medium N case studies in design research.

Paper is Available to Meeting Registrants Only.

TIM: Paving the Way for Circular Economy Innovation: Evidence on Barriers and Drivers

Author: **Felix Carl Schultz**, *Martin-Luther-U. Halle-Wittenberg*
Author: **Robert Reinhardt**, *Freelancer*

Eco-innovation (EI) has been proposed by scholars, policymakers, and practitioners to be instrumental in achieving the Circular Economy (CE) vision. While the available body of knowledge on EI has largely focused on 'eco-efficient' incremental technological innovation, a successful CE transition, however, requires systemic 'eco-effective' CE-innovation. Yet, little is known about what barriers and drivers are stimulating systemic CE-innovation in sector specific contexts and geographies. This research aims to mitigate this existing gap in knowledge by delivering an identification of major CE barriers and drivers that hinder or facilitate systemic 'eco-effective' CE-innovation—identified in the European polyurethane (PUR) plastics industry. By applying a hybrid research approach using an original combination of the inductive GABEK method (“Ganzheitliche Bewältigung von Komplexität”—holistic processing of complexity) with deductive consideration of existing theories, this article provides novel findings indicating that barriers to CE-innovation largely materialize on individual firm and intra-industrial levels, while drivers to CE-innovation primarily appear beyond immediate industrial boundaries (inter-/cross-industrial). Our key contribution lies on revealing the necessity to reframe the focus from mere individual 'optimization'—primarily discussed in EI literature—to a collective (horizontal) 'coordination' challenge across industries to enable functional CE-innovation. In addition, we deliver five strategic deliberations for managers to facilitate and further advance towards systemic CE-innovation activities.

TIM: Green Innovation and Financial Performance – Panel Analysis with Computer-aided Text Analysis

Author: **Birte Prinzhorn**, *Otto von Guericke U. Magdeburg*

Green innovation is strategically important since it allows companies to address increasing environmental concerns. However, the impact of green innovation on financial performance remains ambivalent. One reason might be the heterogeneity of environmental and economic measures and the lack of measurement options for longitudinal data. While cross-sectional studies can rely on questionnaires, most longitudinal studies have used patent data or counts of environmental products and process improvement, which has limitations, since it does not address the strategic role of green innovation. This study tries to fill the gap in using computer-aided text analysis to measure green innovation. Using a panel set of the Standard & Poor's 500 companies over the years 2000-2019, I find that green innovation is negatively correlated with the financial performance of the subsequent 2 years. CEO age moderates this relationship positively in those years. The study introduces an alternative measure of green innovation, which is strongly linked to the strategic orientation of the company and the findings add to the discussion around the relationship between green innovation and financial performance.

Yoga for Creating a Better World Together from the Inside Out *Yoga*

Participant: **Julia Storberg-Walker**, *George Washington U.*

Host: **Tracy F. Chang**, *Rutgers U.*

Host: **Tulsi Chase**, *SCCP BIDMC Harvard Medical School*

Host: **Sepideh Hariri**, *Sadhguru Center for a Conscious Planet, Beth Israel Deaconess Medical Center, Ha*

Join us for online yoga and meditation sessions in support of creating a better world together from the inside out! Learn a series of simple but powerful practices and experience their potential benefits. Physically, these practices exercise the muscles, lubricate the joints, activate energy, and improve flexibility. At the mental level, these practices improve focus, memory, awareness, and intellectual sharpness. Overall, these practices can enhance your overall wellbeing, productivity, and sense of inclusiveness. After learning these practices, you will be equipped to do them on your own wherever (e.g., travel, office, home) and whenever you need a boost of physical energy and mental clarity. These practices can be done while you travel and while you work in the office or at home. The instructors for the workshops are academics and researchers who are also certified Isha Hatha Yoga Teachers, completing an intensive and rigorous 21-week (1,750 hours) of training in Coimbatore, India.

Responses to Nonmarket Strategy

Session Moderator: **Flore Bridoux**, *Erasmus U.*

STR: The Effect of Nonmarket Strategies on Reputation in the Eyes of Experts: Uncovering Microfoundations 

Author: **Pushpika Vishwanathan**, *U. of Amsterdam*

Author: **Flore Bridoux**, *Erasmus U.*

Author: **Illir Haxhi**, *U. of Amsterdam*

Corporate political activity (CPA) and corporate social responsibility (CSR) are two nonmarket strategies that have been argued to jointly affect firm reputation. But little is known about the impact of CPA on reputation, the microfoundations of this relationship, and the interplay with CSR. Building on the social judgment literature, we propose that perceptions of warmth and competence explain how nonmarket activities – here, CSR, controversies, and CPA – are evaluated by experts. We performed two experiments and a QCA-study of large US firms to test how nonmarket activities, in isolation and combination, affect firm reputation. We find that CPA reduces warmth and increases competence perceptions and has an overall negative effect on reputation. In the presence of other nonmarket activities, however, the effect of CPA is only marginal while CSR is a strong driver of reputation. In addition, we show that CSR can cushion firm reputation against the reputational costs of controversies.

STR: Women Board Members and Stakeholder Strategy: Consistency Under Complexity and Uncertainty   

Author: **Malgorzata Kurak**, *IMD Business School*

Author: **Stephen Smulowitz**, *International Institute for Management Development - IMD*

Despite the growing importance of firm stakeholder strategy, key stakeholders continue to criticize firms for failing to keep their commitments. Here, we theorize that due to their long-term nature, consistency is particularly important for stakeholder investments, and that due to their differing experience and values, women board members can be a key driver of stakeholder strategy consistency. Specifically, building on previous research and 15 semi-structured interviews with women and men board members, we theorize that while increasing complexity and uncertainty make stakeholder investments more difficult or costly, leading to a reduction in such investments, women board members increase firm stakeholder consistency, and counteract these negative effects. Using a sample of 1,755 S&P 1500 firms for the period 2000-2013, we provide robust support for our hypotheses.

STR: Which Environmental, Social, or Governance (ESG) Activities are More Informative to Stock Prices?

Author: **Mingying Cheng**, *Fordham U.*

Author: **Joseph Micale**, *Fordham U.*

Author: **Iftekhar Hasan**, *Fordham U.*

While prior literature has investigated the impact of ESG activities on investors and other stakeholders, our paper is the first to disaggregate firms' activities into each of the Sustainability Accounting Standards Board (SASB)'s definition of Material Environmental, Social, and Governance activities and determine which of these ESG activities provide the greatest information content of stock prices. We find that material Social activities provide the greatest stock price informativeness and after further disaggregating each of the ESG classifications we find that both Social Capital and Human Capital activities provide informative stock prices, while Business Model and Innovation activities reduce stock price informativeness. Cross-sectionally, this effect is strengthened by higher levels of institutional ownership, further supporting the idea that material Social activities are important to sophisticated investors. Our results are consistent in a battery of sensitivity analyses.

Paper is Available to Meeting Registrants Only.

STR: To Highlight or Not to Highlight: Costs of Environmental Sustainability 

Author: **Eun-Hee Kim**, *Fordham U.*

Author: **Mingying Cheng**, *Fordham U.*

With the popularity of corporate environmental sustainability, management scholars have started to call attention to the cost of sustainability pursuit. While corporate sustainability brings about many benefits, implementation is costly. Most firms do not report environmental costs separately from other costs, but some firms do. We explore what drives firms to report environmental costs and how such reporting affects external evaluations such as analyst recommendations. We suggest and find that firms are more likely to reveal environmental costs separately for the purpose of highlighting the costs associated with their sustainability pursuit when faced with conflicting pressure from shareholders for sustainability. We further find that firms that report environmental costs separately generally receive less favorable analyst recommendations and forecasts than those who do not. This effect is mitigated by a greater share ownership from short-term institutional investors.

STR: **Common Owner, Uncommon Value: Business Group Ownership and Firm Growth Opportunities** 

Author: **Manikandan Karayambadi Srinivasan**, *Indian Institute of Management, Tiruchirappalli*
Author: **Shaleen Gopal**, *Indian Institute of Management, Udaipur*
Author: **Ramachandran J**, *Indian Institute of Management, Bangalore*

Recent research on business groups has traced their continued growth, despite widespread institutional changes, to their inherent characteristics such as diverse business portfolio and multi-entity structure. We add to this stream of work by focusing on the third important characteristic of business groups, viz., their ownership structure. In sharp contrast to the prevailing view that business group core owners use their control to expropriate minority shareholders in weak institutional environments, we focus on their value adding potential in strengthened institutional environments. We argue that higher levels of controlling ownership positively influence all key drivers of opportunity pursuit by firms, viz., motivation, firm-specific knowledge, and controllability, and hence a firm's growth opportunities. More significantly, we highlight the common nature of business group ownership that distinguishes them from controlling owners of standalone firms. We argue that this common characteristic together with control enables business group owners to orchestrate resource and information transfer across affiliate firms and importantly leverage their accumulated expertise of making decisions to positively influence growth opportunities of affiliate firms. We test our arguments on a sample of Indian firms during the time period 2001-2019 and find significant support. Our work adds to business group research by investigating a defining yet understudied characteristic of business groups—common ownership. By demonstrating their value adding role, we complement the emerging body of work that looks beyond institutional environment-based explanations for the existence of business groups. Our work also has significant implications for the nascent competence-based view in ownership research.

STR: **Director Interlocks and Group Affiliate Performance: Benefiting from Internal vs. External Ties**   

Author: **Hongjin Zhu**, *McMaster U.*
Author: **Lin-Hua Lu**, *National Taipei U. of Technology*
Author: **Akbar Zaheer**, *U. of Minnesota*
Author: **Ishtiaq Pasha Mahmood**, *NUS Business School*

While business group research has emphasized the impact of interlocking directorates within groups, research has neglected the role of interlocks with firms outside the group. We theorize that external interlock partners improve the performance of group affiliates because of access to fresh ideas. Moreover, drawing on theories of learning through network ties, we propose that interlocks with poorer-performing partners enhance affiliate performance to a greater extent than better-performing partners. We further examine how internal and external interlock partners shape the performance of focal affiliates interactively. Using a dataset involving manually coded director interlocks of 781 listed firms affiliated with business groups in Taiwan between 2006 and 2015, we show that the ratio of external interlocks enhances affiliate performance, but the effect increases at a decreasing rate. As predicted, only interlock partners with poorer performance relative to the focal affiliate enhance the focal affiliate's performance. While this pattern applies to both internal and external partners, the positive performance effect of poorer-performing external partners weakens when the focal affiliate's performance is highly dissimilar to that of better-performing internal partners. Our results present a nuanced understanding of combining learning from both internal and external board interlocks in group settings.

STR: **The Role of Marriage Ties and Political Ties in New Market Entries of Business Groups**   

Author: **Chi-Nien Chung**, *National U. of Singapore*
Author: **Zong-Rong Lee**, *Institute of Sociology, Academia Sinica, Taiwan*
Author: **Hongjin Zhu**, *McMaster U.*

While the importance of social ties to firms in emerging economies has long been acknowledged, relatively less attention has been directed at how different types of social ties, individually and in combination, affect firm strategy differentially. In this study, we examine how business groups' various social ties influence business strategies, specifically the entry into new unrelated industries. Using a manually coded dataset that includes intermarriage ties among the 100 largest business group families and their connections to the political regime in Taiwan between 1981 and 2006, we demonstrate that while both intermarriage ties and political ties facilitate market entry, the positive impact of intermarriage ties is mitigated by political ties due to differences in the norms of interactions between kinship networks and political networks. Moreover, intermarriage ties promote both entry into marriage partners' incumbent industries and entry into new industries jointly with marriage partners. However, the efficacy of intermarriage ties on entry into marriage partners' incumbent industries is weaker for intermarried groups with greater political embeddedness. Our study presents a nuanced understanding of the benefits and costs of maintaining multiple types of social ties in emerging economies.

STR: **Crossing Boundaries: Internationalization and Industry Switching in Response to Performance Feedback**  

Author: **Michelle Liu**, *Monash U., Australia*

Why do firms cross geographical or industry boundaries, initiating internationalization or industry switching? To address this question, I combined the behavioral theory of the firm with the resource-based view, while considering the boundary conditions of the institutional environment and industry competition. I found that high-performing firms are more likely to initiate internationalization, while low-performing firms tend to switch industries. Furthermore, high institutional development level and high industry competition attenuated the propensity of internationalization, whereas high industry competition accentuated the tendency of switching industries. Results based on census data containing 54,393 local industrial enterprises in China from 2007-2013 support my predictions.

A Behavioral View of Organizational Theory

Session Moderator: **Esther Leibel**, *Boston U.*

STR: [The Role of Dependence Relationships in the Value Capture Process](#) 

Author: **Cliff Bowman**, *Cranfield U.*

We view the firm as a complex system and deploy Emerson's power dependence theory to explain who captures value in deals between the firm and its suppliers and customers. The value realised in a deal is the difference between the buyer and seller reservation prices and dependence is a function of need strength and the availability of alternative deals. We argue that prices are the outcome of perceived dependence relationships between buyer and seller. Dependence on the focal deal is based on the buyer or seller's subjective judgements concerning the use value being traded, the other party's dependence and the availability of alternative deals. We develop eight value levers which firms can deploy to improve their dependence relationships. We then use this value capture perspective to address three questions: 1) should firms pursue generic strategies? 2) what is a valuable resource? 3) how should firms approach strategic change? We conclude that any change or resource which enhances the firm's dependence relationships improves firm performance.

Paper is Available to Meeting Registrants Only.

STR: [Underperformance Duration and Strategic Change: An Attention-based View of the Firm](#)

Author: **Xinrui Zhang**, *Zhejiang U., China*

Performance feedback, especially underperformance feedback, is a vital factor influencing a firm's strategic change; yet, there is little evidence on underperformance duration. Drawing on attention-based view and cognitive literature within psychology, we argue that the length of time that a firm has been underperforming leads to firms' strategic change, while this effect could be moderated by the TMT stability, the firm's goals, and the family governance of a firm. Specifically, we proposed that the TMT stability will weaken the effect of underperformance duration on strategic change, while the firm's growth orientation will strengthen this effect. Furthermore, both of these moderating effects will be flattened by family ownership. Our hypotheses were supported by a ten-year panel data of 2070 firms listed on the National Equities Exchange and Quotations (NEEQ) in China. We also discussed the statistical and practical significance of the results.

STR: [How Organizations Choose Templates: Evidence from Slow Money](#)  

Author: **Esther Leibel**, *Boston U.*

Author: **Natalya Vinokurova**, *The Wharton School, U. of Pennsylvania*

Replicating existing templates can help organizations achieve superior performance. While organizations often consider multiple templates, the question of how they choose which template to replicate has been surprisingly underexplored. We investigate the process by which organizations choose templates in the context of Slow Money—a loosely-coordinated network of geographically-dispersed microfinance organizations that facilitate access to capital for sustainable food entrepreneurs in the U.S. Drawing on an in-depth ethnography of Slow Money, we shed light on the process by which local Slow Money groups chose which template to replicate. We find that the groups used a combination of cognitive and experiential search to evaluate the templates' external fit (i.e., how well the template matched the local context) and learn about the internal fit (i.e., the interdependencies within the template). Specifically, groups took three approaches to choosing a template: 1) using cognitive search to anticipate the fit between the template and the local context—an approach we label “modeling exactly;” 2) using experiential search to achieve external fit by replicating the template and then either adapting the template to fit the local context or pivoting to a different template; and 3) using cognitive search of other organizations' experiences to redesign the template. Comparing groups that replicated templates with different degrees of accuracy sheds light on the tradeoffs in replication. Copying the template more accurately allowed groups to adapt the template to the local context following replication, while copying the template less accurately allowed them to learn about the interdependencies within the template.

STR: [Strategic Inertia and Renewal: Contrasting Responses to Market Changes](#) 

Author: **Luis Perini**, *FGV - EAESP*

Author: **Jorge M. T. Carneiro**, *FGV EAESP Sao Paulo School of Business Administration*

Author: **Kent Miller**, *Michigan State U.*

The academic, consulting, and practitioner-oriented literatures present many examples of companies that have failed to adapt their strategy in the face of a changing competitive arena, even when their top managers and executives acknowledged the need for change—and had a reasonable idea of what ought to be done. By means of an in-depth study of two polar cases of large companies from the fast-moving consumer goods sector, we shed light on the complex intertwined causes that might lead some companies into strategic inertia, while others engage in strategic renewal. Our findings suggest that strategic inertia is a multilevel phenomenon, which extends beyond the “usual suspects” presented, in isolation or in combination, in the literature (i.e., cognitions, power and politicking, emotions, and communication). We found that encouragement of divergent judgments and a participative planning process, as well as propensity to experiment, may lead a company to jettison the drivers of its past success and embrace novel pathways with serenity to deal with short-term uncertainty and anguish.

Presenter: **Gautam Ahuja**, *Cornell U.*

Presenter: **Mary Tripas**, *U. of California, Santa Barbara*

Presenter: **Melissa Schilling**, *New York U.*

Facilitator: **Rajyalakshmi Kunapuli**, *Southwestern U.*

The primary goal of the symposium is to reflect upon the rich contributions that search and recombination research has made so far and uncover promising questions for future research. The topics we aim to discuss in the symposium include 1) how we define search and its various dimensions, i.e., depth, breadth, local, distant, etc. 2) how does organizational boundary spanning influence search and learning behavior of firms 3) what are the implications of different search and recombination strategies such as simultaneous vs. sequential, for subsequent innovation outcomes 3) how do the new technological advancements challenge the behavioral assumptions underlying the search process and what are the opportunities that new technology evolution presents? 5) what is the role of cognition or individual beliefs in structuring the search processes, particularly in nascent industries? 6) What are the empirical implications of theoretical developments such as different measurement methods and inherent trade-offs involved in such selection.

**Catalyzing Transformative Change: Co-creating a
Better World Together**
Catalyzing Transformative Change

Panelist: **Sandra A. Waddock**, *Boston College*
Panelist: **Joan F. Marques**, *Woodbury U.*
Panelist: **Andrew J. Hoffman**, *U. of Michigan*
Panelist: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*
Panelist: **Bobby Banerjee**, *Bayes Business School (formerly Cass)*

Picking up on the AOM 2022 theme of (Co-)Creating a Better World Together, we propose a panel symposium that argues for the need to catalyze system transformation and provide insights into how that catalytic process works. The panel of thought leaders argues that multiple levels of change are needed: individuals as self and scholar, in management education, teaching, research, and theory and that it can be enhanced by the work of emerging new entities called transformation catalysts. Panelists will take the following perspectives: Joan Marques (Woodbury U) will evaluate Buddhist concepts as foundational pillars of awakened leadership. Andrew J. Hoffman (Michigan) will address concern over capitalism’s inability to deal with systemic programs and the need for examining the foundations of management education. Chris Laszlo (Case Western), building on Hoffman, will discuss the use of prospective theorizing, evaluating possible (better) futures as a catalyst for transformation. Bobby Banerjee (City, U London), noting that the pandemic has upended “normal” and possibly provided a basis for a more just and flourishing world. Finally, Sandra Waddock (Boston College) will explore the emerging role of transformation catalysts to catalyze transformation among a wide variety of actors collectively towards socio-ecological flourishing aimed at making the world better.

CAR: Sustaining Entrepreneurial Careers: Coping with COVID-19 Career Shock  

Author: **Vrinda Khattar**, *National Institute of Industrial Engineering (NITIE), Mumbai, India*

Author: **Upasna A. Agarwal**, *NITIE*

Author: **Seemantini Madhukar Pathak**, *U. of Missouri, St. Louis*

The impact of career shocks on entrepreneurial careers is still an under researched topic. This study explores the coping mechanisms of women entrepreneurs as they faced career shock arising from the COVID19 pandemic. Semi-structured interviews with 20 Indian women entrepreneurs were conducted and analyzed using Gioia methodology. Our findings point to the role of growth mindset, career intentionality and family & spousal support on the career continuity of Indian women entrepreneurs. Spirituality as a coping mechanism also emerged from the study. This study makes strong contributions to career and entrepreneurship literatures by studying an integration of personal and contextual factors in career continuation.

Paper is NOT Available. Please contact the author(s).

CAR: Career Success and Entrepreneurial Identity: A Case of Women Tech-Entrepreneurs   

Author: **Mona Itani**, *American U. of Beirut*

Women technology entrepreneurs are reworking gender stereotypes and changing both the economy and the culture. Focusing on how they evaluate themselves and their success on the individual, organizational, and social level the conducted qualitative research study showed that women entrepreneurs defined their goals and success mostly in self-realization and social terms while showing a high economic awareness. Using the self-concept definition under the social identity theory as the combination of the individual, relational, and collective self, this paper relates how women entrepreneurs defined their success with their entrepreneurial identity. Thus, this paper’s theoretical contribution lies in gaining a new perspective on entrepreneurial identity from a gendered lens based on the social identity theory.

CAR: The Multilevel Manifestation of Ideal Worker Norms: Evidence from Working Mothers During Covid-19   

Author: **Mona Zanhour**, *California State U., Long Beach*

Author: **Dana McDaniel Sumpter**, *Pepperdine Graziadio Business School*

This research studies changes in ideal worker culture as experienced by working mothers across organizations in the United States during the Covid-19 pandemic. Based on the experiences of 53 interviewees in how they attended to increased responsibilities across both work and family domains, we observed an entrenchment of the ideal worker culture across nearly all organizations and professions. This manifested in three levels, as (1) a reinforced ideal worker culture in the workplace through work-intensification, increased competitiveness, and surface-level support; (2) the reinforcing of organizations’ ideal worker norms at home, with gendered division of space and labor, and (3) experienced internalized ideal worker norms in the expectations working mothers maintained for themselves. These findings offer insight into the careers of working mothers during the Covid-19 pandemic, as well as the challenges which have pushed many mothers to adapt their career strategies, such as reducing work hours, changing their jobs, or leaving the workforce. Highlighting the intricate nature of the entrenchment of the ideal worker culture informs implications for theory of gendered organizations and for organizational practice.

A new and rapidly developing phenomenon in the labor market is gig work. Gig work refers to short-term work or a ‘gig’ that sees intermediary platforms match workers with requesters/consumers via an app (Kuhn et al., 2021). Such work sees platform or gig organizations manage workers via algorithms causing a reconfiguration of the traditional employment relationship (Duggan et al., 2020; Kellogg et al., 2020). Although research in this domain is increasing exponentially as evidenced by published papers, special journal issues, books and conference presentations and symposia/workshops, knowledge is still in its infancy, particularly related to micro-level phenomena. In that vein, we propose this symposium to further refine and broaden the understanding of gig workers’ experiences, and in so doing help advance gig work theorization along with offering insights that may make improvements to practice. To achieve this goal, the symposium features four papers. The first one explores the social exchanges in the gig economy ecosystem (Paper 1). The following two studies also focus on the employment relationship between the algorithm and the worker, delineating this relationship in a conceptual piece (Paper 2), and investigating how a more human centered approach of the algorithmic management potentially enhances the sustainability of gig workers’ experiences (Paper 3). The fourth paper examines the challenging environment of gig workers as potentially impeding living a calling (Paper 4). Taken together, this symposium will provide important insights for scholars and practitioners across interrelated disciplines such as careers, human resource management (HRM), and organizational behavior (OB).

Job search scholarship has established the job search as a self-regulatory, within-individual process that individuals engage in as they pursue new employment opportunities. Traditional scholarship has focused on job search quantity –the degree of effort exerted–and offers received as a result of job search efforts potentially at the neglect of understanding factors that impact job search quality. Therefore, recent job search scholarship has begun to shift away from this conventional paradigm to instead focus on the quality of job seekers job search experiences and different factors that impact job seeker well-being and perceptions. This symposium includes four papers that address job seeker well-being (e.g., psychological resources) and job search quality (e.g., types of search effort) as well as investigating psychosocial aspects of job seekers search experiences (e.g., degree of network centrality, volunteer work while unemployed). These papers are indicative of current trends in the job search literature and represent promising new streams for future research areas. The symposium also platforms preeminent job search scholar, Dr. Connie Wanberg, as the discussant of these works in progress.

**Creating a Better Workplace: Emerging Trends in Resiliency and
Acceptance Through Positive Mindsets**
Workplace Resilience and Acceptance Via Positivity

Organizer: **Kristin L. Scott**, *College of Business, Clemson U.*

The purpose of this caucus is to explore emerging positive psychology topics as they relate to building resiliency and acceptance in the workplace. Specifically, this caucus will create a platform for discussing how mindsets such as hope, gratitude, courage and curiosity can create better workplaces.

**Envisioning a Better Career: Reflecting on the Past to
Rearticulate and Imagine New Possibilities**
Envisioning a Better Career

Organizer: **Nadia C. DeGama**, *AFG College with the U. of Aberdeen*
Organizer: **Katharina Chudzikowski**, *U. of Bath*
Organizer: **Axel Haunschild**, *Leibniz U. Hannover*
Organizer: **Olivier Ratle**, *U. of the West of England*
Organizer: **Sarah Robinson**, *U. of Glasgow*
Organizer: **Angelika Schmidt**, *WU Vienna U. of Economics and Business*

Inspired by this year's AOM conference theme, and against the backdrop of the global pandemic, which has caused many to reflect on different aspects of their lives including their careers, work practices and lifestyle choices, the objective of this PDW is to create an inclusive and safe space where we can come together to consider the ways in which we can creatively (re)imagine and construct better careers. We begin this workshop by looking inwards – pausing and reflecting on our own career journeys and experiences, both in academia and elsewhere, identifying areas where we may have been both victims to and complicit in the neoliberal career rat race. We then break into smaller groups to collectively and creatively think about how we may envision and enact better careers. We hope our discussion will go beyond conference walls and inspire members of the Academy to turn the gaze onto ourselves and others – to meaningfully think about our own career experiences and construct concrete ways that we can (re)consider, (re)articulate and (re)imagine better careers both for ourselves and through researching alternative career possibilities/trajectories, past, present and future.

To participate in this workshop, participants are asked to submit prework to angelika.schmidt@wu.ac.at by 15th July. For the prework, participants are asked to take time to reflect on their career journey, and write 'A Letter to our Career: Past, present, or future' reflecting on this journey. In their letter they are encouraged to unpick any career frustrations, obstacles, and barriers, to reflect on how they may have overcome these and any conflicts they may have experienced in enacting what they may have considered to be a 'successful' career. They may wish to end their letter with hopes for their career for the future, drawing on learning moments or even regret; to consider what their ideal career may look like and feel like. They may choose to draw upon other mediums to envision their ideal or a utopian career, for example an illustration, poem, song, painting, sculpture etc.

Visibility, Analytics and Social Media

Session Moderator: **Marta Stelmaszak**, *Portland State U.*

CTO: **Behavioral Visibility through Analytics: How Organizations Construct Actionable Insight** 

Author: **Marta Stelmaszak**, *Portland State U.*

Organizations increasingly introduce analytics systems that heighten behavioral visibility through collecting online trace data, leading to new insights that are subsequently acted upon by organizational members. Research so far focused on unpacking how behavioral visibility challenges traditional forms of expertise in obtaining new insight, but how do organizations construct actionable insight when the behaviors of their own members become visible? In a case study of a UK-based business school that implemented a learning analytics system as a source of insight on students and staff, we find that analytics simultaneously increased and decreased the visibility of organizational members' behaviors. The organization developed responses to increased visibility and invisibility to construct actionable insight under these conditions by 1) normalizing analytics as a source of information, 2) supplementing analytics with other forms of knowing, and 3) making data-informed interventions. Our findings show that analytics can both illuminate and obscure behaviors, and that analytics-based insight can complement human expertise as organizations strive to derive new knowledge.

CTO: **On the Need for and Conceptualizations of Big Data Analytics Capabilities**  

Author: **Tay Minh Huynh**, *Free U. of Bozen-Bolzano*

Author: **Michael Nippa**, *Free U. of Bozen-Bolzano*

Author: **Thomas Aichner**, *Alfaisal U.*

Big Data and Big Data Analytics (BDA) techniques play a pivotal role in the course of the ongoing digital transformation. In contrast, the fact that organizations need to develop capabilities to take advantage of these technological advances receives much less attention. In the context of previous waves of applying advanced information technologies (IT) the concept of IT capabilities has been frequently used to emphasize the importance of a well-orchestrated interplay of different resources and organizational capabilities. However, there is no current overview of what is needed to develop effective BDA capabilities (BDACs) and to what extent previously proposed concepts may be applied. Hence, this study aims at identifying and analyzing specific aspects that are relevant to BDACs within the management context. To this end, we apply a systematic review of early papers on BDACs, relate the results to previous concepts, propose a comprehensive framework, which combines antecedents, dimensions, and outcomes of BDACs, and provide suggestions for future research.

CTO: **ESM Usage, Employee Agility, and Creativity: Role of Communication Visibility in a Multi-Wave Cross-**

Author: **Muhammad Imran Rasheed**, *The Islamia U. of Bahawalpur Pakistan*

Author: **Abdul Hameed Pitafi**, *Sir Syed U. of Engineering and Technology Karachi*

Despite the increasing popularity of enterprise social media (ESM) technology in the workplace, little research has explored the relationship between its usage and employee creativity. Drawing on insights from communication visibility theory, this study investigates the relationship between ESM usage and employee creativity via employee agility. The study further explores the moderating role of communication visibility. Our results are based on two cross-cultural and multi-wave studies. Study 1 (N = 233) was conducted in the Peoples' Republic of China, where three-wave data were collected from employees working in a variety of organizations utilizing ESM technology at work. We replicated our findings in Study 2 (N = 215), using two-wave data from employees in the United States of America (USA). The results reveal a positive relationship between ESM usage and employee agility, and subsequently, employee creativity in organizations. In addition, communication visibility has shown significant moderating effects on some of our hypothesized relationships. We discuss how our findings can help organizations and managers better understand ESM usage and the implications for both employee agility and creativity.

AI, Sense-making, and Ethical Decision Making

Session Moderator: **Elisa Gagnon**, *Bishop's U.*

CTO: **How Humans and Machines Make Sense Together: Characteristics and Outcomes of a Case Survey Approach**  

Author: **Elisa Gagnon**, *Bishop's U.*

Author: **Anouk De Regt**, *Utrecht U. School of Economics*

There is a growing realization of Artificial Intelligence (AI)'s importance, including its ability to provide competitive advantage and change work for the better. Indeed, organizations are investing in various AI applications in the hope to automate or augment human judgment. Despite the promise of AI, many organizations' efforts with it are falling short. Therefore, adopting the sensemaking theory as a theoretical lens, this study investigates under which conditions and how human and machine collaborations should be structured, to enhance each other's capabilities and facilitate optimal strategic decision-making and operational effectiveness. A framework is developed based on the level of complexity of the context and the severity of wrong decisions and four types of human-machine sensemaking processes are proposed. The framework is validated through a qualitative meta-analysis of 48 case studies of AI and highlights the characteristics of the interaction process as well as its outcomes. Besides providing a new instrument for the analysis and assessment of human-AI interactions and controls, this research aids the development of guidelines and facilitates the move towards explainable AI (XAI) design, development, and practices.

CTO: **AI Fairness in Organizational Decisions: Conceptualization, Measurement, and Attainment** 

Author: **Arun Rai**, *Georgia State U.*

Author: **Jing Tian**, *Georgia State U., J. Mack Robinson College of Business*

Author: **Ling Xue**, *Georgia State U.*

Digital transformation of decision-making with AI has made AI fairness a major issue for organizations. Although there have been significant technical advances in the computer science literature on artificial intelligence/machine learning (AI/ML) on assessing and attaining AI fairness, this literature has not been bridged with the rich body of work on organizational justice. Drawing on organizational justice theory, we develop a taxonomy of AI fairness assessment and attainment. Our taxonomy differentiates: (i) AI fairness assessment based on form (outcome-based, process-based) and foci (collective, instance), and (ii) AI fairness attainment methods based on form (outcome-based, process-based) and proactivity (reactive, proactive). For both AI fairness assessment and attainment, we differentiate the form of fairness based on principles for fairness: equality, equity, and need for outcome-based fairness; input validity, process integrity, and process correctability for process-based fairness. Using our taxonomy, we synthesize 77 articles in the top AI/ML conferences in the last ten years. In doing so, we cohere the technical advances on AI fairness assessment and attainment from an organizational justice perspective and bridge these literature. Drawing on the insights, we generate theoretical, practical, and future research implications on three fronts: bridging the technical perspective on AI fairness with the organizational justice perspective, assessing AI fairness, and attaining AI fairness.

CTO: **Algorithms and Ethics: Evidence from Two HR Algorithms Developed by a Major French Digital Company**  

Author: **Clotilde Coron**, *IAE Paris - Sorbonne Business School*

Author: **Simon Porcher**, *Sorbonne Business School*

Organizations increasingly rely on algorithms for human resource (HR) management and decision-making. In this paper, we provide a detailed case study of the implementation of two HR algorithms in a major French digital company. We use diverse qualitative analyses to open the "black boxes" of the algorithms by regarding them as quasi-objects that circulate among a variety of actors, e.g., data scientists, HR practitioners and lawyers. By using mixed qualitative methods, we identify and discuss the key ethical challenges related to the phases of the development and implementation of the algorithms. We conclude by discussing how our results can help both academics and practitioners better understand the decision-making process in the creation of algorithms and the key ethical issues that are raised in this process.

CTO: **Facial Recognition Technologies and Societal Wellbeing**  

Author: **Jayson Killoran**, *Smith School of Business, Queen's U.*

Facial recognition technologies are a form of biometric innovation that can identify and verify the identity of an individual using an analysis of their facial features. Facial recognition systems have been increasingly adopted by individuals and organisations over the past two decades, but there has been scant attention to theoretical perspectives and integrated explorations into the benefits, risks, privacy concerns, and trustworthiness of such systems. The purpose of this paper is to understand the current state of knowledge into facial recognition technologies and provide a summary of the privacy and trust implications of this emerging technology in societies. Using a systematic literature review, this paper sheds light on the commonly studied benefits and risks of facial recognition technologies in management research, as well as the prevalent privacy concerns and trust perceptions of facial recognition technologies. Next, we propose a typology of five user profiles of trust perceptions toward facial recognition technologies: the skeptic, the protector, the conformer, the adopter, and the preacher. This paper then offers implications on how facial recognition technologies may be used for societal benefit in the new normal of organisational activity, but also discusses the precautions that should be taken to prevent the misuse of facial recognition systems that may lead to public harm. Finally, a research agenda is presented, and contributions to research and practice are discussed.

Artificial intelligence (AI) technologies are claimed to compete with human capabilities in multiple domains such as complex problem-solving, perception, and reasoning (Rai et al. 2019). These technologies are seen as enablers of a fundamental transformation to organizations (Faraj et al. 2018, Kellogg et al. 2019), professionals (Barley et al. 2017) and more broadly, the future of our society. Contentious debates are revolving around whether, over time, AI technologies are more likely to “automate” professional work on certain tasks by fully replacing human professionals, or to “augment” human professionals (e.g., Brynjolfsson and Mitchell 2017, Kellogg et al. 2019). The aim of this symposium is to present four distinct yet related studies on algorithms, augmentation, automation and the changing nature of work. Each presentation will broaden our understanding of these issues and actively engage the participants of the symposium to reflect on the larger questions on the future of work and society.

Entrepreneurial Orientation 2

Session Moderator: **David Matthew Townsend**, *Virginia Tech*

ENT: [Exploring the Flow of Entrepreneurial Orientation Within Firms: A Cross-Level, Cascading Effects](#) 

Author: **Sebastian C. Schuh**, *China Europe International Business School (CEIBS)*

Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*

Author: **Xing Wang**, *U. of Illinois at Chicago*

Author: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*

To extend the field's understanding of entrepreneurial orientation (EO), this paper explored whether and how EO shapes dynamics within organizations. Specifically, we developed and tested a cross-level contingency model that describes how and when EO cascades through an organization—bridging firm-, supervisor-, and employee-levels. We conducted a three-level, three-wave study with a sample consisted of 280 supervisors and 1,214 employees from 94 organizations to test our model. The results show that firm-level EO has an indirect and positive relationship to employees' creative performance serially via supervisors' and employees' passion for inventing. In addition, these cascading effects of EO is conditional upon the extent to which supervisors identify with their organizations, that is, the indirect effect is stronger when supervisors' organizational identification is high. These findings provide a new theoretical perspective on the internal dynamics of EO, uncover a central yet unexplored boundary condition, and offer managerial insights for the effective implementation of EO.

ENT: [Motivating Innovation: The Vertical Organisational Pervasiveness of CEO Entrepreneurial Orientation](#)

Author: **Xu Zhang**, *Nanjing U.*

Author: **Shulin Zhang**, -

Author: **Siqi Liu**, -

Author: **Xiulin Geng**, *Nanjing U.*

Digital technology opens new avenues for innovation and value creation but also introduces difficulties and challenges. To deal with the digital economy's dynamic and competitive environment, an information-based and team-centric structure has emerged as the dominant trend in developing relationships among organisation members. Social information processing theory suggests that a CEO's entrepreneurship orientation (CEO EO) is an organisational signal that influences the innovativeness and behaviours of middle management teams. Based on differences in external environments, organisational structures, and middle managers' cognition, this study thoroughly investigates how the vertical penetration of CEO EO impacts the innovativeness of middle management teams (MMTs). Fuzzy-set qualitative comparative analysis (fsQCA) is employed to investigate which configurations of CEO EO vertical penetration within an organisation can stimulate MMT innovativeness. The findings show there are four first-level configurations and two second-level configurations in each group that provide solutions to support stimulating MMT innovativeness.

Paper is Available to Meeting Registrants Only.

ENT: [Corporate Entrepreneurship in Perilous Times: Striking a Balance between EO and FSO](#) 

Author: **Joseph Simpson**, *Virginia Tech*

Author: **Richard Hunt**, *Virginia Tech*

Author: **David Matthew Townsend**, *Virginia Tech*

Author: **Maximilian Stallkamp**, *Virginia Tech*

Corporate entrepreneurship impels firms to engage in novel pursuits that provide exciting opportunities for growth and renewal. Yet, this same vigorous pursuit of new, stakeholder-enhancing possibilities also exposes firms to a vast array of increasingly alarming security threats such as cyber-attacks, organized retail crime, and terrorism. Paradoxically, then, a strong entrepreneurial orientation can lead simultaneously to highly desirable growth and highly undesirable threats. Navigating this paradox has become a defining – albeit largely understudied – facet of corporate entrepreneurship. Our study remedies this gap by developing and testing new theory concerning the interplay between a firm's entrepreneurial orientation and security orientation. In results that are relevant to scholars and practitioners, we find that firms engaging in a careful rightsizing security attentiveness are able to protect their assets and stakeholders without suffocating the firm's growth prospects.

Paper is Available to Meeting Registrants Only.

ENT: [Can Entrepreneurship Rescue Me from the Job Mismatch Trap?](#) 

Author: **Azzurra Meoli**, *U. of Bologna*

Author: **Herica Righi**, *Alma Mater Studiorum U. di Bologna*

Author: **Riccardo Fini**, *U. of Bologna*

Author: **Maurizio Sobrero**, *U. of Bologna*

We focus on the relationship between job mismatch – when someone's work is not closely related to their skills, type, or level of education – and entrepreneurship. While prior research has focused on a particular kind of mismatch and the effect on entry, we show that different types of mismatch may have a heterogeneous impact on entrepreneurial entry and the type of entry (self-employment vs. new venture formation). Moreover, we look at the re-employment condition to understand if the choice of entering entrepreneurship might help escape from a condition of mismatch. Using longitudinal data from more than 90,000 graduates, we document the effects of job mismatch on entrepreneurship and contribute to the literature of entrepreneurial entry. We discuss implications for research, managers, and policymakers.

ENT: Creating Start-Ups for a Better World: The Venture Creation Process of ‘Missionary’ Founders

Author: **MICHAEL RYCHENER**, *U. of St. Gallen*

Author: **Heiko Bergmann**, *U. of St. Gallen*

How do ventures that are focused on solving social and environmental problems come into existence? Drawing upon social identity theory, this study focuses on the venture creation process of Missionary founders. More specifically, we investigate in what way the strength of a founder’s Missionary identity affects the relationship between two central entrepreneurial actions – i.e., conducting discovery and exploitation related start-up activities – and firm emergence. We test our hypotheses using binary logistic regression on a sample of 133 nascent entrepreneurs from a recent longitudinal study. Our results suggest that Missionary founders find it more difficult to develop and implement their business model in comparison to other founders, resulting in a different importance of discovery and exploitation related start-up activities, and, possibly, in some cases also leading to an escalation of commitment.

ENT: The Mechanisms of Performance in Social Entrepreneurship: Assemblage, Market Building, Issue Selling   

Author: **Yanto Chandra**, *Hong Kong Polytechnic U.*

Author: **Long Wang**, *City U. of Hong Kong*

Tackling societal problems using a market approach—or social entrepreneurship (SE)—has become a central goal for a growing number of organizations worldwide. Although achieving social and commercial success is challenging for most social enterprises, some social enterprises have been more successful than others socially and commercially. While research in SE has proliferated in the past two decades, we still know little about why and how some social enterprises achieve better performance than others. In addressing this “performance void” in SE literature, we conducted a grounded theory study to interrogate the mechanisms that distinguish high from low performing social enterprises across two territories—Hong Kong and Singapore. Our study that focused on 20 social enterprises—around half are high performing social enterprises—between 2019 and 2020 revealed three broad mechanisms of performance that we labelled as resource assemblage, visionary market building, and persuasive issue selling. This article offers a first theoretical contribution on the integration of resource conserving and optimizing processes (or resource assemblage) as well as market pioneership, uniqueness, and partnership to build new markets (or visionary market building) and influence and media work (or persuasive issue selling) as central mechanisms that explain high performance in SE. This study also offers insights for practitioners and policy makers to “achieve more with less”, to identify market visionaries, and how to be master persuaders to gain support from stakeholders.

ENT: An Exploratory Study on the Nature and Origins of Social Venture Mission  

Author: **David Lucas**, *Syracuse U.*

Author: **Uisung David Park**, *Syracuse U.*

Mission is central to social venturing, but little is known about the nature and origins of social venture mission. The field lacks a theoretical framework for understanding the moral content of “prosocial” missions that rely on quite different—and potentially conflicting—moral values. We engage in an exploratory quantitative study, wherein we draw on moral foundations theory and social identity theory to develop framing questions related to the moral discourse in social venture missions and the role of founders’ partisan identities in infusing these missions with moral values. We construct a novel dataset by performing computer-aided text analysis on the mission statements of over 50,000 nascent nonprofit ventures in the United States and matching founding team members to voter registration data. We find that moral foundations are frequently espoused in mission statements. We also find that the partisan political identity of the founding team is strongly associated with differences in the moral discourse in social ventures’ stated missions in ways that intriguingly differ from prior work relating moral foundations to political beliefs. Our work contributes to social entrepreneurship research by offering a new way of looking at social venture mission, a road map for future empirical studies, and practical and policy implications.

Paper is Available to Meeting Registrants Only.

ENT: An Experimental Study on How SEs Build Rhetorical Legitimacy and Its Effects on Consumer Responses 

Author: **Qian Jin**, *Hong Kong Polytechnic U.*

Author: **Yanto Chandra**, *Hong Kong Polytechnic U.*

Legitimacy has long been a central construct of interest by organizational scholars. The burgeoning research on legitimacy has increasingly seen the importance of legitimacy building for emerging and novel organizations, especially social enterprises (SE) that embrace a hybrid organizational logic. However, little is known about how SEs can build legitimacy effectively, particularly legitimacy as it is assessed by consumers, and whether the legitimacy-building efforts will translate into favorable consumer responses. Drawing on cultural entrepreneurship theory, we designed a scenario-based experiment to examine whether using different rhetorical strategies will help SEs acquire legitimacy as assessed by consumers and to what extent legitimacy drives positive consumer responses. Our experiment results reveal that the use of social and membership discourse in SEs’ identity building will effectively enhance SEs’ legitimacy as perceived by consumers. More importantly, this legitimacy will further catalyze desirable consumer responses on both social and commercial sides. This research offers novel contribution by addressing “legitimacy-consumer” gap in organization and SE literature, enriches consumer studies in SE by bringing the social dimension of consumer responses into the field, and demonstrates the use of experiment as a promising method in advancing SE studies. This research also provides practical implications for SE practitioners and policymakers to harness the rhetorical tools for SEs’ legitimacy building.

ENT: How Entrepreneurs in Socially Contested Contexts Develop Social Ties to Access Opportunities 

Author: **Christian Busch**, *New York U.*

Author: **Robert Mudida**, *STRATHMORE BUSINESS SCHOOL*

Social ties are important sources of resources and opportunities for entrepreneurs. However, in socially contested settings, it is often more difficult to connect with (diverse) others, and it is unclear how entrepreneurs in these contexts may develop the social ties that previous research has shown to be valuable. We studied this subject matter in Kenya, an ethnically fractionalized society that recently experienced the decentralization of government. This contextual change required entrepreneurs who were previously providing IT services to the central government to deal with both in-group and out-group ethnicities on the local county level. Our inductive case study of four ICT firms contributes a process model of how and why entrepreneurs in socially contested settings select and manage social ties in order to access opportunities.

ENT: Linking Digital and Coding Skills to Entrepreneurial Intention and Student Entrepreneurship in Italy 

Author: **Giuliano Sansone**, *Prague U. of Economics and Business*

Author: **Antonio Ghezzi**, *Politecnico di Milano School of Management*

Author: **Paolo Landoni**, *Politecnico di Torino*

Author: **Andrea Rangone**, *Politecnico di Milano School of Management*

Although a great deal of attention has been paid to entrepreneurial intention, few studies have analysed which factors can foster student entrepreneurship. Furthermore, to our best knowledge, no one has yet tested individual-level factors such as i) coding knowledge and experience and ii) digital knowledge and experience. The aim of this study is to fill this gap by empirically testing if these factors have a positive impact on entrepreneurial intention and student entrepreneurship. The quantitative analyses are based on a unique data set of more than 2000 Italian university students. Adopting a Human Capital Theory perspective, we argue that coding knowledge and experience have a positive impact on entrepreneurial intention and student entrepreneurship. Moreover, considering a Social Capital Theory perspective, we argue that digital knowledge and experience have a positive impact on entrepreneurial intention and student entrepreneurship. Our findings provide an original contribution to the research on entrepreneurial intention and student entrepreneurship, while holding implications for practice policy-making by disclosing individual-level factors which, if purposefully nurtured, can stimulate students' entrepreneurial endeavors.

ENT: Who to Call in Case of Emergency? – Networking Responses to an Economic Crisis Among Entrepreneurs

Author: **Leif Brändle**, *U. of Hohenheim*

Author: **Helen Signer**, *U. of Hohenheim*

Author: **Andreas Kuckertz**, *U. of Hohenheim*

The resilience of entrepreneurs in times of crisis depends on mobilizing resources from others. Nevertheless, prior research on the role of entrepreneurial networks in an entrepreneur's crisis response is limited. While an emerging research stream on entrepreneurial network agency made substantial strides in explaining the active role of entrepreneurs in network evolution, it remained relatively silent on when and why entrepreneurs activate different parts of their network. The current study investigates who entrepreneurs call when facing an economic threat. The study applies a bricolage and effectuation lens to develop hypotheses on entrepreneurial network activation in times of crisis. The results of a pre-registered randomized experiment in the COVID-19 context conducted with 122 entrepreneurs from the USA show that, contrary to prior expectations, entrepreneurs activate more-closed networks involving strong ties between network actors in a crisis. Additionally, higher-status entrepreneurs activate contacts to serve their own goals (instrumental networking) when facing an economic threat while, counter-intuitively, lower-status entrepreneurs, in such situations, more likely network to support others. The study discusses the implications of these findings for theory on crisis response among entrepreneurs and entrepreneurial networking.

ENT: Shaping the Nature of the Venture: The Independent and Tandem Work of Human and Social Capital

Author: **Anastasia Veronica Graham Bailey**, *Rutgers Business School*

Author: **Mona V Makhija**, *Ohio State U.*

This research examines the roles played by human and social capital in determining the novelty of entrepreneurial ventures. Using an inductive approach, we provide detailed evidence on four high-tech and four low-tech ventures that vary substantially in their novelty. Our findings suggest that human and social capital play separate as well as joint roles in shaping venture novelty. While human capital assists in diagnosing and addressing problems in how a product or service is currently delivered in the marketplace, social capital plays an oversized role for bringing about a new business model. We find that different combinations of specific human capital and instrumental social capital of founders vary in systematic and unforeseen ways across four levels of venture novelty. This research demonstrates the separate and fine-grained implications of human and social capital for the novelty of the entrepreneurial ventures pursued by founders

Teams 3

Session Moderator: **Emma Rui Lu**, *Stockholm School of Economics*

ENT: **Characteristics of Entrepreneurial Teams and Emergence of New Ventures** 

Author: **Kamal Sakhdari**, *Faculty of Entrepreneurship, U. of Tehran*

Author: **Sohrab Soleimanof**, *Louisiana State U.*

Author: **Sima Sajadi**, *Faculty of Entrepreneurship, U. of Tehran*

Author: **Kristen Madison**, *Oklahoma State U.*

This study posits that the emergence of new ventures depends on both the homogeneity and heterogeneity of the team members' skills in the entrepreneurship process. Our multi-respondent survey of 210 participants on 83 entrepreneurial teams indicates that teams with higher levels of aggregated discovery skills can develop more competitive value propositions at the conception stage of the entrepreneurship process. Yet, the teams can leverage their competitive offerings for venture emergence at the execution stage when they possess more heterogeneous delivery skills. These findings extend our understanding of the composition of new venture teams by highlighting the varying nature of skillsets and learning throughout the entrepreneurship process.

Paper is Available to Meeting Registrants Only.

ENT: **Identity Fusion and New Venture Performance: Team Average and Dispersion Effects**

Author: **Emma Rui Lu**, *Stockholm School of Economics*

The present paper studies the relationship between entrepreneurial identity on new venture performance through a group level analysis. It expands on the concept of identity with a metric of identity fusion for the new venture team context and uses a longitudinal field design with repeated survey responses of multiple members in knowledge-intensive new venture teams from Sweden, Denmark, and Russia. Results from multilevel structural equation modeling (MSEM) showed that while there was significant dispersion in intensity of identity fusion among members within a new venture team, there was no direct effect between average team identity fusion and venture performance, as represented by external funding, customer acquisition status and product advancement status. The results run contrary to recent findings of a positive effect between identity fusion and firm performance and makes the case for further explorations into the consistency of the relationship between identity fusion and venture outcomes. The study is among the first to consider venture outcomes of group-level identity in entrepreneurship, highlighting the salience of identity fusion as one of several potential forms of group identity.

ENT: **Abandoning The Ship? The Familization of Lone-Founder Firms and Its Impact on TMT Turnover** 

Author: **Yanlong Zhang**, *Peking U.*

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*

Author: **Lujun Xie**, *Beijing Information Science and Technology U.*

Borrowing insights from the institutional logic perspective on hybrid organization, we theorize the introduction of family logics into lone-founder firms driven by incumbent entrepreneurial logics as a familization process. Using a sample of Chinese listed firms, we explored how this familization process affects the reactions of internal audiences and linked this internal dynamic with organization- and field-level contingencies. Our results indicate that TMT turnover rates increase when firms experience the familization process, but organizations' financial slack and entrepreneurial narrative can help the hybrids to mitigate the adverse impacts of familization. In addition, we find that field-level legitimacy of the hybridity can condition the effectiveness of firms change management capacities, such that when the legitimacy of hybrids is high in a given field, the moderation effects of the financial slack decrease while the moderation effects of entrepreneurial narrative increase.

 ENT: **How do Entrepreneurial Teams Manage Adversity? A Qualitative Study During the COVID-19 Pandemic** 

Author: **Caroline Becker**, *Ruhr-U. Bochum*

Author: **Silja Hartmann**, *Freie U. Berlin*

Author: **Kyle Brykman**, *Odette School of Business, U. of Windsor*

Author: **Matthias Weiss**, *Ruhr-U. Bochum*

The COVID-19 pandemic has threatened the existence of many start-ups and has underlined the importance of successful adaptation to adversity for entrepreneurial actors. Yet, while most start-ups are founded and led by teams, our knowledge on how entrepreneurial teams may develop and demonstrate positive adaptation to adversity, i.e., entrepreneurial team resilience, is scarce. The purpose of this study is to address this research gap. We conducted a multiple-case study with entrepreneurial teams that faced the adversities of the COVID-19 pandemic. Based on the qualitative data, we developed a process model of the entrepreneurial team resilience process. The model differentiates this process in stages of (1) adversity perception and evaluation, (2) information search and acquisition, (3) coping with adversity, and (4) resilience outcomes. With our study we add to theory development on psychological resilience in entrepreneurship. Specifically, we enrich the nascent research on entrepreneurial team resilience and shed light on the collective cognitive, affective, and social dynamics that enable entrepreneurial teams to develop team resilience in the face of adversity.

Entrepreneurial Ecosystems 1

Session Moderator: **Jared Shaw Allen**, *Texas Tech U.*

ENT: **Why Entrepreneurial Processes Enable Value Creation in Entrepreneurial Ecosystems** 

Author: **Clau Sganzerla**, *Texas Tech U.*

Author: **Ronald K. Mitchell**, *Texas Tech U.*

Author: **Jared Shaw Allen**, *Texas Tech U.*

There is increasing interest in entrepreneurial ecosystems, which are a system of elements (social, political, economic, and cultural), that produce the synergistic outcomes of value creation through entrepreneurial activity. Because an ecosystem is a set of elements that produce an effect that is not inherent in any one of them (Davis & Marquis, 2005; Hernes, 1998), understanding the mechanisms through which elements are integrated to create value is of prime importance to entrepreneurial ecosystems research that interests scholars, practitioners, and policy makers. Helpfully, work to date has explored the who, what, where and how questions related to entrepreneurial ecosystems, with less attention focused on why such systems are able to produce value. We apply analogical process theorizing (e.g., Chan, 1998) and the creation view of opportunity exploitation (Alvarez & Barney, 2007; Sarasvathy, Dew, Velamuri, & Venkataraman, 2003) to develop theory to explain why entrepreneurial processes help to integrate discrete systems (rational, natural, and open systems) into superordinate systems (i.e., entrepreneurial ecosystems). Our theorizing offers novel explanations for why entrepreneurial ecosystems flourish despite having to integrate discrete, often orthogonal systems.

ENT: **More Than a Catching Name? Entrepreneurial Ecosystem, Risk Anticipation and SMEs' Resilience**

Author: **Enrico Carlet**, *Department of Economics and Management "Marco Fanno", U. of Padova*

This study investigates whether the commitment to risk anticipation influences small and medium enterprises' (SMEs) resilience. Moreover, the research adds the entrepreneurial ecosystem (EE) mobilization to the analysis. Specifically, we study how the EE mobilization of SMEs coping with adversities relates with both risk anticipation and resilience. In doing so, we are aimed at contributing to resilience and EE literature, which overlooked the study of the relationship between the EE and resilience at the firm level. The exploitation of the EE resources may be useful for SMEs that cope with crises, as they rarely anticipate risks implementing the best (and costly) practice. Testing the impact of the EE mobilization on firms' resilience may help us in clarifying – at least partially – the cause-effect network of the EE. This leads us to engage in the debate whether the EE is just a catching name or a valuable and usable construct. Drawing on the resilient response model, we develop a framework that includes risk anticipation and EE mobilization. To test our hypotheses, we estimate OLS regression and probit models using a dataset of 761 questionnaires. These were collected from London, Milan and Frankfurt SMEs' entrepreneurs that experienced a crisis in the year before the research. We find that the commitment to risk anticipation enhances the EE mobilization level, that, in turn, increases SMEs' probability of showing a resilient response. Surprisingly, no direct effect is found between commitment to risk anticipation and resilience. Results are commented drawing on High Reliability Organization theory: in particular, we argue that the mobilization of the EE increases the effectiveness and the efficiency of the activation and detection phases that characterize the critical period following the disruption. We posit that a crucial role is played by the increased variety of perspectives obtained via the EE mobilization, that supports a deeper understanding of the threat and a richer generation of solutions. Beside the scholarly debate about the value of the EE – to which we contribute demonstrating an empirical application of the construct –, from the results we derive managerial and policy implications concerning SMEs' entrepreneurs' strategies and EE planners' initiatives.

