The composition-based view explains how emerging market firms creatively adopt compositional investment, compositional offerings, and compositional capabilities to gain a competitive advantage in the global marketplace. How the composition-based international strategy contributes to organizational resilience under the de-globalization world remains unclear. Using fuzzy-set qualitative comparative analysis, we explore how emerging market firms reconfigure compositional elements and the crucial role of firm heterogeneity in determining organizational resilience. Our analysis of 250 Chinese manufacturing firms revealed five distinct international compositional strategies and asymmetric outcomes. Multiple configurations of composition-based international strategies and firm heterogeneity were found to be related to high and low organizational resilience. Our findings confirm that emerging market firms must reconfigure their compositional elements to achieve sustained and resilient performance throughout the pandemic. Our findings extend the composition-based view by elucidating the multiple pathways and boundary conditions of compositional strategies leading to organizational resilience.

IM: **The Regional Dynamics of Inward–Outward FDI: the Interplay of Productivity, Spillover & Competition**

Author: **Jianxun Chen**, *U. of International Business and Economics*
Author: **Monica Ren**, *Macquarie U.*
Author: **Stephan Davys Manning**, *U. of Sussex*
Author: **Peishan Li**, *Graduate School of Arts and Sciences, Columbia U.*

Despite continuous scholarly interest in the effects of inward foreign direct investment (IFDI) on outward foreign direct investment (OFDI), IFDI-OFDI dynamics remain unclear. We argue and show, in the context of China, that IFDI increases human capital availability for firm populations within a given region, but decreases labor efficiency in these firms due to growing competition for talent. Both dynamics, however, drive outward foreign direct investment (OFDI) as firms seek to escape competitive constraints and exploit their growing talent management capabilities abroad. Our findings make important contributions to our understanding of IFDI–OFDI dynamics.

How to Review a Manuscript? A Developmental Panel Symposium by Journal of Managerial Psychology

Organizer: **Jeremy D. Meuser**, *Purdue U. Northwest*
Organizer: **Carrie A. Bulger**, *Quinnipiac U.*
Panelist: **Bella Galperin**, *U. of Tampa*
Panelist: **Ulrich Leicht-Deobald**, *Trinity Business School, Trinity College Dublin*
Panelist: **Adam J. Vanhove**, *James Madison U.*
Panelist: **Frankie Jason Weinberg**, *Loyola U. New Orleans*

Reviewing a manuscript and providing solid recommendations to action editors is a critical part of the scientific process. Yet, as critical as it is, there seems to be little opportunity to develop this skill, called a “professional obligation” (Treviño, 2008). This panel, targeted at students and junior scholars, gathers JMP action editors to discuss reviewing experiences with current and potential reviewers in a round- table format. At the round tables, participants will discuss their reviewing experiences. Participants will receive resources for use later when executing their own reviews.

IM Division CEIBS Best Paper Award Finalists

Session Moderator: **Katherine Xin**, *China Europe International Business School (CEIBS)*

IM: **Intra-regional Cross-border M&As by MNEs: Access to Market versus Knowledge**

Author: **In Hyeock Ian Lee**, *Loyola U. Chicago*
Author: **Eunsuk Hong**, *SOAS U. of London*
Author: **Jong Kook Shin**, *Korea U.*

Building on the theories of internalization and regional MNEs and using a sample of 11,098 cross-border M&As in 1997–2017, this study investigates performance implications of MNEs' cross-border M&As aimed to access overseas market potential versus knowledge endowment, in terms of intra-regional vis-à-vis inter-regional M&As. The main findings from this study are three-fold: (1) Intra-regional cross-border M&As' positive effects on their completion and post-merger operating performance are location advantage-specific phenomena; (2) When cross-border M&As are to acquire location-bound market-seeking activities, intra-regional cross-border M&As are more likely to be completed, and followed by the acquirers' better post-merger operating performance than inter-regional counterparts; and (3) When cross-border M&As are to internalize non-location-bound knowledge-seeking activities, intra-regional cross-border M&As are less likely to be completed, and do not seem to help the acquirers achieve better post-merger operating performance, compared to their inter-regional counterparts. The study concludes with important theoretical, practical, and public policy implications.

IM: **How do Emerging Market Multinationals Grow Sustainably by Engaging in Global Value Chains?**

Author: **Sihong Wu**, *U. of Auckland*
Author: **Xinli Huang**, *WU Vienna U. of Economics and Business*
Author: **Di Fan**, *School of Management, RMIT U.*
Author: **Yiyi Su**, *Tongji U.*
Author: **Yongjian Li**, *Nankai U.*

The past two decades have demonstrated that engaging global value chains (GVCs) provides grand opportunities for emerging market multinational enterprises (EMNEs). GVCs, in turn, are also reshaped remarkably by the rising power of EMNEs. However, received knowledge does not sufficiently explain how EMNEs, as game changers, managing their sustainability in GVCs to compliance with social and environmental expectations. This study aims to address the research gap. Through taking a linkage-leverage-learning lens, we investigate the influences of different international cluster linkages in GVCs on EMNEs' repeated leveraging propensity, and the subsequent learning outcomes, viz. environmental innovation and value growth. We also incorporate internal and external boundary effects by examining contingencies of the firm-cluster relatedness and host-country institutional voids. Our intriguing findings not only resonate with the recent call for research to focus on measuring firms' sustainability outcomes in GVCs, but also shed light on assessing the complexity of GVCs for future studies.

IM: **What's in it for the Worker? Nonmobile Global Work, Structural Conditions, and Paradoxical Thinking**

Author: **Rany Salvoldi**, *Ben Gurion U.*
Author: **Dorit Efrat-Treister**, *Ben Gurion U. of the Negev*

Existing global work research offers little insights into the cognitive outcomes of nonmobile global work. Drawing on paradox literature, we propose paradoxical thinking as a potential outcome of nonmobile global work. We further propose that the breadth of intercultural work and the task interdependence are structural conditions that stimulate paradoxical thinking in this context. Results show that workers in nonmobile global work display higher paradoxical thinking than workers in non-global work (Study 1); and that when nonmobile global work is characterized by high breadth and high task interdependence it is most conducive to paradoxical thinking (Studies 2 and 3).

IM: **Electoral Uncertainty and the Multinational Corporation: Firm-level Effects and Strategies**

Author: **Hubertus Reinprecht**, *WU Vienna U. of Economics and Business*
Author: **Jakob Müllner**, *WU Vienna U. of Economics and Business*

We develop a conceptual framework for elections as sources of political uncertainty and risk, arguing that electoral uncertainty MNCs face is characterized by temporal certainty, heterogenous firm-level outcomes and contextuality. Being embedded within national institutional environments, the level of electoral uncertainty is shaped by the election's boundary conditions. We highlight the importance and suitability of studying elections in an international business (IB) context, which allows for gaining an understanding of the key topic areas related to the phenomenon, while simultaneously depicting the current state of research and emerging trends in this field. Assuming a firm-level perspective, we systematically review the existing body of knowledge for firm-level implications of political and electoral uncertainty. Specifically, we investigate the effects elections have on MNCs—structured along operating, investing and financing activities—and the strategies MNCs can employ to manage the uncertainty. We classify firm-level strategies into political activism, financial management and further strategies such as leveraging prior experience in international markets and with political change. This paper contributes to existing research by discussing and synthesizing theoretical contributions and empirical evidence in both a systematic and in-depth manner. It makes a case for further strengthening the IB perspective in political and electoral uncertainty research.

Climate Changes and Human Rights: Initiating and Advancing International Management Research

Session Chair: **Chang Hoon Oh**, *U. of Kansas*
Panelist: **Grazia D. Santangelo**, *Copenhagen Business School*
Panelist: **Rudolf R. Sinkovics**, *Adam Smith Business School, U. of Glasgow*
Panelist: **Rob Van Tulder**, *Erasmus U. Rotterdam*
Panelist: **Addisu A Lashitew**, *McMaster U.*

This panel symposium aims to initiate and advance dialogues and collaboration on the impact of managerial responses to climate change on human rights as a new interdisciplinary research area in management. The primary purpose of the panel symposium is to discuss how theories and methodologies in international management, business ethics, and sustainability can advance research on climate changes and human rights issues in multinational enterprises (MNEs) and studies in a cross-country setting. The panel symposium also aims to find critical future research questions in climate change and human right issues that provide both challenges and opportunities to MNEs and how scholars can help to achieve better social outcomes and business environments. The symposium will be a platform for management scholars in different disciplines sharing their knowledge to explore new research questions in the topic as well as agonizing together over solutions for the challenges we face.

Emerging Issues in Management Consulting

Organizer: **Shola Ajiboye**, *Case Western Reserve U.*

As in every dynamic sector, it is important to pay attention to emerging issues that have the potential to impact the field of management consulting significantly. By paying attention to the factors that might contribute to the growth and decline in the field, management consulting scholars and practitioners can begin to design and prepare the tools to harness the potential growth and mitigate the likely decline. In this symposium, a multitude of important issues is highlighted, including the impact of bribery on a firm's performance, the codes to cooperation in organizations, the use of internal consultancy to promote strategic elevation, consultants' contribution to crisis management through value creation, the transaction cost in a pandemic environment, and the coherence-cohesion duo as a managerial bedrock. Other issues are focused on workers, including strategic practices of employees in SMEs, management practices and their relationship with internal stakeholders' statuses, consulting services' role in putting workers in front of customers centricity, and enhancing employee motivation in an organization.

Change in the Workplace: A Cultural Phenomenon

Organizer: **Shola Ajiboye**, *Case Western Reserve U.*

The fact of life is that change is inevitable. To a large extent, survival and growth in an organization depend on the ability to cope with change. A cultural phenomenon of survival and success emerges when the organization resolves to integrate its vision, mission, and core values through cultural change management. Success scenarios are an emerging leadership tool likely to gain increased interest and importance because they provide solutions in the face of uncertainty by introducing a form of predictivity or establishing a benchmark. Also, there are reasons why organizations have such strong resistance to change, especially regarding the socio-economic approach to management. These topics are synthesized into a session that brings together scholars and practitioners to showcase emerging studies about new tools and strategies that could change organizations' and employees' perspectives toward positive change.

Management Faculty: Promotion, Productivity & Culture

Session Moderator: **Betina Agata Szkudlarek**, *U. of Sydney Business School*

MED: **"You f***ers! Not One of You. Not One of You Will Back Me." On Silence Among Faculty**

Author: **Betina Agata Szkudlarek**, *U. of Sydney Business School*
Author: **Mats G Alvesson**, *Lund U.*

Fear and futility, caused by dysfunctional management practices and processes, have long been seen as the underlying causes of silence within organizations. While system dysfunctionalities undoubtfully contribute to a climate of silence, individual and group drivers of muteness have thus far received limited attention in research. Our study of voice, participation and, in particular, silence, in the context of higher education, uncovered multi-layered drivers contributing to silence and passivity. More specifically, we demonstrate how, in explaining silence, individuals reach to system-level explanations first, initially circumventing discussion of personal motives. To this end, we demonstrate that fear and futility might serve as sensemaking constructions or a vocabulary of motives masking a complex matrix of individual drivers for silence. We discuss how the complex interplay between system- and individual-driven factors could contribute to the progressing deterioration of professional ethos.

MED: **The Research Productivity Configurations of Chinese Business Academics at Different Career Stages**

Author: **Yanfen Wang**, *U. of Science and Technology of China*
Author: **Qingxiong Weng**, *U. of Science and Technology of China*

The predictors of research productivity of business academics have long intrigued researchers and practitioners. Drawing on the S&T human capital model, this study developed the conceptual framework that includes human capital, social capital, and individual characteristics. On this basis, the present study investigates the configurational effects of these three kinds of factors on business academics' research productivity at different career stages by using the fsQCA approach to analyze the curriculum vitae of 507 business academics at various career stages. Results show that six first-order configurations, which were labeled as different patterns according to their features, lead to a high level of research productivity for business academics at different career stages. Specifically, the original education experience dominant pattern and the diverse knowledge-mobility dominant pattern can enhance the research productivity of business academics at early career stages. The funding-mobility dominant pattern and diverse knowledge-collaboration dominant pattern are critical for mid-career business academics to improve their research productivity. Finally, for business academics, the mobility-collaboration-driven pattern and funding-collaboration dominant pattern are associated with maintaining higher research productivity. These findings guide business academics to choose suitable patterns for promoting their research capacity.

MED: **Why Wasn't I Promoted? Exploring the Ambiguity of Linguistic Signals in Academic Promotion Documents**

Author: **Adam Keeley**, *Maynooth U., Ireland*
Author: **Olga Igorevna Ryazanova**, *Maynooth U.*
Author: **Peter McNamara**, *Maynooth U.*

Academics are continuously making decisions on how to shape their career with particular focus paid to research output, teaching quality, and service involvement to achieve recognition in the form of advancement in rank. For many academics, these career decisions are influenced by the institution's expectations, normally communicated via the university promotion policies. However, these decisions become increasingly difficult to make when faculty are unclear about the expectation the university is signalling. Taking a signalling theory perspective, this study explores the clarity and ambiguity surrounding promotion criteria from a sample of institutions from Ireland, the US, the UK, Canada, New Zealand, and Australia for senior teaching- and research-active faculty positions. Content analysis was applied to 376 individual rank promotion documents to determine what these institutions required individual faculty to show for advancement in rank. It was found that promotion documents contain high levels of ambiguity, specifically regarding the measures used to assess each of the promotion requirements. It was also found that while the literature guides academics on how to build their careers quantitatively, institutions favor a qualitative approach to assess academic productivity.

MED Plenary Session: The Digital Transformation of Management Education

Division Chair: **Gerard Beenen**, *California State U., Fullerton*
Division Chair-Elect: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*
Program Chair: **Arran Caza**, *U. of North Carolina, Greensboro*
Professional Development Workshop Chair: **Christine Rivers**, *U. of Surrey*

Presentation by Michael D. Smith (Carnegie Mellon University)

Over the past 20 years, new information technologies have transformed nearly every sector of the global economy, upsetting the market power of firms and creating abundant choice, interactivity, and personalization for customers. For a long time, the one sector remarkably absent from this transformation was higher education. In this talk I'll use management theory to discuss what has allowed higher education to resist the forces of digital transformation that have altered so many other industries, why current market forces make higher education ripe for disruption, and how universities can embrace this opportunity to create a more inclusive and accessible system of education for the hundreds of thousands of deserving students who today are excluded from our pricey residential degrees.

History as a Way of Addressing Problematic Past Issues

Session Moderator: **John Humphreys**, *Texas A&M U., Commerce*

One of the most pressing issues that modern managers must contend with is the idea that corporations have benefitted from, and indeed created, immoral practices. Analyzing management history allows us to identify and address problematic past issues.

MH: **The Elaboration of Facades of Conformity Using the Historic Case of the Pullman Porters**

Author: **John Humphreys**, *Texas A&M U., Commerce*
Author: **Stephanie Pane**, *Texas A&M U., Commerce*
Author: **Milorad Novicevic**, *U. of Mississippi*

Even though the values of George Pullman's porters were incongruent with those embodied by their founder and organization, many porters zealously consented to performing the imposed role of dutiful servant for decades. Their respective life-stories and autobiographical memories provide first-hand accounts of their compliance in sustaining a façade of conformity, while simultaneously resisting an eclipsing internalization of their work roles into their personal identities. A review of the extant literature suggests that maintaining such a dissonant enacted role over time can engender negative employee stress-related consequences, including increased turnover, reduced job commitment, and diminished personal well-being. Yet, the Pullman porters appear to tell a different story regarding their enduring façade in the face of organizational values misfit. As recounted by the porters, their narratives of constructing difference as a productive resource to underpin their counter-institutional group identity is one of coping via the co-constitution of consent and dissent. Accordingly, we performed a form of historical retrospective case analysis of the Pullman porters as an organizational collective to elaborate a theory of how coping with values incongruence through façades of conformity may be sustainable in conjunction with the fusion of personal and counter-institutional identities to buffer deleterious employee effects.

MH: **Leon Sullivan, Martin Luther King, Jr., & the Fight for Racial & Economic Justice for Black Workers**

Author: **Leon Prieto**, *Clayton State U.*
Author: **Simone Trixie Allison Phipps**, *Middle Georgia State U.*
Author: **Oscar Jerome Stewart**, *U. of San Francisco*
Author: **Neil Stott**, *U. of Cambridge*

This paper reconstructs how Reverend Leon Sullivan's philosophy of "ham and eggs on earth" (or economic stability for African Americans) influenced Reverend Martin Luther King, Jr.'s vision of racial and economic justice. In addition, the article explores sources to demonstrate that Dr. King, Jr.'s position on justice was not solely shaped by radical theologians, thinkers, and activists, but also by Sullivan, a Black moderate. Using critical race theory and Black liberation theology, the paper asserts that the struggle for "silver rights" or economic freedom and empowerment for African Americans epitomized a more complex journey that has ignored the contributions of major drivers along the way.

MH: **Remembering Unethical Acts from the Past: A Path Toward Moral Repair**

Author: **William Foster**, *U. of Alberta*
Author: **Diego Coraiola**, *U. of Victoria*
Author: **Francois Bastien**, *U. of Victoria*
Author: **Jukka Rintamäki**, *Aalto U. School of Business*

Organizational wrongdoing is of central concern to organizational scholars. These discussions have focused on how organizations react to and manage these unethical acts. What has yet to be understood is how organizations engage with unethical acts from their past. In particular, we discuss how organizations engage with the discovery of unethical acts from the organization's past and/or those acts from the past that are now considered unethical. These acts, although perpetrated in the past, are still painful and traumatic. We propose that for organizations to best engage with their past actions, they have to understand that there are different types of unethical acts from the past and that different forms of memory work needed to remember these unethical acts. Our paper presents a a typology of unethical acts from the past and we explain why forms of memory work should be used to help organizations engage in moral repair.

MH: **Proximal versus Distal Temporal Orientation in an Infinite Game: Lessons from the Homestead Massacre**

Author: **Erik Taylor**, *East Carolina U.*

Working conditions, pay rates, and the rights of workers to collectively negotiate have become important points of discussions in recent years, with support for unions and union applications rising to levels unseen for many decades in America. In many instances, though, companies have responded aggressively, closing down stores where employees attempt to organize and withholding pay raises from employees who agitate for the union. This is not the first time such a dynamic has played out in American business. The present research takes a fresh look at one of America's most prominent historical disputes between labor and ownership—the Homestead Massacre of 1892—to glean lessons from that conflict that remain relevant to today's business environment. Specifically, this work draws on game theory to investigate how differences in temporal orientation between management and workers exacerbated the conflict. Letters, contemporary news reports, and histories of the events in 1892 are qualitatively analyzed with a genealogical pragmatic approach, revealing that the Carnegie Company was playing an infinite game with a finite game mindset—attempting to win a game that, owing to its repeated nature, could ultimately neither be won nor lost—yielding suboptimal results for all involved parties.

AI and Technology

Session Moderator: **Ceyda Paydas Turan**, *Kingston U.*

MOC: **A Dual-Process Model of Hybrid Intelligence for Improved Decision-Making in the Digital Age**

Author: **Ceyda Paydas Turan**, *Kingston U.*
Author: **Eugene Sadler-Smith**, *U. of Surrey*

What are the implications of artificial intelligence (AI)-based decision support systems for artificial and human cognition in organizational decision-making? To answer this question, rather than pitting AI against human intelligence (HI), we adopt both an AI and HI stance to develop a 'hybrid intelligence model' based on the distinctive and complementary cognitive processes of AI and HI. Our research is significant in that prior research has failed to specify with requisite theoretical clarity the respective information processing/cognitive functions of HI and AI and how they are related. Our research is integrative and unique in that we draw on dual-process theories of cognition to analyse the cognitive functions and interactions between three levels of AI (mechanical, thinking, and feeling) and two (i.e. dual) forms of HI (analytical/System 2 and intuitive/System 1). Based on a theoretical analysis of the respective functions of AI and HI informed by a process-process perspective, we propose an optimum decision-making sequence in which AI and HI operate interactively and synergistically. We show how integrating business analytics practice and behavioural science principles based on dual-process theory into management makes it possible to develop a new theoretically coherent hybrid, iterative decision-making model capable of producing outcomes surpassing those of humans or machines alone (cf. automation versus augmentation). Recommendations for decision-makers are: (1) acknowledge distinctive and complementary cognitive functions of AI and HI based on dual-process theory; (2) reinforce analytical approaches by a complementary decision support system that is capable of using the unique 'sensing' and 'translating' attributes of HI; (3) focus on building capabilities whereby human cognition remains distinctive, relevant and value-adding in the workplace of the information age. We argue the case for a dual-process view of 'cognitive augmentation'.

MOC: **Conformity? How Mental Processes Affect Cognitive Trust in Artificial Intelligence at Multiple Level**

Author: **Tian Wei**, *NEOMA Business School*
Author: **Fabio Fonti**, *NEOMA Business School*

Artificial Intelligence (AI) is used to interpret complex situations by assessing the causal effects of massive information, thus exhibiting its potential to help firms sustain competitive advantage in quickly evolving environments. Employees' cognitive trust in AI is an essential factor affecting firms' successful deployment of AI technologies. Research has shown that this trust is built upon employees' perceptions of AI characteristics, yet how their mental processes influence it is still unclear. This study aims to fill this gap by examining the links between mental processes and cognitive trust in AI at two levels – the firm level and the strategic group level. We argue that employees of the same firm may show divergence in their trust in AI at the beginning of their tenure, owing to their heterogeneous mental processes. Such intra-firm variations may decrease as employees' tenure grows, as similar work environments gradually lead employees to develop similar mental processes. We also believe that managers' mental processes—in particular, competitive categorization—may affect their trust in AI. The structures of strategic groups that derive from categorization processes enable managers to mutually learn from each other within groups and effectively interpret the competitive landscapes of markets. By considering other firms' strategic activities and intra-group competitive intensity, managers' cognitive trust in AI may diverge when competition among group members becomes too intense. When not the case, such trust will converge over time. To examine these arguments, we conducted two studies on the accounting industry and integrated questionnaires, online datasets, and machine-learning methods. Results show the divergence-to-convergence changes in employees' cognitive trust in AI—at the firm level—and the dynamic changes in such trust across managers depending on the changing competitive intensity—at the strategic group level. These findings provide insight into the effective patterns of AI implementation under competitive conditions.

MOC: **Diagnosing AI: Professionals' Sensemaking of An Equivocal Technology**

Author: **Harry Scarbrough**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Yaru Chen**, *U. of Liverpool Management School*
Author: **Gerardo Patriotta**, *U. of Bath*

New technologies are equivocal, triggering sensemaking responses from the individuals who encounter them. As an 'epistemic technology', one which encroaches on the knowledge claims and jurisdictions of established professional groups, AI poses new challenges to the core roles and identities of individual professionals. In this study, we explore these challenges through an empirical study of professionals in the field of radiology which found their sensemaking patterns around AI ranging from 'an unwelcome guest in the workplace' to a 'system intervention', to a 'catalyst for change' in the field. We contribute to theory on sensemaking and the equivocality of epistemic technologies by showing how this variation in sensemaking is influenced not only by relative expertise or professional jurisdictions, but also by the situated work role identities of individuals. In particular, we develop the concept of 'epistemic space' to account for the way different groups of professionals make sense of AI by projecting their distal or proximal interactions with it into distinct contexts. This analysis highlights the new form of equivocality engendered by 'epistemic technologies' such as AI, and the role of epistemic spaces as a main determinant of professionals' sensemaking in the face of such equivocality.

MOC: **Artificial Entrapment: Human Dependence on Artifacts with Advanced Forms of Conjoined Agency**

Author: **Andrew Schnackenberg**, *U. of Denver*

Recent trends indicate that a growing number of new artifacts—artificial intelligence, Web 3.0 technology, robotics, etc.—are entering industries carrying a host of troubling consequences despite their observed benefits. These artifacts carry advanced forms of conjoined agency, or the capacity to augment human activity by taking on functions embedded within themselves. Although theory suggests that individuals and organizations should curtail their dependence on artifacts in the face of mounting evidence of their alarming effects, human dependence is only rising. This article develops a theory to explain human dependence on artifacts by proposing the concept of artificial entrapment. Leveraging insights from Construal-Level Theory (CLT), I theorize that artifacts entrap humans based on how they are construed. I argue that artifacts with advanced forms of conjoined agency are capable of updating themselves so that their positive attributes are psychologically closer to humans than their negative attributes, enabling them to entrap individual and organizational practices, identities, and discourses. This article helps to identify a new theory of human dependence on artifacts and aids in clarifying often-blurred distinctions between separate outcomes of artifacts.

Behavioral Insights From Causal Field Research

Organizer: **Polly Kang**, *INSEAD*
Organizer: **David P. Daniels**, *NUS Business School*
Presenter: **David P. Daniels**, *NUS Business School*
Presenter: **Ilana Brody**, *UCLA Anderson School of Management*
Presenter: **L Taylor Phillips**, *NYU Stern*
Presenter: **Jose Cervantez**, *The Wharton School, U. of Pennsylvania*
Presenter: **Todd Rogers**, *Harvard U.*

This symposium, “Behavioral Insights From Causal Field Research,” presents five papers that use causal research designs involving field experiments with rich organizational contexts (e.g., education, medical, crisis counseling). Causal field research can be viewed as the gold standard of research designs because it combines the traditional strength of laboratory experiments (i.e., internal validity / causal inference) and the traditional strength of field research (i.e., external validity / generalizability). First, Daniels and Kang examine how aversive factors, such as job difficulty, influence turnover (“quitting”) and disengagement (“quiet quitting”) using a five-year large-scale natural field experiment at a major nonprofit organization (the largest field experiment on worker engagement to date), where 14,383 workers were repeatedly and randomly assigned to do 1,976,649 harder (vs. easier) job tasks. They find that aversive factors (like job difficulty) may increase overall turnover among workers, but they can also increase engagement among those workers who choose to stay. Second, Brody, Dai, and Hershfield use a field experiment to examine how to deliver comparison information to 27,952 teachers (of 595,789 students) to influence their students’ goal pursuit. They examine how providing (vs. not providing) comparison information to teachers influences student performance and student engagement. Third, Phillips et al. examine how to make bone marrow donation requests to increase donations. They find that a values-affirmation intervention at the first decision point (registration) fosters higher commitment to the process of donating bone marrow. Fourth, Cervantez et al. examine the impact of providing summary statistics to decision-makers describing the fraction of valued opportunities they have recently provided to women (vs. men) and minorities (vs. non-minorities) to boost diversity. Fifth, across five field experiments (total N=866,104), Lasky-Fink and Rogers find that shortening messages written by professionals increases the likelihood that readers register for webinars, complete surveys, donate, and visit links. Overall, this symposium showcases field experiments that use causal research designs and provide behavioral insights that are both theoretically important and practically relevant.

A natural field experiment on “quitting” vs. “quiet quitting”

Navigating Complexity with Mindful Leadership and Well-being

Session Moderator: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

This session will cover research papers that explore the intersection of mindfulness, leadership, and well-being in complex work environments. Attendees will gain insights into responsible leadership approaches to managing complexity, levels of well-being and brahmaviharas, and the impact of state mindfulness on feedback reception. Additionally, the session will delve into the potential benefits of mindfulness interventions for workers in a post-pandemic world. Overall, this session aims to provide valuable perspectives on fostering mindfulness, well-being, and effective leadership in today's dynamic work contexts.

MSR: **State Mindfulness and Feedback Reception: An Experimental Study**

Author: **Parijat Lanke**, *Assistant professor, Jindal Global Business School, O P Jindal Global U.*
Author: **Papri Nath**, *11646*

Performance feedback is crucial to organizational excellence. Research has shown that negative feedback largely leads to a dip in performance, and is explained via feedback intervention theory. Research has studied the ways in which negative feedback delivery could be improved to check for the dip in performance post feedback, but there exist a gap in literature focusing on the receiver of the feedback. Receiver of the feedback is most crucial in the process. In recent times, there have been calls for interventions based studies in organizational research as they have stronger implications for practice. In line, this study introduces the concept of mindfulness as an intervention to improve reception of negative feedback. Mindfulness, has the characteristic of improving the psychological resources of individuals. Current study has two-fold purpose of empirically testing the mechanism that leads to a dip in performance post negative feedback, and then to examine the impact of state mindfulness on this process. It employs an experimental method with a 2*2 factorial design, with state mindfulness, and mind wandering as the two conditions, along with feedback valence of positive and negative feedback. The sample is drawn from a working population. The results from the serial mediation, and the moderated mediation analysis reveal that mindfulness significantly moderates the acceptance/rejection of negative feedback, leading to a decreasing in negative affect and an improved core self-evaluation leading to improved performance even after receiving negative feedback. This study contributes significantly to the literature on performance feedback including feedback intervention theory as well as mindfulness practice's benefits in organizational setting.

MSR: **Levels of Well-being and Brahmaviharas: Conceptualization and a Field Experiment**

Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*
Author: **Chirag Dagar**, *Jindal Global Business School, O P Jindal Global U.*
Author: **Ajinkya Vijay Navare**, *S P Jain Institute of Management and Research*

The youth represent the nation builders of tomorrow. Moreover, individuals with high levels of well-being are more productive at work and are more likely to contribute to their communities. Given the significance of the young population, it is crucial to gauge the levels of their well-being, its key contributing factors, and how to enhance that. Subsequently, the current research was carried out through two studies. In the first study, we investigated the levels of well-being and the affiliated factors contributing towards well-being for a sample of students denoting the youth of India. As per the results of the survey, only about one third of the participants in the sample were flourishing, while the remaining either had moderate mental or were languishing. The results from multinomial logistic regression suggested that specific values and factors comprising engaged living, social connectedness, and family cohesion contributed significantly to well-being. We noticed a significant overlap between the variables associated with higher levels of well-being and components of Brahmviharas. This Buddhist notion consists of being friendly, joyful, accepting, and compassionate towards self and others. Consequently, anchored on how to enhance well-being and its associated factors, the second study investigated the effect of a self-management course offered in a university setting on different components of Brahmviharas. Findings of the (experiment) study indicated a positive impact on Brahmaviharas, on well-being. The research contributes to the literature by highlighting the importance of assessing well-being and the associated factors and undertaking initiatives to improve the level of well-being.

MSR: **Mindfulness Interventions to Leverage Workers Potential in a Post-pandemic World**

Author: **Carole Daniel**, *SKEMA Business School*
Author: **Jessica R. Mesmer-Magnus**, *U. of North Carolina, Wilmington*
Author: **Rebecca Monette Guidice**, *U. of North Carolina, Wilmington*

The COVID-19 pandemic has challenged organizations in unprecedented ways. In these chaotic times, finding ways to foster remote employees' mental health so they can continue to be engaged in their work, satisfied, and productive is a key concern. We explore the value of a digital, self-help mindfulness intervention for mitigating the widespread effects of the COVID-19 pandemic on workers' mental health and safeguarding employee engagement. Additionally, we examine whether a mindfulness intervention, through improved well-being and engagement, could enhance employees' performance and job satisfaction. Using a longitudinal, four-wave experimental design, we compare the levels of depression, work engagement, job satisfaction, and performance (in-role and extra-role) of participants who completed a 10-day self-help mindfulness intervention (n = 191) versus those that experienced an active (mind wandering; n = 100) or passive control (n = 70) condition. Participants who completed the mindfulness intervention reported significantly lower depressive symptomatology than those in either the active/mind wandering or passive control groups. Further, these participants reported significantly greater work engagement four months later and ultimately reported greater job satisfaction as well as productivity than their control group counterparts. We discuss the theoretical implications of these results for work-related mindfulness research as well as the practical implications for workplaces still struggling with the implications of COVID-19.

MSR: **Leading Mindfully Through Complexity: A Responsible Leadership Approach**

Author: **Sadhna Sargam**, *Indian Institute of Technology, Bombay*
Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

Leading a web of stakeholder relations amid environmental uncertainty and complexity that pose many challenges to the organization and its leaders has gained much attention in recent scholarship. Despite this, there remains insufficient research that demonstrates how leaders deal with such challenges in a socially responsible way to ensure organizational sustainability. Through two studies (survey and experiment), we demonstrate how the mindfulness of leaders assists them in dealing with such challenges. Decentering works as an important mechanism between mindfulness and the socially responsible behavior of leaders. Our findings have important implications for recruitment and selection strategies and training and development of employees to develop a responsible workforce.

Individuals in organizations are constantly challenged by their own physical states and by mistreatment by other organizational members. Naturally, there is growing interest among management scholars to study such phenomena. Most previous research on the topic, however, has relied on self or others' reports that may be less valid given the sensitive nature of these phenomena. In this symposium, we intend to demonstrate the viability of biological, micro-behavioral, and neuroscientific methods in the study of individual and interpersonal deviances in organizations. Among the topics discussed will be neural processes associated with abusive supervision, mental fatigue, trust, and threats associated with workplace sexism. Among the goals of this symposium is to demonstrate the benefits of biological measures to the study of individually and organizationally sensitive phenomena, as well as their potential contribution to mitigating their negative consequences.

Beyond the Voicer: Towards a Contextualized View of Employee Voice and its Social Dynamics

Organizer: **Shuoxin Cheng**, *U. Of Sydney*
Discussant: **Uta K. Bindl**, *King's College London*
Presenter: **Shuoxin Cheng**, *U. Of Sydney*
Presenter: **Helena Nguyen**, *U. Of Sydney*
Presenter: **Yiduo Shao**, *U. of Iowa*
Presenter: **Daniel Newton**, *U. of Iowa*

The rise and proliferation of research on employee voice in recent years reflects the importance of the topic. Studies have shown associations between voice and a range of benefits to organizations, such as enhancements to performance and productivity (Lam & Mayer, 2014), successful implementation of new ideas (NG & Feldman, 2012), lower intention to quit (Jiang & Yao, 2020), stronger supervisor-subordinate relationship (Kwon, farndale, & Park, 2016), and higher trust in senior management (Rees, Alfes, & Gatenby, 2013). The extant research remains scant, however, in specifying contextualized voice dynamics, social dimensions and social actors beyond the voicer that contributes to the successful outcome of voice. Envisioning voice as a process and as a context-specific phenomenon that involves multiple social actors (eg., voice endorsers, implementers, allies, resistors, bystanders etc), this symposium involves a collection of studies that advances a multilevel, multi-perspective, socially contextualized understanding of employee voice. Specifically, in recognizing voice as a dynamic social process that ebbs and flows and is influenced by multiple social actors, this symposium addresses several important research questions, such as: Whether and how do team member allyship and resistance influence team voice and the implementation of team voice? How do personality traits (e.g., trait competitiveness) in the social context influence employee voice? What is the impact on voicers when supervisors take over and take credit for subordinates' voice during implementation? What is the buffering role of voice on demands during crisis and the role of supervisor support in enabling voice to have beneficial outcomes in challenging times?

Going Above and Beyond: New Directions in Organizational Citizenship Behavior Research

Session Moderator: **Feng Yu Zhai**, *Dongbei U. of Finance and Economics*

OB: **To Protect the Ego? Anticipated Image Risk as a Deterrent to Workers' Safety Citizenship Behavior**

Author: **Feng Yu Zhai**, *Dongbei U. of Finance and Economics*
Author: **Xin Ning**, *Dongbei U. of Finance and Economics*

Scholars and practitioners are increasingly paying attention to workers' safety citizenship behavior, the emergence of which has been indicated to benefit safety improvement and accident reduction. Although it may have major implications for occupational safety, workers seem to be apathetic to enacting safety citizenship behavior. In this paper, we focus on construction workers' safety citizenship behavior and examine anticipated image risk as a deterrent to enacting it. By proposing that workers tend to conceal or deny their member identity to not engage in safety citizenship activities, we offer a self-protection explanation for why perceptions of image risk can have a deterring effect on safety citizenship behavior as well as why this relationship can be attenuated by workers' proactive personality. Specifically, we propose that proactive workers may view anticipated image risk as a surmountable challenge and frame their actions to reshape others' negative opinions, thereby maintaining their sense of safety responsibility and sense of belonging. Using data from 339 construction workers, we demonstrate that proactive personality moderates the negative relationship between anticipated image threats in safety citizenship behavior and sense of safety responsibility, sense of belonging, which in turn affects subsequent safety citizenship behavior enactment. Our findings provide a new lens to study the emergence of safety citizenship behavior by illuminating a previously overlooked danger (i.e., anticipated image risk) and a viable remedy (i.e., proactive personality), which merits organizational attention and careful management.

OB: **The Unique Effects of Citizenship Pressure and Citizenship Behavior on Fatigue and Family Behaviors**

Author: **Ekaterina Netchaeva**, *HEC Paris*
Author: **Remus Ilies**, *Bocconi U.*
Author: **Massimo Magni**, *Bocconi U.*
Author: **Jingxian Yao**, *Singapore U. of Social Sciences*

Past research has distinguished between organizational citizenship behaviors (OCBs), which refer to willful extra-role behaviors, and citizenship pressure – the perceived pressure to engage in these behaviors. Although citizenship pressure can be seen as a precursor to OCBs, it is also considered a stressing demand (and evidence for the association between these two citizenship constructs is mixed); thus, in the current research we examine citizenship pressure and OCB as independent constructs and compare their effects on relevant outcomes. Drawing on the Model of Human Energy (Quinn, Spreitzer, & Lam, 2012) as our overarching framework for this research, we hypothesize that both daily citizenship pressure and OCB lead to greater fatigue – an indicator of perceptions of resource threat or depletion – and that these relationships will be moderated by sleep quality that the employees had the night before. We further predict that fatigue will have negative effects on spouses' reports regarding employees' engagement in social activities with them in the evening, and that this relationship will be moderated by spousal recovery support provision. We test our hypotheses in a sample of professionals using Experience Sampling Methodology. Findings and implications, as well as directions for future research, are discussed.

OB: **The Effect of Perceived Hazardous Working Settings on Employees' Moral Identity and Behaviors**

Author: **Chao Ma**, *Australian National U.*
Author: **Sijia Zhao**, *Tongji U.*

Drawing from social cognitive theory, we developed a model to propose that the perceived hazardous working settings tends to elevate employees' moral identity, which predicts their engagement in more organizational citizenship behavior and less unethical behavior. Moreover, we integrated with social–cognitive model of moral behavior and suggested that leader ethicality serves as a second stage moderator strengthening the positive effect of moral identity on organizational citizenship behavior and weakening the negative effect of moral identity on unethical behavior. We tested the model in two studies using multisource and multiwave data. Results of a 3-wave investigation of 211 fulltime employees and their immediate supervisors (Study 1) supported the proposed relationships among perceived hazardous working settings, moral identity, organizational citizenship behavior, and unethical behavior. We further conducted a second study (Study 2) using 451 fulltime employees and their immediate supervisors to replicate the results of Study 1 and tested the full model. Results of Study 2 indicated full support of our model. Implications for theory and practices are also discussed.

OB: **Good Soldiers, Good Actors, and Good Learners? Self-Improvement as a Motive for OCB**

Author: **Thomas Kelemen**, *Kansas State U.*
Author: **Samuel Matthews**, *Gonzaga U.*
Author: **Michael Matthews**, *U. of Oklahoma*
Author: **Phillip S. Thompson**, *Virginia Tech*
Author: **Mark C Bolino**, *U. of Oklahoma*

Previous research has emphasized the role of prosocial values, organizational concern, and impression management as driving motives behind organizational citizenship behavior (OCB). However, it is likely that employees are also motivated to engage in OCB in order to self-improve. As such, our theoretical and empirical understanding of citizenship motives is incomplete. Therefore, in this research, we explain why self-improvement motives are critical to our understanding of OCB. Further, we develop an OCB motives scale that includes a self-improvement motive. We subsequently demonstrate the scale's content adequacy, validity, and reliability. Then, using two independent samples of multi-source data, we find that self-improvement motives are positively related to individually focused OCB (OCBI) and organizationally focused OCB (OCBO). Further, we show how prosocial values, organizational concern, and impression management all positively moderate the relationship between self-improvement motives and OCB. Implications and directions for future research are discussed.

Artificial Intelligence and Decision Making

Session Moderator: **Chao Lei**, *School of Management, Huazhong U. of Science and Technology*

OB: **Identifying Managerial Search Strategies in Virtual Reality**

Author: **Albert Jolink**, *SKEMA BS - U. Côte d'Azur*
Author: **Eva Niesten**, *SKEMA Business School - U. Côte d'Azur*

The literature on decision-making by boundedly rational organizations has largely focused on examining triggers and outcomes but has black boxed the middle process of search for solutions to problems. In this study we will unpack the "middle step" of problemistic search using a virtual reality (VR) experiment. Specifically, we will refer to this middle step as managerial search strategies. By building on belief- and aspiration-based models, we demonstrate that improved insights into the specific internal sub-processes of problemistic search help to identify different managerial search strategies. We also examine the adaptation of managerial search strategies in terms of their efficacy and efficiency in ambiguous environments. We test our propositions on managerial search strategies and their adaptation in a purpose-built virtual environment. Depending on the extent of ambiguity, we find that decision-makers adopt three types of strategies: vary-one-thing-at-a-time, vary-all-things-in-opposite-directions, switching-to-other-corners-solutions. When ambiguity increases, decision-makers achieve higher levels of efficacy and efficiency with a search strategy of switching-to-other-corners-solutions. Our study responds to the call for research in decision-making in behavioral organizational theory, culminating in a research agenda that further develops VR research for organizations.

OB: **The Effect of the Decision Time of a Human-robot Hybrid Group on Normative Conformity**

Author: **Chao Lei**, *School of Management, Huazhong U. of Science and Technology*
Author: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*
Author: **Huan Tao**, *School of Management, Huazhong U. of Science and Technology*

Steam of research shows that peoples' decisions could be influenced by other groups under social pressure, even if they know their initial outcomes are correct. This effect of normative conformity not only exists in human-human interaction, but also exists in human-robot interaction. However, we argue that these findings are incomplete because they all focus on the effect of the confederates' decision outcomes on focal individuals in conformity. It is as yet unclear whether and to what extent the confederates' decision process (i.e., their decision time) can influence normative conformity. In this study, we use the Asch paradigm in a human-robot hybrid setting, revealing that the confederates' decision time affects normative conformity. We further explore whether the unanimity of the confederates' decision time affects normative conformity. Results reveal that the effect of the robot confederate's decision time on normative conformity is weaker than the human confederates'. Next, we further explore the underlying explanation of this effect, finding that the confederates' decision time shapes their group pressure and ultimately influences normative conformity. These findings suggest that the confederates' decision time can and does affect normative conformity, the influence of the decision process of the human-robot hybrid cannot be ignored in human-robot interaction.

OB: **Will Humans in AI-Augmented System Correct AI Bias? The Barrier of AI Unbiasedness Stereotype**

Author: **Yuqing Sun**, *U. of Washington*
Author: **Jian Guan**, *Currently a PhD student at Shanghai Jiao Tong U., Shanghai, China*
Author: **Xuan Wei**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xin-an Zhang**, *Shanghai Jiao Tong U.*

Humans increasingly rely on artificial intelligence (AI) for efficient and objective decision-making. Yet AI is not a panacea, and it is well-acknowledged that AI suffer from biases. Tackling this bias issue requires not only designing unbiased AI algorithms but also considering human behaviors in response to AI bias from the psychological perspective. This study focuses on the underexplored latter by investigating whether and when human decision-makers execute bias correction in response to AI-generated biases. In virtue of the attribution theory, we propose an inhibitory bias correction effect that rests upon AI unbiasedness stereotype—referring to the tendency to associate AI with the attribute of being unbiased. With three pre-registered experimental studies, we received supporting evidence that participants were less likely to correct for AI bias because they did not believe that the bias was attributable to AI as an external cause. Using a separate survey study, we further validated the generalizability of human stereotype of AI unbiasedness, lending support to the practical value of our research. The present study delivers actionable insights for AI-assisted decision-making that human partners should be aware of the impact of stereotypical beliefs and offer necessary intervention.

OB: **Machine Learning-based Resignation Prediction Framework for Small Dataset Analysis**

Author: **Chia-Yu Lin**, *National Central U.*
Author: **Mitchel Hsu**, *Yuan Ze U.*
Author: **Yun-Chieh Cheng**, *Yuan Ze U.*
Author: **Heng-Yu Chang**, *Chang Gung U., Chang Gung Memorial Hospital*

Managerial shocks and business costs often occur when employees resigned without notice, a reliable prediction framework to avoid unexpected turnover can therefore minimize human capital losses. Prior studies have shown that resignation prediction models were trained with datasets in correspondence to some specific regions, yet the model generalizability remains problematic and challenging due to the availability of sufficient employee data. This study proposes a machine learning-based resignation prediction framework (ML-RPF) designed particularly for small dataset adapted to multiple regions. With two layers of feature processing and four prediction models, the ML-RPF is a general framework that can be constructed with small dataset. Eventually, it increases the overall average recall score by 0.40, indicating that the results can reach three times higher than the average score of baseline models. The adoption of the ML-RPF for human capital development is also discussed.

The Role of Emotions in Employee Counterproductive Work Behavior

Session Moderator: **Nai-Wen Chi**, *National Sun Yat-Sen U.*

OB: **Compensatory Effects of Loneliness: How and When does Workplace Loneliness Promotes Employees UPB**

Author: **Yanghao Zhu**, *Huazhong U. of Science and Technology*
Author: **Yannan Zhang**, *Southwestern U. of Finance and Economics*
Author: **Yunpeng Xu**, *Zhongnan U. of Economics and Law*
Author: **Feng Qin**, *Jiujiang U.*

With the development of information and communication technology (ICT), loneliness has become a common emotional experience in the workplace. However, research on what strategies employees would take to alleviate loneliness is scarce. To fill this gap, we explored the interpersonal consequences (e.g., unethical pro-organizational behavior, UPB) of workplace loneliness based on self-determination theory and the evolutionary model of loneliness. A three-stage questionnaire survey of 249 employee-colleague dyadic data in China shows that workplace loneliness positively affects employees' UPB through relatedness need thwarting. In addition, collectivism orientation not only moderates the direct relationship between workplace loneliness and relatedness need thwarting, but also the indirect effect of workplace loneliness on UPB via relatedness need thwarting. The theoretical and practical implications of the findings are discussed.

OB: **Depleted and Inauthentic? Dual Mechanisms Linking Daily Surface Acting to Problematic Drinking**

Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*
Author: **Gordon Matthew Sayre**, *EMLYON Business School*
Author: **Yin Yee Wong**, *The Hang Seng U. of Hong Kong*
Author: **Ke-Li Li**, *National Sun Yat-Sen U.*

Alcohol use represents a costly behavior for individual health and organizational competitiveness, with especially high prevalence rates in jobs involving frequent contact with customers and clients. Emotional labor, where individuals must regulate their emotions for a wage, is common to these jobs but shows mixed effects on alcohol use. We seek to remedy these mixed findings by testing predictions from the process model of depletion, along with felt inauthenticity as an additional mechanism based on the social interaction model of emotional labor. Results from a two-week experience sampling study of customer service workers indicated that both depletion and inauthenticity explained the link between surface acting and problematic drinking. We also explored boundary conditions, finding that trait dominance buffered the inauthenticity pathway consistent with the social interaction model, while trait self-control did not moderate the depletion pathway contrary to regulatory depletion predictions. These findings advance the emotional labor literature by highlighting the importance of motivational shifts in line with the process model of depletion, and the role of felt inauthenticity as an important but often ignored mechanism explaining the link between surface acting and health.

OB: **Leisure Crafting and Immoral Behaviours at Work and Home**

Author: **Yifei Shen**, *Dalian U. of Technology*
Author: **Zhenduo Zhang**, *Dalian U. of Technology*
Author: **Xiuxia Sun**, *Dalian U. of Technology*

Employees are under more stress than usual as a result of the COVID-19 pandemic, both at work and at home. A recent stream of research has focused on the benefits of leisure crafting, which cultivates job resources in the leisure domain, for employees. Based on conservation of resources theory (COR) and the work-home-leisure resources model, this study aims to explore when and how leisure crafting might inhibit immoral behaviours at work and home. To test the conceptual model, this study adopted a two-wave multi-source questionnaire survey design to collect data from 545 Chinese hospitality employees. Mplus 7.4 was used to test the hypotheses and the results indicate that: 1) leisure crafting is negatively associated with unethical behaviour at work and family incivility at home; 2) flourishing mediates the influences of leisure crafting on unethical behaviour and family incivility; 3) family hassles undermine the positive spillover effect of leisure crafting on unethical behaviour and family incivility through flourishing. In the face of the COVID-19 pandemic, our research supports the advantages of leisure crafting in inhibiting immoral behaviour at work and at home.

OB: **From Organisation-targeted Counterproductive Work Behaviour to Organisational Citizenship Behaviour**

Author: **Peixu He**, *Huaqiao U.*
Author: **Hanhui ZHOU**, *Huaqiao U.*
Author: **Cuiling Jiang**, *Kedge Business School*
Author: **Qiongyao Zhou**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Based on moral cleansing theory, a moderated mediating model was proposed to explore the internal psychological mechanisms of employees' transformation from organisation-targeted counterproductive work behaviours (CWB-O) to organisation-targeted citizenship behaviours (OCB-O). We conducted three studies, including two experiments and one survey. Our results show that the previous CWB-O positively affected employees' subsequent guilt feeling and perceived moral impurity. In particular, guilt feeling and perceived moral impurity played mediating roles in the relationship between CWB-O and OCB-O. In addition, employees' traditionality positively moderated the indirect effect of CWB-O on OCB-O via guilt experience and perceived moral impurity, such mediating effect is more vital for employees with higher level of traditionality, and vice versa.

You're Too Funny: Exploring the Effects of Humor at Work

Session Moderator: **Shuai Ren**, *McMaster U.*

OB: **The Social-Cognitive Functions of Workplace Humor, Gender, on Promotability**

Author: **Shuai Ren**, *McMaster U.*
Author: **Rick D. Hackett**, *McMaster U.*
Author: **Abira Reizer**, *Abira Reizer, Associate Professor. Ariel U. Israel*

Humor is a pervasive social phenomenon in the workplace context as more and more organizations nowadays are pursuing a fun work environment. While previous literature had examined the evaluations of leader humor, trait humor of employees in the workplace context had not been examined with career advancement prospects, particularly promotability. Our study investigated the effects of both positive and negative traits of workplace humor reported by employees on their promotability evaluated by supervisors using a dyadic work sample in Israel (N=142 dyads) with a cross-sectional design. Interactions between positive/negative workplace humor, employee gender, and supervisors' gender were examined. The results suggested that employee trait humor is a critical predictor for promotability when gender is incorporated as a moderator, even after controlling for Big Five personality traits and emotional intelligence. In particular, humorous male subordinates are more likely to be perceived as promotable especially if their supervisors are male while humorous female subordinates are less promotable. Moreover, male and female supervisors evaluate promotability associated with workplace humor differently. Our study replicated and extended the earlier studies concerning the gender bias of humor in the workplace from a subordinate perspective, and yielded important implications for leadership emergence and diversity, equity, and inclusion.

OB: **Interpersonal Humor as Dynamic, Contextual, and Spontaneous: A Call to Study**

Author: **Sharon F. Ehasz**, *Case Western Reserve U.*

Humor is a social process. As a multi-functional construct, it can transform individuals, relationships, and organizations. The development and popularity of humor styles have shaped how humor is conceptualized and measured. Empirical research makes the case for the benefits of affiliative and self-enhancing humor, as well as the detriments of aggressive and self-defeating humor. However, in drawing such a distinction, the individual and cultural differences that impact humor and interpersonal relationships are neglected. To understand the process of humor, it is vital to recognize how context (i.e., culture, organizational norms, and specific setting), amount of humor, and time influence humor's impact. Current methods for studying interpersonal humor need to transition from studying humor as a static concept occurring as a moment in time to studying it longitudinally. By observing humor over time, researchers will be able to identify humor's evolution and correlational and causal relationships, as well as better account for the context, amount, and timing of humor. Identifying how specific humor styles and types impact interpersonal relationships, and larger communities and organizations through positive affect and emotional contagion, will enable a more well-rounded understanding of humor, as well as provide the knowledge to more effectively use humor for good.

OB: **Set A Good Example: The Impact of Leader Self-deprecating Humor on Subordinate Learning from Failure**

Author: **Xi Wang**, *Renmin U. of China*
Author: **Songbo Liu**, *Renmin U. of China*

Based on motivated information processing theory, we explore how and when leader self-deprecating humor influences subordinate learning from failure by considering task reflexivity as a novel explanatory mechanism and leader-subordinate value congruence as a boundary condition. We conducted a multi-wave and multi-source survey of 342 members from 61 teams in a large research institute in China. Given the nested data, we used multilevel modeling method as the analytical strategies to test our moderated mediation model. Results of multilevel path analyses demonstrate that leader self-deprecating humor positively influences subordinate learning from failure via task reflexivity. Moreover, this mediation effect is stronger when leader-subordinate value congruence is high. Therefore, our research goes beyond extant literature on learning from failure and enriches the theoretical understanding of the relationship between leader self-deprecating humor and subordinate learning from failure.

OB: **Think Big and Start Small: A Within-Person Examination of Vision Communication and Goal Progress**

Author: **Fu Yang**, *Southwestern U. of Finance and Economics*
Author: **Ju Yang**, *Southwestern U. of Finance and Economics*

In this study, our primary purpose is to clarify how and when leaders motivate followers to pursue visions by vision communication. Specifically, grounded in the general model of vision communication, we propose that leader vision communication provides enabling conditions for need fulfillment and, thus, stimulates follower vision pursuit, in the form of follower goal progress. We further theorize how two cross-level moderators—leader sense of humor and follower selective optimization with compensation—affect the above relationship. An experience sampling study with 911 daily observations across 10 consecutive workdays provided support for our hypotheses. Results showed that the impact of leader vision communication on follower need fulfillment was pronounced for leaders with a high sense of humor. In turn, follower need fulfillment arising from leader vision communication resulted in greater goal progress, especially among followers with high selective optimization with compensation. Altogether, our findings offer new insights into how organizations can effectively utilize vision communication to motivate followers.

New Directions in Emotions Research

Session Moderator: **Effie Savvides Syrimis**, *Employee Well-Being via Eudaimonia: A Proposed Model of Eudaimonia at Work*

OB: **Employee Well-Being through a Eudaimonic Lens: A Proposed Model of Eudaimonia at Work**

Author: **Effie Savvides Syrimis**, *Employee Well-Being via Eudaimonia: A Proposed Model of Eudaimonia at Work*

The aim of this study is to develop a deeper understanding of employee eudaimonic well-being. With the use of the Broaden and Build Theory (BBT) of positive emotions we develop a model to conceptualise the eudaimonic perspective of employee psychological well-being. Eudaimonia is seen as a type of psychological well-being entailing the search for meaning, self-actualization and excellence, while embarking on a journey to personal growth. As per the BBT, positive emotions have an enduring impact, and enable individuals in positive states to develop resources for them to grow, contributing positively to well-being and eudaimonia. Our contribution lies in the ability to conceptualise employee eudaimonic well-being from a multidisciplinary angle borrowing from the literature of psychology, organizational behaviour and human resource management. Specifically, we bring together meaningfulness, virtue and personal growth at work to better explain employee eudaimonic well-being. Meaningfulness at work is conceptualised through the 'work and meaning inventory' (psychological meaningfulness, making meaning through work and great good motivations). Virtue at work is conceptualised by looking at the employee character strengths, leadership virtuousness and organizational virtuousness. We conceptualise personal growth at work through personal growth in life, perceived supervisor support and perceived investment in employee development. Bringing these three constructs (meaningfulness, virtue and personal growth at work) together to study employee eudaimonic well-being, including their suggested sub-constructs is a novelty in the literature.

OB: **A Meta-Analysis Study of Attachment Styles in the Workplace**

Author: **Mai Pham**, *Department of Business Administration, National Chengchi U.*
Author: **Chang-Ya Hu**, *National Chengchi U.*
Author: **Yen-Yu Chen**, *National Yang Ming Chiao Tung U.*
Author: **Sheng Wang**, *U. of Nevada, Las Vegas*

Attachment style is a valuable motivation framework for studying how employees develop emotional connections and interaction patterns in the workplace. However, the findings of existing empirical studies were mixed, suggesting a need for a quantitatively synthesized review. We conducted a meta-analysis of relationships between attachment styles and employees' work attitudes, behaviors, and leader-related styles and attributes (K = 151 independent samples, N = 36,695 workers). Secure attachment was positively related to job satisfaction, organizational commitment, affective commitment, self-efficacy, self-esteem, and trust. Secure attachment employees were linked with heightened job performance, organizational citizenship behavior, OCB, and organizational citizenship behavior-individual, OCB-I. Anxious and avoidant attachment were negatively related to group cohesion, life satisfaction, job satisfaction, self-efficacy, and trust. Both insecure attachments were prone to continuance commitment, counterproductive work behavior, CWB, surface acting, job burnout, depersonalization, and inefficacy. Regarding leader-related styles and attributes, secure attachment was positively related to the perception of transformational leadership, while avoidant attachment was negatively related to the perception of transformational leadership. Anxious attachment was negatively associated with LMX quality. The cultural dimensions of the samples (i.e., individualism, power distance, and masculinity) moderated some of these relationships. We discuss the theoretical and managerial implications of these results.

OB: **Find Your Fit From Within: Towards a Resource-based Understanding of Emotional Fit**

Author: **Florence Bernays**, *U. of Zurich*
Author: **Jochen I. Menges**, *U. of Zurich*
Author: **Lauren Christine Howe**, *U. of Zurich*

Fit theories have suggested that employees prosper when their personal characteristics match with those of their environment. Previous fit research has highlighted how employees assess fit with, for example, their organization, their job, and their supervisor. Surprisingly little research has examined how employees assess fit with their emotional needs – that is, the degree to which work provides emotional experiences that match those desired by the employees. We suggest that employees differ in their emotional needs (i.e., the emotions that employees wish to feel at work) and that emotional fit occurs when work provides the distinct emotions that employees desire. In a 10-day diary study, we find that when individuals get to experience their desired feelings at work, they are less emotionally and physically exhausted, less likely to quit, and more satisfied with their work. We further find that experiencing one's desired feelings too much (overfit) or too little (underfit) yields differential effects and that attentional focus declines or improves as a function of experiencing optimal, deficient, or excessive levels of emotional fit. Our results offer a new facet of fit that concerns the idea of "fitting in from within"; they provide novel insights into how organizations, leaders, and employees can benefit from embracing employees' desired feelings at work.

OB: **Why Do Perfectionists Procrastinate? The Role of Autonomous Motivation and Psychological Distress**

Author: **Xiao Wang**, *School of Business, Renmin U. of China*
Author: **Lifeng Zhong**, *School of Business, Renmin U. of China*
Author: **Josh Howard**, *Monash U., Australia*

Research on perfectionism and procrastination has largely focused on the role of rational behavioral control in effective self-regulation. However, procrastination is characterized by the priority of short-term gratification over long-term goals and implies the breakdown of the rational system, which suggests that a deeper investigation of the natural tendency to follow impulses is valuable. In this study, we attempt to address this gap by considering the joint effects of motivation and affect. Specifically, based on self-determination and emotion regulation theory, we propose two supplementary pathways linking the two types of perfectionism (perfectionism strivings and perfectionism concerns) to procrastination behavior: a motivational path via autonomous motivation and an affective path via psychological distress. Further, we hypothesize that the relationships are contingent upon a contextual moderator, such that external performance pressure strengthens the negative indirect effect of perfectionism strivings on procrastination behavior as well as the positive indirect effect of perfectionism concerns on procrastination behavior. We found support for most of our arguments in a longitudinal study using 376 employees recruited from an online survey platform in China. Our analyses shed new light on why and when trait perfectionism impacts procrastination behavior. We discuss theoretical and practical implications for organizations and employees.

New Perspectives in Leadership Research

Session Moderator: **Ryan Scott Hemsley**, *Michigan State U.*

OB: **Paternalistic Leadership and Job Satisfaction: Moderating Role of Cohesion and Trust**

Author: **Sheng-Bin Wang**, *National Sun Yat-Sen U.*
Author: **Chun-Han Chao**, *Binghamton U.-State U. of New York*
Author: **San-Fu Kao**, *National Tsing Hua U., Hsinchu, Taiwan*

This study uses polynomial regression with response surface analysis to examine the congruence effect of authoritarianism and benevolence from paternalistic leadership theories. This integrative method can fix the misalignment between theoretical arguments and empirical tests of paternalistic leadership, such that previous studies usually treat authoritarianism and benevolence as separate dimensions of paternalistic leadership. Using data from 566 high-school basketball athletes from 42 teams in Taiwan, we empirically show that congruent paternalistic leadership (i.e., high authoritarianism and high benevolence) has a positive effect on follower satisfaction. Moreover, this positive effect is further reinforced when follower-rated cohesion or affective trust is high, highlighting the role of contextual factors in paternalistic leadership. The theoretical and practical implications of these findings are discussed.

OB: **Theses and Antitheses: Toward a Normative Schema Theory of Leadership Functions**

Author: **Ryan Scott Hemsley**, *Michigan State U.*
Author: **Daniel Jacob Griffin**, *Michigan State U.*
Author: **John R. Hollenbeck**, *Michigan State U.*

Rather than relying on a formal leader, self-managed teams frequently utilize a broader leadership structure centered on leadership functions. Ideals about how leadership functions should be executed will affect team member perceptions of effective leadership. Seminal theories on perceptions of effective leadership take a cognitive perspective centered on ideal traits (i.e., prototypes and anti-prototypes). Unfortunately, these theories involving ideal traits make at least three problematic assumptions that may not hold for ideals about leadership functions. Specifically, (a) the content of cognitive ideals is primarily defined by traits, (b) the structure of cognitive ideals is linear (i.e., prototypes versus anti-prototypes), and (c) the stability of cognitive ideals is relatively static in a specific context. To redress these problematic assumptions, we advance new theory about normative schema of leadership functions. Normative schemata have a unique dialectical structure, where universal team problems (e.g., how to arrive at a single decision in the face of conflicting opinions) have multiple acceptable solutions (e.g., decision-making through hierarchy, consensus, or a combination). In this study, we find evidence in support of our Normative Schema Theory. Beyond introducing a new construct, this study advances theory on perceptions of effective leadership and leadership processes in self-managed teams. Indeed, embracing alternative ways of leading as antithetical, rather than anti-prototypical, has important implications for the future of socio-cognitive leadership research.

OB: **Weep To Be Heard: The Joint Effect of Individual Voice and Sadness Expression on Leader Support**

Author: **Xiaode Ji**, *Hong Kong Polytechnic U.*
Author: **Yanting Wang**, *Guanghua School of Management, Peking U.*

The current study aims to explore when and how the expression of individual voice, or upward communication of ideas, suggestions, concerns, and opinions related to one’s own work, will engender leader support. Drawing on the social functional perspective of emotion, we hypothesize that expressing sadness together with individual voice will facilitate leader socio-affective and cognitive support by eliciting the leader perceived importance of voice. To test our hypothesized model, we employed an event-contingent method to collect data from 312 leaders from China. Consistent with our propositions, expressing sadness when speaking up individual voice is positively related to leaders’ perception of the importance of voice. As a consequence, leaders provide more support in terms of voice endorsement and emotional support. The present research emphasizes the importance of emotion in entailing the receptivity of individual voice, adding value to the emerging literature that focuses on achieving a balance between individual and organizational needs to promote a more sustainable organizational culture. We discuss implications for theory, future research, and management practice that result from our study.

OB: **“What Would My Leader Do Today?”: Leader’s Daily Time Plan Sharing and Daily Subordinate Outcomes**

Author: **Aran Cho**, -

According to the Conservation of Resource (COR) theory, perceiving resource availability is crucial for employees to have an ideal workday with high task performance and job satisfaction. Time is one of the most important resources that has distinguished characteristics and values. However, not many studies have examined how employees can feel perceived control of time in organizational settings, in which employees’ daily time use is not only determined by their own time management but also influenced by various environmental factors. With an integrative model drawn from the COR theory and self-regulation literatures, this study explains how leaders' daily behavior of sharing their time plan with their subordinates increases the subordinates’ daily task performance and job satisfaction by influencing the subordinates’ perceived control of time and engagement. The study suggests that leaders’ time plan sharing serves as a reference for subordinates to predict their leaders’ time use of the day and to begin a resource-related self-regulation process. Using Example Sampling Method (ESM), hypotheses are tested with 161 employees from the media industry, measured across five days. With all hypotheses supported, this study provides practical implications both for leaders and organizations and theoretically contributes to time resource-related self-management research and temporal coordination research.

The Big Picture: Organizational Climate, Context, and Culture Research

Session Moderator: **Haifeng Wang**, *Shanghai International Studies U.*

OB: **The Different Effects of Organizational Culture on Firm and Individual Performance: A Meta-Analysis**

Author: **Haifeng Wang**, *Shanghai International Studies U.*
Author: **Jing Li**, *School of Business and Management, Shanghai International Studies U.*

To study the differences in the performance of the firms and individual employees in different organizational cultures, we employ meta-analysis methods to examine the differential impact of the clan, adhocracy, hierarchy, and market culture on firm and individual performance, basing on the Competing Values Framework (CVF) classification. This article includes 49 studies with 76,437 firm-level samples and 32 studies with 99,621 individual-level samples, we find that at both firm and individual level, the positive impact of adhocracy culture on performance is strongest, and hierarchy culture has the weakest impact, we also uncover that clan culture has the stronger impact on performance at the individual level; while adhocracy culture and market culture have the stronger impact on performance at the firm level. In addition, results also show how organizational cultures differ in the context of Eastern culture and Western culture.

OB: **Trickledown Effect of Participative Leadership Climate: Age and Immigration Status as Moderators**

Author: **Neha Tripathi**, *Assistant Professor Indian Institute of Management Ahmedabad*
Author: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*
Author: **Daan Van Knippenberg**, *Rice U.*
Author: **Nitin Sharma**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Sophia Zhao**, -

Participative leadership involves the followers in the decision-making process to leverage their contribution in the development of creative concepts, goals, and execution of strategies. At the organization level, participative leadership climate can be manifested at the top management and at the middle management levels. The present paper develops theory on middle managers' participative leadership climate, illuminating how it is formed from the top management leadership climate, for whom, and what are its firm level outcomes. A globally representative data from Centre of Creative Leadership from the year 2000 to 2016, initial data consisted of information on 152,644 individuals from 11,559 organizations, was used to provide support for the hypothesized relationships. Top management participative leadership climate had a trickle-down effect on middle managers participative leadership. This effect was found stronger for (a) the younger, and (b) immigrant middle managers. Middle management participative leadership climate positively associated with firm performance. Theoretical and practical implications are discussed.

OB: **How Gender-diversity Context Affects Employee Performance through Workgroup Inclusion**

Author: **Chiyin Chen**, *Donghua U.*
Author: **Zhigang Song**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Literature on the relationship between gender diversity and employee performance results is ambiguous. This manuscript wishes to discuss how gender diversity context, employee gender, and individual value affect employee attitude and performance through the lens of optimal distinctiveness theory and social gender psychology. We propose and test a three-way interaction model in an employee-supervisor dyads data set and found that gender distance is more positively associated with workgroup inclusion perceptions for male employees who score low on the value of conservation whereas such relationship becomes negatively associated for female employees with low levels of conservation. Furthermore, workgroup inclusion perception mediates the relationships between the three-way interaction and employee task performance and creativity. Our study provides new theoretical explanations on whether and when gender diversity context affects employee attitude and performance.

OB: **Research Integrity Management in Business Schools**

Author: **Anna Strazda**, *RISEBA U. of Applied Sciences*
Author: **Inna Kozlinska**, *U. of Groningen, Faculty of Economics and Business*
Author: **Paula Danskin Englis**, *Berry College*

In today's global research environment, academic staff and researchers at business schools are under the increased pressure to maximize their publications output in high quality journals. Individual indicators are used to assess professional performance, award academic positions, promote university indicators, ensure international accreditation requirements, and attract research projects and funding. These achievements are often assessed only based on quantitative criteria, which risks lowering the quality of research content. The aim of research is to create the conceptual framework of research integrity culture based on literature studies on research integrity and organisational culture approaches. We used analytically critical literature review, to create the understanding of research integrity concept, identity influencing factors, define "hot topics" by keywords analysis and bibliometric analysis with VOSviewer. The literature review was conducted on organisational culture approaches to define dimensions that can serve as the foundations for research integrity culture. The main contribution of this theoretical research is linking the concept of research integrity with organisational culture in business schools and filling the gap on how the organisational culture approach might be applied to strengthen research integrity on the individual and organisational levels in business schools. Keywords: Research integrity; business schools; organisational culture; research integrity culture

Team Resilience and Reflexivity

Session Moderator: **Sandra Baumbach**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

OB: **Self- vs. Team-Preserving Responses in Extreme Contexts and the Demonstration of Team Resilience**

Author: **Kijan Vakilzadeh**, *U. of Kassel*

Most conceptualizations of team resilience seem to be implicitly based on the understanding that team members individually and collectively strive for resilience. While this may prove true in more mundane contexts, team members may turn away from the overall team's efforts to demonstrate resilience when their lives are at stake. By drawing from conservation of resources theory and emotion regulation theory, we seek to conceptually explore the process through which individual team members decide between different coping behaviors in response to the perceived severity of the extreme situation they face. We propose that unregulated negative emotions at the individual level lead to what we call “ugly coping.” Ugly coping differs from the concept of resilience in that it aims to conserve individual resources at the expense of other team members. When this ugly coping spreads to most team members and crosses a certain threshold level, a team will demonstrate brittleness. In contrast, when individual team members are able to regulate their emotions, they can focus on responses aimed at preserving the team’s collective resources. When this resilient individual response crosses over to other team members, a team will demonstrate resilience.

OB: **Stressor or Relaxor? How Ambidexterity influences Team Conflict and Entrepreneur’s Stress Level**

Author: **Sandra Baumbach**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Organizational ambidexterity provides one answer to the question of how to build a thriving, successful business that is able to survive. Despite manifold ambidexterity research on related organizational benefits, to date, it remains unclear what (negative) consequences can be caused for teams and individuals working in such a context. While prior work has conceptually related the existence of tensions with ambidexterity, we particularly lack empirical evidence measuring such effects on individuals. Hence, the purpose of this paper is to investigate the relationship between organizational ambidexterity and conflicts within the founding team, i.e., task and relationship conflicts, as well as perceived stress for entrepreneurs. By leveraging a dataset of 193 entrepreneurs, we show a two-fold effect of organizational ambidexterity: On the one hand, ambidexterity offers benefits by mitigating relationship conflict and perceived stress, which, both, can be harmful to founding teams and entrepreneurs. On the other hand, we find ambidexterity to also decrease task conflicts, a type of conflict that can be beneficial for teams. Our findings contribute to extant ambidexterity literature by analyzing consequences following organizational ambidexterity. Also, we provide valuable insights for new venture leaders to anticipate positive and negative effects of their new venture’s strategic focus.

OB: **Design Thinking’s Impact on Team Emergent States and Performance: A Quasi-experimental Field Study**

Author: **Jingqiu Chen**, *Shanghai Jiao Tong U.*
Author: **Dana Rachel Vashdi**, *U. of Haifa*
Author: **Qingyue Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Peter Bamberger**, *Tel Aviv U.*

Design thinking (DT) has become widely adopted in many organizations as a structured approach to creative problem-solving based on experimentation and reflective practice. Yet, it remains unclear whether, how and when DT as a team development intervention impacts team performance or whether it is more effective than other, more conventional team development interventions. Building on and extending experiential learning theory, we propose that: (a) interventions more thoroughly grounded on the elements of experiential learning theory (such as DT) have more robust effects on performance relative to those placing less of an emphasis on these processes (e.g., after-action review [AAR] and team-building [TB]), with (b) these effects at least partially explained through the impact of these processes on team emergent states, and (c) most robust among teams engaged in more complex tasks. Results from a multi-wave, quasi-experimental field study of teams in a manufacturing company indicate that when pitted against these alternative interventions, DT is associated with a greater improvement in team performance, and with this effect partially explained by a more robust improvement (relative to that of AAR and TB) in both team learning climate and transactive memory system (TMS). Additionally, team task complexity strengthened the indirect effect of design thinking (relative to AAR and TB) on team efficiency improvement, moderating the effect of DT on the change in team-learning climate. Implications for theory and practice are discussed.

OB: **Team Reflexivity and Team Performance: A Meta-analysis of Main Effects, Mechanisms and Moderators**

Author: **Meltem Ceri Booms**, *KU. Leuven*
Author: **Bart De Jong**, *Durham U. Business School*
Author: **Michaela Schippers**, *Erasmus U. Rotterdam*

Although team reflexivity – the extent to which teams reflect on and adapt their working methods and functioning-- is believed to be important for team function and team performance, the evidence to date remains mixed and fragmented. Cumulating evidence from field (k=83) and experimental (k=36) studies (N=XX teams), we meta-analytically examined the relationship between team reflexivity and team performance. Our findings confirm that team reflexivity is moderately and positively related to team performance, and it predicts performance meaningfully beyond learning behaviors based on information seeking/sharing/elaboration/integration. We also found that the increase in external integration and temporal stability strengthens this relationship, and furthermore, it is fully mediated via two parallel processes: team cognition and change-oriented behaviors. Finally, our study exhibited that team reflexivity was largely determined by the relation-focused antecedents (i.e. team climate and person-focused leadership), than by the task-focused antecedents (i.e. team structure and job diversity). Together, our findings contribute to the literature in terms of (a) resolving the scepticism about the beneficial effects of team reflexivity, and testing a coherent set of boundary conditions influential on reflexivity-performance relationship, (b) identifying the main mechanisms between reflexivity and performance, (c) constructing an initial mapping of the reflexivity’s nomological network by determining the antecedents of reflexivity and their predictive validity in promoting reflexivity.

Exploring the Role of Leader Humility in Teams

Session Moderator: **Yijie Zhang**, *School of Economics and Management Tsinghua U.*

OB: **The Consequences of Leader Humility Based on Affective Events Theory --A Mediated Moderation Model**

Author: **Cailing Feng**, *Nanjing Agricultural U.*
Author: **Lisan Fan**, *Shandong Institute of Business and Technology*

Studies exploring the consequences of leader humility from the perspective of affective reaction and intentional attribution are relatively rare. Based on Affective Events Theory (AET), this paper proposed an integrated multilevel model of leader humility on individual and team outcomes, and also the mechanism and interaction. Firstly, at the individual level, we theorize that follower intentional attribution of expressed leader humility will moderate the relationship between leader humility and follower affective reaction, which also determines follower performance (task performance, interpersonal deviant behavior and leader-member exchange relationship). Moreover, at the team level, we hypothesize that the proposed relationships at the individual level will also occur at the team level, that is, the interaction between team leaders' humility and team intentional attribution influences team performance (team performance, organizational deviant behavior and team-member exchange relationship) through team affective reaction. Finally, at the cross-level, we explored the mediating role of affective reaction in the relationship between team perception of team leaders' humility and individual performance, as well as the moderating role of team affective climate in the effect of affective reaction on individual performance. Our research is also instructive for the enrichment of expanding the theory and practice of leader humility, affective reaction and intentional attribution.

OB: **Leader Humility and Team Creativity**

Author: **Mingyan Chen**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xingshan Zheng**, *Shanghai Jiao Tong U.*
Author: **Bingqing Wu**, *U. of Wisconsin Parkside*

Extending an existing dynamic perspective between leaders and team members, we argue how and why leader humility impacts team creativity through the two intrateam work processes (team information elaboration) and bottom-up work process (team voice quality). We propose that humble leaders positively relate to team creativity via promoted team information elaboration and team voice quality. Our hypotheses were supported by multisource and time-lagged data collected from 55 teams in China. Theoretical and practical implications are discussed, as are limitations and suggestions for future research.

OB: **Good Examples or Bad Apples? The Effects of Leader-favorite's Traits on Team Effectiveness**

Author: **Yijie Zhang**, *School of Economics and Management Tsinghua U.*
Author: **ZIjing Wang**, *Huazhong U. of Science and Technology*

To effectively manage teams, leaders often develop differentiated leader-member exchange (LMX) relationships with members. During this process, a certain member would develop a better-than-everyone LMX relationship and receive the leader's favor in trust, opportunity, and decision-making latitude. We define the member with the highest LMX as the leader-favorite. Although it is common sense that leader-favorites exist in teams, research on this topic is surprisingly scarce. Drawing on minority influence theory, we jump-start the conversation on leader-favorites by examining how their humility and narcissism influence team process and effectiveness. Specifically, based on a field study with 70 teams, we found that under the condition of high levels of LMX differentiation, the leader-favorite's humility facilitates team coordination and team performance, while the leader-favorite's narcissism induces relationship conflict and hinders team effectiveness. Therefore, our findings suggest an essential extension to LMX research and team research by introducing the role of leader-favorites and demonstrating how their traits influence the key team processes and effectiveness.

OB: **Relational Energy in Teams: The Roles of Leader Humility, Team Network Density, and Team Performance**

Author: **Gang He**, *Guanghua School of Management, Peking U.*
Author: **Sebastian C. Schuh**, *China Europe International Business School (CEIBS)*
Author: **Liangding Jia**, *Nanjing U.*

The present study was designed to extend our understanding of the concept of relational energy by providing new team-based and indirect effects perspectives on its emergence and impact. By integrating social learning theory and social network theory, we propose that leader humility can enhance team relational energy density by promoting energy generation and reducing energy depletion among team members. Moreover, we propose that leader in-group prototypicality strengthens the impact of leader humility on team relational energy network density. Finally, we predict that team relational energy network density will be positively related to team performance. Data from a multi-source, three-wave study using social network approach of 149 professional works teams (including 10,656 ratings from 149 leaders and their 967 employees) provide support for our proposed hypothesized model. The implications for the relational energy, social networks, and leadership literatures are discussed.

It's All About Me: The Role of Narcissism in Leadership Processes

Session Moderator: **Haiyang Liu**, *Nanyang Business School, NTU Singapore*

OB: **An Emotional Desert? Leader Narcissism, Affective Events, and Affect-Laden Leader Behaviors**

Author: **Haiyang Liu**, *Nanyang Business School, NTU Singapore*
Author: **Caleb Phillips**, *London School of Economics and Political Science*
Author: **Yueting Ji**, *Central U. of Finance and Economics*
Author: **Shengming Liu**, *Fudan U.*
Author: **Tong Wu**, *Nanyang Business School, NTU Singapore*
Author: **Qianyao Huang**, *Xi'an Jiaotong-Liverpool U.*

Previous literature has regarded narcissistic leaders as "emotional deserts," uncomfortable with their own affectivity, thereby shunning emotions as a whole. However, recent research in personality psychology has highlighted how narcissists can actually be overwhelmed by emotions. To better understand the affective experiences of narcissistic leaders, we conduct an experience sampling study and an experiment to investigate how leaders respond both affectively and behaviorally to varying affective events. Employing a motive-based lens via the Self-Regulatory Processing Model of Narcissism, we hypothesize and find that narcissistic leaders, in an effort to maintain their leader identity and ego, suppress positive affective reactions to positive affective events and exaggerate negative affective reactions to negative affective events. As a result, we also find narcissistic leaders deploy fewer positive and more negative affect displays and affect-laden leader behaviors (e.g., managerial consideration and abusive supervision, respectively). Important theoretical and practical implications are discussed, and directions for future research are provided.

OB: **Follower Narcissism and Leader-Directed Behaviors: The Role of Relational Grandiosity**

Author: **Judy Qiu**, *ESSEC Business School*
Author: **Selin Selin Kesebir**, *London Business School*

Research has shown that narcissistic people tend to self-enhance when evaluating their agentic traits, such as intelligence and competence. The current work proposes that narcissists' grandiose self-perceptions extend to their relationships with their leaders: Narcissistic followers believe that they have formed better relationships with their leaders compared to their peers (LMXSC), even when there is no basis for such beliefs. Drawing on conservation of resources (COR) theory, we propose that an elevated relational standing is a valued organizational resource, which motivates followers to protect their relationship with leaders and leverage it to accumulate other resources. The "relational grandiosity" of narcissistic subordinates thus enables them to more readily engage in relationship maintenance behaviors with their leaders, and seek instrumental support from them. We find general support for our hypotheses across three studies. We discuss their implications for narcissists' ability to get ahead in organizations by building relational capital with and soliciting instrumental help from their leaders.

OB: **Leader Narcissism, Team Empathically Driven Moral Emotions and Team Relational Quality**

Author: **Chun Yang Zhou**, *Shanghai U. of Finance and Economics*
Author: **Jin Song Li**, *Shanghai U. of Finance and Economics*
Author: **Yingying Zhang**, *Chengdu U. of Information Technology*
Author: **Lingjun Zhou**, *Shanghai U. of Finance and Economics*

While past research has demonstrated the destructive effects of leader narcissism in leader-follower relationships, this study explores whether leader narcissism could harm the relationship quality among team members and its influence mechanism. This study first suggests that leader narcissism can damage the relational quality among team members, which is manifested in the low frequency of team organizational citizenship behavior toward co-workers, but the high frequency of team social undermining toward co-workers. Based on the framework of moral emotions within teams, and integrating leadership and team norms literature, this study proposes that team perspective-taking norms, and team empathically-driven moral emotions sequentially mediate the destructive impacts of leader narcissism on team members' relational quality. Data analyses based on a sample of 352 team members and 81 team leaders reveal that leader narcissism results in weak team perspective-taking norms and a low level of team empathically driven moral emotions (e.g., guilt, compassion, and pride), which ultimately reduces team organizational citizenship behavior but increases team social undermining.

OB: **The Double-Edged Effect of Leader Narcissism on Leader Effectiveness: Based on the NARC Framework**

Author: **Peipei Shu**, *Zhongnan U. of Economics and Law*
Author: **Dan Li**, *Zhongnan U. of Economics and Law*

We draw from the narcissistic admiration and rivalry concept (NARC) model to provide nuanced insight into why leader narcissism has a dual impact on leader effectiveness. A multi-wave, multi-source field study (n = 263) demonstrates evidence that leader narcissistic admiration has a positive effect on leader effectiveness through subordinates' perceived leader prestige that was stronger when subordinates have high power distance orientation than low power distance orientation; leader narcissistic rivalry has a negative effect on leader effectiveness through subordinates' perceived leader dominance that was stronger when subordinates have low power distance orientation than high power distance orientation. We make novel theoretical, empirical, and practical contributions by explaining the inconsistency of the relationship between leader narcissism on leader effectiveness in terms of the dualistic structure of narcissism (i.e., leader narcissistic admiration and leader narcissistic rivalry) and how each of these two distinct narcissisms impacts leader effectiveness. Overall, our study extends the narcissistic admiration and rivalry concept (NARC) model to explain leader narcissism' double-edged sword effect in order to meaningfully inform researchers' attempts to build cohesive streams of research in these areas and practitioners' attempts to promote greater workplace environments.

Effective collaboration among individuals within organizations is essential for the successful operation of organizations. However, individuals often face significant impediments to successful collaboration, even when they share common goals. This symposium seeks to understand and identify impediments to three types of collaboration that are particularly relevant to improving individual performance and decision-making within organizations: advice, feedback, and favors. The papers provide novel insights into both individual and interpersonal factors that influence the processes of advice, feedback, and favors with the goal of informing strategies that will allow for more successful collaboration among individuals within organizations.

Events are discrete happenings that are bounded in space and time, and are distinct from features of the environment that are enduring and stable. Sharing personal events with others is a very common behavior not only in daily life but also in the workplace. However, our knowledge of this behavior in the work setting is still in an infantile state. Moreover, given the valence and work-relatedness of the content of the events as well as the relationship between the discloser and the recipients, sharing events with others is a multifaceted behavior, each of which deserves examination. Two studies in this symposium explore how employees sharing their work-related positive events could impact other employees (i.e., responders). One study explores employees sharing their nonwork-related events and its implications. Another study focuses on the implications of leaders sharing their negative events with subordinates. The last study provides a comprehensive typology of leader self-disclosure with subordinates and related consequences on subordinates. Overall, our symposium introduces the cutting edge of current research on sharing personal events with others in the workplace.

Presenter: **Courtney Williams**, *U. of Toledo*

The post-pandemic work environment is a breeding ground for challenges and hindrances that may elicit negative emotions among workers. Despite the nuance between unique negative discrete emotions, negative emotions are often lumped together and examined by valence. However, this obscures the differentiated nature of unique negative discrete emotions for important outcomes. Research is needed to help managers better understand specific negative emotions and the negative and positive outcomes that may ensue from negative emotion experience and expression at work. This symposium brings together four such works by focusing on negative discrete emotions in response to COVID-19, customer mistreatment, racism, as well as negative emotion experience in the context of the Great Resignation. A wide range of work-related outcomes are discussed, including well-being, work attitudes, performance, and co-worker intervention in racism. This symposium will conclude with an integrated discussion of all four papers and offer a road map for the future of research on negative emotions and the modern worker.

Workplace gossip, or evaluative talk by one employee (gossiper) to another (recipient) about an absent colleague (target), is ubiquitous (Foster, 2005). It is not surprising that increasing research effort has focused on it (Sun, Schilpzand, & Liu, 2022). Although prior research has generated valuable insights, our knowledge on workplace gossip remains incomplete. This is primarily because the phenomenon per se is complex. First, by definition there are at minimum three roles involved in workplace gossip – gossiper, recipient, and target. Different roles may have different attitudes and behaviors in the same episode of workplace gossip. Investigating gossip from different roles' perspectives, therefore, is necessary for us to comprehensively understand this phenomenon. Second, theory on gossip is traditionally surrounded by debates. For instance, some scholars regarded gossip as bad and immoral behavior (Peters & Kashima, 2013), while others explored the benefits gossip brought to the collective (Feinburg, Willer, Stellar, & Keltner, 2012). Scholars should identify the debates in the literature, and address them by examining contingencies, integrating paradoxical views, and so on. Third, gossip continuously happens in interpersonal interactions at work. Even the same person's attitudes and behaviors in gossip may change with time and context. Therefore, we may not be able to understand the complexity of workplace gossip without considering temporal and contextual factors associated with it. As stated below, the four studies in our symposium (1) focus on different roles' perspectives, (2) address debates in the literature, and (3) examine the contextual factors associated with workplace gossip in rigorously designed studies.

Much of employees' professional success and emotional well-being comes from their social interactions in the workplace. Unfortunately, employees sometimes fail to socialize as effectively as they could, reducing their social capital at work and limiting the potential benefits they could gain from building strong social connections in the workplace. This symposium demonstrates four new ways that employees fail to maximize their social value at work, and additionally suggests a reason why they do so: workers have mistaken forecasts regarding their social interactions. In particular, the symposium showcases four distinct contexts of social interactions – talking to dissimilar others, seeking help, gossiping, and being humorous – and suggests methods for improving social capital and consequently career success. Taken together, these symposium presentations shed light on the various pitfalls, mistaken beliefs, and surprising ignorance we have when it comes to optimal workplace socialization. The research findings will encourage people to examine their own assumptions regarding social interactions at work, so that they can create more effective connections and uplifting moments, and achieve greater social capital for themselves in the workplace.

In alignment with the theme for AOM 2023, our symposium seeks to put the individual worker at the forefront and focus on how we can help essential workers recover from workplace challenges that affect them both at work and outside of work. As workers take part in intense work intervals, it necessitates a recovery period in which they can relax and recover from workplace strains and demands (Sonnentag, Mojza, Demerouti, & Bakker, 2012). Researchers have proposed four different experiences of recovery (psychological detachment, mastery, control, and relaxation; Sonnentag & Fritz, 2007), and empirical work has begun to examine how workers use these processes individually and in tandem (Bennett, Gabriel, Calderwood, Dahling, & Trougakos, 2016; Sonnentag, Binnewies, & Mojza, 2008). The prevailing assumption is that when workers recover, it not only benefits the worker's level of strain from workplace stress but also prompts other positive outcomes for the worker. Yet, our understanding of recovery experiences has been relatively limited in terms of outcomes. While research has connected recovery processes to outcomes such as job performance (Liu, Ji, & Dust, 2021) and job engagement (Sonnentag, 2003), there remain a great deal of personal and professional outcomes that our papers seek to connect directly to recovery processes. Our symposium investigates the ways that recovery practices can enhance personal and workplace outcomes by examining both common and novel recovery processes (including sleep, leisure time, social support, and coping) and considering their impacts on individual work behavioral outcomes. Specifically, the papers in our symposium explore behavioral outcomes of physiological and psychological resource replenishment, career outcomes from dyadic leisure practices, employee voice outcomes from discussing work at home, and well-being outcomes from collections of individual coping strategies. Across these papers, we also take a dynamic approach to consider how recovery processes and subsequent effects can differ across time.

Contextualizing the Self in the Workplace: Problems and Solutions for the Study of Authenticity

Moderator: **Erica Bailey**, *Columbia Business School*
Moderator: **Kyle Dobson**, *U. of Virginia*
Panelist: **Sandra Cha**, *Brandeis U.*
Panelist: **George Newman**, *U. of Toronto*
Panelist: **Jacob Brown**, *U. of Illinois at Urbana-Champaign*
Panelist: **Julianna Pillemer**, *New York U.*

Decades of research document the significant benefits of authenticity both in personal and professional life. As many as 60 studies have found that authenticity is linked to greater well-being and meaning in life (for a review, see Sutton, 2020), heightened self-esteem (Heppner et al., 2008), lowered stress (Wood et al., 2008), and better interpersonal relationships (Brunell et al., 2010; Le & Impett, 2013). In the workplace, employees who feel and express themselves authentically are more engaged (Bailey et al., 2022; Cable et al., 2013); while experiencing inauthenticity at work depletes employee resources (Reis et al., 2016). Authenticity occurs when individuals express their core or inner selves (Kernis & Goldman, 2006). At first blush, this definition seems straightforward, describing an intuitive phenomenological experience that occurs on an almost daily basis (Huber et al., 2022). Despite this apparent simplicity, questions remain regarding what authenticity precisely is, how to measure it, and how to access it in professional life. These questions have led to frustrations as researchers try to wrap their arms around its theoretical boundaries, even leading some to question the validity of authenticity as a scientific construct (Baumeister, 2019, Sedikides et at al., 2018, Rivera et al., 2019). Given the benefits of authenticity for individuals and their organizations, the goal of this panel is to expose these challenges directly as well as provide solutions for how to approach authenticity as a topic of theoretical and empirical study. In our proposed panel symposium, we will bring together leading experts on the topic of authenticity who will discuss the hurdles, pain points, and breakthroughs they have experienced in studying this elusive topic. Points for discussion include: Is the axiom to "bring your whole self to work" an appropriate suggestion? How might expressed authenticity impact work relationships? Is authenticity experienced differently across organizational contexts? Across organizational hierarchies? What are the potential perils of authenticity when we try to relate to one another in a personal manner? What does the next decade of authenticity research look like? What advice do you have for organizational scholars interested in studying authenticity?

It is a common assumption that organizations should avoid “bad” behaviors, as such behaviors have very few positive outcomes or they are likely motivated by undesirable antecedents. In this symposium, we question this prevailing wisdom, in several ways. We suggest that bad behaviors may both inspire positive outcomes (task performance) and be motivated by seemingly “positive” or innocuous antecedents (gratitude, psychological distance). Additionally, we find that engaging in “bad” behaviors (expressing anger) may have positive relational consequences. Together this symposium explores a series of counterintuitive findings that help explain why bad may be good, and good bad in ways that helps illuminate unexpected behavioral mechanism in workplace relationships.

Resource-Based Perspectives on Change: Dynamic Capabilities, Bricolage, and Mothers

Session Moderator: **Valter Moreno**, *Rio de Janeiro State U. (UERJ)*

ODC: **From Managerial to Organizational Dynamic Capabilities: Enabling Adaptability in Turbulent Times**

Author: **Valter Moreno**, *Rio de Janeiro State U. (UERJ)*
Author: **Flavia Cavazotte**, *Pontificia U. Catolica de Rio de Janeiro*
Author: **Carlos Cesar Valentim Alves**, *CVM*

This study explains how dynamic managerial capabilities (DMCs) are interrelated to dynamic organizational capabilities and competitiveness in highly turbulent environments. We conducted a case study in an IT company operating in the Brazilian oil and gas industry during a major crisis that hit the sector between 2012 and 2016. The analysis of data from in-depth interviews and participant observation shed light on how the arrival of a new executive leader with distinctive DMCs mobilized the reconfiguration of ordinary resources and capabilities, thus encouraging the development of DMCs in the management team and progressively enhancing the company's dynamic capabilities. We identified three mechanisms leveraged by DMCs in the strategic planning cycles that enabled the organization's dynamic capabilities: improved capacity to monitor and seize opportunities, increased agility and autonomy in decision-making, and enhanced leadership effectiveness in the implementation team. The results are discussed, considering theoretical and practical implications.

ODC: **Innovating through Bricolage under Resource Constraints**

Author: **NABILA ABID**, *U. degli Studi "G. d'Annunzio" Chieti - Pescara*
Author: **Federica Ceci**, *G. D'Annunzio U. of Chieti-Pescara*

Small and medium enterprises substantially accelerate the global economy and serve as a backbone to developing countries' economies. However, firms operate under severe resource constraints, and the lack of innovation and entrepreneurial orientation has sparked the failure rate in recent years. The current literature does not provide sufficient information on how firms operate under such constraints. Therefore, to fill the gap in research, we highlighted the role of "bricolage," defined as "making do with whatever is at hand," and posit it as the ultimate solution to deal with the crisis SMEs face due to lack of innovation. By drawing perspective from a resource-based and dynamic capabilities perspective, the present study has explored the impact of bricolage on innovation performance using data from 383 SMEs operating in Pakistan. Considering the hostility of the market, we have framed dynamic capabilities, entrepreneurial orientation, and environmental volatility as mediators and moderators' factors in our model. The structural equation modelling technique was used to test the hypotheses. Evidence of benefits suggests that bricolage promotes innovation performance and entrepreneurial orientation through moderation and dynamic capabilities indirectly influencing the process. However, environmental volatility does not moderate the dynamic capabilities and innovation performance linkage. The study highlighted the significance of bricolage, which helps firms excel in resource constraints by "utilizing, recombining" the existing resources to create innovative outcomes. The study provides theoretical and practical implications to the relevant stakeholders.

ODC: **Towards a Performantive View on Dynamic Capability Enactment in Small and Medium-sized Enterprises**

Author: **Alexander Engelmann**, *WU Vienna U. of Economics and Business*

Prior research mainly assumed that the dynamic capabilities (DCs) of small and medium-sized enterprises (SMEs) manifest in specific business processes, such as product development processes, portfolio planning, and customer management. Although that research significantly enhanced our understanding of how DCs benefit SMEs' growth and innovation, scholars assumed away the question of how archetypical SME attributes, such as low professionalization of strategy work and high informality, might lead to distinct enactment of DCs in interactional patterns rather than in formalized business processes. This study thus built on recent theorizing on the interactional substrates of DC enactment and examined how practitioners perform the sensing and seizing of entrepreneurial opportunities and the according transformation of their assets and organisation in practice. The findings reveal a set of social practices that describe how SMEs effectively reconfigure their assets and operations without a recourse to process formalization. The dynamization of these practices unfolded through specific styles of communicatively embodied interaction: i.e., resonant, generative, and coordinative communication. By offering a communicative explanation of DC enactment, the findings contribute empirical substantiation and novel insights into the idea that organisational communication is a critical component of DC development and deployment.

ODC: **The Woman Behind the Scenes: The Influence of Heirs' Mother in Family Business**

Author: **Yi-Chun Lu**, *Department of Business Administration, Soochow U.*
Author: **Kelly Xing Chen**, -
Author: **Hsi Mei Chung**, *I-Shou U., Taiwan*
Author: **Kevin Au**, *Chinese U. of Hong Kong*

Increasing studies recognize the important role of women in family business. While prior studies mainly highlight the role of women as daughter (being a female heir or a female entrepreneur), our study aims to explore the role of women as heirs' mother in large family business. Inspired by the "uterine family" in anthropology and resource dependence theory, we expect that a mother in a polygamous business family would strategically allocate her resources to enhance the chance of one of her children becoming the successor, which influence power imbalance among heirs. Using a family business group in Taiwan as our research context, we found that the heirs of the same mother are more likely to have greater power imbalance in the family business group. Our study contributes to succession and family business literatures by enriching the understanding of heirs' mother in family business.

Job and Workspace Crafting in Diverse Physical, Remote, and Hybrid Spaces

Session Moderator: **Marie Hasbi**, *Vrije U. Amsterdam*

ODC: **The Production of Hybrid Workspace**

Author: **Marie Hasbi**, *Vrije U. Amsterdam*
Author: **Alfons Van Marrewijk**, *BI Norwegian Business School*

This paper studies micro-processes of organizational change when introducing the concept of hybrid workspace, which is the working of employees at multiple workplaces. The topic has received much attention during and after the Covid pandemic. Drawing on a longitudinal qualitative study of a major European bank in Paris, we foreground the introduction of hybrid workspace as a change process connecting space, technology, and human agency. We found four contradictions related to the introduction of hybrid workspace: (1) connecting with versus disconnecting from others; (2) agile versus sedentary work; (3) paperless versus paper based-working; (4) home workspace versus organizational routines. These findings contribute to the literature on the production of hybrid workspace suggesting recognizing users' sense making and improvisation, and calling to recognize and embrace contradictions in managing change process.

ODC: **The Dirty Workers Among US**

Author: **DeAndrea Y. Davis**, *U. of Dallas, Satish & Yasmin Gupta College of Business*
Author: **Richard J. Miller**, *U. of Dallas*
Author: **Scott Wysong**, *U. of Texas at Dallas*

This study evaluates job crafting as a strategy hospitals may utilize with guest services personnel to promote growth, reduce turnover, and increase work engagement, while simultaneously improving the quality of patient care and growing individual workers. This paper admonishes healthcare organizations to invest in marginalized workers who are mission-centric and critical to the continuity of healthcare systems and patient care. This study shows that individuals who job craft do so proactively, leading to work engagement; however, this study postulates that the relationship with the leader impacts employee self-determination, job crafting, and work engagement. Study data included a sample of 83 hospital cleaners and food and nutrition workers in a North Texas regional hospital. Moderated mediation was assessed using PROCESS macro for SPSS®. Each job crafting factor was assessed individually to understand the interactions of each with self-determination, work engagement, and LMX. Results suggest a significant positive relationship between self-determination, relational and cognitive job crafting, and work engagement for dirty workers. Only cognitive job crafting was found to be a full mediator of self-determination and work engagement; no support was found for LMX as a moderator.

ODC: **Understanding Happy Remote Workaholics: The Role of Leisure-Time Exercise**

Author: **Yu-Yu Chang**, *National Cheng Kung U., Taiwan*
Author: **Shih-Yin Kuo**, *National Cheng Kung U.*

The profound impacts of the COVID-19 outbreak have made working from home a new common to company personnel due to the various restrictions enacted by governments and organizations to prevent disease spread. Not only have individuals' mobility and social activities been reduced by the pandemic-induced remote working practice, but they have also been deprived of the opportunity to engage in physical activities. The unexpected working from home blurs the boundary between work and life, making employees vulnerable to overcommitment, emotional instability and deterioration of overall work experience. Using a large-scale sample from a questionnaire survey on 2,063 company employees who were experiencing unplanned remote working during the Level 3 epidemic alert in Taiwan, we tested a moderated mediating model that clarifies how overcommitment influences remote workers' work engagement, job commitment, and subjective wellbeing through affecting their emotional stability. Essentially, we investigate the moderating role of leisure-time exercise. Our findings suggest that overcommitment reduces remote workers' emotional stability and subsequently exerts an indirect negative impact on their work engagement, job commitment, and subjective wellbeing, especially when they engage in low levels of leisure-time exercise. Surprisingly, overcommitment may enhance employees' subjective wellbeing, work engagement, and job commitment by stimulating emotional stability when they regularly engage in high levels of leisure-time exercise. Our findings shed new light on the HRM policy for the prevalent remote working for the future organization as well as bringing about a new avenue for organizational research.

ODC: **Making it Work but Keeping it Small – Professionals' Engagement with Self-initiated Change**

Author: **Clarissa E. Weber**, *U. of Goettingen*
Author: **Marilena Diel**, *U. of Goettingen*
Author: **Christian P. Kortkamp**, *U. of Goettingen*

Research on professionals' behavior in the context of change has extensively explored how professionals counter change initiatives, such as by engaging in boundary-work activities to protect and defend their professional roles, jurisdictions and domains. While much of this research has focused on change initiatives mandated by third parties (such as managers or governments), practical evidence surprisingly shows that change initiatives may even be affected by such reaction when the professionals themselves have made the initial decision to implement change—a phenomenon that is currently not well understood. Given that failed change attempts may cause considerable inefficiencies and prevent improvements in work execution, we explore how professionals engage with their own change initiatives. We study this question empirically in the context of German general practitioners (GPs) who decided to implement video consultations (VC) into their everyday work. Our findings present comprehensive insights into how GPs engaged in various—and at times seemingly paradoxical—efforts. These efforts served to generally enable task fulfillment and keep up high-quality healthcare provision (making it work) as prescribed by their professional ethos. Yet, driven by a perceived threat of their professional role when using VC, professionals also engaged in various efforts to guard their professional authority and delimit the legitimacy of VC; thereby countering their own change initiative (keeping it small). We contribute to our understanding of professionals' behavior in response to change. Given the context of our study, we also contribute to research on virtual work and to the evolving literature on professionals' dealing with the implications of the COVID-19 pandemic.

The Handbook of Methods in Organizational Change Research, a volume in Edward Elgar's series of research methods handbooks, will be published in the Summer of 2023. Each chapter in the handbook addresses unique frameworks, theories, approaches, ontologies, epistemologies, and values that researchers can adopt. The methods are particularly suited for studying organizational change, highlighting current trends while presenting ideas about the future of research within the field of Organizational Development and Change. A natural next step is to convene an opportunity where contributors can not only situate their work and thoughts within the broader themes of the book but also interact in real-time with fellow thought leaders – scholars and practitioners– to participate in dialogue that can further the discussion on the future of organizational change research. We plan to create this space through a symposium at the 2023 Academy of Management Conference in Boston, MA, where the editors, authors, and participants can engage with one another. Jennifer Y. Kim (Tufts University) will, along with fellow editors David Szabla (Western Michigan University), Bill Pasmore (Teachers College, Columbia University), and David Coghlan (Trinity College Dublin) will share how the handbook was conceived, how contributing authors were engaged to participate, and how these chapters emerged. Selected contributing authors will be featured on the panel and asked to share their experience crafting and writing their chapters while discussing current and future trends of organizational change research. Importantly, in light of the 2023 conference theme Putting the Worker Front and Center, the discussion will feature how research methods can be adapted to center on employee experience and voice and what can be done to humanize the worker in the face of recent events, including COVID-19 and recent social and political unrest.

Strategic Firm Alliances and Acquisitions

Session Moderator: **Fan Xia**, *Rennes School of Business*

OMT: **Strategic Renewal and Resource Redeployment in Horizontal Acquisitions**

Author: **Fan Xia**, *Rennes School of Business*
Author: **Gordon Walker**, *Southern Methodist U.*

We estimate and compare the operating performance of two dominant rationales for horizontal acquisitions: strategic renewal and resource redeployment. We define a deal as strategic renewal when an acquirer with low growth potential acquires a high growth potential target. In resource redeployment deals, a high-growth potential acquirer buys a low-growth potential target. We argue that both types of acquisition entail a transfer of knowledge related to growth potential either to the acquirer (strategic renewal) or from it (resource redeployment). Based on the literature regarding knowledge transfer in organizations, we hypothesize that, although both types of deals may have positive returns, the returns to strategic renewal-type deals will be higher. Our method uses a Difference-in-Differences fixed effect model design with Kernel-weighted Propensity Score Matching among comparable firm pairs to measure synergy and to control for endogeneity and portfolio effects using data on U.S. firms over thirty years. We also developed an accounting-adjustment formula to calculate comparable post-M&A operating performance.

OMT: **The Unintended Consequences of Strategic Alliances on the Stability of Supply Relationships**

Author: **Jongyoun Baek**, *INSEAD*
Author: **Martin Gargiulo**, *INSEAD*

This paper studies the unintended consequences of alliances between organizations separated by two steps in a supply network. We argue that those alliances create a structure through which a supplier can indirectly influence the behavior of one of its clients through its alliance with one of this client's customers, independently of the motives that prompted the supplier to enter the alliance. This, in turn, can lead the client to reconsider the convenience of maintaining the commercial relationship with this supplier, especially when the client can switch demand to other suppliers within or outside their current supply network. We find partial support for our hypotheses on a sample of triadic supply chain relationships and alliances in the automotive industry between 2005 and 2020. Our results contribute to developing a dynamic version of resource dependence theory by highlighting the effects of attempts to manage resource interdependencies on the stability of such interdependencies.

OMT: **Orchestration of Collective Resilience by Local Community Stakeholders Following Acquisition**

Author: **Nguyen Thi Quynh Thuong**, *U. Toulouse Capitole*
Author: **Audrey Rouzies**, *U. of Toulouse*

Merger and acquisition literature has neglected the role of stakeholders in the local community and considered their reaction as mainly negative which the firm should avoid. We contend that stakeholders in the local community do not react only with resistance and boycotts and explore their positive agency. Through a qualitative single case study, we study how stakeholders from different institutions in the local community orchestrate collective resilience to cope with challenges that arise from a post-acquisition restructuring. Our study shows that the quality of their pre-existing relationships is a precursor to the initiation of non-contractual inter-organizational collaboration. Stakeholders form a common interest despite their different institutional affiliations and view their agency as crucial to overcome the restructuring. They coordinate tasks and actions by mobilizing each other's prerogatives (knowledge, economic and political). We find that their agency has positive consequences on an array of stakeholders such as employees, higher education institutions and businesses. Our findings advance our understanding of the agency of local community stakeholders by illuminating the power of collective resilience. Our findings also contribute to the micro-foundations of stakeholder theory by unearthing the micro-aspects of stakeholders' motivations and their collaborations.

OMT: **Competitive Embeddedness and Resource Commitment in Alliances**

Author: **Alex Makarevich**, *California State U., East Bay*

We explore the relationship between competition among alliance members and their resource commitment to join ventures. We draw on the embeddedness theoretical perspective and, in particular, on the notion of competitive embeddedness to theorize this relationship. Our empirical analyses of the venture capital (VC) industry spanning a 40-year period show that VC syndicates with a higher degree of competition among members commit more resources to new ventures. We suggest that a signal-related and a collaboration-related mechanisms of competition generate this result. Further, we find that alliance members' experience, market segment specialization, and centrality in the industry network weaken the effect of competition on resource commitment, while shared third-party connections amplify it. This study shows that, counterintuitively, competition among firms can lead to greater, not lesser, commitment of resources to their joint ventures. The results of this study advance our understanding of the interplay of competition and cooperation, resource commitment to new ventures, and effects of competition on third parties. They also have practical implications for VC firms and entrepreneurs seeking VC funding.

Paradoxes and Paradoxical Tensions in Organizations

Session Moderator: **Bennet Schwoon**, *U. of Zurich*

OMT: **Deliberate Organizational Responses to Sustainability Paradoxes! The Case of Hate Speech Governance**

Author: **Bennet Schwoon**, *U. of Zurich*
Author: **Stefan Schembera**, *Radboud U., Netherlands*
Author: **Andreas Georg Scherer**, *U. of Zurich*

The increasing prevalence of online hate speech has become a mayor sustainability issue. Its governance is mainly left to the self-regulation of online platform providers who struggle specifically with the question of how they should respond as an organization to online hate speech. This is a problem because in face of the paradoxical tension between foundational values such as the freedom of speech and human dignity it remains unclear what the right thing to do actually is. Surprisingly, despite intensive empirical research scholarship on sustainability paradoxes remains largely silent about the normative question of how organizations should respond to sustainability paradoxes. To open-up the black box of normativity and paradox, we build on a strong notion of normativity derived from deliberation scholarship, provide a framework to describe normativity as an empirical phenomenon, and develop processual evaluation criteria to critically assess the normative quality of organizational responses. In a longitudinal single case study over 13 years we analyse the moderation of online hate speech by an online platform of a news provider. We contribute to literature on sustainability paradoxes and organizing sustainability more broadly. With normative-decision making we uncovered a new process-based normative justification of responses to sustainability paradoxes. The more, based on a strong notion of normativity we identify three mechanisms – deliberative capacity, emotional attachment, and legitimacy – which drive changes in normative justifications and help us critically evaluate the normative quality of responses to sustainability paradoxes. We conclude that a normative decision making response is of highest normative quality.

OMT: **Families or Assets: Unpacking Moral Responses to Paradoxical Tensions in Social Housing**

Author: **Ferran Torres**, *U. Ramon Llull, ESADE Business School*
Author: **Guillermo Casasnovas**, *ESADE Business School*
Author: **Ignasi Marti**, *EMLYON Business School*

Responses to organizational paradoxes have been unpacked from descriptive and instrumental perspectives. However, when organizational actors construct responses to paradoxical issues they also draw on their morality. Accordingly, in this paper we seek to advance our understanding of the moral dimension of responses to paradoxical tensions. More precisely, we aim to unpack the mechanisms through which people at different levels in an organization affecting the life of many vulnerable families morally respond to paradoxical demands. Through a qualitative study, we explore how people morally respond to the paradoxical tension between social and economic demands in the context of social housing. Our findings expand on the moral microfoundations of tensions exploring how people make sense of and adjust their responses to the synergic, yet competing economic and social demands of their work when dealing with vulnerable people. We contribute to paradox theory in two ways. First, we unpack the moral charge of organizational paradoxes in situations where people need to decide on the fate of others. In doing so, we show how the moral charge not only changes between poles (e.g., social and commercial), but also across the nested levels of paradox (e.g., paradoxes enacted at the strategic level vs operational level vs field level). Second, we explore the mechanisms through which actors operationalize moral responses, and how they dynamically (morally) charge and discharge interactions.

OMT: **Practicing Organizational Sustainability through Deparadoxization**

Author: **Ignas Bruder**, *Hertie School*
Author: **Julia Bartosch**, *Radboud U. Nijmegen*
Author: **Joerg Sydow**, *Freie U. Berlin*

Businesses engaging with sustainability obviously face paradoxical tensions, in particular between social and environmental concerns on the one hand and economic demands on the other. With an in-depth ethnographic study investigating a natural cosmetics business that ambitiously subscribes to sustainability, we uncover how this organization succeeds in continuously reproducing a normativity catering to environmental and social concerns. Building on the concept of “deparadoxization,” we discover how a unidirectional pattern of prosocial or proenvironmental deparadoxization creates a recursive loop that, as an important side-effect, facilitates endeavors to meet economic demands and thereby constitutes a viable response to paradoxical sustainability tensions. This response differs from established balancing approaches that encompass deparadoxization oscillating between these contradictory poles, which we also identified in our case. Whereas paradox scholars have established the importance of makeing sustainability paradoxes salient to increase the organizational sustainability, we discover, rather counter¬intuitively, the potential of paradox latency in businesses striving for sustainability. This paper contributes to paradox theory by unearthing the generative potential of paradox latency and linking its reproduction to the normativity inherent in daily practices. By revealing the crucial role that normativity has in organizational sustainability and the manner in which it paves the way toward a “sustainability case for business,” we contribute not only to sustainability research but also, more broadly, to management and organization theory.

Buiilding Legitimacy in Organizations and Institutions

Session Moderator: **Julia Stephanie Thaler**, *U. of the Bundeswehr Munich*

OMT: **Experimental Evidence about Individual Judgments of Organizational Legitimacy**

Author: **Julia Stephanie Thaler**, *U. of the Bundeswehr Munich*
Author: **Martin Sievert**, *Leiden U., The Netherlands*
Author: **Alexander Pinz**, *U. of Mannheim*

Previous research emphasizes the relevance of organizational legitimacy's micro-level component: propriety beliefs. These result from individual evaluators' (the audience) judgments about an organization (the legitimacy object), grounded in expectations characterizing their relationship. We conceptualize evaluators' expectations as organizational prototypes, referring to organizations perceived as appropriate in the relationship's context. We specify how this heuristic affects propriety beliefs. Addressing the multi-level conceptualization of legitimacy, we also account for validity (macro-level) and consensus cues (meso-level). Two representative factorial survey experiments with more than 1,800 adults indicate that prototype alignment predicts evaluators' propriety beliefs. Additionally, low validity and low consensus reduce propriety beliefs, with consensus decreasing the impact of validity. We contribute to legitimacy-as-perception research by theorizing and empirically demonstrating that evaluators' expectations can be approximated through prototype alignment. Counterintuitive results indicate that validity and consensus cues have a limited impact on propriety beliefs because only negative cues exhibit significant effects.

OMT: **Constructing a Spatial Theory of Legitimacy**

Author: **Claudio Biscaro**, *Johannes Kepler U. Linz*
Author: **Elena Bruni**, *Luiss Guido Carli U.*
Author: **Katharina Musil**, *Johannes Kepler U. Linz*

This paper theorizes three rhetorical mechanisms to establish legitimacy that alter the topological structure of meaning. Empirically, we analyzed the figures of speech used in the highly contested debate around cruise ships in Venice, Italy. Drawing on the cognitive linguistic concept of image schema, we propose that figures of speech establish legitimacy by (1) exploiting core or peripheral features of the context in which legitimacy is needed, (2) creating conceptual hierarchies, and (3) constructing containment. We propose that these mechanisms affect legitimacy by altering concepts' desirability and appropriateness. We contribute to the literature on legitimacy construction by embedding these rhetorical mechanisms in a theoretical model that explains how figures of speech can be used for establishing or eroding legitimacy.

OMT: **Certification Emergence and Legitimation: An Institutional Agent and Institutional Work Perspective**

Author: **Scott Taylor**, *U. of Washington*
Author: **David G. Sirmon**, *U. of Washington*

While institutional theory has explained what certifications are and their major effects, the benefits and outcomes of certification are based on the assumption that certifications are already available and legitimate. However, in order for certifications to have salient market outcomes, certifications need to be created and legitimized. As such our theoretical focus is on an earlier stage of certification prior to their emergence and legitimation which we term proto-certification. Using institutional theory as a base and specifically applying the literature on institutional work and its agent-driven logic, we theorize that certification emergence and legitimation require the concurrent presence of 1) market ambiguity and 2) stakeholder pressure and the intentional actions of institutional agents. That is prominent stakeholders requiring resolution of salient market ambiguity trigger institutional agents to create proto-certifications and work to gain legitimacy. We develop a theoretical model to illustrate this institutional agent-driven process of certification emergence and legitimation and describe when we would expect certifications to emerge, how the certifications obtain legitimacy, and whether the process will repeat itself.

OMT: **Complementarity Mechanisms of Authenticity and Legitimacy in Value Development**

Author: **Mohammadamin Yousefi**, *Rotterdam School of Management, Erasmus U.*
Author: **Frank Wijen**, *Erasmus U. Rotterdam*

Legitimacy and authenticity-seeking demands have been treated as conflicting forces: compliance with others rejects being true to oneself. Yet at the organizational level we observe instances where both concur, acquiring one without losing the other. In the absence of a processual understanding of their concurrence, we integrate diverse streams of research and develop a theoretical framework to explain how an organization can accomplish both legitimacy and authenticity. By taking a value-focused perspective, we identify four mechanisms (imagination, evangelism, shame, and conversion) that an organization goes through to merge legitimacy and authenticity. The concurrence of these mechanisms significantly enhances the convergence of legitimacy and authenticity. These processes function under the conditions of field opacity, moderate value dissonance, and value salience. Elaborating on the complementarity mechanisms of legitimacy and authenticity adds to the literature on institutional substreams of values and identity.

OMT: **Collective Authoring: Constructing the Legitimacy of Action in Post-bureaucratic Settings**

Author: **Lauri Pietinalho**, *NYU Stern School of Business*
Author: **Frank Martela**, *Aalto U.*

As organizations grow more post-bureaucratic and self-managing, stable sources of authority partly lose their significance, leading to the legitimacy of action becoming increasingly interpreted and constructed in collective dialogue. However, we know relatively little about how such construction occurs. In a qualitative study into three hierarchically flat mid-sized Nordic software consultancies where we utilize interviews and internal discussion forum records, we draw from notable emergent communicative episodes where the legitimacy of actions was debated. We find that in such episodes, actions became deliberated in reference to a number of inconclusive and dissonant organizational guiding values. The discussions often did not change the specific action, but transcended into meta-conversations in which the guiding values themselves became re-contextualized and re-interpreted. We conceptualize such dialogues as 'collective authoring' and identify their modalities of construction—exposing contradictions, elaborating premises, and expanding balancing of values—through which both the interpretations of the legitimacy of the specific action and the related values guiding future action were concurrently constructed. We conclude by discussing how the study extends research on organizational authority, communicative constitution of organization, and post-bureaucratic, self-managing organizations.

The Dynamics of Categories in Feature Films and TV Series

Session Moderator: **Anton Andersson**, *McGill U. - Desautels Faculty of Management*

OMT: **From the Silver Screen to the Streaming Site: Blurring of Category Boundaries in Hollywood**

Author: **Anton Andersson**, *McGill U. - Desautels Faculty of Management*

Most existing market category studies either focus on the process of category emergence or the repercussions organizations face when spanning between stable categories. In this paper, I investigate the process of category change. More specifically, I focus on the blurring of category boundaries. The few studies that have explored category change have mostly emphasized the role of purposeful producers acting as change agents. However, I argue that also non-producers, such as market intermediaries, act strategically in established category systems and can play the role of category change catalysts. I examine these claims empirically in the screenplay market. I find that purposeful on-demand streaming sites leveraged the growing popularity of their platforms to willfully blur the boundaries between the feature film and television series categories. I theorize that market intermediaries in mediated distributor markets can blur category boundaries by delaying the moment when audiences must choose between categories, by stripping categories of their distinct category associations, and by introducing new cross-category associations. Moreover, I show the effect that blurring boundaries have on category status and in which categories high-status screenplay actors chose to claim membership. I close by discussing implications for future research on category change.

OMT: **What Determines the Category-Spanning Activities of Organizations? A Content-Based Approach**

Author: **Jie Yang**, *U. of Manitoba*

Category spanning is widely observed in modern society despite the robust evidence that category spanners tend to be ignored or devalued. Driven by a value logic, extant literature argues that producers may actively engage in category spanning either to capture the hidden value that is not observed by peers or to lessen the value loss of being confined to a special category. We argue that category spanning should not be viewed only as a market move activated by strategic producers. Instead, category spanning may embody the heterogeneous perception of audiences when they are exposed to an offer with a wide range of features. We summarize the new reasoning as a content-based approach and propose that the volume, diversity, and presentation of product contents positively affect the level of category spanning perceived by individual customers. We maintain that the relationship between rich content features and multi-category membership is valid no matter what evaluation modes (prototype-, goal-, or exemplar-based) audiences use to categorize the offer. Our hypotheses are tested in the North American feature film industry. This research advances category research by linking product contents with audiences' heterogeneous category perception.

OMT: **Evaluation of Categorical Atypicality: The Role of Contextual Emotional Factors**

Author: **Arnaud Cudennec**, *Hong Kong Polytechnic U.*
Author: **Chang Wa Huynh**, *HEC Paris*

Existing research documents how cognitive mechanisms affect audiences' taste for atypicality but fails to account for more contextual factors, including emotional factors. Answering calls on the joint study of cognitive and emotional factors, we investigate the role of emotional mechanisms in the appraisal of cultural atypicality. We study the context of movies' atypicality in terms of their genre. We contend that the anxiety leads individuals to evaluate movie atypicality less positively. We test our hypothesis using a mixed-methods design in the context of movie evaluations (difference-in-difference using COVID-19 lockdown and preregistered controlled experiment). We find that anxiety triggered by the lockdown negatively moderated the impact of movie atypicality on movie evaluation. Our findings have implications for research on social evaluations, categorization in cultural markets and the consequences of policies aimed at containing the COVID-19 pandemic.

OMT: **Categorical Distinctiveness, Category Spanning, & Attention Endurance: A Configurational Perspective**

Author: **Yau Chau**, *City U. of Hong Kong*
Author: **Stan X. Li**, *City U. of Hong Kong*
Author: **Bryan Spencer**, *City U. of Hong Kong*

The categories literature generally assumed that categories are quick decision toolkits to simplify evaluation when audiences utilize cognitive resources sparingly. However, from both theoretical and practical perspectives, categories are present to inform decision-making even when audiences engage in effortful evaluation. Under such evaluation, categories would undergo systematic processing rather than serving as mental shortcuts. As effortful evaluations are likely to occur when audiences make important decisions, not knowing how categories play a role in such a situation limits our understanding of how categories and their associating properties affect attention. We propose that audiences are likely to engage in effortful evaluation when they examine older products for a critical decision. Products that continuously attract audiences' attention are termed as having high "attention endurance." Drawing from the category-spanning literature, we identified three conceptual fragments that could determine attention endurance: categorical distinctiveness, capability signals, and ambiguity signals. We differentiate between within-category distinctiveness (i.e., contrast) and between-category-combination distinctive (i.e., category-combination uniqueness) and theorize their effects, respectively. By adopting a configurational approach, we study the context of online US feature film reviews using fuzzy-set qualitative analysis (fsQCA). We propose multiple context-dependent paths that link categorical distinctiveness to attention endurance.

Learnings from Universities and Colleges

Session Moderator: **Kunyuan Qiao**, *Georgetown U.*

OMT: **Founding Zeitgeist and Competitive Advantage: A Longitudinal Study of American Universities**

Author: **Kunyuan Qiao**, *Georgetown U.*

American universities were imprinted with their founding zeitgeists, which have persistently influenced their competitive advantages—namely, strengths in certain academic disciplines. I argue that colonial colleges (founded before 1776) are strong in most academic disciplines, although they excel at classical liberal arts. Competitive advantages of antebellum colleges (founded between 1776 and the 1862 Morrill Land Grant Act) and postbellum universities (founded between the Morrill Act and World War I) include the science and practical disciplines, respectively. At the same time, federal research grants sponsor science disciplines and thus strengthen such disciplines at sponsored universities. Drawing on a hand-collected data set of American universities and combining longitudinal analysis and natural language-processing techniques, I find support for all hypotheses with one exception: postbellum universities do not excel at practical disciplines than colonial colleges and antebellum universities. My study sheds new light on the imprinting perspective, institutional theory, and competitive advantage of organizations.

OMT: **Enduring Ambiguity in Rule Proliferation**

Author: **Julie Ricard**, *École des sciences de la gestion (ESG UQAM)*

Recent years have made world populations resilient to the addition and change of rules and regulations. The recent pandemic has required governments at different levels to adjust practices and implement stricter regulations. Some rules were changed, some were added, and some were complexified. Ambiguity in applying some of these rules was sometimes caused by their modification, removal, or the addition of new ones. This phenomenon of rule content complexification, rule changes, and rule additions, is defined as rule proliferation. In the context of an embedded longitudinal case study following the life of one rule conducted in a pluralistic organization; we observed the emergence of four areas of ambiguities generating further rule proliferation. The case study selected is the life of one bureaucratic rule in a university, namely, the clause-reserve rule indicating how teaching load reserves are to be distributed between visiting professors and graduate students before they are allocated to lecturers. It presents findings and contributions about the role of emergent and enduring areas of ambiguities in the process of rule proliferation. The enduring nature of these areas of ambiguity cultivates the process of proliferation. We conclude that organizational rule proliferation is a process in which the autonomous and control regulations interplay by fostering enduring areas of ambiguities that require resolving. These results contribute to the literature on the sociology of organizations, bureaucracy theory, and organizational learning. Because this study takes place in a pluralistic setting, it further contributes to research on pluralistic organizations.

OMT: **Transnationalism and Social Cultural Exchange: New Theoretical Insights on Sources of Organizational Change**

Author: **Daniel Auguste**, *Florida Atlantic U. College of Business*

A core motivation of organization research is understanding why organizations constantly evolve despite organizational affinity for familiarity and stability. Some suggest the extent to which organizational actors are exposed to alternative cultural schemas as a source of cultural contradictions motivating the creation of organizational alternatives. This literature, however, focuses mainly on sources of organizational alternatives emerging from immediate organizational environment, overlooking potential sources of organizational alternatives deriving from organizational embeddedness in the global cultural environment. I propose a dialectical process of organizational change emphasizing transnationalism as a viable source of organizational alternatives, and organizational culture and evolutionary history as organizational absorptive capacity, shaping organizational change process. Thus, I advance the cultural evolutionary approach, while departing from the creative destruction perspective, by demonstrating that organizational change is a continuity of organizational culture and identity. Finally, I illustrate my argument by describing the process of a recent organizational change at Brooklyn College.

OMT: **How Many Rankings Are Enough? The Joint Assessment of Plural Evaluations**

Author: **Chris Moos**, *U. of Oxford*

How does the same group of stakeholders assess organizations in the context of plural evaluations? We address this question using a Fuzzy Set Qualitative Comparative Analysis to develop a configurational approach to assessing plural evaluations. Our approach advances our understanding of plural evaluations in three ways. First, our concept of the equifinality of plural evaluations shows how multiple configurations of plural evaluations can coexist in a field, yet produce the same stakeholder assessments. Accordingly, there is more than 'one best way' of dealing with plural evaluations. Second, our concept of the differential interactions of plural evaluations shows that prospective students assess MBA programs using multiple configurations of plural evaluations. The coexistence of multiple configurations means that plural evaluations interact differently across configurations - they may be both consistent and inconsistent. Third, our concept of the asymmetric effects of plural evaluations shows that in the eyes of stakeholders, being evaluated highly is not sufficient for high assessments, whereas being evaluated lowly can indeed be sufficient for high evaluations. These contributions are significant, as configurations of plural evaluations are of increasing empirical relevance in many contexts, such as corporate firms, hospitals, or business schools.

Organizational and Institutional Responses to Stigma

Session Moderator: **Ludovica Castiglia**, *IESE Business School*

OMT: **Escaping from Stigma: Strategic Responses of Foreign Companies in a Recently Stigmatized Market**

Author: **Anastasiia Prokopenko**, *U. Carlos III de Madrid*
Author: **Samira Reis**, *U. Carlos III de Madrid*
Author: **Olga Khessina**, *U. of Illinois at Urbana-Champaign*

A previously approved market may become stigmatized because of events external to organizations that operate in it. Unfolding market stigmatization may threaten performance of these companies and they will need to decide whether to stay or leave such a market. We develop a theory explaining how companies make such a choice. We propose that organizations decide to exit the market when the perceived risk from stigmatization overweigh the benefits from staying. We further argue that the perception of stigma risk is shaped not only by characteristics of organizations at risk for stigmatization, but also by characteristics of audiences that do stigmatizing. To test our theory, we rely on the current context of the Russia-Ukraine military conflict that has stigmatized the Russian market as a place for foreign direct investment and resulted in the mass exodus of foreign companies. The event history analysis of 1,334 foreign companies' decisions to exit Russia provides support to our theory. Ultimately, our paper suggests that to understand organizations' exit decisions from stigmatized markets, it is necessary to look not only at variation among the affected companies, but also at differences within stigmatizing audiences.

OMT: **Stigma as a Driver of Support: The Success of Polarizing Crowdfunding Campaigns**

Author: **Ludovica Castiglia**, *IESE Business School*

How and when do new ventures operating in highly contested and stigmatized domains manage to survive and even thrive? Studies suggest that stigmatized organizations are penalized: they have lower chances of survival and perform worse than non-stigmatized organizations. I argue that these effects are contingent on the extent to which tolerant audiences, those that are not part of the critical mass of stigmatizers, mobilize to support the focal organization. Specifically, I propose that the consequences of a stigma may even be positive for an organization (1) when it is the target of a particularly severe stigmatization process, i.e., when a greater number of stakeholders are involved in its stigmatization, and (2) when its stigma is polarizing, i.e., when the specific elements of the organization that are stigmatized are associated with values and beliefs that are central to but conflicting for different political ideologies. Under these conditions, tolerant audiences will more likely mobilize in support of the organization because perceiving central values to their identity under threat, overall increasing the organization's chances of survival. I test my theory using data from the entire universe of projects launched in the U.S. on the largest reward-based crowdfunding platform from its inception in 2009 until 2020 (331,305 campaigns). I find support for my predictions and evidence of the underlying mechanism. This study enriches our understanding of how stigmatized organizations manage to survive and thrive shedding light on the central role of polarizing stigmas and tolerant audiences.

OMT: **Time Will Tell: Category Reinvention as Incumbent Stigma Management Strategy in Contested Industries**

Author: **Hannah Schupfer**, *U. of Oslo*
Author: **Birthe Soppe**, *U. of Innsbruck School of Management*

Research on core stigma that affects an entire organizational category has often focused on category members' individual coping tactics. Only little work has shed light on how category members join forces to cope with category stigma. Through a qualitative study of the increasingly stigmatized oil and gas industry in Europe because of climate change concerns, we find that category incumbents conjointly engage in seemingly contradicting strategies to confront the stigmatic threat. We identify two stigma compliance strategies targeted at reinventing the devalued category in a favorable light. Yet, employing these strategies, a temporal void is created between category relabeling in the present and categorical promises that pertain the future. Filling this void, the incumbents deploy two stigma defense strategies in support of the stigmatized category as is. We derive a theoretical model of how seemingly contradicting stigma management strategies foster category reinvention as a subtle form of category maintenance when facing stigmatization.

OMT: **Tarred with the Same Brush? New Category Regulation and Growth in Stigmatized Industries**

Author: **Kevin Curran**, *U. of Amsterdam*
Author: **Jonathan Sitruk**, *Amsterdam Business School, U. of Amsterdam*
Author: **Balazs Szatmari**, *U. of Amsterdam*

New categories often emerge by offering a reduction of negative externalities associated with an established category and frame themselves as oppositional to the established category to legitimize themselves. However, when a new category emerges oppositional to an established category which is stigmatized it may struggle to avoid being treated harshly by regulators already regulating the established category. In this paper, we theorize that regulators will likely transfer punitive regulations to new categories oppositional to established stigmatized categories except in cases where the regulators have a history of proactivity, and that this proactive regulation also predicts the growth of the new category. We further predict that industry concentration in the new category will moderate the effects on regulation. We test our hypotheses on a novel dataset of cigarette and e-cigarette regulation and growth in the European Union (2016-2021). Our findings make several contributions to research on stigma reduction and stigma transfer in stigmatized categories.

This symposium focuses on the drivers of workplace inequality. Racial and gender inequalities are highly persistent in hiring and participation in the workplace. Past research shows that workplace inequalities are driven by two types of mechanisms: demand-side and supply-side mechanisms. In this symposium, we put together five papers that provide insights into how organizations and external stakeholders (e.g., labor market intermediaries) can mitigate or exacerbate these inequality drivers. Each paper investigates inequality mechanisms through either a supply- or a demand-side lens, examining multiple stages in the organization: applying, hiring, and contributing. Considered together, these papers shed light on how organizations can jointly think of supply- and demand-side factors when designing their hiring and knowledge contribution processes.

Social Inequality in Entrepreneurship: Insights into the Evaluations of Underrepresented Founders

Organizer: **Jean Joohyun Oh**, *Columbia Business School*
Organizer: **Kylie Jiwon Hwang**, *Northwestern Kellogg School of Management*
Discussant: **Sarah Kaplan**, *U. of Toronto*
Presenter: **Tiantian Yang**, *U. of Pennsylvania*
Presenter: **Aleksandra Joanna Kacperczyk**, *London Business School*
Participant: **Salem Alsanousi**, *London Business School*

Access to entrepreneurship and subsequent success are not equitable for all. Questions about disparities in entrepreneurship have garnered major attention in the literature, with many researchers particularly focusing on gender and race gaps in entrepreneurial entry. In recent years, scholarly investigation in this area has started to broaden, to include post-entry stages of entrepreneurship while also paying attention to other underrepresented groups of founders. This symposium aims to further this recent development by bringing together four presentations that provide insights into how various groups of underrepresented founders are disadvantaged in their evaluation by important decision makers across various stages of entrepreneurship. Each of our presenters highlight a different group of underrepresented founders (women, racial minorities, previously incarcerated individuals, and individuals from lower social class backgrounds) and evaluators (investors, potential hiring firms, current employers of intrapreneurs, as well as startup employees). Overall, our audience will leave the symposium with 1) new insights into the evaluations of underrepresented founders and 2) directions for future research at the intersection of entrepreneurship and social inequality.

Participant: **Dan Jun Wang**, *Columbia Business School*

This symposium seeks to explore the role of top executives and corporations in society, focusing on the factors that enable CEOs and firms to weigh in on controversial sociopolitical issues and respond to social protests. Structured around the same overarching theme –the determinants of CEO and corporate sociopolitical activism—the five presentations included in this symposium tackle the theme of CEO and corporate activism from multiple levels of analyses. The first three papers investigate what prompts CEOs to speak out on sociopolitical issues unrelated to their companies' core businesses, and what are the associated risks of entering the political debate. The last two papers broaden the level of analyses to the firm and community levels, respectively; using rich data from the Black Lives Matter protests, these two papers explore in what circumstances firms are more likely to respond to social movements. The discussant, Professor Chin, will integrate the five presentations, provide his feedback on each of them, and engage in a discussion related to the future research avenues that scholars broadly interested in the phenomenon of sociopolitical activism could fruitfully pursue. The multidisciplinary nature of the presentations included in this symposium suits equally well the OMT, SIM, and STR divisions.

The landscape for sustainability disclosures continues to evolve in response to increased societal demands for accountability and transparency from firms. This presenter symposium seeks to advance organizational scholarship around how firms navigate sustainability disclosures under conditions of uncertainty and ambiguity. The five featured papers propose a theoretical framework for distinct sources of uncertainty in corporate sustainability metrics, examine the predictive power of sustainability ratings in markets with multiple intermediaries, consider how firms' sustainability disclosures differ across venues, analyze when firms choose to voice support for socially contentious issues, and reflect on the circumstances under which shareholder engagement can drive firms to adopt emissions reduction practices.

Author: **Nhat Tan Pham**, *International U., Vietnam National U.-HCM*
Author: **Chidiebere Ogbonnaya**, *Kent Business School, U. of Kent*

Drawing on attribution theory, the present research explores the direct and indirect (via employee perceived ecological impact) relationships between GHRM and GIB. We also explore the contingent effect of employee conscientiousness to delve into when and for whom the influence of GHRM practices is more effective. The results based on time-lagged and multi-source survey data supported our hypotheses. We spotlight a crucial yet largely unnoticed role of GHRM in carving employee perceived ecological impacts and GIB. Our results also underscore the role of a vital individual trait in making a significant difference in these interrelations between GHRM, perceived ecological impact, and GIB. Our findings can guide organizations' pursuit to safeguard nature.

ONE: **Pro-environmental Behavior and GHRM: Effects of Organizational and Coworker Support for Environment**

Author: **HINA ZAFAR**, *U. of Newcastle, Australia*
Author: **Yuliani Suseno**, *Royal Melbourne Institute of Technology U.*
Author: **Jo Ann Ho**, *U. PUTRA MALAYSIA*

The expansion of the textile industry has a significant impact on Asia's rising pollution levels and the deterioration of the global environment. The study investigates the effects of green human resource management practices on employees' organizational citizenship behavior for the environment, using data collected from textile industry employees in Pakistan, one of the major exporters of textile products in the world. Our findings indicate that green human resource management practices influence employees' organizational citizenship behavior for the environment through the mediating effects of both perceived organizational and coworker support for the environment. The implications for theory and practice as well as the limitations and directions of future research are then discussed.

ONE: **Employees' Role in the Sensemaking of Green Human Resource Management: A Moderated Mediation Model**

Author: **Huanxin Liu**, *Binghamton U.-State U. of New York*
Author: **Biying Yang**, *Binghamton U.-State U. of New York*
Author: **FUHE JIN**, *The College of New Jersey (TCNJ)*
Author: **Guiyao Tang**, *Shandong U.*

Green human resource management (GHRM) is essential in organizations' sustainable development. Extant research has focused on the top-down effects of GHRM on employees' green behaviors, with less research on the critical role of individuals in the sensemaking process of GHRM. Our study aims to highlight the role of employees' characteristics in fostering GHRM perceptions and subsequent green behaviors in the workplace. Based on signaling theory, we propose that employees' environmental self-assets are an important antecedent for enhancing their positive perceptions of GHRM and that such perception positively promotes voluntary green behavior. Meanwhile, we investigated the role of age to see its moderating effect on the relationship between positive GHRM perceptions and voluntary green behavior. To accomplish this goal, we conducted a moderated mediation model using the data collected from 303 employees in the medical and chemical industries. We found that employees' environmental self-assets were positively associated with their positive GHRM perceptions, whereas positive GHRM perceptions were unrelated to voluntary green behavior. Furthermore, the indirect effect of environmental self-assets on voluntary green behavior via positive GHRM perception was more pronounced among older employees. Overall, our study contributes positively to the existing GHRM literature by shifting research attention from individual reactions to GHRM implementations to proactive perceptions of GHRM.

Reducing Carbon Emissions: Challenges and Implications

Session Moderator: **Frederik Dahlmann**, *U. of Warwick*

ONE: **What Gets Measured Gets Managed? The Challenges of Reducing Scope 3 GHG Emissions**

Author: **Frederik Dahlmann**, *U. of Warwick*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Stephen Brammer**, *U. of Bath*

Drawing on paradox theory, here we investigate the trade-offs and tensions firms experience in the context of sustainable OSCM when they attempt to reduce scope 3 supply chain GHG emissions. We develop hypotheses to explain why the processes underpinning measurement and management, and their interactions lead to poorer performance from a climate change perspective. We test these hypotheses using rich data from both CDP and Asset4 from 2013 to 2018. Our findings strongly support our conceptualization of the existence of a supply chain emissions paradox (SCEP) in that firms with both greater measurement experience, and broader supply chain engagement practices, display higher emissions levels. Filling a gap in prior OSCM studies by providing large-scale quantitative insights into these paradoxical relationships, we demonstrate that as firms embark on the journey of measuring and managing emissions through partner engagement, they are paradoxically put at a potentially commercial and societal disadvantage by showing performance that worsens over time. Given competing demands on firms when managing supply chain complexities as well as the urgency for significant emissions reductions, firms are likely to respond by either delaying or withholding transparency to avoid facing potentially further stakeholder scrutiny, and unfavorable comparison with competitors. Our findings suggest such responses are unwarranted provided there is understanding and acknowledgement of the underlying mechanisms driving SCEP.

ONE: **Artificial Intelligence and Corporate Carbon Neutrality: A Qualitative Insight**

Author: **Adeel Luqman**, *Shenzhen U.*
Author: **Qingyu Zhang**, *College of Management, Shenzhen U.*
Author: **Ayesha Masood**, *Shenzhen U.*

In this study, we conducted a qualitative study to examine the issues experienced by firms in various sectors endeavoring to use AI to achieve CN. We used the technology, organization, and environment (TOE) framework as the guiding theory to analyze data collected from 66 respondents working in firms that had implemented AI for CN. Analysis revealed seven dimensions energy management, resource conservation, fault-tolerant and predictive maintenance, security and privacy concerns, technical expertise, financial resources and government incentives, and normative, mimetic, and coercive pressures. These served as the basis for proposing seven propositions to guide future research. The study also offered valuable practical insights based on the experience of managers working in firms that had adopted AI for CN.

ONE: **Evolving Practices of Corporate Carbon Target Management: Outcomes and Implications**

Author: **Patrick J. Callery**, *U. of Vermont, Grossman School of Business, US*
Author: **Eun-Hee Kim**, *Fordham U.*

Strategy researchers are increasingly paying attention to corporate climate change management with growing expectations from shareholders and other stakeholders. We examine carbon targets, a critical element in climate change management and note three key findings. First, roughly half of active carbon targets change before reaching the target year. On average, changed targets lead to higher subsequent emissions, especially if the change involves a lower per annum reduction, or target relaxation. In sharp contrast, target changes to a higher per annum reduction, or more aggressive targets, do not lower emissions. Second, our mechanism analysis reveals that the non-findings are closely associated with adoption of net zero and scienced based targets, two rapidly growing types of enhanced carbon targets. Firms that adopt these practices use carbon offsets to a greater extent than those do not, and their emissions tend to increase in the following years. Third, we find that adoption of these practices has significantly accelerated in the past three years, with this recent adoption associated with greater emissions increases, particularly in carbon emissions-intensive industries. We discuss implications of these for the emerging field of climate change and corporate sustainability strategy, and highlight opportunities for future research.

ONE: **The Impact of Family Ownership - Does it Pay for Family Firms to Mitigate Carbon Emissions?**

Author: **Johanna Cecilia Schulze-Berge**, *TUM School of Management, Technische U. München*

This study examines the relationship between corporate environmental performance (CEP) and corporate financial performance (CFP) in private German family firms via econometric techniques. I add to the question “when does it pay to be green?“ by investigating the condition of being a family firm. Existing research on the linkage between CEP and CFP for family firms is scarce, yields inconclusive findings, and lacks studies that express CEP via corporate carbon performance. Yet, corporate carbon performance is an unambiguous metric based on international standards, directly linked to climate change and regulation, and the predominant metric used for environmental performance in the extant literature. Based on firm panel data from 2013 to 2021 from 74 German family firms, I demonstrate a positive relationship between CEP expressed as carbon intensity and CFP expressed as Return on Assets (ROA) and Return on Equity (ROE). Further on, I provide evidence for a moderating effect within the family firm dataset: the public disclosure of a firm’s CEP. My findings inform practitioners and regulators that decarbonization is financially incentivized in the absence of regulation, while the positive effect of disclosure should be acted upon.

Environmental, Hybrid and Community Enterprises and Business Ecosystems

Session Moderator: **Rosalie Luo**, *Ivey Business School*

ONE: **How Individual and Social Mechanisms Foster and Hinder Environmental Entrepreneurship**

Author: **Yasmin Olivia Schwegler**, *HEIG-VD // HES-SO // U. of Applied Sciences & Arts W. Switzerland*

Environmental entrepreneurship has considerable potential for generating positive environmental impact. Extant research about the factors driving its attractiveness and success has mainly been focused on economic factors, while the crucial role of individual and social factors has often been obscured by the multitude of interrelated factors that are at work simultaneously. In this paper, we disentangle the individual and social mechanisms driving and hindering the attractiveness and the success of environmental entrepreneurship and summarize them in a conceptual model. We complement the extant knowledge about environmental entrepreneurs and their stakeholders with literature about environmental attitudes, behavior, social norms, and legitimacy. We find that especially the individual and social valuation of environmental value play a crucial, yet unarticulated role for environmental entrepreneurship. Our insights contribute a clearer picture of the individual and social mechanisms that facilitate and hinder environmental entrepreneurship, which can guide future research on how to achieve the ecological transition, through and beyond environmental entrepreneurship.

ONE: **Battling Magic: Negotiating Crisis in a Regenerative Community Enterprise**

Author: **Rosalie Luo**, *Ivey Business School*

This study investigates how a community enterprise and its membership negotiated enchanting modes of production and consumption during a period of significant turmoil and organizational change. Using an ethnographic methodology, we qualitatively follow the growing season of one of the longest standing agricultural community-based entrepreneurial organizations in the United States located in the Midwest over six months during a period of intense crisis. At the organizational-level, we elaborate upon how it engaged in institutional work to legitimate itself with internal and external actors. At the micro-level, we closely examined different groups within the membership that had heterogeneous motivations and ways of participating. We inductively find four diverse groups that differ in their attachment to rational decision-making or pragmatism (disenchantment) on one hand and mysticism or idealism on another (enchantment). We include insights related to how different coalitions in the organization negotiated the meaning associated with the purpose of the organization, the role of the farmer, and the responsibilities of the membership as the crisis became more salient to community members. This study also provides timely implications for related contexts, particularly the revival of craft, sustainable modes of production, and collective organizing.

ONE: **Hybrid Ventures and Healthy Cities: Community Logics and Mission Variation**

Author: **Michael V. Russo**, *U. of Oregon*
Author: **Brooke A. Lahneman**, *Montana State U.*
Author: **Andrew Earle**, *U. of New Hampshire*
Author: **Suzanne Gladys Tilleman**, *U. of Montana*
Author: **Hyeonjin Cha**, *U. of Oregon*

Hybrid entrepreneurship offers cities a way to navigate the fundamental tension between generating economic vitality and improving conditions for residents, in particular marginalized groups. To unpack how to support this, we explore how community logics in a city shape the differing mission-related goals of hybrid ventures, examining logics in terms of municipal policies and job markets. In our study, we spotlight hybrids whose missions focus on either social welfare or environmental stewardship, and develop theory describing why these different mechanisms shape hybrids with socially- versus environmentally-focused missions in distinctly different ways. More than mere nuances, our study demonstrates that differences in the foci of hybrid ventures are meaningful and locally relevant, and that initiatives by cities to attract hybrid ventures should be tailored for greater effect. This study offers insights at the nexus of hybrid entrepreneurship and public policy for cities trying to encourage positive and inclusive economic development.

ONE: **The Role of the Corporation in Business Ecosystem from the R&D Performance Viewpoint (WITHDRAWN)**

Author: **Shiu-Wan Hung**, *National Central U.*
Author: **Che-Wei Chang**, *Minghsin U. of Science and Technology*
Author: **Jyun-Hao Jian**, *National Central U.*
Author: **An-Pang Wang**, *National Central U.*
Author: **Chien-Hui Hsu**, *National Central U.*

The changing roles of enterprises mean that the relationships between businesses have become increasingly complicated. Therefore, the previous chain relationship cannot now be utilized to analyze business interaction models. Based on the business ecosystem, this study takes into account the characteristics of a high-tech industry, research and development (R&D) orientation, and identifies the roles in the business ecosystem with the results of R&D performance. This study finds out that a multi-stage performance evaluation method can define the role of LED manufacturers in a business ecosystem. It also suggests that, in the technological development stage, most manufacturers were found to belong to niche players and develop technological niches with their own specialized capabilities. In the technology diffusion stage, traditional, leading LED companies are the keystone manufacturers who are able to construct a technological platform that influences the technological development of others. In the profit creation stage, however, a great number of manufacturers are found to be hub landlords and just extract profits from other companies, which means that numerous companies have the capacity to develop technologies but ignore how much profit technologies can bring them.

ONE: **Framing Contests During Collaborative Experimentation in Ecosystem Emergence**

Author: **Neva Bojovic**, *Kedge Business School*
Author: **Fanny Salignac**, *U. of Technology, Sydney*
Author: **Hugo Guyader**, *Linköping U.*
Author: **Frederic Ponsignon**, *Kedge Business School*

This study investigates how ecosystem actors collaborate in the early stages of ecosystem emergence to create and test the ecosystem value proposition. It analyses multi-actor data from a two-year-long experimentation process around the circularization of human waste in France. In doing so, the findings of this study open a black box of collaborative experimentation and uncover important struggles based on the different framings of value and power that become pertinent during the experimentation process. This study contributes to ecosystem literature, by shedding light on the importance of internal legitimacy between ecosystem actors in ecosystem emergence, and to the strategic experimentation literature by showing how multiple theories of value in collaborative experiments lead to negative, yet generative experimentation outcomes.

Student Best Paper Competition

Session Moderator: **Dominic Loske**, *U. of Goettingen*

OSCM: **There is no I in "Team": Learning from Team Success and Failure for Retail Performance Improvement**

Author: **Dominic Loske**, *U. of Goettingen*
Author: **Maik Hammerschmidt**, *U. of Goettingen*
Author: **Klumpp Matthias**, *Politecnico di Milano School of Management*

Learning from individual experiences has been described as an important predictor of organizational performance. In contrast, little is known about how prior success and failure experiences at the team-level impact performance and whether goal accomplishment moderates the learning process. In this study, we investigate 573 dispatcher-driver teams that work together in delivering groceries to retail stores. We analyse daily-level data for 13,246 deliveries during a period of four months. We find support for the argument that prior team success increases current delivery performance while performance declines with increasing number of failures. We also show that teams learn from failures when service-level goals in the prior period have been accomplished. In contrast, success-based learning is reinforced when goals in the most recent period are accomplished . These findings illuminate the conditions under which teams can be enabled to learn from prior successes and failures. For supply chain managers, the study informs how feedback about goal accomplishment for different time periods can boost learning rates.

OSCM: **How Performance Measurement Systems Enable or Constrain Organizational Ambidexterity**

Author: **Daniella Abena Badu**, -
Author: **Pietro G. Micheli**, *U. of Warwick*

This study examines how different uses of performance measurement systems affect organizations' capacity to become ambidextrous. Data were gathered through semi-structured interviews, observations, and reviews of documents at four departments of an automotive firm; an abductive approach was employed to analyze the data. Drawing on Simons' levers of control framework, the combined diagnostic and interactive uses of performance measurement systems are found to facilitate organizational ambidexterity in four main ways: (1) performance information is used to identify areas that could benefit from exploitation or exploration, (2) through the collaborative development of objectives and targets, (3) via performance review sessions, and (4) by leveraging lessons learnt from previous projects. Also, the diagnostic use is found to have positive effects on exploration by stimulating creativity. However, measurement systems can be detrimental to organizational ambidexterity if they reinforce old practices and processes, and if they are strongly linked to individual rewards or sanctions.

OSCM: **Impact of Blockchain-driven Sustainable Supply Chain Transparency on Buyer's Supplier Selection**

Author: **Sukrit Vinayavekhin**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Aneesh Banerjee**, *City U. London*
Author: **Feng Li**, *Bayes Business School (formerly Cass), City, U. of London*

When selecting new suppliers, buyers often look beyond purely financial criteria to include suppliers' sustainability records as well. This paper aims to investigate how a buyer assesses the importance of various attributes of supply chain sustainability disclosed by suppliers. These include product, process, and sourcing network disclosure as well as the attributes associated with information disclosure using blockchain technology such as the immutability and update frequency of the information. Building on concepts in inter-organisational trust and information economics, we use a choice-based conjoint experimental design to collect both quantitative and qualitative responses from procurement managers. The results reveal that buyers are concerned with sustainability signals from suppliers and are willing to pay a price premium. Buyers expect blockchains to increase supply chain transparency, but we do not find a significantly higher willingness to pay for information from blockchain platforms. Overall, buyers prioritise information on products over processes and sourcing networks, while the immutability of information and update frequency of information received less attention. The paper contributes to our understanding of the role of blockchain in supply chain transparency and presents new lines of inquiry on the value of blockchain-enabled platforms in supply chain sustainability reporting.

OSCM: **Circular Supply Chain Stakeholder Mapping for Blockchain Governance of Lithium-ion Battery Safety**

Author: **Zhuowen Chen**, *Worcester Polytechnic Institute*
Author: **Abdullah Yildizbasi**, *Worcester Polytechnic Institute*
Author: **Yan Wang**, *Worcester Polytechnic Institute*
Author: **Joseph Sarkis**, *Worcester Polytechnic Institute*

The application of blockchain (BC) technology in the lithium-ion battery (LIB) circular supply chain can provide significant support to help in this practice. Yet BC application is limited due to various complexities—accurate information and data from stakeholders is plays a significant role in that complexity. This study aims to identify stakeholder roles in BC application to address safety issues during the circular supply chain—a critical issue for the adoption of CE for LIB to help mitigate LIB materials scarcity. We survey and gather input from 40 experts in CE, lithium-ion batteries (LIBs), BC, and safety-related issues from academia and practice. The Responsible, Accountable, Consulted, and Informed (RACI) matrix project management tool is used to categorize and map stakeholders by their level of power and involvement. The results provide insights into five theory-based hypotheses and practical implications for BC application in this environment. The study provides a methodology to identify stakeholder roles for BC development in mitigating CE LIB safety issues using the RACI matrix. Part of the study also considers the heterogeneity in stakeholder involvement in this process. This process and methodology also provide a way to evaluate and support long-term transdisciplinary research and innovation. The application of BC technology in the supply chain has been touted as inevitable, but a significant barrier is understanding stakeholder roles ranging from development to application and improvement. This study examines a methodology to identify and map stakeholders and further provides research and practice insights to the application of BC technology to solve safety issues in the LIB circular supply chain.

OSCM: **Beyond Organizational Sustainability: Do Female Directors Ensure Suppliers' Sustainability?**

Author: **Ammar Ali Gull**, *ESSCA School of Management*
Author: **Sunil Tiwari**, *ESSCA School of Management*
Author: **Muhammad Nadeem**, *U. of Queensland*
Author: **Pankaj Sharma**, *National U. of Singapore, Singapore*

This study examines whether board gender diversity is associated with firms' tendency to adopt sustainable supply chain practices worldwide. Utilising the data of listed firms from 42 countries during the period 2002-2019, we find that firms with gender-diverse boards are more likely to implement sustainability criteria in supplier selection and termination process. However, the relationship of gender diversity with sustainable supply chain practices is significant when boards have two or more women and mainly driven because of independent women directors. We further substantiate our main finding by using alternate measures of board gender diversity and incorporating several subsample analyses, based on the effect of global financial crisis, Paris agreement on climate, firm-level governance quality and CSR orientation, industry nature and geographical location of firms. We also address the potential endogeneity concerns in several ways and our results always hold. Finally, we show that the adoption of sustainable supply chain practices also results in higher financial performance for firms with gender-diverse boards. Our study provides interesting insights with important managerial and policy implications in the backdrop of increasing stakeholder demands for sustainable business practices worldwide.

OSCM: **How Do Environmental Impact and Gender Inequality Characterise Fast Fashion Supply Chains?**

Author: **Amy Olivia Boote**, *Cardiff Business School, Cardiff U.*
Author: **Maryam Lotfi**, *Cardiff Business School*

This paper investigates how environmental impact and gender inequality characterise the fast fashion supply chain, from an ecofeminist perspective. The 21st century has entered into a period of significant anthropogenic environmental challenge, powered by capitalist consumer society; in which, its impacts are inextricably burdensome for women, namely women in the global South. Fast fashion has played a contributory role; becoming renowned for its unsustainable, unethical practices that jeopardise environmental stability and threaten women's hope for gender parity. In effect, the need for this research is paramount in understanding how fast fashion can break with its ecological and feminist problems. To do so a qualitative method was used. Thematic analysis was conducted on company reports of 75 fast fashion companies for the years 2019-2022. The companies were chosen based on the Fashion Transparency Index 2021. Further, all the companies were defined as fast fashion companies, operating in Europe's fast fashion industry. The analysis showed that fast fashion companies' supply chains, contributed to environmental impact through air pollution, water pollution and land pollution. And contributed to gender inequality through ameliorating economic discrimination and gender-based harassment. We concluded that environmental impact and gender inequality reinforce one another both ideologically and materially, in the fast fashion supply chain. Additionally, the study contributes an original and unique literary account regarding its use of the ecofeminism perspective. It filled a literary gap by effectively pointing out that, impacts were felt acutely in the global South by women garment workers. And, therefore, brings to academic attention that, women garment workers are subjected to fast fashion's patriarchal governing structure and placed on the front line of the environmental crisis, which has emanated from fast fashion's supply chain practices.

OSCM: **Inclusion of Women and Older Employees in Telecom Sales Teams and Sales Performance**

Author: **Bengu Nur Ozdemir**, *IE Business School*
Author: **Antti Tenhiälä**, *IE Business School*
Author: **Antoaneta Momcheva**, *Stockholm School of Economics*
Author: **Fabrizio Salvador**, *IE U.*

Diversity and inclusion (D&I) are of vital importance for organizations that wish to nurture a culture of equality. Despite a growing research interest, especially in the firm-level performance effect of diversity in top management teams, there is scant research on how bio-demographic D&I measures impact team-level operational outcomes of work teams. This study examines how the inclusion of women and older employees affects the performance of sales teams of telecommunication technology. We focus on these two aspects of D&I, as gender discrimination and ageism are prevalent in the technology sector. To test our hypotheses, we use a panel dataset of 260 sales teams. We account for the endogeneity of assigning members to the teams and the dynamic panel bias by estimating our model with the system generalized methods of moments (S-GMM) approach. The results suggest that greater inclusion of women and older employees is associated with increased sales performance, even for teams in the technology sector that inhabit a fast-paced environment. These findings are robust to alternative model specifications, as well as alternative operationalizations of the inclusion of women and older employees. Taken together, this study corroborates the business case of promoting the greater inclusion of women and older employees in the technology sector.

OSCM: **Procurement of Reproductive Health Commodities in LMICs: The Impact of Female Decision-Makers**

Author: **Dwaipayan Roy**, *U. of Virginia Darden School of Business*
Author: **Amir Karimi**, *U. of Texas At San Antonio*

Access to contraceptives, an essential reproductive health commodity, can substantively improve women's mental and physical health by helping to prevent unintended pregnancies and their consequent adverse repercussions. However, in low-, and middle-income countries (LMICs), where resources are limited and women are under-represented as decision-makers in national governments, issues related to reproductive health have not traditionally been prioritized. Drawing on past research demonstrating that female decisionmakers tend to prioritize issues that better reflect women's needs and preferences, we examine the relationship between female decision-makers in national governments and contraceptive procurement. Specifically, we focus on female decision-makers at two levels, as health ministers and parliamentarians, and examine their impact on the procurement quantity of contraceptives by LMICs. Using a combination of field interviews and empirical analyses of a large dataset on contraceptive procurement by LMICs, we find that a female (vs. male) health minister is associated with an increase in the procurement quantity of contraceptives. Notably, this relationship is strengthened with an increase in the proportion of female representatives in national parliaments. Additional empirical analyses highlight that this synergistic effect of female health minister and female parliamentarians is stronger in countries with higher unmet need for contraceptives. Together, these findings provide empirical evidence that female (vs. male) decision-makers are likely to bring greater attention to contraceptive procurement, an issue that has a disproportionate impact on women's health and well-being. As ensuring good health and well-being for all and increasing gender parity in leadership positions are two of the key United Nations Sustainable Development Goals (UN SDGs), our study on examining the relationship between female decision-makers and contraceptive procurement represents a timely and consequential line of inquiry. In conducting this inquiry, our study also responds to recent calls for research at the intersection of operations management and diversity and inclusion.

The Role of Representation

Session Moderator: **Eiko Strader**, *George Washington U.*

PNP: **Race in Representative Bureaucracy Theory: A Problematizing Review**

Author: **Eiko Strader**, *George Washington U.*
Author: **Vernicia Griffie**, *George Washington U.*
Author: **Patrick Irelan**, *George Washington U.*
Author: **Leslie Kwan**, *George Washington U.*
Author: **Emma Northcott**, *George Washington U.*
Author: **Sanjay K Pandey**, *George Washington U.*

This study is an epistemic reflexive examination of race in representative bureaucracy theory, responding to the criticism that its conceptualization has been narrow. To counter socially reinforced ways of thinking, we use a problematizing review method to read broadly and selectively. Reviewing a sample of articles published in public administration (immediate research domain); political science (neighboring domain); sociology and Asian/cultural/ethnic studies (indirectly relevant domains) between 2017 and 2021 and paying attention to social constructionism, we examined how race and ethnicity are conceptualized. While the articles in public administration focused on a binary conception of race, treating differential outcomes as natural, articles sampled from other domains explained how ethnoracial categories were constructed, highlighted the contextual nature of differential outcomes, and engaged with the issue of racialization. To expand the conception of race in public administration, we must explore the process in which racial constructs became associated with unequal outcomes.

