Collaboration between nonprofit organizations and firms is growing in relevance and prevalence. The potential for collaborative value creation beyond single partners' capabilities is a strong driver of relationships across sectors. Philanthropic relationships are one collaboration format, but more interactive cross-sector partnerships become increasingly relevant. We study how nonprofit organizations integrate firm partners in their work through a variety of relationships. We theoretically and empirically delineate philanthropic relationships from cross-sector partnerships using the relational view of interorganizational relationships. From a study of 16 nonprofit organizations and their relationships, we then derive two distinct dimensions for relationship development and propose a link between philanthropic relationships and cross-sector partnerships. While the distinguished types of relationships should be viewed differently, the proposed link and development paths support the ongoing transition in practice from philanthropic toward interactive relationships.

PNP: **A Phenomenological Approach to the Dynamic Analysis of Nonprofit Governance**

Author: **Hiroshi Togo**, *Kindai U.*
Author: **Yasuo Dan**, *Kindai U.*

The purpose of this study is to develop an analytical framework and demonstrate a dynamic governance process of small non-profit organizations called Civil Society Organizations (CSOs) with focus on "intentionality" (Husserl, 2013) of nonprofit leaders who are responsible for fulfilling mission-oriented organizational activities. The term of intentionality is a useful concept in addressing the challenge of previous research of elucidating the dynamic nonprofit governance process from an institutional perspective. In particular, the acts of intentionality by nonprofit leaders that defines the future direction of board management are to be demonstrated by looking inside the process of forming institutional logics (Friedland & Alford, 1991; Jackall, 1988; Thornton & Ocasio, 1999) of nonprofit governance. In order to do this, in the form of an application of Husserl's phenomenology, this research attempts to build an analytical framework in order to capture the dynamic process of nonprofit governance by clarifying changes in his or her intentionality for the future direction of the board management.

PNP: **How Organizational Practices Relate to Nonprofits' Societal Roles**

Author: **Berta Terzieva**, *WU Vienna U. of Economics and Business*
Author: **Christian Burkart**, *Institute of Industrial Management, FH JOANNEUM, Kapfenberg, Austria*
Author: **Florentine Maier**, *WU Vienna U. of Economics and Business*
Author: **Michael Meyer**, *WU Vienna U. of Economics and Business*

Nonprofit organizations (NPOs) make vital contributions to society. Providing essential services, engaging in advocacy, or strengthening communities, NPOs, however, face the challenge of pursuing a social mission while concurrently operating and meeting the demands of a market economy. The resulting tendency of NPOs to adopt characteristics from the business world has been a contested topic in nonprofit management studies; scholarly views on underlying theoretical mechanisms are often vague and rather weakly supported by empirical data. Drawing on survey data of nearly 600 NPOs in the metropolitan region of Vienna (Austria) and employing structural equation modeling, we examine how configurations of organizational practices, specifically managerial and democratic practices, are associated with NPOs' emphasis on societal roles of service delivery, advocacy, and community building. Our analysis reveals that configurations of organizational practices are a part of institutional logics that unfold distinctive interpretation frame effects. We find that managerial practices are positively related to an emphasis on service delivery and advocacy, whereas organizational democracy is positively related to community building but negatively related to service delivery. The implications and significance of these results for nonprofit management practice and future research are discussed.

Thriving During Change

Session Moderator: **Marlene Walk**, *U. of Freiburg*

PNP: **Organizational Change in the Nonprofit Context – A Systematic Review of the Literature**

Author: **Marlene Walk**, *U. of Freiburg*
Author: **Lindsay Cart-Turner**, *IUPUI*
Author: **Emily Peterson**, *IUPUI*
Author: **Abigail Klippel**, *IUPUI*

Organizational change is not new for nonprofits, however, the external environment and increasing volatility impact nonprofits now even more so than in the past. This systematic literature review takes stock of the landscape of organizational change research in the nonprofit context. Focusing on research published in leading peer-reviewed journals in nonprofit and civil society studies, this study provides a comprehensive overview of the field capturing how organizations plan for or react to environmental changes in either incremental or strategic ways. Findings indicate that most of the work is done in the context of human services organizations with a heavy focus on large-scale strategic changes. Based on the identified gaps in the literature, this article discusses implications for future research.

PNP: **The Use of Paradox Theory in Public Administration: A Systematic Literature Review**

Author: **Marta Ingaggiati**, *U. degli Studi di Milano*
Author: **Giovanni Barbato**, *U. degli Studi di Milano*
Author: **Renato Ruffini**, *U. Statale di Milano*
Author: **Marco Guerci**, *U. degli Studi di Milano*

Public Administration (PA) managers and employees deal every day with competing but equally valid demands from multiple and heterogeneous stakeholders. Paradox theory provides, in this sense, a powerful analytical lens as it offers an approach to accommodate and find synergies between competing interests simultaneously despite their contradictions and interdependency. This article aims to systematically review the application of paradox theory in PA research, adopting the replicable and transparent PRISMA methodology, for unravelling and critically interpreting whether and how this theory has been applied, according to both the explanatory potential of this framework and the specificities of the PA context. In this regard, the findings show that extant literature is under-exploiting the paradox theory framework's potentialities, as (i) paradox theory appears to be only partially applied, and (ii) its applications seem to conceive PA as a 'normal' organization, underrepresenting its unique peculiarities. The findings present relevant implications for PA scholars and practitioners and PA educators.