ENT: **Entrepreneurial Ecosystem and Urban Economic Growth** 

Author: **Yang Peipei**, *U. of Chinese Academy of Sciences*

The purpose of this paper is to explain the link between the development of entrepreneurial ecosystems and economic growth at the urban level, and in specific scrutinizes the moderating roles of industrial diversities and digital technology service. This study investigates the economic growth of 32 cities in China from 2008 to 2018. The sample covers a wide range of cities in China. We apply OLS models with fixed effects and time controlled. The results show that entrepreneurial ecosystems' development promotes municipal economic growth. Moreover, industrial diversity and digital technology service are found to positively moderate the relationship between entrepreneurial ecosystems' development and the urban economic growth. This study significantly extends the literature on entrepreneurial ecosystems and regional economic development. From the perspective of knowledge-based view, this study provides a new lens to understand the function of the entrepreneurial ecosystems at the urban level. It also provides policymakers and stakeholders a different mentality when forming strategies and regulations on entrepreneurship.

 ENT: **Do it Yourself While Running it Together: How Disparate Projects Form an Entrepreneurial Ecosystem** 

Author: **Yixin Qiu**, *U. of Bayreuth*

Small-scale DIY practices are generating widespread communities and global movement, where the concept of entrepreneurial ecosystem emerged to explain and describe this phenomenon. However, most prior research bonds to regional borders and focal actors, and therefore leaves the interdependence and the dynamic nature of an ecosystem and the value creation from adopting the constructs unaddressed. In light of an entrepreneurial ecosystem that induces international networks and collaboration, we adopted the flexible pattern matching approach to surface new insights. We use two patterns deduced from the literature to discover match and mismatch. Longitudinal data was collected from multiple sources. Adopting Adner's ecosystem as structure perspective, the findings indicate two emergent dimensions: internal alignment, and connection and resilience to the external environment. This paper advances our understanding of the distinguishable features of self-regulating entrepreneurial ecosystems and how they are derived from individual DIY practices.

Exploring the Relationship Between Entrepreneurship and Public Policy

Entrepreneurship and Public Policy

Moderator: **Per L. Bylund**, *Oklahoma State U.*

Panelist: **David Audretsch**, *Indiana U., Bloomington*

Panelist: **Steven Walter Bradley**, *Baylor U.*

Panelist: **Fernando Antonio Monteiro Christoph D'Andrea**, *Oklahoma State U.*

Panelist: **Jeffery S. McMullen**, *Indiana U., Bloomington*

This symposium explores avenues for research in the area of entrepreneurship and public policy. Research in other disciplines, primarily economics, have previously addressed questions in this space assuming a static or unidirectional relationship, either the impact of public policy (regulations) on startups or corporate rent-seeking, but the entrepreneurship perspective suggests a bidirectional, dynamic, institutionally embedded relationship between entrepreneurial value creation and the environment in which it occurs, in particular public policy. This perspective remains understudied. In this symposium, leading scholars in this new and exciting area of study in entrepreneurship will present new research, provide guidance and recommendations, and insights into opportunities in both theory development and empirical studies.

ENT: **Boundary Conditions in Early-Stage Venturing Research: A Systematic Review** 

Author: **Andrew MacLaren**, *Edinburgh Business School, Heriot Watt U.*
Author: **Lucrezia Casulli**, *U. of Strathclyde Business School*

In this paper we problematize existing markers of entrepreneurial action as being subject to boundary conditions and we seek to make such boundary conditions explicit through the systematic scrutiny and review of empirical literature on early venturing. The value of doing so, we contend, is that by making explicit what the boundary conditions are we will be better able to develop an awareness of what may be potentially left out. More broadly, we hope to spur conversations about how we sample entrepreneurial actions in empirical studies and what this means in relation to the domain of entrepreneurship in a context that is increasingly calling for more inclusivity and contextualisation – indeed, under the theme of creating a better world together, togetherness issues from an implicit desire to be inclusive in how we treat others as well as ensuring that our research is able to capture and represent its subject matter in as comprehensive a manner as possible. We inductively develop four categories of boundary conditions for participants’ identification and recruitment in early-stage entrepreneurial research that are based on whether entrepreneurial action is being recognized and the epistemic positioning of that recognition. Our findings reveal that there is a predominance of attributing action entrepreneurial status in a way that is: - implied from context, whereby the latter is considered entrepreneurial; or - implied from the expressed intentionality of the individual, or - retrospectively inferred based on the characteristics of consequent endeavours.

ENT: **How Founders Attract Joiners: Evidence From a Conjoint Analysis**     

Author: **Travis Howell**, *UC Irvine*

Hiring is one of the most important and yet also one of the most difficult responsibilities in a startup. When an organization is small and only has a few employees, even one bad hire can impede the startup's growth or even lead to its demise. Yet, because startups have limited cash flow, they typically cannot offer the salaries or job security offered by larger corporations with whom they compete for talent. The question then is how startups can attract talented employees without offering competitive financial packages. The few studies that do address this find that startups provide several nonpecuniary benefits that larger corporations do not. Yet, which types of non-pecuniary incentives are most effective has been relatively understudied. In addition, whether (and which type of) workers prefer and are thus willing to give up pecuniary benefits in exchange for non-pecuniary benefits remains to be empirically established. This study uses a conjoint analysis to provide causal evidence of these relationships. Specifically, the questions I address in this study are: Which non-pecuniary incentives are most effective in attracting employees to startups, and how do these preferences differ across employee types?

 ENT: **The Impact of Evolutionary Patterns of External Enablers on Perceived Entrepreneurial Potential** 

Author: **Jiyoung Kim**, *Jonkoping International Business School*

Focusing on changes in the external environment, this research investigates the effect of agent-independent factors in new venture creation. Based on the notion of External Enabler (EE) and the EE framework (Davidsson, 2015; Davidsson, Recker, & von Briel, 2020), I propose that an evolutionary pattern of an EE (incremental vs. discontinuous) affects perceived entrepreneurial potentials of individuals. Drawing on sensemaking theory, this research develops theoretical relationships between key constructs in the EE framework (i.e., EE characteristic, enablement, and role) and empirically test them employing between-subject experiments. The results support that when an EE evolves discontinuously, individuals perceive higher overall entrepreneurial potential of the EE but lower potential of the enablement drawn from the EE. The research findings provide crucial theoretical and practical implications for entrepreneurship research.

ENT: **Riding the Roller-Coaster: A Pivot Process During Covid-19**

Author: **Clara Scheve**, *Institute of management and Organization, Leuphana U. of Lüneburg*
Author: **Thomas Karl Gegenhuber**, *Johannes Kepler U. Linz*
Author: **Markus Reihlen**, *Leuphana U. Lüneburg*

This article investigates how a new venture responded to the challenges of the Covid-19 pandemic by performing a pivot. A pivot is a process of radically transforming the current business model of a young venture in case of a (potential) failure. So far, researchers have paid scant attention to the consequences of pivots, neglecting the “after pivot” phase of the pivot process. We propose that a pivot alters a new venture's business model, reallocates or restructures resources and capabilities, which, in turn, leads to a lasting impact on the organization and its identity. Drawing on an inductive, longitudinal case study of the fast-growing new venture “Gazelle”, this paper identifies three effects. First, it shows how a pivot is interrelated with “entrepreneurial vibrancy”, i.e. the unconditional maintenance of the entrepreneurial spirit and action despite hostile circumstances. Second, our case exemplifies how the Covid-19 pandemic created an existential crisis and triggered a unique recovery trajectory of the new venture, which we characterize as the “Phoenix effect”. Third, the “sedimentation effect” depicts how changes along the pivot process imprinted into the new venture’s identity.

Corporate Entrepreneurship 2

Session Moderator: **Lucia Naldi**, *Jonkoping International Business School*

 ENT: [Spanning Boundaries Across Two Worlds: How Accelerators Source Startups for Changing Corporates](#)   

Author: **Kristina Koch**, *TUM School of Management, Technical U. of Munich*
Author: **Rebecca Preller**, *Technical U. of Munich*

Collaborating with innovative startups can be beneficial for large established corporates. However, sourcing attractive startups that fit the corporates strategically is challenging. To overcome this challenge, more recently a new type of accelerator emerged that offers a startup sourcing process that matches corporates with applicant startups for specific collaboration projects once the accelerator's cohort starts. This platform accelerator is different from internal corporate accelerators since it works as an independent legal entity and sources startups for multiple changing corporate sponsors at the same time. But how can an accelerator – that is external to both worlds and faces changing partners – match corporates with applicant startups for collaboration projects? To develop theory about how platform accelerators match multiple changing corporates and startups, we draw on a boundary spanning perspective and an inductive study based on a six-month in-depth single-case study of a platform accelerator matching four corporate partners with initially ~1500 scouted startups. Our process model shows how the accelerator established and re-positioned itself as a boundary organization and reveals the sequence of three key mechanisms (anticipating, structuring, fostering) applied by the accelerator during matchmaking. Our study extends previous research on accelerator design, entrepreneurial support organizations, boundary spanning, and boundary organizations.

ENT: [External Enablers: Emergence, Novelty, and Persistence of Entrepreneurial Initiatives](#)

Author: **Joaquin Cestino**, *Jonkoping International Business School*
Author: **Lucia Naldi**, *Jonkoping International Business School*
Author: **Mats Ots**, *Jonkoping International Business School*

There is a growing consensus that exogenous, environmental changes can affect entrepreneurship. However, the external enabler framework, which provides structures and terminology to analyze these enabling effects, has typically focused on new venture creation. In an attempt to extend the external enabler framework, we explore how environmental changes enable the emergence, novelty, and persistence of entrepreneurial initiatives within established organizations. Grounded in a longitudinal multiple-case study, our findings corroborate several aspects of the external enabler framework and extend it by identifying additional mechanisms and relational qualities of external enablers critical to understanding entrepreneurial initiatives in established organizations.

 ENT: [Getting Away With It: How Do Firms Avoid Damage to Their Network After Allegations of Misconduct?](#)

Author: **Jitse Duijsters**, *Erasmus U. Rotterdam*
Author: **Vareshka Van De Vrande**, *Erasmus U. Rotterdam*
Author: **Rene Bakker**, *Erasmus U. Rotterdam*

How do firms avoid losing network centrality following accusations of organizational misconduct? In this paper, we argue that while accusations generally lead to a decrease in the network position of the focal firm, there are certain strategies firms can use to mitigate this relationship. We examine the impact of status volatility, showing that firms that maintain a more stable network position are affected less by accusations, and expectancy violation, arguing that firms that act in line with negative expectations are less likely to receive punishment by their peers. We test our predictions in the setting of corporate venture capital investments by firms operating in the U.S. IT industry (1985-2018) and show that under certain conditions, firms can 'get away' with accusations of misconduct.

Paper is Available to Meeting Registrants Only.

 ENT: [How Do Corporate Venture Capitalists Evaluate Digital Technology Ventures? A Conjoint Analysis](#) 

Author: **Petrit Ademi**, *Justus-Liebig-U. Giessen*
Author: **Monika Schuhmacher**, *Justus-Liebig U. Giessen*
Author: **Andrew Zacharakis**, *Babson College*

Drawing upon affordance theory, this study analyzes how corporate venture capital (CVC) investment managers evaluate digital technology ventures for investment. We argue that affordances, namely action potentials that arise from the relation between CVC investors and digital technology ventures, determine investment decision-making. Our study uses experimental data from a conjoint analysis of 432 investment decisions made by 54 CVC investment managers representing 44 CVC units from 34 industries. We find that CVC investment managers value characteristics of digital technology ventures that give rise to digital affordances as well as task-sharing affordances. Our findings show that CVC investment managers' prior digital technology experience, entrepreneurial experience, and perceived CVC unit dependence on business units influence the interpretation of affordances, and thus the evaluation of investment opportunities. Our study contributes to the understanding of CVC investment decisions and extends affordance theory by a decision-making perspective.

ENT: Funding Source Intimacy Bias: Examining the Impact of Strong Ties on Entrepreneurial Decision Making

Author: **Emily Neubert**, *Texas Tech U.*

Due to the ease of accessing individuals in entrepreneurs' social networks, raising money from friends and family is one of the most common forms of startup funding. Despite this being a significant form of financing, we know relatively little about how accepting funds from these individuals influences an entrepreneur's decision making. Drawing on sociological research on strength of relational ties, this study investigates how entrepreneurs' relationships with investors influence their risk-taking preferences, and consequently, their decision making. Using quasi-experimental methods, this study found that as the strength of a relationship with an investor increases, the entrepreneur is more likely to pursue a more conservative growth choice for his or her venture. This effect is mediated by greater feelings of anticipated guilt if the entrepreneur's venture is not successful. Narcissism was investigated as a potential moderator of this mediation effect. In line with the results of this study, I introduce the notion of "funding source intimacy bias", which is the tendency for an entrepreneur to become more risk averse after accepting funds from a strong tie.

ENT: Perceptions and Inaccuracy in New-Venture Investment Decision: An Experimental Evidence

Author: **Ashish Vazirani**, *Indian Institute of Technology, Kharagpur*
Author: **Titas Bhattacharjee**, *Indian Institute of Technology, Kharagpur*

Access to investment has a significant effect on performance of new-venture but investment decisions in such new-ventures are found to be inaccurate. Mainly researchers focused on the factors that are significant in determining investment decisions but no study has explored the cause of inaccuracy in new-venture investment decisions. We have used the theories of decision making and behavioral experiments to explore the cause of such inaccuracy. We have explored the role of information signals in determining perception, then measured the deviation between perceived utility and actual investment, and lastly explored the source of such deviation. In study-1, we asked participants to appraise proposals on prospects of "risk-exposure" and "return-potential". In study-2, participants invest in the same proposals presented in random order. We found that the role of information in determining perception of "risk-exposure" and "return-potential" is partially mutually exclusive and partially related. Though information signals help in determining the perceptions, the investment decisions do not follow the rational value of the perceived utility. Time-constraints resulted in heuristics as only few information signals were considered in determining the same level of perceptions. Further, quick decisions limit the perspective of considering an information signal. As a result, information type, respective perceptions and time-constraints are found to be significant determinants of accuracy of investment decisions.

ENT: Attracting Business Angels: Does Signaling Sustainability Pay Off for Commercial New Ventures?

Author: **Julian Bafera**, *U. of Wuppertal - Schumpeter School of Business and Economics*
Author: **Simon Kleinert**, *Maastricht U., School of Business & Economics*
Author: **Christina Guenther**, *WHU - Otto Beisheim School of Management*
Author: **Christine Katharina Volkmann**, *U. of Wuppertal*

The importance of signals of economic quality is clear, though heightened awareness of ecological issues and pressures for sustainable development suggest that new ventures also might need to signal their sustainability. With a basis in signaling theory, the current study addresses how sustainability quality signals might enable new ventures to raise financing from business angels (BAs). A conjoint experiment, involving 68 active BAs from one of the largest angel networks in Europe, reveals that credible and costless sustainability signals relate positively to the willingness of BAs to invest, whereas negative sustainability signals, in the form of harmful environmental practices, relate negatively to such willingness. Sustainability signals interact, such that conflicting signals induce penalties. The effectiveness of sustainability signals also is strongly contingent on the BAs' own entrepreneurial experience, but surprisingly, the results indicate that they are not more important for new ventures from green industries.

ENT: The Nature of the Firm's Exchange Complexity: A Configurational Study

Author: **Aydin Selim Oksoy**, *U. of Hartford*
Author: **Matthew Farrell**, *Old Dominion U.*
Author: **Anil Nair**, *Old Dominion U.*

We conduct a configurational study on the complexity of an entrepreneur led embryonic firm's intended strategic trajectory, focusing on the firm-environment exchanges. In doing so, we identify a new way to conceptualize the complexity of an organization. The complexity of the firm-environment exchange is a function of activities internalized into the firm and is therefore initially within the entrepreneur's control. We study angel investor reactions to various organizational complexity configurations as captured in their explicitly communicated offers of capital, equity ownership in the firm, and a derived firm-level valuation. Using the set-theoretic methodology of fuzzy set qualitative comparative analysis (fsQCA) (), we derive a series of propositions about the impact of complexity on negotiation outcomes between entrepreneur and angel(s). Theoretically we study the tension between two logics: resource-based view (RBV) logic and transaction cost economics (TCE). For the equity outcome, we find support for a TCE-logic with the level of equity requests being related to the level of complexity, while low capital and low valuation outcomes are associated with low complexity profiles that suggests support for RBV logic based on the issue of inimitability.

 ENT: The Endogamy Tradition and the Performance of Informal Owner-Manager Ventures in Sub-Saharan Africa 

Author: **Peng Zhang**, *Beedie School of Business Simon Fraser U.*

Author: **Saul Estrin**, *LSE*

Author: **Tomasz Marek Mickiewicz**, *Aston Business School*

Informal businesses, ubiquitous in developing countries, operate on the fringes of the (often ineffective) state, and are instead influenced by informal institutions. This paper applies a cultural anthropology perspective to provide explanations on the origins and dynamics of informal institutions and their effects on informal business performance. We posit that informal institutions originate from the traditions embedded in family systems, and we consider endogamy - the practice of marrying within a specific social group or local community - as a key dimension of family traditions relevant for performance of informal entrepreneurs. First, endogamy can make bridging trust more difficult to establish, limiting wider market opportunities for informal businesses in Sub-Saharan Africa and lowering their performance. Second, the evolution of informal institutions can be driven by external cultural interventions that are antipathetic to the pre-existing family systems. For example, the effect of endogamy might be attenuated by specific experiences of Africa's colonial past, especially if the colonial powers were characterised by individualistic cultures. Our hypotheses are supported by the empirical analysis based on surveys of informal entrepreneurs in multiple regions of eight African countries.

 ENT: How Paying-it-Forward Expands Entrepreneurial Functioning in Kenya's Informal Settlements    

Author: **George Kuk**, *Nottingham Trent U.*

Author: **Dr Amon Simba**, *Nottingham Business School, Nottingham Trent U.*

Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*

Carolyn Dexter Award Nominee

With over 1 billion of people living in informal settlements, micro-entrepreneurship accounts for a large proportion of business activities, providing necessity services otherwise unreachable through normal means. Understanding the role of micro-entrepreneurship in extreme condition is an important component of the grand humanitarian challenge of how to alleviate poverty. Existing theory has suggested that extreme events such as COVID-19 can induce a poverty-constrained mindset, however during our preparatory field work we found micro-entrepreneurs who were able to sustain their entrepreneurial activities used a paying-it-forward mechanism to expand their own functioning by simultaneously improving others. We tested this counter-factual insight by using panel data covering the trading histories of 2,255 entrepreneurs who lived and traded in Kenya's informal settlements. Our dynamic regression estimated the interplay between paying-it-forward and emerging network structures. The results confirm that paying-it-forward expands entrepreneurial functioning through two contrasting interaction effects with network structures that either amplify or attenuate the prosocial impact of paying-it-forward on others' welfare during the COVID-19 pandemic lockdown. These research findings hold practical implications for humanitarian agencies and policy makers who have to juggle between resource allocations and entrepreneurship policies for communities dealing with multiple hardships.

ENT: Collective Entrepreneurship for Rural Women Microentrepreneurs: A Capability Approach Perspective     

Author: **Ekta Johar**, *Indian Institute of Management, Ahmedabad*

Author: **Manjari Singh**, *Indian Institute of Management, Ahmedabad*

Collective Entrepreneurship models holds paramount importance for economic development, social upliftment, and empowerment of rural women. Operating within socio-economically constraint environment, women microentrepreneurs can promote their interest through collective enterprises. While entrepreneurial literature has prominently focused on the economic output of entrepreneurship, our study aim extends the discussion regarding the role played by collective entrepreneurship in human capabilities development specifically within the context of rural women entrepreneurs. Relying on Sen's Capability Approach and the Human Development paradigm we have studied a sample of 94 rural women microentrepreneurs involved in cooperative dairy farming sector in India to illustrate the role played by the collective enterprise in facilitating the development of human development imperatives at all three levels namely: individual, family and community. The three indices considered for the human development imperatives are- education and skill development; access to resources and standard of living; and health and well-being.

ENT: Crises and the Disadvantaged: How Effectual Behaviour Leads to Resilience Among Micro-Entrepreneurs.  

Author: **Luca Castellanza**, *U. of Mannheim*

Author: **Michael Woywode**, *U. of Mannheim*

Crises hamper entrepreneurship by eroding the entrepreneurs' resource bases. Entrepreneurial resilience, the act of maintaining functioning during adverse circumstances, requires using resources to counteract disruptions. Building on these ideas, we develop theory as to how entrepreneurs operating in extreme poverty settings may behave resiliently when confronted with crisis-related losses. Through a grounded-theoretical analysis of entrepreneurship in South-West Cameroon, we identify three behaviours entrepreneurs enact in reaction to losses: negative, need-driven, and causal effectuation. Then, we build theory as to how the entrepreneurs' effectual behaviours enable them to build resilience against current and future adversity.

Gender and Diversity in Entrepreneurship 2

Session Moderator: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

ENT: [A Systematic Literature Review on Female Entrepreneurship and an Agenda for the Future](#) 

Author: **Sidney Isabelle Hribersek**, *Technical U. of Munich*

Author: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

Female entrepreneurship is a crucial phenomenon in entrepreneurship and management research. However, the field suffers from fragmentation, leaving fundamental questions unanswered. Prior research lacks consensus whether and why female entrepreneurs differ from their male counterparts, posing obstacles to the further development of the field. Given the field's rapid evolution over the past 13 years and the absence of a state-of-the-art systematic literature review (SLR), this SLR aims at clarifying which factors explain wherein female entrepreneurs differ from male entrepreneurs along the entrepreneurial process. For this purpose, we conducted a SLR of 331 articles, covering the last 38 years of research, and inductively generated 21 thematic areas from our qualitative content analysis. We identified the primary drivers and barriers of female entrepreneurship and present a research model along four stages of the entrepreneurial process. For each stage, we address the most fundamental questions and contribute to the fields' development by providing a cohesive overview of prior research and directions for future research. This SLR discusses opportunities of pursuing cross-disciplinary research, helps to overcome limitations of current research, and aims at expanding existing theories within the female entrepreneurship field. Political implications for gender-related directions of societally gender inequality discourses are discussed.

ENT: [The Contingent Effect of Gender on Entrepreneurs' Relationships Within an Entrepreneurial Ecosystem](#)  

Author: **Joshua Marineau**, *North Dakota State U.*

Author: **Ahmad Al Asady**, *North Dakota State U.*

Author: **Onnolee Anne Nordstrom**, *North Dakota State U.*

This paper examines the extent to which gender roles influence the types of relationships entrepreneurs enter with other actors in an ecosystem. We draw on role-congruity theory (Eagly & Karau, 2002) to suggest that because of the perceived incongruity between female gender roles and entrepreneurship as a profession, stakeholders are less likely to engage with female entrepreneurs in a collaborative capacity than male entrepreneurs. We studied this by collecting survey and interview data. The survey and interviews posed questions pertaining to the entrepreneurial ecosystem, as well individual's personal relationships with other in the local startup community. The nascent entrepreneurial ecosystem we studied was in a rural mid-sized city in the Midwest US. From this data we were able to determine the overall network structure and collaborations and friendships networks within the ecosystem. Findings suggest that entrepreneurs are less likely to collaborate overall than non-entrepreneurs and female entrepreneurs are less likely to collaborate than male entrepreneurs and male and female non-entrepreneurs.

ENT: [Process Pathway of Doing Resilience: Evidence from a Study on Women Technology Entrepreneurs](#)   

Author: **Constanza Reyes**, *Aarhus BSS, Aarhus U.*

This research investigates resilience as an ex ante characteristic of a group of "highly vulnerable" entrepreneurs, namely women technology entrepreneurs in business incubators and accelerators environments. Evidence shows that women start tech firms in a substantial fewer proportion than men because they confront gender issues throughout their career in technology that could discourage them embark and to persist in entrepreneurship. For doing so, this investigation employed a grounded theory approach in connection with life story interviews for elucidating how resilience has been shaped throughout the life of 25 women technology entrepreneurs in Denmark, during their childhood and youth, and its influence on their career choices. Findings show how resilience is developed over the lifespan, by identifying the risk and protective factors as well as the resilience mechanisms, and how they evolve through time. Moreover, this study suggests that resilience acts as an explanatory factor for understanding how those women cope with adversity in adult life and with the different gender issues that they encounter.

ENT: [When the Odds are Stacked Against You: Female Entrepreneurs in Male-dominated Industries](#)

Author: **Elena Lizunova**, *Brigham Young U.*

Author: **Denisa Mindruta**, *HEC Paris*

One of the most well-documented gaps in entrepreneurship is the gender gap which manifests itself in various ways—females are less likely to become entrepreneurs, less likely to attract external capital and less likely to scale up their ventures. In spite of the growing empirical evidence suggesting that the current entrepreneurial system might favor men, we know less about the drivers of these gender disparities. In this project, we study female entrepreneurs in male-dominated industries—industries where women might face additional challenges. We find that in the first two years after venture creation, female founders exit at higher rates than their male counterparts. The data patterns do not seem to validate the gender underperformance hypothesis though—while few women enter male-dominated industries, the ones that do perform as well as the men. Further analysis suggests that one of the reasons for higher exit rates among women might be related to the way the entrepreneurial process unfolds for both genders (for example, women seem to encounter more hurdles and benefit less from pre-existing relations with clients and suppliers). This project highlights the importance of delving into the entrepreneurial process when examining gender disparities.

Entrepreneurial Cognition 2

Session Moderator: **Justin Kent**, *Appalachian State U.*

ENT: Who's Buying?: An Examination of the Drivers of Entrepreneurship Through Acquisition

Author: **Justin Kent**, *Appalachian State U.*

Author: **Atul Nerkar**, *U. of North Carolina, Chapel Hill*

Author: **Patia J. McGrath**, *U. of North Carolina, Chapel Hill*

Entrepreneurship through acquisition represents a viable path to entrepreneurship, yet little is known about the characteristics of the individuals attracted to these types of opportunities. Using a unique dataset of aspiring entrepreneurs, we find that aspiring entrepreneurs with more experience are more likely to proceed with an ETA opportunity while those with experience working in bureaucratic organizations are less likely to proceed with an ETA opportunity. Finally, aspiring entrepreneurs who have stronger implicit motivations of status and recognition are also more likely to proceed with an ETA opportunity. Implications of the findings are discussed and directions for future research are offered.

ENT: Aging Small Business Owner-managers and Business Exit: Longitudinal Investigation 

Author: **Monika Von Bonsdorff**, *U. of Jyväskylä*

Author: **Erno Tornikoski**, *U. of Exeter Business School*

Author: **Katja Pynnönen**, *U. of Jyväskylä*

Author: **Asko Tolvanen**, *U. of Jyväskylä*

The context of this study is business exit decisions of aging small business owner-managers. Because of the intention-action gap that exists between the theoretical modeling and actual behavior, and the existence of multiple important goals (e.g. business exit, retirement), we do not fully grasp the social psychological mechanism underlying actual business exit among aging small business owner-managers. In our theorizing efforts, we argue that aging small business owner-managers' perceived control over a target behaviour (i.e. business exit), combined with higher levels of general self-efficacy, is likely to facilitate business exit intention turning into actual business exit. We collected empirical, longitudinal data among aging Finnish small business owner-managers to test a mediated moderated model. Our main empirical findings suggests that attitude-behavioural models (e.g. Theory of Planned behavior) can help us gain a deeper understanding of how intentions translate into actual behavior in situations with multiple important goals if they are coupled with more generic control beliefs, such as self-efficacy. This main finding has both theoretical and practical implications.

ENT: An Inductively Derived Theory of Entrepreneur-Investor Rivalry

Author: **Theodore Waldron**, *Texas Tech U.*

Author: **Jeffery McMullen**, *Indiana U. - Kelley School of Business*

Author: **Oleg V. Petrenko**, *U. of Arkansas*

Author: **Lori Leigh Tribble**, *Clemson U.*

Author: **Olivia Aronson**, *U. of Richmond*

Entrepreneurs and investors sometimes battle for control of new ventures when their post-deal relationships deteriorate, a phenomenon that we describe as entrepreneur-investor rivalry (EIR). Theoretical accounts of entrepreneurs' and investors' relationships preclude the potential for rivalry, yet it can and does happen. To address the disconnect between theory and practice, we develop an initial theory of EIR from the in-depth, qualitative analysis of rivalry to control a renowned craft distillery. Our theory elaborates why, how, and to what end EIR manifests, attending to the contextual factors, interaction dynamics, and rival attributes that shape the outcomes of three sequential stages and the overall rivalry process. In strengthening understanding of EIR, we improve extant theory's capacity to explain such rivalry, provide practical prescriptions to mitigate or avoid it, and till fertile ground on which to invigorate its study. Most importantly, we provide a theoretical foundation to invigorate research on entrepreneur-investor rivalry and other relational dynamics of importance to venture resource mobilization, moving beyond assumptions that we "know all there is to know" about these relationships.

ENT: How Regulatory Focus Influences the Emergence of Entrepreneurial Imaginativeness

Author: **Markus Olaf Rey**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Author: **Denise Fischer-Kreer**, *RWTH Aachen U.*

Entrepreneurial imaginativeness depicts a cognitive skill that predicts new venture ideation success and differs in form and level amongst individuals. Despite its indisputable role for entrepreneurial action, it remains unclear where these differences in form and level come from and whether the skill can be developed. Using regulatory focus theory (RFT), we suggest that the process of bringing oneself into alignment with one's goals and standards (in a promotion or a prevention focus) affects the emergence of entrepreneurial imaginativeness. Using a sample of 220 entrepreneurs, we find that promotion focus fosters all three forms of imaginativeness (creative, social and practical imaginativeness), whilst prevention focus depicts both catalyst and inhibitor of imaginativeness, depending on its form. Important implications for theory and practice will be discussed.

The Past, Present, and Future of Subsistence Marketplaces: Broadening Inclusion and Diversity
Past, Present, Future of Subsistence Marketplaces

Session Chair: **Jacob Park**, *Castleton U. and U. of Johannesburg*
Session Chair: **Madhu Viswanathan**, *U. of Illinois*
Panelist: **Laurel Steinfeld**, *Bentley U.*
Panelist: **Priyanka Jayashankar**, *Iowa State U.*
Panelist: **Srinivas Venugopal**, *U. of Vermont*
Panelist: **Ronika Chakrabarti**, *Trinity College Dublin*

As the 2022 Academy of Management conference (“Creating a Better World”) call for submissions notes: “there seems to be a growing awareness of the vital role of business organizations, managers, and stakeholders in tackling societal challenges including environmental sustainability; inter-generational trade-offs where future generations cannot make their voices heard today; and issues of diversity, equity, and inclusion” (AOM 2022). While the issues of poverty and inclusive management practices have been examined as management topics for decades, the global grand challenges of health pandemic, environmental sustainability, and worsening economic inequality have sharpened the need for a more scholarly-based exploration of what we might refer to “subsistence marketplaces” [SM]. Since the publication of the seminal edited volume (Viswanathan and Rosa 2007), which raised awareness of the need for a “bottom-up” approach to study the broad range of low-income consumers, entrepreneurs, communities and marketplaces around the world (Viswanathan, 2021), scholars from a wide range of management and social science disciplines have advanced our understanding of these communities. By “subsistence”, we are referring to the wide range of low-income communities—from extreme poverty to those at the cusp between low and lower-middle income. It essentially captures people and communities barely meeting basic conditions for living. We are also using the term “marketplaces” in the broadest and most diverse sense, meaning where goods, services, information, and ideas are exchanged, versus a meaning that restricts the focus to a physical marketplace. Such marketplaces captures different domains of subsistence, such as health, nutrition, education, and livelihood, different geographies, and different modes, such as physical and virtual. Over the past 15 years, a plethora of SM studies has advanced some foundational insights on how subsistence marketplaces function and how social innovations and organizations can foster well-being in subsistence communities (Gau et al, 2014; Sridharan et al, 2017; Steinfeld and Holt, 2019). At the same time, given the global and diverse stakeholders involved in the subsistence marketplaces field, there remain important under representations in literature both in terms of geographical contexts, such as sub-Saharan Africa and transition economies, as well as substantive topics such as the intersectional disadvantages stemming from gender and disability. The purpose of this panel symposium is, therefore, to engage a group of panelists in a moderated and interactive discussion of (1) how best to define and understand subsistence marketplaces as a field in 2022; (2) what are some critical insights that could improve organizational theories about the work of organizations with these communities and best practices; (3) what are important under-represented or missing topics and stakeholders in the subsistence marketplaces literature and how best can scholars fill those gaps; (4) what might comparative analyses of subsistence marketplaces across geographies or institutional environments look like and (5) how is subsistence marketplaces as a field of study changing amidst the global pandemic, environmental sustainability, and other global grand challenges.

Psychological Experiences of Women at Work

Session Moderator: **Deepa Chaudhary**, *IIM Udaipur*

GDO: Cut or Close in? Examining Social Relations from Stakeholders Perspective Towards Family Business Success   

Author: **Deepa Chaudhary**, *IIM Udaipur*

Author: **Siddhartha Satish Saxena**, *Ahmedabad U.*

Stakeholder social support is integral to the thriving of the successors in a family business. The paper aims to develop an understanding about the provisions of social nudge that influence the support of stakeholders (viz., life partner, investor, community of entrepreneur, expert, venture partner and employee) towards the role of successor in the family business. Implicit in many discussions of congruence of gender roles and job roles is the idea of perceived incongruity between the female gender role and leadership roles. We address whether this intuition is supported by the empirical data in the context of 218 family businesses i.e., 1,308 stakeholders. The role is understood in terms of the gender role congruity of the successor, in simple words, the effect of the gender of the successor in shaping the social support from stakeholders. Network Relationship Inventory-Social Provisions Version (NRI-SPV) (Furman & Buhmester, 1985) is used to conceptualize social provisions and thus, is used to measure stakeholders' social nudge. The results imply that social nudge comprises of antagonism as negative quality and affection, nurturance and reassurance of worth as positive quality. The positive and negative social nudge by the stakeholders along with the gender effect determines the support of stakeholders towards the family business successor. Moderation analysis further reveals that gender influences the stakeholders' positive and negative qualities.

GDO: Women's Working Conditions Following the Covid-19: Insights into Pinkwashing and Mansplaining 

Author: **Davide De Gennaro**, *U. of Salerno*

Author: **Francesca Loia**, *U. degli Studi di Napoli Federico II, Naples, Italy*

Author: **Gabriella Piscopo**, *U. of Salerno*

Author: **Paola Adinolfi**, *U. of Salerno*

The Covid-19 pandemic has had adverse global impacts both economically and socially. Among these impacts, the pandemic has unfortunately played a role in aggravating perpetual gender inequalities, which primarily affect women across the globe. In this context, this study developed four poetic inquiries to investigate how the lives of the working women and workplace relationships were changed during the Covid-19 pandemic in Italy. The results of the study indicate that pinkwashing and mansplaining are two critical phenomena that fuel the gender gap in organizations. Furthermore, this study provides pragmatic implications for policymakers by recommending the use of a diversity management approach to remove barriers causing the gender imbalance.

GDO: Gender Bias for the Organizational Citizenship Behavior Expectations in Gender-Typed Jobs in Turkey

Author: **Feride Pinar Acar**, *Middle East Technical U.*

Author: **Kubilay Gok**, *Winona State U.*

The present study aims to examine one source of gender bias. The extent to which expectations of in-role and extra-role behaviors may change as a function of the job occupant's sex and the sex-type of the job- in a non-Western cultural context. Following the predominantly North American extant literature, two hypotheses were proposed. First, communal organizational citizenship behaviors are more likely to be perceived in-role for women, whereas agentic organizational citizenship behaviors are more likely to be perceived in-role for men. Second, communal organizational citizenship behaviors are more likely to be perceived in-role for employees who hold female sex-typed jobs. In contrast, agentic organizational citizenship behaviors are more likely to be perceived in-role for employees who hold male sex-typed jobs. The hypotheses were tested using an experimental design in a Turkish sample of 210 senior-level undergraduate business administration students. Consistent with previous research, the results indicate that altruism is perceived as mandatory for women but not for men. Significant differences were not detected between observers' expectations for men and women and other dimensions of organizational citizenship behavior and between the holders of masculine and feminine jobs.

GDO: Role Models Or Disliked Opponents? Do Women Like To Work For Other Women?   

Author: **Maryem Salam**, *Indiana State U.*

Author: **Bahareh Javadizadeh**, *Indiana State U.*

Women are valuable leaders in organizations. Nevertheless, many women face various limitations attempting to climb the organizational hierarchy. This perception of upward limitation is termed "Glass Ceiling." In this study, we investigate the nature of women's experience working for a female boss to extend the current research that shows some women prefer working for male leaders rather than female leaders. The primary purpose of this paper is to explore the female subordinates' perception of their female boss and better understand the overall female-female relationship in the workplace. In addition, we suggest that women's inclination to work for male leaders is another factor that contributes to the glass ceiling phenomenon. Using qualitative methodology, we conducted in-depth interviews with 18 female subordinates. In addition, qualitative content analysis was used to analyze the data. Our findings cover different topics around the female boss-female subordinate relationship, including gender stereotypes, leadership styles, and charismatic leadership.

Determinants of Women's Representation on Boards

Session Moderator: **Ricardo Gimeno**, *Banco de España*

GDO: **The Gender Diversity Imitation Game: The Role Of Board Interlocks**   

Author: **Ricardo Gimeno**, *Banco de España*
Author: **Ruth Mateos De Cabo**, *U. San Pablo-CEU*
Author: **Patricia Gabaldon**, *IE U.*
Author: **Pilar Grau**, *U. Rey Juan Carlos*

We show the role that board interlocks play in the diffusion of company strategies on the proportion of Women on Boards. We analyze two networks of more than 12,000 American and 6,500 European companies from 1999 to 2015. We obtained evidence that companies imitate each other on appointing women to boards. Results point towards mimetic adaptation whereby those companies with a higher proportion of women on boards experiment a pressure to reduce it further than when the proportion is lower, and the pressure is to improve it. This asymmetry is the result of competing forces within the interlocking directorates, where the opposition to change that comes from some actors in the board networks obstruct faster diffusion. Finally, we observe how this asymmetric behavior vanishes in the presence of strong coercive pressures, such as mandatory gender quotas, although not in the presence of gender diversity recommendations in countries' corporate governance codes.

GDO: **When the Going Gets Tough: In-group Bias and Board Gender Diversity in the Wake of Economic Shocks (WITHDRAWN)**

Author: **Shibashish Mukherjee**, *EMLYON Business School*
Author: **Sorin Kramer**, *U. of Exeter Business School*

Despite substantial benefits to organizations, increasing gender diversity in corporate boards remains an elusive problem due to persistent in-group biases that favor men. We engage in this conversation by probing theoretically and empirically the effects of economic shocks on board gender diversity (BGD) and the role of female leadership along with regulatory elements (i.e., gender quotas and corporate governance codes) in tackling this bias. We test our predictions using a large dataset of 6,582 firms and 45,610 observations in a quasi-experimental design that captures the heterogeneity of economic crisis in an international sample of 23 countries. Our results confirm a robust decline in BGD in the wake of an economic shock and a complex interplay between female leadership and the regulatory environment. Our findings contribute to leadership research on the bias faced by out-group minorities within organizational upper echelons and female leadership's role in dealing with pervasive organizational biases.

GDO: **Female Directors, Culture and Governance Around the World**  

Author: **Hanh Thi Hong Nguyen**, *Lecturer in Accounting*
Author: **Collins Ntim**, *U. of Southampton*
Author: **Alaa Zalata**, *Lecturer in Accounting*
Author: **John Malagila**, *Lecturer in Accounting*

The proportion of female directors differs among countries. Drawing on institutional and social role theories, this paper investigates whether national governance quality (NGQ) and national culture (NC) can explain the differences in the appointment of female directors among countries around the world. Using 647 firms from 78 countries over the 2010 to 2017 period, the main findings show that both national culture and governance quality have influence on the appointment of female directors. We find further that the impact of national culture on the presence of women directors is moderated by national governance quality. Finally, the results support institutional and social role theories in terms of explaining the difference in appointment of female directors among countries. Our findings are robust to controlling for endogeneities and alternative measures of culture and female directors.

GDO: **Battle of the Classes. Social Class and Work Status in Determining Women Director Appointments**   

Author: **Yashodhara Basuthakur**, *Texas A&M U., Mays Business School*

The literature on women on board of directors provides limited insights on how the social class origins of the women executives influence their selection on corporate boards and their career trajectories. Gender research in management has narrowly focused on the disadvantages women experience in the workplace. However, women's unique and complex social identities with multiple group memberships, such as social class and work status, can lead to paradoxical experiences in the workplace, with women experiencing both advantages and disadvantages. To shed new light on the role of multiple identities for women executives in gaining board directorship, I leverage the social classification based on "caste" in India. I develop a theoretical model to show the influence of social class, work status, and social class mobility in director selection market for women executives. The model predicts four distinct profiles of women executives and their outcomes in the director labor market. By using the intersectionality of social class and work status, I propose that women executives with high work status and low social class will be able to display their authority and dominance in the workplace and craft credible professional executive images at work, and hence will be buffered from the stereotypic bias of incompetence due to gender and social class. In contrast, for women directors with high social class but low work status, high social class will mitigate the adverse effects of low work status by signaling their high social capital through their homophilic kinship ties. Moreover, the director appointments of women executives with lower work status will allow upward mobility of these director profiles and improve their future career prospects in the corporate elite.

GDO: Getting More Women on Boards: Cultural and Institutional Antecedents that Matter

Author: **Gillian Warner-Söderholm**, *USN School of Business, U. of South-Eastern Norway*

Author: **Patricia Gabaldon Quiñones**, *I.E*

Author: **Cathrine Seierstad**, *U. of South-Eastern Norway*

Author: **Carl Åberg**, *USN School of Business, U. of South-Eastern Norway*

The purpose of this study is to contribute to a better understanding of the multiple cultural and institutional antecedents which positively (or negatively) impact getting more women on corporate boards (WoCB). Many contemporary discourses about quotas vs. voluntary actions as drivers of greater gender diversity on boards are largely based on cross-country mimicking. These discourses often fail to integrate country-level configurations and conditions, as drivers or barriers to change. We address this gap by seeking to understand the complexity of such multiple antecedents to getting WoCB. Findings reveal multiple macro factors involved in getting WoCB. We test the complex inter-relations of factors such as legislation, cultural, societal, economic, political and institutional variables and their effects. Findings also highlight the influence of factors such as gender equality in political empowerment and institutional settings; government-regulated maternity and paternity leave; specific legislative or soft quota policies; and societal cultural variables, such as (low) power distance and (high) assertiveness, as drivers of getting WoCB. Empirical evidence underscores the need to consider and complement legislative policies to specific cultural and institutional conditions in each country. To help policymakers, we provide insights into which multiple macro factors act as drivers or barriers in their organizations or societies for getting more WoCB. This will help decision makers in organizations or policymaking bodies to match gender diversity goals to the multiple country-level conditions they need to navigate.

Gender Diversity in Organizations: Understanding Barriers and Designing Effective Interventions

Gender Diversity in Organizations

Presenter: **Ashley E. Martin**, *Stanford Graduate School of Business*

Presenter: **Aastha Chadha**, *NYU Stern School of Business*

Presenter: **Julia Bear**, *Stony Brook U.-State U. of New York*

Presenter: **Linda Chang**, *The Wharton School, U. of Pennsylvania*

Discussant: **Lisa Michelle Leslie**, *New York U.*

Companies collectively spend billions of dollars on diversity initiatives each year, which are designed to improve the workplace experiences and outcomes of women and other groups that face disadvantage in society. Despite these efforts, women remain underrepresented in the upper echelons of organizations and receive lower pay and promotion rates than equivalent men. The four papers in this symposium use a range of methodologies to advance understanding of why women experience worse career outcomes than men do and what can be done to foster gender diversity and equity. Specifically, the first two papers provide new insight into the complicated ways in which gender stereotypes create career barriers for women (Martin & Flynn; Chadha, Leslie, & Manchester) and the second two papers investigate innovative interventions for facilitating women’s career success (Bear, Pinkley, Barsness, Mazei, Bhatia, & Slesman; Chang, Rai, & Milkman). As a set, the papers provide new insight into how gender stereotypes constrain gender diversity and equity, as well as nuanced interventions for removing the barriers women face in advancing their careers. The symposium will conclude with an integrative discussion among participants and audience members.

HCM: Understanding the Effect of Research on Hospitals Performance: The Complementary Role with HIT  

Author: **Antonio Garcia Romero**, *IE U. - IE Business School Madrid, Spain*
Author: **Josep A. Tribo**, *Stevens Institute of Technology*

Hospitals are knowledge-centered organizations where technology and research are factors of central importance in their operations and performance. In this study, we propose that research in hospitals is pivotal, first, to improve hospitals' performance in terms of reductions in readmission and mortality rates, as well as in their overall risks measured through the Malpractice Insurance Premium (MIP). Second, research complements technology to improve hospital outcomes. We provide evidence supporting these results using a panel data set comprising 189 Spanish public hospitals with 1,120 observations for the period from 2001 to 2009. Our findings add new evidence on how research may contribute to a more sustainable and affordable healthcare system by highlighting its key role not only in improving hospitals' performance but also in making health technology more efficient. These results constitute a helpful piece of evidence for advising policymakers and hospitals' managers.

HCM: Robotic Technologies and Well-being for Older Adults Living at Home   

Author: **Gloria Ge**, *Griffith Business School, Griffith U.*
Author: **Stephanie Christine Schleimer**, *Griffith U.*

The purpose of this study is to investigate the benefits for aged care providers to add affordable robotic technology in their services packages to enhance the well-being of older adults from culturally and linguistically diverse (CALD) backgrounds who choose to live at home. This study, adopting a Transformative service research lens, was performed with a group of Australian older adults from CALD backgrounds aged on average 70 years old. In total, the study conducted four rounds of home trials with three different, commercially available robotic technologies from January to November 2020, each trial lasted seven days. The findings reveal that older adults from CALD backgrounds are open to learning about new technologies and can successfully interact independently with multiple robotic technologies in their own homes. Further, our results indicate that robot technology has the potential to increase the well-being of these older people. The results show that technology can enhance a sense of belonging, independence, and quality of life while living at home. Research limitations/implications - This study shows a promising future involving the use of available technology to assist older people from CALD backgrounds to lead a better life at home. Aging at home can be central to a person's sense of identity and independence; this study is a big step towards a new aged care system that is sorely needed in a society that experiences a rapidly aging population.

HCM: New Technologies to Change Work: The Creation of Professional Identity and Legitimacy 

Author: **Jette Ernst**, *Roskilde U.*
Author: **Kasper Elmholt**, *Aalborg U.*

Studies of professionals in organizations have highlighted the importance of building and maintaining a mandate, and have proposed that many professionals face difficulties defining their differentiating skills and knowledge in the context of new technologies. In this paper, we examine how the influx of new technology and robots in particular, influence the professionalization struggles and strategies by the Danish medical laboratory scientists (lab scientists), which we term a marginalized professions due to its weak professional status in the healthcare field. We examine how the professional project and professional capital is constructed and put to work by the association of the lab scientists as we underscore the important yet overlooked role played by associations in shaping how new technology may be coupled to the professional project. Using a theorization inspired by Bourdieu in particular, we show how robots may pose both an opportunity and a 'wicked' problem for professionalization. We conclude by discussion these contributions and outlines options for future research.

HCM: A New Frontier: Patients as Sources of Creative Ideas for Health Care Improvement.

Author: **Yuna Lee**, *Columbia U.*
Author: **Rachel Grob**, *U. of Wisconsin, Madison*
Author: **Ingrid Nembhard**, *The Wharton School, U. of Pennsylvania*
Author: **Dale Shaller**, *Shaller Consulting*
Author: **Mark Schlesinger**, *Yale U.*

Achieving patient-centered care requires reimagining aspects of care delivery and invites innovation possibilities. Eliciting creative (novel and useful) ideas from patients may enrich innovation with distinct information on experience, emotions, and needs. This research examines the potential of systematically elicited creative ideas to catalyze innovation in ambulatory care. Drawing on literature on creativity and user-based innovation, we developed and tested a survey approach to elicit patients' creative ideas for health care improvement. First, ideas extracted from 600 narratives from a representative sample were categorized thematically and analyzed for impact on closed-ended patient experience scores. Next, 1,053 narratives were collected from patients in one ambulatory care system, and we applied an innovation-focused coding schema. Patients' creative ideas addressed care experiences broadly and were significantly associated with closed-ended patient experience scores, which suggests perceived improvement gaps and idea sharing are correlated. Ideas provided information on solutions, problems, exemplars, and aspirational change, with high levels of specificity. Reframing patient participation at the beginning of the innovation process situates patients in a rare and powerful position of informing agenda setting. This approach expands our view on engagement by reimagining patients as a unique source of expertise to achieve patient-centered care.

HCM: An Expanded 4I Framework to Conceptualize Inter-Organizational Learning in the Global Health Sector

Author: **Breanna K. Wodnik**, *U. of Toronto*
Author: **Meena Andiappan**, *U. of Toronto*
Author: **Jim Lavery**, *Emory U.*
Author: **Erica MC Di Ruggiero**, *U. of Toronto*

Though calls to improve learning in health systems have been increasing in recent years, the literature for learning in the global health sector is sparse and, to our knowledge, a conceptual model for organizational learning in the field has not been identified. This article proposes an expansion of the 4I framework for organizational learning to guide the creation, retention, and transfer of knowledge within and across global health organizations. Specifically, two additional levels are added to the framework to account for inter-organizational learning in the highly collaborative field: 1) consideration of learning pathways across organizations via formal or informal partnerships and communities of practice, and 2) the addition of a macro level 'coordinating body' (e.g., the World Health Organization). Two additional processes are proposed by which inter-organizational learning occurs: interaction across partnerships and communities of practice, and incorporation linking global health organizations to coordinating bodies. Organizational politics play an important role in determining why some insights are institutionalized while others are not. The roles of the episodic influence and systemic domination forms of power are considered in the proposed additional organizational learning processes. The modified '6I' framework may provide a basis for assessing and implementing organizational learning approaches in global health programming.

HCM: Of Novices and Experts: Settling Expertise Differences Following a Hospital Merger

Author: **Karla Sayegh**, *U. of Cambridge*

HCM Division Best Paper
HCM Division Best Paper Based on a Dissertation
William H. Newman Award Nominee

While much is known about expertise integration across different occupations, researchers have paid less attention to how expertise integration occurs when distinct groups from the same occupation need to work together. This study examines how communities of experts in a single occupation settle their practice differences and converge (or not) on common practices following a hospital merger. We conducted a two-year ethnographic study of how two neonatal intensive care units belonging to Canada's largest hospital network synchronized their care practices in a merger. Contrary to expectation, we find that novices, a group that usually has the lowest power and status in an organization, may play a pivotal role in challenging differences and enhancing an organization's ability to improve expert practices in the context of a merger. Successfully standardizing practice may entail the enactment of rules that reflect best practices and accepted scientific evidence in the occupation's explicit body of knowledge; however, while scientific knowledge provides a foundation for settling differences, experts often push back against rules because working to them diverges from the established and tacit ways by which experts perform their work (i.e., through intuition and judgement based on experiential knowledge). Thus, managers may need a complex repertoire of interventions to facilitate practice convergence, but in the process, ironically, experts may have to regress to working according to rules, much as novices do in their quest to become an expert.

Author: **Doug Whitman**, *Webster U.*

THE RELATIONSHIP OF REGISTERED NURSE STAFFING AND NURSING HOME QUALITY MEASURE STAR RATINGS ABSTRACT Today's nursing homes are under immense pressure from government regulators to improve quality while the government simultaneously tightens reimbursement rates. These two forces squeeze nursing home operations. The question facing nursing home administrators is how to improve quality as measured by the government and healthcare organizations. This study looks at the association of registered nurse staffing ratios (RN Ratios) with quality measure star ratings in U.S. nursing homes. This research project fills literature gaps. Existing literature found improved nursing home quality correlates with more RNs, but those studies used self-reported data and typically considered only two or three quality measures. This study used recently released electronic payroll data to report nursing labor hours more accurately, and it utilizes the government standard of 17 quality measures that make up the star ratings. This study uses the Resource-Based View of the Firm theory with the Donabedian structure/process/outcome framework to analyze the relationship of RN staffing mix with quality measure star ratings. This paper utilized ordered logistic regression to examine the relationship between RN staffing and quality measure star ratings. This research project used 2017-2019 data sets from LTC Focus, American Community Survey, CMS Medicare cost reports, CMS Payroll-Based Journal, and CMS Nursing Home Compare archives. The final analytic sample was 13,406 unique nursing homes. This study determined that a higher proportion of RNs was correlated with improved quality measure star ratings.

MC: **Artificial Intelligence and Human Resources** 🌐

Author: **Franoise Chevalier**, *HEC*

Artificial intelligence (AI) has only recently been adopted in human resources (HR). What does this mean in concrete terms? What AI practices have been developed in the HR function? And what are the related risks? This chapter, prepared on the basis of qualitative interviews with HR directors at large corporations, sheds light on the various ways in which AI is transforming HR (administrative aspects, recruitment, training, motivation, etc.). It becomes clear that these practices must be examined critically, with reference to the issues of HR data, the risk of gadgetization, and the transformation of innovation.

Author: **Jean-Michel Plane**, *U. Paul Valery, Montpellier*

Author: **Laurent Cappelletti**, *LIRSA-Cnam Paris*

Winner of the Benedictine University Award for Outstanding Paper on Ethical Issues in Consulting

The concept of situation awareness, still little used in management science, can play an important role in the decision-making process of public managers. This contribution focuses on the role of public managers, and more specifically local managers, in the transformation of the Public Service. It seeks to show that a manager who has "good situation awareness" is likely to develop more effective managerial practices.

“That’s So ‘Meta’”! Metacognitive and Integrative Research

Session Moderator: **Peter Thomas Bryant**, *IE Business School*

MOC: [Digitally Augmented Metacognition and the Prospects for Autonomous Thought](#) 

Author: **Peter Thomas Bryant**, *IE Business School*

To preserve autonomous thought in a digitalized world, human and artificial agents must learn to collaborate in digitally augmented metacognition, meaning to monitor and manage their own cognition. Artificial agents are advancing rapidly in these respects and are increasingly capable of fast metacognition. However, human processing is often relatively simplified and sluggish. Indeed, natural metacognition often relies on habit, routine, and social docility. When both types of agents combine, therefore, artificial functioning could be complex, fast, and precise, while human functioning is relatively simple, sluggish, and heuristic. The combined result could be metacognitive dysfunction. Either both agents will diverge and conflict, or one might overwhelm the other. My paper explains the mechanisms which drive these effects and their consequences for autonomous thought.