PNP: **Empowering Female Managers: A Cross-Sector Comparison of Perceived Inclusion and Internal Networks**

Author: **Jihoon Jeong**, *Texas A&M International U.*
Author: **Eun-sil Yoo**, *U. of Mississippi*
Author: **Jiwon Suh**, *U. of Texas At Arlington*

Organizational inclusion is particularly essential for an underrepresented group of employees who consistently encounter challenges while climbing up the hierarchies. This study examines the effects of internal networks on perceived inclusion and tests how these networks impact self-competency through perceived inclusion by focusing on female employees. Employing social network theory and subjective uncertainty reduction theory and comparing the public and for-profit sectors, we find that vertical interpersonal relationships (relationships with superiors and mentoring) have positive impacts on the female employees' sense of leadership competency while horizontal and group network relationships have no such impact in public organizations. Results also show that internal networks influence female managers' perceived inclusion and their feeling of leadership competency through perceived inclusion, while such networks do not impact work competency. Findings suggest that internal networks are paramount for female employees' career advancement through perceived inclusion.

PNP: **Giving Voice: Examining the Strategic Repertoires of Nonprofit Advocacy for Marginalized Populations**

Author: **Heather MacIndoe**, *U. of Massachusetts, Boston*
Author: **Maria Manuella Pache De Athayde**, *U. of Massachusetts, Boston*
Author: **Olanike Ojelabi**, *U. of Massachusetts, Boston*

How do nonprofit organizations serving disadvantaged populations represent their constituencies in the policy process? What are the formal and informal routines—what sociological studies of social movements call strategic repertoires (Taylor & Van Dyke, 2004)—that nonprofits use to pursue change for marginalized people and communities? Preliminary analyses of a survey of New England nonprofits (N=656, 55% response rate) indicate that nonprofits serving disadvantaged populations use similar tactics to organizations advocating for other constituencies but employ them at higher rates. These nonprofits are also more likely to involve constituents in advocacy and to perceive their advocacy as having effective outcomes.

PNP: **The Effect of the Board and Staff Racial Representation on Grantmaking in Community Foundations**

Author: **Yue Ming**, *Indiana U.- Lilly Family School of Philanthropy*

Philanthropic efforts to increase philanthropic staff and leadership from diverse minorities groups and benefit the interests of diverse groups is an avenue to improve equity. The efforts in philanthropy are consistent with the representative bureaucracy framework in the public administration literature. This study applied the theory of representative bureaucracy into the context of community foundations to examine the effect of racial representation in board members and staff on grant allocation. The findings suggest a positive relationship between racial representation in nonprofit leadership and grant allocation outcome, which mirrors the linkage between passive and active representation from the representative bureaucracy.

Nonprofit Financial Management

Session Moderator: **Jeongyoon Lee**, *U. of Kentucky*

PNP: **What Kills Nonprofits? A Study on U.S. Human Service Nonprofits Dissolution (2007-2018)**

Author: **Jeongyoon Lee**, *U. of Kentucky*
Author: **Andrew Sullivan**, *U. of Central Florida*

This study explores why human service nonprofit organizations cease to exist from two theoretical viewpoints: organizational ecology and resource-based view. Our county-level fixed effects survival analysis identifies three mechanisms explaining human service nonprofits' dissolution, using 2007-2018 data from multiple sources - National Center for Charitable Statistics, Census, American Community Survey, MIT Election Lab, and Small Area Income and Poverty Estimates. We clarify how ecological selection processes relate to nonprofit dissolution occur within communities over time. Specifically, first, at the macro-level, an improving political environment and worsening economic and social environments within communities associate with a greater likelihood of nonprofit dissolution. Second, at the meso-level, as the environment becomes increasingly competitive, nonprofits are more likely to dissolve. Third, at the micro-level, nonprofits' resource management competencies still relate to a lower likelihood of dissolution. These findings extend research on nonprofit organizations' life and death by showing turbulent and multi-level relationships of ecological and organizational factors constituting the human service delivery system with human service nonprofit dissolution in the United States.

PNP: **Do Charities Clarify or Conceal? Text Complexity and the Financial Performance of Large Nonprofits**

Author: **Philip T. Roundy**, *U. of Tennessee, Chattanooga*
Author: **John Trussel**, *U. of Tennessee, Chattanooga*

Communication can improve or hinder organizational transparency. The "obfuscation hypothesis" contends that if stakeholders are likely to perceive an organization's financial performance as poor, managers have an incentive to obscure organizational information by communicating it in ways that are difficult for stakeholders to understand. Information obfuscation has primarily been examined in the context of for-profit organizations. We test the obfuscation hypothesis in the nonprofit sector by examining how annual report text complexity relates to the financial performance of large charities. Assessing text complexity using measures from computational linguistics, we anticipated that the annual reports of charities with lower financial efficiency are shorter and more difficult to read. We find a negative effect of a charity's financial performance on the readability of its annual report, but no effect of performance on annual report length. Overall, our findings demonstrate that the performance of a charity is reflected in the text complexity of its external reports, and that text complexity may clarify or conceal information depending on a nonprofit's organizational performance.

PNP: **How Do Nonprofits Manage Profits? Evidence from Nonprofit Hospitals**

Author: **Jiahuan Lu**, *Rutgers U., Newark*
Author: **Young Joo Park**, *U. of New Mexico*

Despite the nondistribution constraint, nonprofits can legally seek profits or surpluses. However, previous literature pays little attention to how nonprofits deal with their profits. This study tests and extends Chang and Tuckman's theory of profit accumulation by nonprofits. Through a longitudinal analysis of U.S. nonprofit hospitals, we find that nonprofit hospitals seek profit accumulation over time. Further analysis suggests that nonprofit hospitals are more likely to expend profits to pursue organizational growth and financial stability. In addition, nonprofit hospitals do not seem to allocate profits to subsidize services to disadvantaged groups and reduce health disparities. In other words, nonprofit hospitals tend to use profits to serve organizational benefits rather than community benefits. The findings flesh out the literature on profit accumulation by nonprofits and have implications for theory and practice.

PNP: **Characteristics and Expenditure in the UK Not-for-Profit Sector**

Author: **Karolis Matikonis**, *U. College Dublin*

Not-for-profit organisations (NPOs) are provided with support through tax reliefs and further funding in exchange for creating social benefit. They are, however, often accused of abusing and misallocating resources. Employing a visual, non-parametric, machine learning methodology to some of the largest UK annual financial micro-level datasets, the study uncovers how UK not-for-profit organisations (NPOs) differ from other organisations with regard to their characteristics and expenditure. The author found that NPOs are more stable and more likely to become high growth firms. They have higher average employment than other organisations and most of them spend significantly more on employment-related costs and acquisitions than comparable organisations. The author also identified the interrelationships between lower tax paid and higher employment costs. The findings help us question the targeting and oversight of tax reductions, which are likely to be at least partly distributed through the inflated expenditure for larger organisations.

Collaborations and Pluralism

Session Moderator: **Humberto Falcao Martins**, *FDC - Fundacao Dom Cabral*

PNP: **Visualising and Measuring Public Values in Smart Cities. A Collaborative Governance Perspective**

Author: **Giuseppe Grossi**, *Kristianstad U. College*
Author: **Dorota Dobija**, *Kozminski U.*
Author: **Zuzanna Staniszewska**, *Kozminski U.*
Author: **Dominika Kaczmarek-Ciesielska**, *Kozminski U.*

The purpose of this paper is to explore the perceptions of creators and users regarding the visualization and measurement of public values created by smart cities. We build an analytical framework using the collaborative governance and public value theories to show how smart city creators and users perceive the visualization and measurement of multiple values. We applied photo-elicitation interviews with 40 city creators and city users, and used visual sources created by the researchers. The photographs were used to expand the ideas about capturing value from various smart city projects. We analyzed public value from an economic, societal, and environmental perspective and found that public value perceived by city creators is not always aligned with city users. While we found general agreement in relation to environmental values, in the case of social and economic value, the perceptions of smart city users diverge from the those of smart city creators. We also found that the multi-actor reality and in-group pressures may influence the lack of a coherent vision of smart cities among the creators, which results in relatively lower fulfillment of users' expectations. This paper explores how the combination of different interests, actors and values affect performance measurement in a certain reality of smart city initiatives in Poland.

PNP: **Updating Emerson's Collaborative Governance Model**

Author: **Humberto Falcao Martins**, *FDC - Fundacao Dom Cabral*
Author: **Ettore Oriol**, *FDC / EAESP - FGV*
Author: **Douglas Wegner**, *FDC - Fundação Dom Cabral*
Author: **Patrícia Becker**, *FDC - Fundacao Dom Cabral*

Collaborative governance has been attracting increasing interest from academics and practitioners due to its ability to minimize wicked problems that require the articulation of multiple stakeholders. One of the widely cited models of collaborative governance was published by Emerson et al. (2012). The model has been applied in hundreds of empirical studies and theoretical essays since its publication. However, no studies have incorporated the results of these studies into the aforementioned Collaborative Governance (CG) model. This paper aims to provide an expanded update of Emerson et al.'s (2012) model in order to incorporate elements derived from recent literature, and to propose adjustments designed to address gaps/limitations of the original model. It contributes to the literature by extending Emerson et al.'s (2012) model of CG by incorporating and gaining a better understanding of the elements necessary for the creation of public value. Furthermore, we present an expanded model of collaborative governance that facilitates the organization of such collaboration and, consequently, the creation of public value, which will guide policymakers and practitioners.

PNP: **Relational Pluralism within the Hybrid Organization**

Author: **AANCHAL GUPTA**, *Ph.D. scholar, IIM Raipur*
Author: **Samar Singh**, *Associate Professor of Practice, IIM Raipur*

The network of relations with and amongst stakeholders plays an important role in an organization. A hybrid organization deals with diverse stakeholders, some including individuals from weaker sections of society. However, the importance of relational pluralism within a hybrid organizational network for achieving organization goals has not yet been explored by researchers. So, building on social network theory, we explored how a hybrid organization creates good for society by leveraging relational pluralism. We adopted a qualitative case study method, the case of an Indian hybrid organization operating successfully for the past 21 years and involving stakeholders from a resource-deprived community was chosen. Our study highlights that relational pluralism emerges among stakeholders, who are from resource-deprived communities, based on social impact, cohesive social environment, and pro-social motive of the organization. This relational pluralism helps the firm to create socio-economic welfare for society by utilising social and human capital from stakeholders' communities. Furthermore, we suggest that an organization can leverage multiplex relations of weaker communities for their benefit and societal development.

PNP: **Linking Organizational Collaborative Motivations with Purpose-oriented Network Characteristics**

Author: **Huishan Yang**, *Virginia Tech*
Author: **Robin Hargroder Lemaire**, *Louisiana State U.*

With the significant growth of purpose-oriented networks in the realm of public affairs, the challenges for public and nonprofit organizations in deciding which networks to engage with have also increased. This work is an exploration of whether organizations with different collaborative motivations prefer networks with different sets of characteristics. By bridging organizational theory and social network literatures, this study proposes a conceptual framework regarding the connections between organizational collaborative motivations and network characteristics. The framework was then examined using survey data collected from two statewide networks in Virginia. A crisp-set qualitative comparative analysis (cs-QCA) was employed to identify different sets of network characteristics associated with four organizational collaborative motivations. The QCA results indicate that organizations with different collaborative motivations indeed prefer different kinds of networks. We also identified multiple pathways for each motivation and which network characteristics need to be combined together for each motivation, as well as offered some universal combinations that work for different motivations. The findings of this work are valuable for both network managers' efforts in recruiting members and public and nonprofit organization managers' attempts at seeking beneficial collaborations.

Myths and Neglected Issues in “Standard” Methods

Session Moderator: **Gwowen Shieh**, *National Yang Ming Chiao Tung U.*

RM: **Unified Test Procedures for Probing Negligible Interaction Effects in Factorial Designs (WITHDRAWN)**

Author: **Gwowen Shieh**, *National Yang Ming Chiao Tung U.*

A vital problem in factorial analysis of variance is testing for interactions. Traditional procedures mainly aim to establish the existence of substantial effects. However, the interaction effects may be so small that they should be considered clinically or practically unimportant. Note that the current method is only applicable to the two-way interaction of balanced designs. This paper presents test procedures to ascertain the negligibility of interactions in multifactor studies. A unified approach is conducted for appraising the lack of interaction that applies not only to higher order factorial designs, but also to unbalanced schemes. In addition, viable procedures are also described when the homogeneous variances assumption is untenable. To facilitate planning factorial design, the corresponding sample size procedures and accompany computer algorithms are also developed. Numerical example and simulation study are utilized to explicate the usefulness and accuracy of the proposed procedures for assessing interactions in factorial studies.

RM: **Testing Interaction Effects: Overcoming the Limitations of the Product Term**

Author: **Torsten Biemann**, *U. of Mannheim*
Author: **Jeremy F. Dawson**, *U. of Sheffield*

The standard approach of testing interaction effects uses the product of a predictor variable and a moderator that is entered in a regression. This method of testing interactions has become so ubiquitous that researchers seldom stop to consider whether the assumptions implicit in this method are justified, although any other theoretically meaningful computation of the interaction term is possible. We discuss the product term’s limitations, in particular its non-linear increase with increasing values for predictor and moderator. To overcome this limitation, we introduce an alternative interaction term, the joint linear effect, and compare it to the product term in a set of Monte Carlo simulations. Finally, we make recommendations for how and when researchers might analyze their data with the product term or the joint linear effect.

RM: **The Myths of the VIF: Why Variance Inflation Factors are Deceptive as Multicollinearity Diagnostics**

Author: **Arturs T. Kalnins**, *U. of Iowa*
Author: **Kendall Praitis Hill**, *Swarthmore College*

Variance Inflation Factors (VIF scores) are widely used as diagnostics to detect deleterious multicollinearity among independent variables in regression analyses. Despite their popularity, substantial inconsistencies exist among perspectives found in organizational research regarding what examining VIF scores actually accomplishes. We conduct original analyses to compare and contrast three incompatible perspectives. First, a commonly applied practitioner perspective is that VIF scores below a numerical ``rule of thumb" threshold allow researchers to dismiss multicollinearity concerns. A second perspective is that t-statistics sufficiently assess statistical significance, implying that VIF scores are superfluous. A third perspective considers regressions where multicollinearity arises from common forms of mis-specification. In such cases, VIF scores may fall below any threshold yet be associated with type 1 errors. Our analysis casts doubt on the first perspective, and provides strong boundary conditions regarding the second. Low VIF scores may be deceptive; they do not necessarily indicate that multicollinearity concerns can be dismissed, as literally thousands of published articles claim every year. Further, high VIF scores may in fact be unproblematic, but only when the Gauss-Markov assumptions are fully met.

Why We All Should Be Bayesians: An Introduction to Bayesian Studies

Presenter: **Andreas Schwab**, *Iowa State U.*
Presenter: **William H. Starbuck**, *U. of Oregon*
Presenter: **David Krackhardt**, *Carnegie Mellon U.*

The purpose of this symposium is to introduce management researchers to the opportunities of Bayesian statistics for empirical research in the management sciences. We will outline the fundamental features of the Bayesian method without delving into the mathematical details. Instead, we will outline the conceptual differences and potential advantages of a Bayesian approach compared to traditional statistical analyses involving null-hypothesis statistical significance tests. We will then introduce an illustrative example from empirical management research that illustrates opportunities for the useful application of Bayesian data analysis and introduces participants on how to interpret the outcomes of Bayesian analyses for causal inference. Finally, we will discuss why in spite of strong arguments supporting the use of Bayesian statistics, the field of management research has been very reluctant considering Bayesian analysis as an alternative and how management scholars can support related methodological change efforts. The purpose of this symposium is to convince participants of the potential opportunities Bayesian methods can provide and to motivate organizational researchers to consider Bayesian statistics as an alternative in future research.

Author: **Paula Jarzabkowski**, *U. of Queensland*
Author: **Rebecca Bednarek**, *Victoria Management School*
Author: **Eugenia Cacciatori**, *Cass Business School, City U. London*
Author: **Konstantinos Chalkias**, *Birkbeck, U. of London*
Author: **Rhianna Gallagher Rodgers**, *U. of Queensland Business School*
Author: **Mustafa Kavas**, *Sheffield U. Management School*

Much literature and research has focused on the tensions and problems of doing impact-driven research, even as the need for greater impact upon the grand challenges facing society has become an imperative for strategy and organization scholars. In this paper, we draw upon a case study of a 14-year team-based program of research that was intended from the outset to have impact. We explain the evolving nature of our impact, which we attributed to two features of our research process. First, the process of doing impact through iteration between co-creating, translating, and performing activities, from which new research questions emerge, new collaborators become engaged, and new impacts arise. Second, our ability to remain in the field over sufficient time, and with sufficient scope, due to our teamwork approach to research and impact. Based on our case study, we develop a framework for teamwork and its implications for practical and academic impact over the long-term. Our case contributes to a more dynamic understanding of the process of doing impact, and to the means of attaining continuity to have impact within a field.

SAP: **"Journey Making": Co-creating and Opening Strategy While Addressing Grand Challenges**

Author: **Igor Pyrko**, *U. of Bath*
Author: **Fran Ackermann**, *Curtin Business School*

As societies recover from the shock of the Covid-19 pandemic and its ramifications, it becomes evident that academic research cannot wait but must engage with today's complex and large-scale challenges. As a result, interdisciplinary, participatory architectures must be deployed, including opportunities for the co-creation and testing new tools, ideas, and solutions to address grand challenges. However, past research shows that working across silos and organizational boundaries is not easy, and the grand challenges agenda can become diluted over time as part of the unfolding strategy implementation. In this paper, we present the "Journey Making" qualitative methodology by Ackermann and Eden, which has been applied fruitfully in other related fields, namely strategy and project management. We adopt "Journey Making" to grand challenges research, reflecting on the theoretical implications for understanding grand challenges and co-creating impact by attending to process, context, and content of the multi-stakeholder conversation. Building on a qualitative empirical study with Mental Health Networks in Australia, we show how "Journey Making" can contribute to grand challenges research by mapping grand challenges as complex systems of interdisciplinary mutual relations and allowing for an inclusive and transparent strategy between different organizations and occupational communities in the pursuit of a shared purpose. The underlying 'Journey' captures the ongoing pathway for impact as researchers and participants support one another in understanding what grand challenges are in practice and how they can be addressed effectively.

SAP: **Employee Voice And Corporate Governance: Power And Engagement For The Environment**

Author: **Gregory Jackson**, *Freie U. Berlin*
Author: **Julia Bartosch**, *Radboud U. Nijmegen*
Author: **Manuel Nicklich**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Drawing on configurational perspectives from organization and management studies, this paper develops a theoretical framework for understanding the specific role of labor for corporate environmental impact. The paper draws on both Using Qualitative Comparative Analysis (fsQCA) and extensive interviews to show how a comparatively lower environmental impact comes together with a) specific configurations of the governance of corporations in which labor plays a central role and b) diverse set of practices by which labor representatives engage in the strategizing process, thereby mobilizing their formal guaranteed power resources. For the question of environmental impact, our result supports that the governance of corporations does not operate through specific elements in isolation but through a complex interplay of multiple structures and actors' everyday practices. For tackling climate change, this underlines the need for a complex understanding of corporations in the light of urgent transformation. Moreover, it contributes environmental labor studies by focusing the role of labor representatives on the organizational level.

SAP: **Process and Practice Perspectives: A Morphological Analysis and Reassessment of Impact**

Author: **Elena P. Antonacopoulou**, *Ivey Business School*
Author: **Chloe R. Cameron**, *Ivey Business School*
Author: **Sabrina Goestl**, *Ivey Business School*
Author: **Chang H. Kim**, *James Cook U.*

Author: **Renate Kratochvil**, *BI Norwegian Business School*
Author: **Marilyn Poon**, *U. of Innsbruck*
Author: **Arti Sharma**, *Fellow, Indian Institute of Management Indore*

To advance Management and Organization Studies and respond to the grand challenges of our time calls for unifying perspectives to enrich our understanding of collective action. At the core of collective action are essential processes and practices integral to managing and organizing. Whilst the process and practice-based views mark the most significant advancement in the field for the last 20 years, we propose an integrative perspective of these views to shed new light on collective action itself which is integral to the much called for system change. Our analysis considers the application of Process and Practice Perspective (PPP) across streams of research in strategy, leadership and entrepreneurship which are currently treated in silo in management and organization studies. We introduce a novel methodology—the morphological analysis—as an alternative to traditional systematic literature review. In conducting our morphological analysis, we examine PPP research conducted across the three management research streams and conceptualize the PPP elements evoked. Our findings offer concrete pathways for PPP researchers across the three themes to generate new insights, while our work advances PPP's ability to promote connectedness across research streams which invites fresh ways of addressing grand challenges and co-creating desirable futures.

Politics, Polarization, and Ideology

Session Moderator: **Steve Michael Loren**, *U. of Massachusetts, Boston*

SIM: **The Return of the Oppressed: Market Sanctification and the Rise of the Anti-ESG Movement**

Author: **Steve Michael Loren**, *U. of Massachusetts, Boston*

Utilizing the insights of moral foundations theory (MFT), this study investigates the recent and rapid rise of anti-environmental, social, and governance(ESG) legislative proposals brought at the state level in the United States beginning in 2021 and which continued to gain momentum throughout 2022. This study uses a mixed method design that incorporates hierarchical logistic regression to reveal aggregate differences in moral foundations at the state level in the U.S. as they are associated with anti-ESG and pro-ESG legislative proposals. The study then scopes down to analyze the conversations of influential conservatives using qualitative hermeneutical methods to discern salient moral intuitions motivating the anti-ESG sentiment underlying the movement. The findings reveal that anti-ESG legislative proposals at the U.S. state level are primarily motivated by the sanctity/degradation foundations and, more generally, by the 'binding' moral foundations. In contrast, pro-ESG legislative proposals at the state level are primarily motivated by the fairness/cheating foundation and, more generally, by the 'individualizing' moral foundations. Significantly, through the hermeneutical exegesis, this study expands on MFT by emphasizing the importance of the proposed sixth moral foundation of liberty/oppression that is revealed to underly and motivate the anti-ESG sentiment of prominent conservatives. While evidence supports that all six moral foundations are used to give voice to anti-ESG sentiment, the liberty/oppression foundation and the sanctity/degradation moral foundations were the most prevalent amongst influential conservatives.

SIM: **Robust CEO Activism and Moral Legitimatino in a Polarized News Media Landscape**

Author: **Dorothee Maria Winkler**, *U. of Zurich*
Author: **Florian Ueberbacher**, *Montpellier Business School*
Author: **Andreas Georg Scherer**, *U. of Zurich*

CEO sociopolitical activism is a double-edged sword when navigating heterogeneous stake-holder demands. In a case study of Elon Musk, Tesla's CEO, we examine the conditions under which CEO activism conducted via Twitter is evaluated favorably, leading to moral legitimacy for CEOs and their companies in ideologically polarized media landscapes. Our study suggests that in their sociopolitical activism, CEOs may use political ideologies much more flexibly and skillfully than previous research suggests. Utilizing inductive theory building, research on or-ganizational impression management, cultural agency, and robust action, we suggest that Musk engaged in robust CEO activism involving three ideologically flexible sociopolitical claim-making strategies. We explain why robust CEO activism induces ideologically polarized audi-ences to evaluate a CEO's and his/her company's image coherently and morally favorably. Ro-bust CEO activism enabled Musk to maintain Tesla's and his moral legitimacy among left-wing media while reducing illegitimacy among right-wing outlets leading to depolarization among both audiences.

SIM: **Toward an Integration of Corporate Disobedience in CSR**

Author: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*

This paper follows the political turn that corporate social responsibility (CSR) took recently in studying the political roles of private firms as a complement to public authority, and it proposes a new stream of conversations on the additional political function of corporations: being a counterweight to public authority. In doing so, it takes issue with the legalist assumption that companies ought to comply with the law that was part of the first attempts to conceptualize CSR and that continuously and discretely influences theory and practice. This paper adopts a meta-normative perspective and draws on theories of political obligation to discuss the conditions under which it becomes morally acceptable for corporations to disobey the law, as they assume the role of counterweight to political authorities spanning from authoritarian to liberal democratic regimes. The paper also maps the key issues at stake and indicates directions for further research.

SIM: **Risk-Averse Revolutionaries: Engine No. 1 and the Limits of Purpose-Driven Investing**

Author: **Andrew Paul Lynn**, *U. of Virginia*

While managerial studies has conventionally located the locus of moral leadership at the level of the corporate manager or executive, the rise of concentrated institutional investors has allocated far more power to shareholders and owners to dictate the moral behaviors of firms. Unfortunately, both normative and strategic management writings have often neglected to address the degree to which shareholders now exert not just financial but ethical and political pressures on firms. This paper assesses the practice of ethical shareholder activism or "activist ownership" by critically examining the ethical frameworks invoked by hedge funds and indexed investors seeking to achieve certain social goods. The shareholder activism of Engine No. 1 is reviewed and assessed as an exemplary case, examining their proxy battle and subsequent introduction of financial instruments that ground sustainable practices within financial interests and mitigating risk. I label the ethical framework promoted by Engine No. 1 "instrumental utilitarianism," an ethical framework that cites not normative values but economic or long-term risk for pursuing particular lines of action. Drawing on the discourse and justifications provided by the firm itself, I parse out the manner in which this utilitarianism ultimately narrows all ethical action to that which proves advantageous to shareholders. I then offer an immanent critique of such approaches, bringing to the surface three central blindspots or shortcomings that substantively constrain or incapacitate those actors subscribing to such an approach. The paper concludes with tentative proposals for grounding activist investment and firm leadership in less constrained ethical and social purposes and commitments.

Sustainability and Environmental Performance

Session Moderator: **Ye He**, *Warwick Business School*

SIM: **Environmental Performance Feedback and Corporate Social Orientation**

Author: **Ye He**, *Warwick Business School*
Author: **Raveendra Chittoor**, *U. of Victoria*

Research on corporate social responsibility calls for the need to distinguish between corporate environmental and social practices, as firms' investments in environmental issues rely more on technological innovation and scientific pursuit than in social issues. Yet, we know little about the relationship between firms' engagement in environmental and social practices in response to different stakeholder demands. To understand how environmental performance feedback (below or above aspirations) may impact firms' subsequent social orientation, we offer a behavioral theory explanation for the heterogeneity in organizations' interpretation and responsiveness to failed and achieved environmental performance goals. Based on panel data analyses on a global sample of 6,659 listed firms from 72 countries from 2004 to 2019, we find a U-shaped relationship between negative environmental performance feedback and corporate social performance. Our findings also show an inverted U-shape between positive environmental performance feedback and social orientation. Namely, when firms have extremely poor environmental performance far below aspirations, they are more motivated to perform better in addressing social issues, mainly due to legitimacy concerns. Conversely, as firms' environmental performance is well above aspirations, their motivation to improve social performance will be decreased significantly, partly because their legitimacy is already secured by the satisfactory environmental performance.

SIM: **Space Debris and Sustainability**

Author: **Yeolan Lee**, *U. of Alabama, Huntsville*
Author: **Eric Fong**, *U. of Alabama, Huntsville*

The entry of private companies (e.g., SpaceX) into space has led to the space sector's rapid growth; however, the governance of space activities has not been able to keep pace with this growth. One primary area for which stakeholders must address is space sustainability, particularly regarding space debris given space debris impacts all human space activity. In this paper, we propose an ecosystem framework in which there are five components including activities, stakeholders, formal governance, informal governance, and common pool resources. We discuss issues surrounding space sustainability in the space ecosystem and analyze space debris using our ecosystem framework. This paper concludes that the ecosystem approach (i.e., addressing all five elements in the ecosystem) is required to resolve space debris.

SIM: **Value Co-creation Pathways in Social Innovation: A Sustainability Business Model View**

Author: **Li-Hsiang Yi**, *National Tsing Hua U.*
Author: **Jingjing Weng**, *National Taiwan U. of Science and Technology*
Author: **Ying-Che Ali Hsieh**, *National Tsing Hua U.*
Author: **Hui-Ching Hsieh**, *National Cheng Kung U.*

A sustainability business model (SBM) is an innovative approach to delivering social and commercial value with the interests of the stakeholders in alignment. Sustainable business model innovation entails developing value propositions that create value for multiple actors simultaneously, and thereby facilitate a sustainable environment. To extend the discussion of sustainable business models in the literature, this study investigates how sustainable value is co-created through social innovation. Using empirical evidence from 30 social enterprises fostering the construction of social innovation, this study takes a qualitative multiple-case-study approach, and identifies three factors (social construction, products/services, and multi-stakeholder collaborative relationships) as the foundation of an SBM. Five types of SBM (interaction, integration, co-production, bridging, and self-branding) are proposed. Based on this, we show the pathways of how value is proposed, captured, and co-created in social innovations in practice. This study makes an important contribution in bridging the research on SBMs with the literature on social innovation, as well as the construction of sustainable value for institutional change.

SIM: **Entrepreneur's Socioeconomic Status and Corporate Environmental Actions in China**

Author: **Yuling Shi**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Wanming Chen**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Yapu Zhao**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Qian Xu**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Beilei Dang**, *Nanjing Vocational College of Information Technology*

There is controversy on the role of a leader's socioeconomic status in corporate environmental actions since high socioeconomic status can both promote resource acquisition and help avoid penalties. We aim to reconcile the theoretical puzzle by examining the influence of an entrepreneur's socioeconomic status on positive environmental actions (green innovation) and environmental misconduct (environmental pollution) as well as the moderation effects of family ownership in emerging economies of China. The analysis of 3,664 private firms from a national survey in China shows that an entrepreneur's socioeconomic status not only can promote green innovation but also can stimulate more environmental misconduct. Furthermore, both effects become more salient in firms with a higher level of family ownership. Our study adds novel insights to green management literature by uncovering the complicated effects of an entrepreneur's socioeconomic status on corporate environmental actions.

CSR in Context: Small Firms and Developing Countries

Session Moderator: **James J. Cordeiro**, *SUNY*

SIM: **CSR Transparency Among Small Firms**

Author: **Aynur Nabiyeva**, *U. of Massachusetts, Boston*
Author: **Edward Carberry**, *U. of Massachusetts, Boston*
Author: **Nardia Haigh**, *U. of Massachusetts*
Author: **Theodore DeWitt**, *U. of Massachusetts, Boston*

Existing research has largely assumed homogeneity in small firm CSR communication; nevertheless, mission-driven SMEs are increasingly engaging in CSR communication with various degrees of transparency in this effort. To better understand this phenomenon, we theorize the transparency of small firm CSR communication, drawing on stakeholder salience and organizational cost perspectives. We hypothesize that broader representation of stakeholders in governance will positively affect CSR transparency through the greater salience of stakeholder demand for information. Additionally, we suggest that CSR training, defined as the practice of integrating social-environmental performance principles into employee training, will positively affect CSR transparency by absorbing organizational costs associated with CSR communication. Results from multilevel analyses of an unbalanced panel of 990 benefit corporations offer support for our hypotheses. We find that firms with a broader representation of stakeholders in their governing body and higher levels of CSR training demonstrate higher transparency in their CSR communication. Our study provides an empirically grounded understanding of the firm-level drivers of small firm CSR communication and contributes to the literature on corporate social responsibility by highlighting how organizational practices, such as stakeholder representation in the governing body and incorporation of social-environmental principles into employee training, can facilitate transparency of CSR communication among small firms.

SIM: **The Micro-foundations of CSR and Intra-organizational Power Dynamics**

Author: **Mai Chi Vu**, *Newcastle Business School, Northumbria U.*
Author: **Hyemi Shin**, *School of Management, Royal Holloway, U. of London, UK*

A micro-turn in Corporate Social Responsibility (CSR) research has been growing scholarly attention on what happens internally when CSR is developed and implemented in firms. However, the concept of power remains relatively neglected in micro-CSR studies. Therefore, in this study we ask, how individuals in CSR teams experience internal organizational power dynamics influenced by informal institutions in CSR implementation? Based on interviews with 56 team members in 16 CSR project teams from small-and medium-sized enterprises in Vietnam, we explore the power dynamics of CSR implementation within organizations. Our findings identify three dimensions of power (relational, discursive, and performative) influencing different mechanisms of internal power dynamics (refraining, accumulating and coercing) in CSR implementation, leading to different perceived outcomes (integrated, fragmented, and symbolic) across CSR teams.

SIM: **Assessing and Explaining CSR Investment Efficiency in a Developing Country Context**

Author: **James J. Cordeiro**, *SUNY*
Author: **Tara Shaw**, *Indian Institute of Technology, Bombay*
Author: **Swetketu Patnaik**, *Anglia Ruskin U.*
Author: **Chunguang Bai**, *U. of Electronic Science and Technology of China*

We study the efficiency of CSR investment in terms of generating CSR outcomes in Indian firms using a sample of 1295 firm-years over the 2015-2019 period post-2013 Companies Act. Our construct "CSR spending efficiency" is a novel one that is intended to address the concern that past research on CSR has tended to implicitly assume that CSR spending proxies for (or is strongly tied to) CSR performance. Our first research focus is on quantifying the CSR spending efficiencies for Indian firms using data envelopment analysis (DEA). Our second research focus is on studying the impact of two key firm-level variables: managerial ability and family owned and managed ownership status on CSR spending efficiency. We document a significant positive impact of both variables in panel data regressions incorporating relevant controls and Heckman sample correction.

SIM: **Embedded Nature of CSR: An Inquiry into Macro-Contextual Dynamics from a Social Capital Perspective**

Author: **Shahnaz Ibrahim**, *Principle Teaching Fellow in Strategy and Entrepreneurship*
Author: **Mine Karatas-Ozkan**, *U. of Southampton*

In this paper, we demonstrate the embeddedness of CSR and the nature of macro-contextual influences (economic, socio-political and cultural) on SME-CSR expressions and orientations, mediated through the cognitive, relational and structural elements of social capital. Drawing on 54 qualitative interviews, our findings reveal that social capital acts as a resource as well as a constraint, shaping CSR understandings and practices of SMEs in the Egyptian context. We argue that there exists a tension and conflicting signals and 'pull and push' between different facets of social capital, thus shaping peculiar expressions of CSR among SMEs. We make multiple contributions to the field by illuminating the salience and interdependency of the three forms of social capital, and how these invariably mediate the relationship between macro-context and CSR engagement. Key words: Corporate Social Responsibility (CSR), Small and Medium–Sized Enterprises (SME), Social Capital Theory, Developing Countries, Egypt.

Social Movements: Stigma, Cancellation and Social Change

Session Moderator: **Kristen Raney**, *Arizona State U.*

SIM: **Social Movements and Corporate Foreign Board Directorships: A Stigma Perspective**

Author: **Guang Zhou**, *Changshu Institute of Technology*
Author: **Longwei Tian**, *Tongji U., Shanghai, PR. China*
Author: **Xincheng Wang**, *Tongji U.*

Studies show that when social movements target a firm, the firm will often yield to the demands of the movements. When social movements target the peers of the firm, the firm will also yield. In this study, we examine social movements that do not target specific firms or industries. Drawing upon the stigma literature, we posit that social movements that are built upon a broad societal consensus can influence corporations to make changes in line with the movements. We test our hypotheses using the 2012 anti-Japanese social movement in China. We found that Chinese firms were less likely to retain Japanese directors after this movement. We found that this effect was more salient for firms with a higher media exposure, but less salient for firms with ownership by the state or ownership by the Japanese stakeholders. This study contributes to a better understanding of social movements on corporate behavior.

SIM: **No Room for Redemption: Toward an Understanding of Cancellation as an Organizational Phenomenon**

Author: **Kristen Raney**, *Arizona State U.*
Author: **Lindsey Yonish**, *Texas A&M U.*
Author: **Cynthia E. Devers**, *Virginia Tech*
Author: **Jonathan Nicholas Bundy**, *Arizona State U.*

In recent years, there has been an increase in public attention toward what has become colloquially known as "cancellation." Despite this, there is a lack of scholarly consensus around what cancellation is, the conditions under which it occurs, and the implications of cancellation for organizations and their members. We propose a formal definition of cancellation and draw from theory and research on cultural and media studies, social movements, and social evaluations to develop a theory of how cancellation occurs. We also differentiate cancellation from related concepts and describe how cancellation may pose both challenges and opportunities for organizations.

SIM: **How Social Movements Contest Business and Corporate Social Responsibility: Drawing on Gabriel Tarde**

Author: **Diego Alfonso Vazquez**, *Portsmouth Business School*
Author: **Lutz Preuss**, *Kedge Business School*
Author: **Natalia Yakovleva**, *Kedge Business School*
Author: **Hamid Foroughi**, *U. of Essex*

Existing research is still struggling to fully understand how social movements contest business practices and increase public awareness of social issues until business or public policy decision-makers are forced to act on them. We draw on Gabriel Tarde's Laws of Imitation as well as on the literature on issue salience to examine how social movements elevate the significance or salience of a social issue from local to national level and establish new framings that resonates with communities. Using data from a case study of an anti-mining social movement in Argentina, we identify conditions and processes required to successfully contest mining companies' practices and grow local contestation into a national anti-mining movement with public policy consequences. Our analysis reveals that social movements can achieve large-scale issue salience through micro-processes of opposition, imitation and invention and that these processes are underpinned by desire, belief, prestige, proximity and resemblance. We further demonstrate that elevated issue salience can be maintained over time when polarizing frames are successfully introduced, and note that contestation of corporate social responsibility plays a key role in the articulation of these frames

SIM: **The Role of Materials in Issue Framing in Social Movements: A Case Study of Women's Movement**

Author: **Ozgu Karakulak**, *U. of Sussex Business School*
Author: **Esra Paca**, *Ozyegin U.*
Author: **Çagla Güven**, *Ozyegin U.*

The process of collective issue framing is one of the main tasks of social movement actors to mobilize support, sustain their movement and deliver social change. In this study, we investigated how materials mutually shape the evolution of collective issue frames used by social movement actors. Even though materials are one of the most important strategic tools social movement actors use, the role of materials has been mostly overlooked. To address this issue, we study the Turkish Women's Movement from 1980 to 2022. We found that social movement actors benefited from three main functions of materials: functional, cognitive and emotional. Our findings also highlight that the relationship between materials used and collective issue frames has evolved mutually. This relationship became more salient towards the end of the period when social movement actors started recognizing the role of human bodies and engaged in active bodywork. Our work contributes to filling in an important research gap by studying the role of materials in the evolution of a social movement and reveals the significant role of materials in this process.

Theoretical and Empirical Advancements in Purpose-Driven Workplaces and Employee Outcomes

Panelist: **Christiane Bode**, *Imperial College Business School*
Panelist: **Magda M. Donia**, *U. of Ottawa*
Panelist: **Magali Fia**, *U. of Bologna-Yunus Social Business Centre*
Panelist: **Kelsy Hejjas**, *Edinburgh Napier U.*
Moderator: **Maureen A. Scully**, *U. of Massachusetts, Boston*
Organizer: **Aynur Nabiyeva**, *U. of Massachusetts, Boston*

To assess the current state of the debate on purpose-driven workplaces and their impact on employees, this panel symposium brings together a group of distinguished scholars who conduct research at the intersection of CSR and employees from a variety of perspectives and levels of analysis. In particular, this panel aims to provide insights into (1) the outcomes of engaging in CSR for employees, organizations, and corporate governance, (2) the underlying employee attributions and internal organizational factors explaining such outcomes, and (3) strategies that can help organizations more effectively leverage CSR initiatives for the benefit of organizations, employees, and society at large. The panel will provide directions for future research to better understand the relationship between CSR and employee outcomes and identify ways to bridge the gap between academic research and practice in this field.

Stakeholders: Value, Innovation, and Performance

Session Moderator: **Vipin Sreekumar**, *Masters' Union School of Business*

SIM: **Corporate Information Environment and CSP: Transparency, Stakeholder Value, and Shareholder Value**

Author: **Vipin Sreekumar**, *Masters' Union School of Business*
Author: **Parthiban David**, *American U.*
Author: **Augustine Duru**, *American U.*
Author: **Palash Deb**, *Indian Institute of Management, Calcutta*

Why do some firms have higher Corporate Social Performance (CSP)? Why does CSP yield higher Corporate Financial Performance (CFP) in some firms? We propose that transparency in a firm's corporate information environment plays a governance role in shaping these relationships. By providing valuable information about hidden managerial actions, transparency makes it easier for stakeholders to distinguish among actions on the basis of fairness, and reciprocate accordingly, thereby tying value creation and managerial career outcomes more closely to managerial actions and making managers more accountable to stakeholders. Our study contrasts with prior work that emphasizes formal mechanisms such as incentives or direct control and monitoring of managers for aligning managers with stakeholders. We find that transparency enhances CSP and strengthens the association between CSP and CFP.

SIM: **Stakeholder Governance: Interdisciplinary Review, Theoretical Synthesis, and Future Research**

Author: **Sarah Ku**, *Loyola U. Chicago*

Stakeholder governance receives attention across many disciplines, resulting in fragmented knowledge. The inherent complexity of stakeholder governance requires the integration of this knowledge to develop comprehensive and inclusive theories to better conceptualize this phenomenon. We develop integrated theory for stakeholder governance through interdisciplinary review and synthesis to identify similarities, reduce redundancies, contrast differences, and reconcile conflicts of patterns across disparate knowledge streams. This research identifies definitions and terminologies, reviews the evolution of theories and orientations, organizes mechanisms and conceptualizations, synthesizes key theoretical tensions, and offers suggestions for future research. We contribute pluralist conceptual frameworks that reviews, synthesizes, and integrates knowledge across disciplines to provide a comprehensive overview and recommendations to advance theory development for stakeholder governance.

Politics and Society in Philanthropy Research

Session Moderator: **Arthur Gautier**, *ESSEC Business School*

SIM: **Taking Society Seriously in Corporate Philanthropy Research**

Author: **Arthur Gautier**, *ESSEC Business School*
Author: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*

Building upon a systematic, integrative review of corporate philanthropy (CP) research (354 articles), our analysis reveals the ubiquity of the "business case" for CP in the literature: understanding the antecedents of corporate executives' decisions to practice CP and measuring its outcomes on firms' financial performance and stakeholder relations. In contrast, we identify an emerging perspective, the "society case," which focuses on how CP affects recipients—nonprofit organizations (NPOs) in particular and society more broadly. We underline the limitations of the "business case" and argue that it matters to study the "society case." To uphold this argument, we distinguish different types of CP outcomes and explain how they can be assessed. We also show how focusing on outcomes should add more ethical and political conversations to CP research agendas.

SIM: **Political Ties and Philanthropic Donations of Chinese Entrepreneurial Firms**

Author: **Naveen Kumar Jain**, *U. of Groningen*
Author: **Nitin Pangarkar**, *National U. of Singapore*
Author: **Lin Yuan**, *U. of Macau*

In this paper, we examine the relationship between political ties of Chinese entrepreneurial firms and their philanthropic donations. We argue that the type of political ties by Chinese entrepreneurial firms will influence the information available to not only them about government policies and priorities but also the government about their resources and performance. Coupled with the heterogeneity in legitimacy accrued to these firms because of their political ties, this bidirectional information availability will influence their philanthropic donations, we posit. Our study assumes salience because of three key trends: greater emphasis placed on CSR and philanthropy by the Chinese government, the consequent higher expectations it holds of private sector enterprises for philanthropic contributions, and the increasing importance of entrepreneurial firms to the Chinese economy. We test our model by analyzing a dataset of 9262 observations and find support for most of our key predictions.

SIM: **Grassroots-oriented Corporate Philanthropy as Extension of Core Business Activities** ✈ 💻

Author: **Yuhao Zhuang**, *HEC Paris*

Prior nonmarket strategy research has established that corporate philanthropic donations in emerging markets and authoritarian states are predominantly received by the government and its affiliates. Drawing on 69 interviews and 20 months of participant observation in China, I develop a theory of firms' donations to grassroots nonprofits, which are politically marginalized organizations unaffiliated with the state. Precisely due to lack of access to coercive means and failure to legitimize work as a political necessity, grassroots nonprofits are prone to corporate donors' requests to secure control of donation allocation and leverage such control to buffer against market volatility. In addition, grassroots nonprofits also become politically expedient targets of firms seeking to turn philanthropic events into opportunities of business networking and product marketing. Consequently, for collaborations between firms and grassroots nonprofits, the distinction between social initiatives and core business activities is blurred. These findings connect political status of nonprofit organizations with commerciality of corporate philanthropy, contributing more broadly to work on political embeddedness, hybridity, and corporate social responsibility.

Panelist: **Luigi Marengo**, *Luiss Guido Carli U.*
Panelist: **Colin Mayer**, *Said Business School*

Scholars and practitioners are focusing on redefining the purpose of corporations from shareholder value maximization to creating value for all stakeholders. One school of thought considers this an important step toward corporations' willingness to solve critical social problems and responsibly conduct business. However, another school of thought argues that this voluntary move of redefining the purpose will be harmful to society and illusory. As a result, the literature is fragmented and inconclusive. In this symposium, we have invited panelists from both schools of thought to discuss this issue, highlight the strengths and weaknesses of both schools, and direct useful areas of research.

Behavioral Theory of the Firm

Session Moderator: **Stephen Smulowitz**, *International Institute for Management Development - IMD*

STR: **Ethnic Diversity and R&D Search Intensity: The Moderating Effects of Aspirations**

Author: **Stephen Smulowitz**, *International Institute for Management Development - IMD*
Author: **Corinne A. Post**, *Villanova U.*
Author: **Didier Cossin**, *International Institute for Management Development - IMD*

Combining research that examines the effect of performance feedback and available slack on firms' innovation efforts with research on board ethnic diversity, we theorize that board ethnic diversity alters how firms adjust their innovation efforts in response to the information that search provides. Specifically, we theorize that more ethnic diversity in boards amplifies the intensification of firm research and development (R&D) search efforts caused by lower than anticipated performance and available slack, and exacerbates the drop in R&D search intensity that occurs when performance is above anticipated levels. Testing these predictions with a panel dataset of 11,036 observations from 1,527 S&P 1500 firms for the period 2006–2016, we find robust empirical support for most of our predictions.

STR: **MNC Subsidiary-Level Performance Comparisons and Termination Decisions**

Author: **Jung-Hyun Suh**, *Chinese U. of Hong Kong*
Author: **Shige Makino**, *Kyoto U.*
Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

In this study, we examine how subsidiary-level social performance comparisons affect multinational corporations' (MNCs) subsidiary termination decisions. A foreign subsidiary's performance can be benchmarked against external and internal peer subsidiaries whose performance levels constitute external social aspirations (ESA) and internal social aspirations (ISA), respectively. Using unpublished survey data on Japanese MNCs that offer subsidiary-level performance data, we find that a subsidiary's below-ESA performance is a stronger predictor of subsidiary termination than below-ISA performance. However, as a subsidiary's host country experience increases, the effect of below-ISA performance is amplified and even surpasses the effect of below-ESA performance, which does not vary with host country experience. We discuss how our theory and findings enrich performance feedback and MNC research.

STR: **The Relationship Between Firm Performance and Strategic Change: A Meta-analysis**

Author: **Christian Kaiser**, *Justus Liebig U. Giessen*
Author: **Andreas Bausch**, *Justus-Liebig U. Giessen*

A core concern in strategy research centers on the relationship between firm performance and strategic change. Despite decades of research, the empirical evidence for this relationship is still inconclusive. Our analysis of the extensive research suggests that the inconclusive empirical findings are related to the complex nature of the concepts of firm performance and strategic change, which has implications for strategic change as a form of risk-taking. Thus, the purpose of this paper is to advance a more nuanced understanding by asking: How does risk influence the relationship between poor firm performance and strategic change? Our baseline hypothesis is drawing on arguments from the behavioral theory of the firm (BTOF) that poor performance triggers a "problemistic search" which leads to an increase of strategic change. Furthermore, we incorporate arguments of prospect theory regarding risk-taking that strategic change is also influenced by the risk-driven behavior of managers. We tested our predictions using meta-analytical techniques for a sample of 76 empirical studies and we found substantial empirical support for our predictions. Our study helps advance our theoretical and empirical knowledge about the relationship between poor firm performance and strategic change.

STR: **Product Market Overlap with Peers and the Effect of Social Aspirations on Product Market Entry**

Author: **Jung-Hyun Suh**, *Chinese U. of Hong Kong*
Author: **Kyeonggook Park**, *City U. of Hong Kong*

Although there has been ample work studying the effect of performance feedback relative to social aspirations, empirical evidence has not been conclusive. In this study, we adopt a finer-grained approach by exploiting the product market data and examine the boundary conditions under which the social aspiration level becomes a stronger reference point for firms' product market entry decisions. In particular, we posit that the relationship between firm performance falling below social aspirations and the likelihood of entering a new product market depends on the degree of product market overlap with industry peers that shapes the ability and motivation to anchor market entry decisions on social aspirations. We further argue that this amplifying effect of product market overlap depends on the growth of the firm's existing product markets, such that the more firms' existing product markets are growing, the less strong the amplifying effect of product market overlap is. Empirical analyses on product-level data of the US software industry from 2015 to 2019 provide support for our arguments.

Strategic Human Capital

Session Moderator: **George Ward**, *U. of Oxford*

STR: **Workplace Happiness and Employee Recruitment**

Author: **George Ward**, *U. of Oxford*

For over a century, organizational researchers and practitioners alike have been interested in the role played by employee happiness in shaping workplace performance. Whereas prior work has focused on the potential effects of happiness on productivity and retention, in this paper, I study the effects of workplace happiness on a firm's ability to compete in the labor market and attract workers. I provide evidence from a field experiment on a large online jobs platform in the USA, in which treated job seekers were shown aggregated information about the happiness of incumbent workers at the companies to which they were considering applying. I provide evidence that showing information about happiness has an impact on job search behavior, with treated job seekers increasing their application selectivity and redirecting applications from low- to high-happiness companies. These labor supply effects are driven largely by job seekers ``screening out" low happiness firms from their job search, a finding that is replicated in subsequent field experiments on the platform in Canada and the UK. The findings suggest that workplace happiness affects labor supply decisions and, ultimately, that employers face incentives to invest in organizational and management practices that are conducive to worker happiness.

STR: **Human Capital and Strategic Foresight: Evidence from Insider Trading**

Author: **Nauman Asghar**, *NEOMA Business School*
Author: **Russell Coff**, *Wisconsin School of Business*
Author: **John Mawdsley**, *HEC Paris*

We explore how the nature of human capital (generalist vs specialist) shapes the strategic foresight of corporate leaders. Examining insider trading—an important manifestation of strategic foresight—associated with product introduction announcements, we find that, on average, the insider trading of specialists is associated with greater strategic foresight compared with that of generalists. Yet, generalists can narrow this difference if they hold firm-contextual knowledge. Such knowledge enhances generalists' understanding of the specificities of the focal firm and in turn offers them greater accuracy when they apply their broad knowledge to the firm. Yet, despite the apparent advantages of specialist knowledge for strategic foresight, we find that it is generalists who engage in more insider trading before product introduction announcements than specialists, and this effect is stronger when generalists hold firm-contextual knowledge. Our study offers fresh contributions to the strategic human capital and strategic foresight literatures.

STR: **Why and How Organizations Manage Workers' "Whole Selves": Exploring the Case of Kin**

Author: **Sarah Wittman**, *George Mason U.*

Taking a strategic behavioral theory lens, I bring the organization's interests to the work-life bargaining table. Arguing that workers negotiating their personal-professional boundaries exposes organizations to individuals' "whole selves," I delineate how organizations' diverse needs and preferences, status quo, and neighborhood search coupled with decision-makers' threat and opportunity frames drive organizational management of workers' nonwork lives, including their kin (nuclear and extended family). I theorize that threat mindsets that beget resource protection efforts lead firms to segment workers' professional resources into, and—sometimes unintentionally—their personal lives out of, the firm. Such approaches, where workers seek personal-professional integration, lead to identity threat, disenfranchisement and, paradoxically, organizational resource loss. Under opportunity mindsets, organizations will attempt to gain resources by aligning workers' whole selves—personal and professional—with organizational interests; this may propel psychological and structural kin-firm integration. Organizations will offer idiosyncratic deals (I-Deals) where workers or their kin are considered strategically important to firm resources; integration will increase worker dependence and family embeddedness, keeping workers at work. I discuss how viewing workers' boundary negotiation as a firm-level strategic issue changes research at individual and organizational levels of analysis, and propose an open, interest-based relationship that fosters both worker and organizational thriving.

STR: **Individual Choices and Firm Specific Human Capital**

Author: **Sreevathsan Sridhar**, *London Business School*

Prior literature presents the view that workers build firm specific skills through experience. However, recent empirical works suggest that the relationship between organizational tenure and firm specific human capital could be ambiguous. Further, other types of skills (e.g. task specific, industry specific and occupation specific skills) also accrue through experience. How these skills evolve over an employee's tenure remains an untested assumption in literature. In this paper, I argue that workers develop firm specific skills and general skills at different points of their tenure in a firm. At the early stages, they have a stronger incentive to develop firm specific skills because of the immediate value they gain in terms of performance and legitimacy within the firm. At later stages, they develop general skills to secure their value outside the firm. I provide evidence for my theory in the mutual fund context and discuss some implications to the human capital literature.

Divestitures

Session Moderator: **Deirdre Coveney**, *Warwick Business School*

STR: **Selling to a Friend or a Stranger: Successive Ownership and Exit Routes in Private Equity Contexts**

Author: **Deirdre Coveney**, *Warwick Business School*
Author: **Sotirios Paroutis**, *Warwick Business School*

Research on acquisitions and divestments notes the importance of timing in creating and capturing value. A timing competence encapsulates the ability to time ownership well, choosing when to cease ownership and how to exit ownership effectively. Beyond "timing it right" through there is little understanding of the decision-making and outcomes of ownership succession, with the impact of temporal investments and the decision-making around entry and exit strategies remaining largely unexplored. Using the Private Equity (PE) industry, our study uses a matched dataset of 3,008 PE targets tracked from acquisition to divestment to demonstrate the negative impact of successive ownership. Our findings showcase the importance of the ownership cycle and more specifically the relationship of the succession of ownership or temporal investments to the value for successive owners. Further, by examining the importance of coherence between entry and exit strategies, this research disentangles the facets of timing competence. Overall, our study contributes insights into how ownership creates value, how the investment of time acts as a cue for this value and delineates the ways in which modern forms of ownership can create value through succession.

STR: **All Tied Up? How Shareholders' Financial and Non-Financial Interests Affect Strategic Divestitures**

Author: **Josua Oll**, *U. of Oldenburg*
Author: **Swantje Freund**, *U. of Oldenburg*
Author: **Joern Hoppmann**, *U. of Oldenburg*

Recent research stresses the strategic importance of corporate divestitures and suggests that firms' divestiture approaches may be decisively shaped by its shareholders. However, so far, our understanding of how shareholders shape divestitures is still limited as prior literature tends to neglect shareholders' non-financial interests and does not provide detailed insights into the mechanisms through which shareholders affect a firm's mode of divestiture. To address these shortcomings, we draw on a comparative case study of the four largest electric utility companies in Germany to investigate whether, how, and how fast they divested their coal business. We show that differences in firms' divestiture strategies can be explained through differences in shareholders' financial and non-financial interests, which, in turn, were closely related to the geographic distance between shareholders and firms' operations. Specifically, we find that firms with geographically proximate shareholders had formed close supply, economic, philanthropic, and cultural ties with their shareholders that prevented radical divestitures. By developing a framework that explicates the detailed mechanisms through which shareholder ties hinder firm divestitures, we contribute to the growing body of literature dealing with non-financial motives in divestitures, research on strategic change and inertia, as well as the literature on grand challenges.

STR: **No Light without Shadow? Implications of Divestitures from the Employee Perspective**

Author: **Jan Christoph Hennig**, *Groningen U. (RuG)*
Author: **Natascha Loth**, *U. of Goettingen*
Author: **Michael Wolff**, *U. of Goettingen*

Extant research on divestiture outcomes highlights various financial and strategic bene-fits at the firm level resulting in a predominantly positive image of divestitures. Challenging this view, we provide evidence for adverse outcomes of divestitures by focusing on the employ-ee level. We argue that the divesting firm's remaining employees subjectively perceive divesti-tures as a violation of their psychological contract with the firm, resulting in lower commit-ment. We further suggest that this effect intensifies for employees with longer relationships with the firm and higher preferences for reciprocity. Using 1.85 Mio. employee-year observa-tions of proprietary, internal firm data, we find support for our hypotheses. Our results highlight the importance of the employee-perspective on divestiture outcomes, unveiling the previously neglected dark side of divestitures.

STR: **Build, Borrow, Buy... or Bail?**

Author: **Ralph Anthony Gibbs**, *Purdue U., West Lafayette*
Author: **Heejung Byun**, *Purdue U.*
Author: **Koungjin Lim**, *Purdue U.*

The relationship between divestitures and acquisitions is generally presented in three ways: the focal firm makes divestitures to free up resources for future acquisitions; the focal firm divests redundant parts of a target firm they have acquired; or the focal firm may divest an acquired business entirely if the performance of the combined firm does not meet expectations. We theorize an additional relationship—if a bidding firm attempts to acquire a target firm but the transaction fails to close, we predict conditions in which the firm may pivot to divest resources related to the target firm rather than return to status quo or attempt another mode of growth. To test this relationship, we augment previous methodological approaches with a novel method: matching successful and unsuccessful acquisition bids using the perceived risk of deal failure by using arbitrage spreads between the announced and spot price of the target. Consistent with this argument, we find that bidding firms make more divestitures in sectors proximal to the target after a failed bid.

Distinctiveness in CSR Responses

Session Moderator: **Stan X. Li**, *City U. of Hong Kong*

STR: **Bridging Optimal Distinctiveness and Strategic Group: A Cross-level Approach**

Author: **Stan X. Li**, *City U. of Hong Kong*
Author: **Huajie Shen**, *School of management, Zhejiang U.*

The optimal distinctiveness (OD) literature proposes a focal firm is able to differentiate away from the industry prototype to obtain competitive advantage, whereas the strategic group (SG) literature suggests a focal firm conforms to the group prototype. The study proposes a cross-level perspective to integrate the two bodies of literature. We theorize that a focal firm's performance is mutually determined by the interplay of between-group distinctiveness (BGD, defined as the extent of differentiation between the strategic groups with which the focal firm affiliates) and within-group distinctiveness (WGD, defined as the extent of differentiation between the focal firm and other firms of the strategic group with which the focal firm affiliates) , because the drivers of legitimacy and competition vary across the two levels. In other words, firms must tradeoff its strategic positions at the between-group and within-group levels. In our empirical analyses, we developed a novel method based on the algorithm of fuzzy clustering to construct BGD and WGD. In addition, we employed an efficient GMM model with three instrumental variables to address the endogenous concern. In further support of the cross-level perspective, analysis results show that the classic argument of "optimal distinctiveness" only applies to the firms which affiliate with more than one strategic group, and a focal firm's perception on the "optimal position" within an industry is determinant by the number of strategic group memberships.

STR: **It Costs to be Different: The Moderating Role of CSR Fit and Media Severity in Time of Crisis**

Author: **Nontuthuzelo Mashaba**, *NEOMA Business School*
Author: **Fabio Fonti**, *NEOMA Business School*

As the relevance of environmental challenges continues to grow globally, business environments are becoming highly scrutinized, with a higher intolerance for firms' corporate social irresponsible (CSI) behavior. Firms, through CSR, need to continuously build strong reputations and maintain a positive image, as well as avoid irresponsible behaviors (i.e., CSI). Yet, many firms continue to disregard this call. We take a risk management perspective to investigate what scholars have called the "insurance-like effect of CSR", in times of firm misconduct. We investigate whether firms whose CSR activities – i.e., differentiated CSR – stand out will attract harsher stock market reaction in the event of CSI behavior, thus nullifying CSR's insurance-like effect. In addition, we explore to what extent the magnitude of the media reaction to firm misconduct – i.e., media severity – will result in a harsher stock market reaction, thus weakening the insurance-like effect of CSR activities. Using data from the RepRisk database, we conduct an event study of 28 oil and gas companies between 2009 and 2017. We look at cumulative abnormal returns and find that differentiated CSR and media severity negatively moderate stock market reaction, thus weakening the insurance-like effect of CSR. We contribute to the understanding of moral capital by providing evidence that not all CSR is created equally, which might help guide managers when responding to the call to be good corporate citizens.

STR: **Deviating from Corruption Norms in China: A Perspective of Institutional Complexity**

Author: **Ziyi Chen**, *HKUST*
Author: **Zhenzhen Xie**, *School of Economics and Management Tsinghua U.*
Author: **Rui Wu**, *Tsinghua U.*

Despite the extensive controversy over to what extent corruption greases or throws sand into the gears of economic activity, there has been little scholarly work examining how bribery influences a firm's performance when a norm of corruption and an anti-corruption regime co-exist. Drawing on institutional theory, this study explored the idea that paying bigger bribes does not always predict above-average financial performance. The level of bribery accepted by social norms in a particular market is also influential. Deviation from corruption norms is subject to punishment by both informal institution and formal anticorruption enforcement agencies. Strengthening either sort of institution enhances the negative effect. Our empirical findings based on private industrial firms operating in China from 2003 to 2007 support these arguments.

STR: **Moving Beyond Environmental, Social, and Governance Ratings**

Author: **Jin-Su Kang**, *NYCU*
Author: **Stephen Thomas Downing**, *U. of Missouri*
Author: **Ying-Fang Chien**, *National Yang Ming Chiao Tung U.*

While environmental, social, and governance (ESG) has become the epic center of investment in recent years, a common practice of an aggregate ESG rating offers little guidance to investors and firms by lumping different natures of E, S, G moves together. Drawing on competitive dynamics literature and signaling theory, we contend that firms may employ ESG with strategic intent and underlying structure of each E, S, and G repertoire is crucial to earn inverstors' valuation, rather than overall ESG rating. Based on 7,606 ESG moves of rival dyads of 8 industries during 2015-2019, we show that while investors positively respond to highly visible and easy-to-understand ESG repertoires (i.e., high intensity and low complexity), their valuation differs by the type of signal each ESG type carries. As a pointing signal, investors value highly when a firm's environmental competitive repertoire is seemingly genuine and less manipulative signal (low predictability, and low motif). On the other hand, they appreciate predictable and well-organized social and governance competitive repertoires (i.e., high predictability and high motif), which serve as activating signals. Lastly, challengers are more aggressive in implementing ESG actions as they keep looking for opportunities to overthrow market leaders.

CEO Gender

Session Moderator: **Marko Reimer**, *WHU Otto Beisheim School of Management*

STR: **How Do Masculine CEOs Influence Radical Innovation: A Goal-Orientation Perspective**

Author: **Marko Reimer**, *WHU Otto Beisheim School of Management*
Author: **Michael Möller**, *WHU Otto Beisheim School of Management*
Author: **Dimitrios Georgakakis**, *U. of York*
Author: **Sebastiaan Van Doorn**, *U. of Western Australia, UWA Business School*

How does CEO masculinity – captured by the CEO's facial Width-to-Height Ratio (fWHR) – influence radical innovation? CEOs with high fWHR have higher levels of the steroid hormone testosterone, an aspect that influences behavior and leads to stronger achievement-drive for radical innovation. Yet, radical innovation is a trial-and-error learning process, requiring leaders to motivate learning and adaptation through empathy and relational leadership – an attribute of CEOs at low masculinity levels. Building on goal-orientation theory, we reconcile these opposing views, by positing that the effect of CEO masculinity on radical innovation is neither positive nor negative, but rather U-shaped. CEOs at relatively higher and lower levels of the masculinity continuum are more likely to boost radical innovation compared to their counterparts at moderate levels – as they identify more readily with: (a) a learning goal-orientation (at low masculinity levels), or (b) a performance prove goal-orientation (at high masculinity levels). We also maintain that this U-shape relationship becomes more pronounced with higher levels of TMT female-minority representation. Data from 140 CEOs, 82 pharmaceutical and bio-medical products firms between 2004 to 2020 support our predictions.

STR: **Exploring the Risk Taking Willingness of Women and Men Strategic Leaders: A Longitudinal Analysis**

Author: **Iuliia Vitte**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Jost Sieweke**, *Vrije U. Amsterdam*

Risk taking is an important construct in management research and the topic of differences in risk taking willingness between women and men strategic leaders has received much attention in the literature. Most studies indicate that women and men strategic leaders differ regarding their risk taking willingness. However, these studies focus on firm risk taking and provide very little insights into the individual risk taking attitudes of strategic leaders. The few existing studies on individual-level risk taking attitudes are limited by the cross-sectional nature of their data, which leaves a gap in our understanding of potential differences in the risk taking willingness of women and men strategic leaders and the dynamics over time. Our study addresses this gap and aims to provide new insights into strategic leaders' risk taking willingness with a special focus on women strategic leaders. We use of longitudinal data from the German Socio-Economic Panel (SOEP) to address limitations of prior cross-sectional studies. We find that women with high levels of risk taking willingness (self-)select into strategic leadership positions but that men in strategic leadership positions have a very high risk taking willingness, so that the difference we observe between women and men in the general population can be observed in strategic leadership positions, too. We also find that this difference in risk taking willingness between women and men strategic leaders already exists before their promotion to strategic leadership positions and that women's risk taking willingness increases more than men's at event of promotion to strategic leadership positions. Our study contributes to research on managerial risk taking and strategic leadership.

STR: **The Effect of CEO Gender on CEO Activism**

Author: **Scarlet Lausen**, *Leeds U. Business School*
Author: **Jatinder Singh Sidhu**, *Leeds U. Business School*

Recent years have witnessed a growing number of CEOs taking public stances on contested socio-political issues such as climate change, LGBTQ+ rights, or immigration. This phenomenon, termed 'CEO activism', may have far-reaching effects for firms and their stakeholders. Because of this, there is an urgent need to shed light on what drives CEOs to engage in activism. To address this gap in the research, this study examines the effect of CEO gender on their activism. Drawing on the literature on gender differences in terms of values, experiences, and leadership style, we argue that female CEOs are more activist than male CEOs. We also identify theoretical reasons for why CEO celebrity and firm headquarter state conservatism moderate this main relationship. Analysis of data on US Fortune 500 CEOs from 2015 to 2021 provides empirical support for most of our theory. We discuss contributions and implications of this study.

STR: **Financial Analysts Penalize Female CEOs for Female-Type Speech**

Author: **Aharon Cohen Mohliver**, *London Business School*
Author: **Anantha Krishna Divakaruni**, *U. of Bergen*
Author: **Laura Fritsch**, *U. of Oxford*

Female representation in top management remains stubbornly low. Of CEOs in public companies in the US for example, only 6.6% are women. One piece of the puzzle relates to audience reaction – analysts, who are sophisticated and informed actors reduce their recommendations following the first earnings call with an incoming female CEO (on average, from "hold" to "sell"). We use a novel dataset of containing the voice recordings of 60,038 earnings calls, and a novel computational approach that extracts to examine these earnings calls and ask why do analyst reduce (increase) their recommendation when a new Female (Male) CEO is appointed. The scale of our data (3,465 publicly listed firms, 203,159 executives and 266,340 analysts sampled at 15-second intervals – yielding 11.5 million observations of individual participant speech, and intonation), and it's panel structure (from 2011 to 2019) allows us exceptional granularity. We find that although it seems that analysts penalize female CEOs, they only do so when female CEOs use a distinctly female type speech (uptalk). Non-uptalk using incoming female CEOs, or uptalk using male CEOs are not penalized. To our knowledge, this is the first paper to use large-scale voice data of earnings calls, and we, therefore, end by reporting how voice data compares to text data in established measures (e.g. positive, negative, financial, uncertainty etc) that demonstrate the usefulness of voice data over transcribed text.

Firm External Control

Session Moderator: **Canquan Li**, *Hong Kong Polytechnic U.*

STR: **Common Ownership and Interorganizational Diffusion of Corporate Misconduct**

Author: **Canquan Li**, *Hong Kong Polytechnic U.*
Author: **Shuping Li**, *Hong Kong Polytechnic U.*
Author: **Jane Lu**, *City U. of Hong Kong*

Research on common ownership has largely relied on the assumption that common owners actively coordinate the behaviors of investee firms. However, in weak institutions characterized by high shareholder coordination costs, common owners may be less active, making common ownership an information channel for illegal practice diffusion. Drawing on the reputation-based perspective, we predict that when a common-ownership peer's misconduct is not detected in a timely manner, a firm will tend to imitate the misconduct. We further predict that firms will be more likely to imitate peers' misconduct when the misconduct is not detected in a developed legal environment, when state common owners are absent, and when firms experience performance that falls short of social aspirations. Evidence from commonly owned Chinese listed firms supports our predictions.

STR: **Strengthened or Weakened Monitoring? Multiple Blockholders and CEO Dismissals**

Author: **Jingyuan Li**, *Hong Kong U. of Science and Technology*

How does having multiple blockholders affect shareholder monitoring? Extant wisdom from agency theory and inter-organizational relationship research tend to give different predictions. We propose that whether the multiple blockholder structure would strengthen or weaken shareholder monitoring is contingent on whether the blockholders' interests are likely to align. We test this idea by investigating the CEO dismissals following two kinds of negative corporate events, where the blockholders are likely to concur on the dismissals to different degrees. We propose that the multiple blockholder structure will make firms less effective in replacing an under-performing CEO when firm performance is below industry peers but more effective in replacing a culpable CEO when firms are involved in financial misconduct. Our analyses using data on Chinese listed firms, where the multiple blockholder structure is prevalent, provide support for our hypotheses.

STR: **Dissecting Organizational Stigma: Does the Market Punish the Innocent?**

Author: **Enrico Onali**, *U. of Exeter*
Author: **Justin Tumlinson**, *U. of Exeter*
Author: **Anna Grosman**, *Loughborough U.*

Does organizational stigma due to firm failure affect individuals regardless of their ability to influence firm strategies? We exploit a quasi-natural experiment in the financial industry to address this question. In September 2008, Lehman Brothers and Merrill Lynch had similar business strategies and exposure to toxic assets, and both faced insolvency. However, while Lehman was allowed to collapse, Merrill was rescued. For Lehman employees without board positions, bankruptcy was thus random and unrelated to their actions, allowing us to disentangle the effect of organizational stigma from their ability and role in the firm's distress. We show that former Lehman employees are subsequently (1) paid less, (2) less likely to hold top positions, (3) and have lower-powered incentives in future compensation packages relative to former Merrill employees. However, firms hiring former Lehman employees as directors do not have worse performance or higher risk than firms hiring former Merrill employees. We conclude that the labor market irrationally stigmatizes organizations according to random negative outcomes rather than causes of negative performance. Our study contributes to the literature on organizational stigma, as it demonstrates that the stigma of organizations transfers to employees who had little to no influence on firm actions, even when there is no future negative effect on performance and risk.

STR: **HF Activist Gender Diversity, Managerial Resistance, "Wolfpack" Shareholder Support, and Performance**

Author: **Ankita Agarwal**, *California State U., Bakersfield*
Author: **Parthiban David**, *American U.*
Author: **Augustine Duru**, *American U.*
Author: **Maria Goranova**, *U. of Wisconsin, Milwaukee*
Author: **Anna Obedkova**, *Independent*
Author: **Yasar Mahmut**, *U. of Texas At Arlington*

We propose that the efficacy of hedge fund activism in overcoming managerial resistance, gaining support from wolf packs, and enhancing shareholder value is contingent on social evaluations of hedge fund legitimacy. Given the uncertainty and high costs of supporting or opposing activist campaigns, managers of target firms and other investors rely on attributes that can convey credible information about the activist in determining how to respond to the campaign. We theorize that managers and shareholders make social evaluations and judge gender-diverse HF teams as less legitimate because the presence of females in leadership roles that are considered to be masculine, especially in traditionally male-dominated sectors such as hedge funds, leads to role incongruity, thereby undermining legitimacy. Accordingly, in comparison with all male HF teams, gender-diverse HF teams face more backlash, criticism, and resistance from managers of target firms and other stakeholders. Our empirical analysis of 908 hedge fund activism campaigns involving 712 U.S. firms targeted by 295 hedge fund activists from 2010-2017 demonstrates that gender-diverse HFs face greater resistance from managers of target firms, get less wolf pack support from other shareholders, and achieve lower activism returns relative to all-male HFs.

Firm-specific and General Human Capital

Session Moderator: **Agnes Guenther**, *U. of Utah, David Eccles School of Business*

STR: **Does Firm-Specific Human Capital Decrease or Increase Employee Mobility?**

Author: **Agnes Guenther**, *U. of Utah, David Eccles School of Business*
Author: **Jay B. Barney**, *U. of Utah, David Eccles School of Business*

An ongoing debate in the field of strategic human capital is whether high levels of firm-specific human capital decrease or increase employee mobility. Some argue that firm-specific human capital limits employment options, thus reducing mobility, while others argue that it should increase mobility because a signal of employees' willingness to make such investments is broadly valuable. Empirical findings using tenure as a measure provided mixed results. Addressing the puzzle, this paper suggests that whether firm-specific human capital decreases or increases employee mobility depends on the extent to which an employee's current firm relies on team production to generate economic value. Analysis of linked employer-employee data on 1,024 R&D workers in acquired firms provides support for this idea. Implications for human capital theory are discussed.

STR: **Post-M&A Retention of Top Managers: The Role of Structural Knowledge**

Author: **Tingyu Du**, *UCLA Anderson School of Management*
Author: **Ulya Tsolmon**, *Washington U. in St. Louis*

This study examines how the combination of acquirer firm resource base and target managers' human capital shape managerial allocations post-acquisitions. Using mobility data of 1,339 managers in 616 deals, we find that in related acquisitions, the retention rate of target managers post- M&A is higher when the organizational structure between the acquiring and target firms is similar. We propose that structural knowledge of managers—experience in specific organizational structures—matters. We find that the individual managers with structural knowledge more similar to the acquirer are more likely to be retained. Consistent with the notion that managers are critical to post-acquisition integration and success, deals between firms with greater structural similarity, and hence greater retention of target managers, exhibit greater post-acquisition performance, especially in the long run.

STR: **Voluntary Moves and Firm Reallocation: Scientists and Engineers during Japan's Industrialization**

Author: **Shotaro Yamaguchi**, *U. of Maryland, College Park*

This paper studies the economy-wide allocation of university-educated scientists and engineers (S&E) during Japan's industrialization period and highlights the role of two reallocation mechanisms: voluntary moves and firm restructuring. Using nearly the census data of university S&E graduates on employers and addresses in 1890-1940, combined with education, patent, and company histories, I show that better-educated graduates were less likely to move voluntarily and more likely to experience firm restructuring, while invention experience likely leads to both cross-industry voluntary moves and experiencing firm restructuring. The selection of higher-level human capital, both in terms of educational attainment and invention experience, is particularly stronger for cross-industry moves to high-tech industries through firm reallocation. Using a staggered-DID approach, I also find that cross-industry firm-directed reallocation increases the invention productivity of reallocated S&E graduates.

STR: **Developing Firm-Specificity: Enhancing the Value of Stars by the Hollywood Studios**

Author: **Jamal Shamsie**, *Michigan State U.*
Author: **Stefan Maric**, *Eli Broad School of Business, Michigan State U.*

Although firm-specificity of human capital has been recognized as a valuable resource, little attention has been given to how it is developed. Most research has focused on incentives that a firm can give to its employees to develop firm-specificity, given that it constrains their mobility. Few studies have investigated how it is developed among employees or the firm's role in its development. In this paper, we show that firms develop firm-specificity in its employees by assigning them as much as possible to task or projects on which it can provide them with considerable support. Furthermore, firms assign them to work with managers with whom they may have the best chance of learning about the firm's practices.

Aspirations and Corporate Change

Session Moderator: **Daniel Levinthal**, *U. of Pennsylvania*

STR: **How Adaptive are Adaptive Aspirations: Exploring the Ecology of Organizational Learning**

Author: **Daniel Levinthal**, *U. of Pennsylvania*
Author: **Daniel Schliesmann**, *The Wharton School, U. of Pennsylvania*

The examination of aspiration levels has proven to be one of most fruitful and actively studied elements of the behavioral theory of the firm. However, learning with respect to aspirations is just one facet of a broader learning process. Organizations both encode their interpretation about outcomes and change their beliefs about preferred actions. We explore this fuller ecology of organizational learning and, in particular, consider the contrast between the learning dynamics generated by a setting in which aspirations are adaptive to experience and one in which aspirations are not adaptive. Aspiration-based learning is a form of adaptive intelligence; however, it is also subject to potential pathologies. First, akin to a competence trap, we identify a satisfaction trap. Further, rapidly adaptive aspirations in a world with noisy feedback can lead to a pattern of unending search and continued goal dissatisfaction. Organizations face a problem of not only identifying attractive alternatives, they also face a challenge of persisting in favorable alternatives in the face of ambiguous feedback. Ironically, we find that an apparently less adaptive system, in which the organization's goal increases in a mechanistic manner over time, leads to a more adaptive organization.

STR: **Self- vs. Peer-Directed Search Responses to Organizational Performance Feedback**

Author: **Thomas Lechler**, *Stevens Institute of Technology*
Author: **Serhan Kotiloglu**, *California State U., San Marcos*
Author: **Daniela Blettner**, *Beedie School of Business Simon Fraser U.*

Organizational performance feedback theory (PFT) explains when and how organizations search, proposing that performing below an aspiration level is problematic and organizations increase search to solve this problem. Thus, organizational search is problemistic in nature which takes place in the vicinity of an organization's own prior strategic actions that neighbor the problem. In this study, we expand organizational search within PFT with a competitive perspective by relaxing the assumption that search is only self-directed. We argue that search can also be peer-directed, i.e., firms search in the competitive space of their peers. Integrating competition to organizational search also raises another related and important question: do organizations move towards or away from the competition? Using a dataset of 9191 high-growth firms and a novel topic-modeling methodology, we find a match between an organization's performance feedback input and search location: performance below self-based (historical) aspirations influences self-directed search and performance below peer-based (social) aspirations influences peer-directed search. Moreover, we find that when performance is above aspirations, both self- and peer-based aspirations influence self-directed search. We also identify which performance feedback inputs motivate organizations to move towards or away from peers. Our findings contribute to the BTOF, PFT and competitive strategy discourses.

STR: **More Risk-averse or More Innovative? The Effect of Women Board Membership and Aspirations on Patents**

Author: **Malgorzata Smulowitz**, *IMD Business School*
Author: **Stephen Smulowitz**, *International Institute for Management Development - IMD*
Author: **Didier Cossin**, *International Institute for Management Development - IMD*

Do women directors make firms more risk-averse or more innovative? We resolve this paradox by predicting and showing that the effect of increasing women directors on the board on innovation output depends on the firm's performance relative to aspirations (PRA). Research based on the Behavioral Theory of the Firm (BTOF) has shown that the behavioral motives of executives to innovate depend on the firm's PRA, both positive and negative. However, who is interpreting the information that performance feedback provides could make a difference in PRA's effect. We theorize that, when performance is poor relative to aspirations and when the firm is close to failure, boards with more women directors will lead to firms focusing more on survival, reducing innovation output. In contrast, when performance is high relative to aspirations and when the firm has increasing available slack, boards with more women will lead to the firm taking advantage of the excess leeway that this provides, increasing innovation output. Using a panel dataset of patent data with 6118 observations for 524 firms from 1999-2016, we find strong empirical support for most of our predictions. Also, post hoc analyses show that for radical innovation (i.e., patents with citations in the top decile) risk-aversion is more prominent than innovativeness.

STR: **Relative versus Absolute Aspirations**

Author: **Jerker C. Denrell**, *U. of Warwick*
Author: **Luigi Marengo**, *Luiss Guido Carli U.*
Author: **Manuel Romagnoli**, *Friedrich Schiller U. Jena*
Author: **Axel Zeijen**, *ETH Zürich*

Because aspirations impact when managers search for new alternatives, the level of aspirations, and how they change with environmental conditions, has important performance consequences. While having a high aspiration is often useful, past research has shown that prolonged search for a superior alternative may not make sense in turbulent conditions when the profitability of an adopted alternative may quickly change. Using a simple and analytically tractable model of problemistic search, we show that when aspirations are defined in relative terms, i.e, being better than a certain fraction of others, the opposite conclusion holds: a higher aspiration leads to higher performance in settings with more turbulence. These contradictory findings result from the relationship between absolute and relative outcomes generated by social comparison, which is moderated by environmental turbulence: depending on environmental conditions, poor individual outcomes can be good in relative terms, and vice versa. Our study enriches the debate on the aspiration-performance relationship by drawing attention to the relevance of the specification of aspirations. Moreover, our analyses have important managerial implications and inform how targets should be set at both the population and individual level.

Alliance Performance and Innovation

Session Moderator: **Wookyung Lee**, *Arizona State U.*

STR: **Resource Complementarity, Market Overlap and Market Performance in the Italian Network Contracts**

Author: **Anna Cabigiosu**, *Cà Foscari U.*

This study examines how resource complementarity and market overlap, alone and jointly, affect the extent to which an alliance generates positive economic returns in the case of Italian network contracts. We draw on RBV theory and we disentangle the correlation between the network market performance and resource complementarity, which captures partners' synergistic diversity in terms of resources allocated to the network, and market overlap, which captures similar knowledge and understanding of the external environment. We also examine how market overlap, as a moderator, amplifies the positive correlation between resource complementarity and network market performance. We address our research questions by relying on an original dataset of 183 Italian network contracts that mainly involve SMEs and argue that market overlap reinforces the network firms' ability to exploit complementary resources.

STR: **Do Contracts Condition Innovation? Evidence from Biopharmaceutical Alliances**

Author: **Shantala Samant**, *Western Washington U.*
Author: **Jongwook Kim**, *Western Washington U.*

We examine the impact of alliance partners' ex-ante contractual commitments to transfer knowledge on ex-post innovation. Building on insights from the alliance governance and organizational learning literatures, we argue that partners' ex-ante commitments to transfer knowledge reflect their strategic intent towards collaboration that will in turn influence partners' ability to generate innovation. We hypothesize that a contractual commitment to transfer tacit knowledge is critical for innovative outcomes from the alliance, while the commitment to transfer explicit knowledge plays a supporting role. Moreover, administrative mechanisms such as joint committees are also critical for innovative outcomes, especially when the cospecialization of R&D activities is extensive and when technological uncertainty is high. We empirically examine our hypotheses using patenting activity from biopharmaceutical alliances in the United States.

STR: **Contract Design and Collaborative Innovative Performance: Evidence from Biopharmaceutical Alliances**

Author: **Punit Sharma**, *U. of California, Irvine*

R&D partnerships represent one of the most common forms of interfirm collaboration and are especially prevalent in technology-intensive industries such as pharma and biotechnology. Despite the best intentions, R&D partnerships do not always succeed and do not always lead to innovative performance. The design of the contract is a significant factor in explaining these outcomes. But the link between contract design and collaborative innovative performance has remained somewhat unexplored because studies do not focus on how specific contract design elements impact innovative performance directly. Furthermore, it is important to recognize that the level of contractual control and coordination necessary to foster innovation is likely to be different depending on the type of R&D. This study examines whether specific contract design elements, based on their control and coordination distinction, impact collaborative innovative performance in exploratory and exploitative collaborations. I test predictions on a sample of 305 biopharmaceutical alliances at various stages of R&D and find some evidence that elements of the design of the contract may impact the innovative performance of R&D partnerships. Specifically, I find support for the link between the contractual specification of direct oversight and innovative performance in exploitative R&D partnerships, the link between bilateral monitoring and innovative performance in exploratory R&D partnerships, and the link between the contractual specification of management roles and innovative performance in R&D partnerships, in general. This study contributes to the literature on R&D partnerships by improving our understanding of the factors that may lead to innovative performance, and posits a role for the specification of contract design elements that provide a control or coordinating role between partners that enhances or inhibits collaborative innovative performance in exploratory and exploitative R&D partnerships.

STR: **Competition of Digital Networks: Explaining Performance Heterogeneity of Blockchain Consortia**

Author: **Wenqian Wang**, *Purdue U., West Lafayette*
Author: **Marvin Hanisch**, *U. of Groningen*

This research explores the role of competition in digital networks, specifically in the context of blockchain-enabled multiparty collaborations. We find that the composition of a consortium's founding group has a significant impact on its performance, both in the short term and the long term. In the short term, the size of the founding group has a negative effect on the speed of pilot completion. However, in the long term, a diverse and competitively-tied founding group can positively impact the consortium's survival, growth, and public sentiment. Our results suggest that strategic considerations related to the composition of a consortium's founding group are important for understanding and improving its performance. Theoretically, this study contributes to the strategic management literature by extending the focus on competition from the traditional firm level to the level of digital networks.

Adapting to Disruption and Shocks

Session Moderator: **Arzi Adbi**, *National U. of Singapore (NUS)*

STR: **Small But Resilient: New Product Development and SME Survival During the COVID-19 Pandemic**

Author: **Arzi Adbi**, *National U. of Singapore (NUS)*
Author: **Anant Mishra**, *U. of Minnesota*

Does pre-crisis new product development (NPD) help the survival of small and medium-sized enterprises (SMEs) during an unanticipated crisis? If so, how? Analyzing SMEs' exits during the COVID-19 pandemic across 15 countries, we find that SMEs with pre-crisis NPD experienced lower exit rates during the crisis than did comparable SMEs without pre-crisis NPD. Our contribution is to explore the potential channels that drive the NPD–survival relationship among SMEs. First, leveraging the exogenous variation across countries in the changes in community mobility to workplaces, we find that the effect of pre-crisis NPD increases when SMEs face a greater decrease in community mobility to workplaces, while this effect disappears for smaller community mobility decreases. Second, leveraging the variation in the structural features of various industries, we find that the effect of pre-crisis NPD increases substantially for SMEs operating in industries with greater reliance on in-person interactions and foot traffic pre-pandemic. We do not find an effect of NPD for SMEs operating in industries that did not rely heavily on in-person interactions and foot traffic pre-pandemic. Finally, leveraging the variation in industries' structural dependence on external financing, we find that the effect of pre-crisis NPD increases for SMEs operating in industries with greater dependence on external financing pre-pandemic. Overall, this study sheds light on the channels through which NPD can influence the survival of SMEs during unanticipated crises such as the one induced by the COVID-19 pandemic.

STR: **Strategic Responses to Innovation Shocks: Evidence from the Video Game Industry**

Author: **Nicholas Argyres**, *Washington U. in St. Louis*
Author: **Lyda S. Bigelow**, *U. of Utah*
Author: **Jack A. Nickerson**, *Washington U.*
Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*
Author: **Erdem Yilmaz**, *Rotterdam School of Management, Erasmus U.*

The strategy and innovation literatures emphasize that incumbent firms often fail to respond to shocks, yet also point out that some firms can survive by repositioning. The Comparative Adjustment, Transaction and Opportunity Cost (CATO) framework addresses this critical issue by predicting which firms will and will not reposition in response to a shock, when, and to which positions. This paper applies the CATO framework to predict which complementors in the videogame industry repositioned in response to the introduction of the Sony PS2 console, a major innovation shock, and with which strategy. We find that proxies for comparative adjustment and opportunity costs successfully predict complementors' homing strategies in response to the shock: i.e., the choice of whether to develop games for a single console, multiple consoles sequentially, or multiple consoles simultaneously.

STR: **Incumbents' Strategic Responses to Gig Disruptors in the Hotel Industry**

Author: **Yiyang Zeng**, *UCLA Anderson School of Management*
Author: **Mariko Sakakibara**, *U. of California, Los Angeles*

Disruptive technologies afforded by the gig and sharing economy have placed existential threats on the incumbent firms. We use property-level hotel data to examine the impact of short-term rental disruptors on incumbent hotels and how incumbents respond. We argue that the innovations brought by these disruptors differ from past disruptive technologies because they possess architectural advantages over the smaller incumbent hotels while growing from a niche to compete with the larger incumbent hotels. As a result, incumbents need to dynamically adjust their positioning based on their resources and capabilities to respond effectively. To address endogeneity concerns, we explore regulatory events limiting the operation of short-term rental hosts. We find suggestive evidence that performance impacts and responses are heterogeneous across incumbent hotels with different organizational characteristics.

STR: **Of Academics and Creative Destruction: Startup Advantage in the Process of Innovation**

Author: **Julian Kolev**, *United States Patent and Trademark Office*
Author: **Alexis Haughey**, *MIT Sloan School of Management*
Author: **Fiona Murray**, *Massachusetts Institute of Technology*
Author: **Scott Stern**, *Massachusetts Institute of Technology*

What is the role of startups within the innovation ecosystem? Since 2000, startups have grown in their share of commercializing research from top U.S. universities; however, prior work has little to say on the particular advantages of startup ventures in the innovation process relative to more traditional alternatives such as academia and established private-sector incumbents. We develop a simple model of startup advantage based on private information held by the initial inventor, and generate predictions related to the value and impact of startup innovation. We then explore these predictions using patents granted within the regional ecosystems of top-25 research universities from 2000 to 2015. Our results show a significant startup advantage in terms of forward citations and outlier-patent rates. Further, startup innovation is both more original and more general than innovation by incumbent firms. Moreover, startups that survive to become "scale-ups" quickly grow to dominate their regional innovation ecosystems. Our findings have important implications for innovation policy.

STR: **Market vs Hierarchy? Conservative CEO Preference for Vertical Integration**

Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*
Author: **Holly Loncarich**, *Kansas State U.*

A wealth of research has considered firm 'make' or 'buy' decisions from the rational firm-level perspective, such as transaction cost economics, firm capabilities, and resource dependence. However, scant research has considered irrational executive values and beliefs as the underlying impetus of such decisions. Drawing from upper echelons theory, we suggest that conservatives' lower levels of risk tolerance, aversion to uncertainty, and ambiguity compared to liberal leads to conservative CEOs being more likely to build vertically integrated firms compared to their liberal counterparts. Further, we argue this relationship is strengthened when the CEO has higher levels of individual- and firm-level risk exposure through stock options compensation and firm underperformance, respectively. However, the effect of CEO conservatism on vertical integration is likely to weaken if government approval to vertical integration is low. Using a comprehensive sample of all publicly traded firms in the U.S. between 2001 to 2020, we find broad support for most of our arguments and advance research on firm 'make' or 'buy' decisions, risk-taking, and upper echelons research.

STR: **Refining the Measurement of CEO Political Ideology: Unmasking Moderate Groups**

Author: **John Merli**, *U. of Denver*
Author: **Scott Kuban**, *Tulane U.*
Author: **David Lacek**, *U. of Colorado, Boulder*
Author: **Burak Malkoc**, *PhD*
Author: **Michael Seth Nalick**, *U. of Denver*

This paper offers a refined measurement of political ideology that better reflects CEOs' values and perceptions along the entire political ideological continuum for both moderates and extreme ends of the political spectrum. This measure captures ideological nuance and shows greater refinement over the traditional measure of political ideology which is based solely on political party association. By replicating Chin, Hambrick, and Treviño (2013) using this new measure and developing extension hypotheses that focus on the role of political moderate CEOs, we demonstrate that more than eighty percent of CEOs are ideologically moderate and reflect the norm, whereas the ideological extremes are the outliers. We also find moderate CEOs are a greater driver of CSR than their ideological extreme counterparts. Thus, in general, we provide a more accurate indication of how CEO political ideology affects firm strategy.

STR: **Determinants of Political Responses to A Competitive Attack**

Author: **Xiaoyan Sun**, *National School of Development at Peking U.*
Author: **Hao Ma**, *National School of Development at Peking U.*

This article examines the joint deployment of competitive strategy and corporate political strategy in global competition. We advance a theory of cross-domain competition between MNEs in the context where an MNE engages in responses in the political domain to an attack in the competitive domain. We posit that such cross-domain responses are determined by the relative competitiveness of the defender and the attacker. The less the differential in competitiveness between the defender and the attacker in the competitive domain, the greater the differential in the political domain and their intra-firm cross-domain coordination and integration, the greater the probability of the defender's response in the political domain, which is also affected by the concerns and expectations of third-party players.

STR: **Political Contributions Made by Individual Shareholders: Imitation of Corporate Contributions?**

Author: **Eleandra Maria Prigol Meneghini**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Ana Paula Pereira Dos Passos**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Jeferson Lana**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Marina Gama**, *Fundação Getulio Vargas - EAESP*

We focus on individual political campaign donations. Media coverage shows that many individual shareholders donated during the 2018 election campaign in Brazil. We tested our hypotheses with a sample of 348 companies listed on the Brazilian stock exchange. Our results demonstrate that, after the regulation of corporate contributions, there was an increase in donations from individual shareholders to candidates. On the other hand, donations to political parties did not follow the same logic. Our article contributes to the literature on corporate political activity, presenting results of contributions from individual shareholders. We show that companies may be replacing corporate contributions with donations from their individual shareholders and that this, at least for the company's market value, is positive.

Presenter: **Gerry M. McNamara**, *Michigan State U.*
Presenter: **Prithwiraj Choudhury**, *Harvard U.*

Senior managers' words matter and both how they communicate and what they communicate can have significant consequences for their firms. Further, in a world of instant communication, where individuals can transmit their thoughts instantaneously to a wide range of audiences through many channels, such words can have an immediate impact. While managerial scholars have sought to understand how attributes such as organizational resources, managerial cognition, and firms' degree of diversification can shape an organization's behaviors and subsequent performances, less attention has been paid to how senior managers' communications can influence such outcomes. In this symposium, we present four recent studies that have started to unpack how managerial communication can be shaped by managerial and organizational attributes as well as the consequences of managerial communication. We will start to unpack the factors and mechanisms that shape senior managerial communication and how communications can shape organizational behavior and performance outcomes, thereby helping to deepen our understanding of a particular pathway that can help explain heterogeneity in performances between firms. The ultimate goal of this symposium is to spark interest in the domain of managerial communications and how such communications can have important consequences for firms.

Publishing Mixed-Methods Studies: Challenges and Opportunities

Organizer: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*
Organizer: **Liyue Yan**, *BI Norwegian Business School*
Panelist: **Giada Di Stefano**, *Bocconi U.*
Panelist: **Brent Goldfarb**, *U. of Maryland*
Panelist: **Heather Haveman**, *U. of California, Berkeley*
Panelist: **Aruna Ranganathan**, *Haas School of Business, UC Berkeley*
Panelist: **Maria Roche**, *Harvard Business School*
Panelist: **Daniel Wadhwani**, *U. of Southern California*

At this symposium, experts in the field of management who employ mixed-methods in their research will discuss the importance of mixed- methods and how scholars can effectively utilize them to contribute to the field. The panelists will share their experiences with various mixed-methods approaches, including field experiments, surveys, ethnography, and the iteration between inductive and deductive processes. Topics covered during the symposium will include the challenges and opportunities associated with mixed-methods, best practices, distinctions between the roles played by different methods, narratives and testimonies, possible evaluative criteria for assessing mixed-methods studies, and editorial and reviewer perspectives.

The goal of the symposium is to provide participants with a better understanding of mixed-methods and the factors that can enhance the chances of publishing such studies in top-tier journals.

The symposium is intended to stimulate scholarly conversations and build a scholarly community around the role of strategic leaders in facilitating the process of digital transformation amidst the challenges and opportunities of the 4th Industrial Revolution – a fusion of technologies and systems blurring the lines between the physical, digital, and biological spheres. Given the profound influences these interrelated developments will have on internal and organizational factors, there is a pressing need to ensure our theories and research methods on strategic leadership are appropriately reflective of these emerging influences. We envision the symposium to help us generate awareness for pressing research opportunities in this emerging area and to convene and enlarge our research community by inviting scholars from a broad array of research streams and various AOM Divisions.

Presenter: **Yilang Feng**, *U. of Illinois at Urbana-Champaign*

This presenter symposium explores research frontiers in the rapidly growing nonmarket strategy area, with a focus on corporate political activities and business-government relations. With five working paper presentations and feedback from two distinguished scholars, we strive to discuss 1) understudied aspects of firms' active engagements with regulators and 2) how they lead to nonmarket strategy success vs. failure. By doing so, we plan to examine several theoretical and methodological approaches that have the potential to advance the study of corporate political activities in the nonmarket strategy area. This presenter symposium should interest scholars working on corporate political activities, business-government relations, corporate social responsibilities, stakeholder governance, international management, and social issues in management in both advanced economies and emerging markets.

The attack on the United States Capitol on January 6th, 2021 generated extensive public attention on Corporate America regarding its role in the event and responsibilities to prevent similar events from happening in the future. This proposed symposium presents frontier research on how businesses responded to the Capitol Riot. The four constitutive studies examine different forms of businesses' involvement in the insurrection with emphasis on different stakeholders including employees, customers, shareholders, and general investors.

Presenter: **Aticus Peterson**, *Harvard Business School*
Presenter: **Andy Wu**, *Harvard Business School*
Discussant: **Brent Goldfarb**, *U. of Maryland*

Throughout the past decade, the practice of experimentation has become central to the strategy of early-stage ventures. The strategic management literature has started to explore this phenomenon, seeking to highlight both the benefits and the costs of using this approach. While this line of research has made progress, much work remains to be done. We argue that one reason why our understanding of entrepreneurial experimentation is still limited is the difficulty of offering accurate measurement of the experimentation process. The motivation for this symposium is to combine a series of research projects that, collectively, shed new light on experimentation by leveraging a variety of novel empirical approaches. The common factor between these papers is that they all rely on novel approaches to measure experimentation and/or related constructs. Overall, we expect that the discussion will generate a variety of new insights about the role of experimentation in entrepreneurship.

People and Innovation Track: Innovation Through Collaboration

Session Moderator: **Sarah Cheah**, *National U. of Singapore*

TIM: **Effect of Daily Communication on Innovative Behavior**

Author: **Sarah Cheah**, *National U. of Singapore*
Author: **Shiyu Li**, *NUS*
Author: **Shigemi Yoneyama**, *Gakushuin U.*

Organizational behavior researchers have argued the centrality of affect in the relationship between interpersonal exchange processes and work outcome. Our study presents a multi-level perspective of research on team communication and individual innovation to address how the affective experiences may serve as contextual factors underlying the communication-innovation process link at different levels. Using experience sampling methodology, our study sampled 201 workers of firms operating in 43 coworking spaces in Singapore and Beijing who completed daily surveys twice a day over a period of ten consecutive workdays. Our results indicated that the daily communication is positively related to innovative behavior on the same day after controlling for workload stress, sleep quality and job requirements. Within-person variation in communication was found to account for part of within-person variation in individual's innovative behavior. We demonstrated that daily high-activated positive/negative affect are positively/negatively related to daily innovative behavior. In line with our expectations, our findings established that the importance of daily positive affect as a mediator in the relationship between daily communication and innovative behavior in Singapore, but not in Beijing. Our study also revealed that negative affect does not have any significant mediating role in the daily communication-innovative behavior link in both cities.

TIM: **Hidden Costs of "Star" Inventors: Inventor Knowledge Composition and Innovation Performance**

Author: **Jaeho Kim**, *The Wharton School, U. of Pennsylvania*
Author: **David Hsu**, *The Wharton School, U. of Pennsylvania*

Inventors are a crucial source of firms' innovation performance, and the role of "star" inventors has been highlighted in that vein. Prior studies show competing mechanisms and results about whether star inventors improve or undermine the innovation performance of other peer inventors in the firm. We argue that the literature overlooks the implications of organizational design choices in the composition of inventors that can reconcile the competing mechanisms and suggest new insights. At the same time, the entrepreneurial innovation literature does not address the consequences of inventor composition during the post-foundation periods although tech startups heavily rely on their inventors for their subsequent innovation success. By applying the organizational lenses to tech startups, we show the combination of high average and high concentration of inventor knowledge (i.e., top-heavy composition) undermines inventors' innovation performance. This research contributes to the entrepreneurial innovation literature by investigating how tech startups can manage their human capital pool to continue their innovation success during the scaling stage. The inventor composition effects on innovation performance at the firm-level and team-level boundaries also provide important implications for organizational design choices in tech-intensive industries.

TIM: **Integrating Ethnic Diversity: The Impact of Ethnic Divide in Collaboration on Firm Innovation**

Author: **Hyoungwon Thomas Yoon**, *Bocconi U.*

Although research on skilled migration and ethnic diversity has discussed the benefits and drawbacks of increasing human capital diversity in achieving innovation performance, prior innovation literature has largely focused on the compositional element of diversity without examining the operational element of diversity, that is, its integration. However, even equally diverse firms can have heterogeneous collective performance depending on how they can integrate and therefore incorporate the knowledge that resides in ethnically diverse individuals. In this study, I examine how firm-level innovation performance is determined by the level of ethnic (dis-)integration in collaborations. The empirical analyses of the patent data from all U.S. firms illustrate how and why ethnic integration is a critical lens to realize the potential benefits of human capital ethnic diversity.

People and Innovation Track: The Human Side of Innovation

Session Moderator: **Shukhrat Nasirov**, *U. of Manchester*

TIM: **The Effects of Innovation Demands and Rewards on Employees' Off-the-Job Communication and Creativity**

Author: **Thomas Ng**, *U. of Hong Kong*
Author: **Haoran Xu**, *Department of Management and Strategy, The U. of Hong Kong*
Author: **Yinuo Zou**, *U. of Hong Kong*
Author: **HAOYANG CHEN**, *U. of Hong Kong*

Innovation demands and rewards are two main work design features that organizations implement to promote employee creativity. This study argues that these design features can possibly lower creativity and that off-the-job communication using technology (and the subsequent reactions like detachment difficulty and work-home conflict) is the main mechanism. Mixed-level data collected from 235 employees-coworkers over 10 workdays, with two separate surveys being sent on each workday, showed preliminary support for the study premises. The stable conditions of innovation demands and rewards were positively related to daily off-the-job communication, which in turn was negatively related to daily creativity as rated by coworkers. There was also modest evidence that daily off-the-job communication was related to daily creativity via daily detachment difficulty and daily work-home conflict. An important moderator at the between-person level, perceived organizational exchange, was identified. Thus, this study contributes to the creativity literature by unraveling why designing a workplace to encourage employees to display creativity through imposing innovation demands and linking creative outputs to rewards might ironically lower their creativity as a result of promoting daily off-the-job communication.

TIM: **Workforce Age Diversity, Innovation Performance, and the Moderating Effect of Societal Tolerance**

Author: **Shukhrat Nasirov**, *U. of Manchester*
Author: **Gary Chapman**, *U. of Nottingham*
Author: **Mathew Hughes**, *U. of Leicester*
Author: **Paul Hughes**, *U. of Leicester*

Population ageing has resulted in a "new normal" where employees from different generations increasingly interact within organisations. However, the impact of workforce age diversity on organisational outcomes is yet to be fully understood. In this study, we focus on the link between workforce age diversity and innovation performance, owing to the importance of innovation for organisations and society. We argue that the distribution type of workforce age diversity (that is, variety and polarisation) guides when and why workforce age diversity's positive and negative innovation effects materialise. More specifically, the heterogeneity of age groups in age-varying workforces leads to positive innovation effects because it augments the amount of idiosyncratic knowledge, skills, and networks available to organisations. Age differences as a basis for social categorisation and fragmentation are maximised in age-polarised workforces, thus generating negative innovation effects. We also introduce societal tolerance as a force that should switch "on" the positive effects of workforce age variety and "off" the negative effects of workforce age polarisation. Drawing on UK higher education as the empirical setting, we find full support for our theoretical framework. We use our findings in order to devise practical implications

---

TIM: **Social Jetlag and Corporate Innovation: Evidence from Time Zone Discontinuities**

Author: **Gianni De Bruyn**, *Darla Moore School of Business, U. of South Carolina*
Author: **Paul Freed**, *U. of South Carolina*

This paper investigates the effects of sleep deprivation on corporate innovation, using a discontinuity in sleep behavior across the three US time zone borders. We find that a lack of sleep has a negative effect on corporate innovation in terms of innovation radicalness and impact. The results are robust to a battery of empirical tests including different model specifications, a different causal inference strategy, and alternate variable operationalizations. Our findings highlight the importance of sleep on corporate innovation and introduce time zone borders as an important novel factor for firms to keep in mind when deciding where to locate. In addition, our findings also indicate that geographical factors other than infrastructure, tangible resources, and agglomeration are critical to the firm's innovation.

Innovation and Competitive Strategy Track: Market Competition & Competitive Strategy

Session Moderator: **Dominika Kinga Randle**, *Harvard Business School*

TIM: **Diversifier's Entry as a Catalyst for Incumbent Firms' Exploratory Innovation Efforts**

Author: **Dominika Kinga Randle**, *Harvard Business School*

Volumes of research documented firms' reluctance and difficulty in pursuing exploratory innovation, but systematic empirical investigation into factors associated with firms' decisions to engage in the process has been lacking. This was the gap we seek to redress in this paper. Our findings identify a foreign firm's entry into an industry through diversification as a factor that is positively associated with the decision of incumbent firms from that industry to engage in exploratory technological knowledge search. We speculate that this could be because of two key reasons. First, entry of an established firm which in the past has demonstrated the ability to compete in a different market could be both noticeable to incumbent firms and appear as a threat to them. Second, a diversifying firm's past technological knowledge might serve as a map of foreign spaces in the theoretical knowledge field that include components that are foreign to incumbents but likely applicable to their innovation efforts. Considered together, increased and visible competitive threat and decreased knowledge search uncertainty that are both aspects of a diversifying firm's entry could be positively associated with incumbent firms' ability to overcome their reluctance against exploration and engage in the process. Our empirical results support those predictions. We find that upon experiencing a diversifier's entry, incumbent firms increased their exploratory knowledge search and that during those inventive efforts, they explored spaces of the technological knowledge field that were previously foreign to them but familiar to the new entrant. Our findings have implications for theory and research on firm innovation, diversification, and inter-industry knowledge flow.

TIM: **THE ADJACENCY TRAP: The Adjacency Trap: Entry into (Dis)Similar Markets**

Author: **Eric Volmar**, *Stanford U.*
Author: **Emily Cox-Pahnke**, *U. of Washington*
Author: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*

We conduct an in-depth case study of entry into the nascent MOOC market by two organization with deep ties to elite universities. Our comparative case design allows us to build theory on entry into adjacent markets. Although they shared many characteristics initially, the organizations we study differed in their approach to the MOOC market resulting in divergent outcomes. These differences were driven by their view of the similarities and differences between the MOOC market and academia. Our findings suggest that when firms enter adjacent markets, negative transfer effects can result in adjacency traps that hamper their success.

TIM: **Productivity Effects of Firm's IT Investments: The Roles of Innovation and Competition**

Author: **Mathias Beck**, *ETH Zürich*
Author: **Torbjørn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Plekhanov Dmitry**, *ETH Zürich*
Author: **Martin Wörter**, *ETH Zürich*

How do market competition and a firm's innovation capability affect the firm-level productivity gains from IT investments? Answering this question, we extend the strategic management literature and information systems research by relating the creation of competitive advantages in the digital economy to developing innovation capabilities required for different properties of competitive markets. Drawing on the Red Queen Effect theory, we empirically demonstrate the importance of deviating from competitors when seeking competitive advantages in IT. Based on a large, representative dataset covering the period 2002-2017, we use dynamic panel estimation methods to show that IT investments in competitive oligopolistic markets lead to significant positive productivity effects when firms outperform their industry-size-class means in both IT investments and innovation capabilities. In contrast, we find significant adverse effects for this relationship in competitive polypolistic markets. In these markets, further analyses point out that firms can increase productivity mainly through efficiency gains resulting from process innovation. Thus, our study identifies how market conditions, in combination with above-average innovation capabilities, drive the productivity effects of IT investments at the firm level. These findings provide a new and nuanced perspective on the productivity paradox of IT investments.

Increased innovation activities of neighboring hospitals may be perceived by focal hospitals as a threat to their market position. This may in turn result in increasing innovation activities of the focal hospital. A number of studies emphasized the existence of such a "medical arms race" but do not provide adequate empirical evidence about the underlying innovation dynamics among neighboring hospitals. We ask whether a hospital responds to an increase in service innovation activities from neighboring hospitals by increasing their own service innovativeness. Further, we argue that the reaction is moderated by hospitals' structural characteristics (degree of specialization, ownership) and market characteristics (market competition) and, thus, aim to resolve conflicting evidence of prior studies. Our hypotheses are tested by applying a spatial econometric analysis of German hospitals' implementation of new medical procedures from the years 2012 to 2019. Our results show a positive spatial effect of neighbors' innovation activity on the focal hospitals' service innovativeness. We found as well support for the moderating role of the structural and market characteristics. Our study highlights the importance of considering the spatial perspective on service innovation, which also contribute to a deeper understanding of the underlying dynamics of the medical arms race.

TIM: **Attaining Optimal Distinctiveness in Technological Positioning: A Multi-dimensional Perspective**

Author: **Veethica Smriti**, *Indian Institute of Management Bangalore*
Author: **Sai Krishna Yayavaram**, *Indian Institute of Management, Bangalore*

The strategic balance literature suggests that firms that have an intermediate level of similarity with their rivals are optimally distinctive and can achieve a balance between the pressures of conformity and competition. We examine optimal distinctiveness in the context of technological positioning and contend that the optimal level of distinctiveness for a firm depends on whether it is located in the core or the periphery of the industry. Further, we argue that similarity with the nearest rivals is more relevant that similarity with all the rivals in the industry or with the industry as a whole. Maintaining an intermediate level of similarity is not the only way that firms can achieve the optimal level of distinctiveness. Specifically, we hypothesize that core firms that are similar to their immediate rivals in domain knowledge but dissimilar in architectural knowledge achieve high levels of invention performance. We also hypothesize that firms that have a high level of technological complementarity with their immediate rivals also achieve high levels of invention performance, especially when they are in the core. We tested these hypotheses with patent data from the medical devices industry and found support for them.

Learning and Innovation Track: Knowledge Transfer & Mobility

Session Moderator: **Xiaolan Fu**, *U. of Oxford*

TIM: **Intrafirm Mobility and Innovation Performance – Individual-level Evidence**

Author: **Xiaolan Fu**, *U. of Oxford*
Author: **Xuechen Ding**, *U. of Oxford*

Employees are considered key sources of innovative ideas in organizations. Previous literature has confirmed the benefit of interfirm mobility of employees in knowledge sharing and transfer. Despite the obvious mechanism, relatively little research has examined how intrafirm mobility influences innovation performance and opened up the black box of how various types of internal mobility influence individual innovation performance differently. Furthermore, how the intrafirm mobility interacts with the personal and organizational characteristics in the process. This study uses a unique dataset on intrafirm mobility and patent application of 1344 employees from a Fortune 50 multinational company in an emerging country. The empirical results show that intrafirm mobility has a significant and positive effect on employee's innovation performance. However, the frequency of mobility presents an inverted U-shape relationship with innovation performance. Besides, mobility in the form of cross-department mobility has a more significant and positive effect on employee's innovation performance than within-department mobility, voluntary mobility has a more significant and positive effect on individual innovation performance than passive mobility. We also find that the mover's absorptive capability and new team's collaboration play a moderating role in the relationship between intrafirm mobility and individual innovation performance. Finally, managerial implications and future research directions are discussed.

TIM: **Knowledge Transfer and PhD's Attraction and Retention: What Impacts their Geographical Mobility?**

Author: **Jérémy Orsat**, *GSEM - U. of Geneva*
Author: **Michel Ferrary**, *GSEM - U. of Geneva & Skema Busines School*

Countries invest in academic research to nurture innovation. The policy maker issue is to transfer academic knowledge to their national innovation ecosystem. Most of research focuses on patent licensing. We propose an alternative instrument by considering PhD geographical mobility as a conveyor of knowledge transfer. A majority of PhD students in academic research are foreigners, which raises the question of their attraction and retention in the training country. Three alternative explanations are explored: rational choice, cultural proximity and migration policy. Since mobility and knowledge transfer phenomena are intertwined, it is vital for policy makers to understand the factors behind PhD graduates' mobility. We explore the mobility of the PhD population of a Swiss university at their enrollment and after their graduation. We found evidence for rational choice, cultural proximity and adaptation to migration policies, but with a prominence of the cultural proximity effect. This cultural proximity effect is stronger for attracting prospecting PhDs that for keeping them after their graduation. A rational choice is observed for their attraction but not for their retention, showing that economic factors play a role in the choice of studies but not in the choice of career. A labor policies effect is observed for both attraction and retention of PhDs. We contribute to the knowledge transfer literature by analyzing the drivers of PhD graduates' professional mobility on two momentums. We also contribute to the debate on migration regulations by stressing how countries loose access to potential talents depending on their migration policies.

TIM: **Exploring the Direct and Indirect Routes of Inter-unit Knowledge Transfer** 💻

Author: **Tomoyuki Shimbo**, *Kanto Gakuin U.*
Author: **Motohiro Nakauchi**, *Aoyama Gakuin U.*

This study focuses on inter-unit knowledge transfer within a firm. We could argue that there are two types of routes for gaining knowledge from other units: direct and indirect routes. The direct route means that acquirers gain knowledge from other units directly, while the indirect route means that acquirers gain knowledge from other units indirectly through boundary spanners (BSs) in the same unit. However, we were unable to find any studies that focus on the two routes and clarify the mechanisms thereof. Therefore, we focus on the network characteristics of knowledge providers, including BSs, and examine how their networks (centrality and structural holes) affect inter-unit knowledge transfer by the direct and indirect routes. The analysis results illustrated three points. First, the centrality of knowledge providers facilitates knowledge transfer by the direct route. Second, the centrality of providers inhibits knowledge transfer by the indirect route. Third, providers' networks connecting structural holes facilitate knowledge transfer by the indirect route. We found "three steps of communication flow" in which BSs explore knowledge in other units and translate it to only a limited number of members in the same unit rather than a large number of members, and the limited number of recipient members in the unit should proceed to transmit the knowledge to the rest of the unit.

TIM: **Two Channels of Intra-firm Knowledge Transfers for Exploration: The Effects of Inventors' Networks (WITHDRAWN)** 💻

Author: **Motohiro Nakauchi**, *Aoyama Gakuin U.*
Author: **Tomoyuki Shimbo**, *Kanto Gakuin U.*

This paper focuses on intra-firm knowledge transfer for exploration. There are two types of knowledge transfers: intra- and inter-unit transfers. Prior studies have shown that interpersonal networks can resolve the difficulty of absorbing knowledge in inter-unit transfers, but they do not focus on the difficulty of gaining novel knowledge via intra-unit transfers. Therefore, we pay attention to the various problems in both types of knowledge transfers and examine how knowledge providers' networks affect intra- and inter-unit knowledge transfers. The analysis illustrated four points. First, knowledge providers' networks connecting structural holes promote intra-unit transfer. Second, the centrality of providers and intra-unit transfer have an inverse U-shaped relationship. Third, the centrality of providers promotes inter-unit transfer. Fourth, the relationship between providers' networks connecting structural holes and intra- and inter-unit transfers is positively moderated by the centrality of the providers. We also found that an inventor's deep exploitation of intra-unit knowledge could promote other inventors' exploration beyond unit boundaries, and we consider this to be a new pattern of the balance between exploration and exploitation.

TIM: **Am I Not Interesting Anymore? Lab Closures and Technology Repurposing**

Author: **Thiago J. Soares**, *Insper Institute of Education and Research*
Author: **Raphael Martins**, *New York U.*

This paper examines to which extent firms' new technologies still rely in the inventions produced in R&D laboratories that the firm decided to shut down. We employ a difference-in-differences (DiD) approach to compare technologies from closed labs with similar inventions within the firm that were created in labs that remained open. Our results suggest a negative relationship between a lab's closure and the use of its stock of knowledge in the focal firm's subsequent inventions. We further investigate how much of this effect is due to specific attributes of the technologies' inventors and how much of it is due to the proximity of technologies to the focal firm's core capabilities. We find that the negative relationship we observe is stronger for inventors with higher amounts of social capital. This relationship is also stronger for technologies that are close to the focal firm's core competencies.

Innovation and Entrepreneurship Track: Fostering Entrepreneurship

Session Moderator: **Claudia Frosi**, *Department of Management and Technology, Bocconi U.*

TIM: **Is it a Match? Training Entrepreneurs to Make Decisions Favors the Prepared Mind**

Author: **Claudia Frosi**, *Department of Management and Technology, Bocconi U.*
Author: **Myriam Mariani**, *Department of Management and Technology, Bocconi U.*
Author: **Luisa Gagliardi**, *Department of Management and Technology, Bocconi U.*

This study investigates the role of entrepreneurs' personal background on the absorption and portability in follow-on occupations of a training course that teaches them to use a theory-based approach to decision-making. We argue that having a background in theoretical disciplines (relative to applied fields of education) allows entrepreneurs to better absorb the decision-making training and to apply it also after the training is over, across contexts and over time. Data from a randomized controlled trial on 136 entrepreneurs confirm the existence of a reinforcing effect between the training course entrepreneurs receive and their pre-existing education background. Specifically, by the end of the training program, entrepreneurs with theoretical domains become more conservative about their entrepreneurial ideas when trained with a theory-based approach to decision-making (i.e., they terminate their entrepreneurial idea more often). After the training ends, they apply this approach to new undertakings, founding new ventures or taking up occupational roles that involve key characteristics of the theory-based approach.

TIM: **Founder Human Capital, Start-up Subsidies, and Innovation: Evidence from New Ventures**

Author: **Gary Chapman**, *U. of Nottingham*
Author: **Hanna Hottenrott**, *TUM School of Management, Technische U. München*

While it is recognised that innovation treatment effects are heterogeneous, our understanding of how and which new ventures can achieve superior innovation treatment effects from public start-up subsidies remains limited. Using the resource-based view and insights from the innovation and entrepreneurship literatures, we develop a theoretical framework concerning the effects of founder human capital in enabling subsidised new ventures' innovation activities to benefit from public support. Using detailed data on new ventures founded in Germany, we show that founder human capital plays an important role but that not all human capital matters equally. Specifically, founder specific human capital, and particularly founder entrepreneurship and innovation experience, equips new ventures with advantages that enable them to generate superior innovation treatment effects from start-up subsidies. The role of general human capital, on the other hand, is more mixed. These findings contribute to research on the effectiveness of start-up policy instruments by showing that differences in founder human capital offer a fundamental explanation for why treatment effects vary substantially. We discuss the implications for theory and policy.

TIM: **Engaging with AI in Entrepreneurial Ecosystems: Dynamics of Delegation-based Interventions**

Author: **Sujith Nair**, *BI Norwegian Business School*
Author: **Angelos Kostis**, *Umeå U.*

Entrepreneurial ecosystems literature outlines interventions that facilitate entrepreneurial actions and interactions. In this paper, our theorizing turns attention to delegation dynamics emerging when ecosystem service providers engage with AI to support new venture creation within entrepreneurial ecosystems. The fast-paced decision-making and the inherent cognitive and social biases in such uncertain and complex environments make learning and adaptation—and the resulting heuristics used by facilitators for interventions—flawed. While AI can facilitate more effective interventions in this context, prior research has paid scant attention to how the specific facilitating potential of AI may manifest. We introduce the notion of delegation-based interventions and delve into specific mechanisms by which artificial intelligence make ecosystem service providers' interventions within entrepreneurial ecosystems more effective. We contribute to entrepreneurial ecosystems literature by showing how the mindful engagement with artificial intelligence help reduce the biases, noise, and bounded rationality in facilitating entrepreneurial actions and interactions within the complex and uncertain environments that EEs present.

TIM: **The Impact of Artificial Intelligence on Entrepreneurial Firms**

Author: **John Anthony De Leon**, *Texas A&M U., Corpus Christi*
Author: **Catalin Dinulescu**, *Tarleton State U.*
Author: **Brian Martinson**, *Tarleton State U.*

While some believe that artificial intelligence (AI) is poised to create the Fourth Industrial Revolution, others argue that AI is simply another tool firms will use to compete. We apply a theoretical framework created to examine the impact of digital transformation to test the impact of AI on young entrepreneurial firms. Using a sample of 2,714 young entrepreneurial firms across industries we examine if firms specializing in AI differed in funding, revenue, the number of founders, or employees compared to their peers. We find that firms specializing in AI secured funding rounds faster, had higher revenues, and had more employees than non-AI firms. We failed to find significant relationships regarding differences in founding team size.

Learning and Innovation Track: Knowledge Networks

Session Moderator: **Manuel David Gomez-Solorzano**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

TIM: **Autonomy in R&D Projects and Breadth of Knowledge of Informal Ties**

Author: **Manuel David Gomez-Solorzano**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Considerable research has established the performance implications of knowledge mobilization through individuals' informal ties. Scholars have also delved into how the formal structure and the informal patterns of interactions in organizations intermingle. Less is known, however, about how formally designed organizational elements influence what flows through these informal ties. I develop and test a theory about how the formal organization of innovative activities influences the type of knowledge individuals choose to acquire from one another. In particular, I study knowledge ties among researchers working in a R&D laboratory in a global pharmaceutical company. Results show that delegation decisions in R&D projects have nonlinear effects on whether researchers choose to broaden the content of their ties to knowledge domains not defined by their assigned projects. My findings reveal the nuanced relationship between formal and informal organization, suggesting new implications for the organization of innovative activities within firms.

TIM: **Interplay between Intrafirm Inventor Network Structure and Extant Radical and Incremental Knowledge**

Author: **Donggyu Kim**, *KAIST College of Business*
Author: **Byungchae Jin**, *Korea Advanced Institute of Science and Technology (KAIST)*

There has been a theoretical debate regarding the relationship between a firm's knowledge stock and its innovation performance. To address this debate, we decompose a firm's accumulated knowledge into radical and incremental knowledge and highlight the moderating role of the structure of intrafirm networks among inventors who create the knowledge stocks. Using a panel of U.S. publicly-traded firms during 1990-2010 and information on all U.S. patents finally granted until 2019, we empirically demonstrate that each firm's accumulation of radical (incremental) knowledge enhances (reduces) its R&D productivity. We further find that a highly connected intrafirm inventor network strengthens the positive (negative) effect of extant radical (incremental) knowledge, while a highly clustered network weakens the positive (negative) effect of extant radical (incremental) knowledge.

TIM: **How Network Dynamics Affect Firm's Innovation Performance: From the Lens of Innovation Communities**

Author: **Guannan Xu**, *Beijing U. of Posts and Telecommunications*
Author: **Ning Kang**, *Beijing U. of Posts and Telecommunications*
Author: **Gaoya Li**, *Beijing U. of Posts and Telecommunications*
Author: **Yuan Zhou**, *Tsinghua U.*

Existing literature investigating how network characteristics influence innovation has equivocal results. The reasons for these inconsistent findings may lie in the lack of a dynamic and mesoscopic perspective. Therefore, this paper explores the impacts of network dynamics on firms' innovation from the lens of innovation communities. We proposed a conceptual model of how within-community structural holes, cross-community institutional holes, and community dynamic membership turnover affect firm innovation, with the contingency of firms' coreness in the innovation community. To test the hypotheses, we conducted an empirical study in the global 3D printing industry from 1995 to 2016. The innovation communities are identified by Louvain topological algorithm based on large-scale collaboration networks. The findings suggest that a firm can reap innovation benefits from within-community dynamic structural holes and cross-community dynamic institutional holes. And community dynamic membership turnover has an inverted U-shape effect on firms' innovation performance. Moreover, a firm close to the periphery position can benefit more from cross-community dynamic institutional holes and community dynamic membership turnover. This paper contributes to inter-organizational network theory by introducing an innovation community lens and a dynamic perspective.

Open Innovation Track: User & Crowd Innovation

Session Moderator: **Sebastian Niederberger**, *ETH Zürich*

TIM: **The Scientific Approach to Decision-Making at the Collective Level: An Empirical Study**

Author: **Sebastian Niederberger**, *ETH Zürich*
Author: **Anja Schulze**, *U. of Zurich*
Author: **Petra C. Schmid**, *ETH Zürich*

Research has demonstrated benefits of the scientific approach to decision-making for individuals' predictive ability in innovation related settings. We move this research from the individual to the collective level. Pursuing this shift in the simplest possible way, we study crowds (i.e., non-interactive groups). We conduct an online experiment and find that crowds that use the scientific approach attain a higher predictive accuracy compared to crowds using the intuitive approach. This advantage increases with the complexity of the prediction task. Further, we elicit the underlying mechanism of this relationship. Importantly, we find that deploying the scientific approach at the collective level is associated with lowering prediction diversity and inducing systematic errors. As a result, the improvements that can be obtained by the scientific approach do not translate completely to the collective level. Theoretical implications are discussed.

TIM: **Experimentation-driven Product Innovation in User-Communities: The Community Engagement Dilemma**

Author: **Ryan Allen**, *U. of Washington*
Author: **Robert Bremner**, *Stanford U.*
Author: **Rory Morgan McDonald**, *Harvard U.*

This study investigates experimentation-driven product innovation in user communities. Prior research has largely focused on the innovation benefits of leveraging users and user communities as an experimentation resource. In this paper, we posit that reaping the innovation-related benefits of experimentation is contingent upon the degree to which the community represents demand in the broader market. However, at the same time, failing to incorporate the feedback from engaged users may lead to losing the support of the community. Jointly, we suggest that firms face a community engagement dilemma: incorporating feedback from engaged but non-representative niche communities has the potential to mislead innovation efforts, but ignoring that feedback may stunt the development of the community resource. Using longitudinal and interview data on experimental PC game development, we find that adapting games in response to community engagement increases games' commercial performance on average, unless the game's user community is concentrated in a narrow market segment. Such narrowly concentrated niche communities give signals of market demand that, when incorporated into the game, can decrease the game's appeal to broader audiences. But, failing to respond to customer feedback leads to reduced engagement later on, especially in concentrated communities.

TIM: **Good for the Crowd, Good for the Market? A Study of Crowd-Generated Ideas and Product Market Success**

Author: **Heeseung Lee**, *Hong Kong Baptist U.*
Author: **Likoebe Maruping**, *Georgia State U.*

A fundamental challenge in product innovation is the informational gap between a firm's understanding of opportunities and actual needs in existing and untapped markets. Crowd-based digital platforms have been touted as an avenue to address this informational challenge. However, there remains a fundamentally unsubstantiated assumption regarding the efficacy of such platforms to capture and aggregate crowd information in a way that enhances product innovation success. We examine the extent to which innovation crowdsourcing communities enable firms to gauge demand preferences and unmet needs as manifested in two key ideation outputs: idea popularity and novelty. We theorize and empirically test the implications of these two attributes for product innovation performance based on evidence from Salesforce. Our findings shed light on the role of digital platforms as a useful aggregator of market information and shift the emphasis from the ideation phase of crowds' knowledge engagement to their value proposition in the market.

TIM: **Intrinsic Self-rewards for Participating in Household Sector User Innovation: Lessons from a Survey**

Author: **Xintong Wu**, *School of Economics and Management, Beijing U. of Chemical Technology*
Author: **Liang Mei**, *National School of Development at Peking U.*

Household sector (HHS) user innovation has been recognized as a prevalent type of innovation. However, few studies have examined the non-pecuniarily self-driven motivations of HHS user innovation. This study emphasizes intrinsic self-rewards (ISRs) according to self-determination theory and explores the effect of altruistic ISRs on HHS user innovation upon a large-scale survey in China. Furthermore, we incorporate a social facilitation factor, the partnering relationship involving partnering size and partnering closeness, and investigate their moderating effects on the relationship between altruistic ISRs and HHS user innovation. The results indicate that individuals participating in HHS user innovation are positively motivated by altruistic ISRs. Besides, the partnering size strengthens the effect of altruistic ISRs on HHS user innovation while the partnering closeness dilutes the effect. By uncovering this motivation antecedent and the social facilitation conditions, this study provides theoretical contributions and managerial implications to HHS user innovation.

TIM: **Well-Connected for the Crowd: Which Network Structures are Conducive to Crowd-open Innovation?**

Author: **Lukas Vogelgsang**, *Ludwig Maximilian U. of Munich (LMU)*

Crowd-open forms of organizing innovation are becoming increasingly prevalent. Yet, there is scant insight about which network structures are most conducive to innovation performance in these new modes of governance. Drawing on social capital theory, we argue that crowd-open innovation settings need network structures critically different from those in hierarchical contexts. Concretely, we highlight the role of structural closure to provide trust and shared understanding as a complementary fit to crowd-open innovation. In contrast, we follow extant literature in that hierarchical-closed innovation profits from brokerage positions accessing non-redundant sources of information. We test our hypotheses in a project-level model employing data from 10,250 board games developed between 2009 and 2021. Our results provide strong evidence that the values of projects´ network structure to produce both novel and valuable innovation depend on the underlying governance arrangement. As such, we contribute to extant innovation management theory by explaining why and how 'better connected for innovation' means different things in hierarchical-closed vs. crowd-open innovation environments.

Innovation and Competitive Strategy Track: Technology & Knowledge Acquisition

Session Moderator: **Ully Yunita Nafizah**, *Warwick Business School*

TIM: **Customer Knowledge Acquisition Channels and Technology Investment**

Author: **Ully Yunita Nafizah**, *Warwick Business School*

Customer knowledge has been acknowledged as one critical source of innovation. This paper identifies three channels through which firms acquire knowledge from different types of customers and geographic proximity customers: collaboration with local customers, collaboration with extra-regional, and exporting activity. This paper focuses on how each channel of customer knowledge acquisition influences firms' innovation performance. Our empirical analysis is based on four waves of the UK Innovation survey collected between 2015 and 2021, comprising around 7,000 observations. OLS and probit regression models are used to investigate the innovation benefits of each channel of customer knowledge acquisition channel. In addition, we explore how firms' technology investment complements customer knowledge acquisition. Our results highlight the role of each channel of customer knowledge acquisition and the complementary effect of technology investment on innovation. We find the higher innovation benefits of collaboration with local customers and the potential substitution effect of local and extra-regional collaboration, suggesting that firms could choose either type of customer collaboration strategy, with local collaboration as the preferable strategy. Our finding also highlights the innovation benefits of exporting activity, confirming the learning-by-exporting activity. While we find evidence of the complementary role of technology investment, our finding highlights the diminishing innovation benefits of technology investment due to geographical barriers. Our results emphasize the importance of customer knowledge acquisition on innovation and the geographic challenges in the knowledge acquisition process, technology investment, and innovation.

TIM: **Negative Consequences of Being Acquired on New Product Quality**

Author: **Jongsoo Kim**, *Hong Kong Baptist U.*
Author: **Moonsik Shin**, *Chapman U.*
Author: **Joon Mahn Lee**, *Seoul National U.*

Technology acquisition is an effective way for firms to acquire new technologies and develop novel products. However, prior literature overlooks the negative consequences on acquired firms' new product quality. Thus, we examined the new product quality of acquired firms and argue that being acquired is likely to disrupt their innovation process. We tested our hypotheses using U.S. medical device-level data and the device's quality failure. We found evidence that a device produced by an acquired manufacturer is likely to be recalled due to quality failures post-acquisition period. However, the incidents of quality failure decreased as time progressed after post-acquisition. Furthermore, when acquiring and acquired firms are familiar with their technologies pre-acquisition and the acquired firm's CEO remain post-acquisition, the risk of product quality failure is less pronounced. Our results suggest that product quality failure can be another consequence of being acquired.

TIM: **Information Disclosures and Contracting for Technology Acquisitions**

Author: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*
Author: **Sandip Bisui**, *Purdue U.*
Author: **George Chondrakis**, *ESADE Business School*

Material adverse change (MAC) clauses and contingent earnouts are important contractual mechanisms used to protect acquirers from the risk of adverse selection. Yet, the extant literature has not sufficiently explored the antecedents to their use, in particular within the context of technology acquisitions. In this study, we take advantage of the passage of the American Inventors Protection Act (AIPA), which disseminated information through the publication of patent applications, and explore the impact of innovation disclosures on the design of technology acquisition contracts. Our analysis suggests that deals disproportionately affected by AIPA have less expansive MAC clauses and are less likely to feature contingent earnouts. These results provide new evidence linking the use of MAC clauses and earnouts with acquisitions subject to information frictions.

TIM: **Cross-border M&As and Growth Option Value: Technological Diversity, Uncertainty and Correlation**

Author: **Rene Belderbos**, *KU Leuven, Faculty of Economics and Business*
Author: **Luca Del Viva**, *ESADE Business School*
Author: **Lenos Trigeorgis**, *Durham U.*

Taking a real options perspective, we argue that, compared with domestic M&As, cross-border M&As have positive performance implications for acquirers in terms of an increase in growth option value when acquisitions increase the diversity of the acquirers' technology portfolio. This influence is greater if the target's foreign market exhibits higher economic uncertainty and lower correlation with the domestic market. While cross-border M&As may result in lower profitability in the short term, the exercise of embedded real options makes acquirers experience higher profitability in the long term. We find support for these conjectures in an analysis of M&As by U.S. listed firms during 1991-2014. Our findings reconcile contrasting previous findings on the performance of cross-border M&As.

TIM: **Like Seeks Like in the 'Digital Age'? On the Role of Similarity in Firms' Acquisition Behavior**

Author: **Johanna Deperi**, *U. of Brescia*
Author: **Olivier Bertrand**, *Fundação Getúlio Vargas/EBAPE*
Author: **Lionel NESTA**, *OFCE-SciencesPo Paris / GREDEG U. Côte d'Azur (UCA)*

The rise of the 'digital age' fundamentally challenges how acquiring firms seek to create and add value through their selection of targets firms. This study aims at investigating how digital firms' characteristics influence the creation of unique dyad-specific synergies in the selection of a potential target firm. Recognizing that digital firms are inherently distinct from non-digital firms in their digital resources and digital technologies, we argue that these distinctive particularities can moderate the effects of market and technological similarity on the choice of target firms. Comparing large U.S. publicly traded digital and non-digital acquiring firms, we empirically show that digital firms value product-market similarity and technological similarity differently. Our findings reveal that digital firms' characteristics reduce the effect of product-market similarity on their likelihood of acquiring a potential target. The findings also indicate that the effect of technological similarity on the likelihood of acquiring a potential target is stronger for digital than non-digital firms.

Innovation and Competitive Strategy Track: Innovating in Times of Crisis

Session Moderator: **Sawan Rathi**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

TIM: **Hybrid Innovation Management: Managing Distributed Innovation in the Post-pandemic Era**

Author: **Marina Konrad-Maerk**, *U. of Innsbruck*
Author: **Johann Fueller**, *U. of Innsbruck*
Author: **Anne Gfrerer**, *IU International U. of Applied Sciences*

The COVID-19 pandemic forced firms worldwide to find new ways to use technology to digitize their innovation management. Against this backdrop, there is a growing interest in the question of how virtual collaboration and the associated use of ICT (Information Communication Technology) are changing traditional innovation management processes. Using an affordance lens, we conducted semi-structured interviews with a heterogenous group of 20 innovation managers from different industries to provide an exploratory view on innovation management during the pandemic. Our findings unveil three key affordances related to ICT-enabled innovation management processes: flexibility & speed, global collaboration, and information & data sharing. However, these affordances also come with a set of constraints, including individual constraints (e.g., lack of digital literacy or face-to-face creative exchanges), as well as structural constraints such as reliance on haptic artifacts for physical innovation infrastructure (e.g., laboratory work). In light of these findings, we conclude by proposing a strategic renewal of traditional innovation management processes toward a hybrid innovation management model that leverages the advantages of both virtual and physical innovation spaces and mitigates the constraints accordingly. This new hybrid innovation management model may serve as a new governance mechanism to manage distributed innovation in the post-pandemic era.

TIM: **Pandemic Shock and Technology Replacement: Evidence from EMR Data on High-end Medical Treatment India**

Author: **Sawan Rathi**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Anindya Chakrabarti**, *Indian Institute of Management, Ahmedabad*
Author: **Chirantan Chatterjee**, *U. of Sussex*
Author: **Anthony Vipin Das**, *LV Prasad Eye Care Institute*
Author: **Raja Narayanan**, *LV Prasad Eye Care Institute*

New technology adoption is driven by a troika – demand-pull, technology-push, and institutions shaped by market and non-market forces. In technologically laggard countries, often this process is slowed due to frictions arising from the fact that the new technology has to replace an established older technology. In this paper, we exploit the COVID-19 pandemic shock to examine how intraorganization technology replacements occurred due to concurrent shifts in the demand and the supply side. Specifically, we focus on the adoption of a highend medical technology, Optical coherence Tomography Angiography (OCTA), by ophthalmologists to diagnose prevalent eye diseases – replacing less costly and older technology OCT. We use novel Electronic Medical Records (EMR) data from one of the largest eye-care hospital chains in India that treats both non-paying and paying patients with a not-for-profit orientation. In a differencein-differences setup, we consider non-paying patients as the treatment group and paying patients as the control group. We find that visual acuity among the pool of non-paying patients worsened during lockdown. Demand-pull generated through increased impairment propelled OCTA adoption by 21.6% points, predominantly facilitated through technology-push by young physicians. Higher adoption of OCTA, in turn, contributed to improving the eyesight of the non-paying patients. Our results go through various robustness checks and we conclude discussing the managerial and policy implications of our findings.

TIM: **Buying Behaviors during Crises: A Health Belief and Competitive Arousal Perspective**

Author: **Muhammad Waleed Ayub Ghouri**, *U. of Electronic Science and Technology of China*
Author: **Guofeng Wang**, *U. of Electronic Science and Technology of China*

Crises in the past have shown some devastating impacts on the global economy while bearing a long-lasting nature. The after-effects always bring some dynamic and rigorous challenges for businesses and governments which have always been a point of discussion for scholars. Recently, the world confronts a gust of outbreak (i.e., COVID-19 pandemic) that has emaciated the global economy and left everyone including people and government with uncertainties, fear, and many psychological impairments. One of the headwind features utilized by consumers was panic buying which needs to be explored in various contexts for policymakers and practitioners. To address this, gap the study deploys the moderated mediation mechanism which integrates the health belief model (HBM) and competitive arousal theory to excavate the underlying notions behind panic buying with the intrusion of evolved real-time psychological disorders (i.e., intolerance of uncertainty (IU) and cyberchondria). The study is enacted as a natural experiment in a south Asian developing economy. Online surveys were disseminated during the crisis in the region. Our findings reveal the positive impact of health beliefs (i.e., perceived severity and perceived scarcity) on perceived arousal which causes panic buying. Moreover, our study also signifies the sturdiest role of perceived arousal as a mediator. Besides, the study investigates the distinctive role of boundary conditions under different psychological strains. Theoretical and practical implications are further elaborated.

TIM: **Economic Crises and the Evolution of Innovation Networks: A Contextual Approach**

Author: **Amit Kumar**, *Warwick Business School*

This study extends our understanding of the drivers of network evolution by taking a contextual approach to network dynamics. We study how exogenous crises, stemming from macroeconomic conditions, influence the logic driving tie formation and regional network structure. Existing research on social capital has identified two perspectives on network formation: an instrumental approach and a community-oriented approach. Based on behavioral research, we propose that individuals shift their behavior from advancing their own interests to pursuing the collective good of their local community when facing an external crisis. Thus, we expect an increase in network connectedness and a reduction of inequality in degree distribution in communities hit by a crisis. We tested our hypotheses using data on regional collaboration networks between inventors within US Metropolitan Statistical Areas between 2002 and 2014. Our results support our propositions: we show that regional innovation networks become more connected and less hierarchical during crises, while they become less connected and more centralized in periods of economic growth.

Transformation of Business Management and Production in the Era of AI

Organizer: **Xiaoshu Bei**, *U. of Colorado, Boulder*
Organizer: **Kenneth Guang-Lih Huang**, *National U. of Singapore*
Presenter: **Nan Jia**, *U. of Southern California*
Presenter: **Kenneth Guang-Lih Huang**, *National U. of Singapore*
Presenter: **Timothy James DeStefano**, *Harvard Business School*
Presenter: **Xiaoshu Bei**, *U. of Colorado, Boulder*
Discussant: **Vibha Gaba**, *INSEAD*

The papers of this symposium use a variety of theoretical and analytical approaches to study the processes and management in corporations that adopt AI technology and apply it in different areas. The authors, presenters and discussant represent a group of scholars deeply rooted in strategic management and technology innovation. Through this symposium, we seek to advance our understanding of how combining human labor and AI tools can change organizational performance and leadership in various settings. This symposium fosters the development of an important research agenda that studies the strategic, organizational and leadership changes associated with the adoption of AI technology. While focused on AI, we believe the theoretical insights and empirical findings of these research papers have broader implications for firms' strategic responses, management and adaptations to technological changes.

Participant: **Nira Liberman**, *Tel Aviv U.*

People can mentally represent situations, people, and tasks at different levels, focusing on the details (i.e., construing concretely) or the big picture (i.e., construing abstractly). Despite the growing attention devoted by management scholars to construal level as a feature of cognition, methodological innovations are needed to allow researchers to better study construal-level within organizational contexts. This symposium presents four lines of research that use diverse research designs to advance measures and manipulations of construal level in varied contexts. The four papers examine cognitive construal in everyday work, context-specific linguistic abstraction in small natural language samples, construal-related stereotypes of social groups, and effectiveness of two common construal manipulations in the lab. This symposium aims to provide an opportunity for knowledge sharing and discussion among researchers, with a specific focus on methodological innovations that can advance construal level research in organizations.

Social Entrepreneurship, Innovation and Social Impact

Moderator: **Katarzyna Bachnik**, *Hult International Business School*
Panelist: **L Caimacan**, *Hult International Business School*
Moderator: **Carina Paine Schofield**, *Hult International Business School - Ashridge*
Panelist: **Bogdan Prokopovych**, *U. of Massachusetts, Amherst*
Panelist: **Daniel Rukare**, *Hult International Business School*

The purpose of this panel symposium is to engage a group of three expert panelists in a formal, moderated, interactive discussion to (1) clarify and interpret the three terms: social entrepreneurship, innovation and social impact; (2) to explore any interdependencies and links between them; (3) to provide real-life examples; (4) to discuss latest technology and consumer trends that influence organizations to innovate and generate impact. The invited panelists will present their informed point of view focusing on one selected thread. They will situate their view in the broad context of business development and growth, and of the role of organizations in the communities they operate in. Space will be created for symposium participants to interact with the panelists, to get some definitive answers, based on the mini presentations delivered by the invited panelists and in the course of the follow-up discussion.

OSCM: **Budget Uplifting in Capital Projects: A Theoretical Model of Joint Value Production**

Author: **Yongcheng Fu**, *College of Management and Economics, Tianjin U.*
Author: **Nuno Gil**, *U. of Manchester*

This study develops the rudiments of a contingent perspective on the value of budget uplifts in capital projects. Budget uplifting is a policy to endow capital projects with unallocated funds to tackle unquantifiable uncertainties, creating a budget reserve that can be mobilized ex-post project approval to encourage nonmarket stakeholders to collaborate. Budget uplifts aim to help managers keep a project within budget while they address pressures to widen the project purpose after the investment is sanctioned. Using a formal model, we propose this form of financial 'slack' can be advantageous, but only up to a point. Hence, up to a lower threshold, we show slack enables to increase the project economic returns and the benefits appropriated by nonmarket stakeholders. But adding extra slack above an upper threshold is superfluous because it has no effect on the choice between cooperating vs. competing with these stakeholders. We examine how the slack thresholds vary with the organizational purpose of the project sponsors, the bargaining power of the nonmarket stakeholders, and the subjective value of the stakeholder benefits. We discuss implications to policy debates on the imperfections of methods to estimate budget uplifts and on trends towards collaborative procurement.

OSCM: **Last-Minute Coordination Between Warehouses: An Empirical Analysis in E-Commerce**

Author: **Kedong Chen**, *Old Dominion U.*
Author: **Hung-chung Su**, *U. of Minnesota*
Author: **Kevin Linderman**, *Penn State U.*
Author: **William Li**, *Shanghai Jiao Tong U.*

Warehouse has become the new storefront as e-commerce continues to prosper, but the operational efficiency of a warehouse is challenged when it strives to meet changing demand. Demand uncertainty in last-mile operations prompts last-minute coordination between warehouses, where they autonomously coordinate to transship and re-position inventory to fulfill customer orders. This study examines how last-minute coordination affects the operational efficiency of warehouses. We draw on the organizational information processing theory to understand the mechanisms. First, we demonstrate that demand uncertainty is an antecedent to last-minute coordination, using the method of Separable Temporal Exponential-family Random Graph Models (ST-ERGM). Then, we perform warehouse-level analyses and show that the more warehouses that a focal warehouse conducts last-minute coordination with, the lower the operational efficiency of the focal warehouse. Last, we examine the performance of the entire last-minute coordination network and find that a structure of high centralization improves the network-level operational efficiency. This study provides implications for warehouse managers and the central manager in charge of the warehouses.

OSCM: **Towards an Ecosystem Approach to Supply Chain Reconfiguration: An Explorative Case Study on the VCUK**

Author: **Xianwei Shi**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **William David Cordo Jimenez**, *Cambridge Design Partnership*
Author: **Yongjiang Shi**, *Cambridge U. Engineering Department*
Author: **Yufeng Zhang**, *Birmingham Business School, U. of Birmingham, UK*
Author: **Zheng Liu**, *Cardiff Metropolitan U.*

While extant literature on supply chain reconfigurations focuses primarily on reconfiguring or redesigning a supply chain for preestablished, ex-ante products, we show how a provisional supply chain may be configured for novel, ex-post products that are outside of suppliers' normal scopes of production. We conducted an inductive, qualitative study on the VentilatorChallengeUK, an industrial consortium established in response to an urgent call from the UK government in early 2020 to create a new ventilator supply chain, to cope with the spiking need for such medical devices amid the Covid-19 pandemic. Our grounded analysis shows that the process of reconfiguring a supply chain with entirely new sets of suppliers that are outside the medical device sector unfolds through the iterative transformation and (re-)embedding mechanisms between the supply chain and the wider ecosystem resources. By theorising an ecosystem approach, we shed new light on supply chain reconfigurations through collaborations beyond existing boundaries of supply chains upon the onset of large-scale disruptions. We also elaborate the usefulness of the ecosystem construct in the field of operations management by introducing supply chains as the key underpinnings of business ecosystems. Our findings inform managers and policy-makers in terms of how to cultivate the reciprocities between supply chains and the wider ecosystem to be better prepared for future disruptions.

OSCM: **Slaves at Sea – How Social Intermediaries Build Power to Mitigate Forced Labor in Supply Chains**

Author: **Miriam Michiko Wilhelm**, *WU Vienna U. of Economics and Business*
Author: **Vivek Soundararajan**, *U. of Bath*
Author: **Vikram Bhakoo**, *U. of Melbourne*
Author: **Andrew Crane**, *U. of Bath*
Author: **Alin Kadfak**, *Swedish U. of Agricultural Sciences*

Forced labor poses a significant risk in global supply chains. Its hidden nature leads to the failure of conventional buyer-led governance approaches, such as monitoring and auditing. In this paper, we highlight the role that social intermediaries (SIs), such as NGOs and worker rights organizations, can play in mitigating forced labor in global supply chains. So far, the role of NGOs has mainly been described as supporting buyer-led supply chain governance. Instead, we argue that SIs can play a more active role when they design and lead interventions that help vulnerable workers to claim their rights and thereby alleviate occurrences of forced labor. However, as SIs are external to supply chains, they need to build legitimate power with employer firms and migrant workers in order for these interventions to be effective. Based on a multiple case study of three SIs collaborating with one global seafood brand in Thailand to combat forced labor in their operations and supply chains, we identify several distinct sources of legitimate power of SIs. With respect to focal firms, the sources are: endorsement by influential referents, autonomy from the focal firm, and recognized forced labor expertise; and with respect to workers, the sources are: embeddedness in migrant worker communities and the building of goodwill trust with them. By dissecting the sources of power that bolster the legitimate position of SIs with the focal firm and workers, we contribute to the emerging debate on forced labor in supply chains and how it could be addressed beyond compliance-based supply chain governance.

In the last few years, the world of work as we know (or used to know) it has undergone fast-paced changes due to various external factors (e.g., COVID pandemic, remote work, 4-day work week, population aging, population migration, acceleration of AI adoption, just to name a few). In this plenary, we will have an interactive discussion with world-renowned panelists, who are all experts in different areas of work and careers. During this session, panelists will answer questions and discuss topics and trends that are affecting work and careers, including new modes of work, difficulties organizations have in attracting and retaining talent, how to deal and plan for AI-induced workplace changes, lack of workplace engagement, migrant work, and work-home (and gender-related issues) interface. Please join us to listen to these outstanding panelists and participate in such a timely and critical discussion in the world of work and careers.

Participant: **Patrizia Vecchi**, *U. of Cambridge*

Interpersonal interactions are fundamental to organizations - they are essential for building and maintaining professional relationships, as well as attaining collective goals and achieving success in work performance. However, not all interpersonal situations are easy to navigate. Various challenges may occur when people interact and work together, which can adversely impact workplace relationships and performance. This symposium offers a more comprehensive understanding of difficult interpersonal situations people encounter in organizations and provides insights on how individuals can navigate effectively to achieve positive outcomes. The four presentations draw on empirical research conducted with a variety of methods (surveys, experiments, and natural language processing methods) to explore individuals' decision-making processes under challenging interpersonal contexts and the outcomes of different types of interactions. These contexts include ice-breaking in networking events, apologizing for mistakes made in teamwork, making rejections in communications, and collaborating remotely versus in person. This symposium will offer effective interventions that can guide individual interactions to enhance organizational outcomes.

Organizer: **Peter Fleming**, *U. of Technology, Sydney*
Presenter: **Ulla Eriksson-Zetterquist**, *Ulla Eriksson-Zetterquist*
Participant: **Kerstin Sahlin**, *Uppsala U.*
Presenter: **Logan Crace**, *Alberta School of Business*
Presenter: **Joel Gehman**, *George Washington U.*
Participant: **Michael Lounsbury**, *U. of Alberta*
Presenter: **Jakov Jandric**, *U. of Edinburgh*

This symposium aims to stimulate debate, reflection and research on collegiality by management scholars. Collegiality as a set of values and practices is central to the idea of the university. Yet it appears that in many places collegiality is under threat from managerialism. In spite of its centrality to our institutions and working lives, collegiality has received remarkably little attention from management scholars. This symposium aims to stimulate debate, reflection and research on collegiality within the management discipline. It brings together four papers by teams of authors based in North America, Europe, the UK and Australia, which examine collegiality through different lenses. They are united by a concern with understanding collegiality and the threats it currently faces and encouraging discussion of how it might be protected and expanded.

Exploring Leadership to Unpack its Power Asymmetries and Hegemonic Discourse

Session Moderator: **Mark Learmonth**, *Nottingham Trent U.*

CMS: **Recovering the Origins of Transformational Leadership for Democratizing Work**

Author: **Lauren Eaton**, *Victoria U. of Wellington*
Author: **Todd Bridgman**, *Victoria U. of Wellington*
Author: **Stephen Cummings**, *Victoria U. of Wellington*

Transformational leadership theory, originally developed by American political scientist James MacGregor Burns in the late 1970s and subsequently developed by management scholars, is arguably the best-known and most influential leadership theory in business. Transformational leaders are visionaries who engage with followers' higher-level needs and inspire them to deliver extraordinary outcomes for their organizations. Democracy was at the core of Burns' conception of transformational leadership: voters selected their leaders and voted them out if they failed to deliver on their visions. However, this was overlooked by those who introduced the theory to management studies. Drawing on the critical historical approach of intellectual history, we contrast the conventional representation of transformational leadership theory in business with Burns' original conception. We explore how and why the democratic foundation of the theory was lost, why this matters, and what can be done to recover it. We conclude that while critical management scholars generally see little value in transformational leadership theory, understanding and extending Burns' conception can contribute to debates on democratizing work by helping put workers front and center of decision-making.

CMS: **The Attractions of Leadership Discourse as Resource for Identity**

Author: **Mark Learmonth**, *Nottingham Trent U.*
Author: **Gerlinde Mautner**, *WU Vienna U. of Economics and Business*

Senior people in organizations are now often called leaders; and yet, it was only a few years ago that such individuals were generally known as managers, or even as administrators. On the face of it, this apparently mundane practice, now reproduced routinely in all sorts of texts – job advertisements, survey instruments and staff training programmes among many others – might seem innocent enough. However, we show empirically that the discourse of leadership can be understood as an identity resource that enhances elite power because the positive connotations of the term make the acquiescence and enthusiasm of subordinates (who can now be cast in a follower identity) more likely. We hope to challenge hegemonic representational practices and pave the way for other, more progressive forms of identity to emerge in organizational life.

CMS: **Despotic Leadership and Ideological Manipulation at Theranos: Towards a Theory of Hegemonic Totalism (WITHDRAWN)**

Author: **Dennis Tourish**, *U. of Sussex*
Author: **H. C. Willmott**, *Bayes Business School; Cardiff Business School*

This paper addresses despotic leadership and ideological manipulation in the workplace, and explores their detrimental consequences for employees and other stakeholders. The notion of 'hegemonic totalism' is advanced to account for how employees are often subordinated to the will of powerful elites. Our argument is illustrated through a case study of Theranos, a high prolife Silicon Valley bio-tech company that promised a revolution in healthcare diagnostics but was declared bankrupt in 2018. Its once much feted founding CEO, Elizabeth Holmes, has been sentenced to eleven years in prison for fraud. Analysis of empirical material on the company illustrates how business leaders may engage in despotic practices, while simultaneously invoking apparently positive ideals to enforce the performance of consent by employees. Following an exploration of the paradoxes and pathologies of hegemonic totalism, our study identifies three primary countervailing forces that act to limit its effects.

CMS: **Algorithmic Leadership and the Game of Business**

Author: **Sverre Spoelstra**, *Copenhagen Business School*
Author: **Nick Butler**, *Stockholm U.*

This paper reflects on the increasing role played by algorithms in management today by situating this trend in the context of a long-standing debate about the distinction between leadership and management. Our guiding question concerns the role of humans in what might be called 'algorithmic leadership', understood as an advanced form of algorithmic management that is making redundant some of the exceptional qualities that have traditionally been ascribed to 'true' human leaders. The paper recalls the chess-playing automaton known as 'the Mechanical Turk', developed by Wolfgang von Kempelen in 1770. For almost a century, the Turk, which was a mechanical illusion secretly operated by a human chess player, travelled through Europe and the US, beating some of the best chess players of its time. Today's strongest chess-playing computer engines, most notably Google's AlphaZero, are in no need of illusions to beat the world's best chess players and nor do they need human chess knowledge of any kind. They are fully self-taught and rely on an algorithm that can be put to work in many game-like environments. Given the widely shared idea that business itself is (supposed to be) game-like, we may legitimately ask what will happen to qualities like 'vision', 'gut-feeling', 'inspiration', and 'insight' – all characteristics that are traditionally ascribed to exceptional business leaders – when AI and machine learning further develops in the 'game-like' environment of business. Will such leadership qualities fall within the realm of the machine? What roles will be left for human leadership? And is the future of leadership a mechanical Turk reversed, i.e. not a machine that is secretly human, but rather a human face that hides an algorithmic machine?

CSR Subjectivities and Pushing Institutional Boundaries

Session Moderator: **Jussara Pereira**, *FGV - EAESP*

CMS: **An Affective License to Operate?**

Author: **Jussara Pereira**, *FGV - EAESP*

Why do some victims/stakeholders begin to minimize their criticism of companies within their communities after an event of corporate irresponsibility? This article investigates how communities that have an economy strongly based on the extractive industry may develop an affective relationship with these companies. Moreover, we stated that those companies may exploit this relationship to pursue their own interests. Literature from the fields of Corporate Social Responsibility (CSR), Corporate Social Irresponsibility (CSiR), and the Social Licence to Operate (SLO) were mobilized to understand the phenomenon. Such concepts have been examined in management and organization literature through its normative foundations and instrumental approaches. In this article, we address a puzzle to CSiR and the SLO literature, adding an affective dimension through qualitative critical analysis. The paper explores a gap in the literature of CSiR, showing that past relations contribute to social identification between agents of the same social structure. It goes beyond mere public relations in the SLO literature, and, may affect claims against the company. It is also ambiguous since it incorporates the emotions around the relationship between companies and communities. The self-image of the city of Mariana as a mining town, together with the huge importance of the activities of Samarco to the municipality engendered affections, that gave Samarco what we call here an "affective license".

CMS: **The Adjuvant Middle Manager: An Ideological Subjectivity** ☯

Author: **Kerrie Howard**, *Royal Holloway, U. of London*

This article illuminates the importance of situational contingencies for understanding middle managerial subjectivities at work. Drawing from empirical research with middle managers in a large U.S. retail firm and the context of their additional responsibilities for corporate social responsibility (CSR), the paper explores conformist subjectivities variously constituted via ordering and tidying practices. Theoretically motivated by Mary Douglas's ideas on tidying and ordering rituals as micro-political relational practices that assist in day-to-day risk management and danger mitigation, analyses identify three key overly compliant subjectivities: acolyte, defender and myth maker. Conceptualized as an adjuvant middle manager, the paper explores the relevance of this subject in 21st century organizations. With this analysis, the paper makes a twofold contribution to literature. First, it highlights the extent to which middle managers subjectivities are shaped by situated micro-political relational practices perceived as locally necessary and protective. Second, the study offers a contribution to CSR literature on CSR agents and micro-CSR by showing how CSR practice is impacted variously by the subjectivities available to those implementing CSR.

CMS: **Repoliticizing Spirituality: A Collaborative Auto-Ethnography on Decolonial Identity Formation**

Author: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Simón Crisóstomo Loncopán**, *Observatorio Ciudadano Temuco*

How does the intended siting of an environmentally friendly hydropower project and its best-practice CSR impact the collective identity of an Indigenous community? We address this question through a collaborative autoethnography, told through narratives and visual aids (photos and a map drawn from Mapuche cosmovision) of one of the co-authors, a young Mapuche Indigenous leader in Chile. We draw from decolonial and Indigenous ontologies related literatures to help explain the processes of identity work and resistance. We posit the concept of 'politicized spirituality' to aid our understanding in how decolonial identity formations take shape and help in contesting CSR and mega (energy) projects. Consequently, we advance calls for scholars researching in decolonial contexts to re-politicize spirituality. Additionally, we desire that this article benefits the struggles of Mapuche and other Indigenous communities in having their collective rights respected in contexts of business projects. We end by offering future directions of research for scholars in CSR and (collective) identity work and recommendations to managers, practitioners and policymakers when attempting to engage with Indigenous peoples

CMS: **How to Construct a Time Machine: Dialogic Organizing and Cybernetic Ethics Within the Anthropocene**

Author: **Marta Gasparin**, *Copenhagen Business School*
Author: **Steven D Brown**, *Nottingham Business School, Nottingham Trent U.*
Author: **William Green**, *Birmingham Business School, U. of Birmingham, UK*
Author: **Simon Lilley**, *U. of Lincoln, UK*
Author: **Martin Quinn**, *Lancaster U. Management School*
Author: **Michael Saren**, *U. of Leicester, Leicester, UK*

How can organizations become responsive in a meaningful way to events which may occur way outside the boundaries of their own lifespan? We are living in a time of considerable climate crisis. The challenges presented by the Anthropocene are such that a piecemeal, incremental approach to addressing them will not be sufficient. In order to 'become active' and effect the radical change required, organizational processes need to be situated in relation to flows of activities that stretch across the enormity of 'Earth time'. We will re-imagine the possibilities of dialogically affirmative organization in creating engagement, hope, and solidarity by proposing a novel organizational approach that refigures the dialogical basis of 'thinking in time' in relation to the Earth System. We build on the work of both Serres and Jarry to explore the conditions under which a dialogue between the temporalities of organizations and Earth time might be possible. We make four contributions. First, we draw a novel link between the concern with dialogical organization and wider issues around sustainability and the capacity of organizations to engage with the magnitude of entering the Anthropocene. Second, we present a series of conceptual experiments through which organizational time can be related to Earth time and show how duration – that time that makes 'us' – can be extended towards broader time 'outside us', and for this reason, we suggest that organizations should have a "Board of Indirectors", a board of human and non-human actors that reflect on the long-term impact of organizations on the Earth System. We make a series of practical recommendations that are intended, in the spirit of 'pataphysics, as 'imaginary solutions' that provoke thought beyond its current grounding in established business doxa. Finally, we sketch out how dialogues with 'ethernity' begin to coalesce as a 'cybernetic ethics'.