PNP: **Trust as a Concept of Struggle in Public Administration**

Author: **Christian Wittrock**, *Work Research Institute Arbeidsforskningsinstituttet AFI*
Author: **Karl Iver Slartmann**, *Oslo Business School, OsloMet*
Author: **Åge Johnsen**, *Oslo Business School, OsloMet*

A High level of trust is promoted as the "Scandinavian gold," and reforms with trust-based management are sweeping the Scandinavian countries, proposed as a new paradigm of leadership. Trust-based management draws on ideas of co-creation, bottom-up approaches, and the explicit recognition of the skills and knowledge of front-line workers, as well as results-orientation and de-bureaucratization. We examine the discourse on trust-based management in newspapers during the period 2010 to 2020. We analyze trust as a concept of movement and a concept of struggle, and show which co-concepts, counter-concepts and conceptual change occur in the discourse. We propose that conceptual change and theorized co- and counter-concepts form part of a collective co-creation process in the discursive space where the interpretation of trust-based management is negotiated by groups of actors. This negotiation is driven by a struggle to define the rightful interpretation of the term. We show that politicians, managers, and employees have interpretations peculiar to these groups, just as there are clear differences between the right and the left in the political landscape. We show that the largest group of counter-concepts affects the label used, so that the term "control" becomes included in the signifier to become "trust-based control and leadership."

Development and Evaluation of Measures

Session Moderator: **KULDEEP SINGH**, *JAIN (Deemed to be U.) Bangalore*

RM: **Recognition to Unpaid Domestic and Social Welfare Activities through Indexing Mechanism**

Author: **KULDEEP SINGH**, *JAIN (Deemed to be U.) Bangalore*
Author: **Jitendra Yadav**, *ICFAI Business School, IFHE, Hyderabad*

This study focuses on proposing a new scheme for paying recognition and reward to unpaid domestic work and various other forms of unpaid volunteering activities related to social welfare work. The present study is divided into two parts; in part one, a Social Contribution Index (SCI) was constructed to quantify contributions made by individuals toward unpaid domestic and social welfare work. The SCI index is based on the Alkire and Foster methodology and is composed of 25 indicators corresponding to 5 main dimensions. In part two, a model is constructed to reinforce current Corporate Social Responsibility (CSR) as a means of rewarding unpaid domestic work and various other unpaid volunteering social welfare activities.

RM: **One Scale Fits All? Meta-analyzing Psychometric Properties of Measuring Entrepreneurial Orientation**

Author: **Thomas Niemand**, *TU Clausthal*
Author: **Fabian Eggers**, *Menlo College*

As a core concept of entrepreneurship research, entrepreneurial orientation (EO) captures companies' entrepreneurial activities and behaviors. Spanning over more than four decades of research, the concept and its dimensions have been deeply investigated. However, no meta-analysis has examined the psychometric properties of EO (reliability, convergent validity, discriminant validity, predictive validity) so far. This is particularly important given the popularity of EO in general and its most prominent measurement scale (Miller, 1983; Covin & Slevin, 1989) in particular. Hence, it is unknown under which circumstances this scale performs better or worse. Using 40 samples from 26 studies that capture over 12,000 responses, the present meta-analysis thus aims to fill this void by systematically investigating the psychometric properties of this scale and exploring multiple moderators. Combining the strength of meta-analysis with structural equation modelling, this study reveals in three steps that all properties are highly contextual. Based on these findings, we discuss consequences for scale development and point at further investigations needed to understand EO measurement.

RM: **Measurement Equivalence in Dyadic Research: Implications of Differential Item Functioning**

Author: **Huanxin Liu**, *Binghamton U.-State U. of New York*
Author: **Jayoung Kim**, *Binghamton U.-State U. of New York*
Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*
Author: **Francis J. Yammarino**, *Binghamton U.-State U. of New York*
Author: **Minyoung Cheong**, *Kyung Hee U.*

Dyadic research investigates the dynamics of one-to-one interactions and contributes to understanding organizational functioning and effectiveness. A dyad has three central characteristics: two entities, mutual interdependence, and a shared relationship. With the call for alignment among theory, measurement, and analysis, collecting data from both sides of a dyad has become essential to investigate dyadic phenomena. Adding to this research inquiry, we highlight the importance of measurement equivalence of dyadic measures. Dyadic measures aim at capturing the shared reality between dyadic members and usually originate from the individual-level ratings, which presumes—but never tests—that no perception differences exist between two parties of a dyad. Moreover, dissimilarities of dyadic members (e.g., position or demographic differences) can also cause biases in interpreting survey items. As such, it is essential to note that items from the same scale can be perceived in a different conceptual manner between two parties of a dyad. Taken together, drawing on item response theory (IRT), this article advances measurement equivalence of dyadic measures by using differential item functioning (DIF) analysis. We use LMX-7, a dyadic measure for leader-member exchange (LMX) quality, from 242 leader-follower dyads, to demonstrate how to conduct DIF analysis on the dyadic measures between leaders and followers. Implications and limitations of DIF analysis are discussed.