MOC: [Integrating the Accuracy and Time Dimension of Foresight](#) 

Author: **Benedikt Alexander Schuler**, *U. of St. Gallen*

Author: **Johann Peter Murmann**, *U. of St. Gallen*

Author: **Marie Beisemann**, *TU Dortmund U.*

Judgmental forecasting research has demonstrated that forecasters differ in their foresight—their ability to consistently forecast future states of the world accurately. However, the conceptualization of foresight underlying this research stream focuses exclusively on accuracy and thereby, neglects the time dimension of foresight. We develop a reconceptualization of foresight that integrates the dimensions of accuracy and time. To provide the theoretical basis for this integration, we propose a forecasting framework suggesting that forecasting future states of the world becomes easier over time as the availability of signals, which enable forecasters to forecast future states of the world more accurately, increases over time. Therefore, we reconceptualize foresight as the ability to forecast future states of the world accurately and early. To operationalize this reconceptualization of foresight in forecasting tournaments, we propose the time-weighted Brier score (TWBS), which weights errors made closer to the event horizon more heavily. We prove analytically that the TWBS is a strictly proper scoring rule that represents a mathematical generalization of the Brier score (BS). Furthermore, we show in a simulation study that the linear and square root TWBS, which weight the forecast errors over time heavier according to the linear and square root function, measure the true foresight of persons better than the BS under various theoretical signal trajectories. Taken together, we contribute to the emergent literature on foresight by providing a theoretical framework, reconceptualization, and generalized operationalization of foresight that integrate the dimensions of accuracy and time.

MOC: [Unconfusing the Uncertainties: A Structured Typological Approach](#) 

Author: **Richard J. Arend**, *U. of Southern Maine*

We offer a new perspective on how to clarify uncertainty – a concept that has suffered from misunderstanding and misuse in management and the organizational sciences, especially in its theoretical modeling. We offer a structured approach to build our typological solution to the current confusion and challenges of analyzing uncertainty-related phenomena. We describe the main types and subtypes of uncertainty relevant to strategic decision-making and entrepreneurship. We explain and illustrate some of the dangers of remaining confused over uncertainty. We also describe possible opportunities emerging from clarity. Our analysis leads to recommendations to follow in order to make progress in what is an underappreciated complex concept.

MOC: [Human Connection and the Mystery of Being: Toward a Metaphysically Grounded Theory of Mutuality](#) 

Author: **Lyndon Earl Garrett**, *Boston College*

Author: **Ulrich Leicht-Deobald**, *Trinity Business School, Trinity College Dublin*

Author: **Lloyd Sandelands**, *U. of Michigan, Ann Arbor*

Human connection is a fundamental human need, which is severely lacking in modern society. Efforts to manufacture moments of human connection often fail, or even exacerbate feelings of disconnection. Relatedly, we argue that efforts to scientifically analyze and create formulas for achieving human connection are similarly missing the mark. Social science attempts to understand human experience by reducing it to observable and measurable properties, but fails to acknowledge the metaphysical nature of human being and human connection. In this manuscript, we first review constructs from different social science disciplines attempting to capture and articulate moments of human connection, including mutuality (relational therapy), *communitas* (anthropology), collective effervescence (sociology), and relational flow (psychology). We then introduce the philosophical perspectives of Martin Buber and Gabriel Marcel to elaborate a metaphysical view of human connection. We argue that human connection is fundamentally a mystery, as evidenced by two fundamental paradoxes that emerge when trying to conceptualize moments of human connection, as observed in the various concepts we review. We illustrate these paradoxes in the equally mysterious experience of play, a mode of being that animates human connection. We conclude by discussing implications of a metaphysical perspective on how we grapple with human connection in organizational studies.

Diverse Implications of Emotional Regulation at Work

Session Moderator: **Hannah Kunst**, *U. of Sydney Business School*

MOC: **The Role of Healthcare Leaders' Regulation of Followers' Emotions on Follower Wellbeing**

Author: **Hannah Kunst**, *U. of Sydney Business School*

Author: **Helena Nguyen**, *U. Of Sydney*

Author: **Anya Madeleine Johnson**, *U. Of Sydney*

Author: **Shenjiang Mo**, *Zhejiang U.*

Author: **Carolyn MacCann**, *U. Of Sydney*

Finalist for MOC Division Best Submission with Practical Implications for Organizations

Intrinsic emotion regulation (the process of regulating one's own emotions) is conceptually distinct from extrinsic emotion regulation (the process of regulating others' emotions). Much less is known about extrinsic regulation, especially in the context of how leaders influence followers' wellbeing. Drawing on resource perspectives, we argue that leader extrinsic regulation is a valuable socioemotional resource that followers can draw on to manage resource loss during times of high stress. We investigate the influence of two types of leaders' extrinsic regulation—reappraisal and suppression—on followers' burnout and job satisfaction. Leaders' reappraisal and suppression differentially influenced followers' wellbeing via the mediating role of positive and negative affect over and above the effects of followers' intrinsic regulation. Leaders' use of extrinsic reappraisal was most beneficial for followers with high levels of internal resources for coping with change, but extrinsic suppression was more detrimental. These results extend our understanding of extrinsic regulation in the important context of leaders and followers, and provide new insights into how and for whom different types of leader extrinsic regulation affect followers' wellbeing. These results have important practical implications in terms of developing more targeted leadership-based interventions to help manage the mental health and wellbeing of healthcare workers.

MOC: **Emotion Regulation and Strategic Decision Making: A Depletion of Resources Perspective** 

Author: **Mark P. Healey**, *U. of Manchester*

Author: **Adrien Querbes**, *U. of Manchester*

Author: **Mercedes Bleda**, *Alliance Manchester Business School, U. of Manchester*

A growing body of evidence shows that making strategic decisions is emotionally draining and requires managers to devote significant effort to regulating emotions. However, theoretical models of strategic decision have not kept pace with these developments and largely overlook the role of emotion regulation. In this paper, we adopt a resource depletion perspective to examine how executives' emotion regulation capabilities influence strategic decision processes and outcomes in dynamic environments. We propose that executive emotion regulation resources are vital for developing and sustaining novel representations of strategic opportunities, searching for distant solutions, and utilizing social systems for evaluating and selecting alternatives. Hence, the depletion of regulatory resources inhibits these processes and reduces the effectiveness of strategic decision making. By identifying interdependencies among executive emotion regulation capacity and the cognitive and social resources required for strategic decision making, our analysis extends understanding of the requirements for making strategic decisions in dynamic environments. We discuss implications for research on strategic decision making, executive job demands and dynamic managerial capabilities.

MOC: **I Feel Compassion for You but Not All the Time: The Aftermaths of Observed Ostracism**  

Author: **MARIA RASHEED**, *U. of Lahore*

Author: **Inamul Haq**, *ESC Clermont Business School*

Author: **Farooq Anwar**, *Lahore Business School, The U. of Lahore*

Author: **Marina Bourgain**, *ESC Clermont Business School*

This study focused on the aftermaths of observed ostracism with boundary conditions of dispositional envy. We examined two distinctive paths, which produce the observer's prosocial congruent (compassion) and incongruent emotions (schadenfreude) against the Victim of ostracism. Time lagged data (N=306) were collected from the employees working in Pakistan's various service sectors. The study's findings indicated that observed ostracism generates congruent and incongruent emotional reactions among the observers. Employees' feelings of compassion engage in the higher organizational citizenship behaviour, whereas employees with schadenfreude tend to enact ostracism with the victim. Both paths depend on boundary conditions of dispositional envy. The observers with high dispositional envy lead toward schadenfreude, Whereas observers with low dispositional envy lead toward compassion with the victim of ostracism.

Author: **Kapil Verma**, *Indian Institute of Management, Kozhikode*
Author: **Marilyn Ang Uy**, *Nanyang Technological U.*

The COVID-19 pandemic forced organizations to shift to remote working. From the employees' perspective, working from home comes with its own set of challenges. Because the boundary between work and home gets even more blurred, staying focused on the job while being at home takes a great amount of effort. Can psychological detachment from home help employees in adapting to work-from-home arrangements? Focusing on this question, we draw on the self-regulation theory to examine how and when psychological detachment from home influences daily work engagement. We conducted an experience sampling study across two work weeks with employees working from home in India during the reopening phase after the nationwide lockdown in 2020. Our findings indicate that psychological detachment from home helped employees by reducing next-morning work-related anxiety, but it also increased next-morning exhaustion. Work-related anxiety and exhaustion in turn mediated the effects of psychological detachment from home on daily work engagement. Moreover, the indirect effects of detachment from home on work engagement via exhaustion were significant only for employees with low trait self-control. Overall, our study yields theoretical and practical implications for work-from-home practices.

Cultivating high-quality social relationships is key to building a better workplace and a better society. Yet, in today's uncertain and fast-paced environment, modern organizations and their leaders are facing unprecedented challenges in doing so. This symposium comprises five papers that examine virtuous emotions, virtuous actions, and/or tensions inherent in social relationships to shed light on challenges in building positive and healthy workplace. The papers employ diverse theoretical perspectives (e.g., social learning theory, risk regulation theory, social comparison theory, ambivalence theories), theoretical foci (e.g., trickle-down effects, leader-follower congruence, a third party's countervailing reactions, the intra- or interpersonal influence of ambivalence), methods (e.g., scale development, multi-wave survey, experimentation, qualitative methods), and study populations (e.g., racial minorities, working mothers). Together, five papers in this symposium highlight some intriguing and complex issues related to virtuous emotions, virtuous actions, and tensions in social relationships and provide insights into the challenges and useful ways of relationship management.

Presenter: **Jerker C. Denrell**, *U. of Warwick*

Presenter: **Felipe Csaszar**, *U. of Michigan*

Discussant: **Joseph Porac**, *New York U.*

Organizational studies have long distinguished between two modes of information processing. On the one hand, an organization uses its past experiences in similar circumstances to guide present information processing to inform current actions. Experience accumulated in the past is embodied in various modes of cognition (Gavetti, Levinthal, & Rivkin, 2008), influencing individuals' abilities to attend to, encode, and make inferences about new information. In this way, an organization follows a "top-down" (Abelson & Black, 1986) or "theory-driven" (Felin & Zenger, 2017) approach. This approach is cognitive because what drives action is actors' beliefs about the linkage between the actions and their outcomes. On the other hand, the organization can let the current information context guide information processing in a "bottom-up" or "data driven" approach. In other words, the information itself shapes individuals' response to it in a "bottom-up" or "data driven" approach (Walsh, 1995). Because of the latter's focus on current experience, it is also known as the experiential approach. In an influential piece, Gavetti and Levinthal (2000) examines formally the role and interrelationships between these two alternative processes and specifically how cognition influences subsequent processes of experiential learning. They find that even a crude, lower dimensional representation of a more complex problem still acts as a powerful guide to initial search processes, thereby resulting in superior performance. The mechanism behind the performance benefits of cognition is that cognition may usefully "seed" a subsequent process of experiential learning, preventing experiential learning from wandering off in potentially dysfunctional directions. Subsequent to Gavetti and Levinthal (2000), theoretical work has developed in two distinct directions. One stream of work explores very different operationalizations of cognitive structures (Walsh, 1995), such as the degree to which of specification of structural or temporal interdependencies are specified (Martignoni, Menon, & Siggelkow, 2016), capability to consider temporal complexity (Rahmandad, 2008), or the number of environmental features considered by the decision maker (Csaszar & Levinthal, 2016). Cognition is typically modelled to be fixed, and thereby resistant to updating based on the current experience. In a related stream of work, scholars have devoted careful attention to model experiential learning processes beyond just simple local search in several related models. First, building on work on credit assignment from artificial intelligence and cognitive science (Sutton & Barto, 2018), scholars have modelled experiential learning as a gradual updating process, where outcome feedback is used to update priors (Denrell, Fang, & Levinthal, 2004; Fang & Levinthal, 2009; Rahmandad, 2008). Cognition, in the form of a mental model, evolves as a result of experiential learning, and serves as an alternative guide to action (Fang, 2012; Rahmandad, 2008). In this stream of work, cognition is experientially derived and thus backward looking. Despite these recent developments, the fundamental questions raised by Gavetti and Levinthal (2000) remain - How would forward looking cognitive search co-evolve with backward looking intelligence of experiential search? Second, what would be the performance implications of cognition? In addition, what would be the performance implications of having cognition that vary in fidelity in the action-outcome linkages? In the symposium, we would like to explore various directions of cutting edge research and fruitful future directions. What are some of the state-of-the-art research on how cognition and experience interacts in the process of organizational search? How do models of learning incorporate behavioral and rationality assumptions that are Mendelian in nature? What are the empirical correlates that ground the models predictions?

The world today faces multiple and serious crises including an economy devastated by a pandemic, climate change, continued racial injustice, growing inequality, species extinction, migration, and various ecological crises (Laszlo et al. 2021). These types of wicked problems are both transcultural and transnational that necessitate a new awareness that a systems change is needed. Thus, an opportunity exists to reset personal, organizational, and systems-level practices that enable the creation of future arrangements that help create a better world for all. To facilitate change, values such as love, connectedness, and compassion should be at the root of this new model to enable wise decision-making that builds on the best of what we know. However, the current ethos of education and management preferences intellect and reason over the innately human attribute of love. To correct the imbalance, we need to explore ways of preparing managers of the future to develop and embody love. This PDW aims to frame the personal experience of love in a cultural context to decolonize any differences regarding the idea of love. Our intention is to create opportunities for us to learn from each other about love by creating safe inter-subjective places. We wish to demonstrate how deep communal learning through the research process of Collaborative Autoethnography grows our personal understanding of love to enable wiser decision-making. Building a shared understanding of love might be a central energizing force in addressing wicked problem creatively, no matter the origins of the people involved.

NEU Best Symposium Award

Management research relies heavily on methods, most particularly surveys, that portray individuals' subjective reports of their experiences but fail to capture their deep-seated or subconscious reactions. For instance, survey research has been subject to scrutiny over validity issues, self-report bias, social desirability, and endogeneity, among other things. The purpose of this symposium is to expose management audiences to neuroscientific research methods and how they address some of the limitations of traditional research methods. Presenters will demonstrate the application of physiological and neurological methods to the examination of classic processes in management at the individual and the group level, including decision-making in social-exchange situations and group cohesion and effectiveness. Common to all presented research is that it utilizes these methods to uncover an important aspect of a management phenomenon. For example, one study examined the role of team members' heart rate in explaining group functioning, and another study tested how the ventrolateral prefrontal cortex is implicated in rational decision-making. Presenters will discuss ways to enhance the ecological validity and applicability of neuroscience technologies to management research. Beyond sharing findings from innovative research, we hope that this symposium will help illustrate to participants the feasibility of employing neuroscientific methodologies in management research.

The symposium aims to problematize the concept of work-family (WF) integration specific to the Indian cultural context. A sizable amount of scientific discourse points to the relevance of more culture-specific insights on the issue in order to alleviate concerns of the working population. While researchers in India have recently been pursuing this objective by adopting an emic approach, research on WF integration is still scant, needs careful evaluation and streamlining to devise solutions and to create more sustainable, culturally aligned, and relevant work practices. To this end, the symposium includes four India specific studies and approaches the subject from an individual perspective (eg., factors affecting employees' factual autonomy and role of resilience in dealing with work and family demands) as well as organizational policy (eg., empowering employees and leaders to set individual boundaries and the efficacy of telecommuting- the challenges and opportunities for employees and leaders). The studies discuss pertinent challenges in developing sustainable WF practices in India in order to instigate more debates, deliberations on the topic and propose pertinent future research directions and implications for employees and organizations.

Dear All, Welcome to our symposium "Sustainable Work Practices for Optimizing Work-Family Integration in India". The symposium aims to problematize the concept of work-family (WF) integration specific to the Indian cultural context. We also aim to provide specific input to the international audience and those who want to learn and do research in the Indian context. Looking forward to an enriching, engaging, and interactive symposium. If you have any questions or would like to contact us, you may please email us. Thanks and regards, Symposium Organisers: Mahima Raina - mraina@jgu.edu.in & Rupashree Baral - rupashreebaral@gmail.com; rupashree@iitm.ac.in

Stress, Loneliness, Gossip, and Procrastination

Session Moderator: **Katherine E. Ciarlante**, *U. of Central Florida*

OB: Testing the Effects of Stressor Trajectory on Counterproductive Work Behavior

Author: **Katherine E. Ciarlante**, *U. of Central Florida*

Author: **Mindy Krischer Shoss**, *U. of Central Florida*

Author: **Shiyang Su**, *U. of Central Florida*

Counterproductive work behavior (CWB) represents a significant threat to organizations and organizational stakeholders, such that understanding the processes driving employee engagement in deviant workplace behaviors is for essential for ensuring well-being at work. Although, evidence suggests that a variety of work stressors influence counterproductive behavior in the workplace the application of this research has been constrained by a lack of longitudinal studies, that investigate the relationship between stressors and CWB over time, and a failure to examine how within-person change in job stressors can influence between-person differences in CWB. Utilizing a random coefficient modeling (RCM) approach we seek to address this limitation by investigating how job stressor change or trajectory impacts employee CWB. Our dynamic research model explores how the strength and direction of changing job stressors (e.g., increasing or decreasing levels of stress) impacts both the frequency of employee CWB and CWB trajectory with a goal of enhancing our understanding of “why” and “when” employees are motivated to engage in CWB in response to changing work experiences. We also investigate the moderating effects of temporal focus (past, present, and future) and job preservation motivation on the relationship between stressor trajectory and CWB.

OB: I'll Do It Tomorrow: A Review of Procrastination in the Workplace and an Agenda for Future Research

Author: **Lifeng Zhong**, *School of Business, Renmin U. of China*

Author: **Xiao Wang**, *School of Business, Renmin U. of China*

In modern organizations, procrastination is prevalent. Although extant research has examined the causes of procrastination, these efforts are scattered across multiple disciplines. As a result, we lack a coherent understanding of why employees procrastinate. To address this issue, based on the review of previous research, the article proposes a definition of workplace procrastination and a comprehensive theoretical framework to explain how the contextual factors influence employees' behavior. Specifically, we argue that perceived task motivation and self-regulation serve as two independent psychological mechanisms influencing procrastination. The substitution effects between the two mechanisms in reducing procrastination are also discussed. Finally, future directions covering conceptualization, theory development and methods are discussed.

OB: Linking Workplace Loneliness to Workplace Territoriality: A Self-protection Perspective 

Author: **Qi Nie**, -

Author: **Xiao Chen**, *Guangdong U. of Foreign Studies*

Abstract: Based on the self-protection theory, this study hypothesizes that workplace loneliness induces employees' self-serving cognitions, which, in turn, leads to employees' territorial behavior. This indirect relationship may be mitigated by self-sacrificial leadership. The results of regression analyses based on a three-wave data from 243 leader-employee dyads showed that (1) employees' workplace loneliness was positively related to their territorial behavior; (2) employees' self-serving cognitions mediated the relationship between workplace loneliness and territorial behavior; and (3) self-sacrificial leadership negatively moderated the relationship between workplace loneliness and self-serving cognitions and the indirect relationship between employee workplace loneliness and territorial behavior through self-serving cognitions. Theoretical and practical implications are discussed.

OB: Picking “Pieces” to Play: Gossip as Mediator Between Perceived Organizational Politics and Employee      

Author: **Aamna Khan**, *Indian Institute of Technology Patna*

Author: **Richa Chaudhary**, *Indian Institute of Technology Patna*

Information gathering and validation (IGV) through gossip is of key importance for the employees as their survival in the organizations is sufficiently linked with the mapping of environment and behaving accordingly. However, only a handful of studies have sought to explore its significance in the organizational context. This study uses path analysis to test a model that posits perceived organizational politics (POP) has an indirect relationship with instigated workplace incivility (IWI) and organizational citizenship behaviour towards individual (OCBI) through the mediating effects of IGV. From the results of two field studies conducted in private (n= 408) and public sector (n= 239) organizations, we found that IGV mediated the relationship between POP and IWI in Study 1 and 2, whereas it mediated the relationship between POP and OCBI in Study 1 only. An additional analysis also lent support to our theorizing. In light of our findings, important implications for policy makers, HR managers, and leaders are discussed.

Helping Behaviors and their Consequences

Session Moderator: **Huan Xiao**, *Harbin Institute of Technology*

OB: How does the Fit between the Receiving and Giving of Helping Behavior Influence Workplace Well-Being

Author: **Huan Xiao**, *Harbin Institute of Technology*

Author: **Zhenduo Zhang**, *Harbin Institute of Technology*

Author: **Qin Chen**, *Harbin Institute of Technology*

Based on self-determination theory, the current study explored the effects of congruence in employees receiving and giving helping behaviour on workplace well-being from an actor-centric perspective. A two-wave questionnaire survey was used, and 202 matched surveys were collected. Polynomial regression with response surface analysis was used to examine the conceptual model. The results indicated that workplace well-being increased when the receiving and giving of helping behaviour were balanced at higher levels. In addition, the results highlighted an asymmetrical incongruence effect in that workplace well-being was not significantly different when the imbalance increased in the direction of either receiving or giving helping behaviour. We further explored the underlying self-determination mechanism through which the fit between receiving and giving helping behaviour affected workplace well-being by testing the serial mediators of basic psychological needs satisfaction and work meaningfulness. Our research deepens the understanding of the joint effect of receiving and giving helping behaviour on workplace well-being.

Paper is Available to Meeting Registrants Only.

OB: Helping or Ostracizing? Employee Responses to Coworker Anxiety Expression 

Author: **Diwan LI**, *Hong Kong Polytechnic U.*

Author: **Katrina Jia Lin**, *Hong Kong Polytechnic U.*

Author: **Bonnie Cheng**, *U. of Hong Kong*

Author: **Yidong Tu**, *School of Economics and Management of Wuhan U.*

While conventional research has shown that feeling anxiety yields a variety of negative outcomes, we know little about the consequences of expressing anxiety. Grounded in emotional as social information (EASI) theory, we develop and test a model to understand both the benefits and costs of anxiety expression at work from an observer perspective. We propose that, on the one hand, anxiety expression elicits observer's perspective taking, and further promotes more helping behavior towards the expresser (i.e., affiliative consequences); on the other hand, anxiety expression leads the observer to perceive the expresser as incompetent, and then respond with higher ostracism (i.e., social distancing consequences). We further hypothesize that rivalry between the observer and the anxiety expresser acts as the boundary condition, which affects the strength of these affiliative or social distancing consequences. One scenario-based experiment and one experience sampling study provide support for our predictions. Theoretical and practical implications are discussed.

Paper is NOT Available. Please contact the author(s).

OB: Observers' Moral Elevation and Helping Behavior Following the Abusive Supervision of Coworkers 

Author: **Benjamin Korman**, *U. of Konstanz*

Author: **Christian Troester**, *Kühne Logistics U.*

Author: **Steffen R. Giessner**, *Erasmus U. Rotterdam*

While previous studies have argued that observers of abusive supervision are driven by negative moral emotions (i.e., moral outrage) to help the victim but harm the perpetrator, we argue that positive moral emotions (i.e., moral elevation) can also motivate observers to help the victim and the perpetrator. A field study utilizing critical incident techniques provides support for our theory that, in addition to previously found relationships, observers of abusive supervision experience moral elevation (i.e., an admiration for virtue) when the victimized coworker stands up for themselves and opposes the abusive supervisor. Moral elevation, in turn, promotes benevolent behavior and increases observers' supervisor- and victim-directed helping. Together, our study unveils victimized coworkers as a potential source of moral elevation for observers and highlight when observers of abusive supervision may be motivated to act benevolently towards both victims and perpetrators of abusive supervision.

Paper is Available to Meeting Registrants Only.

OB: I Have Received More Help Than Others! A Social Comparison Perspective on Receiving Help

Author: **Huan Cheng**, *Huazhong U. of Science and Technology*

Author: **Weili Zheng**, *Wuhan U. of Technology*

Author: **Yuanfang Zhan**, *Huazhong U. of Science and Technology*

In the current research, we developed and tested a model of how and when receiving help social comparison influenced the recipient's job performance (i.e., interpersonal citizenship behavior, task performance). Based on social exchange theory and social comparison theory, we posited that receiving help social comparison influenced the recipient's feelings of gratitude, which in turn had a positive relationship with interpersonal citizenship behavior (ICB) and task performance. Further, we argued that the effects of receiving help social comparison were influenced by the recipient's psychological entitlement. Using data collected in three waves from 307 employees in China, we found that receiving help social comparison was positively associated with the recipient's feelings of gratitude while controlling for overall receiving help. Gratitude, in turn, benefited ICB and task performance. Moreover, high levels of psychological entitlement weakened the relationship between receiving help social comparison and the recipient's feelings of gratitude, and further weakened the indirect relationship between receiving help social comparison and the recipient's ICB as well as task performance via gratitude. Overall, these findings had the potential to extend our knowledge of receiving help literature by introducing a social comparison perspective.

How Culture Matters

Session Moderator: **Quan Hoang Nguyen Tran**, *U. of Tartu*

OB: Universal task and two faces of relationship orientation: organizational culture in East Asia

Author: **Quan Hoang Nguyen Tran**, *U. of Tartu*
Author: **Krista Jaakson**, -

In the present study, the authors proposed a novel scale OC_TSU for assessing organizational culture for East Asian countries, using the example of Vietnam. Following a step-wise mixed methods research with 52 interviews, experts' evaluations, and a survey of 228 working adults in three organizations in different sectors, the final scale comprises task orientation (8 items), unity orientation (3 items), and status orientation (3 items). Among the existing organizational culture scales, the latter two are unique. The present study furthers our understanding of workplace relationships in the Confucian socialist country in East Asia and how these influence organizational culture.

OB: Are the Verbal Charismatic Leadership Tactics Universal? An Empirical Investigation Across Cultures

Author: **Sirio Lonati**, *NEOMA Business School*
Author: **Nicolas Bastardo**, *KU Leuven*

Cross-cultural studies identified charismatic leadership as universally desirable. Yet, what does it take to be perceived as charismatic across all cultures? Relying on objective markers of charisma signaling (commonly known as charismatic leadership tactics; CLTs) developed in Western cultures, this manuscript investigates whether the preference and appreciation for CLTs is universal or culturally contingent. Building on an empirical framework that avoids methodological issues related to linguistic comparability, we focus on a highly consequential leader selection setting—U.S. presidential elections—and test whether candidates' use of CLTs affects voting choices of U.S. citizens with non-U.S. ancestries. Relying on secondary data covering 12 presidential elections and up to 23 different national ancestries, our findings suggest that CLTs tend to be appreciated by most cultural groups, albeit with some significant heterogeneity. Moreover, specific dimensions of national culture of origin (e.g., future orientation) predict the heterogeneous response to leaders' use of CLTs; however, these cultural dimensions are not always the ones documented by previous research on cross-cultural prototypes of charisma.

OB: Organizational Leadership and Culture in Bulgaria

Author: **Mariya A. Bobina**, *Western Illinois U.*
Author: **Diana Sabotinova**, -

The study of Bulgarian culture and organizational leadership was based on the application of the Global Leadership and Organizational Behavior Effectiveness (GLOBE) research instruments. Based on two surveys of 226 managers we created the profile of societal culture and the profile of leadership perceived as effective in that culture. We then compared the empirically derived results with the theoretically generated leadership profile for Bulgaria and partially confirmed the hypothesis that culture is predictive of effective leadership. The paper contributes to the scholarly discussion about culture's effects in leadership and to the analysis of managers' behaviors in a country that has been on a periphery of cross-cultural studies.

OB: How National Culture Influences the Speed of COVID-19 Spread: Three Cross-Cultural Studies

Author: **Lihua Zhang**, *Renmin U. of China*
Author: **Vipin Gupta**, *California State U. San Bernardino*
Author: **Xiaoyu Huang**, *California State U. San Bernardino*
Author: **Fu Yang**, *Southwestern U. of Finance and Economics*
Author: **Jiaming Zheng**, *Renmin U. of China*

Carolyn Dexter Award Nominee

The COVID-19 pandemic has affected 222 countries and territories around the globe. Notably, the speed of COVID-19 spread varies significantly across countries. This cross-cultural research proposes and empirically examines how national culture influences the speed of COVID-19 spread in three studies. Study 1 examines the effects of Hofstede's national cultural dimensions on the speed of COVID-19 spread in 60 countries. Drawing on the GLOBE study (House, Hanges, Javidan, Dorfman, & Gupta, 2004), Study 2 investigates how GLOBE cultural dimensions relate to the speed of the pandemic's spread in 55 countries. Study 3 examines the effect of cultural tightness in 31 countries. We find that five national cultural dimensions – power distance, uncertainty avoidance, humane orientation, in-group collectivism, and cultural tightness – are significantly related to the speed of COVID-19 spread in the initial stages, but not in the later stages, of the pandemic. Study 1 shows that the coronavirus spreads faster in countries with small power distance and strong uncertainty avoidance. Study 2 supports these findings and further reveals that countries with low humane orientation and high in-group collectivism report a faster spread of the disease. Lastly, Study 3 shows that COVID-19 spreads slower in countries with high cultural tightness.

Individuals' Role in Organizational Change

Session Moderator: **Tom Junker**, *Erasmus U. Rotterdam*

OB: [Agile Work Practices: Scale Development and Validation](#) 

Author: **Tom Junker**, *Erasmus U. Rotterdam*

Author: **Arnold Bakker**, *Erasmus U. Rotterdam*

Author: **DAJA Derks Theunissen**, *Erasmus school of Social and Behavioural Sciences*

Author: **Dylan Molenaar**, *U. of Amsterdam*

Building on team effectiveness and work design perspectives, the present study develops a novel Agile Work Practices Instrument (AWPI). This instrument measures the most common agile practices and further distinguishes them along the taskwork-teamwork continuum. Using data of 269 teams, we establish the psychometric properties and construct validity of the AWPI. Tests of measurement models and nomological networks supported the distinction between agile taskwork and agile teamwork. As hypothesized, agile taskwork related uniquely to emergent taskwork planning and team autonomy, while agile teamwork related uniquely to emergent teamwork planning and feedback. The AWPI sets the stage for more empirical research on agile working, beyond the software development context, where most agile concepts originated. By integrating team effectiveness and work design perspectives, we aim to clarify the meaning of the term “agile” for management researchers and practitioners.

OB: [Radical Change at the Individual Level: A Systematic Review and Conceptual Model](#) 

Author: **Raghid Al Hajj**, *Gulf U. of Science and Technology*

Author: **John G. Vongas**, *Ithaca College*

In recent years, there has been a surge in research interest on radical change in the workplace. As organizational change becomes more radical, frequent, and unpredictable, our knowledge of the mechanisms that govern change at the ‘micro’ or individual level—rather than the ‘macro’ or organizational level—remains limited. In this paper, we provide a systematic review of the literature and provide a novel theoretically based definition of individual-level radical change. Using attitudes to change as a theoretical framework, we then present a conceptual model that combines cognitive (e.g., cognitive dissonance), emotional (e.g., emotional intelligence), and motivational (e.g., goal concordance and commitment) dimensions to explain how an individual’s goal pursuit and achievement is influenced by this type of discontinuous change. We further differentiate between agents (i.e., those actively responsible for the change) and recipients (i.e., those experiencing but not initiating the change), two role occupiers who differ in how they perceive and react to radical change. Finally, we conclude with valuable advice for both researchers and practitioners and urge them to rethink their tendency to use the term ‘radical change’ as a clichéd expression.

OB: [Employee Participation in Change Planning - A Buffer Between Change Impact and Change Attitudes](#) 

Author: **Ana Alina Tudoran**, *Aarhus U.*

Author: **Thomas Jönsson**, *Aarhus U.*

Author: **Anna B. Holm**, *Aarhus BSS, Aarhus U.*

This study investigates the dynamic development of experiences and attitudes toward a large-scale organizational change at individual and occupational group levels. The research examines whether attitudes to change deteriorate along with employees’ experiences of the personal impact of change. Moreover, the study investigates the moderating role of employee participation in change planning decisions on the relationship perceived impact - attitudes towards the change. Employee panel data (n = 901) were gathered at two-time points, three years apart. We applied a two-wave latent change score model to address change and time-sequential associations between and within constructs and across four occupational groups. The findings show that the increased personal impact of the organizational change is related to worsened attitudes towards the change, with significant variation between occupational groups. Moreover, increased perceived influence on plans and strategies for organizational development moderates the relationship between perceived personal impact and attitude towards organizational change: employees that gain/lose power on organizational change planning develop fewer/more negative attitudes the more they become impacted by the changes.

OB: [Paradoxical Leadership: An Episodic-Circadian Approach](#) 

Author: **Stefan Volk**, *U. Of Sydney*

Author: **Christopher Barnes**, *U. of Washington*

Paradoxical leadership, the integration of leadership behaviors that are seemingly contradictory, but nevertheless interdependent, is becoming increasingly important in today’s complex and turbulent business environments. Despite evidence for the positive consequences of paradoxical leadership, little research has examined how and when leaders can effectively integrate opposing leadership behaviors. Two of the most fundamental paradoxical challenges that leaders face include the need to integrate control and empowerment, as well as reconciling collective rules with followers’ individual needs. In this article, we advance a circadian theory of paradoxical leadership that outlines how leaders can combine episodic thinking with circadian principles to achieve a dynamic equilibrium between the opposing poles of these two leadership paradoxes. Our temporal framework explains how leaders can effectively structure paradoxical leadership episodes that leverage their own and their followers’ circadian processes within a broader framework of situation-driven leadership. In doing so, we contribute to future research by providing a novel circadian perspective on how paradoxical tensions in organizations can be reconciled within the constraints of situational demands.

Participant: **Lauren D'Innocenzo**, *Drexel U.*
Participant: **Cynthia Kay Maupin**, *U. of Mississippi*

This symposium features emerging developments in emergent leadership research, reflecting some of the following questions: What role can computational modeling play in exploring different theoretical perspectives of emergent leadership? What do the patterns of leader emergence within team networks reveal that single occurrences of the phenomenon cannot? What influence do cultural norms have on the effectiveness of informal leadership status-seeking behaviors? Of what importance is the gender of those being evaluated for emergent leadership status, and what about the evaluator? More specifically, the studies included in this symposium focus on utilizing agent-based computational modeling as a way to compare social-cognitive and social-interactionist perspectives of leadership emergence (Acton, Foti, & Lord), how social network analysis can reveal patterns of emergent leadership in teams, and how maintaining multiple leader relationships impacts team member stress (Choudhury & Maupin), how high-ability team members' self-promotive behaviors are interpreted differently based on cultural norms (Liu & Hanna), and how the gender of those granting leadership status, as well as the gender composition of informal teams, is predictive of emergent leadership evaluations (Farro, Kukenberger, & D'Innocenzo). The discussant, Dr. William Gardner, will discuss themes across studies, highlight future research directions, and lead an interactive discussion between presenters and the audience.

Participant: **Gillian Ku**, *London Business School*

This symposium brings together a diverse group of management scholars to provide novel answers to how employees can navigate the increasingly permeable boundary between work and nonwork aspects of their lives. Advances in technology and the proliferation of flexible work arrangements promised a better work-nonwork balance. However, increased work flexibility has ironically resulted in employees feeling overwhelmed, burned out, and unable to disconnect from work. The four papers in this symposium expand the work-nonwork literature by examining how individuals transition between work and nonwork. First, Arianna Beetz, Nancy Rothbard, and Sigal Barsade demonstrate how the affective experience of the commute to and from work has important consequences for employees' attitudes and behaviors at work as well as for employees' experiences after work. Second, Benjamin Rogers, Ovul Sezer, Trevor Watkins, Katherine DeCelles, Chen-Bo Zhong, Michael Norton, and Hal Hershfield show how after-work rituals help employees cope with job stressors by prioritizing self-care and recovery activities. Third, Vanessa Conzon and Ruthanne Huising reveal the importance of studying the interplay between temporal and relational boundaries across the work and nonwork domains. Finally, Laura Giurge, Stephanie Chan-Ahuja, and Gillian Ku show that employees experience greater subjective well-being, work-life balance, and task performance when they collectively consider work and nonwork activities and create temporal boundaries around them. The key takeaway of this symposium is that employees can positively shape their well-being and work outcomes by proactively crafting how they transition between work and nonwork.

I could not indicate my answer to two questions so answering them here. Namely, for "Is your session by invitation only", the answer is No. And for "Does your session require breakout rooms?", the answer is No. Thank you!

Presenter: **Mariana Toniolo-Barrios**, *Simon Fraser U.*

Management scholars have called for an increase in research on employees who have mental health challenges at work (Follmer & Follmer, 2021; Follmer & Jones, 2018). Additionally, research conducted during the COVID-19 pandemic has illuminated workplace factors that may hinder employee mental health (e.g., Andel et al., 2021; Caldas et al., 2020). To answer these calls and further expand on our understanding of employee mental health, this symposium brings together a group of scholars who are studying topics related to both common and chronic mental health challenges faced by employees. Specifically, this symposium introduces the following novel perspectives. First, the symposium expands our understanding of how discrimination influences mental health conditions, and it questions assumptions around offering mental health support in the context of racial and gender discrimination. Second, the symposium considers the importance of industry and work characteristics in the emergence of mental health concerns. Last but not least, the symposium introduces novel recommendations for managers, educators, and employees on ways to support employees facing mental health challenges.

Participant: **Jing Zhang**, *California State U. San Bernardino*

Research devoted to the intersection of work and family has achieved increasing attention over the past several decades (Allen, Johnson, Kiburz, & Shockley, 2013; Kossek & Lautsch, 2018). An abundance of management research on work-family conflict, family-work conflict, flexible work policies, work-from-home arrangements, suggests that there is substantial need to understand how employees experience and negotiate the work/life interface (Greenberg & Landry, 2011; Premeau, Adkins, & Mossholder, 2007; Park, Liu, & Headrick, 2020). Issues around employees' work-family dynamics have become increasingly salient during the COVID-19 pandemic as many employees saliently balanced work and family demands with oftentimes fewer support resources (Vaziri, Casper, Wayne, & Matthews, 2020). This symposium brings together a group of researchers investigating issues around the work/life interface with the intent of adding to this practical and theoretically important conversation. Specifically, this symposium highlights several novel perspectives on understanding work-family intersection. First, through adopting a temporal lens, it explores how employees may cognitively switch between highly integrated work and family domains and the outcomes of such switches over time, and how employees' work-family balance changes over time. Second, from the perspective of workers' identity and social gender roles, the symposium examines how partners' evaluation of workers' performance or perception of workers' interrole conflict affects workers' outcomes such as performance, job satisfaction, and relationship satisfaction. Last but not least, this symposium takes workers' family members into consideration and demonstrates the spillover effect of workers' work-related experiences (such as burnout) on their children.

People emerge as leaders both because they claim leadership and because others grant them leadership (DeRue & Ashford, 2010). Although this line of research has been transformative, an established measure and empirical investigation of this process is currently lacking. To illustrate, past work operationalized leadership claiming and granting through other constructs, such as participation and influence. The current symposium seeks to present emerging research examining the empirical process of leadership claiming and granting at various levels of analyses (i.e., dyadic, individual, and team).

The focus of this proposed symposium is to examine the effects of experiencing and expressing emotional ambivalence and compassion at work on important outcomes, and critically, how these effects vary depending on gender. We join four investigations that document new phenomena at the nexus of gender, emotional experience, emotional expression, emotional display rules, leader effectiveness, leader behavior, leadership emergence, and performance outcomes.

Presenter: **Paul Gouvard**, *USI (Lugano)*

The symposium offers an integrated and updated understanding of the key gaps in organizational culture theory and how organizational researchers might address them, by showcasing novel and cutting-edge methodological approaches and highlighting how they can inform culture theory building. The papers focus on two key theoretical gaps in the existing literature: the microfoundations of how organizational culture emerges and the extent to which it is shared across different groups, and the role of organizational identity as perceived by various audiences and how it influences individual and firm performance. Using a range of methods, including online experiments, Q-sort assessments of culture, natural language processing (henceforth, NLP) in the form of topic modeling, and computational simulations, papers 1, 2, and 3 focus on the mechanisms leading to the emergence of shared cultural understanding, or the lack thereof. Then, using NLP in the form of word-embedding, paper 4 offers insights on how organizations may leverage atypicality with regards to competitors to achieve superior outcomes in their competitive landscapes.

Over the last decade, research on positive psychology has skyrocketed. One area in particular that has gained attraction is compassion. In short, compassion is the desire to alleviate suffering, a common yet detrimental aspect to an individual's personal and professional life. Suffering can take on a variety of forms – from feeling undervalued by your supervisor and organization to grieving the death of a family member. This experience can happen inside the walls of the workplace or spillover from an individual's personal life. Regardless of where, when, and how an individual suffers, an increasingly important question that is asked is “should businesses care?” (Worline & Dutton, 2017). Many would argue yes, as compassion helps from both a strategic level – increasing an organization's overall bottom line (Worline & Dutton, 2017) – and an individual level – protecting an employee from negative experiences (Reizer, 2019; Schabram & Heng, 2021) and improving their overall well-being (Zessin, Dickhauser, & Garbade, 2015). Despite that the topic is both “timely and timeless,” it is surprising that there is a lack of attention given to compassion in the workforce. A recent review illustrates that the healthcare industry dominates the majority of research on compassion (Dodson & Heng, 2021). While research in that setting may be important, it is also useful to explore compassion from a business lens. For instance, encouraging compassion in the workplace may appear beneficial, but research on helping professions demonstrates that it can lead to compassion fatigue (Boyatzis, Smith, & Blaize, 2006; Figley, 2002). Thus, an important question to consider is what does compassion mean in the workplace? Does it result in positive organizational outcomes, but come at cost to the individual? Further, the literature on compassion has shown to be empirically messy or inconsistent (Dodson & Heng, 2021). The literature has teased out two components of compassion: self-compassion (kind acts toward the self; Neff, 2003) and other-compassion (kind acts toward others; Lazarus, 1991). The former has been studied as a state (Leary, Tate, Adams, Allen, & Hancock, 2007), trait (Anjum Liang, Durrani, & Parvez, 2020), and process (Schabram & Heng, 2021), while the latter has been conceptualized as a process (Dutton, Workman, & Hardin, 2014). Taken together, these shortcomings pave the way for future research to investigate the implications of compassion in the organizational context and conceptualizations and comparisons of the constructs. This symposium seeks to investigate the role that self- and/or other-compassion play in addressing employee suffering – a common yet understudied area. Our symposium includes five papers that collectively make three important contributions. First, we contribute to the compassion literature by expanding scholars' knowledge to both the antecedents and consequences of compassion, which shows that compassion can be harnessed in organizations and can benefit the individual employee as well as surrounding employees or a diverse workgroup. Second, we explore various conceptualizations of compassion, which paints a clearer picture on how compassion can be utilized and studied in the workplace. Third, we consider the role that compassion may have for the self and other employees, highlighting both the potential upsides and downsides from an organizational perspective. We hope this symposium will encourage future research and stimulate further discussion around the importance of studying and practicing compassion at work.

ODC: [An Examination of the Relationship between Organizational Memory and Absorptive Capacity](#) 

Author: **Heloisa Aragao**, *U. of Texas At Arlington*

Author: **Liliana Pérez-Nordtvedt**, *U. of Texas At Arlington*

The organizational memory (OM) and absorptive capacity (AC) constructs surfaced in management science the same year. Yet, AC has received considerably more attention in the organizational learning literature, even though both constructs are important to understanding and explaining organizational learning and change. We suggest that because both constructs came from cognitive psychology and share the notion of individual memory. In this paper, we make a clear distinction between them. Importantly, we suggest how these two constructs relate to one another, how they fit in the nomological network, and their distinct role in affecting organizational change and learning. In doing so, we generate testable propositions for empirical examination in future research.

ODC: [Inside Persistent Strategic Renewal: A Process Study of Structural Ambidexterity](#) 

Author: **Justin Harlan**, *NHH Norwegian School of Economics*

This article shows how repeated separations and reintegrations of ambidextrous innovation units becomes a mechanism for persistent strategic renewal of an established firm. A process model is developed showing distinct stages in the ambidextrous process and the different dynamic capabilities occurring at each stage. Learning and improvement after each successive cycle of the ambidextrous process is also illustrated, as well as cross-unit linking mechanisms. I draw on a 25 year retrospective longitudinal analysis of an embedded-case study of three historical ambidextrous units within the same firm. The findings contribute to extant research by developing a link between structural ambidexterity, dynamic capabilities, strategic renewal, and persistent innovation through an in-depth process model.

ODC: [Collective Flourishing as an Appreciative Process of Organizing: A Team Development Approach](#)   

Author: **Ignacio Pavez**, *U. del Desarrollo*

Flourishing represents the full potential of a system, serving as a guiding force to build more virtuous, innovative, resilient, and highly effective organizations. It is a desired state for most companies, and there is an increasing interest in knowing how it can be enacted. Unfortunately, most studies have approached it as an ideal condition or end state, which has limited our capacity to explore its dynamic or unfolding nature. I propose to overcome this limitation by exploring the notion of flourishing as an appreciative process of organizing, which I describe as an ongoing set of interactions and narratives that help to perceive and enhance the full potential of social systems. To explore this, I implemented an appreciative team development program in five different teams, with the aim of exploring the organizing and sensemaking processes that allow the emergence of flourishing states. In doing so, I use grounded theory methods to build a process model of positive change in teams, which offers interesting insights as to: (1) understanding flourishing from a process perspective; (2) recognizing the processes that characterize an “appreciative mode” of organizing and sensemaking; and (3) illuminating the micro foundations of positive organization development at the team level.

ODC: [The Comparison of Two Different Organizational Mechanisms to Facilitate the Value Co-Creation](#)

Author: **Chan Hsiao**, *National Yang Ming Chiao Tung U.*

Author: **Meng-Wen Hsieh**, *National Yang Ming Chiao Tung U.*

With the transformation of economic change, companies have gradually transformed their mode from the traditional one-way of goods-dominant logic to interactive two-way of service-dominant logic, which is known as value co-creation. It gives us a good opportunity to answer the basic research question of corporate change: Why are the employees willing to participate in value co-creation and facilitate the corporate change? We design a research framework which reflects the two contradictory theoretical assumptions—self-actualizing theory and rational organizational theory; and to explore the influence of two extremely different leadership styles: servant leadership and authoritarian leadership on value co-creation. Additionally, based on social exchange theory, the variables of implicit reciprocity (collective strategic vision) and extrinsic rewards (perceived organizational justice) were selected as two moderators to further investigate the relationship between leadership style and value co-creation under different situations. A total of 397 valid questionnaires from 91 groups were collected and hierarchical linear regressions were adopted for statistical analyses. The results showed a positive association between servant leadership and value co-creation and a negative relationship between authoritarian leadership and value co-creation, which demonstrated the impact of value co-creation on organizations from different leadership styles. Moreover, based on social exchange theory, this study identified implicit reciprocity and extrinsic rewards as two distinct moderators of the relationship between leadership styles and value co-creation; and finally, this study underscored the particularly interesting finding that the negative relationship between authoritarian leadership and value co-creation is weakened when supervisors adopt authoritarian leadership styles and employees perceive lower organizational justice.

ODC: **Organizational Sustainability Transformation through KPIs: A Model for Sustainability Change**

Author: **Kim Strunk**, *U. of Passau*

Author: **Andreas Ihl**, *Danube-U. Krems*

Author: **Luisa Hasenauer**, *U. of Passau*

Author: **Marina Fiedler**, *U. of Passau*

The financial industry is argued to play a vital role in transforming our economies toward sustainability, yet little is known on how to achieve such a transformation. In an inductive, qualitative, single case study analysis of a sustainability leader in the financial services industry, we investigate how the introduction of sustainability key performance indicators transformed the organization. Thereby we contribute to the understudied topic of sustainability transformation in the insurance and investment industry and aim to provide a deeper understanding of how this industry's indirect real-world impact can be effectively leveraged to benefit sustainability. Introducing consistent indicators for sustainability performance essentially helped to overcome the prevailing diffuse and symbolic image of sustainability in the financial industry through non-financial accounting and reporting. Thereby the organization shifted its sustainability strategy away from individual opinions and sustainability advocates toward legitimate and widely accepted performance indicators. Initially triggered by external regulatory pressure and societal norms, introducing reliable key performance indicators activated organizational awareness, initiated changes in corporate governance, and reinforced a pragmatic sustainability transformation that considered numerous stakeholders' needs. Our derived model illustrates how firms initiating an organizational sustainability transformation can leverage sustainability key performance indicators to (1) activate and commit internal stakeholders, (2) transform governance structures, and (3) establish accountability of actions and in decision-making.

ODC: **Project-as-Practice: Change in a City Organization**

Author: **Jatta Pitkänen**, *U. of Eastern Finland*

Author: **Hanna P. Lehtimäki**, *U. of Eastern Finland*

Author: **Ari Jokinen**, *Tampere U.*

ODC Action Research Paper Award

The purpose of this paper is to increase understanding on the ways in which a project creates strategic change for sustainability transition within a permanent organization. Drawing on a practice theory perspective, we present a longitudinal study of the day-to-day activities of a project management team in a city organization. The results of our study show that a project team without hierarchical authoritative power to give orders or delegate change-related activities engages in a praxis of navigating that attracts people and resources to change making. This study contributes to project management studies by increasing understanding about the ways in which the short-term activities of a project foster long-term strategic change in a siloed and departmentalized permanent organization. Additionally, this study provides novel insight into the ways in which a project supports a city organization to act as a leader in urban sustainability transitions.

ODC: **The Virtue of Objects: Ethical Consumerism in the Indian Toy Industry**  

Author: **Saheli Nath**, *U. of Central Oklahoma*

In this study, we examine the performative role of virtual spaces in moralizing markets in emerging economies. These spaces accommodate assemblages of stakeholders and discursive elements through which the market on ethical products is enacted in emerging nations. Employing a qualitative investigation of the toy market in India, we find that the first virtual India Toy Fair 2021, aimed at overcoming the limits on large gatherings across the country imposed as a response to the pandemic and at reviving the decaying traditional toy sector, constituted a multi-vocal environment that enabled the moralizing of the Indian toy market. The First India Toy Fair represents an effort to "mainstream" home-made toys as more "sustainable" compared to imported plastic toys from abroad.

 ODC: **Subtractive Change in the Face of Adversity: Expanding Theory on Organizational Dormancy**

Author: **Kimberly Rocheville**, *Creighton U.*

Author: **Ian Walsh**, *Bentley U.*

Winner of ODC Division Rupert F. Chisholm Best Theory-to-Practice Paper

While there is ample evidence that organizations are not immortal, scholars who study them and the members who comprise them often treat them as entities that are fully operational or shutting down. We extend theory of organizational dormancy which represents an alternative organizational status that is not well understood, and one that we see that allows organizations an important moment of pause in the face of adversity – a moment to make sense of the adversity, adapt to it, and then to potentially resume functioning. Given the function that dormancy serves in enabling organizations to overcome adversity, there is a need to understand and explain decisions to enter dormancy, members' interpretations of it, and the responses by which they strive to resume operations. In this paper, we strive to extend scholarly understanding of dormancy by theorizing about organizational dormancy as a novel organizational state as well as the processual dynamics of organizations entering, enduring, and overcoming it.

During periods of uncertainty, opportunities to intentionally create new futures can arise. At such times, integrating knowledge and skills from multiple perspectives can create systems and structures that further elevate well-being for all. The call for proposals for the 82nd AOM meeting asks us to consider our role in this larger opportunity - how might we create a better future, together? Alvarez (2021) suggests that one outcome of working together is the opportunity to reset outmoded practices, replacing them with innovations that increase our capacity to problem solve on a global scale. Yet, solutions for global problems do not easily fit into categories or fields of study (Mitroff, 2004). Thus, organizational scholars, practicing managers, and change agents must come together to connect, synthesize, and integrate our areas of expertise in ways that increase our ability to create a better future. As a field of study spanning the worlds of theory and practice, Organization Development (OD) is uniquely positioned to contribute. Foundational elements of OD, our belief in the potential of the human system (Jamieson & Worley, 2008) and humanistic values of participation, learning, and democracy (Worley & Good, 2021), can support interdisciplinary integration. At this precarious time, world challenges compel us to move beyond the divide between scholarship and practice to harness the best of both to create innovative solutions. As OD faculty representatives of the ODEA, we propose to convene a workshop to explore the continued development of integrated scholar-practitioners in service of creating a better world.

Aligning CEO compensation with environmental sustainability one of the primary channels through which firms which firms can improve their environmentally sustainability. Yet, only a minority of firms adopts environmental criteria in CEO compensation. In this study, we investigate the effect of board-level environmental expertise on the use of environmental criteria in CEO compensation. Using hand-collected data on environmental criteria from a multi-country European sample, we show that environmental expertise is positively associated with the use of environmental criteria. Moreover, we explore several mechanisms for the use of expertise, and find that in countries with lower environmental awareness, environmental expertise is more strongly associated with the likelihood of using environmental criteria. This suggests that environmental experts can potentially play the role of raising awareness toward environmental issues.

ONE: Scapegoating a Nonfamily Member after Organizational Misconduct in Family Firms  

Author: **Soolim Park**, *George Washington U.*
Author: **Jorge Rivera**, *George Washington U.*

Who is blamed for organizational misconduct in family firms? While extant studies assume that dismissing executives/directors is a corrective action to avoid future misconduct, doing so may operate as a defensive action to placate stakeholders without organizational change by scapegoating less responsible executives/directors. Nonetheless, several theories suggest a mixed role of family members in scapegoating (the likelihood that nonfamily members will exit a firm, as opposed to family members). For example, agency theory argues that less agency conflict will lead to less scapegoating, but behavioral theory posits that high socioemotional wealth will result in scapegoating. By combining agency and behavioral theories, this paper theorizes that scapegoating occurs in family firms. These family firms may scapegoat nonfamily members after organizational misconduct as the number of family member executives/directors increases. This scapegoating is based on several reasons; in this case, the board emphasizes the preservation of socioemotional wealth, less attribution to family member executives given their family-based emotional ties, family members' low motivation to abandon their family-firm specific resources, and their strong power from the top hierarchy and family identity. Additionally, family member executives' power from sitting on board can strengthen the scapegoating of nonfamily members. This study further explores the consequence of nonfamily member departure in family firms: not significant evidence for reducing future violations. Overall, this study contributes to the literature on organizational misconduct by suggesting that scapegoating serves as a firm's defensive response.

ONE: CEO Vision Communication of Sustainability and Sustainability Performance

Author: **Yanzhao Su**, *Guanghua School of Management, Peking U.*
Author: **Yue Zhang**, *Guanghua School of Management, Peking U.*
Author: **Xiaode Ji**, *Guanghua School of Management, Peking U.*

Even if sustainable development is well known for its critical role in firm economic benefits, survival, and growth, we still know little about the antecedents of how it works within the organization. The purpose of this paper is to establish how and when CEO vision communication fosters firm sustainability performance. Building on the framework of upper echelon theory and organizational sustainability literature, we proposed that vision communication of sustainability would catalyze organizational change, facilitating firm sustainability performance. Moreover, we also reveal the boundary condition of dialectical leadership. CEO dialectical leadership will accelerate the above positive associations. Data analysis results from 130 CEO and their 562 top management team (TMT) members supported our propositions. Theoretical implications and future research directions are also discussed.

ONE: CEO Personality Traits and Corporate Environmental Performance

Author: **Ajith Venugopal**, *Texas A&M International U.*
Author: **Snehal Awate**, *Indian School of Business*
Author: **Sridhar Nerur**, *U. of Texas At Arlington*
Author: **Abdul Rasheed**, *U. of Texas At Arlington*

This study examines how chief executive officers' "Big Five personality traits" (FFM)- conscientiousness, extraversion, agreeableness, openness to experience, and emotional stability - affect corporate environmental performance (CEP). Drawing from upper echelon perspective (UE) and natural-resource-based view (NRBV) of the firm, we argue that FFM traits of CEOs are associated with CEP. Using a sample of 304 CEOs of 276 S&P 1500 firms, we found that CEO conscientiousness, extraversion, and openness to experience are positively related to CEP. We used a novel technique based on linguistic analysis developed by IBM to assess the FFM traits of CEOs. Our study advances the microfoundations of CEP and UE research.