Data, Technology, & Work

Session Moderator: **Mette Strange Noesgaard**, *Aalborg U.*

CTO: **Data Work on the Ground: Matching Data Work Requirements and Professional Matters of Concern**

Author: **Mette Strange Noesgaard**, *Aalborg U.*
Author: **Kasper Elmholdt**, *Aalborg U.*
Author: **Jeppe Agger Nielsen**, *Aalborg U.*

In this paper, we explore the role of data work in the digital age—the situated practices workers engage in to produce data. Existing studies point out that data affects organizational life tremendously, but we know little about how frontline workers balance data work requirements with professional matters of concern. Yet, gaining this understanding is essential as producing data on the frontline is the foundation of the data-driven organization. We conducted a four-year qualitative study of a large-scale data initiative in a Danish local government eldercare department requiring new documentation practices and massive data work among frontline workers. Our analysis reveals a tension between the new requirements for digital documentation and frontline workers' values and norms. We identified five relational strategies—supplementing, tinkering, postponing, complying, and aligning—to match data work requirements and professional matters of concern. We contribute to the emerging literature on data work by unpacking and conceptualizing how frontline workers apply relational strategies and discuss if—and how—this may challenge the objectives of creating a data-driven organization.

CTO: **Smartphone Use and Job Performance: How Executives Are Realizing the Full Potential**

Author: **Frederik Hesse**, *U. of St. Gallen*

The use of information communication technologies (ICTs) increases steadily and allows workers to stay constantly connected to their employers, colleagues, and customers. Especially executives make intensive use of ICTs for work-related purposes after-hours due to the many demands that come along with the managerial role. Given the intensive use of ICTs after-hours by many executives, the question arises whether this behavior is beneficial or detrimental to their respective job performance. Available studies give no clear answer, as they are characterized by two shortcomings. Firstly, studies on the effects of work-related ICT use after-hours have generally produced mixed results. Secondly, previous research on ICT use has focused primarily on employees without managerial roles. Taking into consideration the shortcomings of previous research, I build on the job-demands-resources model and the conservation of resources theory and develop and test an individual-level model explaining the association between an executive's after-hours work-related smartphone use and his or her job performance. Specifically, I argue that work-related smartphone use after-hours increases individual flexibility which in turn fosters job performance. Moreover, I hypothesize that whether managers can exploit the potential of ICTs depends on certain boundary conditions. Hypotheses were tested using large-scale survey data from 4,257 executives from 94 German firms from multiple industries. My results reveal a positive indirect association between executives' after-hours work-related smartphone use and their job performance, which is mediated by their perceived work flexibility. In addition, I find this positive indirect relationship to depend on the degree of the executive's polychronic orientation, the degree of formalization in the respective organization and his or her job pressure. Keywords: executives; technology; electronic communication; job performance

CTO: **Knotted Paradoxical Tensions of Employees' Communication Technology Use**

Author: **Camilla Sofia Suortti**, *U. of Jyväskylä*
Author: **Anu Sivunen**, *U. of Jyväskylä*

Digitalization has become pervasive not only in the working life but also in other life domains, making human interaction increasingly technology-mediated and creating tensions and paradoxes when navigating these different domains. Previous research has shown that tensions and paradoxes are an inherent part of communication technology use. However, much less is known about how those tensions and paradoxes intertwine with each other. Thus, this study applies tensions and their entanglements as a framework to identify how different tensions related to communication technology use knot together and are navigated by media workers. Twenty semi-structured thematic interviews were conducted, and the data were analyzed iteratively according to thematic content analysis methods and applying elements of contrapuntal analysis. The findings indicate an emergence of a tensional knot consisting of two interwoven tensions and two paradoxes in media workers' technology use. The theoretical and practical implications of the entangled tensions and paradoxes related to communication technology use are discussed. By investigating the interweaving of these tensions and paradoxes, this study contributes to the theoretical and practical understanding of multiple organizational tensions related to communication technology use and their forming of a tensional knot.

CTO: **The Work Ecosystem: Software Technology Diversity and the Value of Occupations**

Author: **Shiyan Zhang**, *Stevens Institute of Technology*
Author: **Bei Yan**, *Stevens Institute of Technology*
Author: **Justine Herve**, *Stevens Institute of Technology*
Author: **Jeffrey V. Nickerson**, *Stevens Institute of Technology*

This study views the set of occupations as a form of ecology and examines the relations between the technologies used in occupations. It examines the effects of the relations between software technology categories on the value of occupations, as measured by average wages. The relations examined are two forms of technology diversity, which are developed into two indices — technology separation and technology disparity — that measure two aspects of the diversity of technologies within an occupation. Technology separation refers to the span of the function of the technologies used in an occupation — when technologies do different things, their separation is high. Technology disparity is the distribution of technology categories applied in an occupation — when workers in an occupation concentrate on one or a small number of technology categories, the disparity is low. Our results show that separation and disparity are negatively and positively associated with wages, respectively. This study expands our understanding of the effects of technology on the future of work by looking at occupations as part of an overall ecosystem in which technology categories are related to the value of occupations. More specifically, this study considers the relations between technology categories and shows that these relations have effects on value while controlling for other well-understood forces such as education. Our findings have implications for the development of skills and suggest how individual careers may unfold in certain occupations.

The Social Context & Digital Innovation

Session Moderator: **Sun-young Whang**, *UMass Boston College of Management MSIS*

CTO: **The Metaverse Church: Institutional Work Toward Forging Actor Networks for Network Innovations**

Author: **Sun-young Whang**, *UMass Boston College of Management MSIS*
Author: **Shaila Miranda**, *U. of Oklahoma*

An enduring problem facing information systems researchers has been how to promote adoption of technology innovations when their benefits are contingent on others' adoption and use, i.e., when the innovation is subject to network externalities. Prior research has related adoption of such network innovations to the pre-existing network of adopters or networks subject to the prospective adopter's fiat or financial incentives. However, diffusion of network innovations is a pernicious problem when the network is not subject to fiat or financial incentive and does not already exist. One such network innovation is the Metaverse Church. Using an institutional work lens, we address the question: What are the institutional work practices associated with forging a heterogeneous network of actors toward diffusion of a network innovation? We used an immersive, netnographic approach to collecting data in the Metaverse to answer this question. We surfaced five practices associated with forging an actor network toward the diffusion of a network innovation: conscripting a non-human actant as foe, envisioning the Metaverse as inevitable, practicing socio-technical inclusiveness, building community, and fostering generosity. Though the innovation investigated was the Metaverse Church, our findings have implications for those studying other types of network innovations.

CTO: **Social Media and the Inlaying, Infixing, and Annealing of Cultural Toolkits During Cultural Change**

Author: **Mohamed Hédi Charki**, *EDHEC Business School*
Author: **Nabila Boukef**, *U. côte d'Azur, Skema, France*

Information Technology (IT) has rarely been considered as an intentional force behind an organizational culture change. Still, changing organizational culture is a puzzle that continues to mystify and attract scholarly attention. In this research, we use a rich inductive study of an organization attempting to use social media to drive an organizational culture change. We induce new theory at the intersection of research on organizational culture change and technology. Taking a cultural toolkit perspective, our emergent theory breaks new ground by revealing that organizational leaders often are stuck attempting to introduce a new cultural toolkit but having to catalyze the transformation to this new toolkit by reactivating the existing toolkit. As a consequence, change generates a confluence of two toolkits leading to mixed outcomes: infixing where the new toolkit's resources become a significant part of the existing toolkit, inlaying where the new toolkit exists as a tool and not a legitimate part of the culture, and annealing where the old toolkit becomes hardened and more salient. Our results help to resolve longstanding puzzles around success and failure of technology in driving organizational culture change and repositions cultural toolkits as an outcome of change.

CTO: **Artificial Intelligence as an Endogenous Mechanism of Institutional Isomorphism**

Author: **Camille Endacott**, *U. of North Carolina, Charlotte*
Author: **Paul Leonardi**, *U. of California Santa Barbara*

Emerging technologies equipped with artificial intelligence are improving in their capability to autonomously make decisions on behalf of people and organizations. We argue that organizations' implementation of these AI technologies will perpetuate a new mechanism of isomorphism, through which the work practices of organizations will become increasingly similar over time, which we call endogenous isomorphism. Unlike mechanisms of isomorphism that depend on knowledgeable actors' responses to the institutional field, endogenous isomorphism occurs as AI technologies implement patterns gleaned from aggregated data across time and space. In this chapter, we draw on organizational theory in the areas of institutional isomorphism, structuration, and organizational change to theorize the endogenous change that the use of AI technologies to autonomously make organizational decisions will contrive. We present an illustrative example of endogenous isomorphism from our research on AI scheduling technologies and discuss the theoretical, practical, and methodological implications of our conceptual argument.

CTO: **How Algorithmic Technologies Affect Employees' Social Relationships**

Author: **Anne-Sophie Mayer**, *Vrije U. Amsterdam*
Author: **Franz Strich**, *Deakin U.*
Author: **Mary Beth Watson-Manheim**, *U. of Illinois at Chicago*
Author: **Marina Fiedler**, *U. of Passau*

The introduction of advanced algorithmic technologies to augment or automate employees' work tasks increasingly transform employees' social relationships. Through a qualitative, in-depth case study in the banking industry, we identify two different forms of algorithmic technologies that employees use. In doing so, we reveal how decision-taking technology negatively affects the quantity of social interactions with customers and colleagues, and consequently the quality of social relationships. However, we also uncover how a second set of algorithmic technologies, which is used for consultation, reduces the quantity of interactions, but enhances the quality of the social relationships with colleagues and customers. Based on six different aspects of social relations, we highlight commonalities and differences between algorithmic technologies with regard to their impact on employees' social relationships and derive relevant theoretical and practical implications.

Artificial Intelligence (AI) & Strategy

Session Moderator: **Piotr Staszkiewicz**, *Warsaw School of Economics*

CTO: **Frictions of the Application of Artificial Intelligence to Auditors' Risk Assessment Processes**

Author: **Piotr Staszkiewicz**, *Warsaw School of Economics*
Author: **Anna Szelagowska**, *Warsaw School of Economics*
Author: **Agnieszka Strzelecka**, *Koszalin U. of Technology*

Purpose – The study aims to understand frictions generated by the mechanism of artificial intelligence (AI) translation into auditors' risk assessments. Design/methodology/approach – This paper looks through the lens of sociomateriality to decompose human behaviour into avoidance, rearrangement, and substitution. It splits the AI translation mechanism into two loops: knowledge diffusion and spillover. This study examines interviews conducted with auditors, researchers, supervisors, and self-regulatory body representatives. Findings – Priori unaccounted effects of AI applications to audit risk (AR) assessment processes are institutional feedback clinch, combined with human inability to embrace the adaptive feature of AI. Acceptance of AI into audit practice is conditioned on mutual human and AI understanding of rights, obligations, and their dynamic adjustments. The understanding refers to both affordance (how humans interpret AI properties) and self-affordance (how AI reacts to humans and other AI's interpretations). Auditors are not using advanced solutions and are not exploring AI in practice. Hence, practice does not provide empirical research problems to academics who therefore do not provide theoretical solutions. Meanwhile, supervisors adopt a passive attitude to AI risk assessments, while professional associations fail to formulate expectations for potential AI solution providers. Thus, the actors look at each other and wait for others to move, which blocks feedback. To break the vicious feedback circle, this study modifies the AR assessment model to account for the autonomy of AI. Research limitations/implications – Being an exploratory study on transition economy, the findings are tentative. Findings imply the humans' inability to grasp AI properties. Originality – This paper enhances insight into the dynamic mutual accommodation that takes place between humans and AI, and within AI. It widens the affordance concept with self-affordance to capture the role of the "software personality". The study expands the AR model with the AI factor.

CTO: **A Firm-Level Analysis of Artificial Intelligence for Organizational Knowledge Search**

Author: **Ann-Katrin Eicke**, *U. of Muenster*
Author: **Stephan Nüesch**, *Westfälische Wilhelms-U. Münster*

The advent of Artificial Intelligence (AI) challenges our understanding of firms' knowledge search behavior. While scholars agree on AI's transformational potential, recent research offers a fragmented perspectives on how AI shapes search. Through the lens of managerial attention, we examine how AI as a strategic choice affects search in terms of exploitation and exploration. An analysis of S&P 1500 firms from 2012 to 2021 reveals that AI directs managerial attention toward novel opportunities and the realization of existing ones, thus simultaneously increasing exploitation and exploration. Firm internal and external contingencies decide upon when firms bundle AI for exploitative or explorative purposes. We contribute to the literature on search behavior, attention-based view, and AI by highlighting the role of a strategic AI orientation for corporate search.

CTO: **Organizing in digital platforms: Temporality, the grammar of actions, and algorithmic delegation**

Author: **Omid Omidvar**, *Warwick Business School*
Author: **Farjam Eshraghian**, *U. of Westminster*
Author: **Najmeh Hafezieh**, *Royal Holloway, U. of London*

Organizing on open digital platforms relies on contributions to harness innovation and creativity. However, since such organizations attract the interest of contributors, they face the challenge of taming emerging chaos while preserving their flexibility. In this study, we argue that previous studies thought about addressing such dilemmas by offering spatial and design-led solutions. Using mixed methods, we analyse the development of Bitcoin project since its inception in 2009 to see how it addressed the pressing challenge of balancing flexibility and order. We argue that coordinating resulted from emergent mechanisms of harnessing a grammar of action, algorithmic decluttering and monitoring, and rhythms. These findings shed new light on how non-spatial mechanisms might be at work to address these challenges.

CTO: **Go Beyond the Local Search: Understanding the Impact of AI Capabilities on Exploratory Innovation**

Author: **Myunghwan Lee**, *Sauder School of Business, U. of British Columbia*
Author: **Gene Moo Lee**, *Sauder School of Business, U. of British Columbia*
Author: **Victor Cui**, *U. of Waterloo*

The firms typically depend on technological assets or inter-firm relationships to pursue exploratory innovation. In this paper, we regard Artificial Intelligence (AI) as an exploratory innovation-seeking instrument by which AI may search unexplored resources and thereby broaden the boundary of firm. Drawing on the theory of bounded rationality and organizational learning, we hypothesize the impact of a firm's AI capabilities on exploratory innovation and how AI influences traditional boundary-expanding activities. Our empirical investigations, using a novel AI capabilities measure constructed with AI conference and patent datasets, show that AI capabilities have positive impacts on exploratory innovation. In addition, the results show that extant technological assets (i.e., traditional data management capabilities) and ongoing inter-firm relationships (i.e., inter-firm technology collaboration) remedy the constraints on a firm's innovation-seeking behaviors and that these boundary-expanding activities negatively moderate the positive impact of AI capabilities on exploratory innovation. Our key takeaway is that we investigate how AI affects exploratory innovation using our newly developed AI capability measure, contributing to the body of knowledge on exploratory innovation literature.

Online Communities and Human Motivation

Session Moderator: **Tao Wang**, *U. of Toronto*

CTO: **The Impact of Emotional Distress and Empathy on Knowledge Sharing in Entrepreneurial Communities**

Author: **Tao Wang**, *U. of Toronto*
Author: **Pek-hooi Soh**, *Simon Fraser U.*

Are entrepreneurs in online communities more willing to respond to their peers who express emotional distress like sadness and anxiety? While emotional distress may arouse others' empathy and promote prosocial behavior, it can signal a seeker's high expectation of receiving helpful responses, which raises a provider's emotional and cognitive costs. Building on the emotion as social information (EASI) model, we emphasize the role of a seeker's expressed emotional distress in triggering a provider's empathy as an affective reaction and a provider's inference for cost-benefit analysis. We argue that online requests with more expressed emotional distress will likely receive fewer but above-average quality responses and that a provider's empathy is the mediating mechanism that mitigates the cost concern. Furthermore, a provider's tenure and a seeker's reputation can moderate the impact of expressed emotional distress on the occurrence of knowledge sharing. We created a novel dataset comprising 8.3 million seeker–provider pairs from an online community of entrepreneurs and found full support for our hypotheses, using rare event logistic regressions and hierarchical OLS regressions. This study extends the EASI model to explain how and when negative emotions affect empathic help and enriches our understanding of online knowledge sharing among entrepreneurs.

CTO: **Is Status Always a Motivating Factor that Affects the Knowledge Contribution of Q&A Community Users?**

Author: **Mengmeng Song**, *Xi'an Jiaotong U. School of Management*
Author: **Mi Zhou**, *Xi'an Jiaotong U.*

Status is an important individual characteristic and motivation factor affecting users' knowledge contribution, yet the relationship between them is still contradictory. This study subdivides users and investigates the influence mechanism of core and non-core user's online status on knowledge contribution, and the boundary condition in the process to extend previous study and solve the problem of conflicting conclusions. Based on the social exchange theory and impression management theory, our study analyzes 422905 data from 184000 users in Zhihu roundtable, using entropy weight method to identify different categories of users (core users and non-core users) and hierarchical linear modeling to analysis. We find that the perception of cost and benefit of online status and impression management motivation of different categories of users were different. The higher the status of users, the more willing core users are to take conservative defensive strategies (decrease quantity and avoid low-quality of knowledge contribution), while non-core users are to adopt active acquisitive strategies (increase quantity and provide high quality of knowledge contribution) to maintain or enhance their image and gain benefits. This study enriches the research of user knowledge contribution behavior, and has important reference significance for subsequent research on knowledge contribution by emphasizing the differences in impression management motivations, strategies and cost-benefit perceptions of different categories of users.
Keywords: online status; knowledge contribution; user categories; impression management; topic attention

CTO: **TikTok Use Motivators: A Latent Profile Analysis of TikTok Use Motives**

Author: **Bin Ling**, *Hohai U.*
Author: **Qu Yao**, *Hohai Business School, Hohai U., Nanjing, China*

Prior social media research has identified a range of motives (like surveillance, personal identity, social interaction, diversion, and mood management) within a classic framework of use and gratification to answer why people use social media. To date, most work has used a variable-centered approach to investigate how TikTok use motives that are quantified with a composite score to influence outcomes. However, this approach ignores the possibility that there are subpopulations of TikTok users who use the TikTok application with different constellations of motives. By comparison with prior work, this current study conducted 2 studies (Study 1: full-time employee; Study 2: college student; Ntotal = 680) that investigated TikTok use motives or gratifications following a person-centered approach. We conducted latent profile analysis and identified four profiles of TikTok use motives: deep motivators, lone motivators, mood-elevating motivators, and slight motivators. Using the BCH command in Mplus, we found that these motivator profiles differentially predicted individual outcomes (TikTok addiction, labile self-esteem, subjective well-being, and engagement). Our findings contribute to the TikTok use literature by exploring how TikTok use motives combine and develop different motivator profiles.

CTO: **How Social Versus Informational Motivations Affect the Language of User-Generated Content**

Author: **Yiping Li**, *UMass Lowell Manning School of Business*
Author: **Ann Kronrod**, *UMass Lowell Manning School of Business*

This research proposes a novel conceptual distinction between two motivations of online communication – social motivation and informational motivation – and tests five linguistic features characterizing user-generated content that was posted driven predominantly by one of these two motivations. We employed an open-source text analysis tool to analyze real-world and experimentally obtained datasets and supported our theory by experimentally manipulating motivation and measuring linguistic outcomes. Theoretical and practical implications are discussed.

Online Communities

Session Moderator: **Carol Lee**, *Northeastern U.*

CTO: **Can Communities Articulate a Solution? A Mixed Methods Study on Digital Mechanisms of Empowerment**

Author: **Carol Lee**, *Northeastern U.*
Author: **Pratyush Bharati**, *U. of Massachusetts, Boston*

This study investigates the digital interactions of community members to understand the mechanisms influencing empowerment in communities. We examine how these mechanisms can manifest over digital platforms to empower members to engage or act in their communities. We adapt the theoretical lenses of collective action and social ideation to investigate empowerment in communities. We collected data from a community outreach platform of 10 community projects, Twitter and conducted interviews with community members. An inductive mixed methods approach with natural language processing was adapted to understand how community members develop ideas and engage others over social media to empower each other in the communities. Our analysis identified community discourse and community ideation as the main mechanisms that can lead to either empowerment or dissolution in communities. This study contributes to the understanding of empowerment in communities by elaborating upon the social exchanges that advance the community members from discourse framing to idea articulation and, subsequently, enable progress from idea elaboration to solution articulation.

CTO: **An Online Community-Based Digital Platform – From Success to Failure**

Author: **Assia Lasfer**, *FSA ULaval (Laval U.)*
Author: **Emmanuelle Vaast**, *McGill U.*

Digital platforms are becoming the new way of doing business for many ventures and established organizations. Understanding digital platforms is central to understanding organizing through information technology. Digital platforms face unique challenges in engaging an external pool of users for value exchange. These challenges are especially unique when the digital platform is designed to host an online community. Much is known about what motivates online community users to participate and how members coordinate and govern activities. However, less is known about the role played by the digital platform provider and why a digital platform hosting an online community would fail. In this research, we answer this question through a qualitative grounded theorizing approach. We study an empirical case of a propriety collaborative online community and examine how the provider divided decision-making between itself and the online community, establishing such division in the architecture it provided and the interaction it performed with the online community. We conclude that the discrepancy between the community's activities and the provider's goals leads the provider to tweak the division of decision-making by either increasing or decreasing centralization. We present four propositions explaining the conditions through which restriction and expansion of communal decision-making can support or undermine the online community. We differentiate between restriction and expansion of communal decision-making through technology modification and content intervention. We explain important implications for research and practice.

CTO: **The Data Science Gender Gap: Investigating Progression Rates in the Kaggle Online Community**

Author: **Marlon DeMarcie Twyman**, *U. of Southern California, Annenberg School for Communication and Journalism*
Author: **Michael Zaggl**, *Aarhus BSS, Aarhus U.*
Author: **Yi Yang**, *U. of Southern California*
Author: **Namita Mutha**, *U. of Southern California Viterbi School of Engineering*
Author: **Ann Majchrzak**, *U. of Southern California*

This study investigates the gender gap in the relatively new STEM field, data science, where women are underrepresented and are less than 20% of data scientists. Unlike many STEM fields, data science has emerged with online communities serving as prominent spaces for professional development and learning. Based on an investigation of a large and prolific online community for data science, Kaggle, we seek to better understand how an online community contributes to the gender gap. We analyze 114,842 community members, of which only 6,737 (5.9%) earned promotions to the the first performance-based level in the community. There were observed differences between genders in earning promotions: 6.1% of men and 4.4% of women. The analysis uncovered the two explanations for the gender gap in promotion. While men and women conduct the same sets of activities to earn promotion, men are more productive in the most influential predictor of promotion: submitting to data science competitions. The other explanation for the gender gap is that people who use positive language in discussion forums are promoted members, but men become more positive after promotion whereas women are not as positive and do not become more positive after promotion. Women appear to be adopting a neutral language style that reflects a substantial proportion (37%) of the community. Overall, the study explains how an online community contributes to the gender gap of a STEM field and acknowledges the role that online communities have in reinforcing the cultures of their topical areas.

Artificial Intelligence, Machine Learning and the Future of Human Resource Management

Organizer: **Richard Johnson**, *Washington State U.*
Organizer: **Sandra Fisher**, *Münster U. of Applied Sciences*
Organizer: **Kimberly Lukaszewski**, *Wright State U.*
Presenter: **Stefan Strohmeier**, *Saarland U.*
Participant: **Guido Hertel**, *U. of Muenster*
Participant: **Jenna Van Fossen**, *Michigan State U.*
Participant: **Dianna L. Stone**, *U. of New Mexico, Albany, and Virginia Tech*

Artificial Intelligence (AI) and machine learning (ML) have the potential to fundamentally transform the practice of human resource management (HRM), streamlining HRM processes and improving employee related decisions. However, much of the research to-date has either focused on AI as a black box or has been descriptive in nature. In this symposium, our goal is to examine the black box of AI and ML to better understand how the design and capabilities of AI/ML can benefit HR, increase employee trust, or lead to unintended consequences for different HRM functions. Further, the presentation takes a multiple stakeholder perspective to help HR researchers examine the effectiveness of these tools for employees, managers, and the organization. Each presentation will offer directions for future research and implications for practice.

An Integrative Model of Motivated Trust in AI: Considering Multiple Stakeholder Views in HRM

Algorithmic Bias and Data Injustice: Dark Side or Dark Matter?

Organizer: **Aleksi Aaltonen**, *Fox School of Business, Temple U.*
Participant: **Francesco Gualdi**, *London School of Economics*
Participant: **Mayur Prataprai Joshi**, *Alliance Manchester Business School, U. of Manchester*
Moderator: **Silvia Masiero**, *U. of Oslo*
Participant: **Monideepa Tarafdar**, *U. of Massachusetts Amherst*
Participant: **Marta Stelmaszak**, *Portland State U.*
Organizer: **Kari Koskinen**, *Aalto U. School of Business*

This panel brings together five contributions that, impinging on the notions of algorithmic bias and data injustice, explore both the dynamics producing data-induced harm and the manifestations of such harm on people. Ranging from data-based treatment of LGBTQ+ communities, to algorithmic bias in e-government and exclusion of recipients from datafied food security systems, the panel engages the debate on whether the notion of a 'dark side', widely applied to the adverse side effects of information systems, is appropriate to discuss data-induced unfairness. As an alternative framing, the panel introduces the notion of a 'dark matter' of datafied systems, where bias and injustice are designed into the technology. The panel aims at generating debate on unfairness with the view of imagining fairer data-based technologies, and thus contributing to building a future where a 'force for good' can effectively stem from datafication.

Marginalization and Exclusion

Session Moderator: **Aiman Nida**, *Indian Institute of Management, Calcutta*

DEI: **‘Transfer Visibility Work’: Working Around Institutional Boundaries in Deprived Neighborhoods**

Author: **Caterina Maria Orlandi**, *U. of East Anglia*
Author: **Zografia Bika**, *U. of East Anglia (UEA)*

This qualitative case study examines how residents of deprived social housing neighbourhoods in France carry out ‘transfer visibility work’, a process that aims to make them positively visible both personally and professionally in their job search or business start-up. Drawing on thirty-two in-depth interviews with such residents, alongside desktop research and participant observation, we show how these non-organised actors work intensively around the institutional boundaries they encounter in their journey away from social exclusion, thus merging, stretching, bending or indeed renouncing these boundaries, in order to change the direction and territoriality of one’s own visibility movement. We propose that social exclusion is neither inextricably linked to invisibility, nor a passive state of affairs but, rather those living in it who feel ignored, downgraded and out of sight, carry out extensive visibility work to change the extent to which, and the ways in which they are seen across different everyday contexts. Territories are a fundamental aspect of their transfer visibility work; and working around institutional boundaries to ensure one is positively perceived is more effective than loudly renouncing them.

DEI: **Relational Work – Indian Women Domestic Workers Navigating Quotidian Work Challenges**

Author: **Aiman Nida**, *Indian Institute of Management, Calcutta*
Author: **Devi Vijay**, *Indian Institute of Management, Calcutta*
Author: **Randhir Kumar**, *Indian Institute of Management, Calcutta*

This article uses the lens of relational work to explore the work-related challenges faced by women domestic workers in India and understand how they navigate through them. Based on the relational dynamics with their household employers, two types of domestic workers were identified – first the Servile Appeasers and second the Tactful Assertors. We noted that the servile appeasers ended up working on more tasks than required, without necessarily gaining from the relational ties and/or pecuniary benefits. Moreover, tactful assertors when compared with servile appeasers, did not face the burden of enhanced expectations of their employers. In the context of informal work arrangement, our study helps to gain insights into understanding Relational work leading to Internal Segmentation and Material Supplementation. Internal segmentation denotes the division created by domestic workers amongst themselves, on the basis of the household tasks they perform and the social status of the household employers they serve. Material supplementation involves gaining materialistically from household employers and peers. Conceptually, we introduce a deeper insight on how the relational work dynamics, prevalent in the informal sector of the Global South, enable or constrain women domestic workers in navigating through the challenges in their routine work.

DEI: **Workplace Impacts of Food Insecurity: Exploring Multiple Stress Mediating Paths on Job Performance**

Author: **Francisco Moreno**, *Louisiana State U.*
Author: **Michael Addison Johnson**, *Louisiana State U.*
Author: **Andrew Loignon**, *Center for Creative Leadership*

With the management field seeing increased interest in the workplace outcomes of out-of-work experiences (e.g., sleep, cellphone use), researchers have begun to explore the workplace impact of food habits. However, this literature has neglected those who deal with food insecurity, which is a public health issue that affects a significant portion of the world's population. In this paper, we introduce the topic into a management context to examine the impact of food insecurity on work outcomes. In particular, we propose that food insecurity can be associated with a decrease in work performance through three different theory-driven mechanisms (e.g., emotional, physiological, and cognitive strain). We use the stress and coping theory (Lazarus & Folkman, 1984) to explore multiple stress-mediating paths and explain the connection between food habits and work performance. We test our model across two studies (archival and field test), and we find general support for emotional and cognitive, but not physiological, strain as mechanisms that link food insecurity and work performance. Theoretical and practical implications are discussed.

DEI: **Compassion in Organizations: A New Perspective for Maintaining Diversity Management**

Author: **Guler Kizilenis Ulusman**, *York U., Canada*
Author: **Neslihan Turnalar-Çetinkaya**, *MEF U.*
Author: **Ebru Alpay Oraman**, *The Fluid You*

This study examines how people acknowledge others' emotions and respond to them in the face of discrimination and unequal treatment. The research explores whether workplace compassion is a viable resource for responding to minorities' suffering due to discrimination and unequal treatment to achieve maintaining diversity management. Specifically, this study investigates (1) the minority employees’ expressions of suffering from discrimination and unequal treatment, 2) whether the employees’ suffering from discrimination and unequal treatment is noticed, and (3) qualities of appropriate, compassionate responses to alleviate their suffering. Twenty-five women employees working in five multinational companies across seven countries (i.e., Switzerland, Germany, Netherlands, Sweden, United Kingdom, Turkey, and Egypt) were interviewed. Participants were drawn from different departments and varied in their seniority levels. Our findings indicated that workplace compassion could be a viable resource for maintaining diversity and inclusion in the organization. Interviewees reported different expressions of suffering (i.e., bias & stereotyping, discriminations, and gender roles), noticing (i.e., empathy, understanding, support, role modeling, active listening, awareness, and authenticity), compassionate responses received (agentic, communal, and no response) and levels (i.e., individual, organizational and both). Drawing on the organizational capacity for compassion theory and the resource-based view of the firm, the implications of findings, limitations, and future research directions are explored. Keywords: Workplace compassion; discrimination; inequality; diversity management; the resource-based view of the firm.

DEI: **Entrepreneurial Emancipation of Marginalised Entrepreneurs: Syrian Refugees in Turkish c**

Author: **Cagla Yavuz**, *Bahcesehir U.*
Author: **Mine Karatas-Ozkan**, *U. of Southampton*
Author: **Rifat Kamasak**, -
Author: **Joana Vassilopoulou**, *Brunel Business School*

The way in which these refugee entrepreneurs are perceived and responded to in many societies is highly biased. Societal prejudices about them as liability to the economy and society remain to be strong in some contexts, which lead to exclusionary and discriminatory practices. The aim of our article is to address the questions "how do marginalised refugee entrepreneurs experience entrepreneurial emancipation?", and "how do emancipatory outcomes (goals) and emancipatory aspirations differ based on their degree of marginalisation?" To explore these questions, we have drawn on our empirical study with Syrian refugees in Turkey. We have examined their entrepreneurial experiences by unpacking institutional complexities encountered in the process of entrepreneurship. We contribute to the recently growing literature on emancipation-as-entrepreneuring (Rindova et al., 2009; Ruebottom and Tobiana, 2021; Zafar et al., 2021; Jennings et al., 2016, Verduijn et al., 2014, Pergelova et al., 2022; Martinez Dy et al., 2018) through providing empirical evidence on emancipatory process of marginalised entrepreneurs, which has received less attention.

Diversity Management Shortcomings

Session Moderator: **Marlee Eden Mercer**, *York U.*

DEI: **The Impact of Flexible Work Arrangements on an Older Grieving Population**

Author: **Marlee Eden Mercer**, *York U.*

Age-inclusive management practices are vital to meet the needs of the older workforce. However, there is a scarcity of research detailing what these practices entail. A topic with particularly insufficient research involves how the workplace can support older employees following the loss of a loved one. The psychological process of loss differs for older employees and can have numerous adverse effects on their ability to perform in the workplace. This conceptual paper draws on the job-demand resource model and signalling theory to investigate how flexible work arrangements can support older employees following the death of a loved one and contribute to optimal employee performance. Flexible work arrangements are theorized to lead to optimal performance via informational support. Further, the organization's ethical climate and cultural competency are proposed to impact this relationship, whereby a more ethical climate and stronger cultural competencies strengthen the effects of flexible working arrangements on older employees' performance. A theoretical framework and propositions are presented to encourage a comprehensive research approach to exploring this topic. This paper advances the current understanding of age-inclusive management and offers a novel perspective on the benefits of flexible working arrangements in the workplace.

DEI: **The Adverse Impact of the Accountability Movement**

Author: **Kwonhee Han**, *U. of Illinois at Urbana-Champaign*

Although social movements and normative pressures have encouraged US organizations to become more diverse and inclusive, progress toward racial equality is still slow and sometimes faces backlash. I focus on one countermovement that is thought to undermine diversity related goals—the recently expanded demand of accountability and transparency in organizational performance. I argue that performance accountability-based policies undermine racial diversity outcomes, even though diversity and performance are not mutually exclusive goals. I also argue that accountability effects on diversity will vary across the status hierarchy. Because high-status organizations face greater scrutiny and are more selective, these organizations will exhibit the greatest adverse impact from performance accountability policy. I examine accountability, diversity, and status in the U.S. higher education sector where state-level performance-based funding policies have been widely adopted during the last decade. The empirical results show performance-based policies negatively affect student diversity, but only among high-status organizations. Theoretical implications and future directions of this research are discussed.

DEI: **Working from Home, the Physical Space and the Gender Gap in Productivity: Evidence from Academia**

Author: **Alessandra Migliore**, *Politecnico di Milano*
Author: **Massimo Colombo**, *Politecnico di Milano*
Author: **Cristina Rossi Lamastra**, *Politecnico di Milano School of Management*
Author: **Raffaele Mancuso**, *Alma Mater Studiorum U. di Bologna*

This study explores the effect of work-from-home (WFH) on the research productivity of female and male academics taking advantage of the Covid-19 natural experiment. We argue that female academics' productivity suffers more from WFH during the pandemic than that of male academics, as household and childcare interfere more with their work activity. The magnitude of this productivity gap varies according to the physical space at home, as men manage to create physical boundaries protecting their work activity, while women fail to do so. We test our hypotheses through econometric estimates based on data on the scientific productivity of 4,718 Italian academics in STEM disciplines, the extent to which they resort to WFH during the pandemic, and the characteristics of their physical space at home. We found that the research productivity of female academics decreased more than male one while working from home. Research productivity of male academics benefits more than the one of their female peers from a dedicated home office. Male academics can also benefit their productivity by working consistently from another house room (e.g., kitchen, living room, bedroom). Conversely, the productivity gap between the two genders nullifies when they work in not favorable home space conditions (i.e., without a dedicated home office and moving across multiple other rooms for working). The research contributes to boundary theory and provides several practical implications to support gender equality in academic work.

DEI: **A Pay Raise, with a Bonus Cut: The Unintended Effects of Interventions to Close the Gender Pay Gap**

Author: **Monika D. Hamori**, *IE U. - IE Business School Madrid, Spain*
Author: **Denis Monneuse**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Zhaoyi Yan**, *IE Business School*

This paper presents one of the few accounts of the unintended consequences of diversity initiatives that decrease their effectiveness or may even exacerbate inequality. We rely on the personnel records of a multi-unit European bank between 2012 and 2017 to explore the bank's attempt to reduce the gender pay gap. We find that the gender gap in annual base salaries declines slightly over the period we examine, because women receive larger base salary increases than men, even after controlling for demographic and human capital attributes, types of jobs held or job performance. Nevertheless, we document that managers adjust downward another part of the pay package (bonuses), to counterbalance the higher increases in base salary given to women. We also investigate the factors that may mitigate this unintended consequence and find that women are less likely to be penalized during bonus allocation if they have a female, rather than a male supervisor, and after the employer implements other diversity initiatives to signal its commitment to diversity and inclusion.

Stigma and Neurodiversity

Session Moderator: **Chloe R. Cameron**, *Ivey Business School*

DEI: **Eliminating (Dis)advantage Caused by Role-Irrelevant Factors**

Author: **Chloe R. Cameron**, *Ivey Business School*
Author: **Robert Austin**, *Ivey Business School*

How can organizations mitigate or eliminate disadvantages that are experienced by marginalized groups in the workplace due to role-irrelevant factors? The prospect of better performance and mounting social pressures are pushing organizations to prioritize diversity, equity, and inclusion in their workforces more than ever before. Despite this, organizations continue to struggle to overcome institutionalized practices and behaviours that marginalize or discriminate against various social groups. In this paper, we use interview and observational data from 18 organizations with formal neurodiverse talent integration initiatives to investigate the differences between common HR practices and those developed specifically for neurodiversity inclusion initiatives in the four core areas of HRM (recruitment/selection, training/development, performance appraisal, and pay). We find that high employee engagement and increased organizational motivation are antecedents to create a neurodiversity-inclusive environment, and led organizations to develop processes that formalized certain previously informal processes and made subjective processes more objective in the core areas of HRM. These findings have implications for diversity management more broadly and suggest directions for future research.

DEI: **Characteristics Of Stigmas In The Workplace: The Development and Validation of a Scale**

Author: **Jiuyang Chen**, *Louisiana State U.*
Author: **Michael Addison Johnson**, *Louisiana State U.*
Author: **Bailey A. Bigelow**, *Louisiana State U.*

Despite widespread practitioner interest in diversity, equity, and inclusion, scholarly understanding is somewhat lacking. Some research endeavors to understand how individuals perceive and respond to marginalized identities by considering five different characteristics of stigmas—concealability, controllability, centrality, disruptiveness, and malleability. However, scholars have yet to fully delve into the mechanisms underlying the process of how individuals perceive and make judgments about different stigmatized attributes in the workplace. One issue hampering the theoretical and empirical advances of this area is that there is currently no reliable measure of the characteristics of stigmas. Therefore, the current paper aims to develop and validate a Stigma Characteristics Scale (SCS) across three studies. In Study 1 we generate items based on the five characteristics of stigma defined in the literature and utilize subject matter experts for content validation. In Study 2, we use a sample of employed individuals (N = 278) and conduct an EFA, where results confirm the presence of five unique dimensions. Finally, in Study 3 we collect responses from 351 employed individuals and further validate our measure with a CFA and convergent and discriminant validity analyses. This results in a final 15-item scale measuring the five characteristics of stigmas.

DEI: **Neuro-Inclusive Job Design in a Smart Work Context: Demands-Control-Support Perspective.**

Author: **Joanna Szulc**, *Gdansk U. of Technology, Faculty of Management and Economics*
Author: **Michal T. Tomczak**, *Gdansk U. of Technology, Faculty of Management and Economics*

We extend current debates on organizational equality, diversity and inclusion to a consideration of neurodivergence (i.e., diversity in the human brain and cognition) in the smart work context (i.e., fully flexible work arrangement where employees can work outside their office). Drawing on the demands-control-support model of job demands we qualitatively explore how a neuro-inclusive job design in the context of smart work can be created. We do so by building on the results of 34 semi-structured interviews with neurodivergent individuals, experts in neurodiversity at work, and individuals whose day-to-day tasks include therapy and cooperation with neurodivergent adults. Our analysis of over 24 hours of interview recordings emphasized that each individual is different. Not only will neurodivergent employees have unique perceptions of what constitutes demands and support but they will also have specific preferences in terms of exerting control over their working life. Our findings emphasize the need to move away from universal HR as a route to positive employee outcomes in order to be able to facilitate a more accurate reflection of organizational reality for disadvantaged members of society. We contribute to the existing scant literature on the topic of job design and neurodiversity and we prompt employers to offer working arrangements that better suit employees' unique needs.

DEI: **What Does It Mean To Be A Veteran At Work? A Qualitative Study Of Veteran Workplace Identity**

Author: **Sarah Villanueva**, *U. of Wisconsin At Oshkosh*
Author: **M. Fernanda Wagstaff**, *U. of Texas at El Paso*
Author: **Pamela Suzanne**, *UdeSA*
Author: **Edward Ramirez**, *U. of Texas at El Paso*

Though military veterans make up just 5% of the U.S. workforce, their outcomes are of particular interest to society and business organizations due to generally high public regard for veterans and widespread support for both public and private veteran hiring initiatives. Despite this social concern and respect for veterans, little management theory explains veterans' outcomes in employment. This paper considers what it means to be a military veteran in the workplace and uses qualitative methods to define the dimensions of veteran workplace identity (VWI). This work contributes to our understanding of the theoretical boundaries of work-related identity by defining VWI as a multidimensional, work-related identity as opposed to a purely social or role identity. In turn, this finding offers theoretical grounding for veterans' research by management scholars in theories of work-related identity. We inform practical interventions to improve veteran recruitment and hiring and transition support for current service members. We also offer an agenda for future management research on veteran identity.

Gender, Boards, and Executive Work

Session Moderator: **Maria Aluchna**, *Warsaw School of Economics*

DEI: **Women on Boards and Climate Change Disclosure: The Evidence from NFRD**

Author: **Maria Aluchna**, *Warsaw School of Economics*
Author: **Leszek Bohdanowicz**, *U. of Lodz*
Author: **Bogumil Kaminski**, *Warsaw School of Economics*

Drawing on a multiple theory framework we examine the relationship between female representation on boards and the scope of climate disclosure related to energy use and GHG (greenhouse gas) emissions in the context of the Non-Financial Reporting Directive (NFRD). We use a sample of 72 companies that were listed on the Warsaw Stock Exchange (WSE) over the period of 2015-2019, included in the main indices and subject to the enactment of the NFRD legislation. Evidence from the difference-in-difference analysis on the total of 353 firm-observations shows at a critical mass of 35% female representation on the board, in addition to the structural power of a female chairperson, differentiate company reactions to the implementation of the mandatory reporting legislation and enhance the scope of the climate-related disclosure of management approach statements and Global Reporting Standards (GRI) standards in the post-NFRD period. The token presence of one woman on the board remains insignificant in its effect and does not change the climate-related disclosure. Our study offers policy implications suggesting that regulation on mandatory non-financial reporting is not a sufficient determinant to improve disclosure. Particular organizational characteristics related to female representation on boards may stimulate the process of greater sustainability transparency and the implementation of mandatory non-financial reporting disclosure into company practice.

DEI: **Board Skill Diversity and Firm Risk (WITHDRAWN)**

Author: **Yanru Chang**, *Baruch College*
Author: **Seungjoon Oh**, *Peking U. HSBC Business School*

This study examines whether board skill diversity is associated with firm risk. Using skill-related keywords in director biographies disclosed in firms' proxy statements as measures of skill diversity, we find that board skill diversity reduces firms' idiosyncratic risk. Specifically, board skill diversity reduces idiosyncratic risk by monitoring CEO power and advising on investment policy. We further show that having more female directors, measured by the exogenous Nasdaq's diversity rule, increases board skill diversity. In addition, the association between board skill diversity and firm risk is mitigated when directors hold multiple outside board seats. Overall, this study identifies an important yet unrecognized board diversity dimension—director skills and qualifications at the acquired level and provides the first findings on how the role of board skill diversity shapes firms' risk environment.

DEI: **Gender Quotas in Firm Governance: The Extent of Family Control and Response Heterogeneity**

Author: **Yashodhara Basuthakur**, *Texas A&M U., Mays Business School*
Author: **Srikanth Paruchuri**, *Texas A&M U.*
Author: **Michael C. Withers**, *Texas A&M U.*

This study investigates the response of firms with different extents of family control to external affirmative action policies for board diversity. We theorize that while gender quotas provide an opportunity for highly qualified women to be represented on boards and for organizations to gain legitimacy by complying with regulatory pressure, the implementation of these quotas may be perceived as a threat by firms with larger extent of family control given outside directors can disrupt power relations and disrupt long-standing imbalances within the organization. As a result, firms may take defensive conforming actions, such as appointing women directors by expanding the board and/or appointing a family member as a new woman director. To test these predictions, we analyze a sample of publicly listed firms in India that did not have any women directors on their boards when the board diversity mandate was introduced in 2013.

DEI: **Studying Gender Bias in the Upper Echelons: Where Do We Come From and Where Do We Go?**

Author: **Hendrike Werwigk**, *U. of Passau*
Author: **Heribert Erwin De Oliveira Kuhn**, *U. of Passau*
Author: **Corinne A. Post**, *Villanova U.*

In the last 40 years, research on manifestations and consequences of gender bias in upper echelons has exploded, becoming increasingly fragmented. At the same time, gender roles, stereotypes, and the composition of upper echelons have undergone important changes. We take a historical approach to review the evolution of gender bias research and methodologies and identify new opportunities for future research. Our review contributes to extant research by: (1) offering a historical perspective on research on gender bias in top management, thereby facilitating a broader understanding; (2) providing the first overview of explanations of female top executives' underrepresentation beyond the predominant, role-theoretical reasoning; and (3) developing a comprehensive agenda for future research. We invite scholars to test and expand previous findings through replication in different empirical contexts and triangulation with other methods, investigate gender bias in light of intersectionality, and develop strategies to successfully mitigate gender bias and promote gender parity at all management levels.

Entrepreneurship, Power, and Privilege

Session Moderator: **Elina Meliou**, *Brunel U. London*

DEI: **How is the Illusio of Gender Equality in Entrepreneurship Sustained? A Bourdieusian Perspective**

Author: **Elina Meliou**, *Brunel U. London*
Author: **Mustafa Ozbilgin**, *Brunel U.*

Studies of gender and entrepreneurship highlight the problematic emphasis of the gender equality discourse in entrepreneurship that ignores wider structural inequalities but provide a limited explanation of how the allure of this discourse is sustained. To address this lacuna, we draw on Bourdieu's theoretical ideas to theorise and demonstrate how certain women trade-off their capital endowments to compensate for gender inequality in entrepreneurship. Through an analysis of forty-nine biographical interviews with women entrepreneurs in London (UK), we show two forms that the 'illusio' of gender equality manifests: 'illusio of work-life balance', and 'illusio of meritocracy', and reveal how this doxic experience that escapes questioning and allows certain women to continue to play the game, entrenches the illusio of an entrepreneurial field free from gender bias. We thus illustrate the conditions of possibility and the various trade-off mechanisms through which gender inequality in entrepreneurship is reproduced or contested.

DEI: **Women Entrepreneurs Building Resilience During Crisis: Evidence From Iran**

Author: **Afsaneh Bagheri**, -
Author: **Golshan Javadian**, *Morgan State U.*
Author: **Pardis Zakeri**, *U. of Tehran*
Author: **Zahra Arasti**, *U. of Tehran*

Women entrepreneurs have to deal with the gendered impact of crisis on their business activities. Regardless, they successfully adapt to the disruptions and new market realities caused by crisis. Given that resilience explains how individuals maintain functioning or even thrive despite challenges, it becomes crucial to understand women entrepreneurs' resilience building during times of crisis. This study used a qualitative approach to examine how women entrepreneurs build resilience during crisis by specifically examining the challenges they face and the coping strategies they utilize to build their resilience. Using a sample of Iranian women entrepreneurs operating health related businesses during the Covid-19 pandemic, we offer a comprehensive understanding of women entrepreneurs' resilience building process. Our findings suggest that resilience building is not only a gendered phenomenon but a contextual one.

DEI: **Social Identity, Narratives and Crowdfunding Success**

Author: **Subhadeep Datta**, *NEOMA Business School*
Author: **Sourjo Mukherjee**, *BITS PILANI*
Author: **Somendra Narayan**, *Amsterdam Business School, U. of Amsterdam*

This research examines how and why crowdfunding campaigns are influenced by social identity (of the fundraiser as well as the funder). We argue that funders use crowdfunding as a way to signal their affiliation with politically aligned social groups. In three sequential experiments, we show that the LGBTQ-run enterprises are seen as having higher venture legitimacy, which leads to greater crowdfunding success. This relationship is moderated by the political ideology of the funders, such that liberal funders perceive LGBTQ-run ventures to have higher legitimacy, whereas conservatives do not. We theorize that the appetite for pro-social actions among funders is finite and when depleted does not contribute to their perceptions of identity-linked venture legitimacy. In other words, as liberal funders assess enterprises with inherent pro-social narratives, their need for signaling social group affiliation is fulfilled, depleting their appetite for pro-social choices linked with the entrepreneur's identity. We show evidence for this account and rule out some alternative explanations in our studies. Our study thus contributes directly to the literature on crowdfunding, adds to the literature on social identity theory, and provides insights to entrepreneurs regarding the effect of founder's identity on fundraising.

DEI: **Examining Racial Identity: The Lived Experiences of African American Entrepreneurs**

Author: **Susana Correia Santos**, *Rowan U.*
Author: **Eric Liguori**, *Rowan U.*
Author: **SherRhonda Gibbs**, *Morehouse College*

Race is a social construct expressed and reproduced in different social structures, such as organizations, and, particularly important in the scope of this study, entrepreneurship. Building on social identity theories and racialized social systems framework, we examine entrepreneurship through a racialized lens, exploring how the entrepreneurial process reflects several aspects of the racial identity of the individual. Using a discursive approach, we analyze 21 reflective interviews featuring African American entrepreneurs and inductively derive racialized discourses related to entrepreneurship. Findings uncover three thematical conversations expressing racial identity: (1) racial identity in the entrepreneurial venture – African American identity is expressed and experienced in business through tapping into a racialized market need, pursuing co-ethnic products and goods, facing hurdles coupled with racial discrimination and experiencing a racialized meaningfulness of the venture; (2) racial identity in the personal life – African American identity is expressed through family racial identity, experiences of schooling as a racialized structure, and episodes of racial segregation and systemic racism; and (3) social affirmation of racial identity –African American identity is expressed socially as pride and legacy. Our study challenges the notion of race-neutral entrepreneurship and supports that entrepreneurship is an empowering mechanism for racial agency.

Turnover, Productivity, and Diversity

Session Moderator: **Sophie Johanna Moser**, *U. of Konstanz*

DEI: **Starting-Out in a Gender-Atypical Occupation: A Dynamic View on Male and Female Token's Experiences**

Author: **Sophie Johanna Moser**, *U. of Konstanz*
Author: **Florian Kunze**, *U. of Konstanz*

This study offers a dynamic perspective on the experiences of organizational newcomers who hold the gender token status in their occupation. We aim to analyze, first, whether the effect of newcomers' gender on temporal changes in negative work events depends on the gender com-position of their occupation and, second, whether these temporal changes, in turn, impact per-formance and withdrawal. Integrating role congruity theory with ego depletion theory within a tokenism framework, we propose that male and female newcomers in occupations dominat-ed by their opposite gender experience an increase in negative work events over time. Draw-ing from prospect theory, we further propose that these increases diminish task mastery and enhance turnover intentions in the long run. By applying an extensive repeated-measures de-sign on 275 individuals over three months, we show that tokenism effects are not the same for women and men, contrary to theoretical expectations. Rather, male tokens do experience an increase in negative work events over time, while female tokens do not. Moreover, we find that newcomers who experienced increased negative work events over time indeed report lower task mastery and higher intentions to leave the job. In conclusion, this study illustrates that an occupation's gender composition plays an important role in forming employees' day-to-day experiences at work and effectiveness-related outcomes, but in a deeply gendered way. We discuss possible explanations for the counterintuitive findings and emphasize theoretical, as well as practical implications.

DEI: **The Impact of Changes in Organizational Gender Diversity on Employee and Organizational Outcomes**

Author: **Eugene Son**, *Rutgers U.*

This study examines whether and how a change in organizational gender diversity affects employees' collective attitudes and organizational performance based on three theoretical perspectives: 1) Gestalt characteristics, 2) Sense-making perspectives, and 3) Social categorization perspectives. Previous literature has maintained a static approach to investigating the impact of organizational gender diversity and generated inconsistent findings regarding the relationship between diversity levels and organizational outcomes. Organizations with the same level of gender diversity, however, may have different histories of the diversity level (e.g., increase, decrease, or keep the level) and encounter different interpersonal dynamics according to the history. Using nationally representative Korean firm-level panel data spanning more than twelve years, this study shows that a change in organizational gender diversity has a unique impact on employees' collective job satisfaction, collective turnover, and organizations' labor productivity. This study suggests that a change should be considered to clearly understand the direct relationship between organizational gender diversity and subsequent outcomes, and provides a partial explanation about why the previous diversity research has found inconsistent results on the topic.

DEI: **An Examination of Lesbian and Gay Employees' Intention to Change Workplace Heterosexism in China**

Author: **Chris Zhang**, *Wilfrid Laurier U.*
Author: **You-Ta Chuang**, *York U.*
Author: **Jing Wang**, *York U.*
Author: **Robin Church**, *Ryerson U.*

This study focused on the condition under which lesbian and gay (LG) employees intend to change workplace heterosexism. I theorized that the experience of institutional contradictions derived from the misalignment between LG employees' interests of advocating equal treatment and workplace heterosexism triggers their intention to change. In a sample of 840 LG employees in organizations in China, as hypothesized, LG employees' experience of institutional contradictions related to direct and indirect heterosexism positively associated with their intention to change. In addition, the study also shows that LG employees' intention to change is constrained by their continuance commitment to their organization. However, such constraint is contingent on their perception of the likelihood that workplace heterosexism could be changed in such a way that 1) high perceived changeability lifted the constraint of continuance commitment, and 2) the constraint of continuance commitment becomes stronger when perceived changeability is low.

DEI: **Assessing Younger Worker Prescriptive Stereotypes: The Workplace Ambivalent Youngism Scale (WAYS)**

Author: **Susana Schmitz**, *Instituto U. de Lisboa (ISCTE-IUL)*
Author: **Christin-Melanie Vauclair**, *Instituto U. de Lisboa (ISCTE-IUL)*
Author: **Carla Sofia Esteves**, *UCP - Católica Lisbon School of Business & Economics*
Author: **David Leonard Patient**, *Vlerick Business School*
Author: **Miriam Rosa**, *Iscte - U. Institute of Lisbon, CIS_Iscte*

A measure of prescriptive age stereotypes towards younger workers was developed and validated by using a cultural decentred approach, totaling 1,888 participants across four studies. Data was collected from the U.S. and Portugal. In Study 1, participant responses to open-ended questions regarding age-based expectations were thematically analyzed to identify prescriptive age stereotypes towards younger workers. Study 2 explored the factor structure of the item pool in both the U.S. and Portuguese samples. In Study 3, CFA was used to validate the factor structure from the previous exploratory study, examine convergent and divergent validity from proximal constructs, and test for measurement invariance for samples from the U.S. and Portugal. Eight first-order factors emerged, subsumed under three second-order factors: humility-deference, loyalty-belonging, and vitality-innovation. The scale shows ambivalent expectations regarding younger workers, who are, on the one hand, supposed to accept their lower social status, and on the other hand, expected to show attributes usually associated with higher status groups, and was therefore named the Workplace Ambivalent Youngism Scale (WAYS). Finally, Study 4 tested, in a two-wave questionnaire, the predictive power of WAYS in relation to several important workplace outcomes, relating to perceived age discrimination, justice perceptions, in-role and extra-role performance, turn-over intentions, and well-being outcomes.

Going Beyond Demographic Faultlines in Work Teams: New Perspectives and Contexts

Session Chair: **Yunhyung Chung**, *U. of Idaho*
Organizer: **Qin Su**, *Xi'an Jiaotong-Liverpool U.*
Discussant: **Bertolt Meyer**, *Chemnitz U. of Technology*

Scholars have called for research to elucidate conflicting results on faultlines and extend existing research that largely focuses on the effects of demographic faultlines on group processes and outcomes. In response to this call, the presentations in our symposium aim to extend existing research on faultlines in different ways, which goes beyond the effects of demographic faultlines on group processes and outcomes. The first study is a meta-analysis study that synthesizes contradictory findings in faultline research in the last couple of decades and examined how faultline types (i.e., task-oriented faultlines vs. non-task-oriented faultlines) moderate the indirect relationship between team faultline strength and team innovation and performance. The second study proposes two new constructs of power-based faultlines—power-separated faultlines and power-centered faultlines—and applies a new perspective—social dominance theory—to explain how these two types of faultlines influence team power struggling and open communication differently. The third study derives a new construct of work-life faultlines and their unique working mechanisms on teams and individuals—perceptions of unfairness and feelings of social exclusion—from qualitative and quantitative methods. The fourth study extends the faultline research into a new context—major league baseball (MLB) teams—and investigates how faultline strength can moderate the relationship between players' performance and competitive behaviors. Through these four studies, our symposium aims to refine and advance current faultline research in organizations.

Participant: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*

A growing number of employees are participating in virtual work arrangements such as working from home, virtual teamwork (team members communicating via electronic means from dispersed locations), and other forms of computer-mediated work. Despite its rising popularity, there is research to suggest that virtual work can be a double-edged sword for women in the workplace with mixed effects on their job opportunities, social integration at work, and ability to control their work-nonwork boundary. Yet, many unanswered questions remain regarding the implications of virtual work for women's equality. There is an urgent need to address these questions, given the increasingly widespread implementation of virtual work in contemporary organizations and the persistent problem of women's inequality in the workplace. The papers in this symposium help to advance research in this area through empirical studies that apply different theoretical perspectives to provide important new insights on virtuality's career- enhancing as well as detrimental effects for women. The authors of the papers, who collectively span four continents, examine women's equality related to their work and family success and their well-being in different aspects of virtual work, including virtual collaboration, virtual leadership, and working from home. The research findings presented in this symposium point to the need to manage the burgeoning phenomenon of virtual work in ways that leverage its benefits and mitigate its downsides for women.

This presenter symposium offers five empirical studies of diversity in elite leadership positions around the world. Findings of a comprehensive review of 100+ longitudinal panel studies indicate rather consistent support for the beneficial effects of board demographic diversity. A global program of research identifies the contextual factors and implementation problems creating barriers to diversifying elite leadership. New research broadens our outcome variables beyond firm financial performance to gender equity, sexual harassment, CSR, fraud, and bankruptcies, all of which benefit from diversity among elite leaders. New qualitative research opens the black box of elite leadership selection, interaction and onboarding, with fascinating implications for increasing diversity in elite leadership.

The theme of the 2023 AOM conference is “Putting the Worker Front and Center.” The meeting description talks about the ways in which work has changed over the last few years and speculates that a research focus on workers, and not just leaders and managers, is important to expand our knowledge. Consistent with that theme, our symposium focuses on employee resource groups (ERGs), which are a bottom-up, volunteer worker phenomenon driving not only diversity goals but also innovation, new business, crisis response, employee retention and community support. ERGs are run by workers at all job levels (not just managers). ERGs are, in a majority of cases, started by volunteers who build a business case to create an ERG for a key demographic group at the company (e.g., Black/African American, Hispanic/Latino, Asia/Pacific, Veterans, LGBTQ+ or Disabilities) (Friedman, 1999). ERGs may also be started by groups of people who have passion for a mission that, to date, was not seen as important by the company (e.g., sustainability, palliative care, neuro diversity, and more (Welbourne, Rolf, & Schlachter, 2017). ERGs attempt to put all workers front and center and provide members with visibility, advocacy, support and opportunities that help not just the members but all workers. ERGs are found in over 90% of Fortune 100 companies, are being started in smaller organizations, and they have evolved while experiencing significant growth since 2020. Recent growth is due to ERGs being viewed as a powerful solution to the racial unrest and inequalities that became more visible during the pandemic and after murder of George Floyd (Asare, 2021; Lewis & Simmons Fisher, 2022) Even though these groups have been in existence since the early 1960s, there is very little research on them (Friedman & Craig, 2004), and much of the work being done has been limited to case studies and published by consulting firms or published in outlets focused on diversity. Although the impact and importance of ERGs for achieving diversity goals is positive and worth significant research, the effect of ERG work on other outcomes is also critical knowledge for organizations because higher impact creates a stronger business case, which is necessary for ERGs to receive funding and other sources of support. Thus, our symposium focuses on not only the role of ERGs for driving diversity, equity and inclusion but also the ways in which ERGs are impacting other organizational goals, including sales, innovation, personal development and more (VanAken et al.,1996; Welbourne & McLaughlin, 2013).

This symposium brings together multiple perspectives on structure, behavior, and cognition in order to gain a more comprehensive understanding of the complex dynamics of gender and diversity in social networks and organizations. It aims to advance research on gender and diversity in social networks by examining individual, team, and organizational level characteristics as both causes and consequences of social networks. The studies presented in this symposium help bridge the micro- and macro-divide in social network scholarship and uncover boundary conditions to existing theories related to gender and other minority identities.

How Can organizations achieve their diversity goals? New theories and evidence

Organizer: **Elena Obukhova**, *McGill U.*
Organizer: **Jeraul Mackey**, *Rady School of Management, U. of California San Diego*
Presenter: **Summer Jackson**, *Harvard Business School*
Presenter: **Sanaz Mobasseri**, *Boston U. Questrom School of Business*
Discussant: **Jennifer M. Merluzzi**, *George Washington U.*

Many organizations set-up well-intentioned diversity goals but find that the reality falls short of their expectations. We take up this problem – how organizations can achieve their diversity goals – by illuminating how the behaviors of individual actors undermine ambitious goals and well-intentioned practices. In this symposium, we bring together four papers that explore novel mechanisms that elucidate how micro-level actions shape the efficacy of meso-level diversity initiatives and macro-outcomes of interest to DEI scholars. The papers' approaches draw on several perspectives, including those rooted in psychodynamics, culture studies and social networks, and diverse methodologies, including longitudinal data, ethnography, experiments, and interviews. Jennifer Merluzzi is especially fitting as the discussant, as diversity in organizations is one of the major themes in her work.

Entrepreneurship, Religion and Spirituality

Session Moderator: **Kaushik Gala**, *Iowa State U.*

ENT: **The Influence of Religion on Entrepreneurial Exits**

Author: **Kaushik Gala**, *Iowa State U.*
Author: **Brandon Mueller**, *Iowa State U.*

This study explores the influence of religion on entrepreneurial decisions to exit their ventures following success or failure. We draw upon attribution theory to posit that religious beliefs and principles may shift entrepreneurs' causal attributions of success and failure from internal or external loci to a third locus of causality, the divine. Similarly, we draw upon time perspectives theory to explore how religious beliefs and principles may shift entrepreneurs' temporal depths from weeks, months, or years to eternity. We suggest that these shifts may, in turn, influence the nature and timing of entrepreneurial exits, often thought to be motivated by purely economic considerations. We develop several propositions using the context of Jainism, a minority religion originating in India characterized by an extremely high proportion of self-employed adherents and a seeming paradox between riches and renunciation. We contribute to the literature on entrepreneurial exits, emphasizing on non-economic, self-less motivations, specifically those informed by religious beliefs and principles. We also seek to highlight the underlying mechanism – contemplation that is conducted in solitude and involves reinterpretation of entrepreneurial success or failure – through which religion may transmute into entrepreneurs' exit choices and timing. Finally, we contribute to the emerging literature on temporal aspects of entrepreneurial decision-making.

ENT: **The Influence of Ancestral Spirituality Among Indigenous Entrepreneurs**

Author: **Sebastián Andrés Barros**, *U. del Desarrollo*

Even though religion and spirituality provide a unique source of purpose and meaning, their study has been neglected in entrepreneurship research. Due to the salience of a spiritual calling among indigenous entrepreneurs, we explored how it influenced their actions in venturing. We found that an ancestral calling summoned indigenous individuals to revitalize a distant past rather than pursue opportunities in the proximal future, distinguishing their temporal orientation from future-oriented entrepreneurs. We contribute with this project by gaining a deeper understanding of a spiritual calling as an important driver for entrepreneurship at large, influencing distinctive cognitions, behaviors, and outcomes among entrepreneurs.

ENT: **Transcendental and Effectual Processes in Religious and Secular Social Entrepreneurs**

Author: **Ronit Yitshaki**, *Department of Economics and Business Administration, Ariel U.*

Religion is an important source for identifying and addressing social problems. This study examined the underlying motivations, sensemaking and effectual processes in religious and secular social entrepreneurs (SEs) who have responded to the problem of feeding the needy in the Israeli ecosystem. The findings show substantial differences between religious and secular SEs' motivations and effectual processes. Religious SEs are motivated by religious-based values as well as a social awareness of social injustice. Unlike secular SEs, they see their role as a 'sacred calling' and view God as an active transcendental stakeholder. They also use communal donations extensively and manage uncertainties through coopetition. In contrast, secular SEs are motivated by their commitment to fight social injustice and a sense of calling based on free choice to address hunger. They follow an effectual logic of resource accumulation from various stakeholders and do not collaborate to decrease uncertainty. By highlighting these differences between different SEs, the findings contribute to the literature on religions and entrepreneurship and religion and effectuation.

ENT: **Exploring the role of Spirituality in Social Entrepreneurship using sustainability lens**

Author: **Diwakar Singh**, *Ambedkar U. Delhi*
Author: **Richa Awasthy**, *Dr. B. R. Ambedkar U. Delhi*

The purpose of this study is to explore the role of spirituality in the field of social entrepreneurship using the triple bottom line as a sustainability lens and develop a framework for their integration. Spirituality is linked to a variety of positive outcomes at both individual and organizational levels. There is, however, a dearth of literature on the intersection of spirituality and social entrepreneurship and social entrepreneurship and sustainability. We used a thorough literature review to explore the field of spirituality, social entrepreneurship, and sustainability. We synthesize a list of individual and organizational spirituality's positive outcomes and identified seven dimensions of social entrepreneurship: entrepreneurial, social, ecological, employee, market, and ethical orientations along with spiritual capabilities. We developed a framework and speculated that individuals with spiritual practices are more likely to experience and engage in entrepreneurial, social, and ecological orientations. Moreover, organizations with spiritual practices are more likely to experience and engage in the employee, market, and ethical orientation. Further spiritual capability can be used as a strategic advantage and lead to the sustainable development of social enterprises. Finally, we discussed the contributions and implications for various stakeholders and provided limitations and directions for future research before we concluded.

Entrepreneurship from a Resource Perspective

Session Moderator: **Ahmed Sewaid**, *Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC*

ENT: **Intangible Resource Deployment: Learning from Market Performance Feedback**

Author: **Ahmed Sewaid**, *Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC*
Author: **Shaker A. Zahra**, *U. of Minnesota*
Author: **Jared Shaw Allen**, *Texas Tech U.*
Author: **Rakesh Kumar Pati**, *Deakin U.*

Early-stage entrepreneurs often leverage their intangible resources to raise funds that ensure their ventures' survival. We examine how entrepreneurs decide to allocate their psychological capital to raise funding, and how this decision is affected by market performance feedback (financial and social) received given prior fundraising outcome (success vs. failure). Using a sample of 15,390 crowdfunding entrepreneurs, we find that psychological capital deployments vary between financial and social feedback, depending in both cases on prior fundraising outcome. The results also show that psychological capital deployment enhances fundraising performance following initial failure, but harms fundraising performance following success. Entrepreneurs' gender and race also significantly moderate these relationships, sometimes leading to in-optimal deployments of psychological capital by females and minority groups.

ENT: **Linking Resource Mobilization Approaches and Venture Performance in Resource-Constrained Environment**

Author: **Abiodun Samuel Adegbile**, *Nottingham Business School, Nottingham Trent U.*
Author: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

Drawing on resource orchestration and social network theories, this study examines the relationships between bricolage, optimization, and new venture performance. We argue that optimization (i.e., standard application of resources acquired from resource markets) increases performance whereas bricolage (i.e., improvisation and unconventional resource applications) causes the opposite effect. We also argue that the effect of these RM approaches is contingent upon entrepreneurs' network diversity. Using survey data from agricultural ventures in Nigeria, we found support for our propositions. The findings show that entrepreneurs' social capital affects the value of resource orchestration in relationship-based economic systems. We discuss the theoretical and practical implications of these findings.

ENT: **Resource Enrichment: Integrating Penrosean and Barnean Perspectives**

Author: **Aman Bhuwania**, *Indian Institute of Management, Bangalore*
Author: **Saras Sarasvathy**, *U. of Virginia*

Resource-based theorizing has largely been built upon two distinct resource-based logics: Penrose's "versatile" resources and Barney's "VRIN" resources. However, management scholars have studied these theories in silos or conflated them together. We attempt to theoretically integrate these two logics and present a micro-foundational model of resource "enrichment". Our model offers novel insights into how entrepreneurs/managers and their actions and interactions with other stakeholders play a key role in the process of resource "enrichment" from identifying a potential resource to acquiring the characteristics of value and versatility.

Cultural entrepreneurship (CE) is increasingly active because of its important role in the survival of new ventures. However, the fragmentation of cultural resources (CR) and the scattering of research footholds has hindered the subsequent development. Through an integrative review, we introduce meaning into CE and clarify the connotation of CR. We not only identify four meaning activities, but also emphasize the social construction perspective of CR. Our review will not only deepen our understanding of the formation process and impact mechanism of CR and their meanings, but will also make us realize the power of meaning to "create" actors.

Employee Entrepreneurship

Session Moderator: **Junhan Wang**, *School of Economics and Management Tsinghua U.*

ENT: **Deregulation and Employee Entrepreneurship: Evidence from the Patent Law Industry in China**

Author: **Junhan Wang**, *School of Economics and Management Tsinghua U.*
Author: **Xibao Li**, *Tsinghua U.*

We explore a tension between deregulation and employee entrepreneurship. On the one hand, deregulation lowers entry and growth barriers and promotes entrepreneurship. On the other hand, the less stringent entry criteria render it difficult to evaluate the quality of new startups and may bring about a crisis of cognitive legitimacy among potential entrepreneurs. Based on unique data from the patent law industry in China, our difference-in-differences analysis shows that, compared with those having either higher- or lower-level social resources, employees with middle-level social resources are less likely to start a business after deregulation. We further find that, when the crisis of cognitive legitimacy is less a concern in the case of high technology popularity and low market competition, deregulation also promotes entrepreneurship among employees with middle-level social resources. Overall, our findings show that deregulation can have an unintended side effect on the composition of entrepreneurs. Our study and findings enhance our understanding of the effect of deregulation on employee entrepreneurship and the legitimacy challenges that potential entrepreneurs may need to consider in the face of institutional deregulation.

ENT: **Anti-Labor Environments and Employee Entrepreneurship: Evidence from Right-To-Work Laws**

Author: **DAEHYUN KIM**, *Max Planck Institute for Innovation and Competition*
Author: **Namil Kim**, *School of Management, Harbin Institute of Technology*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*

We explore how changes in labor union and related labor environments affect employees' likelihood of starting a new business. Using Michigan's and Indiana's adoption of right-to-work (RTW) laws as a natural experiment, we demonstrate that the likelihood of employees becoming self-employed increased by 50% as compared to that in states without RTW laws following the passage of the law. However, this tendency is more pronounced for less-educated and blue-collar workers. Moreover, newly created-firms are mostly small businesses with limited scalability. These findings offer novel insights on the relationship between anti-labor environments and employee entrepreneurship.

ENT: **Complex Antecedent Configurations of Employee Innovative Behavior in Digital Transformation**

Author: **Shulin Zhang**, *Nanjing U. School of business*
Author: **Fei Xiao**, *Nanjing U. School of business*
Author: **Shiyu Tan**, *Nanjing U.*
Author: **Xin Meng**, *Anhui U. of Finance and Economics*

Employee innovative behavior is the key to improving an organization's autonomous innovation capability and competitiveness. This study employs fuzzy set qualitative comparative analysis (fsQCA) to investigate the complex causal relationships that lead to employee innovative behaviors and confirming the multiple concurrent characteristics that drive employee innovative behaviors. First, based on a theoretical framework of the social information processing model, this study investigates the intrinsic mechanisms of employee innovative behavior using the logic of cue encoding and interpretation, clarification of innovative goals, response construction, response decision, and behavior enactment; second, this study brings together market uncertainty, digital transformation, individual entrepreneurial orientation, trust, perceived organizational support, task performance, and critical thinking ability, as well as contributions in employee innovative behavior; third, on the basis of 478 employee data from 72 Chinese firms and 368 employee data from 50 American companies, this study compares the configurational paths of employee innovative behavior in different dominant cultural contexts, providing evidence for generalizing the similarities and differences in employee innovation behavior in individualism and collectivism.

ENT: **Motivate Pathway of CEO Entrepreneurial Orientation on Employee Innovative Behaviours**

Author: **Siqi Liu**, *Nanjing U. School of business*
Author: **Shulin Zhang**, *Nanjing U. School of business*
Author: **Fei Xiao**, *Nanjing U. School of business*
Author: **Shiyu Tan**, *Nanjing U.*

The success of corporate entrepreneurship requires both the chief executive officer's entrepreneurial orientation (CEO EO) and the hard work by the frontline personnel. This makes the effect of CEO EO on grassroots employees' cognition and behaviour critical. We employ the fuzzy-set qualitative comparative analysis (fsQCA) to examine the various configuration pathways and causal relationships that exist between CEO EO and the process of motivating employees' innovativeness. Using a multi-level sample of Chinese firms with 117 firm-level and 468 individual-level matched data, and anchored in motivation theory, we explore whether CEO EO can stimulate employee innovative behaviour through internal motivators (self-efficacy), external motivators (human resource management), and achievement orientation. Motivating innovative employee behaviour can be classified into three first-level configurations. Through this study, we contribute to the theoretical understanding employee motivation. The results also have important practical implications.

Entrepreneurial Failure

Session Moderator: **FRANCIS DONBESUUR**, *U. of Leicester*

ENT: **Failure Experiences and Business Model Innovations in B2B Entrepreneurial Firms**

Author: **FRANCIS DONBESUUR**, *U. of Leicester*
Author: **Richard Nyuur**, *Northumbria U.*
Author: **Diana Owusu-Yirenkyi**, *U. of Leeds*
Author: **George Oppong Appiagyei Ampong**, *Ghana Communication Technology U.*

This study proposes and tests a model of how and when previous failure experience can impact on subsequent business model innovation of business to business (B2B) SMEs. Analysis of survey data from a sample of 182 B2B SMEs indicates that failure experience is positively related to business model innovation – and that coopetition capability mediates this failure experience. Further analysis of boundary condition effects reveals that high levels of financial resource slack strengthen the positive relationship between coopetition and business model innovation, while the level of managerial persistence has no effect on failure experience and coopetition relationship. We discuss managerial and theoretical implications of these findings.

ENT: **The Motivational Effect of Perceived Failure Stigma for Re-Starting Entrepreneurs**

Author: **Lu Zhang**, *Ulsan National Institute of Science and Technology*
Author: **Young Rok Choi**, *UNIST, Korea*

The current study challenges the prevailing perspective that failure stigma is uniformly detrimental to entrepreneurs. Drawing on social identity theory and stereotype reactance theory, we develop a model that portrays perceived failure stigma as a source of motivation for entrepreneurs' restarting endeavors. We predict that perceiving failure stigma may increase restarting entrepreneurs' desire to defy the negative stigma, which in turn leads to more opportunity recognition activities and improved new venture performance. We further consider entrepreneurs' external attribution of failure as a boundary condition in the relationship between perceived stigma and desire to defy stigma. We tested our hypotheses by collecting three waves of survey data from 348 Korean entrepreneurs who had entrepreneurial failure experience and restarted new venture after failure. Our findings provide support for the positive effect of perceived stigma on restarting entrepreneurs' opportunity recognition activities and new venture performance through their desire to defy stigma. We also find that entrepreneurs' external attribution of failure accentuated the effect of perceived failure stigma on desire to defy stigma. The research and practical implications of these findings are discussed.

ENT: **Should I Try Again? An Investigation of Entrepreneurs' Career Choice After Failure (WITHDRAWN)**

Author: **Nikan Rezvani**, *Macquarie Business School, Macquarie U.*
Author: **Anna Krzeminska**, *Macquarie Business School, Macquarie U.*

Failure is inseparable from entrepreneurship due to the uncertainties of new venture creation. Despite failure being an unpleasant and often dramatic experience, only some entrepreneurs exit after failure, while others reenter and start another venture. While the literature identifies some variables that facilitate or hinder reentry, our knowledge of how entrepreneurs decide what to do after business failure is limited. This interpretative phenomenological analysis investigates entrepreneurs' journeys after failure and explores how entrepreneurs choose their post-failure careers. We investigated the journey of eighteen Australian entrepreneurs after failure and discovered a process by which entrepreneurs' motivation, learning, and opportunity cost lead to different career choices after venture failure. Our findings contribute to entrepreneurial reentry literature in three ways. First, the findings enrich entrepreneurial learning theory by unpacking the role of learning on reentry. We discovered that action-oriented learning is necessary for reentry decisions. Second, besides the financial impact of failure on the ability to raise capital as an obstruction to reentry, we argue even if financial means are available, the individual opportunity cost influences the reentry decision. Finally, this study identifies "hybrid reentry" as a unique career trajectory besides reentry and employment.

ENT: **Shame on You: The Duality of Shame Culture and Fear of Failure for Entrepreneurship and Intrapreneur**

Author: **Chris Boudreaux**, *Florida Atlantic U.*
Author: **Hyungseok Yoon**, *U. of Leeds*

This paper theorizes and tests the duality of national shame culture and individual-level fear of failure in influencing multifaceted entrepreneurial activities. Building on avoidance and approach motivation theory, our multi-level framework postulates that shame culture—a culture in which constituents are sensitive to social norms and seek to avoid negative social judgement—encourages individuals to engage in intrapreneurship, at the expense of entrepreneurship. Additionally, we posit that at the individual-level, fear of failure is a key dispositional mechanism through which national shame culture influences both entrepreneurship and intrapreneurship. We test and find broad support for our theory using the individual-level Global Entrepreneurship (GEM) survey and the unique country-level data on shame from Honor-Shame Culture Survey. Our work highlights the dual nature of national culture and fear of failure that influence entrepreneurship and intrapreneurship in a distinctive manner.

Entrepreneurial Process: Strategy and organization

Session Moderator: **Leon Schjoedt**, *U. of Texas Rio Grande Valley*

ENT: **Small Ventures' Proactive and Reactive Motivations for Coopetition and the Role of Partner Trust**

Author: **Leon Schjoedt**, *U. of Texas Rio Grande Valley*
Author: **Mark Kroll**, *U. of Texas Rio Grande Valley*

Research on small ventures' coopetition is scant. In this cross-sectional study, we examine both proactive and reactive motivations for coopetition and the critical role of partner trust among 527 small ventures from multiple industries. We find both types of motivations to be directly related mutual benefits and that there is no difference in strength between the two relationships. We find that trust in coopetition partners acts in interesting ways as a moderating factor. We illustrate how these findings add new insights into and enhance our understanding coopetition among small ventures.

ENT: **The Double-Edged Sword Effect of Certification in Firm Performance: The Case of Spanish Quality Wine**

Author: **Fernando Campayo-Sanchez**, *U. of Alicante (Spain)*
Author: **Sohvi Heaton**, *Santa Clara U.*
Author: **Simon Parker**, *Ivey Business School*
Author: **Ricardo Sellers-Rubio**, *U. of Alicante (Spain)*

Certification as a tool for reducing information asymmetry between buyers and sellers has become popular among new ventures, yet its full impact on firm performance remains under-studied. Drawing on signaling theory and a dynamic capabilities perspective, we shed light on the double-edged sword effect of certification on firm performance. Using a sample of 319 Spanish wineries producing craft-based luxury wines in the years 2004 to 2014, we empirically test the relationship between protected designation of origin (PDO) certificates and firm performance. Our findings derived from linear mixed-effects regressions and multilevel models that account for endogeneity offer broad support for a positive signaling effect of certification, but performance can suffer when a firm's ability to adapt to changing environments is limited due to a high cost of complying with requirements imposed by a PDO. Our findings hold important implications for craft-based ventures that need to leverage tradition, authenticity, and innovation simultaneously.

ENT: **Environmental Uncertainty, Entrepreneurial Governance, and Entrepreneurial Strategic Change**

Author: **Weiliang Zhang**, *Univevrsity of Science and Technology of China*

Entrepreneurial strategic change is a central topic of entrepreneurship literature. Previous literature on entrepreneurial strategic change emphasized endogenous uncertainty as the driver of entrepreneurial strategic change, while the traditional strategic change literature also emphasizes the role of environmental uncertainty. This study examines how three kinds of environmental uncertainties (i.e., macroeconomic uncertainty, economic policy uncertainty, and political uncertainty) can affect the likelihood of two types of industry-related entrepreneurial strategic change (diversifying entry and change of the dominant business) by utilizing strategic management theory from resource-based view and opportunity-threat framework. Moreover, I investigate how ownership structure as an entrepreneurial governance institution can moderate the above relationships. Using a novel dataset of over nine million Chinese firms newly registered from 2005 – to 2014, I corroborate my theory-driven hypothesis.

ENT: **Updating Strategy and Beliefs: Experimental Evidence on Entrepreneurial Pivoting**

Author: **Andrea Coali**, *Bocconi U.*

Identifying promising business ideas is key to the introduction of novel firms, and research shows that entrepreneurs frequently pivot during the process of idea identification. We argue that if entrepreneurs adopt a scientific approach by formulating problems clearly, developing theories about the implications of their actions, and testing these theories, they positively update their beliefs, identifying changes leading to more promising development patterns of their ideas. We test these predictions with a field experiment with 250 nascent entrepreneurs attending a pre-acceleration program, where we taught the treated group to formulate the problem scientifically and to develop and test theories about their actions, while the control group followed a standard training approach. Results show how treated entrepreneurs who pivot positively update their beliefs on the potential value of their ideas, and pivot when they perceive higher uncertainty. We also show that pivots conducted by entrepreneurs taught to follow a scientific approach focus more on customer desirability. The paper provides novel evidence on pivoting activities and contributes to the growing literature on how entrepreneurs learn and adapt over time.

Entrepreneurship and Effectuation

Session Moderator: **Michael Asenkerschbaumer**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

ENT: **Fueling Effectual Behavior in Public Leaders? The Role of Imaginativeness and Environmental Dynamism**

Author: **Katrin Bauer**, *TU Dortmund U.*

The public sector is a crucial player in the arena of citizens' well-being. Not only since the COVID-19 pandemic radical uncertainty increasingly burdens public leaders. However, research so far less focuses on public leaders' uncertainty coping routines and factors fueling them. With our study, we transfer findings on individual behavior and skills from the entrepreneurship field, in which handling uncertainty is inherent, to the public sector. Drawing upon the creative problem-solving lens, we explore public leaders' effectual behavior fueled by their creative, social, and practical imaginativeness. Assuming an external contingency on that relationship, we investigate environmental dynamism, a major root of uncertainty, as a moderator. 324 responses from public leaders contribute interesting results. We reveal effectual behavior as uncertainty coping routine in a new domain, the public sector, thereby delivering a novel effectuation antecedent and boundary condition relevant for the interface of entrepreneurship, specifically effectuation, and public sector research. While a relationship between creative imaginativeness and effectual behavior is not confirmed, we find that both the public leader's social and practical imaginativeness are directly associated with their effectual behavior and moderated by environmental dynamism. Our findings have practical implications both for public leaders and practices in public sector organizations.

ENT: **Strategic Flexibility - The Role of Effectuation and Entrepreneurial Implementation Intentions**

Author: **Michael Asenkerschbaumer**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

How can new ventures, operating in resource-scarce environments, increase their strategic flexibility in order to sustain? We provide an answer to this research gap concerning antecedents of strategic flexibility in new ventures by drawing on effectuation logic and implementation intention theory. We validate a theoretical framework proposing effectuation, as decision-making logic, and action planning, in the form of entrepreneurial implementation intentions, to increase the level of perceived strategic flexibility in the resource-scarce context of new venture creation. Based on a sample of 155 entrepreneurs we find support for three of our four proposed hypotheses. Effectuation is associated with higher levels of strategic flexibility, whereas entrepreneurial implementation intentions have no association with strategic flexibility. The interaction of effectuation and entrepreneurial implementation intentions is positively associated with higher levels of strategic flexibility. The access level to resources for optimal work performance is a boundary condition leading to ambiguous results – At lower levels, up to a certain point, the moderation effect is increased. Our study sheds light on how perceived strategic flexibility can be increased in new ventures through effectuation and entrepreneurial implementation intentions.

ENT: **Taking an Entrepreneurial Storytelling Perspective on Pivoting**

Author: **Rohny G. Saylors**, *Washington State U.*
Author: **Jillian Saylors**, *Washington State U. Vancouver*

By taking the perspective that entrepreneurship is storytelling, we investigate pivoting as a trial-and-error based structural course correction to an entrepreneurial story. This process is often taken for granted in entrepreneurship scholarship. Presently, some studies of pivoting focus on legitimacy work, which is when a firm works to make sure that stakeholders perceive the firm as both socially valid and personally appropriate. Other pivot studies focus on identity work, which is the process of maintaining a consistent sense of self, even while changing how one sees oneself. While legitimacy work is theorized at the level of legitimating stakeholders and identity work is theorized at the level of the individual founder, there is presently no theory to guide researchers studying the process of pivoting from the perspective of workers. By bringing into view those who presently work in a pivoting firm, we surface a paradox: during a pivot, workers must continue to see the entrepreneurial venture as a meaningful place to work, even while the meaning of their work changes. To address this paradox, we present the idea of authenticity work, which is the process whereby a firm maintains a sense among its workers that it is a meaningful place to work. In doing so, we contribute a description of the restorying process, which is a process that integrates identity, authenticity, and legitimacy work during a pivot.

ENT: **Organizational Sensemaking, Adaptive Marketing Capability, and Effectual Problem Setting**

Author: **Zhi Yang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Xiao Liang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Jinglan Yang**, *School of Management, Huazhong U. of Science and Technology*

How an organization sets the problem space leads to the different logic of prediction or control and the venturing model choice between effectuation and causation. But what factors cause the differences in problem space is still underdeveloped. Based on sensemaking theory, this study explores the influence mechanism and the boundary condition of organizational sensemaking on effectual problem setting. Based on data from 162 valid questionnaires, this study found that: organizational sensemaking has a negative effect on effectual problem setting and a positive impact on adaptive marketing capability; adaptive marketing capability has a negative effect on effectual problem setting; adaptive marketing capability plays a partially mediating role in the relationship between organizational sensemaking and effectual problem setting. Organizational size not only negatively moderates the relationship between organizational sensemaking and adaptive marketing capability, but also negatively moderates the indirect effect of organizational sensemaking on effectual problem setting through adaptive marketing capability. The above findings have important implications for relevant theoretical research and management practice.

Entrepreneurship and Other Individual Characteristics

Session Moderator: **Esther Leibel**, *Boston U.*

ENT: **Making Friends While Pitching Investors—Exploring Different Paths of Resource Acquisition**

Author: **Esther Leibel**, *Boston U.*
Author: **Denise Falchetti**, *George Washington U.*
Author: **Siobhan O'Mahony**, *Boston U.*

Entrepreneurs use business pitches to persuade investors to provide resources to their firms. Scholars have examined how pitches attract investments. What is less appreciated is that successful pitches also can increase network ties - but tie formation may vary by stage. Drawing from extensive field work and the literature on framing, we hypothesize that entrepreneurial frames used at various stages of firm development attract different types of resources. We test our hypotheses on a database of 79 social entrepreneurs pitching impact investors. We show that when early-stage entrepreneurs pitch with higher social emphasis, they increase social ties with investors. Conversely, when late-stage entrepreneurs pitch with lower social emphasis, they acquire more financial capital. These findings suggest that entrepreneurs' pitching can be a proactive strategy for forming new ties – but how strategies resonate with investors varies by stage. In contrast to theories of resource acquisition that focus on the importance of preexisting networks in acquiring the resources needed for new venture formation, our research explains how entrepreneurs can leverage open, competitive pitches to form new relationships with investors.

ENT: **Transgender Emancipatory Entrepreneurship in Southern Context: Insights from Pakistan**

Author: **Fayaz Ali Shah**, *Islamia College Peshawar*
Author: **Sonia Sethi**, *Department of Management Sciences, Islamia College Peshawar*

A recent stream of entrepreneurship literature highlights the surfacing of transgender individuals' involvement in entrepreneurial activities as a novel subject matter particularly in the Southern context. To date, although a great deal of prior studies have detailed about the entrepreneurial opportunities trans community but yet there is a nascent literature on transgender entrepreneurship as emancipation process. Our study intends to learn about whether the transgender entrepreneurial initiations have potentially facilitated them to reconfigure their social status quo as being entrepreneur? Or does the transgender community understand entrepreneurship as a process of change or pursuit of freedom? Putting in simple words, this research paper endeavors to understand the transgender entrepreneurship through the perspective of entrepreneurship as emancipation in southern context particularly Pakistan. To do this, the study tends to understand the transgender emancipatory entrepreneurship from two broad perspectives i.e. (1) entrepreneurship facilitates to alter or remove societal constraints (identity – based emancipation/cognitive), (2) entrepreneurship may facilitate to realize a sense of individuality or construct their own dreams, representations, ideas and freedom to work independently (autonomy). The current research study theoretically contributes to the existing body of knowledge in two major ways; (1) articulates the idea of entrepreneurship as emancipatory entrepreneurship to the nascent literature on transgender entrepreneurship (2) extends the existing knowledge on emancipatory entrepreneurship by deepening our understanding as to whether the entrepreneurship 'emancipates' the transgender entrepreneurs from their stigmatization or create constraints otherwise, and also extends the contextual literature on transgender emancipatory entrepreneurship in southern context particularly Pakistan.

ENT: **How to Get Published: Optimal Distinctiveness of Entrepreneurship Articles**

Author: **Marie Madeleine Meurer**, *Jönköping International Business School*
Author: **Maksim Belitski**, *U. of Reading*
Author: **Christian Fisch**, *U. of Luxembourg*
Author: **Roy Thurik**, *Erasmus School of Economics, Rotterdam*

Optimal distinctiveness theory highlights that authors need to balance the distinctiveness of a paper and the expectations of audiences, such as of editors and reviewers, to get published (i.e., to achieve publication legitimacy). However, while the literature points to several mechanisms of balancing distinctiveness and audience expectations, current research does not account for situations in which authors face diverse audience expectations, such as theoretical contributions, societal relevance, and conventions of academic writing. Thus, to understand how different forms of expectations, in combination with distinctiveness, may influence publication legitimacy, we use computer-aided text analysis to investigate the last version of paper submissions' abstracts and their related editorial decisions for two leading entrepreneurship journals, Entrepreneurship: Theory & Practice (ETP, 4,151 papers) and Small Business Economics Journal (SBEJ, 4,043 papers). We find that the positive impact of distinctiveness disappears in competitive journal environments that receive papers from a large variety of topics, methods, and theories. Furthermore, we find that authors cannot meet varying expectations regarding contributions simultaneously - theoretical contribution claims play a role for ETP and empirical ones for SBEJ. Lastly, we show that language use is critical for the comprehensibility and signaling of paper narratives – analytical thinking increases publication legitimacy in both journals, and authenticity increases publication legitimacy in SBEJ.

ENT: **Not All Entrepreneurs Are Equal**

Author: **Sonia Siraz**, *U. of Essex, United Kingdom*
Author: **Sharon Alvarez**, *U. of Pittsburgh*
Author: **Bjorn Paul Claes**, *The Open U.*

This paper sheds light on how ethno-racial status characteristics affect legitimacy perceptions about entrepreneurs. Our findings causally establish that compared to nonminority entrepreneurs; minority entrepreneurs are perceived less legitimate due to their ethno-racial attributes. Moreover, we reveal the presence of an ethno-racial hierarchy among different minority groups that increases the harshness of legitimacy perceptions for ascribed lower status minority groups. While entrepreneurs' higher level of education alleviates some of those inequalities, it fails to eliminate them completely. Worse, the gap in legitimacy perceptions increases unfavorably for minorities when comparing highly educated nonminority and highly educated minority entrepreneurs. We further demonstrate that observers' beliefs in a just world play a fundamental role in mitigating or increasing the harshness of legitimacy perceptions. Through three conjoint experiment studies, totaling 22,608 evaluations nested in 1,413 observers in the United States, we examine how entrepreneurs from two minority groups, Black Americans and Latinx, are judged relative to nonminority entrepreneurs (White Americans) after their endeavors have failed. We then examine whether there are differences when these two groups of minority entrepreneurs are judged relative to each other. This study contributes to a deeper understanding of how system inequality and prejudice endure in business lowering the economic potential of minority entrepreneurs.

Experimental approaches to Entrepreneurship Research

Session Moderator: **Yun Hou**, *Hong Kong U. of Science and Technology (Guangzhou)*

ENT: **Learning to Let Go: Field Experiment on Benchmarking and Exit**

Author: **Yun Hou**, *Hong Kong U. of Science and Technology (Guangzhou)*
Author: **Ivan Png**, *National U. of Singapore*

Entrepreneurs persist in business despite low returns. Following the Dunning-Kruger effect and threshold model of exit, we argue that entrepreneurs display general overconfidence in evaluating their relative ability and benchmarking information thus induce exit. To investigate, we administered a randomized controlled trial of benchmarking among 194 Singapore food-stall owners. Both control and treatment owners were informed of their own performance. Additionally, treatment owners were informed of their relative performance and best practices. We find that owners in the treatment group are more likely to exit and report lower aspired performance percentiles in the future. Further, we show that the positive effect of benchmarking on exit is more pronounced among entrepreneurs who are more likely to be overconfident and less likely to stay status quo.

ENT: **Curbing the Addition Bias: Scientific Approaches and Propensity to Subtract in Entrepreneurial Ideas**

Author: **Diego Jannace**, *Bocconi U.*
Author: **Arnaldo Camuffo**, *Bocconi U.*

Aspiring entrepreneurs are often biased toward addition and undervalue subtraction when seeking to perform changes to their ideas. We theorize that adopting "scientific" approaches to entrepreneurial decision-making has positive effects on reducing this bias for entrepreneurs and increasing the likelihood of removing unneeded or less coherent components from their business idea. This is relevant because it could allow entrepreneurs to focus on the few elements that are really meaningful to develop their ventures, rather than on too many elements which create unmanageable complexity and waste. A randomized control trial experiment with 200 early-stage entrepreneurs shows empirical support that scientific approaches increase subtraction when developing a business idea.

ENT: **Political Ideologies and Perceptions of 'Underdog Entrepreneur'- Run Ventures**

Author: **Subhadeep Datta**, *NEOMA Business School*
Author: **Sourjo Mukherjee**, *BITS PILANI*
Author: **Syeda Nimra Batool**, *Ruhr U. Bochum*

This research explores how the political ideology of consumers influence their views about underdog entrepreneurs. Through two well-powered experimental studies, we show that the external disadvantages faced by minority entrepreneurs drives the perception of their 'underdog'-ness, which also has a positive influence on the organizational reputation of their ventures in the aftermath of a product harm crisis. Our findings suggest that underdog entrepreneurs are better off disclosing their underdog identity to take advantage of their otherwise disadvantaged positions.

ENT: **External Venture Idea Evaluation and Venture Idea Revisions? The Role of Opportunity Confidence**

Author: **Martin Wurzer**, *Aarhus BSS, Aarhus U.*
Author: **Kim Klyver**, *U. of Southern Denmark*
Author: **Michael Zaggl**, *Aarhus BSS, Aarhus U.*
Author: **Carsten Bergenholtz**, *Aarhus BSS, Aarhus U.*

In this study, we investigate how venture idea assessments from prestigious and non-prestigious external stakeholders impact effort in venture idea revision by changing opportunity confidence. Building on cultural evolution theory, we hypothesize that optimistic venture idea assessments increase opportunity confidence and therefore in turn decrease efforts to revise venture ideas. This effect is stronger when the assessment is received from a prestigious stakeholder. To test our hypotheses, we conducted two online experiments (total N = 600) following a manipulation-of-mediation design. With overall empirical support for our hypotheses, our study contributes with insights into the heterogeneous effects of stakeholder assessment and the role of opportunity confidence.

Gender and Investor Behavior

Session Moderator: **Kevin Koziol**, *U. of Passau*

ENT: **Investor Intuition Promotes Gender Equality in Access to Finance**

Author: **Katharina Fellnhofer**, *ETH Zurich, Harvard U.*
Author: **Yu Deng**, *ETH Zürich*
Author: **Ursula Renold**, *ETH Zürich, D-MTEC*

Although intuition is difficult to distinguish decisively from deliberation and thus poorly understood, it has been often used to explain away gender biases. By contrast, we argue that women's success in access to finance in crowdfunding is rooted in the use of intuition. We measured investors' use of intuition in two complementary ways: self-reports and behaviorally through fast investment decision making related to past real-world crowdfunding campaigns. Our Bayesian analysis, incorporating 2,911 subjects equally from Europe and the United States collected from July 2021 to August 2022 across three randomized controlled experiments, shows that regardless of whether investor intuition actually predicts willingness to invest, it does not significantly interact with presenter's gender. Although gender preferences can be in play, intuition cannot be used as an explanation. Our work points toward the importance of intuition for promoting gender equality and makes clear that the poor scientific reputation around using intuition requires serious rethinking.

ENT: **Power of Kindred Spirits: The Influence of Gender Stereotype Homophily in Entrepreneurial Pitches**

Author: **Kevin Koziol**, *U. of Passau*
Author: **Maja Schmitz**, *U. of Passau*

Drawing on homophily theory, we examine how investor–entrepreneur similarity in gender-stereotypical behaviors affects intentions to fund early stage ventures. For this purpose, we analyzed around 700 investor–entrepreneur dyads during their initial contact in pitches. As hypothesized, gender stereotype homophily, in both feminine and masculine ways (femininity and masculinity homophily), has a positive influence on the willingness to invest in pitching situations. Moreover, we found that uncertainty amplifies the impact of gender stereotype homophily. Specifically, as masculinity homophily increases, the negative effect of a venture's low growth orientation, i.e., investment uncertainty, on willingness to invest is weakened. Our results highlight that investors do not rely solely on objective evaluation criteria, but are also vulnerable to subjectively perceived impressions that the entrepreneur delivers during a pitch.

ENT: **How Women Entrepreneurs' Physical Appearance Affects Men's Investment Decisions (WITHDRAWN)**

Author: **Robert Schreiber**, -
Author: **Manuel Hess**, *U. of St. Gallen*
Author: **Philippe Tobler**, *U. of Zurich*
Author: **Dean Shepherd**, *mendoza*
Author: **Dietmar Grichnik**, *U. of St. Gallen*
Author: **Joakim Wincent**, *Luleå U. of Technology*

Women entrepreneurs are assessed differently than men but are some women assessed differently than other women? In this study, we theorize the physical attractiveness of women entrepreneurs' influence men's investment decisions. Data from a field study with men business angels in which we combined cognitive with physiological responses—cortisol and testosterone hormones as well as eye gaze—supported our hypotheses. Cognitively, women entrepreneurs' attractiveness increased men investors' perception of the entrepreneur's competence and increased likelihood of investment. Our findings on the physiological body reactions show that women entrepreneurs' attractiveness increased men's cortisol levels, which was positively related to likelihood of investment. Although investors may believe their decisions are based on "cold" cognitive factors, our study provides evidence of "hot" emotional factors in investment decisions and funding progress for women entrepreneurs and their ventures. These findings provide new insights into gender stereotypes in the entrepreneurial funding context. By incorporating physiological reactions in investment decision-making, we discuss the implications to a key theoretical concern of research that suggests the mind and the body could advise differently.

ENT: **Gritty Women: Entrepreneurial Grit and Funding Outcomes**

Author: **Anushka Iyengar Daunt**, *U. of Pittsburgh*
Author: **Sharon Alvarez**, *U. of Pittsburgh*

Entrepreneurs exhibit grit when bringing their nascent ventures to market. Grit may demonstrate an entrepreneur's ability to persevere in spite of obstacles and a passion to ensure their venture's success. We propose the existence of a positive correlation between the grit demonstrated during an entrepreneur's pitch and the funding they receive. Additionally, we posit that this relationship is moderated by the entrepreneur's gender. We conducted a mixed-methods study using content analysis and an experimental approach to test our hypotheses. Our findings suggest that grit significantly impacts an entrepreneur's likelihood of receiving a deal.

Participant: **Suntae Kim**, *Johns Hopkins Carey Business School*
Participant: **Peter Younkin**, *U. of Oregon*
Participant: **Ouafaa Hmaddi**, *City College - City U. of New York*

Prior work has shown that the observable social identities of entrepreneurs – such as their marginalized gender, race, religion, or social class – play a significant role in their ability to mobilize resources and successfully engage stakeholders (Fairlie & Robb, 2007; Freeland & Keister, 2016; Snellman & Younkin, 2021; Younkin & Kuppuswamy, 2018). Motivated by these findings, we propose a symposium to better understand the barriers faced by those from historically marginalized groups and examine how members of these groups manage their identities to overcome these barriers. Specifically, we considered three related questions. First, why and when do marginalized entrepreneurial identities lead to lowered resource mobilization and stakeholder evaluation? Second, what strategies do entrepreneurs with these identities and the institutions supporting them undertake to overcome obstacles that entrepreneurs may face due to these marginalized identities? Third, under what conditions are these identity-based entrepreneurial strategies effective, and under what conditions are they not? We hope our symposium will contribute to ongoing discussions about the presence of inequality among entrepreneurs. Our scholars will address these questions in a wide range of empirical contexts, including North Korean refugee entrepreneurs in South Korea, Muslim American entrepreneurs, and entrepreneurs in Morocco, using a diverse collection of qualitative, archival, and experimental methods. After providing comments and integrating lessons learned from the presenters, our discussant Martin Ruef, an authority on entrepreneurship among historically marginalized groups (see, for example, Ruef, 2010, 2014; Ruef & Grigoryeva, 2020), will lead a group discussion composed of prepared questions and audience question and answer session to synthesize understanding and outlining avenues for future research.

Family Firm and Value Creation

Session Moderator: **Marco Mismetti**, *Free U. of Bozen-Bolzano*

ENT: **Restricted and Extended Socioemotional Wealth and Entrepreneurial Orientation in Family Businesses**

Author: **Atul Karwasara**, *Indian Institute of Management, Ahmedabad*

Calling upon socioemotional wealth (SEW) and mixed gamble perspective, we bridge the conflicting findings in the entrepreneurial orientation literature in the family business (FB) by investigating the role of types of SEW on the entrepreneurial orientation of FBs. We validate the two-dimensional measurement of SEW (extended and restricted SEW) using computer-aided text analysis and report that entrepreneurial activities in FBs depend on the type of SEW family owners' values the most. FBs that value restricted SEW have a lower level of entrepreneurial orientation, while FBs that value extended SEW more have a higher level of entrepreneurial orientation. The theoretically derived model is tested using panel data of the large listed Indian family firms in the NSE 500 index and supports our claim.

ENT: **Family Firm Innovation Intentions: The Role of TMT Functional Diversity and Open Discussion**

Author: **Mara Bergamaschi**, *U. degli Studi di Bergamo*
Author: **Marco Mismetti**, *Free U. of Bozen-Bolzano*
Author: **Paola Rovelli**, *Free U. Bozen, Bolzano*
Author: **Cristina Bettinelli**, *U. of Bergamo*

Interest in family firm innovation is drastically increased in recent times, generating contrasting findings about family versus nonfamily firms' innovation. In this paper, we investigate whether family firms differ from nonfamily counterparts with respect to innovation intentions. Drawing on upper echelon theory, we examine the role that TMT characteristics and interaction norms play in this regard. The empirical analyses on survey data from a sample of 437 Italian firms reveal that family firms are less willing to innovate than nonfamily firms, and this result is fully mediated by the functional diversity of their TMT. In other words, family firms develop lower innovation intentions due to their lower TMT functional diversity compared to nonfamily firms. In a second step, we focus on family firms only and find that for family firms the relation between TMT functional diversity and innovation intentions is positively moderated by open discussion in the TMT. Our findings show that TMT functional diversity and TMT open communication are essential to stimulate family firms' intention to engage in innovation; family firms should indeed mimic nonfamily firms and further develop the functional diversity and open communication of their TMT to the benefit of triggering innovation intentions. We thus contribute to the innovation and entrepreneurship research by highlighting the importance of creating a functionally diverse TMT, while fostering open discussion within it.

ENT: **Business Incubator Cooperation – Family Firms' Access to Knowledge within Entrepreneurial Ecosystems**

Author: **David Sauer**, *WHU Otto Beisheim School of Management*

Established firms, such as family firms face increasing challenges with absorbing external knowledge, despite its rising relevance as a strategic factor in organizational operations. One source that provides the means to absorb new knowledge is business incubators, which increasingly becoming part of entrepreneurial ecosystems worldwide, offering knowledge transfer for start-ups, and other ecosystem members. However, little is known about how incubators' services may also affect family firms. This is surprising as family firms are known for favoring cooperation activities on a local level and have experienced difficulties in valuing and acquiring new knowledge from the outside. Our qualitative study investigates how and why entrepreneurial ecosystems help family firms' absorption of new knowledge. We identify three knowledge management mechanisms of 'enforcing information exchange', 'dismantling emotional hesitations', and 'de-abstracting innovation', which family firms used within entrepreneurial ecosystems to absorb new knowledge, thereby addressing family firms' knowledge accumulation challenges. Moreover, we show insights into how space affects regional knowledge management practices in family firms. Thus, we contribute to the current literature reporting barriers to inter-organizational cooperation of family firms and add novel empirical insights into family firms' absorptive capacity to identify and obtain new external knowledge. Lastly, we extend the current understanding of family firms' knowledge-related gap between their willingness and ability to exchange knowledge, by revealing family firms' potential knowledge accumulation within entrepreneurial ecosystems.

ENT: **Entrepreneurial Passion and SEW in Family Firms: The Role of the Founder and Effects on Performance**

Author: **Héctor Pérez-Fernández**, *U. of Valladolid*
Author: **Víctor Temprano-García**, *U. of Valladolid*
Author: **Juan Bautista Delgado-Garcia**, *U. de Burgos*
Author: **Natalia Martin Cruz**, *U. of Valladolid*
Author: **Ismael Barros-Contreras**, *Austral U.*

Entrepreneurial passion plays a fundamental role in entrepreneurship, having been associated with different entrepreneurial behaviors and outcomes. However, it has not been related with these outcomes in the context of family firms even though these firms are very related to the emotions of family owners. Based on affect maintenance arguments, we argue that the domains of team entrepreneurial passion (inventing, founding and developing) of the family help to develop the socio-emotional wealth of the family firms, with consequences for their performance. Furthermore, we consider that the presence of the family founder moderates the aforementioned relationships. We test our hypotheses in a sample of 137 Chilean family businesses through PLS. We found that both the family entrepreneurial passion for inventing and developing positively influence socio-emotional wealth, but not the family entrepreneurial passion for founding. Additionally, the presence of the founder eliminates the effect of passion for inventing on socio-emotional wealth, while the no presence makes negative the effect of passion for founding on socio-emotional wealth. Finally, socio-emotional wealth fully mediates the influence of passion for inventing and developing on the performance of family firms.

ENT: **Resource Orchestration, Socioemotional Wealth and Radical Innovation in Family Firms (WITHDRAWN)**

Author: **R. Duane Ireland**, *Texas A&M U.*
Author: **Daniel Pittino**, *Jönköping International Business School*
Author: **Valeriano Sanchez-Famoso**, *U. of the Basque Country UPV/EHU*

Drawing from resource orchestration and socioemotional wealth (SEW) arguments, this study focuses on radical innovation in multi family-owned firms. We theorize that the weak coordinating mechanism multifamily ownership provides results in a negative impact on the positive family's SEW endowment/radical innovation relationship. Yet, we contend that low generational involvement – the number of family generations involved simultaneously in the family firm's top management team – mitigates the negative moderating effect of multifamily ownership by providing the mobilizing mechanism needed to ensure that the family firm deploys its SEW endowment to produce radical innovation. Our theory and related results, based on a sample of Spanish family firms, offer important theoretical contributions and confirms that firms realize the positive effect of SEW on radical innovation with the leadership governance mechanism of multifamily ownership coupled with low generational involvement. In the conclusion section, we describe the important theoretical contributions emerging from this study.

Women and members of many racial and ethnic groups remain starkly underrepresented in entrepreneurship worldwide. Recent literature attributes women's underrepresentation to heightened structural and normative barriers such as son-favorism or biases in startup evaluations. Diversity has also been shown to shape firm-level outcomes such as creativity or productivity. This presenter symposium advances our understanding in those two key areas - diversity and entrepreneurship. Specifically, the symposium focuses on the following two questions: First, how do we reduce barriers for women and minority groups and increase their representation and inclusion in entrepreneurship? Second, how do greater representation and inclusion of women and minority groups impact startup performance? The symposium broadens our understanding by shedding light on different stages in the entrepreneurial process and by promoting work which uses an experimental paradigm.

New ventures face the liability of newness, intense uncertainty, and a lack of resources, and numerous barriers to their growth and viability. Such challenges include but are not limited to assembling resources quickly, managing transactions and relationships with others, protecting intellectual property, and commercializing products. One intriguing element of such challenges is that their relative importance and intensity could well vary substantially with the new venture's life cycle. Our goal is to discuss how various challenges faced by entrepreneurs and their ventures change over time - and in complex and uncertain business contexts - thereby helping scholars gain deeper insights into strategy formulation and implementation as a whole. To that end, we aim to bring together several eminent scholars in our field to discuss and deliberate timely and fundamental issues in new venture growth and development, and provide a glimpse of what the near future holds in the academic research in this discipline.

Kirzner at 50: Putting Competition Back in "Competition and Entrepreneurship"

Organizer: **Brian Albrecht**, *The International Center for Law & Economics*
Participant: **Per L. Bylund**, *Oklahoma State U.*
Participant: **Walter J. Ferrier**, *U. of Kentucky*
Participant: **Mark D. Packard**, *Florida Atlantic U.*
Participant: **Vlad Tarko**, -
Discussant: **Peter G. Klein**, *Baylor U.*

Israel Kirzner's "Competition and Entrepreneurship" was published fifty years ago this year. In that half-century, many scholars in entrepreneurship and strategic management have built on and criticized his conception of the entrepreneur. However, Kirzner himself saw the work as an explanation of the nature of competition and the entrepreneur's role in the competitive market process. The panel will discuss the role of competition in Kirzner's work and what that means for management and strategy scholars today. More importantly, the panel will discuss what we know today about the nature of competition that Kirzner missed and what Kirzner knew that subsequent scholars have yet to appreciate. Kirzner was responding to a structure-conduct-performance paradigm within industrial organization and an Arrow-Debreu general equilibrium model, both of which dominated economics research in the 1960s and 1970s. Today, research connected to Kirzner's ideas is quite different and spans many more fields. Game theory, evolutionary theory, and simulations are much more prevalent in economics journals. Empirical and policy research is much more micro and digs into the details of how firms and markets organize. Strategy and entrepreneurship scholars increasingly emphasize time, process, uncertainty and judgment, dynamic competition, temporary advantage, and Schumpeterian evolution. With these developments in mind, the panel will discuss the following questions and more: • How has our understanding of competition grown since 1973? • In which ways did Kirzner anticipate subsequent research that moved away from static general equilibrium theorizing? • What insights did Kirzner contribute that we haven't incorporated yet?

Incentives and Compensation

Session Moderator: **Hanho Lee**, *Ohio State U.*

HR: **The Double-Edged Effects of Group Incentives: The Role of Peer Monitoring and Individual Incentives**

Author: **Hanho Lee**, *Ohio State U.*
Author: **Jia Hu**, *Ohio State U.*

While pay for performance (PFP) is widely implemented in organizations to boost employees' performance, the empirical evidence on its incentive effect has been mixed. Based on Park and Sturman's (2021) PFP perception framework, we developed and tested a theoretical model suggesting that the implementation of a team-based incentive pay strategy should be cautious in organizations because of its double-edged effects on employees' motivational and behavioral outcomes. In a three-wave survey study, we found the interactive effects of group-based PFP and individual-based PFP on peer monitoring behavior. Also, we highlighted the double-edged effects of peer monitoring where peer monitoring can increase citizenship behaviors and job satisfaction through group identification, whereas peer monitoring can also facilitate conflict with other peers, which in turn leads them to show incivility within groups. This research provides a more comprehensive and nuanced way of the motivational functions of perceived PFP-G and peer monitoring, as well as critical insights into how organizations can use PFP to motivate employees more effectively.

HR: **How Collective Pay-for-Performance Motivates Organizational Citizenship Behaviors**

Author: **Xiaoyue Wu**, *Nanjing U. School of business*
Author: **Haiyan Cheng**, *Nanjing U. School of business*
Author: **Wenxing Liu**, *ZUEL*
Author: **Kong Zhou**, *Nanjing U. of Science and Technology*

Collective pay-for-performance (collective PFP) contributes to achieving collective goals, but it can also blur individual performance that weakens the effectiveness of collective PFP. We explore when and how collective PFP gets employees to transfer their focus from personal interest to collective goals, particularly on organizational citizenship behaviors (OCBs). Building on self-concept and identification literature, we propose that employees with higher group (relational) identity will have higher group (relational) identification under collective PFP than employees with lower group (relational) identity, thus having more organizational citizenship behaviors towards organization (organizational citizenship behaviors towards individual). We found support for our hypotheses using data from one longitudinal three-wave study of 301 full-time employees. We discuss the implications of our research for theory and practice.

HR: **Modern Performance Management Practices and the Gender Pay Gap**

Author: **Isabella Grabner**, *WU Vienna*
Author: **Aleksandra Klein**, *Vlerick Business School*
Author: **Katharine Patterson**, *WU Vienna*
Author: **Karen L. Sedatole**, *Emory U., Goizueta Business School*

Despite gender parity in education and an accelerated movement of women into the workforce, the gender pay gap persists. Most prior research focuses on the impact of human capital and occupation characteristics on wage inequalities across organizations and occupations; however, recent evidence suggests that pay inequity within organizations causes a large share of the gender pay gap. Accordingly, we take an organizational design perspective and propose that the design of the performance management system at the organizational level plays a key role in explaining the gender pay gap at the employee level. More specifically, we explore whether performance evaluation practices targeted at increasing the accuracy of performance ratings and mitigating performance evaluation biases, i.e., calibration committees, forced distribution systems, and multi-rater systems, act as a buffer for or accelerator of the gender pay gap within organizational ranks. Our unique dataset comprises both survey data of organization-level performance management practices and archival data of individual-level compensation and personnel data of the employees working in these companies. Using this unique dataset, we find evidence that the degree to which male and female employees are compensated differently for comparable jobs is associated with the degree of discretion individual supervisors have in the rating process, and the information sources used to evaluate the performance of individual employees.

HR: **Promotion Decisions under Formal Compensation Rules**

Author: **Jaime Ortega**, *U. Carlos III Madrid*

We study promotion decisions when salaries must comply with firm-level compensation plans that include pay scales and pay setting rules. In practice, these rules imply that employees within the same job level may earn different pay raises if they are promoted. Because these are company-wide rules, line managers cannot choose the pay raise that each employee will receive. However, they can decide whom to promote and can therefore choose to give a greater chance of promotion to employees whose incentives would be otherwise low due to a low pay raise. We use detailed personnel records to study whether promotion decisions are consistent with this hypothesis. We find that the probability of an employee being promoted is negatively associated with the pay raise that the employee would earn if promoted. We also find that this effect is larger in organizational units that are more constrained by their personnel budget.

HR: **Pay Learning Theory: How Pay Understanding Leads to Better Quality Pay Decisions**

Author: **Ormonde Cragun**, *U. of Minnesota, Duluth*
Author: **Jason Kautz**, *U. of Texas at Dallas*
Author: **Lin Xiu**, *U. of Minnesota, Duluth*

Despite the theoretical and practical importance of pay, there is no unifying theory which integrates the differing, yet related perspectives from the literatures on pay transparency, pay communication, pay information disclosure, referent selection, and pay satisfaction to provide an accurate description of why an individual is motivated to learn about their pay, how they learn about their pay, and how their understanding of their pay affects the quality of their pay related decisions. Integrating the theories from these related literatures fundamentally shifts the theoretical focus away from questions regarding how pay design characteristics and mechanisms (e.g., transactions, pay levels, motivation) impact individual motivations and outcomes (e.g., effort and performance) to questions regarding how individuals are motivated to gather and interpret, act upon, and ultimately value pay information. Therefore, integrating and organizing the constructs, relationships, and underlying theories from these compensation literatures and drawing on components that are common across learning theories, we develop a theory of pay learning, which posits individuals strive toward complete pay understanding through an incremental learning process which develops a realization and understanding of the various pay-related factors and their interconnected influence towards the objective of achieving pay satisfaction by making quality pay related decisions.

Remote Work and Virtual Collaboration

Session Moderator: **Ajay Rama Ponnapalli**, *Wayne State U.*

HR: **Blessing in Disguise? Remote Work Modality and Psychological Contract Fulfillment**

Author: **Ajay Rama Ponnapalli**, *Wayne State U.*
Author: **Joseph Yestrepsky**, *Wayne State U.*
Author: **Amanuel G. Tekleab**, *Wayne State U.*

In this study, we explore how experiences with remote work impact employees' relationship with their employers. Specifically, we argue that employees experiencing greater autonomy over their work due to them being remote, in conjunction with their observations of normative standards of widespread remote work adoption, leads to perceived obligations of their employers to provide more autonomy. When such autonomy is granted, remote workers may perceive their organizations as fulfilling its obligations to them, thus strengthening the psychological contract. We also explore how manager communication frequency influences this relationship. Overly frequent manager communication may undermine the autonomy available from remote work and diminish psychological contract fulfilment. However, more judicious and mindful manager communication may underscore employees' experience of autonomy and enhance psychological contract fulfilment. We link these experiences to key outcomes of employee stay intentions, job satisfaction, and employee burnout. Tests of these assumptions using data from a sample of remote workers provides overall support for our theoretical model.

HR: **To Trust or Not to Trust? Toward Understanding Remote Work and Its Implications for Managers**

Author: **Timothy Golden**, *Rensselaer Polytechnic Institute*
Author: **Michael Thomas Ford**, *U. of Alabama*
Author: **John Joseph Cocco**, *Rensselaer Polytechnic Institute*

The rapid growth in remote work has highlighted the need to understand how working remotely affects managers and those who work for them. Although research is beginning to uncover a number of remote work's implications, we know relatively little about how remote work affects trust. Rather than being able to directly observe and develop judgments of a remote manager's trustworthiness from personal observations, subordinates must instead form views with more limited information. In this paper we therefore investigate the effect of teleworking on the trust that subordinates have in their manager. Additionally, we suggest characteristics and behaviors of managers play an especially influential role in shaping the alterations in trust that arise from teleworking. We test our assertions using a multi-source dataset and find that teleworking is negatively associated with trust. We also find that a manger's tendencies to exert control and foster relationships have countervailing effects. Our findings offer implications for both the research and practice of remote work arrangements.

HR: **Remotely Engaged? A Multilevel Study on Telecommuting and Work Engagement**

Author: **Daniel Lourenco**, *U. of Mannheim*
Author: **Torsten Biemann**, *U. of Mannheim*

In the last years, telecommuting has become an increasingly well-established work practice and has attracted the attention of many researchers. However, few authors explored the impact of telecommuting on work engagement, and we know relatively little how organizational policies and social dynamics influence this relationship. With the help of multilevel modeling and using a large multicompany data set (study 1: 1,589 employees nested in 562 companies; study 2: 2,630 employees nested in 869 companies), we propose and test a model that explains the relationship between telecommuting policy, availability of telecommuting, work engagement, and extent of telecommuting. Results revealed that availability of telecommuting is positively related to work engagement and that this relationship is moderated by telecommuting policy, so that telecommuting policy reduces the effect. Moreover, work engagement was positively associated with extent of telecommuting. Overall, results provide evidence for the hypothesized paths between telecommuting and work engagement. Implications of these findings for research and practice are discussed.

HR: **Mobile Work Dispersion: Effects on Positive Affect and Firm Performance from a Social-identity View**

Author: **Marvin Neu**, -
Author: **Leon Barton**, *U. of St. Gallen*

Recent developments regarding the adoption of mobile flexible work practices urge the question about the potential consequences of observed inequalities in the access to mobile flexible work. The present study enriches the research field on telework and unequal working conditions by investigating mobile work dispersion at the organizational level of analysis and examining the consequences for emotions in and performance of organizations. Therefore, drawing on social identity and self-categorization theory, we argue for a negative relationship between mobile work dispersion and positive affective tone. We subsequently theorize that mobile work dispersion has a negative indirect effect on firm performance through decreases in the positive affective tone within companies. Finally, we propose that a strong collective organizational identification acts as a buffering mechanism and can thereby dissolve the negative direct and indirect effects of mobile work dispersion. Our moderated mediation model is tested, and supported, by multiple regression analyses in a multisource data set containing 11,154 employees from 71 companies. These results are discussed in light of their contribution to the literature on telework, unequal working conditions and social identity as well as their implications for practitioners.

HR: **Conditions of Employee Engagement in Global Virtual Teams**

Author: **Farheen Fathima Shaik B**, *XLRI-Xavier School of Management, Jamshedpur, India*
Author: **Upam Pushpak Makhecha**, *Indian Institute of Management, Tiruchirappalli*
Author: **Sirish Gouda**, *Indian Institute of Management, Tiruchirappalli*

The advent of globalization and the pandemic have forced organizations to adopt the use of virtual teams. Multinational organizations now rely heavily on teams composed of members from different cultures, nationalities and time zones that communicate through technological means. These teams are referred to as global virtual teams because they are global and virtual (GVTs). Organizations now need to ensure that employees in such teams are engaged and working in a cohesive manner. The lack of research on employee engagement in GVTs offers HR professionals a limited understanding of the impact of context on employee engagement in GVTs. In addition, the difficulties of working in GVTs, such as less FtF interactions, time zone differences, underlying conflicts, lack of trust and extensive use of technology, make it challenging for GVT members. To address this challenge, this study examines the individual, team, organizational, and contextual conditions of employee engagement in GVTs. This white paper examines the conditions that HR professionals can ensure to increase employee engagement in GVTs.

Workforce Inclusivity: HRD, Diversity, and Overcoming Barriers

Session Moderator: **Alessia Sammarra**, *U. of L'Aquila*

HR: **The Effectiveness of HRD Practices among Chronically Ill Employees: The Role of Intrinsic Motivation**

Author: **Alessia Sammarra**, *U. of L'Aquila*
Author: **Silvia Profili**, *European U. of Rome*
Author: **Laura Innocenti**, *U. of L'Aquila*

Chronically ill employees (CIEs) are among the largest and fastest growing minority groups of today's workforce, which creates a challenge that organisations must address in order to induce them to stay at work motivated and productive. This study draws on the Job Demands–Resources framework to develop and test a model that examines whether and when HR Development (HRD) practices enhance CIEs' work engagement and continuous commitment, focusing on the role of intrinsic motivation as a moderator in these relationships. Results from a field study among 259 CIEs and 1,558 employees of a large company operating in Italy demonstrate that HRD practices have a significant and positive influence on both CIEs' work engagement and continuous commitment. Next, we found that HRD practices elicit greater engagement when CIEs report higher levels of intrinsic motivation. We found a similar trend for the HRD practices-continuous commitment relation, although the moderation of intrinsic motivation only reached slight significance among CIEs. Therefore, our findings showed differences between CIEs and the referent sample regarding the influence played respectively by intrinsic and extrinsic motivation on the relations investigated, with a prominent role of intrinsic motivation among CIEs.

HR: **Employee Responses To Diversity Initiatives: A Tripartite View and Latent Profile Analysis**

Author: **Rouven Kanitz**, *Rotterdam School of Management, Erasmus U.*
Author: **Max Reinwald**, *LMU Munich*
Author: **Katerina Gonzalez**, *Suffolk U.*
Author: **Anne Burmeister**, *U. of Cologne*
Author: **Yifan Song**, *Texas A&M U.*

Diversity initiatives have become ubiquitous in organizations and employees' cognitive, affective, and behavioral responses to those are critical to understand the effectiveness of diversity initiatives. However, prior researchers have largely considered the isolated effects of specific positive or negative responses (e.g., support or resistance) from a variable-centered perspective. This narrow focus overlooks the potential (a) coexistence of more complex configurations of cognitive, affective, and behavioral responses within individuals, and (b) the existence of subpopulations of employees who may respond both positively and negatively displaying ambivalence. To address these shortcomings, we build on the tripartite response model and adopt a person-centered approach to examine responses to diversity practices. Using latent profile analysis, our results across two studies incorporating cognitive, affective, and behavioral components as profile indicators reveal (Study 1, n = 605) and replicate (Study 2, n = 514) four distinct profiles (i.e., excited champions, unagitated compliers, torn critics, and lost opponents). Furthermore, we identify relevant person-, situation-, and content-related predictors of profile membership and show how employees across profiles differ on reported relevant work-related outcomes. Taken together, our work advances research on employee responses to diversity initiatives. We discuss the implications of our work for research and practice.

HR: **Signaling, Screening & Statistical Discrimination in the NFL Draft**

Author: **Dirk Laschat**, *U. of Münster*

The concepts of signaling, screening and statistical discrimination are closely related to each other and are used to explain various economic and social phenomena, especially in the realm of labor markets. As conventional firms, the National Football Leagues' franchises seem to use target universities as a recruiting strategy, since players from colleges with prestigious football operation departments are regularly picked earlier in its annually talent acquisition process the NFL Draft. So far, literature reveals contradictory results about the efficiency of such a targeted hiring strategy. In this paper, we reevaluate the information content of college affiliation as a signal for productivity of NFL players while using more informative variables than previous studies and focusing on possible top quantile effects in place. On this way we are able to make a statement about the efficiency of franchises hiring strategies as well as the kind of statistical discrimination at hand.

HR: **When is Business Necessity a Necessity: How Status and Limitation Influence Accommodations**

Author: **Lauren Offermann**, *Montclair State U.*
Author: **Jennifer Bragger**, *Montclair State U.*
Author: **Pamela Farago**, *Clemson U.*
Author: **Cheryl Gray**, *Montclair State U.*
Author: **Valerie I. Sessa**, *Montclair State U.*

Recent discrimination court cases regarding disability and pregnancy accommodations in the workplace have brought to light questions regarding inconsistency in outcomes of such cases. One possible answer to these questions may be the role that "business necessity" and "essential duties" play in whether or not a disabled or pregnant employee is granted accommodation. The current study sought to explore potential bias in such perceptions. HR professionals were presented with repeated measure vignettes and asked to make decisions about whether they would accommodate pregnant or disabled applicants of various statuses and types of accommodations. Analyses suggested that when business necessity was held constant, employees in high status occupations were more likely to be granted accommodations than employees in low status occupations. Pregnant employees were more likely to be granted accommodations when they faced physical limitations (e.g., limits on climbing, bending, and lifting) than stress limitations (e.g., limits on irregular hours or psychologically stressful situations). Findings suggest the importance of further clarifying the legal definition of business necessity in the equitable treatment of pregnant and disabled applicants and employees in the workplace.

Embracing the AI Revolution

Session Moderator: **Guanglei Zhang**, *Wuhan U. of Technology*

HR: **Take the Bull by the Horns: How Artificial Intelligence Awareness Motivate Employees to Get More?**

Author: **Guanglei Zhang**, *Wuhan U. of Technology*
Author: **Puzhen Xiong**, *Wuhan U. of Technology*
Author: **Huan Cheng**, *Huazhong U. of Science and Technology*

Artificial intelligence (AI) awareness might raise concerns about the layoff in popular consciousness, but it also encourages frontline workers to seek and build more resources to avoid dismission. To survive in the era of big data, those employees might develop specific human capital that could be nurtured by a high-performance work system (HPWS). Drawing on conservation of resources theory and the Ability-Motivation-Opportunity (AMO) framework, this study investigates the impacts of HPWS on specific human capital and subsequent innovation and task performance of frontline workers in the manufacturing industry. In addition, the moderating effect of AI awareness was tested, given the greater risk of unemployment that AI poses to people doing simple repetitive tasks. Structural equation modelling was employed to test the model, with data collected from 386 employees in Chinese manufacturing enterprises through a two-wave online survey. Results indicate that HPWS has a significant positive effect on innovation and task performance at the individual level, and specific human capital mediates the effect of HPWS on frontline workers' performance. Moreover, AI awareness can strengthen the indirect effect of HPWS on frontline workers' performance (via specific human capital). Our research focuses on the specific human capital of low-skilled frontline workers who are extremely vulnerable to being affected. It finds the bright side of AI awareness as a boundary condition and contributes to filling the blank of research on softening the blow of emerging technologies.

HR: **Classification Performance of Supervised Machine Learning to Predict HRM Outcomes: A Meta-analysis**

Author: **Adam J. Vanhove**, *James Madison U.*
Author: **Brooke Z. Graham**, *James Madison U.*
Author: **Tatjana Titareva**, *James Madison U.*
Author: **Alisa Udomvisawakul**, *City of Virginia Beach*

There has been much discussion of machine learning (ML) within the field of HRM in recent years. Our purpose was to meta-analyze the classification performance of supervised ML models used to predict categorical HRM outcomes. Our meta-analysis contained 1,921 effect sizes from 100 samples cross nested by study (k1 = 74) and unique dataset (k2 = 59). We conducted separate cross-classified multilevel models predicting seven different confusion matrix classification performance indices. We compared eight different algorithms, with boosting and random forest algorithms performing best and discriminant analysis, logistic regression, and Bayesian algorithms performing worst across indices. We found limited evidence that models differed in effectively classifying different types of HRM outcomes, despite these outcomes varying in number of outcome categories and balance of observations across categories. We observed study sample size to positively effect classification performance but with a diminishing return at N > 20,000. Finally, we found evidence that testing model accuracy is greatest with around 20 predictors used to train the model. Fewer predictors are associated lower model accuracy and more predictors likely introduces sample-specific artifacts that are poorly replicated in testing data. This meta-analysis provides insights to HRM researchers seeking to conduct their own ML research.

HR: **Leveraging Artificial Intelligence and Human Intelligence for HRM in Uncertainty**

Author: **Surabhi Singh**, *Doctoral Scholar, Indian Institute of Management, Indore, India*

The current study aims to present a new perspective on HRM functions during uncertainty. We present a novel framework of 'AI—HI synergies' across three critical HRM functions, viz. talent acquisition, skill development, and performance appraisal. We root our framework in dynamic capability literature. In doing so, we highlight the importance of AI and HI in building dynamic capabilities for organizations across all three stages, viz. sensing, seizing, and shifting. Our focus is to trigger fresh debates on AI's application to HRM and the need to balance AI and HI to create synergies that can help to achieve dynamic capabilities for organizations.

HR: **Is my Manager AI Capable? Identifying Managerial Competencies in Implementing AI in HRM**

Author: **Deepa R.**, *Loyola Institute of Business Administration*
Author: **Srinivasan Sekar**, *Indian Institute of Technology, Madras*

The application of Artificial Intelligence in Human Resource Management (HRM) is prevalent across the employee lifecycle. The study consolidated the current research trends on the adoption of AI in HRM and investigated the managerial competencies required for adopting AI-based technologies in HRM. To understand the research direction toward adopting AI in HRM, a systematic literature review (SLR) based on PRISMA methodology and bibliometrics analysis using BIBLIOMETRIX was conducted. Directed content analysis of the full text based on the theoretical premise of the Dynamic Capabilities View (DCV) identified the themes and sub-themes of the managerial capabilities and competencies that must be mapped for adopting AI in HRM. SLR identified applications of various AI tools and techniques in multiple HR functions. The bibliometric analysis yielded recruitment and selection as an important function with wider AI applications. Managerial cognition, managerial human capital, and managerial social capital were considered as initial coding categories, under which various managerial competencies required to adopt AI in HRM were listed from the literature. The study utilised SLR, Bibliometric analysis, and directed content analysis as three distinctive methodologies that yielded interesting insights into the adoption of AI in HRM and the associated managerial competencies that must be mapped for its adoption.

HR: **Human Resource Professionals' Coping with Artificial Intelligence-Induced Change to Decision-Making**

Author: **Philipp Heintz**, *RPTU Kaiserslautern-Landau*
Author: **Tanja Rabl**, *RPTU Kaiserslautern-Landau*

Although the use of artificial intelligence (AI) for human resource (HR) activities continues to grow, we still know little about its impact on HR professionals. Based on the theory of stress and coping, we integrate the literatures on identity and organizational change to investigate HR professionals' coping responses to two different approaches of AI-induced change to decision-making: AI-automation and AI-augmentation. Specifically, we consider their intention to resist and intention to proactively support the AI-induced change to decision-making. Moreover, we examine the mediating role of HR professionals' anticipated identity threat and the moderating roles of supervisor support as a social and general change self-efficacy as a personal coping resource. Findings from an experimental scenario-based study with 131 HR professionals show that for HR professionals with low general change self-efficacy lower levels of anticipated identity threat from AI-augmentation compared to AI-automation lead to a weaker intention to resist and stronger intention to proactively support AI-augmentation compared to AI-automation. By putting the HR professional front and center, this study offers insights into the identity-related implications of AI-adoption for HR activities which help to successfully manage AI-induced change.

Artificial Intelligence in HR Decision-Making

Session Moderator: **Ilanit SimanTov-Nachlieli**, *Tel Aviv U.*

HR: **More to Lose: High Performers' Opposition to the Adoption of Powerful AI Aids**

Author: **Ilanit SimanTov-Nachlieli**, *Tel Aviv U.*

Artificial intelligence (AI) systems for decision support are becoming increasingly critical to the daily operation of organizations. Yet opposition to the adoption of such systems is still prevalent among professional employees. This article highlights the overlooked role of employees' (high) performance ranking relative to peers in predicting their opposition to the adoption of reliable AI decision aids by their organizations. Study 1 – a correlational field study conducted among US and UK employees – revealed that employees' (higher) self-reported performance ranking was positively related to their opposition to the potential integration of reliable AI decision aids in their work domain. Study 2 – a laboratory experiment conducted among undergraduate students with manipulation of performance ranking in an estimation simulation – provided causal evidence for the effect of performance ranking on opposition to AI adoption. Finally, Study 3 – an experimental online simulation conducted among US employees – replicated this effect and found that it was mediated by one's perceived potential loss of standing compared to peers, and that it persisted even when accounting for previously theorized mechanisms, such as confidence in one's ability to perform well and self-reliance preference. Further pointing to perceived downstream consequences, the positive link between one's perceived loss of standing and opposition to AI adoption was amplified when pay determination criteria were relative (vs. absolute). Theoretical and practical implications for understanding high performers' opposition to reliable AI decision aids and its management are discussed.

HR: **Recruiters' Behaviors Faced with Dual (AI and Human) Recommendations in Personnel Selection**

Author: **Alain Lacroux**, *Panthéon Sorbonne Paris 1*
Author: **Christelle Martin Lacroux**, *CERAG - U. Grenoble Alpes*

Artificial Intelligence (AI) is increasingly used for decision-making support in organizations, and especially during the recruitment process. Consequently, recruiters may sometimes find themselves having to process different sources of information (human vs. algorithmic decision support system, ADSS) before deciding to preselect an applicant. Our study aims to explore the mechanisms that lead recruiters to follow or not the recommendations made by human and non-human experts, in particular when they receive contradictory or inaccurate information from these sources. Drawing on results obtained in the field of automated decision support, we make a first general hypothesis that recruiters trust human experts more than ADSS and rely more on their recommendations. Secondly, based on the Judge Advisor System Paradigm (Sniezek & Buckley, 1995), we make a second general hypothesis that the accuracy of the recommendations provided by the dual source of advice influences in different ways the accuracy of recruiters' preselection decisions. We conducted an experiment involving the screening of resumes by a sample of professionals (N=746) responsible for screening job applications in their work. As hypothesized, the recommendations made to recruiters do influence the accuracy of their decisions. Our results suggest that recruiters comply more with ADSS than human recommendations even if they declare a higher level of trust in human experts. Finally, implications for research and HR policies are discussed

HR: **Why AI-enabled Interviews Might Reduce Candidates' Job Application Intention?**

Author: **Wenhao Luo**, *North China U. of Technology*
Author: **Yuelin ZHANG**, *North China U. of Technology*

Despite the widespread use of artificial intelligence technologies in human resource management functions such as recruitment, how job candidates perceive and react to AI-enabled interviews remains uncertain. Integrating signaling theory and fairness heuristic theory, we proposed that AI-enabled interviews reduce candidates' job application intention via the mediating role of procedural justice and organizational attractiveness. Utilizing an online scenario-based experiment by adopting a 2(type of industry) × 3(format of interview method) between-subject factorial design, our results indicate that AI-enabled interviews would decrease both perceived procedural justice and organizational attractiveness of applicants, thus further reducing their intention to apply for jobs. We also find the fit of industry and interview format could contribute to the functioning of AI-enabled interviews. Specifically, AI-enabled interviews are more likely to trigger desirable reactions in high-tech industries rather than traditional industries. We discuss the theoretical contributions and practical implications for organizations.

HR: **Artificial Intelligence (AI) in Employee Selection: How Algorithm-based Decision Aids Influence Dec**

Author: **Dan Chen**, *Marshall U.*
Author: **George Benson**, *U. of Texas At Arlington*

With the development of artificial intelligence (AI), algorithm-based decision aids have been adopted by more and more organizations to help recruiters and hiring managers screen and review job candidates. This study assesses how managers integrate selection information produced by algorithms into assessments of job candidates' qualifications to make the hiring decisions. To assess how algorithm-based decision aids are used, we first investigate how individual characteristics of managers influence their perceived usefulness of algorithm selection information. We then examine how managers rate applicant employability when they are given different types of jobs (HR Assistant vs. Data Engineer) and algorithm-based selection information. Results showed that younger managers and managers with experience using these systems perceived algorithm-based decision aids useful. The same relationships were found when managers rated employability of applicants using information from both resumes and algorithm-based decision aids. Managers were less likely to see algorithm-based information as useful if they reported algorithm aversion, but no less likely to use the information when assessing candidates. Finally, we found that applicant information from algorithm-based decision aids had more influence on manager ratings of employability when the job requires more technical skills than when the job requires more soft skills. Theoretical and empirical implications are discussed.

High-Performance Work Systems and HR Configurations

Session Moderator: **Joonyoung Kim**, *Cornell U.*

HR: **Building Cooperative and Successful Organizations with HPWS: Role of Firm Age and Industry Dynamism**

Author: **Joonyoung Kim**, *Cornell U.*

Although numerous empirical studies have linked HR systems, or a set of systematic HR practices, such as high-performance work systems (HPWS), to the superior organizational performance, we have limited understanding of how these benefits differentially influence younger vs. older firms. In reality, younger firms are known to be more reluctant to invest in systematic HR practices than their older counterparts, particularly when they are operating under uncertain environments. Integrating insights from the liability of newness and liability of aging, I theorize that organizations' internal and external environments—firm age and industry dynamism—influence the extent to which they benefit from HPWS. Using longitudinal data on 1,585 firm-year observations from five waves of data between 2009 and 2017, I demonstrate that the positive effect of HPWS on organizational performance is the most salient for younger firms operating in a highly dynamic industry. In contrast, among older firms, such positive effects of HPWS are weaker as the industry becomes more dynamic. In addition, I find that cooperative norms serve as an important mechanism. My findings represent an important step forward in advancing our understanding of when and how younger vs. older firms differentially benefit from HPWS, particularly in the context of highly dynamic industries.

HR: **The Quality of Employee Turnover in High Performance Work Systems and Firm Performance**

Author: **Kiwook Kwon**, *Konkuk U.*
Author: **Chiho Ok**, *Kangwon National U.*
Author: **Kwanghyun Kim**, *Korea U. Business School*

This study aims to investigate (a) how skill-enhancing, motivation- enhancing, and opportunity-enhancing human resource (HR) practice bundles differ in accounting for high performers' (versus non-high performers') turnover; (b) whether high performers' turnover has a stronger impact on firm performance than non-high performers' turnover; and (c) whether high performers' turnover (rather than non- high performers' turnover) mediates the relationships between HR practice bundles and firm performance. Research hypotheses were tested with data collected from 153 South Korean companies. HR practices and turnover rates were reported by each firm's senior HR manager and were combined with publicly available firm performance information for each company. The results indicated that (a) motivation-enhancing HR practice bundles were most effective in retaining high performers compared to skill-enhancing and opportunity-enhancing HR practice bundles; (b) high performer turnover had a substantially stronger impact on firm financial performance compared to non-high performer turnover; and (c) high performer turnover mediated the impact of motivation-enhancing HR practices on firm financial performance. This study contributes to accumulating knowledge regarding why high performance work systems (HPWS) have positive implications for firm performance in terms of maintaining top performers. This study differentiates the quality of employee turnover and provides a more fine-grained investigation regarding the role of two groups of employees' turnover in the relationship between HPWS and firm performance.

HR: **High-Performance Work Systems, HR Flexibility, Size, and Performance: The Advantage of Being Large**

Author: **Michael Ulrich**, *Utah State U.*
Author: **Sean Alexander Way**, *Monash Business School*
Author: **Patrick Wright**, *U. of South Carolina*

For over two decades, there has been increasing theory and research on HR flexibility, however, there is still much to be understood regarding its relationship with other constructs and the potential boundary conditions to its effectiveness. This study replicates and extends this work using a global multi-source, multi-respondent sample composed of 8,139 respondents from 306 organizations. The results provide additional evidence for the mediating role of HR flexibility in the high-performance work system—organization performance relationship. Additionally, they illuminate the mediating role of HR flexibility in the organization high technology focus—performance relationship and the mediating effects of organization size on this relationship as well as on the relationship between HR flexibility and organization performance. In sum, the findings underscore the advantage of being large and contributes to our understanding of HR flexibility's impact on organization performance and further illustrates that HR flexibility can be an organization-level asset in certain circumstances (for very large organizations) and a liability in others (for smaller organizations)

HR: **HR Configurations and Innovation: Mediating Role Capacity for Learning and Transformation**

Author: **Peng Wang**, *Miami U. Ohio*
Author: **Mohammad Moradi**, *PhD candidate Human Resources Management Allameh Tabatabaei U.*

Despite decades of advancement in the management of innovation in organizational studies, conversations on how employees can keep firms on the edge of external knowledge and technology are still open to many questions. We extend research on strategic human resource management (SHRM) by examining the mediating role of employee innovative work behavior (IWB) and firm capacity for learning and transformation (CLT) between HR configurations and product innovation. Thus, we propose a theoretical framework explaining that IWB and CLT serially mediate the relationship between Intellectual Capital (IC)-enhancing HR configurations and product innovation. We designed a rigorous time-lagged study, gathering data from the healthcare industry in three waves of time. Our findings reveal that employees' IWB mediates the relationship between IC-enhancing HR practices and firms' CLT and that IC-enhancing HR practices are associated with firm product innovation through subsequent mediation of IWB and CLT. Further, we found that the indirect effect of IC-enhancing HR practices on a firm's CLT through IWB is moderated by transformational leadership (TL) in such a way that the mediation effect of IWB is stronger when TL exists. Therefore, the current study timely extends prior research on three fronts: SHRM, learning and transformation, and product innovation.

HR: **HR System Complementarity: Examining Effects on Firm Performance and Roles of HR Department**

Author: **Minjong Jun**, *Binghamton U.-State U. of New York*
Author: **Rory Eckardt**, *Binghamton U.-State U. of New York*
Author: **Corine Boon**, *U. of Amsterdam*

Although a lot of HR research has proposed the organizational effectiveness of HR system complementarity, there remains a need for theoretical and empirical evidence to examine how the internal fit of HR practices affects firm profits in a parsimonious way. Based on the previous findings on HR system complementarity and the ability-motivation-opportunity (AMO) framework, this study hypothesizes that there are positive effects of HR system complementarity on firm performance and that those effects are anticipated by the presence of the HR department. To examine this, this study used two different datasets: (1) the Human Capital Corporate Panel date in 2005 and (2) the U.S. longitudinal dataset involving Thomson Reuters Asset4 data on firm environmental, social, and corporate governance (ESG) and COMPUSTAT. Especially, this study utilizes the Cobb-Douglas specifications for capturing the complementarity effects of the HR system. The results supported our hypotheses. We discuss the theoretical implications of this study in terms of the contributions to the AMO framework, the consistent measurement of HR practices, and a new method for capturing the effects of HR system complementarity.

Target-Oriented HRM Systems

Session Moderator: **Promila Agarwal**, *Indian Institute of Management, Ahmedabad*

HR: **Managing Machiavellianism in Organizations: Role of Ethical Leadership and Oriented HRM System**

Author: **Promila Agarwal**, *Indian Institute of Management, Ahmedabad*

The current study investigates the significance of ethics-oriented HRM systems (EHRMS) and ethical leadership in addressing the unethical behavior of Machiavellians in professional services firms. Based on data collected from 364 employees, our results reveal that EHRMS moderates the relationship between Machiavellianism and unethical behavior, while ethical leadership does not significantly moderate this relationship. Overall, our results suggest that EHRMS have a more significant impact on managing the unethical tendencies of Machiavellians than ethical leadership, thereby suggesting that organizations need to institutionalize the ethical behavior in their EHRMS to control the unethical behavior of Machiavellians given the limited impact of ethical leadership. Implications for theory and practice are discussed.

HR: **The Effectiveness of Well-Being-Oriented Human Resource Management in the Context of Telework**

Author: **Philip Gubernator**, *Helmut Schmidt U.*
Author: **Sven Hauff**, *Helmut Schmidt U.*
Author: **Niklas Günther**, *Helmut-Schmidt U.*

Organizations can support employee well-being through a wide variety of HRM practices, which can be summarized as well-being-oriented HRM (WBHRM). It is unclear, however, whether these practices can also foster the well-being of teleworkers. Indeed, due to reduced visibility and salience, it is likely that WBHRM is less or even not effective in the telework context. To prove this assumption, we analyze how strong specific domains of WBHRM are related to different dimensions of employee well-being (including happiness, health, and relational well-being) in a non-telework and telework context. In the telework context, we also analyze the moderating role of telework intensity. Our analyses are based on data of 1,980 German employees from two consecutive points of time. Our findings reveal that the overall relationship between WBHRM and employee well-being in terms of happiness (engagement, job satisfaction) and health (strain) is not weakened in the context of telework. Nevertheless, we found differences in the importance of specific domains to foster happiness and health well-being. In terms of relational well-being, we found that WBHRM is positively related to social isolation in the telework and non-telework context (which is counterintuitive). We did not find support for any moderating effect through telework intensity.

HR: **Common Good HRM Practices and Employee Involvement in Sustainability: A Social Exchange Perspective**

Author: **Teng Li**, *Macquarie Business School, Macquarie U.*
Author: **Mingqiong Mike Zhang**, *Monash Business School*
Author: **Ying Lu**, *Macquarie Business School, Macquarie U.*
Author: **Miles M. Yang**, *Macquarie U.*
Author: **Yue Wang**, *Macquarie Business School, Macquarie U.*
Author: **Lingfeng Yi**, *Faculty of Economics and Management, East China Normal U.*

Existing literature provides limited understanding of how organizational level factors translate into more sustainable employee behaviors. Integrating institutional theory and social exchange theory, this study proposes a cross-level serial mediation model that links firm perceived institutional pressures for sustainability and employee involvement in organizational sustainability behaviors. Specifically, we propose that firm perceived institutional pressures is the main driver for firms to adopt common good human resource management practices, which initiates a micro social exchange mechanism that affects employee perceived organizational support and the subsequent employee efforts toward organizational sustainability. Empirical results based on time-lagged multi-source survey data collected from 96 firms in China support our theoretical model. With its theoretical and practical implications, this study contributes to both organizational sustainability and human resource management literature.

HR: **When SRHRM Encounters Customer Mistreatment: A Cognitive Dissonance Perspective**

Author: **Ying Zhang**, *School of Economics and Management Tsinghua U.*
Author: **Dongmei Zhao**, *Zhongnan U. of Economics and Law*
Author: **Maojiao Mei**, *Wuhan U.*
Author: **Yidong Tu**, *School of Economics and Management of Wuhan U.*
Author: **Wenxing Liu**, *ZUEL*

Although SRHRM has been found to be associated with a series of positive outcomes, we suggest an unexpected consequence might occur when considering the role of external stakeholder. Drawing from the cognitive dissonance theory, we propose a novel explanation for how the interaction between SRHRM and customer mistreatment influence emotional exhaustion and subsequently customer-oriented behavior. Utilizing a scenario experiment (Study 1), we find that SRHRM interacts with customer mistreatment to predict employees' emotional exhaustion, such that the effect of customer mistreatment on employees' emotional exhaustion will be more positive when SRHRM is high than when it is low. We replicate the results and test the role of customer-oriented attitude using a multi-time point multi-source matched field study (Study 2). Moderated mediation hypotheses are also supported across the two studies. Theoretical and empirical implications are discussed.

HR: **Rekindling Relationships: Leveraging Relationship-oriented HR After Disrupted Workplace Socializing**

Author: **Gihyun Kim**, *U. of Massachusetts, Amherst*

Workplace socializing, or friendly interactions at work, is an important informal channel for a number of organizational outcomes, such as the development of work relationships and knowledge sharing. The COVID-19 pandemic interrupted workplace socializing for many employees, but extant research does not tell us how it might be impacted by such a disruption, nor does it tell us how disrupted workplace socializing might influence future work relationships. Drawing on temporal comparison theory and appraisal theory of emotion, I examine how emotional responses to interrupted workplace socializing effects relationship behaviors when employees return to work, and under what conditions human resources practices can support rekindling work relationships. A mixed-methods study, including qualitative analysis of open-ended survey responses (Study 1) and a time-lagged survey using critical incident technique (Study 2) enhanced the understanding of the phenomenon of disrupted workplace socializing, shedding light on the important role of relationship-oriented HR in rekindling and broadening work relationship behaviors.

Strategic Human Capital Resources

Session Moderator: **Yi Ke**, *Shanghai Lixin U. of Accounting and Finance*

HR: **The Firm R&D Personnel and Investment in Exploitation and Exploration**

Author: **Yi Ke**, *Shanghai Lixin U. of Accounting and Finance*

Unlike prior studies that found a positive relationship between education level and firms' R&D investment, using a panel data of Spanish firms during the 2006 - 2011 period, we find that education stimulates a firm's exploratory R&D investment but reduces exploitative R&D investment. Moreover, it is only the high level of education, such as university degrees, that influences a firm's R&D investment. Researchers with non-university degrees (e.g. with technical qualifications) do not have a significant effect on a firm's exploratory and exploitative R&D investment. This study generates the novel insights on how the variance in firms' exploration and exploitation investment can be explained by R&D personnel of firms. Our findings have implications for research as well as for managers and policy makers concerned with the supply of individuals' education to balance firms' exploration and exploitation.

HR: **General Human Capital, Mobility Concerns and the Moderating Role of Firm-Specific Competences**

Author: **Andrea Lanza**, *U. of Calabria*
Author: **Giusy Simone**, *U. of Calabria*

Human capital and resource-based scholars maintain that human capital represents a source of competitive advantage only if it is firm-specific. However, this boundary condition raises a critical issue in those contexts wherein human capital must preserve its generality, because this is a sine qua non for seizing future employment opportunities. In particular, there are several business settings characterized by frequent mobility of human capital, wherein, although firm-specific competences may represent a source of competitive advantage, at the same time, they constitute a threat for human capital future employability, given that they require some degree of firm-level co-specialization. Accordingly, in this study, first, we endeavor to investigate whether valuable general human capital affects positively organizational results in those contexts characterized by human capital recurrent mobility. Subsequently, we commit to exploring whether firm-specific competences moderate this relationship, and how.

HR: **Structural Empowerment, Human Capital, and Organizational Innovation Capability**

Author: **Chanhyuk Shin**, *Korea U.*
Author: **DuckJung Shin**, *Korea U. Business School*

Building on workplace empowerment and human capital resource theory, we examine the role of human capital in the creation of organizational innovation capability through structural empowerment. We further propose the internal dynamic environment and strategic importance of human capital moderate the indirect effect of human capital in the relationship between structural empowerment and innovation capability. With a sample of 437 manufacturing firms representing 28,455 managers and employees from 2007 to 2019 in South Korea, we found that structural empowerment positively affects innovation capability via human capital. Moreover, we found that when structural empowerment is underpinned by a high internal dynamic environment or under high strategic importance of human capital, the indirect effect of structural empowerment on innovation capability.

HR: **The Development of Human Capital Resource Emergence and The Effects of Emergence-Enabling State**

Author: **Chun-Han Chao**, *Binghamton U.-State U. of New York*
Author: **Rory Eckardt**, *Binghamton U.-State U. of New York*
Author: **San-Fu Kao**, *National Tsing Hua U., Hsinchu, Taiwan*
Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*

This study aims to empirically investigate the effects of emergence-enabling states on human capital resource emergence (HCRE). The extant human capital resource theories suggest that emergence-enabling states bind unit members together, transforming and amplifying individual-level knowledge, skills, and abilities into a valuable unit-level human capital resource. Using data collected from basketball athletes in Taiwan, we deploy social network analysis and random coefficient modeling to test how different emergence-enabling states (i.e., trusting environment, coordination, and cohesion) can affect HCRE. Furthermore, we test the interaction effects among different emergence-enabling states. Our results indicated that standing alone, all emergence-enabling states tested in this study do not enhance HCRE. However, trust and cohesion can jointly facilitate HCRE, such that the teams with high levels of both trust and cohesion can have high HCRE. The theoretical implications are discussed.

HR: **The Role of Team Context on Performance Signals for Human Capital Resource Market Value**

Author: **Prisca Brosi**, *Kühne Logistics U.*
Author: **Marvin Schuth**, *TUM School of Management, Technische U. München*
Author: **Nicholas Folger**, *TUM School of Management, Technical U. of Munich*
Author: **Robert E Ployhart**, *U. of South Carolina*
Author: **Gilad Chen**, *U. of Maryland*

This research seeks to understand how the team context affects the market value of individual human capital resources. Specifically, we integrate signaling theory with the strategic human capital resource and team literatures to examine how team performance signals can distort or influence the market signals provided by individual performance and tenure. Using large, multi-year and multi-level data from the top five European professional football leagues, the results largely support the hypothesized meso-level model. Team performance sends an additional positive signal for individual's market value and strengthens the individual performance signal. Tenure, in contrast, sends a negative signal on individual's market value. Team performance distorts the negative signal of tenure, such that tenure is negatively related to market value on high performing teams but positively related on low performing teams. Finally, tenure weakens the individual performance signal. Together, these findings extend understanding how market values are formed by using a meso-level approach demonstrating that team membership sends independent and distorting signals on individual's market values.

Expatriate, Repatriate, and Migrant Employees

Session Moderator: **Pi-Shen Seet**, *Edith Cowan U.*

HR: **Adjustment, Satisfaction, Host Country, Embeddedness & Self-Initiated Repatriates' Turnover Intention**

Author: **Nga Thi Thuy Ho**, *Hue U. College of Economics*
Author: **Hung Trong Hoang**, *Hue U., College of Economics*
Author: **Pi-Shen Seet**, *Edith Cowan U.*
Author: **Janice Jones**, *Flinders U.*

The repatriation process often involves readjustment issues, leading to high turnover among repatriates. However, studies on self-initiated repatriates (SIRs), particularly in emerging economies, are limited. This study develops and tests a theoretical model that elucidates the factors that explain SIRs' intention to quit and the processes underlying the repatriation readjustment-turnover intention relationship in an emerging economy, Vietnam. Data was collected from 445 Vietnamese professional SIRs who worked and/or studied for extended periods overseas, and subsequently returned to Vietnam. Data was analyzed using structural equation modelling. Results indicate that work and life repatriation adjustment difficulties have significant positive effects on turnover intentions, while only repatriation life adjustment difficulties have an indirect effect via life dissatisfaction. Further, the host country locations of SIRs affect turnover intentions, with SIRs who repatriated from non-Asian countries more likely to quit their jobs than those who returned from Asian countries. In addition, SIRs' on-the-job and off-the-job embeddedness negatively moderate the influence of repatriation work and life adjustment difficulties on turnover intentions respectively. The study provides a granular understanding of the factors and pathways in this increasingly important, yet under-researched repatriation adjustment-turnover intention relationship. It shows that job embeddedness can provide social and organizational support that may help professional SIRs deal with psychological issues related to their return to their home country, thereby potentially reducing turnover among this limited, highly-skilled talent. The study also extends repatriation research on an under-researched subgroup of self-initiated expatriates (SIEs), namely SIRs, from an emerging economy context.

HR: **Do Expatriates' Benefit from Cultural Intelligence to Thrive at Work?**

Author: **Michael Gyensare**, *Edith Cowan U.*
Author: **Priyanka Jain**, *Research Associate*
Author: **Eric Adom Asante**, *Hong Kong Metropolitan U.*
Author: **Evelyn Twumasi**, *U. of Education, Winneba*

We draw from socially embedded model of thriving to posit that cultural intelligence directly, and indirectly through local embeddedness enhances expatriates' thriving at work. We argue also that the relationship between local embeddedness and expatriates' thriving at work varies across different levels of relational attachment. Using a time-lagged data of 234 expatraites in eight multinational companies (MNCs) with subsidiaries in Ghana, we found support for our hypotheses. First, cultural intelligence fosters local embeddedness, and this, in turn, enhances expatriates thriving at work. High levels of relational attachment increase the effect of local embeddedness on expatriates' thriving at work. Implications for theory and practice as well as limitations and future research directions are discussed.

HR: **Job Integration of Highly Skilled Migrants: A Process Re-examination and Conceptual Framework**

Author: **Lynn Chahine**, *TBS-Research Center, U. of Toulouse Capitole, Toulouse, France*
Author: **Akram Al Ariss**, *Toulouse Business School*
Author: **Sophie D'Armagnac**, *Toulouse Business School*

Research on highly skilled migration has highlighted the discrepancy between the qualifications of highly skilled migrants and the jobs they occupy in the host country, without conclusive examination of the processes preceding and succeeding their employment in the corporate world. This systematic literature review analyzes 61 articles and accordingly, develops a multidimensional conceptual framework that integrates these processes. Additionally, our synthesis of the literature resulted in 4 emerging dimensions which could play a role in influencing the job integration process of a highly skilled migrant: 1) skill, qualification, and education transferability, 2) sense of belongingness, 3) language fluency, and 4) job searching. Propositions and avenues for future research were suggested based on these clustered themes.

HR: **Hide and Seek: The Antecedents and Process of Knowledge Hiding**

Author: **Ruoting Zhi**, *Nottingham U. Business School China*
Author: **Martin Lockett**, *Nottingham U. Business School China*
Author: **Jingzi Zhou**, *Nottingham U. Business School China*

Knowledge transfer through expatriates to emerging economies is a key part of the value proposition of outward foreign direct investment. However, whether expatriates hide knowledge during expatriation has not attracted much attention. This paper thus explores the popularity, antecedents and process of knowledge hiding among expatriates. Through semi-structured interviews with 26 Chinese organizational expatriates assigned to emerging economies, this paper concludes that not all knowledge hiding should be seen as a negative behavior, as rationalized hiding is distinct from playing dumb and evasive hiding. A process model is also developed based on the three-dimensional antecedents of knowledge hiding (individual, organizational and contextual dimensions), in which the dynamic interaction between knowledge hiders and seekers can be analyzed, even further opening the black box of knowledge hiding.