RM: **The Development of an Unobtrusive Measure of Humility**

Author: **Elizabeth Klock**, *U. of Connecticut*
Author: **Madeline Sullivan**, *U. of Connecticut - Storrs*

Individual and leader virtues have been gaining recent attention in organizational research. Humility has been identified as an essential virtue for individuals and teams to possess. However, how humility is defined and measured is largely debated and scholars agree there is a need to capture the construct of humility more unobtrusively. We use derive and develop a generic humility dictionary and use computer-aided-text analysis (CATA) to measure humility to score a modern-day Rorschach writing task. We sample 60 full-time, English-speaking individuals and score these transcripts using traditional scale measurement, hand coding, and CATA techniques. Then, using these scored transcripts, we evaluate the convergent validities between each of the measurement techniques. Last, we conclude with both theoretical and practical implications of our analyses and provide directions for future research.

Critical and Non-Western Philosophical Perspectives on SAP

Session Moderator: **Leonhard Dobusch**, *U. of Innsbruck*

SAP: **“Not on Us but With Us”: How Open Strategy may be Advanced by Indigenous Approaches to Strategizing**

Author: **Jesse Pirini**, *Victoria U. of Wellington*
Author: **Stephen Cummings**, *Victoria U. of Wellington*
Author: **Rebecca Bednarek**, *Victoria Management School*

Increasing interest in the practice of ‘Open Strategy’ is seen to mirror a gradual evolution in the Western world whereby strategy development processes have opened as they have been professionalized and guided by commonly available frameworks. Just two generations ago history books taught that indigenous Maori’s ‘courage was not matched by a strategic sense’. This history has been rewritten and there is a re-appreciation of indigenous knowledge as a means of thinking differently about current existential challenges. We explore how taking indigenous approaches seriously may encourage revolutionary thinking about Open Strategy. Within the practices of creating a regional Maori economic development strategy we identify three revolutions: 1. Commons Based Production that not only changes the content of strategy, but the frameworks used, the ends toward which a strategy aims, and what strategy is; 2. A conception of Crowd-Based Decision Making that incorporates generations not present, the land, social ties, and mythology; and 3. An expanded understanding of Collective Buy-in and Action looking beyond conventional organizational boundaries to communities-at-large. We explore such radical opening of strategizing in relation to the notion from within the open strategy literature that to open some aspects of strategy others aspects must be closed.

SAP: **No Strategy Without Humans: Examining the Role of Humanness in Strategy Making**

Author: **Sari Laari-Salmela**, *U. of Oulu Business School*
Author: **Tuure Haarjärvi**, *U. of Oulu Business School*

In this paper, we examine the role of humanness in strategy making. Studies on open strategy, strategy discourse, and stakeholder engagement have partly touched on questions of humanness: what is the role of autonomy and equality in the context of strategy. However, the focus of these studies has been on the underlying tensions and questions of power and domination rather than on humanness as such. The hard core underlying also our understanding of morality and responsibility remains unaddressed: what it is to be human in the context of strategy making, and how our understanding of strategy making is related to our understanding of humanness? In this study, our aim is to shed light on these questions by examining humanness as the property of practice. Through a conceptualization of humanness in strategy making, drawing on Theodore Schatzki’s practice theory, we show how the prevailing view of strategy making is related to the understanding of humanness. .

SAP: **Zooming in on the Bantu Paradox Perspective: Evidence from Meru Philosophical Traditions**

Author: **Margaret Koli**, *WHU Otto Beisheim School of Management*

This paper responds to calls in paradox studies to engage with paradox perspectives beyond the Eastern and Western perspective. Specifically, this paper extends research by adopting an Afro-centric view of paradox. To date, the literature has had little engagement with this view, focusing only on the Ubuntu philosophical principles of the Zulu, one of over 300 Bantu ethnic groups. We explore the paradox perspectives of other Bantu philosophical traditions, closely examining the nature of paradoxes and how they are understood in the philosophical traditions of the Meru people of Kenya, mobilizing the principles of Ndugu (kinship), Giteo or Gitiio (meaning respect) and Gucokia njara (reciprocity). With a paradox lens, we explain these principles’ common underlying traits, unique principles, and how they develop our understanding of contradiction, persistence, and interdependence in this context. We find that in this cultural context, there is acceptance and embracing of paradoxes due to an understanding of the persistent nature of paradox, which leads to an expectation of recurrence over time. This expectation is reinforced by the experience of time as circular, yet entangled in the moment with the past, present, and future. Simultaneously, understanding of the interdependence of paradoxical elements and response to these elements is shaped by relationships and kinship ties, which leads to a more holistic response over time. Hence, the Bantu paradox perspective offers a different way to view the nature of paradox based on how persistence and interdependence are understood. More broadly, by examining how underexplored Bantu communities engage with paradoxes based on their philosophical traditions, this paper contributes to how scholars might extend paradoxes theory based on how paradoxes are understood beyond widely studied organizational contexts.