Exploring Sustainable Futures Game (CANCELLED)

Exploring Sustainable Futures Game

Organizer: **Rosina Watson**, *Cranfield School of Management*
Speaker: **Miyang Yang**, *U. of Exeter*
Speaker: **Namita Shete**, -
Speaker: **Hugh Wilson**, *Warwick Business School*
Speaker: **Emma Macdonald**, *Warwick Business School*
Speaker: **Orsolya Ihasz**, -

Cranfield's Exploring Sustainable Futures Game is a role-playing learning experience that helps management students and business leaders to formulate their strategy in the context of the possible radical changes in economy, technology, and society along alternative pathways towards a more sustainable future by 2050, thinking about their long-term strategic options in the context of the wider system of societal actors. The board game version of the game used with Cranfield students has been recognised by the Financial Times as an example of best practice sustainability teaching in business schools, and a theatre-style format of the game was showcased at the COP26 conference in November 2021. This PDW will offer participants a taste of this interactive and immersive learning journey to 2050 as they play an active role, representing the 'public voice,' in shaping the decisions of actors representing businesses, entrepreneurs, policy makers and civil society as they react to unfolding events, then reflecting on the world their actions have collectively created by 2050. Together we will discuss how visiting the future with curiosity can inspire and empower people to take action in the present, and the range of specific learning outcomes this learning experience could be tailored to deliver. Participants will leave with an understanding of how they can make use of this impactful learning experience in their own institutions. The workshop will facilitate collaboration between institutions relating to teaching and learning crucial sustainable leadership competencies, and the role of experiential learning interventions in facilitating this learning.

For more information on this workshop and for further questions after the event please contact: SustainabilityNetwork@cranfield.ac.uk

Sustainability in Operations & Supply Chain Management (2/2)

Session Moderator: **Christian Hofer**, *U. of Arkansas*

OSCM: **Reshoring for Sustainability: A Multi-Theory Decision-Making Framework**   

Author: **Ronan McIvor**, *U. of Ulster*
Author: **Lydia Bals**, *Mainz U. of Applied Sciences*
Author: **Tim Dereymaeker**, *Porsche Consulting GmbH*
Author: **Kai Dominik Foerstl**, *EBS U. für Wirtschaft und Recht*

Sustainability has been increasingly recognised as an important consideration for firms in reshoring decisions. Although there are frameworks in the literature that explain the reshoring decision, limited attention has been given to integrating sustainability issues into the analysis, with much of the attention being given to economic factors. This paper integrates environmental, social and economic factors into a reshoring framework through employing the theoretical perspectives of the Natural resource-based view, the Social resource-based view, the Eclectic paradigm and Transaction cost economics. The paper highlights the interdependencies between these perspectives, and adds theoretical depth to our understanding of how social, environmental and economic factors interact to influence the reshoring decision.

Paper is NOT Available. Please contact the author(s).

OSCM: **Collaborative Partnerships - Conceptualization of Strategic Alliances for Sustainable Supply Chains**  

Author: **Christopher Münch**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Lukas Benz**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

To achieve sustainability among supply chain partners, many actors along the supply chain are increasingly engaging in strategic alliances. This paper aims to create an overview of the phenomenon of alliances and the underlying behavior of the participants leading to collaborative partnerships. Based on a literature review, a framework for strategic alliances that address sustainability issues in the supply chains of member companies is conceptualized. Findings suggest motives, interdependence, and implementation as central aspects for the overview of alliances. It revealed that the motives for participating in an alliance mainly lay on efficiency through shared resources and organizational learning, as well as institutional pressure. Drawing on the social exchange theory, aspects such as reciprocity, trust, commitment, and power can be promoted through the organization of the governance structure, fair allocation of power and benefits, and communication. To reduce issues due to information asymmetry, the implementation relies on tools, practices, and structured information exchange. This research contributes to filling identified gaps and expanding knowledge about the phenomenon of alliances to improve collaborative partnerships. It combines previous findings and creates a framework that provides an overview of the topic.

OSCM: **Unlocking Value Through Sustainable Procurement**  

Author: **Andrea Sordi**, *U. of Tennessee, Haslam College of Business, Dept. of Supply Chain Mgmt*
Author: **Wendy Tate**, *U. of Tennessee*
Author: **Feigao Huang**, *U. of Tennessee, Knoxville*

In the modern marketplace, organizations do not embed sustainability in their strategies as a matter of choice, but as a matter of competitive necessity. In this broad corporate movement toward pro-sustainability policies and practices, one business function plays an especially vital, yet under-appreciated role: the end-to-end supply chain. Clearly, the success of any corporate sustainability initiative requires close collaboration and synchronization with companies across the supply chain. However, companies rarely engage multiple tiers of suppliers in pro-sustainability policy formation or execution primarily because coordinating the processes and practices of a global network of independent companies and subsidiaries is challenging. Yet, one department may be particularly well suited to bring about such coordination: procurement. The reason why procurement executives might be in a favorable position to carry out this work is their cross-cutting functional span, which reaches across numerous areas within an organization. This research provides evidence that certain capabilities are needed to drive sustainability programs through the organization. Seven capability pillars are introduced to help sustainability programs successfully mature into world class programs.

Paper is Available to Meeting Registrants Only.

OSCM: **A Strategic Contingency Perspective on Social Capital in Social Impact Supply Chains** 

Author: **Kelsey Taylor**, *U. of Manitoba*

Social enterprises have emerged with solutions to some of society's most pressing and complex problems, but the pursuit of social impact creates operational constraints that these organizations must overcome to survive. Appropriate supply chain management is key to a social enterprise's ability to deliver its intended social value in a financially viable way. This paper examines how social enterprises can overcome operational constraints and achieve effectiveness by accessing the social capital embedded in their supply chain relationships. Using case studies of ten social enterprises presenting a variety of social value creation strategies, this paper examines how social capital is strategically developed and deployed to overcome operational constraints related to each organization's social mission and seize opportunities for enhanced effectiveness. Based on insights gathered from in-depth interviews with focal organization employees and various partner organizations across the supply chain, this paper identifies key commonalities and differences among social enterprises in how different dimensions of social capital function. The results highlight the importance of aligning supply chain social capital development with organizational strategy to help social entrepreneurs achieve effectiveness and manage the opportunity costs associated with unnecessary social capital development.

OSCM: **When Words and Actions Don't Match: How Greenwashing a Firm's Supply Chain Practices Can Backfire**

Author: **Robert F. Jensen**, *U. of Arkansas*

Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

Author: **Christian Hofer**, *U. of Arkansas*

We study how individual-level consumer evaluations and firms' value are negatively impacted when firms' claims about their environmental supply chain management (ESCM) initiatives are revealed to be misleading. Drawing on signaling theory, we propose that consumers interpret firms' disclosure of ESCM initiatives as a signal of the company's commitment toward pro-social behaviors and that these signals positively influence consumers' purchase intentions. When, however, it becomes evident that there is a lack of signal fit, we propose that consequently there will be a negative effect on evaluations of the firm. In a pretest, based on Information Manipulation Theory we use a vignette-based experiment to evaluate consumer reactions to a comprehensive set of possible means of greenwashing environmental supply chain initiatives. We find that individual-level consumers are most sensitive to "the sin of fibbing" as a type of greenwashing. Our main experimental study shows that greenwashing adversely affects consumers' attitudes towards the firm and willingness to pay a premium. Our archival study uses firm-level data and a new approach to identifying firm greenwashing. We find evidence that greenwashing is associated with decreased firm value. Our multi-method research shows that firm-level outcomes are consistent with negative individual-level consumer reactions to greenwashing.

RM: Meta-Analysis within a Single Paper Using Individual-Participant Data: A Simpler Alternative

Author: **Jessica Yuk Yee Kwong**, *Chinese U. of Hong Kong*
Author: **Kin Fai Ellick Wong**, *Hong Kong U. of Science and Technology*

Sage Publications/RM Division Best Paper Award Nominee

More researchers recognize the importance of meta-analyzing findings within a single paper (i.e., mini meta-analysis). These analyses have been primarily conducted by meta-analyzing aggregated data at the study level, particularly the effect size of each study. We highlight an alternative way of achieving the same goal by meta-analyzing data at the individual-participant level, which combines all the raw data into one dataset. We outline the procedure of conducting mini meta-analysis using the individual-level approach. In a series of 21 simulations, we compared the results between individual-level and the study-level meta-analyses in terms of the accuracy of effect size estimates, Type I errors, and Type II errors. We found that although the results are not identical, they are generally consistent, with the overall outcomes of mini meta-analyses at the individual-level being at least as good as those conducted at the study-level. We recommend more mini meta-analyses at the individual-level not only because individual-level meta-analysis has been regarded as the gold standard of meta-analysis, but also that it is a simple and convenient way to achieve the same goal.

RM: Heterogeneity in Effect Sizes: An Assessment of the Current State of the Literature

Author: **Sven Kepes**, *Virginia Commonwealth U.*
Author: **Wenhao Wang**, *Virginia Commonwealth U.*
Author: **Jose M. Cortina**, *Virginia Commonwealth U.*

Sage Publications/RM Division Best Student Paper Award Nominee

Heterogeneity represents the variability in effect size across different samples and is one of the major criteria to judge the importance and advancement of a scientific area. Importantly, heterogeneity assessments can cause confusion without accurate reporting and interpretation. To advance our understanding of heterogeneity assessments, we conduct a brief overview of the particular statistics that are used to assess the presence of heterogeneity and quantify its amount. Then, we examine the degree to which meta-analytic studies have reported assessments of heterogeneity and interpreted the results. We coded heterogeneity-related information from all meta-analytic studies published in five leading management and applied psychology journals that regularly publish meta-analytic reviews between 2010 and 2011 as well as 2018 and 2019. By sampling from different time periods, we were able to assess temporal trends. Overall, we found that most meta-analytic studies report several heterogeneity statistics. At the same time, however, there tends to be a lack of rigor in the interpretation of heterogeneity-related information in most meta-analytic studies. This situation is relatively stable over the past decade and is not affected by the general research area or the level of analysis. Based on our findings, we discuss implications for practice and provide recommendations for how heterogeneity assessments should be conducted and interpreted in future research.

RM: The Choice of Control Variables: How Causal Graphs Can Inform the Decision

Author: **Paul Huenermund**, *Copenhagen Business School*
Author: **Beyers Louw**, *Maastricht U. School of Business and Economics*
Author: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*

Control variables have a central role when empirical data are used to support causal claims in management research. The current literature has been intransparent in so far as to how control variables should be chosen, how many control variables should be chosen and whether a potential control variable should be included. Causal diagrams provide a transparent framework on how to select control variables for causal identification. This article delineates how causal graphs can inform researchers in leadership and management in finding the correct set of control variables and possible solutions in the case that causal identification is not possible or when causal identification requires unobserved variables.

Paper is Available to Meeting Registrants Only.

RM: Compliers, NeverTakers, AlwaysTakers, and Defiers: The Subjects in Entrepreneurship Experiments

Author: **Mark Conley**, *Stockholm School of Economics*

Entrepreneurship education and training experiments are usually encouragement designs, where training is offered to a randomly assigned treatment group. In encouragement designs, some subjects assigned to the treatment condition do not actually take the treatment, and some subjects assigned to the control condition manage to receive the treatment. A new modeling approach is warranted in order to account for this non-compliance. Field experiments in entrepreneurship must anticipate four subject types: Compliers, NeverTakers, AlwaysTakers, and Defiers. By anticipating two-sided non-compliance and using these terms, entrepreneurship researchers can estimate the effect of interventions on entrepreneurs who actually comply with the training as well as the efficacy of the overall program. Integrating this straightforward methodological innovation using instrumental variables regression can add precision and credibility to entrepreneurship education and training experiments.

Panelist: **Michael C. Withers**, *Texas A&M U.*

This PDW has a long-standing tradition as a crowd favorite. It is a great opportunity to ask experts any questions you might have about quantitative research methods, such as longitudinal/panel data analyses, effect size, probability, linear/nonlinear modeling, moderation, mediation, meta-analysis, sampling, baseline models, factor analysis, multilevel modeling, endogeneity, latent variables, big data/artificial intelligence, Bayesian analysis, and user questions related to statistical programs such as R, STATA, SPSS, SAS, and Mplus. No preregistration is required and the format is very laid back. Attendees are encouraged to come and go as they please to have their questions answered by quantitative method experts.

Corporate Social Responsibility and Individual Well-Being

Session Moderator: **Ramona Demasi**, *U. of Zurich*

SIM: Bridging CSR and Individual Well- and Ill-Being: A Review and Research Agenda   

Author: **Ramona Demasi**, *U. of Zurich*

Micro-level corporate social responsibility (CSR) research has increasingly studied the connection between CSR and individual well- and ill-being but has remained vague in interpreting these findings within the broader well- and ill-being concept. The purpose of this study is to rethink the literature by providing an overarching framework that bridges CSR and individual well- and ill-being. I conduct a systematic literature review on 154 articles in 39 leading journals. After presenting a descriptive analysis of the articles, I provide an initial overview of what is known and not known about the link between CSR and individual well- and ill-being. Based on the findings and relevant research gaps, I present an overarching framework that guides scholars in conducting future research at the intersection between CSR and individual well- and ill-being. I highlight the importance of boundary conditions, provide promising mechanisms bridging CSR and individual well-being, and highlight potential unintended CSR impacts on individuals' ill-being. Furthermore, I point to potential positive short- but adverse long-term effects of CSR, bringing both the dark and bright side of CSR together.

SIM: Authenticity in Corporate Social Responsibility: Towards an Existential Perspective

Author: **Oyinkansola Ige**, *City U. London*

Author: **Andrew Crane**, *U. of Bath*

Author: **Pierre McDonagh**, *Bath*

Authenticity has been recognized as an important factor explaining the success or failure of corporate social responsibility (CSR). To date, CSR authenticity remains under-theorized and extant conceptualizations have been limited to object-based approaches, i.e., whether the organization is perceived to have authenticity. While such an approach brings to fore factors that can enhance transactional benefits for organizations, it does not account for how stakeholders experience their own authenticity in the context of CSR and how this affects their wellbeing. In this paper, we develop a new subject-based approach to CSR authenticity that defines and explains how stakeholders experience their own authenticity when engaging in CSR initiatives. To do so, we draw upon existential authenticity and elaborate three dimensions of existential authenticity – self, purpose, and choice – and develop new theory that sets out the drivers, outcomes, and moderators of existential authenticity in CSR. We explain the contribution of our model to theory about CSR and authenticity in management, as well as offer directions for further research and discussion of the practical implications of our theory.

SIM: How and When Socially Responsible Human Resource Management Practices Influence Employee Insomnia 

Author: **Wang Juan**, *Northwestern Polytechnical U.*

Author: **Zhang Zhe**, *Xi'an Jiaotong U.*

Author: **Jia Ming**, *Northwestern Polytechnical U.*

Although existing studies show that socially responsible human resource management (SRHRM) practices positively influence employees' outcome at work domain, the social impacts of SRHRM practices on employee's insomnia remain unexplored. Drawing on the appraisal theory of emotion, we explore whether, how, and when SRHRM practices reduce employees' insomnia. Using multiphase and multilevel data from 270 employees in 52 companies, we find that SRHRM practices negatively predict employee insomnia, and the relationship is mediated by employee's hope and anxiety. Furthermore, business threat due to COVID-19 weakens the positive relationship between SRHRM practices and employees' hope, whereas mitigates the negative relationship between SRHRM and employees' anxiety. We also find that business threat due to COVID-19 influences the indirect effect of SRHRM practices on employee's insomnia via their hope and anxiety. Our study contributes to understanding the social impacts of SRHRM practices on employee insomnia at the non-work domain, especially after the COVID-19 outbreak.

SIM: Organizational Purpose: Definition, Measurement and the Ambivalent Effect on Employee Wellbeing  

Author: **Anna Jasinenko**, *U. of Lausanne, HEC Lausanne*

Author: **Josephina Steuber**, *HHL Leipzig Graduate School of Management*

Research on organizational purpose has gained great popularity in recent decades. Practitioners and scholars anticipate organizational purpose as a potential solution for the issues of solely profit-driven business. However, critical perspectives and empirical studies are scarce to validate the optimistic prospects. In our study, we critically elaborate and empirically test the outcomes of organizational purpose on employee job satisfaction and subjective well-being. We theorize and empirically show that organizational purpose does not always have positive consequences for employees' job related and general well-being, particularly, if they seek too much meaning through their work and therefore neglect their work-life balance. In our paper, first, we develop a multi-dimensional construct definition of organizational purpose based on a systematic literature review. Second, building on our theoretical construct definition, we develop and validate a four-dimensional organizational purpose scale. Third, we disentangle the related yet differentiated concepts of organizational purpose and meaningful work to theorize how the substantial knowledge in the field of meaningful work can be transferred to the relatively new and untested field of organizational purpose. Fourth, our study provides a rigorously tested critical perspective on the potential outcomes of organizational purpose, which results in a more complex discussion of managerial implications.

Technology, Ethics and the Future of Work

Session Moderator: **Katharina Scheer**, *Technische U. Kaiserslautern*

Author: **Mario Schultz**, *Franklin U. Switzerland*

Author: **Melanie Clegg**, *U. of Lucerne*

Author: **Reto Hofstetter**, *U. of Lucerne*

Author: **Peter Seele**, *USI Lugano*

Literature on dehumanization by algorithms has grown substantially in recent years, making it a highly important topic also for a managerial and business ethics audience as it touches upon several interlinked ethical issues in the business and society nexus. However, scattering across diverse disciplines makes algorithmic dehumanization challenging to approach. It stretches from historical terminological roots from colonialism, industrialization and post-colonialism and today is deeply rooted in technology studies and ethics. We review the literature on algorithms and dehumanization (n=180 articles) and map existing knowledge across several clusters that reveal its underlying characteristics. Based on the review, we derive a business-ethics informed definition: Algorithmic dehumanization is defined as: organizational actors integrating algorithms and data analytics that result in the intentional or unintentional treatment of individuals and/or groups as less than fully human, thus infringe on human rights and particularly the three foundational principles of liberty, equality and dignity. We find that algorithmic dehumanization applies particularly to employees and the future of work, managerial decision making, consumer ethics, hard- and soft-law regulation and basic values such as privacy or human rights of consumers. Further, from the review, we develop a dehumanization avoidance model, which may help researchers and business practitioners to deal with the ethical challenges raised by algorithmic dehumanization. The three stages of the model show that several research topics remain unaddressed so far. Unraveling these topics, we suggest a set of open questions and how future research and practice can build on the model to reflect about organizational processes and improve corporate capabilities and managerial decision-making to avoid algorithmic dehumanization, thus contributing to outline the emerging concept of Corporate Digital Responsibility.

SIM: Technological Unemployment as a Cultural Crisis of Intelligibility (WITHDRAWN)

Author: **Santiago Mejia**, *Fordham U.*

The scholarship on meaningful work has approached the topic mostly from the perspective of the subjective experience of the individual worker. This has led the literature to under-theorize, if not outright ignore, the cultural and normative dimension of meaningful work. This paper addresses this neglect. I show that work operates as a central organizing telos around which our contemporary lives gravitate, it provides ideals that contribute to defining our core aspirations and is at the heart of our notion of human excellence. I defend that this fact has normative force and plays an important role in finding work meaningful. Understanding this dimension of meaningful work is important, not just to have a better understanding of meaningful work, but also because it helps us recognize one important challenge that widespread unemployment caused by automation would pose. A world with few work opportunities will strain our ability to make sense of what it means to find life meaningful.

SIM: Human-Centered Automation: Codetermining New Technology in an Innovative Mining Company

Author: **German Bender**, *Stockholm School of Economics*

Author: **Fredrik Söderqvist**, *Blekinge Institute of Technology*

Underground mining is transforming rapidly, driven by pressures to increase safety and productivity. New mining technologies and methods move the industry to higher levels of automation, enabled by and leading to organizational change. Swedish mining companies are at the forefront of these developments. Here, we present findings from a qualitative case study on how novel mining technologies and algorithmic systems are codetermined and regulated by unions and management at the Swedish mining and minerals company Boliden AB. The company has a strong local union presence and cooperative union-management relationships. We interview employer and employee representatives, study local codetermination protocols and other relevant documents, as well as legislated and collectively bargained regulations set outside the firm. Our analysis attempts to answer how and why the implementation of key technologies are codetermined and regulated. Our findings highlight union concerns about surveillance software, union and management concerns about occupation-specific tasks being reshuffled or automated, mutual (employer-union) agreement on safety and productivity priorities, and challenges relating to skill shortages and training. Collective bargaining on these and other issues rests on the five-tier governance and regulatory structure of the Swedish industrial relations system, which provides unions with holdup capacity and enforcement capabilities. Hence, the employer is incentivized to share information and deliberate with unions about technological implementation. Our empirical and theoretical contributions provide insights on how future of work challenges can be solved at the local level through negotiation, and highlight the multi-tiered institutional framework that allocates holdup power, and thus voice, to local parties.

SIM: AI-Based Software as Anti-Corruption Agent and Employees' Likelihood of Whistleblowing  

Author: **Katharina Scheer**, *Technische U. Kaiserslautern*

Author: **Tanja Rabl**, *Technische U. Kaiserslautern*

Author: **Nils C. Köbis**, *Max Planck Institute for Human Development*

Artificial intelligence (AI) based tools are seen as a promising anti-corruption tool. They are already implemented in public administration to counter corruption. In this paper, we present some of the first empirical results on the consequences. Specifically, based on the bystander effect and moral disengagement theory, we examined whether the use of AI-based anti-corruption tools in organizations leads to diffusion of responsibility for whistleblowing. In a pre-registered scenario-based experiment with 330 German employees, we compared the impact of an AI-based software versus a human as anti-corruption agent on employees' perceived responsibility and stated likelihood of whistleblowing. We thereby considered the clarity of indications of corrupt behavior and employee moral potency as moderators. Contrary to our predictions, an AI-based software did not increase diffusion of responsibility for whistleblowing compared to a human or no anti-corruption agent. We also did not find the proposed moderating effects. Taken together, our findings provide first insights to better understand the impact of AI-based software as an anti-corruption tool on employees' whistleblowing decisions.

Normative Perspectives on Markets, Capitalism and Democracy

Session Moderator: **Miguel Angel Alzola**, *Fordham U.*

SIM: The Normative Evaluation of Markets

Author: **Miguel Angel Alzola**, *Fordham U.*

Markets are institutions where social issues in management take place. Recent management scholarship has coined the expression of “moral markets” to designate market solutions to social issues, such as renewable energy and fair trade goods. But are “moral markets” really moral? What makes them moral? Are not all markets moral? Or are they all evil? Is the answer a categorical one, or do we use parameters to assess whether a market has gone from moral to immoral within a spectrum of morality? The purpose of this paper is the study of markets from a normative perspective. It aims to examine the notion of moral markets, what makes markets moral, and how to assess surrogacy markets—the practice of paying a woman to carry a child that is not biologically related to her—morally and legally. Commercial surrogacy is a booming industry that has emerged to provide solutions to societal challenges. But it is prohibited in the European Union and is illegal in many countries. Is it a moral, amoral, or immoral market?

SIM: A Market-Based View of Progress

Author: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*

While the concept of progress is central to research in science, morality, politics, environmental studies, and other disciplines, a distinct concept of “progress” is absent from the management literature. And yet, managers are increasingly tasked with blending financial performance and extra-financial outcomes such as social justice, fairness and equality, environmental protection, and political responsibility. This paper responds to recent calls to connect the dots between philosophical inquiries on progress and the usual business understanding of firm or industry performance. Rather than offering a specific definition of progress or specifying normative criteria for choosing among “progressive” outcomes, we propose a market-based view of progress that focuses on the conditions under which progress is made and assesses progress through the lens of those who make it: market actors. For engaging a conversation with the philosophical debates on progress we integrate classic management theories on market actors (managers, entrepreneurs, consumers, etc.) with a multidisciplinary literature on preference and signaling theories.

SIM: The Stakeholder Capitalism: Organizations’ Capabilities Promoting Individuals’ Freedom

Author: **Lucas Amaral Lauriano**, *IESEG School of Management, LEM-CNRS 9221*

Author: **Leandro S. Pongeluppe**, *The Wharton School, U. of Pennsylvania*

How do organizations’ capabilities promote individuals’ freedom? Studies have typically focused on public policy as the key driver to remedy poverty, whereas the critical role of organizations is often overlooked. In this theoretical article, we argue that organizations are essential to free people from socio-economic exclusion, using their resources and capabilities – e.g. duty, design, governance – to produce an inclusive approach towards disenfranchised stakeholders. We develop a model based on the “poverty traps” literature that explains how organizations may pull these individuals out of what we call “the exclusion traps” to a superior equilibrium, guaranteeing individual freedom, generating collective prosperity, and fostering socio-economic development. We demonstrate the economic benefits of a stakeholder-oriented approach through an adapted Prisoners’ dilemma game, in which we incorporate stakeholders’ payoffs into the organizations’ payoff. Our analysis shows that organizations’ best response is to be inclusive when stakeholders’ payoffs are considered. We answer a recent call for “Stakeholder Capitalism paradigm” framework, contributing to relocating organizations’ importance for individuals emancipation studies.

Paper is Available to Meeting Registrants Only.

SIM: Deliberation without Romance (nor Cynicism) The Role of Corporations in Deliberative Democracy

Author: **Adrian Gombert**, *Martin-Luther-U. Halle-Wittenberg*

With a growing number of scholars heralding free and open discourses between corporations and their stakeholders as a governance panacea, deliberative democracy has arrived at the center stage of business ethics research. Recent critiques, however, have put into question whether corporations are, at all, viable entities for such deliberative discourses due to their embeddedness in competition and their subsequent reliance on self-interest. In this paper, I argue that this objection not only relies on a questionable reading of the philosophical works underpinning deliberative democracy (particular those by Jürgen Habermas); it also downplays the important similarities between corporate actors on the one hand and political and civil societal actors on the other. Drawing on this, I develop a more nuanced criteria for assessing the discourse viability of corporations and other governance actors: First, the criterion whether deliberative capacities can be a competitive advantage for the actor and, second, the criterion whether deliberative capacities may result from the actor’s altruism.

Paper is Available to Meeting Registrants Only.

Author: **Wayne Eastman**, *Rutgers U.*

Foot voting—that is, an individual’s choice of a government, or of a governance regime such as that offered by a corporation or a homeowner’s association—has been advocated by libertarian law professor Ilya Somin in two recent books (2016, 2021) that emphasize the relative thoughtfulness of foot voters who are making important personal choices compared to the relative ignorance of ballot box voters whose individual votes are hardly ever outcome-determinative. This paper adopts Somin’s case for foot voting and suggests an additional ground for supporting it: giving radical minorities opportunities to exercise self-determination in a way that they are unable to do in majoritarian democratic and business systems in which public policies and corporate governance are targeted to the median voter, shareholder, employee, and consumer. Relying centrally on Mill (1859), Rawls (1999, 2005), and mechanism design theory (Maskin, 1999), it argues that it is in the practical and moral interest of non-radicals and radicals alike that there should be more support in business ethics and elsewhere than there is now for voluntary, partly self-governing, radical local political communities—“codominia”—and to serve and link these communities with small and large radical businesses—“coenterprises.” Although the paper is primarily conceptual, it also includes a qualitative empirical component, in the forms of introductory discussions of a survey on interest in joining radical communities that was administered to students in Southeast Asia, and of how the reforms proposed have a precedent in the long-standing Dutch and Belgian systems of pillarized community self-determination.

Business Models 1

Session Moderator: **Lien Denoo**, *Tilburg U.*

ENT: Business Model Development and Venture Progress in Nascent Technology Ventures

Author: **Lien Denoo**, *Tilburg U.*

Author: **Andrea Belz**, *U. of Southern California Viterbi School of Engineering*

Why do some nascent entrepreneurs have more developed business models than others? And do more developed business models facilitate venture progress? In this study, we examine the effects of rational venture investigation and experience-based heuristics as dual drivers of business model development in nascent technology ventures. Using a unique longitudinal dataset of nascent technology ventures, we find that both venture investigation efforts and prior startup experience have a positive effect on business model development. More developed business models, in turn, facilitate a venture’s progress. The business model not only has a direct impact on venture progress, but also serves as a mediator that translates the founder’s venture investigation efforts and prior startup experience into venture progress. Our study provides unique empirical evidence that rational and heuristics-based approaches positively and independently impact business model development, which significantly contributes to nascent venture progress.

ENT: Startups Experimenting with Technology- and Service-driven Sustainable Business Models

Author: **Ville-Veikko Piispanen**, *U. of Eastern Finland*

Author: **Kaisa Henttonen**, *U. of Eastern Finland*

Author: **Leena Aarikka-Stenroos**, *Tampere U. of Technology*

Author: **Hanna P. Lehtimäki**, *U. of Eastern Finland*

The transition to the sustainable circular economy is shaping global markets and suggests significant potential for startups to improve economic, environmental, and social performance with technological- and service-driven innovations and sustainable business models (BMs). This requires startups to adjust their sustainable novel offerings and BMs to surrounding business partnerships. However, there is a knowledge gap in the startup literature on how startups have developed and refined their BMs through experiments with partnerships and identified their value creation logic toward sustainable transformation. To address this gap, we present a multiple case study of six sustainable startups that looks at how they have developed their BMs through iterative and processual collaborative experiments. The results reveal that sustainable startups experiment by both developing elements of their BMs and their sustainability impact through input from diverse partnerships. With their innovative technologies and services and co-created BMs, they can contribute to their surrounding networks by adapting their businesses either incrementally or radically. Based on the results, we present a matrix model of BM development path archetypes for sustainable startups. These insights can help both startup and mature companies to develop their own BMs by experimenting and ensure their sustainability and innovativeness impact.

ENT: Sustainable Entrepreneurs in Digital Business Ecosystems - Sovereignty vs. Business Model Potential

Author: **Leonhard Gebhardt**, *U. of Potsdam*

Author: **Katharina Hoelzle**, *U. of Stuttgart*

The digital transformation helps organizations to become more efficient while increasing their outreach and targeting new markets. However, it also makes organizational design more malleable and can blur or even disrupt a firm’s boundaries. Opening the firm to external influences impacts the sovereignty of the business. For sustainable entrepreneurs who develop business models for sustainability (BMfS), this might come as a Faustian bargain, as they might be trading their sovereignty for unlocking business models’ potential. In this in-depth action design research case, we chose a methodological process design to accompany and evaluate the development of BMfS based on digital technologies. To better understand rising tensions, we look not only at the related dynamics within the entrepreneurial firm but also engage a digital business ecosystem perspective. We discuss our findings with a contingency corridor that supports the recognition and reconciliation of digital transformation dynamics affecting the value logics of sustainable entrepreneurs.

ENT: Linking Strategy, Business Model and Firm Performance: Evidence from Indian SMEs

Author: **Rakesh Kumar Pati**, *Deakin U.*

Indian small and medium enterprises (SME) operate in a hyper-competitive environment serving price-sensitive customers. To survive and prosper, they rely on low-cost strategy and business model (BM) efficiency, less frequently associated with SMEs, but critical to SMEs operating in developing countries. In this study, we explore the impact of low-cost strategy on SMEs’ business model (BM) efficiency and examine the mediating effect of BM efficiency between the low-cost strategy and SME performance across mature and young SMEs. Using data from 194 Indian SMEs, our findings indicate that low-cost strategy drives BM efficiency and BM efficiency positively mediates the relationship between low-cost strategy and SME performance among mature SMEs. However, younger SMEs do not benefit significantly from low-cost strategy and BM efficiency. Finally, we discuss the theoretical and practical implications of our study.

Women’s Careers in Patriarchal Contexts

Session Moderator: **Young-Choon Kim**, *Ulsan National Institute of Science and Technology*

GDO: Unpacking Women’s Career Advancement: The Case of Saudi Senior Managers

Author: **Hayfaa A. Tlaiss**, *Alfaisal U.*

Author: **Sara Alshareef**, *Department of Business Administration, King Abdulaziz U. Jeddah, KSA*

This study explores the capabilities (strategies) that women use to advance their careers in the country-specific context of Saudi Arabia. To achieve our objectives, we apply insights from the capabilities approach and draw upon in-depth, semi-structured interviews. Our analysis reveals that Saudi women adopted two contrasting accounts based on their diverging approaches to gender inequality, different forms of agency, and approach to the performance of gender. This study advances research on women’s career advancement and contributes to the sparse research on how Arab women advance their careers beyond what is acceptable for women.

Paper is Available to Meeting Registrants Only.

GDO: Gender Differences in Managerial Turnover in the Context of Family Business: Evidence from Korea

Author: **Young-Choon Kim**, *Ulsan National Institute of Science and Technology*

Author: **Taekjin Shin**, *San Diego State U.*

This study investigates gender differences in managerial turnover among top managers in South Korea. While there is a growing literature on the gender diversity in corporate management, we still have little understanding on the gender gap in workplace in the family business context. We address this research gap by examining the Korean corporate context in which the family plays a crucial role in corporate decision making. We argue that the gender gap in managerial turnover for Korean managers is different for family managers and non-family managers and is dependent upon gender composition of the management. We test our predictions using data from senior managers in Korean firms for the period of 2014-2019. The findings show lower exit rates for female managers compared to male managers, especially when they belong to the family (via either kinship or marital ties) of the ultimate firm owner. In addition, we find that lower exit rates by female managers are subject to gender composition among family managers. By empirically documenting gender difference in managerial turnover in the family business context, our study contributes to the research about gender and management and suggest that firms make strategic decisions in their response to the social pressure of gender diversity by keeping female family members in top management.

GDO: Women’s Careers in a Patriarchal Context: Through the Lens of the Kaleidoscope Career Model

Author: **Farzana Ashraf**, *Macquarie Business School, Macquarie U.*

Author: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*

Women in patriarchal societies are known to be oppressed in a variety of ways within their families. Although patriarchy is one of the key impediments to women’s progression and growth, how private patriarchy translates into career behaviors is yet to be understood. Using an intersectionality approach, this study investigates the impact of private patriarchy on women’s career. Career behaviors of authenticity, balance, and challenge are investigated through semi-structured interviews with 40 educated and professional women living and working in the patriarchal context of Bangladesh. As the first study to use the kaleidoscope career model in a patriarchal context, findings demonstrate that household restrictions as daughters, social exclusion as women, and post-marriage adjustments as wives, daughters-in-law and mothers contribute to determine women’s career behaviors. Although household restrictions and discrimination experienced before marriage hinders women’s performance at work, sustaining and advancing women’s career in patriarchal contexts depends on receiving permission to work from both husbands and parents-in-law. Findings from this study differ from previous findings by showing that women in both early and late career stages tend to prioritize authentic career behavior. Furthermore, balance and challenge career behaviors largely depend on the women’s marital status, rather than their career stages.

The significance of Artificial Intelligence (AI) to improve business performance is currently recognised in the business and management literature and by many organisations across different business sectors. The extant literature has identified that collaborative intelligence stemming from effective collaboration between AI and human workers will facilitate organisations to create and capture business value. Research has also shown that organisations need to think beyond technical resources, and focus on developing non-technical ones such as human skills and competencies, leadership, team co-ordination, organisational culture and innovation mindset, governance strategy, and most importantly AI-employee integration strategy. Furthermore, limited transparency and explainability of output responses generated by the AI systems has emerged as a key barrier to experiencing anticipated benefits by confidently turning data-centric decisions into effective actionable strategies. The primary goal of embedding transparency within AI-based machine learning models is to help the decision-making authorities understand what the AI system is doing, how it is generating the output responses and why a particular response is generated. The aim of this workshop is to present AI capability framework supplemented with AI socialisation strategy that will help organisations to develop their own innovation ecosystem enabling interdisciplinary collaboration, interdepartmental co-ordination, data-driven decision making, shared and common understanding between employees, experimental and adaptable mentality, risk-oriented approach (rather than risk-averse strategic orientation). The workshop will discuss how this innovative ecosystem will stimulate employees to embrace AI, enhance business productivity, and competitiveness in developing and developed economies.

Creating Better Research Partnerships Together
Research Partnerships with Indian scholars

Organizer: **Nagaraj Sivasubramaniam**, *Duquesne U.*
Organizer: **Aarti Ramaswami**, *ESSEC Business School*
Organizer: **Senthil K. Muthusamy**, *Slippery Rock U.*
Organizer: **Tanvi H. Kothari**, *San Jose State U.*

This PDW seeks to fulfill the mission of the Indian Academy of Management to build a supportive community of scholars. In line with this year's Academy theme of creating a better world together, we endeavor to expand research opportunities to connect and explore new ideas. In addition, this PDW is designed to serve the specific goal of building research capabilities within India. The PDW is targeted at researchers and scholars who are beginning to develop a research stream, and scholars elsewhere seeking to conduct research in India. The partnerships formed during this PDW will hopefully translate to more impactful and higher quality research engagement and scholarly output.

Governance and Ethics in Hybrid Organizations

Session Moderator: **Clodia Vurro**, *U. of Milan*

SIM: Governing Social-Business Hybrids. A Literature Review (WITHDRAWN)

Author: **Valentin Held**, *U. Ramon Llull, ESADE Business School*

There is consensus among scholars about the importance of governance in social enterprises. Yet, existing literature reviews have refrained from addressing social enterprise governance. This review inquires about the unique governance challenges that social enterprises face and how they address them. Based on a systematically collected and analyzed sample of 72 peer-reviewed journal articles across multiple disciplines, the review identifies accountabilities to multiple principal stakeholders, agents that combine altruism and self-interestedness, and the paradoxical relationship between social and commercial objectives as fundamental governance challenges in social businesses. ‘Hard’ governance, comprising formal structure and control addresses these challenges to some extent. However, impediments related to a mismatch between the assumptions of agency-based governance mechanisms and the context of social enterprises, the insufficiency of differentiated governance structures to balance social and commercial objectives over time, and technical and ideological difficulties of social measurement and reporting limit the applicability and effectivity of ‘hard’ governance. ‘Soft’ governance, comprising organizational culture, identity, socio-psychological mechanisms, and subtle mediation forces circumvent some of these impediments, making them a necessary supplement for social enterprise governance.

SIM: Sacred and/or Profane? Contesting Commercialization in China’s Emerging Civil Sector   

Author: **Haochi Zhang**, *Northwestern Kellogg School of Management*

Author: **Jianhua Ge**, *Renmin U. of China*

Author: **Di Zhu**, *Renmin U. of China*

To what extent will hybrid organizational forms and practices, such as the commercial activities of non-profits, become institutionalized? In this article, we call for attention to the dual system of human morality—consequentialism and deontology—to examine the cultural foundations underlying the tensions in the development of organizational hybridity. On the one hand, the consequentialist moral culture catalyzes the emergence and institutionalization of hybrid organizational forms and practices when hybridity offers instrumental benefits. On the other hand, the deontological moral culture emphasizes purity and inhibits the institutionalization of hybridity, regardless of its costs and benefits. We provide quantitative and qualitative evidence to support our theory by examining how multi-level factors that influence the prevalence of consequentialist and deontological moral culture will either facilitate or hinder the institutionalization of nonprofit commercialization in China. Thus, our study contributes to filling the undertheorized lacuna for the cultural-structural antecedents and the moral foundations underlying the emergence of and potential upper limits for the institutionalization of hybrid organizational forms and practices.

SIM: The Unintended Consequences of Supportive Institutional Infrastructure on Social Ventures 

Author: **Clodia Vurro**, *U. of Milan*

Author: **Peter Dacin**, *Queen's U.*

Author: **Derin Kent**, *Warwick Business School*

Social ventures—newly founded organizations that blend social welfare and commercial logics to deliver innovation for societal change—while becoming an increasingly popular choice of organizational form for addressing complex social problems, often leave social entrepreneurs faced with tensions and trade-offs stemming from multiple and oftentimes contradictory social and business logics. Although tension is intrinsic to the hybridity of social ventures, it can also be unintendedly induced by the context in which social entrepreneurial activities occur. Extending current understanding of the complex role of institutions in both facilitating and hindering the effectiveness of social ventures, our research identifies conditions under which institutional infrastructures meant to coordinate action around a given social problem, unintendedly threaten the effectiveness of social ventures thriving to contribute to solving the problem. Our proposed theoretical framework suggests that, depending on the level of centralization and multiplicity of actors in the institutional infrastructure, social ventures face legitimating and organizing tensions that are likely to threaten their ability to address and manage social-business tensions and, thus, their ability to produce intended results. This enhanced understanding of institutional configurations and related unintended consequences allows us to provide a number of suggestions regarding institutional correction mechanisms targeted at mitigating the likelihood of causing unexpected drawbacks.

SIM: Organizing spectral hybridity: An ethnography of a sheltered workshop in Japan

Author: **Tetsu Hirasawa**, *CHUO U.*

Author: **Elizabeth Hood**, *Boston College*

Hybrid organizations increasingly play key roles in resolving social challenges by combining multiple logics that are not normally combined. Drawing on ethnographic research of a successful hybrid organization – a sheltered workshop managing both welfare through training disabled individuals and bakery business in Japan – we develop theory on combining hybrid elements differently across subunits, what we call “spectral hybridity”. Spectral hybridity occurs when subunits across the organization adhere to the competing hybrid elements to differing degrees. Specifically, we propose spectral hybridity as sustainable through three practices- compartmentalizing variegated hybrid units, distributing tensions across the subunits, and progressive connection between bipolarity. Spectral hybridity makes welfare and business as a continuum. Our spectral hybridity model reorients research away from focusing on either integration or differentiation approaches or both integration and differentiation approaches to the mutual constitution between connection and differentiation with implications for scholarship on hybrid organizing in social challenge.

Innovation, Technology Strategy and Competition Track: Organizational Changes During COVID-19

Session Moderator: **Roberto Santos**, *U. of Massachusetts, Lowell*

TIM: Collaborating Neuroscience Online: The Case of the Human Brain Project Forum      

Author: **Ann-Christin Kreyer**, *PhD Candidate at Max Planck Institute for Innovation and Competition*
Author: **Lucy Xiaolu Wang**, *Assistant Professor at UMass Amherst*

This paper analyzes interactions on the public-access online Forum of the Human Brain Project (HBP), a major European Union-funded neuroscience research initiative, to understand the utility of the Forum for collaborative problem solving. We construct novel data using online posts and detailed user profiles on the Forum, plus proprietary and public sources. We find that post-level HBP Forum utilization is comparable to that of a leading general-interest coding platform, and online usage metrics quickly recover after an initial Covid-19-related dip. Regression results show that user interactions on the Forum are more active for programming questions, and questions in HBP core areas. Further, Cox proportional hazard analyses show that such problems are solved faster. In contrast, discussions involving more users and users from different countries do not directly translate to faster problem solving. Our results suggest that building novel online collaborative Forum can support researchers working on complex topics in challenging times; further study is needed to understand the cost effectiveness of the institution.

TIM: Limits of Open Innovation and Organizational Change: A Case Study 

Author: **Khuram Shahzad**, *U. of Vaasa*
Author: **Sorin Dan**, *U. of Vaasa*
Author: **Faisal Imran**, *U. of Vaasa*
Author: **Philipp Holtkamp**, *U. of Vaasa*
Author: **Mari K. Niemi**, *e2 Tutkimus*

The purpose of this study is to explore the limits of open innovation (OI) during organizational change. It aims to offer approaches that can drive organizations to offset such limits and institutionalize the opportunities of OI. The empirical analysis is based on an in-depth single case study of an OI ecosystem initiative developed by a large multinational manufacturing company in Northern Europe. By analyzing the limits of OI across the different stages of the change process, we have found that clearly communicated top management's vision and support trigger the company to unfreeze for a change towards OI. However, during the change process of developing collaborative and absorptive capabilities, and organizational readiness, several internal and external challenges limit the company's ability to open up. These challenges refer to knowledge and resource utilization, structure and culture, training and development, collaboration, risks and threats, technological advancements and recently the COVID-19 pandemic. Our proposed analytical framework shows several concrete managerial implications by providing evidence and insights for companies to consider when developing and implementing an OI ecosystem.

TIM: First Movers in a Pandemic: How Knowledge Expertise Impacted Global Biopharmaceutical Innovation   

Author: **Denise R. Dunlap**, *UMass Lowell*
Author: **Roberto Santos**, *U. of Massachusetts, Lowell*
Author: **Scott Latham**, *U. of Massachusetts, Lowell*

Creating safe and effective innovative treatments in the biopharmaceutical industry is a knowledge-intensive and risky business, even under the best of circumstances. Until recently, research into deadly infectious diseases was on the decline and attracted negligible investment, despite growing global health authority warnings. The coronavirus pandemic uncovered the socio-economic dangers of neglecting infectious disease research. Drawing upon our unique database of COVID-19 innovations, we explore how firms innovated in the early stages of the pandemic when little was known about the virus. We elucidate how firm knowledge expertise, in terms of breadth and depth, played a pivotal role in first-mover innovations. Our discoveries suggest how different types of knowledge provided distinctive opportunities to develop a wide-range of new and repurposed innovations needed to detect, treat, prevent, and manage its effects. Our findings suggest that deeper expertise is associated with higher rates of new innovative solutions whereas broader expertise led to more repurposing of existing innovations. We provide new insights about the heterogeneity of infectious disease research across countries. Our discoveries have implications for policy makers and business leaders and suggest that further theorizing is needed to disentangle the ways in which firms use knowledge to innovate under public health emergencies.

Author: **Xuemei Xie**, *Tongji U., Shanghai, PR. China*

Author: **Yonghui Wu**, *Shanghai U.*

Based on organizational information processing theory (OIPT), this study examines how and when business networks exert a positive influence on firms' organizational resilience capacity. Using data collected from 409 Chinese manufacturing firms during the COVID-19 pandemic, and by disaggregating business networks into two dimensions—network breadth and network depth—our findings show, firstly, that both network breadth and network depth are positively correlated to the organizational resilience capacity of firms; secondly, that these relationships are mediated by firms' ambidextrous learning; and thirdly, that the positive effects of network breadth and network depth on organizational resilience capacity are stronger when the firms' digital technology levels are higher. Furthermore, through additional analysis, we find that the positive impact of business networks on organizational resilience capacity is stronger for non-state-owned enterprises (non-SOEs) than it is for SOEs, and also that the moderating effect of digital technology on the relationship between business networks and organizational resilience capacity is greater for non-SOEs than it is for SOEs. These findings provide new insight into how a firm's business network, in combination with its ambidextrous learning and level of digital technology, affects its organizational resilience capacity development, which helps it survive a crisis for future sustainable development.

TIM: Familiarity, Disruptiveness, and Stock returns

Author: **Jia Zhang**, *Leiden U., The Netherlands*

Author: **Jian Wang**, *Leiden U., The Netherlands*

Author: **Simcha Jong**, *Leiden U., The Netherlands*

There is an emerging interest in studying how the stock market responds to firm innovation. Many studies have observed that more radical innovation is underappreciated by the stock market and attribute this to the “categorical imperative” (i.e., innovation that does not fit existing cognitive framework is confusing for the market and therefore undervalued). We propose an alternative “creative destruction” hypothesis: more radical innovation is undervalued because it disrupts existing business model and therefore faces a high level of uncertainty. Using a large dataset of 1 million USPTO utility patents granted between 1980 and 2010, we measure patent stock return using the Kogan et al (2017) measure based on stock price response to the issuing of patents, patent familiarity by how similar the patent text is to prior patents using cleaned patent keywords data developed by Arts et al (2021), and patent disruptiveness by how a patent disrupts the citation network proposed by Funk and Owen-Smith (2017). We found that patents with a higher level of familiarity generate lower stock return, demonstrating the market’s appetite for novelty in contrary to what the categorical imperative predicts. We found that patents with a higher level of disruptiveness generate lower stock returns, supporting the creative destruction hypotheses. More interesting, patent familiarity moderates the effect of patent disruptiveness on stock returns, more specifically, when patent familiarity is high, the negative effect of disruptiveness on stock returns is smaller, indicating that the market is unable to recognize the disruptive nature of patents that are unfamiliar to the market. This supports the categorical imperative hypothesis. These complex patterns advanced our understanding on the relation between innovation and stock returns and contributes to the innovation and finance literatures.

TIM: Tethered Architectures in Cyber-Physical System Development: The Case of Tesla’s Autopilot System  

Author: **Antti Kalervo Lyyra**, *London School of Economics*

Author: **Kari Koskinen**, *Aalto U. School of Business*

Author: **Carsten Sorensen**, *London School of Economics*

Author: **Tucker James Marion**, *Northeastern U.*

Cyber-physical systems developed to operate under environmental uncertainty, such as self-driving cars, represent challenges within the new product development process. The amount of data and need for iteration of software in addressing the variety and complexity of use environments can conflict with the realities of hardware development lead-time and manufacture. Furthermore, developing new capabilities requires the ability to learn from product use. Current theories regarding product architecture do not provide an adequate architectural blueprint for the development of cyber-physical systems. In this research, through a longitudinal analysis of Tesla’s Autopilot system, we propose the concept of a “tethered architecture”. A tethered architecture simultaneously allows the slower, incremental iteration of hardware to be linked with faster, exploratory development of software and continual data-rich feedback loops between product development and use. This paper demonstrates how a tethered product architecture and related development process can enable continuous cycles of learning and adaptation to the variety and complexity of physical environments and situations. This architectural reconfiguration decouples hardware and software while introducing a tight integration between the consumer-facing product and backend software infrastructure and operations. The iterative nature of product development may prove identity-challenging for firms that have traditionally focused on developing complete products, as a tethered architecture gives rise to new product strategies, lifecycle models, knowledge regimes, and organizational arrangements.

Paper is Available to Meeting Registrants Only.

TIM: Megaprojects: What’s the Purpose? 

Author: **Nuno Gil**, *U. of Manchester*

A powerful new conceptual understanding of a ‘megaproject’ as a purposeful form of organizing capital production is emerging. The theory, which is nascent, offers novel insights as to why delays, cost overruns and scope creep are so widespread in capitalintensive, project-based enterprises, and what we can do about it. Further, it sheds light on how these social technologies achieve their purpose of creating both economic returns and societal gains, and distributing value in a way that stakeholders that affect or are affected by the capital investment see as fair. This essay identifies implications to our understanding of the bundle of resources that needs to be assembled to progress with capital production, organizational boundaries and governance, stakeholder claims, and performance. I conclude by emphasizing how the purpose of a project is contextsensitive, and linking the insights on why megaprojects behave the way they do to wider debates on the role of stakeholders in strategic management and value creation.

TIM: Collaborative Persuasion Tactics in Advancing Technological Ideas 

Author: **Tea Lempiala**, *U. of California, Merced*

Author: **Sari Susanna Yli-Kauhaluoma**, *Aalto U., Department of Management Studies*

This article examines how idea selling is practiced in three different team contexts of innovative work. With idea selling, we refer to practices that aim at affecting decision maker’s attention to and understanding of relevant issues in idea development efforts with the intention of gaining support and resources for the issue at hand. Based on qualitative data, our results show that all three teams use collaborative tactics as a means of subtle issue selling, which enabled them to blur boundaries between seller-customer roles as well as status quo and novelty.

Organizational Innovation Track: Service-oriented Innovation

Session Moderator: **Valentina Forrer**, *Free U. of Bozen-Bolzano*

TIM: Service Capabilities Development in the Servitization and Digital Servitization Journey

Author: **Erica Santini**, *U. of Trento*
Author: **Valentina Forrer**, *Free U. of Bozen-Bolzano*
Author: **Filippo Visintin**, *U. degli Studi di Firenze*

Servitization is not an homogenous phenomena, and digital technologies are enlarging the organizational solutions allowing companies to enter the journey. The paper assesses differences in the organizational solutions allowing customer contact between a servitization and a digital servitization journey of well-established manufacturers. Servitization and digital servitization trajectories have a different nature. The deployment of front-office staff in the delivery of advanced services is crucial in the servitization journey. In digital servitization journey, however, R&D department is the core of service capability development and it leads the company through the journey. The study is exploratory and based on two case studies. The first case refers to servitization taking place in the pre-digital era and it has been retrieved in the servitization literature. The second refers to a manufacturer that recently entered a digital servitization journey. The resulting differences coming to light from the comparison of these two journey offer manufacturers a more comprehensive understanding about the organizational solutions allowing the delivery of PSS in both servitization and digital servitization strategies.

Paper is Available to Meeting Registrants Only.

TIM: The Value Conception, Acceptance, and Ability Perspectives on Value Innovation

Author: **Pekka Töytäri**, *Aalto U.*
Author: **Taija Tuulia Turunen**, *Aalto U. School of Business*
Author: **Esko Hakkanen**, *Aalto U.*

This study integrates alternative and complementary perspectives to explain how different stakeholders evaluate a novel value creation opportunity in a service innovation context. Our empirical multi-case study findings induce a model that combines three stakeholder perspectives and three evaluation perspectives to show how the differences in attention, acceptance, and ability rule out promising value creation opportunities. The results show that in order to realize the value creation potential of a service innovation, stakeholders need to align and expand their respective value conception, value acceptance, and value ability sets to enlarge the cross section of shared perceptions. Our study contributes to innovation literature by integrating three complementary theories into a model to explain the service innovation receptivity among stakeholders.

Paper is Available to Meeting Registrants Only.

TIM: Servitized Customer Segmentation Model for SMEs

Author: **Davide Gamba**, *U. of Bergamo*

The study's purpose is to develop and test a service-oriented customer segmentation model for manufacturing small and medium enterprises' (SMEs) business development. By acknowledging SMEs' lack of resources, the model aims to help companies establish strategies and organizational arrangements to overcome servitization's strategic and operational barriers. The model was initially developed based on the recency, frequency, and monetary (RFM) model. The RFM model was adapted to include installed base and different services delivered by manufacturers. The model helps manufacturers to focus on profitable after-sales customers to ensure long-term revenues by associating a specific service strategy to each cluster identified and developing offerings that fulfill specific customer needs. The authors collected data about 296 customers of an Italian manufacturing SME during 2019-2021 to offer the first validation and train of the tool developed according to the proposed framework.

Organizational Learning and Search Track: Better Together? Collaborations, Alliances & Acquisitions

Session Moderator: **Mayank Varshney**, *Indian Institute of Management Ahmedabad*

TIM: Gone but not Forgotten: How Inventor Exit Helps in Technology Acquisitions 

Author: **Mayank Varshney**, *Indian Institute of Management Ahmedabad*
Author: **Amit Jain**, *National U. of Singapore*

Firms interact with the strategic factor market to acquire new or external knowledge. However, firms face information asymmetries while trading resources in the strategic factor market because it is not perfect. We argue that inventor-exit helps a firm to identify a target for knowledge acquisition. Inventor-exit from a focal firm to a hiring firm suppresses information asymmetry between the firms and therefore increases the probability of acquisition. Moreover, the positive effect of inventor-exit on the likelihood of acquisition is negatively moderated by the research experience of the hiring firm. The analysis based on the global biopharmaceutical industry in the period 1993–2010 supports the arguments.

TIM: Novel Value Configurations and Business Model Divergence in Dyadic R&D Alliances  

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Viktor Fredrich**, *U. of Bayreuth*

The revised dynamic relational view suggests that alliances in general and R&D alliances in particular offer complementarities and learning for the involved firms. We argue that considerable changes to a firm's business model are more likely to spillover from mutual R&D alliances if managers pay greater attention to these R&D alliances—even more so if collaborating firms operate in overlapping markets. Firms that pursue joint R&D in overlapping markets share basic assumptions and core knowledge regarding the markets' demand drivers. We model and test how the degree of market overlap in a sample of N=604 high-tech firms that formed N=302 independent dyadic R&D alliances can result in novel value configurations that trigger a relative divergence of firm-level business models. In detail, market overlap unfolds an inverted U-shaped relationship with novel value configurations. This curvilinear effect is dependent on the presence of prior and the expectation of future relationships with the dyadic alliance partner. Furthermore, we find that the novel value configurations subsequently result in firm-level divergence of the collaborating firms' business models. In summary, serving a common market while enabling firms to understand better one another can trigger novel value configurations and facilitate more distinct—diverging—firm-level business models.