HR: **Refugees' Workforce Integration. Implications for Human Resource Management**

Author: **Washika Haak-Saheem**, *Henley Business School, U. of Reading*
Author: **Rita Fontinha**, *Henley Business School, U. of Reading, United Kingdom*
Author: **Sarah Jastram**, *Hamburg School of Business Administration*
Author: **Ahmed Zubair Ahmady**, *Hamburg School of Business Administration*

We use the theory of practice to explore how refugees experience capital losses and gains pre- and post-employment in their new country by examining how different actors (refugees, agency employees and managers) use different strategies to help refugees accumulate capital that is most valued in helping them gain and integrate into employment. Study I highlights the challenges refugees face pre-employment and study II uncovers whether and how refugees access and accumulate capital once they secure employment. Comparing unemployed refugees to those with a job, we show that the effects of employment-related capital devaluation persist and continue to impact refugee employment negatively. Our findings pave the way for future research and provide useful implication for practitioners and policy makers.

Promotion and Career Dynamics

Session Moderator: **Yunita Sofyan**, *Xi'an Jiaotong U. School of Management*

HR: **Unboxing Cynicism-Career Satisfaction Relationship: Role of Organizational Dis/identification**

Author: **Yunita Sofyan**, *Xi'an Jiaotong U. School of Management*
Author: **Wenjie Tao**, *Xi'an Jiaotong U.*
Author: **Elisabeth Mutiara Jemadu**, *Xi'an Jiaotong U.*
Author: **Adadu Michael Ushie**, *Xi'an Jiaotong U.*

This paper used conservation of resources theory to investigate when and how organizational cynicism affects employees' career satisfaction. We examine the indirect relationship between organizational cynicism and employees' career satisfaction via knowledge hiding and postulate the moderated mediation of organizational dis/identification. Overall, using three-wave data obtained from several organizations in Indonesia, our hypotheses gain supports; in particular, our results indicate that: (1) organizational cynicism enhanced the employees' knowledge hiding, in turn, diminished employees career satisfaction; (2) when organizational disidentification is high, the relationship between organizational cynicism on employees' knowledge hiding is stronger. Conversely, when organizational identification is high, the relationship between organizational cynicism and employees' knowledge hiding is weaker; and (3) the conditional indirect effects of organizational dis/identification predicting the indirect effect were stronger (lower) when organizational dis/identification is high (low). Implications for theory and practice are also discussed.

HR: **A Qualitative Study of Frontline Employee Career Calling Development in the Hospitality Industry**

Author: **Xiao Tan**, *U. of Nottingham Ningbo China*
Author: **Shijin Zhou**, *U. of Nottingham, China*
Author: **Wu Daoyou**, -

Extant antecedents of perceiving a calling literature concentrated on stable personal factors extensively. Previous literature has largely overlooked the role of interpersonal factors, while individual's attitude and career meaning is influenced by the relationship with others. In order to address this gap, the study adopted qualitative method to explore what social factors develop and hinder individual perceiving a career calling. Based on thematic analysis of 25 hospitality frontline employee interviews, this study identified six interpersonal factors developed hospitality frontline employees' presence of career calling: mentor's career support, mentor's psychosocial support, role modeling of mentor, guanxi closeness with mentor, coworker support, and customer recognition. Four interpersonal factors are identified hindering hospitality frontline employee from perceiving their career calling: negative mentoring experience, mentor's trait neuroticism, abusive leadership, and customer mistreatment. This study contributed to calling literature and calling in hospitality by proposing a conceptual framework to help frontline employee develop career calling, and practical implication for human resource management is discussed.

HR: **Affective Employee Reactions in Career Development: An Experimental Vignette Study**

Author: **Larissa Pomrehn**, *Heinrich Heine U. Düsseldorf*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

The use of artificial intelligence (AI) in career development has expanded over time as its implementation promises to facilitate the fit between talent, positions, and careers. However, knowledge about affective employee responses to AI usage in this field is still underdeveloped compared to other HR disciplines (e.g., recruiting). This study tries to close this research gap by investigating how employees react to either human or AI decision-making in different types of managerial decisions in career development. Drawing on the affective response model, this study proposes a mediating effect of affective reactions (i.e., opportunity to perform (OTP) and emotional creepiness (EC)) between AI usage and organizational parameters (i.e., affective commitment and turnover intention). By using a vignette study with German employees (N = 190), participants were randomly assigned to a scenario where a decision (i.e., work assignment, training assignment and performance evaluation) was made either by an AI or a human. SEM results show that employees had more adverse reactions towards training assignment compared to work assignment in the AI decisions. OTP and EC showed mediating effects between the decision entity and the organizational parameters. This study found that algorithmic decision-making should be introduced carefully as adverse affective reactions rise.

HR: **Promotion Incentives, Career Decisions, and Police Performance**

Author: **Taeho Kim**, *U. of Toronto*

Public sector organizations often struggle to provide adequate promotion incentives. I study how bureaucrats' performance and career decisions respond to changes in promotion incentives. I use a unique setting in Chicago Police Department, where strict eligibility criteria suddenly reduced the promotion chances of some officers relative to an otherwise similar group of officers. The deterioration of chances to become managers induced the ineligible officers to sharply raise arrest performance and join high-performance tactical teams. In a large frontline bureaucracy, a lack of promotion opportunities may not necessarily demotivate bureaucrats who may instead pursue alternative careers as individual contributors.

HR: **Employee Fairness Reactions to Promotional Procedures: A Longitudinal Study**

Author: **Sara M. Ahmed**, *U. of Surrey*
Author: **Neil Anderson**, *U. of Bradford*
Author: **Ana-cristina Costa**, *U. of Leicester*

Employees fairness perceptions of promotional procedures are of significant importance as their reactions can have direct consequences on organizational outcomes. However, existing literature focused mainly on selection fairness at the entry level, leaving a great gap in knowledge on internal applicant reactions to the promotion process. Thus, this study contributes to this gap by examining the impact of fairness perceptions on employees' organizational outcomes in a promotion context. A longitudinal design was used to collect the data at three points of time: Time 1, before the promotion; Time 2, after receiving the promotional decisions; and Time 3, one year later. Data were collected from employees applying for a promotion (N= 253 across the three points of time). The results showed that perceptions of procedural justice predicted employees' organizational trust, P-O fit and turnover intentions in the short and long run, whereas perceptions of distributive justice were only related to applicants' organizational trust. We also found significant differences between accepted and rejected applicants fairness perceptions and reactions over time. Implications for practice and future research are also discussed.

Making Hiring Decisions

Session Moderator: **Philip L. Roth**, *Clemson U.*

HR: **Doxing, Political Affiliation, and Type of Information: Effect on Hiring Related Judgments**

Author: **Philip L. Roth**, *Clemson U.*
Author: **Phil Bobko**, *Gettysburg College*
Author: **Guohou Shan**, *Fox School of Business, Temple U.*
Author: **Emily Ferrise**, *College of Business, Clemson U.*
Author: **Rebecca Roth**, *Clemson U.*
Author: **Jason Thatcher**, *Fox School of Business, Temple U.*

Researchers have recently begun to focus on the influence of political affiliation in organizations. We investigated how doxing (i.e., using social media to post information online with malintent) influenced hiring-related decisions. Based on the integration of the political affiliation model (PAM) with a model of state suspicion, we investigated how a dox containing different types of information (affirming a political affiliation versus providing derogatory/negative information about an opposing party) and party affiliation similarity influenced hiring-related processes. Such concerns led us to expand the “decision space” of hiring-related dependent variables to include social media enabled effects related to expected organizational image and expected retaliation. Results revealed that doxing was related to expected retaliation and that information type and party similarity interacted to predict suspicion. We explain the interaction using the variable of symbolic threat. The effects of type of information and party similarity were pervasive. Our results support the similarity-attraction paradigm (and PAM) and show that expanding the theory to include suspicion helps understand politically related judgments in the enhanced “decision space” that included expected organizational image and retaliation.

HR: **Backlashes or Boosts: The Role of Warmth Perceptions in Hiring Decisions**

Author: **James Garrett Matusik**, *U. of Georgia*
Author: **Rebecca Mitchell**, *U. of Colorado, Boulder*
Author: **Russell Eric Johnson**, *Broad College of Business, Michigan State*

Both men and women who violate gender stereotypes incur backlashes, or penalties, for these transgressions. However, men who engage in warm, communal behaviors occasionally receive a boost (or benefit) for this female-stereotyped behavior. To understand how and why warmth and gender interact to predict backlashes or boosts, we integrate uncertainty reduction theory with the stereotype content model and examine this interaction. In our first study, we find that men receive a boost for exhibiting gender incongruent (i.e., high) levels of warmth (in obtaining a job offer) but women do not receive a backlash for exhibiting gender incongruent (i.e., low) levels of warmth. In our second study, we replicate and extend these findings by elucidating why they occur: because warmth reduces relational uncertainty for male applicants. In our third study, we again replicate and extend this model to identify when these effects are stronger: in male-dominated roles. Our investigation suggests that the valence of the gender stereotype violation matters for hiring decisions. Indeed, we find that displaying warmth may actually promote, rather than impede, career outcomes for men.

HR: **Testing the Efficacy of a New Faking-mitigation Strategy for Optimizing the Utility of SJTs**

Author: **Liyan Xi**, *school of management, USTC*
Author: **Qingxiong Weng**, *U. of Science and Technology of China*
Author: **Jan Corstjens**, *Singapore Management U.*
Author: **Xiujuan Wang**, *school of management, USTC*
Author: **Lixin Chen**, *U. of Science and Technology of China*

This research proposes a new and mild faking-mitigation strategy applied in situational judgment tests (SJTs), named constructed-response retest (CR-retest), which consists of first presenting SJT items with a constructed-response format followed by closed-end items with the same situation description. Two field experiments were conducted to compare the effects of this procedure with pretest warnings (another widely used procedure) on faking-mitigation, criterion-related validity, and applicants’ test perceptions. In study 1, we compared the effects of CR-retest with warnings on faking mitigation and criterion validity based on data from 733 hospital applicants. The results indicated that CR-retest was more effective in reducing score inflation and improving the criterion-related validity compared to warnings. In study 2, we compared the mechanisms and test fairness perception of the CR-retest and warning based on 204 hospital applicants. The results supported that both the CR-retest and the warning can reduce faking by triggering threat perceptions and fear emotions, but the warning evoked a higher level of fear. In addition, applicants reported more positive test perceptions on SJTs with CR-retest. Theoretical and practical implications are discussed.

HR: **The Devil You Know: Human Capital Selection in Temporary Organizations**

Author: **Mark Hand**, *Southern Methodist U.*
Author: **Sekou Bermiss**, *U. of North Carolina, Chapel Hill*

Although the use of temporary organizations and temporary organizing is on the rise, we have little theory about how human capital selection in temporary organizations occurs and how it might differ from permanent organizational forms. This paper examines the relationship between prior shared experience (team familiarity) and temporary organizational performance. We test our hypotheses in the context of political campaigns, temporary organizations with two primary goals, to maximize vote share and fundraising totals. We find mixed results; prior shared experience has an inverted u-shaped relationship with vote share, but a negative relationship or no relationship with fundraising. We theorize that for temporary organizations, hiring employees with more shared work experience can be an effective strategy for performance of temporary organizations, but may be ineffective for outcomes where network closure is detrimental to achieving organizational goals.

HR: **Family Firm Selection: A Relational Perspective**

Author: **Will Tabor**, *Mississippi College*
Author: **Darel Hargrove**, *PhD student at U. of Memphis*
Author: **Feigu Zhou**, *PhD student at U. of Memphis*

Although many scholars believe that family businesses face a human capital disadvantage when hiring nonfamily, research has returned ambiguous results. Drawing on agency theory, we propose that owner referral utilization in hiring mediates the relationship between family firm essence and firm performance. Owner referral utilization, as generated by hiring those within the firm's social network, lessens agency conflicts between owners and nonfamily members by reducing information asymmetries and goal conflicts common in the hiring process. Utilizing a sample of 194 family business owners, we found that owner referral utilization helps explain the relationship between family firm essence and firm performance. We discuss theoretical and practical implications for family business leaders.

Immigration and Expatriation Management

Session Moderator: **Dongdong Huang**, *Business School, Nankai U.*

IM: **From Recipients to Contributors: A Review of Immigrants on Firms' Internationalization**

Author: **Dongdong Huang**, *Business School, Nankai U.*
Author: **Feiyue Sun**, *Business School of Nankai U.*

Pioneering immigrant leaders, as exemplified by Elon Musk, are revolutionizing the world and setting the course for humanity's future, calling for action to recognize their contributions. In this paper, we highlight the practical and theoretical importance of analyzing immigrants' impact on firms' internationalization. Based on results of a bibliometric and keyword co-occurrence analysis, we review the major theories used in the focal literature and identify the main focus, key arguments, level of analysis, outcome predictions and firm responses. This review enables us to synthesize an interplay of theoretical perspectives and develop a context–mechanism–outcome framework to guide research on relationships between immigrants and firms' internationalization. We conclude with a set of recommendations for further research on this important and timely topic.

IM: **Expatriate-Host Country National Interactions: A Bibliometric, Thematic, and Content Analysis Review**

Author: **Michal Wilczewski**, *U. of Warsaw*
Author: **Guro Refsum Sanden**, *BI Norwegian Business School*

This article systematically reviews the literature (197 empirical articles extracted from Scopus) on interactions between expatriates and host country nationals (HCNs), published in 126 journals between 1989-2022. We combined bibliometric analysis with thematic and content analyses to identify the most impactful journals, countries, and authors, as well as to map the thematic structure of the field, explore major research findings, and establish future research directions. Subsequent analyses consistently revealed three major research streams in the field: adjustment, language and communication, and expat-HCN relationships.

IM: **Expatriates' Work Engagement in Focus. A Qualitative Exploration**

Author: **Mette Strange Noesgaard**, *Aalborg U.*
Author: **Marian Van Bakel**, *U. of Southern Denmark*
Author: **Snejina Michailova**, *U. of Auckland Business School*

Research constantly show how work engagement is critical to company success, performance, and survival. Thus, putting the worker in the front as a subject for understanding how work engagement is experienced and fostered can be vital to organization. A context that has remained below the radar of researchers studying work engagement is expatriation. Equally, the expatriation literature has not paid sufficient attention to the phenomenon of work engagement. Through e-interviews with 27 Nordic assigned expatriates in 16 host countries, we explore the factors contributing to assigned expatriates' work engagement. We identify two clusters of antecedents — general and specific — and decompose each cluster into contextual and job-related factors. We establish how these antecedents lead to absorption, dedication, and vigor as three components of work engagement and depict the links in a conceptual framework. Our qualitative study contributes to the expatriate literature by exploring the creation of assigned expatriates' work engagement and the engagement literature by exploring engagement in a new occupational work setting, namely international assignments. Implications for research and practice are outlined.

IM: **Developing a Link between the Concepts of Expatriates and Top Management Teams: A Systematic Review**

Author: **Sana Mumtaz**, *FAST National U. of Computer and Emerging Sciences, Islamabad*
Author: **Sadia Nadeem**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*

The purpose of this article is to bridge the conceptual gap between the distinct concepts of 'top management teams' (TMTs) and 'expatriates' through integrating the literature from the domains of strategic management and international business. Based on the thorough analysis and integration of the two literatures, this paper proposes the idea of a distinct role of 'expatriates in TMTs'. Based on the use of systematic review methodology, the researchers initially reviewed 5000+ articles from six databases published in the last 32 years i.e. between 1990 and 2021. After thorough analysis, 153 articles were included and analyzed in the final review process and themes were generated. The main topic(s) of discussion in each article was identified which led to four main themes namely: (i) the characteristics of individuals in each group; (ii) the challenges they face; (iii) how work assignments impact these individuals; and, (iv) how they impact organizational outcomes. Literature was analyzed to compare differences between expatriate managers and TMT members under each of these themes, and then discuss whether and how expatriates in TMTs are distinct from expatriate managers and other TMT members. Potential areas of research and theoretical perspectives which can help future research in examining the new themes for deepening understanding of the distinct role of expatriates in TMTs are also discussed.

Culture, Institutions and Entrepreneurship Across Borders

Session Moderator: **FRANCIS DONBESUUR**, *U. of Leicester*

IM: **Risk-taking Culture and Innovation Performance: A Cross-cultural Study of the Role of Resilience**

Author: **Yian Chen**, *Aalto U. School of Business*
Author: **Carl Fey**, *BI Norwegian Business School*

Product innovation is of strategic importance to firm innovation, which plays a crucial role in the growth and development of firms. Developing product innovation requires employees to take risks on explorative tasks with creativity. Moreover, firms must also deal with unexpected external market turbulence, often by innovating, to thrive in today's increasingly dynamic operating environment. Organisational resilience helps firms to absorb disruptions and adapt to changes. Drawing on Teece et al.'s (1997) Dynamic Capabilities View, we characterise risk-taking organisational culture and organisational resilience as important dynamic capabilities vital to product innovation and develop a conceptual model where organisational resilience mediates the relationship between risk-taking organisational culture and product innovation. Using empirical survey data from 123 Nordic firms and 200 Chinese firms, we use structural equation modelling for hypothesis testing and cross-country comparison. The two- group analysis reveals that risk-taking organisational culture is positively related to organisational resilience for both Nordic and Chinese firms, whereas organisational resilience only positively influences Chinese firms' product innovation. Finally, we find full mediation of organisational resilience for Chinese firms and non-mediation for Nordic firms, indicating that organisational resilience is more desirable for product innovation in highly dynamic environmental contexts.

IM: **Transnational Entrepreneurship in Business and Management Research**

Author: **Ricardo Ferraz Raats**, *Tallinn U. of Technology*
Author: **Wolfgang Dieter Gerstlberger**, *Tallinn U. of Technology*

The article reviews the literature on transnational entrepreneurship in the areas of business and management using bibliometric methods to provide an updated perspective on the field. It brings supplementary visual information for the analysis and explores the relationships among 98 documents obtained from the Web of Science and SCOPUS databases to advance our understanding of what is strategic about such literature. The objectives defined for this study help to describe how publications concerning the evolution of scientific production are organized, citation analysis, co-citation networks, topics trends, and thematic evolution; We identified the most relevant authors, and sources and discussed future research opportunities. To achieve the defined objectives, the database analysis focused only on articles listed in the Chartered Association of Business Schools' journal guide. Results point to the fact that transnational entrepreneurship is a fragmented field and has grown in scope during the last twenty years to include themes that relate diversity of networks, mixed- embeddedness, and regional transformation to immigrant-owned firm performance. We conclude with considerations for deeper analysis regarding the changes in the actual international business environment and its underlying assumptions affecting individuals, companies, and home and host countries.

IM: **Inter-organizational Social Capital, Ambidextrous Innovation and Post-entry Expansion Performance**

Author: **FRANCIS DONBESUUR**, *U. of Leicester*
Author: **Nadia Zahoor**, *Queen Mary U. of London*
Author: **Richard Nyuur**, *Northumbria U.*
Author: **Kalama Adefe**, *U. of Central Lancashire*

This study develops and tests arguments of the effects of three dimensions of inter-organizational social capital (ISC) – relational, cognitive and structural social capital on ambidextrous innovation and the effect of the latter on post-entry expansion performance. We test these relationships on a sample of 257 internationalized SMEs operating in the UK. Findings from the study indicate that all three dimensions of ISC have positive effects on ambidextrous innovation and that ambidextrous innovation in turn drives both initial and subsequent expansion performance of the sampled firms. The findings further revealed that, ambidextrous innovation mediates the relationships between all three dimensions of ISC and post-entry expansion performance. The findings extend the international entrepreneurship and network research streams by explicating the unique role of ISC in enhancing SMEs' ambidextrous innovation and post-entry expansion performance.

IM: **Institutional Support in SME Internationalization: Road to Rise or Demise?**

Author: **Aleksi Niittymies**, *Aalto U., Department of Management Studies*
Author: **Mika Yrjölä**, *Tampere U.*
Author: **Abdollah Mohammadparast Tabas**, *U. of Oulu*
Author: **Kalle Pajunen**, *Tampere U.*

This paper contributes to firm internationalization and international entrepreneurship research by explaining why governmentally sponsored institutional support helps SMEs to expand to foreign markets in some cases but not in others. Based on a qualitative analysis of 51 key informants representing internationalizing SMEs, we found that the specific implications of institutional support are driven by conditions emerging from complex interplay between two spectrums related to the relationship between the supporting institutions and the SMEs: (1) the closeness of their relationship and (2) the specificity of resources that could help SMEs in their internationalization.

IM: **Friend or Foe? Political Affinity and Foreign Subsidiary's CSR Strategy (WITHDRAWN)**

Author: **Wen Helena Li**, *UTS Business School, U. of Technology Sydney*
Author: **Shan Zhu**, *School of management, Zhejiang U.*
Author: **Vikas Kumar**, *U. of Sydney Business School*

In the context of political hostilities and economic nationalism, we examine whether a foreign subsidiary's country of origin, in particular its level of political affinity with the host country, matters for its corporate social responsibility (CSR) strategies in the host country. Political affinity is defined as the similarity of national interests in global affairs. Integrating international relations literature and international CSR literature, we argue that with decreasing political affinity, the host country stakeholders pose increasing legitimacy concerns and hostilities against foreign subsidiaries because of their home countries. As a result, foreign subsidiaries tend to initiate a high degree of CSR strategies to buffer themselves from the heightened legitimacy challenges in the host country. Furthermore, we expect the level of CSR needed in response to low-level political affinity is not constant but depends on the external environment that is shaped by the CSR of their compatriot firms and the local institutional development in the host country. We submit that performing below its compatriot firms' CSR aggravates the need to increase CSR levels in response to the same level of weak political affinity while performing above its compatriot firms' CSR does not have symmetric influence. In addition, we expect that a region with a well-developed institutional environment can alleviate a foreign subsidiary's legitimacy concerns by local stakeholders and thus decreases the need for CSR to address low political affinity. We found strong support for our arguments after analyzing a unique sample of foreign subsidiaries of large multinationals in China from 2010 to 2019.

IM: **Institutional Tension Within a Country and Foreign Subsidiary's Response (WITHDRAWN)**

Author: **Jingwen Sha**, *Ivey Business School*

The year 2006 is a shifting point for China because it is the first time for central government to consider "sustainability" and "environmental protection" as important agenda in the Fifth Year Plan (2006-2010). However, given the evaluation system of Chinese officials and the fiscal pressure on local government, such environmental initiative from central government lacks political legitimacy for local officials at city level who care more about fiscal revenue and economic performance of their jurisdiction. With such institutional tension between central and local government, understanding how foreign subsidiaries respond is important given that government at both levels are powerful institutional constituent for legitimacy attainment. This paper employed the data of foreign subsidiaries in China from 2006 and 2009 to test how field-level attributes (i.e., the political ties of city leaders, the prefectural priority on fiscal revenue) and firm-level attributes (i.e., whether the firm is located in an industrial park, whether the firm is a joint venture with centrally or provincially controlled SOE) influence firm's response to this institutional tension within the political hierarchy. Some hypotheses are supported, suggesting that how foreign subsidiaries experience and respond to the central-local tension varies based on the field-level and firm-level attributes.

IM: **Air Pollution Effect on Expatriate Assignments: An Interactive Perspective on MNEs and Expatriates**

Author: **Jae C. Jung**, *U. of Missouri, Kansas City*
Author: **DuckJung Shin**, *Korea U. Business School*
Author: **Guo-Liang Jiang**, *Sprott School of Business, Carleton U.*
Author: **Maoliang Bu**, *Nanjing U.*

Despite the devastating effects of air pollution on human health, it is still unknown how local air pollution affects multinational enterprises (MNEs) and their employees. Building upon the micro-foundation of Transaction Cost Economics (TCE), we propose expatriate deployment as an interactive contractual process between MNEs and expatriates. We contend that because local air pollution in the host country causes expatriate candidates' reluctance to relocate, MNEs incur additional transaction costs in expatriate deployment. Our empirical analysis, using samples of Japanese-owned subsidiaries in China, shows that local air pollution in the host country negatively affects expatriate assignments in subsidiaries. We further find that the effect of air pollution is contingent on several external and internal factors. Specifically, the negative effect of local air pollution on expatriate assignments is mitigated when MNEs have more experience in the local environment. Yet, the negative effect of air pollution is more pronounced when MNEs belong to low-pollution industries and when local talent is the most available.

IM: **On Socially Responsible GVC Governance Structures: Outsourcing or Internalization?**

Author: **Simon Iskander**, *Smith School of Business, Queen's U.*
Author: **Anthony Goerzen**, *Queen's U.*
Author: **Christian Geisler Asmussen**, *Copenhagen Business School*

To minimize costs, the traditional approach used by multinational corporations (MNCs) to optimize price and quality in the production and delivery of goods and services has been achieved through hierarchical and arm's length contractual means. This approach combines with the factors that propel economic globalization, yielding complex global value chains (GVCs). However, an emerging challenge facing lead MNCs is that they are unable to control the social and environmental implications of the activities throughout their GVCs. The traditional approach to deal with these issues has been that of "cascading contracts" where responsibility is handed along the GVC sequence of firms. Yet, consumers, civil society, and regulators are increasingly holding lead MNCs morally and financially responsible for social and environmental problems even when these issues do not arise within the MNC's hierarchical or contractual boundaries. To provide new insights into the organization of MNCs, we develop a formal analytical model that combines cascading responsibilities with the value-adding and value diminishing factors that have begun to arch from the "first mile" of the GVC directly to the lead MNC.

Cross-Border Governance Modes

Session Moderator: **Chiung-Jung Chen**, *Chung Yuan Christian U.*

IM: **The Impact of Past Successful Entry Modes on Choice of Subsequent Equity-based Entry Modes**

Author: **Chiung-Jung Chen**, *Chung Yuan Christian U.*

This study examines whether firms use rational or irrational organizational inertia to make mode decisions and uses organizational inertia theory to develop the hypothesis to explore the impact of past successful entry modes in foreign market on subsequent selection of equity-based entry modes. The results show that a firm's past successful mode and past preferred mode both have a positive impact on subsequent entry mode decisions in global and regional markets. In addition, past successful modes have a higher impact on subsequent entry mode choice than past preferred modes, and past successful modes strengthen the effect of past preferred modes on the subsequent mode choices. This signifies the importance of examining the long-term performance of past modes. Further, the past successful mode of a firm in general is the past preferred mode, indicating that most Taiwanese firms tend to apply rational inertia and past successful experience in making foreign direct investment decisions. This study concludes with theoretical and managerial implications and suggestions for future research.

IM: **Stock Market Valuation on the Sequence of Divestiture and Greenfield Investment Announcement**

Author: **Nate Xu**, *U. of Illinois at Urbana-Champaign*
Author: **Kun Yao**, *U. of Illinois at Urbana-Champaign*

From the resource redeployment perspective, this study examines when investors appreciate firms' sequential moves of divestitures and subsequent greenfield investments. Focusing on firms' resources and capabilities, this study maintains that investors value firms' sequential moves when the firms are capable of managing the process of redeploying the freed-up resources efficiently, the information regarding the sequence is available to the investors, and the external uncertainty does not substantially increase the cost of the redeployment. Using a sample of US pharmaceutical firms' divestitures and greenfield investments, this study finds empirical evidence for this proposition. Overall, this study suggests that joining international business (IB) and strategy scholarship helps advance theories and provide more insights into IB phenomena.

IM: **Can Friend at Home Help Me Go Abroad? Effects of Hometown Network on Firms' Foreign Location Choice**

Author: **Yi Xiang**, *Xi'an Jiaotong U.*

We develop a theoretical framework to explain how hometown network among firms affects MNE entries into a foreign country. We leverage insights from the social network theory to argue that common province of home country among firms can become unique channels of knowledge, providing firms with idiosyncratic benefits in foreign places, and overcome liability of outsidership. Such connections to network centrality of province should positively influence location choice through degree of knowledge sharing. Furthermore, if a firm is state-owned and the industry where it belongs to is more competitive, the positive influence of the network centrality of province on the location choice of firms is weakened; while if a firm is from a province where the merchant culture is strongly advocated, the positive influence of the network centrality of province on the location choice of firms is strengthened. Using data from a sample of foreign subsidiaries established in the Belt and Road countries by firms from China between 2013 and 2020, the results support those predictions. The study adds to research on social network, location choice strategy, and informal institution.

IM: **The Path of Offshore Outsourcing Innovation to International Expansion: The Real-Options View**

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

In this study, we explore two research questions: Why do firms adopt offshore outsourcing to conduct offshoring innovation under uncertainty? How do firms strategically respond to their choices over time? Drawing upon the perspective of real options, we argue that firms will be more likely to adopt the governance mode of offshore outsourcing for offshoring innovation when environmental uncertainty increases. In addition, a firm's experience in offshoring innovation can negatively moderate the main effect of environmental uncertainty on the likelihood of adopting offshore outsourcing to conduct offshoring innovation. Moreover, the increase in a firm's learning scope stemming from offshore outsourcing is more likely to lead to future expansion of offshoring innovation. Using the data from Offshoring Research Network, we find the central premises of this study validated and supported.

Perceptions, Socialization and Awareness in MNEs

Session Moderator: **Hae-jung Hong**, *NEOMA Business School*

IM: **The Person-Perception Process and its Influence on Social Interpersonal Dynamics in Global Teams**

Author: **Hae-jung Hong**, *NEOMA Business School*

Multiculturals—individuals with notable cultural knowledge, skills, abilities, and other characteristics—are widely assumed to contribute to the effectiveness of global teams. This paper nuances this general belief by focusing on multiculturals' cognitive processes and their influence on social interactions in global teams. Based on a 20-month in-depth ethnographic study in three MNEs, I find that multiculturals and monoculturals have different cultural self-concepts. Moreover, these self-concepts influence their person-perception processes in global teams—multiculturals use specification in their cognitive processing, while monoculturals use categorization. These different cognitive processes influence social-interaction behaviors (inclusive versus exclusive) and, consequently, affect global teams' effectiveness.

IM: **Exploring Motivations and Outcomes of Language Brokerage in Multilingual Work Environments**

Author: **Youjeong Song**, *U. of Minnesota Carlson School of Management*

Following globalization, organizations and employees have been increasingly exposed to multilingual environments. Linguistically diverse work environments increase demands for employees with language skills, bringing distinctive opportunities and demands to language-skilled employees. This paper introduces the concept of language brokerage – a process occurring when an individual uses language skills in multiple languages to mediate information flow between different language users in multilingual work settings and facilitate communication. We develop and present a model of language brokerage, which theorizes antecedents, modes, and outcomes of language brokerage, explaining how and why language-skilled individuals utilize their linguistic ability to execute roles or requests imposed or to achieve personal- or group- goals. The model emerged from a qualitative inductive study of professionals who are proficient in two or more languages and who have full-time work experience in multilingual workplaces. We found meaningful themes in terms of language brokerage antecedents, methods, outcomes, and contingent factors. We discuss theoretical and practical implications of the model.

IM: **How the More Risk-Aware Post-2022 Global Environment Affects Multinational Company Strategies**

Author: **Farok Contractor**, *Rutgers U.*
Author: **Luciano Ciravegna**, *INCAE Business School*

The more risk-conscious post-2022 international business environment will alter multinational enterprise (MNE) strategies in terms of supply chain, geopolitical and other risks. (Buckley, 2020; Contractor 2021; and Ciravegna & Michailova, 2022. MNEs are today more alive to opportunism by partners, unexpected governmental risks, or just the inability of partners to comply with promised deliveries in supply chains. Transaction Cost Economics (TCE) assumes MNEs to be affected by bounded rationality (the reduced ability to foresee future eventualities and incomplete information) and by bounded reliability (where the MNE's contractual partners or affiliates, despite good intentions, may not be able to deliver reliably on commitments). Heightened risks in a VUCA world will move companies towards a more cautious approach. How do MNEs search for the most efficient mechanisms to counter geopolitical, environmental, supply chain risks, as well as ESG pressures, whilst also engaging in entrepreneurial resource orchestration to create and capture value across borders (Casson, 1979; Hennart, 1982; Toyne, 1989; Rugman & Verbeke, 1992, 2003; Buckley & Casson, 1998, 2003; Verbeke & Kano, 2015)? Aggregate indicators of globalization suggest that globalization is not in retreat. However, the post-2022 era is likely to mark a partial retreat from the previous strategy of extreme global cost-cutting and efficiency-seeking by fine-slicing and geographically spreading value chain components to operations in many countries. The new environment calls for a more risk-aware orchestration that trades away extreme optimization, for somewhat greater redundancy in return for more assured reliability and more predictable rationality, and augmenting relationships with partners and governments. This new risk averse international business environment suggests several areas for further research.

IM: **How Do People Perceive MNCs? Development and Validation of a Multidimensional Attitudes toward MNCs**

Author: **Shuojia Zhang**, *Australian National U.*
Author: **Sarbari Bordia**, *Australian National U.*

MNCs have rapidly expanded worldwide. As external agents, MNCs inevitably bring different cultures, values, and styles of governance into the host countries. Such differences can influence individuals' attitudes toward MNCs. These attitudes can have significant consequences for the MNCs in the host countries regarding talent attraction and retention, stakeholder relationships, and consumer choices, ultimately leading to financial viability. Yet, there is little clarity on host nationals' attitudes toward MNCs. Thus, this study creates and validates a scale on individuals' attitudes toward MNCs in host nations based on 1404 participants. First, we identify items for each scale component (abductively developed based on the literature and 55 inductive interviews). Then, we conducted a series of assessments of psychometric properties. Finally, we retested the scale and its antecedents and consequences via criterion-related and incremental validity tests. We conduct this research in the context of China. China is one of the largest recipients of FDI, with MNC units from various countries. Hence, China serves as an excellent context to study attitudes toward MNCs. This research contributes to the international business literature by presenting a contemporary and usable scale measuring host nationals' attitudes toward MNCs, the antecedents, and the consequences.

MNEs as Networks

Session Moderator: **XIAOCHEN CHANG**, *U. of Barcelona*

IM: **Network-based Subsidiary Autonomy: An Integrative Review and Research Agenda**

Author: **XIAOCHEN CHANG**, *U. of Barcelona*
Author: **Elio Shijaku**, *U. of Barcelona*
Author: **Fariza Achcaoucaou**, *U. of Barcelona*

The concept of autonomy is of critical importance in the study of subsidiary management. Despite the fact that most previous studies have focused on the interaction between dual network embeddedness and subsidiary autonomy on performance, it remains unclear how these two constructs are related and how they affect performance. To better explain its mechanism, we develop a novel integrative framework that clarifies high-quality international journal publications over the last 30 years. According to our framework, the bargaining process between subsidiary autonomy and HQ coordination mechanisms mediates the relationship between network embeddedness and performance outcomes. By taking advantage of subsidiary autonomy, our integrative review explains how, why, and when network embeddedness affects performance outcomes. Furthermore, we list specific moderators involved in the process. This facilitates the exchange of ideas among scholars from different fields and therefore contributes to the development of further theories.

IM: **A Network-centric Perspective on Foreign Direct Investment**

Author: **Soni K. Jha**, *Fox School of Business, Temple U.*
Author: **Snehal Awate**, *Indian Institute of Technology, Bombay*
Author: **Ram Mudambi**, *Temple U.*

Foreign Direct Investment (FDI) remains a preferred mode for multinational enterprises to access international markets and resources. There are vigorous debates in the academic literature about virtually every aspect of FDI, ranging from what it measures to its effects on both home and host economies. In this paper, we argue that many of the debates concerning FDI arise from the traditional “home-host” bilateral context in which it is analyzed. We argue that many of these debates can be resolved by incorporating the multilateral effects of FDI. The structural positions of source countries in the global economic network are the key metric associated with the outcomes of the host country. We use a quantitative network-centric lens to model the multilateral connectivity amongst nations engendered by FDI. Specifically, we use a panel data set of 170 countries spanning two decades to demonstrate that (a) the quality of FDI measured by the network position of source countries and (b) the diversity of FDI measured by the number of source countries is correlated with superior economic outcomes. The extant literature based on bilateral home-host FDI analysis only measures the volume of inward FDI and fails to capture both these critical metrics.

IM: **Entrepreneurial Orientation and Export Performance: Different Effects of Learning and Networking**

Author: **Shanika Perera**, *U. of Waikato*
Author: **Paresha N. Sinha**, *U. of Waikato*
Author: **Antoine Gilbert-Saad**, *U. of Waikato*

This article identifies two learning types—experiential and vicarious learning—and networking mechanisms—formal and informal networking—to propose how they can enhance the entrepreneurial orientation to lead to superior export performance in SMEs operating in emerging markets Based on the Ambidexterity theory and dynamic capability theory, we conceptualise a mediation model. The data were collected through a structured questionnaire and analysed using partial least squares - structural equation modelling. A sample of 150 SMEs in Sri Lanka supported the direct impact of entrepreneurial orientation and export performance, as well as the mediating role of experiential learning and formal networking. Further, the study failed to establish the mediating role of vicarious learning and informal networking in the relationship between entrepreneurial orientation and SME export performance. We conclude by emphasising that both learning and networking practices are not equally important in improving export performance in SMEs in emerging markets.

IM: **How do Domestic Networks Influence the Internationalisation Propensity of Chinese SMEs?**

Author: **Caifei Chen**, *Leeds U. Business School*
Author: **Alessandro Giudici**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Andrew Jones**, *Brunel U. London*

This study addresses the research question: ‘How do domestic networks influence Chinese SMEs’ internationalisation propensity?’ It contributes to the literature by analysing the impact of different types of domestic formal (sponsorship-based linkages and partnership-based linkages) and informal networks on the SMEs’ internationalisation propensity in emerging markets. Drawing on network perspectives and social network theory, this study builds on prior work that suggest that informal and formal domestic networks facilitate Chinese SMEs’ internationalisation activities in the early stages. Second, this study examines that domestic formal sponsorship-based linkages are stronger than domestic formal partnership-based linkages for Chinese SMEs’ internationalisation propensity. Informal networks are stronger than formal networks. Third, the moderating role of absorptive capacity establish in informal networks. Lastly, it proves that there are no mutually reinforcing effects between informal and formal networks and the internationalisation propensity of SMEs.

IM: **The Impact of Culture-related Linguistic Skills on Skilled Migrants' Workplace Integration in MNCs**

Author: **Jinju Xie**, *Hiroshima U.*
Author: **Vesa Peltokorpi**, *Hiroshima U.*

International business (IB) research suggests that employees with high corporate language proficiency are more integrated into workplaces in multinational corporations (MNCs). Yet, culture-related language skills have received less attention in IB research. This study uses the language attitude perspective and interviews with 168 skilled migrants (SMs) to examine how and why culture-related language differences affect SMs' workplace integration in local MNCs in Japan. Our analysis shows that three culture-related language differences – honorifics, indirect expressions, and empathic expressions – increased SMs' categorization as outgroup members by local employees and negative evaluations in terms of their professional and managerial abilities. Despite having high general local language proficiency, the disadvantaged positions of SMs were sustained in MNCs due to negative evaluations of actual/perceived differences in cultural-related language skills by local employees.

IM: **A Behavioral Perspective on General Manager Succession in Underperforming Foreign Subsidiaries**

Author: **Liang Li**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Vanessa C. Hasse**, *Ivey Business School*
Author: **Marketa Rickley**, *U. of North Carolina, Greensboro*

Underperformance is one of the most salient drivers of managerial succession. Yet, its role in influencing general manager (GM) succession in foreign subsidiaries of multinational enterprises (MNEs) has received limited attention and remains poorly understood. This is despite the fact that subsidiary management is critical to MNE success. To fill this important gap, we draw on the performance feedback perspective to argue that MNE decision makers interpret subsidiary performance against aspirations to make subsidiary GM succession decisions. Specifically, we hypothesize that a greater performance attainment discrepancy (a) between the focal subsidiary's performance and its historical aspiration and (b) between the focal subsidiary's performance and its social aspiration increases the likelihood of GM succession. However, as a critical contingency factor, we expect that cultural distance between parent home country and the subsidiary host country obfuscates MNE decision makers' interpretations of performance feedback signals, weakening the relationship between subsidiary underperformance relative to its historical and social aspirations and GM succession. Using Toyo Keizai Needs Merged Database from 1991 to 2020, we find empirical support for our predictions. We discuss the implications of these results and suggest directions for future research.

IM: **Language Proficiency or Cultural Intelligence? A Meta-Analysis of Effects on Intercultural Outcomes**

Author: **Kok Yee Ng**, *Nanyang Technological U.*
Author: **Thomas Rockstuhl**, *Nanyang Technological U.*
Author: **Catherine Wu**, *Nanyang Technological U.*
Author: **Soon Ang**, *Nanyang Technological U.*

Social identity theory suggests that language proficiency and cultural intelligence (CQ) are important predictors of intercultural effectiveness. However, existing research is equivocal about which is more important for intercultural effectiveness. We address the research question with a meta-analysis of 65 field samples (N = 18,237). Consistent with our hypotheses, results showed that both language proficiency and CQ predict job performance and cultural adaptation. These effects are qualified by two boundary conditions: 1) communication context (high- versus low context), and 2) the type of language proficiency (host-country, English, multilingualism). More importantly, relative importance analyses show that CQ is a stronger predictor of job performance and cultural adaptation. We discuss the implications of these findings for theorizing about language proficiency and cultural competence effects and suggest directions for future research.

IM: **"It is Difficult to Understand Them..."- The Role of Non-native Accents in Global Virtual Teams**

Author: **Carlo Brighi**, *Gustavson School of Business, U. of Victoria*
Author: **Michal Szymanski**, *Moscow School of Management Skolkovo*

This study explores the role of non-native accents in communication within global virtual team (GVTs). We conducted 43 interviews with multilingual team members and found that non-native accents are an important factor both in successful communication and in processes of social categorization. Through our data, we show how non-native speakers attempt to rationalize and limit accent-based miscommunication and biases through the use of three different coping mechanisms. Our study advances language-sensitive research in international management by moving the focus away from proficiency and demonstrates how non-native accents might undermine communication and play an important role in interpersonal relationships within GVTs.

States, Firms, and Sustainability

Session Chair: **Anna Grosman**, *Loughborough U.*
Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Panelist: **Aldo Musacchio**, *Brandeis International Business School*
Panelist: **Ilya Okhmatovskiy**, *Nova SBE, U. Nova de Lisboa*
Panelist: **Gerhard Schnyder**, *Loughborough U.*

State capitalism, the influence of the government in economic activity, is witnessing a renewal worldwide as governments increase their regulation of private firms and direct intervention as owners of companies and investment funds. In this symposium, we discuss how the state interacts with firms to improve sustainability. The panelists use evidence from studies of state-owned and state-affiliated firms, as well as privately-owned companies, operating in different regions of the world to discuss novel ways in which the government and firms collaborate to address sustainability challenges. They also discuss how states can influence firms in their sustainability practices indirectly through regulations, subsidies, and taxes. They reflect on past advances in various aspects of state capitalism and provide suggestions to guide future research on this increasingly important topic.

Experiential Teaching Approaches

Session Moderator: **Christopher Craig**, *Murray State U.*

MED: **A STEM-Based Approach to Sustainability Learning**

Author: **Christopher Craig**, *Murray State U.*
Author: **Ismail Karabas**, *Murray State U.*

The complexity of sustainability-related challenges in the workforce necessitates skills and competencies in multiple disciplinary areas, including STEM areas. The application of STEM skills and competencies to the sustainability subject-area is known as STEM-based sustainability. STEM-based sustainability curriculum has previously been linked to improved cognitive sustainability learning, but not affective learning. Accordingly, we designed, developed, implemented, and evaluated a STEM-based sustainability M.B.A. course titled Managing Sustainability targeting improvement in cognitive and affective sustainability learning. Using pre-/post-tests and treatment/control groups, evaluation results indicate that students who participated in the curriculum improved cognitive learning but control students did not. Affective learning improved over twice the magnitude for treatment students than control students. To help instructors and administrators adopt STEM-based sustainability curriculum, we provide (1) a course description, outline, and learning objectives, (2) module-level learning objectives, (3) peer-to-peer discussion questions, and (4) learning activity descriptions.

MED: **Putting the 'Executive' Back in the EMBA: The Role of Learning Goals in Professional Development**

Author: **Pasi Aaltola**, *U. of Jyväskylä*
Author: **Eric H. Kessler**, *Pace U.*
Author: **Ari Manninen**, *U. of Jyväskylä*

This paper seeks to address the professional development of executive MBA (EMBA) students holistically and from the learners' perspective. The aim is to examine how more experienced managers outline their goals for professional development and how this in turn should be taken into account in designing the program pedagogy. We discuss the learning and development of these senior professionals as being more leadership oriented and wisdom based than knowledge based. We study participants in an internationally accredited executive education program using a consistent theoretically constructed comprehensive approach to managerial learning. The results of our qualitative research approach, developed in grounded theory following the Gioia method, shed light on this process and promise to (a) help executive learners outline key goals for their professional development as well as (b) guide educators in the further development of holistic learning in executive programs.

MED: **Keeping it Complex in Large Classroom Environments**

Author: **Nicola Mountford**, *Maynooth U.*
Author: **Gillian Moran**, *Maynooth U. School of Business, Ireland*

Beneath requests for ethical, theoretical, and practical graduates is a cry for adults who understand and can cope with complexity but teaching complex concepts is a complex process. The challenge, therefore, is to simplify basic concepts from a pedagogic perspective, while at the same time maintaining and "conveying their subtlety and ambiguity" (Dehler & Welsh, 1993, p. 80). Experiential learning has been credited with enhancing student engagement to combat "creeping passivity" and the belief among students that they are not "intellectually responsible for themselves" (Cutler, 2007, p. 6; Donovan & Hood, 2021). However, while experiential learning approaches offer a route towards teaching complexity, the implementation of experiential teaching itself may be difficult in the modern school of business where class size, particularly at undergraduate level, must be a factor in curriculum development and delivery (Cullen, 2011; Lyons & Buckley, 2021). This paper develops a conceptual model for how and where complexity intersects with large classroom teaching based on Daft's (1992) dimensions of complexity and suggests different approaches to maintaining the complexity required for experiential learning in the large classroom environment.

MED: **A Service-Learning Approach to Managing Diversity in International Business Education**

Author: **Hyejin Cho**, *State U. of New York (SUNY) Farmingdale*
Author: **Jing Betty Feng**, *State U. of New York (SUNY)- Farmingdale*

This paper highlights challenges facing today's international business (IB) education in developing a global mindset: 1) the complex personal backgrounds from the increasingly diverse college student demographics and 2) teaching materials focused on western MNEs practices and theories. To overcome these challenges, we propose a virtual service-learning project that focuses on forming partnerships to assist small businesses located in remote, rural and under resourced regions. Through the project students were able to engage in intercultural interactions while applying IB concepts to a small business setting. In a pilot study, we find that this project helps appeal to a diverse student background and allows students to draw connections from their own unique backgrounds and skillsets throughout the process of developing a global mindset. The result of the project demonstrates a positive impact on both students' academic and professional learning outcomes.

Breaking the Frame: Innovative Approaches to Learning and Development

Organizer: **Tina Miedtank**, *Nijmegen School of Management*
Presenter: **Tina Davidson**, *Erasmus U. Rotterdam*
Presenter: **Alexia Mary Tzortzaki**, *Cardiff Metropolitan U.*
Presenter: **Carolin Ossenkop**, *Nijmegen School of Management, Radboud U. Nijmegen*
Presenter: **Aurora Díaz Soloaga**, *Almaty Management U.*
Presenter: **Tracy F. Chang**, *Rutgers U.*
Presenter: **Dirk C. Moosmayer**, *Kedge Business School*
Presenter: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*

Scholars and practitioners agree that effective leadership and diversity management in today's complex and ambiguous business environment requires more than learning about and mastering particular sets of behaviors. Rather, effective leadership and diversity management is rooted in being able to lead from one's true self, as well as being able to effectively apply such complex and multi-faceted self-understandings adaptively to changing demands and circumstances. Whereas scholars have called for innovative developmental approaches—especially in the realm of leadership development and diversity management (e.g., Kark, 2011; Kulik & Roberson, 2008)—empirical work heeding such calls remains scarce (Vogel et al., 2022). By presenting research on the conceptual underpinnings and practical effectiveness of innovative/non-traditional leadership development practices, this presenter symposium aims to broaden the horizon regarding the "how" of learning and development processes. Taken together, the research presented in this symposium aims to expand our current theoretical understanding of how employees, leaders, and organizations can learn about and develop their understanding of important organizational phenomena, such as leadership and diversity management.

Panelist: **Onnolee Anne Nordstrom**, *North Dakota State U.*
Discussant: **Daniel Wadhwani**, *U. of Southern California*

Building on current debates in management and entrepreneurship scholarship, this panel symposium aims to merge conversations on the organizational dynamics of community entrepreneurship with the role of history and legacies in entrepreneurial action. Our motivation is to foster dialogue on the role that historical trajectories and legacies play in the creation, maintenance, and sustainability of community-based enterprises (CBEs). This symposium is guided by the research question, "How do community histories and legacies influence the creation, maintenance, and sustainability of CBEs?". To broaden the scope of our conversations, this proposal brings together seven scholars at different career stages engaged in community entrepreneurship research in several parts of the world, extending from Maori communities in New Zealand (Henry, Dana, & Murphy, 2018) the Hutterite in Canada (Nordstrom, McKeever, & Anderson, 2020), the Zapatistas in Mexico and urban movements in Barcelona (Giovannini, 2016, 2020), rural communities in Germany (Hertel, Bacq, & Belz, 2019), indigenous and non-indigenous communities in South America and Canada (Peredo, 2001, 2003, 2004; Peredo & Chrisman, 2006; Peredo & McLean, 2010), rural communities in Scotland and UK (Haugh, 2007; Haugh, 2021), and ongoing research on Italian CBEs (Rocchino). Our discussant Dan Wadhwani brings extensive research experience in understanding the role of history in organization and entrepreneurship scholarship (Wadhwani, Kirsch, Welter, Gartner, & Jones, 2020; Wadhwani, Suddaby, Mordhorst, & Popp, 2018).

Social rank is a fundamental element of interpersonal interaction at work. It can come in different forms, including disparities in power, status, and leadership. Our symposium aims to bring new perspectives to the study of how social ranks are formed, portrayed, and reacted to at work. The four talks address important questions, including how people's gender influences the personal traits that help them attain social rank, how people with different social identities describe their paths to leadership success, how people's beliefs about the moral effects of having high social rank influence their preferences for organizational policies, and how people's status characteristics influence their reactions to supervisor feedback. These talks provide more nuanced views about social rank dynamics and open fruitful directions for research on social rank at work.

New Frontiers in Community Research: Community Experiences Within & Beyond Organizational Boundaries

Organizer: **Reut Livne-Tarandach**, *Manhattan College*
Moderator: **Reut Livne-Tarandach**, *Manhattan College*
Panelist: **Neil M. Boyd**, *Bucknell U.*
Panelist: **Sargam Garg**, *California State U. Sacramento*
Panelist: **Gretchen Marie Spreitzer**, *U. of Michigan*
Panelist: **Kimberly Rocheville**, *Creighton U.*
Panelist: **Cristina Gibson**, *Pepperdine Graziadio Business School*

Humans have a fundamental need to belong and to be a part of a community, yet the changing nature of work offers limited opportunity to create the social glue that binds us together, and thus exacerbates social disconnection. Putting the workers front and center inspires us to acknowledge workers' needs and calls our attention to explore how community experiences can be cultivated within and beyond organizational boundaries. Our panel symposium brings together diverse panelists who are leaders in community research to spark generative, interactive conversation about new frontiers of community experiences at work. Together we'll explore (1) how community experiences emerge in crisis situations, (2) unpack the practices employees and leaders can engage in to seed and nurture community experiences in organizations and (3) explore how cultivating community experiences can be achieved in hybrid, remote work settings and non-traditional work contexts. Considering ways by which community experience can transcend far beyond the organizational boundaries, we'll examine how organizations can best partner with external actors to unlock community organizing that can tackle grand challenges of our society and explore how corporate-community co-development can create synergistic settings to cultivate prosperity and social sustainability.

Situation, Motivations, Cognition: Reconsidering the Fundamentals of Sensemaking

Organizer: **McKenzie Lloyd-Smith**, *U. of Toronto, Rotman School of Management*
Moderator: **Marlys K. Christianson**, *U. of Toronto*
Panelist: **Michelle Andre Barton**, *Johns Hopkins Carey Business School*
Panelist: **Samer Faraj**, *McGill U.*
Panelist: **Claus Rerup**, *Frankfurt School of Finance & Management*
Panelist: **Timothy J. Vogus**, *Vanderbilt U.*

Sensemaking is a critical organizational activity that occurs throughout an organization, from supporting leadership in making strategic decisions to underpinning the construction of organizational actors' identities. Much of our understanding of sensemaking comes from studies of short-term, face-to-face events and assumes relatively homogenous cognitive processes across actors. Today's reality is often far removed from that, leaving us with little understanding of how individuals engage in collective sensemaking over time and physical space, and how individual motivations and cognitive differences interact to complicate that sensemaking. The goal of this panel is to (re)consider contemporary issues of sensemaking by exploring three topics: situation, motivations, and cognition. By exploring these topics, the six panelists, each leading scholars in the sensemaking domain, share their views on enduring challenges within sensemaking theory and how these might be addressed. Through group discussions and the panelists' own thoughts, this symposium promises to further our understanding of sensemaking by exploring both the situated and psychological nature of sensemaking within contemporary organizational contexts.

Religion, Business, and Society: Exploring Values and Influences

Session Moderator: **Stephen L. Hawkins**, *U. of Wisconsin - Milwaukee*

This session will cover research papers that examine the intersection of religion, business, and society. Specifically, the papers will focus on the influence of religious values on business angel investment, the impact of the Jewish ethos Tikkun Olam on business practices, antecedents of exploitation among parish pastors due to anomie in American churches, and the importance of faith in determining race and happiness in the United States. Attendees will gain insights into the complex interplay between religion, society, and business, and how these factors can shape individual and organizational behavior. Overall, this session will offer a thought-provoking discussion on the role of religion in the modern world.

MSR: **Race and Happiness in the United States: The Importance of Faith**

Author: **Randi L. Sims**, *Nova Southeastern U.*
Author: **Baiyun Gong**, *Nova Southeastern U.*
Author: **Will Hawks**, *Nova Southeastern U.*

Although Black Americans face systemic racial discrimination and inequities throughout their lives, they report the same level of happiness as White Americans. Apparently, some unique factors play distinctive roles in the experience of various social groups, as they overcome challenges in their lives. In this study, we establish religious faith as one of the factors that support Black Americans in their pursuit of happiness. We employ resilience theory to explore the process through which economic security influences happiness among U.S. residents. We propose that people rely on their sense of internal control and religious faith to enable positive adaptation to cope with stress caused by low economic security. Findings from the World Values Survey (N = 426) suggest that, while control moderated the effect of low economic security on neighborhood safety among White Americans, it did not play a significant role for Black Americans. In contrast, religious faith plays an important role in the resilience process of Black Americans, moderating the negative impact of low economic security and neighborhood safety on their feelings of happiness. We conclude with the discussion of the importance of faith, as it changes the narratives of life stories and allows a positive perspective in spite of disadvantaged environmental conditions.

MSR: **Religious Values and Business Angel Investment The influence of the Jewish Ethos Tikkun Olam (WITHDRAWN)**

Author: **Gilberto Sarfati**, *FGV-EAESP*
Author: **Ethel Berdugo**, *FGV EAESP Sao Paulo School of Business Administration*

This study investigates the role of religious values in the investment decision-making process of Jewish business angels. We show that respondents' worldview is influenced by Jewish spiritual principles, specifically Tikkun Olam, which affects their investing behavior by providing them with motivational and attitudinal orientation. In-depth interviews were conducted with 15 business angels based in France, Brazil, and Israel. Using thematic analysis, we identified Tikkun Olam-related dimensions on which respondents' decision-making tended to rely. Themes such as collective cohesion, ethical guidelines, improving the world, never-ending search for perfection, and belief in mystical purpose took the leading role over traditional wealth- maximization factors expected in investment decision-making. This work shows that non-rational, social identity-related factors support business angels' decision-making and help them cope with early-stage investment's high risk and uncertainty.

MSR: **Anomie in American Churches: Antecedents of Exploitation among Parish Pastors**

Author: **Stephen L. Hawkins**, *U. of Wisconsin - Milwaukee*

"Calling" provides motivation for one's work, yet research indicates it also increase susceptibility to exploitation. Complexities arise when recognizing not all professions are equally porous. Subject to the constraints of "gateless" total institutions, clergy have limited external networks and work alternatives, despite high education. Clergy frequently face the difficult choice of either remaining where they feel undervalued or denying their authentic calling. When clergy choose the latter, congregations lose highly trained leaders in a period defined by anomie. Addressing this concern requires identifying the antecedents of exploitation commonly experienced by individuals with a sense of calling aimed at reducing voluntary turnover. This paper contributes to the literature by proposing two antecedents to workplace exploitation pertaining to calling: (1) participation in a total institution and (2) modest independent work experience. These antecedents are mediated through networking opportunities and self-perceptions of job alternatives, which are moderated by the specificity of one's calling. Keywords: anomie, work as calling theory (WCT), clergy, exploitation, voluntary turnover

Research on Individual Behavior in OB

Session Moderator: **David Cross**, *Southampton Business School, U. of Southampton*

OB: **Conflicts of Client Commitment: Experience, Bases, and Action Strategies**

Author: **David Cross**, *Southampton Business School, U. of Southampton*
Author: **Juani Swart**, *U. of Bath*

Individuals can commit to multiple targets and these targets can interact in dynamic ways to patinate the everyday experience of work and life. While commitments are known to interact, including conflict, empirical evidence on the causes of commitment conflict and that which is multi-party and intrapsychic is lacking. Even less developed is knowledge of the action strategies and coping mechanisms that individuals deploy in relation to conflicts of commitment. Third, we currently know little about workplace commitment outside of the boundaries of organisational employment. Drawing on a pragmatist-informed qualitative study and interviews with 50 independent consultants, we address these issues and investigate the causes and action strategies used in cases of conflict of client commitment. In our model, we show that these are based on time, knowledge, and expectations and develop the responses of avoiding, turning the conflict into a synergy, preventing, and changing the nature of the relationship. We further develop an understanding of how these conflicts become triggered and manifest, the situated and deep-structured responses, and then how the commitment becomes dormant or is no more. Our paper develops important knowledge on the interaction of commitment in a dynamic system of multiple targets. We respond to calls to examine commitment conflict, investigate workplace commitment experiences through qualitative methods, and consider commitment in alternative yet increasingly common ways of working. Throughout, we differentiate commitment conflict from dyadic conflict, and from that centred on roles, teams, and identity thus developing commitment conflict as a discrete and standalone concept.

OB: **The Bright Side of Commuting: The Impact of Commute Enjoyment on Post-commute Recovery and Work**

Author: **Vivien Lim**, *National U. of Singapore*
Author: **Egan Lua**, *Georgia Institute of Technology*
Author: **Thompson Teo**, *National U. of Singapore*

This paper examines the spillover of commuting on work and well-being. Premised upon conservation of resources theory, we propose that commute enjoyment, a positive affective commute appraisal and resource, buffers the negative effect of engaging in work-related thoughts and activities (WRAT) during the commute on post-commute recovery. Further, we examine a three-way interaction between WRAT, commute enjoyment, and the direction of the commute on post-commute recovery. We also examined the moderated mediation effect of post-commute recovery on the interaction between WRAT and commute enjoyment and its outcomes, specifically work engagement and cognitive fatigue. Utilizing an experience sampling methodology, data on commute enjoyment, recovery and outcomes were collected over a period of seven workdays from 106 public transit commuters in Singapore. Results showed that the interaction effect of WRAT and commute enjoyment on post-commute recovery differed between the commute to and from work. In addition, post-commute recovery mediated the interaction between WRAT and commute enjoyment on work engagement and cognitive fatigue in the morning but not cognitive fatigue in the evening. Results of the study suggest that employees should actively reframe their commute to view it as an important resource for alone time.

OB: **The Double-edged Effect Of Green Performance Management On Employee Non-green Behavior**

Author: **Yufei Cheng**, *Lingnan U.*
Author: **Wei Liu**, *Shandong U., China*
Author: **Yu KOU**, *Lingnan U.*
Author: **Zhang Shujie**, *Shandong U., China*
Author: **Yifeng Chen**, *Lingnan U.*
Author: **Nan Wang**, *Lingnan U.*

Along with the growing public concerns over significant environmental issues, the interest of organizations go “green” is increasing. As employee’s behavior plays an important role in promoting organizational sustainability, organizations begin to highlight employee non-green behavior in the workplace. However, current studies in environmental fields mainly focus on employee pro-environmental behaviors, with little research focusing on employee non-green behavior. Based on ego depletion theory and norm activation theory, this study explores the double-edged effect of green performance management on employee non-green behavior by testing the mediating roles of emotional exhaustion and personal green norms as well as the moderating effect of employee attribution. Data were collected from 257 employees of a company in North China, and were analyzed by SPSS 24.0 and Mplus 7.4. The research results show that: first, green performance management could increase employee non-green behavior by aggravating their emotional exhaustion; second, green performance management could decrease employee non-green behavior by activating their personal green norms; third, the total indirect effect of green performance management on employee non-green behavior is positive; fourth, employee’s substantive and symbolic attribution of green performance management play moderating roles in this indirect process. The theoretical and practical implications are discussed.

OB: **Government Subsidies, Executive Incentives and Green Innovation Performance**

Author: **Chao Liu**, *Shandong U., China*
Author: **Kunru Han**, *Shandong U., China*
Author: **Jingshu Du**, *EMLV Business School, Paris*

Because of increasing environmental concerns, green innovation has been a hot topic in recent years. However, the existing research overlooks the joint impact of both internal and external factors on green innovation. Based on the resource-based theory and principal-agent theory, this paper applies the moderated mediation effect model on a panel data of Chinese manufacturing firms to empirically test the impact of government subsidies, firms' R&D funding intensity as well as executive incentives on green innovation performance in the manufacturing industry. The results show that: (1) Government subsidies have a positive impact on green innovation performance. (2) Firms' R&D funding intensity mediates the relationship between government subsidies and green innovation performance. (3) Executive compensation incentives positively moderate the impact of government subsidies on green innovation performance, whereas executive equity incentive has a negative effect. (4) The opposite moderating effect of executive compensation incentives and equity incentives works mainly on the relationship between firms' R&D funding intensity and green innovation performance. That is, executive compensation incentives positively regulate the relationship between firms' R&D funding intensity and firms' green innovation performance, while the effect of executive equity incentives is the opposite. This paper adds to the literature on green innovation, especially in the context of green innovation in China's manufacturing industry.

Participant: **Nikos Dimotakis**, *Oklahoma State U.*

Our symposium organizes conceptual and empirical research addressing the microfoundations of team-level constructs. By integrating individuals, dyads, and teams into their theories, each of our collected papers shows how team phenomena cannot be viewed as simple aggregates of member characteristics or interactions. We showcase work which demonstrates how researchers can adopt microfoundations perspectives to better understand how surprising outcomes emerge in groups that are hard to predict based on knowledge of individual members.

Panelist: **Amanda Bullough**, *U. of Delaware*
Panelist: **Peter W. Dorfman**, *New Mexico State U.*

Organizations continue to globalize despite declarations of its demise or the global pandemic. Working effectively with a multitude of stakeholders despite hiccups and obstacles requires collaboration and rigorous studies of the various aspects of international management. GLOBE 2020 offers rigorous and contemporary insights on national culture and trust. In this panel, we will provide a review of our theoretical framework and research methodology of the GLOBE 2020 research study and share the latest findings regarding cultural norms with illustrative countries/societies and share insights regarding culture dimensions, geography, and gender and other demographics across countries. We also seek to gain feedback from the audience on the early findings of this study that will help with its interpretation and dissemination techniques.

OB: **When and Why Implementing Bad AI Algorithms Feels Worse Than Self-initiating Them**

Author: **Bar Shlomo**, *Ben-Gurion U. of the Negev*
Author: **Amos Schurr**, *Ben Gurion U. of the Negev*
Author: **Simone Moran**, *Ben Gurion U. of the Negev*

Algorithm regulation – i.e., the question of who should be authorized to decide which algorithms to implement, portrays a key ethical debate regarding AI. We focus on AI programmers, who play a central role in AI deployment processes. Findings of three studies suggest that compared to Low-agency programmers who are instructed which algorithm to implement, high agency programmers who freely choose which algorithm to employ, engage in a pre-justification process, and are thus better equipped to overcome cognitive-dissonance when encountering fatal unfavorable outcomes, and feel less responsibility, guilt, and regret about both their programming and the outcome.

OB: **Apprehending the Workplace Digitalization from a Future-Oriented Imagination: A Triptych Perspective**

Author: **Hongxia Peng**, *Rouen U.*

Scholars have highlighted the potential of future-oriented imagination (FOI) for research on the future of workplaces. Recognizing the relevance of existing studies, this research contributes to the management literature by examining the future of workplace digitalization from a spatio-tempo-cognitive triptych (STECOT) perspective. Empirical data were collected through a FOI-based process and analyzed from the STECOT perspective. The contributions of this work are thus threefold. First, it proposes a new perspective—formalized by the STECOT framework—for studying the workplace and its digitalization, and identifies three distinct forms of the future workplace from this perspective. Second, it pinpoints, by extending existing knowledge (Weick, 2002, 2006), the puzzling and organizing effects of the utilization of FOI in the future-making of the workplace. Third, it provides new knowledge on the future of workplace digitalization by scrutinizing the spatio-tempo-cognitive dynamics (re)framing the workplace and its digitalization. Keywords: Future-oriented imagination, workplace, digitalization, spatio-tempo-cognitive dynamics, Triptych

OB: **When Ghost Work Becomes (Relatively) Good Work**

Author: **Benjamin Shestakofsky**, *U. of Pennsylvania*

Recent scholarship on the social production of artificial intelligence (AI) systems has drawn attention to the hidden labor that enables innovation. Research on computational labor—routinized, information-processing tasks that support software algorithms—focuses on popular platforms designed to connect workers with employers. These studies have raised important concerns about wages and working conditions while spurring speculation about how changes in regulations and platform design might improve workers' experiences. Yet because they focus on platform-based workers, rather than the organizations who hire them, they tend to overlook how organizational design can shape computational workers' experiences. This article uses an anomalous case to advance an underexamined perspective on how computational labor arrangements may be improved. I draw on 19 months of participant-observation research inside a tech startup I call AllDone, which employed 200 computational workers in the Philippines. Rather than sourcing anonymous, temporary workers to complete computational tasks, the company used an online freelancing platform to recruit and build long-term relationships with workers. In the article's first empirical section, I examine how this arrangement addressed some of the problems commonly associated with computational labor while leaving others unaddressed. I then turn to the team's organizational culture of familial love, which endowed work with meaning while simultaneously obscuring how the company's labor practices perpetuated vast inequalities. Although this study suggests how computational labor can be structured in ways that advance organizational goals while simultaneously supporting the dignity of workers, it also reveals the durability of the disparities that characterize tech companies.

OB: **Algorithmic Management and the Objectification of Workers**

Author: **Shane Schweitzer**, *NUS Business School*
Author: **David De Cremer**, *NUS Business School*

The introduction of algorithmic management—AI technology functioning as supervisor to human workers—may influence how workers subordinate to algorithms are perceived. Across four experiments, we explored these perceptions and show that algorithmic management leads to objectification of workers. Objectification of workers, in turn, predicted multiple downstream consequences: workers were assigned more dull work tasks and viewed as having less leadership potential, and in an experiment with professional recruiters, job candidates with prior experience being managed by an algorithm were offered lower starting salaries. Including humans in the algorithmic management process (i.e., augmentation) did not mitigate the effect on objectification. In our final experiment, data from subordinate-supervisor dyads showed that algorithmic management was positively related to objectification of subordinates, which in turn predicted subordinates' perceptions of being objectified. We discuss the theoretical and practical implications of our findings.

Taking Back Control at Work: Employee Bootlegging, I-deals, and Anti-Work Orientation

Session Moderator: **Jinzhao Qu**, *School of Labor and Human Resources, Renmin U. of China*

OB: **How Does CPB Stimulate Employee Bootlegging? The Role of Work Engagement and Uncertainty Avoidance**

Author: **Jinzhao Qu**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Maria Tims**, *Vrije U. Amsterdam*
Author: **Zhijie Xing**, *Nanjing U.*
Author: **Lihua Zhang**, *Renmin U. of China*

Research concerned with bottom-up innovation has focused on the understanding the phenomenon of bootlegging, which refers to individual proactive research and development activities that employees carryout without formal approval or support. While much is known about the positive consequences of bootlegging for organizations, little is known how to create environment which would spark individual bootlegging. In this paper we propose that coworkers proactive behaviors can significantly influence employee bootlegging. Building on the job demands-resources theory, we propose that coworker proactive behavior will lead to employee bootlegging through work engagement. We further propose that employee uncertainty avoidance as a boundary condition for such an association. We test the model on three-wave, time-lagged data from 234 employees nested in 39 teams. The results of multilevel regression analysis showed that coworker proactive behavior was positively related to employee bootlegging through work engagement. The effect of work engagement on employee bootlegging was stronger when employee uncertainty avoidance was high rather than low. Additionally, the indirect effect of coworker proactive behavior on employee bootlegging through work engagement was stronger when uncertainty avoidance was high instead of low. We conclude this paper with a discussion of theoretical and practical implications and recommend directions for future research.

OB: **Coworker Instigated Bootlegging: The Roles of Leadership and Goal Orientation**

Author: **Jinzhao Qu**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Yan Shao**, *U. of Groningen*
Author: **Maria Tims**, *Vrije U. Amsterdam*
Author: **Lihua Zhang**, *Renmin U. of China*

With a growing recognition that bootlegging happens without managers' awareness, we focus on examining the effects of coworkers' behaviors on employee bootlegging. Drawing on social information processing framework and social comparison theory, we propose our theoretical model that coworker proactive behavior will relate to employee bootlegging through instigated learning goal orientation (LGO) and performance-avoid goal orientation (PAGO), we further propose that employees' perception of transformational leadership as a boundary condition for such an association. We tested our hypotheses in a three-wave time-lagged study. The results showed that coworker proactive behavior relates positively to employee bootlegging via LGO and PAGO. The effect of PAGO on bootlegging was stronger when transformational leadership was high rather than low. The indirect effect of coworker proactive behavior on bootlegging was also stronger when transformational leadership was high rather than low. While these effects of LGO was insignificant. These findings of this study offer a novel perspective on the antecedents of bootlegging and provide evidence to the important effects of coworkers' behaviors on employee bootlegging.

OB: **I-deals Making: A Review and Sequential Framework of the Creation of i-Deals**

Author: **Imogen Sykes-Bridge**, *Australian National U.*
Author: **Prashant Bordia**, *Australian National U.*
Author: **Rajiv Amarnani**, *U. of Western Australia*
Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*

Idiosyncratic deals (i-deals) allow individual workers to customize their work conditions, with mutual benefit for both employees and their employers (Rousseau, 2005). I-deals are a quintessential method for organizations to put their workers "front and center". Since the original foundation and classification of i-deals phenomena, over 100 empirical papers have been published on the topic of i-deals. With such a wealth of i-deals knowledge accumulating, we present an empirically- and theoretically-informed sequential framework which describes the process through which i-deals are created and implemented – from employees' i-deal motivations, to i-deal request and receipt, and i-deal outcomes. We use this framework to structure our literature review, compiling empirical evidence from nearly two decades of i-deals research. This structured literature review makes two key contributions to the i-deals literature. First, we contribute to a richer and more realistic understanding of i-deals, by inviting researchers and practitioners to consider i-deals development as a holistic process that unfolds sequentially. Our sequential model provides a straightforward map of i-deals creation, within which existing research can be arranged and identified. Second, with over 55 papers published since the last major literature review of i-deals (Liao et al., 2016), a fresh literature review is timely. To date, many different facets of i-deals have been examined, driving a strong need for an integration based on a sequential framework. We discuss significant areas for theoretical expansion that are highlighted by our model and propose key topics for future research directions.

OB: **Not About the Grind: Emergence and Consequences of Employee Anti-Work Orientation**

Author: **Jared Scruggs**, *The Wharton School, U. of Pennsylvania*

Millions of workers are pushing back on the notion that "work is worth" in the ever-growing anti-work movement. Despite the prevalence of anti-work sentiments among real workers, little extant research has investigated if "anti-work" is just a pop culture label applied to workers who are dissatisfied with present economic and working conditions, or if it is a new, meaningful construct. In this paper, I address this problem by conceptualizing anti-work orientation as a new construct with strong normative traditions, defined as a contentious rejection of the belief that work is foundational to one's self-worth or worth to society. I differentiate anti-work orientation from related concepts (e.g., alienation, work centrality, anti-capitalism) and identify its unique relationships with antecedents (low status, work beliefs, and repeated justice violations) and outcomes (counterproductive and organizational citizenship behavior). In a two-part mixed-method study, Study 1 uses latent Dirichlet allocation (LDA) topic modeling to code a qualitative dataset of 189,436 posts from the Reddit anti-work community and reveal themes of status, injustice, work and meaning. Study 2 validates a new scale of anti-work orientation, finding across two independent samples that this orientation is common in full-time working US adults, distinct from related constructs, and holds unique relationships.

Who Am I? New Directions in Identity Research

Session Moderator: **Jenna-Lyn Rounsaville Roman**, *Kennesaw State U.*

OB: **To Conceal or Reveal? Personal Identity Networks and the Management of Devalued Identity at Work**

Author: **Paul Ingram**, *Columbia U.*
Author: **Yixi Chen**, *Columbia Business School*

As personal identity becomes more prominent, issues of identity management matter more and more to individuals and organizations. Among the most important questions of identity management is "what elements of personal identity do people conceal at work?" We use a novel whole-person identity network approach, combined with natural-language processing of identity content to offer an original answer to this question. We consider both the motivation and the capacity to conceal an identity element. In terms of motivation, we find that devalued identities, which we measure as an identity element's association to the broad cultural concept of stigma and to lower social class standing, are predictors of concealment. We also find that more important identity elements in terms of structural proximity to the core self are less likely to be concealed. Regarding capacity to conceal, we find that structural indicators of an identity element's salience, and autobiographical interdependence with other elements, which represent social and cognitive challenges to concealment, negatively predict concealment.

OB: **Concealable Social Identities and the Workplace**

Author: **Jenna-Lyn Rounsaville Roman**, *Kennesaw State U.*
Author: **Nicholas P. Salter**, -

All individuals in the workforce are made up of a complex array of overlapping identities, some of which are apparent to others that they interact with and some of which are concealable. Recent research has focused on aspects of certain identities of interest (e.g., race, sexual orientation, disability status) to diversity, equity, and inclusion scholars, while less theoretical and empirical ground has been covered for all workers. We introduce a framework for understanding how individual preferences and organizational factors may influence relationships between the concealable social identities of workers and their experience of social connectivity and belonging at work to job performance. We will outline future research opportunities for scholars and practical implications for organizations based on this framework.

OB: **The Role of Place Identity in Worker Geographic Preference and Psychosocial Benefits**

Author: **Kimberly K. Merriman**, *U. of Massachusetts, Lowell*

Recent management research demonstrates that, for some workers, living wherever they geographically choose holds personal utility that in turn benefits the workplace. This presents a black box regarding the underlying mechanisms at play. This study examines the construct of place identity as a distinct factor in geographic preference and an antecedent of psychosocial benefits that spill to the workplace. Place identity as established in environmental psychology represents incorporation of a geographic place into personal identity. It is distinguished herein from the more frequently studied financial and relational motives for worker geographic preference. To empirically parse this distinction, I analyze individual qualitative descriptions about intended or completed moves at a time of heightened geographic flexibility. This is followed with a second sample to examine place identity's conceived psychosocial benefits in the form of individual subjective vitality and willingness to help colleagues. Together this research substantiates place identity as consequential for management scholarship and extends understanding of this extant construct's motivational underpinnings. Implications for research and practice are discussed, including relevance to management discourse on human sustainability and the intertwined nature of work and nonwork lives.

OB: **Should I Stay or Should I Go? The Contextualized Intersectionality Among Global Professionals**

Author: **Xin Lucy Liu**, *Columbia Business School*
Author: **Michael W. Morris**, *Columbia U.*
Author: **Yihan Becca Wang**, -

After studying or working for a period in the United States, young professionals from all over the world face a migration dilemma--whether to stay or go. One of the largest groups, East Asians, are found to face drawbacks (e.g., bamboo ceiling) in their prospect in the United States, yet it is unclear how gender, another prominent status characteristic, plays a role in their status calculus and migration decision. Taking heritage culture as an important context into the intersectional analyses, we propose that compared to East Asian women, East Asian men can expect more social privileges in heritage countries and more social penalties from incongruence with the agentic norm in the United States. The expected status differentials in heritage countries and the host country may motivate East Asian women rather than East Asian men to stay. As the visible representation of a group in public fields can be one source of the expected social status, in Study 1a-1b, we found that the male advantages in Congress positions and Netflix exposures disappeared or became reversed among East Asians in the United States. In Study 2, by analyzing global MBA job placement records from an elite business school across five years, we found actual rates of staying in the United States differ sharply by gender, especially among East Asians. In Study 3, a survey on another MBA cohort, we found that the greater rate of female stayers is explained by their social status expectancy differential in their heritage countries and the United States.

Transformational and Visionary Leadership

Session Moderator: **Gang Wang**, *Florida State U.*

OB: **Transformational Leadership, School Climate, Work Engagement and IWB: A Serial Mediation Analysis**

Author: **Furkan Khan**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Kathan Shukla**, *Indian Institute of Management, Ahmedabad*

Teachers' innovative behaviour plays an important role in improving the school performance. In spite of the importance of teacher innovative work behaviour, little is known about the different factors that are associated with innovative behaviour. Anchoring this study into the JD-R theory, we attempted to explain the relationship between transformational leadership, school climate, work engagement and innovative work behaviour. In order to explain how the transformational leadership style of school principal influences innovative behaviour, this study first examines the relationships between these constructs, and then develops a serial mediation model by fully integrating these links. We collected the data from 755 senior secondary school teachers working under Directorate of Education, New Delhi, India and adopted a mix of structural equation modelling (SEM) and ordinary least squares regression (OLS) to measure the relationship between these constructs. The result shows that transformational leadership is positively associated with innovative work behaviour through serial mediator school climate and work engagement. This study theoretically contributes to school leadership and teachers' innovative work behaviour literature by revealing sequential mechanism between transformational leadership and innovative work behaviour, and offers practical implications by focusing on the importance of transformational leadership. Limitations of this study and future research directions have been discussed below in the later sections of the paper.

OB: **The Role of Leader Emotional Labor Strategies in Follower Perceptions of Charismatic Leadership**

Author: **Gang Wang**, *Florida State U.*
Author: **Scott Seibert**, *Rutgers U., School of Management and Labor Relations*

Unfortunately, after decades of research on charismatic leadership, we have relatively little knowledge of the tactics leaders use to be seen as charismatic. By integrating the dramaturgical perspective of charismatic leadership with Gardner, Fisher, and Hunt's (2009) model of leader emotional labor strategies, we develop a theoretical framework in which we examine the main and interactive effects of three leader emotional labor strategies (i.e., display of genuine emotions, deep acting, and surface acting) on follower perceptions of charismatic leadership. The results based on employees and their supervisors in three organizations show that leader surface acting was negatively related to follower perceptions of charismatic leadership. Further, the three emotional labor strategies interactively affected follower perceptions of charismatic leadership, such that when leader surface acting was infrequent, leader deep acting strengthened the positive relationship between leader display of genuine emotions and follower perceptions of charismatic leadership, whereas when leader surface acting was frequent, leader deep acting weakened this relationship.

OB: **A Future-Oriented Emotion Process: How Visionary Leadership Contributes to Team Member Proactivity**

Author: **Wenjing Cai**, *Vrije U. Amsterdam*
Author: **Yangyi Chen**, *Nanjing U. School of business*
Author: **Xueling Fan**, *Nanjing U. School of business*

This multi-study research examines the relationship between visionary leadership and employees' team member proactivity via exploring the mediator of anticipated emotions and the moderator of conscientiousness. Study 1, an experimental study, employs a scenario-based design to show that visionary leadership contributes to employees' team member proactivity by increasing their anticipated positive emotions. Study 2 utilizes multisource data from 206 employees and their direct supervisors to constructively replicate and expand the results of Study 1. The results show that the indirect effect of visionary leadership on employees' team member proactivity through anticipated positive emotions is stronger when employees are more conscientious. These findings contribute to visionary leadership literature by clarifying why (through anticipated positive emotion) and when (high conscientiousness) visionary leadership is positively related to employees' team member proactivity. Theoretical and practical implications are discussed.

OB: **Can Team Proactivity Compensate for Differentiated Transformational Leadership in Work Teams?**

Author: **Hai Viet Nguyen**, *National Sun-Yat Sen U.*
Author: **Chia-Yen Chiu**, *U. of Adelaide*
Author: **Hao-Chieh Lin**, *National Sun Yat-Sen U.*

While previous research has identified transformational leadership as an essential factor of team effectiveness, recent studies have also highlighted that team managers usually face a dilemma in practicing this leadership style. On the one hand, because of individual focus, transformational leaders can provide personalized support that directly benefits individual team members' development and growth. On the other hand, the perceived within-group variability of the leadership support received by members – that is, differentiated transformational leadership – can have detrimental impacts on teams and organizations. Drawing on the conservation of resources theory and contingency leadership perspectives, we propose that team proactive personality (i.e., the mean of individual members' proactivity ratings) acts as a buffer to alleviate the potential negative influence of a leader's differentiated transformational leadership. Using a time-lagged survey of 92 professional work teams in Taiwan, we find that differentiated transformational leadership can damage team helping norms. Furthermore, team members' satisfaction with supervision suffers, especially in teams with a low proactive personality. However, this harmful effect is neutralized in high proactive personality teams. Our research contributes to the literature of transformational leadership and team leadership. We provide concrete advice for team leadership development and team leaders' career advancement.

Understanding Employee Engagement at Work

Session Moderator: **Jian Shi**, *Vrije U. Amsterdam*

OB: **Embracing Employee Vulnerability: Individual Differences in Infectability Shape Employee Engagement**

Author: **Jian Shi**, *Vrije U. Amsterdam*

The COVID-19 pandemic has posed a significant impact on employees' work patterns and work experiences worldwide. However, it remains unclear whether some employees fared worse than others during the pandemic and what role of individual differences in vulnerability played in shaping work engagement. Drawing from evolutionary psychology literature on the behavioral immune system, we argue that a fundamental factor in how employees coped with the pandemic is the extent to which they perceived themselves as vulnerable to infectious diseases. Employees with higher susceptibility to infectious diseases were expected to upregulate concerns about workplace safety and to engage less with their work during the pandemic, as a functionally avoidant response to the COVID-19 threats. Additionally, we argued that a health-oriented leadership style could decrease safety concerns and increase work engagement, especially for the most vulnerable employees. To test these assumptions, we conducted a three-wave field survey and a scenario experiment with parallel designs on working adults in the United Kingdom at different stages of the pandemic. The results partially supported our predictions. We discuss the theoretical and practical implications of these findings for fostering a safe and healthy post-pandemic workplace, especially for the most vulnerable employees.

OB: **Antecedents of Financial Wellbeing & Consequences on Work Engagement: A Moderated Mediation Approach**

Author: **Bright Malema Mbeye**, *National Dong Hwa U.*
Author: **Chia-Wu Lin**, *National Dong Hwa U.*
Author: **Pon-Han Lee**, *National Dong Hwa U.*
Author: **Chih-Ying Wu**, *Department of Administration, National Taipei U.*

Employee work engagement is as important determinant of organizational effectiveness. Despite the many external and organizational antecedents of work engagement that have been studied, personal level antecedents may also play an important role. Using an approach of moderated mediation, this study examines how self-control and frugality as antecedents of subjective financial well-being influence employee work engagement. A total of 297 valid responses were collected from full-time employees working in diversified industries. The results show that both self-control and frugality positively influence subjective financial wellbeing and work engagement, and subjective financial wellbeing partially mediates the relationship between both self-control and frugality on work engagement. Moreover, the positive effect of self-control on work engagement is moderated by mindfulness. Furthermore, the study confirmed the moderating role of mindfulness on the indirect effect of self-control and frugality on work engagement through subjective financial well-being when the level of mindfulness is higher. The findings of the study enhance the literature on work engagement by suggesting person-level characteristics as antecedents of work engagement. Furthermore, the findings provide actionable insights for managers in various industries to understand that employees' traits and financial wellbeing can be considered as indicators of employees' outlook and behavior towards work.

OB: **Heading in My Headphones: The Negative Effects of Music Listening on Perceived Work Engagement**

Author: **Oguz Gencay**, *U. of Maryland R.H. Smith School of Business*
Author: **Trevor Foulk**, *U. of Maryland*
Author: **Michael Schaerer**, *Singapore Management U.*

Personal music listening is ubiquitous in contemporary organizations. Extant research suggests that music listening is beneficial at work because it can help employees concentrate and focus on their tasks; however, the present research argues that taking third-party reactions into account may reveal surprising consequences for music listeners. Specifically, building off of attribution theory, we argue that while employees indicate that they listen to music to help them focus, observers ironically perceive music listeners as less engaged with their work, which, in turn, leads to decreased peer support behaviors (i.e., less training, motivating, compensating, and more rejection) from observers toward music listeners. Furthermore, we propose that making extrinsic motives for music listening (e.g., listening to music to focus) more salient for observers can mitigate the negative effects of music listening at work. Five experimental studies (three preregistered) provide support for our hypotheses.

OB: **Looking Before Leaping: The Impact of Work Engagement on Passive Job Search**

Author: **Mike Halinski**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Jennifer A. Harrison**, *EM Normandie Business School, Métis Lab, France*
Author: **Janet Boekhorst**, *U. of Waterloo*

Although research has started to show that work engagement relates to careers, research has not fully accounted for the nuanced effects of work engagement on specific career behaviors, such as passive job search behavior. Drawing from broaden-and-build theory, we posit that work engagement encourages employees to broaden their skills through personal development and, subsequently, employees use those skills to build their resources through passive job search behaviors. We further propose that protean career orientation moderates this indirect effect. Study 1 (n = 104) reveals a positive direct effect between work engagement and passive job search behavior. Building on Study 1, Study 2 (n = 250) reveals a positive indirect effect of work engagement on passive job search behavior via personal skill development, and further reveals that protean career orientation significantly moderates this indirect effect. These findings not only highlight the theoretical and practical importance of work engagement in developing personal skills, but also provide a nuanced understanding of how work engagement may lead to job search.

You Complete Me: Interpersonal Relationships and Workplace Outcomes

Session Moderator: **Hasagani Tissera**, *U. of Toronto*

OB: Actual vs. Perceived Liking Gaps: How Adjustment Relates to Liking Judgments in First Impressions

Author: **Hasagani Tissera**, *U. of Toronto*
Author: **Norhan Elsaadawy**, *U. of Toronto*
Author: **Erika Carlson**, *U. of Toronto*
Author: **Gus Cooney**, *Harvard U.*
Author: **Lauren Human**, *U. of British Columbia, Okanagan*

People's beliefs about how much they are generally liked (i.e., meta-liking judgments) are less positive than liking judgments, a finding termed the "liking gap". We build on this past literature by distinguishing between an actual liking gap (i.e., the experience of believing one is less liked by others than one actually is) and a perceived liking gap (i.e., the experience of believing one likes others more than how much others like them). Using a platonic and romantic first-impression sample, we examined the links between adjustment and these liking gaps. Overall, people displayed both liking gaps. Although there was some evidence that more adjusted people were less likely to display a perceived liking gap, adjustment was not related to displaying an actual liking gap. In fact, adjustment was simply related to holding more positive meta-liking judgments. Thus, the present work contributes to the advancement of the social perception and judgment literatures.

OB: Grateful Exchanges: A Theory of How, When, and Why Gratitude Does and Does Not Occur at Work

Author: **Florencio F. Portocarrero**, *Columbia Business School*
Author: **Hooria Jazaieri**, *Leavey School of Business, Santa Clara U.*

Relationships at work are central to employees' worklife. However, the changing nature of work has reduced opportunities for meaningful, high-quality, workplace relationships. We propose that the emotion of interpersonal gratitude can be an effective way of increasing meaningful interactions and relationships between people in organizations. To this end, we develop the grateful exchange process (GEP), a novel theoretical framework which unpacks workplace exchanges that cause the emergence of interpersonal gratitude. This theory also explains why gratitude at work is so rare, by pointing to specific components of the GEP in which organizational actors engage in "wrong turns" (i.e., behaviors that prevent the emergence of gratitude). In addition, as part of the GEP, we propose a variety of individual- and organizational-level interventions to increase the likelihood of successful grateful exchanges between employees at work. Moreover, we propose organizational emotional culture as a crucial moderator of the GEP, and consider key interpersonal outcomes of the framework: interpersonal trust, work-relationship quality, and sense of community. Finally, we discuss the contributions of the GEP to the literatures on workplace gratitude, positive relationships at work and positive organizational scholarship, and emotions and social exchange.

OB: Beyond High and Low Social Power: Affective Well-being in Equal and Unequal Relationships

Author: **Tammy Rubel - Lifschitz**, *Hebrew U. of Jerusalem*
Author: **Alexandru D. Bucevschi**, *Hebrew U. of Jerusalem*
Author: **Lilach Sagiv**, *Hebrew U. of Jerusalem*

How does social power influence affective well-being? The predictions of different theoretical perspectives on the affective experience evoked by power were investigated in equal and unequal interactions in three experimental studies. Studies 1 and 2 used novel methods of sentiment analysis to investigate affect in high-, low-, and equal-power conditions. Low-power evoked the most negative affect, and high-power and equal-power evoked the most positive affect. Study 3 replicated these findings using self-report measures of discrete emotions; in this study, both high- and low-power evoked higher guilt and lower gratitude and pride than equal-power. We propose these similarities may stem from a common underlying emotional experience of unequal relationships. Overall, findings support an inequality aversion approach to power and affect, suggesting (a) equal relations are more emotionally rewarding than unequal relations, and (b) it is low-power that reduces affective well-being, rather than high-power that elevates it. We discuss the conceptual and methodological implications of these findings for the study of power and hierarchy.

OB: How Gender Shapes Ambivalence in Differentially-Powered Workplace Friendships

Author: **Ella Lee**, *U. of Kansas*
Author: **Jill Ellingson**, *U. of Kansas*

Although workplace friendships are typically seen as being beneficial, intensely close relationships often view it as a costly burden, especially with coworkers having different levels of power. Drawing from a social distance and social role theory, we examine how differentially-powered workplace friendship shapes an employee's ambivalence and how gender amplifies or mitigates the ambivalence. We propose and test diverse behavioral responses to ambivalence between high-power men/women and low-power men/women. Our results show that high-power and low-power individuals feel a similar level of ambivalence from differentially-powered friendships, yet men feel more ambivalence than women. Then, we found that three patterns of behavioral responses (moving away, toward, and against) to ambivalence were revealed similarly between high-power and low-power men. Also, high-power and low-power women respond to ambivalence similarity. We offer theoretical contributions in understanding differentially-powered workplace friendships as ambivalent relationships and their behavioral responses, and provide practical implications for practitioners.

New Directions for Organizational (In)Justice

Session Moderator: **Aline Endreß**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

OB: **When Injustice Hits Close to Home: How Comparing Oneself to Similar Peers Reduces Job Satisfaction**

Author: **Aline Endreß**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Social comparison processes are a main mechanism in the context of organizational justice. Still, research on the interplay of organizational justice and social comparisons is limited and, consequently, many aspects of this interplay are not revealed yet. We draw on social comparison theory and fairness heuristic theory to investigate further levels of detail in the relationship of justice social comparison and job satisfaction. In an online experiment (n=309), we generate evidence for the relation of upward and downward social comparison in the context of organizational justice. Additionally, we examine the impact of the perceived similarity to a comparison target. Our results reveal that low justice social comparison (upward comparison, meaning an individual is treated less fairly) and high justice social comparison (downward comparison, meaning an individual is treated more fairly) have a negative association with job satisfaction. The effect is significantly stronger for low justice social comparison. The relationships of low and high justice social comparison on job satisfaction are stronger when an individual feels similar to the comparison target. Our findings suggest considering more levels of detail when researching on the relationships of organizational justice and outcomes in organizational life (e.g., job satisfaction). Identified relationships might not be equally strong depending on context, setting, or involved individuals. We discuss further implications and opportunities for future research.

OB: **How can Combined Trust Repair Tactics Improve Trust after Distributive Injustice**

Author: **Shuwei Hao**, *School of Management, Xi'an Jiaotong U.*
Author: **Ping Han**, *Xi'an Jiaotong U. School of Management*
Author: **Qiushi Wang**, *School of Management, Xi'an Jiaotong U.*

Leaders often violate employee's trust intentionally or unintentionally, and post-violation trust requires significant effort to be repaired. Based on the trust repair literature and the cognitive-affective foundations of trust, this study proposes a goal-form framework for combined trust repair tactics and explores the guidelines, effectiveness, and cognitive and emotional mechanisms of the combined tactics. Using an experimental vignette approach and conducting one-way ANOVA and mediating effects analysis on 423 questionnaires from Chinese employees, this study found that when combining trust repair tactics, the greater the number of tactics, the more effective trust repair, and that priority should be given to tactics that prioritize substantive forms with the goal of alleviating negative reactions. The combined tactics mainly achieve trust repair by enhancing the employee's perception of leader's repentance and reducing employee's anger. This study bridges the gaps in existing trust repair research on the combination of trust repair tactics, advances the understanding of the cognitive and emotional processes of trust repair, and expands the research context of trust repair.

OB: **I-deals and Organizational Justice: A Qualitative Study of Co-workers' Fairness Perceptions**

Author: **Sona Gachayeva**, *U. of Edinburgh*
Author: **Maryam Aldossari**, *Royal Holloway School of Business and Management*
Author: **Susan E. Murphy**, *U. of Edinburgh*

Co-workers are recognized as important stakeholders of idiosyncratic deals (i-deals for short) since their attitude toward i-deals is vital in the successful implementation of i-deals. However, achieving co-workers' favorable attitudes might prove difficult as differences in work conditions created by i-deals can trigger co-workers' fairness perceptions. We conducted an in-depth qualitative study that explores how different dimensions of organizational justice shape co-workers' fairness perceptions of i-deals. We applied a multiple case study design and conducted 48 in-depth interviews using a multi-stakeholder approach (managers, i-deal receivers, and co-workers). Through their descriptions, we found a wide range of factors shaping co-workers' fairness perceptions of i-deals and painted a more complete picture of the fairness implications of i-deals. Building on four dimensions of organizational justice we derived a theoretical model of how these factors shape co-workers' fairness perceptions and induce positive and negative perceptions of i-deals. Our results expand i-deal literature by providing a new approach to thinking about how co-workers form positive and negative perceptions of i-deals based on their fairness perceptions.

OB: **Too Close for Comfort: Relationship Quality, Procedural Justice and Managers' Experiences of Layoffs**

Author: **Abiola Sarnecki**, *Wiesbaden Business School*
Author: **David Leonard Patient**, *Vlerick Business School*

Organizational justice is a powerful predictor of employee and survivor reactions to layoffs. However, less is known about the perspective of managers during layoffs, who often feel responsible for fairness violations. Drawing on cognitive appraisal theory, we argue that managers' perceptions of the procedural justice of layoffs influence the extent to which they assess the task of having to lay-off people as a stressor, and that the quality of the relationship between the manager and laid-off employees attenuates the positive effect of procedural justice. We propose a serial mediation whereby managers' exit intentions after layoffs are influenced by their well-being, which in turn is influenced by their sense of control, and, ultimately by their perceptions of procedural justice. Finally, we argue that relationship quality moderates the serial mediation such that it weakens the positive effect of procedural justice on managers' well-being through sense of control. We test our hypotheses in a field study of 79 managers in an organization undergoing change and in a scenario study (N=302). Our results confirm the positive effects of procedural justice during layoffs on managerial well-being through sense of control. Close relationships with the affected employees weaken the positive effect of procedural justice on perceptions of control.

OB: **How We Treat Us: Justice Within and Between Teams**

Author: **Nathan Tong**, *ESSCA School of Management*

Much of the literature on justice in organizations is based on an implicit assumption that employees' fairness perceptions stem primarily from the decisions and/or actions of a supervisor and/or the organization. Recent research has suggested that team members can also serve as a source of justice in the workplace; however, the few published empirical studies of team-related justice have produced mixed results about whether team-related justice perceptions follow the traditional dimensions of justice (i.e., distributive, procedural, interpersonal, and informational justice), and have yielded few findings about how team-related justice perceptions form, their nature, or their outcomes. Using a qualitative design, I inductively investigated unit-level justice perceptions within teams (intrateam justice) and between teams (interteam justice). My results show that intrateam and interteam justice perceptions stem from congruency with or discrepancy from expected behaviors shaped by teams' unique cultural elements. These expected behaviors are enacted through automaticity and monitored via peer pressure and are perceived as fair if they align with expectations and unfair if they do not. Moreover, I found that these perceptions generally align with existing justice dimensions (i.e., distributive, procedural, interpersonal, and informational). Perceptions of intrateam and interteam fairness resulted in positive outcomes such as getting along better and paying it forward while perceptions of interteam unfairness resulted in negative outcomes such as retaliation and stigmatization.

Understanding Paradoxical Leadership

Session Moderator: **Ying Zhang**, *Peking U., School of Psychological and Cognitive Sciences*

OB: **Paradoxical Leadership and Employee Voice: A Role-perception Perspective**

Author: **Ying Zhang**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Yan Zhang**, *Peking U.*

Drawing on role theory, we propose that paradoxical leader behavior (PLB), as a role sender, enhances employee voice behavior through reducing employees' perceptions of role conflict. We also propose that individual power distance as a reflection of role structure and task complexity as a role requirement moderate the effect of PLB on role conflict. We conduct a field study of 301 members from 70 teams and find that PLB reduces role conflict which is negatively related to employee voicer behavior. The results further show that individual power distance and task complexity both strengthen the effects of PLB on role conflict. The findings offer theoretical and empirical implications for managing role demands and enhancing voice in organizational contexts.

OB: **Paradoxical Leadership as Facilitator in the Idea Journey: The Role of Regulatory Focus**

Author: **Shenghui Wang**, *Dongbei U. of Finance and Economics*
Author: **Irene E. De Pater**, *School of Business and Law, Edith Cowan U.*
Author: **Ming Yi**, *Sichuan U.*

Drawing upon theory and research on innovation, conservation of resources, and paradoxical leadership, we examine relationships between three stages of the innovative process (i.e., idea generation, idea dissemination, and idea implementation) and the role of paradoxical leadership as facilitator of the transitions between these stages. In addition, we examine the motivational mechanisms (promotion and prevention focus) that can explain the relevance of paradoxical leadership in the innovative process. Results of a four-wave study show that paradoxical leadership, through employee promotion focus, strengthens the relationship between idea generation and idea dissemination, whereas paradoxical leadership, through employee prevention focus, strengthens the relationship between idea dissemination and idea implementation. These findings highlight the importance of paradoxical leadership in innovative processes. Implications for theory and practice are discussed.

OB: **What Do We (Not) Know About Paradoxical Leadership**

Author: **Djordje Zivkovic**, *U. of Liechtenstein*
Author: **Mirjam Langenbacher**, *U. of Liechtenstein*

Following the emergence of paradox theory as a growing research stream, studies on paradoxical leadership (PL) have gained increasing momentum in recent years. However, to date, there is no literature review that summarizes the partly fragmented and disconnected research streams and cumulates empirical findings. We introduce a novel framework to provide the first systematic review of the PL literature. This framework comprises individual and organizational level antecedents and outcomes as well as boundary conditions that play a major role in PL research. Further, we identify four types of PL that differ with regard to the level where paradoxes are held (i.e., individual versus collective) and the focus of paradox (i.e., integration versus differentiation). Particularly, we distinguish between (1) an individual integration perspective in which individual leaders manage paradoxical tensions by integrating paradoxical behaviors, (2) a collective integration perspective which focuses on group processes and decision making without taking into account follower's needs or demands, (3) an individual differentiation perspective that zeroes in on how individual leaders include followers' perspective when managing paradoxical tensions, and, (4) a collective differentiation perspective that mainly focuses on how a collective of senior leaders take action in order to navigate paradoxical tensions. Based on our PL categorizations, we contribute to a more detailed and holisitic understanding of what PL is, identify research gaps and propose future research opportunities for each of our categorizations.

OB: **How Paradoxical Leader Behavior Benefits Team Performance: The Role of Team Mental Models**

Author: **Nils Fürstenberg**, *U. of St. Gallen*
Author: **Jonathan Edward Booth**, *London School of Economics and Political Science*

In this paper, we explore how leaders' paradoxical leader behavior (PLB) shapes their team members' mental models and, ultimately, team performance. Specifically, we hypothesize that PLB, which entails contrasting behaviors aimed at fostering cohesion and conformity on the one hand, and empowerment and flexibility on the other hand, positively influences two seemingly opposing, yet ultimately complementary socio-cognitive processes in teams: team members' mental model convergence and mental model adaptation. In line with paradox theory, we argue that both processes are needed to achieve peak performance: We hypothesize a positive interaction between team mental model convergence and mental model adaptation on team performance captured via customer satisfaction ratings. Results from latent moderated structural equation modeling of multi-wave and multi-source data supported these hypotheses. PLB was positively associated with both team mental model convergence and mental model adaptation. We also found evidence for a positive interaction effect between these variables, such that team mental model convergence was only positively associated when team mental model adaptation was higher. In turn, the effect of PLB on team performance was mediated via this interactive effect. We discuss the implications for the leadership, team, and mental model literature as well as the practical implications for organizations.

Look on the Bright Side: The Effects of Leader Positivity and Appreciation on Employee Outcomes

Session Moderator: **Suzi Skinner**, *U. of Wollongong*

OB: **Reflective Positivity - A New Antecedent of Leader Self-Efficacy Underpinning Leader Emergence**

Author: **Suzi Skinner**, *U. of Wollongong*

Research on Leader Self-Efficacy (LSE) was conducted with 150 leaders from a global technology company. This research investigated the influence of subjective interpretation of experience on one's LSE, to identify any additional antecedents to the four identified by Bandura (Bandura, 1997), viz. mastery of experience, vicarious learning, verbal persuasion, and physiological arousal. A Constructivist Grounded Theory approach revealed participants engaged in a complex process of reflection termed 'Reflective Positivity', the characterisitics of which varied depending on the participants' LSE level, and which influenced their LSE. Reflective Positivity represents a new antecedent for LSE, underscoring the critical role of intrapersonal processes in leader emergence. The study contributes fresh insights for leadership-development and suggests a range of practical applications in support of leader emergence within organizations.

OB: **Remember Saying "Thanks" When Rejecting Others: The Role of Leader Gratitude Expression**

Author: **Yanghao Zhu**, *Huazhong U. of Science and Technology*
Author: **Lirong Long**, *Huazhong U. of Science and Technology*
Author: **Yannan Zhang**, *Southwestern U. of Finance and Economics*

Leaders' rejection of employee suggestions is a common occurrence in organizations, yet current research is unclear about how and when leader voice rejection affects employees' subsequent upward voice. Based on the cognitive–affective personality system (CAPS) theory and emotion as social information (EASI) model, this study examines the mediating role of voice self-efficacy (VSE) and leader-member exchange (LMX), as well as the moderating role of leader gratitude expression. Analyzing 245 questionnaires collected across multiple-wave and multiple sources, our study found that leader voice rejection reduces employees' subsequent upward voice behavior via reducing their VSE and LMX, and leader gratitude expression not only moderates the direct effects of leader voice rejection on employees' VSE and LMX, but also moderates the indirect effects of leader voice rejection on subsequent upward voice via VSE and LMX. The theoretical implications, practical implications and future research are also discussed.

OB: **My Leader Sent a Smile Face to Me: The Influence of Leader Smile Emoji Usage on Follower Attitude**

Author: **Jim Liu**, *Fudan School of Management, Fudan U.*
Author: **Mingpeng Huang**, *U. of International Business and Economics*
Author: **Dong Ju**, *Beijing Normal U.*
Author: **Zhiying Shi**, *School of Management, Fudan U.*
Author: **Xinyu Liu**, *Fudan U.*

With the development of digital technology, more and more employees are communicating with each other on virtual platform. Extant research has uniformly demonstrated the positive effect of smile emoji usage in the virtual communication. Drawing upon interactional sociolinguistics theory, our study challenges this prevailing conclusion by exploring a potential negative effect of leader emoji usage and suggesting that leader smile emoji usage can be a mixed blessing. We propose that the effect of leader smile emoji usage hinge on follower power distance orientation. We conducted an experiment and a field study to test our hypotheses. The results showed that leader emoji usage was positively related to follower perceived leader intimacy, which in turn increased satisfaction toward leader. However, leader emoji usage was negatively related to follower perceived leader power, which in turn decreased leader effectiveness. The negative effect was more salient for followers with high power distance orientation. Our findings examine the emoji usage in leader-follower communications and reveal the perils and benefits of leader smile emoji usage.

OB: **Health-focused Leadership Keeps Followers with Physical and Mental Health Problems in Their Job**

Author: **Mahshid Khademi**, *U. of St. Gallen (HSG)*
Author: **Stephan Alexander Boehm**, *U. of St. Gallen*
Author: **Miriam Karin Baumgaertner**, *U. of St. Gallen*

Leadership is linked with health outcomes. Yet knowledge on specific leader approach that directly and objectively contributes to followers' health is insufficient. We close this gap by (1) providing a clear contribution of health-focused leadership approach and demonstrating its effect over and above LMX, (2) using objective HR data on sickness absenteeism and job retention, (3) within two samples of employees, one affected physically (N=2175) and the other psychologically (N=198). In two filed studies, we confirmed that health-focused leadership intervention behavior significantly enhances sustainable work experience (decreases the number of sick days and increases the chance for employees to keep their jobs). Our findings specify that having a good relationship with the followers is not enough; employees, especially in cases with prior health impairments, need active, focused, and timely intervention from their leaders to be able to present in their daily work and keep their jobs.

Understanding New Ways of Working: Coworking and Hybrid Teams

Session Moderator: **Nada Endrissat**, *Bern U. of Applied Sciences*

OB: **Bringing Place into Meaningful Work: The Case of Location-independent Work**

Author: **Nada Endrissat**, *Bern U. of Applied Sciences*
Author: **Pascal Dey**, *Bern U. of Applied Sciences*

Prior research on meaningful work has identified a variety of resources that are available to people at work, including membership, association, and a sense of belonging. However, as digital technologies have made work more location-independent, the ground for meaningful work is shifting. This begs for a closer examination of how the loss of a stable place to work impacts meaningfulness in the context of new work arrangements. Building on the central tenet of humanistic geography that meaningful work always requires a place for its realization, we present a qualitative study of coworking spaces to explore the intertwinement of work, place, and meaningfulness. Putting participants' experiences and affective attachments at the center of our inquiry, we distinguish two forms of place-involvement: Being in place and doing place. While both are expressions of the existential spatiality of meaningful life and work, 'being in place' gives expression to how people bond with places of work affectively and socially to navigate the insecurities associated with location-independent work, while 'doing place' includes human practices geared toward creating the spatial conditions in which meaningful encounters and work can flourish. We discuss the implications of our theorization and its contribution to the literature on meaningful work and coworking. The paper concludes by reflecting on the ethical responsibility for meaningful work under conditions of location-independent work.

OB: **The Influence of Coworking on Well-Being and Performance: An Experience Sampling Method Study**

Author: **Martin Lukes**, *Prague U. of Economics and Business*
Author: **Will M. Bennis**, *Prague U. of Economics and Business*
Author: **Jan Zouhar**, *Prague U. of Economics and Business*

Remote work from coworking spaces (co-remote work) developed as an alternative to remote work from home (solo-remote work), aiming to both retain the positive aspects of solo-remote work (flexibility, autonomy, and escape from negative social dynamics at the office) and avoid the negative aspects (low-quality office space, lost workplace social relationships, and diminished professional development). There are reasons to question whether co-remote work delivers on these aims, however, and evidence is limited. The current study uses Experience Sampling Method to explore within-participant differences in well-being, work engagement, and productivity, depending on (1) whether remote workers are working from home or from a coworking space, and—when working from a coworking space—(2) whether they work alongside others and (3) whether the work is collaborative. Results suggest that co-remote work promotes higher outcomes on all measures relative to solo-remote work. Within the coworking space, the impact of other people in the room and of collaboration is mixed, suggesting distinct strategies for how best to use a coworking space depending on the activity. Coworking spaces provide a valuable alternative to working from home with implications for remote workers, for the organizations that hire them, and for coworking space managers.

OB: **Coworking Spaces as Sites of Organizing: A Literature Review and a Research Agenda**

Author: **Stefano Rodighiero**, *U. of Bologna*
Author: **Cristina Boari**, *Department of management, Bologna U.*

Coworking spaces are membership-based, shared work environments involving individuals from multiple occupational backgrounds. They have emerged in recent years as a phenomenon that reconciles broader changes in the world of work. Within this context, coworking spaces have mostly been interpreted as settings that convey a sense of community. However, recent studies have tried to move beyond this community-related reading of coworking, instead focusing on their organizational character. Indeed, coworking spaces hold the potential to shape professionals' work activities and practices while feeding collective action and co-orientation. Drawing on these insights, this study reviews 87 publications from multiple disciplines to shed light on how coworking spaces emerge as sites of organizing for professionals who are not formally connected to one another. It does so by suggesting five dimensions that articulate the organizational character of coworking spaces – i.e., 'materiality', 'temporality', 'affect', 'identity', 'formalization'. The study concludes with a future research agenda.

OB: **Welcome to the New Way of Working Together: Team Trust in Flexible Hybrid Teams**

Author: **Katharina Schulte**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

One of the major changes in the working world the covid-19 pandemic led to is how people work together. Governmental regulations guided many teams from working together in the office to collaborating virtually. Today, there are no regulations on working from home anymore, nevertheless, many employees intend to stay remote fully or partially. While prior research has mainly focused on pure virtual or pure face-to-face teams, we take the social identity theory as a base to examine the new form of hybrid teams, in which team members are often flexible in choosing whether and when they want to work remotely. Using survey data from 173 individuals from 43 teams of 16 companies, we find that hybridity uniformity is significantly positively related to team trust. With this study, we aim to extend team literature by introducing the concept of this new team form and showing that social identity theory is crucial to understand team dynamics in the post-pandemic world. Moreover, since we only find that task interdependence moderates the relationship between hybridity uniformity and team trust but cannot confirm this finding for communication quality, we open the door for more research on how to make these new hybrid teams work.

New Perspectives on Team Creativity, Innovation, and Learning

Session Moderator: **Jie Lv**, *Shanghai Business School*

OB: Knowledge Network and Transactive Memory Systems in R&D Team Creation: A Moderated Mediation Analysis

Author: **Jie Lv**, *Shanghai Business School*
Author: **Tony Liu**, *Shanghai Business School*
Author: **Xiaohuan Yang**, *Fudan U.*
Author: **Xiaojin Cai**, *Fudan School of Management, Fudan U.*

Where team creation is a social process, and exploring knowledge networks enhances people's understanding of R&D team creativity, this study analyzed relationships between knowledge networks and transactive memory systems to explain the mechanisms of knowledge networks and R&D team creativity. By constructing a moderated mediation model, we verified hypotheses about the relationships between characteristics of R&D team knowledge networks, transactive memory systems and team creativity. We found that team knowledge network degree centrality had a positive influence on team knowledge networks. Transactive memory systems had positive impacts on R&D team creativity and served to mediate between team degree centrality and R&D team creativity. Meanwhile, R&D team knowledge network betweenness centrality moderated the relationship between transactive memory systems and team creativity. These conclusions are theoretically significant to some extent.

OB: Shh…Let's Not Tell Anyone Else: Team Secrecy Affects Team Innovation Through Information Elaboration

Author: **Ke Michael Mai**, *National U. of Singapore*
Author: **Trevor Spoelma**, *U. of New Mexico*
Author: **Yating Wang**, *National U. of Singapore*
Author: **Lei Huang**, *Auburn U.*
Author: **Wu Wei**, *Wuhan U.*

Team secrecy is an important and prevailing phenomenon that happens in most if not all organizations. While a growing body of work in social psychology has started to examine how keeping secrets can influence an individual's psychological state, we still know very little about how collectively keeping secrets can affect team processes and team outcomes. By integrating research on secrecy in the social psychology literature with motivated information processing theory in teams, we predict that collectively keeping secrets (i.e., team secrecy) can enhance intrateam information elaboration, which then leads to a higher level of team innovation. Further, we propose that this effect is moderated by the team leader's political skill, as the higher these skills, the better those leaders can bridge relationships outside the team and bring in resources to facilitate team innovation. Results from an experiment and two field studies consistently supported our hypothesized model. Implications and directions for future research are discussed.

OB: Differences in the Fundamental Epistemic Foundations of Problem Solving

Author: **Tyler Talbot**, *U. of Utah*
Author: **Kathryn A. Coll**, *U. of Nevada Reno*
Author: **Bryan Bonner**, *U. of Utah*

The tasks that organizational teams undertake are typically in the areas analyzing, collaborating, considering, and deciding within defined problem domains. This theory-building work seeks to synthesize and integrate core concepts from classical philosophy and the modern problem-solving literature toward building a stronger foundation from which problem solving may be understood. This is done with an eye toward organizational application, particularly in the context of problem-solving teams. This level of abstraction is more basic and fundamental than individual differences with respect to decision styles, the preference for more or less effortful cognition, or the need to find closure, and provides new avenues for thought and research. Members of teams, even if they share the motivation to come to the best possible solutions to organizational problems, will vary with respect to their perspectives on how that should be done, (i.e., their epistemic predilections). These predilections vary with respect to the a priori or a posteriori nature of preferred knowledge and the source of that knowledge (i.e., self, proximal, or distal). The fundamental divide between problem solvers who are a priori- as opposed to a posteriori-motivated is that the former believes that a given problem requires only insight (although not necessarily their own) whereas the latter believes that the problem requires evidence (although not necessarily from their own experience). In the current work we introduce, define, and provide the nomological network related to epistemic predilection and show its potential with respect to opening new avenues of scientific inquiry.

OB: Team Learning as a Mediator in the Relationship Between Agile Practices and Team Performance

Author: **Anouk Jasmine Albien**, *U. of Lausanne*
Author: **Gabriela Markovic**, *U. of Bern*

Despite the relevance of teamwork to agile practices, little research exists on how the application of agile practices affects team performance. This research study aims to contribute to the research base on the relationship between agile practices and team performance by examining the role of team learning behaviors as a mediating mechanism. In order to explain the effect of agile practices on team performance, a parallel mediation model was established based on the current state of research. Parallel mediation represents an input-process-output model, where agile practices are the input, team learning behaviors are the process and team performance is the output.The sample included 157 individuals, between 19 and 64 years old, employed at least 50% of the time and employed in the IT and financial sector. Significant positive relationships were found between agile practices and three team learning variables (continuous striving for improvement, promoting dialogue and open communication, and collaborative learning). The team learning variable to significantly positively mediate the relationship between agile practices and team performance was collaborative learning. These results confirm the influence of agile practices on team learning behaviors and the relevance of team learning behaviors as a mediator in the relationship between agile practices and team performance. Theoretical and practical limitations are discussed, as well as how future research could build on the results of this study.

Comprehensive Reviews and Meta-Analyses of Leadership Research

Session Moderator: **Wouter Van Zwol**, *Radboud U. Nijmegen*

OB: **Do Chameleons Lead Better? A Meta-analysis of the Self-monitoring and Leadership Relationship**

Author: **Linghe Lei**, *Imperial College Business School*
Author: **Chen Wang**, *Western Michigan U.*
Author: **Jonathan Pinto**, *Imperial College London*

The relationship between self-monitoring and leadership has been the subject of academic debate (Bedeian & Day, 2004). We attempt to resolve this debate by examining the relationship through a meta-analytic study (N = 9,029 across 55 samples). Since this is the first meta-analysis that focuses exclusively on this relationship, we were able to study both focal constructs at a granular level. As hypothesized, self-monitoring is positively associated with leadership emergence and leadership effectiveness. And even though the hypothesized positive relationship with managerial leadership was supported, the relationship with transactional leadership was non-significant. Contrary to our prediction that self-monitoring would be negatively related to authentic leadership and to transformational leadership, we found positive relationships. Importantly, the relationship between self-monitoring and leadership-related variables is typically non-significant when the latter are measured by subordinate ratings (as compared to supervisor-, peer-, or self-ratings). And since subordinates are the followers of the leader, this casts doubt on the general finding that self-monitoring is positive related to leadership. The implications of our work for theory and practice are discussed.

OB: **Leadership Styles and Employee Turnover Intention: A Meta-analytic Path Analysis**

Author: **Yan Liu**, *Indiana U. East*
Author: **Chien Chung Chen**, *Indiana U. East*
Author: **Hong Chen**, *Indiana U. East*

This study used meta-analytic estimates and path analysis with structural equation modeling to examine the effects of leadership on employee turnover intentions. This meta-analysis integrated different conceptualizations of leadership, classified them into three categories, and analyzed the relationship between each category of leadership and employee turnover. Results from 244 studies with a total sample size of 98861 and a total effect size of 332 showed that there is (1) a significant, negative correlation between positive leadership and turnover intention, (2) a significant, positive correlation between negative leadership and turnover intention, and (3) non-significant correlation between neutral leadership and turnover intention. As expected, the highest correlation arises between negative leadership and turnover intention. Moderator analyses found that publication status, study design, cultural differences, job type, and industry moderated some but not all pairs of correlations in the study. Meta-analytic path analyses further showed that positive and negative leadership effects on turnover intention were only partially mediated by job engagement.

OB: **Leading by the Collars' Color: A Systematic Review on Leadership Behaviors Across Occupations**

Author: **Wouter Van Zwol**, *Radboud U. Nijmegen*
Author: **Jeroen De Jong**, *Radboud U. Nijmegen*
Author: **Ellen Rusman**, *The Open U., Netherlands*
Author: **Beatrice Van Der Heijden**, *Radboud U. Nijmegen*

Context is considered to have a crucial impact on the process of leadership and its effects. Despite the urgent calls to include and expand the investigation of the role of context in leadership research, however, scholarly work in this field that includes contextual variables remains cluttered (Johns, 2018). In particular, there is limited insight into how occupational contexts impact leadership behaviors (Oc, 2018), leaving questions such as "do leaders of construction workers engage in similar behaviors compared to, for example, nurses and accountants?" unanswered. In this study, we systematically review the literature on leadership behavior to create insights into the literature on leadership behaviors among three occupational types: blue-, white-, and pink-collar occupations. Drawing on 548 articles, we first conclude that occupational context is only mentioned in 31% (n=174) articles on leader behavior and follower outcomes. An analysis of these 174 sources reveals that occupation is rarely included in research models (e.g. as a moderator), as research usually focuses on one occupational group. Moreover, there is some overlap in the broad pallet types of leadership behaviors studied, but there are also distinct differences in the types of leader behaviors studied within the different occupational groups.

OB: **Leaders in the Lab: A Meta-analysis of Leadership Research Generalizability and Endogeneity Risk**

Author: **Matthew Crayne**, *U. at Albany, State U. of New York*
Author: **Brett Neely**, *U. of Nebraska, Lincoln*
Author: **Gage Matyasovszky**, *SUNY, Albany*
Author: **Samuel T. Hunter**, *Pennsylvania State U.*

Contributing to ongoing debates regarding generalizability and rigor in leadership research, we explored whether differences existed in the results of matched research due to study in laboratory or field environments. In a series of meta-analyses including 439 effects from 265 independent studies, we considered whether similar research questions resulted in different results due to research setting effects. Laboratory and field studies were coded and matched based on theory-driven predictors (Dinh et al., 2014) and the type of outcome examined (Avolio et al., 2009). Further, we coded for the threat of endogeneity in each study design (Antonakis et al., 2010) and included that measure as a covariate moderator in order to account for methodological differences between studies and determine its influence on driving divergence in results. The overwhelming majority of relationships tested did not significantly differ as a product of research setting alone, suggesting broad generalizability between lab and field research. Endogeneity risk was found to significantly moderate meta-analytic effects in several cases, occasionally explaining enough variance in effects to make research setting a significant moderator when endogeneity was controlled for. Given the relevance of these findings to the study of leadership and social sciences more generally, additional implications are discussed.

Understanding Psychological and Social Capital in Organizations

Session Moderator: **Rebekka Kuhlmann**, *Heinrich Heine U. Düsseldorf*

OB: **The Dynamic Interplay of Job Characteristics and Psychological Capital with Employee Health**

Author: **Rebekka Kuhlmann**, *Heinrich Heine U. Düsseldorf*
Author: **Stefan Suess**, *Heinrich-Heine U. of Dusseldorf*

The dynamic development of employee health is increasingly addressed by occupational health scholarships. Based on the Job Demands-Resources model, this study examines reciprocal relationships among job resources, job demands, psychological capital (PsyCap), work engagement and burnout over time. We hypothesize that job resources, PsyCap, and work engagement have positive reciprocal effects on each other and that PsyCap moderates the reciprocal relationship between job demands and burnout. We test our predictions using latent change score modeling with data from 659 employees surveyed over three consecutive months. Results show that PsyCap slows decline in work engagement and job resources and that work engagement and job resources foster growth in PsyCap. However, PsyCap does not moderate the reciprocal relationship between job demands and burnout, as it is directly reciprocally related to burnout but not to job demands. Implications for research and practice are discussed.

OB: **How Employees Influence Service Climate-The Role of Psychological Capital & Sense of Coherence**

Author: **Beatrice Pimlac Loesch**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Service research so far focuses stronger on the customers' perspective i.e. experience than on the service employees` perspective (Bowen, 2021; Kraak & Holmqvist, 2017). However, employees' experiences is at least as essential due to their interactions and relation to service climate (Bowen, 2021). The purpose of our study is to fill this research gap. Following recent researcher calls, we explain how psychological states and traits influence employees` experience of service climate. Moreover, we examine how employees' age and organizational citizenship behavior influence the relationship of psychological capital as well as service climate. Empirical analysis of 212 responses from business professionals reveals that the individual level of psychological capital and sense of coherence are positively related to service climate. Building on the conservation of resource theory, we observe an influence of individuals' psychological resources onto their experience of service climate. Although, we find that individuals' age strengthens this relationship between psychological capital and service climate, organizational citizenship behavior surprisingly weakens this relationship. In sum, we contribute to positive organizational behavior research by deepening the understanding of how individuals can build on their psychological resources to support service climate. We shed light onto individuals' personal key resources as strengths they can draw from to successfully cope with stressors in service-related professions. Our results have implications for individuals, organizations, and institutes. Keywords: Service climate; psychological capital; sense of coherence; dark side of OCB

OB: **Employee View of Social Capital Formation at the Workplace: Intentionality and Intervening Factors**

Author: **Prabhjot Kaur**, *Management Development Institute Gurgaon, India*
Author: **Tanuja Sharma**, *MDI, Gurgaon, India*
Author: **Madhushree Nanda Agarwal**, *Management Development Institute, Gurgaon*

The changing dynamics of work, workplace, and workforce highlight the need to bring employees to the front and centre of the research agenda. Social capital is an emerging concept in the management field. However, most of the research so far has focused on organization-level studies, viewed social capital as an end result, and emphasized its benefits. The study contributes to social capital theory by delving into the origin of social capital and understanding how it is formed at the workplace from an employee perspective. In-depth employee interviews were conducted, post which an inductive approach was used to analyse transcripts and identify novel themes. The study substantiates Dittrich & Seidl's (2018) perspective on intentionality and highlights "purposeful" and "purposive" as the two ends of the intentionality spectrum that guide employee behaviours and actions toward building social capital at the workplace. While all employees recognized the benefits of social capital and admitted that it helps them, however, their actions toward building social capital have a varied sense of purpose. On one hand, employees with an orientation towards purposeful intentionality have clear, specific, and pre-established goals, and their actions are directed in anticipation of achieving these apriori goals such as career growth, project outcomes, favourable decisions, etc. These result in social ties with a mutual understanding of reciprocity. On the other hand, employees steered by purposive intentionality are guided by what they ought to do in a particular context by engaging in spontaneous and authentic acts of kindness such as offering help, giving advice, etc. These result in long-lasting relationships glued by the trust. Also, findings from the study suggest that virtual communication and negative asymmetry in relationships may intervene in the process of social capital formation. These perspectives open new avenues for further investigation and future research in social capital.

OB: **Psychological Capital as a Predictor of Manager's Intrapreneurial Intentions**

Author: **Gentrit Berisha**, *U. of Prishtina*
Author: **Besnik Krasniqi**, *U. of Prishtina*
Author: **Rrezon Lajçi**, *TU Ilmenau*

Much of our understanding of within-organizational entrepeneurship emanates from entrepreneurship scholarships. The organizational behavior perspective has largely overlooked questions regarding intentions and behaviors at the individual level that amount to intrapreneurship. Our purpose is to provide a positive organizational behavior perspective to intrapreneurship. To do this, we focus on the relationship between psychological capital and the intrapreneurial intention of managers. Furthermore, we dig deeper into mechanisms through which positive emotions influence intrapreneurial intention by testing the mediation effect of wellbeing and work-life balance. Drawing on a sample of 211 managers, we tested self-report data using confirmatory factor analysis and regression analysis. Results show that psychological capital strongly influences managers' intrapreneurial intentions. Furthermore, psychological capital strongly influences work-life balance and wellbeing, while the latter mediates the direct relationship between psychological capital and intrapreneurial intentions. We contribute to the literature by theoretical and empirical examination of the importance of positive psychological capital in increasing intrapreneurial intentions. The novelty of our research nestles on introducing positive psychological capital to intrapreneurial intentions research and the study of underlying mechanisms. Furthermore, we provide evidence for the validity of constructs and hypothesized relationships in managerial samples and non-western contexts.

Discussant: **Valerie Joyce Purdie-Greenaway**, *Columbia U.*

Gender issues have long been a prominent topic in negotiation research and decades of research have established foundational knowledge of how gender shapes negotiation outcomes (Bowles et al., 2022). However, the scholarly understanding of gender effects in negotiation is far from complete. In this symposium, we present five projects that point to new research directions by (1) incorporating non-western samples and examining cultural influences, (2) moving beyond the gender binary and exploring intersectionality issues, and (3) proposing new research methodologies and paradigms.

Voice is defined as discretionary behaviors aimed at improving the organization. Four papers in this symposium investigate the outcomes of different voice types (prohibitive versus promotive voice, private versus public voice, and challenging versus supportive voice) using different novel theoretical frameworks and rigorous research designs. These papers address questions related to how different voice types and characteristics of voicers affect relationships between employees and leaders as well as their work groups and the organizations.

Presenter: **Deanna M. Kennedy**, *U. of Washington, Bothell*
Presenter: **Scott I Tannenbaum**, *The Group for Org. Effectiveness*
Presenter: **Jamie Levy**, *The Group for Organizational Effectiveness, Inc*

Resilience has become a strategic imperative for addressing organizational, societal, and professional challenges. The emerging literature on team resilience specifically has helped clarify how teams develop capabilities to manage adversities. However, as the nature of the adversity itself has largely been overlooked, scholars have called for a stronger focus on the adversity that teams experience to deepen our understanding of how teams develop and demonstrate resilience. Therefore, the purpose of this presenter symposium is to advance research on team resilience by shinning a spotlight on team adversity, including how different forms of adversity influence the team resilience process. First, Raetze, Schmutz, Maynard, Mueller, and Steputat-Raetze use bibliometric methods to clarify the content domain and theoretical structure of team adversity, including the different ways that teams experience adversity. Second, Burke, Wiese, Szabo, and Kaosaar use historiometric analysis to identify distinct types of resilience triggers and explore how trigger characteristics engender particular behavioral and attitudinal responses within teams. Third, Easton, Mathieu, and Klock use a multi-method approach to explore the relationship between team resilience and performance, with a specific consideration to environmental stressors and event strength. Finally, Maynard, Mathieu, Kennedy, Tannenbaum, and Levy investigate the impact of dynamic environmental event influences on the resilience of Saturation Dive Teams who live and work in Isolated, Confined, and Extreme (ICE) conditions. All four papers offer important and novel perspectives that enhance our understanding of the nature of the adversities that teams encounter and how teams successfully manage various adversities in the resilience process. Altogether, these papers help move the emerging literature on team resilience forward in several meaningful ways.

Participant: **Julia Lee Cunningham**, *U. of Michigan*

The field of management is beginning to recognize (and emphasize) the value of "real-world" implications of empirically rigorous studies. One promising avenue of research that supports this shift in our field is "intervention-based studies," which provide both practically and theoretically significant insights on timely, managerial problems. Historically, intervention-based research has been scarce in our field, especially relative to other fields like clinical psychology or medicine. However, over the past decade (and especially the last two years), scholars in our field have been increasingly interested in undertaking such research. Supporting this movement, this symposium will showcase six empirical projects using an intervention-based methodology that tackle a range of timely problems—like mental health, work relationship quality, and procrastination—to create positive change in workplace environments of all kinds—from traditional organizations to the gig economy.

Participant: **Hudson Sessions**, *Southern Methodist U.*

This symposium is focused on individuals who advocate for ethical and social issues in the workplace. There is evidence that speaking up about such issues can be risky and lead to negative personal and professional consequences for those who do so. The papers in this symposium will explore various factors that might discourage individuals from speaking up, as well as the factors that drive them to advocate for ethical and social issues despite these risks. This symposium will examine these issues in different contexts, such as diversity and inclusion, organizational norm violations, and broader institutional change, and will use a range of methodological approaches, including qualitative and quantitative research, field studies, and experiments. The goal of this symposium is to understand the psychological processes that motivate individuals to advocate for ethical and social issues at work, and to provide practical recommendations for individuals who wish to sustain their efforts to make a positive impact in society.

A Cocreative Approach to the Research-Practice Gap in Leadership Coaching: A Stakeholder Discussion

Organizer: **Kaeleen Drummey**, *Foster School of Business*
Participant: **Angela Passarelli**, *College of Charleston*
Participant: **Melvin L. Smith**, *Case Western Reserve U.*
Participant: **Stefanie Johnson**, *U. of Colorado, Boulder*
Participant: **Will Guillaume Foussier**, *AceUp*

Coaching continues to be a rapidly growing leadership development practice. Yet while the practice of coaching flourishes, coaching research continues to lag behind, limiting the rigor of evidence-based coaching practices, including coach training and evaluation. This gap between research and practice is not unique to coaching nor a new discussion in the Academy. Therefore, this symposium builds on the existing discourse, focusing on how a co-creative approach between coaching scholars and practitioners can increase both rigor and relevance of research within the field of coaching. Furthermore, building on the AOM 2023 theme, this session will discuss how advancing the science and practice of coaching can positively impact the worker, in this case coaches and coaching clients, front and center. The diverse panel for this symposium was intentionally curated to represent coaching stakeholders with specific perspectives from their respective roles as scholars, coach educators, and coaching industry leaders. Panelists will engage in discussion with each other and the audience with goal of identifying both obstacles and opportunities to cocreatively advance the science and practice of coaching.

Participant: **NICOLAS WALLACE**, *Capt, USAF*
Participant: **Thomas J. Walter**, *Touhy Capital / Tasty Catering*

"…One person can live on a desert island without leadership. Two people, if they're totally compatible, could probably get along and even progress. If there are three or more, someone has to take the lead. Today we have a more nuanced view of leadership. … Our quality of life depends on the quality of our leaders ….And we need more than one. As never before, we need leaders in all our organizations and all our institutions. We need leaders in every community, corporation, and country. That leadership vacuum creates an enormous opportunity…." Warren Bennis, in On Becoming a Leader (2009, p. 4) Going back to Biblical times leadership and supervisory styles have long been an area of observation and 'experiences,' as well as study. A plethora of theories and constructs that emerged over the centuries, frequently reflecting the times shifting from trait (1900's-1948) to behavior (1948-1970) to leader and follower (1970 – present) (Mendez, 2021). (Also see Avolio, Walumbwa, and Weber, 2009; Northhouse, 2016; and Avolio, 1999 for detailed and specific reviews and discussions). And, without doubt, one can be certain that leadership has both positive and/or negative impacts on the organization and its employees possibly resulting in toxic environments (Academy of Management, 2023, p. 1). "… Our quality of life depends on the quality of our leaders ….And we need more than one. As never before, we need leaders in all our organizations and all our institutions. We need leaders in every community, corporation, and country. That leadership vacuum creates an enormous opportunity…." Warren Bennis, in On Becoming a Leader (2009, p. 4) In putting the workers front and center, or "workers as subjects" (AOM, 2023, p. 1) with the objective of avoiding the creation of a 'toxic' environment, the wisdom of management guru Peter Drucker rings loudly: "If you want something new, you have to stop doing something old." Peter Drucker To address this issue, the panelists will share personal experiences in a formal, moderated and interactive discussion in the private (small business) and public sector agencies including the US Federal Government (FBI/law enforcement and Department of State) and the US military (Air Force). The perspectives will be (1) personal experiences; (2) lessons learned from leadership; (3) suggestions for leadership for creating non-toxic work environments; and (4) a comparison of similarities and differences in the various industries and experiences. Please note that the panelists' opinions which are expressed are solely their own and do not express the views or opinions of any public sector agency).

The Dynamics of Organizational Culture and Fit

Session Moderator: **Glenn R. Carroll**, *Stanford*

OMT: **Culture in Large and Small Organizations: Perceptions, Beliefs and Experiences**

Author: **Glenn R. Carroll**, *Stanford*
Author: **Lara Yang**, *Stanford Graduate School of Business*

In this project, we attempted to contribute empirical findings about the relationship between organizational size and organizational culture. To do so, we conducted a large sample survey of full-time workers (men and women) in the US. We asked the respondents about their general beliefs about culture, as well as their specific experiences in the workplace with cultures, leaders and hiring. Generally speaking, the responses show that many cultural perceptions, beliefs and experiences differ systematically by size of the organization.

OMT: **Control is Good, Trust is Better—How a Culture of Trust Affects Corporate Success**

Author: **Jasmin Afrahi**, *Philipps-U. Marburg*
Author: **Susann Dunger**, *Philipps-U. Marburg*
Author: **Thomas Armbruester**, *U. Of Marburg*

Organizational culture and trust have been separately identified as drivers for organizational performance. However, there is limited research on cultures of trust and their effect on business results. This article conceptualizes and measures organizational cultures of trust and tests their effect on organizational success. We define trust based on Mayer et al.'s (1995) factors of ability, integrity, and benevolence and observe it in three dimensions: trust in managers, trust in co-workers, and trust in the organization as the employer. To assess the effect on organizational success, we analyze data from 141,091 employees from eight industries in Germany. The results from a structural equation model show that trust in all three dimensions is positively and significantly related to objective and subjective performance indicators. However, the model counterintuitively explains more variance for objective KPIs (increased revenue and low absenteeism) than for subjective KPIs (innovativeness and low employee turnover). We discuss these findings from methodological and theoretical perspectives, draw conclusions for management practice, and suggest future research possibilities.

OMT: **Shareholder Activism and Employee Belongingness in Organizational Culture**

Author: **Victoria Zhang**, *Massachusetts Institute of Technology*
Author: **Dylan Nelson**, *Massachusetts Institute of Technology*

How does shareholder activism impact workers' sense of fit with their organizations' values and culture? We argue that shareholder activism focuses managerial attention away from activities that promote employee belongingness within the organizational culture, and towards monitoring workers through pay-for-performance and work process improvement. Activist-driven managerial upgrading especially undermines the motivation of blue-collar workers, who are more likely to experience negative emotions relating to broken implicit contracts because more of their immediate co-workers are let go. We use longitudinal data from a large platform that collects reviews, a hand-curated database of private equity buyouts, and an organization-fixed-effect design, matching to control companies on key operational variables. We control for worker reviews of organizational compensation, exclude separated workers, and begin to unpack differences in changes in the review language used by blue- versus white-collar workers. Our research highlights a paradox of shareholder activism: managerial upgrading focused on optimizing productivity may undermine a key source of long-term performance. We explain, for the first time, an increasingly appreciated worker outcome with implications for class-based inequality and subjective job quality.

OMT: **The Effects of Audience-organization Alignment on Access to Social Benefits**

Author: **Paul Gouvard**, *USI (Lugano)*
Author: **Marieke Huysentruyt**, *HEC Paris*

Cultural alignment within organizations or between organizations often results in positive organizational-level outcomes. How audience-organization alignment may affect both organizational and audience-level outcomes is less well known, although, based on extent research, we would expect audience-organization alignment to facilitate communication and coordination, resulting in positive outcomes. We explore this question using the complete corpus of emails exchanged between CAF 93, a French administration providing social benefits in the department of Seine-Saint-Denis (north of Paris), and its beneficiaries in 2021 (nearly 400,000 emails) and socio-demographic and benefits data on beneficiaries (over 5,000,000 monthly observations in total). To measure Beneficiary-CAF alignment, we carried out a computational text analysis of our corpus of emails, training two separate topic models: one on emails sent by CAF 93 beneficiaries and one on emails sent by CAF 93 officers. The beneficiaries' topic model captures latent topics drawn upon by beneficiaries when writing to CAF 93 while the CAF 93's topic model captures latent topics drawn upon by CAF 93 officers when writing to beneficiaries. Contrary to expectations, we find that beneficiaries sending emails drawing on topics that do not have a close equivalent in the CAF 93's topic model (as measured using pairwise Jaccard similarity between sets of topics' top words) tend to receive more, not less, benefits three months later. We theorize a tentative explanation of our surprising finding: audience-organization misalignment arises when beneficiaries rely on idiosyncratic semantic dimensions to structure their emails, which attracts CAF 93 officers' attention. While in a competitive, for-profit setting, such emails would be perceived as cognitively costly to address and thus potentially dismissed, in a non-competitive, not-for-profit setting such as ours, with strong incentives to treat all requests, the attention received by culturally misaligned emails ultimately results in an increased likelihood of being addressed –and hence higher access to benefits. Our results suggest that cultural misalignment may play an important role in helping, not hampering beneficiaries' access to social benefits.

Liability of Newness Revisited: Researching New Entrants and Incumbent (Dis)Advantages

Session Moderator: **Tunde Cserpes**, *Aarhus BSS, Aarhus U.*

OMT: **Liability of Newness Suspended: The Survival of Multiunit New Entrants in U.S. Beer Wholesaling**

Author: **Tunde Cserpes**, *Aarhus BSS, Aarhus U.*

This paper focuses on an intermediary market segment and examines what happens to its incumbents and new entrants when there is a surge in the number of potential upstream partners. In the past thirty years in the U.S. beer industry, as the number of beer producers (i.e., brewers) proliferated, their intermediaries (i.e., wholesaler distributors) declined. This paper examines how under these conditions, two constraints, operating unit structure and historical competitive pressure effect the survival chances of new entrants and incumbent establishments. I use data on the population of U.S. beer distributors from the Longitudinal Business Database (1983–2013) and find that multiunit new entrants have better survival chances than multiunit incumbents. Furthermore, they are more likely to survive in areas where historical competitive pressure is high. I explain this finding via a social mechanism and show that in dynamic market contexts it is easier to create entirely new market ties than to change the old, socially embedded ones.

OMT: **Revising the 'Liability of Newness'? A Review on How Hot-growth Start-ups (HGSUs) Overcome it**

Author: **Matteo Cristofaro**, *U. of Rome Tor Vergata*
Author: **Federico Giannetti**, *U. of Rome Tor Vergata*
Author: **Gianpaolo Abatecola**, *U. of Rome Tor Vergata*

What factors lead hot-growth start-ups (HGSUs) to overcome infant mortality? To date, hot-growth entrepreneurial species, i.e. gazelles, Unicorns, and VC-backed companies, significantly challenge the common perceptions traditionally associated with their liability of newness. Relatedly, a knowledge gap exists in understanding what specific characteristics facilitate each of these exceptional entrepreneurial species to overcome infant mortality. A systematic literature review (SLR) of 70 HGSU articles dealing with the determinants of infant survival has been elaborated and read according to the liability of newness lens. Unicorns are featured by a high-scalable business model based on platform services, but they require huge investments to support rapid growth. For gazelles, instead, the relationship with the local environment seems to be another pivotal element for survival. In all three categories, investors play a key role in overcoming the usual initial lack of experience, coordination, stable ties, and trust. Without their support, the development of their life cycle is seriously undermined. With regard of gazelles, Unicorns, and VC-backed companies, this is the first article providing: i) their different characteristics, ii) discussing and comparing their survival determinants, and iii) proposing a conceptual synthesis of the life cycle of hot-growth start-ups able to forecast their trajectories.

OMT: **Not In My Back Yard: Strategic Deterrence and Firm Positioning Amid Entry Dynamics**

Author: **Joanna Mingxuan Li**, *Indiana U., Bloomington*
Author: **Yanhao Wang**, *Indiana U., Bloomington*

Based on the premise that firms face the need to appear both similar to and different from peers, a vibrant stream of research in organizational studies has explored how firms may optimally position themselves against salient reference points to manage this tension and gain favorable audience evaluation. Nevertheless, one limitation of prior research is that it tends to focus on new entrants' agency and treats the firms that constitute the baseline for comparison as static and given. In a setting of dynamic entry, this paper takes a first step toward studying how incumbent firms' preemptive behaviors in response to entry threats are shaped, and in turn affect potential new entrants' strategic decisions. Our theoretical framework is derived by bridging the organizational studies on strategic positioning and the strategic deterrence literature. Our baseline hypothesis is that incumbents take ex-ante actions to deter entry as entry threats are higher. We also predict significant heterogeneity in incumbents' deterrence depending on the potential new entrants' local market appearance. Furthermore, we expect new entrants to pursue a distinctive positioning if they persist to enter despite strategic deterrence. Exploiting a unique empirical opportunity generated by the branching deregulation in the Chinese banking industry and a novel Difference-in-Differences (DiD) design, we analyzed over 60,000 branches of 16 banks in 189 cities from 2006 to 2012 and found strong support for our predictions.

Digital Platforms and Organizations

Session Moderator: **Qi Song**, *Northwestern U.*

OMT: **Restructuring Relations: How Digital Platforms Transform the Freight Transportation Market in China**

Author: **Qi Song**, *Northwestern U.*

Scholars have identified that digital platforms, as a new form of economic organization, produce value mainly by orchestrating crowds, managing relationships, and facilitating interaction. However, the question of how social relations mediated by platforms are different from those in the pre-platform market is unaddressed. Building upon economic sociologists' theories on embeddedness and relational work, this study perceives social relations as processes and analyzes how digital platforms transform the relational dynamic among market actors. Drawing upon the freight transportation sector in China as an example, this study finds that digital platforms transform the social foundation of market from strong, long-term cooperation among market actors into tenuous, one-time relationships. Digital platforms, thus, replace the conventional way to cope with market uncertainty through the relational work of market actors with bureaucratic mediation of customer services. This study also finds that platforms are considered biased toward freight owners at the expense of truck drivers' benefits when resolving disputes. This article concludes by problematizing the efficiency rhetoric about the platform economy and calls for attention to the relational inequality orchestrated by platforms.

OMT: **The Impact of Socio-political Context on Organizational Reputation: A Study on China Online Platform**

Author: **Wei Wang**, *Northwestern Kellogg School of Management*
Author: **Weiliang Zhang**, *Univevrsity of Science and Technology of China*
Author: **Michael Andreas Etter**, *King's College London*

Management literature on organizational reputation has focused on isolated evaluators as independent agents that form and express reputational judgments about organizations based on a rational assessment of their attributes. In this article, we challenge this assumption, and we shift the focus on the macro-environment by investigating how evaluators' reputational judgments are influenced by the socio-political context. Concretely, we study how national animosity at the societal level influences evaluators' reputational judgment expression online. We theorize in a first step how national animosity elicits negative emotions that override the rational assessment of organizational attributes, and, in a second step, how reputational judgment expression becomes an affectively motivated act through which evaluators express alignment with an in-group. We test our hypotheses with a natural experiment based on the trade-war between the US and China. We show how this shock to the socio-political context changes judgment expression in online ratings for organizations that belong to the outgroup. We find that this reputational animosity cost spills even over to organizations that are only loosely associated with the outgroup. The article therewith contributes to our understanding of the important influence of the socio-political context on reputational judgments within increasingly polarized environments.

OMT: **Strategic Sensemaking in a Digitalized Firm: A Study of an Airline's Response to COVID-19**

Author: **Henri Schildt**, *Aalto U. School of Business*
Author: **Jukka Luoma**, *Aalto U.*

We investigate how a firm's extensive reliance on information systems shapes strategic sensemaking and adaptation. Our inductive study of an airline facing the COVID-19 pandemic reveals how the organization's digital structure—digital representations, data flows, and algorithmic processing—had a critical effect on organizational sensemaking even as the algorithms no longer functioned. The organization's digital structure together with a related data-centric organizational culture endowed specific units with 'epistemic authority' and 'coordination authority' beyond and above their hierarchical position, providing them a central role in adaptive sensemaking over other units. The digital structure and culture instigated a data-augmented sensemaking process, where observation, interpretation, and enactment were shaped by data and technological affordances. We conclude the article by discussing digital structure as a vital complement to formal and informal organizational structures in understanding both routine and non-routine organizational processes.

OMT: **Decontextualizing Software Craftwork: An Ethnography of an Emerging Blockchain and Climate Venture**

Author: **Kam Phung**, *Simon Fraser U.*

Drawing on a 24-month ethnography of an emerging organization as it created a blockchain-based climate platform deploying non-fungible tokens ("NFTs"), I explore how the differential relationships that internal constituents have with the contemporary craft of software development shape the dynamics and strategies of a new craft-based venture. Focused on differential relationships delineated by members' proximity to the technical skill of blockchain programming and its cultural underpinnings, I offer an intimate account of how the distal exerted knowledge, legitimacy, and production-based decontextualization pressures on the proximal, who sought to embrace the roots of the craftwork through discursive, material, and relational linkages. I then explore how the proximal strategically targeted "the wise" and "safe spaces" to resist and insulate themselves and the venture from decontextualization pressures.

OMT: **Strategic Gatekeeping**

Author: **Matthew Josefy**, *Indiana U. - Kelley School of Business*

Gatekeeping theory in the mass communications literature focused on how information was filtered by individuals, such as a newspaper editor, before dissemination to audiences. In light of controversial decisions by firms regarding when to include or restrict certain content from social media and entertainment platforms, we develop a conceptual model of how firms differ in their execution of strategic gatekeeping along the dimensions of strategic agency, orientation and configuration. This model extends consideration from information alone to the gatekeeping of resources more broadly, providing a foundation for future strategic management research to examine firm actions through a gatekeeping lens. The implications of this work are timely for understanding firms' strategies in light of digitization and the ubiquity of platform-based models.

Investigating Diversity and the Impact of Diversity (and Related) Initiatives

Session Moderator: **Kylie Heales**, *U. of Alberta*

OMT: **How Institutional Logics Influence Growth: A Field Experiment with Tunisian Women Entrepreneurs**

Author: **Kylie Heales**, *U. of Alberta*
Author: **Angelique Slade Shantz**, *U. of Alberta School of Management*
Author: **Desiree F. Pacheco**, *IESE Business School*
Author: **Luciano Barin Cruz**, *HEC Montreal*
Author: **Charlene E. Zietsma**, *U. of Michigan*

Entrepreneurial training programmes promoting women's entrepreneurship in low- and middle-income countries command significant global attention and concomitant resources. Despite this broad investment, many ventures in these contexts fail to grow. Prior research suggests that institutionalized patterns of behaviors, in part dictated by institutional logics, may cause this lack of growth. In the context of Tunisian female entrepreneurship, this research explores the effects of community and market logics on entrepreneurial growth outcomes. Using a field experiment, we demonstrate that institutional logics affect the growth aspirations of entrepreneurs through individual empowerment and emotional energy. This research has theoretical implications for institutional logics, entrepreneurial growth, and emotions literatures. Firstly, institutional logics affect entrepreneurial growth outcomes. Secondly, logics are processed by individuals through both cognitive (empowerment) and social (emotions) constructs and we contribute to knowledge of the integrated macro to micro psychological and social processes of institutional logics. Finally, cultural differences explain why logics do not have the expected effects we think they may in the promotion of Western neoliberal entrepreneurial training programs.

OMT: **Oscar Voters so White? Spillover Effects of an Evaluator's Diversity Intervention**

Author: **Daphné Baldassari**, *U. of Toronto, Rotman School of Management*

As award bestowers face criticism for leaving the achievement of women and racial minority workers unrecognized, many interventions focus on making award committees more diverse to reduce evaluation biases. While prior research found mixed evidence of the direct effects these interventions have on reducing gender and racial gaps in the evaluation process, I investigate the spillover effects: whether and how making award committees more diverse influences hiring decisions in award-seeking organizations. Using archival data on 193,394 hiring decisions on films released in the U.S. from January 2010 to April 2021, I examine an intervention by the Academy of Motion Picture Arts and Sciences to increase the number of women and racial minority workers voting for the Oscars. The results show that the Academy's intervention is associated with a greater likelihood that award-seeking film productions hire women or racial minority workers. Moreover, supporting the theoretical argument that award-seeking organizations strategically respond to an evaluator's diversity intervention, these positive spillover effects are concentrated in visible occupations and mainly benefit workers who have become members of the Academy. These findings provide insights into the role that awards and, more broadly, third-party evaluators can play in reducing inequality in an industry.

OMT: **Deprioritizing Diversity: Organizational Uncertainty and the Stalled Diversification of Faculty**

Author: **Kwan Woo Kim**, *Harvard U.*

Scholars have identified employer bias as a barrier to workforce diversification but overlooked organizational mechanisms that activate bias. Using the censuses of American higher education institutions and new doctorates, this study examines whether and how institutional R&D performance affects the diversity of new hires. American higher education is a good case in point because much of the current-day university administration is about keeping the numbers right -- such as institutional research expenditures, endowments, and rankings. Universities also pay a great attention to student and faculty diversity, but do they maintain their commitment to diversity after seeing a decline in the performance metrics? Synthesizing research on organizational uncertainty and employer bias, I hypothesize that a university's decline in R&D expenditures is followed by a reduction in the diversity of faculty hires via two mechanisms: first, by reallocating job openings to less diverse but more resourceful fields, and second, by hiring a less diverse group of job candidates. The analysis using error-correction models suggest that a decline in research expenditures reduces the diversity of faculty hires via ingroup bias within disciplinary subunits more than job reallocation between disciplines. This study contributes to organizational sociology by testing the two mechanisms through which organizational uncertainty amid performance decline stalls workforce diversification.

OMT: **Diverse but not Inclusive: How Organizational Status Maintenance Undermines Social Inclusion**

Author: **Sandra Portocarrero**, *Columbia Business School*
Author: **Andrea Wessendorf**, *U. of Edinburgh business school*
Author: **Gerardo Okhuysen**, *U. of California, Irvine*

We examine how the concern to maintain organizational status undermines social inclusion. To do this, we study the experience of Electi, an elite university in Peru, as it implements a Diversity, Equity, and Inclusion (DEI) initiative aimed at diversifying the student body by enrolling becarios, academically accomplished students from low-income backgrounds. Although Electi enrolled these students, the initiative could have been more effective at achieving inclusion. In particular, we find that the presence of becarios represented a potential status threat for the organization and, consequently, faculty, staff, and students engaged in actions that respond to this threat. We identify four key processes unfolding at Electi: the creation and maintenance of a student prototype, the establishment of upper-class standards as the norm, the creation of a becario stereotype, and the concealment of information that might reveal lower social class. Together, these processes undermine the inclusion objectives of the DEI initiative. We conclude by discussing the theoretical implications of our work.

Tackling Grand Challenges

Session Moderator: **Ferran Torres**, *U. Ramon Llull, ESADE Business School*

OMT: **The Work of Institutional Entrepreneurs Harnessing the Business-society Paradox in Grand Challenges**

Author: **Ferran Torres**, *U. Ramon Llull, ESADE Business School*
Author: **Lisa K. Hehenberger**, *ESADE Business School*

Responses to grand challenges require collaboration between actors from different sectors, which inherently produces friction and paradoxical tension between organizations. However, how collective efforts arise out of conflict in the context of grand challenges remains poorly understood. Accordingly, in this article we explain how institutional entrepreneurs work on their immediate context to shape underlying paradoxes and produce collaboration. We address this research question with a qualitative study in the context of the development of the European Social Impact Bond (SIB) market. SIBs are a novel form of cross-sector collaboration built around outcomes-based contracts and used to tackle grand challenges. Institutional entrepreneurs' work affects their immediate sociomaterial context, shaping the system characteristics in which the business-society paradox is inherent, and knotting it with the shared-individualized, control-flexibility, and simplicity-complexity paradoxes. In doing so, the business-society paradox inherent in grand challenges becomes owned, vibrates, and gets materialized along the facets of complexity, uncertainty, and evaluativeness respectively. Our explanation highlights the sociomaterial nature of paradoxical knots, going beyond amplifying and attenuating effects.

OMT: **Ambassadors for Collaboration - Facilitating Collaborative Governance in Tackling Grand Challenges**

Author: **Nikolai Staudinger**, *WirtschaftsU. Wien*
Author: **Stephan Leixnering**, *WU Vienna*

Management scholars have emphasized the need for multi-actor arrangements in order to tackle grand challenges such as the Covid-19 pandemic. But while recent literature in the field of collaborative governance has revealed insights about the structures and outcomes of collective responses, we know only little about how these responses actually emerge and work on the ground. With our study, we therefore ask for the type of action that facilitates the establishment and sustaining of collaborative arrangements, involving diverse actors with (potentially) adverse interests. Empirically, we study the initiative "Stolz auf Wien", which resulted in the foundation of an investment company by the City of Vienna in order to provide equity to struggling businesses in the aftermath of the pandemic. This collaborative undertaking involved not only various city actors but also private banks, business lobbyists such as the chamber of commerce, auditors, lawyers, and the investee businesses. Building on international relations literature about diplomacy, we find that the key actors involved in "Stolz auf Wien" borrowed from practices usually associated with professional diplomats, such as representing a joint initiative or bringing in their personal ties. With shedding light on such diplomatic action, we contribute to the literature on collaborative governance.

OMT: **Joining Forces for Better Care: The Implications of Logic Multiplicity in Multisectoral Partnerships**

Author: **Marvin Schliemann**, *Uppsala U.*
Author: **Anders Brantnell**, *Uppsala U.*
Author: **Serdar Temiz**, *Uppsala U.*

Confronted with grand challenges, multisectoral partnerships (MSPs) are an increasingly employed organizational approach to gather actors from various societal sectors. While the hope is that joining forces will allow us to address these challenges, MSPs are established in institutionally complex environments, which institutional theory has identified as a driver for conflicts within organizations. However, few studies have investigated the implications of logic multiplicity in MSPs. Drawing on an in-depth revelatory case study of an MSP for the development of 3D printing in healthcare, we provide rich data from the early years of development and compare qualitative and quantitative approaches to capture institutional logics. We build on logic compatibility and logic centrality to capture the implications of logic multiplicity for conflicts in an MSP. We find that both qualitative and quantitative approaches can capture institutional logics in MSPs and that a quantitative approach can be used to explore degrees of conflict in MSPs. These findings contribute to the institutional logics literature by illustrating how institutional logics can be used to study MSPs and how researchers can study logics through quantitative surveys. The findings contribute to management practice by exemplifying how managers could scan their MSPs for logics and level of conflict.

OMT: **Affordances of Participatory Architectures to Tackle Wicked Problems**

Author: **Paulo Savaget**, *U. of Oxford*
Author: **Cynthia Rayner**, *U. of Cape Town Graduate School of Business*
Author: **Marc Ventresca**, *U. of Oxford*

Collaboration is often described as the key to solving complex problems; yet, complex challenges such as climate change, poverty, and inequality are persistent in time and across geography. We approach this issue by combining literature on participatory architectures with affordances theory. We ask: what are the affordances of a participatory architecture that targets wicked problems? To answer this question, we conducted and analyzed 48 semi-structured interviews with key members of Catalyst2030, a participatory architecture created to promote collaboration for the United Nations Sustainable Development Goals (SDGs). Our findings reveal four ideal types of affordances of participatory architectures – coordinated action, advocacy, social learning, and meaning-making – which create both opportunities and frustrations in formulating, sustaining, and reconfiguring collaborative arrangements to address wicked problems. Juxtaposing our findings with extant literature, we discuss how affordances shape the initiation of pragmatic collaboration through a participatory architecture, how affordances help understand the indeterminacy of wicked situations, and the challenges of harmonizing a participatory architecture's governance with its affordances.

OMT: **A Method for Theorizing Impacts of Organizations and Value Chains on Socio-Ecological Systems**

Author: **Elizabeth Miller**, *Aalto U. School of Business*
Author: **Olli Sahimaa**, *Aalto U. School of Business*
Author: **Minna Halme**, *Aalto U. School of Business*

The organizing of global business has major impacts on grand challenges like climate change and polarizing inequality. In complex global value chains these impacts are often indirect and may go unrecognized as business activities and their socio-ecological system impacts are often spread out in time and space. However, organizational theories and methods often miss indirect links between organizations and grand challenges. We address this by developing a five-step method for qualitative systems mapping using “linked-entity coding” and accessible visualization to see indirect impacts and identify feedback loops and root causes. Demonstrating our method, we investigate the textile and garment sector. We contribute 1) a qualitative socio-ecological system analysis method that facilitates uncovering socio-ecological impacts of organizations in a sector relying on global value chains with fuzzy system boundaries and 2) a new way of presenting system maps that can be utilized by management scholars not trained in systems science but needing socio-ecological system understanding in their research.

Institutional Logics: New Research in Organizations and Management

Session Moderator: **Ricarda B. Bouncken**, *U. of Bayreuth*

OMT: **Innovation and Logics in Coworking Spaces: A Template for Contemporary Innovation Spaces?**

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Martin Ratzmann**, *U. of Bayreuth*
Author: **Till Marius Gantert**, *U. of Bayreuth*
Author: **Mahmood Aslam**, *U. of Bayreuth*

The multi-method study informs about complementary vs. trade-off relationships of recursively emerging institutional logics and their innovation consequences in shared social- and work-space settings of coworking spaces. Our initial five-year exploratory study identifies emerging institutional logics that point toward 'a sense of community' logic, a 'traversity' logic, and a 'competitiveness' logic. Our two-level testing study elucidates innovation benefits by each logic as well as their complementary and trade-off relationships. Surprisingly, a competitiveness logic complements a sense of community logic toward greater innovation although they seem antithetic. Differently, the traversity logic, conceptualized by the change of scenery when working in different zones and teams shows a tradeoff-relationship with the competitiveness logic. High levels of a sense of community can compensate for the negative joint effect of traversity and competitiveness. The co-created competitiveness or traversity logics might be followed for increasing distinctiveness besides adhering to a sense of community as the key category logic.

OMT: **Rhetorical Maintenance of Institutional Logic of Work Rationalization under Societal Challenges**

Author: **Kalle Pajunen**, *Tampere U.*
Author: **Juha S. Laurila**, *U. of Turku, Finland*
Author: **Hannele M J Seeck**, *The London School of Economics and Political Science*

Maintenance of institutional logics under societal challenges and crises is a process involving various actors at different analytical levels. It is also a process closely shaped by the use of rhetoric, particularly when these logics face the pressure of challenging ideas and practices. Our study extends previous research on these issues by examining how maintenance of an institutional logic providing meaning and guidance for organization-level activities becomes formatively embedded in and interlinked with rhetorical language enacted on field and governmental levels of the societal system. Based on unique historical evidence on maintenance of work rationalization logic over multiple decades in Finland, we demonstrate how the meaningfulness and eventual effects of the rhetoric enacted to maintain the logic challenged at the organizational level are conditioned by related rhetoric enacted to tackle or address the same challenge on the field and governmental levels. Our emergent theorization explicates three inter-level rhetorical mechanisms—selective value-backing, buffering, and translation—that capture how this embeddedness materializes in logic maintenance.