Strategizing: Emotions, Attention, and Cognition

Session Moderator: **Kathrin Sele**, *Aalto U. School of Business*

SAP: **Creating Order Where There is None: The Reconciliation of Fragmented Attention Structures**

Author: **Christoph Brielmaier**, *Otto-Friedrich U. Bamberg*

In this paper, we advance the the attention-based-view of the firm by challenging a key assumption of attention structures. The very concept of attention structure implies that actors' attention is coherently channelized towards the realization of organizational objectives and indeed, (most) ABV-based studies have treated attention structures as 'homogenous force'. Based on extant literature, we argue that this understanding is too simplistic, and attention structures may also be fragmented, pulling actors' attention in different directions. Drawing on a framing perspective, we explore the concept of fragmented attention structures and its implications for organizational actors. We show that attention structures may indeed be fragmented. Further, we reveal that organizational actors apply certain framing practices to overcome the fragmentation of attention structures and accomplish attention to a particular decision. We define this as attention crafting. Our analysis suggests that attention crafting is based on two categories of framing practices; individual-oriented framing practices shaping the value of a decision for the individual, and organizational-oriented framing practices, shaping the legitimacy of a decision within the organization. It is through these framing practices that actors actively compensate for the lack of guidance by attention structures. We describe the broader theoretical implications of these arguments for the ABV.

SAP: **An Entrepreneurship-as-Practice Perspective on Family Business Successors**

Author: **Bingbing Ge**, *Lancaster U. Management School*
Author: **Ellie Hamilton**, *Lancaster U.*
Author: **Kajsa Haag**, *Jonkoping International Business School*

Following recent calls to develop the Entrepreneurship-as-Practice perspective, we adopt a practice-based approach to family business to understand processes of next-generation engagement involving multiple individuals over long periods in the family life. Drawing on a culinary family business's published cookbooks theorized as 'discursive artefacts', we examine how next generations become successors through enactment of family business practices. This study contributes to family business research on intragenerational interaction and offers new insights into practice theory-building on the emergent Entrepreneurship-as-Practice perspective. Our findings suggest that family business practices – for example, cooking as an everyday practice embedded in family lives - have three dimensions – socializing, bridging, and leading – that contribute to understanding the development of the next generation as successors.

SAP: **Effect Scenario Use on the Detection of Weak Signals of Shifts in Organizational Environments**

Author: **Shardul Phadnis**, *Asia School of Business*

Scenario planning is widely used as a strategy process to help organizations prepare for unpredictable shifts in their environments. The process, arguably, influences managerial perception and interpretation of environmental changes. However, objective evidence of such influence is limited. Using a behavioral experiment, this study finds support for scenario planning's effectiveness in detecting weak signals of important changes in the organizational environment. Countervailing this positive detection benefit, the study also suggests that the strategy process may not be as effective for the negative dismissal benefit or ruling out irrelevant developments.

SAP: **Fear and Fearing in Strategy Work—Financial Industry Strategists Faced with Digital Disruption**

Author: **Pasi Sajasalo**, *U. of Jyväskylä*
Author: **Dinesh Poudel**, *U. of Jyväskylä*
Author: **Tommi Auvinen**, *senior lecturer*

Fear is a ubiquitous emotion that motivates strategy work and has implications for practice, yet we know little about this important emotion because strategy literature has rarely studied it. To understand how fear emerges in strategy work and how it affects strategists and other organizational members in the process of strategizing, we studied a large financial organization facing the threat of digital disruption. We analyzed seven years of annual reports and media content to track the evolution of the threat landscape the organization faced, and to identify which issues the organization's top management conceived as anxiety-evoking and fearful. We also interviewed members of the organization at all levels over three years to identify how the subjective process of fearing in strategy work, internal to the organization, unfolded in the discursive organizational reality. We found that fear is a highly contagious emotion that infects organizational members and influences their decision-making—much more than the strategy literature would suggest. We also found that organizational narration fueled by emotional expressions is the mechanism through which fearing narration manifested and spread rapidly through the entire organization to affect strategizing. We argue that the negative emotion of fear has far-broader implications for industry and practice than previously acknowledged because fear/fearing can be an important driver for strategy-related decision-making. The current emphasis on "positive" emotions in strategy literature may restrict the contribution this literature can make, and by broadening the range of emotions studied in strategy work, researchers' understanding of strategy-related decision-making will more closely reflect practice.

Comparative Corruption

Session Moderator: **Mahdi Forghani Bajestani**, *Alabama State U.*

SIM: **Digitalization of Economies and Corruption**

Author: **Mahdi Forghani Bajestani**, *Alabama State U.*
Author: **Shaomin Li**, *Old Dominion U.*
Author: **Run Tian**, *Old Dominion U.*

Digital technologies are often perceived to be uniformly positive tools for anti-corruption purposes creating more transparency and making governments more accountable. However, the evidence is scarce and inconsistent. This study offers new insights based on a more nuanced, context-dependent perspective to solve the puzzle. We distinguish between rule-based and non-rule-based countries as different governance environments and suggest that the context determines how digitalization plays out. While digital tools contribute to the fight against bribery in rule-based economies, they facilitate corruptive practices in non-rule-based countries. A panel data analysis on 72 countries over a 9-year period from 2012 to 2020 supports our arguments and confirms the context-specific nature of digital transformation and its discrepant implications for different societies.