TIM: In-licensing Networks in the Pharmaceutical Industry: Antecedents and Firm Performance Implications  

Author: **Abel Lucena**, *U. of the Balearic Islands*
Author: **Rebeca Mendez-Duron**, *U. de les Illes Balears*

This paper examines the technology sourcing in the pharmaceutical industry occurring from firms' in-licensing networks. It tests a theory that in-licensing portfolio contents create inducements that drive the subsequent presence of structural holes in the firms' in-licensing networks. Then, the paper examines the firm performance implications of alternative in-licensing network designs, proposing that a balance between structural holes and closures maximizes that performance. Using data for a sample of pharmaceutical firms, the paper finds that companies seek technological diversity by spanning structural holes in their in-licensing networks if their portfolios are highly concentrated on deals exploiting a given molecule technology or coming from a given production stage. In contrast, companies reduce technological diversity by spanning fewer structural holes if their in-licensing portfolios are highly diverse across therapeutic areas. Also, the paper finds evidence that balanced designs lead to superior firm performance, compared to specialization in either structural holes or closures.

Paper is Available to Meeting Registrants Only.

TIM: R&D Collaborations with Common Partners and Knowledge Leakage to Rivals: The Role of IP Litigation

Author: **Sarah Edris**, *Maastricht U., School of Business & Economics*
Author: **Rene Belderbos**, *KU Leuven*
Author: **Victor Gilsing**, *Vrije U. Amsterdam*

While prior studies have suggested that co-location of R&D activities increases the potential knowledge spillovers between rival firms, we emphasize that knowledge leakage can also occur if firms source knowledge through collaborations with the same organizations. We expect that research organization such as universities and research institutions, with their focus on open science, take up a more powerful role as such intermediaries of knowledge spillovers than firms. Focal firms with a more aggressive patent litigation strategy may be able to restrict knowledge leakage through collaboration partners, but this may be more effective if such partners do not adhere to an open science paradigm. Our findings from patent citation analysis among leading pharmaceutical firms show that the degree to which rival firms have research organizations or firms as common partners is positively associated with inter-firm knowledge outflows. This relationship is significantly weaker for firms with a more aggressive patent litigation strategy – but only when the intermediaries are firms.

Open Innovation Track: External Factors in Open Innovation Outcomes

Session Moderator: **Geoffrey Peter Otieno**, *Strathmore Business School, Kenya*

TIM: Influence of Regulatory Environment on the Process and Outcomes of Lead User Innovation

Author: **Geoffrey Peter Otieno**, *Strathmore Business School, Kenya*
Author: **Ruth Kiraka**, *Strathmore U.*

Scholars agree on the importance of lead user characteristics of trend and expected benefits on innovation outcomes. Although scholars agree on characteristics, the process and regulatory environment have not been adequately considered to influence innovation outcomes. With its increasing emphasis on product innovation, lead user innovation literature has become distanced from the real-world considerations of regulatory authorities and the innovation process. Understanding the role regulators and innovation processes play on innovation would enhance identification of different groups of lead users and management processes for the fintech sector and by extension success or failure criteria. The sequential mixed-method approach on 321 lead users and eight regulators quantitative responses, 36 lead users, and five qualitative ones provides new insights. SPSS analyzed quantitative data through principal component and regression analysis, while NVivo analyzed the qualitative data. Results showed that the number of partners is significant, while work experience is only significant when integrated with other variables. It enhances the lead-user theory by addressing whether more than trends and benefits determine the success or failure of innovations. The study linked lead-user innovation outcomes to the process of innovation and regulatory authorities, offering new insights.

TIM: Institutions, Transaction Costs and Inbound Open Innovation: A Multilevel Analysis

Author: **Andrés Eduardo Rangel**, *U. Autónoma de Occidente, Cali (Colombia)*
Author: **Cristina Villar**, *U. of Valencia*
Author: **José Pla-Barber**, *U. of Valencia, Spain*

While previous studies have mentioned a potential effect of institutional policies on open innovation, we analyse how and why the probability of conducting open innovation can vary across countries. Our conceptual model suggests that decisions to engage in open innovation occur at two levels: at the company or microeconomic level, and at the institutional level. We use a complementary theoretical framework based on transaction costs theory and institutional theory to explain this phenomenon. This framework is rooted in institutional logics that affect transaction costs by establishing the rules of the game and reducing (or increasing) uncertainty in transactions. Using a unique dataset from EFIGE study covering almost 15,000 manufacturing companies active in 7 European countries, and by estimating a multilevel logistic model, we show that institutional variables have a relatively greater weight than microeconomic variables when explaining the variability in decisions regarding engagement in open innovation across Europe. This study's approach creates a connection between the transaction cost factors that explain decisions to undertake open innovation and the institutions in which a company is embedded.

TIM: Driver or Enabler? The Role of Social Media in Open Innovation

Author: **Yuan Yuan**, *Warwick Business School*
Author: **Giuliana Battisti**, *Warwick Business School*

Social media has increasingly drawn the attention of both practitioners and academia as it is fundamentally changing the way individuals and organisations interact, communicate and exchange knowledge. Despite its importance, little is still known on the extent to which companies operationalise the external knowledge flow by establishing partnerships and collaborations. Little is also known about the extent to which knowledge flow management is conducive to further innovation activities and open innovation behaviour. Using data from the UK Innovation Survey and E-commerce Survey, we offer empirical evidence on both the direct and the mediating role of social media in shaping collaborations and partnerships for innovation. We find that social media drive open innovation by facilitating formal collaboration. Our study also draws attention to how social media moderate the link between formal collaboration and appropriability strategy with regard to different forms of Intellectual Property protection and appropriability regimes. The theorising and the estimation results have significant implications for business and academia on the role of social media in shaping innovation in organisations.

TIM: The Influence of Gatekeepers on Continued Participation in Open Source Software Projects

Author: **Shaoqin Tang**, *U. of Colorado, Boulder*

The success of firms' participation in open source software (OSS) development depends heavily upon their ability to maintain a constant flow of voluntary contributions. The emerging literature on contributors' continued participation suggests that contributors' willingness to stay in OSS projects is shaped by their experience of prior participation. We extend this literature by examining how gatekeepers' interactions with contributors influence their continued participation in firm-hosted OSS projects. Predictions are formalized in an analytical model that analyzes how contributors' belief updating process is affected by gatekeepers' code acceptance and knowledge sharing activities. By utilizing data on 9,271 newcomers' participation in Google-owned OSS projects on GitHub, we find that gatekeepers' knowledge sharing and code acceptance in initial interactions have positive effects on newcomers' continued participation in OSS projects. In addition, these effects persist among newcomers who work for the OSS firms and are magnified if gatekeepers have high expertise.

TIM: The Status Quo of Environmental Sustainability Implementation During NPD in Industry

Author: **Emelia Delaney**, *King's College London*

Author: **Wei Liu**, *King's College London*

The future of sustainable innovation is a key focus for both academia and industry, with an increased demand for the development of sustainable products due to Climate Change as well as consumers becoming more socially aware of sustainability issues. Literature has previously identified that product designers have a vital role in implementing sustainability during NPD. Critical analysis of literature has identified a range of key factors of environmental sustainability, tools and methodologies which are suggested to be implemented by product designers during NPD; however, it is currently unclear of the current status of environmental sustainability within the product design industry. Semi-structured interviews with 20 sustainability-based product design professionals were conducted to explore the current status of environmentally sustainable innovation. The interviews focus on factors of environmental sustainability, tools, and technologies to aid sustainable product development and the education of participants to understand how equipped they are to fulfil industry's demands for sustainable NPD. The critical review of literature combined with the data analysis of the semi-structured interviews has enabled the development of a new process model which illustrates the environmentally sustainable product design process suggested by literature and participants. Future research directions have also been outlined. Keywords: Product Design, Environmental Sustainability, Design Process, Sustainability, Design

TIM: Digital Transformation for Green Growth: Evidence from Micro Firms

Author: **Pelin Demirel**, *Imperial College London*

Author: **Effie Kesidou**, *U. of Leeds*

Author: **Gamze Ozturk Danisman**, *Kadir Has U.*

In this paper we explore whether pursuing a digitalisation strategy, adopting advanced digital technologies, and building internal digital skills positively moderate the relationship between firms' eco-innovation efforts and growth performance. Our econometric analysis of a sample of 5,015 micro firms from 39 countries accounts for selection bias and endogeneity via the estimation of an instrumental variable two-stage least squares (IV-2SLS) approach. The results provide evidence that eco-innovations boost firm growth when coupled with a well-defined digitalisation strategy. We also find that eco-innovations improve firm growth only for firms that adopt advanced digital technologies (such as big data and Artificial Intelligence applications) rather than basic ones. Finally, our results reveal that the positive relationship between eco-innovation and firm growth is enhanced by improvements in internal digital skills and capabilities. Our findings contribute to the literature and policy debates by underlying a new strategic alternative for micro firms that differs from traditional sole focus on eco-innovation driven growth. Instead, this paper advocates the viability and performance benefits of a twin digital and ecological transformation and showcases the need to align eco-innovation investments with digital transformation efforts for an economically successful net-zero transition.

TIM: How Sustainable is an Innovation Strategic Orientation?

Author: **Fábio De Oliveira Paula/FAPERJ**, *Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*

Author: **Elisangela Tarraço**, *Centro U. FEI*

Author: **Felipe Mendes Borini**, *U. of Sao Paulo (FEA/USP)*

Author: **Roberto Carlos Bernardes**, *Centro U. FEI*

It is a consensus that firms genuinely concerned with environmental sustainability must innovate in their business to achieve above-average sustainable performance, therefore adopting an eco-innovation strategic orientation. On the other hand, nowadays, innovative business models are leveraged by intrinsically more sustainable concepts such as industry 4.0 technologies and circular economy. It means that firms with a more general innovation strategic orientation, even if not explicitly seeking to improve their environmental performance, may achieve it due to their innovative efforts to obtain a competitive advantage. We tested our hypotheses with structural equation modeling through a survey administered in 844 firms from five countries. The results indicated that both eco-innovation and general innovation strategic orientations have similar effects on achieving a better sustainable performance, which simultaneously encompasses environmental and operational performance, directly and mediated by the eco-innovation implementation. This paper contributes by supporting the affirmative that the concepts and technology that support most new business models nowadays are intrinsically more sustainable. It also helps managers improve their firms' strategic planning and execution process by giving elements to verify that both strategic orientations are effective for firms to achieve good sustainable performance.

Author: **Viviana D'Angelo**, *U. Cattolica del Sacro Cuore*

Author: **Enzo Peruffo**, *Luiss Guido Carli U.*

This article explores the impact of green manufacturing practices, in the form of green activities, green investments, and the type of product made, on the economic performance of firms. Using survey data from European small- and medium-sized enterprises (SMEs), we investigate the extent to which the number of green activities, green investments and type of product made affects a firm's economic performance. Our results reveal that while the number of green activities has a positive effect on economic performance, the amount of green manufacturing investments has an inverted U-shaped relationship to economic performance, and that this effect is positively moderated if a company also sells non-green products. Building on self-determination theory, we argue that consumers react positively to green business practices because they accurately assess technological efforts that seek to mitigate the environmental type of "grand societal challenges" that we are currently facing. Our study contributes to the literature on green manufacturing by dissecting the effect of green manufacturing practices on a company's economic performance. Our study findings also provide managers with advice on the right balance of green practices that most benefit their companies.

TIM: Dealing with the Continuum of Tensions in Increasingly Digitalized and Intelligent Complex Systems

Author: **Gunnar Holmberg**, *Linköping U.*
Author: **Nicolette Lakemond**, *Linköping U.*

This paper seeks to explore how organizations dealing with the development of complex systems can understand and act upon the extensive set of entangled tensions they face. By applying a quantum perspective on tensions, and an understanding of tensions based on their latency, salience and persistence, a framework is developed for observing, acting and reacting on a large set of entangled tensions. The well-documented case of Boeing 737MAX is used to illustrate and analyze the extensive set of entangled tensions, or continuum of tensions, and possibilities to act on these tensions. The analysis shows that an actionability perspective on the dialectic tensions potentially offers clarification of the challenges that organizations are facing when addressing complex systems. Two major aspects emerge as crucial for addressing complex systems: 1) Actionable salience as the ability of an organization to identify and select key tensions in several perspectives, and 2) Actionable resolution as the ability to address and resolve a set of salient, often complex, and entangled tensions that have been identified. Several avenues for further research are identified in relation to management of increasingly digitalized complex systems and the emergence of complex intelligent systems.

TIM: Unfolding Emerging Relationship of AI-enabled Job Characteristics on High-Tech Employees IWB

Author: **Surabhi Verma**, *U. of Southern Denmark, Odense, Denmark*
Author: **Vibhav Singh**, *Narsee Monjee Institute of Management Studies (NMIMS)*

The relevance of AI-enabled systems has occupied the central space of innovation research for a decade. Research works have highlighted adoption of AI-enabled systems (AIS) in firms but there is scant empirical research on AI-enabled job characteristics of employees of high-tech firms pertaining to innovative work behavior (IWB). Therefore, the present attempt to address this research gap, by adopting the job design theory. Authors espouse a model that explains the roles AI-enabled task and knowledge characteristics demonstrate in employee's IWB. Furthermore, the impact of AIS on human workforce replacement is currently a debatable area. Drawing on prospect theory, we tested the moderating role of perceived substitution crisis (PSC) triggered by AIS on IWB. The results indicated that AI-enabled task characteristics (job autonomy and skill variety) and knowledge characteristics (job complexity, specialization, and information processing) impact IWB and that AI-enabled job characteristics are strongly associated with IWB under differential effects of PSC. The implications of this study could be used by academicians and practitioners to design AI-enabled job characteristics.

TIM: To Do or Not to Do: Unravelling Employee Intention to Work in AI Driven Hybrid Environment

Author: **Surabhi Verma**, *U. of Southern Denmark, Odense, Denmark*
Author: **Vibhav Singh**, *Narsee Monjee Institute of Management Studies (NMIMS)*

: Industry 4.0 is leading to an era where humans and collaborative robots (Cobots) will work in close proximity to create the hybrid workforce. Although firms are carefully considering this transition, implementation of Cobots is often carried out without careful consideration of employee's motivation and behavior who will be working in hybrid workplace. If employees do not understand their work with Cobots, it is unlikely to bring value to a firm in the dynamic business environment. Thus, our study aims to investigate the synergies between employee's creativity and behavior in hybrid workplace. We develop a model for hybrid workplace based on the componential theory of individual creativity and the valence theory that combines human workers behaviors and Cobots dimensions together. Our empirical analysis confirms most of the hypothesis about employee's creativity in hybrid workplace and positive valence of Cobots, proving that future human-Cobots collaboration needs to focus not only on benefits that Cobots brings but also on human aspects like skills and expertise. This paper contributes to body of knowledge by shedding light on the human and Cobots dimensions together and it serves as a foundation for future application and research for hybrid work.

Author: **Jack Lewis Fraser**, *Saïd Business School*

Author: **Pinar Ozcan**, *Oxford U., Saïd Business School*

Early stage, technology-driven ventures must navigate a trade-off between specialization and flexibility in contexts where the optimal path is unknown. Much of the digital entrepreneurship literature has construed digital technologies as highly malleable, affording founders with the ability to adapt and redeploy the technology to other ends as needed. However, recent work on the ontology of digital artifacts proposes a greater role for external actors – such as users – in shaping technologies through their interaction with it, limiting the agency of founders. To explore the interplay of actors and technology in shaping the growth trajectory of the firm, we conduct an inductive study of six ventures commercializing machine-learning capabilities. We show that the incorporation of training data builds an inadvertent rigidity into the machine learning capability, while simultaneously limiting the pool of actors who interact with the technology. This results in a degree of specialization that is hard to reverse, even in circumstances where the interests of founders and investors demand a return to a flexible approach. Our findings advance theory in digital entrepreneurship by introducing the possibility of categories of digital artifacts that do not share the malleability of digital technologies broadly.

TIM: Industry-University Links and Firms' Resilience: Evidence for Spanish Firms

Author: **Oscar Vicente**, *U. de Valencia*
Author: **Dolores Añon**, *U. de Valencia*

This study analyses the extent to which industry-university links in innovation activities influence firms' performance at downturns. In doing so, we use a sample of Spanish manufacturing firms to estimate how those that collaborate with universities or acquire R&D from universities prior to the Great Recession out-performed, in terms of real sales growth, their counterparts, and even so in sectors that were severely hit by the crisis (as measured by export growth). Our results suggest that knowledge transfers from universities became more valuable at bad times. These results are robust to various specifications of the model. Furthermore, our findings suggest that vertical and horizontal product differentiation is a key mechanism for the greater resilience of firms with university links during the Great Recession.

TIM: The Content Evolution of Basic, Mission-Oriented, and Applied Research in European Universities

Author: **Chiara Marzocchi**, *Newcastle U. Business School*
Author: **Ugo Rizzo**, *U. of Ferrara*
Author: **Laura Ramaciotti**, *U. of Ferrara*
Author: **Gabriele Angori**, *Department of Mathematics and Computer Sciences, U. of Ferrara*

The dynamics of basic and applied research have steadily changed since the eighties, with the private sector reducing its investments in science and universities experiencing significant remodelling in the governance of their funding. Studies looking at this have mostly focussed on industry, and less attention has been paid to understanding the evolution of the contents of university research. We adopt a critical perspective of the basic versus applied research dichotomy, and using a patent-based analysis we first identify a variety of indicators to determine the pure basic, mission-oriented, and pure applied research content. Following this, we observe how university research content has evolved with respect to industrial research content from 1978 to 2015. Our results suggest that relevant shifts occurred in academic research. In particular, while pure basic and mission-oriented research contents remain mostly a matter of university knowledge production, their intensity progressively declined after the early 2000s. Conversely, the pure applied content of university research has been steadily declining since 1978. These results complement recent literature focussing on basic and applied research dynamics in the private sector, while opening up considerations on the role of university research and its value for society.

TIM: Academic Scientists Mobility: The Hidden Pipe of Tacit Knowledge Transfer from Academia to Industry

Author: **Michel Ferrary**, *GSEM - U. of Geneva & Skema Business School*
Author: **Jérémy Orsat**, *GSEM - U. of Geneva*

Knowledge transfer (KT) from academia to industry is critical to support economic growth and to contribute to a local open innovation ecosystem. Research on university-industry knowledge transfer (UIKT) mainly focuses on codified knowledge. However, the vast majority of knowledge produced by academia is tacit and, in some cases, cannot be made explicit thus remaining embodied in individuals. Building on knowledge management theory and social network theory, this article proposes that socialization occurs in two forms, weak and strong socialization, and that strong socialization is needed for tacit UIKT. We propose that professional mobility of PhD graduates is an instrument to measure tacit UIKT. Through a database of the PhD graduates of a large pluridisciplinary European university, our results show that fields hardness and applicability have a positive effect on tacit UIKT and that alignment with national industrial specialization and free-movement policies influence tacit KT to the national industry. We contribute to knowledge management theory by exploring academic scientists' mobility as a pipe of tacit UIKT as well as by extending the concept of socialization from intra-organizational to inter-organizational settings, by proposing the concepts of weak and strong socialization, and by showing how strong socialization and tacit UIKT depend on knowledge, industrial and political dimensions.

TIM: Research, Development and University Technology Transfers: Exploring Complementarities

Author: **Abel Lucena**, *U. of the Balearic Islands*
Author: **Oscar Vicente**, *U. de Valencia*

This study disaggregates firms' R&D into its two main components (research and development) and then analyzes the complementarities between each activity and university technology transfers. Using a sample of Spanish firms, we apply a test for the presence of supermodularity in firms' new innovation sales to check whether research is complementary to university technology transfers and whether development is complementary to university technology transfers. Our results suggest that firms produce complementarities when establishing links with universities for both internal research and internal development. However, when we analyze the conditional complementarities, e.g. how complementarities between research and technology transfers from universities are when adopting, and when not adopting development, what we find is that complementarities appear when companies only do internally one of the two activities. Finally, our results indicate that complementarities are induced by cooperation, and not by outsourcing R&D services to universities.

Technology Strategy and Competition Track: Pushing the Knowledge Frontier or Spilling the Beans? Corporate R&D Disclosure
Corporate R&D Disclosure via Two Channels

Discussant: **David Hsu**, *The Wharton School, U. of Pennsylvania*
Discussant: **Hong Luo**, *HBS*
Organizer: **Nuruddin Ahmed**, *MIT Sloan School of Management*

Firms in knowledge-intensive industries create important intellectual assets while also aiming to appropriate value from their innovation. Survey-based research highlights that firms prefer secrecy and lead time over other appropriation methods (e.g., patents and scientific papers) in order to profit from their intellectual assets. However, firms frequently choose to disclose their intellectual assets via patenting and scientific publications. This symposium illuminates specific channels which guide firms' R&D disclosure strategies. The studies in this symposium focus on the private incentives and performance implications for firms that share their valuable knowledge in the public domain. R&D disclosure choices create competitive implications for other stakeholders, potentially changing innovation trajectories of entire industries. The four studies in this symposium analyze antecedents and consequences of corporate R&D disclosure in various sectors such as the medical device industry and Artificial Intelligence using advanced empirical techniques ranging from synthetic control method to difference-in-differences. The studies in this symposium contribute to the innovation strategy literature concerned with strategic interactions of innovating firms.

**Innovation and Entrepreneurship Track: Entrepreneurial
Scaling**
Entrepreneurial Scaling

Session Chair: **Nataliya Wright**, *Harvard Business School*
Participant: **Natalie Carlson**, *The Wharton School, U. of Pennsylvania*
Participant: **Ranjay Gulati**, *Harvard U.*
Participant: **Melissa Schilling**, *New York U.*
Participant: **Gary Dushnitsky**, *London Business School*
Participant: **Rembrand Michael Koning**, *Harvard Business School*
Participant: **Anselm Hager**, *Humboldt U. of Berlin*
Participant: **Maria Roche**, *Harvard Business School*

We propose to examine: how do young ventures manage the growth of their organizations and markets as they scale; what approaches account for successful scaling; and how do these approaches vary across contexts? While much research has focused on the founding (e.g., Stuart and Ding, 2006; Shane, 2000; Levine and Rubenstein, 2017) and the later stages (e.g., Nelson, 2003; Hoehn-Weiss and Karim, 2014) of the entrepreneurial life cycle, little work has assessed the in-between “scaling” stage when ventures make critical decisions about the growth of their markets and teams. We propose to bring together four papers presented by a panel of Natalie Carlson (Wharton Business School), Gary Dushnitsky (London Business School), Rembrand Koning (Harvard Business School), and Nataliya Langburd Wright (Harvard Business School), discussed by Ranjay Gulati (Harvard Business School) and Melissa Schilling (New York University). We will reveal the novel mechanisms which shape the scaling process of young ventures and how they vary across institutional and sectoral environments.

Technology Strategy and Competition Track: Emergence: Geography and Markets

Emergence: Geography & Markets

Session Chair: **Min Jung Kim**, *U. of Illinois at Urbana-Champaign*

Discussant: **Maryann P. Feldman**, *Arizona State U.*

Discussant: **Mahka Moeen**, *U. of North Carolina, Chapel Hill*

Organizer: **Paige Clayton**, *Georgia Institute of Technology*

Organizer: **Min Jung Kim**, *U. of Illinois at Urbana-Champaign*

The TIM Division and University of North Carolina at Chapel Hill (UNC) co-sponsored a workshop on “Emergence: Organizations, Markets, Platforms, and Regions” in August 2021. This symposium advances the important conversation on the topic of “emergence” begun at this successful workshop that sparked many vibrant conversations and debates. The workshop brought together over 50 leading interdisciplinary researchers in person, and dozens more virtually, who conduct research related to these four emergence themes in order to develop a community of scholars interested in understanding innovation and the dynamics of technological change. The objective of our proposed AOM 2022 symposium is to carry on this conversation with a focus on two sub-themes of emergence: markets and regions. This symposium brings together senior and junior scholars to discuss market and regional emergence at multiple levels of analysis and with varied methodological approaches. These diverse approaches will deepen our understanding of emergence processes in different aspects. Importantly, they include an international view. Specifically, the papers include intensive case study analysis to unpack the detailed process of emergence, rigorous quantitative empirical analysis to discover the antecedents of emergence, and theoretical modeling to address ambiguity and skepticism about existing concepts associated with emergence. Ultimately, by providing a forum for research on emergence and by continuing to foster a community of scholars around this topic, the symposium will advance understanding technology and market development, innovation management, and regional dynamics.

Negotiation and Ethics: Deception, Rivalry and Betrayal

Session Moderator: **Haruo Hagiwara Horaguchi**, *Hosei U.*

CM: The Logic of Betrayal for Ethical Corporate Governance 

Author: **Haruo Hagiwara Horaguchi**, *Hosei U.*

This case study examines the behavioral principles of an organization when its board members commit to ethical standards. The research question involves an ethical dilemma wherein a chief executive officer (CEO) is under suspicion of misconduct, yet is still being supported by the organization’s shareholders. This case study then modifies Hirschman’s trichotomy of exit, voice, and loyalty to propose the three new concepts of exclusion, accusation, and betrayal to depict the organizational dynamics that work under the power structure. How should the board members treat the targeted CEO, whose unethical performance should not be overlooked? What actions can be taken when the CEO is not expected to leave voluntarily? Using news sources and financial reports, we traced the case of the ousting of a charismatic leader, Mr. Carlos Ghosn, from Nissan. He was stripped of his managerial power by the board in November 2018 owing to allegations of misconduct. We termed the exclusion of the CEO caused by trusted subordinates the Caesar–Brutus effect. Six steps from accusation to betrayal are modeled that conceptualize law-abiding ethics in an organization. If hierarchical power exists, the Caesar–Brutus effect serves as an avenue for board members to respond to their CEO’s behavior.

Paper is Available to Meeting Registrants Only.

CM: Beating the Rival but Losing the Game: How Rivalry Shifts Negotiator Goals Away from Value Claiming 

Author: **Sanghoon Kang**, *CUHK Business School*

Author: **Julia D. Hur**, *New York U.*

Author: **Gavin J. Kilduff**, *New York U.*

Decades of negotiations research has revealed the importance of BATNA – best alternatives to negotiated agreement. Negotiators with stronger BATNAs tend to have greater power and claim higher values in negotiation. In addition to the value of the BATNA, the current work suggests that how the identity of negotiators’ BATNAs – that is, who they have an alternative offer from – can affect negotiation strategies. Specifically, we apply a relational lens to the BATNA dynamics and examine how negotiators respond to a counterpart that has an alternative offer from their rival. The three experimental studies show that the alternative offer from a rival activates a goal of defeating the rival and leads negotiators to make a more favorable offer to their counterparts. The effect of rivalry on the favorability of offers was partially driven by the increase in motivation to defeat the rival, which further shields the usual goal in negotiation of getting a good deal. Our model and results show that competing against a rival drives negotiators to set a less aspirational goal, which may adversely impact their decision-making.

CM: Responses to Phantom Alternatives: The Role of Truthful, Exaggerated, Deceptive, and False Statements 

Author: **Shuqi Li**, *Eli Broad School of Business, Michigan State U.*

Author: **Donald E Conlon**, *Michigan State U.*

Author: **Dustin J. Sleesman**, *U. of Delaware*

Author: **Robin L. Pinkley**, *Southern Methodist U.*

Author: **John E. Sawyer**, *U. of Delaware*

Three studies investigated negotiators’ (e.g., recruiters) reactions to counterparts (e.g., candidates) with phantom alternatives (i.e., alternatives that may or may not materialize). Study 1 examined how recruiters’ perceived power and offers are influenced by candidates’ likelihood of obtaining a phantom alternative offer. We found that candidates who have no alternative or an unlikely alternative received significantly lower offers than those with a likely or certain alternative, and power mediated the relationships. Study 2 replicated the results of Study 1 and further tested circumstances when recruiters received disconfirming information about the likelihood associated with the alternative. We found that truthful and understated statements were least likely to suffer from recruiters’ decision to rescind or lower the offer. Misrepresentation (describing the alternative as likely when it is unlikely to materialize), deception (stating facts that lead the recruiter to believe an alternative offer is in hand), and falsification (lying about an alternative offer in hand) move from lower to higher levels of impropriety. Recruiters’ perceived power and their perceived honesty of candidates explained different relationships. Study 3 demonstrated the prevalence of the tested statements and further confirmed the findings.

Author: **Craig R. Carter**, *W. P. Carey School of Business, Arizona State U.*

Negotiations in business are a core managerial activity across functional areas. Negotiations are particularly relevant for forming and managing buyer-supplier collaborations. Within these negotiations, deceptive behavior has been found to be widespread, and some forms of deception (i.e., bluffing) have even been seen as norm-complying in the eyes of both the actor and the target. Previous studies on deceptive negotiation behavior in the supply chain management field have relied on experimental research but have had limited ecological validity. Studies in other fields have focused almost exclusively on the actor's (deceiver's) perspective—for example, investigating actor motivation or traits using correlational analyses. Using two qualitative studies, we provide in-depth empirical insights into deceptive supplier behavior in negotiations from the buyer/target perspective. We begin by conducting 35 exploratory interviews with buyers and sales managers (Study 1) to scrutinize previous conceptualizations of lies and bluffs as forms of deceptive B2B negotiation behavior. In Study 1, we show that deceptive behavior is causally complex and influenced by a combination of different firm-level and individual-level factors. This key finding informed our second study, in which we conducted 68 interviews with another set of buyers; these buyers were asked in the interview to describe one specific negotiation with one supplier. Then, using fuzzy-set qualitative comparative analysis (fsQCA), we systematically analyzed these negotiations for evidence of buyers' experience of deceptive supplier behavior. Our configurational analysis yielded eight total constellations of factors—both firm-level and individual-level factors—that affected buyers' experience of deceptive supplier behavior; in six constellations buyers experienced high degrees of deceptive supplier behavior, and in two constellations they experienced low degrees of deceptive supplier behavior. We shift and advance the current research direction on deceptive negotiation behavior by using a configurational theorizing approach and adopting a target perspective on deception.

The theme of this year’s symposium, Creating a Better World Together, calls for scholars across the field of management to aid in our understanding of how individuals and organizations can help to lead “the world from darkness to better days”. In order for individuals and organizations to positively impact the world, scholars need to better understand both (i) how to sustain individual and organizational motivation to continuously engage in prosocial ventures and (ii) how to help ensure that individuals’ and organizations’ prosocial ventures actually make (continuously) positive impacts on the world. The present symposium presents some of the latest research on the psychology of prosocial and charitable behaviors, each project aiming to shed light on previously unknown barriers to effective prosociality: prosociality that actually helps the world, prosocial appeals that actually foster helping behavior, and prosocial behavior that actually fosters moral praise. We believe that a better understanding of the psychology behind prosocial and charitable behaviors—especially when and why such helping behaviors and appeals backfire—is critical when trying to effectively Create a Better World Together.

Although the body is the mediator of all experiences in organizations our scholarship often renders invisible the body's involvement in organizing. This is puzzling since the body is a constant across organizational phenomena. Making the body's involvement in organizing more visible may help management scholars address today's grand challenges, such as the COVID-19 pandemic, broad social and political unrest related to race, gender, and class dynamics in our countries, as well as resulting economic upheavals that span international boundaries. "Creating a Better World" may be more feasible if we first acknowledge that the body is an essential aspect of experiencing our world in positive, life-giving ways, and that our theories about organizing could be better leveraged in such pursuits if they allowed for a different stance towards human bodies. In our interactive symposium, we convene a panel of junior and senior scholars to share and build on each other's ideas regarding what we lose sight of in organizations when the body is obscured, and what we can do about it as scholars. We will invite audience members to build on our panelists' insights on how the situated or embedded nature of bodies might better explain challenging organizational experiences; how work or professional practices impinge upon the body; and how our theories could better account for how bodies adapt in response to changing organizational environments.

Algorithms, Coordination and Accountability

Session Moderator: **Alan Zhang**, *MIT Sloan School of Management*

 **CTO: Regenerative Coordination: Working with Algorithms to Produce Live Services** 

Author: **Alan Zhang**, *MIT Sloan School of Management*
Author: **Wanda J Orlikowski**, *MIT*

In an increasingly digital economy, a growing number of organizations are offering live services that deliver updated content and functionality continually during use. Producing live services requires managing ongoing algorithmic updates that occur unpredictably through the cloud from heterogeneous sources that are rarely aligned and prone to disrupt the service. These conditions present new challenges for coordination, which we examined in a 15-month field study of a precision agriculture company that delivers a live service providing analytics on real-time, global crop-imagery. We find that the work of producing this service enacts a regenerative form of coordination that leverages cloud-based, algorithmic updates to produce a consistent and continuous live service. We theorize these findings by explaining how the practices of regenerative coordination enable both ongoing improvements and rapid recovery from unpredictable disruptions, in conditions where the local cues, deliberation processes, and specified ends of traditional coordination are unavailable. Our study advances understanding of coordination in the digital era by articulating how cycles of continual regeneration constitute a dynamic capacity to effectively manage ongoing updates and emergent disruptions generated by cloud-based algorithms.

CTO: Enveloping Intelligent Tools: Algorithmic Accountability in Academic Research   

Author: **Wendy Günther**, *Vrije U. Amsterdam*
Author: **Mayur Prataprai Joshi**, *Alliance Manchester Business School, U. of Manchester*

Scholars in management, organizations, and information systems disciplines have been increasingly relying on various machine learning-based techniques to analyze large amounts of unstructured textual data. While reliance on such intelligence tools may help amplify the knowledge-producing capacities of researchers, it also poses challenges for the researchers in fostering algorithmic accountability as demonstrated by our systematic methodological review of papers using topic modeling in their studies in leading journals. Drawing on the literature on envelopment in robotics, we propose an envelopment framework to help researchers systematically think about fostering accountability while employing intelligent tools in research. Our framework conceptualizes research designs in the form of four categories of envelopes depending on their breadth and depth: The breadth of an envelope characterizes the alignment between the data and the phenomenon that the data are believed to represent, while the depth of envelope characterizes the role topic modeling plays in contributing to the chain of evidence in the study. Our core thesis is that the higher the volume of an envelope the more the choices the researchers need to account for while employing intelligent tools in research. Although, the exact nature of accountability expectations varies across research phases. Our paper contributes to the emerging interdisciplinary scholarship on intelligent tools and accountability in academic research in the digital age.

 **CTO: Generating Knowledge Around the Unknowable Algorithm**

Author: **Bomi Kim**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Mohammad Hossein Rezazade Mehrizi**, *KIN Research, VU Amsterdam*

This paper reports on a two-year longitudinal study of the development process of a deep learning (DL) algorithm characterized by unknowability, meaning that humans cannot know how it arrives at the output from input. Current literature predominantly frames unknowability as a problem for alienating human actors from how knowledge is constructed and applied with these algorithms. By focusing on the context of development rather than use, and by expanding the concept of unknowability beyond the opaque link between input and output, however, we found that actors engaged in various knowing practices vis-à-vis the unknowable algorithm. These knowing practices enabled them to cope with unknowability and gradually shape the algorithm by responding to emerging issues and defining concrete actions to take among others. In this sense, our findings suggest that unknowability of algorithms is not necessarily a problem to solve, but can be a generative condition that allows actors to traverse conventional divides between expertise, which is yet to receive scholarly attention.

CTO: Social e-leaders in Frontline Service Industries: A Sociomaterial Analysis

Author: **Alexandra Budjanovcanin**, *King's College London*
Author: **Wei-Ning Yang**, *King's College London*

Deskless workforces comprise more than 80% of the global workforce and many of these are found in customer facing service industries (e.g., retail, hospitality and healthcare). These frontline industries are often characterised by workforces lacking access to corporate email and in attempting to fill this communication gap, organisations are increasingly employing mobile technologies – including enterprise social media – to enable leaders to communicate with their teams. The consequence has been an increase in e-leadership via web 2.0 technology, about which little is currently known. Adopting a sociomateriality perspective and drawing on qualitative findings of 33 interviews with senior, mid-level and frontline leaders, we reveal how the entanglement of web 2.0 technology with formal leaders culminates in the emergence of three social e-leader types (avoidant, pragmatic, intrepid), and how their different configurations have implications for fulfilling a service-oriented leadership strategy. In doing so, we highlight the distinctive ways in which leadership in this context is enacted. We further identify conditions under which these social e-leadership practices are likely to emerge, highlighting factors affecting the degree of entanglement between the human and material.

GDO: [Neither Here Nor There: Status Incongruence in Migration and Mobility in Emerging Markets](#)    

Author: **Kathleen Park**, *Boston U.*

Author: **Eddy S. Ng**, *Queen's U.*

This paper explores the impact of race, ethnicity, origin, and status incongruence in understanding the experiences of highly skilled migrants in international labor markets. This paper highlights the impact of migrant bias and migrant hierarchy on highly skilled migrant labor force participation in the Arabian Gulf region. We discover that the experiences of Gulf professional-level organizational migrants run counter to the popularized migration stories and trajectories. In instances of South-to-South or West-to-East movement into the Gulf region, highly skilled, high human capital migrants have endured a status incongruence. The migration duration from emerging to emerging (South-to-South) or from emerged into emerging (West-to-East) (S2S or W2E) markets was also ephemeral in contrast to migration into Western or developed markets. Highly skilled, professional-level migrants have relatively high educational credentials and income but paradoxically lower status relative to the local citizens. Further, we unpack a migrant hierarchy that is strongly tied to migrants' nationality, religion, race or skin tone, language, and gender that delineates which migrants are more acceptable. The social order dictates that migrants from the Global North—whether affiliation with the Global North is through citizenship, ethnicity, or both—have more social mobility than those from the Global South. This status incongruence and dissonance calls for an array of coping responses not fully explained by current organizational, economic or sociological theory on migration. We extend existing theoretical boundaries on status-incongruence within the context of migrant hierarchy. The highly skilled migrant status-incongruence phenomenon has implications for policy and equity issues in the six interconnected countries of the Gulf Cooperation Council (GCC) and around the world

GDO: [Paving Off Intergenerational Debt: The Immigrant Bargain and Status-Striving Behaviors](#)     

Author: **Harrison Chicas**, *U. of North Carolina at Chapel Hill*

Author: **Shimul Melwani**, *U. of North Carolina, Chapel Hill*

Carolyn Dexter Award Nominee

Children of immigrants—referred to as second-gens—are increasingly making up the labor force. Yet, they, along with their immigrant parents remain understudied in management. Our research begins the exploration of second-gens by examining their status-striving behavior, relative to children of native-born parents—referred to as third-gens. We argue that second-gens will engage in greater status-striving behavior, relative to third-gens, and that such behavior is mediated by the immigrant bargain—a psychological contract between the immigrant parent and the second-gen child—and indebtedness. We conduct a mixed methods investigation across 3 studies, blending: 1) an archival study that examines occupational status across Europe by immigrant generation; 2) a scale development using American and British samples to operationalize the immigrant bargain; and 3) a quantitative investigation to examine the indirect effects of immigrant bargain and indebtedness on status-striving. Across all studies, our results find that second-gens, relative to third-gens, do engage in greater status-striving. We discuss the theoretical implications of such behavior by incoming second-gen employees in the workplace.

GDO: [Intersectional Experiences: Experiences of Commonwealth Female Migrant Architects in the UK](#) 

Author: **Sreenita Mukherjee**, *Queen Mary U. of London*

Abstract: This paper presents the emergent findings of a larger research project on the lived experiences and career outcomes of female migrant architects from the Commonwealth in the UK architectural profession. I will employ a postcolonial feminist analysis, and the paper will, in particular, focus on considering the key challenges related to occupational closure hurdles. In the UK, architecture is a regulated profession. The geographic origin of qualifications is often used as a part of a professional project and closure mechanism, which can be used as a basis for exclusion. Adopting an intersectional framework merging with postcolonial feminist theory with the literature on professionalisation and professional closure, this paper addresses the question: how does the geographic origin of their architectural qualification influence the experiences of female migrant architects from the Commonwealth living and working in the UK? With a commitment to feminist research design, I am carrying out fifty semi-structured interviews with female migrant architects from Commonwealth countries. One of the key findings indicates that the re-qualification and re-certification requirements for labour market participation in the UK can create significant challenges for them. Some of the requalified migrant architects' lived experiences indicate that instead of successfully crossing occupational closure hurdles in terms of re-qualification, intersections of race, gender and migrant status significantly impact their experience at work. This research intends to contribute to the literature on professionalisation and closure of architecture by examining the intersections of migration, race and gender – an intersection hitherto underexamined in the context of architecture.

GDO: [Smells Like the American Workplace: Misfit and Perceptions of Ostracism in Foreign-Born Workers](#)  

Author: **Sachin Sharma**, *UMSL School of Business*

Author: **Matthew Aplin-Houtz**, *U. of Missouri -St. Louis*

Author: **Sarah Willey**, *UMSL School of Business*

This paper explores the phenomenon of perceived misfit and feelings of being ostracized that legal, foreign-born workers experience from odors in the American workplace. Drawing from existing literature in the misfit and workplace ostracism realm, we provide a framework for the study and subsequent analysis. With a sample of 22 foreign-born workers currently employed in the American workforce, we used semi-structured interviews to enhance the understanding of the unspoken but lived experiences of this population when they first encountered the culture and smells of the American workplace. We found that odors with cultural and religious significance (i.e., cooked meat smells for workers practicing Hinduism from India and cooked pork smells for workers practicing Islam) result in perceptions of misfit and ostracism. Additionally, our findings suggest that foreign-born workers will experience not only cognitive dissonance from food-based odors but also display physical symptoms such as nausea (sometimes with vomiting) and headaches/migraines (sometimes requiring medication). Beyond physical and psychological symptoms, we uncovered that foreign-born workers often choose to not involve Human Resources or their managers despite decreases of performance and other negative consequences of culturally offensive odors. After discussion, we suggest implications/directions for future research.

Session Moderator: **Secil Bayraktar**, *Toulouse Business School*

IM: Language Proficiency, Host-Country Nationals, and Expatriate Adjustment: A Moderated Mediation Model  

Author: **Secil Bayraktar**, *Toulouse Business School*
Author: **Irmak Erdogan**, *La Salle, U. Ramon Llull*
Author: **Dariya Kaya**, *Ozyegin U.*
Author: **Alfredo Jimenez**, *Kedge Business School*

Studies have shown that expatriates with more polished skills in the host-country language are better adjusted to the host culture. However, the role of host-country nationals (HCNs) in the link between expatriates' language proficiency and their adjustment has not been thoroughly investigated. Drawing on Social Identity Theory and Network Theory, we propose and test a moderated mediation model focusing on two HCN-related variables, namely HCN support and HCN network size. Based on a survey with 281 expatriates, we show that proficiency in the host-country language has a positive association with expatriates' general, interaction, and work adjustment through increased social support from HCNs. Moreover, we find that HCN network size moderates this mediation such that the expatriates' local language proficiency gains more importance when their network size is smaller. In contrast, when expatriates have large local networks, the positive impact of language skills weakens. Our findings have implications for expatriates and international human resource managers.

IM: International Employees' Adjustment Research: Retrospective Overview Using Bibliometric Analysis 

Author: **Irma Baneviciene**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Vilmante Kumpikaite-Valiuniene**, *Kaunas U. of Technology, School of Economics and Business*

The main purpose of this study is to review articles related to international employee (IE) adjustment published in scientific journals in the field of management during 1990-2021. We used bibliometric and content analysis methods to analyze articles in the Management category of the Web of Science database. The study covers several topics: 1) a broad bibliometric analysis of 1024 articles to overview the number of articles published on the subject; 2) citation analysis and analysis of the most cited articles of 658 articles; 3) content analysis of abstracts of 330 articles published in the most cited journals to analyze the themes covered and to determine research gaps. The results revealed that factors related to the adjustment of assigned expatriates are the most researched area in the management field, leaving the adjustment of other types of international employees under-researched. The study suggests that, although there are a wide variety of topics in the scientific literature related to international employee adjustment, the field of human resource management (HRM) would benefit from more and deeper research on each of them. This study complements the HRM research field by showing research concentration areas and gaps to further future research.

IM: The Hidden Power of Self-affirmations: Chronic Identity Threats and Multicultural Identity Formation   

Author: **Milda Zilinskaite**, *WU Vienna U. of Economics and Business*
Author: **Aida Hajro**, *U. of Leeds*

Research on multiculturalism has predominantly focused on how multicultural identities predict personal, social, and task outcomes of high-skilled migrants (HSMs). What has gone unaddressed are the underlying dynamics of how HSMs form multicultural identities, especially when exposed to chronic identity threats. To address this puzzle, we conducted a qualitative study, interviewing 98 HSMs from 41 countries of origin who currently live and work in Austria. The data revealed a variety of identity threats that the interviewees perceived as beyond their control. We found that in response to these chronic stressors, HSMs relied upon two core psychological building blocks: self-affirmations and integration-conducive coping. The self-affirmations occurred outside of their awareness and were unrelated to the identity threat provocations they encountered. This represents a behind-the-scenes mechanism that triggers integration-conducive emotion- and problem-focused coping strategies, which in turn, support multicultural identity formation among the HSMs. Based on our insights, we developed a recursive process model that explains the specifics of the psychology of change that we witnessed in our data.

What We Still Need to Learn About Temporal Aspects of International Strategic Alliances? *Temporal Aspects in Intl. Strategic Alliances*

Organizer: **Farok Contractor**, *Rutgers U.*
Panelist: **Ilya Cuypers**, *Singapore Management U.*
Panelist: **Pierre Dussauge**, *HEC Paris*
Organizer: **Michael Nippa**, *Free U. of Bozen-Bolzano*
Panelist: **Stephen B. Tallman**, *U. of Richmond*

International strategic alliances are often characterized as temporal organizations and organizational means to deal with (a) temporary, complex tasks and/or (b) conditions of high uncertainty regarding future developments and success. While the conceptual and empirical literature on various aspects of temporal challenges (e.g., instability, longevity, mode changes, premature dissolution, real options) is extensive and has produced a wealth of knowledge, it is desirable to focus on a research agenda that explicitly deals with time or the temporal aspects of alliances for several reasons. There are recent calls for more theorizing on time issues in management and organizations. Reviews show that there are quite a lot of conceptual overlaps, wrong assumptions, inadequate methodologies, inconsistent findings, and the theme of ‘time’ is scattered across several studies. The panel's experts ensure that existing knowledge on this theme is critically considered and consolidated, to develop future research ideas, with additional inputs from the audience participants.

You may contact the organizers for more information or suggestions ahead of the session.

Author: **Evelyn Reithofer**, *Wirtschaftsuniversität Wien*
Author: **Jakob Müllner**, *WU Vienna U. of Economics and Business*
Author: **Jonas F. Puck**, *WU Vienna*

De-globalization, COVID-19, a surprise winner, the financial crisis – MNEs have been confronted with great uncertainties during the US presidential elections from 2012 to 2020. While there is abundant research on political events affecting MNEs, the role of MNEs' international and national diversification when political events occur in increasingly polarized, nationalist Western countries has not been studied yet. Through an event study analysis, we investigate the abnormal returns of 2,941 US companies during US presidential elections. Our research contributes to International Business literature as we explore whether international and national diversification are safeguards of MNEs' performance when electoral and policy uncertainty occur.

IM: **What's in a Name? CEO Foreignness and Government Inspections of MNCs**

Author: **Yulia Muratova**, *Aarhus U., Department of Management*
Author: **Liudmyla Svystunova**, *Loughborough U.*

Government inspections, such as workplace compliance with local tax or safety regulations, are ubiquitous and represent a significant proportion of time that managers of multinational firms spend on interacting with government stakeholders in host markets. Disadvantaged by the information asymmetry about firms' non-compliance with regulations, how do boundedly rational inspectors select inspection targets? Drawing on the theory of social judgments, we propose that inspectors treat CEO foreignness, that is, whether a CEO of a firm is local or foreign, as a marker of potential organizational non-compliance with local institutional demands, therefore, prompting them to select MNC subsidiaries with foreign CEOs for inspections more often. We further explore four boundary conditions, which we argue weaken the association between CEO foreignness and the perception of potential non-compliance. We test our hypotheses on a sample of 2,259 foreign subsidiaries that operated in Russia between 2015 and 2018 and find evidence supporting most of the hypotheses. Our primary contribution is to the liability of foreignness research, specifically, the mechanisms underpinning the discrimination hazard, as well as MNCs' subnational location in host markets and nonmarket strategy.

IM: **Policy Risk and Policy Uncertainty in U.S. Antitrust Enforcement and the Deterrence of Inward FDI** → 📄

Author: **Nan Zhang**, *California State U. Stanislaus*
Author: **Joseph Clougherty**, *U. of Illinois at Urbana-Champaign*

The enforcement of antitrust policy potentially affects the level of foreign investment experienced by a nation. Yet the literature focusing on the impact of antitrust on inward foreign direct investment (FDI) is inconclusive with respect to the nature of this relationship, as antitrust involves properties that can both promote and deter foreign investment. In line with these countervailing mechanisms, the empirical literature considering the impact of antitrust on inward FDI presents mixed findings. We argue that distinguishing between policy risk and uncertainty is essential to detect the accurate impact of antitrust on inward FDI. We test this prior by employing sector-level data on U.S. antitrust enforcement and inward-FDI stocks over the 2002–2017 period. Our panel-data empirical results indicate that it is the policy uncertainty – and not the policy risk – characteristic of U.S. antitrust that deters inward FDI. Distinguishing between policy risk and uncertainty is accordingly a critical step in effectively determining the relationship between antitrust policy and inward-FDI activities.

IM: **Overcoming Institutional Voids: International Institutions and the Investment Climate**

Author: **Si Cheng**, *ESSEC Business School*
Author: **Srividya Jandhyala**, *ESSEC Business School*

Firms in many emerging markets face significant institutional voids. To overcome the liabilities of weak domestic institutions, some states (not firms) participate in international institutions, trading sovereignty for institutional credibility. We examine whether states' compliance with international institutions impacts firms' assessment of the domestic investment climate. Focusing on the global investment treaty regime that allows firms to bring legal claims for alleged property rights violations against sovereign states, we argue that a ruling in favor of the state by a neutral international body will be perceived by observer firms as a legitimating symbol of stronger property rights and domestic courts. In contrast, a ruling against the state leads to firms assessing domestic legal institutions as more challenging. By comparing 14,338 firm responses across 16 countries prior to and after a tribunal ruling, we find support for the hypothesized effect of international institutions. We further find that the effects are conditioned by whether the observer firm is in the same industry as the litigant firm and whether it is a foreign firm. These findings suggest an alternate pathway by which firms can overcome institutional voids in emerging markets.

HQ and Subsidiary Strategies

Session Moderator: **Jan Schmitt**, *Amsterdam Business School, U. of Amsterdam*

IM: How Subsidiary Internal and External Embeddedness Affects an MNE's Attention Allocation?  

Author: **David Weng**, *California State U., Fullerton*
Author: **Hsiang-Lin Cheng**, *National Chung Cheng U.*

Existing literature has suggested that MNEs direct attention and resources based on subsidiaries' actions and attributes. Yet whether or not subsidiaries' internal and external embeddedness affects MNE attention allocation remains underexplored. We postulate that the more embedded a subsidiary is internally within an MNE and/or externally within its host country, the more likely it is that the subsidiary will receive positive notice from the MNE. Subsidiaries' internal and external linkages matter for subsidiary operations, meriting the MNE's regard. We furthermore suggest that these proposed effects of internal and external embeddedness would change depending on certain boundary conditions. Results based on a sample of Japanese MNEs and their subsidiaries operating within Asia support our arguments. Our findings advance the literatures on both the attention-based view and headquarters-subsidiary relationships.

IM: Serving Two Masters: Conflicts of Interest in Intermediary HQ Relocation Decisions?  

Author: **Jan Schmitt**, *Amsterdam Business School, U. of Amsterdam*

How do intermediary headquarters (IHQs) deal with changes in the scope of the multinational corporation (MNC) and in country conditions? To investigate this question, we created a unique panel dataset of 386 IHQ cross-border relocations in Europe between 2000 and 2019. Drawing on extant literature on MNC structures and HQ location choices, we argue that IHQs' special role as 'hybrid' units with a middle position between the subsidiaries and the corporate parent puts (potentially) opposing pressures on IHQs. We hypothesize that increasing distance between the IHQ and the frontline subsidiaries as well as between the IHQ and the corporate parent is detrimental for IHQs. We also suggest that IHQs are especially pulled towards countries with highly developed institutions. We find that higher distance between the IHQ and the subsidiaries is related to a higher likelihood of IHQ relocations and that IHQs relocate to countries with a higher institutional quality than their previous host country. In contrast, the distance between the IHQ and the corporate parent does not influence IHQ relocation decisions. With those findings, we contribute to literature on the antecedents of HQ relocations, IHQ structures and configurations in MNCs, and intra-firm networks.

IM: The Dynamic Evolution of Regional Headquarters: Evidence from Sixty Years of Research 

Author: **Perttu Kahari**, *Aalto U. School of Business*
Author: **Eva Alfoldi**, *U. of Delaware*
Author: **Iiris Saittakari**, *Aalto U. School of Business*

Regional headquarters (RHQ) have long played a significant role in the efforts of multinational corporations (MNCs) to bridge local operations with global strategies through regional management. As organizational units performing intermediate parenting roles, RHQ have to be highly responsive to changes at multiple levels of the MNC, which in turn drives their dynamic and evolving nature. The purpose of this paper is to review how this dynamic and evolving nature of regional headquarters (RHQ) has been addressed and captured in the literature to date, in order to provide a framework for an enhanced and dynamic understanding of the RHQ phenomenon. Using a systematic literature review, 50 academic journal articles and book chapters were analyzed, covering a period of almost 60 years from 1964 to 2021. Our key contribution is an analytical perspective that constructs RHQ dynamism as a combination of changes in role, location and geographic scope and examines the way each of these three elements have been studied in the literature, highlighting trends, gaps and measurement issues. Based on our review, we argue that due to their dynamism, flexibility and change-sensitivity, RHQ may be seen as bellwethers of organizational change, and we theorize about the potential of more dynamic RHQ research to contribute to the broader literature on the strategic and structural evolution of MNCs.

Corporate Boards and Firm Operations

Session Moderator: **Faisal Mohammad Ahsan**, *Indian Institute of Management, Ranchi*

IM: **Do Board Interlocks Affect Entry Mode Selection?**   

Author: **Faisal Mohammad Ahsan**, *Indian Institute of Management, Ranchi*
Author: **Pallav Bose**, *Indian Institute of Management Ranchi*
Author: **Subhasree Mukherjee**, *Indian Institute of Management Ranchi*

In this study, we examine how board interlocks in firms from emerging markets can serve as conduits for vicarious learning in global markets. Based on the organizational learning perspective, we look at how a company's board of directors ties in with other companies that are already doing business in other countries. Drawing from a proprietary dataset of 556 overseas market entries by Indian firms in knowledge-intensive industries, we find that firms with a higher degree of board interlock with internationalised firms are more likely to prefer acquisitions and alliances/joint ventures over greenfield initiatives. The fact that board interlocks have a significant impact on the decision to explore alliances/joint ventures rather than acquisition and vice versa is not conclusively established. Furthermore, we observed that other modes of vicarious learning, like foreign institutional investors, can be used to compensate for the absence of board interlocks. It is also possible to enhance the knowledge gathered through board interlocks with knowledge gained from the organisations' own global experience.