OMT: **Strategy in New Firms: The Influence of Founding Team Institutional Background**

Author: **Joseph Dwomoh Owusu**, *MacEwan U., Edmonton, Alberta*

This article explores whether the institutional logics founding teams are embedded in influence entrepreneurial behaviour. Building on the competing logics scholarship, this paper shows that new firms embedded in family logic are more likely to engage in explorative behaviour, while those embedded in commercial logic are likely to engage in exploitative behaviour. In developing my arguments, I eschew demographic characteristics as explanations of teams and consider their institutional embeddedness. I argue that the institutional backgrounds of founding teams provide richer measures of mechanisms and processes that affect founding team cognition, values and perceptions and, consequently, entrepreneurial behaviour. The findings suggest that founders' institutional logic is an important antecedent of explorative and exploitative behaviour in new firms.

OMT: **Institutional Logics in Corporate Governance: Attributing for Poor Performance and CEO Succession**

Author: **Shoonchul Shin**, *Aalborg U. Business School*
Author: **Juyoung Lee**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*

Institutional Logics in Corporate Governance: Attributing for Poor Performance and CEO Succession in Large U.S. Firms, 1960-2016 ABSTRACT By examining insider versus outsider CEO succession, we demonstrate that the characteristics of prevailing institutional logics—i.e., belief systems about appropriate behavior—constitute a critical contingency for a board of directors' involvement in monitoring management. We propose that outsider succession represents the board's action against managerial digression from historically prevailing logics under conditions of poor performance. We examine this argument in large U.S. Fortune companies in 1960-2016, when these firms were under the successive dominance of two distinct logics, namely a finance logic and a shareholder value logic. Event history analysis reveals that the strength of the relationship between poor performance and outsider succession is conditional on the extent to which CEOs' prior activities conform to or digress from the prominent logic in each time period. Under the shareholder value logic, the relationship was weakened when CEOs were engaged in practices consistent with the logic, such as corporate refocusing and downsizing strategies. In contrast, it was strengthened by the engagement in refocusing and downsizing during the finance logic period, when the pursuit of conglomerate diversification was viewed as appropriate. Meanwhile, CEOs' refocusing and downsizing activities were not associated with outsider succession rates under conditions of high performance. The results suggest that, given that the causes of poor performance often remain uncertain and ambiguous, institutional logics can provide the cognitive point of reference around which directors make attributions for performance problems and evaluations of leadership quality. Implications for the literatures on institutional logics, executive succession, and performance attribution are discussed.

OMT: **Union with Diverging Goals: How Collaboration Unfolds if Partners are Driven by Heterogeneous Logics**

Author: **Silvia Velmer**, *IESE Business School*
Author: **Tommaso Ramus**, *ESSEC Business School*
Author: **Antonino Vaccaro**, *IESE Business School*

In this paper we leverage on the theoretical lenses of institutional logics and orchestration to explore how actors motivated by heterogeneous institutional logics – that set for them different goals and means to achieve these goals – collaborate to address complex societal problems in innovative ways. We rely on the study of a collaborative initiative, whose aim is to eradicate organized crime in Italy through the conversion of mafia-confiscated farming assets into social enterprises that provide job opportunities to marginalized individuals. The collaborating actors, Green and nine farming social enterprises, are motivated by heterogeneous logics: Green by the social justice and the commercial logics, the social enterprises collaborating with it by the social-welfare and the commercial logics. We identify four mechanisms of collaboration and we show how the characteristics and impact of the collaboration depend on the interactions between the heterogeneous logics influencing Green and the partner social enterprises. Our empirical evidence enables us to contribute to extant research on institutional logics, orchestration and social innovation to address complex social problems.

Presenter: **Njoke Thomas**, *Boston College*
Presenter: **Youjin Jenna Song**, *Northwestern Kellogg School of Management*
Participant: **Brayden G. King**, *Northwestern U.*

Platforms present novel ways of organizing labor, and social media platforms are no exception. Social media platforms have transformed cultural production by bringing together multiple actors, shaping their interactions, and enabling commercialization of user influence and activities. One such platform, YouTube, is a digital content-sharing platform with massive social and economic impact and a site of rich social and cultural processes that are of relevance to organizational scholars. The technological tools on YouTube, such as algorithm-based recommendations, comments, livestreams with chats, and data analytics monitoring, amplify the effects of audiences and algorithms in ways that require the adaptation of existing theories and development of new theories in management scholarship. To illustrate the diversity of processes and empirical contexts on YouTube, we bring together four presentations that ask: 1. How do platforms shape cultural producers' interactions with their audiences and the role of audience expectations in their work? 2. How do platform algorithms and professional norms interact to affect cultural producers' meaning-making and practices over their career trajectory? 3. How do cultural producers relying on community ties balance community demands with commercialization? 4. How do platforms allow evaluators of cultural products to amplify social movements? These presentations highlight different tensions that arise between the force of commercialization and other social values – community relationships, authenticity, diversity, and professional norms – as platforms introduce new ways of organizing. They contribute to literatures in organizational theory and economic sociology on the platform economy, cultural production, social movements, authenticity, algorithmic management, entrepreneurship, and evaluations.

Doing Experiments in Social Network Research

Organizer: **Alessandro Iorio**, *Bocconi U.*
Organizer: **Eric Quintane**, *ESMT Berlin*
Panelist: **Ronald S. Burt**, *U. Of Chicago*
Panelist: **Tiziana Casciaro**, *U. of Toronto*
Panelist: **Weihua An**, *Emory U.*
Panelist: **Catherine Shea**, *Carnegie Mellon U. - Tepper School of Business*

Despite the popularity of experimental approaches in management and related fields, the adoption of experimental research designs—laboratory, natural, or field experiments—has been slow in organizational network analysis. In recent years, there has been a growing call for more research that pays attention to experimental designs and causal inference in network analysis. This is important not only to ensure knowledge accumulation, but also because of the practical and policy implications of network research. However, relational theories, data, and methods possess peculiarities that need to be accounted for when conducting experiments. In this panel symposium, we bring together a number of leading academic experts, who have contributed to causal network research, to discuss these topics and share their experience on publishing network experiments in leading management outlets.

Presenter: **Bess Rouse**, *Boston College*
Presenter: **Patricia Helena Hein**, *Ivey Business School*
Presenter: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*

Although the organizing of death and dying is a central matter and grand challenge in all societies, most research in organization theory is scattered across various streams where the actual organizing of death remains in the background. The first stream investigates industries, organizations, and professions as extreme settings that deal with death at the very core of what they do or are about. Another stream explores how the outcomes and actions of societal structures, organizations, or employees can result in death. Finally, some studies focus on how organizational members deal with death and how this may affect organizational practices. The objective of this symposium is to showcase works that put organizing around death at the center, not only empirically but also theoretically. We identify common themes – values and norms, power and inequality, and time and temporality – and offer concrete paths for future research to make progress in understanding the understudied topic of the organizing of death.

Eco-Products: Labels, Accessibility, Purchases, and Brand Value

Session Moderator: **Anne Kellers**, *U. of Zurich*

ONE: **Let's (Not) Put Another Label on it: Multiple Product Labels on Vice and Virtue Products**

Author: **Jana Maria Weinand**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Front-of-package labeling is a promising tool to signal unobservable food product attributes to consumers. With the increasing adoption of multi-level labels such as the EU Nutri-Score and newly emerging Carbon labels, the risk of sending conflicting signals is increasing. Since effective labeling systems can only work in the context of adjacent labels on a package, it is critical to understand how consumers weigh and reconcile multiple labels jointly. This study draws on cue consistency and cue diagnosticity theory to uncover the interplay between carbon and nutrition labels of different valence on vice and virtue products. Results from an online survey experiment (N = 442) suggest that these trade-offs differ by product category in a multi-label context. We show that a positive carbon label can compensate for negative nutritional information in the virtue category. In contrast, we demonstrate how two positive labels backfire and reduce the overall quality perception of vice products.

ONE: **The Effects of the SFDR on Product Accessibility: A Mystery Shopping Analysis** ☯ ✈ 💻 ✋

Author: **Anne Kellers**, *U. of Zurich*
Author: **Julia Eckert**, *U. of Kassel*
Author: **Thomas Cauthorn**, *U. of Kassel*
Author: **Bernhard Zwegel**, *U. of Kassel*
Author: **Christian Klein**, *U. of Kassel*

Sustainable investing is an umbrella term for a variety of investment products that serve different purposes depending on the investor's investment motivation. Yet the disclosure to investors on product differences is insufficiently developed. In response, the European Union introduced the sustainable finance disclosure regulation (SFDR) to make product differences more transparent and investment opportunities accessible. This paper studies the effects of SFDR on the availability and accessibility of sustainable investment products for retail investors. I conduct a mystery-shopping analysis with the first round of data collection taking place a year prior to the introduction of SFDR and the second round a year after SFDR came into effect. The results show that SFDR has increased sustainable investment product availability but had little effect on the accessibility. While banks' offerings have improved, advisors remain hesitant about sustainable investment products due to struggles with product complexity and limited confidence in products.

ONE: **The Effect of Ecological Opinion Leading & Seeking on Remanufactured Smartphone Purchases** ☯ 💻

Author: **Carl Christian Hieronymi**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*
Author: **Denise Fischer-Kreer**, *RWTH Aachen U.*

We are at a tipping point to decide about the future of our planet and the environment for all living creatures. Remanufacturing can help sustain the current state of the environment by drastically reducing the necessity to mine resources further and reducing emissions of harmful or valuable substances. However, remanufactured products lack consumer acceptance as the concept is not yet widely established and known in consumer markets. Opinion leaders help diffuse innovative and new products to the broader public. We, thus, study the influence of eco opinion leading (EOL) and seeking (EOS) on the purchase intention of remanufactured smartphones (PIRS). Given the predominant role of frugality in current societies and its influence on sustainability and purchasing situations, we also study the moderating effect on the EOL and EOS relationship towards PIRS. Our consumer study in February 2022 reveals positive associations for both EOL and EOS on the PIRS and a significant weakening effect of frugality on the EOS and the PIRS relationship. We contribute to theory by establishing the concept of eco opinion leaders and seekers and help practitioners to identify a circular entry product (i.e., smartphone) with large-scale market potential.

ONE: **Environmental Product Innovation and Brand's Perceived Value: The Mediating Role of Ethical Aspects** 💻

Author: **Marcelo Gattermann Perin**, *EAESP - FGV*
Author: **Camila Kolling**, *Industrial Engineering Graduate Program, U. Federal do Rio Grande do S*
Author: **Janine Fleith De Medeiros**, *U. of Passo Fundo*
Author: **José Luis Duarte Ribeiro**, *U. Federal do Rio Grande do Sul*

Environmental product innovations (EPI) tend to be effective for organizations to align with customers who have concerns about the environment. However, firms must go beyond environmental issues. Recent studies have shown that the purchase intention for EPI is strongly associated with the responsible corporate behavior of the organization. Nonetheless, the main streams of research that address the role of companies in sustainability focus on products and processes issues. It is necessary to deeply understand the relationships that these themes present regarding ethical aspects. This study investigates the role of ethical aspects in EPI and, consequently, in the perception of brand value for end users of Apple and Microsoft. Our results confirmed the hypotheses tested in the study, fundamentally indicating that customers perceive value in EPI when they verify that organizations are ethically correct regarding aspects such as the personal data management and their culture of openness.

Supply Networks

Session Moderator: **Paul Skilton**, *Washington State U.*

OSCM: **Supply Network Structure and Diversion Risk in a Market for Hazardous Consumer Products**

Author: **Paul Skilton**, *Washington State U.*
Author: **Ednilson Santos Bernardes**, *OSCM*
Author: **Alan Mackelprang**, *Georgia Southern U.*
Author: **Ramin Sepehrirad**, *Washington State U.*

We use performance outcome expectancy theory to develop and test hypotheses concerning the relationship between supply chain structure and the creation of retail level diversion risk for hazardous consumer goods. As with other forms of organizational misconduct, the creation of diversion risk is evaluated by social control agents such as regulators, trading partners and critics. We theorize that when supply networks are structured to avoid negative evaluations, retail diversion risk increases, and vice versa. We hypothesize that negative evaluations can be avoided by choosing like-minded suppliers and through vertical integration, which obscures outcomes by internalizing them. We argue that because negative evaluations are more consequential for firms that are more sensitive to reputation risk, and are more likely when sourcing from outside suppliers, these factors reduce diversion risk. We find support for our hypotheses using a data set based on DEA records of transactions in the supply network for legal opioids.

OSCM: **Dual Networks: How does Knowledge Network Embeddedness Affect Firms' Supply Chain Learning?**

Author: **Ji Yan**, *Durham U. Business School*
Author: **Zihao Yu**, *Durham U. Business School*
Author: **Yu Xiong**, *Surrey Business School*
Author: **Kiran Fernandes**, *Durham U.*

To explore the mechanism that shapes firms' supply chain learning practices, this study examines the relationship between firms' knowledge network embeddedness and their supply chain learning practice in supply chain network, as well as the moderating role of supply chain network cohesion in this relationship. Using patent application data and supply chain partner information from 869 listed firms between 2011 and 2020 in China, this study uses fixed effect regression models to reduce endogeneity problems by controlling for individual heterogeneity effects that cannot be observed over time. The results shows that firms' knowledge network embeddedness has an inverted U-shaped effect on their supply chain learning (SCL), and this nonlinear relationship is conditional on supply chain network cohesion, which strengthens (weakens) the positive (negative) effect of knowledge network embeddedness on SCL. The findings show that managers can reconcile the downsides of knowledge network embeddedness on SCL by fostering greater supply chain network cohesion.

OSCM: **Supply Chain Agility and Supply Base Complexity: A Longitudinal Study in the Footwear Industry**

Author: **Emanuela Delbufalo**, *European U. of Rome*

This article investigates how the supply base structural complexity influences focal firms' supply chain agility (SCA). By combining two theories – Normal Accident Theory and Portfolio Theory – the study shows how three different supply base structural features – horizontal, functional and spatial complexity – influence differently SCA. The study adopts a longitudinal research design (12-year panel) in order to account for the dynamism of SCA and its time-dependent nature. The results show a linear path between horizontal complexity and SCA. They also show non-linear relationships between SCA and both functional and spatial complexity. These results stand also with a negative moderation of product complexity. The study contributes to the literature and practice by addressing some of the most common trade-offs linked to supply base design and widely discussed in most of the SCA literature. It also represents an additional step in the universalization of the SCA construct.

OSCM: **A Method for Quantizing Supply Chain Resilience Based on Aspect Sentiment Analysis**

Author: **Mengdi Shang**, *School of Economics & Management, Tongji U.*

Economic and political fluctuations have devastating risks for the regular operation of manufacturing companies, and building resilient supply chains is of increasing importance. This paper selects a time window for COVID-19 based on the World News Database. It introduces the dynamic stability of complex networks into the measurement of supply chains through techniques such as data mining and natural language processing sentiment analysis, using two car companies, Tesla and BYD, as examples to elaborate on a quantitative approach to supply chain resilience. Public sentiment management, enhancing innovation and customer service, and reinventing the supply chain can improve resilience. This paper focuses on providing quantitative metrics and decision support for building resilient supply chains from the perspective of public sentiment, offering new applications and insights into natural language processing, sentiment analysis and data mining in management research.

Philanthropy, Altruism, and Identity

Session Moderator: **Shiu-Wan Hung**, *National Central U.*

PNP: **Egoism or Altruism? Exploring Factors Driving Performance in Placemaking**

Author: **Shiu-Wan Hung**, *National Central U.*
Author: **Che-Wei Chang**, *Minghsin U. of Science and Technology*
Author: **Jyun-Hao Jian**, *National Central U.*
Author: **Ling-Yu Wang**, *National Central U.*

Placemaking is local and multifaceted development through cooperation between multiple groups. In this study, we investigated the factors that affect placemaking results on integrated individual and group levels by using a questionnaire. We retrieved 313 valid questionnaires and analyzed them using a hierarchical linear model for hypothesis testing. On the individual level, we discovered that individual norms were the primary factor affecting placemaking results. Unlike other studies, this study posited that the behaviors exhibited by the group while engaging in placemaking not only indicate altruistic values but also involve egotistic values. On the group level, the influence of social proximity on placemaking results was stronger than the influence of organizational proximity. Furthermore, group input in placemaking was not restricted by regionalism. As substantiated by the results of this study, placemaking results can be improved through emphasizing and intensifying group values and by strengthening the group's awareness of consequences.

PNP: **Philanthropy for Systems Change: An Exploratory Study**

Author: **Arthur Gautier**, *ESSEC Business School*

Systems thinking emerged a century ago and has permeated many disciplines, from sociology to environmental sciences. We have recently observed a rising interest for systems change among social sector practitioners aiming to tackle entrenched social problems. Relatedly, criticism has targeted grantmaking foundations for failing to support "changemakers" due to inappropriate funding practices. Recommendations for funding systems change and shifting the status quo in philanthropy are surging. However, we know little about foundation executives' representations and practices regarding systems change. In this exploratory study combining in-depth interviews (n=15) and a survey (n=101) with leaders of large French foundations, I reveal important gaps between a marked interest for systems change and current funding practices. I present key obstacles and discuss the prospects of diffusing systems change philanthropy more widely.

PNP: **Untangling the Helping Paradox: Altruistic Help, Undesired Side Effects and Coping**

Author: **Joanna Szulc**, *Gdansk U. of Technology, Faculty of Management and Economics*
Author: **Fabian Homberg**, *Department of Business and Management, LUISS Guido Carli U.*

We investigate how individuals cope with the side effects of altruistic behavior at work and what role the organizational context plays in these dynamics. Employing simultaneous dyadic interviews with 94 participants, we show how employees of nonprofit organizations cope with undesired effects of altruistic help. Our data provides evidence of previously overlooked unintended negative outcomes for the individual which manifest in increased perceptions of emotional tension, problems with own work, and exploitation. The work sheds additional light on the involved mechanisms by trying to understand the psycho-emotional coping processes associated with helping behavior of employees of nonprofit organizations when facing adverse consequences. Implications for nonprofit managers are discussed.

PNP: **Organizational Identity Work in Volunteer-based Organizations**

Author: **Camille De BOVIS**, *U. of Lyon, UJML3, iaelyon School of Management, Magellan*
Author: **Stéphanie Havet-laurent**, *INSEEC Business School*
Author: **Caroline Hussler**, *U. of Lyon, UJML3, iaelyon School of Management, Magellan*

An increasing body of research focuses on identity work in non-profit organizations. However, little is known about how volunteers engage in identity work in fully-volunteer organizations, i.e. how, through their actions, their discourses and behaviors they influence the core identity of the organization. Taking the case of a musical season located in a Swiss village, we led an insider-outsider research design based on 340 hours of participant observation and 16 semi-structured interviews. We identify two identity work coalitions, each of them being connected to distinct volunteering motivations and contributing to organizational identity work in a specific way, both in temporal and practical terms. Our research finally cross-fertilizes literatures about volunteering and organizational identity work in volunteer-based organizations.

Digitalization and Innovation

Session Moderator: **Julia Ingrid Scheuerer**, *U. der Bundeswehr München*

PNP: **The Dark Side of Digital External Networking: A Job Demands-Resources Perspective**

Author: **Julia Ingrid Scheuerer**, *U. der Bundeswehr München*
Author: **Elisabeth Mueller**, *U. of the Bundeswehr Munich*
Author: **Julia Stephanie Thaler**, *U. of the Bundeswehr Munich*

Digital transformation, networked value creation, and new technologies expose managers to new forms of working. In light of blurring organizational boundaries, they increasingly face the challenge of managing relationships with external stakeholders. In this study, we investigate the adverse effects of digital external networking. Drawing on the job demands-resources model, we propose that digital external networking depletes managers' energetic resources, which may lead to an individual job performance breakdown via higher emotional exhaustion and lower work engagement. Results from a survey among 129 executives of the German Red Cross uncover this 'dark side' of digital external networking. In addition, our findings suggest that personal resources, such as networking ability and digital technology commitment, can reduce the managers' perceived emotional exhaustion and increase their work engagement.

PNP: **Smart Working of Public Servants between Enthusiasm and Skepticism: The Role of Digital Readiness (WITHDRAWN)**

Author: **Davide Giacomini**, *U. of Brescia*
Author: **Rocco Palumbo**, *U. of Rome Tor Vergata*
Author: **Giacomo Carli**, *The Open U.*

The Coronavirus pandemic resulted in significant transformations of work arrangements in the public sector. Smart working has been chosen as the main solution to guarantee public services' continuity. However, there is limited agreement on the factors that make smart working attractive. Drawing on data collected among Italian public servants (n = 2,450), the paper examines the relationship between digital readiness and smart working acceptance. The former enhances the public servants' acceptance of smart working. Role clarity mediates this relationship, reducing the inclination to embrace smart working. Tailored management initiatives are needed to cope with the public servants' resistance to smart working.

PNP: **Change Agents & Public Sector Digitalization: The Role of Social Support and Leading from the Bottom**

Author: **Caroline Fischer**, *U. of Potsdam*
Author: **Jessica Breaugh**, *ESCP Business School*
Author: **Jakob Kuehler**, *U. of Potsdam*

Digital technologies fundamentally change the way workplaces operate and are managed. This is particularly acute in public organisations where citizens' demands for fast, reliable, and accessible services far outpaces actual rates of digitalisation. One critical hurdle in this transformation is the resistance to change that characterizes large bureaucratic organisations. This study examines the role that active change management plays in the digital transition of public sector organisations through the perspective of internal change agents, who act as leaders in digital transformation. While existing research has predominantly examined executives in their role as internal change agents, we look specifically at employees who have selected and trained for this role without being active in a management position. Using a mixed methods approach, including a two-wave survey of public employees (N1=210, N2=200) in a German local administration, we study the role and impact of change agents in digital change. Based on social support theory, we hypothesize that change agents play a role of first responders to stress and strain that employees may feel about the process. However, the suggested impact on employees' readiness for digital change is limited. Although emotional support leads to an increase in digital confidence, no significant influence of other types of support could be shown. Complementary collected qualitative data suggests that, after six months of introducing the change agents, employees are not yet in sufficient contact with them to benefit from their support. These findings suggest that the short-term results of change agent programs in public sector organizations are limited. There appears to be a need to proactively offer support to employees to lower the barrier to engaging with change agents. The results of this research highlight the difficulties in directed bottom-up change management processes for leading large-scale organizational change.

PNP: **A Longitudinal Study of Servant Leadership and Employee Innovation in Public Organizations**

Author: **Linh Thi Thu Bui**, *Australian National U.*
Author: **Guihyun Park**, *Australian National U.*

Employee innovative performance has been central to public organizations' growth and effective service delivery to citizens. Although the literature has acknowledged servant leadership as an important antecedent exerting influence on employee innovative performance, most research has overlooked the dynamics inherent in this relationship. Drawing on the servant leadership literature and the componential model of creativity and innovation, we examined the within-person effect of servant leadership on employee innovative performance and a boundary condition that shapes this effect. Using longitudinal data collected throughout three-month innovative projects of 87 dyads in 47 public organizations, we found that receiving servant leadership reduced employee innovative performance. However, a test of the cross-level interaction effect showed that servant leadership was associated with decreased innovative performance only for employees with low accountability. We discuss the theoretical and practical implications of our findings and provide some recommendations for future research.

Global Approaches to Corporate Social Responsibility

Session Moderator: **Johanna K. Moisander**, *Aalto U.*

SIM: **Traditional Chinese Culture Approach to Corporate Social Responsibility**

Author: **Jianliang LI**, *U. of Nottingham Ningbo China*
Author: **Cong Cao**, *U. of Nottingham Ningbo China*

In this study, we adopt case studies of four local corporations in China to explore how traditional Chinese culture (TCC) influences corporate social responsibility (CSR) in a more systematic and in-depth approach. We collected both archival data and first-hand data via 14 in-depth interviews in 2021. The findings extend the roles of TCC in CSR — 'harmony', 'holism and balance' and 'detrimental', uncover Mohist harmony and Confucianism—Legalism balance. Besides, the relationships between TCC and CSR are affected by leadership, corporate culture, human resource management and employee's engagement. This study enriches the research on management, CSR and culture by connecting ancient wisdom that has guided generations over thousands of years to contemporary issues of business ethics. We provide some managerial implications for CSR practitioners in the Greater China area and East Asia that are deeply rooted in TCC.

SIM: **Emergence of Hybrid CSR Models in a Nordic Welfare State**

Author: **Johanna K. Moisander**, *Aalto U.*
Author: **Kirsi Eräranta**, *Aalto U.*
Author: **Kathryn Fahy**, *Sheffield U. Management School*
Author: **Visa Penttilä**, *Lappeenranta U. of Technology*

This paper explores how hybrid models of corporate social responsibility (CSR)—models combining society-centric mandatory (implicit) and business-centric voluntary (explicit) approaches to CSR—are communicatively constructed through institutional struggles over the respective duties and responsibilities of business and government in the context of a Nordic welfare state. A qualitative analysis of a framing contest over the moral legitimacy of tax avoidance shows how hybrid models of CSR are gradually developed as the contending actors elaborate their diagnoses and prognoses in response to the institutional contradictions and conflicts of interests that surface. While corporate actors develop a frame in which CSR substitutes for mandatory institutionally regulated forms of social solidarity, the media develop a frame that integrates or assimilates elements of explicit CSR into the prevailing implicit model of CSR in ways that ensure the core principles of implicit CSR prevail, thus preserving the institutional ethos that underpins implicit CSR.

SIM: **CSR Preference of Emerging Market High-tech Firms: The Role of TMT Expertise and TMT Attentions**

Author: **Zhang Yue**, *Fudan U., School of Management*
Author: **Qinqin Zheng**, *Fudan U.*
Author: **Jinyun Sun**, *Fudan U.*
Author: **Jinxuan Wu**, *Fudan U., School of Management*

As high-tech firms are rapidly growing under the strong support of governments in emerging markets, such firms are facing more stringent requirements on fulfilling corporate social responsibility. Drawing on upper echelon theory and the attention based view, we aimed to explore high-tech firms' corporate social responsibility preferences under the mechanism of "expertise – attention – willingness" of top management team. We found that top management teams' technical expertise promotes the green innovation intention of high-tech firms. Top management teams' financial expertise boosts their philanthropy intention but inhibits their green innovation intention. Moreover, managerial innovation attention partly mediates the positive relationship between technical expertise and green innovation intention. Managerial efficiency attention partially mediates the positive relationship between financial expertise and philanthropy intention and the negative relationship between financial expertise and green innovation intention. In addition, the further analysis results found that venture capital significantly activates the managerial efficiency attention of financial expertise and thus strengthens its influence on the corporate social responsibility preference of high-tech firms. Our research deepens the understanding of previous studies on the corporate social responsibility preferences of emerging market high-tech firms by focusing on the cognitive uniqueness of such firms' top management teams.

SIM: **The Impact of Social Class on CSR Attitudes - An Empirical Analysis of German Top Managers**

Author: **Anke Schulz**, *LMU Munich*
Author: **Dominik Van Aaken**, *CHARLOTTE FRESENIUS U. Vienna*

In this paper, we examine the impact of top managers' social class on their attitudes towards corporate social responsibility. Building on recent research highlighting the multi-dimensional nature of social class, we develop hypotheses on how managers' social class origin and current social class relate to their social concern, which we test with unique data on 1,230 top managers in Germany. We find that while managers with higher current social class show lower social concern, those with more resourceful upbringing actually display more of it. Our findings highlight the differential nature that imprinting may take on, particularly for social class transitioners.

CSR & Employee Recruitment, Engagement and Turnover

Session Moderator: **Ratna Devi Pillai**, *James Cook U.*

SIM: **Corporate Volunteering and Employee Engagement: Bringing Externalities to the Workplace**

Author: **Ratna Devi Pillai**, *James Cook U.*
Author: **Pengji Wang**, *James Cook U.*
Author: **Adrian T. H. Kuah**, *James Cook U.*

Noting the limited empirical evidence on corporate volunteering (CV) and employee engagement, this study draws on Kahn's engagement theory to investigate different dimensions of CV program design to increase employee CV participation and engagement in the workplace. Partial least squares structural equation modelling (PLS-SEM) is employed to analyze responses from 299 corporate volunteers. Findings suggest that volunteers find more meaningfulness from helping others than developing themselves in CV, while meaningfulness increases CV participation and employee engagement. Core self-evaluation influences psychological availability positively, which further increases CV participation and employee engagement. Psychological safety built on perceived organizational support has a direct impact on CV participation, but an indirect impact on employees' engagement in workplace. Our results imply that by cautiously addressing these dimensions, companies could bring positive externalities into the workplace to better leverage the full potential of their employees

SIM: **Mind the Gap! Employees' Perceived Internal-External CSR on Proactive Behavior & Turnover Intention**

Author: **Yi-chun Lin**, *National Taiwan Normal U.*
Author: **JIAN SHENG CHAW**, *National Taiwan Normal U.*

Recent micro-corporate social responsibility (CSR) studies assessed the employees' perceived CSR through a multidimensional lens by differentiating the targeted beneficiary stakeholders. As organization resource is always denoted in the notion of scarcity, multiple demands have to strive for the same units of resources. Despite prior literature demonstrated perceived internal and external CSR exhibited complementary relationship in affecting the employees, the competing nature and the matters on whether the (in)equivalence of perceived internal-external CSR implemented by the company affects the employees' work attitudes and behaviors were noticeably absent in the literature. Building upon social exchange theory, this study explored how the employees reciprocated to the impact of the discrepancy between perceived internal-external CSR on their proactive behavior and turnover intention. Adopting a two-wave survey approach, 271 responses were collected from incumbent full-time employees with at least one-year organizational tenure working in diverse organizations in Taiwan. The results discovered that the employees perceived external CSR significantly outweighed their perceived internal CSR. The discrepancy between perceived internal-external CSR negatively associated with employees' proactive behavior and positively associated with turnover intention via the mediation of psychological contract breach. There was a significant moderating effect by perceived overall justice on the relationships such that the indirect effects of the discrepancy between perceived internal-external CSR on employees' proactive behavior and turnover intention via psychological contract breach were only pronounced among employees with high perceived overall justice. The academic and practical contributions were also discussed.

SIM: **How do the CSR Message Content and Source Influence Employee CSR Engagement? An Experimental Study**

Author: **Marie Servaes**, *U. Gent*
Author: **Saskia Crucke**, *Ghent U.*

Employee CSR engagement is important for the successful implementation of CSR within the organization. This paper investigates CSR communication toward employees as a determinant of employee CSR engagement. It explores how organizations can improve employee CSR engagement by designing the content of CSR messages. It also explores the impact of the source of CSR messages and possible interaction effects. This study makes use of a 2x2x2 between-subject experimental survey design. Data were collected in the Flemish construction industry between December 2021 and April 2022. A total of 480 employees filled out the questionnaire after reading a fictitious scenario. In the fictitious scenario, both the CSR message content (information specificity and/or social topic awareness) and source (CEO or CSR expert) were manipulated. Results indicate a significant positive effect of information specificity on employee CSR engagement. Additionally, we found an interaction effect of social topic awareness and CSR expert source on employee CSR engagement. Finally, an interaction effect was found of employee' environmental beliefs and information specificity on employee extra-role CSR-specific behavior, a specific form of employee CSR engagement. Our results contribute to the existing literature on CSR communication, specifically internal CSR communication. This study extends previous empirical work on CSR communication, by focusing on two specific aspects: content and source.

SIM: **Managing Meaning with Recruitment Efforts: Meaningfulness Portrayals by Companies in Sin Industries**

Author: **Matthew Deeg**, *Abilene Christian U.*
Author: **Jennifer Golden**, *Abilene Christian U.*
Author: **Sarah Easter**, *Abilene Christian U.*

Employees and organizations benefit greatly from meaningful work. While a wealth of literature has explored the employee experience, scholars have paid much less attention to the management of meaning, particularly prior to an employee joining an organization. Further, scholarship attending to the normative considerations of meaningful work is typically relegated to the philosophical. In this study, we discuss the impact of not attending to the "worth" of the work in assessments of meaningful work. This discussion leads to our examination of how companies engaged in normatively non-meaningful work portray themselves as subjectively meaningful places to work to potential (and current) employees. Specifically, we use a grounded theory approach to categorize the meaning portrayal efforts of 34 publicly-traded companies in sin industries (tobacco, alcohol, and gaming). Our findings highlight nine second-order themes reflective of two aggregate dimensions – meaning from role characteristics and meaning from organizational characteristics. Implications for the management of meaning, the continued assessment of meaningful work through a normative lens, and individual applicant assessment of companies are discussed.

ESG in Context

Session Moderator: **ANGELA KARR**, *Seoul National U.*

SIM: **Gaming The System: Firm Strategic Responses To ESG Ratings**

Author: **ANGELA KARR**, *Seoul National U.*
Author: **Jangwoon Kim**, *Seoul National U.*
Author: **Jayoung Kim**, *Seoul National U.*

This study investigates how firms strategically utilize the materiality or immateriality of environmental, social, and governance (ESG) issues to manage their ESG score and offset negative ESG-related impressions. More specifically, we pull from impression management literature to suggest that when firms face reputational threats (i.e., receiving a low ESG score or facing ESG-related controversies), they strive to enhance their aggregate ESG score by improving their immaterial ESG performance, which is easier, faster, and less costly than improving performance in material ESG areas. Using a large sample of publicly traded U.S. firms ranging from 2012 to 2021, we find that firms facing poor ESG scores, especially manufacturing firms, are more susceptible to engaging in subsequent gaming tactics by improving their immaterial ESG performance in order to manage their ESG-related image without having to face significant financial trade-offs. We also find that firms facing ESG controversies are less likely to do so.

SIM: **Executive Compensation and ESG Controversies: Does Culture Matter?**

Author: **Maria Roszkowska-Menkes**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

The institutional push for corporate accountability and transparency is drawing attention to sustainability-oriented corporate governance mechanisms. This study contributes to the growing literature in this field, by harnessing an open-system approach to corporate governance and focusing on the interplay between organizational and institutional determinants of environmental, social and governance (ESG) m. Specifically, it draws on the agency and institutional theory to hypothesize the relationship between ESG-linked executive compensation and ESG controversy score across national cultures. The hypotheses are tested using a panel dataset of 4066 public firms from 56 countries during 2010-2020. The findings indicate a marginally statistically significant negative association between ESG-oriented executive compensation and corporate misconduct. The study also indicates that the relationship is largely determined by the national culture. In particular, ESG incentives are found for firms headquartered in low power distance, low uncertainty avoiding, individualistic and masculine countries.

SIM: **Environmental, Social and Governance (ESG) Rating as Qualculative Work**

Author: **Jean-Pascal Gond**, *City U. London*
Author: **Wafa Ben Khaled**, *ESCP Business School*

Despite growing concerns about the quality and divergence of Environmental, Social and Governance (ESG) ratings, little is known about how rating agencies operate and the challenges inherent to producing such ratings. Relying on prior studies of ESG rating agencies and the sociology of quantification, we analyze the work underlying the organizational production of ESG ratings. We investigate how the pioneering French ESG rating agency Arese—ultimately taken over by Moody's—constructed its ratings and rating method, while facing multiple commercial and technical challenges. This case shows how the agency addressed these challenges through three practices: by softening its data sourcing, shifting from quantitative to qualitative inputs and relying on relational work; by embedding the qualitative expert judgment of its analysts in the redesigned rating method; and by using analogical quantification so that its ratings match investors' expectations. We theorize these practices as an overarching shift from calculative work to qualculative work—the reliance on subjective judgement and qualitative elements to produce quantified data—in the production of ESG ratings. Our analysis advances studies of quantification by offering new explanations for the lack of convergence in ESG ratings while unpacking the emergence of qualculative work in financial markets.

Corporate Fraud and Misconduct

Session Moderator: **Mijia Gong**, *Northwestern Polytechnical U.*

SIM: **How and When does the Fit of CEO-CFO Promotion Focus Predict New Venture IPO Fraud**

Author: **Mijia Gong**, *Northwestern Polytechnical U.*
Author: **Zhang Zhe**, *Xi'an Jiaotong U.*
Author: **Jia Ming**, *Northwestern Polytechnical U.*
Author: **Xiaohua Yang**, *U. of San Francisco*

Drawing upon regulatory focus theory, this study attempts to examine how the fit of CEO and CFO promotion focus, an important motivational-based psychological trait, can affect new venture initial public offering (IPO) fraud. Furthermore, we explore how this relationship is moderated by CEO-CFO status similarity and environmental dynamism. Using a sample of Chinese new ventures listed on growth enterprise market from 2010 to 2016, we conduct computer-aided content analysis to quantify CEO and CFO promotion focus. Results show that the fit of CEO-CFO promotion focus increases the likelihood of new venture IPO fraud. Moreover, CEO-CFO status similarity and environmental dynamism strengthen this positive relationship. By examining this motivational-based psychological fit of CEO-CFO dyad, our research shows the need to consider CEO-CFO regulatory focus when analyzing new venture unethical behaviors.

SIM: **On the Perils of Not Accounting for Detection in Studies of Organizational Misconduct (WITHDRAWN)**

Author: **Yajing Li**, *Rennes School of Business*
Author: **Alessandro Piazza**, *Rice U.*

Organizational misconduct is a phenomenon of substantive theoretical and practical importance. An inherent challenge to studying the occurrence of organizational misconduct empirically, however, is partial observability—that is, in most cases, we are only able to observe those instances of misconduct that are detected—which can lead researchers to incorrect conclusions. In this paper, we first briefly review recent studies featuring organizational misconduct as a dependent variable. We then leverage an empirical exercise to show how not properly accounting for undetected misconduct can bias interpretation. In so doing, we illustrate that conventional methods can lead to problematic results and show how to overcome this issue using alternative estimation methods. We conclude by providing actionable recommendations for future research on organizational misconduct.

SIM: **Accountability Journalism and Corporate Illegality: An Application of Institutional Anomie Theory**

Author: **Tony Jaehyun Choi**, *Rotterdam School of Management, Erasmus U.*
Author: **Kam Phung**, *Simon Fraser U.*

Research on the watchdog role of newspapers mainly analyzes the relationship between firm coverage by major newspapers and target firms' engagement in wrongdoing or negative repercussions. Yet, the dwindling presence of newspapers amidst the past two decades illuminates a distinct need to examine differences observed in the macro-level media landscape. To this end, we advance research on the institutional determinants of corporate illegality by drawing on institutional anomie theory which highlights the role of non-economic institutions in balancing out excessive economic influences on illegality. Applying the key arguments of the theory to the behavior of firms from 29 countries, we first find that firms headquartered in countries with higher newspaper reach are less likely to engage in corporate illegality. Yet, such a pattern is less pronounced when a country is characterized by strong cultural pressure to succeed or the penetration of economic influences into newspapers. Firm-level shareholder orientation, however, did not mitigate the negative association between newspaper reach and illegality. Based on these results, we discuss the importance of analyzing macro-level media landscapes and related institutional conditions that compromise newspapers as social control agents.

SIM: **Financial Misconduct in Family Firms: The Role of Organizational Identification**

Author: **Ruijie Jin**, *Xi'an Jiaotong U.*

We distinguish between privatized family firms founded through the privatization of state-owned enterprises (SOEs) and de novo family firms created from scratch. We apply social identity theory and organizational identification literature to elucidate the differences between these two types of family firms, and how their varying degrees of organizational identification affects the likelihood of financial misconduct. We propose that privatized family firms are more likely to commit financial misconduct than de novo family firms due to family members' decreased identification with the firm. We also predict that the likelihood for privatized family firms to commit financial misconduct increases when the firm has a family CEO and a higher proportion of family executives, but decreases when the firm has a longer duration of family ownership and is located in an area with stronger clan culture. We tested our hypotheses with a sample of publicly listed family-controlled firms in China between 2009 and 2019, and found strong support for most of our predictions.

Ethical Leadership

Session Moderator: **Sven Horak**, *St. John's U.*

SIM: **Head versus Heart - An Ethics as Paradoxical Practice Perspective on Social Enterprise Leadership**

Author: **Sven Horak**, *St. John's U.*
Author: **Nada Kakabadse**, *Henley Business School, U. of Reading*
Author: **Stewart R. Clegg**, *U. of Technology, Sydney*

Social enterprises often need to meet both social and financial goals simultaneously, a paradox that can lead to ethical dilemmas. To date, little attention has been paid in the literature to identifying and classifying ethical dilemmas that social entrepreneurs encounter in practice. Pursuing an explicit discovery approach, drawing on a series of semi-structured in-depth interviews with social entrepreneurs and leaders in social enterprises in Israel, we discovered a triangle of interrelated non-trivial ethical dilemmas that are typically encountered. These ethical dilemmas hinge on the antecedents of legitimacy, outcomes and governance in navigating complex ethical dilemmas in practice. By combining traditional schools of ethical thought with a business ethics as practice perspective, our results suggest that, in practice, an agile approach to ethical decision-making is needed, one that integrates various ethical approaches, to lead a social enterprise.

SIM: **The Ethics of Authentic Leadership: A Heideggerian Perspective**

Author: **Florence Villeseche**, *Copenhagen Business School*
Author: **Anders Klitmøller**, *Royal Danish Defence College*
Author: **Cathrine Bjørnholt Michaelsen**, *Copenhagen Business School*

In the shadow of various business scandals and societal crises, practitioners take growing interest in authentic leadership (AL), and a stream of research developed on this basis. AL puts personal ethics centre stage and these constitute the basis from which to act, with the view to be both ethically responsible and successful in business. Critics of AL raise concerns about defining assumptions in AL, notably that leaders may access and leverage their 'true selves' and 'core values', and that this compound constitutes the grounds from which to lead and benefit others. Drawing on Heidegger, we argue that authenticity can ground a leadership ethics, yet not grounded in unwavering personal values but instead understood as a attunement to the unfounded openness of existence and to the relational dimension of ethics. We argue that when experiencing a rupture in their work life and facing anxiety, i.e., encountering the prospect of 'leadership death', leaders have an opportunity to reconsider who they want to be and how they want to act. We thus propose an existentialist ethics-as-practice approach where leaders relate to the situations at hand by practicing a being 'attuned to attunement' and cultivating an openness to otherness.

SIM: **Social Issues and Business Leaders: Effect of Directors' Social Class, Values, and Political Leaning**

Author: **Lisanne Juliette Veter**, *Erasmus U. Rotterdam*
Author: **Harry Commandeur**, *Erasmus School of Economics, Rotterdam*
Author: **Jatinder Singh Sidhu**, *Leeds U. Business School*

As humanity faces numerous grand challenges, corporations are called upon to play a role in addressing these social issues. The Sustainable Development Goals (SDGs), as formulated by the United Nations, provide 17 goals to achieve sustainable development. Many firms resort to the SDGs in addressing their corporate purpose. But what makes firms more or less inclined to contribute to certain SDGs? We address this intellectual void by studying the effect that corporate leaders have on SDGs. We empirically study the role of directors' political orientation, social class background and values for SDG contribution preferences. A survey was held among experienced directors. The findings show that political orientation, social class background and values are significant antecedents of SDG contribution preferences. By simultaneously studying the consequences of these concepts for executive decisions on social issues, we add to the literature on corporate leaders and their role in social issues management. As such, answering a call for management scholars to foster knowledge on the SDGs, potentially aiding those who seek to engage corporate leaders and their firms in the adaptation of the SDGs.

SIM: **Demystifying the Concept of Phronesis in Management and Leadership: A Systematic Scoping Review**

Author: **Dimitra Stoumpou**, *PhD Candidate, Athens U. of Economics and Business*
Author: **Ilias Kapoutsis**, *Athens U. of Economics and Business*

Leaders are facing unprecedented challenges that require the ability to make sound decisions and act in situationally appropriate ways. Phronesis, a cardinal virtue that reflects this ability, is considered necessary to navigate these challenges effectively. Despite the burgeoning attention, the concept of phronesis remains elusive and researchers dissent about its definition and measurement. To address recent calls for a deeper understanding of phronesis in management and leadership research, we conducted a systematic scoping literature review. We examined 165 articles and mapped the existing literature in terms of definitions, dimensions, outcomes, and methods. The findings indicate a growing interest in phronesis and highlight the need for further empirical research and the development of valid instruments. We also discuss theoretical implications and propose future research directions for further investigation of this construct.

Managing Competition and Cooperation

Session Moderator: **Joachim Henkel**, *Technical U. of Munich*

STR: **Tough Bargains: When Cooperation is More Competitive than Competition**

Author: **Joachim Henkel**, *Technical U. of Munich*

Economic agents frequently take long-term actions, regarding for instance investments in cost reduction or R&D, before engaging in more short-term interactions, e.g. through price setting. Those short-term interactions may be noncooperative as for example competition on a consumer market, or cooperative and based on negotiations. This raises the question of how long-term actions that prepare for subsequent cooperation differ from those that precede noncooperative interaction. Can it happen that agents prepare more aggressively for cooperation than for competition, and thus destroy some of the value they create through cooperation by preparing for it? If so, under what conditions? To address these questions, I analyze two-stage duopoly games in which agents move noncooperatively in Stage 1, followed by either noncooperative or cooperative moves in Stage 2. In the latter case, a biform game, agents bargain in Stage 2 over how to divide the joint payoff. I show that Stage-1 actions can be more competitive in preparation for cooperation than in preparation for noncooperative interaction, in the sense of deviating more from the benchmark of collusion in both stages, and derive conditions for this to be the case. For instance, in preparation for a merger competing firms invest more in cost reduction than when preparing for price competition. Such increased investments can be wasteful for the duopolists and for society. My results also suggest that economic actors should pay attention to the pre-negotiation phase when arranging cooperation talks.

STR: **Strategic Coopetition: Balancing Authenticity and Market Focus**

Author: **Maria Paola Ometto**, *California State U., San Marcos*
Author: **Serhan Kotiloglu**, *California State U., San Marcos*
Author: **Bennett W Cherry**, *California State U., San Marcos*

In this paper, we explore how craft breweries balance authenticity and sales outcomes when coopeting. We investigate how market and craft focused coopetition in the craft brewing industry impact sales and authenticity outcomes. The industry has a strong collective identity and ethos that makes authenticity very important for businesses . We conducted a mixed-method study. We examine types of coopetitions using ten semi-structured interviews and 772 documents. We also constructed a quantitative dataset of 1,100 beers and 111 breweries to test our hypotheses. In our results, we discovered that market focused coopetition increases sales performance and authenticity. Additionally, we found that craft focused coopetition does not impact authenticity, but hybrid focused coopetition has positive impact on authenticity outcomes. Our study contributes to the literature on coopetition, and strategic action for small-businesses in a craft industry.

STR: **Response Strategy for Corporate Litigation: A Reputational View of Competitive Dynamics**

Author: **Fei Li**, *U. of Nevada, Reno*
Author: **He Gao**, *U. of Delaware*
Author: **Matthew Semadeni**, *W. P. Carey School of Business, Arizona State U.*

Why does a firm aggressively respond to actions of certain attackers while being accommodative to actions of others? Prior research in competitive dynamics has largely ignored social evaluations, such as how stakeholders perceive the attacker and the responder in competitive interactions. Building on social evaluations theory and the Awareness-Motivation-Capability framework, we examine how a firm's reputation for innovation affects its response to a particular attack—patent infringement claim. We propose and find that a firm's reputation for innovation affects its response aggressiveness in opposing ways. Specifically, the relationship is positive for opportunistic and competitive attackers, but negative for attackers whose claims appear to be sincere. We discuss contributions to research in competitive dynamics, social evaluations, and corporate litigation.

STR: **Upcoming Governmental Venture Capital and Private Venture Capital's Decision to Withdraw**

Author: **Wen Zheng**, *ShanghaiTech U.*
Author: **Bin Hao**, *East China U. of Science and Technology*

The role of governmental venture capital (GVC) in affecting private venture capital's (PVC) investment has received increasing attention. Yet it remains inconclusive as to whether GVC promotes or inhibits PVC investment. This study examines how upcoming GVC affect PVC's decision to withdraw its investment in a transitioning economy. Drawing upon institution literature, we argue that policies in a transitioning economy play a vital role in driving PVC's interpretation of GVC entry. We propose that upcoming GVC in a transitioning economy entails policy implications that are not entirely compatible with PVC's interests, thereby driving PVCs to withdraw their investment. Using cross-sectional data of 4,743 PVC investments in China' new ventures, we find that upcoming GVC reduces the likelihood that a PVC continues to invest a venture following its previous investment. We show that this effect will be strengthened by the policy of GVC localization and be weakened by policy-supported industry. We further show that the moderating effect of GVC localization on the upcoming GVC–PVC successive investment relationship is affected by PVC's experience of syndicating with GVCs. Our study adds to the understanding of the interaction between PVC and GVC and how PVCs make staged investment decisions in a transitioning economy.

Board Attributes and Performance

Session Moderator: **Aras Can Aktan**, *Sabanci U.*

STR: **Changes in Board Demographic Diversity: A Performance Feedback Perspective**

Author: **Aras Can Aktan**, *Sabanci U.*
Author: **Saffet Aras Uygur**, *Royal Holloway, U. of London*

This paper analyzes how negative performance feedback affects firms' decisions to change the demographic diversity of their board of directors. In line with behavioral theory, we argue that only the firms deviating below from their performance aspirations are expected to embrace changes in their boards' demographic diversity. Our main argument is that firms will increase their board demographic diversity in terms of age, tenure, gender, and nationality when faced with negative performance feedback to improve the effectiveness of their boards while they are performing their monitoring and service tasks with the expectation of improved performance in return. We find large support for our predictions based on data from Standard & Poor firms from 2007 to 2018. The findings of our study present important contributions to the corporate governance, board leadership literatures, and to the behavioral theory of the firm.

STR: **Director Attention and Board Bandwidth: Implications of Performance Feedback at the Primary Employer**

Author: **Yi Huang**, *Syracuse U. Whitman School of Management*
Author: **Pamela Brandes**, *Syracuse U.*
Author: **Ravi Dharwadkar**, *Syracuse U.*

A strong focus on director independence for improving board monitoring has been the cornerstone of governance research in recent years. Accordingly, many boards have sought to add more employed independent directors (EIDs) to enable objective monitoring. However, research has largely ignored the constraints of these directors' primary job demands on the attention they can reasonably pay on the boards where they serve as impartial monitors, particularly when they experience negative performance feedback at their primary jobs. Using a sample of S&P 1500 firms from 1998-2018, we find that negative performance feedback at one's primary employer reduces board bandwidth and is associated with lower performance at firms where they serve as an external director. We find this relationship is contingent on several firm factors (i.e., firm age, firm size, opacity, and asset specificity). We also identify value reduction channels that result from the reduction in this bandwidth for monitoring. While much research highlights the implications of board busyness and negative performance feedback for a focal firm, we uncover the importance of attentional shifts due to increasing primary job demands that result in spillovers from negative performance feedback to the interlocked firms.

STR: **Independent Director, Firm Risk and Agency: The Case of Convertible Bond Announcement Effect**

Author: **Lei Zheng**, *College of Business. Shanghai U. of Finance and Economics*
Author: **Hailunbeier Li**, *Shanghai U. of Finance and Economics*
Author: **Nan Lin**, *Shanghai U. of Finance and Economics*

While Convertible Bond (CB) is argued to reduce agency cost by sharing risk-return with bondholders, it creates a new problem in that the option in a CB is a source of conflict of interest and information asymmetry about firm risk between manager-shareholder and bondholders. In this research, we examine whether and how independent directors can reduce agency conflict regarding the CB option and increase the firm value. Empirical results show that the more independent directors in a firm, the more positive the abnormal return the firm has after a CB issuance. This effect is stronger when the issuer faces a higher risk, especially a higher downside risk. Our findings suggest that independent director enhances corporate governance by lowering information asymmetric between insiders and outsiders rather than mitigating their divergent risk preference. Our results provide a new perspective to external financing research, which viewed CBs as benign financial sourcing since it satisfies both insiders and outside investors. Our results clarify the independent director's corporate governance mechanism toward market reaction. Furthermore, we expand the research on CBs' effect on shareholder wealth in the Chinese context and offer a plausible explanation for the positive announcement effect.

STR: **Evidence of Eliteness, Diversity, and Prestige in SPAC Proceeds**

Author: **Matthew Josefy**, *Indiana U. - Kelley School of Business*
Author: **A. Bree Josefy**, *Indiana U. - Kelley School of Business*
Author: **Shreya Banda**, *Indiana U. - Kelley School of Business*

Investors seek to interpret signals of underlying quality and potential when assessing whether to provide resources to new ventures, but sometimes prioritize some signals over others. In this study, we seek to isolate the interpretation of signals sent by board composition by focusing on the proceeds raised by Special Purpose Acquisition Companies, in which an underlying business is not yet present. We examine how the signals of board prestige and board diversity are interpreted differently by resource providers based on whether SPACs are associated with prestigious underwriters. Whereas underwriter prestige may simply displace signals of elite boards, investors seem to show greater skepticism of board diversity in the presence of another prominent signal of quality. In building our directory of over 7,400 SPAC executives and board members from over 1,200 SPACs from 2003 to 2021, we also provide the first evidence that SPAC leadership is dominated by a high proportion of individuals from elite educational, political/military, and business backgrounds and relatively few women or racial minorities. For instance, representation of women in SPACs at about 15% lags that even of S&P500 executive and board positions, traditional IPO boards, and the boards of Russell 3000 companies, potentially reducing the likelihood that women founders receive the opportunity to take their firms public via this route.

Nonmarket Strategy: Internal and External Pressures

Session Moderator: **Nandil Bhatia**, *Columbia Business School*

STR: **Are Customers 10x More Important to Firms than Employees?**

Author: **Nandil Bhatia**, *Columbia Business School*
Author: **Stephan Meier**, *Columbia Business School*

Employees and customers are arguably two of the most critical stakeholders for businesses. This paper documents a stark imbalance among scholars and practitioners regarding the relative emphasis between these two stakeholders. Text analysis of earnings call transcripts of S&P 500 firms reveals that executives talk about customers 10 times more often than employees. And when they do, executives perceive customers to be analogous to opportunities and employees to risks. A bias towards customers (relative to employees) continues to be omnipresent across board compositions in the United States (and outside) and the academic domain of strategic management. The patterns shed light on a discrepancy inconsistent with existing theory and rhetoric of firms and should inform a discussion about the sources and consequences of this imbalance.

STR: **I am Not One of Them! Hedge Fund Activism, Gender Stereotype Threat, and CSR Disengagement**

Author: **Longwang Fu**, *City U. of Hong Kong*
Author: **Shi Tang**, *City U. of Hong Kong*

Recent research has shown that female-led (versus male-led) companies are more likely to be targeted by hedge fund activism (HFA), but little is known about whether and how HFA will generate differential impacts on firms led by female versus male CEOs. Building on stereotype threat theory, we argue and corroborate that after being targeted by HFA, firms led by female (but not male) CEOs will experience a sharp decline in corporate social responsibility (CSR) activities. This is because HFA can present a significant stereotype threat to female (but not male) CEOs regarding their leadership competence. As a result, female CEOs are likely to reduce the firms' engagement in CSR activities, an often female-typed domain, to detach themselves from gender stereotypes. We further find support for three key boundary conditions that shape female CEOs' perceived stereotype threat, thereby moderating the impact of HFA on the CSR disengagement of female-led firms. Our study contributes to research on investor activism and female executive leadership by shedding light on the differential impacts of HFA on female- versus male-led firms, as well as providing a new vantage point to explain the consequences of HFA on firms' CSR activities.

STR: **Juggling During Corporate Change: How Executive Job Demands Affect Corporate Social Irresponsibility**

Author: **Sana (Shih-chi) Chiu**, *U. of Houston*
Author: **Azadeh Sabz**, *Missouri State U.*
Author: **Seemantini Madhukar Pathak**, *U. of Missouri, St. Louis*

High job demands have been argued to constrict strategic leaders' cognitive capacity and thus may cause harm to organizations. This study examines the interaction between temporary and existing job demands during critical corporate change events (asset divestitures). We find that temporary increases in executive job demands from intense divestiture activities do result in higher corporate social irresponsibility (CSI). However, female CEOs and new insider (vs. outsider) CEOs mitigate the impact of divestitures on CSI. We also document that higher diversification strengthens the impact of divestitures on CSI, whereas this effect is reduced in firms operating in a more uncertain market. Challenging prior assumptions, these findings suggest that job demands may actually expand executives' decision scope. Thus, some characteristics of job demands, especially when pressure and challenges come from gender role stereotype and reliance on external stakeholders, could result in positive firm outcomes by reducing CSI. This study sheds light on the factors that contribute to the 'bright' side of executive job demands in the context of corporate portfolio change and highlights the importance of looking into specific sources and mechanisms, rather than the overall magnitude of job demands on executives, to better understand their heterogeneous impact on organizations.

STR: **Activist Pressure and ESG Disclosure: Experimental Evidence from the U.K. Modern Slavery Act**

Author: **Matthew Lee**, *Harvard Kennedy School*
Author: **Jasjit Singh**, *INSEAD*

Many corporate ESG disclosure regulations rely on private activist pressure to enforce compliance, but relatively little is known about its effectiveness. We present results from a field experiment testing the effect of various types of pressure from a leading human rights NGO on subsequent corporate compliance with the U.K. Modern Slavery Act of 2015, a law requiring disclosure of actions taken to address human rights issues. Receipt of a baseline letter containing information about the law had an unexpected, negative effect on compliance. This negative effect was partly mitigated for firms that received the baseline letter plus a list of already compliant firms, the mitigating effect being greatest when the peer firms were located in the same metropolitan area as the targeted firm.

Relationships with Venture Capital

Session Moderator: **Yue Shao**, *U. of Science and Technology of China*

STR: **Government Venture Capital and IPO Premium in Emerging Markets: Evidence from China**

Author: **Yue Shao**, *U. of Science and Technology of China*
Author: **Xiafei Chen**, *U. of Science and Technology of China*
Author: **Lingling Qin**, *Guangdong U. of Technology*

This paper examines the role played by government venture capital (GVC) in China initial public offerings (IPOs). Building on the work on GVC and social evaluation, we develop a theoretical framework that links GVC involvement to investee ventures' IPO premium. Using a sample of 715 IPO companies in the Chinese market between 2011 and 2020, we find that (1) GVC-backed companies have a higher IPO premium, and (2) such relationship is negatively moderated by both the status and reputation of GVC firms. Our findings provide valuable implications for research on GVC and social evaluation.

STR: **When Do Spinouts Receive CVC Investments from Their Parents: The Role of Competitive Tension**

Author: **Hyunmin Sung**, *Sungkyunkwan U.*
Author: **Joonhyung Bae**, *Sungkyunkwan U.*

Building on competitive dynamics, this study explores when spinouts cope well with their parent firms via formation of corporate venture capital investment relationships. This study suggests that spinouts with a high level of knowledge inheritance from their parent firms tend not to receive investments from their parent firms due to competitive tension arising from parent firms' potential hostility. This study further finds that the negative effect rests on factors differently influencing competitive tensions. Specifically, the negative effect of knowledge inheritance is amplified as the higher level of enforceability of non-compete agreement strengthens competitive tension by expanding the spinouts' concerns about parent firms' potential hostile attitudes. However, the negative effect is mitigated as the higher centrality of VC investors investing in spinouts and the higher degree of geographic distance between spinouts and their parent firms discourage the competitive tension by reducing the spinouts' concerns. The suggested hypotheses are examined with data from the U.S. medical device industry, and the research expands the parent-child literature and competitive dynamics by enriching the understanding of the cooperative relationship between spinouts and parent firms based on the role of competitive tension.

STR: **Corporate Venture Capital and Change of Technological Distance**

Author: **Qiang Xiong**, *Department of Management and Technology, Bocconi U.*

Established corporations increasingly use corporate venture capital (CVC) as their external R&D strategy. Although a growing body of research examines the innovation and performance implications of CVC for the corporate investor and the start-up separately, little is known about how the formation of a CVC relationship influences the technological relation and knowledge overlap of the dyad post-investment. Understanding the change of technological distance within the dyad can inform us about how learning and competition dynamics interact following CVC investments. Our analyses suggest three different scenarios of technological distance change between start-ups and established corporations: when their technological profile is highly similar pre-investment, the post-investment technological distance tends to increase (a divergent development); when their technological profile is moderately overlapped pre-investment, the post-investment technological distance tends to decrease (a convergent development); however, when their pre-investment technological distance is high, the technological profile remains distant post-investment. We discuss the theoretical and practical implications of our findings associated with corporate venture capital, interfirm relations, and technological dynamics.

STR: **Together We Might Make It Work: Oil and Gas Incumbents' CVC Investments in Energy Ventures**

Author: **Yoon Jung Kwon**, *Rice U.*

This study focuses on the context of the energy industry and examines the choice of oil and gas (O&G) corporate venture capital (CVC) investors between investing in complementary (conventional energy) versus substitutive (renewable energy) ventures. Using a sample of CVC investments in the energy industry in 2001-2019, I find that on average, O&G incumbents are less likely to invest in a renewable energy venture compared to a conventional energy venture due to the high ambiguity and competitive risks posed by renewable energy ventures. Also, while CVC investors are generally less likely to co-invest in a venture with other incumbents of the same industry, this effect is attenuated for O&G incumbents when investing in renewable energy ventures. Through this study, I connect the literatures on CVC investments and investment syndication and explore a condition under which CVC investors are more likely to invest in substitutive ventures and co-invest in ventures with other incumbents of the same industry.

People and Innovation Track: Collaborating Within and Between Organizations

Session Moderator: **Hyungseok Yoon**, *U. of Leeds*

TIM: **Shine on Me: Stars, Status, and Innovation**

Author: **Murod Aliyev**, *Leeds U. Business School*
Author: **Hyungseok Yoon**, *U. of Leeds*

This study develops and tests a set of novel theoretical predictions about the dual and contingent nature of the relationship between star inventors and the innovation performance of firms. We argue that although star inventors can offer the all-important expertise and leadership, having many stars also entails status-based social dynamics with potential conflicts, leading to an inverted U-shaped relationship between star inventors and the innovation performance. Further, we identify two conditions – star-star collaboration intensity and status disparity within firms – that influence contribution of stars and moderate the inverted U-shaped relationship. Our analysis of U.S. firms from 1980 to 2014 supports our hypotheses. Our work highlights the innovation performance trade-offs associated with star inventors, along with moderating effects of star-star collaboration and status disparity.

TIM: **Success in First-Time Partnerships: Optimal Expertise Diversity**

Author: **Ryan Whalen**, *U. of Hong Kong*
Author: **Alina Lungeanu**, *Northwestern U.*
Author: **Neelam Modi**, *Northwestern U.*
Author: **Noshir Contractor**, *Northwestern U.*

Collaboration is of fundamental importance to modern scientific and technological development, and expertise diversity has emerged as an important factor in predicting the success of collaboration. While expertise diversity has typically been seen as the knowledge attribute of a group (i.e., between collaborators), we provide an additional theoretical and empirical conceptualization that considers whether collaborators' knowledge itself is similar (versus being dissimilar) to the knowledge domain of their research output. We define the degree of (dis)similarity between collaborators' knowledge and project output as divergent ideation. We examine the effect of expertise diversity and divergent ideation (and their interaction) on the success of first-time collaborations using data from 158,012 first-time partnerships recorded in the US Patent Office between the years of 1976 and 2012. We use natural language processing to estimate areas of expertise of each inventor and develop measures of expertise diversity and divergent ideation. Results show that collaborations exhibiting a high degree of expertise diversity produce more impactful products, while collaborations exhibiting a low degree of expertise diversity are more likely to collaborate again. Further, collaborations exhibiting a high degree of expertise diversity and a low-to-moderate degree of divergent ideation are most likely to create highest impact inventions, but they are less likely to sustain their collaboration. We conclude our study by outlining the implications of our findings to the literatures on diversity and technological innovation.

TIM: **Technology Affordances for Supporting Gradual Processes of Belonging in Remote Professional Contexts**

Author: **Taylor Fugere**, *U. of California, Merced*
Author: **Tea Lempiala**, *U. of California, Merced*

In this paper, we focus on the processes with which belonging, through meaningful interpersonal connections, is created in online contexts and the technological affordances that enable such processes. In the physical domain, we take the gradual nature of friendship building for granted; people run into one another in the midst of their daily activities and through repeated opportune encounters they begin to form deeper ties. This is challenging in online environments, where interactions are predominantly intentional and designed. While the importance of making meaningful connections in professional contexts has been effectively linked to several positive outcomes, such as motivation, learning, innovation, sense of belonging and professional identity formation (e.g. Hughes 2007; Delahunty et al 2014; Shamsi et al., 2021), there is still little understanding of the gradual processes through which such connections are made - particularly in the context of remote work. In this paper, we highlight the importance of building affordances for casual, "low-stakes" encounters in online contexts and discuss the how to support gradual process of building belonging in remote contexts.

Navigating the Transition from R to D: Maximizing the Impact of Basic Research

Discussant: **Ashish Arora**, *Duke U.*
Discussant: **Annamaria Conti**, *IE U.*
Discussant: **Keyvan Vakili**, *London Business School*
Organizer: **Kaushik Bagchi**, *U. Ramon Llull, ESADE Business School*
Organizer: **Angelo Romasanta**, *ESADE Business School*

The transition from basic research to applied research focused on development is a crucial step in the innovation journey. This step is particularly challenging because it requires a significant escalation in commitment while still dealing with the inherent uncertainty of research. The goal of this symposium is to develop a deeper understanding of the challenges involved in early-stage research and spur further interest in understanding the consequences and knock-on effects that decisions at this stage have on the whole innovation process. We present four studies that explore the decisions and processes involved at the interface of research and development and then go on to examine how they impact innovation and technological progress. The four studies provide a rich variety of perspectives showing the range of factors at play at this critical juncture. The studies presented here examine the role of scientific evaluations, organizational division of labor, entrepreneurial knowledge bases and potential market applications in determining the likelihood of research success. Through this symposium we will discuss some of the fundamental contingent factors that determine whether, when and how good ideas make it to market as valuable innovations.

People and Innovation Track: Creating and Leading Innovative Teams

Session Moderator: **Gaurav Dilip Tikas**, *International Management Institute New Delhi*

TIM: **Can Innovation Risk Mitigation Capability be Measured at Team Levels?**

Author: **Gaurav Dilip Tikas**, *International Management Institute New Delhi*

Risk mitigation is critical for successful innovation. However, risk mitigation while innovating under disruptive environments can be challenging for R&D teams as well as top management teams. A capability-based approach towards risk mitigation can prepare leadership teams in understanding risk involved in innovation projects through assessment, prioritization and experimentation. A measurement framework can further help them in conceptualizing, capturing and comparing R&D teams operating within their organizational environments. This study adopts a rigorous multi-method research design to develop a robust framework to measure risk mitigation capability of R&D teams operating in government-funded R&D labs operating in India. The empirically validated framework can be adopted by organizational leaders to evaluate and improve the innovation-oriented risk mitigation capability of their R&D teams.

TIM: **Can the Knowledge Management Capability of R&D Teams be Measured?**

Author: **Gaurav Dilip Tikas**, *International Management Institute New Delhi*

This study perceives knowledge management as a capability possessed by R&D teams pursuing innovation-oriented tasks within organizational settings and develops a robust scale to measure this capability through a five-step multi-method design. The first step involves item generation through the review of the literature and expert opinions followed by the second study on item purification. The third study employed exploratory factor analysis ($n1 = 124$ respondents) for item reduction and regrouping to reveal the three-dimensional composition of R&D knowledge management capability (RDKMC) - creation, communication, and commercialization. Confirmatory factor analysis in the fourth study ($n2 = 292$ respondents) followed by a replication study ($n3 = 224$ respondents) validated this three-dimensional composition of RDKMC. Practitioners and academicians can now deploy this scale to measure the knowledge management capability of R&D teams pursuing innovation within government-funded organizations.

TIM: **How Innovation Teams Reframe Problems Across Two Planes Within a Problem Space**

Author: **Cristina Tu Anh Pham**, *Politecnico di Milano School of Management*
Author: **Victor Seidel**, *Babson College*

Novel and meaningful solutions by innovation teams are often the result of effective problem framing, where individuals articulate a problem representation consisting of the main goal and the context, barriers, and path to a solution. Past research has stressed the importance of iteration of problem representations and has generally described reframing as moving across a problem space, but the specific practices and moves innovation teams make in problem reframing has been unclear. Our research builds on a single case study using ethnographic observation of problem framing and reframing within a breakthrough innovation project at a large multinational food product firm. We identify four problem reframing practices—personifying problems, forming a dialectic straw man, retracing problem evolution, and stress-testing with scenario creation—and we describe how each involves moves across two planes: the goal plane and the description plane. Breadth moves change the goal or the description of the context, barriers, and path to solution; depth moves link goal planes and description planes. With our study, we respond to the call for in-depth research on problem reframing by unpacking the practices and moves that innovation teams employ as they navigate a problem space.

TIM: **Impact of Hierarchical Cultural Values on Idea Generation and Execution of New Venture Teams**

Author: **Marieke Funck**, *Paderborn U.*
Author: **Benjamin Philipp Krebs**, *U. of Paderborn*
Author: **Slawa Tomin**, *Paderborn U.*
Author: **Bernhard Wach**, *Hochschule München*

This study investigates the role of hierarchical cultural values in shaping new venture teams' (NVTs) outcomes in their inception phase. We propose that such values reduce information-sharing and enhance team coordination, decreasing the quality of new ventures' ideas (idea generation) and increasing implementation speed (idea execution). Using survey data, archival data, and pitch presentations of 284 monocultural NVTs from an international hackathon, we found that hierarchical cultural values are negatively associated with both the quality of new ventures' ideas and implementation speed, suggesting that NVTs that operate in hierarchical cultures suffer from a "liability of hierarchy."

TIM: **Do Broader Teams Lead to More Innovation?**

Author: **Dennis Verhoeven**, *KU Leuven*

Organizations often combine high-skilled workers of different expertise in broad teams to feed the knowledge production process with diverse inputs. This paper asks whether interventions that change team breadth lead to more innovation. Using quasi-random variation in inventor team breadth induced by the death of a team member, I find no evidence of such an effect. This result is at odds with prior findings of a positive relationship between team breadth and invention quality. I show that this positive relationship is not robust to accounting for sorting -- positive selection in particular -- of inventors into broader teams. My results temper optimism about interventions by managers or policymakers that promote team breadth beyond current levels.

Innovation and Competitive Strategy Track: Organizational Adaptation

Session Moderator: **Gayane Shakhmuradyan**, *U. of Padua*

TIM: **Corporate Innovation and Resilience: Evidence from Publicly Traded Companies in the United States**

Author: **Gayane Shakhmuradyan**, *U. of Padua*

This paper empirically examines the relationship between innovation and resilience. Based on prior conceptual-theoretical and empirical literature in the field, it is hypothesized that organizations allocating greater resources to innovation prior to an exogenous crisis, as well as those allocating greater resources to innovation during a crisis, are more resilient than their counterparts not undertaking such allocation. In addition, it is hypothesized that organizations that have been adversely affected by an exogenous crisis but allocate greater resources to innovation following its adverse impact are more resilient than their counterparts not undertaking such allocation. To test these hypotheses, the paper develops two new measures of resilience and applies those to a panel dataset of around 300 publicly traded companies in the United States. It is found that holding other factors, such as industry, liquidity, and age, constant, organizations allocating greater resources to innovation are more resilient to exogenous crises. The impact of the allocation of resources to innovation pre-crisis on organizational resilience is greater than the impact of the allocation of resources to innovation during a crisis. Based on these findings, the paper offers a novel conceptualization of innovation as a resilience strategy, with respective implications for management theory and practice.

TIM: **Agile Control: Theory and Scale Development**

Author: **Leonie Mueller**, *U. of Kassel*
Author: **Tobias Roeth**, *U. of Kassel*
Author: **Patrick Spieth**, *U. of Kassel*

Increased dynamic, turbulent environments and the digital transformation challenge current structures and the control of new product development (NPD) processes. Traditionally, organizations apply tightly controlled NPD processes – such as Stage-Gate. However, organizations are increasingly challenged to adapt to changes quickly and must restructure established tightly controlled NPD processes. To investigate NPD control, we draw on the levers of control framework, describing formalized routines and procedures that use information to maintain or alter patterns in organizational activity. Although the levers of control initially do not exclude mechanisms for more agile control, recent studies did not take up these and predominantly adhere to very tight, plan-driven control. Agility is commonly defined as sensing and responding to change. However, existing research on agility is not appropriate to investigate agile approaches to the levers of control in NPD. Furthermore, previous studies of tightly-controlled NPD processes provide heterogeneous, partly conflicting insights on the effectiveness of these processes. While tightly-controlled and plan-driven approaches increase efficiency within the NPD processes, they further hamper creativity and neglect environmental changes. These ambiguous outcomes challenge our theoretically grounded implications on how to control the NPD process in an agile way and require further exploration of agile control. Therefore, we investigate the following research questions: How can an agile approach to the levers of control be conceptualized? How can agile control within NPD processes be measured? In response, we conducted a rigorous theorizing and five-step scale development process. We synthesize agile control as mechanisms that firms use to direct attention, motivate, and encourage their members to innovate with a strict customer focus while adapting flexibly and quickly to internal and external changes. We show that agile control can be measured as a higher-order construct comprising four dimensions: Belief, Boundary, Diagnostic, and Interactive. Preliminary results contribute to NPD research by extending our understanding of agility and the levers of control. Furthermore, the developed measurement scale enables the assessment of agile control providing new possibilities for future research. By applying our measurement scale, practitioners can evaluate their NPD processes. Thereby, organizations are empowered to derive strategies to apply agile control effectively.

TIM: **The Role of Market Legacy in Incumbents' Adaptation to Technological Discontinuities**

Author: **Chang Liu**, *Bocconi U.*
Author: **Roberto Fontana**, *U. of Pavia & Bocconi U.*
Author: **Franco Malerba**, *Bocconi U.*

While scholarly discussions on technological discontinuities have primarily focused on the supply-side of radical technological changes, they can also cause demand-side market disruptions. Specifically, the characteristic of customers might change radically in a new technological generation due to their preference shifts and sometimes the emergence of a new set of customers. As such, we investigate the relationship between incumbent firms' prior market experiences and their adaptation to technological discontinuities. We empirically test our hypotheses using longitudinal data of market entry and exit among multiple technological generations in the computer printer industry between 1951 and 2021. Our results suggest that the prior market experiences related to the new set of customers could be a source of incumbent heterogeneity in successfully continuing its business in new technological generations.

TIM: **Exaptation as Innovation Strategy? Evidence from the Medical Device Industry**

Author: **Ferran Giones**, *U. of Stuttgart*
Author: **Andreas Wahl**, *U. of Stuttgart*
Author: **Tim Schweisfurth**, *Hamburg U. of Technology*

Exaptation constitutes an alternative mechanism to adaptation in a firm's diversification efforts. The intentional repurposing of existing solutions or technologies for new functions in new domains constitutes a little-understood effort in the innovation strategy of firms. We build upon Andriani et al. (2017) pioneering work on the pharmaceutical industry to uncover the exaptation dynamics in the medical device industry, known for its rapid growth and innovativeness. We study over 45,000 product registrations in the last two decades to 1) validate the existence of exaptation behavior, 2) identify the firm-level characteristics, and 3) understand the main antecedents and their effect on exaptation as a diversification innovation strategy. We contribute to the emerging literature on exaptation by suggesting how it is part of the innovation strategy of firms that use it to reinforce their position in known application domains (inwards) instead of supporting efforts to diversify building new functions for new markets.

Learning and Innovation Track: Organizational Learning & Search

Session Moderator: **Luca Berchicci**, *Erasmus U. Rotterdam*

TIM: **Learning by Hiring Or Hiring to Impede Learning? Small World Network and Learning after Hiring**

Author: **LI Liu**, *U. Carlos III de Madrid (UC3M)*

This research aims to advance the understanding of learning after hiring by investigating the effect of intra-firm network structure on learning patterns in a post-hiring context. Right after a new hire moves to the hiring firm, both the new hires and the incumbent inventors in the hiring firm learn from each other. On one hand, the new hires choose pieces of knowledge to recombine from the hiring firms' prior knowledge (new hire absorption) and incumbent inventors choose pieces of knowledge to recombine from the new hires' prior knowledge (incumbent absorption). The authors investigate how the small world network structure shapes differently the two types of learning. Using the patent data in the US between 1980 and 2015 to develop a network structure and identify inventor mobility, the author finds that a small-world network structure facilitates hiring firms' learning from a prior employer's knowledge, while it impedes new hires from learning the hiring firms' prior knowledge. The results indicate that the hiring firm faces a trade-off between the incumbent inventors' absorption and the new hire's absorption in a small-world network structure. A small-world network enhances incumbent inventors' knowledge absorption while raising the difficulties for the new hires to leverage the hiring firms' prior knowledge stock. The results highlight the importance of aligning a firm's network structure with its strategic goals to pursue the desired types of organizational learning.

TIM: **Disruption in the Making: The Case of Innovation Search for New Technologies**

Author: **Jose-Mauricio Galli Geleilate**, *UMass Lowell*
Author: **Andrew Davies**, *SPRU U. of Sussex UK*
Author: **Gerardo Bastos Neto**, *UMass Lowell*

This study addresses how manufacturers of products encompassing multiple component technologies innovate. We distinguish component technologies pertaining to new and mature stages and observe how firms absorb technological knowledge from their suppliers across these stages. Drawing from the concept of innovation search, we uncover the dynamics of firms' search in their supplier base for the generation of component innovations in areas of ongoing technological disruption and mature technologies at the same time. Using a longitudinal sample of technology-intensive firms, we provide empirical evidence that multitechnology firms have a more intense search for suppliers' knowledge in the context of emerging technologies in contrast to mature technologies. Moreover, reabsorption of spilled over knowledge from suppliers is only positively associated with innovation success in the context of emerging technologies. We conclude with a theoretical assessment of innovation search from suppliers in the context of technological disruption.

TIM: **Shunning Problemistic Search: Performance Feedback, Search, Monitoring**

Author: **Luca Berchicci**, *Erasmus U. Rotterdam*
Author: **Johanna Glauber**, *IE U. - IE Business School Madrid, Spain*

A growing line of research intends to understand the interaction between organizational structure and organizations' response to performance feedback. We extend this line of research by examining why and how the intensity of monitoring changes a decision maker's inclination for problemistic search. Our theory and findings suggest that because monitoring limits a decision maker's room for self-enhancement when interpreting feedback, closely monitored decision makers are more likely to engage in problemistic search than distantly monitored decision makers. Based on a large sample of US manufacturing plants and decision makers' decision to search for solutions to reduce waste, we find preliminary support that monitoring increases problemistic search. Our investigation helps clarify the theoretical relationship between monitoring and organizations' problemistic search as well as target setting and demonstrates the behavioral consequences of structural choices that affect monitoring.

TIM: **Imprinting or Learning? Charting the Organizational Evolution of Scientific Laboratories**

Author: **Vincent Yung**, *Northwestern U.*
Author: **Jeannette Anastasia Colyvas**, *Northwestern U.*

How do scientific laboratories vary in how they operate, and do they change over time? While the study of scientific productivity typically focuses on individual investigators, science and technology studies organizational scholars have pushed us to peer into the operation of scientific labs. To understand how lab models vary among scientific labs across organizations and over time, we compare two competing sets of propositions. Research on organizational imprinting suggests that scientific labs express an organizational model established at time of founding that persists over time. In contrast, research on organizational learning suggests that scientific labs express an organizational model that changes and adapts over time that increasingly differs from its time of founding. Evaluating these competing propositions in the field of academic scientific labs across over 33 American universities, we use a combination of statistical models and machine learning to identify a six-model typology for how labs organize and carry out scientific activity. While we find that while a majority of faculty maintain the same lab model throughout their recorded career, many faculty switch lab models at least once in ways that are patterned across time, by faculty gender, and by initial recorded lab model.

Technology, Policy and Society Track: Drivers of Global & Local Innovation

Session Moderator: **Shantala Samant**, *Western Washington U.*

TIM: **What Drives Global Innovation Under COVID-19? An fsQCA Approach**

Author: **Zhenxing Gong**, *Liaocheng U. Business School*
Author: **Yue Wang**, *Liaocheng U. Business School*
Author: **Miaomiao Li**, *Beijing Information Science and Technology U.*

During the coronavirus disease 2019 (COVID-19) epidemic period, national innovation faced challenges such as high-risk research and development (R&D) and intensified trade competition. Thus, how to allocate resources according to national conditions to promote national innovation rationally during this epidemic period has become a question that must be answered. Based on the Global Innovation Index (GII) framework, combining necessary condition analysis (NCA) and fuzzy set/qualitative comparative analysis (fsQCA), this work analyzes the linkage effect of various national innovation input elements on innovation output from the perspective of configuration. This research also identifies two kinds of paths through which to promote national innovation, which are configurations in which human capital resources (HCR), infrastructure (IFT) and business sophistication (BS) play a core role under the logic of strengthening institution (ITT) and market sophistication (MS) strengthening. It is found that (1) a single innovation input element constitutes the necessary condition and bottleneck of high innovation output; (2) ITT, HCR, IFT, MS, and BS are "multiple concurrent", forming diversified configurations that drive national innovation governance, namely, two high-innovation and four non-high-innovation configurations, as the driving path of national innovation governance is characterized by “different roads leading to the same goal"; and (3) limited by the income levels of various countries, there are obvious differences in innovation drive paths between high- and low-income countries, and the configuration of asymmetric relationships with low innovation output in high-income countries has unique characteristics. This study explores the influence of the coupling of national innovation input elements on innovation output. The research findings have important theoretical and practical significance for revealing the realization path of national innovation output, the conditions of heterogeneity of the innovation output level, and the targeted path of high innovation in countries with different income levels.

TIM: **The Implications of Agglomeration and Alliance Governance for Innovation in Alliances**

Author: **Shantala Samant**, *Western Washington U.*
Author: **Jongwook Kim**, *Western Washington U.*
Author: **Steven Globerman**, *Western Washington U.*

We examine whether innovation from alliances varies based on contractual and governance choices made by alliance partners and the geographic location of partners. Specifically, we focus on a commitment towards tacit knowledge transfer and the formation of a joint committee as governance mechanisms and their effectiveness in promoting learning depending on whether or not alliance partners are located in the same regional cluster. We test our hypotheses using a sample of bio-pharmaceutical alliances in the United States and find that while a contractual commitment to transfer tacit knowledge may be more effective in encouraging innovations in alliances between partners who are not located in the same cluster, the formation of a joint committee is more effective in encouraging innovation in alliances between partners who are located in the same cluster.

TIM: **Innovative Collaboration Among Developing Countries: National Innovation Systems in Latin America**

Author: **Andres Velez-Calle**, *U. EAFIT*
Author: **Fernando Sanchez**, *U. del Desarrollo*
Author: **Elizabeth Marie Moore**, *Northeastern U.*
Author: **Larissa Marchiori Pacheco**, *Northeastern U., D'Amore-McKim School of Business*

Building on current debates on innovation, knowledge diffusion, and institutional dynamics, we analyze the role of intellectual property rights (IPR) and access to scientific knowledge, as moderated by regulatory quality, in cultivating cooperative innovation efforts among developing countries. Negative binomial analyses of a panel of 17 Latin American countries from 2002-2015 support our hypotheses on the effect of different elements of a country’s National Innovation System (NIS) on their cooperation in patenting activities with other developing countries in their region. If developing countries want to improve collaboration on innovation with other developing countries in their region, regulatory quality can substitute for other NIS elements, such as IPR and access to scientific knowledge. We concentrate on specific NIS elements in developing countries that could enhance their attractiveness to other countries in the same region to promote collaborative innovation. Research on NIS in developing economies tends to focus on the efforts to attract collaboration and partnerships from developed countries. We extend the discussion on how institutional factors influence dispersed innovation processes in the local environments where they take place foster collaborative innovation between developing countries.

TIM: **Institutions Meet S-curve: Product Innovation in the Drone Industry around Precision Agriculture**

Author: **Dian Yu**, *Engineering & Public Policy (EPP), Carnegie Mellon U.*

How does product innovation evolve? Innovation theories take a “convergence” perspective, whereby the focus is on how a single standard becomes accepted. However, institutional theories suggest the possibility of a “divergence” perspective, whereby the focus is on how other standards can be legitimated and accepted. To make inroads into this question and theoretical tension, this paper examines how formal standards (regulative institutional factors), industry consortia (normative institutional factors), and knowledge providers (cognitive institutional factors) interact to differentially impact observed firm product features. The drone industry around precision agriculture is a heavily regulated yet nascent market that serves as a useful context to explore the product innovation process. I test the proposed model of product innovation using panel data on new introductions of 464 UAS platforms targeted at precision agriculture sector released between 2000 to 2021. While regulatory standards do lead to product innovation converge, local institutional carriers play a key role in either enhancing or acting against such convergence. Firms located near industry consortia tend to experiment less and align with the emerging standard whereas firms located near knowledge providers tend to experiment more and diverge from the emerging standard. This piece presents a new more holistic perspective on the evolution of product innovation that combines our preexisting perspectives on innovation with emerging ones from institutional theory, namely that around entrepreneurship. This also has managerial implications. While accounting for regulations is crucial, managers may find looking at how local institutional carriers respond to standards trends important in how they modulate product design choices.

TIM: **How Official Imprints Affect the Development of Emerging Industries: Analysis of Moderation Effect**

Author: **Y.Joseph Zhou**, *School of Public Policy and management Tsinghua U.*
Author: **Zidi Wang**, *Tsinghua U.*
Author: **Qiang Feng**, *UIBE*

This study proposes a theoretical framework of "officials' past experiences - officials' transfer - regional new industry development", based on imprinting theory, to model how officials' previous experiences in other places influence the development of emerging industries in new regions through officials' transfer networks. This paper uses vertical data on the transfer of government leaders and their past experiences at each prefecture level in China to provide an explanation for the impact of officials' transfer on the development of emerging industries in each city from the perspective of imprinting theory. The results of the study suggest that officials' previous experiences in innovative cities can be used as a successful experience to influence officials' decisions in their future work, thus promoting the development of emerging industries in their new places of employment. Also, this paper further conducts a heterogeneity analysis of the imprinting effect of officials to explore the influence of environmental similarity and innovation diversity on the exertion of the imprinting effect. This study contributes to research in the areas of imprinting theory, innovation policy, and leadership transfer networks by formulating and testing hypotheses of imprinting theory and employing an empirical approach of fixed effects model.

Learning and Innovation Track: Knowledge Search & Recombination

Session Moderator: **Shaker A. Zahra**, *U. of Minnesota*

TIM: **External Search, National Knowledge Environments, and Innovation Performance**

Author: **Maarten Cerpentier**, *Ghent U.*
Author: **Anja Schulze**, *U. of Zurich*
Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*
Author: **Shaker A. Zahra**, *U. of Minnesota*

Prior research has documented the importance of the breadth and depth of external knowledge search for firms' innovation performance. Still, most studies have focused on countries with abundant knowledge. We replicate and extend Laursen and Salter's 2006 UK study using multiple EU multi-country datasets, which include countries with varying knowledge environments. Consistent with L&S, we find positive innovation performance effects of search breadth and depth, with diminishing returns. Adding to extant research, we find that the effect of search breadth is weaker in countries where knowledge is less abundant. We fail to find such systematic differences for search depth. Overall, by theoretically and empirically taking the firm's national knowledge environment into account, we expand the environmental munificence perspective to the literature on open innovation.

TIM: **Complexity and the Visible Hand: the Role Of Knowledge Interdependence in Employee Entrepreneurship**

Author: **Yuheng Ding**, *U. of Maryland, College Park*

How does growing knowledge interdependence in firm innovation activities affect potential entrepreneurs' decision to start their own business ventures? To answer this question, I adopt an abductive approach and leverage matched employee-employer data from the U.S. Census Bureau between 2000-2014. Results show that higher knowledge interdependence is negatively associated with employee entrepreneurship, and the negative effect is even stronger, not weaker, among the highest-performing individuals. This indicates that knowledge interdependence does not merely raise the bar of entry. Instead, firms implement better pay-for-performance compensation schemes to retain valuable human assets, which also leads to greater compensation dispersion within firms with higher knowledge interdependence. Together, these create a strong selection on the quality of spin-outs being formed especially by individuals ranked highest on the human capital distribution. I use an economic model to summarize these empirical insights and show that knowledge interdependence could also raise between-firm income inequality when it generates large enough profits on the product market.

TIM: **Partner Type Diversity and Firm Innovation Performance: Evidence from Collaboration with SKPs**

Author: **Hsing-Fen Lee**, *School of Business and Management, Royal Holloway, U. of London, UK*
Author: **James Derbyshire**, *Middlesex U. Business School*
Author: **Yuan-Chieh Chang**, *National Tsing Hua U.*

Drawing on data on 571 medium-and-large innovating firms in the chemical, pharmaceutical and electronics industries from the third Taiwanese Innovation Survey (TIS3), and applying a configurational approach based on fuzzy set Qualitative Comparative Analysis (fsQCA), we address the recent call for a more nuanced and qualitative understanding of the relationship between external knowledge search diversity and firm innovation performance. We examine the effect on firms' innovation performance from collaboration with the component knowledge sources of a specific innovation partner category, Specialist Knowledge Providers (SKPs), which is comprised of universities, public/non-profit Research and Technology Organisations (RTOs), and private-sector consultants. We draw on the concept of an analytical and synthetic knowledge spectrum to understand when and how both individual and simultaneous collaboration with these three component knowledge sources is conducive or counterproductive to innovation of four different types: new-to-market product innovation, product innovation, process innovation, and organisational innovation. In doing so, we highlight the usefulness of a configurational approach for research on external knowledge search diversity. Because it is specifically designed to uncover the combined effect on outcomes from multiple inputs configured in varying ways, a configurational approach allows for a nuanced understanding of the relationship between external knowledge search diversity and firm innovation performance. We conclude by suggesting that research on external knowledge search diversity can be advanced using this approach.

TIM: **Knowledge Interdependence as a Double-edged Sword for Innovation:The Role of Technological Shocks**

Author: **Jingya You**, *U. of Illinois at Urbana-Champaign*
Author: **Min Jung Kim**, *U. of Illinois at Urbana-Champaign*

Drawing on the notion that technological innovations are generated by recombining knowledge components in novel ways, we examine how knowledge interdependence affects firm innovation. Using the U.S. pharmaceutical industry as an empirical setting, we develop hypotheses and provide evidence that a firm's knowledge interdependence is beneficial for its innovation because it enhances the firm's capability to source and integrate knowledge components and increases its incentives to invest in R&D activities. We further find that the positive effect of knowledge interdependence on innovation becomes negative when the firm experiences a firm-specific technological shock (e.g., drug withdrawals or black box warnings) owing to high technological uncertainty and considerable adjustment costs. These empirical findings underscore knowledge interdependence as a double-edged sword for firm innovation and highlight the important role of technological shocks in altering this relationship.

TIM: **Recombinant Search at Temporary Gatherings**

Author: **David R. Clough**, *Sauder School of Business, U. of British Columbia*
Author: **Tommy Pan Fang**, *Jones Graduate School of Business, Rice U.*
Author: **Andy Wu**, *Harvard Business School*

Temporary gatherings—such as conferences, trade shows, and festivals—create a forum where strangers interact with one another. The infusion of new social interactions may permit knowledge transfers that facilitate recombinant search. However, knowledge transfer is not assured: social interactions at a temporary gathering may have low information carrying capacity. In this study, we examine under what conditions temporary gatherings catalyze the creation of novel combinations. We examine a large sample of technological combinations created at software development hackathons. We find that while hackathons are a fertile environment for developers to create applications that implement novel combinations of technologies, the distribution of inventive activity between developers is highly skewed, with only one in six developers introducing a novel combination. We find many hackathon projects contain unconventional technology combinations (i.e., combinations with a low base rate of appearance), suggestive of potential for breakthrough innovation. At the same time, under the influence of common contextual cues—including peer attendees and corporate sponsors—multiple developers within a hackathon sometimes arrive at the same novel technology combinations. An attendee's search path at a temporary gathering thus appears to diverge from the search paths of non-attendees but converge with other attendees at the gathering. Our work has implications for research on technology brokering, knowledge transfers in networks, and simultaneous discoveries.

Recent research has documented that innovation within specific fields has been in decline, with a lower number of high-impact discoveries. This phenomenon could have multiple explanations. Have all low hanging fruits of knowledge been plucked? Have the incentives for innovation changed, particularly for certain actors? Or are we simply not measuring innovation and innovation productivity in the right way? And how are new technologies likely to affect this trajectory? The TIM Plenary will discuss these important questions for the AOM community with a panel of experts.

Technological Change Track: Innovation & Industry Dynamics

Session Moderator: **Ankur Chavda**, *HEC Paris*

TIM: **Ties that Bind: The Emergence of New Supplier Relationship Models as Instigators of Industry Change**

Author: **Ankur Chavda**, *HEC Paris*
Author: **John Eklund**, *U. of Southern California*

Industry change can come in several forms. In this study, we examine one understudied form involving the interaction between suppliers and incumbent firms and how changes in industry-wide supplier engagement models impact incumbents. We argue that firms working repeatedly with the same suppliers under the existing engagement model develop effective routines and therefore are associated with higher-quality outputs. In contrast, under a new engagement model, the advantage existing suppliers have over new suppliers diminishes, as well-honed routines become constraints and engender complacency, limiting adaptation to the industry-level change associated with the new model. We find support for our theory in the US television programming industry following the entry of Netflix in 2013, coinciding with changes in the industry's predominant supplier engagement model.

TIM: **Roles of Firm Knowledge Retention When Outsourcing Core Component Amid Technological Change**

Author: **Woo-Yong Park**, *Lee Business School, U. of Nevada, LAS VEGAS*
Author: **Chanchai Tangpong**, *North Dakota State U.*
Author: **Faisal Khurshid**, *Hong Kong Metropolitan U.*

When the technology of a core component is radically changing, a number of firms opt to outsource the core component to mitigate various risks. Some firms choose to retain the knowledge regarding their outsourced core component while others do not. This study examines the effect of firm in house knowledge related to the outsourced core component (i.e., retaining the related knowledge while outsourcing the core component) on product performance during such radical technological change. Drawing on the behavioral theory of the firm, we hypothesize that, before a dominant technology of the core component emerges, firms operate under a high technological uncertainty, and the firms' in-house knowledge related to the outsourced core component can predispose the firms to cognitive biases in the solution search process. Thus, their eventual product performance is compromised. We also hypothesize that prior exploratory experience in a technologically related but outside domain and the external knowledge about the core component from suppliers can moderate such negative influence of the firms' in-house knowledge on product performance during the pre-dominant technology phase. After a dominant technology has emerged, the clarity of key technological features arguably become established. The firms' in-house knowledge related the outsourced core component is hypothesized to have a positive effect on their product performance as it enables the firms to advance the development of their unique firm-specific features in differentiating their products from those of the rivals. We further hypothesize that the moderating effects of prior exploratory technological area experience and external knowledge about the core component from suppliers are fading away after the dominant technology has emerged. We empirically test our hypotheses in the context of U.S. Hybrid Electric Vehicles market, and our hypotheses are largely supported.

TIM: **How do Stock Market Expectations Condition Incumbents' Response to Radical Technological Change?**

Author: **Anand Nandkumar**, *Indian School of Business*
Author: **Deepa Mani**, *Indian School of Business*
Author: **Anandhi Bharadwaj**, *Emory U., Goizueta Business School*
Author: **Arnab Choudhury**, *Indian School of Business*

Prior research is inconclusive on how incumbents respond to radical technological changes. Whereas one stream of research emphasizes the ability of market incumbents to be better positioned to appropriate value from a radical technological change, another stream highlights the challenges encountered by them in the face of a radical technological change. We examine how shareholder preferences for current profitability relative to future growth shape incumbents' responses to a radical technological change and how different facets of corporate governance moderate the extent to which shareholder preferences condition incumbents' responses to radical technological changes. Using a rich dataset comprising 34,673 non-ICT producing incumbent-year pairs spanning 1984-2010, we find that a standard deviation increase in the extent to which incumbents are valued current profits decreases incumbents' ICT adoption by about 10% a year, whereas a similar increase in the extent to which incumbents are valued for their future profits increases ICT adoption by about 5% a year. Our results also highlight the key role of corporate governance in moderating these effects. We advance the rich body of work that examines incumbents' responses to technological changes by highlighting the significance of external stakeholders in shaping the competitive advantage of incumbents.

Innovation and Competitive Strategy Track: Innovation and Intellectual Property

Session Moderator: **Huiyan Zhang**, *Carnegie Mellon/ Catolica Lisbon*

TIM: **Copyright Protection and Innovation: Evidence from Short Video Industry**

Author: **Fei Hao**, *Institute of Economics, Tsinghua U.*
Author: **Jinglei Huang**, *Institute of Economics, Tsinghua U.*
Author: **Danxia Xie**, *Tsinghua U.*

Short videos have become an increasingly important form of digital copyright in the digital era. It is difficult to regulate the infringement of new forms of works like short videos. And due to the lack of exogenous variation of the copyright statute, solid evidence for the effect of copyright protection on innovation is still scarce. So this paper investigates the effect of a special campaign for intellectual property rights (IPR) protection in China on short video creation. With a random sample of 16,011 short videos created in 2019–2020 on one of the leading short video platforms, we find evidence for three important effects of the IPR protection policy: the innovation promotion effect, the propagation impediment effect and the quality stimulation effect. Specifically, strengthened IPR protection can encourage creators' innovation behavior and stimulate the quality of works while it has a negative relationship with the propagation of works. And we also find that the innovation promotion effect is partially attributed to incentivizing creators to devote more effort to original short video production and it is heterogeneous for short videos with different themes. This paper contributes to the research on intellectual property rights and digital innovation and provides practical guidance for governments, platforms and creators.

TIM: **Patent Litigation, Patent Value and the Direction of Innovation: Evidence from China**

Author: **Huiyan Zhang**, *Carnegie Mellon/ Catolica Lisbon*

This paper investigates the role of patent enforcement in the private value of patents valuation and firm patenting strategy. I take China as the institutional context and examine how its damage awards doctrine and patent remedy enhancement efforts impact the private value of patents and the direction of firm innovative activities. To estimate the private value of patent protection, I construct a finite-horizon stochastic dynamic model and recover key parameters of firms' patenting and litigation processes. The structural estimates and counterfactual simulations show that strengthening patent enforcement by promoting damage awards significantly boosts the private value of utility models- the type of patents that do not go through rigorous examination- while leaving the private value of invention patents- the type of patents that go through examination and protect more substantive inventions- almost unchanged. To explore the implications for firm strategy, I run a series of difference-in-differences analyses on a comprehensive sample of Chinese patenting firms. I find that firms with higher litigation exposure tend to patent more utility models when patent reform enhances damage awards. This tendency of filing more utility models is more pronounced among financially constrained firms. The "treated" firms are more likely to switch from low-quality invention patents to utility models. Policy simulations suggest that differentiating damage awards for invention patents and utility models might be a feasible solution to adjust the distortion in patent valuation and firms' innovation choices.

TIM: **Repeated Examiner-Attorney Interaction and Patent Approval**

Author: **Elena Mas Tur**, *Eindhoven U. of Technology*
Author: **Arjan Markus**, *Eindhoven U. of Technology*

Whether a patent application is approved and how fast can be influenced by factors other than its technical merit. We posit that interactions between examiners and patent attorneys smoothen the application process, increasing grant likelihood and speed. We combine data from the USPTO PatEx dataset with the PATSTAT database, studying over 3 million applications from 2001 to 2014. We show that previous examiner-attorney interactions and the percentage of those that led to approval increase the probability of granting and decrease the length of the process. For an average patent, with a lag of 38.19 months, a one standard deviation increase from the mean of previous examiner-attorney interaction speeds up future grant processes by one month, and a one standard deviation increase of successful interaction speeds it up by a further 3.7 months. We conclude that communication between examiners and attorneys increases mutual understanding and reduces friction between applicants and granting institutions. Our findings have implications for different types of stakeholders of the patent process, including examiners at the patent office, patent attorneys, and companies that apply for patents.

TIM: **Legal Environment of Intellectual Property and Innovation: The Moderating Role of Legal Mobilization**

Author: **Tianhao Chen**, *School of Public Policy and management Tsinghua U.*
Author: **Yipo Su**, *School of Public Policy and management Tsinghua U.*
Author: **Yuhan Liu**, *Huazhong U. of Science and Technology*
Author: **Yuan Zhou**, *Tsinghua U.*

Prior research tentatively discusses the influences of legal institutions on firms' innovation, yet limited empirical study has probed into the underlying mechanisms. This study, therefore, explores the impact mechanisms of the perceived legal environment of intellectual property on firms' innovation by using empirical evidence in China. This study collects 99,565 judicial-decision documents from all intellectual property courts in China in 2015-2020, and employs advanced natural-language-processing technology to measure the perceived legal environment of firms through mining those documents, based on which it constructs a panel dataset containing 50,210 year-firm observations. The empirical results suggest an Inverted-U shape relationship between the intellectual property legal environment and firms' innovation in China and find that the legal mobilization of firms in the litigation network has positive moderating effects when the perceived legal system will be degraded and their efficacy of law will be enhanced. Precisely, the "informed disenchantment" flattens the U-shape relationship and shifts firms' innovation up. This study advances our understanding of the intricate interaction between the legal environment and legal mobilization specifically on intellectual property institutions, and also provides insights for policymakers and firms on intellectual property judicial reform that may lead to firms' innovation.

TIM: **Revealing Commercial Potential and Follow-on Inventions: Evidence from Patent Marking**

Author: **Wolf-Hendrik Uhlbach**, *Ecole Polytechnique Fédérale de Lausanne*
Author: **Ling Zhou**, *EPFL*
Author: **Gaétan De Rassenfosse**, *Ecole Polytechnique Fédérale de Lausanne*

In this paper, we investigate the effects of revealing the commercial application of an invention on its use in follow-on inventions by other firms. We extend the literature on knowledge disclosure and cumulative innovation by considering a new mechanism that generates spillovers of strategic knowledge, i.e. disclosing how inventions are used in commercialized products. We operationalize the disclosure of the commercial potential, using Virtual Patent Marks (VPM). We test our hypotheses using the patent portfolio of firms that consistently mark their patents, in the period of 2012 to 2018. To address the empirical problem of time-varying confounders, we make use of Inverse Probability of Treatment and Censoring Weights (IPTCW). Our results suggest that marking leads on average to more follow-on inventions, however, this effect is limited to industries with weak appropriability regimes.

Reactions to Employee Voice

Session Moderator: **Anna Hickman**, *U. of North Carolina, Greensboro*

OB: **Managerial Response to Voice: A Systematic Review and Agenda for Future Research**

Author: **Anna Hickman**, *U. of North Carolina, Greensboro*
Author: **Jason R. Pierce**, *U. of North Carolina, Greensboro*

How managers respond to voice, or upward feedback, from employees has important implications for organizations. Recognition by management scholars that this is so has inspired a nascent and growing body of research on the topic. This literature, however, has yet to gel into a coherent framework. We take two steps towards establishing such a framework. First, we propose, a priori, separate typologies of potential manager reactions to the messengers and message of voice, respectively. Then we conduct a systematic literature review of research on managerial responses to voice using our typologies as guiding frameworks. Our results indicate significant gaps in the literature due to a dearth of research on negative responses to voice message and messenger. We propose a future research agenda oriented around these and other topics in need of further attention.

OB: **On Giving Specific Explanations for Rejecting Employees' Voice: The Critical Role of Voice Safety**

Author: **Si Qian**, *Beijing Technology and Business U.*
Author: **Bert Schreurs**, *Vrije U. Brussel*
Author: **I. M. Jawahar**, *Illinois State U.*
Author: **Melvyn Hamstra**, *IESEG School of Management*

Voice behavior is important in organizations, but managers often need to reject, rather than endorse, the suggestions their employees make. Yet, at the same time, managers need to ensure that employees continue to voice, show voice resilience. Our goal is to contribute to this important but underdeveloped area of knowledge on voice resilience. We propose that specific explanations for why a voiced suggestion was not endorsed are likely to be deemed as fairer, leading to perceptions of voice safety, encouraging expressions of voice in the future. Two experimental studies (N = 176 and N = 275) were conducted using data collected in the US and China. We experimentally manipulated specific versus non-specific explanations after non-endorsements of a voiced suggestion. Results of both experiments show that supervisors' high explanation specificity when rejecting voice promotes voice resilience, indirectly via voice safety.

OB: **A Source Credibility Perspective of Coworkers' Positive Reactions to Employee Voice**

Author: **Xin Liu**, *Renmin U. of China*
Author: **Jingni Dong**, *School of Business, Renmin U. of China*
Author: **Siyu Yu**, *U. of Michigan*
Author: **Elad Netanel Sherf**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Jia Yu**, *U. of Nebraska, Lincoln*
Author: **Shudi Liao**, *Hubei U.*

Recent research on employee voice has shifted its attention from examining the antecedents of voice to investigating its consequences, especially about coworkers' reactions to employee voice. However, knowledge on why coworkers react positively to employee voice remains limited. Drawing on source credibility theory in the communication literature, we propose that a coworker's evaluation of the focal employee's competence and sincerity are two key mediating mechanisms that explain why a coworker reacts positively and offers later-on help to the voicer. Furthermore, we propose that the focal employee's friendship network centrality serves as a key moderator to these relationships, such that the positive relationship between the focal employee's voice and a coworker's evaluation of the focal employee's competence and sincerity, as well as the indirect effects, are stronger when the focal employee's friendship network centrality is lower rather than higher. Using a three-wave, multi-source round-robin survey and social relations analysis, the results largely supported our hypotheses except for the moderating effect of friendship network centrality on the competence evaluation path. Our findings provide novel insights into the mechanisms and boundary conditions that explain how coworkers react to employee voice.

OB: **Linguistic Construal And Responses To Group Member's Voice**

Author: **Afra Koulaei**, *Inland Norway U. of Applied Sciences*

Despite the importance of newcomers' voice messages for enhancing ideas and promoting innovation in groups and organizations, newcomers often conform to group norms. As such, they are less likely to engage in voice behavior as they fear potential negative reactions (e.g., social rejection, unfavorable evaluations) from other group members. Integrating the linguistic construal model with research on group socialization and criticism, we argue that framing of voice messages serves as a situational cue that elicits more or less favorable recipient reactions to voicers (attribution of positive intentions, willingness to utilize voice). We further propose the voicer's tenure as an important moderator of the effects of voice framing on voice utilization via attribution of positive intentions. Results showed that a newcomer's voice message communicated in a low linguistic construal (as opposed to a high linguistic construal) elicited more favorable reactions and support from group members. For an incumbent group member, however, variation in voice framing did not affect other group members' responses to voice differently.

Strategies and Frameworks for Incorporating Community Perspectives in Health Equity

Moderator: **Jeana Wirtenberg**, *Rutgers Business School*
Panelist: **DEIDRA Johnson**, *Porter Novelli*
Panelist: **Justin Pallenik**, *Atlantic Insights*
Panelist: **Manan Shah**, *Bristol-Myers Squibb*
Discussant: **Wendy Purcell**, *Rutgers U.*

While solving health inequities in healthcare does not wholly lie with any one stakeholder, employers can play a far greater role. Healthcare systems are struggling to find solutions to the debilitating inequities in healthcare access, provision, and outcomes. We believe that sustainable success and solutions will only be delivered through clarity of goals, innovative and inclusive community-based programs, conscious and sustained collaboration between the public and private sector, and accelerated, measured impact. New community data- designed by communities – can help point to solutions and prioritize research and practice for effective action. In this Symposium, eminent experts will discuss this unfolding line of research and explore improved equitable access to healthcare for at-risk communities to chart a path forward.

Cross-Cultural Management in the Workplace

Session Moderator: **Gaoyuan Zhu**, *Cornell U.*

OB: **A Strategic Approach to Uniqueness Seeking in Collectivistic Cultures**

Author: **Gaoyuan Zhu**, *Cornell U.*
Author: **John Angus Hildreth**, *Cornell SC Johnson College of Business*
Author: **Ya-Ru Chen**, *Cornell U.*

People in collectivistic cultures have been characterized as being low in uniqueness seeking. However, we find evidence that people in collectivistic cultures are more likely to pursue uniqueness in certain situations compared to those in individualistic cultures. Findings from five preregistered studies (N = 1,986) revealed that compared to those in individualistic cultures, people in collectivistic cultures exhibited a more strategic approach to uniqueness seeking: they were more likely to pursue uniqueness or think others would pursue uniqueness in situations where being unique might confer benefits. Moreover, when being unique did not confer benefits, those in collectivistic cultures exhibited similar levels of uniqueness seeking behavior to those in individualistic cultures. We also found that those in collectivistic cultures did not exhibit lower levels of generic (rather than strategic) preferences for uniqueness. Thus, our findings suggest that in general, people in collectivistic cultures are not lower on uniqueness seeking compared to those in individualistic cultures and can be more highly motived to pursue uniqueness in situations where strategic considerations are prevalent. Overall, our research offers a novel perspective for understanding uniqueness seeking across situations and cultures.

OB: **Are Employees More Burnt Out in Tight vs. Loose Organizations?**

Author: **Shota Kawasaki**, *Nanyang Business School*
Author: **Xi Zou**, *Nanyang Business School*

Cultural tightness, the extent to which a group of people is constrained by rules and norms, has significant implications in group members' well-being at the national and regional levels. Yet, little is known about how organizational tightness affects employee well-being. Integrating tightness theory and job demands-resources model of burnout, we propose that organizational tightness is a double-edged sword to burnout by inducing both job demand and job resource. However, the association between tightness and job demand is more pronounced among female employees, whereas the association between tightness and job resource is more pronounced among male employees. The results from a daily diary study over one workweek period support our prediction. Shedding light on both advantages and disadvantages of tight cultures, our research offers several theoretical and practical implications for organizations to cultivate cultures that can reduce burnout among both female and male employees. Keywords: Organizational tightness; employee well-being; burnout; exhaustion; disengagement; job demands; job resources; gender; daily diary study.

OB: **Bridging Processes of Multiculturals and Multilinguals**

Author: **Tomke Jerena Augustin**, *Asper School of business, U. of Manitoba*
Author: **Markus Pudelko**, *U. of Tuebingen*

This study investigates how multicultural and multilingual employees develop and enact their particular capabilities to bridge cultural and language barriers in international work contexts. Although previous literature has already identified the usefulness of these individuals in overcoming such hurdles, we offer novel insights into how these employees not only use their assets but interestingly also their shortcomings to bridge cultural and language barriers. Based on an in-depth analysis of 154 interviews, we inductively develop a theoretical model of bridging activities that carefully distinguishes between the related, but still distinct, concepts of culture- and language-related bridging. We show the entire bridging processes based on assets on one hand, and shortcomings on the other including (1) antecedents to (2) capabilities and motivation, and (3) enactment. Based on this analysis, we develop four roles in bridging activities including: cultural teacher, language translator, cultural coach and language facilitator.

OB: **How Employee Individualism-collectivism Orientations Predict Workplace Vigilantism**

Author: **Huaying Wang**, *Wuhan U. of Technology*
Author: **Guanglei Zhang**, *Wuhan U. of Technology*
Author: **Mingze Li**, *Wuhan U. of Technology*

Workplace vigilantism refers to activities that employees carry out to monitor their workplace for signs of wrongdoings and effect unauthorized justice based on perceived sense of right and wrong. Extant research gives less attention to how individual differences might predict employees' vigilantism at work. We propose that employee individualism-collectivism orientations may lead to different cognition of workplace vigilantism, perceiving it with risk or efficacy of adopting a vigilante identity as represented by employee perceptions of relationship cost or pro-team motivation, which in turn may affect their engagement in self-appointed mission of monitoring and punishing perceived wrongdoers. We also propose a moderator-task interdependence. We tested this theoretical model in a field study of a sample of 357 employees, which demonstrate our hypotheses largely. Specifically, we found that collectivism-oriented employee gives more attention to the efficacy that vigilantism brings to the work group or team, and they may give less attention to the risk (relationship cost) from engagement in workplace vigilantism. In contrast, individualism-oriented employees may pay more attention to potential risks of effecting vigilantism, which in turn is less likely to motivate them to participate in vigilante activities. Besides, our study have demonstrated that task interdependence moderates the indirect relationship between collectivism orientation and workplace vigilantism, such that the relationship is stronger via perceived workplace vigilantism efficacy when task interdependence low rather than high. Theoretical and practical implications are offered.

We bring together leading scholars in the field of hierarchy – experts in research on power and status in organizations – to present five innovative projects that explore ways in which individuals in organizations perceive hierarchy, and the downstream organizational implications of these perceptions. Altogether, the research presented here provides state-of-the-art theoretical and methodological advances to enhance and refine our understanding of hierarchy, which is a defining feature of organizations and a key research topic for our field. As well as filling conceptual gaps in the literatures on power and status, this research hopes to inspire future scholarship into hierarchy.

Artificial Intelligence and Creativity in Organizations: How Machine Learning Shapes Creativity

Participant: **Alentina Vardanyan**, *Cambridge Judge Business School*
Participant: **Daria Morozova**, *HEC Paris*
Participant: **Federico Magni**, *ETH Zürich*
Discussant: **Teresa M. Amabile**, *Harvard U.*

In this proposed symposium, we aim to spur the exciting discussion on how AI is affecting creativity in organizational settings, including how AI empowers workers in creative domains, how it changes human involvement in creative processes, and what cognitive biases it engenders. We introduce a set of papers that seek to contribute to the study of human-AI creativity on different levels of analysis, integrating insights from established organizational research on organizational behavior and applied psychology into the field of human-AI collaboration.

Meaning of Work in Crisis Contexts

Organizer: **Eunice Eun**, *Yale School of Management*
Organizer: **Winnie Jiang**, *INSEAD*
Discussant: **Sally Maitlis**, *U. of Oxford*
Participant: **Megan Gorges**, *Harvard Business School*
Participant: **Gabriel Robert Sala**, *Northeastern U.*
Participant: **Kimberly Rocheville**, *Creighton U.*

At any moment, organizations may face a range of crises, from global pandemics and economic depressions to business catastrophes – all of which can strain operational processes and performance (Wright et al., 2020; Williams et al., 2017). Research suggests that crises can also engender positive organizational growth, learning, and identity (Fink et al., 1971), which may trickle down to the group and individual levels. However, the dynamics underpinning the interplay of organizational-, group-, and individual-level shifts in meaning of work amidst "a backdrop of change and 'outside' elements" (Cheney & Thompkins, 1987: 5) remain largely underexplored. Research that addresses meaning of work in times of crisis and change not only helps to close this gap, but also enables scholars to understand when and why thriving (vs. decline) amidst crisis occurs. This symposium brings together five field-based investigations to focus on the interplay of individual, group, and organizational dynamics around the meaning of work in the context of crisis. First, Jiang and Cho quantitatively examine the macro effects of a societal level crisis and how a societal crisis can trigger a personal one in terms of individuals' meaning of work; in particular, they uncover that one's meaning of work can be temporarily unsettled by an external, societal-level crisis. Second, Gorges explores people's experiences of downshifting—defined as a voluntary long-term change to spend less time on work and more time on leisure—following a large global crisis, namely, the COVID-19 pandemic. Third, Eun examines how callings are expressed in crises, such as the COVID-19 crisis, illuminating not only the prevailing prosocial nature of callings, but also revealing work orientations as an important input to crisis behaviors. Fourth, Sala considers the effects of occupational level threats and how they affect individuals' sense of self and meaning. Finally, Rocheville and colleagues unpack the effects of individual-level crises in illuminating how workers in chronic pain create and/or sustain a positive meaning of work. Sally Maitlis, a distinguished scholar of how people make sense of challenges and trauma at work in meaningful ways, will serve as the discussant to highlight both theoretical and practical implications as well as future research directions.

CTO Plenary Session

Speaker: **Paul Leonardi**, *U. of California Santa Barbara*
Host: **Nicholas Berente**, *U. of Notre Dame*

Paul Leonardi, Duca Family Professor of Technology Management at UC Santa Barbara is the CTO Division's Distinguished Scholar Keynote Speaker. Dr. Leonardi’s research, teaching, and consulting focus on helping companies to create and share knowledge more effectively. He is interested in how implementing new technologies and harnessing the power of informal social networks can help companies take advantage of their knowledge assets to create innovative products and services. He has authored more than 60 articles that have appeared in top journals across the fields of Management, Communication, and Information Systems. He also publishes his work for managers and executives in outlets such as Harvard Business Review and MIT Sloan Management Review. He is the author of four books on technological innovation and organizational change, including the award-winning, Car Crashes Without Cars and Technology Choices. His latest book is The Digital Mindset: What it Really Takes to Thrive in the Age of Data, Algorithms, and AI (co-authored with Tsedal Neeley). Dr. Leonardi has won major awards for his research from the Academy of Management, the American Sociological Association, the Alfred P. Sloan Foundation, the Association for Information Systems, the International Communication Association, the National Communication Association, and the National Science Foundation and was recently elected as a Fellow of the International Communication Association. He has also received two major teaching awards for graduate student mentorship and education.

Panelist: **Shaila Miranda**, *U. of Oklahoma*
Panelist: **Paul Momtaz**, *UCLA Anderson School of Management*
Panelist: **Jean-philippe Vergne**, *UCL School of Management*
Panelist: **Stephan M. Wagner**, *Swiss Federal Institute of Technology Zurich, ETH*

Management scholars have started to embark on understanding how blockchain may bring about implications for business strategies and organizational theories. This panel symposium seeks to build on a successful panel symposium at AOM 2022 with about 50 attendees by assembling a group of scholars with blockchain technology research spanning an even wider array of AOM divisional interests, including: strategy, innovation, information systems, entrepreneurship, and operations. The panel will “bridge conversations about blockchain research” across these AOM communities. Panelists will provide insights related to theories that could help better understand the application of blockchain to business, theories that can be better understood by observing blockchain phenomena, blockchain phenomena that seem particularly interesting/surprising for researchers, and blockchain data sources (and relevant methods for studying those sources) that have the potential for interesting insights.

DEI: **Hair and its Ramifications (HAIR): A Model of Societal, Organizational, and Individual Forces**

Author: **Lonwabo Makapela**, *U. of Pretoria*
Author: **Maria Del Carmen Triana**, *Owen Graduate School of Management Vanderbilt U.*
Author: **Aneika Simmons**, *Sam Houston State U.*

Despite the CROWN Act of 2022, which stands for Creating a Respectful and Open World for Natural Hair, the existing theory on hair bias rarely explores how past (and consequential exclusionary) practices connect to modern-day structural bias. We present the HAIR model, a comprehensive multi-level model on the antecedents and consequences of hair bias with a distinct focus on Black women's hair. We examine how the experience of Black women resembles subalternity because of their lower social status based on sex and race. We emphasize Black women because they are the targets of hair bias for reasons that include their racio-ethnic status and gender status. The HAIR model explores how Black women experience a society that is socialized to devalue their natural hair and are encouraged to modify their hair to meet White standards of beauty without considering what it takes to accomplish that (e.g., scalp-burning chemicals). We propose testing the HAIR Model to address the artificial barriers Black women face in the workplace regarding their hair. We also propose that workplace organizations and schools establish an approach which challenges the biases in grooming policies directly.

DEI: **Race, Whiteness, and the Diversity Discourse: Lessons from UK Jewish Organizations**

Author: **Edith Pick**, *Queen Mary U. of London*

This paper deepens our understanding of the construction of ethno-racial diversity and difference in organizations, and the consequences of those discursive struggles on the lives of workers. Categories of difference are usually seen as building blocks of diversity management, however critical and postcolonial researchers have long pointed out the need to develop more flexible and context-sensitive epistemologies in studying racial inequality, beyond binary conceptions of blackness and whiteness. The Jewish context offers a unique opportunity to explore those discursive dynamics, due to the elusive nature of "Jewish difference", taboos over the use of racial classifications, and possible conflicts between an anti-racist stance and a Zionist affiliation. Exploring the diversity discourse within UK Jewish nonprofit organizations reveals three main diversity frames: in the first, "Jews are white", the construction the Jewish organization as a white space is explored, as well as DEI efforts to bridge the Jewish-black gap; the second, "Jews are non-white", explores this re-emerging discourse in the context of DEI, and investigates its acceptance as an act of reclaiming a historically marginalized identity, and as an appropriation of racial difference; the third, "Jews are ethnically diverse" explores the manifestations of Ashkenazi-Sephardi relations in diaspora organizations, and the sidelining of race. Throughout those diversity discourses, the repercussions on the lives of workplace are critically examined.

DEI: **Towards Antiracist Feminist Ethics of Care: Interrogating White Apathy in Women-Led Organizations**

Author: **Samantha E. Erskine**, *UMass Boston College of Management*

In this paper, I explore white apathy as an implementation barrier to organizational leaders enacting the "happy" and caring values they espouse. I ask broadly, how do whiteness and elitism influence the allocation of care in the workplace? Using critical discourse analysis (CDA) to understand the insights shared by women CEOs of nonprofit organizations in the U.S., this paper highlights the intersectional ways in which white apathy derails the provision of care, is misaligned with the happy talk espoused in organizations, and perpetuates whiteness and elitism as systemic power in organizations and society. I argue that this weaponization of apathy contributes to systemic racism, including systemic gendered racism. I conclude with implications for research and practice, as well as recommendations for future research.

Participant: **Brent John Lyons**, *Schulich School of Business, York U.*

Diversity, equity, and inclusion initiatives have become a top priority for many companies, with billions of dollars spent per year to improve the workplace experiences and outcomes of groups that face disadvantages in society. Scholars are attempting to keep pace by studying whether these initiatives are effective in increasing target representation, reducing gaps in career success between targets and nontargets, and increasing targets' inclusion; yet equivocal results suggest that diversity initiatives may "not always work as intended" (Leslie, 2019: 538). In turn, there has been a marked increase in research and theory examining the unintended positive and negative consequences of diversity initiatives. This symposium is intended to build on and extend this stream of research by bringing together four papers that coalesce around the general theme of unintended consequences of diversity initiatives. Specifically, the papers in this symposium include examinations of the risks associated with diversity advocacy, dominant group reactions to diversity initiatives, effects of diversity training on creativity, and minority group backlash to diversity initiatives. Following the presentations, Dr. Quinetta Roberson, a renowned scholar in the field of diversity and inclusion, will provide a synthesis and discussion of the papers themselves and broader trends in the literature.

Exploring the Role of Creators' Responses within the Creative Idea Evaluation Process

Discussant: **Justin M. Berg**, *Stanford Graduate School of Business*
Organizer: **Velvetina Siu Ching Lim**, *UCL School of Management*
Presenter: **Velvetina Siu Ching Lim**, *UCL School of Management*
Presenter: **Yidan Yin**, *U. of Southern California -Marshall School of Business*
Participant: **Jennifer Mueller**, *U. of San Diego*
Participant: **Cheryl Wakslak**, *U. of Southern California*
Presenter: **Sarah Harvey**, *UCL School of Management*
Participant: **Onyaglanu Idoko**, *U. College London*
Participant: **Tuukka Toivonen**, *UCL - Dept of Science and tech (UK); GLOCOM International U. of Japan*

In recent years, creativity and innovation scholars have focused their attention towards the complexities in the evaluation of creative ideas (Mueller & Yin, 2021; Zhou, Wang, Bavato, Tasselli, & Wu, 2019). Specifically, the main question has been on how evaluators may overcome the bias against novelty (Harvey & Mueller, 2021; Mueller, Melwani & Goncalo, 2012). Despite establishing the importance of shaping the evaluator's cognition to increase the implementation of ideas, this perspective neglects to account for the social dynamics underlying the idea evaluation process, where creators may also be involved in assessing the value of their own ideas and actively determine if an idea's journey should continue (Berg, 2016; Perry- Smith & Mannucci, 2017). While insights in creative feedback literature suggests the value of feedback to creators (Abi-Esber, Abel, Schroeder, & Gino, 2022; Harrison & Rouse, 2015; Toivonen, Idoko, Jha, & Harvey, 2022), the focus remains very much towards the outcome of developing and implementing creative ideas successfully, rather than how creators navigate and react towards receiving evaluations. In this symposium, we seek to provide a more comprehensive view of the underlying social dynamics of the idea evaluation process by asking: How do creators respond and behave when creative ideas are being evaluated? Second, to what extent should the anticipated responses of creators or other audiences be considered by evaluators during the evaluation process? Across three presentations, we discuss these key questions.

Understanding How People React to Change

Family Business Succession 1

Session Moderator: **Mark Bolinger**, *Appalachian State U.*

ENT: **(Inter)Family Feuds: The Surprising Benefits of Interfamily Rivalries**

Author: **Mark Bolinger**, *Appalachian State U.*
Author: **Alex Bolinger**, *Idaho State U.*

Scholarly and popular accounts are replete with examples of intrafamily rivalries and how they hinder intragenerational succession in family businesses. However, despite famous accounts (e.g., Romeo and Juliet, the Hatfields and McCoys) of interfamily feuds in literature and popular culture, researchers have given little systematic attention to the effects of interfamily rivalries (i.e., rivalries between family businesses). In this paper, we theorize how the presence of a rival family business can increase successors' motivation to participate in the family business and shift the locus of conflict from within the family (e.g., sibling rivalries or squabbles with parents) to competition with the rival family. Drawing on realistic group conflict theory from social psychology, we conceptualize factors that predict the emergence of interfamily rivalries and explain how such rivalries may simultaneously promote intergenerational succession and interfamily hostility. Our conceptual model offers insight into how to leverage interfamily rivalries to address the challenges of intergenerational succession without allowing unmitigated interfamily hostility to harm the well-being of the communities in which the businesses operate.

ENT: **Growing up in a Business Family and Becoming a Founder: Exploring Next Generation Founding Behaviors**

Author: **Miriam Foerch**, *FIF@Zeppelin U.*

Business families are prone to raise entrepreneurs. However, consensus is that family firms, on average, are less entrepreneurial than their nonfamily counterparts. These conflicting findings may be due to the prevailing family firm level of analysis in family business research. This article takes on a family level of analysis by examining how experiences within their business families affect next generation founders' engagement in (1) Family-supported and (2) Unsupported Entrepreneurship. Building on 44 interviews with next generation founders, we further elucidate how these experiences and founding behaviors influence the next generation founders' intention to (1) Integrate their new Venture into the Family Firm, (2) Develop Transgenerational Intentions for their new Venture, or (3) Scale & Exit their new Venture. A theoretical model capturing the relations between next generation experiences within the business family, founding behaviors, and intentions with the new venture is developed to create a theoretical foundation on next generation founding behaviors.

ENT: **Childhood Exposure to the Family Firm, Affective Commitment, and Transgenerational Orientation**

Author: **Baris Istipliler**, *U. of Mannheim, Business School*
Author: **Annegret Hauer**, *U. of Mannheim, Business School*
Author: **Detlef Keese**, *U. of Mannheim, Business School*
Author: **Michael Woywode**, *U. of Mannheim*
Author: **Jan-Philipp Ahrens**, *U. of Mannheim*

On the basis of a commitment theoretical perspective, we explain how childhood exposure to the family firm (CEFF) impacts shareholders' affective commitment (AC) to the firm in later life. After we demonstrate how this AC mediates the relationship between shareholders' transgenerational orientation (TGO) and CEFF, we investigate the two factors on which this mediation relationship is contingent: shareholders' non-manager status and material expectations from the firm. By utilizing a unique sample of 217 family firm shareholders from 174 family firms and a conditional process modelling analysis, we demonstrate that the AC mediates the relationship between CEFF and TGO. Taking into account the different manifestations of AC, this mediation is however only there for non-managing shareholders and gets weaker when shareholders have high material expectations from their firm.

ENT: **A Study on the Effects of Fit and Gender on Next-Generation Family Members' Succession Intentions**

Author: **Fei Zhu**, *U. of Nottingham, China*
Author: **Christopher Graves**, *U. of Adelaide*
Author: **Mary Tang**, *U. of Nottingham Ningbo China*

One key challenge family businesses face is sustaining the success of the entrepreneurial team, particularly following exit of the family founder, and one critical factor influencing such ability is whether a capable next-generation family member is willing to succeed into the family business. Unfortunately, a large number of family businesses in the world are facing a succession crisis, with many founders planning to retire in the next decade having difficulty finding willing and capable successors. This research develops an integrative model of next-generation family members' succession intentions from the person-environment fit perspective and examines how three types of fit perceptions—that is, person-organization fit, person-job fit, and person-group fit, independently and jointly influence next-generation family members' succession intentions. It also explores the gender difference in the fit–succession intentions relationship. Our results show that person-organization fit, person-job fit, and person-group fit both independently and jointly influence the next generation's succession intentions. There is a gender difference as well, as person-group fit has a larger influence for females than for males with respect to succession intentions. This research contributes to family business succession research and person-group fit research.

Drivers and Antecedents of Women Entrepreneurial Outcomes

Session Moderator: **Filippo Marchesani**, *D'Annunzio U. of Chieti-Pescara, Italy*

ENT: **Exploring the Relationship Between Smart Living and Female Entrepreneurship in the Contemporary City**

Author: **Filippo Marchesani**, *D'Annunzio U. of Chieti-Pescara, Italy*
Author: **Francesca Masciarelli**, *G. D'Annunzio U. of Chieti-Pescara*

The appeal of "smart" cities in the current urban trajectories has prompted cities across the globe to pursue smart city initiatives. However, in this transformation from city to smart city, a large part of the research corpus has mostly focused on technology and digital advancement in the city as a driver of this transformation, losing the intrinsic sense that cities should be human-based rather than tech-based or capital-based. In this article, we aim to investigate the relationship between the economic environment and the current smart city trajectories, focusing on the dimension of smart living. This dimension is under-investigated and controversial as it includes cities' practices that enable users and citizens to develop their potential and build their own life in a proper environment. Building on this state-of-the-art, this paper investigates the relationship between smart living practices in cities and the promotion of entrepreneurial activities focusing on female entrepreneurship, as women are identified as the most sensitive actors in the "smart living" dimension in the city. In doing this, we also include the complementary effect of public R&D investment as a driver in the "smart" city transition. Using a GMM method and a panel dataset that considers 30 Italian cities for 12 years, we demonstrate that the advancement of smart living practices in cities drives the promotion of female entrepreneurship. Furthermore, we highlight that public R&D affect this relationship. In doing so, this paper offers empirical contributions to the public and academic discourse on smart city trajectories at the interception between human-based practices and female entrepreneurship in contemporary cities.

ENT: **The Gender Gap in Entrepreneurial Growth Expectations and the Role of Cultural Factors**

Author: **Maud Pindard-Lejarraga**, *IE Business School*
Author: **Ainara González De San Román**, *IE Business School*
Author: **Jose Lejarraga**, *IE U. - IE Business School Madrid, Spain*

A sizeable factor contributing to the gender gap in entrepreneurship relates to women starting smaller and less growth-oriented businesses than men. We argue that this factor has been overshadowed in the entrepreneurship literature by scholars' emphasis in studying women's lower entry rate with respect to men, while directing less attention to understanding the drivers of expectations at entry time. We explore the effect of cultural norms in determining men and women growth expectations at founding. Using data from the GEM report and the UN Gender Inequality Index we find that, consistent with gender roles, the gender gap in growth expectations is reduced in social entrepreneurship, but in countries with low gender inequality women expectations are not conditioned by the social nature of their ventures. However, higher prevalence (i.e. legitimacy) of social entrepreneurship has little effect on the gender gap in expectations for social businesses, suggesting that entrenched cultural norms have more impact than less sticky contextual characteristics. We discuss implications of our results for theory and practice.

ENT: **When do Women Sign Up for Micro-Entrepreneurship Training?: Evidence From a Field Experiment**

Author: **Leena Kinger Hans**, *Indian School of Business*
Author: **Juan Ma**, *INSEAD*

Micro-entrepreneurship training has emerged as a widely used intervention to support the income generating activities of women living in poverty settings. However, most evaluation studies do not find significant positive effects of training on start-up activity, business incomes, and growth- thus raising the question when do women sign up for training in the first place. This study investigates how knowledge about 'how to do entrepreneurship' influences the likelihood of signing up for micro-entrepreneurship among women in less developed contexts. We theorize that founding templates- conceptualized as abstract representations of entrepreneurial tasks and actions- influence individuals' perceived ease of entrepreneurship, thereby driving entrepreneurial action. Furthermore, to investigate how heterogeneity in knowledge influences entrepreneurial intentions, we distinguish between templates that rely on social support and those that rely on self-dependent actions. Findings from our field experiment with 394 rural women in India reveal that exposure to founding templates drives sign-up to entrepreneurship training and that this effect is particularly enhanced when templates exemplify reliance on social support. We thus advance management research on entrepreneurship training in poverty contexts and open up avenues for broader entrepreneurship research.

ENT: **Does Safety Matter? Formal Safety Institutions and Women Microenterprise Failure in India**

Author: **Sreedevi R**, *S P Jain Institute of Management and Research*
Author: **Sriram Narayanan**, *Michigan State U.*
Author: **Disha Bhanot**, *S P Jain Institute of Management and Research*

This study examines the relationship between formal safety institutions and the failure of women-owned microenterprises (MEs) in Southern India. Prior studies on micro-enterprises have primarily focused on the role of human, social and financial capital on microenterprise performance. In addition, prior studies have also examined the role of both formal and informal institutions for ME growth. This study focuses on the role of formal safety institutions and their impact on the failure of women-owned microenterprises. In particular, the study shows that in areas with a greater number of police stations, human, financial, and social capital play a (significant) complementary role to safety in preventing the failure of women-owned MEs. In studying the safety of women, this study departs, and substantially adds to previous studies on performance of women owned microenterprises. Another key feature of the study is its use of not only large-scale empirical data from Kudumbashree (one of the largest social micro-enterprise organizations in India), but also the use of a sequential mixed methods design that finds support for empirical observations through a qualitative study on the field. Implications to policy makers and to theory are discussed.

Entrepreneurial Finance; Late Stage

Session Moderator: **Ruining Cao**, *U. of Nottingham Ningbo China*

ENT: **Heterogeneous Networks and Startups' Subsequent Financing: Theorization Based on Machine Learning**

Author: **Ruining Cao**, *U. of Nottingham Ningbo China*
Author: **Qingxin Meng**, *U. of Nottingham Ningbo China*
Author: **Jin Chen**, *U. of Nottingham Ningbo China*

Startups' interorganizational networks with venture capitalists (VCs) and technological partners largely affect their likelihood of obtaining external financing, and different networks (e.g., startup-VC investment network, VC syndication network, and startup-partner co-patenting network) may function differently and collectively. However, prior studies have mainly regarded different networks as homogeneous or isolated due to the difficulty dealing with heterogeneous, connected networks by econometrics methods. Following the "Algorithm Supported Induction for Building Theory" research paradigm, we construct heterogeneous, dynamic networks by using machine learning and self-develop an innovative hybrid composition layer to combine multiple networks. The results show that our model predicts startups' subsequent financing more precisely than human investors or machine learning methods without the hybrid composition layer. We further find that a hybrid of investment network and syndication network outperforms that of investment network and co-patenting network, and theoretical propositions are developed. Our study contributes to the literature by highlighting the importance of heterogeneous networks in determining startups' external financing and improving understanding of different stakeholders and their networks.

ENT: **A Rewarding Ride? How CVC Experience Influences Startup's Technology Standard Setting**

Author: **Xiumei Li**, *U. of Manitoba*
Author: **Tianxu Chen**, *West Virginia U.*
Author: **Vadake Narayanan**, *Drexel U.*

Startups often emerge based on new technologies and participate in standard setting where one single technology among competing technological variants sponsored by different firms will become the technology standard. The establishment of a technology as the standard is associated with enormous benefits to the sponsoring startup, but no study has explored factors that determine a startup's chance of success in establishing its technology as the standard. In this study, we examined the role of corporate venture capitalist (CVC) experience. We distinguished between CVC standard-setting experience and CVC generic industry experience and found that CVC standard-setting experience has a positive impact on startups' establishment of standard while CVC generic industry experience has a negative impact. Further, we distinguished two types of technology—end-user technology and intermediate technology and examined the moderating effect. We found that CVC standard-setting experience is more beneficial and that CVC generic industry experience is less harmful in end-user technology standard setting. Our study has important implications for the technology entrepreneurship literature, the technology standards literature, and the literature linking CVC and startup performance.

ENT: **Performance Feedback, Resource Deployment, and Corporate Venture Capital in China**

Author: **Lei Yu**, *Business School, Sun Yat-Sen U.*

This research examines the influence of performance feedback on the incumbent firms' behavior of investing in startups in China. The study is motivated by the tension between behavior theory of firm and resource-based view. While the traditional argument in behavior theory of firm suggests that external corporate development activities are used to "fix the weaknesses" of the firm during performance shortfalls, the logic in RBV indicates that the incumbent firms in emerging market can also conduct external corporate development activities to "build on strengths". This study proposes that the influence of performance feedback on firm's behavior depends on the nature of the behavior. In Chinese market, incumbent firms are frequently using corporate venture capital (CVC) to build ecosystem. We find that incumbents in China are more likely to invest intensively in startups when the performance increases above aspiration, and less likely to conduct CVC investments when performance decline below aspiration. Moderators at both firm level and industry level are also discussed. This study enriches the literature of behavior theory of firm, and contributes to the studies of CVC in emerging market.

Entrepreneurial Incubation and Acceleration 2

Session Moderator: **Yanbo Song**, *INSEAD*

ENT: **Variety is the Spice of Founding: Team Affective Diversity, Functional Diversity and Venture Funding**

Author: **Melanie Milovac**, *INSEAD*
Author: **Jeffrey Sanchez-Burks**, *U. of Michigan*
Author: **Yanbo Song**, *INSEAD*

Although prior work has shown how founder positive emotions influence investment decisions, our understanding of how such dynamics play out in founding teams remains limited. In this paper, we suggest that different levels of positive emotion expressed by team members leads to higher funding and investor evaluations for teams that have clear functional separation in their venture. Our theory further suggests that the fit of the positive emotion intensity and the respective role in the venture influences evaluations. We test our theory in two studies. In Study 1, we use FaceReader to analyze prerecorded pitch videos submitted to accelerators to understand how affective diversity in these team pitches influences later funding and venture growth outcomes. In Study 2, we employed an experimental study to examine how the fit of positive emotion levels with creative and non-creative roles in the venture influences evaluations.

ENT: **Are Public Funds for Entrepreneurship Wasted? Evaluating a Business Acceleration Program**

Author: **Alejandro Rodriguez-Vahos**, *U. EAFIT*
Author: **Sebastian Aparicio**, *U. Autònoma de Barcelona*
Author: **David Urbano**, *U. Autonoma De Barcelona*

A debate on whether new ventures should be supported with public funding is taking place. Adopting a position on this discussion requires rigorous assessments of implemented programs. However, the few existing efforts have mostly focused on regional cases in developed countries. To fill this gap, our paper seeks to measure the effects of a regional acceleration program in a developing country (Medellin, Colombia). The economic notion of capabilities is utilized to frame the analysis of firm characteristics and productivity, which are hypothesized to be heterogeneous within the program. Using a sample of 60 treatment and 16,994 control firms, we find that the former had a higher revenue than propensity-score- matched controls on average, confirming a positive impact on growth measures. However, such financial growth is mostly observed in service firms rather than other economic sectors. These findings tip the balance in favor of the literature suggesting supportive programs for high-growth firms as opposed to everyday entrepreneurship. Further evaluations, with a longer time span and using more outcome variables, are suggested in the context of similar publicly funded programs in developing countries.

ENT: **The Mechanisms of Acceleration**

Author: **Laurens Vandeweghe**, *ETH Zürich*
Author: **Dmitry Sharapov**, *Imperial College Business School*

The accelerator is a popular form of entrepreneurship support. Despite the rapid proliferation of the phenomenon in practice, academic literature on accelerators remains disjointed, in particular, about the process of acceleration and its underlying mechanisms. We draw on a literature review to identify three distinct research perspectives on accelerators: venture-centric perspective, sponsor-centric perspective, and ecosystem-centric perspective. We compare and contrast these perspectives and distinguish three distinct underlying rationales of acceleration – accelerated venture learning, accelerated brokering, and accelerated ecosystem spillovers. We then identify and theorize the mechanisms of acceleration within each of these rationales and present an integrative framework of acceleration. By synthesizing existing research in a novel way and generating new theory on the concept of acceleration, we contribute to the literature on accelerators in particular and entrepreneurial support organizations more broadly.

ENT: **I am Not Like Everyone Else! The Moderation Influence of Accelerators on Startup's Signaling**

Author: **Jorge Vinicio Murillo-Rojas**, *INCAE Business School*
Author: **Jan Brinckmann**, *ESADE Business School*

This study draws on signaling theory and literature on financial resource acquisition and analyzes the accelerators' influence on the effectiveness of entrepreneurs' signals for acquiring equity investment. Empirical research has mostly focused on the direct relationship between resource and service provision by accelerators and firm performance. However, few studies address the simultaneous benefits accelerators may have for resource acquisition processes. This study reveals that accelerators' support exceeds direct support through resources and services. This study utilizes the most comprehensive dataset on acceleration programs, including almost 23,000 new ventures from 175 countries that applied to 408 acceleration programs between 2013 and 2019. Employing the two-stage Heckman method to overcome selection bias constraints, this study uses a quantitative methodology based on probit regression, marginal effects, and contrast analysis. The results provide empirical evidence to improve understanding of the moderating role of accelerators in signal effectiveness, which extends the theory on the conditions under which signals influence investment in early-stage firms. Furthermore, this study highlights how four accelerators' practices influence the observability and credibility of signals in financial resource acquisition processes.

Entrepreneurship and work-family dynamics

Session Moderator: **Khaled Tamzini**, *LaREMFiQ, U. of Sousse*

ENT: **Antecedents and Consequences of Women Entrepreneurs' Work-Family Conflict in a Developing Country**

Author: **Khaled Tamzini**, *LaREMFiQ, U. of Sousse*

Research on work-family conflict among working women is neither rare nor new. However, studies conducted on women entrepreneurs in developing countries are scarce, leading to limited knowledge in this field and a lack of empirical evidence in the academic literature. Due to the relevance of this issue for not only researchers but also for women entrepreneurs and policymakers, and drawing on Hobfoll's resource conservation theory (1989), this study aims to fill these gaps by investigating the antecedents (role tension) and the consequences (job satisfaction) of work-family conflict experienced by women entrepreneurs in the context of a developing country (Tunisia). The results of this quantitative study conducted on 130 Tunisian women entrepreneurs revealed that role conflict and role overload positively influence work-family conflict, while role ambiguity has no effect on it. Moreover, the work-family conflict has no negative impact on job satisfaction. This study makes some important theoretical and practical contributions to the work-family conflict and entrepreneurship literature. In opposition to Hobfoll's (1989) resource conservation theory and work-family literature, this research finds that work and family represent two domains for women entrepreneurs that could be seen as "allies" and not necessarily "enemies". Based on this theoretical contribution, an avant-garde and new specific socio-economic model is suggested to policymakers to promote and foster women's entrepreneurship. Avenues for future research are discussed.

ENT: **I Don't Leave Because they Support Me: The Importance of Family-to-Business Support**

Author: **Ting Ting Niu**, *U. of Science and Technology of China*
Author: **Qingxiong Weng**, *U. of Science and Technology of China*

Why does poor business performance cause some entrepreneurs to exit their enterprise but not others? Drawing on the stressor-strain-outcome (SSO) framework as the theoretical underpinning, the present study proposes and tests a research model that examines how and when poor performance is related to entrepreneurial exit intention. We test the model based on time-lagged data from a survey with a sample of 336 Chinese entrepreneurs. The results largely support our hypotheses that emotional exhaustion mediates the relationship between poor performance and entrepreneurial exit intention and that family-to-business support moderates the relationship between emotional exhaustion and entrepreneurial exit intention. However, the hypothesis that family-to-business support buffers the relationship between poor performance and emotional exhaustion is unsupported. Theoretical and practical implications along with future research directions are also discussed.

ENT: **Do Entrepreneurs Face Work Interference with Family Exit Due to Regret?**

Author: **Ting Ting Niu**, *U. of Science and Technology of China*

This study proposes and examines a model that links work interference with family to entrepreneurial exit intention, via entrepreneurial regret, at varying levels of family centrality and entrepreneurial resilience. Specifically, this research introduces conservation of resources theory to the regret literature to suggest that work interference with family triggers entrepreneurial regret, which then leads to entrepreneurial exit intention. Additionally, we explore the potential role of entrepreneurs' family centrality and resilience in moderating these hypothesized relationships. Specifically, family centrality is expected to moderate the work interference with family-entrepreneurial regret relationship, while entrepreneurial resilience is expected to moderate the entrepreneurial regret-entrepreneurial exit intention relationship. The empirical results from a study of 361 entrepreneurs provide general support for our hypothesis. We conclude with theoretical and practical implications as well as future research avenues.

ENT: **Work-Family Boundary Dynamics, Coping Strategies and Subjective Well-being of Women Entrepreneurs**

Author: **Jasmine Banu**, *Indian Institute of Technology, Madras*
Author: **Rupashree Baral**, *Indian Institute of Technology, Madras*

Work-Family Boundary Dynamics, Coping Strategies and Subjective Well-being of Women Entrepreneurs: A Moderated Mediation Model. Women venture into entrepreneurship as a career choice since they desire to achieve greater autonomy and flexibility. Building on the Boundary theory and Role accumulation theory this study examines how boundary management preference impacts the subjective well-being of women entrepreneurs from an emerging country perspective like India. Results of structural equation modelling with data from 324 women entrepreneurs collected in two waves from one of the southern states of India - Tamil Nadu, show that the normative expectations placed on women to perform traditional gender roles and work autonomy, tend to impose integration as a boundary management strategy for women entrepreneurs in India. This study shows that boundary integration preference is positively related to actual integration behavior. The actual integration behavior of women entrepreneurs positively mediates the relationship between boundary integration preference and subjective well-being. As women entrepreneurs need to juggle obligations from business and family spheres and are expected to behave adhering to societal norms, they perhaps prefer to employ coping strategies to experience positive effects in both work and family domains. The problem-focused coping strategies were found to positively moderate the relationship between actual integration behavior and subjective well-being. The relationship is stronger among women entrepreneurs employing higher levels of such coping strategies. The theoretical and practical implications of these findings are discussed.

Entrepreneurial Resilience

Session Moderator: **Etayankara Katangote Muralidharan**, *MacEwan U.*

ENT: **Societal Well-being, Self-Control, and Entrepreneurial Resilience**

Author: **Etayankara Katangote Muralidharan**, *MacEwan U.*
Author: **Saurav Pathak**, *College of William and Mary*

Entrepreneurial resilience is associated with subsequent entrepreneurial re-entry of entrepreneurs who have had unfavorable exits due to a crisis. Considering well-being and self-control as emotional competencies explained by the individual level trait emotional intelligence (EI) model and rendering them as culturally contextualized societal psychological capital (PsyCap), we posit to explain their cross-cultural comparative influences on entrepreneurial resilience. We use PsyCap theory to establish these as emotional competencies that constitute an individual's positive PsyCap. Societies with an increased number of individuals having such competencies will have higher reserves of positive PsyCap thus making these competencies as culturally contextualized. Using 5,351 survey responses from the Global Entrepreneurship Monitor obtained from 29 countries post the 2008 economic crisis and supplementing with data from the World Values Survey we show that the dimensions of well-being at the societal level positively influence entrepreneurial resilience. This influence is mediated by societal-level self-control. Implications of our findings in regard to entrepreneurial resilience are discussed.

ENT: **Team Entrepreneurial Resilience and Entrepreneurial Growth**

Author: **Xiaolin Li**, *Fudan U. School of Management*
Author: **Kai Yao**, *Fudan U., School of Management*
Author: **Vivien Lim**, *National U. of Singapore*
Author: **Xiaolong Shui**, *U. of Bristol*

Based on the conservation of resource theory, we examined the relationship between team entrepreneurial resilience and entrepreneurial growth. As well, we predicted that team stressors would moderate this relationship. Three wave data were provided by 168 teams in high-tech entrepreneurial ventures in China. Results show that team entrepreneurial resilience is positively associated with entrepreneurial growth. This relationship is serial-mediated by certain cognition and behaviour. Team stressors also significantly moderated the serial-mediating effect between team entrepreneurial resilience and entrepreneurial growth. Implications for research and practice are discussed.

ENT: **A Study of Entrepreneurs' Resilience Process in the Face of Persistent Adversity**

Author: **Karlien Coppens**, *Ghent U.*
Author: **Annelore Huyghe**, *U. Ramon Llull, ESADE Business School*
Author: **Mirjam Knockaert**, *Ghent U.*

While prior research has often assessed resilience as a personality trait or state-like resource capacity, this study aims at understanding how entrepreneurs build resilience in the face of persistent adversity. In order to do so, we examine the resilience process of seven entrepreneurs faced with prolonged venture distress over a period of three years. Through our inductive analysis and drawing on insights from appraisal theory, we develop a theoretical model that describes how consecutive functioning episodes translate into different (non-)resilience trajectories over time. A functioning episode reflects entrepreneurs' appraisals of the distress situation and the coping strategies they undertake to manage it. The perceived impact of these coping strategies on the distress situation (i.e., no/small gain or breakthrough/breakdown) in turn shapes new episodes of reappraisal and coping strategies. Eventually, entrepreneurs either move from a threat to a challenge appraisal, hereby building resilience, or evolve from threat to loss appraisal, thus losing resilience. We identify the temporal depth of threat appraisals alongside the sequence and accumulation of gains as important factors in the resilience process. Our study has important contributions to entrepreneurial resilience literature and appraisal theory, and has relevant practical implications.

ENT: **What you Don't Feel Won't Hurt You. How Previous Life Adversity affects Entrepreneur Resilience**

Author: **Saran Anika Nurse**, *Kean U.*

Utilizing an analytic autoethnography, I explore how previous life adversity affects the resilience of Black entrepreneurs under conditions of gentrification. I find that the extent of previous life adversity affects several aspects of the resilience process as well as multiple dimensions of resilience. While most Black entrepreneurs are likely to perceive racial discrimination, those with extensive prior exposure are more likely to be psychologically resilient since they are more likely to have coping mechanisms such as racial identity salience which prevent negative emotions from arising. However, racial identity salience also makes them less likely to adapt their business models to the new residents, so while they are more likely to be psychologically resilient, they are less likely to be financially resilient. Conversely, those with limited prior experience or exposure to racial discrimination are less likely to have previously developed coping mechanisms and have lower psychological resilience. Many do eventually recover psychologically by developing coping strategies such as identity hiding which help their psychological as well as financial resilience.

Entrepreneurship and Environmental Sustainability

Session Moderator: **Mehmet Ali Yetim**, *Louisiana State U.*

ENT: **An Examination of Venture Capital Investments and Firms' Environmental Performance**

Author: **Xiaomin Fan**, *National U. of Singapore*
Author: **Kenneth Guang-Lih Huang**, *National U. of Singapore*
Author: **Jiaxing You**, *School of Management, Xiamen U.*

Firms often face a potential trade-off between profit-seeking and environmental protection when put under pressure by influential investors, particularly in emerging economies where environmental issues are of vital concern. Coalition theory suggests that under adequate institutional influence, a dominant coalition with participation from key members, such as those responsible for financial resources and regulatory oversight, could resolve such conflicting goals. We investigate whether strengthening formal institutions for venture capital (VC) investment yields an (unintended) adverse consequence on the environment for the focal firms. We also examine how such an effect can be mitigated through the participation of key members in the dominant coalition. Using the context of the energy-intensive industry in China, we find that strengthening formal institutions for VC investment associated with a major, top-down VC policy reform results in increased intensity of air and water pollution emissions of the target firms. Nevertheless, VC firms' prior experience in the energy-related industry and local government's monitoring and environmental protection measures could mitigate such adverse impacts. Our study contributes to bridging the literature on coalition theory and institutional theory and advances our understanding of the relationship between VC investments and firms' environmental performance. This study yields important policy and strategy implications.

ENT: **Environmentally Conscious Decision-Making In Employee-Owned Ventures**

Author: **Mehmet Ali Yetim**, *Louisiana State U.*
Author: **Furkan Amil Gur**, *Northern Illinois U.*

Environmental sustainability is important for employee-owned ventures because their employees' retirement accounts are financially vested in their company shares and environmental sustainability is associated with the long-term well-being of these ventures. However, challenges occur due to employee and management concerns about being both sustainable and profitable. In this study, we explore how employee-owned ventures make environmentally conscious decisions through interviews with 26 managers of employee-owned ventures complemented by other data sources. We find that high transparency and delegation of power to employee-owners lead to environmentally conscious practices. On the other hand, when managers make environmentally conscious decisions without the involvement of employee owners, these decisions do not translate to actual practices. We discuss three mechanisms through which transparency and delegation of power lead to environmentally conscious decisions in employee-owned ventures.

ENT: **The Sustainability Orientation of New Ventures – The Role of Imprinting, Firm Age, and Stakeholders**

Author: **Vincent Daub**, *Heinrich-Heine U. of Dusseldorf*
Author: **Andreas Rasche**, *Copenhagen Business School*
Author: **Maximilian Lemmens**, *Heinrich-Heine U. of Dusseldorf*

We provide a nuanced view of the evolvement of sustainability orientation in new ventures over time using imprinting theory. We hypothesize that a firm's sustainability orientation after its creation constitutes an important determinant of its later sustainability orientation, even in new ventures that are not social enterprises and, instead, focus primarily on financial objectives. We further hypothesize that the exit of founders and the entry of outside investor board members represent essential boundary conditions that weaken the persistence of initial imprints. Using data from 375 new ventures, founded in the U.S. in 2013 from different industries, we find general support for our hypotheses. This study contributes to imprinting theory by evaluating the effect of events that typically happen along the entrepreneurial lifecycle on the strength of imprints from the founding period. We also contribute to the literature at the intersection of sustainability and entrepreneurship by showing that the evolution of new ventures' sustainability orientation is significantly impacted by founder exists as well as the entry of new investors.

ENT: **Climate Change as an External Enabler of Entrepreneurial Activity**

Author: **Mirko Hirschmann**, *U. of Luxembourg*
Author: **Steffen Farny**, *Leuphana U. Lüneburg*
Author: **Christian Fisch**, *U. of Luxembourg*

This study examines the relationship between climate change and new entrepreneurial activity. We propose, using the emerging Theory of External Enablers (TEE), that climate change can enable entrepreneurial activity when individuals perceive environmental uncertainty as an attractive opportunity to start a business. Our multi-level analysis of 1,116,324 individuals from 100 countries over a 10-year period strongly supports the idea that climate change can stimulate entrepreneurial activity. Our moderation analysis further shows that women and individuals with a larger entrepreneurial network are even more likely to view climate change as a potential entrepreneurial opportunity. However, those with higher entrepreneurial self-efficacy are generally less likely to see climate change in this way. We discuss the implications of this evidence-based understanding of climate change as a catalyst for new entrepreneurial action for the fields of entrepreneurship and management.

ENT: **The Trajectory of Environmental Change and the Perception of Entrepreneurial Potential**

Author: **Jiyoung Kim**, *Jonkoping International Business School*

This research examines the influence that a trajectory—linear and nonlinear—of external changes has on individuals' perception of entrepreneurial potential regarding triggering and outcome-enhancing roles and enabling mechanisms (i.e., venture-level benefits offered). Using a 'think-aloud', scenario-based experiment, the present study explores the reasoning individuals use to justify the entrepreneurial potential of external changes. The analyses of verbalizations reveal variance in cognitive effort (e.g., frequency of reasoning made and the relative weight assigned) invested in each theme of reasoning by two different trajectories of external changes. This research helps to understand the interactions between external exchanges and individuals.

Gender Stereotypes and attitudes

Session Moderator: **Muntasir Shami**, *Aston Business School*

ENT: **Gender Attitudes and Business Venturing: A Study of Egypt and Jordan**

Author: **Muntasir Shami**, *Aston Business School*
Author: **Bach Nguyen**, *U. of Exeter Business School*

This study investigates the relationship between an individual's gender attitudes and his/her likelihood of engaging in business venturing. We employ the social feminist viewpoint embedded in the institutional theory to argue that people holding egalitarian gender attitudes are more likely to engage in business venturing. The empirical analysis utilizes Egypt and Jordan as the context where inegalitarian structures remain institutionally significant. Addressing endogeneity-related issues using an instrumental approach, we find some initial evidence about the positive association between gender egalitarianism and business venturing. Furthermore, this effect is stronger for females and educated people. Given how gender attitudes associated with individuals' engagement in entrepreneurship are largely unknown, this study contributes to the literature examining which gender attitudes are more helpful in increasing business venturing engagement. Additionally, the study contributes to exploring the under-investigated context of Egypt and Jordan.

ENT: **Family and Female Entrepreneurial Entry: Moderating Effects of Perceptions and Institutions**

Author: **Wei Deng**, *Northwestern Polytechnical U.*
Author: **Qiaozhuan Liang**, *Xi'an Jiaotong U.*
Author: **Wei Wang**, *Xi'an Jiaotong U. School of Management*

This paper explores how family pushes or pulls women into necessity- or opportunity-based entrepreneurship and the moderating roles of individual internal perceptions and external gender-specific institutions. The findings suggest that the family responsibility burden positively affects necessity-based female entrepreneurship (NBFE) and has a U-shaped relationship with opportunity-based female entrepreneurship (OBFE). Household income level negatively affects NBFE but positively affects OBFE. Entrepreneurial self-efficacy and entrepreneurial opportunity perception strengthen the positive relationship between household income level and OBFE. Female political empowerment and gender equality strengthen the negative relationship between household income level and NBFE and weaken the U-shaped relationship between family responsibility burden and OBFE. This study deepens the understanding of antecedents of different types of female entrepreneurship, breaking through the limitation of regarding female entrepreneurs as a homogeneous group. The findings can guide women’s entrepreneurial decision-making and enlighten policymaking to promote female entrepreneurship.

ENT: **Gender Stereotypes and Social Support in the Digital Entrepreneurial Community**

Author: **Xian Cao**, *Ball State U.*
Author: **Hongfei Li**, *Chinese U. of Hong Kong*
Author: **Dan K. Hsu**, *North Dakota State U.*
Author: **Frederic Delmar**, *EMLYON Business School*

In this study, we examine how gender stereotype biases affect the social support given to entrepreneurs by members of the digital entrepreneurial community. While entrepreneurship is a socially embedded activity, extant social support research in entrepreneurship remains scant. We hypothesize that in the digital entrepreneurial community, when entrepreneurs’ conversation topics match their gender role (i.e., being a male and struggling with work-life balance or being a female and struggling with business difficulties), social media commenters’ perceived gender role congruity tends to be higher, which in turn leads to a higher likelihood of providing social support. We also hypothesize that social media commenters’ gender will moderate the relationship between entrepreneurs’ gender and social media commenters’ perceived gender role congruity. The results from three studies confirm our hypotheses.