SIM: **Hanging Together: The Persistence of Misconduct Groups in the Chicago Police Department**

Author: **Sarah Gordon**, *U. of Michigan, Ann Arbor*

This paper investigates the effect of social cohesion and structural inequality on the persistence of misconduct groups. Building from nascent work that considers misconduct as a coordinated phenomenon among multiple actors, I theorize that misconduct groups attempt to maximize internal cooperation and evade interference from outsiders while carrying out their misconduct activities. I examine how social cohesion and structural inequality influence these conflicting goals and hypothesize that they each have inverted curvilinear effects on group survival in that they initially support group coordination – thus supporting survival – but eventually exacerbate internal and external risks – thus undermining survival. First, I expect that social cohesion promotes strong internal unity but eventually risks outsider interference. Similarly, I expect that structural inequality establishes clear hierarchical efficiency but eventually risks internal member disengagement. I test my hypotheses using longitudinal data from 1991 to 2015 in the Chicago Police Department and locate 2,695 unique misconduct communities. I find that structural inequality does indeed exert a curvilinear effect on group survival. However, contrary to my expectations, I find that social cohesion bolsters group survival, thus suggesting that the coordination and loyalty benefits yielded from social cohesiveness may outweigh any risks of outsider detection. Together, my findings reveal a "sweet spot" of misconduct group structure and suggest important nuances regarding the persistence of organized misconduct over time.

SIM: **Political Culture, Resources, and Corruption: Why Louisiana Is Not New Hampshire**

Author: **Marc S Mentzer**, *U. of Saskatchewan*

The connection between political culture and public sector corruption was explored, using the typology developed by the political scientist Daniel Elazar. Similarly, the "resource curse" concept was examined to assess its linkage to public sector corruption. Among the 50 states of the United States, support was found for the association between political culture and public sector corruption. On the other hand, the effort to demonstrate empirical support for the resource curse among the states was not successful.

SIM: **Residual Corruption in the Chinese Civil Service: Towards an Ecosystem Theory**

Author: **Adina Dudau**, *Adam Smith Business School, U. of Glasgow*
Author: **Stelios C. Zyglidopoulos**, *Sprott School of Business, Carleton U.*
Author: **Wei Yang**, *U. of Glasgow*
Author: **Yanduo Li**, *School of Public Policy and management Tsinghua U.*

Our understanding of corrupt behavior and of corruption perpetuation at organizational and societal levels is fairly stable and consensual, largely due to normative approaches taken around it in both research and practice. Arguably, knowledge has reached a critical point where we ought to consider more nuanced facets of corruption , to enable future fecundity in this area. One way forward is examining rich contextual data to extract strikingly different perspectives on corruption. Our focus is the Chinese civil service: a highly guarded context with a distinct cultural and political identity. Specific concepts such as Guanxi, Confucianism and political capitalism can afford us an insight into China's unique political arena (Li-Chia 2021), revealing new perspectives on corruption. Our interview data from 31 high-level Chinese civil servants suggests that individual corruption with which individuals engage to fit in, rather than move ahead, of their collective is seen to contribute to a type of corruption we call 'residual corruption' which confers some equilibrium in a corruption ecosystem where there are drivers for corruption, but also breaks, checks and balances. These findings challenge our current understanding of corruption normalization which suggests uncontrollable growth in the absence of external control.

Gender, Empowerment, and Moral Capacity

Session Moderator: **Wenpei You**, *Indiana U.- Lilly Family School of Philanthropy*

SIM: **Mechanisms of Women's Empowerment: A Perspective of Power Relations**

Author: **Wenpei You**, *Indiana U.- Lilly Family School of Philanthropy*

The core question of women's empowerment is fundamentally about changing power relations. Too often, empowerment has been seen as a technical question to achieve economic advancement, instead of a systemic process of removing habituated unequal power relations. Drawing upon qualitative data from Grameen Bank China (GBC), this paper identify three mechanisms through which traditional gendered hierarchical power relations are shifted to an equal and shared one: relational justice, self-governance, and repetitive praxis. Relational justice is constructed both inside and outside of herself. It plays a critical role in transforming the original hierarchical power relations into an equal one, which is achieved by changing women's interaction model with others and the way they see themselves. Self- governance requires women to govern the 5-member group by themselves, through which women not only improve their power to achieve goals that they have a reason to value, but also begin to realize that there can be power without dominance, instead, they share the power with each other. The third mechanism of praxis matters a lot for women because regular practice and experience work to reinforce the newly-built sense of power by forming a habit of thinking independently and working collaboratively.

SIM: **Entrepreneurship as Emancipation? The Body Work and Journeys of the Hijra Entrepreneurs**

Author: **Enrico Fontana**, *Cranfield School of Management*
Author: **Sanne Frandsen**, *Lund U., Shool of Economics and Management*
Author: **Mette Morsing**, *professor*

In this article we investigate transgender entrepreneurs' body work - e.g., the fashioning of the flesh and aesthetic appearance to overcome challenges and advance in professional settings - and how it could possibly enable or constrain their emancipation. We mobilize multiple sources of qualitative data collected between 2019 and 2022 from hijra entrepreneurs, e.g., 'third gender' persons of South Asian origin who are stigmatized due to their nonconforming gender identity. The evidence indicates that the hijra entrepreneurs understand emancipation as feeling respected by their customers as well as becoming transgender, an identity to which they attribute distinct meanings. We outline that the hijra entrepreneurs embark on four different journeys where they shape and use their body in successful and unsuccessful ways to accomplish emancipation. Our study contributes to conversations in the entrepreneurship literature on emancipation and to organization studies, shedding light on the relevance of body work for transgender entrepreneurs who face discrimination and exclusion.