IM: **Board Diversity and General Manager Turnover in MNC Subsidiaries**   

Author: **Liang Li**, *Henley Business School, U. of Reading*
Author: **Marketa Rickley**, *U. of North Carolina at Greensboro*

This study examines the impact of board diversity in multinational companies (MNCs) on the likelihood of general manager (GM) turnover in foreign subsidiaries. Using a longitudinal dataset with 2,177 observations, which includes 649 GM turnover events across 1,040 foreign subsidiaries of Japanese MNCs between 2004 and 2013, we find that board diversity in tenure, education, and gender reduces the likelihood of GM turnover. These findings support the value-in-diversity perspective and are consistent with the view that diversity not only expands the pool of knowledge in the boardroom but also allows the knowledge to be considered more deeply and extensively. As a result, MNCs with diverse boards make well-reasoned decisions and are less reliant on GM turnover as a managerial intervention tool to address foreign subsidiary issues. Our study contributes to the literature in two important ways. First, by focusing on the general manager, we add much needed insights to the role of boards in influencing turnover beyond the CEO position. Second, we advance research on board performance in multinational contexts, which remain understudied.

IM: **Board of Directors' Composition: Representation of Large Shareholders and Type of Ownership**

Author: **Raul Barros**, *IESEG School of Management*
Author: **Daniel Oyon**, *HEC Lausanne - UNIL*
Author: **Tony Davila**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

We investigate the link between large shareholder representation in the governing bodies of the firm, shareholder's governance relations and the independence of the board of directors. This research shows that the relation between ownership concentration and board independence is not linear. We also show that the combination of shareholders' representation in the governing bodies and shareholders' type shapes this relation. Board composition reflects shareholders' needs of monitoring and access to information and other agency relations. Our results shed some theoretical and empirical light on the dynamics between ownership structure and board composition in a non-Anglo-American setting. We propose a classification of large shareholders considering the involvement in the governing bodies and the agency issues related to the type of ownership. Our research has implications for regulators and investors in countries with high ownership concentration. The independence of the board of directors is a critical mechanism for shareholder protection. Our results suggest that a well-established good governance practice may not tackle the issue it was originally designed for, since it was intended for contexts with atomistic ownership. This research highlights how the 'good governance' practice of board independence is contingent on ownership characteristics.

IB and Politics

Session Moderator: **Hyewon Ma**, *U. of Illinois at Urbana-Champaign*

IM: Real Options and MNE Flexibility: The Strategic Response of US and EU MNEs to the US-China Trade War  

Author: **Hyewon Ma**, *U. of Illinois at Urbana-Champaign*

Increasing volatility in global trade policies seemingly forces MNEs to seek operational flexibility. However, real options theory which focuses on operational flexibility has rarely considered trade policy as the focal source of uncertainty for international operations. Despite recent scholarly efforts to investigate the economic impact of trade wars, how firms respond to such conflict has been underexplored. Motivated by these gaps in the literature, I engage in a firm-level, real-options analysis of the strategic responses of MNEs invested in a host country involved in a trade war. Specifically, I maintain that MNE subsidiary operations in a trade-war-involved host country exercise real options to counter threats and opportunities that depend on the status of the MNE's home country. Using the US-China trade war as the empirical context, I use panel data composed of 1,424 US-MNE and 975 EU-MNE Chinese subsidiaries from 2016 to 2019 and conduct a difference-in-differences analysis. The empirical results corroborate the theoretical priors: US and EU MNEs exercise the hybrid options as an adaptive response to the trade war. Also, I find that the multinationality of US and EU MNEs facilitates their exercise of switching options in response to the trade war.

IM: Do Transnational Rating Agencies "Regulate" National Political Budget Cycles?   

Author: **Glen Biglaiser**, *U. of North Texas*

Author: **Ronald Megawran**, *Tennessee Tech U.*

Author: **Marek Hanusch**, *World Bank*

Author: **Paul M. Vaaler**, *U. of Minnesota*

Regulatory theory assumes governments constrain undesirable behavior by firms, but the opposite could be true internationally. We show how with credit rating agencies (CRAs) and election-year government borrowing. Political business cycle theory implies that governments sometimes borrow excessively to retain office. Transnational regime theory implies that CRAs regulating global credit allocation can threaten borrowing governments with rating downgrades signaling poor economic stewardship to voters. Analyses of CRA ratings and government borrowing for 63 countries holding 109 elections from 2001-2011 indicate support for both implications: 1) governments increase election-year borrowing; 2) CRA rating downgrades increase government electoral defeat likelihoods; and 3) governments diminish excessive election-year borrowing when CRAs signal higher downgrade likelihoods. Such reverse "regulation" raises new issues for international business research, practice, and public policy.

Paper is Available to Meeting Registrants Only.

IM: The Political Economy of Foreign Direct Divestment: Beyond 'Kiss Your Assets Goodbye'  

Author: **Di Wang**, *UT Austin*

Author: **Robert J. Weiner**, *George Washington U.*

How do institutions affect MNE foreign divestment (FDD) decisions? Most scholarship focuses on FDI decisions, FDD is assumed to be the mirror image of FDI. Deglobalization and FDI slowdowns have renewed interest in FDD in recent years. We leverage transaction-level data to document variation in divestment by foreign MNEs versus domestic firms, a comparison in itself that has received little attention in the literature. We hypothesize that, all else equal, political risks in the host state systematically increase FDD. We further consider whether international investment agreement (IIA) coverage, state ownership, and firm size moderate relationships between host state institutions and FDD. We also provide a test of the "obsolescing bargain" theory, which predicts conditions under which MNEs choose not to divest.

Cross-Border Acquisition Strategies

Session Moderator: **Shujaat Mubarik**, *Institute of Business Management*

IM: Parachuting Internationalization: the Earliness of First Cross-Border Acquisition and Performance 

Author: **Jingtao Yi**, *Renmin U. of China*
Author: **Huiwen Su**, *School of Business, Renmin U. of China*

An important unresolved question in the international business literature is how quickly firms should internationalize. Parachuting internationalization suggests that as firms internationalize they should aim to balance the speed of internationalization and the commitment to learn. However, this insight remains underexplored. Our paper leverages parachuting internationalization to investigate the impact of earliness of cross-border acquisition (CBA) on post-acquisition performance. We argue that earliness of first CBA positively contributes to firm performance as it is easier for younger firms to learn. Further, we propose that psychic distance and institutional image both negatively moderate the relationship. Using a diverse sample of young border-crossing acquirers from 23 countries to 31 countries, we find supportive evidence for our hypotheses and discuss the corresponding implications for early internationalization literature.

IM: Do Firms' Acquisitions Affect Their Subsequent Alliance Formation? 

Author: **Binh Minh Truong**, *BI Norwegian Business School*
Author: **Randi Lunnan**, *BI Norwegian Business School*

Does a firm's acquisition affect its subsequent alliance formation? Drawing insights from the resource-based view of alliance formation, we conjecture that the resources of the acquired target enrich the firm's resource base and therefore increase its opportunities to engage in subsequent alliances. We identify three distinct types of target resources – technical, commercial, and social resources – and examine their influences on the acquiring firm's subsequent alliance formation. We hypothesize that these resources increase the acquiring firm's subsequent alliance formation. We expect that the positive effects of the target's resources on the firm's subsequent alliance formation are stronger when the firm and the target have cooperated prior to the acquisition, while these effects are weaker when the acquisition is cross-border. Our analysis of 165 U.S.-based publicly traded energy firms that engaged in 231 acquisitions during the period of 2000 – 2015 provide some support for our predictions.

IM: Intellectual Capital in Cross Border Mergers & Acquisitions: An Exaptation Perspective  

Author: **Shujaat Mubarik**, *Institute of Business Management*

Abstract Exaptation, in internationalization, is defined as the re-use of capabilities that a firm developed through domestic geographical dispersion in the process of cross border mergers and acquisitions (CBMA). This study tests the impacts of exaptation with a firm's first and subsequent cross border mergers and acquisition engagements. The study is based on the 10 years of data from 2009 to 2019 of 99 manufacturing sector companies of Malaysia to test the relationship between the firm's domestic geographical dispersion and chances to engage in first-time and subsequent CBMA. We applied pooled regression to estimate hurdle models. The results showed a positive and statistically significant influence of exaptation of control and coordination capabilities on the firm's probability of engaging first-time cross-border mergers and acquisitions; however, these capabilities become irrelevant in subsequent CBMA involvement. The findings imply that firms operating in geographically dispersed business units can have higher chances of success in cross border mergers and acquisitions.

Business-Government Relationships

Session Moderator: **Alexander Settles, U. of Florida**

IM: Non-market Strategies in Response to Targeted Sanctions of International Business

Author: **Alexander Settles, U. of Florida**
Author: **Juha Väättänen, LUT U., School of Business and Management**
Author: **Roman Teplov, Lappeenranta-Lahti U. of Technology LUT**

Non-market strategies are a tool that multinational enterprises (MNE) use to enhance their ability to adapt to the international market. In this paper, we examine the case of politically initiated targeted sanctions on Russian firms and the non-market strategy reaction those firms engage in to counter the effects of targeted sanctions. Russian firms have become adept at corporate political activity and strategic CSR to build and burnish their reputations and competitive advantage. We employ a combination of quantitative and qualitative analysis to assess the impact of sanctions. Our research indicates that sanctioned firms mainly actively adapt to sanction regimes and, in so doing, mitigate the economic impact of these targeted sanctions. We find evidence of governmental shielding only for the finance industry. This research implies that while target sanctions create symbolic meaning in foreign relations and create financial friction for targeted firms and individuals, firms use adaptation strategies that negate the economic impact of these sanctions. Sanctioned Russian firms seem to have restructured their international holdings subject to sanctions to avoid the harmful effects of these sanctions.

IM: Theoretical Implications of the Sources of Power for MNEs and Host Governments

Author: **Michael Murphree, U. of South Carolina**
Author: **Nicholas J. Bailey, U. of Northern Iowa**
Author: **Nancy Buchan, Darla Moore School of Business, U. of South Carolina**

A long research tradition considers the role of “power” in the relationship between multinational corporations (MNC) and host country governments. However, major theories emphasize different sources of power, leaving open room for misinterpretation or discounting the role of power in the relationship. We outline the sources of power applied when studying the MNC-host government relationship and use examples, Intel’s investment in Costa Rica and Huawei’s relationship with governments in the US and Europe, to illustrate how the sources of power differ, sometimes radically, and how this translates into actions and reactions by MNCs and host governments. Drawing upon these insights, we propose a dyad-level framework for understanding power, which enables cross-theoretical comparisons, higher breadth and depth of consideration, and offers scholars and managers a deeper understanding of the power relationship between MNCs and host governments.

IM: Development of CSR in Emerging Markets: Constructive Role of Reciprocal Business-Government Relations

Author: **Namporn Thanetsunthorn, State U. of New York at Farmingdale**
Author: **Rattaphon Wuthisatian, Southern Oregon U.**

This study sheds light on the development of CSR in emerging markets through the lens of reciprocal relationship between business and government. Drawing on the theory of reciprocity, the study proposes and tests the hypothesis that, in a reciprocal relationship, emerging market firms that receive business-friendly regulations from the government – the regulatory environment that is more conducive to business operations – are more likely to engage in active CSR initiatives in return for this supportive regulatory environment. Using a sample of 1,465 corporations from 20 emerging market countries, the findings provide supporting evidence for the proposed hypothesis. Specifically, the vast majority of firms in emerging markets appear to reciprocate a more business-friendly regulatory environment received from the government by engaging more in CSR activities, especially in the domain of community development. The results are robust across various methods of estimation. The current study adds directly to the existing body of knowledge on CSR in emerging markets by embracing the perspective of reciprocal business-government relationships to understand the nature and practice of CSR among emerging market firms. The findings offer meaningful implications for businesses and policy makers as well as potentially fruitful avenues for further research.

MH: Historical Narratives and the Process of Next Generation Engagement in Family Firms 

Author: **Andrew D A Smith**, *U. of Liverpool*

Author: **Nicholas Wong**, *Newcastle Business School, Northumbria U.*

There is growing interest in family business on next-generation engagement, the processes by which older family members persuade younger individuals to commit to the family firm rather than pursue outside career opportunities. Recent research on the “Uses of the Past” and historical narratives. To date little has been written about how family firms use historical narratives in next-generation engagement. We address this gap by drawing on the ecological approach to family narratives and shed fresh light on the patterns that demonstrate how rhetorical history is used to persuade younger members of families to commit to careers within the family firm and to behave in ways that the older family members deem to be important. In our paper we identify two types of rhetorical history that are used in next-generation engagement: identity-enrolment rhetorical history, which is used to get the younger person to identify strongly with the family firm, and performative rhetorical history, which is meant to get the individual who has already committed to the family firm to behave in a particular fashion. Our analysis is informed by social-identity theory and cross-cultural management research so that gender and national culture are recognized as important moderators in our analysis.

MH: Up in Smoke? Rhetorical and Material Dynamics in Community Identities

Author: **Matthew CB Lyle**, *U. of Colorado, Colorado Springs*

Author: **Ashley Hockensmith**, *U. of Massachusetts, Amherst*

Author: **Ian Walsh**, *Bentley U.*

Prior research suggests that, while organizations often spur material and rhetorical changes to communities, such outcomes are variable in terms of altering what it means to be of that place. In this paper, we draw on Molotch, Freudenburg, and Paulsen’s (2000) framework to develop a multiple case study of two communities where recreational cannabis dispensaries were founded. Specifically, we conceptualize the entrance of novel ventures as a potential identity threat that catalyzes the conjoining of materiality and rhetoric – critical components of collective identity – at a particular time. Qualitative analyses of various data sources, including interviews, community meetings, observations and archival materials from 2016 until 2020 allowed us to theorize processes through which these elements co-evolve and advance our understanding of the iterative nature of community identity dynamics and the actors involved in shaping them.

MH: Informal Institutions as Inhibitors of Rent-Seeking Entrepreneurship: Evidence from U.S. History

Author: **Graham Brownlow**, *Queen’s Management School, Queen’s U. Belfast*

Author: **Andrew D A Smith**, *U. of Liverpool*

Rent-seeking entrepreneurship occurs whenever entrepreneurs use the political process to extract economic gains without returning commensurate benefits to society (Baumol 1990; Sobel, 2008; Choi and Storr, 2019). While we know that nations with “inclusive” political institutions such as democracy (Acemoglu and Robinson, 2019) have significantly less rent-seeking entrepreneurship than do other nations, rentseeking entrepreneurship remains widespread even in long-established democracies. We therefore need to know more about institutional arrangements that can discourage rent-seeking entrepreneurs in democratic countries. The core research question informing this paper is, therefore: how do changes in norms, beliefs, and similar informal institutions moderate the effectiveness of formal institutions that discourage rent-seeking entrepreneurship? To help answer this question, we draw on historical data from the experience of the United States since 1791. Features of the United States Constitution, such as its explicit protection for property rights, discourage rentseeking entrepreneurship. At various points since the ratification of the Constitution, American policymakers have modified the country’s formal institutions with amendments that had the net effect, at least in the short term, of discouraging rentseeking entrepreneurship and channeling the energies of entrepreneurs into more socially-productive activities. This paper presents an explanation for why the effectiveness of these formal institutions in deterring rent-seeking entrepreneurship in the United States has varied over time. We develop a generalizable process model based on our findings and then explain how this model can be useful in future research on a wide range of countries.

MH: Management Accounting: Past, Present, and Future of Double-Entry Bookkeeping and Ledger 

Author: **Giovanna Centorrino**, *U. of Messina*

Author: **Valeria Naciti**, *U. of Messina*

Author: **Daniela Rupo**, *U. of Messina*

The paper investigates the current state of studies on double-entry bookkeeping and ledgers in accounting through a bibliometrics analysis from 1990 to 2021. The study allows for interpretation of the development of accounting information systems, as they are evolving under the impulse given by recent disruptive information technology. We use a sample of 230 publications collected from the Web of Science. We adopted VOSviewer software to illustrate different relational techniques: citation, co-citation, keyword co-occurrence, and bibliographic coupling analyses. The results highlight the emergence of some recent research streams that appear weakly connected with traditional prior studies on the foundation of modern accounting, albeit sharing the same roots with seminal contributions of accounting history in terms of implications for trustiness, morality, and communication. The main finding is a better understanding of the growing interest in double-entry bookkeeping and ledger, focusing on blockchain and its dimensions. This study contributes to the existing literature on the significance of double-entry bookkeeping and ledger by enhancing it with a much more comprehensive, reliable picture given by bibliometrics analysis. The universality of accounting language is called upon to describe new “genealogies of calculation” by converging professional and academic efforts in a field that can benefit widely from a transdisciplinary approach to research.

Session Moderator: **Markus Wienbreyer**, *Ph.D Student*

Papers in this session explore the connections between religion, equity, pay, and managing.

MSR: Does Religion Matter on Financial Decisions? The Case of SMEs Capital Structure

Author: **Markus Wienbreyer**, *Ph.D Student*

Author: **María Iborra**, *U. of Valencia*

Author: **Carola Spiecker-Lampe**, *Hochschule Bremen*

Different finance theories have tried to explain the capital structure of companies considering it as a rational choice with limited results. In contrast, upper echelons theory highlights the influence of top managers' values and beliefs in the decisions of firms. This research aims to fill this gap and looks into the linkage of religious belonging to explain why SMEs differ in their preferences between equity and liabilities. Therefore, the present study uses the two main Christian faiths to analyze the impact on the capital structure. We hypothesize that SMEs in countries with a mainly Catholic faith preferably carry higher amounts of debt, and contrary, firms in predominantly Protestant nations are more willing to issue equity.

MSR: When Jesus Met Equity Theory: Christianity, Distributive Justice Perception, and Job Satisfaction

Author: **Yeong Joon Yoon**, *Texas A&M U. Central Texas*

Author: **Bradley A. Almond**, *Texas A&M U. Central Texas*

(Subtitle: Do Christians live up to the teaching in the Parable of the Vineyard Workers? The relationships among Christianity, distributive justice perception, and job satisfaction) In this study, we examine the relationships among Christianity, distributive justice perception, and job satisfaction. We do this by analyzing 13,289 employees in 27 countries in the 2010 European Social Survey. The analyses first reveal that Protestants, compared to non-Protestants, exhibit a higher level of distributive justice perception, which leads to a higher level of job satisfaction. The analyses also demonstrate that the positive relationship between distributive justice perception and job satisfaction is weaker for Protestants than non-Protestants. These relationships, however, were not evident for people affiliated with other denominations of Christianity. The study findings indicate that Protestants in Europe are applying Jesus's teaching in the Parable of the Vineyard Workers in their work lives.

MSR: Towards an Integrative Conceptualization of Spirituality for Management

Author: **Sharda Nandram**, *Nyenrode Business U.*

Author: **Puneet Bindlish**, *Vrije U. Amsterdam*

A review of the literature on spirituality reveals that searching for a singular definition is not the way forward for ontological purposes. To enhance discussions among scholars, we have developed a different approach to defining spirituality. We revisited the literature around the concept of schema and examined 142 definitions of spirituality using a novel approach adapted from the Tarka Method belonging to Indian philosophical approaches to definitions. By introducing this approach, we contribute to the epistemological scholarly debates on spirituality. After analyzing the definitions in relation to several attributes of a definition, we arrive at our proposed definition schema for spirituality. Through this definition schema, we further enrich the ontology of spirituality for management research. The proposed schema for spirituality functions as a basis for furthering plurality within the ever-evolving nomological network of definitions of spirituality in the context of management.

MSR: Does Religion Matter For Corporate Pay Dispersion Symmetrically: An Institutional Approach

Author: **Ying Zhang**, *Northwestern Polytechnical U.*

Author: **Hongfei Ruan**, *Harbin Institute of Technology*

Author: **Li Tong**, *Peking U. Guanghai School of Management*

This study examines how corporate pay dispersion is shaped by Buddhism- and Confucianism-based institutional environments. Buddhism and Confucianism are prevalent in China and regarded as having a significant influence on corporate policies and practices. We theorize that a Buddhism-based institutional environment is negatively associated with horizontal and vertical pay dispersion, whereas a Confucianism-based institutional environment has competing influences (positive vs. negative relationship) on corporate pay dispersion. Furthermore, we theorize that Buddhism- and Confucianism-based institutional environments have an asymmetric influence on corporate pay dispersion. We propose the existence of an asymmetric influence between Buddhism- and Confucianism-based institutional environments, in which the magnitude of the influence of a Confucianism-based institutional environment on corporate vertical pay dispersion is stronger than that of the influence of a Buddhism-based institutional environment. Our study provides an improved understanding of the antecedents of corporate pay dispersion and empirical evidence showing how broad social structures shape corporate compensation arrangements.

As recent research shows, grief is an integral part of organizational life as well as the experience which spills over from one domain to another. Nevertheless, we know relatively little about: (1) the processes involved in experiencing life-related and work-related grief, (2) the impact such grief has on a griever as well as their colleagues, (3) what circumstances make this experience lighter or harder, and (4) how colleagues, leaders, and organizations can best help to grieving employees as they move through grief towards recovery. Thus, our symposium includes qualitative and quantitative research that enriches the understanding of the phenomenon of a grieving employee, provides research-based recommendations for organizations in managing and interacting with a grieving colleague, and, therefore, strongly contributes to the Academy of Management’s conference theme “Creating a Better World Together”. The symposium includes five papers showcasing the impact of personal and professional grief on employees’ work and non-work lives. Together with discussion, led by Dr. Sally Maitlis, the papers aim to provide insight into the consequences of grief and mourning for employees, their colleagues, and organizations, build an emerging community of scholars focused on issues related to grief and the work-life interface, and generate a strong program of future academic research.

Stakeholder Theory and Value Creation

Session Moderator: **Andre O. Laplume**, *Ted Rogers School of Management, Ryerson U.*

SIM: Stakeholder Theory, Embeddedness and Democracy: A Dewey Encounter 

Author: **Elisabet Garriga**, *EADA Business School*
Author: **Robert Edward Freeman**, *U. of Virginia*

Recently, the research on the embeddedness of business-stakeholder relationships in society is gaining momentum. Here in this paper we present an approach for businesses and stakeholders' embeddedness based on John Dewey's Dewey, a well-known pragmatist thinker who elaborated a thick, original and innovative concept of democracy as an associated living, as a source of conjoint and shared experience between organizations and groups (including business and stakeholders) based on freedom, equality, and fraternity considered the democratic values. We develop the concept of democratic embeddedness, that is, the embeddedness that brings social progress and social hope, based on five main tenets: 1) A diverse, novel, and enriching conjoint experience 2) Cooperation based on equality, freedom, and fraternity 3) a higher degree of overlapping membership between stakeholders 4) Flexibility and adjustment between organizations 5) No isolated organizations or clusters of organizations. Consequently, a new role of the executive has described the democratic role, which consists of the promotion of the 5 tenets, requires democratic habits (courage, intelligence, open-mindedness), requires a scientific and experimental method for solving public problems, and creative and face-to-face communication (with new symbols and signs).

SIM: Harmonizing Moral Obligations to Stakeholders & Fiduciary Duties to Shareholders: A Consent Approach 

Author: **Joseph John McManus**, *Monmouth U.*

The paper elaborates a model designed to aid managerial decision making in light of conflicting normative stakeholder imperatives. Within the discussion the model assumes that managers can face true dilemmas where valid competing normative claims exist and that shareholders are owed fiduciary duties that often create such conflicts. To resolve these conflict situations, the model advocates that managers make the maximization of created value the objective function of the firm. It also provides that they commit to a value statement that defines the types of value they will create, how they will go about this process, and how they will allocate this value across stakeholder groups. Shareholder consent to this express value statement enables managers to simultaneously meet their fiduciary duties to shareholders and fulfill their broader obligations to stakeholders through a fair and transparent process of conflict resolution.

SIM: Perception of Justice in the Strategic Management of Stakeholders.

Author: **Italo Anderson Taumaturgo**, *FEA-USP*
Author: **João Maurício Gama Boaventura**, *U. of Sao Paulo (FEA/USP)*

Justice is pointed out as one of the main guiding factors of stakeholder management. The principles of justice are able to provide a greater basis for establishing criteria for prioritizing the claims of different stakeholders. This research puts the theme of justice as central in the studies that integrate the stakeholder theory. We seek to investigate the origins and evolution of the concept, in order to clarify how justice is seen from the perspective of stakeholder theory. Next, we propose the objective of analyzing how the stakeholders' perception of justice is influenced by the process of value distribution for the stakeholders and how this relationship influences their reciprocity behavior. This idea constitutes a matrix that aggregates different types of stakeholders characterized based on the perception of justice and distribution of value to them. We suggest propositions that suggest the causality of the relationships suggested in the matrix. We believe that the development of this research will contribute by providing evidence of the benefits and strategic consistency for organizations that prioritize making decisions based on stakeholder justice, exploring the concept of justice in order to advance important issues of stakeholder theory and providing basis that stimulate the support of just organizations.

SIM: A Stakeholder Perspective on Employee Spinouts and Parent Firms

Author: **Andre O. Laplume**, *Ted Rogers School of Management, Ryerson U.*
Author: **Sepideh Yeganegi**, *Wilfrid Laurier U.*

Instrumental stakeholder theory (IST) has emerged as a perspective that explains and predicts incumbent firm performance. Extending this perspective to the undertheorized employee spinouts literature, we argue that parent firms have more to gain from treating their spinouts in ways that are consistent with IST. We elaborate a theory of spinout and parent firm behaviors stemming from an IST approach and compare it to the predominant agency theory approach. Using a 2 x 2 matrix that juxtaposes spinout and parent firm behaviors according to the IST and agency theory lenses, we explore the implications of alignment and misalignment between parent and spinout approaches to stakeholder management.

CAR: Experiences of Brazilian Women Who Interrupt Their Careers to Dedicate Themselves to Motherhood 

Author: **Alane Barbosa**, *the Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*

Author: **Ana Lemos**, *Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*

Author: **Filipe Augusto Souza**, -

This paper aims to understand the reasons that led married women with consolidated careers to interrupt their professional lives due to the work-family conflict. In-depth interviews were carried out with 15 married mothers with higher education. Content analysis was used to analyze the interviewees narratives. The results suggest that such a decision, far from being the expression of free choice, is the result of a set of pressures from the work environment, the dominant social construction of gender, and constraints associated with social origin. Also, although many interviewees resent this decision, their discourse endorses its character of “choice” as they do not recognize the structural constraints that condition it.

CAR: Women in STEM Careers in Lebanon: Transforming Bodily Politics and Microaggressions 

Author: **Yasmeen Makarem**, *American U. of Beirut*

Author: **Beverly Metcalfe**, *École supérieure des affaires*

Current career literature in STEM fields has predominantly explored studies in the Global North and does not accurately capture the nuances and complexities of Global South regions and their culture and organization practices. In this paper, we draw on the empirical data of 21 women working in diverse STEM fields in Lebanon to address how their career and opportunities are constrained. During the interview process we noted how body descriptors formed part of the narrative. Consequently, we also probed how bodies are read and interpreted in STEM places. We use the theoretical framing of microaggression in organizations, how they can shape career trajectories, and how this can link to ideas around visibility and invisibility in organizations. We highlight how different forms of microaggression are socially and historically constituted and are manifest in dynamic ways, and what we view as an ‘abject presence’ in organizations. This stresses the formations of multiple processes of representing absence or invisibility.

CAR: Negotiating a New Role Identity: The Experiences of First Batches of Female Military Officers     

Author: **Karan Sonpar**, *U. College Dublin*

Author: **Federica Pazzaglia**, *U. College Dublin*

Author: **Mukta Kulkarni**, *Indian Institute of Management, Bangalore*

Author: **Navya Maheshwari**, *Indian Law Society Law College*

How do individuals create and negotiate a professional identity in a newly created liminal role? We explore this question by drawing upon a qualitative study based on fifty-one interviews with India’s first batches of female military officers. These officers joined the military on an experimental basis with time-limited contracts, and their participation was restricted to certain duties. Despite the highly regimented setting of the military, in which identity custodians hold significant power, we find that these new role occupants actively negotiated, shaped, and ultimately aligned this liminal role with how they saw themselves in it (i.e., their role identity). Our key contributions include: (1) elaborating theory on experiences of individuals in liminal roles within organizational boundaries; (2) highlighting the dynamics of role-identity negotiation in an atypical setting; and (3) explaining, counterintuitively, how liminal role identity can be valued and endure post role departure.

CAR: Structural and Cultural Barriers and Leaky Pipelines: Careers of Women in Geosciences   

Author: **Shruti Sardeshmukh**, *U. of South Australia*

Author: **Sanjeewa Samanmali Perera**, *U. of South Australia*

Author: **Caroline Tiddy**, *U. of South Australia*

STEM fields, including Geosciences, continue to be male-dominated. Unlike other STEM disciplines, the field of Geosciences has successfully improved gender balance in undergraduate degrees. Nevertheless, the field continues to struggle to retain women. To understand the retention challenge in Geoscience careers, we interviewed 67 men and women geoscientists in academia, industry, and government at different career stages. We found structural and cultural barriers for women to continue in the geoscience careers. We also studied strategies used by individuals and organizations to manage these challenges. However, we found that women's survival strategies helped them cope as individuals but contributed to leaky or blocked pipelines and perpetuated hyper-masculinized culture. Women's strategies to change the context addressed the family gender norms and attempted to improve the culture for themselves and others. Organizational responses revolved around enabling strategies to retain women and culture change strategies to provide a culturally safe environment. While successful strategies benefitted both men and women, strategies that made gender salient often came with unintended consequences. We also found that structural and cultural challenges contributed to leaks in the pipeline.

CAR: When Daily Home-to-Work Transitions Are Not All Bad: A Multi-Study Design on the Role of Appraisals

Author: **Maral Darouei**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Joni Delanoetje**, *KU Leuven*

Author: **Marijke Verbruggen**, *KU Leuven*

The current study teases apart positive and negative reactions to home-to-work boundary role transitions (HWTs) and examines their consequences for employees’ work engagement and psychological strain. Based on boundary theory and appraisal theories, we expected that positively appraised HWTs would be related to more engagement and less strain whereas negatively appraised HWTs would contribute to less engagement and more strain. We tested our hypotheses using two daily diary datasets from different Belgian companies, one before the COVID-19 pandemic collected during 13 workdays among 81 employees of various companies (678 observations; study 1) and one during the COVID-19 pandemic during 9 workdays among 82 employees of a limited number of companies (516 observations; study 2). Hypotheses were tested both on the within- and the between-person level using multilevel modelling to account for daily fluctuations in the appraisals of HWTs and potential differences between respondents. In line with our expectations, we found positive appraisals to be related to more engagement and less strain at the between level in both studies. Yet, we did not find the expected impacts on the within level, nor did we find any within-level or between-level effects of negative appraisals. Our study highlights the relevance of positive appraisals but not negative appraisals for employees’ between-level engagement and strain above and beyond the potential impact of HWTs themselves.

Paper is Available to Meeting Registrants Only.

CAR: From Control to Mutual Gains: A Systematic Review and Repositioning of Flexible Working

Author: **Kathryn Brett**, *Australian National U.*

Author: **Karen Jansen**, *Henley Business School, U. of Reading*

Author: **Sarbari Bordia**, *Australian National U.*

Flexible working has been increasingly used by employees as a work practice for juggling career pressures alongside other aspects of life. The COVID-19 pandemic catapulted flexible work to normative work status, temporarily if not permanently. As employees and employers navigate complex social expectations and environments, the mutual gains stemming from flexible work are increasingly valuable to individual careers, organizations, and society. Despite its rising value and usage, minimal research explores flexible working holistically to understand its purpose and significance. Our systematic review addresses this gap by investigating the multiple meanings of flexible working presented by scholars in order to understand its nature as well as exploring how the practice of flexible working has evolved. A review of the scope, prevalence, and context of prior research reveals the need for greater clarity in conceptualizing flexible work and identifies the changing nature of key drivers that influence the requirement for flexibility. The review finds evidence of two paradigmatic shifts. First, previous studies generally explore flexible work in relation to a paradigm of power whereby organizations control employees. Second, the review reveals the emergence of a neo-ideal worker, an employee that achieves agreed outcomes but is not expected to do so within the confines of the office environment. By raising the level of investigation and exploring flexible working at the phenomenon level this review exposes a pivot away from the construct of power towards mutual gain. These shifts in thinking regarding flexible working have significant implications for employee careers and management practice.

CAR: A New Perspective on Flexible Human Resource Practices and Older Workers’ Early Retirement Intention

Author: **Guodong Cui**, *Renmin U. of China*

Author: **Jianmin Sun**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Dorien Kooij**, *Tilburg U.*

Prior research has addressed multiple factors that contribute to older workers’ early retirement intentions; however, little is known about how and why organizational HR practices can proactively discourage older employees from retiring early. Guided by role perspectives, we propose that flexible HR practices decrease older workers’ early retirement intentions by dealing with their role conflicts (work-family conflict), and that the relationship between role conflicts and early retirement intentions is contingent on the gender role difference. Data were collected from Chinese companies with a matching sample of 228 older workers (aged 45-60) from 48 organizations, and multilevel path analysis was carried out to test these hypotheses. The results showed that flexible HR practices have a negative indirect relationship with early retirement intentions through decreased family-to-work conflict. The influence of work-family conflicts on early retirement intention is stronger for women than men. We also found that the effect of work-to-family conflict on early retirement intention is stronger than that of family-to-work conflict, demonstrating that “work-push” factors exert greater influence on early retirement intention than “family-pull” factors. Theoretical contributions and practical implications to early retirement research and the retention of aging workers were also discussed.

The existence of substantive and meaningful generational differences in the workforce remains a matter of some debate in the career literature. Drawn on social identity theory we engage in this debate by providing the first systematic review of the literature on generational differences in the tourism workforce using the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) protocol. The review includes 61 records published from 2002 to 2020 providing the first evidence base of effect sizes from generational differences in the tourism workforce. The meta-analytic insights include 407 pairwise comparisons among five generations – Veterans, Baby Boomers, Generation X, Millennials and Generation Z. The results reveal that the differences with the highest effect sizes (Cohen's $d > .50$) stem from the Millennials and the Baby Boomers.

Digital platforms are pervasive and powerful in almost all economic sectors. In this symposium, we introduce four papers that focus on digital platforms and consider their impact on the transformation of work and work relationships. These four studies address how digital platforms reconfigure employment, careers, and the relationship between work and non-work activities, contributing to the proliferation of the gig economy. We emphasize the need to understand how core interactions involving multiple platform participants shape workers' experiences in work and non-work spheres, directly contributing to the AOM 2022 theme “Creating a Better World Together”. Overall, these papers help identify conceptual ambiguity and empirical inconsistencies, utilize multiple methodological approaches, reflect unique features of web-based and location-based digital platforms, and represent diverse samples of workers and firms from Asia, Europe, and North America.

The studies in this symposium theoretically and empirically advance the literature by examining person-environment fit from new perspectives. Among other new findings and perspectives, the authors will relate the (1) theoretical advantage of examining comprehensive profiles of person-environment fit and their association with work outcomes; (2) the utility of studying individuals with distinctive personal attributes (such as in this case, introversion) to learn more about what specific work demands produce perceptions of misfit at work and how that affects work outcomes; (3) how perceived fit is shaped by peers in the recruitment process; and (4) the extent to which individuals of lower social class are less likely to engage in job search when they perceive a lack of fit (i.e., low job satisfaction).

Responsibility and Wrongdoing

Session Moderator: **Paulina Segarra**, *U. Anáhuac México*

CMS: **What Does CSR do for Freedom? (WITHDRAWN)**

Author: **Kerrie Howard**, *Royal Holloway, U. of London*

This article explores how freedom at work is inhibited by strategies of corporate social responsibility that, ostensibly, have freedom as a guiding principle. It analyses managers' responsible for implementing corporate social responsibility (CSR) strategies and shows how they construct emancipated identities for themselves that, counter-intuitively, may inhibit the freedoms of others. I draw on an understanding of freedom as a product of social relations and a case study of middle managers with formal CSR responsibilities in a large US retail corporation, to explore how CSR managers talk about their roles. This shows that they constitute seemingly emancipated selves that are morally agentic, reflective and privileged and free of moral and social indignities associated with corporate capitalism. This may have deleterious effects on the freedoms of others. The paper contributes a new theory of the effects of CSR in restricting freedom. That is, managers with formal CSR responsibilities, in relying on CSR to constitute emancipated identities for themselves, construct lesser freedoms for others.

Paper is NOT Available. Please contact the author(s).

CMS: **When Disaster Strikes: Corporate Social Irresponsibility and Social Blaming**

Author: **Jussara Pereira**, *FGV - EAESP*

Author: **Diego Coraiola**, *U. of Victoria*

Author: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*

Studies on corporate social irresponsibility (CSI) and the social theory of ignorance have attracted considerable attention from organizational researchers. Notably, most of the studies on CSI have explored ambiguities around the concept and understanding of the phenomenon as the opposite of CSR. On the other hand, studies on ignorance have emphasized how corporations strategically promote ignorance and doubt to achieve their interests. However, little is known regarding how companies and actors that are at risk of being held responsible may strategically mobilize misinformation about an event of CSI. Drawing upon these theories and adding a discursive dimension of ignorance in CSI events, we state that willful ignorance arguments might prevent attributions of culpability and blame in the context of organizational disasters. We highlighted that in CSI incidents, ignorance plays an important role by creating powerful rhetoric of misinformation. Organizational actors may do so using three tactics of ignorance: (1) denying responsibility, (2) concealing information, and (3) persuading the audience. We used a qualitative single-case study to explore a CSI case, namely, the Samarco dam collapse. Our contribution extends the work on CSI and the social theory of ignorance, including the notion of ignorance as a discursive process. The results of this study show that organizations can use willful ignorance to manage their culpability in industrial accidents or unethical management actions.

CMS: **Piracy as Organizational Wrongdoing: from Public-Private Partnerships to Public-Private Pirates**

Author: **Daniel Fisher**, *Bayes Business School (formerly Cass)*

Author: **Alessandro Niccolo' Tirapani**, *ESADE Business School*

Author: **H. C. Willmott**, *City U. London Cardiff U.*

Public-Private Partnerships (P3s) have enjoyed growing support as legitimate and efficient arrangements for providing public goods and services. Nonetheless, mounting theoretical and empirical evidence challenges the positive aura surrounding such arrangements, as private entities have often demonstrated behaviors antithetical to partnerships designed to serve the public. Yet, to date, there is a dearth of empirical research that examines the forms of wrongdoing such organizational arrangements entail, leading to an under-theorization of how and why wrongdoing persists so close to the State. To address this, we take the case of the UK, and code official Parliamentary committee reports and inquiry documents concerned with P3 wrongdoing. We observe that, while the state outsources to P3s, it also allows regulatory voids that invites bad practices. We empirically identify five such practices that underpin P3 wrongdoings, most notably fraud. Observing persistent P3 wrongdoing led us to coin the term 'Public-Private Pirates' to explain unsuccessful partnerships that sustain wrongdoing and undermine public services. Our empirical study contributes to the wrongdoing literature by demonstrating processes, mechanisms and structures that enable normal wrongdoing in government outsourcing.

CMS: **The Love that Binds: Creating a Better World in the Context of Marketplace Violence**      

Author: **Penelope Muzanhamo**, *U. College Dublin, Smurfit*

Author: **Rashedur Chowdhury**, *U. of Southampton*

Our study explores how marketplace violence affects sustainability among vulnerable actors who are often influenced by religious beliefs within a decolonized context. We study the collusive actions of 'native elites' and 'former colonizers' in perpetuating inequalities through manipulative interference with marketplace relations in the context of Zimbabwe. We establish that in absorbing marketplace violence, vulnerable actors 'straddle survival with sustainability' through floating (making do), other-orientedness (poor-to-poor giving), and outsourcing political action to 'God', alongside feelings of homelessness. Social love reflects a cornerstone of 'straddling survival with sustainability'. Vulnerable market actors may create (a fragile) sustainability, but global elites deny them the opportunities to preserve any resources for future generations.

Video conferencing has become a predominant mode of workplace meetings, especially during the ongoing COVID-19 outbreak. In this research, we integrate objective self-awareness theory with the interface design of video conferencing tools to explain the mixed implications of video conferencing for employees. We hypothesize that time spent on video conferencing is positively related to state self-consciousness (i.e., being conscious about one’s self as the object of awareness). State self-consciousness, in turn, is positively related to work productivity but at the same time negatively related to well-being. We further hypothesize that introverted employees are more affected by participation in video conferencing than their extroverted counterparts. In a study employing experience sampling methodology among 144 United Kingdom-based employees who were working remotely on account of the mandatory closure of the workplace, we found evidence for the hypotheses. Specifically, time spent on video conferencing on a workday increased state self-consciousness on that day, which, in turn, increased work productivity. The negative relationship between state self-consciousness and the moderating effect of extraversion received marginal support. A supplementary experimental study further tested the tenet of objective self-awareness theory. We discuss the implications of our findings for how organizations can manage video conferencing as they move to remote work at unprecedented rates.

CTO: **It’s Been a Hard Day’s Night! The Effects of After-Hours Mobile Use on Next Day Outcomes**  

Author: **Massimo Magni**, *Bocconi U.*

Author: **Remus Ilies**, *National U. of Singapore*

Author: **Ekaterina Netchaeva**, *Bocconi U.*

Author: **Jingxian Yao**, *Catolica Lisbon School of Business and Economics*

While acknowledging the benefits of anytime-anywhere connectivity, recent research has demonstrated that the pervasiveness of mobile technologies makes work-life conflict unavoidable, thus calling for a fine-grained understanding of the undesired effects of using mobile technology for work purposes after working hours. To answer this call, and to provide managers and organizations with theory-based insights for facing the challenges of post-Covid work arrangements that potentially generate work-life conflict, we conducted a study examining the detrimental effects of after-hours mobile technology use as well as identifying factors that alleviate these effects. We relied on Experience Sampling Methodology to obtain objective and self- and spouse-reported data. Through 2190 daily surveys we demonstrate that after-hours mobile technology use leads to recovery impairment, which in turn has negative effects on work concentration and spouse undermining the next day. Importantly, we also demonstrate that providing emotional support at home helps individuals alleviate the effects of after-hours mobile technology use on recovery impairment. By collecting lagged data on further 372 professionals we disentangled the cumulative effect of after-hours use of mobile technologies to understand the extent to which the observed effects are attributable to the use of emails, chat, and phone calls. Results show that engaging in after-hours work-related calls affects individuals’ next day concentration at work and spouse undermining. We discuss the implications of our findings for theory and future research.

CTO: **Connectivity Within a Context: Exploring Parameters Beyond Professionals’ Control** 

Author: **Njod Aljabr**, *Jubail Industrial College*

Author: **Dimitra Petrakaki**, *U. of Sussex*

Author: **Petros Chamakiotis**, *ESCP Business School*

Author: **Sue Newell**, *Warwick Business School*

An emerging area of recent research has focused on how professionals experience and manage after-hours connectivity to work. Many studies attribute variations in connectivity practices to the nature of work, and very few studies discuss the context within which connectivity is enacted. Based on two case studies of academic institutions, this research applies the framework of sociomateriality to explore social and material components directing connectivity practices. The study identifies a set of parameters (organizational, individual, technological, and situational) which imbricates to direct professionals’ connectivity practices. We found connectivity to be subjective to the perception of those who enact it in a given context, rendering engagement with connectivity to be a burden for some, and trivial for others.

ENT: Digital Innovation in Family Firms in Germany and China: The Role of National Culture and LTO 

Author: **Anna Maria Bornhausen**, *Philipps-U. Marburg*

Author: **Torsten Wulf**, *Philipps-U. Marburg*

Author: **Xian Xu**, *Fudan U.*

While family firms share many characteristics, they are also a heterogeneous group that particularly differs across countries, such as China and Germany. Anecdotal evidence suggests that Chinese family firms are more apt compared to German family firms to engage in digital innovativeness, an innovation type that offers opportunities for firms to rejuvenate and ensure longevity. Based on research on family firm innovation, we posit that the lower risk and loss aversion of Chinese compared to German family managers, which results from cultural differences that manifest in different cognitive styles, leads to higher levels of digital innovativeness in Chinese family firms. Further, we argue that long-term orientation positively influences the level of digital innovativeness and that the higher levels of digital innovativeness in Chinese family firms become more pronounced with increasing levels of long-term orientation. An empirical investigation of 105 German and 47 Chinese family firms supports our hypotheses. Our study contributes to research on cross-country research in family businesses as well as on digital innovation in family firms.

ENT: Bilateral Frictions, Institutional Logics and Foreign Market Exit of Family Firms 

Author: **Sihong Wu**, *U. of Western Australia*

Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

Author: **Di Fan**, *Swinburne Business School, Swinburne U. of Technology*

Author: **Yiyi Su**, *Tongji U.*

Globalization is pressured by bilateral frictions. Recognizing the complex nexus of drivers for foreign market exit decisions of family firms, this study investigates how bilateral frictions and institutional logics function in such decisions. Building on intergroup relations theory and the institutional logics perspective, and using a sample of 1252 foreign subsidiaries established by 297 Chinese family firms in 2008-2017, we find that value-based friction reduces foreign market exit, while historical military friction leads to higher foreign market exit by family firms. The positive impact of historical military friction on exit is also mitigated by a high state logic, while the negative impact of value-based friction on exit is reinforced by high state and family logics. The conceptual work and empirical results of this study prompt future studies to further explore the challenges for family firms' globalization and their exit strategies.

ENT: What Leads to Impactful Family Philanthropy? Family Incubation as a Missing Link 

Author: **Malgorzata Kurak**, *IMD Business School*

Author: **Peter Michael Vogel**, *IMD Business School*

Author: **Alfredo De Massis**, *Free U. of Bozen-Bolzano (Italy) and Lancaster U. (UK)*

Despite a wealth of research on philanthropy, gaps remain with respect to how enterprising families successfully navigate their giving over time. Impactful philanthropy is needed, and now more than ever? in the post COVID-19 world in which society at large is facing a major global health and economic crisis. Thanks to an in-depth multiple case study of ten impactful enterprising families, we induct a theoretical framework that explains how enterprising families navigate their philanthropic activities successfully. We identify a process model of impactful family philanthropy, introducing a new construct of family incubation. Overall, we contribute to the literature on contemporary philanthropy, family business research as well as entrepreneurship, crystallizing the pivotal role of family incubation in the impactful family philanthropy, and shed light on the dynamic evolution of family philanthropy.

ENT: Out of the Goodness of my Heart: CSR Motivation of Family Firms

Author: **Andreas Schumacher**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Do family firms engage in Corporate Social Responsibility (CSR) for symbolic or substantial reasons? Scholars often use a focus on reputation and self-serving behavior as a theoretical explanation for external CSR in family firms and conceptually indicate that CSR is rather symbolic. The substantiveness of CSR is highly important for its impact on society and the firms themselves. We empirically investigate the relationship between family ownership and CSR motivation (substantial versus symbolic) as well as family ownership and CSR orientation (external versus internal CSR). Due to ambiguous results at the family firm-CSR link in previous literature, there is further a need to evaluate family firm heterogeneity: We analyze the link between family generation and CSR orientation. We base our analysis on survey data of 896 Austrian and German firms from 2020. Our work uncovers that family firms rather focus on substantial compared to reputational CSR. This indicates that the need for social ties might be the decisive factor instead of reputation which advances the theoretical concept of socioemotional wealth. We further demonstrate that succeeding generations positively link to CSR orientation, which indicates that the associated SEW dimensions intensify over time. The latter opens an exciting debate with previous research.

ENT: Seizing Spin-offs’ and Parent Universities’ Resources and Capabilities: An Intertemporal Resilience 

Author: **David Audretsch**, *Indiana U., Bloomington*

Author: **Maksim Belitski**, *U. of Reading*

Author: **Maribel Guerrero**, *Global Center for Technology Transfer, ASU; Facultad de Economía y Negocios, UDD*

This study theorises and offers new insights into how organizational capabilities and resources are used intertemporally by spin-offs to provide a resilient response in a forced-digital context. By using unique multi-level and longitudinal datasets in a forced-digital context period (May 2020, August 2020, November 2020, and February 2021) of 722 UK university spin-offs in emerging sectors where digitization is commonplace, our analysis reveals the seizing of parents’ resources (infrastructures and incomes) and spin-offs’ capabilities (fundraising, scaling-up, intellectual property) that explain the building of resilience in defining the strategies for undertaking forced-digital operations. Several implications about responding to external shocks and building an intertemporal strategy for spin-off will build on firm-specific and parent characteristics that emerge from this study.

Paper is Available to Meeting Registrants Only.

ENT: The Impact of Initial Endowments on Ongoing Capabilities and Resource Reconfiguration.

Author: **Dongwook Kim**, *U. of Pittsburgh*

The purpose of this paper is to show that the type of firms’ resource endowments can have long-lasting effects. This paper empirically tests whether resource endowments have long-term divergent impacts on the type of firm performance, depending on ongoing capabilities, and on the mode of resource reconfiguration. This study tests these hypotheses in the context of the global video game industry, which is both a high-tech and a creative industry. This unique industry gives us an opportunity to observe firms with resources endowments between innovation and commercialization. By demonstrating support for our hypotheses, we shine a light on the importance of timing in the development of resources and capabilities and the types of performance they enable.

Paper is Available to Meeting Registrants Only.

ENT: Surrogate Entrepreneurs in Academic Spinoffs - a Needed but Unwanted Addition?

Author: **Argyro Nikiforou**, *DTU Danish Technical U.*

Author: **Lars Alkærsig**, *Technical U. of Denmark*

Author: **Irini Voudouris**, *Athens U. of Economics and Business*

Author: **Jes Broeng**, *The Technical U. of Denmark*

Despite the increasing interest of scholars in academic spinoffs, there is limited attention paid to the formation of spinoff teams. A particularly intriguing question is why some spinoffs add a surrogate entrepreneur, while others do not, despite the fact that the average researcher lacks business-related competencies. In this study, we explore how researchers perceive the addition of a surrogate entrepreneur to their early-stage commercialization effort, and what individual-level factors lead to differences in their perceptions. Our findings suggest a Dunning-Kruger style effect, as researchers possessing either no or extensive experience outside academia find the addition of a surrogate important. On the contrary, researchers with only low experience in the business domain or with related entrepreneurship training are “stuck in the middle,” not considering adding a surrogate entrepreneur to their emerging spinoff. Furthermore, researchers who have low industry collaborations do not find the surrogate entrepreneur important at the beginning of their commercialization effort, while those with medium and high levels of industry collaborations tend to recognize their own limitations at the initial stages of spinning out, and consider adding a surrogate entrepreneur early on. A fuzzy-set qualitative comparative analysis (fsQCA) corroborates these findings and shows that both the researchers with no or with extensive experience outside academia who also sustain relationships with industrial partners value the addition of a surrogate entrepreneur. On the flip side, the use of external consultants seems to reinforce the belief of the researchers with low business-related qualifications that they know what they need to know for spinning out. Important theoretical and policy implications are discussed.

Paper is Available to Meeting Registrants Only.

ENT: Publish and Flourish? Academic Goals and the Performance of Academic Spin-Offs 

Author: **Tommaso Minola**, *U. of Bergamo*

Author: **Davide Hahn**, *U. of Bergamo*

Author: **Giuseppe Criaco**, *Erasmus U. Rotterdam*

Author: **Francesca Visintin**, *U. of Udine*

One key feature defining the nature of academic spin-off (ASO) is the pursuing of non-economic results relevant to the academic context. However, both the drivers and performance outcomes of such academic goals remain unexplored. To address this gap, we hypothesize that academic goals present both benefits and costs for these firms’ profitability (leading to an inverted U-shaped relationship), while they are positively related with publication performance. We also argue that the goal-performance relationship is moderated by academic ownership. Finally, we propose that the importance of academic goals is determined by ASO founders’ prior exposure to academia and entrepreneurship. We find overall support for our hypotheses on a representative and unique sample of 123 Italian ASOs, thereby contributing to literature on academic entrepreneurship.

Crowdfunding 2

Session Moderator: **Christopher Courtney**, *U. of Richmond*

ENT: **Formal Institutions and Relaunching in Crowdfunding: Novice vs Serial Entrepreneurs** → 

Author: **Ahmed Sewaid**, *Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC*

Author: **Shaker A. Zahra**, *U. of Minnesota*

Author: **Sebastian Aparicio**, *U. Autònoma de Barcelona*

The proliferation of international reward-based crowdfunding platforms as a popular source of financing for new ventures has spurred considerable research in recent years. Researchers have examined the individual and transaction-related factors that affect entrepreneurs' use of crowdfunding platforms. However, they have paid limited attention to examining the effect of the country's institutional factors on entrepreneurs' reliance on these international platforms. They have also failed to differentiate between novice and serial entrepreneurs, ignoring the importance of experience in this regard. Using the institutional lens, we discuss the relationship between a country's formal institutions and entrepreneurs' campaign launching decisions on these platforms. We probe our research questions using a dataset of 177,499 Kickstarter campaigns launched by entrepreneurs located in the top 25 countries represented on the platform. We complement Kickstarter data with macro-level data from the World Bank's Doing Business reports and World Development Indicators to perform our multi-level analyses. Our results show that novice entrepreneurs factor policies governing local credit conditions and resolving insolvency in their decision to finance their venture when using international crowdfunding platforms. However, the effect of local credit conditions no longer persists after developing a record of accomplishment on these platforms, becoming serial. As for laws protecting minority investors and resolving insolvency, its effects on the relaunching decision is amplified for serial entrepreneurs. Our findings offer insights into entrepreneurial finance and serial entrepreneurship, which is useful for designing and guiding public policies focused on promoting entrepreneurship.

ENT: **A Tug of War: Attribution Bias and Problemistic Search In Entrepreneurial Responses To Failure**

Author: **Jim Whitbeck**, *Oregon State U.*

Author: **Violetta Gerasymenko**, *Oregon State U.*

While failure is both a frequent and distressing part of entrepreneurship, whether and when project failure improves subsequent project success remains unclear. We argue that subsequent project success may depend on the severity of the prior failure that, in turn, is contingent on both behavioral responses to failure and types of entrepreneurs. Drawing on problemistic search and attribution theory, we suggest and find partial support for a curvilinear relationship between the failure severity and the level of subsequent project goal attainment. We next study the moderation effects of two predominant behavioral responses to failure, category change and goal reduction, and suggest that portfolio and hybrid entrepreneurs that experienced failure will each achieve different subsequent project outcomes. We examine these questions in the context of crowdfunding projects during the period of 2015-2019 and a total final sample of 1,321 single-founder projects following a failure to achieve funding. We advance the entrepreneurship and crowdfunding literature with a nuanced view of post failure outcomes as contingent on different entrepreneurial behaviors and human capital as well as the potential role of attribution bias and learning.

ENT: **Gateway Signals and Shared Underlying Activities: Evidence From the Crowdfunding Context (WITHDRAWN)**

Author: **Gavin Joseph Williamson**, *U. of Tennessee, Knoxville*

Signals are effective at reducing information asymmetries largely because they are costly to obtain. Additionally, so long as they are not redundant, multiple signals are more effective at reducing asymmetries and capturing the attention of the intended receiver than single signals. However, the very property that makes signals effective also makes accumulating and sending many of them prohibitive to resource constrained organizations. This poses a particular challenge for new ventures, who must send multiple signals to cut through a noisy signaling environment, even with acute resource constraints. To begin to address how organizations can economize the accumulation of multiple costly signals, I introduce the concept of gateway signals (i.e., signals whose underlying acquisition costs are shared with other signals, reducing the costs to attain those other signals). Gateway signals facilitate the acquisition of further signals, and thus have indirect effects on outcomes via other signals. I empirically illustrate the gateway signal phenomenon by testing product development as a gateway signal that impacts fundraising outcomes both directly and indirectly via endorsement signals in the context of reward-based crowdfunding, using a sample of 1,394 Kickstarter campaigns. Implications for theory and practice are discussed.