ENT: **Digging Deep: The Roots of Gender Biases in Decision Making - The Case of Patent Examination**

Author: **Katja Bringmann**, *U. Ghent*
Author: **Theresa Helena Veer**, *U. of Tuebingen*
Author: **Alexandra Zaby**, *Seeburg Castle U.*

We analyze gender biases and their underlying mechanisms in decision making in the context of the US patent examination process. Using United States Patent and Trademark Office [USPTO] data on 1,501,985 single inventor patent applications and their respective examiners between 1991 and 2021, we are able to identify biases against female inventors (compared to male inventors) and trace these biases back to two decision heuristics: representativeness and availability. It is important to differentiate representativeness and availability heuristics because they affect the outcome of decision making in different directions. Taking the dynamically changing individual decision context of the examiners into account, we find that representativeness heuristics are impacted by examiners' prior exposure to female inventor patent applications: gender biases decrease with increasing exposure. Additionally, we look at the effects of examiners' workload on the reliance of decision-making heuristics. We conclude by suggesting that the duality of "minority" group exposure and balanced workload in organisations is a promising avenues for more gender equality in decision outcomes.

Social Entrepreneurship from an Institutional Perspective

Session Moderator: **Amirmahmood Amini Sedeh**, *St. Edwards U.*

ENT: **Social Entrepreneurship: The Configurational Impact of Institutional Logics**

Author: **Amirmahmood Amini Sedeh**, *St. Edwards U.*
Author: **Mohammad Mahdi Moeini Gharaghozlou**, *Morgan State U.*
Author: **Negar Moayed**, *Old Dominion U.*

Drawing on literature on institutional logics and institutional complexity, we examine how the interactions among three prominent institutional logics—state, market, and religion—fundamentally shape the patterns of individuals' engagement in social entrepreneurship. We utilize fuzzy-set qualitative comparative analysis to test our hypotheses by gathering data on social ventures from 35 countries from the World Values Survey and Global Entrepreneurship Monitor. Our configurational theoretical framework shows that the prevalence of social entrepreneurial ventures is enabled by different combinations of logics of action, governance mechanisms, strength of religious beliefs, and religious pluralism. In conclusion, we argue that the relationship between institutional logic profiles and social entrepreneurship is contingent on the coherence between different institutional logics.

ENT: **Legitimation Strategies of Social Enterprises in the Institutional Context of Nepal**

Author: **Alina Spanuth**, *U. Autónoma de Barcelona*
Author: **David Urbano**, *U. Autonoma De Barcelona*

The concept of social entrepreneurship has gained popularity in the last decades globally, but social enterprises are continuously in need of advocating for their legitimacy across institutional contexts. The qualitative study of nine social enterprises in the unexplored institutional context of Kathmandu, Nepal reveals how social enterprise legitimation is developed over an organizational life cycle. We offer a model depicting how micro-processes, which we label Co-creating, Confirming, Consolidating, and Collaborating, of social enterprise legitimation unfold over time within a community. Further, we show how formal and informal institutions, disaster and crisis, change the legitimacy perceptions of community members. The findings display how the social enterprise legitimation process unfolds and how institutions and exogenous events affect the social enterprise legitimation process, which offers implications for legitimacy and institutional theory and practitioners.

ENT: **The Strategic Evolution of Institutional Logics Across Different Social Entrepreneurial Stages**

Author: **Yanfang Xu**, *Renmin U. of China*
Author: **Chunling Zhu**, *School of Business, Renmin U. of China*

Based on the institutional logics theory, we conduct an inductive three case study to explore how and why the institutional logics of social enterprises co-evolve with different social entrepreneurial stages. Our analysis suggests that the combination of hybrid logics for social enterprises is affected by the types of social enterprises and their motivation to acquire different legitimacy. Our findings indicate that an integrated social enterprise should adopt a commercially dominant logic while an external social enterprise employs a socially dominant logic. Only the embedded social enterprises can achieve sustainability from the establishment due to their adoption of the equality of dual logics. Our study is one of the first to reveal the connection between the types of social enterprises, the recombination of competing institutional logics and the underlying motivation to acquire legitimacy.

ENT: **Market Logic and Organizational Hybridity of Social Enterprises**

Author: **Liping Xu**, *Shanghai U. of Finance and Economics*
Author: **Zhiyang Liu**, *Shanghai U. of Finance and Economics*
Author: **Xinhe Zhuang**, *Fuzhou U.*

Drawing on an institutional logic perspective, this study investigates the relationship between the market logic in a country and the organizational hybridity of social enterprises, as well as the contingent effects of organizational activities (product/service innovation and social performance measurement). Combining Global Entrepreneurship Monitor data (2009 and 2015) with other cross-national databases, we test our theoretical predictions using 3,648 social enterprises across 42 countries. We find that the prevalence of the market logic has an inverted-U-shaped effect on the degree of hybridity in social enterprises. Furthermore, product/service innovation and social performance measurement of social enterprises will flatten the curvilinear relationship between the prevalence of the market logic and the degree of hybridity. Through this cross-level empirical exploration, we develop a richer explanation of organizational hybridity and contribute to the growing literature on social enterprises and hybrid organizations.

Entrepreneurship and Individual characteristics: Emotion, intention, motivation

Session Moderator: **Zahra Heydarifard**, *Bryant U.*

ENT: **What Determines Entrepreneurial Career Persistence of Academics? A View of Broaden-and-Build Theory**

Author: **Feng Guo**, *Tianjin U.*
Author: **Xinru Sun**, *Tianjin U.*
Author: **Apan Zhou**, *Tianjin U.*
Author: **Huijuan He**, *Tianjin U.*
Author: **Qiyun Zheng**, *Tianjin U.*

Academic entrepreneurship has been viewed as an efficient way to bridge academia and industry to benefit society. What determines entrepreneurial career persistence of academics? Drawing on broaden-and-build theory, this study explores the effect of academic entrepreneurs' well-being on their persistence in entrepreneurial career and considers the contingencies of entrepreneurial identification and innovation and entrepreneurship support institutions. Based on a sample of 221 academic entrepreneurs in China, this study finds that well-being of academic entrepreneurs benefits their entrepreneurial career persistence and this positive effect is mediated by adaptability of task approach. Meanwhile, innovation and entrepreneurship support institutions strengthen the positive effect of well-being of academic entrepreneurs and their persistence in entrepreneurial career. In addition, entrepreneurial identification weakens the positive relationship between adaptability of task approach and entrepreneurial career persistence while innovation and entrepreneurship support institutions enhance above mentioned relationship. This study also offers important contributions and implications to theory and practices.

ENT: **Entrepreneurial Self-Efficacy as a Ward Against the Effects of Poor Sleep on Behaviors**

Author: **Zahra Heydarifard**, *Bryant U.*
Author: **Alexander Lewis**, *UTSA*
Author: **Hussain Ghodsizadeh**, *HAMAVA*
Author: **Andrea Caldwell Marquez**, *U. of Texas At San Antonio*

Entrepreneurial behavior requires energy, and so entrepreneurs need to sleep. However, combining a scarcity perspective of energy with an abundance perspective of energy, we show that entrepreneurs high in entrepreneurial self-efficacy are less dependent on good sleep than are entrepreneurs low in self-efficacy. Conducting an experience sampling study of 93 entrepreneurs over one workweek, we studied how sleep quality and entrepreneurial self-efficacy affect entrepreneurs' day-to-day energy and their subsequent entrepreneurial behavior. The results showed that sleep quality has a positive indirect effect on daily creativity and daily monitoring (but not daily scanning/search) through morning vigor and that this relationship is contingent on entrepreneurial self-efficacy, with sleep quality unrelated to morning vigor and subsequent behavior for entrepreneurs high in self-efficacy.

ENT: **The Role of Entrepreneurial Imaginativeness for Forming Entrepreneurial Implementation Intentions**

Author: **Michael Asenkerschbaumer**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

Entrepreneurial implementation intentions, embedded in the Rubicon model of action phases, facilitate the initiation of intended action. As a self-regulatory strategy, entrepreneurial implementation intentions reduce the shortcoming of intention models (i.e. Theory of Planned Behavior) that can only partially explain the variance of action caused by entrepreneurial intention. Despite first studies showing the efficacy of entrepreneurial implementation intentions also in more complex settings like entrepreneurship, an understanding of how entrepreneurial implementation intentions may be formed is missing. We address this gap and build on a sample of 161 responses from entrepreneurs to investigate the role of entrepreneurial imaginativeness for the formation of entrepreneurial implementation intentions. We find support for a curvilinear relationship following an inverted u-shape of creative and practical imaginativeness on the formation of entrepreneurial implementation intentions. For social imaginativeness we do not find statistically significant relationships. Our study contributes theoretically to both, implementation intention theory and the Rubicon model of action phases, guiding our study, and validates them in the entrepreneurial context. By establishing entrepreneurial imaginativeness as antecedent of entrepreneurial implementation intentions, we provide entrepreneurs with a recipe to form implementation intentions and add to the extant research on consequents of entrepreneurial imaginativeness.

ENT: **The Path of Most Resistance: Rebels, Mavericks, and Contrarians Scale Development**

Author: **Carlos David Valladares**, *Iowa State U.*
Author: **Brandon Mueller**, *Iowa State U.*
Author: **Marc H. Anderson**, *Iowa State U.*

Nonconforming behaviors are at the core of entrepreneurship. Imagining innovative business ideas and acting on them often requires stepping away from traditional conventions, and nonconforming behaviors may help entrepreneurs overcome social desirability and status-quo bias to engage in entrepreneurial endeavors. However, theory development regarding nonconforming behaviors' characteristics, antecedents, and outcomes is missing from the entrepreneurship literature. This lack of conceptual clarity has limited the study of nonconformity in entrepreneurship, and the lack of reliable measures has hindered the ability to conduct empirical studies. We address this gap by developing theory underlying nonconformity in entrepreneurial contexts and proposing new measures for three distinct types of nonconformity: rebels, mavericks, and contrarians. We theorize that these three constructs are distinct from one another and unique in their relationships to entrepreneurial behaviors. In order to assess validity, we propose and test relationships between these three constructs, as well as with other theoretically relevant measures.

Presenter: **Bryan Kaiser Stroube**, *London Business School*
Presenter: **David Waguespack**, *U. of Maryland*

Are a venture's prospects determined only by the intrinsic qualities of the entrepreneur pre-entry and the post-entry decisions they make, or do seemingly exogenous factors, such as geography, play a role in entrepreneurial outcomes? For example, capital is perhaps the essential resource entrepreneurs must acquire to launch their ventures. Papers in this session focus on regional variation in access to start-up capital and how entrepreneurs wrestle with the realities of their geography. Some examine regional differences in the deployment of venture capital, while others investigate alternatives when it is unavailable locally.

Educating Entrepreneurs

Session Moderator: **Marlous Blankesteijn**, *Vrije U. Amsterdam*

MED: **Authentic Learning in Entrepreneurship Education: The Case of a Student-led Social Venture Fund**

Author: **Joanne Jin Zhang**, *Queen Mary U. of London*

While experiential learning is critical in teaching 'for' entrepreneurship in university entrepreneurship education (EE), the authenticity of tasks employed in programmes varies. Drawing upon an in-depth study of a student-led social venture fund, we explore how an EE programme with a high level of authenticity in complexity and realness may enhance learning outcomes. The findings suggest that this type of programme helps develop those knowledge, skills and attitudes that are challenging to learn in classroom teaching. Two practices and five mechanisms appear to facilitate effective learning though conditions apply. The paper contributes to the literature on experiential and authentic learning in EE.

MED: **Towards Transformative Experiential Learning in Science and Tech-based Entrepreneurship Education**

Author: **Marlous Blankesteijn**, *Vrije U. Amsterdam*
Author: **Jorick Houtkamp**, *Vrije U. Amsterdam*
Author: **Bart Bossink**, *Vrije U. Amsterdam*

Science- and tech-based entrepreneurship education (SBEE) is crucial for the valorization of newly developed fundamental knowledge and innovative technology in science faculties for sustainability. Yet, its didactics are currently underdeveloped. Experiential learning plays an important role in science- and tech-based entrepreneurship education. This paper addresses the following research question: What does systematic assessment of the application of principles of experiential learning bring for further development of the didactics of SBEE? The paper concludes that much improvement is possible when systematic attention is paid to implementation of four core activities of experiential learning: bringing real-worldness into the learning setting, recognition of the ill-defined nature of management problems and entrepreneurial challenges, involvement in execution of management interventions, and the importance of reflection. For a transformative experiential learning effect, the sole focus on a business logic in current science- and tech-based entrepreneurship education needs to be transcended to enable such entrepreneurship and sustainability education to contribute to the kind of out-of-the-box technological innovation solutions which are required for the current, pressing sustainability challenges that society faces. This paper provides first evidence that dedicated attention for critical reflection is a crucial component in the design of the experiential learning process for entrepreneurship and sustainability education.

MED: **Exploring the Utilization of Experiential Learning Methods within Entrepreneurial Education**

Author: **Apurva Ganoo**, *Aalto U. School of Business*
Author: **Ville Eloranta**, *Aalto U. School of Business*

Experiential learning methods are commonly utilized within entrepreneurial education as, in many ways, the nature of such methods closely align with the ways of an entrepreneur. However, the benefits, and more importantly the foundations needed to make experiential entrepreneurial education work in practice need to be better understood. This study, conducted using a grounded theory approach, explored the Young Innovators and Entrepreneurs Pilot, an educational pilot where university students from multiple universities and institutions were partnered with research institutions and startups under the EU ATTRACT Initiative. Looking more specifically at the interactions between the students, the educators, and the organizing body of ATTRACT, the study conducted 22 semi-structured interviews over two rounds. The results indicate that the key to the utilization of experiential learning methods within entrepreneurial education lies in 1) adopting a constructivist educational model and providing tools and methods for students to co-create, 2) identifying and recognizing aspects that can or cannot be controlled, and 3) co-existence of interdisciplinary entrepreneurial education within existing educational environments. This study contributes to the growing theoretical discourse within the fields of experiential learning and entrepreneurial education and presents an integrative framework that highlights the key foundations of experiential entrepreneurial education.

MED: **The Inside Pitch: Entrepreneurial Competencies Through Student-Centered, Experiential Learning**

Author: **Sean McMahon**, *Elon U.*
Author: **Elena Kennedy**, *Elon U.*

The startup "elevator pitch" occupies a prominent place in management and entrepreneurship education. Yet, this experience is often a one-off, a business course rite of passage built upon manufactured student startup ideas rather than a skill-building process for opportunity assessment, value creation, vision, and self-efficacy. This paper describes the Inside Pitch, a curricular change transforming the elevator pitch into an iterative, experiential learning process with broad professional utility. Instead of modeling venture founding, a phenomenon only eight percent of entrepreneurship students pursue upon graduation, students recognize, evaluate, and articulate innovation in a 3600 capacity: as advocate and judge, individually and relative to competing projects, and across industries and organizational types. Over nine rounds, students assume the role of Analyst or Evaluator at an investment firm or foundation. Selected analysts each choose a real crowdfunding campaign and prepare internal pitches to evaluator classmates. Meanwhile, evaluators have prepared written memos with cursory analysis and questions about all the campaigns. Following pitches and Q&A, grades are distributed via evaluators' ranking of analyst performance and the process starts over. Each round introduces a different set of analysts, a new industry focus, and increasing sophistication as students reflect, form insights, and test new capabilities.

Session Moderator: **Martial Stephane Ndtoungou Pfouga**, *U. de Savoie Mont-Blanc, IREGE*

MOC: **When Pay-Performance Incentives Are Detrimental To CEOs' Exploration Orientation: The Role Of Power**

Author: **Martial Stephane Ndtoungou Pfouga**, *U. de Savoie Mont-Blanc, IREGE*
Author: **Rachel Bocquet**, *IAE Savoie Mont Blanc – U. of Savoie Mont Blanc*

When are pay-performance incentives detrimental to CEOs' exploration orientation? This study investigates the influence of pay-performance incentives on the exploration-exploitation choices of CEOs. Building on the behavioral agency model, we argue that pay-performance incentives will respectively have a negative relationship with the exploration orientation of CEOs and a positive relationship with the exploitation orientation of CEOs. We further argue that a high level of managerial power weakens the negative effects of pay-performance incentives on CEOs' exploration orientation. Using computer-aided textual analysis to capture the exploration and exploitation orientations from the rhetoric of 154 CEOs of S&P 500 firms during earnings calls with investors, we do not find a significant relationship between pay-performance incentives and CEOs' exploration. However, we find support for the moderating effect of managerial power such that the negative relationship between pay-performance incentives and CEOs' exploration orientation only exists when CEOs have a low level of managerial power and the negative relationship disappears when CEOs have a high level of managerial power. This result is robust to alternative measures of exploration such as the environmental innovation performance of the firm.

MOC: **Harnessing Challenges: How Public Leaders' Challenge Self-Efficacy Actuates Their Imaginativeness**

Author: **Katrin Bauer**, *TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

War, pandemic, refugee crises, climate change, hyperinflation… The public sector nowadays finds itself in an infinite loop of grand challenges. Thus, for the pure sake of citizens, public leaders need to creatively approach or even anticipate challenges. One way is deploying one's imaginativeness and form a mental image of the problem to generate feasible solutions. However, while imaginativeness is recognized as a vital skill for creative problem-solving in the entrepreneurship field, recent research does not focus on how imaginativeness can be sparked, nor do scholars look at imaginativeness in the public sector. Drawing upon social cognitive theory, we explore public leaders' challenge self-efficacy as an actuator for their creative, social, and practical imaginativeness. Besides, we examine organizational orchestration orientation as a contextual factor. Responses of 308 public leaders provide remarkable insights for public entrepreneurship and entrepreneurial cognition research alike. With our cross-disciplinary approach, we uncover the impact of public leaders' experience and their human side, social influences, on entrepreneurial cognition, being among the first to show imaginativeness antecedents. We further reveal a positive contingent effect of organizational orchestration in large organizations like in the public sector. Our findings have implications both for public leaders and their organizations facing grand challenges.

MOC: **The Effect of Strategic Decision Maker's Hypertemporal Focus and Temporal Depth on Innovation Speed**

Author: **Kilho Shin**, *Niagara U.*
Author: **Liliana Pérez-Nordtvedt**, *U. of Texas At Arlington*

Innovation speed has been argued to be critical in creating and maintaining a competitive advantage for firms. While some work examines temporal issues affecting innovation speed, most of this research has focused on objective treatments of time. However, temporal research has shown the equal importance of the subjective experience of time on affecting organizational outcomes. In this study, we conceptually reframe temporal orientation as both temporal focus and temporal depth and suggest their distinctive effects on innovation speed. Specifically, we examine the effect of strategic decision makers' hypertemporal focus, their strong attentional balance among the past, present, and future, on their firms' innovation speed. In addition, we suggest how decision makers' past and future temporal depths moderate this relationship. Using longitudinal data from 354 strategic decision makers, this study demonstrates how the direction (temporal focus) and the distance (temporal depth) of temporal orientation together shape innovation speed.

MOC: **Confirmation Bias and Managerial Exploration and Exploitation: The Impact of Psychological Capital**

Author: **Valerie Starke**, *Institute for Technology and Innovation Management at RWTH Aachen*

This study advances research on managerial cognition and behavior by examining how confirmation bias influences managerial exploration and exploitation activities in incumbent firms. Furthermore, we evaluate how positive psychological capital (PsyCap) moderates this relationship. Using an original data set based on responses from 233 top managers of German cooperative banks, we found that confirmation bias is positively linked to managerial exploration and exploitation activities. PsyCap only moderates the relationship between confirmation bias and exploration. Managers who are highly susceptible to confirmation bias perform the most exploration, only if they have high levels of PsyCap. Overall, these findings contribute to the debate on how cognitive biases influence managerial behavior. We identify PsyCap as a powerful tool for managers to improve their managerial exploration and discuss why managers can benefit from the functional side of confirmation bias by enhancing their psychological capital.

Relationships and Friendships at Work

Session Moderator: **Liuxin Yan**, *National U. of Singapore*

MOC: **Not All Rivals are Created Equal: Friendly Rivalry at Work**

Author: **Liuxin Yan**, *National U. of Singapore*
Author: **Kai Chi Yam**, *National U. of Singapore*

Individuals ascribe greater significance and experience more psychological arousals when interacting with rivals compared to normal competitors. Aside from heightened psychological significance of rivalry, it needs to be highlighted that rivalry and liking are orthogonal such that one can either hate or love his or her rivals. In response to a widespread assumption that rivalry is often accompanied with hostility and animosity, we set forth a new theory for understanding how individuals develop rival relationships of different emotional valence and consequently result in divergent affective responses and behavioral outcomes. To do so, we first propose a typology of four different types of rivalry (ambivalent, hostile, indifferent, and friendly). Then, we zoom in to the less commonly studied friendly rivalry and delineate a theoretical model that specifically highlights antecedents and consequences associated with having friendly rivals at work. Our theory incorporates both individual dispositional differences and contextual factors to deepen the existing understanding of workplace rivalries.

MOC: **Relational Infrastructures and Gig Worker Well-Being: Social and Parasocial Interaction Rituals**

Author: **Erin Marie Reid**, *McMaster U.*
Author: **Brianna Barker Caza**, *U. of North Carolina, Greensboro*
Author: **Brittany Lambert**, *Indiana U. - Kelley School of Business*
Author: **Steve Granger**, *Concordia U., Montreal*
Author: **Elizabeth Nguyen Trinh**, *U. of Michigan, Ross School of Business*
Author: **Jordan Nye**, *U. of Michigan, Ross School of Business*

In organizations, reliably patterned interactions and role-relationships offer emotional resources central to workers' well-being. In the gig economy, however, workers lack a ready relational infrastructure. Through two studies, a longitudinal repeated measures study of independent scientists and an interview study of gig and organizational workers paired in a variety of occupations, we examine how work relationships shape workers' well-being in the gig economy and develop theory about how gig workers build relational infrastructure. Analysis of the longitudinal data reveals how relational challenges affect gig workers' well-being. Analysis of the rich interview data shows that while organizational workers can rely on stable relationships, gig workers intentionally craft interactions with a variety of relational partners, including imagined interactions, to support their well-being. Mobilizing theory of social interaction and rituals, we demonstrate how these interactions, which we characterize as reaching out or reaching in, create positive energy and emotions that form the building blocks of gig workers' relational infrastructure, ultimately helping workers cope with relational challenges. We detail contributions to scholarship on work relationships and well-being, interaction rituals, and people's experiences in the gig economy.

MOC: **Cross-Class Friendships Help: The Effect of Social Class Background on Performance and Promotability**

Author: **Grace Jia Hui Lim**, *Hong Kong Baptist U.*
Author: **Bingjie Yu**, *Hong Kong Baptist U.*

Workers coming from lower social class backgrounds are disadvantaged in terms of long-term career success in higher-status occupations even when they attain a high level of education and work competence, an issue known as the "class ceiling." To better understand this phenomenon, we integrate research on cultural mismatch theory and newcomer adjustment to examine the cultural obstacles experienced by newcomers from lower social class backgrounds when they enter middle-class workplaces. In a time-lagged multisource field study, we find that newcomers from lower social class backgrounds experience a lower level of person-organization (PO) fit than their counterparts from higher social class backgrounds, and subsequently are rated lower on task performance and promotability by supervisors (Study 1). Furthermore, cross-class friendships moderate this indirect effect, such that the positive relationship between social class background and PO fit is attenuated when cross-class friendships are present as opposed to absent (Study 2). We find support for our explanation that class achievement gaps (measured as task performance and promotability) emerge as a function of newcomer PO fit. We discuss how our findings broaden the understanding of the sources of the class ceiling and how these findings inform novel potential solutions for this issue.

MOC: **How Should Strangers Initiate a Cooperative Exchange? A Grounded Theory of Relational Bands**

Author: **Joella Allott**, *Beijing Foreign Studies U.*
Author: **Laura Poppo**, *U. of Nebraska, Lincoln*
Author: **Jenny Gibb**, *U. of Waikato*

How do strangers decide to work together? To address this question, we conducted an inductive study of how artists and art dealers decide whether to initiate a cooperative exchange. Our inquiry is based on 47 interviews with 20 art dealers and 27 artists in China. Our findings show that shared instrumental benefits are necessary but not sufficient to initiate this decision, which also depends on relational quality: if artists' or art dealers' perceptions of their interpersonal connection or of the other party's moral standing are negative, they will not initiate an exchange, even when a potential benefit to cooperation exists. We then extend these findings to build a grounded theory of relational band to show how relational and financial assessments can reduce harm, relational risk, and financial risk. They do so by offering protection or by suggesting the cooperative exchange should be avoided. This grounded theory extends the predominant conceptualization of trust, the intention to be vulnerable based on positive expectations of financial benefits, by showing that the decision to cooperate need not be a leap of faith.

Resilience and Coping at Work

Session Moderator: **Silja Hartmann**, *Technische U. Berlin*

MOC: **Modes of Adjustment: There's More Than One Way To Organize For Resilience**

Author: **Brian Hilligoss**, *U. of Arizona*
Author: **Jeff Larson**, *U. of Arizona*
Author: **Alden Lai**, *New York U.*
Author: **Matthew John DePuccio**, *Rush U.*
Author: **Elena Maria Wong**, *U. of Arizona*

Despite growing concerns that unexpected events have become regular features of environments, we know little about organizing for resilience—the process by which leaders attempt to positively adjust operations to adversity. To address this gap, we conducted longitudinal case studies of eight U.S. health care organizations adjusting operations through successive phases of the COVID-19 pandemic. We discovered these adjustments demonstrated considerable variety during different phases of the pandemic, even when made by the same leaders in similar situations. We explain this variety through an inductively derived process model of organizing for resilience that traces how the enactment of different adverse situations leads to alternative modes of adjustment that target different resilience outcomes. In contrast to definitions that imply resilience entails both absorbing strain and preserving functioning, our study shows these, along with a third resilience outcome of anticipating and preparing for immanent threat, exist in three-way tension. Leaders must trade off one in pursuit of others. How leaders perceive the relative adversity of conditions and the alignment of organizational capabilities with those conditions shapes this trade-off and modes of adjustment made in pursuit of one, or at most a mix of two, of these three resilience outcomes.

MOC: **"Doing a Service Job": Coping with Customer Abuse Through Identity Work at Gas Stations in China**

Author: **Qi Song**, *Northwestern U.*

Customer abuse has become prevalent across a wide range of service scenarios. However, existing studies on service work have overlooked the question: How do service workers construct an occupational identity that maintains a measure of dignity while facing customer abuse? To address this question, I draw on the case of gas station attendants in China who are frequently harassed by customers but actively embrace their identity as service workers. Findings show that attendants construct positive occupational identities through meaning-making and social comparison. Specifically, attendants mobilize the discourse of professionalism and create a moral order to claim superiority over rude customers to cope with the emotional tolls caused by customer abuse.

MOC: **Understanding How and Under Which Conditions Learning Goal Orientation Fosters Resilience**

Author: **Silja Hartmann**, *Technische U. Berlin*
Author: **Ravit Cohen-Meitar**, *Bar Ilan U.*
Author: **Abraham Carmeli**, *Tel Aviv U.*

With the increasingly volatile and uncertain business environment, psychological resilience in organizations, i.e., the capacity to successfully cope with adverse situations, adapt, and grow, has received growing attention in the communities of scholarship and practice. Yet, existing research has provided only little understanding that explains why, how, and under which conditions resilience can be developed. Our research addresses this gap in the literature. Building on the conservation of resources theory and the relational resourcing view, we develop a conceptual model which posits that learning goal orientation is indirectly related to resilience, through the development of tenacity, but that generative work relationships are required to nourish this relationship. Three different quantitative studies provide support for our model. With our research, we attempt to enrich the current discourse on resilience in the workplace We build theory by tapping on the cognitive, psychological, and social resources that may help build resilience. Moreover, we bridge research on learning and resilience and highlight the crucial role of social conditions for the development of resilience.

MOC: **Next-Generation Mindfulness: Extending the Transformative Potential of Workplace Mindfulness (WITHDRAWN)**

Author: **Jutta Tobias**, *City U. London*

This conceptual analysis offers a rationale for extending the transformative potential of mindfulness for individuals, communities, and society at large, specifically by creating new linkages across previously siloed workplace mindfulness literatures and by arguing that next-generation mindfulness at work research and practice should draw on underexplored synergies between these literatures. The article makes the following three contributions: It offers an overview of seminal workplace-relevant mindfulness literatures and an outline of the problematic associated with "first-generation" mindfulness interventions available to people at work today. Next, it contributes an analysis of the mechanisms of action that make mindfulness practice 'work'. It then provides an integrative mapping of key workplace mindfulness schools of thought alongside several propositions for follow-up theorizing in designing and evaluating next-generation workplace mindfulness interventions, in order to extend the transformative potential of mindfulness at work beyond self-healing, in the interest of overcoming workplace stress and suffering, for one and all.

Interactions of Collectives and Teams

Session Moderator: **Hamid Foroughi**, *U. of Essex Business School*

MOC: **The Role of Collective Memories in Negotiating Membership in Occupations**

Author: **Hamid Foroughi**, *U. of Essex Business School*
Author: **Micki Eisenman**, *Hebrew U. of Jerusalem*
Author: **Samantha Parsley**, *U. of Porthsmouth*

This paper advances scholarship at the intersection of organisational memory studies and occupational research. It asks how the past provides a framework through which DJs in the electronic music industry validate their membership within the occupation and foster their sense of belonging to define and distinguish themselves as 'proper' DJs. We develop the idea of occupational mnemonic communities (OMCs) as socially constructed groups with imagined and interpretative boundaries that are constituted by the occupational Past. Members of an OMC maintain it by remembering the past in discursive, material, and embodied modalities and these memories are expressed through their ongoing interactions and technologies. In particular, we suggest that OMC is a useful theoretical device to analyse diffuse, networked and more informal occupational settings such as among rising numbers of professional freelancers and those working in the gig-economy.

MOC: **The Components of Collective Intelligence and their Predictors**

Author: **Erik Kommol**, *WU Vienna*
Author: **Christoph Riedl**, *Northeastern U.*
Author: **Anita Williams Woolley**, *Carnegie Mellon U.*

The ability of human groups to collaborate effectively is of growing economic and societal importance in more and more areas of daily life. Recent research on collective intelligence in human groups has offered robust evidence that group performance can be explained by one general "collective intelligence" (CI) factor (Riedl et al., 2021). More recent work has theorized a hierarchical structure, with some evidence suggesting a role for component processes such as collective memory, attention, and reasoning, but no analyses to date have examined the degree to which a hierarchical structure adequately fits CI measurement data. In the model presented here, we explain the emergence of CI based on cognitive processes and abilities on the individual- and their aggregation onto the group-level while highlighting temporal aspects of CI. This offers a refined theoretical framework for the study of CI, which enables the derivation of theoretical predictions and the design of interventions. We test our model on a sample of 22 studies, including 5,279 individuals in 1,356 groups using meta-analysis. We find that the hierarchical model shows a better fit in comparison to alternative models in the complete sample as well as in different subsamples. We illustrate the benefits of the hierarchical model by showing that different variables predict different components of CI and discuss implications in the form of interventions.

MOC: **Does Helping Facilitate or Hinder Teammate Performance? An Uncertainty Management Perspective**

Author: **Edward Tang**, *Zhongnan U. of Economics and Law*
Author: **Lida Lingling Zhang**, *U. of Macau*
Author: **Xiaoping Pu**, *Wuhan U. of Technology*

Whereas previous research on workplace helping focused on the relational benefits of helping behavior, we study its relational costs and their implications on teammate performance. Drawing on the uncertainty management perspective of social exchange, we argue that, as a focal team member engages more frequently in matched exchange of help with his or her teammates (i.e., the member gives and receives relatively similar level of help), the teammates experience less relational uncertainty and perform better. By contrast, mismatched exchange of help (i.e., the member gives more or less than receives help) increases teammate relational uncertainty and therefore decreases teammate performance. Results of a survey study supported our arguments. These findings contribute to our current understanding of workplace helping.

MOC: **The Role of The Joint Effect of Verbal and Non-Verbal Communication in Team Interaction**

Author: **Natalia Vuori**, *Aalto U.*
Author: **Satu Rekonen**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Lotta Hassi**, *U. Ramon Llull, ESADE Business School*

Scholars have generated many valuable insights into how creative solutions emerge during the interaction between team members. However, most of the studies investigated verbal communication only—what is explicitly said. We know little about the role of non-verbal communication (e.g., body movements, and facial expressions). To address this gap, we conducted a real-life inductive study of interaction in five teams tasked with creative problem-solving. We observed, and video recorded meetings. We found that verbal and non-verbal communication align or be in conflict. Surprisingly, we found that the conflict between verbal and non-verbal reactions increased mutual focus of attention and the team members' engagement in interaction by activating three processes: monitoring other non-verbal and verbal reactions, elaborating solutions, and/or providing arguments to support or reject the solution, and engaging in active thinking about solutions. We contribute to the team interaction literature by showing that team interaction cannot be studied by focusing on verbal or non-verbal reactions in isolation because interaction patterns may depend on a more subtle joint effect of non-verbal and verbal communications. More importantly, by developing a system that allows researchers to code team members' body movements and their meaning, we provide a methodological tool to investigate micro-socio-emotional dynamics in teams

Prosocial Behavior and OCB

Session Moderator: **Hongguo Wei**, *Robert Morris U.*

MOC: **Will Prosocial Behavior Backfire? Impacts of Leader Pro-group Unethical Behavior**

Author: **Hongguo Wei**, *Robert Morris U.*
Author: **Daria Crawley**, *Robert Morris U.*

Drawing on the appraisal theory of emotion and the three selves literature, we develop a theoretical framework explaining how observing leaders' unethical behaviors that gain better outcomes for the group (i.e., pro-group unethical behavior; UPGB) affects employees' emotional reactions (contempt, guilt, and respect) and supervisory satisfaction. With two experimental studies, we found a positive relationship between leader UPGB and employee guilt and contempt and a negative relationship between leader UPGB and employee respect. These emotional reactions served as the mediating mechanisms through which leader UPGB affected their supervisory satisfaction. In addition, we found that employees with high (than low) conscientiousness experience more guilt and contempt and less respect. Employees with high (than low) collective awareness experience less guilt and contempt and more respect. The moderating effects of conscientiousness and collective awareness on the relationship between observing leader UPGB and emotional reactions passed on to impact their supervisory satisfaction. We discussed the implications and limitations of the studies.

MOC: **Rising from the Shadows of Stigma! Interpersonal Capitalization and Social Worth Affirmation**

Author: **Dong Liu**, *Georgia Institute of Technology*
Author: **Elijah Wee**, *U. of Washington*
Author: **Yang Chen**, *Schoolofbusinessadministration,SWUFE*
Author: **Guiyao Tang**, *Shandong U.*

Occupational stigma has been found to be a significant threat to employees' personal outcomes such as wellbeing. Drawing on self-affirmation theory, we theorize the critical role of two unique affirmation mechanisms, interpersonal capitalization (self-initiated) and social worth affirmation (coworker-initiated) in mitigating employees' occupational stigma awareness. Our time-lagged field survey (study 1) first demonstrates that the two affirmation mechanisms synergize to reduce occupational stigma awareness and ultimately, impact two organization-related outcomes, prosocial organizational behavior and cutting corner at work. We also collaborated with a hospital to conduct a longitudinal field experiment (study 2) to help frontline health workers to minimize occupational stigma awareness and cutting corner behavior, and enhance prosocial organizational behavior. The findings from both field studies highlight the effectiveness of our proposed affirmation mechanisms in coping with occupational stigma and cultivating positive organizational outcomes.

MOC: **Competent or Warm? The Role of Job Performance and OCB in Predicting Workplace Aggression**

Author: **Hamsa Gururaj**, *Wilfrid Laurier U.*
Author: **Aaron CH Schat**, *McMaster U.*

This study proposes and investigates a curvilinear relationship between job performance and exposure to workplace aggression. Drawing upon the stereotype content model, we theorize two distinct mediating mechanisms at high and low levels of job performance. High performers provoke jealousy, and low performers provoke contempt from coworkers, both of which are positively associated with exposure to workplace psychological aggression. We further examine the moderating effect of organizational citizenship behavior- individual. The current study tested these relations using data from a sample of 187 teachers from India. We found support for the curvilinear relationship between performance and workplace psychological aggression and the mediating mechanisms of jealousy and contempt for high and low performers, respectively. We also found that employee citizenship behavior weakens the relationship between job performance and workplace aggression for high performers.

MOC: **Why and When Helping Behavior Can Enable Followers to Cope with Leader Moral Scrutiny**

Author: **Qi Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

We developed and tested a two-stage moderated mediation model to explore why and when helping behavior serves as a successful impression management tactic for coping with leader moral scrutiny. We revealed that followers' helping behavior can serve as a successful tactic for coping with leader moral scrutiny because it can be used to manipulate the assignment of moral credit through the lens of impression management. We further hypothesized that performance subjectivity influences followers' motivation to engage in impression management and impression management attribution affects the effectiveness of impression management. A study of 188 followers and 41 leaders supported this model. We found that helping behavior can enable followers to cope with leader moral scrutiny because it can result in moral credit for followers, especially in high-level performance subjectivity and low-level leader impression management attribution.

Identities at Work

Session Moderator: **Micah Rajunov**, *Boston U. Questrom School of Business*

MOC: **Experts without Expertise: Repairing Professional Identity Through the Professional Motive**

Author: **Micah Rajunov**, *Boston U. Questrom School of Business*
Author: **Miyoung Chang**, *Boston U. Questrom School of Business*

Expertise, or "what we do," is the foundation of professional identity, or "who we are." We examine a case of extreme disruption to expertise where, in contrast to previous studies, professionals were unable to repair their identity through alternative expertise. At the onset of the AIDS epidemic in the US, doctors were confronted with a novel and intractable problem; for over fifteen years, physicians were at a loss for how to effectively treat and cure AIDS patients. We found that this prolonged inability to generate and apply expertise led many doctors to question the "meaning of medicine"— their professional identity. To repair their identity, physicians initially reconnected with the professional motive: the reason a profession exists. They then reinterpreted this motive and discovered new ways to enact their identity. They came to see client relationships as essential, and integrated them alongside expertise to constitute a multi-component professional identity. We contribute to theory on identity work by highlighting the professional motive as a foundation of identity and a key mechanism in this process. In considering clients, rather than professional peers or competitors, we also build on the burgeoning relational perspective in the professions literature.

MOC: **Internal Identity Threats: Theoretical Insights from Elite Rugby**

Author: **Benjamin Webster Walker**, *Victoria U. of Wellington*
Author: **Dan V. Caprar**, *U. Of Sydney*
Author: **Alyson Meister**, *IMD Business School*

Identity threats are pervasive in modern organizations, and much literature has documented their significant psychological and behavioural consequences. Most of this literature, though, focuses on threats triggered by external sources, such as the views of others, or social stigma. But external sources are not the only potential triggers of identity threats. In our qualitative study aimed at exploring how elite professional rugby players develop a performance-based identity (i.e., derive a sense of self from their performance), we discovered that players also experienced threats to these identities stemming from their own adverse perceptions of their performance – a specific manifestation of the broader phenomenon we conceptualize as internal identity threats. Importantly, we also discovered that these internal threats seemed to be even more potent than external threats in driving players to question their performance-based identities, with implications for their well-being, performance, and motivation to improve. Drawing on these findings, key properties of our research context, and relevant literature, we present an initial conceptualization of internal identity threats, and a preliminary theory of when they are more-or-less likely to trigger questioning of the threatened identity. In doing so, we provide foundational insights into a powerful yet largely overlooked source of identity threat.

MOC: **Personal Orientations and Identifications: Their Impacts on Employees' Working Behaviors**

Author: **Hyun Sun Chung**, *Seoul National U.*
Author: **Won-Woo Park**, *Seoul National U.*

Organizational identification (OID) has been known to enhance employees' attitudes and behavior toward and in organizations because it reflects employees' perception of oneness with their affiliation as they connect themselves to their employing organizations. However, it is a recent belief that OID has been eroded in organizations; therefore, in this study, we suggest occupational identification (OCID) as an alternative concept to OID and conduct an empirical investigation to compare relationships between employees' personal orientations and OID and OCID. Furthermore, we compare how employees illustrate their working behaviors based on their personal orientations and OID and OCID by measuring job crafting and voice behaviors. With a sample of 252 survey participants, the results indicate that although collectivism yields both OID and OCID, individualism is only related to OCID; however, employees with OCID showed positive results for all three dimensions (task, cognitive, and relational) of job crafting whereas employees with OID only show positive significant for two dimensions, cognitive and relational crafting, but neither OID nor OCID has a significant relationship with voice behaviors. Based on empirical findings, OID might have a larger impact on organizations, but OCID could yield better performances in job-specific tasks.

MOC: **Work Engagement and Multiple Work Identities: Livelihood Construction Amidst Precarity**

Author: **Muhammad Aqeel Awan**, *London School of Economics and Political Science*
Author: **Niranjan Srinivasan Janardhanan**, *London School of Economics*

The study develops theory on how workers construct work identities amidst exposure to multiple precarity and weak organizational scaffolds. Through in-depth qualitative analysis of fisher folk, including 60 interviews, 45 informal conversations, and 100 hours of observation, we find evidence for the enactment of multiple logics and work identities. Thematic findings reveal four work engagement drivers: individualistic, cooperative, competitive, and reconciliatory, based on four logics: individualism, camaraderie, capitalism, and destiny. Analyses shows that each engagement driver builds on a certain degree of control, with individualistic engagement reflecting the highest degree of control or agency and resignation to fate reflecting the lowest sense of agency among the participants. Our contribution further reflects how agency can also be an inherent characteristic of an identity by showing how workers operating under multiple precarity and weak organizational scaffolds construct and transition between multiple identities—agentic and anti-agentic. We put forward a model of a balanced identity enactment cycle which includes the enactment of both agentic identities as well as an anti-agentic identity steeped in a destiny logic of high external locus of control.

Surviving (and Thriving) in the Gig Economy

Session Moderator: **Konstantina Kougiannou**, *Nottingham Trent U.*

OB: **Lived Experiences of Gig Workers and Side Hustlers in Platform-based Food Delivery Gig Work**

Author: **Konstantina Kougiannou**, *Nottingham Trent U.*
Author: **Pedro Mendonça**, *Heriot-Watt U.*

Management scholars' understanding of motivation factors and job satisfaction is predominantly based on workers' experiences in standard employment relationships with organizations. In this paper, we draw from 35 interviews with, social media data and observations of, food delivery couriers in a British city to understand how the nature of their participation (full-time or side hustling) in, and the structural characteristics of, the gig economy impacts their attitudes, perceptions and behaviors. The data also draws on interviews with two food delivery company senior managers. We explore in-depth individuals' lived experiences of work in platform-based food delivery gig work, factors influencing their decision to take up such gig work and aspects of job satisfaction. Our paper responds to the call for a deeper examination of these workers' lived experiences, attitudes and job satisfaction and informs organizational behavior scholars and practitioners interested in examining and addressing the needs of similar groups of workers in similar occupational contexts.

OB: **To Be (Safe), Or Not to Be (Safe)? Why and When Gig Workers Stay Safe Under Customer Demands**

Author: **Jing-hao Zhang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Jiaxin Xue**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Yingxin Deng**, -
Author: **Zongbo Li**, *China U. of Mining and Technology*

Gig workers in the food delivery industry constantly encounter highly severe life-threatening occupational safety risks. However, little scholarly attention was paid to the hazards of this job that involves potential dangers in traffic situations. Drawing on job demands-resources theory, we theorize a typical tension in food delivery workers' daily experience, namely, finance-safety tradeoff, and examine why and when customer demands may influence delivery workers' safety (i.e., safety behavior, driving speed) using experience sampling method (ESM). We conducted a 14-day diary study with 117 food delivery workers in China. Results indicated that customer demands enhanced workers' safety concern when algorithms had more supervision and showed fewer errors. Moreover, higher safety concern and lower financial concern make them show more safety behavior and lower driving speed. Our research sheds light on the role of exogenous influences in safety compliance of gig workers and broadens our knowledge of how they navigate the salient tension between financial needs and safety risks.

OB: **Thriving in the Gig Economy: How Crafting Beyond the Job Fosters On-the-job Citizenship Behaviors**

Author: **XINYUE LIN**, *Shanghai International Studies U.*
Author: **Liang Meng**, *Shanghai International Studies U.*

Rapid growth of the gig economy provides opportunities for "stuck" employees to pursue proactivity in the form of crafting beyond the job. We introduce a new context-specific form of job crafting, crafting beyond the job, that entails self-initiated efforts to stretch their work lives beyond the current jobs, and further empirically explore its influence on on-the-job citizenship behaviors. Results of a three-wave survey data from 298 full-time employees with side hustles indicated that there exists a positive relationship between crafting beyond the job and employees' on-the-job citizenship behaviors. Three motivational states (i.e., on-the-job role-breadth self-efficacy, perceived competence, and positive affect) mediate the above relationship. Our findings thus indicate that how employees stretch themselves beyond their current jobs in the gig economy turns out to be a flourishing field that invites future research.

OB: **Gig Workers' Social Support Seeking on Informal Online Platforms as a Predictor of Performance**

Author: **Vera M. Schweitzer**, *WHU Otto Beisheim School of Management*
Author: **Wladislaw Rivkin**, *Trinity Business School, Trinity College Dublin*
Author: **Fabiola Heike Gerpott**, *WHU Otto Beisheim School of Management*

The number of gig workers continues to rise globally. Due to the lack of formal support structures and the unpredictability of many tasks, gig work can be emotionally challenging and cognitively demanding. We integrate the transactional stress theory with the social support literature to propose that gig workers (specifically crowd workers) engage in emotion- and problem-focused coping in reaction to daily gig work-specific demands by seeking social support on informal online platforms. In a pilot study, we identify specific behaviors that gig workers show to seek emotional and instrumental support on informal online platforms. Across a single-day noon-afternoon study (N=180) and a 10-day experience sampling study (N=100), we find that gig work-specific cognitive and emotional demands are positively related to emotional and instrumental support-seeking. Moreover, social support seeking subsequently predicts in- (i.e., monetary performance) and extra-role performance (i.e., OCB-I and OCB-O). We also explore differences between coping responses and downstream effects at the within- (i.e., daily) and between-person-level. We discuss how our research helps to further disentangle coping as a trait-based style from coping as a situational response and how the findings contribute to incorporating gig work into current theorizing in organizational behavior.

Exploring Positive and Negative Effects of Servant Leadership

Session Moderator: **Yangxin Wang**, *business school of Central South U.*

OB: **The Impact of Servant Leadership on Employee Job Insecurity and Outcomes**

Author: **Yangxin Wang**, *business school of Central South U.*
Author: **Zhen Wang**, *Renmin U. of China*

Drawing on the job insecurity literature and contingency theories of leadership, this study investigates how employee job insecurity is reduced by servant leadership and further relates to emotional exhaustion and organizational commitment. We suggest that servant leadership helps remove objective threats to employees' job continuity and stableness and declines employees' subjective perceptions of potential threats. We also suggest that the effects of servant leadership are counteracted by perceived competition because competition creates a strong situation where servant leadership could hardly impose their values. Based on a three-wave field study (197 employee data at a photoelectric technology company), we found support for all our hypotheses. Theoretical and practical implications are discussed.

OB: **You're Not the Boss of Me: Peer Reactions to Subordinate Use of Servant Leader Behavior**

Author: **Alexander Lyle Effinger**, *U. of Illinois at Chicago*

While decades of research suggest that servant leaders enjoy myriad benefits resulting from their servant behavior, little is known about the consequences faced by non-leaders who engage in the same behavior. When followers emulate their servant leader's behavior, will they be regarded with appreciation or animus by their peers? The servant leader behaviors likely benefit peers through the provision of valued social exchange such as emotional healing; however, the leader-like behaviors may also prime peers to infer careerist motives. This research investigates the outcomes that non-leaders face when they engage in servant leader behavior, as well as the role that peer attributions play in this process. Findings across two studies suggest that servant non-leaders garner a prosocial reputation and consequently receive greater helping behavior from peers and that this relationship. Furthermore, this effect is influenced by the extent to which non-leaders engage in consistent, authentic behavior.

OB: **Exploring the Dark Side and its Suppressor of Servant Leadership: A Moderated Mediation Model**

Author: **Zhi Liu**, *School of Business, Renmin U. of China*
Author: **Huaiqian Zhu**, *School of Business, Renmin U. of China*
Author: **Yu Zhou**, *School of Business, Renmin U. of China*

Servant leadership has attracted much attention from scholars and practitioners, but its ignored dark side impedes the development of research and practice. Based on role theory, this study explores the negative effect of servant leadership on employees' task performance via employees' role ambiguity and the boundary effect of perceived strength of human resource management system in this relationship. Results from a three-wave two-source study indicates role ambiguity partially mediates the relationship between servant leadership and task performance, and perceived strength of human resource management system mitigates and even eliminates the relationship through attenuating the effect of servant leadership on employees' role ambiguity. Theoretical and practical implications of the results are discussed.

OB: **The Paradoxical Influences of Servant Leadership Behaviors on Illegitimate Tasks**

Author: **Xueling Fan**, *Nanjing U. School of business*
Author: **Ye Li**, *Nanjing U. School of business*
Author: **Jun Liu**, *Wuhan U. of Technology*

While the detrimental influences of illegitimate tasks are almost universally recognized, less research has explored the potential antecedents of illegitimate tasks. Drawing on the servant leadership literature and role theory, we set off to investigate the paradoxical influences of servant leadership on employees' illegitimate tasks perception. Specifically, on the one hand, servant leadership could elicit employees' work meaningfulness and subsequently reduce employees' illegitimate tasks perception; on the other hand, servant leadership could also enhance employees' workplace social status and lead to more employees' illegitimate tasks perception. Moreover, individual identity weakened the positive relationship between servant leadership and work meaningfulness, but strengthened the positive relationship between servant leadership and workplace status. We also proposed two conditional indirect paths linking servant leadership and illegitimate tasks, moderated by individual identity in the opposite directions. Results from a time-lagged multiple-wave field survey with participants from China lent support to most of our hypotheses. Theoretical and practical implications and future research directions are acknowledged.

Understanding Virtual Team Dynamics and Processes

Session Moderator: **Min Ju Lee**, *UT Austin*

OB: **Zoom In, Zoom Out: Affective Convergence in Virtual Teams and the Role of Videoconferencing Layouts**

Author: **Emily Hsu**, *Washington U. in St. Louis, Olin Business School*

The advent of technology has allowed individuals to maintain contact with one another even when physically apart. In particular, more recently, videoconferencing has played an important role in sustaining interpersonal communication and facilitating team processes necessary for remote work that became the new norm as a result of the COVID-19 pandemic. The present study thus aims to explore virtual affective convergence, which has been traditionally examined in text-based interactions, during team meetings on a videoconferencing platform. Specifically, I investigate whether affective convergence occurs when groups meet and discuss over Zoom. Furthermore, I consider how the speaker (versus gallery) video layout configuration can facilitate virtual affective convergence, information elaboration, and group decision-making effectiveness. Results of an experimental study indicate the important role videoconferencing layout configurations can play in influencing affective linkages among team members and highlights the potential videoconferencing platforms have for being rich domains to study interpersonal phenomena. I conclude with a discussion of the theoretical contributions and practical implications the findings of this study offer, along with several recommendations for future research avenues.

OB: **Seeing is Disbelieving: How Liking Influences the Effects of Visuality on Virtual Collaboration**

Author: **Wonbin Sohn**, *U. of Hawaii at Manoa*
Author: **Min Ju Lee**, *UT Austin*
Author: **Andrew Brodsky**, *U. of Texas at Austin*

There has been substantial research highlighting the significant role that passive observation plays in how employees build evaluations of others' engagement at work. One of the most meaningful instantiations of this effect is the "face time bias," which refers to prevailing assumptions by employees that coworkers that they can observe are likely working harder than those they cannot observe. However, passive observation is often no longer feasible with recent growth in remote work and globalization. Consequently, active interactions are now one of the primary (and sometimes only) ways through which employees can observe—and hence, form impressions of—their coworkers' engagement. In this paper, we explore the role of visuality in communication modes in forming impressions of engagement during interactions. In an experience sampling study of 1,338 dyadic virtual interactions reported by 185 employees, we found that being able to "see" one's interaction partner does not necessarily increase perceptions of the partner's interaction engagement and consequent willingness to continue working with that partner. In particular, when the focal employee dislikes the interaction partner, the ability to see them leads to more positive impressions of engagement. Our findings advance the theory on face time to show that evaluations of engagement occur during virtual interactions as a function of both communication mode and existing dyadic interpersonal sentiment.

OB: **A Double-Edged Sword: Multilevel Identification in Global Virtual Teams**

Author: **Maria Ximena Hincapie**, *School of Management, U. de los Andes*

Organizations increasingly rely on global virtual teams due to the need to provide employees with more flexible work arrangements while leveraging high-quality talent from around the world. As a result, many employees plan to work remotely and be part of global virtual teams. Therefore, it is crucial to understand what team members can do to enhance performance in these global virtual teams. Team researchers have recognized team identification as an essential emerging state that can favorably influence team outcomes. While research on team identification exists in other contexts, understanding team identity in global virtual teams has received far less attention. In this study, I theorize and empirically test the hypothesis that identification in GVT acts as a double-edged sword, enhancing the team's performance while simultaneously diminishing individual performance. Adopting a multilevel approach, I investigate the influence of team members' cultural intelligence on member identification and the bottom-up process relating to team member identification to team performance. Results from 751 team members working in 223 global virtual teams reveal that a member's cultural intelligence positively affects the member's identification with the team via the team members' motivation. Results also indicate that team identification is associated with motivation and performance at the team level. Finally, findings show that identification with the team has an overall negative impact on a team member's performance but a positive impact on team performance. This paper advances knowledge about the antecedents, processes, and multilevel effects of team members' identification.

OB: **Emergent Leadership and Team Performance in Short-term, Virtual Teams: A Configurational Approach**

Author: **Katharina Agethen**, *Technische Hochschule Ostwestfalen-Lippe*
Author: **Luc Sandfort**, *Paderborn U.*

While considerable research has been conducted on understanding the multiple drivers of informal emergent leadership, less attention has been given to the implications of these emergent leaders for a team's success. Integrating socioanalytic and functional leadership theory, we developed and tested a multilevel model of antecedents and outcomes of emergent leadership within short-term, virtual teams. We propose that distinct configurations of explicit motives may lead to emergent leadership, and that the resulting leadership motive profiles combine with team processes to promote team success. Hence, we apply a configurational, person-centered perspective to examine what combinations will be sufficient to emerge as a leader and achieve superior team performance. Using fuzzy set qualitative comparative analysis (fsQCA) at individual and team level (223 individuals in 54 teams), we find two causal paths involving specific motive configurations for emergent leadership, namely a) presence of preference for teamwork combined with presence of goal priority and of power motive (the captain), b) absence of preference for teamwork combined with presence of reliance (the opportunist); and multiple causal paths for superior team performance, either combining different team processes regardless of leadership, or if leadership is needed, then only the captain with different combinations of team processes.

It's Not You, It's Me: Beyond the Victims of Shame, Interpersonal Views of Shame in Organizations

Discussant: **Michael Daniels**, *U. of British Columbia*
Organizer: **Olivia Jurkiewicz**, *U. of California, San Diego*
Organizer: **Emily Hsu**, *Washington U. in St. Louis, Olin Business School*
Presenter: **Gordon Scott**, *Washington U. in St. Louis, Olin Business School*
Presenter: **Rebecca Schaumberg**, *The Wharton School, U. of Pennsylvania*
Organizer: **Giselle Elaine Antoine**, *Washington U. in St. Louis, Olin Business School*

Throughout history, shame has been utilized as a tool to maintain social harmony and to communicate important information about norms and values within society. However, research on shame has almost exclusively focused on the individual experience of this emotion with minimal attention to the other parties involved in this social emotion. Furthermore, research on this emotion has typically fixated on the negative consequences. To address these shortcomings, this symposium presents a diverse body of scholarship that explores overlooked perspectives on the study of shame: the shamers and the third-party witnesses. Through two papers, we highlight the role of shamers in shaping organizational cultures and demonstrate the beneficial downstream outcomes of shaming, such as increased corporate social performance. In the second set of papers, we pivot our focus to third-party observers and examine the effects of witnessing not only acts of shaming but also expressions of shame on observers' impressions and behavior. Collectively, the papers in this symposium employ a multitude of theoretical perspectives, levels of analysis (e.g., individual, group and organizational), and methodological approaches (e.g., inductive and deductive, qualitative and quantitative) to advance the scholarship on a unique perspective of this social emotion.

Leader humility, a behavioral characteristic arises when leaders interact with others, is conceptualized as a multi-faceted construct . Humble leaders or those who are willing to admit mistakes and limitations, model teachability, and acknowledge others' strengths and contributions, are shown to influence the outcomes of individual and group of subordinates as well as the organizations they lead. Given the impact of humble leaders in organizational context, understanding (a) when leaders express humility and (b) the underlying mechanisms of the impact of their humility should provide further insights into how to improve work outcomes. This symposium has two primary goals. First, this symposium seeks to provide empirical evidence to extend our current understanding of antecedents of leader humility by exploring whether leaders can learn to develop humility. Second, this symposium seeks to provide empirical evidence and theoretical development to build on extant research on the topic of leader humility. Research presented in this symposium advances our current understanding of leader humility by looking at its effects on different underlying mechanisms and outcomes as well as boundary conditions in which these effects hold. In doing so, this symposium includes research that employs complex and innovative measurement and analytical methods.

Assessing Interventions To Boost Employee Wellbeing, Resilience, Agility, and Innovation

Session Moderator: **John Molineux**, *Deakin U.*

ODC: **An Integrated Intervention Study: Lessons About Key Factors for Effective Outcomes**

Author: **John Molineux**, *Deakin U.*
Author: **Adam Fraser**, *The Energy Factory*

This paper reports on the findings of a wellbeing intervention study involving 26 groups of school principals and other school leaders. The intervention was developed through an action research process in response to needs expressed by school principals to reduce strain and improve their overall wellbeing. With theoretical underpinning from the job-demands resources framework, the multi-modal intervention focused on improving the personal resources of participants. Content from psychology, health and human behaviour was presented and discussed through an integrated set of techniques designed into four bespoke one-day workshops over a 12-month period, plus relationship support within the groups including the use of buddies. A paired sample t-test was conducted that showed significant improvement in 12 measures as hypothesized, including wellbeing and work-family balance. The outcomes were confirmed through qualitative comments provided by participants. The success of this intervention may be attributed to: (1) the use of action research to design an intervention that specifically met the needs of the participant groups; (2) the implementation strategies used in the program; and (3) the commitment of participants. A key message for researchers is to co-design implementations with participants for their specific needs, which should lead to stronger implementation and improved outcomes.

ODC: **An Arts-based Approach to Workforce Agility: The Role of Epistemic Curiosity**

Author: **Janani M**, *Department of management studies, Indian Institute of Technology Madras*
Author: **V Vijayalakshmi**, *Indian Institute of Technology, Madras*

The world of work is constantly evolving such that while the previous era saw the need for stability, the current era witnessed the need for disruption. The ever-changing environment and aspects of work pose important challenges to all its stakeholders. Firms must respond to such dynamics continuously, while the employees must too. Such responses from employees are termed 'Workforce agility', which is the ability of employees to properly respond to change in a timely fashion and to exploit the benefits of change. Every employee needs to be driven at an individual level to leverage one's agile capacities at work. In this study, we proposed and tested the predictive role of both dimensions of 'Epistemic Curiosity' in aggrandizing Workforce agility. Further, we aimed to build a group-level practice to enhance Workforce agility. With a sample of 50 students from Universities in the Southern part of India, we implemented the 'Intermodal Arts-Based Intervention' as a fifteen-hour group process that combines four art forms, Visual arts, Music, Movement, and Theatre. The results reveal a significant change in Workforce agility after the intervention and that only the Interest-type of Epistemic Curiosity predicts Workforce agility.

ODC: **Investing in Employees with Strength-based Training - Insights from a Qualitative Study**

Author: **Nicola Beatrice Spickenreither**, *U. Bundeswehr, Munich*
Author: **Sonja Sackmann**, *U. Bw Munich & U. of Tartu*

Employee well-being and resilience have become a high priority for organizations due to increasing work-related stress and associated costs as well as performance. Since strength-based interventions show great potential for improving employee well-being and performance, our study examined the outcomes of a training program focused on improving mental strength, positive thinking, and individual goal setting and attainment. The 36 interviewees reported increased performance and goal attainment, partly due to a more optimistic, positive, and calm attitude. Our research contributes to the literature on strength-based interventions, positive change in a traditional setting, and well-being by examining the outcomes of strength-based training in the traditional agricultural sector. The paper concludes with suggestions for future research and practice.

ODC: **Transformational Leadership and Employee Innovation: Roles of Commitment to Change and Support**

Author: **Kiho Jun**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Joonghak Lee**, *Gachon U.*

Although the impact of transformational leadership on followers' creativity and innovation has been well documented, the question of how transformational leadership enhances employee innovation in the context of organizational change remains unanswered. In this research, we investigate the function of employee commitment to change as a mediator of the relationship between transformational leadership and employee innovation as measured by both ostensible and measurable measures. We further examine the moderating effect of organizational support for creativity on the link between employee innovation and commitment to change. Regression analysis was used to evaluate the assumptions using data gathered from 535 managers in 11 subsidiaries of a prominent financial institution in South Korea that underwent a dramatic mandated organizational change The results showed that employee commitment to change mediated the positive relationship between transformational leadership and employee creativity such as innovative performance and innovative behavior was mediated by employee commitment to change. Additionally, we also found that individuals with high organizational support for creativity had a greater association between commitment to change and employee innovation was stronger for employees with high organizational support for creativity than for those with poor organizational support. This study can contribute to the management discipline by resolving mixed outcomes between transformation leadership and innovation using both subjective and objective data. Also in the relation between transformation leadership and innovation, which might be important in the changing environment the study discovers the contingent factors of commitment to change and organizational support. Finally, practitioners are aware of what leadership styles and organizational climate should be needed for the imposed change.

Blockchain Technology

Session Moderator: **Lara Schilling**, *U. of Kassel*

OSCM: **A Critical Discourse Analysis of Blockchain Application in Supply Chains: From Power to Justice**

Author: **Lara Schilling**, *U. of Kassel*
Author: **Mehrdokht Pournader**, *Faculty of Business and Economics, U. of Melbourne*
Author: **Stefan Seuring**, *U. of Kassel*

Despite an overall positive discourse of blockchains in academic literature, organizations face difficulties in implementing blockchain in supply chains as with the recent case of discontinuation of TradeLens, a blockchain platform co-developed between IBM and Maersk, has shown. This has prompted the current paper to look more critically into the implementation of blockchains in supply chains. We conduct a critical discourse analysis of academic publications while focusing on buyer-supplier relationships and power asymmetries in such relationships impacting adoption of blockchains. Based on textual, discursive, and contextual analyses, we identified that this discourse is determined by positive sentiments while mainly talking about blockchain's positive impacts on supply chain efficiency, food and drug safety, and sustainability. However, these benefits are reached by reinforcing the power of large multinational companies over small and medium-sized enterprise suppliers. We propose that the adoption of blockchain technology under the consideration of inter-organizational justice would stimulate a more beneficial distribution among supply chain members. Our findings further demonstrate the need to pay more attention to the empowering effect of blockchain technology on suppliers.

OSCM: **Digital Technologies and Operations Management**

Author: **Daniel Kwasnitschka**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Henrik Franke**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Torbjørn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*

We study the effect of providing performance feedback to frontline workers that use new digital technologies in manufacturing. Our research setting is a globally operating manufacturer that uses smartwatches for real-time control on the shop floor. Using a large- scale and multi-site field experiment, we analyze 29.669 machine statuses and study the productivity effects of providing workers near real-time feedback on their performance via the smartwatch. We leverage construal-level theory and its central idea of psychological distance to develop our hypotheses. We first observe the production without feedback to establish comparability of our treatment groups and then allocate several combinations of different feedback to workers in two production plants. We vary whether the feedback addresses the individual worker or the entire work group and the message framing: the positive frame focuses on what tasks have been completed on the shop floor ("glass half full") whereas the negative frame focuses on those tasks that were left unfinished ("glass half empty"). Our findings suggest that positively framed feedback directed to individuals improves performance most, providing novel theoretical insights on the combination of feedback framing and their individual/team-level reference points.

OSCM: **Trusting the Trust Machine: How Blockchain Enhances Credibility in Supply Chain Finance**

Author: **Wenyi Liu**, *School of Business, Renmin U. of China*

Blockchain technology was recognized as a response to the trust crisis experienced in supply chain operations and financial activities. However, limited research on the impact of blockchain technology as a substitute for trust and its accelerating effect on cash flow in supply chain has been conducted. This study draws from a literature review on the relationship between trust and supply chain finance, as well as four case studies to demonstrate that blockchain technology can generate trust. Moreover, the study explores how blockchain technology fits with specific supply chain finance scenarios through resource orchestration, realizing trust in the capabilities and restructuring of the supply chain process. From the resource orchestration perspective, this study proposed that the trust in blockchain application is twofold: First, blockchain-enabled capabilities reconfiguration including organization and technology connectivity, networking, and customized deployment can be internal drivers for trust; and second, blockchain-enabled process reconfiguration covered by credible transactions, logistics, and behavior chains can be regarded as an external driver for trust generation. Hence, we highlight the need for contextualization of trust research on blockchain technology.

OSCM: **Agency and Technology-organization-environment Theories to Interpret Blockchain**

Author: **Pamela Danese**, *Dep. of Management and engineering, U. degli Studi di Padova*
Author: **Pietro Romano**, *U. of Udine*
Author: **Riccardo Mocellin**, *U. degli Studi di Padova*

Empirical research clarifying the real benefits of blockchain (BC) is scarce, while BC applications remain small-scale. This study investigates how a BC system can be designed to address ex-post opportunism, and what factors influence BC system use by supply network members. It analyzes 11 principal–agent dyads within one case of BC implementation in the food sector, each composed of a consortium (the principal) and a supply chain actor (the agent). The methodological approach is case research as theory elaboration starting from Agency and Technology-organization-environment (TOE) theories. This study proposes that different BC systems exist, each assuring a certain level of system trust (trust in the technology output), which should be consistent with the risk level of agents' ex-post opportunism. It also provides an interpretation of how TOE factors can intervene in the adoption of different types of BC systems by agents. This research is useful to assess the efficacy of a BC system to address the agency issue in the food sector, and understand how to adapt, at least initially, a BC system to agents' needs to achieve widespread adoption. It applies a new perspective to study BC based on Agency and TOE theories, to develop a framework explaining BC design and use in a supply network involving many different actors.

Measuring Well-Being

Session Moderator: **Deborah Blackman**, *U. of New South Wales*

PNP: **Different Types of Managerial Support for Flexible Working: Implications for Employee Well-being**

Author: **Fiona Buick**, *UNSW, Canberra, Australia*
Author: **Deborah Blackman**, *U. of New South Wales*
Author: **Miriam Glennie**, *U. of New South Wales Canberra*
Author: **Vindhya Weeratunga**, *UNSW, Canberra, Australia*
Author: **Michael O'Donnell**, *U. of New South Wales*

Improving well-being is an important human resource management issue within public sector organizations as it is linked with improved employee and organizational outcomes. A key antecedent to employee well-being is flexible working, which can enable work-life balance. However, flexible working is often under-utilized in practice due to a lack of managerial support. Despite the importance of managerial support for flexible working and, consequently, employee well-being, few studies explore this in-depth, particularly in the public sector. This article addresses this gap, presenting four distinct types of managerial support for flexible working in a public sector context. These findings are important for public sector organizations, as they can help inform how to support flexible working arrangements in a way that better enables the creation and sustainment of both eudaimonic and hedonic well-being and, thus, optimize well-being. This is particularly important due to access to flexible working now being core to the employee value proposition, with optimizing employee well-being a core focus of many public sector organizations.

PNP: **Too Much of a Good Thing? The Curvilinear Effects of Empowering Leadership on Employee Well-being**

Author: **Zhuolin She**, *Renmin U. of China*
Author: **Quan Li**, *Nankai U.*

Leaders are encouraged to empower employees in recent public sector management reforms. However, it remains unclear whether the influence of empowering leadership on employee outcomes is linearly favorable. Grounded in the “too-much-of-a-good-thing” effect and conservation of resources theory, we develop a model considering a potential curvilinear relationship between empowering leadership and public employees’ well-being. Using data from a multisource, time-lagged survey of 496 employees and their 97 supervisors from a prefecture-level city government in China, we find that (1) empowering leadership has a curvilinear (inverted U-shaped) relationship with employee well-being; (2) perceived responsibility mediates this relationship; and (3) public service motivation moderates the curvilinear effect of perceived responsibility on employee well-being and the indirect effect of empowering leadership on employee well-being via perceived responsibility. Implications of these findings for public management research and practice are discussed.

PNP: **Well-being in the Public Service: Multi-level Analysis of Job Demands and Resources**

Author: **Miriam Glennie**, *U. of New South Wales Canberra*

This study extends the Job Demands-Resources (JD-R) theory in the public sector by adopting a multi-level, qualitative approach to examining well-being. Drawing on a study undertaken in the Australian Public Service, we demonstrate that employee well-being is impacted by job demands and job resources that vary and interact at different levels of the organisation. We propose that adopting a multi-level approach to well-being is useful to recognise the inter-related and inter-dependent nature of job demands and resources at the individual, team and organisational levels. We discuss our contributions to the theoretical development of the JD-R theory and make recommendations to practice for enhancing and sustaining well-being. Qualitative examinations of the JD-R theory are limited; our study addresses this gap, providing valuable insight into the contextual influences on job demands and resources and their implications on employee well-being.

PNP: **Which Survey Design can Serve as an Authentic Citizen Satisfaction Measurement?**

Author: **Chengwei Wang**, *City U. of Hong Kong*

A considerable amount of literature has been published on increasing citizens’ satisfaction with using satisfaction surveys. However, we know little about how to find the optimal design for a citizen satisfaction survey. Based on dual-process theory, the study examines the effects of citizen satisfaction survey design on respondents’ effort and reported satisfaction. A fully randomized 23 between-subjects factorial experiment revealed a positive relationship between the number of anchors and the cognitive effort, while the effect of survey length is negative. Additionally, an increasing number of anchors will decrease the cognitive bias of participants. This study highlights the importance of dual-process theory in the account of citizens’ evaluations and provides implications for practitioners. The first argument is supported by performance feedback theory (Greve, 1998; Salge, 2011), borrowed from business management to PA, and indicates that existing performance information will optimize managerial decisions (Ma, 2016; Meier, Favero, & Zhu, 2015; Zhu & Rutherford, 2019) and lead to performance improvement (Hong, 2019; Min & Oh, 2020). The second argument is discussed under the framework of Michel Foucault’s disciplinary power, which implies that rankings are a kind of benchmark which offer consultancies an avenue of profit (Broome, 2021; Hood, 2006). This article tries to answer the above puzzle by using the case of the Doing Business report published by the World Bank Group. We formulate a dataset of the Ease of Doing Business rankings, Doing Business reforms, and the government's dependence on the World Bank of 190 countries from 2007 to 2020 (N=2590). We examine the influence of performance feedback produced by rankings on the number of positive and negative doing-business reforms. We also verify whether dependence on the World Bank would moderate the effect of performance feedback on government reforms. The result indicates that (a) negative performance feedback will decrease positive reforms and increase negative reforms, (b) positive performance feedback will increase positive reforms and decrease negative reforms, and (c) the dependence on World Bank will decrease the effect of performance feedback on government reforms. The findings support the second answer and suggest that the government ranking released by the inter-governmental organizations will dominate the less-developed countries to learn and obey the rules, potentially threatening their long-term performance.

What Role for Performance?

Session Moderator: **LOAN PHAM**, *Penn State Scranton U.*

PNP: **High-Performance Work Systems and Employees' Creativity in Vietnam: The Role of Employees' Creative**

Author: **LOAN PHAM**, *Penn State Scranton U.*

Although creativity is extensively examined in the US or other developed nations, studies exploring the determinants of individual creativity in Vietnam, especially in the state-owned sector remain limited. The present study extends the creativity literature by investigating mechanisms through which high-performance work system (HPWS) fosters individual creativity, focusing on employee creative self-efficacy and organizational contexts of state own enterprises (SOEs) in Vietnam. The study was conducted among a sample of 392 employees, working in Vietnamese SOEs. The result demonstrated the significant effect of high-performance work system on employee creativity in Vietnam through the mediating role of their creative self-efficacy. Moreover, organizational contexts were found to moderate the impact of employee creative self-efficacy on their creativity. In this paper, managerial implications, recommendations for future research, and limitations are discussed accordingly.

PNP: **Values, Performance or Both? How Values-focused Work can Benefit from Results-based Management**

Author: **Gerhard Speckbacher**, *WU Vienna U. of Economics and Business*

While results-based performance measurement has become a common practice in governing relationships with external stakeholders, many nonprofits are struggling with severe tensions when implementing results-based management practices inside the organization. As its first contribution, the present paper conceptualizes "dedication to values" as a particular characteristic of nonprofit organizations that helps to explain such tensions associated with results-based management practices. Second, the paper builds on research on results-based management and the management of nonprofits to argue that results-based management helps to reduce role ambiguity among nonprofit staff, but by doing this, it creates role conflict. As its third contribution, the paper analyzes how organizations with high dedication to values can make use of results-based management to reduce role ambiguity among employees while avoiding employee role conflict.

PNP: **How Does Performance Feedback Affect Co-Production?**

Author: **Taek Kyu Kim**, *U. of Missouri, Columbia*

This paper is motivated by the following question: Do organizations engage in co-production in response to performance signals? Co-production is activities in which public organization actors and stakeholders work together for public service delivery; it positively impacts reducing costs and improving the service quality. On the other hand, co-production may be a risky strategy because it causes unintended effects such that it complicates the delivery process by inviting external actors. Given the benefits and risks, could co-production be a strategy that organizations deliberately use under certain circumstances, for example, when they are underperforming? To examine the research question, this study employs a regression discontinuity (RD) design based on school performance data and ratings from school quality reports in New York City public schools. The findings show that schools are more likely to increase the degree of co-production in response to performance shortfall. it contributes to the burgeoning performance feedback research by showing that performance signals affect subsequent organizational decision-making on co-production. It also connects the performance management literature and co-production literature by showing that organizations engage in co-production in response to performance shortfalls.

PNP: **Closing the Planning-Performance Gap: Planning Process Outcomes and Their Relationship with Process Design**

Author: **Isidora Sidorovska**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Amelia C. Clarke**, *U. of Waterloo*

Despite various accounts of the practical benefits for nonprofits that implement strategic planning, vs. those that do not, such as survival, growth and access to resources (Stone et al., 1999; Hwang & Bromley, 2015), the value of strategic planning in the nonprofit spaces remains highly disputed. Key concerns for this include the relevance of for- profit tools for the specific needs of the nonprofit organization, whether the benefits gained in efficiency and effectiveness can cause mission drift and greater interest in economic objectives, as well as the relevance of planning tools in the sector beyond their legitimating properties. This paper addresses the question of value of strategic planning for the nonprofit organization by examining the first-order proximal outcomes of strategic planning process in nonprofits and their contribution to long-term objectives such as successful strategic adaptation and performance. The findings indicate that effective planning processes in nonprofits contribute to four major groups of outcomes, including cognitive, operational, social and emotional outcomes that can serve as core resources for strategic adaptation and performance.

Schools and Education

Session Moderator: **James Harrington**, *U. of Texas at Dallas*

PNP: **Legacies, Imprinting, and Rectification (or lack thereof): Evidence from Private Schools in the U.S.**

Author: **Peter Polhill**, *ILR at Cornell*
Author: **Grady Wallace Raines**, *Cornell SC Johnson College of Business*
Author: **Ryan Scott Coles**, *U. of Connecticut*
Author: **Kunyuan Qiao**, *Georgetown U.*

We study how legacy, imprinting, and rectification are connected. We argue that rectification through diversity and inclusion efforts are more likely to occur when a community's shameful legacy interacts with the imprinted values of the organization. We test our hypotheses using the National Survey of Private Schools, the National Census, and a compilation of lynching events in the United States and find supportive evidence. We contribute to the literature on institutional legacies, organizational imprinting, and their intersection with the socially sustainable practice of diversity and inclusion.

PNP: **Determinant Factors to Explain High-School Students' Achievements in Large-Scale Standardized Tests**

Author: **Ricardo Correa Gomes**, *FGV - EAESP*
Author: **Gustavo Fernandes**, *FGV - EAESP*
Author: **Erika Lisboa**, *FGV-EAESP / UnB*

Enem is a large-scale standardized test used as a doorway to higher education in Brazil. Due to social-economic differences among regions, states, and municipalities, the Brazilian Federal Government created mechanisms to improve poor students' chances to access higher education. This investigation aims to understand the determinant factors contributing to improving high school students' performance in the Enem test. We gathered panel data from 5,561 Brazilian municipalities from 2012 to 2020 (two consecutive administrative mandates). We used large-scale standardized tests as dependent variables and educational expenditure per capita, inter-governmental cooperation, and regulatory stakeholder influences as independent variables. We assessed regression estimators using fixed-effects, Newey, and multilevel regression analysis. The results indicate that educational expenditure, inter-governmental cooperation, and stakeholder regulatory activities influence students' achievement in large-scale tests. Two of them have positive effects, while the third one is negative. We conclude the study by proposing contributions and follow-ups for scholars and practitioners.

PNP: **The Unintended Consequences of Quantitative-Centralized Faculty Promotion**

Author: **Mohammad Moshtari**, *Tampere U.*
Author: **Zaynab Sabagh**, *Sharif U. of Technology*

The Iranian higher education system is large in terms of the number of institutions, with nearly 2,500 higher education institutions and 80,000 professors. The promotion system in Iran is semi-centralized and relies heavily on quantitative indicators of performance to ensure transparency and fairness. The present study is empirically grounded research aimed at identifying the unintended consequences and challenges facing the promotion system in Iranian public universities. The data sources include (a) interviews and focus groups with faculty members and policymakers and (b) policy and regulation documents related to the promotion system in the country. Results revealed that the shortcomings of the promotion system have led to low-quality academic activities, task reduction, ethical issues, a decline in satisfaction and well-being, and unconstructive attitudes. The impacts, however, depend on the faculty's individual profile, institutional experiences, and available resources. Decentralization of the current system does not seem to be appropriate because not all institutions have the capability and resources to regulate their promotion guidelines. However, the current quantitative-based faculty promotion system could be improved by adding some dimensions of qualitative assessments.

PNP: **Working in Extreme Contexts: Revisiting the Relationship between Staff Emotions and Outcomes**

Author: **Cecilia Latorre-Cosculluela**, *U. of Zaragoza*
Author: **Pilar Rivera-Torres**, *U. of Zaragoza*
Author: **Monica Franco-Santos**, *Cranfield School of Management*

Staff emotions play a crucial role in the delivery of public service outcomes. This research advances our understanding of the emotions-outcomes relationship in extreme contexts and the conditions that moderate this relationship. In a sample of 765 educational professionals working in infant, primary and secondary schools during the early stage of the COVID pandemic, we find that negative staff emotions do not necessarily lead to poor student outcomes as previous research would have predicted. In extreme contexts, educational professionals seem to "pack their emotional bag (with their fears and concerns) and leave it at the door" to avoid projecting their feelings onto students following deeply embedded professional values. These restrained emotions, however, have detrimental consequences for professionals' work-family relations as families function as an emotional safety valve that enables professionals to release their frustrations, not without potentially hurting their interactions. We also find that an adaptive leadership response to the event attenuates the perceived level of context extremity, leading to a healthier relationship between professionals' work and family life.

Policy Implementation

Session Moderator: **Shirley-Ann T. Augustin-Behravesh**, *Arizona State U.*

PNP: **Stakeholder Influence on the Type of Env. Sustainability Policy Adopted: The Case of US Local Govt**

Author: **Shirley-Ann T. Augustin-Behravesh**, *Arizona State U.*
Author: **Nicole Darnall**, *Arizona State U.*
Author: **Stuart Bretschneider**, *Arizona State U.*

Some environmental sustainability policies can be comprehensive and focus on addressing local governments' broader environmental sustainability concerns, whereas other policies are incremental, focusing on enhancing organizational internal efficiencies. We suggest that pressures from different types of stakeholders – those that are motivated more by economic issues and those motivated by broader social issues – are associated with the local governments' adoption of different types of environmental sustainability policies. Drawing on a nationwide survey of U.S. city governments, we find that stakeholders who are motivated by broader social issues (environmental stakeholders) are associated with local governments' adoption of comprehensive and incremental environmental sustainability policies. By contrast, stakeholders who are motivated by economic and compliance issues (business and higher-level governments) are negatively associated with local governments' comprehensive sustainability policies. Finally, pressures from stakeholders who are motivated by both types of issues (internal stakeholders) are associated with local governments' adoption of comprehensive sustainability policies. These findings offer a more nuanced understanding of how variations in stakeholder pressures are related to different types of city-level environmental sustainability policies and expand on stakeholder theory in the context of public-sector organizations.

PNP: **Zero to one: A Yin-Yang Perspective of Street-level Policy Entrepreneurs in Inter-local Collaboration**

Author: **Monica Ren**, *Macquarie U.*
Author: **Hua Xing**, *School of Government, Central U. of Finance and Economics, Beijing China*
Author: **Puyao Xing**, *School of Government, Central U. of Finance and Economics, Beijing China*

This study adopts a cultural perspective—yin-yang logic—to explore how street-level policy entrepreneurs (SLPEs) affect policy innovation by successfully formulating inter-local collaborations (across 14 cities) from 'zero' to 'one'. Drawing on a single case study—the formation of the Chinese Eastern Northeast Economic Zone between 2003 and 2016—and utilizing the critical incidents technique based on fieldwork interviews and content analysis, we identify 20 critical incidents. We propose a yin-yang logic conceptual framework to investigate the role of SLPEs in the formation of policy innovation, highlighting a six-stage process, three SLPE capabilities, and three yin-yang operating mechanisms. This study makes four theoretical contributions to the policy entrepreneurship literature: (i) it introduces a yin- yang perspective; (ii) it proposes a yin-yang framed conceptual framework; (iii) it explains how context matters in reflecting paradoxes; and (iv) it identifies the three SLPE capabilities through three yin-yang operating mechanisms in formulating policy innovation.

PNP: **The Spatial Spillover Effect of Environmental NGOs on the Urban Ecological Environment in China**

Author: **Zhouyuanye Wang**, *Shanghai International Studies U.*
Author: **Qian LI**, *Shanghai International Studies U.*

Environmental problems have become a common topic around the world. The existing literature rarely studies the relationship between environmental NGOs and ecological environment quality from a spatial perspective. Using spatial econometric models and panel data for 286 Chinese cities from 2011 to 2019, this article develops a comprehensive evaluation system of urban ENGO development and examines its impact on ecological environment quality. The results of spatial distribution analysis show the areas with a high level of ENGO development form a regional city cluster development pattern, with a concentration trend in the northwest-southeast direction across China. The estimation results of spatial Durbin models confirm that ENGO has a certain promotional effect on local ecological environment quality, and has a positive spatial spillover effect on neighbor cities' ecological environment quality. Theoretical and practical implications are discussed.

PNP: **The Impact of Imposed Measures on Individual Temporal Schemata: The Context of Students during Covid**

Author: **Selien Vancaillie**, *Ghent U.*
Author: **Paul Gemmel**, *Ghent U.*
Author: **Melissa De Regge**, *Ghent U.*
Author: **Bert Meijboom**, *Tilburg U.*

This study uses a mixed-method approach to validate the Temporal Cognitive Affective-Processing System (T-CAPS) by applying it in the context of students during Covid-19. The authors took the lockdown measures, imposed by the government and the university, as organizational temporal structures that confront the individual temporal schemata of students. Surveys and interviews were carried out during three Covid-19 waves in Belgium to explore if (1) the T-CAPS is a valid theory that captures the mechanism when temporal structures confront temporal schemata and (2) which behavioral responses the students show and how they evolve over time. The findings suggest that students mostly showed entrainment towards measures imposed by the university. More resistance is visible concerning the measures imposed by the government, especially when they interfered with social life. Subsequently, the study demonstrates that all predicted types of behavioral responses can occur in real life and that deliberate entrainment can transform into resistance over time, both findings that are in line with the T-CAPS. The authors conclude the paper with policy recommendations based on the study results.

New Insights on CEO Compensation

Session Moderator: **Naga Lakshmi Damaraju**, *Sonoma State U.*

STR: **Does Caste/Religion Homophily Matter for CEO Compensation? Evidence from Indian CEO Compensation**

Author: **Naga Lakshmi Damaraju**, *Sonoma State U.*
Author: **Anil Makhija**, *The Ohio State U. Fisher College of Business*
Author: **Jay B. Barney**, *U. of Utah, David Eccles School of Business*

In this paper, we examine the professional CEO compensation using a sample of "same caste/religion" and "not same caste/religion" professional CEOs from the largest 1,000 publicly listed firms in India from 2001-2009. We find caste/religion homophily influences CEO compensation. Unlike previous studies of caste/religion influences in corporate decisions in India that supported 'information/trust' advantages, our findings support homophily influences potentially driven by "taste-based" preferences. We provide evidence for a higher compensation for "not same caste/religion" CEOs, possibly an insurance against "taste-based" discrimination.

STR: **CEO Regulatory Focus and Stock Buybacks: The Moderating Effect of CEO Tenure and Restricted Stock**

Author: **Alexis Hu**, *Harvard College*
Author: **Wanrong Hou**, *U. of Texas Rio Grande Valley*

Maximizing shareholder value has been the dominant goal of corporations in the last several decades, and stock buyback has emerged as the primary mechanism by which corporations return capital to their shareholders. Although a wealth of literature has examined the motivations underlying a firm's decision to repurchase shares, there has been limited research on the influence of CEO psychological attributes on stock buyback. Drawing on upper echelon theory and regulatory focus theory, our study investigates the effects of CEO regulatory focus on a firm's stock buybacks. We find that stock buybacks are negatively associated with CEO promotion focus, while positively associated with CEO prevention focus. In addition, we find the relationship between CEO regulatory focus and stock buyback depends on CEO tenure and CEO restricted stock holdings. CEOs accumulate experience and develop increased risk aversion as tenure increases, thereby weakening the relationship between CEO regulatory focus and stock buyback. The potential gains of restricted stocks weaken the effect of promotion focus on stock buyback, while the potential losses of restricted stocks strengthen the effect of prevention focus on stock buyback. Research contributions and implications are also discussed.

STR: **Always an Agency Problem? The Effect of Top Management Team Perquisite Consumption on R&D Investment**

Author: **Jiangyan Li**, *Chongqing U.*
Author: **Yanshuang Luo**, *Chongqing U.*
Author: **Bing Wang**, *Chongqing U.*

The mainstream research commonly considers perquisite consumption of top management team (TMT) as an agency cost, but some scholars insist on its rationality and call for an exploration of its potential benefits. This study attempts to investigate the effect of TMT perquisite consumption on a firm's R&D investment. We propose that perquisite consumption can promote information exchange and motivate top executives to increase R&D investment. Using a sample of 3,572 Chinese listed firms from 2008-2021, we find a positive effect of perquisite consumption on R&D investment, and such effect is stronger when firms have urgent needs for information gathering. In addition, we follow the agency problem perspective and find that the positive effect of perquisite consumption on R&D investment is weakened when the firm has a weak governance structure. The findings of this study deepen the understanding of TMT perquisite consumption by proposing its potential benefits and complement the research that investigates the effect of executive incentives on firm innovation.

STR: **Regulatory Fit or Regulatory Pride? Relative Values of CEO Restricted Stock and Risk Taking**

Author: **Rong Ma**, *Rutgers U., Camden*

Prior studies have drawn on the behavioral agency model and shown that the relative values of CEO stock-based compensation have a significant effect on firm risk taking. Integrating the upper echelons perspective and the regulatory focus theory, we examine how CEO regulatory focus moderates the effect of relative restricted stock values on firm risk taking. We propose that when restricted stock value is below the reference point, CEOs try to proactively achieve regulatory fit by relying on the goal attainment strategies aligned with their regulatory focus orientations. When the deviation of restricted stock values is positive, CEOs perceive it as an achievement of the compatible self-regulatory motivational systems, which reinforces their regulatory focus and the goal attainment strategies are determined by regulatory pride. Our findings based on a sample of S&P 500 firms support our hypotheses.

Participant: **Miaomiao Zhang**, *Harvard Business School*

Nascent markets often offer great potential business opportunities and economic growth but are often characterized by tremendous uncertainty in how value can be created and captured by firms. Consequently, researchers have extensively explored how firms respond to these highly uncertain markets to achieve better performance, with a large focus on coping strategies for demand-side market uncertainty and supply-side technological uncertainty. However, our understanding of the role of ecosystem uncertainty, and particularly regulatory uncertainty, is still limited. This line of inquiry is much needed, as government actors play a significant role in facilitating or inhibiting the overall industry evolution and market growth. Additionally, how regulatory uncertainty shapes the strategic decisions of entrepreneurs or entrepreneurial ventures remain even murkier, as prior work on nascent markets has mostly focused on diversifying entrants. This symposium aims to provide more insights into entrepreneurial strategies under regulatory uncertainty in nascent markets by facilitating interdisciplinary conversations between researchers exploring a wide range of theories, methods, and contexts. Through two theory-building case studies that leverage in-depth qualitative evidence and two empirical papers that exploit natural experiments for establishing causal estimates, the presentations in this symposium investigate various entrepreneurial strategies, including idiosyncratic coping strategies for regulatory challenges, nonmarket strategy for directly interacting with regulators, equity financing strategy, and entry strategy, in four distinct nascent markets that underwent or are still undergoing regulatory uncertainty (birth centers, lab-grown meat, unmanned aircraft, and self-driving cars).

Social Issues and Corporate Strategy

Session Moderator: **Ana Kurtanidze**, *U. of Lugano/U. Della Svizzera Italiana*

STR: **The Influence of CSR Similarity on Merger and Acquisition Premiums**

Author: **Shao-Chi Chang**, *National Cheng Kung U.*
Author: **Nguyen Thi Kim Lien**, *Institute of International Business, National Cheng Kung U.*
Author: **Huang Chao-Hsuan**, *MBA student*

This study examines the effect of corporate social responsibility (CSR) similarity on merger and acquisition (M&A) premiums based on two competing perspectives. The integration perspective posits that cultural similarity between the acquirer and target can enhance synergy by reducing the post-M&A integration costs. In contrast, the learning perspective suggests that cultural dissimilarity can create significant value from knowledge spillover. The results show that CSR similarity is negatively associated with premiums, implying the learning effect dominates the integration effect. Furthermore, the findings show that the negative relationship between CSR similarity and premiums is stronger when the acquirer and target are from capital-intensive industries; and weaker when the acquirer and target are from related industries and when the acquirer is more experienced in strategic alliances.

STR: **Stakeholder Orientation and Firms' Acquisition Intensity**

Author: **Ana Kurtanidze**, *U. of Lugano/U. Della Svizzera Italiana*
Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*

This paper investigates the influence of stakeholder orientation on firms' acquisition intensity. We depart from prior literature and argue that the heterogeneity in the extent to which firms account for the interests of their stakeholders can affect their acquisition decisions. We study our research question using a difference-in-difference methodology and exploiting the staggered adoption of constituency statutes, which enabled managers to account for non-shareholding stakeholders' interests in their decisions. Our preliminary results based on a sample of 4,241 U.S.-based, publicly listed firms from 1990 to 2015, provide evidence consistent with our predictions that increased stakeholder orientation reduces firms' acquisition intensity. We further show that this effect is stronger for related vs. unrelated acquisitions.

STR: **To Acquire or to Ally? Managing Partners' Environmental Risk in International Expansion**

Author: **Chenchen Huang**, *U. of Bath*
Author: **Di Luo**, *U. of Dundee, UK*
Author: **Soumyatanu Mukherjee**, *U. of Southampton*
Author: **Tapas Mishra**, *U. of Southampton*

Environmental risk (ER) has become increasingly crucial in international business, and firms endeavor to integrate environmental risk management (ERM) into business strategies. Examining a sample of cross-border mergers and acquisitions (M&As) and alliances conducted by US firms from 39 host countries over the last two decades, we show that US firms tend to prefer to choose cross-border M&As over alliances when the ER of foreign partners is high. The propensity towards M&As is amplified by US firms' corporate governance quality, financial flexibility, and adherence to the host-country's sustainability disclosure reforms. Further, US firms experience high announcement abnormal returns when they select M&A deals rather than alliances to manage high ER from foreign partners. Overall, our study provides novel insights into ERM in firms' decision-making around international expansion.

STR: **Alliance Experience and Stakeholder Orientation**

Author: **Kerstin Neumann**, *U. of Innsbruck*
Author: **Melike Nur Findikoglu**, *Ozyegin U.*

Stakeholder theory emphasizes the importance of a relational model of the firm to establish cooperative relationships between firms and their stakeholders for joint value and social welfare creation. Less is known how firms can develop relational routines and capabilities that help them managing a variety of stakeholders in a cooperative way and balancing their interests to the common benefit of all; this is what prior literature labels stakeholder orientation. This paper maintains that firms' alliance experience can predispose them for developing stakeholder orientation, suggesting a positive effect of firms' alliance experience on their stakeholder orientation. We also maintain that alliance experience related to partner multiplicity and goal diversity positively contributes to stakeholder orientation. Furthermore, we propose that governance mechanisms that favor board diversity strengthen the positive impact of alliance experience on stakeholder orientation. Our analysis on a sample of 112 public North American firms in the energy industry with 774 firm-year observations between 2008-2014 supports our expectations about the direct effects of alliance experience generally, and partner multiplicity and goal diversity, specifically on stakeholder orientation, but refutes those concerning the moderating effect of board diversity because of a negative and significant effect.

People and Innovation Track: Managing the Human-Technology Interface

Session Moderator: **Sitong YU**, *Nanyang Technological U.*

TIM: **Trust in Artificial Intelligence (AI): An Integrative and Meta-Analytic Review**

Author: **Sitong YU**, *Nanyang Technological U.*
Author: **Shota Kawasaki**, *Nanyang Business School*
Author: **Kang Yang Trevor Yu**, *Nanyang Technological U.*

Human trust is believed to be a critical precondition of successful AI implementations in the age of artificial intelligence (AI). However, there is a lack of consensus on the definition, operationalization, and measurement of AI-based trust across different associated fields of research. In this paper, we aim to add more clarity to current research on trust in AI with an integrative review and a meta-analysis. First, an integrative review based on 113 papers was conducted. The review summarizes conceptualizations and measurements of trust in AI across communities of practice, as well as generates a framework of antecedents of trust in AI. Then, a meta-analysis was conducted to quantitatively summarize the empirical findings relating trust in AI to these antecedents. Our analysis differentiates between AI-, human-, and context-related factors. A total of 48 included studies comprising 243 effect sizes were meta-analyzed. The moderating effects of AI embodiment (robotic, virtual, embedded), measurement (attitude, intention, behavior), and two study descriptors (i.e., study design and study setting) were also explored. Implications, limitations, and future directions of the review efforts are further discussed.

TIM: **Algorithmic Navigation: Why Employees Guided by Algorithms are More Systematic in Solving Problems**

Author: **Luca Vendraminelli**, *Politecnico di Milano*
Author: **Ambra Galeazzo**, *U. of Padova*
Author: **Andrea Furlan**, *Department of Economics and Management, U. of Padova*
Author: **Andrea Vinelli**, *U. degli Studi di Padova*

Most of the algorithms' support in information retrieval and processing is designed to navigate employees in carrying out ordinary tasks. However, does algorithmic navigation produce countervailing effects on the knowledge functional to systematically solve problems? Algorithmic navigation may reduce (1) the knowledge autonomously acquired from the job because paternalistic guidance leads to creating unconscious automatisms, and (2) the knowledge induced by social support because digital interfaces eliminate the need of asking advice from other human beings. As a result, we expected a decrease in employees' systematic problem-solving (SPS). We test this mechanism on empirical data gathered from an ad-hoc survey of 376 shop-floor employees from 95 work units, exposed to different degrees of algorithmic and social support. Contrary to our expectations, results indicate a positive effect of algorithmic support on systematic problem-solving, reinforced by a complementary effect between algorithmic and social support. The disproval of the SPS undermining of algorithms suggests a refinement in the algorithmic augmentation theory of task performance, advancing the navigation concept by which employees guided by algorithms have higher knowledge functional to solve unexpected problems, induced from the synergic effect of high-frequency codified digital interactions and fortified social support.

TIM: **Mechanical Me: The Dehumanizing Effect of Experience Quantification**

Author: **Kateryna Maltseva**, *Oslo New U. College*
Author: **Christian Fieseler**, *BI Norwegian Business School*
Author: **Klemens Knöferle**, *BI Norwegian Business School*

People are increasingly exposed to quantitative information about various aspects of their lives, such as the number of steps they walk, the number of minutes they spend on various daily activities, or the numbers of words they read in an email. In this paper, the authors propose that exposure to quantitative feedback about such activities induces a state of mechanistic dehumanization – that is, a feeling of being more machine-like. The proposed underlying reason for this effect is that quantification encourages analytical processing of experiences, thus inhibiting people's experiential capacities, which are fundamental to the feeling of humanness. Three studies, one correlational and two experimental, provide evidence of the mechanistically dehumanizing effect of quantification.

TIM: **What's in the (Black) Box?**

Author: **Sanghoon Kang**, *CUHK Business School*
Author: **Jerry W. Kim**, *Rutgers Business School*
Author: **You Wu**, *Chinese U. of Hong Kong*

Studies have documented that individuals distrust and reject algorithm advice (i.e., algorithm aversion). One seemingly natural way to reduce algorithm aversion is to provide post hoc algorithm justifications for algorithm predictions. By increasing the interpretability of the algorithm, decision-makers would presumably be better persuaded and be less likely to reject algorithm advice. This assumption, however, overlooks the fact that providing more information can undermine judgment quality by lowering accuracy and increasing confidence. Building on this "more is less" view of decision-making, we argue that algorithm justifications can increase human rejection of algorithm advice. Two experimental studies demonstrate that providing algorithm advice with justifications (i.e., positive and negative factors driving the recommendation) lowered the acceptance of the algorithm's advice, and that this effect was driven by lower credibility assigned to the algorithm, and an enhanced (false) sense of expertise. We further examine the interaction between expert identity and justifications, and show that the more-is-less bias is more evident when individuals are primed to see themselves as experts. Our findings highlight the importance of social psychological factors in understanding human-algorithm collaboration.

TIM: **Morality Evaluations in Uncivil Human-AI Interactions**

Author: **Patrycja Arundel**, *UC Irvine*
Author: **Maia Young**, *U. of California, Irvine*

Because artificial intelligence (AI) has become ubiquitous across the business landscape, many people now regularly interact and collaborate with voice-enabled assistants and other smart technologies at work. These interactions mirror communication between humans, including displays of workplace incivility. This research investigates how people evaluate the morality of actors who behave uncivilly compared to those behaving neutrally toward AI (Study 1) and similar behaviors toward human agents (Study 2). In Study 1, we find that workplace incivility toward an AI agent leads to lower ratings of the actor's morality, compared to neutral workplace interactions with an AI agent. In a preregistered Study 2, we replicate the initial finding and additionally find that moral inferences about an uncivil interaction between an actor and AI agent are no less extreme than the same interaction with a human agent. We conclude by discussing the theoretical and practical implications of our findings.

The Strategy, Technology, and Management of Clinical Trials: A Multi- Disciplinary Perspective

Organizer: **Marc Lerchenmueller**, *U. of Mannheim*
Discussant: **Olav Sorenson**, *UCLA Anderson School of Management*
Discussant: **Robert Makuch**, *Yale U.*
Presenter: **Ariel Dora Stern**, *Harvard Business School*
Presenter: **Marc Lerchenmueller**, *U. of Mannheim*
Presenter: **Stefan Wagner**, *ESMT Berlin*
Presenter: **Jennifer Kao**, *UCLA Anderson School of Management*

Investments into pharmaceutical research and development (R&D) yield new treatments with the potential of improving human health. The pharmaceutical industry has seen year-on-year growth in R&D expenditures for decades, and yet there exists a large body of evidence suggesting there is a productivity crisis in drug development. With estimates ranging from $ 1-2 billion R&D costs per approved drug, the bulk of which gets expensed in the execution of clinical trials that test drug candidates for safety and efficacy, many companies risk not even earning their cost of capital. In this symposium, we bring together scholars across the disciplines of biostatistics, economics, public health, sociology, and technology management in a discourse on the challenges and opportunities for improving the clinical testing of promising new drugs. We include four empirical papers that collectively investigate the spectrum of R&D productivity challenges, including the operative and regulatory adoption of new technologies, optimal clinical trial design, information gaps in development trajectories, and corporate strategizing. Following the presentations, Robert Makuch and Olav Sorenson will serve as discussants, providing a synthesis of the papers and offering further theoretical insights into mechanisms that may produce the observed phenomena.

The Strategy, Technology, and Management of Clinical Trials: A Multi-Disciplinary Perspective

People and Innovation Track: Contextualizing Digitalization, Ambidexterity, and Innovation

Session Moderator: **Jino Lu**, *USC Marshall School of Business*

TIM: **The Micro-Behavioral Mechanism between Digitalization Strategy and Innovation Ambidexterity**

Author: **Chunling Zhu**, *School of Business, Renmin U. of China*
Author: **Yihui Xiao**, *School of Business, Renmin U. of China*
Author: **Ruxi Wang**, *Renmin U. of China*

While digitalization has come into wide use in contemporary business, we know far less about the micro-behavioral mechanism underpinning the link between digitalization strategy and innovation performance. Integrating innovation ambidexterity theory and the behavioral agency theory, we empirically explore the relationship between digitalization strategy and two aspects of innovation ambidexterity and CEOs' power in conditioning the focal relationship. We theorize that CEO duality strengthens the positive relationship between digitalization strategy and radical innovation and weakens the link between digitalization strategy and incremental innovation. We also propose that local CEOs weaken the positive relationship between digitalization strategy and radical innovation and strengthen the link between digitalization strategy and incremental innovation. Using a sample of listed firms in the manufacturing industry in China between 2011 and 2020, we found support for all the hypotheses. Our study contributes to innovation ambidexterity literature by examining the influence of digitalization strategy, and by bridging the behavioral agency theory and innovation ambidexterity literature.

TIM: **Demand for Innovation and Direction of Research: Evidence from Electric Vehicle Technologies**

Author: **Jino Lu**, *USC Marshall School of Business*

The recent innovation literature has highlighted the benefits of cross-disciplinary research and the importance of combining diverse knowledge domains for impactful innovations. However, despite the growing importance of such cross-domain innovative efforts, we know relatively little about how researchers from other domains respond to an increased demand for their expertise in a focal domain. In this paper, I examine how researchers' research productivity and intellectual distance to the demand shape their propensity to respond to the demand and the quality of their research outcomes. Empirically, I exploit an unanticipated environmental policy shock that led to increased demand for innovation in electric vehicle (EV) technologies. I find that in domains intellectually closer to EV research (e.g., researchers in battery research domains), more productive researchers are more likely to respond and, subsequently, produce higher-quality EV research outcomes than the less productive researchers. However, in domains intellectually more distant to EV research, there is an "adverse selection" between researchers' incentive to respond to the demand and their research outcomes – more productive researchers from distant domains could bring novel knowledge and contribute to highly impactful EV research outcomes, but they have less incentive to engage with EV research relative to their less productive peers in the distant domains. In contrast, the less productive researchers tend to produce low-quality EV research outcomes.

TIM: **Innovative Problem Solving in the Machine Learning Age: Is Domain Expertise Still Important?**

Author: **Edgar Brea**, *U. of Queensland*
Author: **Jerad Allen Ford**, *U. of Queensland*

Specialised and diverse knowledge are both crucial for problem solving; the former increases solution effectiveness while the latter drives solution novelty. However, emerging data-driven technologies – particularly machine learning (ML) – appear to alleviate the dependence on specialised domain expertise to solve problems, thereby threatening to alter the roles of these types of knowledge in innovation. This paper studies the extent to which certain types of specialised knowledge (namely domain and technical) are more or less important when solving problems using ML, as well as the relevance of knowledge diversity. Drawing on a novel research setting comprising an open innovation contest platform for ML problems, we found that teams' knowledge diversity, as well as their domain expertise, matter for problem-solving performance, while technical expertise only matters if teams have high knowledge diversity that increases combinatorial potential. These findings contribute to the recombinant and open innovation literatures, as well as to the emerging literature intersecting innovation management and AI technology, providing insights on the importance of human expertise when using AI for innovation.

TIM: **Technology Transfer in Local and Foreign-owned Firms in Emerging Economies**

Author: **Ellis LC Osabutey**, *Newcastle Business School, Northumbria U., UK*
Author: **Konan A. Seny Kan**, *Grenoble Ecole de Management*
Author: **PK Senyo**, *Southampton Business School, U. of Southampton*
Author: **Felix Arndt**, *U. of Guelph*
Author: **Christiaan Röell**, *Sheffield U. Management School*

Technology transfer in international collaborations is difficult but can occur in both local and foreign-owned firms in emerging economies. Building on differences in absorptive capacity between these two kinds of firms, we identify the role of human resource development (HRD) and knowledge management (KM) as key factors for successful knowledge transfer. Drawing on a crisp set qualitative comparative analysis of a sample of 30 of the largest local and foreign-owned construction firms in Ghana, we investigate how knowledge acquisition and sharing between collaborating partners can facilitate technology transfer. We find that successful technology transfer in these two kinds of firms depend on different combinations of HRD and KM factors and knowledge networks. We contribute to the literature on technology transfer in emerging economies by shedding light on the underlying processes that foster a firm's ability to absorb and share knowledge in international collaborations in ways that generate competitive advantage.

TIM: **Team Knowledge Diversity, Inventor Embeddedness and Organizing for Disruptive Innovation**

Author: **Deepak Nayak**, *Fox School of Business, Temple U.*

How should inventor teams be organized to create disruptive inventions? Knowledge recombination, the core process underlying innovation efforts, requires that diverse knowledge components be available for superlative inventive outcomes. However, when inventors with diverse knowledge bases are assembled in teams, their contribution in the innovation process may be influenced by their embeddedness in the intra-firm networks, leading to differential impact on the innovation outcomes. Using a sample of 25, 428 patents granted over a ten-year period to 400 US-based public firms in the pharmaceutical industry, I show that inventor team knowledge diversity is curvilinearly related in an inverted U-shaped manner to the disruptiveness of new inventions. Further, I show that positional embeddedness of inventors moderates this effect. This study has important insights for innovation and R&D managers' efforts in organizing their knowledge resources for optimal innovation performance.

Innovation and Competitive Strategy Track: Patent Litigation Strategies

Session Moderator: **Huiyan Zhang**, *Carnegie Mellon/ Catolica Lisbon*

TIM: **The Effect of Multimarket Contact on Patent Litigation: Evidence from the Mobile Phone Industry**

Author: **Claudio Giachetti**, *U. Ca' Foscari of Venice*
Author: **Ergun Onoz**, *Ozyegin U.*
Author: **Tieying Yu**, *Boston College*

Instead of mutually forbearing, multimarket competition may exhibit different patterns in technology-intensive industries, where abnormal returns are often short-lived and firms need to constantly defend their knowledge resources from being imitated by rivals. Drawing on the multimarket competition and patent litigation literatures, we argue that the level of multimarket contact (MMC) a focal firm has in a given country is positively related to its intensity of patent litigation in that country, and this relationship is moderated by the extent of imitation threat, which can arise from technological, regulatory and competitive environments. We test our hypotheses in the global mobile phone industry with a comprehensive panel of 84 mobile phone vendors and their patent litigation battles in 45 countries from 2003 to 2015. The empirical evidence provides support to our theoretical predictions.

TIM: **Characteristics of Litigated Patents in Weak Intellectual Property Rights Regimes**

Author: **Huiyan Zhang**, *Carnegie Mellon/ Catolica Lisbon*

This paper investigates characteristics of patents involved in infringement lawsuits in weak intellectual property rights (IPR) regimes. Weak IPR regimes usually feature weak patent enforcement, such as relatively low level of compensation to infringement loss or damage awards being capped by an upper bound. I build a dynamic model to show how these low-enforcement features lead to patterns of litigated patents that are not documented in the Western countries. I compile a new dataset comprising 17,331 Chinese litigated patents and their counterparts- 306,898 non-litigated patents. I find that valuable patents are less likely to be litigated than patents with lower values among invention patents while this pattern does not hold among utility models- the type of patents inferior to invention patents. I also document that China's patent infringement litigation rate is extremely low by international standards, and it has been decreasing sharply over time. Litigated patents tend to concentrate in technological areas and industries in which litigation rates are relatively low in Western countries. These empirical patterns suggest that weak IPR regimes might create a "lemon market" for patent protection in which truly valuable patents are "crowded out" by their counterparts with lower value. Enhancing patent enforcement by eliminating the cap to damage awards might be a feasible solution.

TIM: **Partners' Litigation History and Collaborative Engagement**

Author: **Dutt Dev Harsha Tadikonda**, *Indian School of Business*
Author: **Hugo Leenders**, *U. of Colorado, Boulder*

This paper examines the role of partnering firms' litigation experience on their alliance scope decisions. Prior alliance research has not devoted systematic attention to the interplay of competition and cooperation and its implications for partnering firms' alliance design choices. In this study, we attempt to fill this theoretical gap by unpacking partnering firms' patent litigation activities as a novel dimension of experience that has not been considered in previous alliance research. We suggest that partnering firms' litigation experience will be negatively associated with their choice of a broad scope alliance, owing to the knowledge spillover risks that attend such collaborations. We also suggest that the competitive concerns induced by litigation experience will diminish insofar as partnering firms share dyadic experiences, such as common collaborative and technological experiences. Empirical analyses using a sample of R&D agreements in the biopharmaceutical industry furnish evidence for our theory.

TIM: **The Impact of Socioemotional Factors on Litigation Decisions for Family Firms**

Author: **Patrick Martin Smith**, *Bocconi School of Management*

This study investigates the impact of socioemotional influences on a firm's innovation strategy. By examining a family firm's propensity to file patent oppositions, this research is able to identify the effect of non-economic, affect related influences such as the perpetuation of family control and identity on patent dispute negotiations. Results show that family firms with lower levels of family control file more patent opposition lawsuits than family firms with high levels of family control and non-family firms. Furthermore, eponymous family firms are more likely to file patent oppositions than non-eponymous family firms and non-family firms.

TIM: **The Effects of Foreign Patent Litigation on Firms' Patent Strategies**

Author: **Chenqian XU**, *Xiangtan U.*
Author: **Zhu YAO**, *Hunan U.*

The internationally orientated market leads to a surge of cross-border patent disputes that can change the patent strategies of accused firms substantially. This paper investigates the effect of foreign patent litigation on corporates' subsequent patenting strategy by using U.S. patent infringement lawsuits in which Chinese public firms act as defendants from 2010 to 2018. We find that the experience of foreign patent litigation increases the accused firms' subsequent patent filings relative to non-litigated firms, and those litigated firms are reluctant to file patents in unfamiliar technological classes while prefer to patenting in original technology domains. We further find that such a promoting impact is more pronounced for firms in ICT industry rather than firms in pharmaceutical industry. We interpret the increase in patent output of accused firms as a result of their stronger incentives and more learning effect from foreign patent litigation, and their tendency toward known-class patents relates to costs and risk management. Our paper enriches the literature on patent litigation and offers novel empirically evidence on the patent litigations' effect on patent strategies.

Technological Change Track: Redefining and Advancing Innovation Metrics

Session Moderator: **Holmer Kok**, *Stockholm School of Economics*

TIM: **Novelty or Noise? The Hunt for the Perfect Patent Novelty Metric**

Author: **Holmer Kok**, *Stockholm School of Economics*
Author: **Kristina Dahlin**, *Copenhagen Business School*

Why are there so many measures of patent novelty? Novelty is a central concept in innovation studies but the way it is measured is in a state of confusion. We examine patent-based novelty measures and find that they are rarely grounded in theory or empirically verified. Even though all measures are based on the same data, they use different parts of patents, often constrain which patents they include in comparisons, and frequently impose conditions with unknown effects. Not surprisingly, some measures are highly similar and correlated, while others are not at all. However, we presently do not know exactly why or how these measures differ. We need a better model of how patent data captures novelty to produce robust research with reliable results. Besides calling for external validation of measures, we propose a framework that makes explicit what reference data and decision model are used, and why, with the objective to guide the design of more valid novelty measures.

TIM: **Measuring Innovation and Complexity in Industry** ☯ 💻

Author: **Arash Hajikhani**, *VTT Technical Research Centre of Finland*
Author: **Scott Cunningham**, *U. of Strathclyde*
Author: **Lukas Pukelis**, *Public Policy and Management Institute*
Author: **Arho Suominen**, *VTT Technical Research Centre of Finland*

This paper establishes better linkages between classical and standard industry classification systems. It achieves these objectives by means of advanced methods from natural language processing applied to content from company websites. The study reports on measuring innovation and technological complexity of 96,921 medium-high and high-technology companies using Microsoft Academic Graph hierarchical topic modeling on companies' website content. This novel classification of industrial activity is linked to the European Classification of Economic Activities (NACE). The results highlight added granularity and linkages between NACE codes. Overall, the new classification showed in average 20% expansion on the existing NACE classification category. These overlaps suggest the presence of additional complexity to the current NACE classification definitions.

TIM: **The Measurement of Eco Innovation: Patents and Trademarks as an Indicator for Eco Innovation** 💻

Author: **Jörn Block**, *U. of Trier*
Author: **Marco Cucculelli**, *U. Politecnica delle Marche*
Author: **Darius Lambrecht**, *Trier U.*
Author: **Damiano Meloni**, *U. Politecnica delle Marche*
Author: **Tom Willeke**, *Trier U.*

The measurement of ecological innovation is important for understanding the role of innovation in the transition to a more sustainable economic system. Intellectual property (IP) information has often been used as a measure of ecological innovation output, as it offers a more objective, faster, and cost-effective method compared to surveys. However, the validity of this approach has not been fully established. This study aims to investigate whether patents and trademarks can accurately measure ecological innovation using a two-study design with samples from Germany and Italy. The results suggest that trademarks can be a useful indicator for varying types of ecological innovation, in contrast to patents which get mixed results. While policymakers can use trademarks as indicators of ecological innovation to make more informed decisions on incentivizing and supporting innovation in this area, investors can better target firms which align with their sustainability goals or criteria.

TIM: **A Textual Analysis Measure of Innovation Orientation** 💻

Author: **Renee C. Cornell**, *Rutgers U.*

Innovation is an important contributor to the success of any business, though traditional measures of innovation, such as R&D expenditures and patent counts or citations, are not a good measure of innovations in service industries. In this pilot study, I use text analysis via a semi-supervised machine learning approach to measure Innovation Orientation in a technology industry and a non-technical service industry. Innovation Orientation captures the importance an organization places on innovation and can be used as an overall measure of company innovativeness. The textual analysis measure of Innovation Orientation developed in this study shows a strong correlation to reported R&D expenditures for the technical industry and allows for measurement of innovation in the non-technical industry that has no reported R&D expenditures. Developing and validating a textual analysis method to measure innovation that does not rely on R&D expenditures or patents is a valuable contribution to the field because it allows for measurement of innovation in industries that utilize operational and service-based innovations that are not quantifiable by these measures.

Competencies, Workability, and Employability

Session Moderator: **Miikka J. Lehtonen**, *Rikkyo U. College of Business*

CAR: **Career Competencies: A Systematic Review and Future Research Agenda**

Author: **Surendra Babu Talluri**, *Indian Institute of Management, Lucknow*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*
Author: **Alexander Newman**, *Melbourne Business School, U. of Melbourne*
Author: **Jos Akkermans**, *Vrije U. Amsterdam*

Over the last three decades, career competencies have been widely studied as essential personal resources in the career management literature because contemporary careers have become more self-managed. Moreover, the conceptualization of career competencies has been mainly examined in the context of boundaryless careers. Yet, scholars have extended its application across different career contexts, such as intelligent, global, gig, and sustainable careers. To synthesize our knowledge of extant research on career competencies, we conduct a systematic literature review of 81 peer-reviewed articles from 1985 to 2022. In doing so, we identify how the construct of career competencies has been conceptualized and measured, review prominent theoretical perspectives adopted, and build a nomological network based on a self-regulation lens that showcases antecedents, outcomes, and boundary conditions. We further identify significant themes in existing scholarly research and locate promising research gaps to drive a future research agenda on career competencies.

CAR: **Investigating the Development of Intercultural Competence Through Humor as a Social Practice**

Author: **Miikka J. Lehtonen**, *Rikkyo U. College of Business*
Author: **Alexei Koveshnikov**, *Aalto U.*

In this study, we put forth a novel perspective to theorize on the development of intercultural competence. In contrast to most prior research, we posit that an effective intercultural competence extends beyond language skills and encompasses the ability to understand, navigate and engage with the norms and meanings prevalent in the host country's sociocultural environment. We argue that foreign nationals' sensemaking of their experiences of engaging with the host country's sociocultural environment through humor offers an effective and enlightening lens to understand the development of intercultural competence. We conceptualize the process of competence development as an experiential learning that emerges from engaging with the sociocultural environment of the host country via humor and then making sense of these engagements. Forty-four Nordic expatriates living and working in Tokyo, Japan were interviewed. Our findings reveal how intercultural competence advances through four practices of humor: from coping and disarming to more proactively mingling and shaping the social environment. Our study contributes to existing research by proposing humor as a lens for understanding the development of intercultural competence, showing that an engagement with the host environment via humor leads to the development of individual intercultural competence via experiential learning.

CAR: **Ethical Employability from a Spiritual Lens - An Integrative Approach**

Author: **Gunjan Joshi**, *Nyenrode Business U.*
Author: **Sharda Nandram**, *Vrije U. Amsterdam*

The paper focuses on understanding the interplay of spiritually driven self, agency, and context. The ability of an individual to overcome negative career shock and enhance their employability is largely a function of their career anchor and self-concept. Also, the research on workplace spirituality confirms that spiritually driven individuals value their work more, and their efforts positively support organizational performance. This paper introduces the spirituality paradigm to the career literature by explaining ethical employability from the spirituality lens. Following the integrative approach to ethical employability, we propose a conceptual model to explain spiritually driven ethical employability both from an agency (career identity) and context perspective (workplace spirituality). The authors then validate the proposed conceptual framework with the help of Qualitative data from 18 interviews collected from participants working in a Dutch home-care organization- Buurtzorg Nederland. Atlas.ti software was used to code the data and do the qualitative analysis. The study is the first to assess ethical employability as an outcome of spiritually driven agency and context. The qualitative approach used in the study helps in a deeper and better understanding of the proposed relationships, thereby developing the existing theory on value frameworks of spirituality from individual and organizational perspectives.

CAR: **Two Birds with One Stone? The Impact of Entrepreneurial Self-Efficacy on Workability and Employment**

Author: **Yarid Ayala**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Aysegul Karaeminogullari**, *Pontificia U. Javeriana*
Author: **Jose Ernesto Amoros**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Jaime Andrés Bayona**, *Pontificia U. Javeriana*

Entrepreneurial self-efficacy (ESE) is essential for entrepreneurial success. Entrepreneurship scholars have suggested broadening its scope to analyze its effects in populations other than entrepreneurs. Drawing upon self-efficacy theory, we propose that ESE predicts employability via workability. Furthermore, we propose that work-from-home hours and occupational type (white collar vs. blue collar) are boundary conditions. Adopting a panel study design, we tested our hypotheses within a sample of employees (N = 681). Data were collected between July (T1) and August 2020 (T2). Linear regression analyses showed that ESE predicts employability through workability and this relationship is moderated by work-from-home hours and occupation type. We discuss the implications of adopting entrepreneurial lenses to understand the link between entrepreneurial behavior and career success outcomes in general employee populations, and the ontological relationship between ESE and our criteria. Finally, we offer recommendations for practitioners to improve workability and employability in the "new normal."

Identity and Identification in Careers

Session Moderator: **Sherry E. Moss**, *Wake Forest U.*

CAR: **Fearing Power Loss in Late Adulthood: A Leader Identity Perspective**

Author: **Laura Guillén Ramo**, *U. Ramon Llull, ESADE Business School*

What happens when senior managers fear they will lose leadership power close to retirement? In this paper, we explore how older leaders react to possible power loss, and the consequences it has for their self-concept. We bridge the identity literature with personality research to suggest that the fear of losing power is anxiety-provoking work, but that not everyone will react similarly. In three experimental studies, we show that high (vs. low) fear of power loss have different consequences depending on individuals' Type-A personality. High Type-As reduced their leader identity salience and experienced more negative affect when they fear losing power. Moreover, under high fear of power loss, individuals high (vs. low) in Type-A self-enhanced and derogated others more. When given the opportunity to self-symbolize, high Type-As were more likely to do so than individuals low in Type-A. However, contrary to our expectations, when fear of power loss was high, self-symbolizing (vs. a control condition) did not boost their leader identity and did not reduce their claims of social superiority. We derive theoretical and practical implications from these findings.

CAR: **Depleting Or Enriching? Effects Of Identification With Multiple Jobs On Jobholders And Partners**

Author: **Sherry E. Moss**, *Wake Forest U.*
Author: **Arran Caza**, *U. of North Carolina, Greensboro*

Multiple jobholding is overwhelmingly portrayed as a depleting strain on individual resources, yet the empirical evidence shows more equivocal effects. Some studies even suggest enriching effects from multiple jobholding. We draw on role theory and identity theory to suggest that it is the level of identification with each job which determines whether multiple jobholders and their romantic partners will experience depleting or enriching outcomes from this job arrangement. The results from our multi-source data suggest that higher identification across multiple jobs ("plural identification") is positively associated with the multiple jobholder's job satisfaction, engagement, and well-being, and negatively associated with emotional exhaustion. Experienced enrichment across jobs mediates the relationship between plural identification and these outcomes, while conflict does not. Moreover, we found that plural identification has a positive association with romantic partners' perceptions of social support, also mediated through enrichment. However, plural identification had simultaneous and opposite effects on partners' perceptions of relationship quality. Specifically, plural identification was positively associated with relationship quality through enrichment, but it also had a negative direct effect. Implications for theory and practice are discussed.

CAR: **Who am I? Identity Reconstruction Following a Major Health-Related Career Shock**

Author: **Pamela Suzanne**, *UdeSA*
Author: **Viktoriya Voloshyna**, *York U., Canada*

The paper explores identity reconstruction in response to a major health- related career shock. In-depth case study and interpretive phenomenological methods are used to allow for deep reflective self-analysis of post-career shock stages. We analyze the identity processes a Chief of Human Resources of a multinational firm experienced after being deprived from his main working abilities as a result of a brain stroke. Our findings propose new coping responses that may allow individuals to escape a diminished work identity: identity shedding and identity implanting. Throughout the paper, we identify post-shock identity stages and processes, and the role of identity internalization and relational recognition as crucial in the reconstruction process.

CAR: **Multicultural Identities and Career Preferences**

Author: **Lee Martin**, *U. Of Sydney*
Author: **Jennifer Hui-Han Gao**, *U. of Melbourne*

Growing up at the interface of Eastern and Western cultural values, 1.5- and second-generation Asian immigrants are currently one of the fastest growing population groups of English-speaking societies. While Asian immigrants and their descendents are stereotyped as preferring traditional careers that are stable and high-status, in fields such as medicine and law, this could be shifting in 1.5- and second-generation immigrants who may identify more with Western values. Yet we know very little about how career preferences may be shaped by one's multicultural identity. In this qualitative study, grounded in acculturation theory, we explore how the career orientations (preferences) of ethnic Chinese-Australian professionals are influenced by their multicultural identity. We identify multicultural identity patterns and examine how they interconnect with multiple career orientations. Informants seek to balance or experience tensions between cultural values underpinning their career orientations, which sometimes diverge from their multicultural identity pattern. We discuss how these research findings advance theory on multicultural identity, career orientations, and more broadly, the vocational behavior of Asian migrants in Western societies.

Sustainable Careers

Session Moderator: **Beatrice Van Der Heijden**, *Radboud U. Nijmegen*

CAR: **Career Sustainability: A Critical Review and Agenda for Future Theory and Research**

Author: **Gerard Callanan**, *West Chester U. of Pennsylvania*
Author: **Jeffrey Greenhaus**, *Drexel U.*
Author: **Gary N. Powell**, *U. of Connecticut*

Career sustainability has been broadly viewed as providing individuals with positive career experiences over the long term. Although scholars have identified a wide variety of experiences that represent a sustainable career, we focus on health, happiness, and productivity (HHP) as the core components that capture those positive career experiences. In viewing career sustainability as the extent to which individuals experience HHP at work over the course of the career, we distinguish these three core experiences from other positive career attributes and experiences that can contribute to HHP but are not central to the meaning of career sustainability. We recommend that the measurement of the sustainability of a career be based on repeated assessments of HHP over a period of time in which individuals experience a potentially disruptive career shock or personal change. We also suggest that scholars develop and test a model of career sustainability that incorporates the types of change that are potentially disruptive to ongoing HHP, the process by which individuals appraise the nature and implications of a change, the actions individuals take to prevent the change from substantially disrupting their continued HHP, the resources individuals need to make accurate appraisals and take effective actions, and the role of the work-home interface in the maintenance of HHP over time.

CAR: **Building a Sustainable Career: A Conservation of Resources Approach**

Author: **Surendra Babu Talluri**, *Indian Institute of Management, Lucknow*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*

The sustainable careers literature has thrived in recent years, led by diverse conceptualizations and empirical investigations. We adopt a person-centred approach to investigate how individual factors of working professionals contribute to achieving career sustainability. We draw on the conservation of resources (COR) theory to propose that personal resources (e.g., career competencies) and organizational resources (e.g., organizational career management practices) jointly influence career sustainability by promoting proactive career behaviors. We collected two-wave data from a sample of 414 full-time working professionals employed in different organizations in India. The results suggest that career competencies positively impact career sustainability. This relationship manifests through proactive career behaviors. Further, these relationships become stronger with the support of organizational career management practices. The current study findings contribute to the sustainable careers literature by enhancing our understanding of how personal and organizational resources contribute to crafting a sustainable career.

CAR: **The Interplay Between Supplementary and Complementary Fit in Predicting Career Sustainability**

Author: **Wouter Vleugels**, *Deakin U.*
Author: **Jana Deprez**, *KU Leuven*
Author: **Jeroen De Jong**, *Radboud U. Nijmegen*
Author: **Beatrice Van Der Heijden**, *Radboud U. Nijmegen*

In recent years, the notion of sustainable careers (i.e., careers characterized by productivity but also good health and well-being) has gained much prominence in discussions among management and organizational scholars, employees, and employers alike. The extent to which the employee fits with the organization is considered to be a key determinant to career sustainability. Supplementary and complementary fit are to be seen as two key forms of fit in the PE fit literature, and we propose that these two forms of fit jointly contribute to happy, healthy and productive employees. Therefore, the aim of this paper is to empirically validate one of the key tenets of the PE fit literature, which is the idea that the combination of both high levels of supplementary and complementary fit (called "optimum fit") produces better career sustainability-outcomes than either one of these forms of fit in isolation. We apply polynomial regression and response surface analysis in a) a study using two waves of data (Study 1, N sample 1=112; N sample 2=89) and b) a diary study (Study 2, N=83) to test our hypotheses. Our pattern of results indicates that supplementary and complementary fit simultaneously predict the desired outcome indicators of career sustainability, which validates the importance of both forms of fit. However, optimum fit generally produces the best outcome in terms of a happy, healthy and productive work experiences.

CAR: **Building Sustainable Careers: The Case of Multiple Job Holders**

Author: **Chayanika Bhayana**, *Indian Institute of Management Calcutta*
Author: **K V Gopakumar**, *Indian Institute of Management, Ahmedabad*
Author: **Neharika Vohra**, *Indian Institute of Management, Ahmedabad*

With the increasing interest around multiple job holding (MJH) or moonlighting, where individuals hold one or more jobs in addition to a primary job, the sustainability of such work arrangements from a career perspective has come into question. The present study examined the experiences of multiple job holders (MJHs) and identified how they strived towards building sustainable careers. Based on semi-structured interviews with twenty-five MJHs, this study noted three different strategies employed by MJHs to build sustainable career models – (a) proactively leveraging time and resources by developing networks, seeking out diverse opportunities, investing in building their skills, (b) constantly negotiating boundaries between work, side work and non-work, and (c) enabling opportunities for recovery experiences through side work that facilitated autonomy, control, and mastery. Implications for individual and organizational career management practices are discussed.

In this multidisciplinary symposium, we bring together researchers from different fields (e.g., management, psychology) investigating how platform workers experience working on online labor platforms and how such experiences shape their careers. Specifically, we are interested to understand better the implications of platform work for individuals' career development (e.g., social integration) and career-related success factors (e.g., algorithmic competencies). The four contributions cover diverse methodological approaches (i.e., qualitative interviews, quantitative surveys, field notes, and secondary trace data). They are using, for instance, retrospective and longitudinal research designs focusing on platform workers working online and offline on different platforms in Asia, Europe, and the US.

Dyadic Conflict Processes

Session Moderator: **Zhenyu Yuan**, *U. of Illinois at Chicago*

CM: **Do We Know Who Has Conflict with Us? An Investigation of Dyadic Conflict and Conflict Metaperception**

Author: **Zhenyu Yuan**, *U. of Illinois at Chicago*
Author: **Jack Ting-Ju Chiang**, *Peking U.*
Author: **Zheng Wang**, *Shandong U.*

Despite its important role in a multilevel account of conflict, dyadic conflict has received scant research attention. To advance a comprehensive understanding of interpersonal conflict, we employ a dyadic theoretical, methodological, and analytic lens to explore a series of important questions pertaining to the relational nuances of dyadic conflict. To test our dyadic model of conflict, we collected data from student project teams (Study 1) and intact work teams (Study 2). Applying the social relations model, we found that a decent amount of the variance in task and relationship conflict can be attributed to the dyad level, suggesting dyadic conflict is a distinct phenomenon that warrants scholarly attention. Moreover, our evidence does not support strong dyadic reciprocity, indicating dyad members may not completely see eye to eye regarding their conflict. Our analyses of conflict metaperceptions further highlight that dyad members' relational insights about their partner are largely biased by their own conflict experiences. They are also inaccurate as they have little to do with how their partner feels. Of note, dyadic trust may help weaken dyad members' bias. In mapping out the distorted and misaligned nature of dyadic conflict perceptions, the current research complements the multilevel understanding of conflict by filling in the theoretical void at the dyad level. As the conflict literature stands at a crossroad, these critical insights about dyadic conflict can help inform scholarly attempts to reconceptualize conflict and redirect the next stages of conflict research.

CM: **Impact of Servant leadership on Innovative work behavior: Mediating role of five conflict management**

Author: **Qamaruddin Maitlo**, *Sukkur IBA U.*
Author: **Ishfaque Ahmed Lashari**, *Wuhan U. of Technology*

Conflict is inevitable, more pervasive today than ever, and resolving it has never been more difficult. Poor conflict management can increase absenteeism and costly turnover, decrease teamwork, creativity, productivity, and profits, and may lead to costly employee litigation. Researchers have studied how leadership styles relate to conflict management in organizations, but little is known about how servant leadership relates to conflict management in the workplace. Every new idea primarily originates in the minds of individuals which when implemented successfully contributes to an overall organizational innovation. Hence, fostering employees' innovative work behavior (IWB) is prudent for all those organizations looking to enhance their innovative outcomes. This research aimed to offer an insight by investigating different underlying mechanisms and the boundary conditions through which the servant leadership (SL) affect employees' IWB in the context of Banking Sector of Pakistan. Conflict management styles (CMS) were identified as mediators in the relationships of servant leadership style and employees' IWB. Relying on positivist research paradigm in conjunction with deductive reasoning approach and a cross-sectional design, this research employed the quantitative research methodology with a survey approach. Self-administered survey was executed in the Banking Sector of Pakistan. Dyadic data was collected from 357 pairs (subordinate-supervisor) working in different departments of the Banking Sector of Pakistan. Structural Equation Modeling (SEM) with Smart-PLS was employed to analyze the posited relationships among the constructs of proposed conceptual model. Empirical findings of this research revealed that majority of the hypothesized relationships were significant. All the direct hypothesized paths, leadership style and conflict management styles had a significant positive affect on employees' IWB. Conflict management styles mediates the relationship between SL and employees' IWB. This research highlighted the relative importance of servant leadership style for enhancing the employees' innovative work behavior

CM: **Intra-individual Psychological Experience and Dyadic Interaction during Task Conflict Episode**

Author: **Mengting Su**, *Mahidol U.*
Author: **Parisa Rungruang**, *College of Management, Mahidol U.*
Author: **Xiao Chen**, *National Institute of Development Administration (NIDA)*

Intragroup conflict is often conceptualized as a shared experience at the group level, overlooking the role that individual asymmetries play in determining conflict effects. This study looks beyond predicting outcomes by perceived conflict type, and explores how unpacking conflict expression can explain task conflict's inconsistent outcomes. This study adopts a multi-theoretical perspective that integrates individual asymmetries, cross-level influences, dynamics, and feedback loops. An intra-individual psychological experience and dyadic interaction during task conflict model is proposed in order to clarify a mechanism by which one's task conflict expression interacts with another one's resolution. Conflict expression is conceptualized as a two-sided construct (mild vs. intense), and is theorized to influence his peer's information acquisition and sharing after being psychologically experienced. The intrapersonal cognitive sense-making processes and affective reactions work as one's own conflict perceptual filters to decide on his behavioral outcomes. A cycle in which an individual and his peer's expression influence each other's resolution is also proposed. The model explicates how activities on move timescale act as endogenous factors to drive conflict dynamics in a feedback loop system. Overall, taking a closer look at how people express conflict and psychologically experience conflict helps us understand why conflict spirals escalate or de-escalate.

CM: **Are Our Goals Aligned?: The Impact of Positive Goal Interdependence on Nonnative Speaker and Native**

Author: **Regina Kim**, *Fairfield U.*
Author: **Jimena Ramirez-Marin**, *U. of Seville*
Author: **Kevin Tasa**, *Schulich School of Business*

Organizations are increasingly seeking foreign talent in order to stay competitive in the marketplace and the number of nonnative speakers in the organizations are increasing. Using two studies with diverging methodologies, we explore 1) whether nonnative speakers experience less satisfaction with conflict process and relationship with their native counterpart compared to nonnative counterpart, and 2) whether cooperative-competitive goal interdependence moderates these relationships such that perception of cooperative goal interdependence with native speakers alleviate nonnative speakers' dissatisfaction with conflict process and relationship. Study 1 utilizes critical incident recall methodology to examine nonnative speakers' satisfaction with conflict process and relationship. In study 2, data were collected from a face-to-face simulation with a random-assignment design. Results showed that nonnative speakers who interacted with native speakers experienced less satisfaction with conflict process and relationships compared to nonnative speakers who interacted with other nonnative speakers. Furthermore, cooperative goal interdependence moderated the relationship between Nonnative-Native Speaker interaction (NNS-NS) and satisfaction with conflict processes and relationships such that perception of cooperative goal interdependence increased nonnative speakers' satisfaction with conflict process and relationship with native speaking counterparts. The present research offers new insight into how nonnative speakers experience conflict with native speakers in the workplace and suggest that perception of cooperative goal interdependence can help mitigate conflict dissatisfaction of nonnative speakers in conflict situations with native speakers.

Participant: **I-Heng Wu**, *U. of South Alabama*

Envy seems to be almost inevitable emotion for human and workplace is full of envy eliciting event. With its prevalence in daily life and recently increased scholarly attention (Duffy et al., 2021), this symposium aims to produce a comprehensive understanding of envy and investigate conditions and characteristics that impact how people express and respond to envy. The set of papers explores the enactment (e.g., inferiority, social dominance orientation), outcome (e.g., harming), reaction (e.g., citizenship behavior, interaction avoidance behavior), and measurement of envy. They empirically test this across different contexts (e.g., supervisor-subordinate, teammates) and for different targets (the envious, the envied). In addition, by introducing potential moderators that might mitigate the enactment of envy and buffer the negative impacts of envy (e.g., pre-existing trust), this symposium comes up with practical suggestions for managers and workers to "reduce the pain and discrepancy envy brings" (Duffy et al., 2011, p. 34). This also aligns with the Academy of Management 2023 theme of "Putting the Worker Front and Center."

Reflexive Praxis

Session Moderator: **Jennifer Manning**, *Technological U. Dublin*

CMS: **A Performative CMS: Developing a Critical Management Pedagogy as Intellectual Activism Praxis**

Author: **Jennifer Manning**, *Technological U. Dublin*

In this paper, I take Contu's (2018; 2020) call for a performative turn in CMS into my teaching as a form of intellectual activism praxis. I problematize management learning and education in regard to perpetuating inequalities and offer a critical management pedagogy as a form of intellectual activism praxis to help infuse management education with a critical and socially conscious awareness. This paper is a reflexive account of the development of my critical management pedagogy and an analytical discussion weaving together the practice of a critical management education with intellectual activism. I argue that business schools need to question the relationship between neoliberal capitalism and our global epoch of crisis and uncertainty, and as management educators we must consider how we might inform this relationship. In our teaching in the neoliberal business school, we are often complicit in practices and institutions that reproduce economic and environmental exploitation, White supremacy, heteronormativity, and colonial and patriarchal relations. Inspired by Freire's (1968; 1973) critical pedagogy, I developed a critical management module that was rooted in the everydayness of students lived experiences in our epoch of crises and uncertainty to try engage students critical and social consciousness by providing them with a space to think critically about the social, political and economic phenomena that shape individuals and societies; encouraging them to create alternative versions of what is possible.

CMS: **Nikana' Lulkwik (Leadership)**

Author: **Jeff Ward**, *Membertou First Nation, Heritage Park*
Author: **Kristin Samantha Williams**, *Acadia U.*
Author: **Heidi Weigand**, *Dalhousie U.*

Indigenous perspectives remain marginalized due to the legacies of colonialism and ongoing systemic racism and traditional (Western) management theories continue to dominate management practice. This paper offers a decolonizing perspective at the intersection of management education and Indigenous ideas and traditional wisdom. As part of a larger project looking at the history of management education in Canada, this paper reflects on the negligence of management education to consider Indigenous ways of knowing, in hopes that it might inspire a more inclusive future practice.

CMS: **Intersectional Leadership in the Organization: A Systematic Literature Review and Conceptual Model**

Author: **Eunbi Sim**, *U. of Georgia*
Author: **Laura L. Bierema**, -

Intersectional leadership (IL) is an emancipatory, transformative form of leadership, which appreciates intersectionality in its enactment. IL promises to confront inequity and injustice and provides a useful tool to understand the complexity in subordinated leadership experiences of multiply-marginalized, historically excluded (MMHE) groups stemming from interlocking systems of oppression. The purpose of this study is to explore how IL is enacted in organizations. We systematically reviewed 55 empirical studies on IL in the organization and classified the literature using Choo and Ferree's (2010) framework that proposed three types of practicing intersectionality research—group, process, and system-centered. We found that IL studies have been dominated by a group-centered approach, which focused on the leadership experiences of individuals from MMHE groups and contributing factors impacting their leadership experiences. We also identified the tension between "fixing the oppressed self" and "fixing the oppressive system" in the studies from the group-centered approach. A few IL studies from the process-centered approach illuminated structural, relational, and dynamic processes in IL. The emergence of intersecting identities as a double-edged sword and ongoing negotiation, navigation, and (trans)formation were the characteristics of IL. Based on the results, we proposed a conceptual model for the enactment of IL in the organization. We concluded with a call for illuminating leadership as a promising process to achieve organizational social justice from an intersectional perspective.

CMS: **Violence & Afghan Women: Invasions, Interventions, and Mobilization - A Call for Reflexive Engagement**

Author: **Fahreen Alamgir**, *Monash U.*
Author: **Saleem Saha**, *ARDHO*

In this paper, we reflect on our experience of working on projects focussed on managing the mobilization of Afghan women in 2004-06 after invasions by the Allied Forces in 2002. Here we examine whether we have the capacity to (re)engage with their conversations and to interpret and translate what they told us about the war, invasions, and the 'relational' interventions organized by the Allied Forces and the UN, involving state-owned donor agencies, and international NGOs. We situate our understandings within the situated discussions of transnational feminist scholars on South Asia. Influenced by Nagar, our analytical method considers the situated solidarity that radicalizes our vulnerability, and thereby we reflect on and relate to what we heard. We argue that Transnational Feminist Perspectives (TF) as a field of knowledge demonstrates the politics of location for categorization and thus tends to create research sites on the basis of epistemic demand for representation. However, such practices can also enable a form of exclusion. We argue that radical vulnerability as the way of ethical engagement demands: (i) our capability to listen and understand the differences in 'others' realities through the feeling of being accountable; (ii) our understanding of reflexive engagement entails critical reflexive analysis; and (iii) thus we connect and conceptualize our learnings to create a space where the experience of death, disability, hunger, and starvation cannot possibly be theorized, but can be discussed. The value of listening is relevant for our research to connect and build crossborder solidarities by placing the feeling of being answerable and accountable at the core. Keywords: Violence, Afghan women, Transnational feminist Perspective, Afghanistan, Radical vulnerability

Researching Memory Work: Challenges and Opportunities

Host: **Hamid Foroughi**, *U. of Essex Business School*
Panelist: **Davide Ravasi**, *UCL School of Management*
Panelist: **William Foster**, *U. of Alberta*
Panelist: **Micki Eisenman**, *Hebrew U. of Jerusalem*
Panelist: **Mairi Maclean**, *U. of Bath*
Panelist: **Matthew CB Lyle**, *U. of Colorado, Colorado Springs*
Facilitator: **Bruna Brito**, *Gustavson School of Business, U. of Victoria*

This symposium aims to strengthen the academic community on organizational memory studies, . It will serve as a forum for academics interested in organizational memory studies to meet and discuss possibilities for future research. Six panelists with experience in researching collective memory will take part in a roundtable discussion focused on challenges and opportunities in the study of memory work and organizing. Memory work is defined as a set of practices through which the past is constructed, reconstructed, deconstructed, and destructed (Coraiola, Foster, Mena, Foroughi & Rintamäki, 2023). In particular, the symposium will provide a space where early career researchers can ask questions, exchange information, and network with more experienced researchers. This is particularly important given that the field of organizational memory studies is still young and opportunities for collaboration need to be fostered (Rowlinson, Booth, Clark, Delahaye, & Procter, 2010). Some core topics we expect to cover during the symposium include: i) how memory connects to related concepts such as history, legacy, and traditions, ii) how specific theories have limited our understanding of memory work, iii) how an open-systems view offers an alternative approach to the study of memory and organizing, and iv) what are the main challenges and opportunities for future research in memory work in and around organizations. The workshop can also be of interest to researchers from other areas such as institutional theory, organizational identity, and corporate social responsibility.

Artificial Intelligence (AI), Automation, & Labor

Session Moderator: **Ann-Katrin Eicke**, *U. of Muenster*

CTO: **Are Our Jobs at Risk? Estimating the Effect of Artificial Intelligence on the Swiss Labor Market**

Author: **Timon Jaeggi**, *AI Spaces and U. of St. Gallen*
Author: **Benjamin Schaefer**, *U. of St. Gallen (HSG)*
Author: **Christian Dietzmann**, *AI Spaces and U. of Leipzig*
Author: **Reinhard Jung**, *U. of St. Gallen*
Author: **Ulrich Matter**, *U. of St. Gallen (HSG)*

While recent advances in artificial intelligence (AI) are already contributing value to the economy and society, fears of massive job losses are increasingly coming to the forefront of political debate. Against this backdrop, this paper sheds light on the relationship between AI technology and potential workforce vulnerability. We developed a novel measure to quantify the potential exposure of occupations, considering unaffectedness, substitution, and complementarity effects, incorporating a task-technology fit perspective. We contrasted the measure with data on employment, education, and wages in Switzerland to examine the impact of AI at the aggregate level. The results indicate that about 10 percent of the Swiss workforce is strongly affected by AI substitution due to their specific task content. In contrast, AI can complement 61 percent of the Swiss workforce in about half of their current tasks, eventually increasing individual performance. Occupations in the finance and insurance and professional, scientific, and technical services sectors can benefit most from the complementary effects of AI. In contrast, occupations in the accommodation and food services sector are most affected by AI substitution. In addition, we found substitution to be most prevalent in low-skilled occupations, requiring lower levels of education and inhibiting lower wage levels.

CTO: **Substituting or Complementing Human with Artificial Intelligence? A Carnegie View on Solution Search**

Author: **Ann-Katrin Eicke**, *U. of Muenster*

Organizations increasingly adopt Artificial Intelligence (AI) altering employees' solution search behavior. In fact, AI may exacerbate or mitigate key search outcomes such as distance and effort according to prior work. We reconcile prior theoretical propositions and extend them by theorizing about the nature of the search agent (AI as a substitute vs. complement) and the underlying task setting (well- vs. ill-structured). We categorize four types of AI with different degrees of bounded rationality required to search that decide upon the effect of AI for search outcomes. To account for the interdependencies of these four types across time, we then adopt a process perspective. In doing so, we reveal how splitting search processes between different human-AI combinations helps to maximize the potential of AI for individuals' search behavior. Overall, we contribute to the Carnegie School concept of search by extending its assumptions to emerging non-human, 'intelligent' agents such as AI.

CTO: **Shifts in Hiring During an Era of Evolving Technology & Automation: Lessons from the Media Industry**

Author: **Matthew Weber**, *Rutgers U.*
Author: **Allie Kosterich**, *Fordham U.*

The news media industry has continued to evolve through a sustained period of disruption and adaptation. In recent years, one of the central challenges for larger news media companies has been the integration of computation skills and technical knowledge into the routines and day-to-day work of media. This study approaches the study of shifting skills in organizations through an in-depth analysis of the job titles and skills that comprise modern newsrooms. Computational social science methodology is applied to an analysis of a large-scale dataset tracking job advertisements across industries from 2010 to present day. K-means clustering and other computational approaches were used to identify trends in job skills, as well as the corresponding job titles. The findings from this analysis show the clear and steady influx of computational, data science and programming skills into journalism job descriptions. In many cases, traditional jobs such as editors and reporters, have started to incorporate technical skills as a core representation of the identity of those jobs. In other cases, entirely new job roles, such as news analysts or big data researchers, have become a more integral part of the newsroom workforce.

CTO: **From Menial Workers to Knowledge Producers: An Apparatus Perspective on AI in Agriculture**

Author: **Tomislav Karacic**, *KIN Center for Digital Innovation, Vrije U. Amsterdam*
Author: **Anastasia Sergeeva**, *Vrije U. Amsterdam*
Author: **Marleen Huysman**, *Vrije U. Amsterdam*

The use of artificial intelligence (AI) can transform work of knowledge intensive professionals in unexpected ways. Yet empirical insights into consequences of introducing AI into the work of more menial workers are limited. During a 21-month field study of introducing machine learning (ML) models for seed evaluation and sorting, we trace how the introduction of ML became consequential for the practices of seed sorters – menial workers tasked with removing seeds that will not grow into healthy plants from a seed bag. We find that in the new apparatus of seed evaluation and sorting with ML, seed sorters surprisingly became more central actors and important knowledge producers in the organization. In contrast to the previous studies of AI, this change could not be explained as automation nor augmentation of work. While seed evaluation and sorting were fully automated, in the new apparatus a novel way of seeing and understanding the seed emerged, which led to seed sorters producing entirely new knowledge valuable for adjacent occupational groups. Our contribution is to emphasize how changes in apparatus lead to changes in phenomena, which in turn lead to role reconfigurations.

Digital Business Models

Session Moderator: **Dandan YE**, *U. of Nottingham, China*

CTO: **Toward a Sustainable Business Model in the Sharing Economy: The Role of Digital Resourcefulness**

Author: **Dandan YE**, *U. of Nottingham, China*
Author: **Martin J Liu**, *U. of Nottingham, China*
Author: **Jun Luo**, *U. of Nottingham, China*
Author: **Russa Yuan**, *U. of Nottingham, China*
Author: **Hing Kai Chan**, *U. of Nottingham, China*
Author: **Tiantian Zhang**, *Nottingham U. Business School China, U. of Nottingham Ningbo Chi*

The drastic collapse of sharing economies in the COVID-19 pandemic has intensified criticism of the sustainability of this business model (BM). This has brought a new sense of urgency for the sharing economy to search for a sustainable BM and truly fulfill its economic, social, and environmental values. However, prior studies have primarily focused on reactively reframing its sustainability claims and gaining sustainable legitimacy by aligning with institutional resources. Such a reactive defense assumption requiring abundant resources might not be applicable to a sharing economy with limited resources during a crisis. Resourcefulness—obtaining more resources proactively and creatively from less—provides a far more fundamental solution to enable the sharing economy to fulfill sustainable values. Drawing upon an inductive study of a co-work sharing company, which thrived in the post-pandemic period, we developed a framework termed "digital resourcefulness" to understand how the venture resourcefully brings, bears, and deploys resources. In particular, we critically traced three mechanisms: infrastructuring, re-imbricating, and harmonizing and developed a model to understand how to adapt a sustainable BM. Our findings shed light on the scholarship of resourcefulness, sustainable BM, and crisis management literature, and provide guidance to the sharing economy with respect to responding to crises.

CTO: **Concerts and the Digitization of Recorded Music (WITHDRAWN)**

Author: **Christian Peukert**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Franziska Kaiser**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Jörg Claussen**, *LMU Munich & Copenhagen Business School*

Over the last thirty years, the music industry has changed remarkably. Digitization has affected remuneration models, from sales of physical albums to online piracy and resulting in usage-based royalty income from streaming services. In this paper, we show that this is consistent with developments in the business models of recorded music. We quantify the relationship between artist income and concerts by studying the impact of live performances on demand for recorded music. Data from the online music service last.fm allows us to track individual-level listening and concert-going behavior. Canceled concerts provide a quasi-experimental setting to study the causal impact of exposure to live performances on attendees' listening behavior. We show that concerts lead to an increase in the probability of listening to the artist per week by 29 % and 51 % more weekly plays. We translate this into recorded music income as of before and during the era of online piracy, and after the arrival of music streaming services. We estimate that additional recording income accounted for 13 % of yearly concert gross in the CD era, whereas it accounts for 0.5 % of yearly concert gross in the streaming era. Our estimates explain both, the magnitude of increase during the piracy era, as well as the magnitude of decrease during the streaming era.

CTO: **Upgrading the Business Model? Crisis Prevention in Times of Digital Transformation**

Author: **Kevin Krause**, *U. of Siegen*
Author: **Sohaib Hassan**, *U. of Siegen*
Author: **Felix Simon Rudolf Becker**, -
Author: **Giuseppe Strina**, *U. of Siegen (D)*

This study examined the impact of the Covid-19 pandemic on small and medium-sized enterprises (SMEs) and the role of digital transformation in their survival and performance. Using ordinal logistic estimation, we found that digital transformation can be a performance-enhancing factor for SMEs during crisis situations. We also found that the overall business model affectedness of SMEs is negatively and significantly impacted by the crisis, and that the degree of digital transformation moderated the relationship between the business model and crisis performance in SMEs. These findings suggest that SMEs with higher business model affectedness tend to perform worse during the pandemic, and that digital transformation can support SMEs adapt, survive, and mitigate these negative effects during times of crisis. The results provide valuable insights for SMEs facing external shocks and underscore the importance of considering both the business model and digital transformation in crisis situations.

CTO: **Synergistic Innovation in Platform-Based Enterprise Innovation Ecosystem: A Fuzzy Perspective**

Author: **Chao Zhou**, *Beijing U. of Posts and Telecommunications*
Author: **Cong Sun**, *Zhejiang U.*
Author: **Sihan Li**, *Zhejiang U.*

The rapid development of Internet technology platform and organizational open innovation practice has put forward higher requirements for the establishment of symbiotic relationship among firms. Platform-based enterprise innovation ecosystem, as a favorable means of attracting vast and high-quality innovation resource, has been adopted by more and more firms. However, the high uncertainty of innovation participants, activities and even the ecosystem itself proposes great challenges to the innovation synergy within the system. In addition, the relationship among innovation participants breaks through the traditional "hierarchy-market" framework, which fails to explain the innovation behavior within a platform ecosystem and makes it difficult for the core organization to implement synergistic innovation mechanisms to improve participants' innovation performance. Based on data from 427 questionnaires, this study adopts fsQCA method of configurational perspective to explore how the synergistic innovation mechanisms of platform ecosystem works on participants' innovation performance and the corresponding contextual conditions. The results reveal seven combinations of system characteristics (openness, the intensity of indirect network effect, symbiosis intensity), organizational characteristics (the width and overlap of technological niche), and synergistic innovation mechanism, which consistently produce high participants' innovation performance. This paper explains the underlying mechanism of platform synergistic innovation, advances relevant research and provides theoretical introduction for both the founder and participants of platform-based enterprise innovation ecosystem.

Cross-Cultural Perspectives

Session Moderator: **Sabeen Imran Ahmad**, *King's College London*

DEI: **Who Benefits from HRM Professionalization? The Moderating Role of Gender (WITHDRAWN)**

Author: **Isabella Scheibmayr**, *U. of Salzburg*
Author: **Astrid Reichel**, *U. of Salzburg*

Professionalization aims at closure, i.e., having the monopoly protection of expertise for an occupation, on the labour market and in organizations. Role congruity theory suggests that the translation of professionalization into organizational closure and reaching board membership is likely to be moderated by gender at the individual and the occupational level. We test this proposition focusing on HRM, an occupation with a long history of professionalization attempts. Using a sample of 3,276 organizations embedded in 34 countries with varying professionalization levels between countries, results show that professionalization of HRM at the country level is positively related to closure in organizations. The positive relationship is weaker for female HR directors and high proportions of women in the HRM occupation in a country. Organizational closure, in contrast, is negatively related to board representation but increases the likelihood of board membership in countries with high proportions of women in the HRM occupation.

DEI: **Institutional Forces and Transnational Transfer of Diversity Management**

Author: **Sabeen Imran Ahmad**, *King's College London*

Informed by institutional and power/interest perspective, this paper analyses transnational transfer of diversity management practices to the context of Pakistan. Drawing findings from semi structured interviews conducted with diversity/HR professionals of 30 subsidiaries of multinational enterprises in Pakistan, this study indicates that presence of competent women in the labour force, business case, top management support and commitment, precise structure and effective functioning of subsidiaries' diversity/HR units and desire/pressure to gain legitimacy with global and local institutional environment are key institutional forces that play a vital role in transferring and adopting DM practices and initiatives. At the same time resistance from line managers & employee groups and lack of significant commitment of diversity/HR professionals are found to be the prominent opposing institutional forces which creates obstacles in adoption of diversity initiatives. It is argued that distinct institutional context of the host country (Pakistan) provides subsidiary actors with power capabilities with the help of which they facilitate and modify transfer of DM practices. This study makes both theoretical and empirical contributions. By combining insights of power and interest perspective with institutionalism, this study contributes to new knowledge within diversity management literature, especially in the domain of emerging economies.

DEI: **Advocating For Women on Boards in the UK and Norway: Framing Processes and Actor Positions**

Author: **Elena Doldor**, *Queen Mary U. of London*
Author: **Cathrine Seierstad**, *U. of South-Eastern Norway*

This paper examines the framing processes and the role of actors in the field of women on boards (WoB) spanning two decades in the UK and Norway. Drawing on social movements' literature, we adopt a frame analysis lens to examine the features of frames and the framing processes mobilized to pursue change for WoB in each national context. Empirically, we compare how different frames are leveraged to make the case for WoB under the guise of voluntary and compulsory policies, which reflect distinct liberal and radical approaches in the two countries which are characterized by different institutional contexts. In our analysis, we utilize multi-source secondary and primary data spanning two decades (including 161 interviews with key actors, 59 policy documents). Our contribution is twofold. First, by surfacing the structure of WoB frames, and how these frames have been mobilized, bent, and stretched in the UK and Norway, we extend framing literature by connecting the role of actors and their politicking processes to the broader political, national and institutional context in which they operate, having both a comparative and time trajectory approach. Second, we extend equality, diversity and inclusion scholarship by critically examining the politics, ideologies, contradictions and neglected voices in the WoB frames mobilized within each national setting.

DEI: **DEI in Dual listed Mining MNEs: A Fields Perspective on the Evolving Rhetoric and Reality**

Author: **Visalakshy Sasikala**, *Indian Institute of Management, Kozhikode*
Author: **Venkataraman Sankaranarayanan**, *Indian Institute of Management, Kozhikode*

This paper assesses the degree of convergence between dual-listed MNEs' stated posture (rhetoric) in the DEI issue field and the espoused practices (reality) in the mining industry exchange field over the period 2015 - 2021. We combine topic modelling and longitudinal qualitative content analysis of the sustainability reports of two global mining conglomerates with dual listing structure, Rio Tinto and Anglo American, alongside prevalent DEI regulations in the United Kingdom, Australia and South Africa to critically analyze the linkages between firms' rhetoric and reality and the inherent complexities of DEI from a fields' perspective. We identify three broad evolutionary phases emphasizing diversity (2015-2017), equity (2017 – 2019) and inclusion (2019 - 2021) respectively. Reality consistently lagged behind rhetoric in all three phases for both firms with Anglo American performing quite better than Rio Tinto. The study contributes to literature on fields and institutional theory as well as diversity management in international business while helping organizations and policymakers comprehend the dynamics within country-specific DEI fields and industry exchange fields for advancing DEI.

Theoretical and Empirical Advancements in Research on Disability and Leadership

Session Chair: **Duygu Biricik Gulseren**, *York U., Canada*
Session Chair: **Daniel S. Samosh**, *Queen's U.*
Discussant: **Mukta Kulkarni**, *Indian Institute of Management, Bangalore*
Presenter: **Nicola Glumann**, *U. of St. Gallen*
Presenter: **Amanda J. Hancock**, *U. of Regina*
Presenter: **Christine Anna Mihelcic**, *U. of Richmond*

Persons with disabilities encounter workplace barriers across the employment cycle (Bonaccio et al., 2020). While access to employment is often the focus of disability research, many barriers to disability inclusion persist after entering the workforce (e.g., Kulkarni & Gopakumar, 2014; Tompa et al., 2020). Considering approaches to mitigate these barriers, extant research highlights the relevance and significance of leadership in supporting disability inclusion in the workplace (Samosh, 2021; Stone & Colella, 1996). While the traditional view of leadership assumes that the relationship between leadership and disability at work is one way (i.e., leader influencing the outcomes of employees with disabilities), emerging studies demonstrate that leadership and disabilities have relationships in multiple directions. This symposium involves four paper presentations that showcase the top-down, bottom-up, and broader relationships leadership may have with disability at work. Focusing on the top-down influence, the first two papers examine the role of specific leadership styles (i.e., transformational and strengths-based leadership) on work ability and disability. Adopting a bottom-up lens, the third paper shares findings on how followers evaluate leaders with mental health-related disabilities. Lastly, presenting a broader perspective on leadership and disability, the fourth paper explores how entrepreneurs with and without disabilities demonstrate leadership in the adaptive apparel industry. Together, this symposium expands our knowledge and understanding of how leadership and disability are related.

Participant: **Michael Norton**, *Harvard U.*

This symposium includes four empirical papers that seek to advance knowledge about understanding institutional and interpersonal barriers to achieving gender equality. The first paper presents evidence of overrepresentation of women Nobel laureates in the media and explores how such disproportionate visibility can paradoxically put women at a disadvantage by negatively impacting award prestige and reducing support for diversity initiatives. The second paper explores gender disparities in the professional credentialing process in engineering and shows how these ultimately perpetuate the gender gaps in firms and professions. The third paper investigates how female leaders' usage of gender-stereotypical language gets them greater approval from others yet less compliance. Finally, the fourth paper explores how men's responses to gendered job association may represent a critical, yet relatively underappreciated, mechanism sustaining gender inequality and segregation. The next section provides a more detailed summary of each paper.