SIM: **Organizing Precarity: Hustling in Ghana's Informal Waste Management Sector**

Author: **Samuel Bonsu**, *GIMPA*
Author: **Diego Alfonso Vazquez**, *Portsmouth Business School*
Author: **Natalia Yakovleva**, *Kedge Business School*

The precarity of labour has drawn significant interest in the sociology of work literature over the past decade or so. Many of the studies bemoan the trend towards unstable and uncertain work, while overlooking the fact that the majority of people around the world have never experienced the stability of labour that has facilitated this movement towards precarity. In fact, many in the Global South have known nothing but the conditions defined as precarious in contemporary Western society. Drawing on experiences of informal waste pickers in Ghana, this paper places precarity within the concept of hustle to demonstrate how precarity is operationalized by marginalized women and young migrants from Ghana's north to its capital, Accra. We call for a rethinking of the current approach to reading precarity to consider that it may actually be a conscious means to overcome organized labour.

SIM: **Eu Meto a Colher Sim! Rethinking Organization's Response to Gender Violence in the Workplace**

Author: **Luciana Lucena De Lima**, *U. Ramon Llull, ESADE Business School*
Author: **Maria Jose Parada**, *U. Ramon Llull, ESADE Business School*
Author: **Allan Fernando Discua Cruz**, *Lancaster U. Management School*

Business leaders are increasingly asked to act morally to help to ameliorate persistent global inequalities and injustices. However, this is not an easy task especially if moral dilemmas such as gender-based violence emerge in the workplace. In this study, we review a real-life case of a family owner, from a multibillion family business in Brazil, who faced a difficult moral challenge in the workplace when an employee was killed by her intimate partner. Based on the moral conation theory, this study shows how a business leader can think and act morally to respond to societal challenges such as violence against women and girls. We examine how moral conation (i.e., moral ownership, efficacy, and courage) enhance a business leader's moral cognition to process a moral challenge from recognition to action. We expand a theoretical framework by showing that component moral capacities of business leaders can generate responsibility and will to take moral action, particularly in family firms whose fundamental business orientations include strong moral and ethical values developed and maintained through generations.

Ethical or Unethical Pro-Organizational Behavior

Session Moderator: **Silvia Velmer**, *IESE Business School*

SIM: **Leveraging Ethical Claims for Nonethical Purposes**

Author: **Silvia Velmer**, *IESE Business School*
Author: **Tommaso Ramus**, *ESSEC Business School*
Author: **Antonino Vaccaro**, *IESE Business School*

International standards set voluntary shared rules of the game in order to strike harmonization among market players and to ensure product reliability. As to say, international standards are a guarantee for consumers relatively to the safety of a given good and represent a “soft” system of regulation among competitors. However, empirical data has shown that standards can manifest certain drawbacks due to their “loose” nature. This research has the objective of showing how players leverage strategically on institutional voids of voluntary standards in order to influence market and competitive dynamics. This work relies on an in-depth qualitative investigation of a major voluntary standard-related product reliability case affecting the sunscreen industry. The research sheds light on how grey areas generate novel competitive dynamics which simultaneously affect and are affected by multiple stakeholders (e.g., businesses, medical doctors, academic institutions and European regulatory bodies). The present work shows how players leverage on standards’ “grey areas” and develop ad hoc ethical claims in order to pursue unethical objectives both on the level of competition (e.g., undermining competitors’ reputation) and regulation (e.g., the creation of market niches through the ban of specific substances). Thus, players use ethical claims to actively influence the competitive and, more broadly speaking, the market environment.

SIM: **Unethical Pro-Organizational Behavior: A Multilevel Study of Employees’ Unethical Learning Behavior**

Author: **Saleem Azhar**, *Xi'an Jiaotong U.*
Author: **Zhe Zhang**, *Xi'an Jiaotong U.*
Author: **Aditya Simha**, *U. of Wisconsin, Whitewater*

This study examines the relationships between unethical pro-organizational behavior (UPB), employee unethical learning behavior, and team unethical climate. We draw on a principle learning perspective of social learning theory and reciprocal determinism concept of social cognitive theory. Our multilevel mediation model proposes that the indirect relationship between leader UPB and team level unethical climate is sequentially transmitted through the employees’ moral disengagement and employees’ self-interested unethical behavior. We used a multilevel structural equation model to empirically support this model on dyadic data obtained from 165 leaders and 330 subordinate employees. Results suggest that employees process and learn unethical behavioral principles from leader UPB and engage in self-interested unethical behavior such that it develops team level unethical climate ultimately. We discuss theoretical and practical implications of these findings.

SIM: **Institutionalization of Unethical Pro-Organizational Behavior – A Process Model**

Author: **Vivek Mishra**, *Indian Institute of Management, Lucknow*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*

We propose a conceptual model to showcase how, after the initial occurrence of unethical pro-organizational behavior (UPB), the responses of different organizational actors will lead to the informal acceptance and institutionalization of UPB. Organizational actors would support or oppose UPB act as per their preference between loyalty and honesty. The proposed model illustrates that loyalty-inclined individuals would support UPB. Using the notion of social projection, we argue that supporters would have a perception of being in the majority owing to false consensus and consequently actively voice their support. On the contrary, honesty-inclined individuals would oppose UPB. Individuals opposing UPB would feel like being in the minority due to Uniqueness bias and prefer to keep silent. As a result, the dominating presence of support for UPB in the organizational discourse arena would suggest a collective acceptance of UPB. This first episode of collective acceptance of UPB serves as the guiding reference for the upcoming UPB instances. The absence of negative consequences for perpetrators would become shared knowledge in the organizational memory and organizational actors would perceive UPB as acceptable behavior. Therefore, leading to the institutionalization of the UPB at the organizational level. The proposed work positions itself in the dearth of scholarly investigation in post-UPB literature. It offers a process model showcasing how the organizational actors’ individual preferences affect their responses to UPB, which becomes instrumental in collectively establishing the normativeness of UPB.