 ENT: **Doing Good to Look Good? Displayed Narcissism and Moral Values in Raising Capital for Social Venture**

Author: **Aaron Anglin**, *Texas Christian U.*

Author: **Christopher Courtney**, *U. of Richmond*

Author: **Thomas Houston Allison**, *Texas Christian U.*

We adopt an identity perspective to examine how entrepreneurs' displayed moral values and narcissism shape the likelihood of pursuing a social venture and the ability to acquire crowdfunded capital. We contend that narcissism complements the influence of moral values on the likelihood of pursuing a social venture. Backers will respond differently to displays of narcissism and moral values when funding social ventures, however. Analysis of 1,000 crowdfunding campaigns indicates a complementary influence of displayed moral values and narcissism on the likelihood of social venture engagement. Displayed moral values elevate crowdfunding performance among social ventures compared to commercial ventures, while displayed narcissism hampers performance.

How Does Creativity Factor in Forming Entrepreneurial Opportunities?

Creativity in Entrepreneurial Opportunities

Moderator: **Ilgaz Tahir Arikan**, *Kent State U.*
Panelist: **Asli Musaoglu Arikan**, *Kent State U.*
Panelist: **Denis A. Gregoire**, *HEC Montreal*
Panelist: **Libby Leann Weber**, *U. of California, Irvine*
Panelist: **David Deeds**, *U. of St. Thomas*
Panelist: **Julio O. De Castro**, *IE U. - IE Business School Madrid, Spain*

Does creativity change in the absence of markets? Does forming entrepreneurial opportunities necessitate the existence of markets? What is the role of creativity in recognizing, discovering, and/or creating entrepreneurial opportunities? In this panel symposium we will debate whether the role of creativity is the same in discovery versus creation of entrepreneurial opportunities. The panelists are in three camps: the discovery camp, the creation camp, and the third – it does not really matter camp.

Entrepreneurial Mindsets

Session Moderator: **Robert J. Pidduck**, *Old Dominion U.*

ENT: Not Seeing the Forest for the Trees: A Theory for Scaffolding Students' Entrepreneurial Mindset   

Author: **Dagmar Hattenberg**, *Groningen U. (RuG)*
Author: **Jeroen Loef**, *Hanze U.*
Author: **Olga Belousova**, *Groningen U. (RuG)*
Author: **Aard J. Groen**, *U. of Groningen center of entrepreneurship*

Entrepreneurship education is well accepted within higher education and many universities aim to build their entrepreneurship programs. Moreover, a large number of tools and theories are readily available for instructors to use in their teaching programs. The flipside of the coin is that the overwhelming amount of available resources may result in overwhelmed teachers: on the one hand, one educational approach does not fit all students, yet, on the other hand, it is practically impossible to create a different approach for each student. We develop a theoretical framework highlighting nine categories of students' entrepreneurial mindset and propose four scaffolding strategies fostering the variety of entrepreneurial mindsets.

ENT: A Gulf in the Gulf? Gender Differences in Entrepreneurial Mindset in Bahrain

Author: **Kelly G. Shaver**, *MindCette, LLC*
Author: **Omar Al-Ubaydli**, *Bahrain Center for Strategic, International and Energy Studies, Manama, Bahrain*
Author: **Jan Wegelin**, *Jan Wegelin Research Consultancy, Johannesburg, South Africa*

Drawing on social role theory, we examine the entrepreneurial mindset of citizens in Bahrain. As Jennings and Brush 2013 have noted, entrepreneurship as a phenomenon is embedded within a society's collective conception of what roles are appropriate for women and men. In many Arab countries these societal expectations are magnified by common interpretations of religious prescriptions. Prior research, often using selected samples and qualitative methods, suggests that women may be particularly disadvantaged in the creation of entrepreneurial ventures. Our study involved entrepreneurs and non-entrepreneurs of both sexes in a comprehensive survey of psychological characteristics related to entrepreneurial performance. Results showed fewer gender differences than expected and significant mindset differences between women entrepreneurs and women who were not entrepreneurs. We suggest reasons why our findings are counter to earlier work.

ENT: The Entrepreneurial Mindset in the Digital Context: A Conceptualization and Research Framework   

Author: **Xaver Neumeier**, *U. of North Carolina, Wilmington*
Author: **Susana Correia Santos**, *Rowan U.*

Despite the increasing relevance of digital technologies for entrepreneurial processes and outcomes, research on the impact of digitalization on individual-level entrepreneurship variables is still scarce. Specifically, we identify the need to further examine the construct of the entrepreneurial mindset in the digital context. In examining the literature, we conclude that although the basic tenets of entrepreneurial thinking and acting still apply in the digital world, several distinct aspects of digitalization such as digital literacy, abductive thinking, and technostress influence the cognitive, behavioral, and emotional aspects of the entrepreneurial mindset. Using those as a basis for our work, we provide a theoretical foundation for prospective studies and insights for entrepreneurship practice.

Paper is Available to Meeting Registrants Only.

Author: **Robert J. Pidduck**, *Old Dominion U.*

Author: **Ajay Patel**, *Wake Forest U.*

Research on the constructive linkages between forms of multicultural experience and entrepreneurial activity continues to proliferate. However, to date empirical research at the individual level has largely focused on cognitive, pre-launch outcomes such as entrepreneurial intention, alertness, or opportunity recognition. We advance this literature by probing the role of cross-cultural experience on venture performance using a longitudinal design on a primary sample (n = 357) of new and small ventures. We draw from and integrate research on serendipity mindset with cultural tightness-looseness theory to explain why exposure to foreign cultures is so conducive for venture performance. Specifically, spending time abroad takes founders out of their normative frames of reference and provides uniquely impactful 'serendipity fields' for valuable encounters to emerge that help systematically bolster novel bisociations of foreign ideas, concepts, resources, and contacts—which enhances venture profitability over time. Critically, we theorize that founders socialized into tighter sociocultural norms and expectations stand to leverage cross-cultural experience to constructive ends in their ventures to a much greater extent than those socialized into looser norms as foreign experiences provide deeper cultural juxtapositions that spark innovativeness. We find support for our theorizing by unpacking the differences between male and female founders and family versus non-family businesses in a culturally tight national setting with relatively fixed gender and family role expectations. Our findings provide several key theoretical advancements to this literature along with some meaningfully practical insights on the transformative role of cross-cultural experience, especially among entrepreneurs from marginalized or socially restrictive contexts.

ENT: **Board Functions at Governance Arenas: A Comparative Case Study of Four Swedish Family Firms** 

Author: **Jenny Ahlberg**, *Linnaeus U.*

Author: **Sven-olof Collin**, *Free U. of Scania*

The board performs board functions, but these functions can be performed at other arenas. Through a structured induction in a four-case study of middle-sized Swedish family firms we show that the board functions are localized at other arenas and suggest propositions that explain their localization. We offer the concept of kin strategy, that indicates the governance importance of the structure of the owner, and bi-directional governance, that suggests that the board govern the owners.

ENT: **Owners as Strategists - Four Types of Strategist Identity of Owner-Managers in Family Businesses**

Author: **Constantin Ludwig Zeif**, *Bielefeld U.*

Author: **Christina Hoon**, *Bielefeld U.*

As ultimate strategic decision-makers, owner-managers in family businesses face paradoxical tensions of the complementary yet different strategic needs of the business family and the family business in their strategy work. The goal of this study is to explore owner-managers' self-understandings as strategists in relation to the opposing poles stemming from the business family and the family business. We draw on identity theory to explain how owner-managers understand themselves as strategists in terms of who they are and how they should act to navigate these tensions. Building on rich data collected in focus groups and enriched by reflexive data points, we identify that owner-managers' identity as strategists vary along the two dimensions of integration and dissociation of the business family and preservation and change of the family business. Given the heterogeneity of their positioning, we find four different strategist identities: the family business actionist, the family business innovator, the family business steward, and the family business orchestrator. We contribute by offering empirical insights into owners as strategists in family businesses and by discussing implications for research on transgenerational entrepreneurship as well as differences in innovation behavior in family firms.

ENT: **The Brightness of the Founder's Shadow: Not an Oxymoron!** 

Author: **Liliana Dinis**, *Nova SBE, U. Nova de Lisboa*

Author: **Pedro Neves**, *NOVA School of Business and Economics*

Author: **Alfredo De Massis**, *Free U. of Bozen-Bolzano (Italy) and Lancaster U. (UK)*

Most studies on family firms focus on the implications of one generation's actions on the next, since memory is still fresh and the actors can still be accessed. Through an inductive study of 27 family firms, we develop theory about how the implications of the founder's actions and beliefs go beyond one generation, potentially enduring even when the business no longer belongs to the founding family. Family business researchers typically study the practices of the founding family that sustain the founder's influence. We reveal that the founder's shadow is perpetuated by the firm's stakeholders, especially the community of employees. We discuss the implications of the founder's continued presence, even when absent, and suggest ways to use it to reinforce collective identity. Nonfamily firm managers might also learn from the positive outcomes of family firms using the founder's shadow to strengthen collective identity rather than discarding their founding history.

ENT: **Family Firm Branding: a Mixed Method Literature Review through Sender-Receiver Perspective**

Author: **Marco Galvagno**, *U. of Catania*

Author: **Vincenzo Pisano**, *U. of Catania*

Author: **Sonia M. Strano**, *U. of Messina*

The purpose of this paper is to review the extant literature on family branding through the sender-receiver perspective and to provide a research agenda to address future research avenues. We conducted a literature review through a mixed-method of systematic literature review and bibliometric analysis and we identified five main research lines on family firm branding. Then, drawing on signaling theory, we applied a sender-receiver perspective to thematically analyze each research lines previously identified through the bibliometric analysis and, thus, we provided a research agenda to address future research. The contribution of our study is threefold. First, we identify the main research lines of the literature on family firm branding and systematize it by drawing on signaling theory and a sender-receiver approach. Second, we provide a comprehensive representation of the family firm branding research lines, maintaining a distinction between the three dimensions of the brand (i.e. identity, image, and reputation). Third, we aim to address future research on family branding providing a comprehensive research agenda. This study represents the first attempt to systematize the whole literature on family branding through the sender-receiver perspective, also providing a path for future research.

ENT: The Venture Is Calling: Understanding Entrepreneurial Callings and Their Effect on Action

Author: **Peter Kalum Schou**, *BI Norwegian Business School*

Being an entrepreneur is a uniquely hard job riddled with uncertainty, long working hours and low pay. Yet, many choose to become entrepreneurs. To understand why people choose such hard jobs, organizational psychologists have drawn on the concept of 'callings', arguing that people feel a deep connection between their personal identity and their chosen job. However, little is known about entrepreneurial callings. To improve knowledge here, I analyzed 100 podcast interviews with leading entrepreneurs to understand why they feel called to become entrepreneurs, why they feel passion for being an entrepreneur and how it affects their entrepreneurial journey. I find four archetypes of entrepreneurial callings narratives: predestined (becoming an entrepreneur to realize oneself), discoverers (becoming an entrepreneur to work with something they love), fighters (becoming an entrepreneur to transform as a person) and Samaritans (becoming an entrepreneur to help others). These callings differ in overall motivation for becoming an entrepreneur, what the entrepreneur feels passion for and shapes entrepreneurial action in different ways. By unpacking these different entrepreneurial callings narratives, my study challenges and extends work on entrepreneurial identity and passion, as well as providing new insights into the nature of callings.

ENT: Should I Stay or Should I Go? Predictive Effects of Commitment on Long-Term Entrepreneurial Action

Author: **Laëtitia Gabay-Mariani**, *ESSCA School of Management*

Our research addresses the entrepreneurial intention-action gap, by examining the predictive effect of goal intention and commitment on long-term entrepreneurial action. Building on recent research adapting Allen and Meyer's model of commitment to nascent entrepreneurship, it explores how different profiles of commitment can lead the entrepreneur to persist within the same project (entrepreneurial persistence), or to start a new one (serial entrepreneurship). A longitudinal survey was conducted within a timeframe of 18 months on a sample of nascent entrepreneurs (n = 161). Our results demonstrate that commitment predicts long-term entrepreneurial action, but that the nature of this behavior depends on entrepreneurs' commitment profile. While commitment to the project is positively associated with entrepreneurial persistence, commitment to the entrepreneurial profession leads to serial entrepreneurship. Our study is the first one to empirically test the predictive effect of commitment on long-term entrepreneurial action. It contributes to literature on the entrepreneurial intention-action gap, as well as an emerging literature on entrepreneurial commitment. Our results are also important for incubators, in their effort to individualize their support offer, but also for increasing entrepreneurs' self-awareness and transparency with their stakeholders.

ENT: The Call of the Heart: Entrepreneur's Calling, Resilience and New Venture Performance

Author: **Haixiao Chen**, *Shanghai U. of Finance and Economics*

Author: **Feifei Lu**, *Shanghai U.*

Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*

Drawing on upper-echelon theory and psychological resource perspective, this paper explores the relationship between entrepreneur's sense of calling and new venture performance. Although the importance of work as calling in shaping individual job outcomes has been well studied, the pathway from entrepreneur's calling to firm performance is poorly understood. To address this, we develop a theoretical model of relationships between entrepreneur's calling, resilience, and new venture performance, and the role of family support. We test our model with time-lagged survey data from 175 entrepreneurs in China using structural equation modeling and a series of robustness tests. Results indicate that psychological resilience mediates the positive relationship between entrepreneurs' calling and new venture performance. Besides, family support moderates the links of the calling and entrepreneurs' resilience. These findings demonstrate how and when entrepreneurs' calling contributes to the new venture performance.

ENT: Rebels, Mavericks, and Contrarians: The Entrepreneurial Side of Nonconformity

Author: **Carlos David Valladares**, *Iowa State U.*

Author: **Brandon Mueller**, *Iowa State U.*

Entrepreneurs are often called rebels, mavericks, or contrarians because their nonconforming actions challenge existing ways of doing things and radically change industries and even society itself. While existing studies use these terms to describe entrepreneurs, there is little systematic research on these distinctly different types of nonconforming entrepreneurial behaviors, and prior studies do not clearly differentiate among these three terms, lacking a theory-driven conceptualization of their similarities and differences. To advance the study of rebels, mavericks, and contrarians, this paper presents a systematic literature review that reveals a conflicting view of these behaviors and proposes definitions of each construct that address their commonalities and differences. We borrow from the theories of conformity and nonconformity to explain each behavior's nuances and distinct motivations. We also theorize about the influence of rebels, mavericks, and contrarians on several entrepreneurial outcomes and why people with these behavioral tendencies may experience better fit in entrepreneurship's flexible environment.

ENT: **Unpacking the Black Box of Impact Investing: The Investment Practices and Types of Impact Funds**     

Author: **Laurens Vandeweghe**, *ETH Zürich*
Author: **Bart Clarysse**, *ETH Zürich*

Since the term impact investing was first coined in 2007, there has been a tremendous growth of impact investment funds. While impact investors have been considered as a new investor type, little is known about the specific investment practices of professional impact investors. We provide an in-depth analysis of the practices of impact investors, using a multiple case study analysis of thirteen impact funds. We document six 'impact investment practices' that are unique to impact investors. We then show that impact funds vary in their emphasis on and approach towards the identified impact investment practices, diverging into three distinct types of impact funds: "Community" vs. "Catalyst" vs. "Cherry-picker". This study contributes to our understanding of this emerging class of investors.

ENT: **"As Long as I Am Able to Help These People": How Social Entrepreneurs Construct Their Motivation** 

Author: **Zanele Penny Lurafu**, *Jönköping International Business School*
Author: **Magdalena Markowska**, *Jönköping U.*
Author: **Olof Brunninge**, *Jönköping International Business School*

The paper conceptualizes how social entrepreneurs construct their prosocial motivation through a person-centered approach. The study examines seven social entrepreneurs who actively own and manage their businesses in Sweden. Gioia methodology was adopted to analyze social entrepreneurs' life stories and the interview data with their close relations to understand how they construct prosocial motivation in social entrepreneurship. Based on grounded theory-building and constructive perspectives, this study contributes in a few ways. First, it departs from the subjective viewpoint of social entrepreneurs taking a lived experience approach to their prosocial motivation. Secondly, we elaborate on the relationship between meaning in life, time orientation, and the adopted perspective to wellbeing in social entrepreneurship setting. Showing that finding meaning in life results in both long-term orientation and a more eudaimonic view of own wellbeing, whereas experiencing meaning void contributes to entrepreneurs taking a short-time perspective and focusing more on hedonic wellbeing, the feeling of being happy.

ENT: **How Social Entrepreneurs Access Resources: A Relational Chain Approach**  

Author: **Frédéric Bally**, *Grenoble Ecole de Management*
Author: **Thibault Daudigeos**, *Grenoble Ecole de Management*
Author: **Josselin Tallec**, *Grenoble Alpes U.*
Author: **Ludvine Calamel**, *Grenoble Ecole de Management*

Very little research has described how social entrepreneurs leverage their social networks to tap resources, especially in their local environment which has been proven to be crucial in the early stages of their venture. To address this gap, we draw on economic geography and, more specifically, the work of Grossetti on relational chains of individual entrepreneurs. We interviewed and collected data on 40 social entrepreneurs, all based in the Grenoble region of France. The analysis through a quantified narrations approach led to two surprising results: first, contrary to commercial ventures, the local embeddedness of social entrepreneurs increases through time. Second, personal ties of social entrepreneurs – both weak and strong – play only a small role in the access to resources unlike local institutional and market ties. We finally elaborate some theoretical propositions to explain these intriguing results and discuss their implications for the literature on social entrepreneurship.

ENT: **The Ripple Effect of Artisan Entrepreneurship for Women: Conceptual Model and Research Agenda**   

Author: **Stacey Edgar**, *U. of Colorado, Boulder*
Author: **Elizabeth Embry**, *U. of Colorado, Boulder*

This paper shines a light on women artisan entrepreneurs and examines the often-overlooked role they play in establishing and maintaining resilient communities in developing countries. While women's empowerment and opportunities through entrepreneurship has received significant attention through the lens of sustainable development and poverty alleviation, little scholarship has examined the unique attributes of the artisan sector, the second largest employer in developing countries. Artisan craft work not only meets women's economic needs as necessity entrepreneurs, but also creates significant social, environmental, and cultural impacts locally, nationally, and globally. Thus, we utilize a three level research framework established to explore the ripple effect of artisan entrepreneurship in the craft sector, we highlight the importance of this work for women through targeted vignettes which illustrate the impact of artisan enterprises, and present critical areas for future research exploration of this important sector.

Gender and Diversity in Entrepreneurship 6

Session Moderator: **Bari L. Bendell**, *Suffolk U.*

ENT: **Investigating the Role of Gender Differences in the Online Social Networks of Entrepreneurs**  

Author: **Bari L. Bendell**, *Suffolk U.*

Author: **Kathrin Hanek**, *U. of Dayton*

Author: **Diane McMeekin Sullivan**, *U. of Dayton*

Author: **Dmitry Zinoviev**, *Suffolk U.*

Author: **Pelin Bicen**, *Suffolk U.*

The present study builds on the view that social capital is a social relational artefact by exploring how entrepreneurs cultivate and interact with their audience in the increasingly prevalent digital context of social network sites (SNS). More specifically, this paper examines the role of gender in these relationships, emphasizing the influence of social norms that govern the behavior of entrepreneurs in the shared online space, or community, of Twitter. The hypotheses are tested utilizing a gender-balanced dataset of 821 unique Boston-area entrepreneur digital social network profiles from Twitter. Results suggest that by self-presenting in ways that cater to one's audience (i.e., are gender-role congruent), entrepreneurial networking on Twitter is shaped by gendered social norms and etiquette. Notably, on Twitter, women entrepreneurs had fewer followers, held less popular network positions, had less audience reach, and tweeted about more stereotypically feminine, as well as, entrepreneurial topics compared to men entrepreneurs.

ENT: **Logics of Digital Space, Informality and Women Entrepreneurship**  

Author: **Lalarukh Ejaz**, *Institute of Business Administration, Karachi*

Author: **Vadim Grinevich**, *Southampton Business School, U. of Southampton*

Author: **Mine Karatas-Ozkan**, *U. of Southampton*

Author: **Muhammad Shehryar Shahid**, *Lahore U. of Management Sciences*

This paper explores the role of digital space in enabling women's informal entrepreneurship in developing economies that are mostly riddled with institutional voids. It is based on an in-depth study of forty-seven (47) women informal entrepreneurs from Karachi, Pakistan. We utilize the institutional logics perspective to explore the voids women informal entrepreneurs face in their businesses and the resolution of these voids through the interaction of pre-existing institutional logics and emergent digital logics. The findings of this research show dominance of patriarchal logic and active utilization of digital logics to overcome it. From our data, we abstract digital logics of flexibility, affordability, spreadability, and connectivity as well as their interaction with dominant patriarchal logic that result in transposing and diffusing practices for women informal entrepreneur. This research contributes to the literature by examining how digital space amalgamates into business operations enabling women's informal entrepreneurship.

Paper is Available to Meeting Registrants Only.

ENT: **Ties that Bind or Blind? The Role of Identity and Place in Understanding Women Entrepreneurs Support**

Author: **Norin Arshed**, *U. of Dundee*

Author: **Graeme Martin**, *U. of Dundee*

Author: **Stephen Knox**, *U. of Dundee*

Women operating in male-dominated spaces face challenges to their legitimacy as entrepreneurs. These legitimacy challenges trigger reflections into who they are as authentic entrepreneurs, and where they belong within entrepreneurial contexts. To address these legitimacy claims, they enact identity work to construct their identities at the intersection of gender and entrepreneurship. Thus, we ask how do women entrepreneurs' role identities, personal identities and identity work shape their perception of gendered support places such as WBCs? Our findings detail the challenges women experience when navigating enterprise support and how this triggers reflections into the legitimacy of their entrepreneurial identities. On one hand, women work to create socially validated identities as women entrepreneurs, advocating gendered spaces and approaches to enterprise support. On the other hand, women work to create a coherent and resilient sense of self, advocating integration into mainstream enterprise support environments.

Paper is NOT Available. Please contact the author(s).

ENT: **Still Standing: Exploring Black Entrepreneurial Resilience Under Conditions of Gentrification** 

Author: **Saran Anika Nurse**, *Kean U.*

Utilizing an autoethnographic case study of Black small business owners in Fort Greene, Brooklyn, New York, I examine entrepreneurial resilience under conditions of gentrification. I conceptualize resilience as a process. I find that, for Black small business owners, resilience is a fluid concept that takes different forms with each form, or resilience capacity, having different determinants and characteristics. Black small business owners with absorptive resilience have been able to leverage protective factors - social networks, ownership of their commercial spaces, and not being dependent on the neighborhood for business - to withstand the effects of gentrification, and stay in place. Black small business owners manifesting opportunity adaptive resilience have stayed in place by adjusting their product/service offerings to the new environment. Those exhibiting necessity adaptive resilience have adapted reluctantly by relocating outside of the neighborhood. Resilience does not always equate with business survival or staying in place. Business owners also exhibit resilience by transforming, that is, by closing one entity and starting a new business either in the short-term, or, after a period of recovery.

Session Moderator: **Per Davidsson**, *Jonkoping International Business School*

ENT: Two Types of Entrepreneurship Process Research Revisited: Solidifying the Evidence

Author: **Per Davidsson**, *Jonkoping International Business School*
Author: **Jan Henrik Gruenhagen**, *Queensland U. of Technology*

In their review of venture creation process research, Davidsson and Gruenhagen (2021) identified two distinct types of process research: process as a journey through qualitative changes in content and process as a directional and temporal journey toward a goal. We revisit their findings with more robust methodology and find that these two are indeed distinct, ideal types that capture two centers of gravity in past process-oriented research on venture creation. The two types of process research represent different traditions and vantage points but both contribute to our understanding of core entrepreneurship phenomena. Further, they are complementary rather than incompatible and can be further refined by learning from each other.

ENT: Entrepreneurial Opportunity Development in Online Communities

Author: **Peter Kalum Schou**, *BI Norwegian Business School*

In recent years, scholars have argued that entrepreneurs develop opportunities through social engagement in communities of peers. These entrepreneurial communities of peers, so-called communities of inquiry, are moving from the physical to the virtual realm as digital technologies proliferate society and entrepreneurial processes. However, little is known about how entrepreneurs partake in online communities and how these communities may affect opportunity development. To improve knowledge on this matter, I analyzed data from four entrepreneurial online communities on Reddit. I find that online communities may support opportunity development by A) providing information about the market and feedback on entrepreneurs' ideas, B) providing advice and emotional support to entrepreneurs dealing with issues in their ventures, C) and by providing vicarious learning from others' experiences. The paper contributes to the nascent stream on the social aspects of opportunity development and to the growing interest in digital entrepreneurship by unpacking how online communities support opportunity development in different ways, as well as outlining the limitations of online communities as digital tools for entrepreneurs.

ENT: A Qualitative Analysis of Partnership Formation – Matching Theory Perspective

Author: **Willy Das**, *college of business, Lehigh U.*
Author: **Satyasiba Das**, *Indian Institute of Management Raipur*

Existing studies on EFT formation look at the partner selection process only from the founder's perspective. This raises several questions. Founders may prefer teaming up with specific individuals but are these collaborations equally attractive to these individuals? Therefore, at the core of this study is the idea that 'matching models' are more relevant to answer the specific question of "How is the partnership formed between the founder and the co-founder?" To answer this, we collect primary data from the founder and co-founders of 13 entrepreneurial firms from four incubation centers in India for a period of three years. We establish that a successful partnership involves considering both micro-founder attributes and micro co-founder attributes. We also establish that the partnership formation depends not only on the founder's ability to identify human capital within their networks, but a successful partnership is predominantly restricted by the 'macro labour market attribute' the 'constraint of unmatched preparedness' and the 'culturally induced attributes'. We have discussed these in detail in the paper.

Paper is Available to Meeting Registrants Only.

ENT: Problem-Solving Approaches, Working Capital Management, and New Venture Performance

Author: **Min-Huei Yang**, *Macquarie Business School, Macquarie U.*
Author: **Kehan Xu**, *City U. of Hong Kong*

This study investigates how, under the pressure of working capital constraints, a problem-solving approach influences decision-makers' financing decisions, and also how it affects consequent venture performance. Using a mixed-method research design including a survey study, a text-based analysis based on secondary data, and a behavioral laboratory experiment, we show that decision-makers with limited working capital (i.e., financial constraints) who use an abstract problem-solving approach can achieve better new venture performance compared with those using a concrete problem-solving approach. Implications for new venture managers and policymakers are discussed.

**Social Entrepreneurship in Africa: Entrepreneurial
Action to Create a Better World Together**
Social Entrepreneurship in Africa

Organizer: **Giacomo Ciambotti**, *U. Cattolica del Sacro Cuore*
Organizer: **Helen Haugh**, *U. of Cambridge*
Discussant: **David Littlewood**, *U. of Sheffield Management School*
Participant: **Ana Maria Peredo**, *U. of Ottawa*
Participant: **Ben Mkalama**, *U. of Nairobi*
Participant: **Milande Busquet**, *Utrecht U.*
Participant: **David Littlewood**, *U. of Sheffield Management School*

Social entrepreneurship is increasingly recognised as an important community response to catastrophes such as ethnic conflict, social issues such as poverty, inequality, and child labour, and environmental challenges such as waste management and climate change (Saebi, Foss, & Linder, 2019; George, Howard-Grenville, Joshi & Tihanyi, 2016a; Sserwanga et al., 2014). In light of the growing literature on social entrepreneurship, and the size and scale of the African continent, surprisingly few studies have engaged with and explored social entrepreneurship in African countries (Rivera-Santos, Holt, Littlewood, & Kolk, 2015; Zoogah, Peng, & Woldu, 2015; Zahra, Gedajlovic, Neubaum, & Shulman, 2009). Our presenter symposium seeks to address two fundamental shortcomings in current organization, management, and entrepreneurship scholarship. First, research in African countries offers the opportunity for greater understanding of how “the diverse, rich life worlds of African people can inform our understanding of management and organization” (AMR, 2021; Kim, Bansal & Haugh, 2019). Second, Africa has been recognized as an important and fertile ground for critically evaluating the relevance of Western theories in non-Western contexts (Nkomo, 2017; Zoogah et al., 2015). Specifically, the learnings derived from a better understanding of how African communities organize local responses to local needs creates opportunities for new insights into how social entrepreneurship seeks to create a better world for communities.

Participant: **Jennifer Bragger**, *Montclair State U.*

Neurodiversity is an emerging challenge and opportunity for organizations. Research on this topic explores the employment of people diagnosed with autism spectrum disorder (ASD), attention deficit hyperactivity disorder (ADHD), dyslexia, dyspraxia, dyscalculia, and other related neurodevelopmental conditions and their inclusion in largely neurotypical organizations. This chronically underemployed population faces inaccurate stereotypes and other barriers to employment. Research presented in this symposium provides an inter-disciplinary review of research to date and as well as new insights on cultural stigmas, social and communication challenges, a framework for training neurodivergent leaders and an analysis of how they are perceived.

IM: Do Digital Technologies Add Value? The Role of Digital Diffusion in Foreign IPO Firms

Author: **Christina Maria Muehr**, *WU Vienna*
Author: **Igor Filatotchev**, *King's College London*

In this article, we contribute to international IPO research on technology and institutions by investigating the relationship between digital strategic intents in initial public offering (IPO) prospectuses and the performance of foreign IPO firms going public in the United States (US). Despite the expectation of this foreign listing activity to convey digital quality, our theory and results suggest the digital adoption-use gap on both the firm and institutional level to create an uncertain digital diffusion process, an investment environment conveying low transparency, and a resulting IPO discount. We further explore contingencies of the chief executive officer's (CEO) and board of directors' technology expertise, investigating interrelationships among technology, institutions, upper echelon and foreign IPO performance. Considering uncertainties carried by the digital adoption-use gap, we find both contingencies to be negative moderators.

IM: International IPO Research: A Systematic Review and Assessment

Author: **Christina Maria Muehr**, *WU Vienna*
Author: **Igor Filatotchev**, *King's College London*

Initial public offerings (IPOs) have strong economic significance and performance fluctuations, while the international IPO phenomenon introduces additional opportunities and challenges that come with bypassing stock exchanges located in the IPO firm's home country. Integrating and building on literature emerging from multiple domains, including international business (IB), accounting, finance, entrepreneurship, management and economics, our review summarises the current state of research. In particular, we identify seven central themes primarily studied by international IPO scholars, encompassing corporate governance, upper echelon, social partners, internationalisation activities, institutions, technology and market activities. Based on our review, we identify gaps in prior investigations, and outline research questions developing a more comprehensive agenda for future inquiries in international IPO research.

IM: Containment Measures and Spillover Effects in Covid Times: A Global Study on Business Confidence

Author: **Diego Finchelstein**, *U. de San Andrés*
Author: **Paula Margaretic**, *U. Adolfo Ibañez*
Author: **Agustín Sotelo**, *U. de San Andrés*

In this paper we take a global perspective to assess the impact of the exogenous COVID pandemic shock on business confidence. Through a quantitative analysis of 43 emerging and advanced economies over the period from January 2018 to December 2020, we provide a novel investigation of a unique worldwide event, in contrast to the most frequent exogenous shocks, which typically have a more limited local or regional scope. We proxy business expectations with the business confidence indicator or BCI. First, we find that the containment measures for the COVID pandemic have negatively affected business confidence, with the compulsory policies having a greater negative effect on BCI than the voluntary ones. Second, we find positive spillover effects on the local BCIs from the containment measures implemented in neighboring countries. This suggests that business people are not against compulsory measures per se, but rather that they are less inclined to assume the costs of these. Third, we find that while the severity of the containment measures has been greater in emerging countries, the negative impact on BCI of these containment measures has been larger in advanced economies. Keywords: Business confidence, containment measures, spillover effects

A Focus on Firm Strategy: Alliances, Innovation, and Change

Session Moderator: **Eugene See**, *Coastal Carolina U.*

MOC: **The Influence of Past Activists on Firm Strategic Change**  

Author: **Eugene See**, *Coastal Carolina U.*

The prevalence of shareholder activism has resulted in the placement of activist appointed directors onto the boards of firms. Extant work examining this phenomenon has taken a rational approach in examining how such directors bring about change, but have assumed for the behavioral implications associated with their placement on boards. Building on theory involving alignment and legitimacy at the team level, this paper adopts a behavioral approach in theorizing how experience with shareholder activism in the past affects activist directors as they seek to bring about change in firms. It finds that such “past activists” are negatively associated with firm change. Further, it finds support for the effects of demographic similarity between such activists and incumbent directors in causing for firm change.

 MOC: **A Model of the Dynamics of Subgroup Influence on Boards** 

Author: **Julia E. Morley**, *London School of Economics*

Author: **Jason Alexander**, *London School of Economics and Political Science*

Finalist for MOC Division Best Paper Award

Corporate governance regulation on board effectiveness tends to focus on board composition and pays less attention to the issue of the dynamics of board deliberation. We develop an agent-based model to provide a ‘how possible’ explanation which engages primarily with these dynamics and demonstrates how a small subgroup on a board can dominate deliberation in virtue of rhetorical characteristics. In particular it is shown that a subgroup of 5 out of 14 board members can exert disproportionate influence over board decision-making. The assumptions of the model are validated by empirical evidence from interviews and a conversation analysis of two board meetings of the International Accounting Standards Board. The findings contribute to current research on board effectiveness by introducing an agent-based model and by providing directly observed evidence of the dynamics of board deliberation.

MOC: **The Role of Overconfidence and Responsibility in Escalation of Commitment in New Product Development**

Author: **Dimitar Krastev**, *U. College Dublin*

Author: **Antonio Garzon-Vico**, *U. College Dublin*

Author: **Jan A. Rosier**, *U. College Dublin*

When new product development shows signs of failure, decision makers often face a difficult dilemma: either to cancel the project or to continue investing resources, hoping for success. On many occasions, managers choose to persist with their investments beyond a point that could be considered rational, a phenomenon that has been called escalation of commitment. To understand what drives individuals to escalate commitment, we conducted a randomized experiment investigating three predicting factors: overconfidence arising from past correct decisions, overconfidence arising from how probability information is presented, and responsibility. Our paper contributes to the literature by showing that correct decisions do not necessarily lead to overconfidence or escalated commitment. Instead, it is only when a correct decision leads to a positive outcome that escalation of commitment occurs. Regarding overconfidence arising from how probability information is presented, we found that when statistical information is framed in a positive way, individuals become more overconfident but that overconfidence does not translate into higher escalation of commitment. Our results indicate that knowing that an individual is overconfident is not enough to predict whether they will escalate their commitment; we also need to know the source of this overconfidence. In the case of responsibility, we find a connection between felt responsibility for the project and escalation of commitment to it.

MOC: **How Fear Can Affect the Pursuit of Novel Technologies in Incumbent Firms** 

Author: **Christopher Golding**, *Alliance Manchester Business School, U. of Manchester*

Author: **Tyrone Pitsis**, *Durham U.*

Author: **Matthew Mount**, *Adelaide Business School*

Despite often being the source of novel technological breakthroughs, incumbent firms frequently fail to capitalize on these opportunities. We examine the potential role that emotion – specifically, fear – can play in this process, through a 24-month ethnographic study of a communications incumbent attempting to commercialize a novel security technology called Quantum Key Distribution. Our findings suggest, counterintuitively, that fear might actually facilitate the pursuit of novel technologies in incumbents, under the right circumstances. We therefore nuance the literature on fear in the pursuit of novelty by suggesting how – and under what conditions – fear can behave as a motivator and inhibitor respectively. Moreover, in identifying how actors involved in the pursuit of novelty may experience fear of failure and fear of missing out, we advance existing unidimensional conceptualizations of fear. Finally, we propose that how novel technologies are emotionally framed to other organizational actors may depend on the position of the communicator in the organizational hierarchy.

Diverse Cognitions at Work: Judgment, Affect, Motivation, and Social Perception

Session Moderator: **Zahra Heydarifard, Bryant U.**

MOC: Social Attention Capture and Judgement Formation in Virtual Reality 

Author: **Theodore Charles Masters-Waage, Singapore Management U.**

Social attention – the process by which individuals select information from the social world to mentally process – is a key antecedent to all organizational behavior. This central role of attention has long been appreciated by organizational theorists, but our understanding of this core cognitive process has been hampered by a lack of empirical evidence. This paper is part of a dissertation seeking to advance programmatic research on social attention through developing new methodology (VR Vignettes) and integrating theory from cognitive science, social cognition, economics, and the behavioral theory of the firm, with micro-research on organizational behavior. Specifically, this paper studies the role of social attention in judgement formation and how job candidates can use charisma to win the “battle for attention”. Results from a virtual reality study found that charismatic individuals receive increased social attention, but the benefits of this depend on the quality of their underlying knowledge, skills, abilities, and other attributes (KSAOs), demonstrating the mixed benefits of charisma for job candidates. Further, it is found that social attention from selectors increases judgement differentiation between high- and low-quality candidates, demonstrating the benefits of social attention for organizations. Together these results seek to advance current theory on the role of social attention within organizations and provide tools for future scholars to continue this work.

MOC: The Social Perception of Virtue Signaling

Author: **Kelly Nault, IE Business School**

Author: **Andy Jiexiong Yap, INSEAD**

References to “virtue signaling” have increased in recent years, yet academic research has failed to define and examine this behavior as a type of status signaling. Using a prototype analysis, which involves creating a participant-generated library of attributes related to virtue signaling and analyzing their similarity and frequency, we find that virtue signaling elicits social judgments of benevolence and sanctimony from observers. Using an experimental study, we find these social judgements, induced by manipulating a signaler characteristic (i.e., the signaler’s socioeconomic status), to directly affect the efficacy of this status signaling behavior. Specifically, perceptions of signaler benevolence increase, and perceptions of signaler sanctimony decrease, observers’ perceptions of signalers’ status. In addition, using a body of 10,000 tweets tagged with #StopAsianHate, we find posts reflecting greater benevolence to garner more retweets, a measure of social influence. In sum, although status signaling generally requires individuals to elevate themselves compared to those around them, we find virtue signals prioritizing the needs of others to result in social status gains. We discuss implications for the literatures on status signaling, moral character, and self-promotion.

MOC: The Role of Self-Monitoring and Motivation on Discretionary Advice: Evidence From a Field Study

Author: **Hendrik Leendert Aalbers, Radboud U. Nijmegen**

Author: **Alexander Smit, assistant professor**

Finalist for MOC Division Best Submission with Practical Implications for Organizations

Despite the pivotal role that self-monitoring plays in a multitude of social exchange situations and the preference of high self-monitors to look good in the eyes of others, relatively little is known about the role of self-monitoring on discretionary advice tie formation. This paper addresses tie formation choices relative to one’s opportunity seeking triggers. Based on the embeddedness literature and self-monitoring theory we develop and empirically test two hypotheses on the interrelation between self-monitoring (trait), motivation (trigger) and discretionary advice seeking (action). Drawing on data collected at a global pharmaceutical company, and based on a quantitative analysis using dyad-level regression models with multiway clustered observations, our findings suggest high self-monitors preferentially reach out to dissimilar others in advice seeking. We find intrinsic motivation to mitigate this effect amongst high self-monitors such that enjoyability positively stimulates self-monitoring ability. Extrinsic motivation, in turn, moderates the positive effect of self-monitoring on the formation of new ties such that external rewards positively stimulate self-monitoring sensitivity. Our findings nuance the notion that high self-monitors are more likely to engage in advice seeking activity than low self-monitors, suggesting one’s motivational preference to moderate this relation as trigger towards actual action. We conclude with discussing the implications of these findings for the study of social exchange processes in an intra-organizational and innovation aspiring context.

MOC: Cognitive Task Analysis: Eliciting Management Cognition

Author: **Olivia Brown**, *School of Management, U. of Bath*

Author: **Nicola Power**, *Lancaster U.*

Author: **Julie Gore**, *Birkbeck, U. of London*

Cognitive Task Analysis (CTA) is a powerful qualitative methodological approach which has the potential to add to management researchers' knowledge of in-depth interviewing techniques, whilst addressing the importance of producing rigorous research that has relevance for management practice. Developed within the Naturalistic Decision-Making community, this set of semi-structured interviewing techniques have much to offer to management researchers. Distinct from traditional semi-structured interview methods, CTA is designed to identify the knowledge requirements that underpin expertise in complex work domains. CTA is underutilised by management scholars, contrary to other applied social science disciplines in cognitive psychology, human factors, and ergonomics where it is widely used. This paper aims to advance understanding of these pragmatic techniques which are theoretically rigorous and easy to use, with results which have high face validity with practitioners. First, we provide an overview of CTA as a robust methodological approach to research oriented around knowledge elicitation. Second, we provide two examples of how the CTA approach has been used to research management; specifically using the Critical Decision Method to explore management in high-stakes environments; and an Applied Cognitive Task Analysis to explore global strategic leadership. In ending, we highlight potential avenues for using CTA for innovative management research.

MOC: Well-Being Implications of Unaccepted Voice for Voicers: Negative Affect and Insomnia as Outcomes   

Author: **Zahra Heydarifard**, *Bryant U.*

Author: **Dina Krasikova**, *U. of Texas At San Antonio*

Employees express voice in order to improve the status quo of their work units and organizations. However, sometimes employee voice attempts are not accepted by managers or violate group norms with regards to voice expression. When voice is unaccepted, it may not only negatively impact the effectiveness of their work units and organization, but also may take a toll on voicer well-being. Drawing from the appraisal theory of discrete emotions (Roseman, 1984, 1991, 1996), we examine the well-being implications of unaccepted voice for voicers. In a 10-day within-person study of 113 full-time employees, we found that employees experienced higher levels of fear and, subsequently, were more likely to suffer from insomnia at night, when their voice was rejected by their supervisors. In addition, we found that these effects of supervisory voice rejection on fear and insomnia were stronger for employees who had lower levels of affective commitment to their organization. Also, we found that employees were more likely to feel frustrated when their voice violated group or organizational norms, and this effect was stronger for employees who were higher in affective commitment.

Existing research has established various strategies and beliefs that can aid in goal pursuit. These tools and perspectives, however, can often lead us astray. This symposium combines four presentations that highlight various tactics and viewpoints for goal pursuit that are commonly thought to be effective, but in fact prove detrimental for motivation. The first presentation begins by demonstrating that contrary to people's expectations and a large body of work documenting comprehensive benefits of practice, repetition engenders contrasting effects on creative performance. The second presentation continues by examining how although failing and learning from failure is encouraged, people actually overestimate how much they and others learn from failure. The third presentation then investigates how individuals intuitively believe that goals must progress linearly; so, when goal pursuers experience nonlinear progress, they are more frustrated and demotivated. The last presentation demonstrates that although choice and agency is touted to motivate charitable giving, asking people to choose between donation options may backfire. Taken together, this symposium highlights how popular strategies and beliefs about goal pursuit can misguide our motivation.

Michael Driver Best Symposium Award Nominee

Identity is a key organizational construct that “can be linked to nearly everything” (Alvesson, Ashcraft, & Thomas, 2008: 5); subsequently, within the organizational and behavioral sciences, it has garnered much scholarly attention. A wide array of identity-based processes and experiences have been studied, including the processes whereby identities are formed (i.e., identity construction) and altered (i.e., identity work), as well as various identity-implicating experiences, such as identity threats and opportunities, and identity conflict. This tremendous scholarly interest has resulted in myriad studies and numerous identity-related constructs. The proliferation of and lack of clarity among identity-related concepts resulting from this prolonged theory building stage has contributed to construct proliferation and a lack of clarity among identity-based concepts. Further, a lack of integration across identity-based studies makes it difficult to generalize research findings and contributes to an absence of encompassing models. Continuing this fragmented approach will contribute to conceptual ambiguity and confusion for the field, decreasing researchers’ confidence in the knowledge generated and inhibiting further progress. This symposium aims to advance identity research by fostering greater clarity and theoretical integration among identity-related constructs and processes. Presentations focused on identity resources and identity coherence address this theme via identity construction and its outcomes, and papers on identity enactment and identity conflict integrate existing knowledge pertaining to existing identities. As a whole, this symposium forges a pathway towards the next stage in this research: construct convergence (via definitional clarity and measurement development) and more theory testing.

OB Division Plenary: Social Class and its Implications for the Future of OB Research

Social Class and Implications for OB Research

Organizer: **Daan Van Knippenberg**, *Rice U.*

Recognizing the pervasive influence of social class in organizations, we organize this Spotlight Plenary to take stock of the state of the science and practice in social class in organizational behavior, and highlight important future questions for scholars and practitioners to address. The session kicks off with research- and practice-focused presentations to set the stage, and then proceeds to explore avenues for the further development of social class research in organizational behavior via interactive discussions. The session closes with a plenary integration of the insights from these discussions to identify promising ways forward to develop this important area of research.

Expressions of Emotions

Session Moderator: **Sasha Pustovit**, *Towson U.*

OB: The Impact of Uncertainty on Selfish Workplace Behaviors: An Emotions Perspective

Author: **Sasha Pustovit**, *Towson U.*

Author: **Andrea L. Hetrick**, *U. of New Mexico*

Author: **Tanja R. Darden**, *Towson U.*

There has been a marked increase in the prevalence of selfish behaviors in organizations worldwide over the past few years and decades (Global Study on Business Ethics Survey, 2021), along with a simultaneous increase in the prevalence of uncertainty in the business environment. Drawing from Appraisal Tendency and Conservations of Resources theories, we present an integrative model that examines the impact of perceptions of uncertainty on individuals' propensities to engage in unethical and competitive behaviors. We tested our hypotheses in three studies; Study 1 utilized a critical incident recall experiment in a sample of 321 working adults, Study 2 utilized an experimental vignette in a sample of 91 students with prior work experience, and Study 3 utilized an experimental vignette in a sample of 130 working adults. Results show that individuals are more likely to engage in unethical and competitive behaviors as a consequence of a fear-based response to perceptions of uncertainty. We further investigate the mechanism through which fear elicits these effects.

OB: The Interactive Effect of Emotion and Voice on Voice Endorsement

Author: **Xiaode Ji**, *Guanghua School of Management, Peking U.*

Author: **Hui Wang**, *Peking U.*

How emotion in voice expressions affects voice endorsements is less understood. In this paper, we followed two lines of reasoning and incorporated the arguments of promotive and prohibitive voice to explain when and how emotional voice expressions facilitate voice endorsements. Specifically, based on the display rule of emotion perspective, we proposed that expressing positive emotion would lead to more voice endorsements through perceived voicers' emotion management ability, especially for prohibitive voice. However, based on the information processing perspective, we proposed that positive voice expression of promotive voice and negative expression of prohibitive voice would increase information processing fluency by eliciting perceived emotional expression authenticity, leading to higher voice endorsements. Results from two studies consistently supported the display rule of emotion perspective explanation. The practical implication, as well as future research direction, is discussed.

OB: Happiness, Productivity and Willingness to Compete

Author: **Karl Overdick**, *Oxford U., Saïd Business School*

Is happiness a necessary attribute of a successful employee? This paper analyses productivity and willingness to compete (WTC) as two measures of employee success. It conducts an online experiment on 645 respondents with real-effort tasks eliciting productivity and WTC for different levels of happiness. No effect of happiness is obtained despite sufficient statistical power. One explanation is that affective happiness does not shift behavioural preferences like risk aversion enough. In contrast, more established alternative features such as pay scheme and gender shift both behavioural preferences and objective outcomes significantly.

OB: "I Did It! I Feel Guilty!": Expressing Guilt and Facing a Less Severe Punishment by Observers

Author: **Afra Koulaei**, *Inland Norway U. of Applied Sciences*

Author: **Arash Talebi**, *EDHEC Business School*

We examine the interpersonal effect of expression of guilt following a norm violation on the severity of punishment recommended or executed by independent observers. In a series of five experiments (4 preregistered), we consistently show that expressing guilt after violating a norm reduces the severity of punishment. Drawing on the Emotion as Social Information (EASI) model, we also show that the perceived warmth and entitlement of the violator explain the effect of guilt expression on punishment. Further, we propose and empirically document that observers' guilt-proneness moderates the effect of guilt expression on punishment such that more guilt-prone individuals tend to punish a norm violator who does not express guilt more severely. In sum, we show that people's acknowledgment of their wrongdoings and transgressions via expressing guilt have interpersonal benefits.

In recent years, there has been a large body of research examining why employees engage in unethical behavior. Scholars have made substantial progress in terms of understanding the antecedents and processes associated with unethicality. Yet, there remains an important opportunity to more systematically investigate the consequences of unethical behavior from a variety of perspectives. For observers of unethical behavior, there may be a variety of negative consequences as well as potentially unanticipated positive consequences. These effects might occur through the specific morally-relevant emotions, such as anger or vicarious shame, experienced by the observers of unethicality and their subsequent behavioral responses. Additionally, the motives of the transgressor may play an important role in shaping the reactions of others. Observers may also react differently to victims of unethical behavior based on whether the victims decide to forgive the perpetrator. Finally, to pursue ethicality in the workplace, an employee's own ethical focus on a given day may influence how they feel and whether or not they rise to the occasion when presented with an opportunity to do the right thing. The purpose of this symposium is to deepen scholars' understanding of the consequences of unethicality via multiple perspectives and methodologies.

Leaning into the Paradox of Belonging: A New Tool to Evaluate Leader-Team Trust and Respect *Leaning into the Paradox of Belonging*

Organizer: **Michael R. Manning**, *Benedictine U.*
Presenter: **John Heiser**, *TRG Management Solutions, LLC*
Presenter: **Laura Guilliam**, *Benedictine U.*

The “Great Resignation” has made one thing clear over the past two years: an unprecedented number of employees have quit their jobs. Employment survey data is uncovering that employees are seeking a sense of belonging, a sense of purpose. This sense of belonging, or lack thereof, has taken on greater significance for leaders given the “new normal” in terms of remote and/or hybrid work settings. Hence, leaning into the paradox of belonging has become a pressing issue that employers must address if they are going to retain their best employees going forward. The purpose of this workshop is to engage in a highly interactive program that examines the research underlying the paradox of belonging and its relation to employee engagement in the context of the current employment situation; exposes participants to a new tool that evaluates the key components of belonging, respect and trust; and engages participants in dialogue about the skills and behaviors leaders need to effectively lean into the paradox of belonging to drive movement toward retention rather than attrition.

Finalist for the OMT Division Best Symposium Award | Michael Driver Best Symposium Award Nominee

Social inequality, i.e., the unequal opportunities and outcomes based on social group membership, is one of the grand challenges of our time. The current literature on social inequality foregrounds organizational practices and structures that contribute to patterns of social inequality. Given that organizations distribute most of the economic and social resources in our society, this research has yielded important insights into the drivers of social inequality both within and beyond organizational boundaries. However, such studies have predominantly focused on patterns of vertical segregation of individuals across organizational ranks. This focus has distracted from patterns of horizontal segregation of individuals into different occupations and industries, based on their social group membership. In this symposium we seek to develop an occupational lens on social inequality by bringing together organization theorists whose work is exemplar of this new direction. This symposium, which is both timely and relevant, is grounded in recent empirical work. The experts will draw on their own research to discuss how an occupational lens can help us to better understand social inequality. In discussing patterns of intra- and inter-occupational dynamics of social inequality, we seek to generate insights from the rich studies that the panelists have conducted and elaborate on why and how an occupational lens can enrich our understanding of social inequality. The symposium should be immensely useful for researchers and practitioners looking to address social inequality within the workplace by not only focusing on broad patterns of social inequality across occupations but also by addressing some of the micro-dynamics of social inequality within the workplace. We hope that this symposium will provide a forum for discussion about an occupational lens on social inequality and provoke insights into future research direction.

Management Education & Learning**
AMLE Session: Addressing Socioeconomic Inequalities

Facilitator: **Paul Hibbert**, *U. of St Andrews*

Facilitator: **Diego Coraiola**, *U. of Victoria*

Organizer: **Susan Zaid**, *Academy of Management*

This paper development workshop is focused on the AMLE Special Issue on socioeconomic inequalities. Although belated, management research is paying increasing attention to socioeconomic inequalities, particularly the role of organizational practices and decisionmakers in providing differential opportunities for value creation, appropriate and distribution to individuals of different demographic groups. This special issue aims to complement this body of research by examining the links between management education and re/production of socioeconomic inequalities within and outside organizations. Contributions to this special issue of AMLE should provide new theoretical understandings, reached through examination of the role of management education and learning in recognising, resisting, and ultimately alleviating socioeconomic inequalities around the world. Due to the broad nature of the topic, relevant insights from other disciplines (e.g., psychology, sociology, anthropology, economics, ethics and many others) that can be connected with the theme and the core interests of the journal may be appropriate, in addition to more conventional approaches. In this PDW, we encourage those with early-stage ideas to submit a long abstract of 1,500 words (excluding figures/tables, appendices, and references), to gain feedback from peers and the special issue guest editors to help guide the development of the full paper. The deadline for full paper submissions for the special issue is December 31, 2022, and the call for papers is available at <https://aom.org/events/event-detail/2021/11/08/higher-logic-calendar/addressing-socioeconomic-inequalities-through-management-education-and-learning>. Pre-registration, submission of your long abstract (1,500 words) and agreement to comment on a small number of peer submissions is required in order to participate in PDW. Racial Justice, Ethics and Corporate Social Responsibility

Session Moderator: **Sonia Siraz**, *U. of Essex (EBS), UK*

SIM: Camouflaging and Leveraging Race: How Entrepreneurs Deal with Racial Issues

Author: **Maria Paola Ometto**, *California State U., San Marcos*
Author: **Carly Offidani-Bertrand**, *California State U., San Marcos*

Much of the literature examining entrepreneurship among communities of color have examined the structural obstacles that impact the initial funding of a business, but this is only part of the story; entrepreneurs of color must also persist in the face of interpersonal racial discrimination in order to grow their business successfully over time. We know little about how entrepreneurs of color deal with discrimination as they work to sustain and grow their businesses within primarily white industries. Our study examines qualitative interview data using grounded theory analysis to understand how entrepreneurs of color experience and navigate racial discrimination that could potentially impact the survival and growth of their businesses. Those entrepreneurs of color who narrate persistence and growth demonstrate the ability to invisibilize, camouflage, and leverage their race in adaptive response to the socio-ecological context within which opportunities arise. We also illustrate how social movements can play a role in beginning to shift unequal structures of power within the business world by creating emergent opportunities for POC entrepreneurs that allow them to be open, and even forward, about their racial-ethnic identity. We also demonstrate that entrepreneurial trajectories can become a way for people of color to change the exclusion and discrimination they face.

Paper is Available to Meeting Registrants Only.

SIM: All Entrepreneurs are Equal but Some are More Equal than Others

Author: **Sonia Siraz**, *U. of Essex (EBS), UK*
Author: **Bjorn Paul Claes**, *The Open U.*

This paper sheds light on how ethno-racial stereotypes affect legitimacy perceptions about entrepreneurs. Our findings show that compared to nonminority entrepreneurs, minority entrepreneurs are perceived as less legitimate due to their ethno-racial attributes. Our study confirms the presence of an ethno-racial hierarchy among different minority groups that increases the harshness of legitimacy perceptions for lower-status minority groups. Entrepreneurs' higher level of education alleviates some of those inequalities but fails to eliminate them completely. We demonstrate that observers' beliefs in a just world play a fundamental role in mitigating or increasing the harshness of legitimacy perceptions. Through three conjoint experiment studies, totaling 22,608 evaluations nested in 1,413 observers from the general public in the United States, we examine how entrepreneurs from two minority groups, Black Americans and Latinx, are judged relative to nonminority entrepreneurs (White Americans) after their endeavors have failed. We then further examine whether there are differences when these two groups of minority entrepreneurs are judged relative to each other. This study contributes to a deeper understanding of how system inequality and prejudice endure in business.