The Gender License Gap: Gendered Barriers in the Engineering Licensing Process

Disability

Session Moderator: **David J. G. Dwertmann**, *Rutgers U.*

DEI: **An Organizational Burden or a Pathway to Innovation? Disability Diversity in Manufacturing Teams**

Author: **David J. G. Dwertmann**, *Rutgers U.*
Author: **Stephan Alexander Boehm**, *U. of St. Gallen*
Author: **Kristie Lynne McAlpine**, *Rutgers U.*

Conceptualizing disability as a job-related dimension of diversity within organizations, we provide the first empirical examination of work unit disability diversity and its connection with innovation. We propose and test perspective taking as a boundary condition to explain when work unit disability diversity can result in greater implementation of ideas for improving work processes. Results, based on time-lagged and objective data in a sample of 7,037 employees from 425 work units of a large German automotive organization, largely support our arguments. We complement these findings with an experiment of 954 full-time German workers in which we show a positive effect of having a team member with a disability on idea generation, a necessary precondition for innovation. Together, our findings allow us to challenge the conventional framing of disability as a burden for employers. Rather, we theorize that disability can serve as a job-related dimension of diversity in the right context and, as such, has the potential to serve as a catalyst for positive outcomes that benefit the organization, such as work-design innovations.

DEI: **IO psychology as gatekeeper of power and privilege: A critical analysis and call to action**

Author: **Tanya Bilsbury**, *Saint Mary's U., Canada*
Author: **Lucie Kocum**, *Saint Mary's U., Canada*
Author: **Shripad G. Pendse**, *Sobey School of Business, Saint Mary's U.*

In this critical review, we present mainstream Industrial-Organizational (I-O) psychology as a gatekeeper of status quo power structures in society, and in academic and organizational settings. The persistent marginalization by mainstream I-O psychology of topics of concern to non-able-bodied white workers has caused tremendous human harm over the past century, and presents a major challenge for I-O psychology to support organizations to respond in an evidence-based way to the recent resurgence in public demand for social justice accountability in all spheres, including workplaces. Inspired by health research leaders in knowledge translation, we end by proposing a First-Voice-informed integrated knowledge translation framework for applying EDIA research to practice.

DEI: **'Being A Part or Being Apart: A Model Of Workplace Integration Of Schizophrenic Individuals'**

Author: **Afaf Khalid**, *Lahore U. of Management Sciences (LUMS)*
Author: **Jawad Syed**, *Lahore U. of Management Sciences*

Abstract: This study discusses how people with schizophrenia (SCZ) may feel efficacious and exercise human agency to deal challenging circumstances during workplace integration. Informed by salutogenic perspective and utilizing the information gathered through semi-structured interviews with seven cases of schizophrenia, associated three family members/ custodians, five psychiatrists/ clinical psychologists and two employers. The findings explain the underlying mechanism and process by which internal resources connect with external resources and enable SCZ individual to successfully integrate in work environment and identifies the general resistance resources (GRR) and specific resistance resources (SRR) which enhance the sense of coherence (SOC) of SCZ individuals enabling them to develop a coping mechanism for effective integration at workplace. This study contributes to the diversity and mental health literatures by explicating how the presence of adequate resources enhances SCZ individual's self-efficacy belief and enable them to exercise their agency to socially integrate, gain employment and be a productive member of society. Our study proposes a model that highlights how SCZ individuals may feel confident and efficacious to cope with their condition and gain relative control over their lives. Key words: general resistance resources, human agency, salutogenic perspective, sense of coherence, specific resistance resources

DEI: **Answering Skepticism Over Disability Inclusion: A Meta-Analysis Comparing Workplace Outcomes**

Author: **Yuyang Zhou**, *Florida International U.*
Author: **Siddharth Kanakrai Upadhyay**, *Florida International U.*
Author: **Chockalingam Viswesvaran**, *Florida International U.*

Despite longtime interest among scholars in reducing barriers for disabled employees at the workplace, disability inclusion still remains a challenge for most organizations. We conduct a meta-analysis of studies comparing the disabled employees and non-disabled employees in terms of their job performance (task performance), job attitudes (job satisfaction, perceived supervisor support, perceived organizational support, and psychological well-being), and various measures of work disruptions/withdrawal behaviors (interference with work, compensation claims, absenteeism, turnover, and tenure). Our results cumulating findings across 35 independent samples show small effect sizes ranging from .04 for absenteeism, .06 for job satisfaction, and .13 for task performance. Interestingly, the difference in task performance was .12 for self-reports but .34 for other reports, suggesting that disabled individuals do face a perception barrier when it comes to their task performance. The beliefs such as (1) disabled individuals will exhibit lesser withdrawal behaviors, and (2) organizational concerns that employing disabled individuals will increase work compensation claims, were not empirically supported. A moderator analysis based on geographical location, job requirements (interactional demand), industry, sample source, disability type, and report method show varied results.

Diversity and Team Composition

Session Moderator: **Joelle Hofer**, *U. of Bern*

DEI: **How Much Difference Makes a Difference - The Effects of Faultlines in New Venture Teams**

Author: **Joelle Hofer**, *U. of Bern*
Author: **Artur Baldauf**, *U. of Bern*

New venture teams (NVTs) are decisive to the performance of a new venture. Previous research has called to consider faultlines when analyzing NVTs and their performance to deepen our understanding on new ventures. Faultlines are hypothetically dividing lines within a team based on different characteristics. They are an important construct to consider when studying teams and performance since they can assess the joint effects of individual attributes. However, knowledge on NVT-faultlines and how they affect the performance of a new venture is scarce. Therefore, this study investigates how identity-based and knowledge-based faultlines affect the performance of new ventures. Using the Entrepreneurship Database Program at Emory University we analyze a sample of 616 ventures and 1848 team members to study the effects of NVT-faultlines. Our results show that none of the analyzed faultlines significantly affect the new venture performance. Faultlines are found to be less influential in NVTs than in other work teams. We go on to discuss the unique environment of a NVT and different elements which might also help non-entrepreneurial teams to overcome unwanted effects of faultlines. Furthermore, we provided implications for future research on NVTs as well as faultline research and practical implications.

DEI: **Leadership Styles and Regulatory Foci: Attaining Psychological Safety in Diverse Teams**

Author: **Victor Chen**, *Tulane U.*
Author: **Danielle Cooper**, *U. of North Texas*
Author: **Shuhua Sun**, *Tulane U.*

Organizations value diverse skills, perspectives, and experiences. Yet, we need to know more about how to attain the benefits of diverse compositions in teams. While team diversity does not automatically lead to better performance, research suggests that psychological safety helps to unite and equalize diverse voices. We draw from regulatory focus theory to explain how contrasting leadership styles – leader humility and transactional leadership – spark a path that either enhances or hinders psychological safety through prevention or promotion focus. With an experimental vignette method analyzed through an experimental-causal-chain design, we create online scenarios and two experiments (transactional leadership vs leader humility and prevention focus vs promotion focus) to examine the influence of team leader style on promotion vs prevention regulatory focus, and in turn, the effect of regulatory focus on psychological safety. We provide evidence that prevention or promotion changes can explain how different leader behaviors transform into psychological safety. Our results advance knowledge that has implications for regulatory focus theory, and organizations, and has the potential to guide research.

DEI: **Diversity in Teams: Large-Scale Meta-Analytic Assessment of Diversity Categories and Taxonomies**

Author: **Martha L. Maznevski**, *Ivey Business School*
Author: **Piers Steel**, *U. of Calgary*
Author: **Yimin He**, *U. of Georgia*
Author: **Guenter Stahl**, *WU Vienna*
Author: **Brian Chang**, *Ivey Business School*
Author: **Justine Fiscus**, *U. of Nebraska, Omaha*
Author: **Sabrina Goestl**, *Ivey Business School*

The effect of diversity in teams is not straightforward and numerous studies have sought to discover underlying patterns. Still, the research has not been conclusive and patterns are difficult to discern. This is crucial to address, because diverse teams represent one of the most important contexts in which individuals experience the dynamics of Diversity, Equity and Inclusion. Research should identify more clear cause-effect relationships to support leaders in their quest to create positive environments. We compiled a meta-analytic database of 650 studies over 30 years of research on diverse teams in organizational settings. Based on a systematic review we developed an alternative taxonomy of diversity, categorizing diversity by its source on two dimensions: individual or social context, and existential or actively invested in. Using a subset of 154 teams, we compared the explanatory power of this new taxonomy with the power of the more traditional surface- and deep-level categorization, and found preliminary support for our taxonomy. In our discussion, we provide observations on the types of diversity examined across the 650 studies, reflections on the potential of the newly proposed taxonomy of diversity sources, and encouragement to build more systematic theory about the role of moderators in diverse teams.

Gender and Career Barriers

Session Moderator: **Alison Sheridan**, *U. of New England*

DEI: **Women Making it to the C-suite: Leveraging Individual, Organizational and Collective Action**

Author: **Alison Sheridan**, *U. of New England*
Author: **Linley Anne Lord**, *Curtin U.*
Author: **Anne Elizabeth Ross-Smith**, *Macquarie U.*

Despite extensive attention to women's absence from senior leadership roles over the past two decades, men continue to be over-represented in the 'chief' roles in corporate Australia. The purpose of this study is to share the insights of a sample of successful women on how they 'made it'. The study uses a qualitative, interview-based approach, drawing on data from women in the C-suite in Australian listed companies. Applying Eagly and Carli's labyrinth metaphor, we present the enduring barriers women face in progressing their careers, and the strategies these 'successful' women have employed in navigating their way to the C-suite. Our findings provide direction for aspiring women C-suiters and those tasked with increasing women's representation. While their reported career blockages have been well-established in the extant literature, the value of our research lies in organising and communicating the enablers these women have found effective in making it to the C-suite. This paper offers new insights into women's actions in navigating a path to the C-suite through their individual action, the organizational actions that matter, their leveraging of key influencers within and outside of their workplace, and the increasing value placed on women's networks.

DEI: **Men's Experience in a Masculine Contest Culture**

Author: **Jodi Detjen**, -
Author: **Tammy MacLean**, *Suffolk U.*
Author: **Sheila Webber**, *Suffolk U.*

Research clearly shows that increasing the number of women in leadership positions yields financial benefits for the organization. Despite this, there has been limited upward movement in the percentage of women in senior leadership positions. Although some research has extensively examined this from the perspective of bias against women, few studies have examined the linkage between masculine culture and the implications for men. Using a mixed methods approach, this research deepened existing research through two studies focused on four aspects of masculine contest cultural norms and how they impact male identity and perceptions of career advancement. Study One examined the relationship between individual masculine identities and the existence of a masculine contest culture through a qualitative interview study of ten male executives. The study found that masculine contest culture norms were evident but were being perpetuated and reinforced by organizational culture and historically defined processes instead of individual masculine identities. In addition, Study One demonstrated a shift in masculine contest culture norms reducing the emphasis on the strong male archetype. Study Two examines the relationship between masculine contest culture attributes impacting opportunities for career development and promotion. We evaluated these relationships through a large-scale survey study and found that male fairness perceptions of career development and promotion reduced as masculine contest culture increased. Broadly, the findings suggest that masculine archetypes of leadership negatively effect men and women, and evolving norms hint that rigid masculine norms of leadership may be an artifact of the 20th century.

DEI: **One Size Does Not Fit All: A Field Experiment on Countering Gendered Occupational Choices**

Author: **Patricia Palffy**, *U. of Zurich*
Author: **Patrick Lehnert**, *U. of Zurich*
Author: **Uschi Backes-Gellner**, *U. of Zurich*

To foster gender equality and diversity in the workplace, firms and policymakers strive to attract women and men to gender-atypical occupations. However, particularly for men, such attempts have been of limited success. We theorize (a) that identity threat-related barriers hinder gender-atypical occupational choices, (b) that these barriers differ for women and men, and (c) that therefore the success of policy interventions aiming to encourage gender-atypical occupational choices differs for women and men. We conduct a large-scale field experiment with young women and men choosing their occupations when applying for their first job. We find that a brief intervention featuring counter-stereotypical framing and female role models in typically male jobs in STEM substantially increases women's applications for STEM jobs. However, an equivalent intervention featuring counter-stereotypical framing and male role models in typically female jobs in health and care does not increase men's applications for those jobs. Thus, strategies that work for women—such as portraying role models—do not necessarily work for men. To foster full gender equality in the workplace, firms and policymakers should not only continue investing in interventions aiming to attract women to male-dominated occupations but also develop interventions particularly focused at encouraging men to consider female-dominated occupations.

DEI: **Gender Inequality in Vertical Career Progression in Project-based Industry**

Author: **Yoojeong Shin**, *U. of North Carolina, Chapel Hill*

Women are underrepresented in leadership positions in many sectors of the economy, including project-based industries. In addition, while project-based organizing is frequently used in creative and knowledge-intensive industries, we have a limited understanding of how careers vertically progress in this context. This research examines how prior career experiences have gendered impacts on an individual's likelihood of attaining vertical career progression. Using the Korean film industry as an empirical context, I find that both small project leader experiences and large project follower experiences help an individual attain vertical progression, namely becoming a leader of a large project. In addition, the findings indicate that the returns on each type of experience differ by gender. Specifically, the relationship between small project leader experiences and the likelihood of achieving vertical career progression is stronger for women than men, whereas the relationship between large project follower experiences and the likelihood of attaining vertical career progression is weaker for women than men. Implications for project-based career literature, gender inequality literature, and practitioners are discussed.

Career Effects of Gender Stereotypes

Session Moderator: **Letian Zhang**, *Harvard Business School*

DEI: **Why Do you Dress Like That? Consequences of Sexual Subjectification at Work**

Author: **Laura Guillén Ramo**, *U. Ramon Llull, ESADE Business School*
Author: **Maria Kakarika**, *Durham U. Business School*

Does sexual subjectification lead to positive consequences at work? In this paper, we explore these questions. We bridge literatures on sexualization, gender and attribution to suggest that the consequences of sexualization depends on the motives attributed to women who self-sexualize. In one experimental study with a sample of managers with hiring experience (N = 305), we show that sexualization has different consequences for women depending on whether they are perceived to have instrumental or self-expression motives to self-sexualize. Women who self-sexualize for instrumental reasons are judged more harshly than women with self-expression motives only—the former suffer a triple backlash: they are seen as less competent and communal, as well as greedier. These perceptions in turn lead to greater interpersonal dislike and lower promotability. Although women who self-sexualize for self-expression reasons are seen as less communal and greedier than women who do not self-sexualize, the total effects on likeability and promotability did not raise significance. We derive theoretical and practical implications of these findings.

DEI: **Feminists' Irony: The Labor-Market Discrimination against Women Activists in Feminist Movements**

Author: **Letian Zhang**, *Harvard Business School*
Author: **Xuege (Cathy) Lu**, *U. of Minnesota Carlson School of Management*
Author: **Laura Huang**, *Harvard Business School*

This paper shows that while feminist movements help advance women's rights as a group, they may at the same time lead to penalties for individual women engaging in them. We refer to this phenomenon as feminists' irony, which we find empirical support using a large-scale resume audit study coupled with an original survey experiment. Female activists who indicate participation in women's rights movements on their resumes are 14 percent less likely to receive callbacks than the activism of other types, while men activists who participate in feminist activism do not suffer from such discrimination. In probing why this might be the case, we find that signaling their involvement in feminist movements not only triggers gender-norm violation for women--which subsequently paints them as less likable and more aggressive, but doing so also makes them appear less altruistic--which is contrary to the other-serving glow received by women in other types of activism as well as male participants in women's rights movements. This effect is especially salient in conservative-leaning communities and when the candidates are judged by male recruiters; we do not find this effect to vary much across feminist activists of different racial profiles.

DEI: **Speak Entrepreneur - Speak Male: Large Natural Language Data Shows Gender Bias in Entrepreneurship**

Author: **Nadja Mirjam Born**, *Harvard Kennedy School; Technical U. Munich*
Author: **Ilayda Zengin**, *Technical U. of Munich*

One of the primary explanations for the prevailing gender inequality in entrepreneurship is a perceived "lack of fit" between female gender stereotypes and the collective representation of entrepreneurship. The language used in a society can provide unique insights into the prevalence and strength of shared, collective beliefs and representations. Applying methods from machine learning and natural-language processing, namely word embeddings, we uncover and quantify the strength and prevalence of gender stereotypes around entrepreneurship across large and diverse language corpora. The analysis of billions of words shows that the collective stereotype of entrepreneurship is in fact not gender-neutral but is associated with men as well as masculine traits rather than with women and feminine traits. By identifying the most common collective stereotypes and demonstrating that entrepreneurship itself (not only a subset like commercial or high growth entrepreneurship) is perceived and depicted as a masculine endeavor, this research has the potential to inform efforts to promote gender equity in entrepreneurship. The fact that we were able to detect this trend in large-scale natural language data using objective, machine learning methods speaks to the widespread nature of gender bias in entrepreneurship.

DEI: **Shifting Towards a More Positive Perception of Counter-Stereotypical Individuals at the Workplace**

Author: **Nadja Mirjam Born**, *Harvard Kennedy School; Technical U. Munich*
Author: **Thorsten Erle**, *Tilburg School of Social and Behavioral Sciences*

Individuals who violate gender stereotypes often suffer backlash. Two high-powered experiments (total N = 975) aimed to answer the question whether backlash occurs due to the perception of gender-specific proscription or prescription violations. To test this, participants rated gender-congruent and -incongruent applicants on indicators of proscriptions, prescriptions, and backlash. In Experiment 1, the applicants applied for a non-leadership position. The results strongly supported the idea that gender-incongruent individuals are perceived as having a prescription-deficit. But surprisingly no backlash for gender-incongruent individuals was found. Therefore, Experiment 2 was a pre-registered conceptual replication of the first experiment in a leadership context where backlash is more likely. Although Experiment 2 replicated the absence of backlash at the leadership level, the data did neither support a prescription deficit, nor a proscription penalty. Cross-experimental comparisons revealed potential explanations for these findings, based on which implications for human resources and future research are outlined.

New Theories for DEI

Session Moderator: **Ryan Federo**, *U. of the Balearic Islands - Palma de Mallorca*

DEI: **The Rainbow Glass Ceiling: Taking a Closer Look at Board Gender Diversity**

Author: **Ryan Federo**, *U. of the Balearic Islands - Palma de Mallorca*

Board gender diversity has attracted scholarly interest over the past decades, as achieving gender-balanced boards has become a crucial goal for many firms and policymakers worldwide. However, despite the fact that gender is a spectrum rather than a binary construct, the taken-for-granted focus of both research and practice related to board gender diversity is the attempt to attain equal men and women representation in the boardroom. This prevalent view does not represent reality and excludes individuals who do not identify nor behave according to their sex assigned at birth, i.e., those belonging to the lesbian, gay, bisexual, transgender, queer, and other identities (LGBTQ+) community. In this paper, we seek to reconceptualize board gender diversity by unpacking the rainbow glass ceiling, which we define as the barriers that prevent members of the LGBTQ+ community from reaching top management positions. We then draw on biological sciences to discuss the role of behavioral adaptation in order to identify the strategies of LGBTQ+ individuals for overcoming the rainbow glass ceiling. Our theorizing emphasizes the need for including the LGBTQ+ community to better understand and promote board gender diversity. We conclude by discussing the implications of the rainbow glass ceiling for theory, research, and practice.

DEI: **Diversity Research Pushed to the Margins? Status, Stigma, and Self-group Distancing Effects**

Author: **Lee Martin**, *U. Of Sydney*
Author: **Eddy S. Ng**, *Queen's U.*
Author: **Yuan Liao**, *U. Of Sydney*

Diversity, equity, and inclusion ("DEI") is a field of research that, despite its 50-year history, remains at the margins of management scholarship. If the field of management is to contribute influential research on topics such as bias and discrimination, which have significant organizational and societal relevance, it is imperative to address the issue of the marginalization of DEI research, and how it may be perpetuated in the power structures of academia. We draw on status, stigma, homophily, representative bureaucracy and self-group distancing perspectives to explain and pose predictions on the factors that contribute to the marginalization of research. We examine race, gender and intersectional diversity of authors of articles on DEI topics, as well as in journal leadership teams, at 14 top-tier Management journals over a 20-year timespan, from 2001 to 2021, across five timepoints. We find that DEI research is more likely to be conducted by equity-deserving scholars. While the careers of equity-deserving scholars do not appear to be limited by their choice of research topic, this is not the case for white men who engage in DEI research. The results did not show that more diverse journal leadership influences the amount of DEI research that is published. We discuss the implications of our findings in terms of the advancement of DEI theories.

DEI: **Postsocialist Gender Gatigue from a Dialectical Perspective**

Author: **Anna Hidegh**, *Corvinus U. of Budapest*
Author: **Henriett Primecz**, *Johannes Kepler U. Linz*

Albeit gender inequality is a global social problem, there are huge differences among the different regions of the world. In the postsocialist region, the gender situation is significantly different from any other region due to its unique modern history, they are featured in some aspects higher, but in some aspects lower gender equality. The paper aims to look at the history of gender inequality in postsocialist countries as the interplay of contradictory tendencies from a dialectic perspective. The Socialist era that was featured by forced emancipation is considered as the thesis. The period of antithesis started with the regime change when postsocialist countries adopted capitalist social order, and neoliberal individualism and retraditionalism spread, representing backlash compared to socialist gender equality measures. We argue that the transcendental result of these contradictory tendencies is the so-called postsocialist gender fatigue, which integrates postfeminist and anti-communist discourses, emphasizing the individual responsibility of women for their own career progress and renaturalizing femininity, while preserving special equality measures supporting employment opportunities for women.

DEI: **Research on Diversity, Equity, and Inclusion in Management: A Scoping Review**

Author: **Cho Hyun Park**, *Purdue U.*
Author: **Sunyoung Park**, *Louisiana State U.*
Author: **Bora Kwon**, *Sacred Heart U.*

The purpose of this study is to understand the overall trends in diversity, equity, and inclusion (DEI) research in the management field. By reviewing 725 articles, we summarize the topics, publication years, and journals of DEI research. We also identify the main focuses of DEI research by discussing the dimensions of DEI (e.g., age, gender, race, culture, etc.) and work environments in which DEI is discussed (e.g., traditional vs. remote/virtual work settings) as one aspect of DEI research. In addition, we identify the following five common themes of DEI research: DEI management and practice, diversity/inclusive climate, leadership, diversity training, and perceptions, perspectives, and attitudes towards DEI. Finally, discussion, implications, and recommendations for future research are presented.

Presenter: **Julia Stevenson-Street**, *Purdue U., West Lafayette*
Participant: **Courtney Hart**, *U. of Texas At Arlington*

The presentations (a total of four presentations) include a mix of theorizing and empirical findings from experts advancing research by unpacking the mechanisms through which DEI in social networks may emerge. This presenter symposium invokes a modern discussion of DEI-related social networks research in terms of 1) Theorizing the mechanisms that enable (or hinder) DEI in social networks and 2) Exploring the interplay between the individual-level attributes (e.g., social identities and beliefs) and contextual factors (e.g., team characteristics) in studying DEI in social networks. Relying on empirical evidence from an array of methods (e.g., surveys and experiments), this research points to new paths by systematically investigating networking outcomes depending on focal employee social identity (e.g., gender and race).

Participant: **Gia Ruscitto**, *Michigan State U.*

Social class plays an integral role in how individuals connect with others and make sense of their interactions. To date, organizational literature in class tends to focus on individual-level processes and outcomes such as self-efficacy, income, and job search successes. Previous research in management, social psychology, and sociology, however, highlights the importance of adopting an interpersonal lens to understand social class. In organizations, for example, interactions between employees may draw out and perpetuate social class distinctions or disrupt class-based hierarchies. It is critical to understand better how social class impacts and is impacted by interactions, as workplace interactions underpin organizations and are the main mechanism by which work is accomplished. As such, this symposium explores how social class is manifest in, and subsequently exerts influence on employees' interpersonal exchanges.

Menstruation Matters: The Current Challenges and Future Goals of Menstruation Research

Panelist: **Rachel Hahn**, *Eli Broad School of Business, Michigan State U.*
Panelist: **Hillary Anger Elfenbein**, *Washington U. in St. Louis*
Panelist: **Daphna Motro**, *Hofstra U.*

This panel symposium will consist of an interactive and moderated discussion that addresses the following questions related to the issues facing menstruation researchers: (1) What are the biggest challenges to collecting quality and accurate menstruation data? (2) What challenges do authors face in publishing menstruation research? (3) What other methods or areas of research can we draw from to strengthen or inform menstruation research? (4) What is the role of menstruation in organizations, and vice versa? (5) What have we learned from previous menstruation research, and where do we go from here?

Participant: **Michelle Zhao**, *Washington U. in St. Louis*
Participant: **Nir Halevy**, *Stanford U.*

This symposium advances knowledge about increasing diversity, equity, and inclusion in organizations by examining data obtained from the field. The first half of the symposium will address factors determining support or decisions around organizational diversity efforts. The latter half will be devoted to field interventions that sought to promote diversity in organizational settings. The first paper investigates how female board directors' network connectedness shapes the organization's decisions on increasing future boardroom gender diversity. The second paper investigates the motivations behind the dominant group members' engagement in allyship behaviors that often belie their own interests. The third paper examines how a 9-week debate training increases Asian employees' leadership advancement. Finally, using a large-scale field experiment, the fourth paper explores how providing justifications of why one should attend DEI events differentially impact younger versus older individuals' engagement with these events.

Topics and Concepts in Social and Sustainable Entrepreneurship

Session Moderator: **Stephanie Brooke Escudero**, *Ph.D Student*

ENT: **Reviewing Key Concepts in Recent Social Entrepreneurship Research: A Topic Modeling Approach**

Author: **Stephanie Brooke Escudero**, *Ph.D Student*
Author: **Jeremy Collin Short**, *U. of North Texas*
Author: **Marcus Wolfe**, *U. of North Texas*
Author: **Jeffrey Chandler**, *U. of North Texas*

The study of social entrepreneurship has continued to flourish in recent years. To understand recent trends in this research stream, we present a topic modeling literature analysis of articles published in Financial Times 50 journals in the last 8 years. Our Latent Dirichlet Allocation analysis reveals 10 dominant topics in recent social entrepreneurship research: (1) how social enterprises change form, (2) social enterprises' unique hybrid nature, (3) benefits of social entrepreneurship, (4) growth amid scarce resources, (5) identity challenges, (6) transitioning from traditional to social enterprise, (7) social venture founder(s) traits, (8) prosocial motivation and action, (9) social enterprise emergence, and (10) predictors of social initiatives' efficacy and performance. Using these topics, we summarize current research and highlight promising future directions.

ENT: **Estimating the Topics and Prevalence of Social Entrepreneurship Research: Machine Learning Approach**

Author: **Vineet Kaushik**, *Indian Institute of Management*
Author: **Shobha Tewari**, *Indian Institute of Management, Kashipur*
Author: **Manisankar Datta**, *Indian Institute of Technology, Delhi*

This study offers a comprehensive outlook of topics and their prevalence in social entrepreneurship (SE) research by adopting a machine learning based text-mining approach on 1185 published articles that are both indexed in Scopus and are listed in the ABDC journal quality over a period from 1989 to 2022. Traditionally, systematic literature reviews and bibliometric-based reviews have been used to capture the state of research. These methods, however, fall short if the researcher wants to seek an in-depth understanding of the research at a topic level. This study is the first such attempt to fill this gap in the field of social entrepreneurship by deep mining the social entrepreneurship literature and providing insights at topic levels using a contemporary unsupervised machine learning approach—structural topic modelling (STM). Using this approach, 26 topics have been identified and a dynamic view of their prevalence has been shown in tier I and tier II journals. Apart from methodological contributions to the field, this study has made significant highlights in the theoretical strands of the domain. In addition, this study provides a useful tool that aids in decision-making support for novice researchers in the field of SE.

ENT: **External Enablement of Social and Commercial Entrepreneurship**

Author: **Marie Madeleine Meurer**, *Jönköping International Business School*
Author: **Per Davidsson**, *Jönköping International Business School*

Increasingly, entrepreneurship scholars are using the external enabler framework to explain how environmental changes, so-called external enablers, impact entrepreneurial activities. By providing insights into the applicability and development needs of the external enabler framework based on social entrepreneurship literature, we tease out how this literature stream can inform the external enabler framework. To achieve this, we apply a topic modeling approach to both commercial and social entrepreneurship literature. This approach allows us to disentangle similarities and differences between external enablers of commercial as well as social entrepreneurship. While social entrepreneurship literature would mainly profit from a broader perspective on external enablers (e.g., global social impact vs. local community), social entrepreneurship literature can inform the external enablers framework regarding actor – external enabler interactions, as well as the role of external enablers in narratives. We conclude by providing a research agenda that can guide future research applying the external enabler framework to social and commercial entrepreneurial activities.

ENT: **Sustainable Entrepreneurship and SDG-8: A Systematic Literature Review**

Author: **Muhammad Salman Shabbir**, *UBD School of Business and Economics*
Author: **Rabia Salman**, *U. Sains Malaysia, Malaysia*

In recent years, the association between entrepreneurship and sustainable development has been recognized as an important issue to provide possible solutions in order to achieve sustainability and to resolve the existing situation. Along with innovation, entrepreneurship has been recognized as a key element for addressing the challenges of sustainable development. Thus, this paper has made an attempt to study the developments in the existing literature and to highlight how sustainable entrepreneurial activities lead toward the attainment of SDGs specifically SDG 8 by means of a systematic literature review. To structure this research and systematized the current literature on sustainable entrepreneurship and SDG-8, the systematic literature review approach was adopted. The review process was initiated with a literature search on the Scopus indexing online database of scientific articles published between 2015 and 2021. VOSviewer (software version 1.6.10) was used to conduct the analysis, which is a data mining tool commonly used in systematic review studies. The bibliometric analysis displays that the scientific literature over the past few years evolved which suggests tremendous growth in the field of sustainable entrepreneurship and SDG-8 in recent years (i.e. 2020 and 2021). Furthermore, five research themes were identified via thorough analysis. The themes are classified into five distinct clusters that comprise recent trends in existing literature in the areas of SDGs, sustainable development, economic and social growth, sustainability, higher education and others. This systematic literature review was conducted with the purpose to analyze the scientific literature on sustainable entrepreneurship which is considered a strong engine for promoting economic and social development and growth of an economy. The focus was made on the objective that how sustainable entrepreneurship will lead in attaining the SDGs, especially the SDG-8 attainment.

ENT: **Beyond Collaboration: A Review of Positive and Negative Interactions in Social Entrepreneurship**

Author: **Wiebke Heinze**, *Maastricht U., School of Business & Economics*
Author: **Jarrod Ormiston**, *U. of Technology, Sydney*

This paper explores the diversity of positive and negative interactions in social entrepreneurship. Social entrepreneurship research has been overly biased towards positive forms of interaction such as collaboration, failing to appreciate more negative interactions that play out between certain actors. To overcome these issues, we draw an ecological perspective to explore the multiple positive and negative interactions within the field of social entrepreneurship. We conduct a systematic literature review of 248 articles to unpack extant research on different interaction types in social entrepreneurship. Our findings highlight how social entrepreneurs engage with a diverse range of actors through positive forms of interaction such as collaboration and mutualism, alongside negative forms of interaction such as competition and parasitism. We also show the presence of more balanced interactions through volatile interactions and coopetition. We show that social entrepreneurship research is biased towards more positive forms of interaction such as collaboration. We call for further research on how negative interactions such as competition and parasitism play out in social entrepreneurship. We also highlight the need for deeper insights into relational pluralism and multiplexity in social entrepreneurship.

Social Capital and Entrepreneurship

Session Moderator: **Barbara Gabrielle Silva**, *U. of Central Florida*

ENT: **Why Do Birds of a Feather Flock Together? Homophily and Well-Being Among Entrepreneurs and Employees**

Author: **Barbara Gabrielle Silva**, *U. of Central Florida*
Author: **J. Jeffrey Gish**, *U. of Central Florida*

Well-being is one of the most paradoxical outcomes in the entrepreneurship literature. Self-employment can be seen as rewarding and beneficial to well-being, but at the same time highly stressful and detrimental to one's well-being. Therefore, identifying factors that impact the well-being of entrepreneurs and circumstances in which entrepreneurs exhibit higher well-being compared to employees is highly important. The present study examines the moderating effect of homophily preferences (status homophily, value homophily, and overall homophily) in the entrepreneurship–well-being relationship. Data on homophily preferences and psychological well-being of 1,532 individuals were obtained from the National Survey of Midlife Development in the United States (MIDUS 3) collected from 2013 to 2014. A Latent Profile Analysis (LPA) was performed followed by an analysis of covariance to investigate whether entrepreneurship (self-employment vs. wage-earning employment) combines with profiles of preference for homophily (status homophily, value homophily, and overall homophily) to explain well-being outcomes. It was found that entrepreneurs with status and value homophily preferences exhibit greater well-being than employees, demonstrating that they seek to compensate for the uncertainty in their workplace environment by engaging in less uncertain personal relationships based on characteristics they value the most.

ENT: **The Overconfident Entrepreneurs and Entrepreneurial Team Formation: A Cognitive Network Perspective**

Author: **Haifeng Wang**, *Shanghai International Studies U.*
Author: **Yihao Zhao**, *School of Business and Management, Shanghai International Studies U.*

New startups are often founded by entrepreneurial teams through entrepreneurs' social networks. Actually, entrepreneurs rely on their cognitive networks to make decisions instead of the actual networks, though existing literature focuses more on the actual networks. Drawing on the cognitive network perspective, our research intends to explore the impact of entrepreneurs' overconfident social networks on two types of entrepreneurial team formation (dream-oriented entrepreneurial teams and reality-oriented entrepreneurial teams), and also uncover the moderating effects of prior entrepreneurial failure experience. Based on survey data from 185 entrepreneurs, including 155 egocentric instrumental networks and 163 egocentric emotional networks, our results show that the overconfident entrepreneurs promote dream-oriented entrepreneurial team formation but inhibit reality-oriented entrepreneurial team formation. Moreover, prior failure experience may weaken the positive impact of the overconfident entrepreneurs on dream-oriented entrepreneurial team formation, but improve the negative impact of the overconfident entrepreneurs on reality-oriented entrepreneurial team formation.

ENT: **The Dynamics of Emotional Support and Venture Progress - The Moderating Role of Disjunct Brokerage**

Author: **Mette Søgaard Nielsen**, *U. of Southern Denmark*
Author: **Kim Klyver**, *U. of Southern Denmark*
Author: **Pekka Stenholm**, *U. of Turku, Finland*

Emotional support is not just externally obtained by entrepreneurs, but also individually created through agency and networking. In this study, we aim to understand the dynamic relation between emotional support and perceived venture goal progress as it evolves over time. We employ a repeated measurement design of up to 10 measurements over twelve months from 86 entrepreneurs participating in a Danish startup program. We find that emotional support enhances perceived venture goal progress, and that venture goal progress boosts emotional social support continuously in a dynamic loop. We also show how brokerage behavior works as a boundary condition for the dynamic support-progress link.

ENT: **The Role of Social Tie Strength on Entrepreneurial Success in Emerging Markets**

Author: **Tobias Baum**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*
Author: **Denise Fischer-Kreer**, *RWTH Aachen U.*

Emerging markets move to the core of economic gravity, with entrepreneurship contributing significantly to economic development. According to institutional and social capital theory, entrepreneurs can use strong social ties to substitute institutional voids and protect against corruption in emerging markets. However, social ties entail costs in the form of maintenance and reciprocity and can lead to closed and redundant networks. We thus propose that social tie strength and entrepreneurial success maintain a curvilinear relationship (inverted U) so that strong social ties eventually impair entrepreneurial success. We further suggest that corruption fortifies this curvilinear effect, as in corrupt environments, strong social ties are more critical to comply with the informal "rules of the game". Using a primary sample of 887 entrepreneurs across ten emerging markets surveyed between March and August 2022, we find support for our hypotheses. With our study, we advance research on entrepreneurship in emerging markets and add to the social network perspective in emerging markets by relating tie strength to entrepreneurial success. Further, we contribute to entrepreneurial performance literature by leveraging a comprehensive success measure comprising financial, psychological, and impact dimensions. Our supplemental analyses show that effects differ between regions and cultures, advocating against cross-country generalizations in academia.

New Venture Teams

Session Moderator: **Jannis Von Nitzsch**, *TUM School of Management, Technical U. of Munich*

ENT: **Better Safe Than Sorry –The Role of Team Design in New Venture Teams' Escalation of Commitment**

Author: **Jannis Von Nitzsch**, *TUM School of Management, Technical U. of Munich*
Author: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*
Author: **Vangelis Souitaris**, *Bayes business school and U. of St. Gallen*

We examine how two features of new ventures' team design—friendship ties and power inequality within the team—affect the teams' escalation of commitment. We focus on these two design features given that both friendship ties and power differences among team members are key antecedents of groupthink (i.e., extreme concurrence-seeking tendencies in groups) that is argued to limit the appraisal of alternatives to a taken course of action (i.e., an important driver of escalation of commitment). Based on two distinct experiments with a total of 69 teams, we offer causal evidence that teams sharing friendship ties and teams with an unequal power structure are more prone to escalate their commitment. We show that collective efficacy mediates the relationship between friendship ties and teams' escalation of commitment, and that task conflict mediates the relationship between power inequality and teams' escalation of commitment. We further find that psychological safety mitigates the positive relationship between power inequality and teams' escalation of commitment. Our research advances knowledge on new venture teams' escalation of commitment and contributes both to the literature on new ventures' team design and decision-making, as well as research on group escalation of commitment.

ENT: **Exploring New Venture Team Creation and Evolution Through Configurations of Trust**

Author: **Badri Zolfaghari**, *GSB, U. of Cape Town*
Author: **Farsan Madjdi**, *GSB, U. of Cape Town*

New venture team formation has an important influence on the new venture emergence process. Yet, the development and evolution of trust-as an organizing principle- between multi-founder teams at the early stages of venture creation remain relatively unexplained. To explore this, we undertook an event-driven longitudinal process study with 8 dyads of two (co)founders using bracketing techniques in conjunction with narrative analysis. Our findings show that founders and co-founders refer to both the features of the venture idea and the relational aspects of the co-founding process as being influential in the trust development and evolution process during new venture formation. Trust emerges in the form of faith-based trust when referring to the venture idea itself and the form of assessment-based trust when referring to the other (co)-founder. We also draw attention to the spillover effects of trust between both referents, the future-oriented, imagined venture idea, and the present co-founder relationship.

ENT: **The Impact of Founder Experience on Tech Development: Evidence from Autonomous Driving Ventures**

Author: **Kyung Baek Toni Min**, *Ulsan National Institute of Science and Technology*
Author: **Young-Choon Kim**, *Ulsan National Institute of Science and Technology*

This paper investigates the effect of founders' prior career experiences on technological development of their subsequent ventures in the context of emerging fields of innovation. While existing research has documented that founders' prior experiences provide the relevant knowledge for their venture development, we have limited understanding about what specific sources of prior experiences can aid technology development in the emerging fields of innovation. Drawing on the idea of paradoxical nature of prior experiences, we specifically compare two major sources of prior experiences: from industry incumbents versus research institutions. Using the data of 71 U.S. technology ventures and their founders in the autonomous driving field, we present the contrasting findings: prior experiences from industry incumbents have a negative effect on technology development, but those from research institutions have a positive effect. We further find that the effects of both sources of prior experiences are amplified as the venture accumulates experiential knowledge. Our research highlights that the founders' prior experiences, depending on their sources of origin, can have diverging ramifications in their ventures' technological progress.

ENT: **How Do Investors Evaluate Co-Founder Breakups?**

Author: **Naja Pape**, *INSEAD*
Author: **Heejung Jung**, *Imperial College London*

Scholarly and anecdotal evidence show that co-founder breakup – the replacement or the departure of a co-founder – is common in early entrepreneurial teams. In the absence of objective evidence on inherent venture quality, investors evaluate young venture using diverse quality signals based on the limited information available about the founding team. We show that co-founder breakups work as "soft" data, informing investors about the quality of the founding team and thereby affecting their evaluations. In parallel with 15 in-depth interviews with professional investors, we conduct a pre-registered survey experiment on 720 individuals who have experience with venture funding in the form of crowd-funders, business angels, and venture capitalists. We ask these investors to evaluate venture with versus without co-founder breakup, using real business cases that are identical across conditions. Consistently to our qualitative interview, we find that investors perceive the quality of venture whose team experienced co-founder breakup (compared to venture whose team did not) as lower in terms of entrepreneurial team viability, its competence, and warmth, and, in turn, are less likely to invest. This penalty was found consistently across female-led and male-led entrepreneurial founding teams.

New Perspectives on Social Entrepreneurship

Session Moderator: **Alexander Glosenberg**, *Loyola Marymount U.*

ENT: **Applying Principles of Aid Effectiveness to International Social Enterprises**

Author: **Alexander Glosenberg**, *Loyola Marymount U.*
Author: **Yongsun Paik**, *Loyola Marymount U.*
Author: **David Y. Choi**, *Loyola Marymount U.*
Author: **Jason F. D'Mello**, *Loyola Marymount U.*
Author: **Martin Senderovitz**, *U. of Southern Denmark*

International social enterprises (ISEs) are promising ways to address social and environmental problems, yet little is known about how best to optimize their social and environmental impact alongside the financial value they create. However, the field of international development has long engaged with developing best-practices in creating social and environmental value because otherwise well-intentioned efforts have often been ineffective or harmful. Consequently, the purpose of this study is to apply inductive insights from the field of international development to understand how ISEs can best adopt effective sustainable-business models. In particular, we focus on the principles of the Paris Declaration on Aid Effectiveness (the aid-effectiveness framework) - the broadest consensus of international stakeholders on effective approaches to international development work. We link the aid-effectiveness framework, and the principles it encompasses, with literature on international business and entrepreneurship. These principles highlight critical activities and conditions – namely: local-community representation on the executive team and/or among company directors (ownership); a close understanding of the lived experience of foreign customers and other beneficiaries from the inception of the enterprise (alignment); strategic alliances or joint ventures with potential competitors (harmonization); partnerships with NGOs/multilaterals to provide oversight of the ISE (mutual accountability); and the adoption of localized validated-learning approaches (management for results). We discuss how engaging with these propositions will help to develop greater insight how ISEs engage with participative empowerment, capability development on higher/broader levels of analysis, and the measurement of distal social outcomes like empowerment.

ENT: **Situating Social Innovation in Religious Buildings**

Author: **Helen Haugh**, *U. of Cambridge*
Author: **Timur Alexandrov**, *U. of Cambridge*

Social innovations are new products, processes and services that are designed to address social and environmental challenges and imbued with values and hopes for social change and a more desirable future. Social innovation is also anchored in social relations and thus inherently place-based. In this paper we develop a typology of place-based social innovation based on the dimensions of radicality, reordering, and values alignment. Using data gathered from interviews, observation and secondary sources associated with 33 church buildings, the typology distinguishes four types of place-based social innovation: Conserving, Experimenting, Adventuring, and Pioneering. The research makes three contributions: we develop a place-based social innovation typology that engages novelty, place materiality and values; introduce the concept place thread to explain the relationship between place materiality and place use; and extend the concept of heterotopia to church buildings as unexpected places to find entrepreneurial activity.

ENT: **Overcoming Reductive Traps in Social Entrepreneurship: A Capitals Theory Approach**

Author: **Gorgi Krlev**, *ESCP Business School*

Research has primarily highlighted the ability of social entrepreneurs to solve persistent social problems, but there is also notable research that has shown us the limitations of social entrepreneurship. Consistent with the latter, we argue that a combined 'solutionism' and an action bias in social entrepreneurship can lead to a reductive trap, which unduly amplifies a social enterprise's ability to address a social problem. We further show how social entrepreneurship research, when studying social impact through a standard performance approach or by blackboxing the entrepreneurial process, generates a second reductive trap. Together, the reductive traps propel a vicious circle that impedes organizational learning and limits effective social problem solving. Based on this constructive critique, we argue that alternative conceptual approaches, which value processes and embrace reflexivity, may serve to address these shortcomings. To illustrate our argument, we use Bourdieu's capitals theory to analyze a social enterprise's program to promote prosocial behavior in schools. This allows us to demonstrate how a capitals theory approach can help overcome the identified reductive traps and initiate a virtuous circle between social entrepreneurship and social entrepreneurship research.

ENT: **Schumpeter's Second Act: Market Disequilibria in a Macro-level Theory of Social Entrepreneurship**

Author: **Kai N. Hockerts**, *Copenhagen Business School*
Author: **Francesco Di Lorenzo**, *Copenhagen Business School - Department of Strategy and Innovation*

This paper advances a theoretical model for how Schumpeterian social entrepreneurship catalyzes systemic change. We shift attention from micro (the hybrid identity of social entrepreneurs) and meso (the management of hybridity in social enterprises) phenomena to macro-level perspective of social entrepreneurship. At this level social entrepreneurship does not just require an understanding of the direct impact created by a social enterprise, but more importantly, by its indirect impact when transforming market and non-market environments. By drawing on Schumpeter's definition of entrepreneurship we conceive of social entrepreneurship as the discovery and exploitation of economic opportunities through the generation of market disequilibria that initiate the transformation of a sector towards an environmentally and socially more sustainable state. We discuss why such transformative impact creation begins with the recognition of market failure due to the presence of antagonistic assets and the identification of opportunities to transform these into complementarities. Three such strategies are discussed and suggestions for future empirical work are proposed.

Family Firm and Leadership

Session Moderator: **Felix Hoch**, *U. of Münster*

ENT: **How the Interaction Between Female Family CEOs and Gender-Related Institutions Affects CSR**

Author: **Felix Hoch**, *U. of Münster*
Author: **Lilo Seyberth**, *WWU Münster*
Author: **Eric Clinton**, *Dublin City U.*
Author: **Catherine M. Faherty**, *Northwestern Kellogg School of Management*
Author: **Pramodita Sharma**, *U. of Vermont, Grossman School of Business, US*

Does CEO gender affect corporate social responsibility (CSR) of family firms? And does this relationship vary between countries based on different levels of social and legal gender bias? Drawing on insights from the literature on female leadership and CSR, we combine social role theory with institutional theory and explore these issues empirically based on a sample of 1,555 family firms from 29 countries. We find that family firms led by female CEOs perform stronger on both internal and environmental CSR. However, this relationship is contingent on the social and legal institutional environment. The positive effect of female CEOs is strongest in contexts of legal gender equality and, interestingly, a negative social bias against women.

ENT: **The Impact of of Transformational Family CEO on Business Unit Financial Performance**

Author: **Debbie YiYing Chang**, *Department of Business Administration, National Taiwan U. of Science and Tech*
Author: **Qilin Hu**, *Loughborough U., School of Business and Economics*
Author: **Mathew Hughes**, *U. of Leicester*
Author: **Paul Hughes**, *U. of Leicester*
Author: **Che-Yuan Chang**, *School of Management, National Taiwan U. of Science and Tech*
Author: **Boyka Simeonova**, *U. of Leicester*

Transformational family CEO is identified as an enabler of firm financial performance, but only a few discussed this mechanism empirically in family firm studies. Notably, the impacts of the transformational family CEO on the business unit financial performance are largely overlooked. Moreover, the inconsistent relationship between transformational leadership and financial performance is shown among existing transformational leadership studies. Building on the family firm context, this study strengthens the transformational leadership theory regarding how a transformational family CEO can generate better business unit financial performance. Our study reconciles previous studies on the transformational family leaders can form a high level of stewardship so that family firms can result in high financial performance. As nonfamily members are often identified as the central workforce of a family firm, we observe the financial performance of business units managed by nonfamily members. The positive relationship between transformational family CEO and business unit financial performance. Our study also extends Howell et al. (2005) by showing the positive relationship between transformational family CEO' impact and nonfamily business unit managers. Also, our study reveals that the CEO political skill strengthens the transformational family CEO's effects on business unit EO and the business unit financial performance. This finding clarifies that transformational family CEO unnecessarily has absolute power in influencing nonfamily members' behavior, but the effectiveness of the influence also matters. This also urges the transformational family CEO to strengthen their political skill to increase the effectiveness of transformational leadership.

ENT: **Facing the Rebel: Identity Work of Nonfamily Leaders after a Leadership Succession in Family Firms**

Author: **Jana Boevers**, *Bielefeld U.*
Author: **Anna Zentgraf**, *Leibniz U. Hannover*
Author: **Christina Hoon**, *Bielefeld U.*
Author: **Erk Peter Piening**, *Leibniz U. Hannover*

In this paper, we explore the role of nonfamily leaders in the succession process of family firms. Drawing on a social identity approach to leadership, we highlight that nonfamily leaders are key for advancing, creating, and embedding a shared sense of their followers with the family business after a succession. Based upon the concept of identity work, we are interested in the resources that nonfamily leader use to reflect and make sense of the successor's novel leadership expectations and how identity work shapes their sense of self after a succession. Exploring the leadership succession in a German family business, we identify physical, behavioral and discursive resources as well as interactional work spaces of identity work. These resources carry projections of a desired self and expectations about the leadership behavior and help the leaders to develop their new leader identity. We contribute by theorizing how nonfamily leader identity work links identity leadership and the transmission of succession in family businesses.

Entrepreneur Migration

Session Moderator: **Nhu Nguyen**, *U. of Central Florida*

ENT: **Returnee-Migrant Entrepreneurship: A Systematic Review**

Author: **Barbara Gabrielle Silva**, *U. of Central Florida*
Author: **Nhu Nguyen**, *U. of Central Florida*
Author: **Nicholas Connor Andriese**, *U. of Central Florida*
Author: **Jim Combs**, *U. of Central Florida*

Return-migrant entrepreneurship (RE) is a global phenomenon that has the potential to boost local and less-developed economies and promote social mobility. Despite its prevalence and importance, research in RE is fragmented and lacks an overarching theoretical model. We therefore systematically review the literature pertaining to RE and provide a process model to better explain the phenomenon. Based on our integrative review, we theorized that immigration enhances resources and capabilities pertaining to entrepreneurship. Once a combination of (1) environmental factors and (2) personal preferences trigger their return home, these resources and capabilities are activated, more so when personal preferences and the home country environment are aligned. We conclude with a research agenda to further consolidate what is known and point the way toward a fuller understanding of who engages in RE, why, and to what effect.

ENT: **The Perception of Foreignnes in the Resource Orchestration Process: A Study of Migrant Entrepreneurs**

Author: **Stoyan Stoyanov**, *U. of Bath*
Author: **Veselina Petrova Stoyanova**, *U. of Birmingham*

Migrant entrepreneurs often face challenges in host countries due to their "liabilities of foreignness" (LoF). While it has been suggested that these challenges can be reduced through increased openness in the host context, it is not yet clear how this happens or how these liabilities can be turned into "assets of foreignness" (AoF). In this study, we propose that the way migrant entrepreneurs structure, combine, and utilize their resources - known as "resource orchestration" (RO) - plays a significant role in this process. We also suggest that the perception of foreignness by migrant entrepreneurs - whether it is seen as an asset or liability - influences their resource orchestration process. Our findings show that those who see their foreignness as an asset engage in shorter and less complex resource orchestration processes, while those who view it as a liability pursue more elaborate and complex paths. This research contributes to the resource orchestration literature by examining how the perception of foreignness affects the resource orchestration process and proposing a model to explain the variance in these processes. By extending the RO framework to consider variance among firms, particularly in the context of migrant entrepreneurs, we aim to provide a more comprehensive understanding of this phenomenon.

ENT: **Typology of Migrant Entrepreneurs' New Venture Ideas**

Author: **Muhammad Sufyan**, *U. of Jyväskylä School of Business*
Author: **Peter Zettinig**, *U. of Turku, Finland*
Author: **Pekka Stenholm**, *U. of Turku, Finland*

Migrant entrepreneurs have diversity in their thinking about new venture ideas (NVIs), which is evident through their businesses in multiple industries, ranging from low value added to highly knowledge intensive. Nonetheless, migrant entrepreneurship literature has yet to conceptualize migrant entrepreneurs' diversity of NVIs and explain why they vary in their thinking about new venture ideas. With this conceptual study, we have constructed a typology of migrant entrepreneurs' new venture ideas by building on the ethnicity/non-ethnicity of market niches and value chains, which are the two essential aspects of potential business models. Consequently, we identified that migrant entrepreneurs could imagine four NVIs; ethnic NVIs, break-out NVIs, market break-out NVIs and resources break-out NVIs. In addition, we have adapted the external enablers and actors' characteristics concepts in the context of migrant entrepreneurs' NVIs. More specifically, we have developed ethnic, non-ethnic, and trans-ethnic enablement, embeddedness, and human capital concepts to explain variations in migrant entrepreneurs' NVIs. We further discuss the contributions to migrant entrepreneurship and external enablers of entrepreneurship research.

Entrepreneurial Finance; Venture Capital 2

Session Moderator: **Giovanni Perrone**, *U. degli Studi di Palermo - Department of Engineering*

ENT: **With Whom Sharks Share their Meal. How Corporates Syndicate New Venture Investment With Other CVCs**

Author: **Giovanni Perrone**, *U. degli Studi di Palermo - Department of Engineering*
Author: **Erica Mazzola**, *U. degli studi di Palermo*
Author: **Mariangela Piazza**, *U. degli studi di Palermo*
Author: **Dzidziso Samuel Kamuriwo**, *City U. London*

This paper aims at filling a relevant gap in the entrepreneurial literature, by studying how corporates share their new venture investments with other corporates in a syndication team. In particular, we analyze how the corporate exploration propensity, i.e. the experience the corporate has acquired in investing in new ventures far from the corporate's industrial domain, influences the number of other the corporates (the multiplicity) involved in the syndication team and their prominence. Furthermore, we also analyze how the corporate's propensity at syndicating their investment with IVCs moderate the relationship between exploration propensity and corporate multiplicity and prominence. By drawing from the literatures of organizational learning and of competition concern in CVC syndication, we argue that there is a U-shaped relation between the corporate propensity to exploration and the multiplicity in syndication teams. We also argue that there is a negative relation between the corporate propensity to exploration and the corporate prominence in syndication teams. Furthermore, by drawing from social network literature, we argue that the propensity of the corporate to syndicate with IVCs and with prominent IVCs moderates the aforementioned relations. To test our theoretical framework, we have collected data about CVC investments from the VenturExpert database for 21 years, i.e. in the time window from 1995 to 2015. Our empirical analysis substantially confirms the theoretical framework by providing a significant contribution to the CVC literature.

ENT: **The Interplay of Cooperation and Competition in Venture Capital Syndication on Start-Up Acquisition**

Author: **Xiaolei Wang**, *Radboud U. Nijmegen*
Author: **Yan Zhong**, *KLATASDS - MOE, School of Statistics, East China Normal U.*

Drawing on embeddedness theory, this study explores the role of Venture Capitalists' prior coopetitive relationships on their start-up's exit strategies. In contribution to the literature on Venture Capital syndication, we argue that in a VC syndication, VC partners' prior cooperation and competition experience affects the success of their start-up's acquisition exit. We test our theoretical framework and hypotheses on a collection of 4,865 start-ups and their 4,024 VCs in the U.S. during 2001-2018. We find that both VCs' direct and indirect cooperation, theorized as the relational and structural embeddedness, have a positive effect on the success of start-up acquisition exit. Conversely, the impact of VCs' competition has an inverted-U shape effect on it. Moreover, a high level of VC cooperation diminishes the effect of competition on start-up acquisition exit. Our study extends the emerging literature on VC exit strategies in VC syndications and VC coopetition dynamics by identifying the role of VCs' prior coopetitive relationships in promoting the possibility of their backed start-ups to be successfully acquired.

ENT: **When Distance Makes the Partnership Grow Fonder: Venture Capitalist--New Venture Geographic Distance**

Author: **Sae Young Lee**, *China Europe International Business School (CEIBS)*
Author: **Andrew D. Henderson**, *U. of Texas at Austin*

We study when it benefits an entrepreneurial venture to locate farther away from its venture capitalist (VC) partner. In analyses of new ventures in the U.S. medical devices industry, we find the effects of geographic distance are conditioned by a venture's dependence on VCs. Ventures led by vetted serial entrepreneurs were more likely to succeed the farther they were from their VCs, as were ventures in later stages of development, and ventures not located in entrepreneurial hubs. Our results hold when accounting for differences in ventures' innovative abilities and are robust to corrections for endogeneity in VC-new venture pairings.

ENT: **Signals in the Acquisition Market for Private Ventures: the Role of Signal Receivers Characteristics**

Author: **Massimo Colombo**, *Politecnico di Milano*
Author: **Benedetta Montanaro**, *Politecnico di Milano School of Management*

Scholars agree that there are considerable information asymmetries in the acquisition market for privately held entrepreneurial ventures, that may inhibit the realization of value-creating acquisitions and depress target ventures' acquisition valuation. Quality signals like target firms' affiliation with venture capital investors (VCs), especially prominent ones, help reduce these negative effects. In this study, we argue that the effectiveness of this signal depends on the characteristics of signal receivers and increases with the number of prospective acquirers that are poorly informed about a focal target venture (i.e., those that operate in a different business as the one of the target venture and are located at great geographical distance from its premises). Our model shows that ventures affiliated with VC investors, especially highly reputable ones, are more likely than non-VC-backed ventures to be acquired by firms that are poorly informed about the focal target venture. Moreover, the positive effect of VC-backing on entrepreneurial ventures' acquisition valuation is greater if there is a greater number of poorly informed prospective acquirers, while it is not influenced by the number of well-informed prospective acquirers. We investigate our claims on 1,310 European privately held entrepreneurial ventures that were acquired between 1998 and 2018. Results largely confirm our hypotheses.

Despite family business research output growing nearly five-fold in the last decade, lingering questions remain over the uniqueness of family firms compared to other organizational forms. Some scholars have suggested that in order to answer these questions, closer study of the psychological foundations of management in family firms is needed and more micro-based frameworks should be utilized. After all, it is the individuals in the family that are often considered to be the main differentiator for family firms. This symposium features five presentations that, altogether, explore the factors driving family member behavior and the impact those behaviors have at both the individual and firm levels. Antecedents and outcomes examined in a family business context include commitment, identification, well-being, corporate venturing and innovation, among others. A brief discussion of research and practical implications will follow.

Entrepreneurship Education

Session Moderator: **Stefan Weik**, *Technical U. of Munich*

ENT: **Impact of Entrepreneurship Education Programs at University: Quasi-Experimental Evidence**

Author: **Michael Fröhlich**, *Center for Digital Technology and Management (CDTM)*
Author: **Stefan Weik**, *Technical U. of Munich*
Author: **Aaron Merlin Defort**, *Technical U. of Munich*
Author: **Isabell Melanie Welpe**, *Technical U. of Munich*

We evaluate the impact of participation in an entrepreneurship education program during university on subsequent entrepreneurial activity by comparing career decisions between program participants and the best applicants not accepted to the program using a regression discontinuity design. We find that program participation increases both founding rates and several indicators of startup quality. The effect on founding rates is visible for several years after the program. Even when program participants do not found, they are more likely to select into careers related to entrepreneurship. The study also finds that the interview process can identify students more apt to build higher quality startups, but not who is more likely to found. Participating in the program, however, appears to 'level the playing field' for participants to a degree where the original interview scores lose their explanatory power. Overall, the study suggests a strong positive causal effect between program participation and the measured outcome variables.

ENT: **Becoming entrepreneur without institutional support: a PhD Perspective in entrepreneurial university**

Author: **Matteo Opizzi**, *department of economics and business - U. of Cagliari*
Author: **Giammarco Marras**, *department of economics and business - U. of Cagliari*
Author: **Michela Loi**, *U. of Cagliari*

Illuminated by the social information processing perspective, which postulates an interplay between individual and the surrounding context at the base of an organizational behavior, this work proposes and empirically tests a model to explain doctoral students' decision to become entrepreneurs, that is their transition from entrepreneurial alertness to intentions. A structured questionnaire is administered to 261 doctoral students enrolled in 19 Italian universities. Partial Least Square Structural Equation Modeling (PLS-SEM) tests for causal relationships among latent variables. Necessary Condition Analysis (NCA) is adopted to clarify whether the relevance of the university support system changes with different levels of doctoral students' pro-social motivation. Our results demonstrate that the more doctoral students are endowed in terms of human capital, the more likely they are to become entrepreneurially alert. Conversely, they show that university support system does not reinforce doctoral students' entrepreneurial decision process, but it becomes a 'condicio sine qua non' when doctoral students have a weak pro-social motivation. This work contributes to theory by (i) clarifying whether and how university support system actually nurtures the early stage of academic entrepreneurship, and (ii) providing a multi-level model for explaining the arising of academic entrepreneurship.

ENT: **Nascent Entrepreneurs' Choice to Attend Entrepreneurship Training: Does it Matter**

Author: **Seyyede Sharare Bagherian**, *Sharif U. of Technology*
Author: **Misagh Tasavori**, *U. of Essex*
Author: **Sohrab Soleimanof**, *Louisiana State U.*
Author: **Alireza Feyzbakhsh**, *Sharif U. of Technology*

Nascent entrepreneurs are usually constrained with limited resources and have to decide whether an investment in their human capital (e.g., participation in entrepreneurship training programs) improves their firm performance. Based on the Conservation of Resources theory, we investigate the impact of nascent entrepreneurs' resources on their decision to participate in entrepreneurship training. By employing a Panel Study of Entrepreneurial Dynamics (PSED I) on nascent entrepreneurs, we notice that better-educated and growth-seeking founders are more likely to invest in their human capital through participation in entrepreneurship training; while those who observe the environment to be more uncertain are less likely to participate in entrepreneurship training. In addition, by using the propensity score matching technique, we reveal that participation in entrepreneurship training does not pay off for nascent entrepreneurs. We discuss our findings' implications for entrepreneurship research and training.

ENT: **Representing Contextual Factors in Entrepreneurship Education: An Agenda for Future Research**

Author: **Fatemeh Rahimi**, *Sharif U. of Technology*
Author: **Alireza Feyzbakhsh**, *Sharif U. of Technology*

In response to various calls for more context-aware research in entrepreneurship education, in this article, we review all the empirical studies published in top-level journals (ABS 3 and above), with a specific focus on the context. We build on the "Who? / Whom? What? Where? When? Why?" framework to extract context elements. Employing our framework, we indicate several biases of the literature as well as point to under-investigated spaces. Finally, using examples from reviewed articles, we demonstrate how accounting for contextual factors as main variables can be used to cover some gaps in the existing literature, based on which we suggest an agenda for future research in the entrepreneurship education field.

Entrepreneurial Cognition and Decision 2

Session Moderator: **Laëtitia Gabay-Mariani**, *ESSCA School of Management*

ENT: **Pivoting to Startup Success: Entrepreneurial Imagination and the Generation of New Business Options**

Author: **Laëtitia Gabay-Mariani**, *ESSCA School of Management*
Author: **Alejandra Flechas**, *Faculty of Economics, Administration and Accounting - U. of São Paulo*
Author: **Tali Hadasa Blank**, *Hadassah Academic College*
Author: **Alex Kier**, *Washington State U.*

Past research on entrepreneurs' use of imagination has focused on the identification and development of a business idea and has overlooked so far its role in their pivot decisions. We propose that imagination processes are key for entrepreneurs to rethink their initial ideas and to avoid the risks of path dependency, continued influence effect, and escalation of commitment. We sketch a model explaining the relationships between imaginativeness and the generation of new entrepreneurial options and factors that moderate this relationship. By doing so, we contribute to opening the black box of pivot decisions and deepening our understanding of how entrepreneurs use their imagination in crucial moments of the entrepreneurial process.

ENT: **From Oppression to Envisioned Liberation: Cognitive Precursors of Emancipatory Entrepreneurship**

Author: **Muhammad A. Muhammad**, *St Cloud State U.*
Author: **Jennifer E Jennings**, *U. of Alberta*
Author: **Hans Hansen**, *Texas Tech U.*
Author: **Zahid Rahman**, *Dhillon School of Business, U. of Lethbridge*

Given the fervent discourse evident in academic, policy, and practitioner forums regarding the relationship between oppression/emancipation and entrepreneurship, our aim in this paper is to extend extant theorizing about entrepreneurial activity as a potential means of liberation from oppressive forces. We start by identifying an unresolved theoretical puzzle inherent in foundational conceptual work on the emancipatory entrepreneurship perspective; specifically, how it is possible for individuals living in a state of oppression to transition to a state of (entrepreneurship-facilitated) envisioned liberation. We develop a process model and illustrative propositions pertinent that address this puzzle, elaborating the mechanisms by which individuals subjected to persistent oppressive forces can achieve the cognitive emancipation necessary to view themselves as aspiring entrepreneurs. The theoretical tools developed herein thus offer fundamental insight into the cognitive precursors of emancipation-motivated entrepreneurial activity. They also provide a platform to help guide future research on this timely and important topic.

ENT: **Act Quickly to Avert Disaster? How Entrepreneurs' Perceptions of Temporal Pace Affect Action Timing**

Author: **Stella Seyb**, *Neeley School of Business - Texas Christian U.*

Entrepreneurs tend to act quickly when faced with fast-paced problems. Yet, for some fast-paced problems, including climate change, biodiversity loss, and social polarization and unrest, entrepreneurs often delay or avoid taking action. This hesitation in the face of such fast-paced (and significant) problems raises questions about the relationship between temporal perceptions and action that existing theory cannot adequately answer. To advance understanding, I theorize how the characteristics of focal problems affect entrepreneurs' temporal perceptions, and how those perceptions affect the immediacy of their actions. Conceptualizing temporal pacing as the rate of development of a problem's characteristics and associated harms, and distinguishing between perceived and objective temporal pacing, I explain how discrepancies between perceptions and reality are more likely to arise when entrepreneurs are faced with grand challenges. As such, I argue that such discrepancies are most likely to delay entrepreneurial action in situations in which entrepreneurs can least afford to delay. The core contribution of the model is to demonstrate the necessity of conceptualizing temporal pacing not only in terms of perceptions of raw speed (i.e., previous slow-fast conceptualizations), but also the rate at which speed changes (i.e., stable-linear-exponential rates of growth in pace over time).

ENT: **Fostering Self-Regulated Entrepreneurial Learning (SREL) in Entrepreneurship Education**

Author: **Manuel Fahrbach**, *U. of St. Gallen (HSG)*
Author: **Tobias Jenert**, *U. of Paderborn*
Author: **Alexander Paul Fust**, *U. of St. Gallen*
Author: **Ronja Büker**, *U. of Paderborn*
Author: **Noah Bellwald**, *U. of St. Gallen*

Entrepreneurship education has already moved towards student-centered approaches. We seek to contribute to this development by introducing the concept of self-regulated entrepreneurial learning (SREL). Additionally, we propose a blueprint of an entrepreneurship training fostering SREL. Our training is based on Bandura's Social Cognitive Theory. In a quasi-experimental design, we compare our training with nascent entrepreneurs from a university accelerator program with a comparison group from a business innovation master. The participation in our training increased the SREL capabilities of nascent entrepreneurs significantly with large effects.

Poverty and Disadvantage

Session Moderator: **Ines Alvarez-Boulton**, *King's College London*

ENT: **Necessity is Not the Mother of Invention: Social Entrepreneurship, Poverty, and Innovation**

Author: **Ines Alvarez-Boulton**, *King's College London*
Author: **Anna Rebmann**, *King's College London*
Author: **Saul Estrin**, *LSE*

Social enterprises (SEs) are often depicted as highly innovative. However, there is little systematic evidence on the drivers of innovation by SEs or on how they compare to commercial enterprises (CEs) in this regard. This research compares innovation and radical innovation by SEs and CEs in a nationally representative sample of 903 UK small and medium enterprises (SMEs). We find that SEs are 78% more likely to innovate than CEs and 107 % more likely to introduce radical innovations. Contrary to expectations working alongside the government and being located in areas of poverty decreases, rather than increases, the likelihood of innovation by SEs. However, working with the government positively moderates the relationship between radical innovation and SEs. Our study offers a perspective on innovation and social entrepreneurship by proposing that pursuing dual goals stimulates both types of innovation in SEs.

ENT: **How and When Does Growth-Oriented Entrepreneurship Happen in Poverty Contexts? The Case of Kenya**

Author: **Harry G. Barkema**, *London School of Economics*
Author: **Anna Nadolska**, *Radboud U., Netherlands*
Author: **Caroline Oloo**, *Maseno U.*

Our paper explores an important theoretical puzzle in entrepreneurship research on poverty contexts in emerging economies: why has entrepreneurship failed to deliver on its promise of growth-oriented entrepreneurship and poverty alleviation? We explored this in the context of urban slums in Kenya, using mixed-methods research: first inductive qualitative research (Study 1) to identify entrepreneurial challenges and opportunities in context, in turn informing conceptualization and quantitative evidence to explore generality (Study 2). Surprisingly, our qualitative research showed entrepreneurs not only engaged in exploitation (March, 1991; consistent with 'replication' suggested by earlier entrepreneurship research for this context), but also in exploration (search, risk taking, and entrepreneurial growth). Additionally, we found that exploration was enabled by a combination of entrepreneurs' business failure experience and the presence of a close business relationship (acting as a role model, mentor, providing financial and other resources). In sum, we extend prior research suggesting that entrepreneurs will not go beyond replication in emerging economies in poverty settings, by identifying, conceptualizing, and providing further quantitative evidence consistent with the theory that entrepreneurial growth does happen in this context: through exploration, and under which conditions, with clear practical implications as well.

ENT: **The Ecology of Informal Entrepreneurship Among the Disadvantaged: A Field Theory Perspective**

Author: **Michael David Hudecheck**, *U. of St. Gallen*

That ecology influences venturing is a fundamental concept in organizational ecology theory (Dahl, 1956; Hannan & Freeman, 1987; Hannan & Freeman, 1989). What is less well known are the ecological considerations that influence informal entrepreneurship venturing, as well as the concomitant theories and concepts that describe the mechanisms behind these interactions. I combine organizational ecology theory, along with a Bordieuan perspective of field theory, to examine multi-level informal entrepreneurial venturing dynamics among informal entrepreneurs before and during the Covid-19 pandemic. I test my theorizing by combining a longitudinal dataset on informal entrepreneurial venturing in Thailand with a global ethnic fractionalization dataset and a custom geospatial urbanization map derived algorithmically from European Space Agency Sentinel 2 multispectral imaging and National Aeronautics and Space Administration nighttime light emissions imagery. I find strong evidence that several socio-cultural ecological factors: urbanization; "cross-cutting cleavages", or identification with two or more competing identities; and adversity strongly influence informal entrepreneurial venturing population dynamics. These results help clarify the potential of organizational ecology theory to examine informal entrepreneurial venturing dynamics among disadvantaged entrepreneurs.

ENT: **Venture Creation in Impoverished Contexts: Case Study of a Woman Entrepreneur from Manipur in India**

Author: **Kanika Pande**, *Indian Institute of Management, Udaipur*
Author: **Jayaram Suryanarayana Uparna**, *IIM Udaipur*

Women entrepreneurship is viewed as an important vehicle to drive socio-economic progress, especially in the contexts facing challenges such as poverty and industrial underdevelopment. But how do these women entrepreneurs view the very idea of entrepreneurial opportunity, and how does it influence their venture creation? Opportunity and venture creation are two of the prominent areas of research within the domain of entrepreneurship, and this pilot study examines these two aspects in relation to women entrepreneurship in impoverished contexts. With effectuation theory as the guiding framework, case study methodology is used to explore the entrepreneurial journey of a woman entrepreneur from the state of Manipur in India. Thematic analysis of the data was undertaken to examine her engagement in opportunity and venture creation and growth which revealed three broad themes pertaining gendered spaces, gendered affordable risk and gender barriers to collaboration.

Entrepreneurship and Ethics

Session Moderator: **Jan Keim**, *Bern U. of Applied Sciences*

ENT: **When Does Entrepreneurial Greed Lead to Explorative Behavior? (WITHDRAWN)**

Author: **Friedrich Tacke**, *TUM School of Management, Technische U. München*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*

Greed is a trait that causes people to be dissatisfied with what they currently have and to always want more. Entrepreneurs are often portrayed as greedy people who try to satisfy their desires through their venturing activities. In this paper we examine whether greed relates to explorative behavior. Explorative behavior is about searching for new opportunities and holds the chance for major improvements. We further investigate when entrepreneurs high in greed show greedy behavior. Based on a sample of 234 entrepreneurs from 112 teams, we show that the impact of entrepreneurial greed on explorative behavior depends on the current situation, specifically the situational strength. Entrepreneurial greed has positive impact on explorative behavior only in weak situations – situations with low certainty for the individual and low psychological pressure to behave in a certain way.

ENT: **Why Entrepreneurship Overlooks Structural Injustice: Biases, Blind Spots & Paradigmatic Assumptions**

Author: **Jan Keim**, *Bern U. of Applied Sciences*
Author: **Susan Müller**, *Bern U. of Applied Sciences*
Author: **Pascal Dey**, *Bern U. of Applied Sciences*

Entrepreneurship is often associated with positive attributes such as innovation and economic growth. In recent years, however, researchers and practitioners have increasingly recognized the "dark sides" of entrepreneurship. Despite the growing recognition of the negative impacts of entrepreneurship, the concept of structural injustice has been largely overlooked in the field. Structural injustice refers to deeply ingrained and systemic forms of inequality that disproportionately affect marginalized groups. In this paper, we aim to fill this gap by examining the role of entrepreneurship in perpetuating and mitigating structural injustice. Our hypothesis is that five paradigmatic assumptions prevalent in the entrepreneurship community, as well as a lack of appropriate tools, methods, and curricula, contribute to this omission. To address this issue, we propose three corrective actions. First, we propose strengthening critical thinking skills in entrepreneurship education by encouraging students to critically examine the assumptions and values underlying entrepreneurship and the potential indirect consequences of their actions. Second, we recommend that entrepreneurship research takes a more holistic view by applying different research methods, promoting multidisciplinarity, and considering the potential consequences of innovation and entrepreneurial activities in funding programs and measuring firm-level success. Finally, we suggest reconsidering the role of prosocial entrepreneurship, which is currently viewed as a panacea for solving today's most pressing ills. Overall, this paper represents an important first step in incorporating structural injustice into the discourse on entrepreneurship.

ENT: **Entrepreneurial Ethical Discernment: Identifying the Line in Ethical Gray Areas**

Author: **Miranda Welbourne Eleazar**, *U. of Iowa*
Author: **Karl Henry Reinke**, *Tippie College of Business, U. of Iowa*
Author: **Emily W. Choi**, *U. of Texas at Dallas*

Entrepreneurship comes with the potential for great benefits for entrepreneurs, investors, and society at large. However, its uncertainty can also put great pressure on entrepreneurs to try to obtain success at all costs, even behaving unethically. Prior research has acknowledged the potential for unethical entrepreneurial behavior through rule breaking, fraud, and sliding down a slippery slope to unethical behavior, but has not considered how entrepreneurs themselves perceive the gray areas in entrepreneurship and identify the line between ethical and unethical behavior. In this qualitative study incorporating 92 interviews of entrepreneurs and investors, we delve into entrepreneurs' perception of the ethical line in entrepreneurship, the factors affecting that perception, and how entrepreneurs navigate entrepreneurial gray areas. In doing so, we develop a process model of entrepreneurial ethical discernment, contributing to the literature on entrepreneurship, ethics, and decision-making.

ENT: **Dark and Destructive? Configurations of Negative Ends and Means in Entrepreneurship Research**

Author: **Amitabh Anand**, *Excelia Business School*
Author: **Oana Branzei**, *Ivey Business School*
Author: **Nakul Parameswar**, *Indian Institute of Technology Hyderabad*
Author: **Birgit Muskat**, *Australian National U.*

The dark side of entrepreneurship is endemic, yet lacks depth. We use a configural approach to first identify and then actively categorize key dimensions surfaced by prior studies across disciplines. Our systematic literature review derives and describes five configurations, which we label creative, forced, episodic, re-allocative, and magnetic. We use convenience theory to synthesize and consolidate these five forms into a coherent conceptual framework. Working within and between these five forms can advance the research agenda on the dark side by drawing our attention to the different trigger, tensions and mechanisms that precipitate the destruction rather than the creation of value

Entrepreneurship is portrayed in a predominantly positive light in popular media and organizational scholarship. Indeed, the entrepreneurial actor has been dubbed a “hero”, “man of action”, and “agent of innovation” and the entrepreneurial process proclaimed as the ”pivot on which everything turns”. Despite the effusive evangelization of entrepreneurship from organizational scholars, the organizational literature remains rather mute about entrepreneurship’s darker sides. Manford Kets de Vries (1985) was the first to theorize that many of the often celebrated “light sides” of entrepreneurship may also correspond to seldom discussed “dark sides.” Following Kets de Vries, Shepherd (2019) proposed dividing up the “bad side” of entrepreneurship research into three distinct domains: 1) the dark side—the emotional and psychological tolls associated with entrepreneuring (e.g., pernicious passion); 2) the downside—the loss of financial and social capital following entrepreneurial failure (e.g., socioemotional wealth); 3) the destructive side—the societal consequences of entrepreneurial conduct (e.g., securities fraud). The purpose of this panel symposium is to cast a light into the darker recesses of entrepreneurship by expounding on existing dark side scholarship, exploring connections between the “bad sides” of entrepreneuring, exposing gaps in the dark side literature, and illuminating a path forward for future research.

Participant: **Bowen Lou**, *U. of Connecticut*

A large extant literature has historically established the importance of various intermediaries in promoting entrepreneurship, such as government agencies, science parks, and various university and public educational programs. Recently, scholars have paid close attention to a prominent type of entrepreneurial intermediary organizations—accelerators—that have catered to high-growth startups, as a range of high-profile entrepreneurial successes have emerged from their programs, e.g., Dropbox, AirBnB, Stripe, Postmates, DoorDash, etc. At the same time, other types of burgeoning intermediary organizations that are not specifically designed for entrepreneurs have also cultivated notable cases of well-known startups. On one hand, coworking spaces—subscription-based workspaces in which individuals and teams from different companies work in a shared, communal space—have sparked the successes of Instagram, Uber, Spotify, etc. On the other hand, makerspaces—physical spaces that provide fabrication tools and materials for making things—have allowed ventures like Square, PebbleTec, and URB-E to produce their initial prototypes for achieving later commercialization. Consequently, scholars, practitioners, and policy makers all endeavor to understand whether these successes from the various intermediary organizations can be replicated broadly and how. This symposium aims to spark conversations between scholars studying different types of intermediary organizations that can facilitate entrepreneurship. The four papers altogether allow for the possibility of exploring the question of who benefits from which intermediary organizations by integrating perspectives from accelerators, coworking spaces, and makerspaces.

Don't Let Me Down (Session 1): Adoption of Novel Management Practices and Delivery Systems

Session Moderator: **Elmira Mirbahaeddin**, *Telfer School of Management, U. of Ottawa*

HCM: **Work-Life Boundary Management of Peer Support Workers when Engaging in Virtual Mental Health Support**

Author: **Elmira Mirbahaeddin**, *Telfer School of Management, U. of Ottawa*
Author: **Samia Chreim**, *U. of Ottawa*

Mental health challenges have increased since the COVID-19 pandemic was declared. In this context, peer support has proved to be a valuable resource. In many jurisdictions, peer support services have moved online, offered virtually by peer support workers who have engaged in work from home. Despite the importance and prevalence of virtual mental health peer support during the pandemic, there has been a paucity of research that examines how working from home influences PSWs' work-life boundaries. This research aims to examine work-life boundary challenges and management of PSWs. Semi-structured interviews were conducted with paid PSWs in a peer support organization. Data was analyzed thematically using inductive and deductive approaches. Descriptive coding utilizing participants' terms was followed by inferential coding informed by boundary theory. The work-life boundary challenges were temporal, physical, and task-related. PSWs' strategies to address these boundaries involved segmenting work-life domains by creating separate timescapes, spaces, and tasks and integrating domains by allowing some permeability between the areas of work and life. This study highlights the need to attend to the consequences of greater work-life integration for mental health workers. Implications for theory, future research, management, and policy of health workforce are discussed.

HCM: **Travel Nurses and Patient Outcomes: A Systematic Review**

Author: **Candice Vander Weerdt**, *Cleveland State U.*
Author: **Jessica Peck**, *Cleveland State U.*
Author: **Tracy Hopkins Porter**, *Cleveland State U.*

The unprecedented use of travel and temporary nurses in recent years requires further investigation of the impact on patient care. We conducted a systematic review of empirical research investigating the relationship between travel nurses and patient care to identify if a consistent significant association exists and how structural and process variables may influence such associations. Our review following the Preferred Reporting Items for Systematic Reviews and Meta-Analysis (PRISMA) of six databases resulted in the identification of 21 relevant articles. The existing research of travel nurse use differs widely in terms of the definition of travel nurse, study design, and included controls. The literature has failed to establish a consistent relationship between travel nurses and patient outcomes. Underlying structural and process variables, such as staffing levels and the practice work environment, may be confounding associations between travel nurse usage and quality patient care. Administrators and managers are urged to assess staffing and the work environment when employing travel nurses.

HCM: **Nursing Homes' Alzheimer's Disease Special Care Units: What are the Drivers of Adoption?**

Author: **Giovanna Pilonieta**, *U. of Alabama, Birmingham*
Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*
Author: **Rita A Jablonski**, *U. of Alabama, Birmingham*
Author: **Amy Yarbrough Landry**, *U. of Alabama, Birmingham*
Author: **Justin Lord**, *Louisiana State U. Shreveport*
Author: **Ferhat Zengul**, *U. of Alabama, Birmingham*

Objective: To ascertain whether environmental and organizational characteristics predict the adoption of Alzheimer's disease special care units (AD SCUs) among nursing homes. Methods: This study utilized data from two different sources: Brown University's LTCFocus data and the Area Health Resource File from 2005 to 2019. The sample consisted of approximately 193,652 nursing home-year observations (or an average of 12,900 facilities per year). Panel logistic regression with random effects and state and year fixed effects analysis was used to examine the relationship between nursing homes' adoption of AD SCUs and environmental and organizational characteristics. Results: Bivariate analyses showed significant differences between AD SCUs adopters and non-adopters in all environmental and organizational characteristics except Medicare Advantage penetration rate. In regression analyses, nursing homes operating in a less munificent external environment and more dynamic environment were less likely to adopt AD SCUs. On the other hand, nursing homes operating in more monopolistic markets were more likely to adopt AD SCUs. In addition, organizational factors such as size, for-profit status, occupancy rate, payer mix, and nursing homes' location were significant predictors of AD SCUs adoption. Conclusions: Findings suggest that environmental and organizational factors influenced the adoption of AD SCUs by nursing homes. Our study findings can be used by NHs administrators to make informed decisions when adopting specialized care for people with dementia. Keywords: Alzheimer's disease, special care units, nursing homes, environment, market factors

HCM: **Organizational Change under Value-based Healthcare Reform: Evidence from Acute Hospital-at-Home**

Author: **So Yeon Kang**, *Georgetown U.*

Payment reform initiatives run by CMS encourage hospitals and physicians to invest in care coordination and move facility-based services into less intensive care sites to lower healthcare spending and improve the quality of care. These initiatives may influence organizations' interest and competence to implement cost-effective care delivery models. This retrospective cohort study investigated 3,248 general acute hospitals' adoption of a new CMS payment program for a home-based inpatient care model for Medicare beneficiaries between November 2020 and August 2022. This study supports three organizational change arguments: (1) Change management experience handling uncertainty in the prior period increases organizations' likelihood of adopting a change in the next period. (2) Partnership with change agents facilitating the innovation increases the organizations' likelihood of adopting a change when the organization lacks its own change experience. (3) The community's change climate, shaped by the prevalence of adopters in the community, increases a member organization's adoption of innovation. Mere exposure to the change did not induce the adoption. The paper then discusses implications for the collective competence in adopting care delivery innovation in the community of organizations.

HCM: **E-Access versus Physical Access: An Examination of Telehealth Adoption**

Author: **Eric Li Xu**, *U. of Minnesota*
Author: **Kevin Linderman**, *Penn State U.*

As interest in telehealth has expanded in recent years, it is more important than ever to understand the tradeoffs patients make when deciding about whether to use in-person services or telehealth services. From an operations strategy perspective, the infrastructural characteristics related to access to acre, specifically physical road distance and broadband access are important factors impacting individual patient's decisions. Therefore, we examine the impact of telemedicine adoption on primary care use, specifically examining the conditions by which telehealth consultations become a substitute for in-person care or a compliment to in-person care. Using a unique dataset of insurance claims for primary care visits, we examine in-person, asynchronous, and synchronous primary care visits. The empirical analysis shows that broadband coverage directly impacts synchronous telehealth visits in states with payment parity and service parity once the quality of providers broadband is improved through expanded funding under the Rural Healthcare Program (RHP). Notably, the effect of distance to the nearest provider is not impacted by the RHP expansion. With regards to asynchronous telehealth uptake, the analysis shows that the sole predictor of uptake is consumer broadband coverage regardless of a state's payment parity or service parity laws related to the privately insured population.

HCM: **Unmitigated Risks in Hospital Laboratories During COVID-19 Pandemic: A Phenomenological Study**

Author: **Khadar Diria**, *A.T. Still U.*
Author: **Lori Peterson**, *U. Norbert Wiener*
Author: **Patrick Albert Palmieri**, *U. Norbert Wiener*

Medical laboratory professionals (MLPs) perform clinical diagnostic testing on human specimens. Due to the COVID-19 pandemic, MLPs were at risk for viral exposure due to occupational hazards. As MLPs typically work behind the scenes, hidden in hospital laboratories, their needs are often overlooked by management. This phenomenological study describes the lived experience of MLPs working in hospital laboratories during the COVID-19 pandemic. MLPs were purposively recruited from hospitals in the Middle Atlantic and Midwestern regions of the United States. Semi-structured interviews were conducted via Zoom until saturation was achieved with 12 participants. Data were analyzed using Colaizzi's (1978) seven-step method in Atlas.ti. The central theme "nobody cares about us" emerged from the 232 codes organized into 16 subthemes and consolidated into five themes. The themes included: (1) Who is responsible for our safety? (2) What is causing our fear? (3) Why work so much? (4) Where are our managers? and, (5) Where is our emergency plan? This study provides the first known qualitative findings to describe the unique experiences of MLPs working in hospital laboratories during the COVID-19 pandemic. Unmitigated occupational hazards and unresponsive management resulted in increased fear and viral exposure in laboratories. Misinformation from social and broadcast medias and inadequate hospital communication increased anxiety and concerns. Deficiencies in hospital disaster response plans may have resulted from inadequate review by accreditors and poor regulatory oversight. The findings provide an opportunity for professional organizations to take a proactive role in improving laboratory safety.

HCM: **Working on the Frontline: Emotional Demands and Qualitative Job Insecurity as Triggers of Depression**

Author: **Bram Fleuren**, *Maastricht U.*
Author: **Lieze Poesen**, *Maastricht U.*
Author: **Daan Westra**, *Maastricht U.*
Author: **Fred Zijlstra**, *Maastricht U.*
Author: **Rachel Gifford**, *Maastricht U.*

The COVID-19 pandemic continues to strain hospital workers worldwide and those working in COVID-19 wards are particularly at risk. Consequently, organizational functioning suffers as hospital employees drop out because of burn-out, sickness, or depressive symptoms. This paper uses self-report data from a large shortitudinal subsample of 366 clinical hospital workers to investigate the relationship between working in a COVID-19 ward and depressive symptoms, supplemented with interview data to validate and deepen quantitative findings. Specifically, we test a moderated mediation model in which the effect of working in a COVID-19 ward on depressive symptoms is mediated by emotional demands, and this mediation effect is in turn moderated by insecurity over working conditions. We find support for the full moderated mediation model, even after controlling for age, occupation, and pre-existing mental health condition. That is, working in a COVID-19 ward is positively related to depressive symptoms, and this effect flows partially through a positive mediation effect of emotional demands. Additionally, a positive moderation effect of insecurity over working conditions is found, indicating that this insecurity worsens the effect of emotional demands on depressive symptoms. These effects provide solid evidence on why COVID-19 ward workers are at increased risk of depressive symptoms.

HCM: **Cut them Some Slack: Effects of Slack Resources on HR Outcomes of Healthcare Organizations**

Author: **Frank Christian Van De Baan**, *Maastricht U.*
Author: **Niels Hameleers**, *Maastricht U.*
Author: **Rachel Gifford**, *Maastricht U.*
Author: **Dirk Ruwaard**, *Maastricht U.*
Author: **Bram Fleuren**, *Maastricht U.*
Author: **Daan Westra**, *Maastricht U.*

Healthcare organizations worldwide struggle to maintain adequate staff levels as a result of absenteeism and attrition of staff, and the COVID-19 pandemic has worsened this issue. This study examines whether slack resources might enable organizations to improve these outcomes, including during an exogenous shock. To this aim we used a national dataset containing annual report data of all hospital in the Netherlands from 2017 to 2021. Our multivariate multilevel models show a curvilinear relationship between absorbed slack and attrition rates. Moreover, our findings show that unabsorbed and potential slack can buffer against negative absenteeism rates caused by the COVID-19 pandemic. These findings advance our conceptual knowledge of the relationship between slack resources and organizations. As such, this study sets a future direction for studies further examining the relationship between slack resources and HR outcomes.

HCM: **Psychological Safety as an Enduring Resource for Employees Amid Organizational Crisis**

Author: **Hassina Bahadurzada**, *Harvard Business School*
Author: **Michaela Kerrissey**, *Harvard U.*

While psychological safety has come to be widely accepted as valuable in healthcare, in practice it is often treated as secondary when resource constraints arise amid intense production pressures. Leveraging longitudinal survey data collected from healthcare workers before and during the COVID-19 crisis (N= 27,218), we examine how baseline psychological safety relates to employee burnout and intent to stay over time and investigate this relationship relative to resource constraints (i.e., the adequacy of both staffing and tools). Using hierarchical models, we find that the challenging implications of resource constraints for burnout and intent to stay that arise during periods of system stress can be mitigated by the presence of psychological safety. Moreover, we find that baseline psychological safety (prior to crisis) is associated with sustained reductions in burnout and increased intent to stay in an organization that undergoes major disruption. Our longitudinal study identified that psychological safety can have protective benefits for healthcare workers during periods of stress, and that these benefits can mitigate the negative consequences of resource constraints for burnout and turnover intent.

HCM: **Workers During Trying Times: A Dynamic and Cyclical Health Action Process**

Author: **Aristides Isidoro Ferreira**, *ISCTE - Instituto U. de Lisboa*
Author: **Ana Antunes**, *Lufthansa AG Lufthansa Aviation Center Frankfurt, Germany*
Author: **Nadia Pereira**, *U. de Lisboa - Faculdade de Psicologia*
Author: **Paula Da Costa Ferreira**, *CICPSI, Faculdade de Psicologia, U. de Lisboa*

This study proposes to examine which strategies organizations can focus on to effectively and sustainably grasp their employee's potential during a pandemic and how strategic planning can be adapted to warrant the importance of human resource sustainability, using a dynamic and cyclical health action process approach. It also proposes to investigate what the longitudinal relationship and potential impact of the challenges presented by the pandemic are on employees and organizations with respect to the enactment of DGS guidelines, work engagement, leaders' moral (dis)engagement, and employees' decision to remain in their company in the context of the pandemic caused by COVID-19. To study multidimensional measures, a mixed study was conducted with qualitative and quantitative data. Interviews were conducted and questionnaires were applied at two different times, corresponding to two general confinement phases and were analyzed using thematic analysis and Structural Equation Modelling, respectively. Results showed what motivated organizations and their employees to adopt new prevention and containment measures. Based on the Social Cognitive Theory and Social Exchange Theory, different repercussions (negative and positive) of the HAPA constructs on certain organizational outcomes were confirmed. Specifically, the effects on the Leader's Moral Disengagement, on Enactment of Sanitation Guidelines provided by the Directorate-General for Health (DGS), on Work Engagement, and on employees' Decision to remain in the company, were confirmed. The study presents theoretical, practical contributions and suggestions for future investigations.

Participant: **Andrea Funke**, *Macquarie Business School, Macquarie U.*

Healthcare management, entrepreneurship, and innovation involves multiple actors spanning from individuals to the larger system level. For example, patients, providers, entrepreneurs, managers, scientists, and investors/funders are nested and interconnected in collective partnerships, teams, organizations, communities, and political systems. These relationships are multifaceted and result in layers of complexity as well as a range of opportunities for the stakeholders involved. In healthcare, stakeholders oftentimes have differing goals and the goods/services provided can be less tangible, with credence qualities or with longer time horizons around outcomes, compared to other areas of business management. Tasks are complex and interdependent while co-production among numerous actors from different backgrounds is common. Therefore, a better understanding of the managerial, entrepreneurial, and innovative processes across healthcare can contribute to our research progress, practitioner application, and broader social impact. In this symposium, we will bring together scholars from across disciplines and geography to explain how to advance healthcare innovation and entrepreneurial activity. The papers consider a range of stakeholders, leverage various theoretical and methodological approaches, and focus on multiple levels in healthcare, such as the political economy of a region, venture capital investment across counties, temporary teams in hospitals, business model innovation for firms, and individual entrepreneurial mindsets.

Participant: **Jordan Duran**, *UNC Charlotte*

With the changes that digitalization and globalization introduce to organizational landscapes, new challenges manifest for organizations to thrive. These challenges include a stronger focus on remote and virtual work settings, flatter hierarchies, and an enhanced emphasis on self-managed as well as cross-functional teams. The rise of fast-paced, interdependent, and autonomous work will particularly affect the emergent and unofficial processes in organizations. Specifically, informal dynamics will gain even greater importance in organizations. Informal dynamics reach deep into organizational processes and phenomena and play out at different organizational levels. The manuscripts of this symposium throw light on a selection of informal dynamics at and across the individual and team level. At the individual level, informal dynamics are explored by investigating workplace gossip and its various contents. At both the individual and team level, informal dynamics are investigated by observing team reflexivity initiated in a formal context. At the team level, informal dynamics may act out via group processes, such as entitativity or informal leadership, and affect group outcomes including group performance. The manuscripts of this symposium combine qualitative, experimental, and interaction analytical approaches to investigate this field.

Presenter: **Mark Hand**, *Southern Methodist U.*

This symposium seeks to understand the impacts of employee ownership (EO) on firms' effective engagements with diverse stakeholders. Specifically, the main purpose of this symposium is to respond a question: With regard to corporate engagements in stakeholder relations, what if workers or employees become owners of companies? In particular, how do employee-owners or employee-owned companies approach to stakeholder management? Previous research presents that EO significantly influences various dimensions of firm performance and outcomes. With regard to corporate stakeholder engagements, however, as this year's AOM theme points out, management scholarship has paid "far less attention to workers as subjects." Also, management scholarship insufficiently studies relevant phenomena of workers-as- owners, i.e., EO or employee-owned companies, one of the important ownership categories. The research presented and ideas discussed in this symposium can help management scholars reconsider and rebalance the roles of workers as owners of their own workplaces in stakeholder management. EO is considered a plausible remedy to pervasive equity problems and diversity/inclusiveness issues in our socio-economic system. As such, this symposium squarely meets this year's theme: Putting the Worker Front and Center.

The extant work on talent management (TM) has largely promoted neoliberal agendas concerned with ranking, rating and recording employees' talent, or indeed lack of talent. While there are emerging insights that unravel the gendered, racialized and classed logics underpinning dominant TM writings, there is largely an acceptance of TM as an elitist practice, and there has been limited critical work that challenges the epistemological foundations of TM. In this symposium we adopt a critical lens and stress on the importance of power relations that shape, constrain and may hinder opportunities for all employees. In line with this year's AOM theme "putting the worker front and center", this presenter symposium aims to broaden our sight for more inclusive TM theorizing by including five papers that bring intersectionality to the forefront. The collection of papers documents the voices of the silenced talent from the Netherlands, Germany, Switzerland, Austria, and Ghana, and draws on feminist, critical, transnational and postcolonial epistemologies to challenge the dominance of masculinist and neo-liberal logics in TM theorizing and open up opportunities to review TM systems that stress inclusion and equity. This is a timely endeavor to draw out, extend, give emphasis and voice to what and who is silent or marginally present or ideologically represented in much of the current TM literature with the aim of broadening our sight in TM theorizing.

Migrant workers are important participants in the labor markets of their host countries – yet they have largely remained "invisible" in management research. Although there is research on how migrants integrate in the larger society, few have examined how they access and integrate into labor markets and even fewer have examined the role organizations play in this integration process or what makes for a successful employer-employee relationship. "Putting the migrant worker front and center," this symposium offers a collection of papers that examine migrants in the workplace from various perspectives: that of migrant support organizations, of employers, and of migrants themselves. A collaboration of scholars from universities in Australia, Canada, Denmark, and Germany, it includes both theoretical and (quantitative and qualitative) empirical papers, based on samples from Canada, Germany, and India, each contributing to the conversation on how to facilitate migrant success, a topic of the highest priority at the intersection of business, migration, and society.

Participant: **Rachel Arnett**, *The Wharton School, U. of Pennsylvania*

The purpose of this symposium is to explore personal self-expression and self-disclosure in the workplace. Collectively, the papers in this symposium study predictors and consequences of bringing the personal self into the professional sphere using multiple different methodologies. These papers consider not only the perspective of the personal information discloser, but also the perspective of the disclosure recipient, thereby examining the effects of personal self sharing for both parties in the interaction. Furthermore, the current literature on self-disclosure in social psychology paints a rosy picture of this behavior, suggesting largely positive outcomes (e.g., Frattaroli, 2006). However, in this symposium, we also identify some potential drawbacks of self-disclosing to colleagues. This symposium will feature four papers as well as remarks from a session discussant in hopes of stimulating dialogue on personal self-expression and self- disclosure at work.

Presenter: **Florencio F. Portocarrero**, *Columbia Business School*

Corporate volunteering (CV) programs have gained substantial attention in the past years as organizations respond to calls for incorporating responsibility and sustainability principles into their strategies (Kearns and Woollard, 2019). In the literature, scholars have advanced our understanding of the positive impacts of corporate volunteering on employee attitudes toward their work and organisation (Rodell, 2013; Peterson, 2004; Booth et al. 2009; Muthuri et al. 2009; Jones, 2010; Vlachos et al. 2010; Deloitte 2011; Dempsey-Brench and Shantz, 2022), and produced limited research looking into the outcomes of employee volunteering (de Gilder et al. 2005; Morjza et al. 2011; Caligiuri et al. 2013; Mattila and Hanks, 2013; Shantz and Dempsey-Brench, 2021). Yet, research gaps exist requiring further investigation about organizational influences on establishing and sustaining CV programs, as well as understanding organizational-level outcomes of these volunteering programs. This symposium presents four empirical papers that further our knowledge investigating organizational influences and outcome of corporate volunteering programs. Firstly, our session addresses how to effectively establish CV programs (Paper 1, Dempsey-Brench, Hewett, & Shantz) by framing these programs to upper-level management in ways that best align with managerial identity and status. Second, it provides evidence of how employers can help sustain employee volunteering through interventions that can promote affective experiences and influence employees' enduring affect through which employees engage in volunteering (Paper 2, Portocarrero). The final papers in this symposium (Paper 3, Nabiyeva, Haigh & DeWitt; Paper 4, Portocarrero) address the potential benefits of employee volunteering accrued at the organizational level. Corporate volunteering programs have been theorized to benefit multiple stakeholders, but primarily the benefits have been studied at the individual or group level. By addressing volunteering as a firm-level phenomenon, this likely can aid in building the business case for CV programs, as well as contribute to the sustainability of these programs in organizations.

Entrepreneurship and Innovation in International Expansion

Session Moderator: **Romina Guri**, *U. of Groningen*

IM: **A Born Global Internationalization Path: The Role of Digital Technologies**

Author: **Romina Guri**, *U. of Groningen*
Author: **Florian Noseleit**, *U. of Groningen*

The Born Global literature explains the internationalization of born globals in the light of firm-specific factors and has recently given attention to the factors that facilitate their internationalization. In that regard, digital technologies are viewed to play an important role, however, not all firms that use digital technologies follow a born global path. In this study, we adopt a business model perspective and conceptualize digital technologies with regard to their function in creating, delivering, and capturing value. We argue that firms which use digital technologies that enable value creation, delivery, and capture are more likely to follow a born global internationalization path. Using the IAB/ZEW startup data we test our predictions on a sample of approximately 1963 startups. Our findings show a positive association between digital technologies that enable value creation and following a born global path, whereas the effect of digital technologies that enable value delivery and capture depends on the degree of firms' entrepreneurial orientation.

IM: **International Entrepreneurship and Sustainability: Bibliometric Analysis and Future Directions**

Author: **Liting Liang**, *U. of Vaasa*
Author: **Brian Chabowski**, *The U. of Tulsa*
Author: **Martin Meyer**, *U. of Vaasa*

Research on international entrepreneurship has grown over the past twenty years but most attention has been paid to the economic perspective of the phenomenon. There is a lack of a holistic understanding of the intellectual structure that links sustainability with international entrepreneurship. Based on the bibliometric analysis of 1,918 articles with 104,004 citations, this study identifies important topics for three time periods spanning from 1993 to 2021: entrepreneurial orientation; institutional isomorphism and collective rationality; institutional voids; and institutional change and performance. Future directions of research are suggested by employing the Kuhnian approach to research development by: integrating the importance of stakeholders and institutions; linking institutions and the natural resource-based view; combining topics such as productive, unproductive, and destructive entrepreneurship with dynamic capabilities; comparing literature related to corruption, formal, and informal institutions with the natural resource-based view; and incorporating corruption, formal, and informal institutions with dynamic capabilities

Despite extensive research about the externalities of inward foreign direct investment (FDI) on host economies and firms, we still know little about the role that inward FDI plays on local entrepreneurial activity. In this paper, we extend prior research by investigating whether, and how, inward FDI influences entrepreneurial dynamics in host countries. We argue that foreign multinationals operating in the host country are likely to spur domestic entrepreneurship and enhance startup performance. We emphasize the roles of skill acquisition and labor mobility among employees of foreign-owned multinational enterprises (MNEs). Using matched employer-employee data from Sweden for 2009 to 2018, we find a positive association between MNE presence and local entrepreneurial activity. Not only are more new firms likely to be founded in municipalities with more MNEs, but the new ventures are more likely to spawn from foreign MNEs than from domestic firms. Moreover, MNE spawns outperform—across several dimensions (e.g., financial performance and productivity)—domestic firm spawns. Taken together, our results hint at positive externalities from inward FDI and speak to the different channels through which those externalities may manifest in host regions.

IM: **Early Internationalization and its Subsequent Location Choice**

Author: **Hirokazu Kano**, *Oita U.*

The phenomenon of early internationalization has garnered increasing attention from scholars in recent years. However, extant research on international entrepreneurship has largely neglected the growth trajectory of early internationalizing firms, particularly their choice of investment location in the post-entry process. In order to address this gap, we adopt an entrepreneurial approach to experimental learning. Our premise is that through subsequent foreign investments, early internationalizing firms can develop a portfolio of international opportunities, which promotes experiential learning in foreign markets and thereby enables highly experimental foreign investments. Based on this premise, we hypothesize that early internationalizing firms are more likely to invest in host countries that they have not previously entered in order to expand their portfolio of international opportunities, and that this portfolio mitigates the negative impact of regional boundaries and geographic distance on the likelihood of foreign investment. The findings of our longitudinal study, spanning 16 years (2003-2018) and focusing on Japanese early internationalizing firms, provide evidence to support our hypotheses.

IM: **Unintended Trust Violations in Cross-Border Collaborations: A Social Trust Culture Perspective**

Author: **Jun Ho Lee**, *U. of Kansas*
Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*

Unintended trust violations often occur even after forming a cross-border collaboration between organizations from different countries. We draw on the perspectives of social trust cultures and bounded rationality and examine how organizations from different social trust cultures (i.e., ingroup/outgroup trust cultures), even without malicious intentions, may perceive trust violations in cross-border collaborations. These violations result from a gap in how an organization expects and perceives the partner's behavior, which would differ based on its distinct social trust culture. We posit a U-shaped relationship between social trust frame distance and perceived trust violations. Given that any cross-border collaborations are embedded in a social context, we also propose that multi-level embeddedness – environmental embeddedness in a host country, structural embeddedness in cross-border collaborations, and positional embeddedness within the cross-border collaborations – would have different implications for perceived trust violations.

IM: **The Interplay of International Alliance and Subsidiary Portfolios: Implications for Firm Performance**

Author: **Mariia Koval**, *Grenoble Ecole de Management*
Author: **Viacheslav Iurkov**, *Grenoble Ecole de Management*
Author: **Gabriel R.G. Benito**, *BI Norwegian Business School*

The benefits of having an internationally diverse alliance portfolio are well known. However, their challenges remain overlooked, especially their potential to curb companies' international expansion beyond such alliances. Building on global connectivity literature, we study how companies' international footprint through their foreign subsidiaries is affected by the geographical spread of their international alliances. Using data on a sample of U.S. high-tech firms, we find that this relationship follows a U-shaped pattern and is contingent on alliance portfolio geographic distance and firms' absorptive capacity for internationalization. Deviations from the optimal international footprint lower companies' innovation and financial performance.

IM: **The Effect of Balanced Ownership on IJV Conversion to Foreign WOS: From the Learning Perspective**

Author: **Hyeyoun Park**, *U. of Surrey*
Author: **Yunok Cho**, *Southern Methodist U.*

This study explores how the balanced ownership structure of an international joint venture (IJV), formed by foreign and local partners as an equal partnership, affects its conversion to a wholly-owned subsidiary (WOS) owned by the foreign partner. Drawing on organizational learning literature, we explain that mutual learning and knowledge transfer, which significantly affect IJV stability, influence the probability of IJV conversion. We posit that a balanced ownership structure reduces the foreign partner's motivation to take full control of the IJV. By fostering trust and enhancing the learning environment, it enables them to better access to valuable knowledge that the local partner owns. Further, we examine the characteristics of foreign and local partners that moderate the effect of a balanced ownership structure. First, we highlight the importance of the foreign partner's absorptive capacity to capitalize on the enhanced mutual learning opportunities in an IJV with a balanced ownership structure. Second, we emphasize the role of the local partner's governance structure, especially business group affiliation, and how it offers valuable learning opportunities to the foreign partner. Our predictions are tested and supported by empirical analysis using a sample of IJVs located in Korea from 2007–2019.

IM: **Matrilineal or Patrilineal: Location Choice of Outward FDI by International Joint Ventures**

Author: **Ping Lu**, *Chinese Academy of Sciences*
Author: **Waner Xu**, *U. of Chinese Academy of Sciences*

This study examines the choice of outward foreign direct investment (FDI) location in the context of international joint ventures (IJVs). Drawing on social exchange theory and social identity theory, we study how three contextual IJV variables - the distance between parents, unbalanced equity share, and relationship age - shape the location choice in terms of cultural and institutional distance to both local and foreign parents. We argue that bilateral exchange and unilateral identity facilitate the accumulation of cultural and institutional knowledge, respectively, which may help mitigate the unfamiliarity hazards caused by cultural and institutional distance. Using a bivariate probit model based on data from 445 outward FDIs of IJVs established in China, we find that location choice in terms of distance to foreign source countries is related to all three variables, while the choice in terms of distance to China is not significantly affected by the social process between parents. This study's results demonstrate how the combination of social theory and location choice research provides new insights into the internationalization of IJVs.

Managing People Across Borders

Session Moderator: **Letian Zhang**, *Harvard Business School*

IM: **Soft Power Strikes: Global Firms and Local Assimilation**

Author: **Letian Zhang**, *Harvard Business School*
Author: **Shinan Wang**, *Northwestern Kellogg School of Management*

This article explores the role of a country's soft power in doing business overseas. When a country has higher soft power, its multi-national corporations in foreign countries will conform less to local expectations. We test this theory by analyzing over 60 million job postings in the 28 European Union countries, including 2 million postings made by foreign subsidiaries. Using a word embedding model, we measure the level of local conformity for each job posting made by a foreign subsidiary. We then show that jobs posted by foreign firms from countries with higher soft power conform less to local norms than those posted by firms from lower soft power countries. To account for endogeneity, we measure soft power at the country-to-country dyadic level, so that our models include fixed effects on job, host country, and firm. Our findings underscore the importance of countries' soft power in shaping organizational behavior.

IM: **The Effects of Cultural Intelligence, Psychological Availability, Job Autonomy, and Work Outcomes**

Author: **Angela Shin-yih Chen**, *National Taipei U.*
Author: **Ya-Hsuan Lin**, *National Taipei U.*
Author: **Trung Kim Nguyen**, *National Taipei U.*

The purpose of this study is to examine the effects of cultural intelligence (CQ) on expatriates' work engagement and job satisfaction via the mediating effect of psychological availability and the moderated mediating effect of job autonomy. An online survey was completed by 546 Taiwanese expatriates currently living and working abroad. Data were analyzed via PROCESS v.3.5. The results showed that psychological availability not only mediates the relationship between CQ and work engagement, but also the relationship between CQ and job satisfaction. Moreover, job autonomy moderates the indirect relationship between CQ and work engagement/job satisfaction through psychological availability. For theoretical contributions, the findings increase the research avenue on the mechanism of psychological availability as the mediator of the effects of CQ on work engagement and job satisfaction, and also provide two moderated mediation models between CQ and work engagement or job satisfaction by job autonomy. In addition, the results have not only remained consistent with conservation of resources theory, but also added empirical evidence that has not been intensely discussed in extant studies. For practical implications, this study provides suggestions for individuals, human resource departments, and relevant organizations with the goal of helping them achieve better working outcomes and practical management in culturally diverse business environments.

IM: **JD-R & Employee Wellbeing during the Covid-19 Pandemic: "Traditional" Values as Psychological Buffer**

Author: **Justin Marcus**, *Koç U.*
Author: **Secil Bayraktar**, *Toulouse Business School*
Author: **Alfredo Jimenez**, *Kedge Business School*
Author: **Dorra Yahiaoui**, *Kedge Business School*

Fusing theory and research on the JD-R framework and cultural values shift and set at a unique historical moment representing the height of the Covid-19 pandemic, we theorized that values typifying the traditional society prioritizing social order and the collective including collectivism, rule/hierarchy orientation and religiosity act as psychological buffer in associations between work and non-work demands, resources, and employee wellbeing. Results from a large sample of employees working in many different industries and situated across four world regions including Europe, the Middle East, North America, and Asia found support for these notions. Societal culture was found to amplify the interactive effects of demands/resources and values on employee wellbeing at the individual level such that larger effects were found in tight societal cultures. The theoretical and practical implications of the present findings for research and practice in international business are discussed.

IM: **Experimental Research on Diversity and Gender in Human Capital Acquisition in International Markets**

Author: **Nils Kruse**, *FHWien der WKW U. of Applied Sciences for Management and Communication*
Author: **Lynn Pyun**, *Ewha Womans U.*
Author: **Arpit Raswant**, *Deakin U.*

This study considers the interplay of foreignness and potential advantage in the host country endured by multinational firms from the diversity perspective in acquiring human capital in international markets. Drawing on signaling theory, we examine how foreignness and diversity signaling as part of corporate social responsibility (CSR) affect corporate attractiveness and how this effect is explained by gender. This study utilizes experimental research with South Korea as a context and finds that foreign firms are perceived as more attractive than indigenous firms in the absence of diversity signals. However, corporate attractiveness is enhanced for indigenous and foreign firms, with indigenous firms benefitting more when promoting gender diversity. The results also indicate that diversity initiatives have a positive effect on women and a negative effect on men and remain consistent with robustness checks.

Session Moderator: **Thomas Lawton**, *U. College Cork*

IM: **Making Sense of Socio-Political Risks in International Business: A Configurational Approach**

Author: **Thomas Lawton**, *U. College Cork*
Author: **Maria Andrea De Villa**, *EAFIT U.*
Author: **Sandra Milena Santamaria-Alvarez**, *U. EAFIT*

As social and political contexts have become major sources of uncertainty for international business (IB), we have witnessed renewed efforts to study the impact of socio-political risks on multinational enterprises. However, predominant methods in the field of IB are, for the most part, limited in their capacity to directly address the complexity intrinsic to socio-political risks. We propose overcoming this limitation by adopting a configurational approach that enables researchers to embrace the complexity of socio-political risks in international business. We explain the fundamental principles of a configurational approach and the typical sequential stages for using its methodological tool, Qualitative Comparative Analysis (QCA). We then outline how scholars can use QCA to pursue future research avenues that identify the configurations of conditions that constitute socio-political risks or the effects of socio-political risks on diverse outcomes of interest. We also clarify how the IB field can benefit from the use of QCA in the study of socio-political risks by advancing knowledge of international business in emerging and informal markets, where data access is limited. These efforts aim to motivate international business and management scholars to broaden their empirical toolbox for the study of socio-political risks by engaging in configurational thinking and theorizing.

IM: **How do Cultural Values and Country Norms Influence Tolerance for Corrupt Business Practices?**

Author: **Jennifer Spencer**, *George Washington U.*

Because MNEs face strategic complexities when navigating diverse institutional environments, managers improve their performance when they understand local institutions, and can thus anticipate local stakeholders' expectations. Additionally, the public's tolerance, or disdain, for business practices with negative social consequences can greatly impact their operations and bottom line. This paper focuses on managers' engagement in seemingly corrupt transactions. It finds support for arguments linking corruption tolerance with both cultural orientations and countries' institutionalized corruption norms, and also finds an interaction between two constructs. Relative tolerance across three different types of practices--explicit quid pro quos, relationship-building gifts, and grease payments--varied across cultural orientations. Moreover, in highly corrupt environments, some cultural orientations associated with increased tolerance for corrupt practices, yet others associated with less.

IM: **'My Right Honourable Friend!' When Do MNEs Use Relational Corporate Political Activity?**

Author: **Irakli Barbakadze**, -
Author: **Davide Castellani**, *Henley Business School, U. of Reading*
Author: **Stefano Elia**, *Politecnico di Milano School of Management*
Author: **Irina Minodora Surdu**, *Warwick Business School*

The nexus between business and government remains a topic increasingly debated in international business (IB) and management. Corporate political activities (CPAs) are used strategically to secure a firm's access to market knowledge and legitimacy which is particularly beneficial for the multinational enterprise (MNE) in order to overcome the liability of outsidership (LoO). In practice, however, building political connections is far more complex than assumed. MNEs may also face considerable costs and risks when building such political connections. We examine variation in firms' political connection, based on a comprehensive dataset consisting of 24,591 firms and 41 countries. By integrating LoO and Resource Dependency Theory (RDT), we show that, overall, MNE subsidiaries are less likely to have political connections compared to domestic-owned firms. Our findings, however, also reveal that the value of political connections increases with the degree of dependency on local resources. MNEs use political connections more when they (1) have higher local market commitment; (2) operate in industries with high informal regulation; or (3) operate in autocratic political systems.

IM: **Global Entry: Re-conceptualizing FDI as Two-Sided Matches Between Governments and Firms**

Author: **Sinziana Dorobantu**, *NYU Stern School of Business*
Author: **Thomas Lindner**, *U. of Innsbruck*
Author: **Laurenz Tinhof**, *Wu Wien*

Research in international business conceptualizes the selection of investment locations as unilateral decisions made by multinational firms, without acknowledging that, in most industries, local governments play a critical role in approving foreign investments. We develop a theoretical framework that conceptualizes a multinational investment as a two-sided match between a multinational firm interested in a particular location and a local government interested in the investment of that firm. Our two-sided framework accounts for the strategic goals of both multinational firms and local governments that can either incentivize or block multinational firms from entering their markets, incorporating the dynamics of competition among firms for the best investment locations and competition among governments for the best firms. Empirically, we use statistical simulations to assess the relative explanatory power of matching and binary choice models, and we show that in the global power generation market, matching models to outperform significantly binary choice models.

Political Ideologies and MNEs

Session Moderator: **Fangwen Lin**, *National U. of Singapore*

IM: **The Fallout of Anti-Foreign Protests: Effect of Nationalist Sentiments on New Product Introductions**

Author: **Fangwen Lin**, *National U. of Singapore*
Author: **Yun Hou**, *Hong Kong U. of Science and Technology (Guangzhou)*

This paper investigates how social movements that arise from tensions between countries invigorates innovative activities. In view that animosity against a foreign country curtails the product demands for the targeted country, would the market voids be filled up by other foreign brands or domestic brands, if the latter, then well-established incumbents or new entrants? Exploiting the anti-Korean protests in China, we examine the new product introduction pattern for domestic cosmetic brands versus brands from Korea and other countries before and during the protests. We find that domestic Chinese brands introduced more new products than Korean brands amid the rise of anti-Korean sentiments, while other brands from non-targeted foreign countries did not launch more new products than Korean brands. As the K-beauty features multi-step skin care regimen, domestic brands with experience in offering substitutable products in the skincare category show a more salient innovation impetus. Such innovation impetus applies to both domestic incumbents and new entrants, but the effect is more salient if the domestic brand is affiliated to an incumbent parent firm rather than a newly established firm. This study contributes to social movement literature in an international setting, by extending the protest focus from multinational to domestic firms, from investment to innovation decisions, to further manifest the far-reaching influence of political protests on the corporate side.

IM: **State Control's Effects on Firms' FDI Entry Decisions: A Study of Chinese Firm's Outward Investments**

Author: **Sichang Liu**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*
Author: **Xavier Martin**, *Tilburg U.*

State-owned enterprises (SOEs) are subject to different influences from host countries and the home country compared to privately owned enterprises (POEs). We examined how these effects shape SOEs' entry (Wholly Owned Subsidiary vs. Joint Venture) and establishment (Greenfield vs. Acquisition) mode decisions. We theorize that host country and home country effects may shape a distinct preference for wholly-owned subsidiaries and greenfield entry among SOEs. Furthermore, we theorize that the specificities of SOEs and of the host country constraints they face change their rates of learning – i.e., their reactions to experience with each entry mode and establishment mode – relative to POEs. Empirically, we examine entry decisions by SOEs and POEs from a prominent emerging economy, China. We show that using an instrumental variable method to account for the endogeneity of state-owned status makes a difference in the main effects. We find support for our predictions regarding differential experience effect magnitudes for SOEs. These findings extend the studies on how state ownership affects firms' foreign investment strategies, as well as the theoretical and empirical understanding of state-owned status.

IM: **Nationalism, Entry Mode and Foreign Subsidiary Survival**

Author: **Jesper Edman**, *Waseda U.*
Author: **Junichi Yamanoi**, *Waseda U.*
Author: **Bei Daisy He**, *Singapore Management U.*

While the relationship between entry mode choice and foreign subsidiary performance has received considerable attention, no work that we are aware of has considered the relationship in the context of nationalism. Employing a multinomial endogenous treatment effects model with greenfield entry mode as our reference category, we find that joint venture entry modes have a higher probability of survival in countries with nationalist sentiments, as compared to greenfields. Conversely, we find that acquisitions (both full and partial) have a lower probability of survival than greenfields in host countries characterized by high levels of nationalist sentiments. In countries characterized by low nationalist sentiments we find that both joint ventures and acquisitions have higher probabilities of survival, as compared to greenfields. We suggest several theoretical explanations for these results, as well as paths for future research.

IM: **The Right-Wing Shift: Political Populism, Partisanship, and Foreign Investment Risk in Europe**

Author: **Barclay James**, *St. Mary's U. (San Antonio)*
Author: **Paul M. Vaaler**, *U. of Minnesota*

Management research provides little guidance about when and how host-country politics influenced by nationalist, anti-elite populist parties affect foreign investment risk. In response, we develop and test hypotheses derived from a framework grounded in political risk theories assuming that foreign investors are more vulnerable to opportunistically adverse actions by host-country governments, but when led by right-wing parties typically espousing pro-investor policy preferences such actions are less likely. We propose that greater influence in host-country policy-making by right-wing populist parties counters pro-investor with anti-foreign policy preferences, thus raising risks of opportunistically adverse actions by host-country governments against foreign investors specifically. We find support for our proposal in analyses of 596 investment projects announced in 27 European countries from 1990-2020. Projects announced in countries with governments led by right-wing or centrist parties exhibit decreased risk measured as the percentage of equity comprising all project capital funding on announcement date. On the other hand, projects announced in countries with increasing vote percent and increasing legislative seats for right-wing populist parties exhibit increased risk, but only when led by foreign sponsors.

X-Culture in a Time of War: Global Virtual Collaboration Meets Global Military Conflict

Session Chair: **Amanda Budde-Sung**, *U.S. Air Force Academy*
Participant: **Dhruv Pratap SINGH**, *NEOMA Business School*
Participant: **Jae Hwan Lee**, *Rollins College*
Participant: **Sonja Sackmann**, *U. Bw Munich & U. of Tartu*
Participant: **Anil Yasin Ar**, *Tecnologico de Monterrey*
Participant: **Emil Velinov**, *DHBW Villingen-Schwenningen / Germany*

For over a decade, the X-Culture project has been an invaluable pedagogy tool in the teaching of international business management. The X-Culture project puts students into global virtual teams, and allows them to work on challenges posed by real companies around the world. In these virtual teams, students work with peers from other countries, and in doing so, learn about cross-cultural management without having to leave their home countries. For many students, this project is the first time they have worked with people from other cultures. This exposure to other cultures takes on a new urgency in a time of war. In February 2022, Russa launched a full-scale invasion of Ukraine. Many students in the 2022 sections of the X-Culture project were from Ukraine, as well as from other areas plagued by significant strife and/or terrorism, such as Yemen, Pakistan, Syria, Nigeria, etc. In 2022, military students from US military academies also participated in the X-Culture project, and having those students work in teams with students in war-torn and/or terrorism-active countries, countries in which the American military students may well find themselves developing military strategy in the near future, brought heightened awareness of the importance of cross-cultural management skills for all students involved in those groups. Additionally, this global collaboration experience increased the sense of importance and urgency of developing de-escalation skills for all students. This panel will discuss international business pedagogy and blended learning international cooperation in a time of war.

Governance and Sustainability: Changes and Challenges

Organizer: **Pasquale Massimo Picone**, *U. of Palermo*
Organizer: **Cristina Leone**, *U. of Palermo*
Panelist: **Petra Christmann**, *Rutgers U.*
Panelist: **Valentina Marano**, *Northeastern U.*
Panelist: **Jordi Surroca**, *U. of Liverpool Management School*
Panelist: **Kai Xu**, *U. of Texas At San Antonio*
Discussant: **Arturo Capasso**, *U. del Sannio*

Scholars and practitioners recognize the central importance of corporate governance mechanisms and the nature of the institutional contexts in which firms and their suppliers operate as important drivers for understanding how firms respond to rising societal expectations. Accordingly, the symposium proposes to bring together a panel of scholars to examine a series of interrelated research on the role of corporate governance vis-à-vis firms' involvement with sustainability practices: How do governance mechanisms promote sustainability practices? Do different owners exhibit diverging degrees of compliance with societal norms contingent on the expected legitimacy derived from different institutional logics? What firm- level and institutional factors facilitate firms' voluntary regulation of their environmental and social conduct? How does the relationship between corporate governance and sustainability change across countries? Drawing on the panelists' rich expertise in this vast topic area, the proposed symposium would create an opportunity to develop a multilevel picture of the governance systems that guide the management of sustainability issues within firms. In doing so, it would contribute to shedding light on the governance settings that can likely encourage the adoption of sustainability solutions within firms and ensure more sustainable outcomes.

Session Moderator: **Luis Alfonso Dau**, *Northeastern U.*

IM: **International Connectedness, Governmental Interventions, and Firm Adaptation to Exogenous Shocks**

Author: **Sorin Krammer**, *Surrey Business School*
Author: **Nuruzzaman Nuruzzaman**, *Alliance Manchester Business School, U. of Manchester*
Author: **Debmalya Mukherjee**, *U. of Akron*

Our understanding of how organisations adapt to exogenous shocks remains very limited. Drawing from the organisational ecology theory, we argue that internationally connected firms (i.e., firms that rely on exporting and global value chains (GVCs) and that have foreign owners) are less likely to adjust their production activities in response to a major exogenous shock. In addition, we posit that governmental interventions in the form of confinement stringency and economic stimuli are less helpful for internationally connected firms than for their domestically focused counterparts. To test these assertions, we use the COVID-19 pandemic as a quasi-experiment and employ a novel dataset comprising more than 13,000 firms from 41 countries around the world. Our findings support the idea that export-intensive and foreign-owned firms are less likely to adjust their production in response to the pandemic. In addition, we find weak support for the idea that government interventions benefit less internationally connected firms than the domestic ones, namely only for firms that rely heavily on GVCs. These findings offer important insights for managers and policymakers to deal with major exogenous shocks and their consequences.

IM: **Characterizing MNCs' Corporate Diplomatic Activities**

Author: **Marcelo Bucheli**, *U. of Illinois at Urbana-Champaign*
Author: **Xavier Duran**, *U. de los Andes*
Author: **Minyoung Kim**, *U. of Kansas*

We advance the concept of corporate diplomatic activities (CDAs) to study the actions through which multinational corporations (MNCs) seek to influence the diplomatic relations between their home country and the host country to gain business advantage. We maintain that an MNC can mobilize its political resources and capabilities in the home country through their CDAs to increase the host government's bargaining power vis-à-vis the home country and, in return, obtain business benefits in the host country. The MNC's CDAs, however, can also become a source of risk: the host government can use the MNC's political resources at home to increase its bargaining power vis-à-vis the host government by taking "hostage" the MNC's sunk investments in the host country to compel the MNC to work on its behalf in the home country and, in this way, outsource foreign policy to a powerful actor in the home country. We adopt a history-to-theory approach and develop a theoretical framework by analyzing the case study of the role played by Standard Oil of New Jersey in the negotiations between Colombia and the United States over the reparations for the loss of Panama in the 1910s and 1920s. Our theoretical framework advances that MNCs' CDAs can create an inter-temporal shift in asset specificity, which, in turn, can reshape the dynamics in the bargaining power between MNCs and the host country.

IM: **Rising Geopolitical Risk and Firm's Customer Concentration**

Author: **Yu Li**, *U. of South Carolina*
Author: **Vivek Astvansh**, *Indiana U. - Kelley School of Business*

This research argues that a firm responds to rising geopolitical risk (GPR) by adjusting its sales strategy. Specifically, in response to rising GPR, a firm lowers the concentration of its sales to customers, i.e., allocates sales revenues more evenly across its customers instead of relying on a few major customers. Analysis of a panel data set of 49,018 firm-year observations of 5,933 U.S. public firms between 2001 and 2021 supports their hypothesis. The firm's lobbying spending strengthens the effect of GPR on customer concentration. Further, while a firm does not change its corporate customer concentration, it lowers the government customer concentration when GPR rises. Also, in response to rising GPR, an average firm decreases each of its domestic customer concentration and its foreign counterpart, though the effect on domestic customers exceeds that on the foreign customers. Moreover, reducing customer concentration in response to rising GPR hurts firm performance by impeding the firm's number of new product introductions. The findings contribute to the literature on exogenous shocks in the nonmarket environment impact a firm's strategic decisions.

IM: **Institutional Distance Effects on the Coopetition-Performance Relationship: A Meta-Analysis Approach**

Author: **Qi Zou**, *West Chester U. of Pennsylvania*
Author: **Marcelo J. Alvarado-Vargas**, *U. of Toledo*
Author: **Yuan Wang**, *U. of Houston, Victoria*

As empirical evidence remains inconclusive, we present a meta-analysis study to contribute to the discussions about the relationship between coopetition (i.e., cooperation and competition among firms) and firm performance (C-P). Additionally, we performed a systematic review of the focal relationship by incorporating country-specific institutional distance moderating effects such as physical property protection easiness, country structural change, and country political openness. We relied on 49 different empirical studies that provided 144 C-P relationships and represent 58,919 firms around the world. We utilized robumeta, a reasonably new STATA command for hierarchical meta-analyses, as our sample contained multiple C-P relationships per study. Our results provide evidence of a positive effect in the main C-P relationship. The results also confirm our hypotheses that there is a positive moderating effect of physical property protection easiness, and there is a negative moderating effect of country structural change and political openness on the C-P relationship. Our findings shed some light on the moderating effects that institutional distance has on the C-P relationship as a plausible explanation of the inconclusive empirical results in the literature. We also provided marginal analyses for the moderating effects in an attempt to fully understand those effects.

Geography matters and there are striking differences across regions in the nature and extent of economic activity. While the field of strategic management has been primarily interested in differences in firm profitability and often emphasized on internal drivers of firm competitive advantage such as resources, capabilities, and routines, it is notable that geography has played a pivotal role in the rise of entire industries. In this symposium, we have five papers drawn from various regions namely Milan, Bangalore, Tel Aviv, Detroit, and the various states within the United States. Given their spread across continents, they naturally bring out regional variations to the fore. In addition, given that the papers focus on fashion, software, food, auto, and high tech, the symposium shall also provide an opportunity to scholars to understand and appreciate various nuances in agglomeration studies set in heterogeneous industries and settings, increasing the potential for raising newer and interesting questions within and across the streams of strategy, international business, and entrepreneurship.

Why did Milan emerge as the hub of the Italian Fashion Industry?

A Renewed Focus on IT, AI, and Digital Transformation in Management Consulting

Session Moderator: **Pierre El Haddad**, *MACH Consultants*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **Socio-technical System and Organizational AI Integration: An Integrative Literature Review**

Author: **Anezka Viskova-Robertson**, *Leadership and Organizational Change*

Artificial intelligence (AI) is a technical innovation that is predicted to bring change to organizations across a wide range of industries by substituting computer automation for human labor (Muro et al., 2019). Ensuring seamless implementation of AI into work processes requires deep understanding of both technical and non-technical aspects. A hexagonal structure representing the Socio-technical System's social and technological elements is used to represent forming the complex ecosystem of an organization (Clegg, 2000). If used purposefully, the framework may be used to predict how AI implementation would affect the organization. It will also help with identifying AI related requirements and responsibilities for errors and how to avoid them. Depending on AI's potential—whether it is Substitutional, entirely replacing some activities, or Complementary, enhancing human employees through collaborative task design and skill fusion—AI will have diverse effects within the organizational ecosystem, mostly on the social domains.

MC: **The Machine at the Center? Consulting and Digital Transformation in Four Chinese Organizations**

Author: **Fahd Jamil**, *U. of Warwick*

What can consultants do to assist client leveraging digital transformation to serve better the well-being of employees? Whereas most of the DT projects fail, the causes of these failures are not solely related to information technology but also to organizational and human factors. Current DT processes however, remain heavily influenced by the concept of enterprise architecture and, as a result, appear to put the machine front and center as opposed to those involved in the digital transformation process. Hence the research question becomes: RQ1: Do current digital transformation processes put "the machine" front and center through enterprise architecture? In order to investigate this question, four organizational cases were examined. In addition to analyzing the technology and digital transformation process utilized, 106 semi-structured interviews and observations were also conducted. Our findings indicate that the most successful digital transformation case may be indeed related to enterprise architecture and to strategic alignment. However, a consideration of the organization, the IT management mode and the business model, reveals the importance of decentralization and innovation for DT success in addition to enterprise architecture or strategic alignment. Therefore, this case suggests that the response to the question: "what can consultants do to assist client leveraging digital transformation to serve better the well-being of employees?" may be: "How consultants and managers can assist with organizational and systems design for work procedures, and processes that improve performance?". Also, this case suggests that, rather than the machine, workers shall be front and center of DT.

MC: **Digital Transformation and Operations Improvement - A Case Study of Leading Manufacturing Company**

Author: **Soen (Joyan) HAYASHI**, *JOYAN*

Whereas the focus of digital transformation is rather operations than business models, it often results in failure. This research aims to analyze the impact of implementing digital transformation, relying on the Socio-Economic Approach to Management (SEAM) theory. The research method is a case study with interviews of 17 staff and related PICs and corporate observation. The research field is Midea Group, a manufacturing company in China. How can managers assist with organization and system design for operation process that improves performance? Through the aspect of the human factor, make clear the impact of implementing IT and digital technology in the organization. The contribution to theory is applying Socio-Economic Approach to analyze the organizational problem in the implementation of information technologies. The contribution to practice is to understand the impact of IT and digital technologies, and the improving the operation process by managers.

MC: **The Future of Work: Implications for Managers and Consultants**

Author: **Uzonna Olumba**, *U. of Illinois at Urbana-Champaign*
Author: **Sergio Madero**, *Tecnologico de Monterrey*
Author: **Oscar Eliud Ortiz**, *EGADE-ITESM Campus Monterrey*

The future of work is conceptualized as the need, both for companies and individuals, to develop effectively and efficiency, in the field of automation and digitization. There is a demand to improve processes and eliminate repetitive activities to be able to design work schemes that allow organizations to be more efficient and productive (Alagoa, 2016). After COVID-19, the demand creates a need for new practices based on a diversity of alternatives or modalities of work pertaining to years 2022 and 2021. This mixed- method study focuses on individuals within the workplace that participated in remote work or work from home initiatives, which sought the continuity of its operations and tried as much as possible to maintain the jobs of employees by improving the conditions of a favorable organizational environment. Thus, prevent or control conditions that could affect the physical and mental health of all those involved (Ismail, 2017; Sammut, 2021). Furthermore, this research aims to know the perceptions of people regarding the conceptualization and the way in which companies prepare for new ways of working, as well as to identify the relevance of flexible work practices for people when they return to work to carry out their work activities in post-pandemic environments, as well as the implications that new ways of working have on talent management in organizations. Due to the pandemic, several companies have started to increasingly adopt the "work from home" work scheme in which the employee has some freedom to work from home or remotely. However, it is important to consider that this does not imply that the collaborator's performance decreases, that individuals are not available at the required time, or that the objectives or metrics established by the company are met. Through the lens of examining digital transformation and change management, this paper identifies change management as an organization development tool, relational to important humanistic factors that are central to the successful planning and implementation of workplace transformation. Keywords: digital transformation; organization and culture; management consulting; workplace performance; change management

Showcasing Worker Voices: “Worker-Driven” CSR and Consultant-Guided Socioeconomic Methods

Panelist: **CIW Workers**, *Coalition of Immokalee Workers*
Organizer: **Grace Ann Rosile**, *New Mexico State U.*
Organizer: **Richard Herder**, *Southwest Minnesota State U.*
Panelist: **David M. Boje**, *Emeritus*
Panelist: **Marc Bonnet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Panelist: **Pierre El Haddad**, *MACH Consultants*

This symposium will offer a panel of experts from two different organizations, both having exemplary practices of “Putting the Worker Front and Center.” One example is the Coalition of Immokalee Workers (CIW). This group received a presidential award for their success in combatting decades-long enslavement practices in their region. In this symposium they will focus on how their affiliated Fair Food Program (FFP) and Fair Foods Standards Council (FFSC) use “worker-driven” processes and procedures to achieve their success. They call this approach “Worker-Driven Corporate Social Responsibility” (WSR). Symposium convenors Boje, Rosile, and Herder introduced the CIW to the Academy as part of a 2019 AoM All-Academy Symposium, highlighting their inclusionary “Ensemble Leadership.” This discussion extends that work to focus on worker voices. The CIW example also highlights the role of worker voices in transforming CSR into WSR. The CIW's long boycott of Wendy's fast food chain triggered Panelist David Boje to deconstruct Wendy's code of ethics. In this symposium, Boje's deconstruction will reveal evidence of missing workers' voices. Our second examplary organization is the Institute for Socio-Economic Organizational Research (ISEOR), whose founding leader Henri Savall was recognized by the French government in 2017 with their “Chevalier of the Legion of Honor” for his work. The ISEOR ethnographic-tinted methods of interviewing in organizations has always put worker voices “front and center.” These two stories demonstrate how worker-driven processes can be more effective than traditional “management” methods, even against persistent decades-old problems such as enslavement practices.

MED: **Cosmopolitan Distinction – A Consideration of English Medium Instruction (EMI) in France**

Author: **Dirk C. Moosmayer**, *Kedge Business School*
Author: **Susannah Davis**, *U. of Passau*

Our paper explores why, when given a choice between their first language and English, business students who are not native speakers of English choose to study through English as a medium of instruction (EMI) in a non-English speaking setting. Taking Lueg and Lueg's (2015) study of business students' motivations to study in English at a public Danish university as a starting point, we choose a contrasting case and consider the choice for English by students at a private French business school. We contrast Lueg and Lueg's theorizing around EMI for social status with cosmopolitan theory and the idea of choosing EMI for global connectedness per se. Applying stepwise moderated regression to 201 answers from a French business school, we find that these respondents did not choose EMI for job advantage (reflecting social status). In contrast, EMI choice was influenced by students' cosmopolitan attitudes and their peers' support for EMI, both reflecting a cosmopolitan foundation. Our results suggest that in the specific context, student choice for choosing business courses in English may be less instrumental and that it is difficult to make broad generalizations about EMI in management education.

MED: **Developing Interculturally Competent Graduates: Meeting Employer Needs in Europe**

Author: **Rea Prouska**, *London South Bank U.*
Author: **Sa'ad Ali**, *U. of Derby*
Author: **May Tungtakanpoung**, *London South Bank U.*
Author: **Karin S. Moser**, *LSBU Business School, London / UK*
Author: **Robin Bell**, *Worcester Business School*

Research has highlighted the importance of intercultural competencies in higher education graduates to boost their employability with national and international employers. Yet, little is known about whether current graduates in Europe meet employer needs with respect to such competencies and how higher education institutions in Europe can strengthen their graduates' employability by offering a curriculum that supports the development of such competencies. We bridge this gap by studying the supply and demand of intercultural competencies from the perspectives of students and employers in Europe. We draw on a cross-national study of 102 interviews with students and employers in the UK, Belgium, Sweden and Turkey. We report on the key intercultural challenges faced by students and employers and on the intercultural competencies that graduates need to develop in future to meet industry needs. We offer a curriculum map through which higher education institutions can develop students' intercultural competencies to enable them to be active professionals in an increasingly intercultural employment world.

MED: **Sage on the Stage and Coach on the Side-Facets of a Good MBA Teacher-Indian Students Perspective**

Author: **ANADI SARAN PANDE**, *Indian Institute of Management, Lucknow*
Author: **NEERJA PANDE**, *Professor Indian Institute of Management Lucknow*

This study was undertaken with the objective of enriching and extending the literature on facets of a good MBA teacher with the premise that students being direct consumers of teaching services are in an ideal position to guide the study. This paper attempts to fill the hiatus of rigorous and grounded research on the subject. Two survey instruments, one comprising open-ended questions and the second comprising comprehensive list of items were used. Rigorous research methodology was used to discover a thirty-two items list comprising five factors that reflect facets of a good MBA teacher in Indian context. The facets thus discovered are generalizable across gender, age, work experience, programme type, and programme completion status. We present our analysis and discuss the inferences, including contributions and practical implications. Finally, we identify limitations of the study and directions for future research.

MED: **Challenges of Brazilian Management Students: International Recommendations from Their Voices**

Author: **Marcello Romani-Dias**, *Positivo U.*
Author: **Fernando Eduardo Kerschbaumer**, *Business School - Positivo U. (BSUP)*
Author: **Aline Dos Santos Barbosa**, *U. Estácio de Sá*

Our article sets out to deal with internationalization of students, looking thru their choices and challenges. The motivation is to understand the voices and experiences of international students of management. Based on the assumption that there are influences over the intention, we choose the Theory of Planned Behavior to analyze choices and challenges, with the question: In the light of the Theory of Planned Behavior (TPB), how is the behavior of Brazilian international students facing the challenges and choices in their international experiences? We used a qualitative approach, based on multiple sources of evidence, to analyze experiences of Brazilian international students in the Northern Hemisphere (at doctoral and postdoctoral levels), in the light of planned behavior theory. Few studies address international mobility of Brazilian students, especially on a theoretical basis. In terms of understanding their choices and the challenges they face, we observed vis-à-vis (a) a behavior of overvaluation of international mobility and foreign universities (attitude dimension); (b) a dependence on intermediaries to enable mobility (subjective norm dimension); (c) and heterogeneity in the adaptation of Brazilian students in terms of language and culture (perceived behavioral control dimension). We present in the article recommendations for individuals and for educational managers.

Learning at Work

Session Moderator: **Zheng Chenxu**, *National U. of Singapore*

MED: **Helping Employees to Upskill and Reskill through Peer Composition in Continuing Education**

Author: **Zheng Chenxu**, *National U. of Singapore*
Author: **Bernard C.Y. Tan**, -

The Industry 4.0 workplace is characterized by the changing nature of work, resulting in rapid obsolescence of knowledge and frequent disruption to jobs. To progress in their careers, employees may engage in continuing education throughout their entire careers to upskill and reskill. However, as workers age, they are more likely to be threatened by negative age-based stereotypes, making it more difficult for them to pursue continuing education as adult learners. This study examines the on-time graduation rate of adult learners from different age groups who had enrolled in continuing education programs in a large university to upgrade their knowledge. The results show that adult learners start to differ from their younger peers in on-time graduate behaviour as early as 30 years old. We then look into the effect of peer age composition on this difference by investigating the on-time graduation rate of adult learners from different age groups in programs with different cohort compositions (in terms of age distribution in the cohort). The results reveal that the difference in graduation rates between old adult learners (those aged 30 and above) and young adult learners (those younger than 30) is significantly reduced (due to better on-time graduation rates for old adult learners) when there are more rather than fewer old adult learners in the cohort. Detailed analyses of the marginal effect of peer age composition show that having more than 40% old students in a cohort could make the difference in the on-time graduation rate between old and young adult learners statistically insignificant. This study has both significant theoretical contributions and practical implications.

MED: **An Organizational-Employee Learning Contract: An Integrated Framework and Implementation Guide**

Author: **Amne Samhat**, *Concordia U.*
Author: **Raghid Al Hajj**, *Gulf U. of Science and Technology*

The present paper argues that implementing learning contracts (LCs) in the workplace has great value to both employees and the organization. First, the work presents an integrated framework dubbed the "Organizational-Employee Learning Contract" (OELC) to aid in implementing an LC approach that aligns employees' learning with the company's business goals. The gap in knowledge between academia and practice and the calls to consider LCs in the workplace context that can be utilized by practitioners are the main factors for presenting a developed framework that includes employee learning contract elements particular to the workplace. The employee learning contract form is designed to include the learning elements associated with the particularities of the workplace, such as the application of learning in the workflow, learning incentives, employee self-reflection about learning, and learning-focused meetings with the direct supervisor. Lastly, the paper presents a detailed implementation process of learning contracts (LCs) in the workplace. The work presented here divides the LC process into three implementation phases: the pre-implementation phase, the employee LC implementation phase, and the post-implementation phase, and elaborates on how to navigate through them properly.

MED: **Work Engagement in Remote Internship: Role of Institutional and Individual Level Factors**

Author: **Samvet Kuril**, *Ahmedabad U.*
Author: **Swati Ghulyani**, *IMT Ghaziabad*
Author: **Shiva Kakkar**, *Indian Institute of Management Nagpur*
Author: **Manosi Chaudhuri**, *BIMTECH - Birla Institute of Management Technology*

An internship is important in higher education as it is one of the first on-the-job training and provides direct exposure to prospective employers. However, the proliferation of remote internships, has raised concerns if interns are really engaged in the remote environments. This study examines the role of support received from the academic environment (faculty mentor support and communication satisfaction), interns' cynicism and efficacy, on work engagement in remote internships. Situating in JD-R and efficacy literature, we hypothesize that interns' cynicism and efficacy will mediate the relation between faculty mentor support, academic institution communication satisfaction and work engagement. Data were collected from 309 interns from four reputed business schools in India while working as remote interns using standard measures of work engagement, cynicism, efficacy, communication satisfaction, and faculty support. Covariance based modelling using AMOS 22 showed that while working remotely, the relationship between faculty mentor's support and intern's work engagement was mediated through intern's cynicism but not professional efficacy. However, the relationship between academic institution's communication and intern's work engagement was mediated by both cynicism and professional efficacy.

MED: **From Obstacle to Opportunity How Growth Mindsets Fosters Employability & Entrepreneurship in Mali**

Author: **Sumaya Islam**, *PhD at Paderborn U.*
Author: **Enja Herdejürgen**, *Paderborn U.*
Author: **Yanick Kemayou**, *Kabakoo Academies*
Author: **Rüdiger Kabst**, *Professor International Business, Paderborn U.*
Author: **Martin Schneider**, *U. of Paderborn*

Having a Growth mindset is said to be one of the most effective means to improve academic achievements and can therefore help improve general future outcomes (Dweck, 2016). Furthermore, given the fact that entrepreneurship is seen to be an effective means to alleviate poverty, especially in developing countries (Gielnik et al., 2016), it could be a major crux of the matter to an economic change of regions, where un-(der)employment rates are high. EdTech Academies, a start-up in Mali, organizes six-month programs of problem-oriented, blended learning for young adults in Mali intending to stimulate a growth mindset and thus, help participants overcome their crucial situations. With the data provided by EdTech, we conducted a field experiment among the participants and two further control groups to measure the impact of its learning and training program. More generally, our paper shows that this training package can act as a long-term, immersive growth mindset intervention to enable the participants to enhance either their chances of regional employability or to engage themselves in small or micro levels of entrepreneurship.

Panelist: **Dhruv Pratap SINGH**, *NEOMA Business School*
Panelist: **Wendy Farrell**, *Management Center Innsbruck*
Panelist: **Jiang Chun**, *Mae Fah Luang U.*

This panel symposium will briefly describe the different experiences of X-Culture. X-Culture began as an experiential learning experience over 10 yearsago and now offers so much to so many. Beyond the benefits from experiential learning for instructors and thousands of students each semester, thissymposium will describe some of X-Culture's future plans, the effects of hosting and participating in its Global Symposium, how its coaching program canhelp instructors and students, what data it collects and the types of research questions that this data can help answer as well as what it is like toparticipant in one of its Xachathons. Seasoned members of the X-Culture community will make brief presentations on each of these "experiences." Audience members will then self-select into tables to further discuss the topics of interest to them. Which experience best fits your goals? Come and findout!

History as a Source for Contemporary Research

Session Moderator: **Jay J. Janney**, *U. of Dayton*

History can inform contemporary research in that it could be grounds to develop and test theory, a way to research how a concept or theory came into being and what path it has taken, or as a case study to illustrate some management practice.

MH: **History-Informed Research in Family Businesses: A Systematic Review and Future Research Agenda**

Author: **Jana Boevers**, *Bielefeld U.*
Author: **Julia Brinkmann**, *PHD Student at Bielefeld U.; Faculty for Business Administration*

History is central for our understanding of how family firms make sense of their past, shape their experience in the present and drive their aspirations for the future. This review paper builds a strong foundation for a history-informed approach to the study of family businesses. Exploring the role and use of history in family businesses through a systematic review of 64 family business history studies, we identified three main themes of (1) representations of family firm history; (2) sensemaking and experience of family business history; and (3) managing family firm behavior and performance. Mapping and systematically synthesizing the field allowed us to develop three paths for stimulating future history-informed family business research, namely material and visual representations of family firm history, family firm memory work that anchors the past, and mnemonic communities in and around family firms. Our review offers both a categorization of the emerging field of history-informed family business research and an identification of the key questions for future research that project the alternative states of the field.

MH: **We Were Equal: Then We Were Paid**

Author: **Jay J. Janney**, *U. of Dayton*
Author: **Della Stanley-Green**, *U. of Dayton*
Author: **Terry Lee Amburgey**, *U. of Toronto*

We argue the introduction of pay into historically what had been a volunteer role created a gender role incongruency where it previously had not existed. Friends historically stressed equality (both racial and gender) as one of their core values. In 1874 Friends in Indiana Yearly Meeting (the largest yearly meeting at the time) reversed their position which opposed hireling ministry (paid pastors). We examine 73 years of ministerial recording data to show that gender recordings dropped from 49% female to less than 33% female. The drop is smaller for non paid pastoral ministers.

MH: **Cognitive Biases in Accounting Activities: Debiasing Strategies to Support Decision-making Process**

Author: **Riccardo Camilli**, *U. of Rome Tor Vergata*
Author: **Ivo Hristov**, *U. of Rome Tor Vergata*

Accounting practices are based on human decision-making processes thus, for definition, affected by cognitive biases. The influences of cognitive biases on accounting practices have been highlighted on several occasions, as well as related negative consequences on businesses and society. In spite of the continued interest of research in debiasing accounting practices, this process has not yet reached maturity because it lacks fundamentals and systematicity. In this regard, the authors worked to provide accounting research with interdisciplinary view on cognitive biases to trigger the virtuous process of debiasing accounting practices. Thus, the research protocol adopted in this paper is rigorous. Firstly, the cognitive biases, selected from both business and psychological studies, are traced within accounting literature by means of a Systematic Literature Review (SLR). Secondly, authors categorized contents of accounting literature according to negative effects of cognitive biases on accounting practices and related debiasing strategies formulated. Ultimately, thanks to the findings of the summary of literature, authors were able to highlight cognitive biases not considered by accounting research yet as well as those cognitive biases lacking respective debiasing strategies.

MH: **The Evolution of the Electric Vehicle**

Author: **Sanjay Jain**, *California State U., Northridge*
Author: **Habib Ashraful Islam**, *Eastern Washington U.*
Author: **Anil Nair**, *Old Dominion U.*
Author: **Matthew Farrell**, *Austin Peay State U.*

In this study, we argue that the emergence of the electric car phenomenon - and in particular, Tesla's overtaking of General Motors in market valuation - does not align with the predictions of extant theoretical perspectives on technology transitions. We conduct a microhistorical analysis from the early 1990s to the present day. Synthesizing insights from the imagined futures literature and the multilevel perspective, our results suggest that transmuting imagined futures into reality involves contention at each of the levels specified in the MLP.

Strategic Firm Decisions

Session Moderator: **Lun Li**, *Business School, Beijing Normal U.*

MOC: **Pursuing Venture Goals under Uncertainty: A Behavioral Engagement Perspective**

Author: **Lun Li**, *Business School, Beijing Normal U.*

Despite the salient role of uncertainty in entrepreneurship, we lack a scholarly understanding of how entrepreneurs manage uncertainty to pursue their venture goals. Integrating theoretical perspectives on uncertainty and self-regulation, we provide a conceptual model that links entrepreneurs' perceived uncertainty with venture goal progress through a change in entrepreneurial task engagement. Entrepreneurs' general goal pursuit tendencies—tenacious goal pursuit (TGP), i.e., maintaining focus on one's goals, and flexible goal adjustment (FGA), i.e., modifying one's goals during challenging times—were expected to moderate this process. Using a week-level study across a period of eight weeks among 76 start-up entrepreneurs, we observed that in times when entrepreneurs perceived high uncertainty, they were less engaged with their entrepreneurial tasks, which, in turn, resulted in decreased venture goal progress. While TGP weakened the negative relationship between perceived uncertainty with changes in entrepreneurial task engagement and venture goal progress, FGA strengthened this relationship. Theoretical implications for research on entrepreneurial self-regulation and practical implications for start-up entrepreneurs dealing with uncertainty are discussed.

MOC: **How Societal Factors Influence IJV Completion: The Role of Constituent Perceptions**

Author: **Xinran Joyce Wang**, *Zicklin School of Business, Baruch College, City U. of New York*
Author: **Jun Xia**, *U. of Texas at Dallas*
Author: **Rhonda K. Reger**, *U. of North Texas*
Author: **Jiyu WANG**, *U. of Texas at Dallas*

Global dynamics and rising tensions have magnified the importance of understanding how transnational firms navigate global markets, including the completion of international joint ventures (IJVs). Drawing from a behavioral strategy perspective, we theorize that constituent perceptions originated from out-group threats, benefit-spillover, and uncertainties serve as mechanisms to explain the relationship between societal factors and IJV completion. Specifically, we argue that a host-country's national pride and a home-country's relative economic status increase the likelihood of IJV completion, while potential conflicts between the two countries decrease this likelihood. We also theorize that prior collaboration between countries acts as a contingency under which the effects of these factors vary. Using a large sample of 13,675 IJV deals in 58 host countries and 59 home countries, we find general support for our hypotheses.

MOC: **How Peers Influence MNE Headquarter Attention to Foreign Subsidiaries**

Author: **Mayank Sewak**, *Newcastle U. Business School*
Author: **Anna Lamin**, *Northeastern U.*

Firms rely on social reference groups to inform their behavior. Extending this to headquarter attention, we explore how external and internal peers can influence a multinational's (MNE) attention to its subsidiaries. Because MNEs operate in multiple contexts, the selection of relevant social reference groups is complicated. We use the cognitive perspective to propose different categorizations of 'peers'. Using a longitudinal dataset of 213 subsidiaries of 135 MNEs operating in India during 2001-2016, we find that MNEs' headquarter attention is tuned to external peers from the same industry but not home-country. For internal peers, we find two relevant reference groups influence headquarter attention. Thus MNE attention to subsidiaries can occur independent of subsidiary actions and be dependent on an external or internal peers.

MOC: **The Effect of Categorization Breadth and Granularity on Corporate Venture Capital Investment**

Author: **Jungsoo Ahn**, *Stony Brook U.-State U. of New York*

This study theorizes how two dimensions of managerial categorization influence firms' external search. First, the categorization breadth by top managers—or tendency to define peer firms beyond a firm's existing industry boundaries—leads them to scan the periphery of the competitive environment and increase the firm's proclivity for corporate venture capital (CVC) investment. Second, the categorization granularity by top managers—or tendency to distinguish specific subcategories of peer firms rather than simply identify coarse groupings of peers—leads to more caution and decreases the firm's proclivity for CVC investment. I analyzed United States' financial services firms' CVC investment in financial technology (fintech) start-ups from 2013 through 2020 and found that (1) categorization breadth among top managers is positively related to the level of a firm's CVC investment in fintech start-ups, and (2) categorization granularity among top managers is negatively related to the level of a firm's CVC investment in fintech start-ups.

Creativity and Decision-Making

Session Moderator: **Spencer Harrison**, *INSEAD*

MOC: **Creativity and the Compositional Paradox: A Framework and Research Agenda**

Author: **Spencer Harrison**, *INSEAD*
Author: **Arne Carlsen**, *BI Norwegian Business School*
Author: **Miha Skerlavaj**, *U. of Ljubljana, School of Economics and Business*

While research on creativity has long acknowledged the importance of iteration, recombination and other integrative activities, the theorizing of creative outputs has often forefronted descriptions that denote a singular output. By explicitly theorizing the nature of creative outputs as composition we develop a vocabulary for understanding creative ideas as simultaneously singular and plural, thereby unlocking the compositional paradox. We specify four compositional archetypes to that end: (1) synergy as the emergence of a new function that comes from bringing multiple ideas together; (2) systemic as the functional connection of the creative idea(s) to existing or new systems; (3) seamless as harmonious connecting of ideas into a pattern or configuration that makes the individual ideas themselves almost invisible, and (4) sourcing as connecting the creative idea to existing themes which make the focal ideas of the composition stand out in dialogue with prior work. Overall, our theorizing of creativity as composition redirects the literature by challenging assumptions that singular and complex ideas imply the same type of creative activities, and by expanding the understanding of how complex creative outputs are formed.

MOC: **Noise in Judgments of the Value of Novel Ideas**

Author: **Wayne Johnson**, *Cornell SC Johnson College of Business*
Author: **Devon Proudfoot**, *Cornell U.*

Four pre-registered studies (N=1,831 U.S. adults) and analyses of archival data document an obstacle faced by creative ideas: Greater idea novelty produces greater noise (variability between evaluators) in judgments of idea value. We find this effect in evaluations of 500 business venture ideas (Study 1) and audience ratings of 523 films premiering at the Sundance Film Festival (Study 2). We demonstrate the causal role of novelty in producing noisy value judgments using a controlled experiment in which participants rated 80 abstract paintings (Study 3). The positive relationship between novelty and noise attenuated when value was explicitly construed as contingent on novelty (Study 4). Greater noise in others' value ratings reduced people's willingness to invest in an idea, as noise signaled risk (Study 5). Findings show that consensus about an idea's worth diminishes the newer it is, highlighting one reason creative ideas may fail to gain traction in the social world. Keywords: novelty, creativity, noise, consensus, value judgments

MOC: **Stay the Course or Cut Your Losses? Navigating Persistence and Abandonment in Creative Work**

Author: **Greg Fetzer**, *U. of Liverpool*

Persistence is often considered a key to creative success. Yet we also know that creative work requires abandonment, and indeed, abandonment is a key prescription to prevent escalation of commitment, the proverbial throwing of good money after bad. These countervailing prescriptions create a puzzle for scholars and creative workers themselves. On the one hand, the literature emphasizes the need to persevere through setbacks to develop breakthrough ideas. On the other hand, much organizational research emphasizes the need to put limits on persistence to prevent escalation of commitment and other distorted thinking. To date, however, little work has explored how creative workers navigate these tensions between persistence forces and abandonment forces. Through a qualitative, inductive study of R&D scientists in a pharmaceutical company, I find that scientists are able sustain creative engagement despite the tensions between persistence and abandonment by constructing an aspirational purpose and maintaining a calculated emotional detachment to their ideas. My study has implications for theories of creative work, persistence, and escalation of commitment.

MOC: **Sweeping the Fog on the Cognitive Reflection Test: A Review and Derivative Creation Tool**

Author: **Ahmet Onur Agca**, *Loughborough Business School*

Cognitive Reflection Test is a unique method for measuring cognitive differences across individuals and since its creation in 2005, it has been very popular among researchers from various fields. However, this popularity has brought many questions about the capabilities and application of the test, which has not been holistically evaluated. Besides, the growing popularity of the test has created a side risk of previous exposure, which leads researchers to use variations of the CRT. However, the lack of any structured way of developing test alternatives has also increased the confusion. Therefore, this study aimed to clarify the fog on the topic by applying a non-exhaustive but comprehensive literature review, which also resulted in a conceptual framework for creating novel CRTs derivatives. Then, the research followed a two-stage experiment to apply and evaluate that framework. Through both experiments, the framework's creation and evaluation criteria tested twice and the final results showed sufficient manipulation power for the items while decreasing the potential risk of previous exposure. The study initially provides a conceptual contribution to the theoretical contemplation of CRT. Secondly, it also contributes to the methodology by creating and testing the CRT customisation framework.

Participant: **Elizabeth Embry**, *U. of Kansas*
Participant: **Heather Ciara Vough**, *George Mason U.*

Organizations provide guidelines, or a scaffold, for constructing work identities through audience feedback and cultural norms. This symposium examines contexts in which workers either use feedback from their interactions with proximal others to navigate restrictions imposed by the organizational scaffold (as in the case of stigmatized or low-status identities), and/or exercise agency and use unconventional interactional cues to construct their identities in the complete absence of the organizational scaffold (as in the case of independent workers and brewery founders). Putting the worker front and center, we aim to explore the ways in which individual workers craft work identities both within as well as beyond organizational scaffolds. Our discussant, Michael Pratt, a leading scholar in identity construction processes at work, will integrate insights from the presentations, and facilitate the concluding discussion about future directions for this field of research.