SIM: **The Curvilinear Relationship between Moral Identity and Unethical Pro-Organizational Behavior**

Author: **Vivek Mishra**, *Indian Institute of Management, Lucknow*
Author: **Varun Sharma**, *Indian Institute of Management Indore*

We propose that the relationship between the employee’s moral identity (MI) and unethical behavior might sometimes differ from linearly negative, given certain contextual variations such as unethical pro-organizational behavior (UPB). The pro-organizational motivation of UPB would appeal to individuals’ morality to perform unethical behavior for their organization. Herein, we hypothesize a curvilinear relationship between MI and UPB. Further, using the social identity perspective, we investigate a moderation effect of organizational identification (OI). Data were collected from 316 executives in Study 1 and 185 executives in Study 2. Our results affirmed an inverted U-shaped association of MI and UPB with an OI moderation such that an increase in OI augmented the UPB tendency for low MI individuals while inhibiting the UPB tendency for high MI individuals. Theoretical and practical implications of the study are discussed.

Risk and Corporate Social (Ir)Responsibility

Session Moderator: **Rong Zeng**, *U. of Manitoba*

SIM: **Buffering or Backfiring? A Meta-analysis of the Effects of CS(i)R on Firm Risk**

Author: **Rong Zeng**, *U. of Manitoba*
Author: **Won Yong Oh**, *U. of Nevada Las Vegas*

This study examines how a firm's engagement in corporate social responsibility (CSR) and irresponsibility (CSIR) influence its risk by meta-analyzing 144 empirical studies. We test how CSR and CSIR affect firm risk differently, given that firms often engage in CSR and CSIR simultaneously. Our findings indicate that CSR decreases firm risk (risk-mitigation effect), whereas CSIR increases firm risk (risk-generation effect). Furthermore, we found that there is a nuanced asymmetrical effect of CSR and CSIR on firm risk. CSR's risk-mitigating effects are greater when there is a high level of CSIR, but CSIR's risk-generating effect does not vary significantly depending on the level of CSR. Our results also show that these relationships differ according to the dimension of CSR and CSIR (i.e., environmental, social, and governance) as well as the type of firm risk (i.e., market, financial, and operational). Our study sheds additional light on the literature by responding to a longstanding call for better understanding the effects of CSR and CSIR on various firm-level risks.

SIM: **Risk Perceptions in the Semiconductor Industry**

Author: **LouAnn Conner**, *Kedge Business School*
Author: **Ralf Barkemeyer**, *Kedge Business School*

Facing an increasingly complex and volatile business environment, companies may find it difficult to effectively monitor and manage risk given the institutional contexts they are embedded in. Corporate boards provide critical guidance on the main risks a company is exposed to and, hence, should correct for this distortion. Like the company itself, however, corporate directors are embedded in networks that shape their perceptions and behaviors. Isomorphic pressures arising from these institutions may distort risk perceptions of corporate boards and shift their focus from the most pertinent risks to more generally accepted risks. In this study, we extend the national business systems (NBS) perspective to the level of risk perceptions of corporate board directors, in order to explore how risk evaluations of board directors are shaped by the institutional contexts in which their companies are embedded in. We find that even though a number of risk types are found to be almost uniformly prioritized across the semiconductor company samples, a significant share of risk evaluations emerges as context-specific. Divergent risk identification and prioritization can be mapped along geographic and cultural boundaries, most notably with environmental risk, societal risk and operational risk. Our findings highlight isomorphism in risk evaluations as a hitherto undetected risk on its own. It follows that when it comes to board composition, geographical diversity can be a means to improve risk identification and, ultimately, increase the effectiveness of corporate risk governance.

SIM: **The Effectiveness of CSR Committees' Characteristics and CSR Contracting**

Author: **Etienne Develay**, *Nottingham Business School, Nottingham Trent U.*
Author: **Yan Wang**, *Nottingham Business School, NTU*
Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*

We rely on the stakeholder-agency theory to examine whether the effectiveness of CSR committees influences the initiative of CSR contracting, which consists of tying ESG performance measures to executive compensation contracts. Using a sample of 1,641 observations from 575 U.S. companies over 2015 to 2019, we measure the effectiveness of CSR committees in function of their structural characteristics. We find that an effective independence of CSR committees, proxied by a larger proportion of independent directors and an independent chairperson enhances the likelihood of CSR contracting. Furthermore, we report that an effective structure for CSR committees, captured through a composite score including size, directors' independence, chairperson's independence, and meeting frequency, is positively associated with CSR contracting. Overall, our results show that an effective CSR committee improves the controllability of CSR contracting through better monitoring and consideration of all stakeholders' interests. This study has important implications for practitioners to build more effective CSR committees based on their structural characteristics and for regulators to provide better guidance on their structures and practices.