SIM: I'm Not Racist, They're Just Facebook Jokes: How Organizations Deal with Viral Racist Incidents

Author: **Susan Cooper**, *King's College London*
Author: **Lucas Amaral Lauriano**, *IESEG School of Management, LEM-CNRS 9221*

An organizational dilemma for a modern era: racism and social network sites (SNSs). In this international qualitative study of nine cases, we map the stages of how organizations and the public react to incidents of racism gone viral. In the absence of a platform-based consequences, the public negotiates group reactions to offending statements. While organizations have little control over what their staff do outside of work, online spaces enable a context collapse where the traditional work-non-work boundaries are unclear, and when individuals' racism are tied to their workplace, organizations are called to hold their offending staff members accountable. When organizations go into a stage of damage control their responses are generally considered weak. Our study contributes to critical diversity studies and racism on social media by showing the boundaries of platformed racism, outlining processes of bricolage carried out by the public to show organizational patterns of discrimination, and expand on processes of how organizations perpetuate systemic racism by only targeting 'bad apples'.

Chinese MNEs

Session Moderator: **Yue Zhao**, *U. of Arkansas, Little Rock*

IM: Owner Identity, National Institutional Systems and Outward FDI Location: The Case of Chinese MNEs → 

Author: **Zhixiang Liang**, *York U.*

Author: **Yue Zhao**, *U. of Arkansas, Little Rock*

Author: **Michael Carney**, *Concordia U., Montreal*

We examine the relationship between majority owner identity, national institutional systems and Chinese MNEs' outward FDI location choices. We reason that particular owner types will prefer to locate in institutional systems with complementary institutional characteristics. Drawing upon the comparative capitalism literature that classifies institutional systems into nine configurations, we predict that owner identity significantly affects the selection of foreign investment destinations. Using a two-decade sample of 8,000 OFDI investment decisions, we explore the probabilities that particular owner types will select a specific institutional configuration as an OFDI destination. Our results show the likelihood of choosing a destination varies greatly across configurations. In particular, we find a strong correlation between owner identity and preferred institutional system in three types of enterprise. This study contributes to new understandings of how owner identity shapes the MNEs' OFDI destination and institutional system relationship.

IM: Internationalisation of PSFs from Emerging Markets: A Longitudinal Case Study of Chinese Law Firm → 

Author: **Xianwu Zhang**, *Trinity College Dublin*

Author: **Na Fu**, *Trinity Business School, Trinity College Dublin*

Author: **Louis Brennan**, *Trinity College Dublin*

As one type of emerging market multinational enterprises (EMNEs), professional service firms (PSFs) from emerging markets are a unique phenomenon. They have been rapidly internationalising but remain relatively under-explored in the IB or PSF literature. Distinctive from manufacturing firms, PSFs from emerging markets face great challenges due to the differences in culture, regulations, and cross-border management of a highly autonomous professional workforce between the host and home countries. Using a longitudinal case study approach, this study focuses on a Chinese law firm - Dacheng, which was established as a single site with ten lawyers in 1992. It has experienced three stages of rapid expansion: 1) internationalisation in Asia (2003-2009); 2) internationalisation beyond Asia (2010-2014); and 3) network internationalisation (2015-2020). Over 3000 items were collected from multiple sources between 1992 and 2020 along with 16 in-depth interviews. Using thematic analysis, this study explores the drivers, strategies and processes undertaken by Dacheng across the three international expansion stages. Knowledge management based on digital tools was found to be central to its rapid and successful internationalisation. This study provides insights into why and how PSFs from emerging markets, as latecomers and newcomers, develop their own competitive advantages in well-established markets.

IM: The Impact of State Visits and Prior Investments on the Investment Location of Chinese Firms

Author: **Filip De Beule**, *KU Leuven*

Author: **Hinrich Voss**, *HEC Montreal*

We analyze the impact of state visits and prior investments on the investment location of Chinese firms. We argue that these government and business networks should have a positive effect on investment decisions. Prospective entrants decide about investment locations not only on the basis of economic and institutional characteristics of host countries but also learn about the attractiveness of alternative locations through state visits and previous investors. We analyze greenfield investments by Chinese firms between 2003 and 2019 and find broad support for our conceptualization in an analysis of more than 8000 investments. State visits are thereby shown to have a shorter term effect than prior investments by compatriot firms. Our results also show that state visits are comparatively more important in institutionally weaker countries whereas prior investment is relatively more important in institutionally stronger countries.

IM: State Ownership and Chinese POEs' OFDI to Developed Economies: Institutional Driven or (In)compatible 

Author: **Fanshu Li**, *School of Economics & Management, Tongji U.*

Author: **En Xie**, *Tongji U.*

International business research has developed multiple theoretical lenses on how state ownership influences a firm's outward foreign direct investment (OFDI). Institutional driven view suggests state ownership provides both motivation and capability for firms to take OFDI activity, while institutional (in)compatible view suggests the OFDI is discouraged by privileged compatibility at home or lack of legitimacy abroad. This study specifies a context on the OFDI to developed economies made by Chinese privately-owned enterprises (POEs) in which the mechanism of each view is likely to prevail. Using a sample of 1,416 publicly-listed POEs in China, we find state ownership reduces POEs' engagement in OFDI to developed economies, aligning with the prediction of institutional (in)compatibility. Furthermore, the subsidy a firm receives from the government weakens this negative effect, whereas negative media coverage of a firm strengthens it. These findings finally identify lack of legitimacy (institutional incompatibility) as the dominant mechanism through which state ownership of POEs hinders their OFDI to developed economies.

NEU Best Paper Award

This research offers a comparative examination of participant experience when facing a job interview in a physical face-to-face environment and simulated virtual reality (VR). Beyond the conventionally employed neurophysiological techniques, our study acknowledges the realm of organizational neuroscience pertaining to speech and vocal utterances. Using a recruited sample of 31 subjects, we conducted a longitudinal study to capture semantics of participants' vocal responses in the two interview conditions and analyzed them using sentiment analysis and natural language processing methods. Results revealed that the usage of linguistic dimensions (like nouns, adjectives, achievement-related words) and positive emotion-related dimensions were stronger in the VR condition. Furthermore, the level of presence experienced in a face-to-face job interview was higher than that in VR, but participant anxiety was similar in both interview conditions. The current findings are useful for HR practitioners and job applicants as VR becomes an increasingly popular medium being used in selection practices.

NEU: Responsible Leadership and Employee Thriving at Work: The Mediating Effect of Neurological Affect

Author: **Weiwèn Li**, *Sun Yat-Sen U.*
Author: **Yan Gao**, *School of Business, Sun Yat-sen U.*
Author: **Danni Wang**, *Rutgers Business School*
Author: **Sicheng Luo**, *Business School, Sun Yat-Sen U.*

Strategic leaders can approach responsibility from either a strategist or integrator framework. The former focuses on serving the interests of owner/shareholders, while the latter is more broadly oriented toward serving the interests of multiple stakeholder groups. We proposed and found that an integrator orientation more strongly impacts the positive affect of potential followers which, in turn, positively predicted their potential for thriving at work. A unique aspect of our research is the use of electroencephalogram (EEG) technology to assess in real time the positive affect of potential followers. We discuss our findings in terms of theoretical and practical implications, especially in terms of the role of affect and emotions in strategic management research. We also consider various limitations of our approach and future research possibilities.

NEU: How Organizational Neuroscience and Self-Determination Theory Explain Neuro-Leadership

Author: **Nese Saruhan**, *istanbul gedik U.*

Organizational neuroscience (ON) explores new brain research alternatives and contributes to HR field for further understanding of human behaviour and decision-making process. Also, ON studies provide opportunities to extend leadership approach that is one of the most interesting research areas of organizational behaviour through latest discoveries on neural activation pathways during decision processes. However, without taking into consideration of psychological theories behind the leadership philosophy, ON would not be enough to explain and improve leadership behavioural patterns. At this point, Self-determination theory (SDT) will present a detailed explanation of intrinsic motivational factors that are the main success factors of leaders. Neuro-leadership uses SDT factors that are autonomy, relatedness and competence to go one step further on upcoming leadership theories. Neuro-leadership will be a tie between psychological theories and organizational neuroscience. This article illustrates how neuroscience, psychology and leadership approaches can be combined to address how to enhance leadership skills in business environments and the new way of shaping leadership behavioural patterns. In addition to the Neuro-leadership approach of SCRAF model, emotional regulation ability should become a recent research area for leadership studies. Contemporary leadership development training should comprise sessions for reappraising environmental stimulus on a positive way while dealing with managerial problems on the business settings.

**Circular Economy: New Business Models for
Sustainability (In-Person)**

Session Moderator: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*

ONE: [Circular Moonshots: The Influence of Business Models for Sustainability on Field Change](#)  

Author: **Lori Divito De Paauw**, *Amsterdam U. of Applied Sciences*

Author: **Erin Leitheiser**, *Copenhagen Business School*

Author: **Charlotte Pillar**, *Venture Building, Bridgemaker GmbH, Berlin*

We aim to understand the interaction between shifting organizational field logics and field actors' responses to reconcile logic plurality and maintain legitimacy through business model innovation. Drawing on a multimethod, longitudinal field study in the fashion industry, we traced how de novo and incumbent firms integrate circular logics in business models (for sustainability) and uncover how productive tensions in field logics lead to experimental spaces for business model innovation. Our findings showed a shift in the discourse on circular logic that diverted attention and resources from materials innovation (e.g. recycling) to business model innovation (e.g. circular business models). By juxtaposing the degree of field logic tension and the degree of business model innovation, we derive four types of business model hybridization responses that actors engaged in to maintain legitimacy – constrained, limited, integrated, and expanded. Our study generates new insights on business models for sustainability as vehicles for organizational field change.

ONE: [Tackling the Global Waste Problem as a Multi-Level Process: The Case of a Circular Startup](#) 

Author: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*

Author: **Thomas Wrona**, *Hamburg U. of Technology*

Author: **Jill Küberling**, *Hamburg U. of Technology*

The global waste problem constitutes one of our grand societal challenges and requires a sustainable transition of the economy. One way to achieve this transition is to move to a circular economy. Realizing such a transition encompasses multiple actors from politics, business and the society and a broad range of measures such as regulations, new business models and a change in consumption behavior. This research sets out to analyze how the realization of the circular economy is realized through the systematic interaction of a circular business model and multiple stakeholders. We draw on the literature on hybrid organizations and circular economy and develop a single case study of a circular startup that works towards reducing waste through interaction with its value network. We develop a conceptual model that illustrates how a social enterprise uses practices at multiple levels to address critical growth episodes and their associated hybridity challenges, contributing to a transition toward a circular economy. Our findings advance understanding of hybrid organizing as a multi-level phenomenon and the role of stakeholder interactions for circular transitions.

ONE: [Towards a circular economy: what paradoxical tensions do organizations face?](#) 

Author: **Viktorija Varaniute**, *Kaunas U. of Technology, Lithuania*

Author: **Lina Dagiliene**, *Kaunas U. of Technology, School of Economics and Business*

Author: **Justina Banioniene**, *Lecturer*

The circular economy emphasizes fundamental changes in today's dominating business models. Organizations dealing with circular innovation usually face multiple tensions emerging from the paradoxical relationship between circularity and economic value creation. The paper aims to explore tensions of implementing circular business model. Following an abductive approach, the research methodology employs semi-structured interview and observation methods in manufacturing industry. Research results let us to identify various organizational-level tensions, that may lead to five groups of paradoxes, namely learning, organizing, performing, belonging and collaborating. We contribute by explaining how organizations response and deal with the complexity of the circular economy through paradox management perspective. Importantly, a strategic paradox in the field of the circular economy has been identified.

ONE: [New Circular Bioeconomy Business Models for Fruit and Vegetable Waste Valorisation](#) 

Author: **Mechthild Donner**, *INRAE France, Montpellier*

Author: **Hugo De Vries**, *INRAE, UMR IATE, U. of Montpellier*

One of the world's agrifood system major challenges on the road to sustainability is the prevention of waste. About one third of all food produced is lost or wasted. The fruit and vegetable sector is particularly concerned, because these crops are highly perishable and also contain substantial non-edible parts. Here, business models that valorise fruit and vegetable waste and by-products via circular and sustainable bioeconomy approaches are reviewed. Drivers and waste conversion strategies towards new value propositions and markets are studied. In total, 47 international cases are analysed regarding their business model types, drivers and business model elements, and contribution to sustainable development, based on data gathered from an extensive online search mainly of company websites and reports. Results indicate that worldwide, numerous predominantly micro product and service enterprises have emerged recently, driven by concerns about food waste within a larger circular and sustainable bioeconomy debate. The businesses principally target the highest added-value via redistribution and upcycling strategies, or, if not feasible, recycling and recovering. The contribution to sustainable solutions – along economic, environmental and social dimensions – via business activities and new value propositions is in general explicitly communicated on the firm's websites, referring to their role in a responsible society.

Sustainable Consumers and Consumption (In-person)

Session Moderator: **Ralf Barkemeyer**, *Kedge Business School*

ONE: Activating the Sustainable Consumer: The Role of Customer Involvement in Corporate Sustainability

Author: **Manuel Reppmann**, *U. of Mannheim, Business School*
Author: **Stephan Harms**, *Leibniz U. Hannover*
Author: **Laura Marie Edinger-Schons**, *U. of Mannheim, Business School*
Author: **J. Nils Foege**, *Leibniz U. Hannover*

The success of the ongoing sustainability transformation depends in large parts on both the sustainability in firms' production of goods and the consumption choices of individuals. While firms and consumers already separately contribute to sustainable development, a key challenge still lies in accelerating collaborative efforts. In this study, we develop a conceptual model to demonstrate how firms can motivate sustainable consumption behavior amongst their customers by involving them in their sustainability activities. In particular, we introduce psychological ownership as the underlying mechanism that explains how customer involvement in sustainability activities translates into changes in individuals' consumption choices. We further argue that this mechanism depends on the type of sustainability that a firm undertakes, i.e., whether it is embedded in or peripheral to a firm's core business. Results from two scenario experiments and one field experiment broadly support our theorizing and contribute to management research by showing how firms can go beyond delivering sustainable products and services toward actively shaping the consumption behavior. Our results additionally reveal that firms can derive further benefits from customer involvement in embedded sustainability since it incites higher extra-role behavior in the form of feedback-giving than involvement in peripheral sustainability, which firms can exploit to develop their sustainability strategy further.

ONE: Eco-labels, Conspicuous Conservation and Moral Licensing: An Indirect Behavioural Rebound Effect

Author: **Ralf Barkemeyer**, *Kedge Business School*
Author: **C. William Young**, *U. of Leeds*
Author: **Phani Chintakayala**, *Leeds U. Business School*
Author: **Anne Owen**, *U. of Leeds*

Sustainable consumption is a growing niche with an increasing number of initiatives aimed at lowering domestic environmental consumption footprints. Third-party assured product eco-labelling has emerged as a key governance mechanism to promote sustainable consumption. However, does the purchasing of eco-labelled products really support a transition towards more sustainable consumption? In this paper, we explore eco-labelling through the lens of the rebound literature. While theorizing of the rebound effect originated in energy economics and has long been centred on eco-efficiency, we extend its rationale to products that are associated with a price premium in return for added environmental quality attributes. Reporting on two inter-related studies into the link between willingness to consume eco-labelled products and different types of environmental resource consumption, we find that eco-labelled products flourish in more affluent economies that are characterised by higher levels of overall resource consumption; and that willingness to consume eco-labelled products is positively related to higher individual carbon, water and material footprints. In other words, eco-labelling in its current form is inextricably linked to higher – rather than lower – levels of resource consumption. We thus argue that the governance mechanism that underpins eco-labelling is associated with an indirect behavioural consumer rebound effect.

ONE: Sustainable Consumption of Services: Willingness-to-Pay for Sustainable Alpine Skiing Experience

Author: **Andreas Hinterhuber**, *U. Ca' Foscari of Venice*
Author: **Iveta Malasewska**, *Inland Norway U. of Applied Science*
Author: **Erik Haugom**, *Inland Norway U. of Applied Sciences*
Author: **Gudbrand Lien**, *Inland Norway U. of Applied Sciences*
Author: **Per Kristian Alnes**, *Inland Norway U. of Applied Sciences*

In this study, we examine sustainable consumption from a ski area perspective by using the exploratory sequential mixed-method approach. The empirical data from Norway and Switzerland allows us to investigate how customers' preferences for sustainable service alternatives translate into actual willingness to pay. We relate the differences across countries to diversity on Hofstede's cultural dimensions. The results show that alpine skiers are in general willing to pay more for a day pass if the ski area is either environmentally certified, carbon-neutral, or uses only natural snow. The positive effects are even stronger among environmentally conscious skiers and skiers from masculine, long-term oriented cultures. We discuss the implications our results have for ski area managers wanting to incorporate sustainability in the overall pricing strategy.

ONE: Socially Responsible Plastic Consumption Behavior: A Multi-Wave Study of UAE  

Author: **Khalid Mehmood**, *School of Economics and Management Hubei Engineering U.*

Author: **Fauzia Jabeen**, *Abu Dhabi U.*

Author: **Zhang Hui**, *School of Economics and Management Hubei Engineering U.*

Author: **Shilpa Iyanna**, *Associate Professor Abu Dhabi U. UAE*

Author: **Chenglong Zhang**, *School of Economics and Management Hubei Engineering U.*

Author: **Yaser Iftikhar**, *Armed Forces Post Graduate Medical Institute, National U. of Medical Sciences*

Author: **Prateek Kalia**, -

This study examines the factors that drive behavioral willingness to reduce plastic consumption and socially responsible consumption behavior through the Stimulus–Organism–Behavior–Consequence (S-O-B-C) framework. Using a four-wave time-lagged design, 440 consumers from the UAE retail sector participated in the study. Structural equation modeling was used to examine the hypotheses. The study results suggest that environmental consciousness and values are positively related to environmental knowledge and environmental self-identity. Furthermore, environmental knowledge and environmental self-identity are positively linked with the willingness to reduce plastic consumption, while socially responsible consumption behavior is positively associated with the willingness to reduce plastic consumption. Additionally, policy support positively moderated the connotation of environmental knowledge with behavioral willingness to reduce plastic consumption and socially responsible consumption behavior. The proposed S-O-B-C framework enriches the literature on plastic consumption to understand retail consumers’ perspectives in an emerging country context. The findings provide insights that will help practitioners and academics understand consumers’ plastic consumption intention and formulate strategies that will increase the involvement of consumers in plastic conservation activities.

ONE: Beyond Green Consumerism: Uncovering the Role of Social Exclusion in Green Product Consumption 

Author: **Zhang Hui**, *School of Economics and Management Hubei Engineering U.*

Author: **Ali NAWAZ Khan**, *School of Economics and Management Hubei Engineering U.*

Author: **Chenglong Zhang**, *School of Economics and Management Hubei Engineering U.*

Previous research on the influence of perceived social exclusion on pro-social or pro-environmental behaviors has yielded inconclusive results. We extended the theory of planned behavior (TPB) by including green self-identity as a boundary condition to check the impact of social exclusion on green product consumption intentions. We collected data from 476 respondents through online questionnaires. Structural equation modeling (SEM) technique was applied to test the proposed model. Green product attitudes, subjective norms about green products, and perceived behavioral control (PBC) are significantly predicted by social exclusion. Our results also reveal that TPB plays a mediating role between social exclusion and green product consumption intentions. Furthermore, the results of moderation and moderated mediation revealed that green self-identity moderated both the direct and indirect effects of social exclusion on green product consumption intentions. Moreover, these effects were not significant in the case of PBC. The extension of TPB has several implications for organizations and policymakers in the context of social exclusion and green product consumption.

OSCM: An Empirical Assessment of Firm Responses to the COVID-19 Crisis

Author: **Maximilian Klöckner**, *ETH Zürich*

Author: **Christoph Schmidt**, -

Author: **Stephan M. Wagner**, *Swiss Federal Institute of Technology Zurich, ETH*

Author: **Morgan Swink**, *Texas Christian U.*

The COVID-19 pandemic presents an unprecedented crisis environment. To mitigate the negative impact of the COVID-19 crisis or to ensure survival, firms across all industries attempt to adequately respond. Yet, it remains largely unclear how firms respond to the COVID-19 crisis, and how effective these responses are. In this empirical study, we address these issues. In a first step, exploring how firms respond to the COVID-19 crisis, we identify five distinct tactical response types, namely operational, digitalization, financial, supportive, and organizational responses. We also find that responses vary in their scope, as some firms take action on their own, while others collaborate on an inter-organizational level. Eventually, we observe different response angles, manifesting in firms that leverage upside potential during the pandemic and firms that focus on the mitigation of downside risk. In a second step, we measure the effectiveness of the different responses, conducting an event study to estimate the financial value that investors attribute to the announced COVID-19 responses. Our results indicate that firm responses to the COVID-19 crisis are generally associated with an increase in firm value, and that financial and digitalization responses are valued particularly positive. In contrast to solo efforts, collaborative responses are also associated with a higher increase in firm value. Collectively, our empirical findings extend the emerging, yet mainly conceptual, literature on the COVID-19 crisis, as well as the more established general literature on crisis response management.

OSCM: Transparency Fosters Trust and Justice in Global Supply Chains

Author: **Emily C. Dickey**, *Kühne Logistics U.*

Author: **Prisca Brosi**, *KLU Hamburg*

Author: **Jan C. Fransoo**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

OSCM Division Best Student Paper Award

Despite growing pressure on manufacturers and retailers across industries to disclose more information about their supply chains, companies still view transparency as a double-edged sword. Companies fear that the more information about suppliers and supplier conditions they disclose, the more they open themselves up to criticism from the outside, while, simultaneously, hiding such information causes criticism and suspicion. Through two online experiments we compare how supply chain transparency—namely, the disclosure of information about supplier names, supplier locations, and supplier working conditions—affects consumer perceptions. We do this under conditions of both positive and negative information, while also identifying the underlying mechanisms of this relationship. We find that the relationship between the disclosure of supply chain information and consumer perceptions of a firm is mediated by firm trustworthiness and perceptions of interpersonal justice in the supply chain. Furthermore, our results provide evidence that transparency, whether it reveals positive information or negative information, is more beneficial for firms than staying silent about supply chain practices. Our results suggest that it may be of interest for companies to prioritize the voluntary disclosure of supply chain information, especially in regard to social sustainability initiatives, whether or not they fear what is disclosed.

OSCM: **Faith in Disasters: The Influence of Religion on Humanitarian Relief Operations**

Author: **Llord Brooks**, *U. of Arkansas, Fayetteville*

Author: **Iana Shaheen**, *U. of Arkansas*

Author: **David Dobrzykowski**, *U. of Arkansas*

Religion has consistently played an important role in the humanitarian relief environment as a source of understanding and community that helps individuals to cope with negative events and situations. As such, an NGO's (non-governmental organization) religiousness ought to be an important factor in how volunteers view their work in the organization and in determining operational performance. Yet NGOs often engage both religious and non-religious volunteers (due to legal and other factors), which may hinder NGO operations. To date, it is unclear how and if an NGO's religiousness may affect volunteers and performance. In this study, we examine how NGOs can leverage their religious affiliations and take advantage of established religious communities to manage their relationships with volunteers and influence operational outcomes. Based on social capital theory, we test the influence of NGO religiousness on social capital, organization commitment, volunteer satisfaction, and volunteer performance. Utilizing person-organization fit theory, we also examine how 'fit' or compatibility between NGO and volunteer religiousness influences these relationships. We use a 3x1 factorial video experiment to collect data from 237 individuals to test our hypotheses. We find that increases in NGO religiousness hinders the development of social capital, commitment, and satisfaction. However, NGO and volunteer religiousness 'fit' improves social capital, commitment, and satisfaction. Finally, we highlight that there is a trade-off between efficient and effective performance in terms of volunteer response time and service accuracy. Overall, these findings contribute to the literature on humanitarian relief operations, volunteer management, religion and diversity, and social capital and guide decision-making in NGOs towards recruiting and retention.

OSCM: **Effective Goal Framing for Managers Using Inventory Management Systems**  

Author: **Dilina Kosgoda**, *U. of Moratuwa, Sri Lanka*

Author: **H. Niles Perera**, *U. of Moratuwa, Sri Lanka*

Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

While automated inventory management systems are prevalent, managers are known to use judgmental adjustment when they have access to system recommendations. However, these adjustments might be subject to human decision biases in the form of framing effects contingent on managers' profit maximizing or cost minimizing goals. We conduct the first investigation of goal framing effects that influence judgmental adjustment of system recommended order quantities. Our laboratory experiment uses a 4 (Goal framing: Positive, Negative, Neutral, Control) x 1 design that manipulates the goal frame. Except for the control group, decision makers in other treatments had access to a system recommendation. The participants in all treatments were asked to determine the optimum order quantity in a high margin newsvendor task. We find that the decision makers' trust in the system recommendation determines the extent to which they make adjustments to the system recommendation. Most importantly our results reveal a significant goal framing effect: participants in the positive/negative frame condition ordered less/more than the system recommendation. This implies when organizations communicate goals and set targets for their decision makers, those goals should align with a cost minimization strategy to improve performance.

Diversity Equity and Inclusion (Live In-Person)

Session Moderator: **Vera Schwarzmann**, *European Business School, Wiesbaden*

This session examines the intersection of diversity studies with public administration paradigms and practices such as representative bureaucracy, civility, teamwork and professionalism. The session explores these topics in application to concerns faced by a range of identities, including age, religion, and gender.

Workplace incivility can originate from multiple sources and can have deleterious effects on individuals and organizations (Cortina, Kabat-Farr, & Magley, 2017; Schilpzand, De Pater, & Erez, 2016). This paper draws upon Conservation of Resources (COR) theory to explain the linkages between workplace incivility and job search behavior. It contributes to our understanding of how incivility affects public sector employees by considering whether it motivates job search behaviors and the mechanisms that influence that relationship. More specifically, we examine the mediating effect of job satisfaction and the moderating effects of age, gender and race. Our analysis is based on a mediated moderation model using data from a survey of 751 professional employees working in a state level law enforcement organization. We collect data on both supervisor-instigated incivility and coworker-instigated incivility, enabling us to uniquely examine the differential effects of each on job search behavior.

Given the political debates that religious symbols, such as a hijab, are often undesired in public employment, we ask if reflections on empathy or professionalism by citizens mitigate potential negative perceptions about public servants who wear a hijab. We conducted a two-step 2x3 between-subjects experiment (n = 2,680) where reflection tasks on empathy and professionalism were combined for a public servant wearing or not wearing a hijab. In a first step, the effect of a hijab was tested on perceived professionalism and empathy, while in a second step, the effect was estimated of type of reflection, as well as the answer to the reflection, on citizens' performance during public services. We find no evidence that wearing a hijab influences citizens' perceptions or performance. However, the reflection answer with respect to professionalism or empathy is positively related to citizens' performance. We frame these results in the intersection of the literature on public servant and religious stereotyping.

Demographic changes and an aging workforce challenge organizations by amplifying the impacts of age diversity on teamwork. While previous research focused on age diversity in professional teams, this study sheds light on the dynamics of teamwork in age-diverse volunteer teams. Our empirical analysis draws from the case of German World Shops, which sell fair trade goods. We collected extensive ethnographic and interview data from age-diverse volunteer teams. We identified three overarching barriers to (resistance towards change, communications preferences, power dynamics) and three enablers of (creating space to experiment, ensuring protected spaces, fostering spaces of encounter) age-diverse teamwork. Our analysis suggests that younger volunteers were thwarted by a larger and more powerful group of older volunteers. Moreover, the older volunteers showed a considerable aversion to change, despite their volunteer engagement to bring about change in trade. Beyond developing the respective concepts, this study extends the literature on volunteering by integrating the perspective of age diversity, offers practical solutions to improve collaboration in volunteering and paves the way for further research to explore the nascent phenomenon.

Transgender people are amongst the most stigmatised and marginalised members of society. Many continue to face state sanctioned discrimination. Kerala, India stands out in supporting and advancing transgender people through progressive politics by affording them fundamental human rights. We were interested in learning more about how the Communist government in Kerala, motivated by its ideology, support and improve the lives of transgender people. With this question in mind, we seek out to interview government officials and transgender women to deepen our understanding of how the government advances a socially marginalised group. Guided by public administration literature, we find transgender representation in government can improve the lives of the transgender community. The Kerala government took steps to first recognize transgender people and give them standing in society. The government also hired them and offered them economic and educational opportunities. Transgender people became self-sufficient and began serving others in the community. In this way, the Kerala government reengaged transgender people through citizenship, collective action, and civic participation. Our study highlights the central role representative bureaucracy play in improving and lifting marginalised citizens.

Replicability and Transparency of Management Research

Session Moderator: **Jose M. Cortina**, *Virginia Commonwealth U.*

RM: Misreporting Statistical Non-significance Levels to Support Hypothesized Relationships

Author: **Donald D Bergh**, *U. of Denver*

Author: **Barton Miles Sharp**, *Northern Illinois U.*

Author: **Ming Li**, *U. of Liverpool*

Author: **Andrew Schnackenberg**, *U. of Denver*

Author: **Sung Soo Kim**, *U. of Denver*

Author: **Paul Seaborn**, *U. of Virginia - McIntire School of Commerce*

Recent research has documented a range of problematic behaviors by academic researchers including p-hacking, hypothesizing after results are known, and even fraud. This study tests whether the “publish or perish” aphorism might explain the occurrence of one such action: misreporting statistical significance levels to support hypothesized relationships. Drawing from an integrative theoretical model, we hypothesize that articles with senior academic lead authors are more likely to have misreported statistical significance findings to support hypothesized relationships than those led by junior authors. Findings from a study of 55 high impact articles appearing in top empirical management journals confirm these expectations. Overall, nearly 20 percent of the articles report support for hypotheses which are actually non-statistically significant, this occurrence is related to senior ranked lead authors, and the relationship is robust relative to the research rankings of the lead author’s institution, their PhD program, and the number of coauthors on the article.

RM: Are We Building Our Science on Quicksand? Current Reproducibility Practices in Management 

Author: **Jose M. Cortina**, *Virginia Commonwealth U.*

Author: **Tine Koehler**, *U. of Melbourne*

Author: **Lydia Craig**, *George Mason U.*

While debates about a replication crisis in organization studies have taken up significant journal space over the past years, the issue of reproducibility has so far been mostly ignored. Reproducibility manifests when researchers draw the same conclusions from a reanalysis of the same dataset as used in the original study with the same (literal reproducibility) or superior (constructive reproducibility) data analytic techniques. Reproducibility studies are crucial for correcting accidental mistakes as well as intentional distortions during data analysis that impact on the conclusions drawn from the findings of a study. Reproducibility practices allow a science to be self-correcting and to produce more robust and reliable findings over time. In the current study, we define reproducibility, provide published examples for the crucial role reproducibility plays in scientific knowledge production, and offer findings from an illustrative review of papers published in the 2019 volume of AMJ to explore how frequently different forms of reproducibility are employed in the top-management publication outlet. We discuss implications from our findings for future research and reporting practices.

RM: Are They Replicable and Transparent? Insights from Search Strategies for SLRs 

Author: **Marek Szarucki**, *Cracow U. of Economics*

Author: **Oskar Kosch**, *Cracow U. of Economics*

Systematic literature reviews (SLRs) are of particular interest among management scholars. There are different approaches to explore which SLR is a high-quality one. The main attribute that differentiates a systematic review from an unsystematic one is a methods section that sufficiently communicates the research question, the search strategy, and the designs of the works that were selected. It is not easy to choose an approach and search strategy to succeed in publishing in journals accepting only high-quality research. Successful or high-quality search strategy is one that assures replicability and transparency of SLR. Despite numerous publications of guiding nature on how to conduct a literature review, a gap on search strategy utilized by scholars in management research is still observed. The main purpose of the paper is to explore successful search strategies for SLRs in management sciences. We have utilized a systematic review exploring all SLRs in terms of their replicability and transparency available in the *International Journal of Management Reviews*. The obtained results have revealed several thought-provoking methodological patterns in search strategies related to replicability and transparency of the analyzed SLRs.

RM: Are Replications in Management Research a Wasted Effort? An Analysis of Co-Citation Patterns 

Author: **Przemyslaw G. Hensel**, *U. of Warsaw*

Author: **Agnieszka Kacprzak**, *U. of Warsaw*

The past decade has witnessed great interest in replication research caused by widely publicized failures to replicate a significant share of research in psychology. However, much of the discussion implicitly assumes that replications lead to reevaluations of the original findings. We examined this assumption by drawing on a sample of 137 original study-replication pairs in management and organization studies. Study 1 analyzed the direct impact of replication by studying original-replication co-citation patterns. An analysis of data for 6,965 unique citing sources showed that over 92% of journal articles and conference proceedings published after the replication was performed failed to co-cite it with the original study, whereas papers published in higher ranking journals were more likely to co-cite replications. Dependent replications were more likely to be co-cited, whereas no support was found for the hypothesis that failed replications are more likely to be co-cited. Study 2 analyzed the indirect impact of replication through meta-analyses. Half of the replications in our sample had never been meta-analyzed. For the remaining cases, we used data for 3,501 citing sources, showing that 90% of them failed to co-cite meta-analysis when citing the original study, while the rank of citing journals was positively associated with co-citations. However, the replication-covering meta-analyses were cited 30,138 times, thus having an immense impact on the field. Our results show that replications tend to be ignored when original studies are referenced but have a considerable impact through meta-analyses. We offer suggestions on editorial policy intended to increase the use of replications.

Meta-analysis (MA) is an increasingly popular and highly influential tool for cumulating scientific evidence in the organizational sciences. While MA has continued to evolve across disciplines, leading to 'next generation' MA approaches that enable new research questions to be answered in novel ways, Management has been slow to take advantage of these developments, instead relying on 'first generation' MAs that are based on overly narrow assumptions of how MA can be applied, and that limit its potential for advancing Management theory and practice. Our aim with this symposium is therefore to unlock the full contribution potential of MA by showcasing underutilized, 'next generation' MA approaches. The first paper lays the foundation by providing a systematic review of MA applications within Management, and advancing a versatility perspective to MA that includes 'next generation' MAs. The second, third, and fourth papers each zoom in on one of the 'next generation' MAs – i.e., crowdsourced, prospective, and individual participant data MA respectively – and illustrate what these MAs look like 'in action' by providing applications to Organizational Behavior-related topics (e.g., leadership, commitment).

One of our panelists has indicated that he can only participate now if our session is on Monday.

Endogeneity: Myths, Legends, and Facts – Second Annual

Endogeneity: Myths, Legends, and Facts

Organizer: **Elle Hyunjung Yoon**, *Iowa State U.*
Organizer: **Daniel Gamache**, *U. of Georgia*
Panelist: **John R. Busenbark**, *U. of Notre Dame*
Panelist: **Lindsey Greco**, *Oklahoma State U.*
Panelist: **Scott G. Johnson**, *Iowa State U.*
Panelist: **Michael C. Withers**, *Texas A&M U.*

Management scholars are increasingly concerned about biases in empirical analyses from endogeneity. When endogeneity is present, any model that does not account for the source of endogeneity will provide biased coefficient estimates. Thus, scholars strive to address endogeneity concerns in their research. Yet, scholars do not share a common understanding of endogeneity and often implement questionable solutions in response to their perceived concerns. Our target audience is Academy members who lack confidence in dealing with endogeneity or who want to improve their methodological ‘tool kit.’ This PDW will provide a learning opportunity about different topics related to endogeneity and how to address it correctly. To do so, we explore the myths, legends, and facts about endogeneity. The PDW will be divided into two parts. Part 1 consists of a selection of presentations on different issues related to endogeneity. Specifically, Dr. Scott Johnson will discuss four sources of endogeneity, Dr. John Busenbark will discuss instrumental variables and the ITCV technique, Dr. Lindsey Greco will discuss endogeneity in micro research, and Dr. Michael Withers will discuss endogeneity in panel data. In Part 2, the panelists will answer questions from the audience from which we will facilitate a scholarly conversation about their views on endogeneity. With this PDW, we hope that scholars will understand endogeneity better and learn when and how to account for endogeneity in producing high-quality, credible, and replicable scientific research.

Advancements in information technology (IT) can have profound impacts on the development and management of human capital. Extant research has examined how human capital in markets and organizations are shaped by increased digitization and the deployment of strategies relying on collection and analysis of big data, cloud computing, social media, Internet of Things (IoT), and the like. In knowledge-intensive settings, however, IT-enabled mechanisms have heterogeneous impacts on issues related to human capital. Although IT potentially expands capacity for collection, storage, and utilization of knowledge, some firms and individuals successfully leverage technology and information systems while others do not—or are even possibly left worse off. This symposium contributes to examining why such discrepancies may exist by shedding light on the market and organizational processes that underlie the intersection of IT and knowledge-based processes, networks, and outcomes as they relate to issues in strategic human capital.

The Role of Community in Venturing for a Better World Together

Community and Venturing for a Better World

Session Chair: **Rebecca Arwine**, *U. of Tennessee*
Session Chair: **Adrian Beorchia**, -
Session Chair: **Jessica Jones**, *U. of Tennessee*
Panelist: **Sophie Catherine Bacq**, *Indiana U. - Kelley School of Business*
Panelist: **G. T. Lumpkin**, *U. of Oklahoma*
Panelist: **Ana Maria Peredo**, *U. of Ottawa*
Panelist: **Trenton A. Williams**, *Indiana U. - Kelley School of Business*
Panelist: **Ralph Hamann**, *U. of Cape Town*

Scholars have argued that any entrepreneurial attempts to address societal issues may fall short without incorporating the role of community as an endogenous component to venturing, as opposed to treating community as an exogenous contextual variable. A growing but disparate body of entrepreneurship research centers specifically on the role of community, and has explored the involvement of community as actors, recipients, or stakeholders in entrepreneurial outcomes. However, research progress is hampered by both the ambiguity surrounding the definition of community, and how community is engaged in the research process. Building on the idea of the community as a stakeholder with constant presence but varying involvement in the entrepreneurial process, we advocate viewing community as a passive or active embedded partner in the entrepreneurial process. Using this agentic view of community, the speakers in our symposium discuss approaches to conduct research at the intersection of community and entrepreneurship to “create a better world together”. The symposium will close with a brainstorming session regarding future research questions designed to elevate and refine scholarship at the intersection of community, entrepreneurship, and positive social change.

Agile Work and Coordination Across Organizational Interfaces

Session Moderator: **Michael Greineder**, *U. of St. Gallen*

CTO: A Longitudinal Examination of Agile Work Transformation - A Process Theory

Author: **Michael Greineder**, *U. of St. Gallen*

Author: **Ivo Blohm**, *U. of St. Gallen*

Agile work organization has experienced a significant increase in acceptance in recent years. However, literature falls short in explaining the transformation process that results from the implementation of agile work organization as a means of achieving increased adaptability, rate of speed and flexibility. We apply a process ontology to agile work organization by following three multinational firms that apply agile work organization, utilizing a case study approach over three years. At the macro level, our theory describes the transformation process set in motion by agile work organization as a three-phase process. At the micro level, we show that this transformation process is driven by specific design decisions on individual elements. Thus, our process theory contributes to a better understanding of agile work organization as a means to achieve organizational agility and to STS theory by showing that the emergence and constitution of STS are mainly driven by micro-level processes.

Paper is Available to Meeting Registrants Only.

CTO: Organizational Interfaces and Autonomous Agents

Author: **Corinna Rutschi**, *U. of Bern*

Author: **Nicholas Berente**, *U. of Notre Dame*

The history of organizational research is abundant with organizational interfaces: human-to-human, machine-to-machine, and human-to-machine. Existing research on coordination treats humans and machines as distinct. However, in recent years, the emergence of autonomous agents is rendering the distinction between human and machine less salient. As the line between human and machine agency blurs, we propose a framework of agent-to-agent interfaces. The framework involves four general types of agent-to-agent interfaces: standard, adaptive, generative, and autonomous. Each type of interface requires a different perspective for organizational action, and we propose design principles, reference domains, and modes of adaptation for each.

CTO: Cartooning the Integration of Interorganizational Coordination Types

Author: **Israel Fortin**, *Goa Institute of Management*

In this study, I analyze cartoons used to communicate to the public the integration of digital platforms with transport chains in port logistics. I argue that these two types of coordination carry competing logics, which explains the ambiguous visual representations of the future implementation of digital platforms in a major European port. In addition to intentional, convenient, and unintended affordances specific to cartoons, I identified three ambiguous trade-offs in the visual communications to the public. These trade-offs prevent incumbents to share the reliable real-time data required for the conception of a digital platform. Based on these findings, I argue that a disruptive suspension of the existing interorganizational coordination logic might be inevitable. This study contributes to discussions about unintentional coordination maintenance, the possibility of weaker incumbents to resist the will of more powerful incumbents, and the affordance of visual communication through cartoons.

Creativity and the Digital Mindset

Session Moderator: **Kai Wang**, *Kean U.*

CTO: **Finding and Testing Diverse Stimuli for Enhancing Creative Ideation**

Author: **Kai Wang**, *Kean U.*

Author: **Boxiang Dong**, *Montclair State U.*

Using creativity support systems to enhance creative work has attracted much research attention. It is commonly suggested that providing diverse stimuli, instead of homogeneous stimuli, should better enhance creativity. Yet there is little empirical evidence or theoretical consensus linking stimulus diversity and idea creativity. There is also a lack of generic and automated methods for finding diverse stimuli for creative tasks. This study used a machine learning method, GloVe, to partially automate the search for diverse and homogeneous concepts to be used as stimuli. An experiment was conducted where the participants generated ideas upon the exposure to these concept stimuli. Stimulus diversity had no effect on cognitive load or idea novelty, even though it was positively related to idea diversity and perceived stimulus usefulness. The study points to the tension among existing creativity theories on the effect of stimulus diversity and suggests multiple future research directions.

CTO: **From Buzzword to Theory - Defining Digital Mindset**

Author: **Paul Goldmann**, *WFI Ingolstadt School of Management*

Author: **Christina Altendorfer**, *WFI - Ingolstadt School of Management*

Author: **Björn Schäfer**, *Free U. of Bozen-Bolzano*

The digital transformation not only imposes new demands on companies but also on employees. First scientific and practical studies point to the relevance of a digital mindset in this context, but without creating construct clarity. Addressing the fuzziness of mindset theories, we take a grounded theory approach to shed light on digital mindset. Our analysis of 28 interviews with experts from different industries suggests that digital mindset is an essential capacity for dealing with the complexity and power of digitalization. It includes screening available information through a digital filter and exploiting arising opportunities. Furthermore, we identify three elements underlying digital mindset: digital consciousness, digital expertise, and digital entrepreneurship. Those elements co-occur in different strengths and combinations. While all three indicate digital mindset, we interpret paired elements as roles individuals can take in their organization and provide definitions. Our systematic conceptualization of digital mindset provides orientation for researchers by rigorously defining the term, affiliating the concept with the social psychology and leadership mindset-stream, and identifying elements crucial to the emergence of digital mindset. By drawing upon these elements, organizations can identify candidates and members with strong digital mindsets and thereby individuals complementing the overall organizational digital mindset.

CTO: **Immersive Experience in Virtual Reality Horror Game**

Author: **Claire K. Wan**, *National Chung Hsing U.*

Author: **Cih-Hao Chiu**, *Department of Business Administration, National Chung Hsing U., Taiwan*

In this study, we proposed an analysis framework that examines participants' immersive experience processes from three dimensions: (1) the state of enjoyment, (2) transformation of the awareness of time, and (3) a sense of spatial integration. We found that the balance of skills and challenges is threshold factor affecting participants' overall enjoyment state and experience of transforming the time awareness during a VR gaming process. When considering the influence of social interaction on the three dimension of enjoyment, time and space, a new emerged element of emotion connection suggests that an autotelic experience – the feel of intrinsically rewarding during the process of interacting with other partners is a threshold factor affecting participants' overall enjoyment. Further, that the mechanism by which fear is transformed into enjoyment corresponds to the element of a sense of control in the state of flow.

CTO: **Assessing the Digital Mindset - Using Explicit Scales to Measure an Implicit Phenomenon**

Author: **Yannick Hildebrandt**, *Otto-Friedrich U. Bamberg*

Author: **Daniel Beimborn**, *U. of Bamberg*

The 'digital mindset' is frequently raised by both researchers and practitioners to be an essential factor of the human side of digitalization to successfully cope with the arising challenges of digitalization. Despite existing conceptualizations of the construct, the literature provides no operationalization usable for quantitative research, so far. Our research pursues the goal to address the question of how the digital mindset can be measured. Using a multi-method approach, a literature- and Delphi study-based initial scale has been developed and empirically validated with 156 and 147 participants was developed. Based on this initial scale, we developed to further survey scales and a structured interview approach as alternative measures for the digital mindset. In a pilot-study with 18 participants, the correlations of the answers from using the different measures indicates that the developed survey scales can serve as quite accurate proxies for the qualitative approach, which is assumed to measure the 'true' level of the digital mindset. In the future, researchers can choose from different scales based on their requirements for precision and efficiency (i.e., time needed to complete the survey items).

Gender and Diversity in Entrepreneurship 4

Session Moderator: **Joyce Komakech Nabisaalu**, *Oklahoma State U.*

ENT: **Entrepreneurs Are From Mars, Venture Capitalists Are From Venus: Gender Biases in Decision-Making**

Author: **Oleksandr Tsaruk**, *West Virginia U.*

Entrepreneurs are known to be different from managers. They are more susceptible to biases and heuristics in decision-making, but when they are part of a dyad with asymmetry of errors costs, both parties may be affected by gender-driven biases. Drawing upon error management theory, we propose that gender-driven biases are originated from their roles in dyads (entrepreneur and venture capitalist (E-VC), which are similar to the gender roles in couples. We propose a mechanism for enhancing decision-making accuracy in E-VC dyads by utilizing multi-level decision-making theory. The presence of shared mental models in E-VC dyads is proposed as the solution to mitigate the negative effect of gender-driven biases – overperception and commitment-skepticism biases. The paper is focused on E-VC dyads engaged in resource seeking and funding new ventures.

ENT: **Women Technology Entrepreneurs in Lebanon as Catalysts of Change and Innovation**

Author: **Mona Itani**, *American U. of Beirut*

Women entrepreneurship has not been given justice in the entrepreneurship literature and female entrepreneurs have been often treated as inferior to the dominant male entrepreneur. This study answers the numerous calls for women entrepreneurship research reform by studying how women tech-entrepreneurs in Lebanon are catalysing change and innovation. Paying special attention to context and utilising a qualitative methodology comprising of in-depth interviews with fifteen women technology entrepreneurs, the results presented in this paper widen the field of entrepreneurship literature by incorporating more inclusive definitions and nuanced understanding. Applying Schumpeter's Entrepreneurship as the underpinning theory, it is shown how women entrepreneurs in technology are disrupting the traditional understanding of entrepreneurship in their communities.

ENT: **How Does Entrepreneurial Networking Improve the Sustainability of Women-led Micro Enterprises?**

Author: **Joyce Komakech Nabisaalu**, *Oklahoma State U.*

Author: **Samuel Mayanja**, *Kyambogo U.*

Author: **Henry Mutebi**, *Makerere U. Business School*

Women-led microenterprises contribute to economic development through job creation, extend resources to rural communities, reduce poverty, and improve family wellbeing. However, little is known about how women entrepreneurs in contexts stricken by institutional, cultural, and religious constraints grow microenterprises. Therefore, the purpose of this study is to examine how women entrepreneurs in developing countries improve the sustainability of microenterprises. We ground our study in social capital theory to test the partial mediating role of entrepreneurial learning behavior and self-organization in the relationship between entrepreneurial networking and sustainability of microenterprises. Based on a sample of 581 women-led microenterprises in Uganda, we test our model using ordinary partial least squares regression through SmartPLS version 3.3.3. The results support our theorizing that entrepreneurial networking has a positive and significant effect on sustainability of microenterprise performance and that the relationship is partially mediated by entrepreneurial learning behavior and self-organization. Our findings provide evidence that financial and nonfinancial resources available through women entrepreneur's networks improve the sustainability of microenterprises which in turn enhance family wellbeing and economic development. We extend application of social capital theory among women-led microenterprises and offer insight to policymakers when making decisions directed towards growth and survival of microenterprises.

ENT: **Female Entrepreneurs' Application of Gender Homophily to the Test of Stereotypes : Demand Financing**

Author: **Marie-Christine Chalus-sauvannet**, *MAGELLAN, IAE Lyon, U. of Lyon, France*

Author: **Pauline Gibard**, *U. of Lyon, UJML3, iaelyon School of Management, Magellan*

The behaviours of women entrepreneurs with respect to their financing needs are still poorly understood. Our research focuses on the application of the concept of gender homophily on women entrepreneurs' financing requests through the prism of gender stereotypes. Through 10 semi-structured interviews with women entrepreneurs, we were able to show that not all women entrepreneurs are equal when it comes to the concept of gender homophily. Indeed, while some women entrepreneurs will voluntarily choose to approach a female investor, feeling better understood and closer to her, others will choose to do so only as a strategy, thinking they have a better chance of being financed. Conversely, other women entrepreneurs choose to distance themselves from their counterparts out of mistrust and fear of complicated relationships and value male investors based on stereotypes they may have of them.

ENT: **Investor – Entrepreneur Gender Effects in New Venture Screening**

Author: **Terwase Viashima**, *IESE Business School*

Author: **Sampsa Samila**, *IESE Business School*

We examine the influence of the interaction between the gender of the investor and the gender of the entrepreneur on the focus of the screening criteria used by venture capital investors. To do so, we use a proprietary dataset from TechCrunch Disrupt, a startup fundraising competition. We find that female investors appear to focus more on entrepreneur / team criteria when evaluating female entrepreneurs. They also focus more on the upsides of both product and entrepreneur / team dimensions when screening female entrepreneurs, suggesting that female investors may view female entrepreneurs and their products more favorably. We do not find similar evidence with respect to male investors and / or male entrepreneurs. These effects correlate with winning only the 1st stage the competition suggesting that female investors may rely on gender when uncertainty about the quality of the startup is high.

Session Format: **In-person Only: Seattle**
Scheduled: **Monday, Aug 8 2022 10:00AM - 11:30AMPT (UTC-7)** at **Hyatt Regency Seattle in 702 Clearwater**

Teaching About Markets and Free Enterprise

Teaching about Markets and Free Enterprise

Organizer: **John Parnell**, *U. of North Alabama*
Organizer: **Siri Ann Terjesen**, *Florida Atlantic U.*
Participant: **Rajshree Agarwal**, *U. of Maryland*
Participant: **Per L. Bylund**, *Oklahoma State U.*
Participant: **Marianna Davidovich**, *Foundation for Economic Education*
Participant: **Eric B. Dent**, *Florida Gulf Coast U.*
Participant: **Amanda Brickman Elam**, *Babson College*
Participant: **Stephan F. Gohmann**, *U. of Louisville*
Participant: **Peter G. Klein**, *Baylor U.*
Participant: **Mark D. Packard**, *Florida Atlantic U.*
Participant: **Michael Louis Troilo**, *U. of Tulsa*
Participant: **Sebastian Vaduva**, *Emanuel U. of Oradea*

This workshop will explore teaching practices associated with free-market thinking and market-based management. Free markets promote competition, innovation and the private ownership of productive enterprises, and limited government intervention. Each presenter in this workshop will share an exercise, case vignette, or another classroom approach grounded in a market orientation with an emphasis on eliciting class interactions and discussions. Pre-registered participants will receive an electronic packet of selected readings in the months before AOM to aid in preparation for the event. Participants who do not register are also welcome.

GDO: Team Gender Composition Impact on the Production of Disruptive Research

Author: **Nazha Gali**, *U. of Michigan*

This paper examines the disruptiveness of research produced by scientific teams with an emphasis on understanding how a team's gender composition and team leader's interdisciplinarity focus influence the way in which the research consolidates and destabilizes the knowledge trajectories to which they contribute. Drawing on new indicators of disruptiveness and transaction-level research expenditures data, I test disruptiveness effects using an expansive definition of a research team that considers all individuals who were paid on a grant associated with the principal investigator (PI). Insights from the sociology of science and prospect theory support the female-favoring-prospecting perspective. The female-favoring-prospecting perspective suggests that female PIs will be more likely to pursue exploratory projects that have greater potential to disrupt existing research streams. I test the study's hypotheses using a sample of 3,758 scientific research teams in biomedicine that produced 32,655 papers between 2002-2013. UMETRICS data (Universities Measuring the Effects of Research on Innovation, Competitiveness, and Science) on the PIs and their teams, WoS (Web of Science) on scientific research publications and citations, and Scimago journal classifications are used. The analyses demonstrate female dominated teams had highest likelihood of disruption, while gender parity teams had lowest odds of disruption. Further, PIs with stronger histories of interdisciplinary research produced increasingly disruptive research when their teams were female dominated. The findings provide significant contribution to science of science and innovation policy.

GDO: Gender Diversity in R&D Teams and Firms' Eco-innovation Strategies

Author: **Bettina Becker**, *Durham U. Business School*

Author: **Priit Vahter**, *U. of Tartu*

This paper examines, for the first time, whether an increase in the gender diversity in a firm's R&D team increases the firm's likelihood of adopting an eco-innovation strategy. We also examine whether this effect differs between clean and dirty industries, end-of-pipeline and integrated cleaner technologies, and firms with and without prior experience in eco-innovation. The empirical analysis employs propensity score matching to account for endogeneity and unobserved firm heterogeneity, using Spanish firm level data during 2009-2016. We find robust evidence that gender diversity of the R&D team matters for firms' eco-innovation. The results bear important policy and practical implications.

GDO: Stimulating Creativity in Gender-Diverse Teams: Testing Diversity Training in a Field Experiment

Author: **Christoph Reinert**, *Kiel U.*

Author: **Claudia Buengeler**, *Kiel U.*

Author: **Bart Voorn**, *Ahold Delhaize*

Author: **Astrid Carlotta Homan**, *U. of Amsterdam*

The link between gender diversity and team creativity is ambiguous. On the one hand, diverse viewpoints and ideas associated with gender diversity may stimulate team creativity. On the other hand, gender diversity may disrupt team creativity due to social-categorization processes and intergroup biases. This ambivalence underlines the need for appropriately managing processes in gender-diverse teams. This study focuses on the potential of team diversity training to increase creativity in gender-diverse teams. Addressing diversity as a double-edged sword, we argue that diversity training can stimulate team creativity by facilitating both team identification and teams' ability to elaborate on their diverse perspectives. Using a randomized field experiment with 71 organizational teams (N = 534 individuals), we tested the effects of two different diversity training programs (compared to no training) on team creativity in gender-diverse teams. Team diversity training focused on fostering identification (as the social-categorization perspective would suggest) alone did not stimulate creativity. Only when team diversity training additionally focused on the ability to elaborate on diverse viewpoints, it improved information elaboration, which subsequently increased the creativity of more gender-diverse teams. Speaking to processes and contingency factors of diversity training effectiveness, our research has important theoretical implications and helps to illuminate when diversity training is more likely to be effective.

GDO: Expectations of Performance in Peer Evaluations: Are Females Harsher Raters?

Author: **Wendy Farrell**, *Management Center Innsbruck*

Author: **Lucia Farriss**, *Saint Leo U.*

Author: **Dhruv Pratap SINGH**, *NEOMA Business School*

Author: **Hafsa El Kamous**, *Africa Business School, Mohammed VI Polytechnic U., Benguerir, Morocco*

Author: **Lydia Karnadi**, *i3L School of Business*

Author: **Marc Idelson**, *HEC Paris*

This paper explores gender differences in rater harshness in global virtual teams (GVTs). The study utilizes both longitudinal and cross-sectional designs to analyze differences in peer evaluations collected weekly of over a nine-week period, involving 2,516 individuals from 90 countries. An "overall rater rating" was constructed from participants' ratings of their team members' performance along the following dimensions: perceived communication frequency, friendliness, helpfulness, creativity, leadership, and proportion of work completed. The nonparametric Kruskal-Wallis and Mann-Whitney tests indicated that females overall tend to rate their team members more harshly. PLS-SEM modeling further revealed that personality mediates the effects of gender or peer evaluation harshness, such that raters who are more agreeable tend to rate their peers higher. The practical and theoretical implications of gender difference and personality on peer ratings are discussed.