Presenter: **Brianna Barker Caza**, *U. of North Carolina, Greensboro*
Presenter: **Zhuo Lin**, *U. of Cincinnati*

Temporality is an inextricable component of identity. As people experience identity change over time, they are motivated to create a sense of self-continuity, i.e., the subjective feeling of having a sustained and coherent identity story and trajectory (Giddens, 1991; Vignoles et al., 2006). More so than ever, management researchers have been examining the diverse ways through which people craft self-continuity that transcends time (Petriglieri, Ashford, & Wrzesniewski, 2019; Petriglieri, Petriglieri, & Wood, 2018). However, scholars also acknowledge that crafting a sense of self-continuity has become more challenging because of the uncertain, unstructured, and discontinuous nature of contemporary careers (Arthur & Rousseau, 1996; Ashford, George, & Blatt, 2007; Ibarra and Obodaru, 2016). The papers in this symposium examine how people manage their identit(ies) over time as they face identity change, challenges, and the need for self-continuity. We examine identity work strategies both at transitional moments in one's career and as evolving processes in the long term. Our symposium includes qualitative, quantitative, and theoretical works, and investigates identity work in both traditional and novel work settings.

As scholars have begun to dig deeper into the assumptions the psychological literature on impostor syndrome has been making for decades, the stage has been set for an evolving conversation about how we can better examine and understand the mechanisms that generate the impostor phenomenon, the different consequences that result from feelings of impostorism, and the best strategies for mitigating its adverse effects. The purpose of this symposium is to bring together a group of top scholars interested in the impostor phenomenon to share and discuss emerging research and insights, and help spark new research ideas and collaborations that can influence research in this area into the future.

Spirituality and Society: Insights from Culture, Health, and Learning

Session Moderator: **Jeffrey Miles**, *U. of the Pacific*

This session will explore various research papers on spirituality and its impact on different aspects of society. The papers will cover topics such as sparking a feminine organizational culture through spiritual wisdom traditions, the impact of spirituality on the health of college students, the influence of spirituality on stress appraisal during the Covid-19 pandemic, and re-conceptualizing spirituality to generate a whole-person learning experience for graduates. Additionally, the session will question whether spirituality is an interdisciplinary interest or an emerging discipline. Attendees will gain valuable insights into the multifaceted nature of spirituality and its potential impact on individuals and society at large.

MSR: **Spirituality and the Health of College Students: A Partial Replication and Extension**

Author: **Jeffrey Miles**, *U. of the Pacific*
Author: **Stefanie E Naumann**, *U. of the Pacific*

Spirituality has been linked with numerous positive effects, and the university experience is generally viewed as an important time for students to develop their spiritual identities. The purpose of this study was to partially replicate and extend the findings of Nelms et al. (2007) on the relationship between spirituality and the health of university students. In a survey study of 968 first-year undergraduate students in the western United States, we found that spirituality was associated with higher levels of physical health, emotional health, and exercise, and these relationships were generally different for white individuals and men than for minorities and women.

MSR: **Spirituality: An Interdisciplinary Interest or an Emerging Discipline for The Unknown ?**

Author: **Sharda Nandram**, *Vrije U. Amsterdam*
Author: **Puneet Bindlish**, *Vrije U. Amsterdam*

The intersection of management, spirituality, and religion (MSR) gives scholars, academicians, and practitioners a distinctive approach to understanding phenomena in management, solving issues around them, and making decisions regarding them from a different or rather transformed perspective. Exploring this intersection, we reflect its influence on management practices and research in MSR. Although not truly interdisciplinarily, spirituality has so far been developed and dealt with under several disciplines. Owing to its weak or lesser-known disciplinarity, spirituality has been colonized by interdisciplinarity leading to digestion of its concepts or methods and eventual distortion to fit the dominant disciplines. This undermined its distinct ontology and epistemology and in turn the promise it holds. This paper highlights the emerging disciplinarity in spirituality to argue for its position as a distinct discipline. After discussing some of the challenges towards this end, we propose spirituality as a field of knowledge that deals with the un-experienceable and unknowable unknown, and its connectedness with the knowable and experienceable realm. We further propose the building blocks for this discipline (ontology, epistemology, axiology and praxeology). Finally we reflect on the road ahead for qualifying to be an academic discipline as a field of study for learning, producing and practicing knowledge.

MSR: **Opportunity or Threat: Spirituality And Stress Appraisal During The COVID-19 Pandemic**

Author: **Salar Mesdaghinia**, *Eastern Michigan U.*
Author: **Morgan Milner**, *Eastern Michigan U.*

The COVID-19 pandemic has been a great source of stress for employees. However, employees differ in how they cope with pandemic stressors and how they are impacted by them. Drawing on challenge-hindrance stress appraisal framework, we propose that employees with higher levels of spirituality are more likely to view pandemic stressors (e.g., health concerns and job insecurity) as challenges - that is, opportunities for growth - than those with lower levels of spirituality. Conversely, employees with high spirituality are less likely to perceive pandemic stressors as hindrances - that is, threats to their goals - than those with lower spirituality. We also propose that challenge appraisal is related to positive behaviors and outcomes (following social distancing rules, work adaptation, and post- traumatic growth), whereas hindrance appraisal is associated with negative outcomes (psychosomatic strain, job cynicism, and depression). We further hypothesize that for employees with high spirituality, pandemic stressors are associated with enhanced behavioral and well-being outcomes due to their more favorable stress appraisal. Data from two time-separated studies involving employees from a variety of jobs and organizations in the U.S. support our hypotheses. Our findings show that by promoting a positive view of pandemic stressors, spirituality can be a source of relief and growth for employees, can help them engage in positive coping behaviors, and can promote their well-being.

MSR: **Sparking a Feminine Organizational Culture: Insights from Spiritual Wisdom Traditions**

Author: **Ayesha Sengupta**, *Postdoctoral Research Associate at U. of Illinois, Urbana-Champaign*
Author: **Vickie Coleman Gallagher**, *Department of Management, Cleveland State U.*

Masculine cultures are perpetuated by stereotypical management practices, often taught in many business schools. Our research explores the intersection of feminine organizational cultures and the intersection of spiritual wisdom traditions that celebrate femininity. We provide a thematic analysis of the literature and end with change management practices to advance management practices and theory. We will contend that in order to achieve the benefits of feminine cultures, we must not only alter our hiring practices or structural design, as would be suggested by typical management practices. We must begin to help leaders visualize the feminine identity and appreciate the inclusion of spirituality in the workplace, so that the culture itself is altered. Humanistic change management literature can be leveraged to alter a culture, while incorporating the themes discovered in this research, such as compassion, a connection to nature, unity as well as a powerful feminine leader. These visualizations have the potential to provide the necessary images, signs and symbols necessary to create a more feminine culture, thereby benefiting from these practices.

MSR: **Re-conceptualizing Spirituality to Generate a Whole Person Learning Experience for Graduates**

Author: **Cheryl Dowie**, *U. of Houston - Downtown*

Producing a learning environment that equips graduates with sustainable and intangible life-skills that can contribute effectively to today's complex business world, requires the reinforcement of humanistic variables in management education. In this study, we infuse spiritual learning elements such as humility, compassion, and simplicity with Kolb's Experiential Learning Theory (ELT) to generate a whole person learning experience for graduates. Our rationale behind conceptualizing spirituality with ELT is because it develops sustainable competencies required for graduates to focus on personal development, community engagement, and an overall higher purpose in life, which will in turn nurture them into productive citizens of the 21st century. Our empirical data was collected during the covid-19 pandemic period (i.e., 2020-2021) when online-teaching was carried out for graduates at two locations (i.e., the Middle East and the UK). We expect that our study will encourage management scholars and instructors to adopt a reflective approach while revisiting their curricula and apply innovative pedagogical approaches to educate next generation leaders and global citizens.

Workplace accounts of poor management, employee burnout, and inequity have been consistent elements of work life leading to countless media reports of workplace toxicity where a lack of trust and overabundance of conflict have become the norm. The studies in this symposium continue to advance knowledge by documenting how mindfulness intersects common challenges in the social realm. These include managing the intricate process of feedback and communication, supportive leadership behaviors that enable employee resilience, deepening the understanding between telecommuting and well-being, and enriching our understanding of minoritized experiences. These studies add to knowledge on mindfulness by examining understudied areas and voices and offer new theoretical insights and practical implications.

The Effects of Leader Leniency and Compassion on Subordinates

Session Moderator: **Maie Stein**, *U. of Hamburg*

OB: **Leading for Growth: Daily Affiliation Resources Provided by the Leader and Nonwork Mastery**

Author: **Maie Stein**, *U. of Hamburg*
Author: **Vanessa Begemann**, *U. of Hamburg*
Author: **Sabine Gregersen**, *Institution for Statutory Accident Insurance and Prevention*
Author: **Sylvie Vincent-Höper**, *U. of Hamburg*

Despite the importance of mastery experiences to day-to-day recovery from work, we know little regarding the day-level antecedents of mastery. Drawing on conservation of resources and resource exchange perspectives, we aim to examine the role of affiliation resources provided by the leader (i.e., demonstrations of warmth, care, and positive regard) during the workday in promoting mastery during after-work time. Multilevel path analysis of daily diary data from 198 employees (768 days) indicated that on days when employees perceived that their leader provided more affiliation resources, they reported higher levels of self-esteem and work engagement and, in turn, experienced higher levels of mastery during after-work time. Additionally, we found that employees in high-quality (vs. low-quality) leader-member exchange (LMX) relationships benefitted more from affiliation resources provided by their leader in terms of work engagement. The findings of this study contribute to recovery research by shedding light on the day-level work-related factors and psychological processes that are associated with mastery. By highlighting the interplay of day-specific resources and general perceptions of LMX quality, we advance the understanding of LMX as a dynamic phenomenon and provide a more nuanced understanding of the relative value of resources provided by the leader to employees.

OB: **Entitlement or Obligation:The Role of Attributed Motives in Subordinate Reactions to Leader Leniency**

Author: **Zheng Zhu**, *Nankai U.*
Author: **Xingwen Chen**, *School of Managament, Fudan U., China*
Author: **Robin Mengxi Yang**, *School of Economics and Management, U. of Chinese Academy of Sciences*
Author: **Wansi Chen**, *East China U. of Science and Technology*

Although previous research has examined the effectiveness of various levels of punitive reactions to misconduct, researchers have given leader leniency relatively inadequate attention. Prior studies consistently suggest the beneficial effects of reacting less punitively toward misconduct. The current research challenges this notion by delineating a mixed effect of leader leniency on subordinate psychological and behavioral reactions. Building on social exchange theory (i.e., reciprocity norm and rank equilibration norm) and motive attribution literature, the authors argue that when subordinates hold high levels of instrumental motive attribution, leader leniency relates positively to subordinate psychological entitlement, which in turn leads to workplace deviance. In contrast, when subordinates develop high levels of value-expressive motive attribution, leader leniency is positively associated with their felt obligation toward leaders, which positively influences their subsequent organizational citizenship behavior. The results of a field study and a recall experiment conducted to test these hypotheses confirm the double-edged effects of leader leniency. These findings have important implications for theory and practice.

OB: **Trauma-Informed Compassionate Leader Behaviors-Compassion at Work for Those Who Have Suffered Trauma**

Author: **Nicole Alonso**, *U. of Houston*

The present research study sought to develop a compassion scale – a measure of Trauma-informed Compassionate Leader Behaviors (TICLB) using a total sample size of 949 across three studies. In Study 1a, TICLB items were generated through interviews with trauma survivors using both an inductive and deductive approach. Interview questions and coding schema were informed by theories of compassion and trauma-informed approaches. Items were based on content from interviews. In Studies 1b and 1c, TICLB items were investigated for content validity, to ensure that items measured the focal construct TICLB. In Study 2, the TICLB measure was further refined, and the factor structure examined revealing a bifactor model with one general factor and two specific factors "tangible behaviors" and "intangible behaviors." Additionally, Study 2 established convergent validity with extant measures of compassion as well as discriminability from conceptually similar constructs (e.g., perceived supervisor support). Study 3 revealed that TICLB predicted employee well-being, employee perceptions of the organization, and employee contributions to the organization. Additionally, Study 3 revealed that TICLB predicts these same outcomes above and beyond general compassion and compassionate leader behaviors. The theoretical and practical implications are discussed.

OB: **Should Leaders Be Lenient to Followers? The Mixed Impact of Leader Leniency on Follower Misconduct**

Author: **Puchu Zhao**, *School of Business,Sun Yat-sen U.*

How to address followers' misconduct to prevent its future occurrences is a common issue for leader in their daily work. While the existing literature has consistently demonstrated that imposing the prescribed punishment is more effective to rectifying wrongdoers' misconduct than not doing so (i.e., engaging in leniency), we challenge this prevailing conclusion. Integrating social information processing theory and power literature, we proposed that leader leniency is a mixed blessing for preventing subsequent misconduct by wrongdoer followers. Specifically, because of its dual but conflict moral implications (i.e., unrighteousness and mercy), leader leniency exerts both facilitative and inhibitive effects on follower misconduct. We further identify followers' dependence on leader serve as a key boundary condition. When this dependence is low, leader leniency will increase follower misconduct via follower perceived acceptability of norm violations. On the contrary, when this dependence is high, leader leniency will inhibit follower misconduct via follower work moralization. Our theory was supported through a longitudinal survey. Taken together, our research provides significant implications to understanding a management issue—whether, why, and when leader leniency is an effective means for preventing future misconduct by followers.

OB: **Must Have or Nice to Have? Necessary Leadership Competencies to Enable Employees Innovative Behavior**

Author: **Liehr Jennifer**, *Helmut Schmidt U.*
Author: **Sven Hauff**, *Helmut Schmidt U.*

Encouraging employees' innovative behavior (EIB) is one of the most important leadership task and numerous studies have examined the links between leadership and EIB. However, the research field is highly fragmented and does not provide a unified conception of innovative leadership. Using a qualitative content analysis, we investigate which leadership competencies are mentioned related to EIB. We turn away from leadership styles and apply a behavioral-focused competency approach. We first identify specific competencies mentioned in connection with EIB. Subsequently, we prioritize the results by examining which leader competencies are described as necessary conditions for EIB. The results show clear differences between competencies described as innovation-promoting and competencies characterized as necessary for EIB. Of the variety of competencies considered as EIB- promoting, only a very small part seems to be a necessary prerequisite for EIB. Based on the results, we present seven theoretical propositions and a concise model of innovative leadership.

OB: **To Serve or to Enable? From Leadership to Innovative Behaviors Through Engagement and Empowerment**

Author: **Waleska Yone Yamakawa Zavatti Campos**, *Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*
Author: **Flavia Cavazotte**, *Pontificia U. Catolica de Rio de Janeiro*

The aim of this study is to comparatively examine the influence of servant and entrepreneurial leadership on innovative work behavior (IWB) of civil servants, analyzing their concurrent effects. In addition, we assess the mediating effects of psychological empowerment and work engagement to understand better how specific leader behaviors promote IWBs. We conducted a survey with 160 Brazilian civil servants from union courts of accounts. We used partial least squares modeling to analyze our data, controlling for common method effects. Results show that servant leadership exerts stronger influence on employees' IWB than entrepreneurial leadership. However, entrepreneurial leadership was also associated with IWBs through psychological empowerment and positively associated with work engagement. Our study contributes to the literature by suggesting that servant and entrepreneurial leader behaviors have complementary effects on IWBs of employees in the public sector. We discuss implications for theory and practice.

OB: **Inclusive Leadership and Employee Innovation: A Review and Direction for Future Research**

Author: **Khoshmorad Khamosh**, *Harbin Institute of Technology*
Author: **Ali Hasan Mumtaz**, *Harbin Institute of Technology*
Author: **Chuqi Hang**, *Harbin Institute of Technology*

This review paper aims to answer two research questions: Does inclusive leadership predict employee innovative behavior? If so, how and when does this prediction occur? A systematic search and review of empirical papers published. We conducted a systematic search and review of empirical papers published between 2006 and 2022. A total of 35 papers were identified based on the criteria of reporting empirical results, having been published in English, and answering the above research questions. In general, the results of these studies indicate that inclusive leadership is positively predictive of employee innovation and creativity. However, recent findings indicate that this relationship may not be as simple as it appears. Additionally, several mediators and moderators have also been identified, demonstrating that in many cases inclusive leadership has an indirect effect on employee innovation. Although some boundary conditions have been examined, it is necessary to conduct further research on the moderators. According to the review, it is imperative to move forward with stronger research designs to determine causality in this area. Therefore, it is necessary to examine the aspects of inclusive leadership separately, as well as to evaluate more complex relationships.

OB: **The Trickle-up Effect of Followers' Knowledge Sharing Behavior on Leaders' Innovative Behavior**

Author: **Sadia Afzal**, *IAE Aix Marseille Graduate School of Management CERGAM*
Author: **Carolina Serrano Archimi**, *Aix-Marseille Graduate School of Management – IAE, France*

The current study tested a multi-level moderated mediation model to understand the indirect effect of employees' knowledge-sharing behavior (KSB) on leaders' innovative behavior via leader psychological capital (PsyCap) under the moderating conditions of leader learning goal orientation and performance approach goal orientation. We collected multilevel and multi-sources data from 708 employees, 240 team leaders, and 80 operational managers using three surveys. We developed four alternative models (due to multi-source data of self-rated vs. other rated) for each measurement and hypothesized model and tested them using multi-level confirmatory analysis and multi-level structural regression model, respectively. The results showed that employees' KSB (self-rated and team leader rated) has a positive and significant indirect effect on leaders' innovative behavior (self-rated & manager rated) via leader PsyCap. Furthermore, leader learning goal orientation and performance approach goal orientation moderate positively and negatively, respectively, the above-mentioned indirect effects. This is the first study of its nature that examined the trickle-up indirect effect of employees' KSB on leaders' innovative behavior via leader PsyCap, along with the moderation of leader learning goal orientation and performance approach goal orientation. This study also provides a methodological contribution because it tested the measurement and hypothesized models with a multi-level modeling technique in Mplus, using four alternative models based on combinations of self-rated and other rated responses collected at three different levels (managers, team leaders, and employees).

OB: **Effort Justification of Leader Knowledge Sharing and Its Diminishing Marginal Utility**

Author: **Ranxin Liao**, *Hitotsubashi U.*
Author: **Ran Li**, *Beijing Normal U.*

In the work place, employees can be recipients of knowledge sharing from both the leader and coworkers and be benefited both individually and collectively (Wang & Noe, 2010). However, although knowledge sharing has been found promoting multiple desirable work outcomes in an organizational context, it has been studied more from the perspective of a benefactee (i.e., the knowledge receiver) rather than from the perspective of a benefactor (i.e., the knowledge giver). Taking the perspective of benefactors, with a 2-wave survey on 623 employees, our paper explores the influence of leader knowledge sharing on employee performance. Employing the cognitive dissonance theory, we argue that leaders would experience an effort justification effect where the more knowledge a leader has shared with a particular employee, the more the leader would favor the focal employee subjectively in the evaluation of his or her performance. We further argue that such an effort justification effect would have a diminishing marginal utility. Our paper has several important theoretical contributions and practical implications.

New Perspectives on Abusive Supervision

Session Moderator: **Habib Tayyab**, *Univevrsity of Science and Technology of China*

OB: **Supervisor Perception of Psychological Contract Breach and Abusive Supervision**

Author: **Habib Tayyab**, *Univevrsity of Science and Technology of China*
Author: **Qingxiong (Derek) Weng**, *school of management, USTC*
Author: **Anastasiia Popelnukha**, *school of management, USTC*
Author: **Lincoln Jisuvei Sungu**, *school of management, USTC*
Author: **Alexander Narh Tetteh**, *school of management, USTC*

Drawing from COR theory, this research examines supervisor extra-role investment in subordinates as a key boundary condition for the linkage between an employee's lack of OCBI and the supervisor's perception of psychological contract breach and subsequent resource withdrawal as abusive supervision. Across 4 independent studies, 3 experimental scenario-based studies (N = 103; Study 1; N = 120; Study 2; N = 88; Study 3), and a time-lag working sample (N = 133; Study 4), the positive relationship between employees' lack of OCBI and abusive supervision was established to hinge on a supervisor's extra-role investment in subordinates. Study 2 demonstrates that the effect of a lack of employee OCBI on supervisor perceptions of psychological contract breach was positive and significant only when supervisor extra-role investment in subordinates was high. Study 3 shows that supervisor perceptions of psychological contract breach are positively related to abusive supervision. Study 4 demonstrated the overall generalizability of our findings in a field setting. All in all, the findings of current research highlighted the role of crossover resource investment and loss in relation to supervisors' perceptions of psychological contract breach and promote new insights on both the antecedents and outcomes of supervisors' perceptions of psychological contract breach.

OB: **Breaking Bad: Abusive Supervision of High Integrity Leaders**

Author: **Hanhua Xu**, *Hong Kong Baptist U.*
Author: **Bonnie Cheng**, *HKU Business School, The U. of Hong Kong*
Author: **Xu Huang**, *Hong Kong Baptist U.*
Author: **Ye Zhou**, *Shanxi U. of Finance and Economics*

It is well known that abusive supervision hurts employees' self-evaluation, making them feel worthless and excluded. Conventional wisdom suggests that "bad leaders" abuse employees, however, increasingly we know that "good leaders" may at times lose control and abuse employees. Does employees' self-evaluation suffer more or less when abusive supervision comes from the hands of a high integrity leader? Since people may rationalize away abusive behavior on the part of a perceived "good leader", we often overlook and pay scant attention to the damage of abusive supervision that they cause on employees. To explore this issue, we draw on attribution theory to theorize, counter-intuitively, that abusive supervision from a leader high on behavioral integrity exacerbates employees' damaged self-evaluation, as leader behavioral integrity may compel abused employees to make internal rather than external attributions of abusive acts, subsequently influencing their self-evaluation and task performance. Taking a mixed-method approach, results based on an experimental scenario study (Study 1: N = 198) and a multi-wave multi-source field study (Study 2: N = 269 employees, N = 48 supervisors) support our propositions. This work points to the exacerbating effect on employees when good leaders break bad.

OB: **The "Life" Consequences of Abusive Supervision: Abusive Supervision and Employee Procreation**

Author: **Feng Qiu**, *U. of Massachusetts, Amherst*
Author: **Xueqi Wen**, *Tongji U.*
Author: **Zihan Liu**, *U. of Houston*

Drawing upon the literature on abusive supervision and family planning, we explored how and when abusive supervision was associated with employee reduced procreation intention and subsequent birth control behavior. We found that abusive supervision was negatively related to state self-esteem and anticipated family-supportive supervisor behavior, which, in turn, led to reduced procreation intention and increased birth control behavior. In addition, employees who attribute abusive supervision to themselves are more likely to experience reduced self-esteem in reaction to the abuse, whereas employees who blame their supervisors for the abuse tend to expect lower levels of family-related support from their supervisors in the future. Our research extends the abusive supervision literature from a multi-generational perspective and reveals that abusive supervision could have substantial and long-lasting influences on employee family planning.

OB: **Subordinate Proactive Behavior and Abusive Supervision: Exploring Boundary Conditions**

Author: **Qin Xu**, *Southeast U.*
Author: **Catherine K. Lam**, *City U. of Hong Kong*
Author: **Hongjiang Lv**, *School of Economics and Management, Southeast U.*

Drawing from social exchange theory and regulatory focus theory, this study proposes a model in which supervisor future orientation and subordinate performance moderate the relationship between subordinates' proactive behavior and abusive supervision. Results across a multi-source field study (Study 1) and a scenario experiment (Study 2) consistently showed a three-way interaction pattern, such that, the positive interaction of subordinate proactive behavior and supervisor future orientation on abusive supervision only occurred when subordinates had high levels of performance. We discuss the theoretical and practical implications and indicate several directions for future research.

Using an OB Lens to Understand Entrepreneurship

Session Moderator: **Minah Park**, *U. of Wisconsin, Madison*

OB: **Gender Differences in Feedback Response During Entrepreneurial Pipeline Programs**

Author: **Minah Park**, *U. of Wisconsin, Madison*
Author: **Jirs Meuris**, *U. of Wisconsin-Madison*
Author: **Jonathan Thomas Eckhardt**, *Wisconsin Institute for Discovery*

Pipeline programs seek to facilitate pathways into entrepreneurship through training, education, and mentorship. These initiatives are intended to encourage individuals into entrepreneurship who may otherwise not have considered it and provide them with the knowledge and skills that can enhance their success. We propose that these programs may unwittingly contribute to persistent gender disparities in entrepreneurship. Throughout, individuals tend to receive feedback (e.g., grades or pitch evaluations) on their ideas or skills. Drawing on research suggesting that women and men may respond differently to performance feedback, we predict that instances of negative feedback during entrepreneurial pipeline programs decrease the intention to enter entrepreneurship among women but not men explained by changes in women's entrepreneurial self-efficacy and evaluations of risk. We find support for this prediction across two pre-registered studies using pre-and post-survey data combined with archival data from a sample of students enrolled in introductory entrepreneurship courses (Study 1) and a randomized lab experiment (Study 2). Altogether, our findings suggest that programs intended to strengthen the pipeline into entrepreneurship may be an unintended contributor to gender disparities.

OB: **Smart People Working for Whom? Linking Perceived Overqualification with Entrepreneurial Outcomes**

Author: **Chao Ma**, *Australian National U.*
Author: **Xue Zhang**, *Shanghai Normal U.*

Perceived overqualification refers to an employee's feeling that he/she possess surplus capabilities than a job requires. Drawing from theory of planned behavior and self-efficacy literature, we develop a theoretical model to depict the potential effects of perceived overqualification on entrepreneurship. Specifically, we propose that perceived overqualification is positively related to an employee's entrepreneurial self-efficacy, which further predicts their entrepreneurial intentions and entrepreneurial goal-enacting behavior. We also suggest that peer's entrepreneurial experience may serve as a moderator strengthening the positive relationship between perceived overqualification and entrepreneurial self-efficacy. We collected a 2-wave multisource data from employees in China and on the basis of a final sample of 118 employees, we found empirical support for our proposed relationships among perceived overqualification, entrepreneurial self-efficacy, entrepreneurial intentions and entrepreneurial goal-enacting behavior, and the boundary condition of peer's entrepreneurial experience. Implications are discussed.

OB: **Experimentation and Business-model Transformation: The Self-Regulatory Benefits of Hype**

Author: **Jean-François Harvey**, *HEC Montréal*

Research on hype in entrepreneurship has largely focused on image-related gains for entrepreneurs. As a result, it has overlooked the reciprocal nature of social interactions, which entails information exchanges that can help entrepreneurs self-regulate over time. To better assess the self-regulatory benefits of hype, we investigate the behaviors of entrepreneurs who must both build legitimacy and learn and adapt in order to succeed: pivoting entrepreneurs. Latent change score (LCS) modeling of five-wave monthly longitudinal data from 574 entrepreneurs during COVID-19 shows that hype leads to intraindividual increases in experimentation, which are associated with intraindividual increases in business-model transformation. We also find that entrepreneurs' sense of efficacy acts as a boundary condition, as only those who are confident in their entrepreneurial capabilities leverage hype in such a way. In other words, provided they are not beset by self-doubt, pivoting entrepreneurs who promote their venture the most engage in more experimentation and implement more strategic changes over time. Our study offers key implications and opens avenues for future research on hype in entrepreneurship and contributes more broadly to our understanding of entrepreneurial expertise.

OB: **Institutional Logics as a Legitimating Force in Enacting Top-down Entrepreneurship in the Arab Gulf**

Author: **Seungah Lee**, *New York U. Abu Dhabi*

In face of top-down promotion of entrepreneurship, how do organizations make sense of their environment and as enactors and facilitators of an entrepreneurship ecosystem? This chapter explores how "entrepreneurship enabling" organizations navigate, enact, and manage entrepreneurship development in light of active promotion of entrepreneurship by Arab Gulf states. government-driven national development rhetoric around entrepreneurship as a core part of their identity and purpose, resulting in multiple institutional logics. In fact, embrace of a national developmentalist institutional logic becomes critical for these organization's local legitimacy and survival as entrepreneurship is a nascent field for the Arab Gulf. In doing so, these organizations engage in multiple institutional logics: entrepreneurship market, community, and national developmentalist. Pursuit and navigation of multiple institutional logics amidst an uncertain entrepreneurship environment with ambitious goals, then, result in these organizations engaging in the "technology of talk" and strategic segmentation and decoupling that follows historical patterns of modernization and development observed in the Arab Gulf.

Understanding the Effects of Harmful Leader Behaviors and Emotions on Employees

Session Moderator: **Aikaterini Eleni Tsantila**, *Justus-Liebig U. Giessen*

OB: **Leader Perfectionism and Subordinate Turnover Intention: An Attribution Theory Perspective**

Author: **Jiarong Guo**, *School of Management, Shandong U.*
Author: **Zhaopeng Liu**, *School of Management, Shandong U.*
Author: **Yamei Liu**, *Shanghai U. of Finance and Economics*
Author: **Danting Chang**, *School of Management, Shandong U.*

As perfectionism exploration in the workplace began to emerge, existing research on leader perfectionism have both positive and negative effects on subordinates' behavior. From the perspective of attribution theory, this paper attempts to propose a dual-path moderated mediating model for the influence of leader perfectionism on employees' turnover intention. We examined how employees' attributions of leader perfectionism influenced their responses. The results showed that a high subordinate's self-serving attribution will make employees believe that the leader's perfect requirements are in line with their own qualifications, perceived as over qualifications, thereby promoting their turnover intentions. However, subordinates with a low self-serving attribution would see leader perfectionism as a good characteristic of the leader, thus increasing their identification with the leader in terms of values, further enhancing their desire to stay in the organization. Our research has crucial implications for the application and practice of perfectionism in the field of management.

OB: **Antecedents and Leadership Consequences of Supervisors' Employee-directed Objectification**

Author: **Aikaterini Eleni Tsantila**, *Justus-Liebig U. Giessen*
Author: **Frank H. Walter**, *Justus-Liebig U. Giessen*

Objectification (i.e., perceiving others as dehumanized instruments for goal attainment) is highly prevalent in supervisor-employee interactions. Nevertheless, little is known about (a) why some supervisors objectify their employees to a greater extent than others and (b) how such objectification manifests in a supervisor's leadership behavior. We draw from theory and research on self-concepts and role identities to address these questions. We propose that the way supervisors view themselves in relation to others (i.e., their self-concept) is an important antecedent of their employee-directed objectification. Further, we hypothesize that such objectification has the capacity to evoke an autocratic leadership style, although this linkage will hinge on supervisors' identification with their leader role. Using a sample of 65 supervisors and 266 of their employees, we found that supervisors' individual (but not relational or collective) self-concept was positively related to their employee-directed objectification. Moreover, supervisors' objectification was positively related to their autocratic leadership behavior, but only among those who strongly identified with their leader role. These results advance our theoretical understanding of objectification in leadership relations, providing new insights into the antecedents, consequences, and boundary conditions associated with supervisors' employee-directed objectification.

OB: **Supervisor Downward Jealousy and Its Social Function in Supervisor-Subordinate Relationships**

Author: **Feng Qiu**, *U. of Massachusetts, Amherst*
Author: **Lingtao Yu**, *U. of British Columbia*
Author: **Xueqi Wen**, *Tongji U.*
Author: **Michelle K. Duffy**, *U. of Minnesota*

We introduce the concept of supervisor downward jealousy, defined as supervisor's fear of losing valued relationships with subordinates because of an actual or imagined rival (e.g., an informal leader). We integrate recent theoretical framework on workplace jealousy with the social functional view of emotions to propose and test a novel theoretical model to delineate both the antecedents and consequences of supervisor downward jealousy. We theorize that the presence of an informal leader contributes to the emergence of supervisor downward jealousy, particularly when the informal leader is competent, and that jealous supervisors are more likely to refrain from abusive supervision and provide supervisory support to their valued targets (i.e., other subordinates), particularly when the other subordinates are competent, with the hope to repair and rebuild the valued relationships. We first developed a scale on supervisor downward jealousy (Study 1a) and then adopted a multi-method, multi-sample research design including an electronic confederate-based experiment (Study 1b) and a multi-wave, multi-source field study (Study 2) to test our model and hypotheses. Results across both studies provide consistent support for our predictions. We discuss the theoretical and practical implications as well as future research directions of our work.

OB: **A Daily Diary Study on the Mechanisms Linking Leader Workaholism and Subordinate Work Withdrawal**

Author: **Yaqing He**, *U. of Illinois at Urbana-Champaign*
Author: **Sunjin Pak**, *California State U., Bakersfield*
Author: **Sang-Hoon Lee**, *Loyola Marymount U.*
Author: **Amit Kramer**, *U. of Illinois Urbana-Champaign*

Based on moral licensing theory, we propose that employees who perceive that their leaders are high in workaholism during the workday are more likely to experience ICT demands after work hours the same workday, which would be considered morally praiseworthy by leaders who spend excessive time on work activities. After-hours ICT demands, in turn, may activate two psychological mechanisms (i.e., psychological entitlement versus emotional exhaustion) that ultimately relate to work withdrawal on the next workday. First, after-hours ICT demands are associated with greater psychological entitlement, which relates to work withdrawal. Second, after-hours ICT demands are associated with greater emotional exhaustion, which also increases work withdrawal. Using experience sampling methodology, we tested the model with 130 full-time employees in South Korea who completed the online survey for a period of 10 consecutive work days, three times a day. Results of multilevel analyses showed that the serial mediation relationship between leader workaholism and subordinate work withdrawal was positive. However, the data did not support the moderating effect of subordinate trait family identity salience on the within-person relationship between leader workaholism and after-hours ICT demands. Overall, this study illustrates that leader workaholism and subordinate work withdrawal are related through subordinates' after-hours ICT demands and psychological entitlement.

You Make Me Feel Brand New: The Role of Emotions in Influencing Employee Creativity

Session Moderator: **Lynn Schmodde**, *Heinrich-Heine U. of Dusseldorf*

OB: **The Impact of Daily Emotion Regulation Strategies on Creativity and Performance**

Author: **Lynn Schmodde**, *Heinrich-Heine U. of Dusseldorf*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

Extant research provides limited insights into how employees' daily emotion regulation strategies affect creativity and performance in organizational contexts, although it is important to examine the impact of these potentially resource-consuming strategies on specific behavioral outcomes. Drawing on conservation of resources (COR) theory, we conducted a one-week diary study with 103 participants working in small firms. Small firms are characterized by close working relationships, and interpersonal interactions that entail emotion regulation can potentially impact employees' daily creativity and performance, which in turn are critical resources in small firms. We examined the effects of two different emotion regulation strategies (i.e., deep acting and surface acting) on employees' creativity as well as in-role and extra-role performance, mediated by employees' affective well-being. We extend existing knowledge by showing that daily surface acting had negative within-person effects on creativity and performance, mediated by affective well-being. Daily deep acting, on the other hand, positively affected our outcomes, and dispositional emotional intelligence moderated the effect on affective well-being.

OB: **How Do Emotions Impact Creativity ? A Meta-analysis of Dual Pathway Creativity Model**

Author: **Cayrol Alex**, *Sabanci U.*
Author: **Thomas Gillier**, *Grenoble Ecole de Management*
Author: **Christophe Haon**, *TBS Business School*

Creativity is not only a cognitively complex activity but also an emotionally charged activity. Emotions are known to be a strong predictor of creativity. Yet, there is no scientific consensus about the mechanisms underlying the effect of emotions on creativity. Using a meta-analytical approach with 327 independent samples and 158 studies and following the DPCM (Dual Pathway Creativity Model), this research examines how cognitive flexibility (the ability to switch between various perspectives) and cognitive persistence (the ability to sustain the prolonged effort) mediate the impact of emotions on the creativity. Results show that activating positive emotions lead to creativity through cognitive flexibility while activating negative emotions trigger creativity through cognitive persistence. Findings contribute to the literature on emotions and creativity by establishing a scientific consensus about the mechanisms of the emotion-creativity relationship and by resolving inconsistencies in the literature. Practically, findings inform managers about the processes under which emotions lead to creativity in the workplace. Limits and future research are discussed.

OB: **What's Emotion Got to do With It? Individual Emotion's Role in Collective Idea Generation**

Author: **Sarah Kostanski**, *PhD Student at UMass Lowell*

Creativity is recognized as a key performance output in contemporary organizations. Yet we do not fully understand the emotional individual antecedents that contribute to collective creativity. While affect seems to play an important role in influencing creative output, this area is underexplored because there is conflicting evidence as to which the emotions are most salient. Two separate streams of literature, one at the group-level and one at the individual-level of analysis, have wrestled with whether positive or negative valence emotions lead to creativity. This field study provides insight into the multi-level phenomenon of how individual emotions foster or inhibit group creativity. With a multi-method approach, drawing from interviews, surveys, and videos of live brainstorms in a technical organization, I find that individuals exhibited emotional ambivalence (EA) – i.e., simultaneous positive and negative feelings – during moments of idea generation. EA occurred before and during idea generation and dissipated, with only positive emotions remaining afterwards. Extending affect-as information theory, my research shows that EA is an important contributor to collective creativity by activating simultaneous pleasant and unpleasant emotions which amplify conditions for group creativity. Rather than, happiness and sadness, my research empirically shows that the positive and negative composition of EA most salient during group brainstorms were activated pleasant (excitement and enthusiasm) and activated unpleasant (nervous and jittery) emotions.

OB: **The Effect of Downward Social Comparison on Creativity**

Author: **Yuha Yang**, *SunMoon U.*
Author: **Heesun Chae**, *Pukyong National U.*

Employee creativity has become the essential element for the survival and success of contemporary organizations under the fast-changing business environment. The increase in the importance of team systems in the flood of information has increased the attention to creativity in social relationship. This study adopts social comparison theory (Festinger, 1954) to propose a framework that exhibits the process in which the social comparison of creative ability between team members influences individual creativity. In particular, this study focuses on the downward social comparison that individuals experience frequently in real team situations (Gerber, Wheeler, & Suls, 2018). I proposed the process model that downward social comparison influences individual creativity through negative affect. This study examined the emotional response to downward social comparison within teams. In addition, the effect of downward social comparison on creativity, as mediated by negative affect, is positively moderated by narcissism. A multi-source multi-wave field data collected from 130 employees and supervisors working in a manufacturing company in South Korea confirm the moderated mediation hypothesis. This research provides novel insights for researchers and practitioners by offering theoretical elaboration of the effects of social comparison processes on creativity and providing unique empirical validation of the model in the context of teams in actual organizations.

You Never Get a Second Chance: Advancements in Impression Management Research

Session Moderator: **Benjamin Moon**, *U. of Calgary*

OB: **Impression Management Profiles in Job Interviews: Relations with Interview Outcomes**

Author: **Benjamin Moon**, *U. of Calgary*
Author: **Kabir Daljeet**, -
Author: **Joshua Steven Bourdage**, *U. of Calgary*
Author: **Nicolas Roulin**, *Saint Mary's U.*

In job interviews, applicants' use of impression management (IM) tactics is central to our understanding of the interview process, with individual tactics in isolation relating to applicant disposition and interview outcomes. However, despite the fact that theory indicates that applicants can combine IM tactics in meaningful ways to attempt to create specific impressions, we know little about how applicants use IM tactics in combination, and the individual differences and outcomes associated with these combinations. The current study used Latent Profile Analysis to 1) determine how applicants combine IM tactics in job interviews (i.e., IM profiles), and 2) interview outcomes (i.e., interviewer- and self-rated performance, receiving a follow up interview or a job offer, fit). Participants consisted of undergraduate business students participating in high-fidelity mock interviews with real interviewers (N = 516) and a broader applicant sample who recalled their most recent job interview (N = 1042). In both samples, a five-profile solution provided the best model fit. The five profiles were distinct in terms of the levels of overall IM, self- vs. other-focused, and honest vs. deceptive IM use. These profiles were replicated across both samples. Furthermore, the five IM profiles demonstrated meaningful relations with interview outcomes, and some of these relationships differed from relations with individual IM tactics. This study provides a nuanced insight of how applicants combine IM tactics in job interviews.

OB: **The Role of Applicant Cognition and Personality on Impression Management in Virtual Interviews**

Author: **Benjamin Moon**, *U. of Calgary*
Author: **Stephanie Law**, -
Author: **Joshua Steven Bourdage**, *U. of Calgary*
Author: **Nicolas Roulin**, *Saint Mary's U.*
Author: **Klaus Melchers**, *Ulm U.*

Applicants' use of impression management (IM) in job interviews has been shown to be highly related to individual differences such as personality. However, research has paid less attention to how applicant cognition (i.e., cognitive ability and executive functioning) influence IM use, even though cognition is theoretically linked to applicant IM use. Therefore, the current research aimed to address these gaps in an asynchronous video interview setting. 294 job-seeking participants recruited through Prolific completed a mock asynchronous video interview. Overall, cognitive ability was negatively related to deceptive IM. Furthermore, cognitive ability and working memory, but not incongruency and shifting, were negatively related to honest IM. In addition, several personality dimensions differentially predicted honest and deceptive IM. Overall, our findings provide a more comprehensive understanding of how interview IM relates to applicant individual differences in asynchronous video interviews.

OB: **How Coworker's Upward Ingratiation Shapes Performance-goal Orientation and Proactive Task Behavior**

Author: **Ge Li**, *School of Business, Renmin U. of China*

Ingratiatory behavior has been demonstrated to have both positive and negative effects on employee's work outcomes, and while a number of contingencies have been proposed to reconcile the mixed findings, its impact on the broader social context has been understudied, impeding us from a more comprehensive understanding of such behavior. In this study, we draw on goal orientation theory and social comparison theory to explore the mechanism underlying the relationship between coworker upward ingratiation and individual behavioral outcomes from a third-party audience perspective. We predict that coworker upward ingratiation stimulates focal employee's state performance-prove goal orientation which in turn is positively associated with proactive task behavior. Self-efficacy weakens the relationship between coworker upward ingratiation and focal employee's state performance-prove goal orientation. In a multilevel regression analysis that assessed 295 employees in a manufacture company across three time points, we find support for our hypotheses that in order to compensate for the potential negative effects of coworker upward ingratiation, employees will increase their own state performance-prove goal orientation and proactive work behavior.

OB: **Impression Management as a Climate: Development and Validation of a Success Theater Climate Scale**

Author: **Hyungwoo Oh**, *WHU Otto Beisheim School of Management*
Author: **Miriam Muethel**, *WHU Otto Beisheim School of Management*
Author: **Louisa Antonia Bloedorn**, *U. of St. Gallen*

Impression management as a tactic to make oneself look successful is prevalent in organizations. However, most research focused on the individual level and neglected the fact that impression management can also be an organizational phenomenon. In fact, shared perceptions of impression management may create a climate of "success theater" where managers do everything to convey a favorable image of themselves. In this vein, we introduce success theater climate as an organizational climate where managers convey an impression of success, irrespective of their actual success. Combining impression management with attribution theory, we conceptualize a two-by-two framework of four impression management behaviors forming success theater climate. In three studies, we then develop and validate a success theater climate scale. First, the results revealed good internal consistency reliability as well as support for a second-order structure of success theater climate. Second, we find support for the measure's convergent and discriminant validity. Finally, we find support that success theater climate can predict important work outcomes such as job satisfaction, turnover intention, and organizational commitment beyond existing measures. Contributing to the AOM's 2023 annual meeting theme, we thus shed first light on how toxic climates of success theater can influence workers' attitudes.

Participant: **Soohyun Yoon**, *Arizona State U.*
Participant: **Eunjeong Kwon**, *Arizona State U.*

Despite growing research interest in task transitions and interruptions, broadly understood as shifts in focus from one activity to another, and their verified importance for individuals and organizations, our understanding is far from complete. Although researchers have identified a number of advantages and disadvantages of task transitions, we lack insight into the extent to which these effects offset each other or evolve over time. Following from this, we are limited in our ability to speak to challenges managers and employees face in structuring their work. In this symposium, we focus on the unique outcomes of different task transition events as well as their holistic consequences. By enhancing our understanding of task transitions and interruptions that are inevitable in today's fast-changing and competitive work environment, we "put the worker front and center" and provide insights into how employees may better deal with these challenges in modern organizational lives. Lastly, our symposium features Sophie Leroy, a prominent scholar who has developed this area of knowledge, to offer theoretical and practical insights through discussion to advance our understanding. In doing so, the symposium provides an avenue for discussing new research directions and moving the research stream forward with synergistic perspectives.

Employee Use of Personal Technologies to Enhance Performance

Session Moderator: **Alice J. M. Tan**, *Beijing Normal U.-Hong Kong Baptist U. United International College*

OB: **I Am on the Net for Performance! A Self-regulation Perspective of Personal Internet Usage Behavior**

Author: **Yolanda N. Li**, *Lingnan U.*
Author: **Bingjie Yu**, *Hong Kong Baptist U.*

A significant number of employees have reported using the internet and IT devices to deal with personal matters during work time, a phenomenon denoted as Personal Internet Usage (PIU) behavior. However, in contrast to its practical prevalence, understanding of PIU is scant in the management literature, with an exclusive view of PIU as one type of destructive behavior that impedes employees' job performance. We deviate from this negative view of PIU and rely on the self-regulation perspective to develop a model depicting their possibly positive impacts on employees' performance outcomes (task and creative performance). We propose that employees' PIU may improve task performance and creative performance by fostering their cognitive flexibility at work, and the effects will be strengthened by supervisor support for employees' personal behaviors and employees' work and nonwork self-efficacy. Findings from a 10-workday experience sampling study, using multiple data sources (self and supervisor), generally supported our hypotheses. After controlling for employees' PIU related to others, we found that employees' PIU was positively related to cognitive flexibility, thus improving task performance, and supervisor support for personal behaviors strengthened the positive indirect effect. Our findings provide a positive view of PIU and broaden the understanding of the effects of PIU.

OB: **Can Performing mWork Benefit Family? The Role of Active Coping and Hope**

Author: **Alice J. M. Tan**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Raymond C.H. Loi**, *U. of Macau*
Author: **Stephanie Wang**, *U. of Macau*

Performing unfinished job tasks using mobile device during off-job time (i.e., mWork) is becoming a common phenomenon. Is it possible for mWork to benefit employees' family? Based on the transactional theory of stress and coping, the present research aims to shed light on the positive relationships between mWork and family outcomes. Using two-wave survey data collected from both teachers and their spouses, we found that mWork increased employees' family role performance and their spouse's family satisfaction through active coping. In addition, hope weakened the positive relationship between mWork and active coping. This research contributes to extant literature on mWork and also provides practical implications for organizations to help employees deal with mWork appropriately.

OB: **The Paradox of Information and Communication Technology Demands at Work on Creativity**

Author: **ZIjing Wang**, *Huazhong U. of Science and Technology*
Author: **Huan Cheng**, *Huazhong U. of Science and Technology*

Although it is widely assumed that information and communication technology (ICT) demands are detrimental, ICT-related requirements may have hidden benefits for creativity. In this research, we draw from the job demands-resources (JD-R) model to examine how employees react to ICT demands in distinct ways. These distinct ways, in turn, will differentially predict employee creativity. Findings from a three-wave, multisource field study conducted with research and development teams at 38 high-technology firms in Southern China suggest that ICT demands induce employees' burnout or boost learning. In line with the JD-R model, job autonomy functions as a key qualifier for the effects of ICT demands, such that when faced with ICT demands, employees who have low levels of job autonomy are more likely to experience burnout, whereas employees who have high levels of job autonomy are more likely to engage in learning. Burnout is negatively related to employees' creativity, whereas learning is positively related to employees' creativity. In summary, our work is an important extension of research on the effects of ICT demands.

OB: **Appraising and Reacting to Digital Extended Availability: The Contingent Roles of Growth and Fixed**

Author: **Junjie WEI**, *School of management, Zhejiang U.*
Author: **Chu-Ding Ling**, *Renmin U. of China*
Author: **Xiaoyun Xie**, *Zhejiang U.*

Digital extended availability (DEA), or being responsive during non-work time via digital technologies, is becoming an essential feature of contemporary work. Existing research has shown its adverse and beneficial effects on employees while not presenting a clear picture of how employees perceive and produce coping behaviors toward the demand of being digitally connected after regular working hours. Drawing on the transactional theory of stress, we examine a contingent model elucidating how and when employees generate varying coping behaviors toward this technology-driven demand. We found that individuals with high growth mindsets are likely to appraise DEA as a challenge and lead to taking charge behavior. On the contrary, individuals with high fixed mindsets are likely to appraise DEA as a hindrance and ultimately lead to withdrawal behavior. Results from two field survey studies supported our hypotheses. Based on these findings, we further discuss this research's theoretical and practical implications.

Out of Sight, Out of Mind: Examining the Dark Side of Remote Working

Session Moderator: **Barbara Zepp Larson**, *Northeastern U.*

OB: **Remote (Work) is What I Want: Remote Work Preferences and Professional Isolation**

Author: **Barbara Zepp Larson**, *Northeastern U.*
Author: **Erin E. Makarius**, *U. of Akron*
Author: **Steffanie L. Wilk**, *Ohio State U.*

The effect of remote work on affective outcomes is mixed. Some studies find that remote work is associated with negative affective outcomes, such as professional isolation, while others related remote work to positive affective outcomes, such as intent to remain and reduced work exhaustion. We suggest that a greater consideration of the role of employee's preferences may enhance our understanding of the relationship between remote work and affective outcomes, and that the relationship between an individual's desired and actual amounts of remote work should influence their affective work outcomes. We also argue that desired amount of remote work represents an individual's optimization of internal preferences and external factors such as commute time. We develop and validate a measure of preference for work remoteness to begin to unpack this optimization process. We focus on the affective outcome of professional isolation because of its relevance as a concern for remote workers, and its relationship with other work outcomes. We examine these relationships using data from 295 working adults, and find that an individual's preference for work remoteness is an antecedent of their desired amount of remote work, and that desired amount of remote work moderates the relationship between actual amount of remote work and professional isolation.

OB: **Work Outside Work-hours, Not Work During Work-hours: How Digital Connectivity Leads to Cyberloafing**

Author: **Zhonghao Zhang**, *U. of Nevada, Reno*
Author: **Jinyu Hu**, *U. of Nevada, Reno*
Author: **Wenxiao Xu**, *Shandong U., China*
Author: **Junyun Jia**, *Shandong U.*

Using digital technologies to conduct work outside work-hours, a phenomenon called digital connectivity (DCON), is a prevalent behavior in the post-epidemic era. Despite growing research on DCON, little is known about why and how DCON may induce employee deviant behaviors. Using a comparative test of moral licensing and social exchange views, this article examines the link between DCON and workplace deviance, cyberloafing. Specifically, we propose that employees who engage in DCON driven by external motivation will feel more psychologically entitled. Further, we argue that DCON is perceived as an imbalanced exchange action that can induce a sense of psychological entitlement, which subsequently leads employees to undertake cyberloafing. Data from two multi-wave studies confirm that psychological entitlement mediates the association between DCON and cyberloafing and the moderating effect of external motivation. This study contributes to the DCON literature by highlighting the psychological mechanism underlying the detrimental effect of DCON.

OB: **Effects of Strength Application on Employee Outcomes at the Office vs Remote: A Diary Study**

Author: **Stephanie Neidlinger**, *Helmut-Schmidt-U*
Author: **Jörg Felfe**, *Helmut Schmidt U.*
Author: **Susan Peters**, *Harvard T.H. Chan School of Public Health*

In this paper, we focus on the application of 24 character strengths conceptualized by Peterson and Seligman (2004). We investigated the relationship of strength application with two achievement-related (work-related self-efficacy and work performance) and two psycho-social (work-life balance and job strain) employee outcomes. We also examined the influence of work location (remote vs. office) on strength application and whether the relationships between strength application and outcome depends on work location. A sample of 92 German employees working in different hybrid work arrangements took part in a 5-day diary study and reported their strength application, work location, and outcomes every evening after work. Results of multilevel models showed that daily strength application at work was positively related to self-efficacy and performance, and negatively to job strain, but not to work-life balance. Employees reported less strength application when working from home. The relationship between daily strength application and self-efficacy depended on work location, indicating that employees benefit less from strength application in term of their self-efficacy when they worked remotely. The relationships with performance, work-life balance, and strain were unaffected by work location. We discuss implications, potential benefits, and risks of remote work practices.

OB: **A Blessing or a Curse? The Effect of Remote Work on Emotional Exhaustion**

Author: **Tarek Benedict Carls**, *U. of St. Gallen*

The effect of remote work on emotional exhaustion has been investigated in the past. Most studies find a negative effect with remote work reducing emotional exhaustion. However, these findings rely mostly on cross-sectional designs and do not disaggregate within- from between-subjects variability. This is especially relevant in this research context, as workplaces that allow for remote work differ significantly from those that do not. Hence, previous findings might have been biased due to time-invariant unobserved heterogeneity. We aim to fill this gap in the literature using two studies: In the first study, we test two competing hypotheses in a random intercept cross-lagged panel model ($N = 641$): Drawing on COR theory, remote work should decrease emotional exhaustion by saving resources. Drawing on boundary theory, remote work should increase emotional exhaustion by increasing boundary violations. We find strong empirical support for the latter, contradicting previous studies. In the second study, we test a causal mechanism explaining this relationship. Using a random intercept model ($N = 4255$, $n = 12870$), we find that remote work increases the work-nonwork boundary violations of employees, which in turn increases telepressure and emotional exhaustion. Our findings complement the literature in an important way: They indicate that the negative effect of remote work on emotional exhaustion might have been overestimated in the past due to unobserved heterogeneity and the actual effect is positive with remote work increasing boundary violations and telepressure. More research should focus on facilitating and restraining factors of healthy remote work in a longitudinal setting.

Making Your Own Way: Perspectives on Job Crafting

Session Moderator: **Ye Kang Kim**, *Hongik U.*

OB: **A New Pathway to Job Crafting: The Role of Gratitude, Responsiveness, and Prosocial Motivation**

Author: **Ye Kang Kim**, *Hongik U.*
Author: **Guihyun Park**, *Australian National U.*
Author: **Junho Oh**, *Korea Advanced Institute of Science and Technology (KAIST)*
Author: **Yunchul Shin**, *Samsung Electronics*
Author: **Sujin Lee**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

Since jobs are dynamically embedded in a social context, job crafting is often inspired by socio-emotional experiences that spur individuals to seek greater meaning in their professional roles and responsibilities. However, previous studies have largely overlooked socio-emotional aspects of job crafting. Using find-remind-and-bind theory, this research elucidates the mechanism whereby gratitude works as a critical emotion that activates job crafting. Study 1 is an experiment that manipulated feelings of gratitude and tested gratitude's effect on job crafting through perceived responsiveness and prosocial motivation. Study 2 replicates Study 1's findings with a two-week daily diary study. The overall results support a serial mediation model in which gratitude facilitates the perceived responsiveness of coworkers, which in turn increases prosocial motivation and, subsequently, job crafting. Our results remain consistent after controlling for positive affect. By linking gratitude to job crafting and unpacking the underlying prosocial elements at play, our work highlights a unique, affectively driven pathway to job crafting with meaningful practical implications.

OB: **When and How Off-work Hobby Participating Influences On-work Job Crafting and Task Performance?**

Author: **Xinxin Lu**, *Hunan U.*
Author: **Haiming Zhou**, *Shandong U. of Science and Technology, Tai'an Campus*
Author: **Yuan Xiao**, *Hunan U.*

Drawing on resource allocation theory, the current research seeks to explore how off-work hobby participating influences job crafting and the resulting task performance, as well as the relevant boundary condition. We hypothesize that hobby participating is positively related to resource increasing and challenge seeking, job meaningfulness, and task performance serially among employees with low performance-approach goal orientation. In a diary study (N employee = 93, N response = 721) with four occasions a day for 8 consecutive workdays over two weeks, we found that performance-approach goal orientation attenuates the effect of hobby participating on resource increasing and challenge seeking, respectively. Especially, the indirect effect of hobby participating on task performance via resource increasing and job meaningfulness serially is significant and positive only among employees with low performance-approach goal orientation. Our research sheds light on the impact of off-work hobby participating on job crafting and task performance and highlights the role goal orientation playing in the process.

OB: **Tackling Customer Mistreatment: Roles of Growth Mindset and Job Crafting in Pursuing Career Success**

Author: **Zhongda Wu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Yu Ma**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Changqin Lu**, *Peking U., School of Psychological and Cognitive Sciences*

There has been a lack of research on individuals' proactive responses to customer mistreatment, albeit a substantial body of research demonstrating the negative consequences of customer mistreatment. In this study, we address this gap by theorizing that employees with growth mindset tend to embrace customer mistreatment as an occasion that can cultivate their work-related abilities, consequently, they proactively craft their jobs and achieve more successful careers. Through a field study with multi-wave and multi-source data, we evidenced the interaction effect of customer mistreatment and growth mindset on job crafting, as well as their indirect effect on two critical career success indicators in today's career world (i.e., promotability and employability). The theoretical and practical implications are discussed.

OB: **Time for Actions: How Artificial Intelligence in the Workplace Facilitates Employee Job Crafting**

Author: **Liang Meng**, *Shanghai International Studies U.*
Author: **XINYUE LIN**, *Shanghai International Studies U.*
Author: **Lei Chen**, *School of Business and Management, Shanghai International Studies U.*

Artificial intelligence (AI) in the workplace is gaining increasing research attention. Introducing event system theory into the AI literature and basing on the conservation of resources theory framework, this study offers a new perspective to theorize and model the impact that AI-related events have on employees' psychological states and behaviors. A critical-incident recall survey was distributed to 270 employees from all works of life (Study 1). Results demonstrates that the positive link between perceived threat of AI introduction to the workplace and employees' need for positive self-image is conditional on meaningful work. That is, when employees perceive lower meaningful work, perceived threat of AI introduction to the workplace is positively related to employees' need for positive self-image, which further motivates them to engage in job crafting. In a follow-up vignette experimental study (Study 2, N = 158), we replicated the results in a more controlled setting and expanded our understanding of the impact of AI. Since scholars have theoretically emphasized the introduction of intelligent technologies to the workplace and its consequences, our empirical investigation enriches the insufficient understanding of this research topic.

Understanding Physical and Emotional Energy in Teams

Session Moderator: **Wei Wu**, *Renmin U. of China*

OB: **Team Physical Activity and Team Performance: An Information Processing Approach**

Author: **Wei Wu**, *Renmin U. of China*
Author: **Yuchuan Liu**, *Nanjing U.*
Author: **Guoyang Zheng**, *Peking U.*
Author: **Jun Liu**, *Wuhan U. of Technology*

Physical activity is a common component of employee wellness programs. Research has shown that it can benefit both employees and organizations by promoting daily recovery, creating positive emotions, improving work-life balance, reducing job burnout, and preventing interpersonal deviance and social undermining of employees. However, all these studies are at the individual level. Whether physical activity can influence workplace entities at a higher level remains unclear. Thus, in this study, we investigate how team physical activity influences team performance from an information processing perspective. Specifically, our two field studies (Study 1 contains 54 teams of 283 employees; and Study 2 contains 188 teams of 956 employees) show that team physical activity influences team performance through a serial mediation of physical activity-related information sharing and subsequent team cooperative climate. Theoretical and practical implications of our findings have been discussed.

OB: **The Effect of Emotional Dissonance Between Team Emotional Display Norms and Positive Emotions on OCB**

Author: **Da Eun Hong**, *Hanyang U.*
Author: **Min-Soo Kim**, *Hanyang U.*
Author: **Hee Young Lim**, *Hanyang U.*
Author: **Hyunju Yoon**, *Hanyang U.*

Emotional labor is typically conceptualized as a process in which individuals regulate their emotions in response to display rules (Gosserand & Diefendorff, 2005). Most research on EL has argued on the influence of display rules as individual-level perceptions, but rarely examined as team-level. We examine the influence of the shared display rules in teams as emotional display norms. This study considered emotional dissonance as difference between positive emotional display norms in team-level and positive emotion in individual-level. To examine the purpose of this study, a multi-level polynomial regression analysis was conducted. Thus, this study used the response surface methodology to interpret the incongruence effect. The results show that the incongruence effect of emotional dissonance is positively related to surface acting. In addition, the moderating effect of regulatory focus significantly strengthens the positive relationship between emotional dissonance and emotion regulation strategies. The results also show that surface acting strategy is negatively related to receive OCBs low.

OB: **Energized by the Team: Effects of Collective Energy on Leaders' Well-being**

Author: **Nate Zettna**, *U. Of Sydney*

In this paper, we examine the process by which leaders' sleep quality, physical health, and emotional well-being are influenced by the quality of leaders' relationship with their team (leader-team exchange, LTX) and their team's collective energy. Based on interaction ritual theory which emphasizes the role of collective energy in social interactions and how energizing shared interactions influences the quality of relationships and well-being outcomes, we test a novel theoretical model whereby the relationship between collective energy and leaders' physical (sleep quality, sickness and pain) and emotional health (emotional exhaustion) is mediated by LTX. Based on a sample of 706 team members nested within 74 teams, we found evidence to support indirect effects of collective energy measured at Time 1 and leaders' well-being outcomes measured two months later via LTX. These results extend theoretical and practical insights into how factors in the leader's socioemotional and relational context can be influential in shaping their health and well-being and offers practical implications for malleable levers for managing leaders' stress and well-being.

OB: **The Ingredients of Transformation: Towards a Theory of Free Energy in Teams**

Author: **Matthias Spitzmueller**, *Smith School of Business, Queen's U.*
Author: **Addison Maerz**, *California Polytechnic State U., San Luis Obispo*
Author: **Dustin J. Sleesman**, *U. of Delaware*
Author: **Michalina Woznowski**, *Smith School of Business, Queen's U.*

The ecology of teams has changed in fundamental ways. Teams have to continually adapt their internal structure, processes, and activities in an increasingly dynamic environment. We develop a Theory of Free Energy in Teams to identify the ingredients of a team's capacity to initiate change, adapting Gibb's Free Energy from the natural sciences to team research. We introduce team social capital, team interdependence, and team emotional activation as the equivalents of enthalpy, entropy, and temperature in Gibb's Free Energy and as the main drivers of free energy in teams. We propose that team social capital and team interdependence increase free energy, and team emotional activation enhances the effect of team interdependence on free energy in teams. We conceptualize free energy in teams as a common ingredient of transformation in teams and as a driver of team adaptation, team creativity, team proactive performance, team resilience, and reduced flux in coordination in teams. We exemplify the value of our Theory of Free Energy in Teams by discussing practical examples with different constellations of team social capital, team interdependence, and team emotional activation.

OB: **Heavy Is the Head Who Wears the Crown? The Dualistic Impacts of Brokerage on Relational Energy**

Author: **YIN WU**, *School of Economics & Management, Tongji U.*
Author: **Feng Wei**, *Tongji U.*

Human energy is of great importance to organizations and it can be generated from interpersonal interactions, namely relational energy. Prior research has focused on the influence of one-on-one interactions on employees' relational energy, yet we know little about the impact of employees' interpersonal interactions with all team members. Employing a social network perspective, the present study explores whether, why, and how occupying a brokerage position influences employees' relational energy. Results from a questionnaire study suggest that, while being brokers does directly elevate employees' relational energy, the higher informal leader status after becoming brokers will lower down their relational energy, and the situation turns worse when employees have higher leadership aspiration. Implications for theory and practice are discussed.

To Share or to Hide? New Perspectives on Knowledge Sharing in Organizations

Session Moderator: **Jessica Good**, *York U.*

OB: **Self-Interested Knowledge Sharing Behavior: An Examination of Relational Impacts**

Author: **Jessica Good**, *York U.*
Author: **You-Ta Chuang**, *York U.*
Author: **Mark Podolsky**, *York U.*
Author: **Michael Halinski**, *Ted Rogers School of Management*
Author: **Janet Boekhorst**, *U. of Waterloo*

Encouraging knowledge sharing is crucial for organizational to gain a competitive advantage; however, employees often employees are reluctant to share knowledge and engage in different knowledge dissemination strategies. It is essential for us to understand the different ways in which employees share knowledge (i.e., self-interested knowledge sharing behavior). Drawing from the broaden-and-build theory, we examine the indirect effect of work engagement on two self-interested knowledge-sharing behaviors (i.e., knowledge hiding and manipulation) via team member exchange. In a time-separated field study (n= 117), our analysis reveals that work engagement is positively related to team member exchange. Also, team member exchange was negatively associated with both self-interested knowledge sharing behaviors (i.e., knowledge hiding and knowledge manipulation). Finally, our analysis found that team member exchange fully mediates the relationship between work engagement and (a) knowledge hiding and (b) knowledge manipulating.

OB: **Do Perpetrators of Knowledge Hiding Engage in Knowledge Sharing? A Moral Cleansing Perspective**

Author: **Abdul Karim Khan**, *United Arab Emirates U.*
Author: **Maria Khalid**, *Foundation U. Islamabad*
Author: **Samina Qurat-ul-ain**,
Author: **Ghulam Ali Arain**,
Author: **Samantha Jordan**, *U. of North Texas*
Author: **Wayne Hochwarter**, *Florida State U.*
Author: **Sundas Nisar**, *Bahria U. Karachi*

Drawing upon moral cleansing theory, we examined how and when supervisors' evasive knowledge hiding towards followers can result in consequent knowledge sharing as a reparative action. In an experimental vignette study and a field study (N=200 and N=234, respectively) of employees working in diverse organizations located in the United Arab Emirates (UAE), we examined the mediating influence of loss of moral credits and moral emotions (guilt and sympathy) between knowledge hiding and knowledge sharing by supervisors. Moreover, the study also investigated the moderating role of supervisors' moral identity in this process. In study 1(experimental vignette), we tested the association between supervisors' knowledge hiding behaviors and cognitive (loss of moral credits) and emotional outcomes (guilt and sympathy). However, we tested the complete theoretical model in study 2 (field study). As predicted, the results of both studies highlighted that evasive knowledge hiding by supervisors is positively associated with loss of moral credits and guilt. However, we found no relationship between evasive knowledge hiding and sympathy in either of the studies. Moreover, loss of moral credits mediated the relationship between evasive knowledge hiding by supervisors and knowledge sharing, but the mediating role of moral emotions was not found. Furthermore, the moderating role of moral identity on the relationship between evasive knowledge hiding by supervisors and loss of moral credits was supported. Against expectations, moral identity did not moderate the relationship between evasive knowledge hiding and moral emotions (i.e., guilt and sympathy).

OB: **Small Talk, Should We Avoid? Linking it to Tacit Knowledge Sharing**

Author: **Yunyun Yuan**, *School of Management and Economics, Beijing Institute of Technology*
Author: **Pingqing Liu**, *Beijing Institute of Technology*
Author: **Bin Liu**, *Fuyang Normal U.*
Author: **Lifeng Yang**, *Fuyang Normal U.*

Small talk, whose positive role beyond greeting and casual chatting is often overlooked, has unique value in micro-interactions and communication within organizations. We extend this line of research by enriching the connotations of small talk and analyzing the relationship between small talk and tacit knowledge sharing. Drawing on Interaction Ritual Theory, we explore the role of psychological distance and openness to experience among small talk and tacit knowledge sharing from the perspective of the subtle dyadic scenarios created by interactions. The experience sampling methodology was used to collect data through multiple repetitive measurements over a certain period to verify the relationship among variables. 50 qualified volunteers complete daily surveys for10 consecutive workdays. Results verify the positive relationship between small talk and tacit knowledge sharing, the mediating effect of psychological distance and the moderating role of openness personality, that is, individuals high on openness to experience are more likely to engage in small talk and shorten the psychological distance with others, which is more conducive to tacit knowledge sharing. Our research perspective provides new, interesting, and dynamic insights into understanding tacit knowledge sharing research.

OB: **The Effects of Peer Relative Performance on Knowledge Hiding: A Contingency Model**

Author: **Cong Zhang**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Shuqi Du**, -

Increasing evidence indicates that performance disparity in organizations elicits mixed interpersonal effects among peers. However, less research attention has been paid to contingencies such as individual characteristics. This paper investigates a covert form of victimization of high-performing peers—knowledge hiding. Integrating social comparison theory (Buunk, & Gibbons, 2007; Festinger, 1954) and social exchange theory (Blau, 1964; Cropanzano & Mitchell, 2005), we proposed a dual-path model to explain the effects of peer relative performance on knowledge hiding while examining two personal traits of the focal individual—social comparison orientation and cooperative orientation. A cross-lagged survey among 141 undergraduate students in China was conducted to test our theoretical model. Results of path analysis showed that an individual tended to perceive a high-performing peer as a threat and as a cooperator simultaneously, which were positively and negatively related to knowledge hiding, respectively. The individual's social comparison orientation strengthened the positive mediating effect of perceived threat from the peer, but cooperative orientation did not strengthen the negative mediating effect of cooperative intention with the peer.

Participant: **Aditya Gunawan**, *U. of Washington, Seattle*

This symposium presents a collection of four research projects that together represent a collective effort to address several issues related to transformational leadership theory. First, in response to measurement and operationalization issues, we explore new and unique approaches to assess and measure the transformational leadership construct. Second, we examine the processes that unfold as leaders and followers are more than ever being asked to work together in the virtual work environment. Finally, we provide a systematic investigation of the state of transformational leadership scholarship through a comprehensive meta-analysis of the meta-analytic transformational leadership literature. The authorship team involved in this symposium provides a well-rounded combination of highly established as well as up-and-coming transformational leadership scholars. Together, these projects introduce new measurements, analytical approaches, theorizations, and contextualization of transformational leadership. Methodologically, the included studies focus on approaches that are both diverse and complimentary. Our discussant, Dr. Sean T. Hannah, will offer closing remarks as we aim to shape future research directions for transformational leadership scholarship.

A Latent Profile Approach to Examining Transformational Leadership

Hierarchy and Teams

Organizer: **Huisi Li**, *Georgia Institute of Technology*
Organizer: **Elijah Wee**, *U. of Washington*
Organizer: **Yufei Zhong**, *Georgia Institute of Technology*
Organizer: **Kendall Yamamoto**, *U. of Texas at Austin*

Understanding hierarchy in teams can provide valuable information about social structures in collectives and societies. However, previous research on hierarchy has primarily focused on its effect at the individual level (see Magee & Galinky, 2008 and Li, Chen, & Blader, 2016 for reviews). This symposium aims to contribute to the growing and important literature on status dynamics in team settings. With two papers that focus on the drivers of team hierarchy changes, one paper that investigates the influences of team status inconsistency, and one paper that examines status negotiation, we help generate new perspectives and important questions regarding team hierarchy and its changes. We hope that it will facilitate sophisticated theorizing and rigorous empirical research in this line of research.

Status Differentiation Influences How Negative Feedback Impacts High-Status Member Addition

Participant: **Valerio Incerti**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

Knowledge workers are asked to work concurrently on several teams, but very few studies have tried to operationalize Multiple Team Memberships (MTM) using a variety of metrics, above and beyond the number of teams. However, broader conceptualizations of MTM (for instance, different forms of context variety) could help appreciate some unique benefits and challenges for multi-teamers. Relatedly, we still need to more broadly understand how people interpret and give meaning to their different experiences in MTM contexts. This symposium addresses these pressing issues by presenting four papers looking at the interplay between various conceptualizations of MTM (e.g., number of teams, variety of perceived team inclusion, variety of perceived team prestige) and several underexplored individual outcomes such as creativity, emotions, thriving at work, and the likelihood to enter multiple boards. Importantly, the papers use multiple methods and multiple sources of data such as qualitative data based on interviews, quantitative data based on surveys, and longitudinal panel data. They also focus on the experiences of people when engaged in scenarios of MTM within the boundaries of single firms as well as when they work across multiple firms.

How Do Knowledge Workers Cultivate Opportunities from their MTMs for Creative Contributions?

Participant: **Rebecca Carey**, *Princeton U.*

Organizations around the world have rapidly increased the resources they are devoting to improving diversity, equity, and inclusion (DEI) over the past several years. However, these initiatives have fallen short. Women and people of color remain underrepresented in high-status jobs and often do not feel included in the workplace. Across five presentations, this symposium brings together papers that focus on two components of DEI: 1) decisions in the hiring process that could increase racial and gender diversity of organizations, and 2) decisions in organizational structures that can impact equity and inclusion in organizations. This symposium features papers that utilize a wide range of methods – ethnographic work, incentivized behavioral experiments, field experiments, archival data analysis, and more – to provide insights in this key area. Following the presentations, Dr. Laura Kray, a scholar with innovative and impactful work on the social psychological barriers that influence inequality in organizations, will facilitate a discussion about the papers and future research on advancing diversity, equity, and inclusion in organizations.

Panelist: **Ines Black**, -
Presenter: **Sharique Hasan**, *Fuqua School of Business, Duke U.*

Taking a network perspective to study teams has been popular and fruitful in the past decades. Yet, the changing nature of how work teams are organized and managed in the new era brings unprecedented challenges to this line of work. For example, nowadays, many teams have fuzzy boundaries. And social exchanges and collaborations between groups are far more frequent and intensive than they traditionally were. Teams are also becoming increasingly diverse due to the globalization trend and the recognition of the value of diversity. These changing features of teams are likely to influence or interact with intra- and inter-team networks and exert a collective, integrated impact on individual members' and teams' cognitions, behaviors, and outcomes, which have not been thoroughly understood and examined. Our symposium highlights the recent efforts to investigate new emergent features of teams and explore how they interact with networks within and between teams. Two papers directly tap into the members' social relations within and between teams, the diversity of these social relations, and associated team performance outcomes. Another two papers look at dynamic entrepreneurial teams, where each team constitutes the entire organization. Each explores a different element of diversity as a function of how networks are strategically used in these budding firms. The fifth paper switches the gear to focus on individuals' intrapersonal diversity and network structural features and provides insights into how their linkage may shape team dynamics.

Gratitude is a positive emotion with numerous benefits for individuals that experience and express gratitude. However, gratitude is not as prevalent and widespread in organizations as one might assume given its myriad benefits.The five papers in this symposium focus their attention on how gratitude impacts the core organizational stakeholders – the workers. By putting the worker front and center, these papers explore how gratitude impacts worker's feelings of belongingness and envy, worker's home life, and the spreading and culture of gratitude within worker's organizations. Through a diverse group of studies implementing a wide variety of study designs, we offer a novel, in depth look at the impact of gratitude expressions on individuals, relationships, and cultures.

Participant: **Jing Zhou**, *Rice U.*

The purpose of this symposium is to bring together emerging empirical research and theorizing about how other individuals, both inside and outside of the workplace, can impact one's work creativity. We present five papers that investigate different processes and aspects through which social interactions can impact creativity: dynamic feedback cycles with different sources, different role models and their differential effects on both idea generation and creativity evaluations; temporary intense interactions or one-time exchanges with different strong and weak ties and their potential energizing effects for creativity; how creatives may leverage their networks by intentionally managing them for creativity and how prior success may be a better predictor for choosing champions for idea implementation. Collectively, the papers provide a deeper look at prospects and pitfalls for individual workers taking more control of their creative destiny at work.

Grappling with Growth: How Workers Grow Within Organizations and Experience Organizational Growth

Organizer: **Manjari Ganti**, *U. of Michigan, Ross School of Business*
Organizer: **Hilary Hoyt Hendricks**, *U. of Michigan*
Discussant: **Jane E. Dutton**, *U. of Michigan*

Both individuals and organizations often strive for growth. For individuals, growth may involve developing skills and abilities or creating a more positive personal image. Organizations, particularly startups, may grow in number of members -- from a small, close-knit group to a larger more diverse entity, and may also grow in the amount of monetary investments, the number or type of divisions, or the number or type of products or services produced. Whatever the form of growth, it likely impacts the experiences of individual employees. However, the relationship between personal growth and organizational growth is rarely examined. The sessions of this symposium will explore this question using a variety of methodologies and exploring a variety of organizational contexts. Together, the papers in this session will shed light on the complex interplay between personal and organizational growth.

Scalability and Heterogeneity: Targeting Interventions to Maximize Social Impact

Session Chair: **Ilana Brody**, *UCLA Anderson School of Management*
Presenter: **Dilip Soman**, *U. of Toronto, Rotman School of Management*
Presenter: **Ilana Brody**, *UCLA Anderson School of Management*
Presenter: **Ashley Whillans**, *Harvard Business School*
Presenter: **Todd Rogers**, *Harvard U.*
Discussant: **Christopher Bryan**, *McCombs School of Business, U. of Texas at Austin*

Social scientists have begun to recognize that planning for individuals' heterogeneous needs is essential to successful behavior change efforts. However, there is still limited evidence about exactly where the challenges in scaling interventions arise and how to plan for and address these challenges. One notable pitfall in previous attempts is a one-size-fits-all intervention approach. This approach does not account for context-related and individual-level heterogeneity, and in management settings, fails to centralize the worker in designing behavior change interventions. This session contributes to the critical conversation of leveraging research insights for broad societal impact by assessing challenges and opportunities in scaling behavioral interventions broadly. We contribute a specific focus on heterogeneity based on individuals' motivations to engage in the activity, putting the user – in many cases, the worker – front and center.

Challenges to Translating and Scaling Behavioural Interventions

Employee Voice: Past, Present, and Future of Research

Moderator: **Ryan Smerek**, *Northwestern U.*
Panelist: **Elizabeth Wolfe Morrison**, *New York U.*
Panelist: **Ethan Burris**, *U. of Texas at Austin*
Panelist: **Melissa Chamberlin**, *Iowa State U.*
Panelist: **Chak Fu Lam**, *City U. of Hong Kong*

The proposed panel symposium will explore new directions in employee voice, seeking to take stock of where we've been and where research is headed. As noted by recent reviews, interest and research on employee voice has increase substantially over the past decade (Morrison, 2023), with reviews offering frameworks to summarize the field (e.g. Bashshur, & Oc, 2015; Morrison, 2011) and meta-analyses determining key associations and distinctions (Chamberlin, Newton, & LePine, 2017). This symposium will take stock of key distinctions and research findings over the past 15 years and help the audience understand current streams of research.

Interorganizational Collaborations Driving Organizational and Social Change

Session Moderator: **Anna Af Hällström**, *Chalmers U. of Technology*

ODC: **From Hero to Farmer: The Changing Leadership Profile of Collaborative Megaprojects**

Author: **Anna Af Hällström**, *Chalmers U. of Technology*

Megaprojects have recently increased in both size and number. These complex and unique organizations transform societies by coordinating inter-organizational relationships and aligning organizational goals to achieve feats unattainable by single actors. The increased attention paid to megaprojects highlight a need for further studies into their delivery. Drawing on data from a single case study, I show how the view of leadership changes as the institutional context changes. I contribute to literature by giving empirical evidence of the perceived leadership change needs through a case study of a British megaproject through an institutional perspective. My findings show that leadership requirements in megaprojects change when utilizing collaborative project delivery models, emphasizing trust and communication, as well as capabilities to manage uncertainty and teamwork. I contribute to the growing body of research into megaproject management and delivery, by providing deep insights into the leadership structure on multiple levels, including individual, project-based and field-focused.

ODC: **Reconfiguring Resource Complementarity in Interorganizational Collaboration for Societal Challenges**

Author: **Lena Elisabeth Bygballe**, *BI Norwegian Business School*
Author: **Bente Flygansvaer**, *BI Norwegian Business School*
Author: **Debbie Harrison**, *BI Norwegian Business School*

Interorganizational collaboration is critical to cope with complex societal challenges since it enables actors to combine complementary resources. Yet, how such interorganizational resourcing is realized remains unclear. We draw on a longitudinal case study of an interorganizational collaboration where the parties designed a new solution for circular handling of construction waste. The case demonstrates the tensions occurring when the realization of this prospective resourcing faced reality in term of the network of other organizations, and their resourcing efforts, and existing resource configurations. We identify three interorganizational resourcing sub-processes underpinning the parties' efforts to realize resource complementarity: conceptualizing complementary resources into a new resource configuration, confronting existing resource configurations, and compromising between resource configurations. Compared to the firm-centric perspective in previous research on interorganizational resourcing, these resourcing processes are rooted in an interactive-centric view. We discuss the implications for the literatures on resource complementarity and interorganizational collaboration for societal challenges.

This paper presents a case study of a persistent innovator that repeatedly employs the spinout strategy to realize multiple benefits for itself, its competitors, and the industry. We draw on the dynamic capabilities framework and introduce the concept of 'innovation-by-proxy' to explain the indirect way in which the parent firm innovates. Through the spinout approach, the parent firm not only advances innovation but gains access to competitors' resources for financing and sustained enhancements while avoiding the potential drawbacks of strategies involving direct industry collaboration among competitors (e.g. coopetition, alliances, or other forms of partnership). Our analysis reveals how employees in the parent firm can sense opportunities in developing technological inputs, allowing them to be seized in an R&D unit and then separated from the company to be sold to the global competition. In doing so, the spinouts can then service the parent firm's competitors, shifting the innovation sensing to the largest and most competitive firms in the industry globally, and sending both financing and new innovations back to their parent. Persistence in this innovation trajectory also creates a network of spinout firms servicing the parent and the industry that cooperate on product development and client acquisition. This paper contributes to the spinout and innovation literature by providing evidence and theoretical insights into how, when, and why a spinout strategy can be successfully used to finance and scale innovations.

ODC: **Deal Shapers: The Roles of Sell-side M&A Advisors in the Pre-acquisition Phase**

Author: **David Santana**, *U. Toulouse 1 capitol- TSM*
Author: **Nicola Mirc**, *Toulouse School of Management*

The role of M&A advisors in the pre-acquisition phase of Mergers & Acquisitions (M&A) is largely acknowledged as significantly shaping managerial decision-making and performance outcomes. Yet, it surprisingly remains a fairly under-examined topic in M&A research. This inductive study aims at shedding light on the role and influence of these third-party actors. This shows that M&A advisors fulfill various roles, going beyond classic value assessment tasks and including client expectation and emotion management. Additionally, advisors have a strong relational function by managing impressions and actively networking with stakeholders and key decision-makers involved in M&A. Our findings reveal the highly influential roles advisors have in shaping the pre-acquisition process and its outcome, through the trade-offs they make in deal valuation as well as the orchestration of stakeholders and their deal perceptions in pre-deal decision-making. This paper importantly contributes to M&A research by providing a fine-grained actor-based perspective on advisors' roles in M&A processes, highlighting the way they shape M&A processes and the laying ground for many avenues that future research must cover.

Communication, Language, and Laughter in Organizations and Management

Session Moderator: **Sonia Aissaoui**, *Normandie U., NIMEC*

OMT: **Close But Yet So Far: The Role of Virtual Communication in the Relation of Proximity and Trust in CSA**

Author: **Sonia Aissaoui**, *Normandie U., NIMEC*
Author: **Pascale Bueno Merino**, *Léonard de Vinci Pôle U., Research Center*
Author: **Samuel Grandval**, *Normandie U., NIMEC*

Our research explores the role of virtual communication in the construction of proximity and trust in CSA (Community Supported Agriculture). Although CSAs have been widely assimilated with a relationship of trust built on knowing each other and facilitated by proximity and face-to-face interactions, our research shows, on the contrary, that the interactions between consumers and agricultural entrepreneur are not as systematic as one might expect. CSAs are attracting more and more consumers with hedonistic motivations and whose relational exchanges with the agricultural entrepreneur remain secondary, or even sometimes non-existent. Furthermore, our ambition is to examine this proximity/distance paradox by studying the role of virtual communication between CSA partners and to understand how trust manages to emerge in case of limited face-to-face interactions. Based on 55 semi-structured interviews carried out with CSA partners (CSA presidents, agricultural entrepreneurs, consumers), six non-participating observations, and a double content analysis (thematic and lexical), our research shows the role of proximity in the emergence of trust in CSA and highlight the influence of virtual communication in the strengthening of relational, identity and process proximity. Our research aims at contributing to a better understanding of the modes of coordination in CSA.

OMT: **Defining the Public Interest: The Use of Emotional Language in Institutional Work**

Author: **Juan Francisco Chávez R.**, *Smith School of Business, Queen's U.*
Author: **Matthew Murphy**, *U. of Victoria*
Author: **Belaid Moa**, *U. of Victoria*

This article investigates the role of emotional language in institutional work under conditions of institutional complexity. While prior research, mostly qualitative, has demonstrated that the use of emotional language plays a critical role in the creation and maintenance of institutions, the specifics about when, how, and with what effect, remain underexplored. Using a large dataset of textual da-ta, comprising the verbatim transcripts of more than 3,000 actors, we conducted three quantitative studies – using topic modeling, dictionary-based content analysis, and other statistical analyses –, that confirm and provide nuance to the current theory. First, by comparing the actors' use of emo-tional language in mobilizing economic, environmental, or social concerns, we found no significant distinctions among these three concern categories. This challenges the idea that certain concerns have an emotional register that determines the use of emotional language. Second, while actors use more emotional language when the complexity of the institutional context intensifies, this relation-ship is stronger among actors engaged in disruptive institutional work. Third, we demonstrate that while the use of emotional language appears to enhance the effectiveness of disruptive institutional work, this effect is limited to specific concerns, such as those related to environmental issues and not social or economic issues.

OMT: **Executive Voiced Laughter and Social Approval: An Explorative Machine Learning Study**

Author: **Niklas Mueller**, *U. of Passau*
Author: **Steffen Klug**, *U. of Passau*
Author: **Alexander Kathan**, *U. of Augsburg*
Author: **Lukas Christ**, *U. of Augsburg*
Author: **Björn Schuller**, *U. of Augsburg*
Author: **Shahin Amiriparian**, *U. of Augsburg*

We study voiced laughter in executive communication and its effect on social approval. Integrating research on laughter, affect-as-information, and infomediaries' social evaluations of firms, we hypothesize that voiced laughter in executive communication positively affects social approval, defined as audience perceptions of affinity towards the organizations. We also surmise that the effect of laughter is especially strong for joint laughter—i.e., the number of instances in a given communication venue where the focal executive and the audience laugh simultaneously. Finally, combining the notions of affect-as-information and negativity bias in human cognition, we hypothesize that the positive effect of laughter on social approval increases with bad organizational performance. We find partial support for our ideas when testing them on panel data from 902 press conferences from German Bundesliga soccer coaches and media tenor, applying state-of-the-art machine learning approaches for laughter detection. Our emerging findings contribute to research at the nexus of executive communication, strategic leadership, and social evaluations, especially by introducing laughter as a highly consequential potential, but understudied social lubricant at the executive-infomediary interface. Our research is also unique by focusing on highly reflexive microprocesses of social evaluations, rather than the infomediary-routines perspectives in infomediaries' evaluations. We also make methodological contributions.

OMT: **Language Use to Foster the Acceptance of Organizational Identity Change**

Author: **Vitaliano Barberio**, *USI (Lugano)*
Author: **Stefan Arora-Jonsson**, *Dept of Business Studies Uppsala U.*

While organizational identity change is a well-researched topic, little is known about the role of language in facilitating members' acceptance of – this often-dramatic process. Building on previous research, we develop a theory on how leaders justify identity change through vocabularies – i.e., a system of words and their meanings. We argue that these vocabularies imply four argumentative strategies to induce members' acceptance of identity change, these are moral/moralization, negations/disidentification, affiliation/positive rewards, and desire/cognitive legitimization. We build on the case of British political parties (1945-2018) to further develop our initial claim and hypothesize that when identity change is most sharp – i.e., parties incorporate claims that belong to the ideology of their opponents – the argumentative strategies, we propose, are to be observed above average in public narratives about what the party is all about. To test this proposition, we machine-code (SVM) the speeches the two main parties' leaders deliver at the annual party conference. Our coding, developed from the consolidated knowledgebase of the Manifesto Project, allows us to ascertain when leaders' claims incorporate the ideology of their opponents. Additionally, we measured leaders' use of argumentative vocabularies as the ratio of selected pre-validated (LIWC) lexicons in each claim. Our results validate our expectations. Beyond the relevance of the four vocabularies and corresponding argumentative strategies proposed in this paper, we contribute to the literature on organizational identity change by showing that particular historical and organizational circumstances determine the leaders' preference for some vocabularies over others.

Innovation, Commercialization, and Performance: The Context of Chinese Firms and Non-Profits

Session Moderator: **Christopher Marquis**, *Cambridge Judge Business School*

OMT: **Government Industrial Priorities and Firm innovation in China**

Author: **Christopher Marquis**, *Cambridge Judge Business School*
Author: **Qian Wang**, *Cornell SC Johnson College of Business*

Management scholars have been increasingly interested in how institutional factors such as government policy affect innovation in emerging markets. This paper contributes to this literature by examining the effect of government industrial priorities on firm innovation through an investigation of how the Chinese Central Government's Five-Year Plans affects innovation of Chinese public-listed companies. As would be expected, we find that firms within prioritized industries have higher innovation outputs (patents). However, we also examine how being in an industry prioritized by the government also comes with challenges, such as coordination costs and potential political intervention. As a result, the effect of being in a prioritized industry on innovation is weaker for private firms than state-owned enterprises (SOE) and also when the focal firm is in a more competitive industry. Moreover, we document how government power in resource allocation affect firms' response. The effect of industrial priorities can be strengthened in regulated industries where the government has stronger control, but attenuated in regions with high institutional development, where market power is more pronounced. We further examine spillover effects showing that firms in regions with higher concentration of prioritized industries have higher innovation outputs. For low concentration regions however, without this spillover effect, the effect of being in a prioritized industry is particularly strong.

OMT: **Two Sides of a Coin? Performance Impacts of Diversification and Multimarket Contact**

Author: **Stan X. Li**, *City U. of Hong Kong*
Author: **Xi Qu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Aurora Genin**, *Indiana U. - Kelley School of Business*

This study examines the diversification-performance (D-P) relationship in an industry. The diversification literature emphasizes intra-firm coordination on resource allocation, referred here as the internal configuration. Multimarket contact (MMC) research examines the performance effects of inter-firm coordination on competitive interactions, coined here as the external configuration. We cross-pollinate these streams to conceptualize the duality in diversification. We uncover the interactions between the internal and external configurations, which elucidate novel mechanisms by which diversification yields performance synergies. Specifically, diversification benefits can stem from external strategic synergies even when internal resource synergies are absent. We implement spatial econometrics to address two critical empirical issues in prior research—omitted variable bias and observation dependence. We glean evidence for our hypotheses in the Chinese general insurance industry in 2005 – 2015.

OMT: **A Tale of Two Moral Cultures? The Diffusion of Commercialization Among Non-Profits in China**

Author: **Haochi Zhang**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Edward J. Zajac**, *Northwestern U.*
Author: **Jianhua Ge**, *Renmin U. of China*
Author: **Di Zhu**, *Renmin U. of China*

What factors impel/impede the spread of morally controversial organizational forms/practices, such as when non-profit organizations embrace commercial activities? We develop and test a theoretical perspective that emphasizes the philosophical foundations and cultural-structural antecedents driving the (non)acceptance of a morally controversial organizational form/practice. More specifically, we contrast how and why a differential reliance on consequentialism (emphasizing instrumental benefits) versus deontology (emphasizing purity), in accordance with a set of specific environmental and organizational factors, predict the degree of acceptance of commercialization among non-profits. We provide both quantitative and qualitative evidence to assess the predictive power of our theoretical perspective, using the vivid context of the unsteady diffusion of commercialization among thousands of non-profits in post-Mao China. We conclude with a discussion of the implications of our theoretical perspective and supportive findings for future research on the diffusion of morally controversial forms and practices, as well as work on organizational hybridity.

OMT: **Legal Development and the Legal Advantage of Relational Embeddedness**

Author: **Hui Sun**, *Stockholm School of Economics*
Author: **Xiaohong Yu**, *Tsinghua U.*
Author: **Zhaoyang Sun**, *Tsinghua U.*
Author: **Yi Shu**, *Tsinghua U.*

The institution of contract law is paramount to economic development. Theories of new institutional economics suggest that extralegal influences on court adjudications are symptoms of less developed legal institutions. Theories of economic sociology argue that legal institutions are always deeply embedded in the social fabric of the environment, regardless of their independence from other branches of the government. Combining these two perspectives, we contend that with legal development, the locus of extralegal influences on court outcomes shifts from politically embedded litigants to relationally embedded attorneys. Leveraging over 110,000 first-instance court decisions on contract disputes among private corporate litigants in China between 2014 and 2019, we found that in comparison to corporate litigants in less legally developed regions, those in more legally developed regions benefit more from legal representation. Using the introduction of circuit court as an exogenous policy shock, we found causal evidence that the relational embeddedness effect is better explained by local knowledge coordination on legal interpretations. And it cannot be explained by either collusions or corruption between lawyers and judges, or changes in courts' dispute resolution preferences after the policy shock. The findings support our propositions that legal development pushes the transition from bureaucratic courts to professional courts and fosters the formation of judicial field as an alternative social structure for informal connections.

The Effects of Misconduct, Wrongdoings, and Scandals

Session Moderator: **Brigitte Wecker**, *Konstanz U. of Applied Sciences*

OMT: **Misbehave like Nobody's Watching? Investor Attention to Corporate Misconduct and its Implications**

Author: **Brigitte Wecker**, *Konstanz U. of Applied Sciences*
Author: **Matthias F. Brauer**, *U. of Mannheim*

One astonishing finding in the literature on corporate misconduct is that investors do not always respond clearly negatively to corporate misconduct. To date, it is unclear if this is because news about corporate misconduct drown in the multitude of stimuli competing for investors' attention such that they fail to be noticed or because investors notice the news but do not act upon them. To inform this line of research, we are first to study whether investors allocate attention to alleged corporate misconduct and whether investor attention has implications for investor response to a focal allegation. Building on expectancy violations theory as well as behavioral and cognitive arguments, we hypothesize that investors allocate attention to a focal allegation and that increasing investor attention is associated with more negative investor response. Further, we hypothesize that central characteristics of the alleged firm condition the above effects. By analyzing 9,773,333 Google search volume observations as well as up to 17,426 focal allegations, we find empirical support for our theoretical predictions. Thereby, our study complements in particular corporate misconduct research on the factors inhibiting more negative investor response. For the first time, it is able to demonstrate that investors do not typically fail to notice allegations such that the lack of clearly negative investor response is likely to have other causes.

OMT: **Unscrupulous Unicorns: Perceptions of Founders and Their Effects on Evaluations of Wrongdoing**

Author: **Jinah Ryu**, *U. of Illinois at Urbana-Champaign*
Author: **Josh Henry Katz**, *Department of Business Administration. U. Carlos III de Madrid*

What makes the leaders' questionable behaviors be perceived as wrongdoing and when are they ignored by subordinates in entrepreneurial ventures? Recent incidents in take-off ventures, such as Theranos, WeWork, FTX, and Nikola, show that some entrepreneurs can commit infractions big and small before their ventures stabilize. Existing research explains that questionable behaviors at the top are often rationalized by formal and informal systems (e.g., hierarchy and culture) in large companies, but few examine the context of entrepreneurial ventures where such situational influence is lacking. Our study argues that constructed perceptions of leaders (or founders) play a role in shaping employees' rationalization of leaders' potentially wrongful behaviors. Specifically, our qualitative analysis shows that the behavioral cues that a leader usually violates norms provide a rationale that the leader is a type of person who is not to be judged by social norms and ethics. Building on the findings, we conceptualize the disruptor prototype of entrepreneurial leaders and develop hypotheses explaining how this prototype works in a way reducing negative evaluations of the leader's ambiguous wrongdoings. We test and find evidence for these hypotheses from a set of experiments. Our findings contribute to existing theory by revealing that the perceptions of leaders emerge as a significant institutional force and facilitate the sensemaking process within entrepreneurial ventures.

OMT: **Do Cheaters Every Prosper? Illicit Competitive Intelligence and Organizational Performance**

Author: **Joshua Austin Downs**, *Western Carolina U.*
Author: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*

This paper examines the effects of private information misappropriated through illicit competitive intelligence on organizational performance. We employed data from the unique case of the Houston Astros cheating scandal in Major League Baseball to shed light on this otherwise difficult-to-observe phenomenon. Contrary to our initial proposition, we found no evidence that the Houston Astros derived performance advantages from the illicit competitive intelligence that the team collected and used. We then examined conditions under which this practice may have disproportionately helped the Astros' performance, and again found no supporting evidence. We conclude with potential explanations for why the Astros may not have derived performance advantages from its illicit competitive intelligence practice and discuss implications for organizations broadly and for future research concerning illicit competitive intelligence.

OMT: **The Career Spillover Effects of Scandal: Evidence from the United States Congress**

Author: **Derrick Choe**, *NYU Stern School of Business*
Author: **Scott Cohn Ganz**, *Georgetown MSB*

Scandals can lead to severe career penalties for those associated with these negative events. Existing research on the career consequences of scandals has focused on organizational leaders' career outcomes and has focused primarily on financial performance-related scandals. Furthermore, most analyses of external labor markets face challenges in isolating labor supply versus demand effects. In this paper, we examine the career consequences of political scandals for U.S. Congressional staffers from 2001-2021. Comparing scandalized offices to non-scandalized ones around the point of office closure, we highlight that professional scandals—which we define as scandals directly related to an office's core functioning—hurt staffers' chances of re-employment in external labor markets in Congress. In contrast, personal scandals unrelated to core work activities do not harm staffers' re-employment opportunities. We find that both professional and personal scandals harm employees' future compensation. Furthermore, we find that high-ranked and low-ranked staffers are equally penalized following scandals, suggesting that those high in leadership positions are not the only ones punished for organizational misconduct. This study demonstrates that while employees along the organizational hierarchy are similarly affected by scandals, the type of misconduct revealed influences the exact penalties employees suffer in external labor markets.

OMT: **Status Reset: How Scandals Affect the Evaluative Advantages of Status**

Author: **Marco Clemente**, *ZHAW School of Management and Law*
Author: **Ke Michael Mai**, *National U. of Singapore*
Author: **Joseph Porac**, *New York U.*

Status effects are pervasive across organizational and market settings. In this paper, we examine whether the tendency of high-status actors to be evaluated more positively irrespective of performance—a phenomenon often referred to as the "Matthew effect"—is robust to the occurrence of negative events that affect the field. We argue that because the benefits of status manifest in the evaluation of performance under uncertainty, and because negative events are known to induce discontinuities in evaluation, exposing actors within the field to stricter scrutiny, Matthew-type effects accruing to high-status actors should be diminished or erased in the aftermath of such events. Negative events, such as scandals, in fact, engender a generalized loss of trust within the field; because trust primarily accrues to high-status actors, however, these actors no longer being given the benefit of the doubt results in the evaluative advantages of status (in terms of deference and taken-for-grantedness) being lost. Using unique observational data on media coverage of football referees in Italy before and after the 2006 scandal known as Calciopoli and two experiments, we find broad support for our predictions.

New Directions in Institutional Studies of Organizations and Environments

Session Moderator: **Eun Young Song**, *Australian National U.*

OMT: **Unlevel Playing Fields: Gender and its Role in the Early Stages of Institutional Fields**

Author: **Eun Young Song**, *Australian National U.*
Author: **C. R. Hinings**, *U. of Alberta*

Institutional studies on fields have been neglectful of gender. To extend the boundaries of current understanding of institutional fields, we develop a theory by drawing insights from doing gender and gender-status beliefs theories and by considering fields as relational spaces within which diverse actors interact with one another on particular issues. We argue that gender plays a key role in the emerging fields in three ways; (1) issues themselves are often gender-marked, (2) issue-leading roles such as organizers of field configuring events are gendered, and (3) gender composition of field participants influences the development of new fields into the next stages. In considering the gendered nature of issues, issue-leading roles, and gender makeup of field participants, we introduce a new model of the early stage of fields to explain gendered dynamics that structure interactions and shape the development of new fields. With our model, we advance the existing literature on early stages of institutional fields.

OMT: **Collective Identity Under Pressure**

Author: **Sergej Ljubownikow**, *U. of Sheffield*
Author: **Christian Fröhlich**, *National Research U. Higher School of Economics*
Author: **Yulia Skokova**, *National Research U. Higher School of Economics*

Identity plays a vital part in, for example, determining membership or actor behaviour. However, despite research looking at identity at the individual, group, and organizational level, identity or collective identity at the meso-level, such as strategic action fields (Fligstein & McAdam, 2011), has received less attention so far. Specifically, the role macro-institutional influences have on shaping collective identity has remained under-examined. In this paper, we set out to explore potential macro-institutional impacts on the collective identity of strategic action fields. Drawing on qualitative data from a variety of organizations within civil society in the Russian Federation, we highlight how under macro-institutional pressure, multi-layered collective identities emerge bound together by overarching common values and norms at the meso-level. This allows actors to reconcile and mediate the pressures they experience from the institutional environment and, at the same time, align with collective identity at the strategic action field level. Hence, we contribute to collective identity literature by demonstrating the role of the macro-institutional environment in the collective identity of an organizational field.

OMT: **Institutional Translation Ad Infinitum: Localising HIV/AIDS Relief in Lesotho**

Author: **Habofanoe Jeremiah Polaki**, *IESEG School of Management (LEM-CNRS 9221)*
Author: **Wim Van Lent**, *IESEG School of Management (LEM-CNRS 9221)*

Although existing theory conceptualizes institutional translation as a distributed process involving various actors, scholars mainly focus on the contestation or novelty of an idea or practice, the disparity between origin and receiving context, and the adaptive work of actors. Whilst many ideas and practices are contested and subsequently manipulated to fit a receiving context, the focus on idea or practice adjustment obfuscates the dynamic and complex interactions between actors and contextual factors in the process of institutional translation. We seek to understand how the roles and agency of translating actors evolve within an institutional infrastructure and throughout the translation process when the translated ideas and practices are not contested in principle. To do so, we conducted a case study of the localization of foreign aid amongst local and Indigenous NGOs combating HIV/AIDS in Lesotho. Our study identifies and explains how institutional factors shape and complicate the transfer of practices and agency through a chain of translating actors. Overall, our findings advance knowledge by highlighting contextual factors, such as legacy funding mechanisms, administrative complexity and an established field hierarchy as key determinants of the institutional translation process.

Building Resistance, Resilience, and Safety in Challenging Times

Session Moderator: **Amrita Lahiri**, *Washington State U.*

OMT: **Unpacking the Effect of Political Affiliation on Organizational Resilience Following a Policy Shock**

Author: **Amrita Lahiri**, *Washington State U.*
Author: **Nanjundi Karthick Krishnan**, *U. of Michigan*
Author: **Alex Kier**, *Washington State U.*
Author: **Aditya Johri**, *George Mason U.*
Author: **Joyojeet Pal**, *U. of Michigan*

Resilience results from the interaction between an organization and its environment under conditions of adversity. While research has shown the positive association between resources and resilience, an understanding of how partisan contexts impacts this relationship is missing from the literature. In our study, through a combination of exploratory interviews and survey of entrepreneurs, we account for the socio-political context of adversity in influencing entrepreneurs' adaptation to a crisis by examining India's 2016 demonetization policy shock. We find that entrepreneurs' political affiliation not only shapes how they interpret their environment, but also influences the extent to which they leverage available financial and human capital resources towards business resilience. Our study sheds light on the mechanisms behind entrepreneurial actions in the aftermath of a policy shock and how they ultimately shape organizational resilience.

OMT: **Love Thy Neighbor: The Impact of Social Cohesion on Community Economic Resilience**

Author: **Stephanie Koornneef**, *Radboud U.*
Author: **Joris Knoben**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*
Author: **Tal Simons**, *Erasmus U. Rotterdam*
Author: **Patrick Vermeulen**, *Radboud U. Nijmegen*

An important yet understudied topic is the difference in communities' abilities to respond to disruptions. The Covid-19 virus caused disruptions worldwide as firms were forced to close overnight as a measure for stopping the virus from spreading, resulting among others in dramatically decreasing sales and revenues. However, considerable regional heterogeneity in the impact of organizations closing and other measures, above and beyond what would be expected based on industry composition, have been observed in many countries. Focusing on governmental financial support, and voluntary firm exits across 379 Dutch municipalities, we argue that social cohesion – conceptualized as involving kinship and residential stability – increases communities' economic resilience, defined as their ability to retain the status quo when faced with adversity. Kinship is the affective and emotional bond between community members, which creates the willingness to help other members, even if this means suffering (temporary) losses, whereas residential stability fosters a social infrastructure that is necessary for the quick mobilization of resources within socially cohesive communities. Our study reveals the importance of social cohesion to foster communities' economic resilience and demonstrates how social cohesion can explain differences in economic resilience specifically in the face of major disruptions.

OMT: **El Dorado's End: Indigenous Community Cultural Effects on Agreement Adoption**

Author: **Maggie Cascadden**, *U. of Alberta*
Author: **P Devereaux Jennings**, *Alberta School of Business*
Author: **Emily S. Block**, *U. of Alberta*
Author: **Francois Bastien**, *U. of Victoria*

Indigenous communities around the world are engaging in resurgence. As they do so, the dynamic of engaging and resisting nonlocal corporations has changed. It is unclear under what conditions these communities use their increased autonomy to disrupt the surrounding institutional fields by re-negotiating more favourable terms of partnerships or rejecting these partnerships all tougher. It is therefore important to better understand the factors underpinning these dynamics and how they are connected to field fragmentation. As part of doing so, we argue that it is pertinent to better understand Indigenous worldviews and how they effect their engagement with firms over time. We theorize and demonstrate the impact of cultural identity and the use of traditional languages for cultural alignment and convergence to integrate Indigenous and Western perspectives, as well as the impact of recognized claims to meaningful places - on higher benefit agreement adoption in early periods of diffusion, but largely absent effects later. In contrast, early on, active voice – coalitions and protest – have undetected effects early on, but important impact later. The variation in community culture and its shifting effects increase cultural complexity and are associated with greater heterogeneity in partnership agreements later. Our paper contributes to research on Indigenous perspectives and nonlocal firm engagement, to theories of late adoption of organizational practice, and to work on Indigenous community development during El Dorado's end.

OMT: **"We Are Still Here": The Everyday Work Of Coping With Intergenerational Trauma**

Author: **Ketan Madan Goswami**, *Warwick Business School*
Author: **Katrin M. Smolka**, *Warwick Business School*
Author: **Ali E. Ahmed**, *Warwick Business School*
Author: **Deniz Ucbasaran**, *U. of Warwick*

Coping, defined as "thoughts and behaviours used to manage the internal and external demands of situations that are appraised as stressful", has been a research focus since Lazarus's 1966 book, Psychological Stress and the Coping Process. However, while a fair amount of coping literature both in psychology and management focuses on discrete adverse events (for example, bereavement, job loss, COVID, etc.), there is little research on how everyday actors cope with chronic conditions of adversity like intergenerational trauma. Our qualitative study studies the context of Indigenous entrepreneurs in the Canadian Prairies and endeavors to answer the question – How do everyday actors (specifically, everyday entrepreneurs) cope with intergenerational trauma? We find that Indigenous entrepreneurs in the Canadian Prairies experience everyday (chronic) emotional hurt by virtue of intergenerational trauma. This necessitates deployment of everyday coping strategies which would help mitigate this hurt. Notwithstanding instances of maladaptive coping (e.g., addictions and alcoholism), we find that Indigenous entrepreneurs predominantly leverage two broad categories of adaptive intra-personal coping mechanisms – subversive humor and restorative storytelling – that "undo" some of the negative effects of chronic emotional hurt. In addition to intra-personal coping strategies, we also find a set of inter-personal communal coping strategies which implicate family and community members (for example, cultural ceremonies and storytelling). As we analyzed these strategies, we came to realize that these coping strategies serve as micro-processes which underpin both emotion-work and institutional-work, i.e. not only help with emotional work but also help with routine disruption and (re)-creation of alternative institutions. Consequently our findings have implications for both coping literature as well as social symbolic work literature.

OMT: **Understanding the "COR" of Psychological Safety: Toward a Reconceptualization and Integrative Model**

Author: **Nico Roland Schaefer**, *U. of St. Gallen*

Scholars have utilized the construct of psychological safety to investigate a multitude of work-related phenomena. In this article, I review past research in an effort to highlight the lack of a comprehensive conceptual understanding of the construct. Building on the Conservation of Resources (COR) theory, I reconceptualize psychological safety as a belief about a resource-engaging ecology that enhances the ability of individuals to accumulate resources and hence shapes their resource investment decisions. For this, I advance a three-stage model that delineates the underlying motives and mechanisms for creating, maintaining, and strengthening a climate of team psychological safety. Further, I detail how psychological safety influences processes and outcomes in teams and outline the dynamic nature of the construct over time. I then discuss implications for future research and limitations.

Author: **Joel Adam Cobb**, *U. of Texas at Austin*

The employment relationship has fundamentally shifted over the last 40 years as firms have moved from an organizational- to market-based employment orientation, including a decline of internal labor markets (ILMs). Workers have borne the brunt of these shifts as work has become more precarious and wages less equitable. Specifically, while ILMs facilitate known and predictable career paths, workers today often combine moves within organizations in the internal labor market with moves between organizations in the external labor market. In contrast to the predictability – or orderliness – of internal labor markets, movement between organizations in external labor markets introduces a degree of uncertainty to workers. In this paper, we examine how different segments of the labor market navigate the external labor market by considering two segments of the labor market with historically divergent outcomes: low- and high-educated workers. We consider the way education shapes careers by considering workers' mobility between firms and how orderly those transitions are – or in other words, whether workers' mobility follows predictable and expected patterns. We also study how education shapes the rewards available to workers for more or less orderly moves. To answer these questions, we use the 1997 National Longitudinal Survey of Youth, which follows a representative sample of workers from high school through the first 20 years of their careers. We find that workers with higher education (that is, a bachelor's degree or higher) have more related – or orderly – mobility events. We also find that orderliness has an overall positive effect on wages, but that more educated employees reap greater rewards for orderly job transitions.

OMT: **Imagined Labor Markets, Open-Access, And Inclusion In Tech: Getting a Job Without A CS Degree**

Author: **Dilan Eren**, *Boston U.*

Alternative skilling resources—such as open-access coding initiatives—promise more democratized access to professional careers, previously closed via credentialism. Less clear is their capacity to alter labor market inequalities. Relying on interviews conducted with 74 aspiring developers and digital ethnographic observations, I investigate how job-seekers skilled through alternative resources without computer science credentials navigate the U.S. tech labor market. My analysis reveals two distinct job-seeking strategies. Skills-piling: Some, perceiving tech's open-access initiatives as prioritizing technical skills in hiring decisions, focused on proving their technical competency. Opportunity-grabbing: Others, perceiving the same initiatives as a chance to compete for jobs without credential barriers to entry, invested in making themselves visible to potential employers. These strategies were patterned along existing social inequalities and generated stratified pathways: Skills-pilers tended to be those who have been marginalized in the labor market before and, compared to opportunity-grabbers, they delayed their entry into the labor market and targeted a limited variety of jobs. This study reveals a new mechanism of social inequalities: individual job-seekers' contrasted perceptions of what a new labor market values unequally shape their labor market entry and thus, exacerbate social inequalities—even when skills-acquisition is open-access and credential barriers are removed.

OMT: **Can New Hires Benefit from Random High-status Assignments? Evidence from a Field Experiment**

Author: **Shihan Li**, *Heinz College - Carnegie Mellon U.*

In project-based organizations, there is a mystique around "hotshot" projects and how they affect one's career. While the status of a project is often treated primarily as a function of the status of its individual members, we argue that projects develop status in an organization based on the challenge and complexity of the problems they solve, and that this status is revealed in projects' eigenvector centrality in the project-by-project network. We leverage a natural field experiment in a Chinese high-tech company where 327 employees were randomly assigned to 38 projects during their first two years of employment. We find that employees who are assigned to higher-status projects enjoy better career outcomes (i.e., faster promotions, higher end-of-season bonuses, higher supervisor evaluations). Drawing on the status and uncertainty literature as well as on attribution theory, we further posit that an employee's hierarchical level moderates the career benefits associated with high-status assignments. We show that mid-level employees (as opposed to low- or high-level employees) will benefit most from being assigned to high-status projects.

Organizational Responses to Performance Shortfalls and Technological Change

Session Moderator: **Ambra Mazzelli**, *SKEMA Business School*

OMT: **The Problems That Bind: Problem Representations and Courses of Action in Problemistic Search**

Author: **Ambra Mazzelli**, *SKEMA Business School*
Author: **Ekin Ilseven**, *INSEAD*

Understanding how organizations respond to performance shortfalls and allocate attention and resources to searching for solutions—i.e., conduct problemistic search—has long been a central issue in the literature of the Carnegie School tradition. Notwithstanding the size of this literature, much of the extant research has tended to overlook the heterogeneity of the outcomes arising from the problemistic search process and, rather, treat it as a uniform activity. In response, we highlight how different problems may orient decision makers' attention toward particular solution trials and make some responses more likely. In doing so, we show that, when distance is considered in relation to decision makers' mental representations of the solution space elicited by a specific problem definition, the traditional distinction between local and distant solutions becomes blurred. Overall, this article advances our current understanding of the heterogeneity of organizational responses to negative performance feedback and advocates new research based on integrating problemistic search outcomes with the ways in which problems are represented. In doing so, it responds to recent calls for research that takes into account the role played by mental representations in problemistic search.

OMT: **The Interplay of Performance Feedback and Corporate Culture: Influences on the Technological Search**

Author: **Han Kyu Jin**, *Doctoral Researcher at Yonsei U.*

This study investigate how firms adjust the intensity and direction of technological search in response to performance shortfalls and how this relationship is moderated by corporate culture. Extending the literature on problemistic search, I suggest that firms enhance the intensity of technological search as their performance falls below the aspiration level and change their direction of search moves from explorative (involving search breadth) to exploitative (involving search depth) to obtain more reliable and predictable outcomes. Moreover, I theorize and test the moderating effect of two cultural attributes, flexibility and external focus, based on social control theory and the competing values framework. An analysis of a longitudinal data sample of the U.S. high-tech industry from 1999 to 2015 supports the arguments on the effects of performance shortfalls on the intensity and direction of technological search. Additionally, I find that flexibility significantly strengthens the effect of performance shortfalls on research and development intensity, search depth, and search breadth, whereas external focus weakens prior relationships, except for search breadth. I contribute to the management literature by investigating the relationship between performance feedback and a detailed direction of technological search and by theorizing and empirically testing the contingency effect of a corporate culture of a problemistic search based on longitudinal measurement of the corporate culture.

OMT: **Introducing New Technologies while Maintaining High Reliability: A Comparative Case Study** ✈ 💻

Author: **Carolin Auschra**, *Freie U. Berlin*
Author: **Joerg Sydow**, *Freie U. Berlin*

How do reliability-seeking organizations (RSOs) manage episodes of technological change? Previous literature argues that introducing new technologies is a challenge to organizations that strive for and have reached a certain level of reliability. With the help of practice theory and a special focus on resourcing practices, we conducted a qualitative case study on the introduction of two different technologies in German hospitals: a digital anesthesia documentation software and a robot-assisted knee arthroplasty. Our findings illustrate that, to introduce such innovative techniques, the organizations involved enacted specific practices, among them resourcing practices, in order to increase reliability during all steps of the introduction process: in the initial phase reliability-specific issues can be inscribed into the hard- and/or software; in the testing phase malfunctions of the technology can be detected and potential changes of an established routine be made; and in the implementation phase, additional temporary redundancy and learning practices help to secure reliability. Our study also reveals that, throughout all three phases, it is important to collaborate with the technology provider in order to acquire knowledge not only about the new technology, but also about the introduction process and to maintain reliability.

OMT: **Where Do Rigidities Come From? Capability Reconfiguration as Social Accomplishment**

Author: **Joakim Hans Netz**, *Jönköping U.*
Author: **Patrick Reinmoeller**, *IMD*

Incumbents' responses to changes of core technologies are well-known mechanisms of capability reconfiguration, but the problem of capability rigidity that hampers reconfiguration has remained largely unpacked. Combining the extant capability reconfiguration theory and Selznick's sociological view on social structure of relations, we develop a taxonomy of how capability reconfiguration motivated by economic rationale aligns with the interdependent managerial roles, organizational identity, and distribution of power. The taxonomy explains capability reconfiguration as social accomplishment by pinpointing variations among rigidities under conditions of dynamic equilibrium and disequilibrium. Implications for capability research on microfoundations are discussed. The study provides managers with an extended conceptual basis to diagnose their firms' responses to technological change and discontinuities.

OMT: **Why Do Firms Adopt and Abandon Corporate Governance Practices?**

Author: **Yuki Torida**, *Waseda U.*
Author: **Shigeru Asaba**, *Waseda U. Business School*

This study examines the mechanism underlying reversion of practice, namely, abandoning a shareholder-oriented for stakeholder-oriented corporate governance after adopting from the stakeholder- to shareholder orientations. Utilizing the integrated model of irrational and rational decisions in the adoption and abandonment processes, we built certain hypotheses. The first concerns the relationship between the irrational adoption of shareholder orientation and its abandonment. Second, the irrational adoption of shareholder orientation deteriorates firm performance and induces its rational abandonment for stakeholder orientation. To test these hypotheses, we used the data on Japanese listed firms between 2005 and 2018. The empirical outcome illustrated that firms continue to adopt the shareholder orientation that others adopt; however, the irrational adoption damages firm performance and induces the abandonment of the shareholder for stakeholder orientations. The findings clarified that irrational decisions negatively affect firm performance but help induce rational ones, highlighting the combined rationality and irrationality in decisions affecting changing institutions or corporate governance.

Social Networks and Networking: New Research Directions

Session Moderator: **Mark Kennedy**, *Imperial College Business School*

OMT: Social Astuteness: How People Picking Happens in Social Networks

Author: **Mark Kennedy**, *Imperial College Business School*
Author: **Antoine Vernet**, *U. College London*
Author: **Sankalp Chaturvedi**, *Imperial College London*
Author: **Sarah M. G. Otner**, *Kingston Business School*

While the social network literature explains much about why individuals benefit from, for example, network closure, centrality, or weak ties, it says less about how they pick people. Following March's account of how decisions happen, we conceptualize people picking as a process of situation recognition, role selection, and situation- and role-based rules. Across occasions where this process is more deliberative or automatic, we argue individuals differ in how much their people picking changes to meet situational demands. As a framework for exploring these differences, we link three idealized logics—picking for cohesion, influence, and opportunity—to situations that especially call for ideation, resource mobilization, or implementation. To explain differences in people picking, we propose social astuteness, a two-factor construct defined around perspicacity and flexibility to see who is suited for different kinds of situations and pick accordingly. Our theorization of social astuteness features "network metadata", data about individuals' beliefs about people they might pick, regardless of whether they already have ties. Social astuteness contributes to theory by linking a wide range of people picking behaviors—some seemingly less savvy—to network metadata and suggesting that individual differences in social astuteness reflect an adaptive division of labor in human populations.

OMT: Net Negatives: Transcending Pro-Network Bias in Organizational Analysis

Author: **Mark C. Suchman**, *Brown U.*
Author: **Meghan Kallman**, *U. of Massachusetts, Boston*
Author: **Alexander Wambach**, *Brown U.*

Social network analysis pervades contemporary organizational studies. To date, however, this burgeoning literature has exhibited a noteworthy skew toward accounts that explore (or assume) the benefits of network relations while obscuring (or ignoring) the hazards and limitations. Several reviews have acknowledged this "pro-network bias" (Grandori 1999:2), and occasional studies of network dysfunction have begun to emerge; however, scholarship on the adverse aspects of organizational networks remains sparse and fragmented. This paper seeks to assemble the most significant of these skeptical shards into a more cohesive and coherent vessel. We begin by examining the key orienting assumptions that have fostered pro-network bias in the current literature, along with the key definitional challenges that have made "network failure" such an elusive concept. Drawing on this assessment, we then offer a forward-looking roadmap for locating and navigating the terrain of adverse processes that we label "net negatives." Across three levels of analysis (whole networks, intra-network sub-structures, and individual network elements), we examine three distinct types of network dysfunction: governance failures, informational failures, and adaptational failures. This integrative typology points the way toward a set of key problematics, propositions, and predictions to guide future research and practice.

OMT: Proactivity Punished: Nativist Bias in Advice Seeking

Author: **Denis Trapido**, *U. of Washington, Bothell*

This study theorizes nativist bias in interpersonal advice seeking within organizations and empirically detects its effects. Extending the existing discrimination and social networks research, we argue that the effects of nativism—a bias against foreigners—in advice seeking and other network relations cannot be validly inferred from native/nonnative outcome inequalities. Instead, the effects of nativism in social networks are revealed in natives' asymmetric behaviors and attitudes that disadvantage nonnatives. We hypothesize that, other things being equal, natives seek task-related advice across the nativity divide less frequently than nonnatives do. In another manifestation of nativism, native advice seeking targets perceive nonnatives who seek their advice as less competent than those nonnatives who do not seek their advice. We find consistent evidence of these patterns in four separate networks of working professionals. We discuss the implications of our findings for the study of discriminatory biases in social networks and for countering such biases in organizations

New Scholarship on Institutional Change

Session Moderator: **Moritz Jan Kleinaltenkamp**, *Copenhagen Business School*

OMT: **Infrastructures for Institutional Change: Inscription and the Role of Technological Prefiguration**

Author: **Moritz Jan Kleinaltenkamp**, *Copenhagen Business School*

Actors working to bring about institutional change increasingly leverage digital infrastructures while doing so. Ample scholarship has examined how change-oriented actors use infrastructures like social media to organize and communicate their change vision. More recently, scholars' and practitioners' attention has turned to new phenomena such as Blockchain and open data platforms, where institutional change efforts and technology intersect in a different way. In these cases, change-oriented actors attempt to kick-start large-scale change by inscribing their envisioned institutional logics directly into IT artefacts serving a pivotal role in institutional arrangements. While scholars have long recognized the validity of such technological inscription as an approach to institutional change, a systematic understanding of how inscription of digital infrastructures proceeds at the organizational level is currently lacking. In this conceptual paper, I synthesize literature from information systems and organizational research to develop a theory of "technological prefiguration" that illuminates this topic. The concept and associated propositions highlight a crucial but hitherto disregarded organizational challenge that institutional change efforts proceeding via inscription of digital infrastructures face. I illustrate these arguments with examples from the Blockchain space and discuss how an understanding of technological prefiguration can inform research and practice.

OMT: **Constructing Collective Identities For Change With Aesthetic-affective Power: A Rhetorical Approach**

Author: **Xiaoran MA**, *U. of Melbourne*
Author: **Vanessa Pouthier**, *U. of Melbourne*

Collective identity construction is the mobilizing motor to movement-driven institutional change. Yet, rarely has collective identity construction been understood with regards to its moral-emotional forces, given the heavily skewed attention of extant literature towards cognitive mechanisms. Drawing upon Brown et al.'s (2012) theorization on rhetoric justification, we investigate how institutional entrepreneurs deploy logos-ethos-pathos with their dynamics to mobilize potential followers to take on new collective identities for action and change. We do so by exploring the entrepreneurial discourse of French New Wave in Cahiers du Cinéma. Our findings lay bare three distinctive but intertwined layers of discursivity underpinning New Wave entrepreneurs' collective identity construction, including two-kind textual relation (intratextuality and intertextuality), six-type discursive work (characterizing, interweaving, deconstructing, canonizing, alliancing, and antagonizing), and three-element rhetorical justification (logs, ethos, and pathos underpinning discursive work). In particular, we illustrate the indispensability and inseparability of ethos-pathos to identity-based movement mobilization and institutional change. Our research makes two contributions. First, our study contributes to the identity movements literature by foregrounding the significance of morality and emotionality to the mobilizing mechanism of collective identity construction. Second, our study builds on but goes beyond existing rhetorical research by unpacking the dynamics among logos-ethos-pathos, especially the adrenalizing effects of negative aesthetic-affective power, which ultimately constitute the attractiveness of an anti-institutional "we."

OMT: **Hegemonization or Pluralization? Towards a Low-Carbon Smart Energy System**

Author: **Behshad Azodideylami**, *John Molson School of Business, Concordia U.*

We investigate the case of the emergence and evolution of the smart energy systems frame in the UK electricity industry to understand how the hegemony construction of incumbents and powerful actors unfolds in the process of technological and institutional meaning-making and slows down the process of radical institutional change. Based on a longitudinal qualitative study, we identified three main collective frames around the smart energy systems and two contradictory processes of hegemonization and pluralization that counteract each other in the process of institutional change. Particularly, we contribute to the hegemony and institutional change theory by introducing concepts of Inter-institutional versus intra-institutional hegemonization and Inter-institutional versus intra-institutional pluralization.

OMT: **Dynamic Persistence of Institutions: Modeling the Endurance of Public Housing After Red Vienna**

Author: **Christof Brandtner**, *EMLYON Business School*
Author: **Parham Ashur**, *EMLYON Business School*
Author: **Bhargav Srinivasa Desikan**, *EPFL*

The endurance of shared meanings that shape individual behaviors is a central feature of organizational life, but organization science reduces the persistence of institutions to the absence of change. We argue that institutions can endure precisely because how they are instantiated in wider meaning structures changes. We conceptualize and operationalize such dynamic persistence by combining scholarship on institutional change, which emphasizes that changing meanings influence how organizations operate because institutions are dynamic rather than static; and cultural sociology, which has used co-occurrences to show how ideas are embedded in meaning structures. We examine institutions and their instantiations through dynamic topic modeling. We develop diagnostic measures that allow tracking change in large corpora. We illustrate our argument and method using a 140-year corpus of reports of the City of Vienna to show that the persistence of public housing as an institution was only possible due to periodically changing instantiations and affiliations with broader meanings. Our paper contributes a dynamic and contextual approach to studies of institutional persistence that will allow future research to test theory-led expectations about persistence and change in big text data. We conclude with insights for studying temporal and geographic heterogeneity when institutions change.

Institutional Complexity, Stakeholders, and Political Dynamics: Museums for Organizational Insights

Organizer: **Marya Besharov**, *Oxford U., Saïd Business School*
Organizer: **M. Diane Burton**, *Cornell U.*

Museums offer an important research context for organizational scholars. Competing demands from stakeholders—including professionals, funders, visitors, etc.—are central in museum operations, and multiple logics in the institutional environment add to the complexity of managing and leading these organizations. Building on this rich history of museum research as a source of organizational insights, this symposium brings together multi-method and multi-disciplinary studies within the museum context to shed new light on core issues of interest to organization and management scholars. Applying different angles, the four presentations cover topics ranging from field-level structuration, institutional entrepreneurship, logic changes, and organizational governance and leadership, and they span varied national and institutional contexts. By bringing these studies together in the symposium, we hope to introduce attendees to new research within this rich context and contribute to organization and management theory.

Essence, Silence, Vitality: The Moral and Ethical Dimensions of Professional and Occupational Work

Panelist: **Michel Anteby**, *Boston U. Questrom School of Business*
Panelist: **Beth Bechky**, *UC Davis*
Moderator: **Daisy Eusun Chung**, *City, U. of London*
Panelist: **Joelle Evans**, *Bayes Business School*
Panelist: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*
Panelist: **Madeleine Stefanie Rauch**, *Stanford U.*

Professions and occupations are animated by moral concerns in relation to their practice, because these communities profess to serve society. These communities are also uniquely positioned to engage with, and may be forced to contend with, moral quandaries emerging from their embeddedness in organizations and environments presenting multiple and conflicting values. In this symposium, we bring together scholars in an interactive discussion of (1) how to conceptualize morality in professional and occupational studies; (2) the panelists' conceptual contributions based on their work; (3) the complexity of studying morality in organizations and professions (4) methodological approaches for engaging with these issues.

Participant: **Cameron Verhaal**, *Tulane U.*

Over the last twenty years, the gaming industry has emerged as one of the fastest growing markets in the modern economy. While the segments of video games and online gaming have garnered the lion's share of both consumer and researcher attention during this time, the segment of tabletop board games has also experienced a recent resurgence making the broader gaming industry one of the more interesting settings for studying a variety of theoretical and practical questions. This is due to the inherent tensions that exist both between and within different segments of the industry. The goal of this symposium is to embrace these tensions and serve as a catalyst for a conversation around markets and industries that contain such contrasts in physical vs. virtual, formal vs. informal, high-tech vs. low-tech, and mainstream vs. oppositional features and processes. We plan to do this by (1) focusing on how different types of audiences, such as consumers, expert critics, and game members, shape evaluation processes across different segments of the broader gaming industry; (2) exploring successful product positioning strategies in different segments; and (3) investigating how users themselves can take in active role in game positioning on the market. To this purpose, the symposium consists of four unique papers that cross various theoretical perspectives and different levels of analysis to explore the effects of inherent contradictions of gaming markets on product and firm performance in four diverse game contexts - global video games, digitally distributed PC games, global EVE Online role-playing game, and U.S. tabletop board games.

The Evolution of Industries: Integrating Across Multiple Perspectives

Organizer: **Anders Dahl Krabbe**, *King's Business School*
Organizer: **Stine Grodal**, *Northeastern U.*
Panelist: **Fernando Suarez**, *Northeastern U.*
Panelist: **Ryann Noe**, *Harvard Business School*
Panelist: **Giacomo Negro**, *Emory U.*
Panelist: **Tiona Zuzul**, *Harvard Business School*

How do industries emerge and evolve? This is a key question in organizational theory, which over the last half a century has been addressed through a variety of theoretical perspectives. However, these perspectives have mostly developed in isolation. Recently, different scholarly communities have seen a reinvigoration of the study of industry evolution with scholars engaging in combining elements from different perspectives as well as advancing new research agendas within the perspectives. The goal of this panel symposium is to stimulate a conversation between scholars representing each of these perspectives, to further encourage cross-pollination of perspectives. To achieve this, we have asked a scholar representing one of four different traditions to talk briefly about their view on industry evolution, and point to future research directions.

Circular Economy Entrepreneurship, Digitization, Partnerships and Network Effects

Session Moderator: **Henry Willem Müller**, *HSG U. of St. Gallen*

ONE: **Circular Entrepreneurship: Exploring the Role of Startups in Circular Ecosystem Emergence**

Author: **Henry Willem Müller**, *HSG U. of St. Gallen*
Author: **Felix Bernhard Pahl**, *Stockholm School of Economics*

Despite increasing environmental consciousness and social pressure, established firms struggle to implement circular business models. Recent literature suggests that the circular economy may only be realized within ecosystems of actors. Due to their lack of resources, startups have been widely neglected as drivers of circular ecosystems. By employing a multiple case study, this paper exploratively delves into the role of startups in circular ecosystem emergence. The cases unveil how startups drive and orchestrate the emergence of circular value propositions with a wide range of actors. Therein, circular entrepreneurs face a set of common, interrelated challenges, namely Financing, Knowledge, Awareness, Convincing, Aligning, and Scaling. We identify strategies that circular startups employ to address these challenges. Startups are highly embedded in institutional settings which affect their strategic behavior. The study concludes by making five propositions regarding the role of startups in circular ecosystem emergence. In illuminating the role of circular startups, this study promotes our understanding of the processes that drive the transition to the circular economy and redirects the attention of scientific research from incumbent-centric orchestration to circular entrepreneurship.

ONE: **Does Digitalization Foster the Path to a Circular Economy? An Exploratory Analysis of EU**

Author: **Mercedes Gil-Lamata**, *U. de Zaragoza*
Author: **Lucio Fuentelsaz**, *U. of Zaragoza*
Author: **María Pilar Latorre-Martínez**, *U. de Zaragoza*

The European Union (EU) governments are placing intensified stress on the circular economy (CE) development and the digital performance. In spite of the strategic and economic relevance of these two scientific fields, there is a lack of evidence regarding their mutual effects and implications. We tackle this gap by analysing how digitalization favours the path towards the CE across EU member states for the period 2014-2021. Firstly, a cluster analysis was carried out to identify groups of countries in the EU depending on its circular behavior, resulting in the GRAI classification. Following this, an ANOVA was performed to study how the groups were influenced by the different contexts of digitization. This has allowed us to detect that the digitalization variables of human capital and integration of digital technology, are key drivers of variability in the CE. Moreover, we have found that countries with similar circular behaviour share similar levels of digitalization variables.

ONE: **Sustainable Value Co-creation in the Circular Economy through Digitalization**

Author: **Qinglan Liu**, *U. of Exeter*
Author: **Miying Yang**, *Cranfield School of Management*

Climate change is demanding higher sustainable development commitment from business management. Digital technologies can support circular economy (CE) activities in a value chain to create sustainable value with social, environmental, and economic benefits. However, how different stakeholders can co-create sustainable value through digitalization in the CE paradigm is unclear. This research aims to address this gap by exploring the sustainable value co-creation pattern between digital solution providers and manufacturing companies for the CE. We draw conclusions from multiple case studies of three multi-stakeholder involvement levels. We develop a theoretical framework about how digital solution providers can co-create sustainable value with manufacturing companies by co-developing a CE- oriented digital solution, which can be shared with multiple stakeholders in the CE value chain. Our findings advance our understanding of the interaction between digital technologies and the multiple-stakeholder collaboration in the CE paradigm.

ONE: **The Power of Words: Formation of Partnerships through Circular Startups**

Author: **Alexa Böckel**, *Centre for Sustainability Management, U. of Lüneburg*
Author: **Steffen Farny**, *Leuphana U. Lüneburg*
Author: **Nancy Bocken**, *Maastricht U., School of Business & Economics*

A growing interest in startups in the circular economy emerges which is perceived as one pathway to a sustainable development. Circular startups are concerned with the prolonging of resource use and the reduction of waste. For realizing their business models, collaborating with partners of different kinds is deemed crucial. As circular business models are rather new and lack in diffusion, circular startups face the challenge of persuading potential partners to be acknowledged as legitimate. This qualitative research sheds light on the cognitive frames applied by circular startups against this backdrop. We draw on 31 interviews with startups in an incubation program focused on circular economy and observed their attempts at gaining partners. We find that four frames are used individually and in combination in order to both legitimate their business model as well as the overarching concept of the circular economy. Our model shows how these cognitive frames are related to an overarching process of legitimation of their circular entrepreneurial action.

ONE: **The Power of Networks: A Field Data Analysis of Geographic Network Effects in the Circular Economy**

Author: **Christoph Ratay**, *TUM School of Management, Technical U. of Munich*

Product Service Systems have the potential to align businesses' financial incentives with environmental objectives. Research on the circular economy and non-ownership consumption suggests that such offerings benefit from network effects, which motivate system adoption and system use by consumers. However, there is a need for empirical analyses of these effects based on field data capturing actual behavior. This paper leverages a large field dataset from a system for reusable takeaway food containers to evaluate the effect of increased geographic network density of participating restaurants on (a) the acquisition of new users and (b) the frequency of system use. Based on fixed effects Poisson panel models, this paper finds statistically significant and economically meaningful positive effects of increased geographic network density on acquiring new users. Notably, marginal effects of increased geographic network density on user acquisition diminish as networks get denser. In terms of frequency of use, no consistently significant effects of geographic network density are identified. These results contribute to the literature on network effects in multisided markets and in the circular economy by presenting field evidence of indirect, cross-side network effects on consumer adoption. Moreover, findings encourage businesses and policymakers to establish dense local networks of circular economy offerings.

Employee Pro-environmental Behavior and Practices

Session Moderator: **Noor Ullah Khan**, *MGSEB, U. Malaysia Kelantan (UMK)*

ONE: **Putting the Workers First: Antecedents Of Pro-Environmental Behavior in the Hospitality Industry**

Author: **Noor Ullah Khan**, *MGSEB, U. Malaysia Kelantan (UMK)*
Author: **Jie Cheng**, *School of International Education Anhui Xinhua U. Hefei, Anhui, China*
Author: **Roselina Binti Ahmad Saufi**, *MGSEB, U. Malaysia Kelantan (UMK)*
Author: **Asfia Obaid**, *National U. of Sciences & Technology (NUST)*
Author: **Hanieh Alipour Bazkiaei**, *Faculty of Entrepreneurship and Business, U. Malaysia Kelantan (UMK)*

Sustainability is vital for the hospitality industry to address major environmental issues. Stakeholders' growing ecological awareness is pushing organizations to adopt sustainable practices, e.g., ecological worldview (EW), environmental concern (EC), through employee environmental engagement (EEE), and environmental knowledge (EK), to foster employees' pro-environmental behavior (PEB). The purpose of this study was to examine the impact of EW and EC on PEB through EK and EEE as a serial mediation approach among employees of the hotel Malaysian hotel industry. This research used a quantitative methodology based on a positivist approach. The sample of 449 respondents was randomly targeted via standard questionnaires. Around 313 responded with a response rate of 70%, which is sufficient for data analysis to achieve this study's objectives. Structural equation modeling (SEM) analysis revealed that EK and EEE serially mediated the relationship between EW, EC, and PEB employees in the Malaysian hotel industry. This research also discusses important implications for line managers, employees, and the hospitality industry.

ONE: **Understanding Sustainable Work Behavior: The Role of Personal Values, Attitudes and Sustainable HRM**

Author: **Fiona Edgar**, *U. of Otago*
Author: **Jing A. Zhang**, *U. of Otago*
Author: **Nataliya Podgorodnichenko**, *U. of Otago*
Author: **Adeel Akmal**, *U. of Otago*

Employees' sustainable work behavior (SWB) is a major facilitator for organizational sustainable development. Some studies have examined the importance of extrinsic motivations of employee SWB, while others have suggested that intrinsic attributes also influence SWB. In this study, combining the value-attitude-behavior theory with person-environment (P-E) fit theory, we explore how employee's self-transcendence values, along with their innovation-oriented attitudes, affect their engagement in SWB, and how these influences are contingent on sustainable HRM (SusHRM) practices. Using a sample of 374 employees working in private sector organizations in New Zealand, our findings demonstrate the positive effects of self-transcendence values on SWB through innovation-oriented attitudes. We also find that in organizations with procedural SusHRM practices, employees with higher self-transcendence values have stronger innovation-oriented attitudes, while distributive SusHRM practices support employees with strong innovation-oriented attitudes to engage in SWB. Our findings generate several novel theoretical and practical implications.

ONE: **Towards Sustainable Businesses in Latin America: The Role of Worker's Dark Triad Personality Traits**

Author: **Asghar Afshar Jahanshahi**, *Tec de Monterrey*
Author: **Juan Carlos Andrango Vicuña**, *U. Tecnológica Indoamérica, Ecuador*
Author: **Milagros Isabel Rivas Mendoza**, *U. tecnologica del Peru*

Having sustainable businesses becomes priority for many Latin American countries these years. Socially responsible behaviors (SRBs) of employees in the workplace plays important roles in making businesses more sustainability oriented. The main aims of this research to identify those employees which involve less in two types of SRBs: societal behaviors and sustainability-oriented behaviors at the workplace by considering their dark triad personality traits. By using survey-based data from 550 workers in Peru and Ecuador, we found a negative relationship between workers dark triad personality traits (Machiavilism and Psychopathy) and their socially responsible behaviors in the workplace. Furthermore, our results show that workers with higher level of Machiavilism and psychopathy has lower level of environmental concerns, which in turn reduce their intentions to involve in socially responsible behaviors in the workplace. Our study advances sustainable business research in Latin America by providing workers Machiavellianism and psychopathy as a novel predictor of socially responsible behaviors of employees at the workplace.

ONE: **The Role of Employees' Embodied Practices in Achieving Ecological Sustainability**

Author: **Donna Ladkin**, *Birmingham Business School, U. of Birmingham*

This paper develops insight into the role embodied practices undertaken by a firm's employees play in achieving ecologically sustainable organizations. Grounded in a case study of a group of UK-based hotels, the research highlights three materially and bodily-based aspects of the hotels' workings which ground their sustainability-focused ethos. In highlighting these aspects, the paper moves the locus of attention in how sustainability is achieved from strategies and organizational discourses to the role played by habits and embodied intersubjectivities. In particular it illustrates how 'embodied care' can be facilitated and enacted in organizations through the development of 'caring habits'. The paper proposes that a key aspect of achieving ecological sustainability is through attending both to the material aspects of organizational life, as well as to creating spaces in which organizational members experience care for one another as well as their surrounding environment.

Managing and Teaching Beyond Humans

Session Moderator: **Nicholas Poggioli**, *Appalachian State U.*

ONE: **More-than-human Management: A Systematic Review**

Author: **Nicholas Poggioli**, *Appalachian State U.*
Author: **Costanza Sartoris**, *U. Ca' Foscari of Venice - Dept. of Management*
Author: **Monica Nadegger**, *U. of Innsbruck*
Author: **Simon Pek**, *U. of Victoria*
Author: **Himanshu Shekhar**, *Doctoral Student at Indian Institute of Management Bangalore*
Author: **Miron Avidan**, *HSG U. of St. Gallen*
Author: **Jason Good**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Ping Wang**, *U. of Queensland Business School*

We review management research that extends consideration beyond human-like characteristics to nonhuman, noncorporate actors and describe possible paths for theorizing more-than-human management. Management scholarship historically assumes actors are people (legally defined as "natural persons") or organizations ("legal persons"). "More-than-humans" are entities other than natural or legal persons that are ascribed human-like characteristics. Examples include animals, rivers, computer programs, plants, mountains, places, and landscapes. Management theory and practice now ascribe human characteristics to a growing number of more-than-humans by recognizing them as stakeholders or as having legal rights to representation in decision-making and regulatory processes. Growing management and legal attention to more-than-human actors is a potential revolution in business practice on par with the recognition of corporations as legal persons. We describe how management scholarship has addressed more-than-humans so far and chart possible ways forward for further research in this area.

ONE: **Managing Relationally in the Ecology-in-Place: Multispecies Organizing in Ecological Restoration**

Author: **Maria Ehrnström-Fuentes**, *Hanken School of Economics*
Author: **Steffen Boehm**, *U. of Exeter Business School*
Author: **Linda Annala Tesfaye**, *Hanken School of Economics*
Author: **Sophia Hagolani-Albov**, *U. of Helsinki*

Contemporary human-centered organization and management practices endanger the health of the planet and consequently the existences of multiple species—including humans. In the face of the on-going climate and ecological emergencies, it is vital to move from an extractive managerial approach—sustaining human lives at the expense of other beings—towards organizational modes of co-existence based on a logic of restoration and revitalization. Drawing on actor network theory, posthuman studies, environmental humanities and three situated, illustrative case examples on ecological restoration, this article contributes to the corporate sustainability literature by developing a theoretical framework on multispecies organizing. The framework includes four analytical dimensions: organizing practices as matters of care; becoming with the ecology-in-place; the role of ontological politics; and how ecological restoration practices are translated across space. We conclude by articulating the need for intra-actions between humans and nonhuman beings in what we call the ecology-in-place.

ONE: **Ordinary Lands and Hidden Woods: Unveiling the (Un)known About Sustainability Curriculum**

Author: **Barbara Galleli**, *Federal U. of Parana*
Author: **Flavio Hourneaux**, *U. of Sao Paulo (FEA/USP)*
Author: **Gabriele Lopes**, *Federal U. of Paraná*
Author: **Gabriel Gusso Mazzo**, *Federal U. of Parana*

Although Higher Education Institutions (HEIs) are one of the leading promoters of education for sustainable development, there is little consolidated research on how sustainability becomes a part of HEIs' curriculum and which aspects are a part of this process. Thus, we pose the following question: "How is sustainability integrated into higher education curricula?" To answer it, we used a systematic review of the literature, investigating more than two decades of studies on the theme. This article's contributions are threefold. First, providing a deeper understanding of how sustainability curricula are integrated into HEIs and delivering an agenda for future research. Second, by providing insights into curriculum development, regarding the educational practice. Finally, the article offers elements to increase social impact and to develop public policies, reinforcing the importance of the subject, directly connected to the United Nations' Sustainable Development Goals, especially SDG4.

ONE: **Digital Stories on [for] the Anthropocene: Transforming Student Experential Learning and Creativity**

Author: **Jorge Alexis Arevalo**, *William Paterson U.*
Author: **Jose M. Manuel Alcaraz**, *ESDES, U. Catholique de Lyon*
Author: **Mark Edwards**, *Jonkoping International Business School*
Author: **Keary Schandler**, *Murdoch U. Dubai*

There are around fourteen thousand business schools in the world, educating most of the executives that drive the corporations whose impact on global environmental change is staggering. Assuming that business school is one of the most important educational realms where a deep understanding of the Anthropocene is needed, this research presents an innovative use of digital story telling (DST) for sustainability in management education (SiME) applications. Using grounded theory, we analyze 63 student generated DST films on the Anthropocene to propose an experiential learning framework based on five key learning domains: the Planetary Boundaries (PBs), scale issues, (time and place), complex governance (levels of approach), social justice (humans and animals), and environmental justice. This learning framework will help instructors introduce and conceptualize the Anthropocene to business students while promoting cognitive, behavioral, emotional, experiential and creative learning needed to manage business sustainably while becoming less impactful key drivers and amplifiers of planetary change. The multi-dimensional framework offers a point of entry for educators and students into the grand social and environmental challenges of the Anthropocene, while encouraging teaching and research on issues of high societal and future relevance.

Understanding Green Innovation

Session Moderator: **Su Ruixin**, *School of Management, Jiangsu U., China*

ONE: **UNDERSTANDING ECO-INNOVATIONS IN SMEs. THE ROLE OF COLLABORATIONS AND ALLIANCE PORTFOLIO DIVERSITY**

Author: **Maria Teresa Bolivar-Ramos**, *Autonomous U. of Barcelona*
Author: **Dante Ignacio Leyva-de La Hiz**, *CUNEF*

Small and Medium Enterprises (SMEs) often suffer from resource constraints, yet developing eco-innovations requires gaining knowledge from multiple sources. Therefore, SMEs need to enter into external collaborations to foster eco-innovations. In this regard, we analyze how the learning experience of these firms, derived from both national and international collaboration, helps or hinder the development of eco-innovations. In addition to this, we study the moderating role of alliance portfolio diversity un such relationship, which can be positive (e.g., higher breath of knowledge) or negative (e.g., higher coordination costs). Our panel data of Spanish manufacturing SMEs shows that firms with greater experience -both national and international- are more likely to eco-innovate. However, the diversity of the alliance portfolio negatively moderates this relationship. In other words, a more diverse alliance hinders the development of eco-innovation, so that the costs of a higher complexity outweigh the benefits of broader knowledge.

ONE: **Too Hot to be Innovative: The Relationship between Extreme Weather and Green Innovation Search** 💻

Author: **Su Ruixin**, *School of Management, Jiangsu U., China*
Author: **Xiaolong Shui**, *U. of Bristol*
Author: **Minhao Zhang**, *Newcastle U.*

A substantial body of literature has suggested that climate change-induced extreme weather events, including heat waves, can affect country-level economic output and growth. However, we still lack knowledge about how extreme weather events affect the organizational move, specifically, green innovation search. As such, building upon the attention-based view (ABV), we argue that heat waves can serve as environmental stimuli that affect corporate green innovation search. Based on a sample of publicly listed Chinese manufacturing firms, we find that the relationship between heat wave intensity and corporate green innovation search is inverted U-shaped. Moreover, industry-wide environmental uncertainty can flatten the inverted U-shape. Our results offer implications for research on the corporate response to extreme weather.

ONE: **CEO-TMT Faultline and Corporate Green Innovation: The Mediating Role of Eco-attention**

Author: **Zhiyu Chen**, *School of Management, Lanzhou U.*
Author: **Jianzu Wu**, *School of Management, Lanzhou U.*

Although research on CEO-TMT interface shows the important role of CEO-TMT interactions on decision making, it is unclear how executive interactions affect corporate environmental activities. Based on the upper echelons theory and the attention-based view, this study explores the impact of the CEO-TMT faultline on green innovation and the mediating role of corporate eco-attention on the CEO-TMT interface using panel data of Shanghai and Shenzhen A-share listed companies from 2011 to 2020. In addition, we find that the negative effects of the CEO-TMT faultline, which affects the allocation of corporate eco-attention, on the development of green innovation activities. And environmental regulation plays a negative moderating role. This empirical study highlights the important role of the interaction between the CEO and the other members in corporate green innovation, and contributes novel insights regarding how the CEO-TMT faultline can influence environment activities.

ONE: **Does Financial Slack Influence Green Innovation in Manufacturing Firms?** ☯ 💻 ✋

Author: **Yuanting Zhao**, *ONE*
Author: **Jun Jin**, *Zhejiang U.*

Different issues with sustainable economic and social growth are currently becoming more visible. Green innovation of manufacturing enterprises is a key strategy for achieving sustainable development, and its motivating forces merit investigation. The green innovation investment of manufacturing enterprises is large and risky. The adequacy of capital is an important consideration for enterprises to choose green innovation. This study focuses on whether enterprises with financial slack are more likely to undertake green innovation projects that require long-term investment and slow to achieve results. This study examines green patent applications as a gauge of green innovation, using 1453 Chinese listed manufacturing firms from 2009 to 2019 as samples. It empirically investigates the effect of company financial slack on green innovation based on the resource-based perspective and examines the diversity of market competitiveness. The empirical findings demonstrate that financial slack significantly enhances green innovation. The findings of additional research indicate that market competition determines the proportional influence of financial slack on corporate green innovation. Financial slack has a greater positive impact on enterprise green innovation in industries with less fierce market competition. The research conclusion clarifies the relationship between financial slack and green innovation, determines its boundary conditions, deepens the situational research on financial slack, and provides a perspective for the dispute whether slack promotes innovation.

OSCM: **How does Transparency Impact Technological Novelty? Evidence from Large Pharmaceutical Firms**

Author: **Hanu Tyagi**, *U. of Minnesota Carlson School of Management*
Author: **Manuel Hermosilla**, *Johns Hopkins Carey Business School*
Author: **Rachna Shah**, *U. of Minnesota Twin Cities*

How does transparency in new product development (NPD) efforts impact technological novelty? We examine this question in the context of the pharmaceutical industry where firms have historically engaged in selective reporting of clinical trial outcomes, i.e., hiding results that show poor safety or efficacy of the new drug. We exploit a pro-transparency shock that was designed to address biased reporting by requiring pharmaceutical firms to register clinical trials as a prerequisite for publishing results in academic journals. Using drug development data from 2000-2014, we show that transparency negatively impacts technological novelty such that firms with higher exposure to the policy experience a 13.9% increase in the exploitation of previously used technologies and a reduction in the exploration of new technologies. However, the effect is contingent on diversification. Firms with less diversified portfolios are affected by transparency shock but those with more diversified portfolios are not. Our results make several contributions to theory and practice. We study the unexplored relationship between transparency and technological novelty and caution policymakers that transparency may have contributed to the "incremental innovation" in the pharmaceutical industry where firms prioritize small improvements in their existing portfolio over pursuing novel breakthrough innovations.

OSCM: **Improving Customer Service of Customized Products Through Segmented Planning of Inbound Components**

Author: **Anne Elizabeth Dohmen**, *Broad College of Business, Michigan State*
Author: **Jason Merrick**, *Virginia Commonwealth U.*
Author: **Lance Saunders**, -
Author: **Ted Stank**, *U. of Tennessee, Knoxville*

Firms producing customized products often struggle to meet customer lead time expectations due to the increased complexity inherent to forecasting these products. The resource dependency literature has described how a firm's relationship with its external environment should drive how it implements, in what the supply chain literature terms as, buffering and bridging strategies to overcome complexity. In relation to customization, many firms focus on inventory management strategies by increasing component safety stock to buffer their ability to be responsive to customer orders. For components not in safety stock, firms often rely on bridging strategies by working with their suppliers to deliver components with sufficient time left to meet finished goods service expectations. The literature has to yet address how firms can balance upstream component lead time performance with the cost of inventory required to meet finished goods service requirements for firms making customized products. This research addresses this issue by first creating a framework to allow investigation of how supplier lead time performance metrics should inform the levels of buffering and bridging strategies necessary for different types of components. Data from a large manufacturer of customized industrial products is next used to test the framework through the development of a logic-based simulation to allow investigation of the impact of different buffering and bridging strategies cost and service performance outcomes. The results have multiple contributions to the literature. First, we link upstream component delivery performance to a manufacturing firm's ability to meet downstream customer lead times for customized products, providing insight into the management of inbound flows that could significantly impact a firm's ability to execute a production plan and meet customer service expectations efficiently. The creation and implementation of a framework based on supplier delivery characteristics also offer a perspective for firms on how should apply buffering and bridging strategies at the component level, which complements many existing supplier management frameworks in the literature that assume a singular strategy per supplier.

OSCM: **The Value of Mobile Digital Factories from a Transvection Theory Perspective**

Author: **Jasmina Müller**, *Kühne Logistics U.*
Author: **Kai Hoberg**, *Kühne Logistics U.*
Author: **Jan Holmstrom**, *Aalto U.*

Mobile digital factories are production units equipped with direct digital manufacturing technology that can be set up at any location to produce products and after completing the job moved to another location. While this novel manufacturing concept is currently explored by companies in various industries, there is little knowledge of what mobile digital factories are and how and when they provide value. We identify direct digital, on-site and mobile manufacturing to be the key characteristics of them and examine the effects thereof from a transvection theory perspective. Our qualitative case data from companies operating mobile digital factories in the construction industry provide insights into viable use cases, the advantages realized, and challenges faced during operation. These findings allow for theorising about the supply chain structure. Specifically, we argue that (i) form transformation is delayed and place and time transformations of finished parts are eliminated, (ii) time transformation to move the manufacturing capacity and raw materials on-site is added, and (iii) the temporary production at the point of demand is enabled. This research contributes to the scientific understanding of mobile digital factories from both operational and theoretical perspectives and provides approaches for executives to operate them.

OSCM: **Fulfilment of Expectations and Loyalty in Digital Home-sharing Platforms**

Author: **Frederic Marimon**, *U. Internacional de Catalunya*
Author: **Marta Mas-Machuca**, *U. Internacional de Catalunya*
Author: **Natalia Amat**, *U. Internacional de Catalunya*

Purpose: Customer loyalty is a key issue for sharing economy platforms. Thus, the main goal of this paper is to analyse the role of fulfilment of expectations as a mediator between perceived quality, satisfaction, and loyalty. Design/methodology/approach: The proposed research model is grounded on service quality literature, the expectancy disconfirmation theory and the technology acceptance model. Based on a survey completed by 408 consumers of home-sharing platforms, this study uses structural equation modelling to assess the linear and non-linear relationships among the proposed dimensions. Findings: The results show that fulfilment of expectations mediates the link between satisfaction and loyalty in home-sharing platforms. On the other hand, social interaction with the host has been found to have a negative impact on fulfilment of expectations, especially when there is too much interaction. Additionally, the study finds that two types of satisfaction (towards the platform and towards the apartment owner) are important in order to achieve loyalty in shared accommodations. Originality: One of the main novelties of the study is that it analyses both linear and non-linear correlations among perceived quality, fulfilment of expectations and loyalty. Moreover, the potential effect of fulfilment of expectations in the context of shared accommodation services has not been analysed in previous studies.

Buyer-Supplier Relationship II

Session Moderator: **Shubhobrata Palit**, *ESADE Business School*

OSCM: **Unlocking Barriers to Circular Procurement Management**

Author: **Asad Ali Qazi**, *U. of Rome Tor Vergata*
Author: **Andrea Appolloni**, *U. of Rome Tor Vergata*

The aim of the study is to analyse the interdependencies of barriers to circular procurement in the context of EEE supply chain. A panel of experts from industry and academia was consulted to develop a contextual relationship. ISM-MICMAC was applied to find the contextual relationship among the identified barriers. Based on the analysis, a hierarchical model of barriers is developed that helps to understand the impact of one barrier over others. The managers and organizations can use this study to inhibit the effects of barriers to the successful implementation of CP that will lead to achieving the sustainable development goal (SDG) number 12 particularly target 12.7.

OSCM: **Innovation and Knowledge Accumulation in Buyer-Supplier Relationships**

Author: **Shubhobrata Palit**, *ESADE Business School*
Author: **Manpreet Hora**, *Georgia Institute of Technology*
Author: **Soumen Ghosh**, *Georgia Institute of Technology*

In this study, we focus on a buyer as a source of technological knowledge for a supplier, and examine factors that make a supplier accumulate technological knowledge from the buyer. Specifically, we study buyer innovation, technological similarity between a supplier and a buyer, a supplier's dependence on a buyer, and buyer-supplier size asymmetry, and how these factors interrelate in influencing the extent of supplier's knowledge accumulation from the buyer. We use panel data on supplier-buyer relationships from Bloomberg SPLC, patent data from USPTO, and accounting information from Compustat to test the hypotheses. Our sample comprises 6759 supplier-buyer-year observations constituted by 2774 unique dyads, 250 unique suppliers, and 342 unique buyers spanning four years from 2011 through 2014. We find that the extent of a supplier's knowledge accumulation from a buyer increases with buyer innovation and that the extent of knowledge accumulation is higher with high buyer innovation along with high technological similarity. We also find that a supplier's dependence on a buyer plays a positive moderating role in the relationship between buyer innovation and the extent of supplier's knowledge accumulation from the buyer. The combined effect of buyer innovation and buyer-supplier size asymmetry also enhances the extent of supplier's knowledge accumulation from the buyer. In summary, this study highlights some of the key factors that can influence a supplier's decisions which is considering its buyers as a source of external technological knowledge.

OSCM: **Resilience, Keiretsu and Dependence on Buyers: Evidence from the Great East Japan Earthquake**

Author: **Genjiro Kosaka**, *Sophia U.*

Research on supply chain management has revealed factors that influence the resilience of supply networks facing a crisis, such as financial crises, natural disasters, pandemics, or wars. By drawing on a relational view of a firm, such resilience is enhanced on the basis of cooperative relationships between buyers and suppliers. Although recent studies have pointed out that cooperative and competitive relationships—coopetition—are key to supply chain management, the effects of coopetition between buyers and suppliers on the resilience of supply chains, especially in the context of a disaster, have not been elucidated. We examined auto parts transactions in the Japanese automobile industry in the context of the Great East Japan Earthquake in 2011, developing a dataset with a total of 907 pairs of auto parts and their suppliers during 2010–2014. The results of our analysis revealed that coopetition, balancing the opposing moments of competition and cooperation, has a more positive effect on resilience than complete cooperation or complete competition. The effect of coopetitive relationships on resilience is more pronounced in the long-term than in the short-term.

OSCM: **Buying from a Competitor: A Model of Knowledge Sharing and Innovation**

Author: **Dominique Lauga**, *U. of Cambridge*
Author: **Matthew Selove**, *Chapman U.*
Author: **Mohammad Zia**, *Chapman U.*

Many firms buy a production input from a competitor. However, managers often worry that this supply relationship may give their competitor valuable knowledge about new product innovations. We develop a two-period model in which a firm can buy an input from a competitor or a third party in each period, and in order to innovate, the firm must invest in improving the input and must share the resulting knowledge with its chosen supplier. We find that buying from the competitor: (1) mitigates price competition in the consumer market, and (2) puts the competitor in a stronger negotiating position in the second period if the focal firm shares knowledge. We derive the equilibrium in which the focal firm chooses whether to buy the input from its competitor or the third party, and then decides whether to innovate and share knowledge. If the value of the innovation is sufficiently low or sufficiently high, the firm buys from its competitor, but if the value of innovation lies in an intermediate range, the firm buys from the third party to ensure innovation occurs in equilibrium.

Nonprofit Governance

Session Moderator: **George Mitchell**, *City U. of New York, Baruch College*

PNP: **Who Governs Transnational NGOs? A Mixed-method Analysis of Board Composition**

Author: **George Mitchell**, *City U. of New York, Baruch College*
Author: **Peter Nerothin**, *U. of San Diego*
Author: **Megan Pontes**, *U. of San Diego*
Author: **Hans Peter Schmitz**, *U. of San Diego*
Author: **Caroline Walsh**, *U. of San Diego*

Transnational NGOs (TNGOs) often to claim to speak and act on behalf of diverse communities in the Global South, yet many are governed by boards that do not reflect the sector's rhetorical commitments to inclusive governance. Meanwhile, TNGOs are facing increased demands to 'shift the power,' 'decolonize aid,' and more specifically, to improve representation through strategic governance reforms. This article evaluates the composition of the boards of 25 prominent TNGOs in the United States with a combined 395 board members to assess the extent to which this criticism and rhetoric has translated into patterns of boardroom representation. A latent class analysis of board member data measuring demographic, competency, and cognitive background indicators identifies a distinction between "traditional" and "inclusive" board types. An assessment of TNGO websites and annual reports suggest an association between the observed board type and discursive commitments to diversity, equity, and inclusion.