SIM: **Corporations As Arenas Of Responsibility And Wrongdoing: A Multi-Level View**

Author: **Gregory Jackson**, *Freie U. Berlin*
Author: **Julia Bartosch**, *Radboud U. Nijmegen*
Author: **Jana Costas**, *European Uni Viadrina, Frankfurt (Oder)*

We examine the relationship of corporate irresponsibility and responsibility across multiple levels of analysis. While corporate responsibility and irresponsibility were often considered to be opposites or separate phenomenon, recent literature has problematized the dynamic relationship between them. Corporate responsibility may be both a response to past irresponsibility, but may also enable new forms of irresponsibility. In this paper, we explore these dynamic tensions from a Polanyian perspective of embedding and disembedded capitalism. We examine corporate wrongdoing in relation to corporate responsibility movements at different levels of analysis and showing its interdependence and limitations in addressing core sources of corporate irresponsibility. With this, we contribute a perspective to better understand the ambivalences related to corporate responsibility

Stakeholders and Social Issues in Acquisitions, Alliances, and Joint Ventures

Session Moderator: **Qing Dai**, *Nottingham U. Business School China*

SIM: **The Effect of Corporate Social Responsibility on Joint Venture Termination**

Author: **Qing Dai**, *Nottingham U. Business School China*
Author: **Liang Wang**, *U. of New Brunswick*

Premature termination of a JV is one of the most dramatic events in its life cycle. Building on the institutional theory, this study argues that corporate social responsibility of a partner can mitigate the risk that a JV terminates by helping it acquire legitimacy. The legitimization effect of partner CSR is likely to be more pronounced for a JV that is young or operates in a related industry with the partner. Furthermore, if the partner is state-owned or controls less ownership in the JV, its CSR would be less effective in legitimacy acquisition to the JV and in mitigating the termination hazards. Empirical evidence based on 256 JVs supports all the hypothesized relationships. These findings give rise to a notion that being responsible leads to being stable, thereby bridging the research stream on CSR and that on JV termination.

SIM: **Reimagining M&A Strategies to Prevent Deal Abandonment: Toward Incorporating Stakeholder Salience**

Author: **Rajesh Jain**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Ashutosh Kumar Sinha**, *Indian Institute of Management, Lucknow*
Author: **Priyatam Anurag**, *IIM Lucknow*

The abandonment of a significant proportion of publicly announced M&A deals entails significant negative consequences for managers of acquiring firms, implying that they need to shift their focus from a shareholder value-maximizing perspective to a broader stakeholder salience perspective. Drawing from the literature, we develop a conceptual framework and argue that managerial cognitive failure to incorporate stakeholder salience, i.e., also incorporating diverse stakeholder interests, may lead to the abandonment of a large number of M&A deals. We also posit that two factors may lead to low stakeholder salience: influence overconfidence (due to generalizing past successful M&A experience, the acquirer firm's influencing power, and managerial hubris) and high impact asymmetry (managerial failure to recognize that M&As may impact diverse stakeholders asymmetrically). We further contend that the impact of influence overconfidence is accentuated if managers underestimate the power of regulatory stakeholders in countries with institutional voids. Since M&As have broader economic, social, and political consequences for multiple stakeholders, rethinking M&A strategies by including a stakeholder perspective is a promising research area with implications for managers, researchers, and policymakers. Performing empirical analyses based on the proposed conceptual framework should be interesting and meaningful to advance M&A scholarship.

SIM: **Alliance as Interorganizational Governance: R&D Alliance and CSP in Biopharmaceutical Industry**

Author: **Yahan Hu**, *Fudan U. School of Management*
Author: **Qinqin Zheng**, *Fudan U.*

This study explores the effect of alliance partnership as a form of interorganizational governance that contributes to the improvement of CSR performance in the focal firms. While prior CSR literature mainly focuses on institutional governance and firm-level governance, recent studies begin to explore how meso-level inter-firm relationships shape focal firms' CSR practices. Taking biopharmaceutical firms as typical examples, we propose that the interorganizational governance effect relies on high interdependence and frequent interactions between firms and explore the influence of R&D alliance partnership. Specifically, we suggest a positive association between the number of R&D alliance partners and focal firms' technical CSP. The effect is contingent on focal firms' established intraorganitional governance and their needs to gain resource support and to reduce risk perception of partners. Using a sample of global biopharmaceutical firms from 2002 to 2020, we find solid support for our hypotheses. Our study contributes to the CSR literature by enriching the meso-level mechanisms of interorganizational governance generated by alliance partnership, which are especially prevailing and vital in biopharmaceutical industry.

SIM: **CSR Engagement and Acquisition Performance: Exploring the Impact of Target Attributes**

Author: **Sammy G. Muriithi**, *U. of Central Oklahoma*
Author: **Bruce Walters**, *Louisiana Tech U.*
Author: **Son Anh Le**, *Louisiana Tech U.*
Author: **Mark Kroll**, *U. of Texas Rio Grande Valley*

We extend the research on the relationship between acquirers' corporate social responsibility (CSR) and acquisition performance by focusing on both the acquirer and target. Utilizing a moderated mediation model, we argue that target quality mediates the relationship between acquirer CSR and acquisition performance and that this relationship is further moderated by target CSR. We propose that socially responsible firms can evaluate and close deals with high-quality targets by leveraging their superior stakeholder management capabilities and social evaluations. Contrary to expectations, we find a negative relationship between acquirer CSR and acquisition performance; and target quality does not appear to mediate the acquirer CSR-acquisition performance link. The findings supported our contention that target CSR positively moderates the relationship between acquirer CSR and acquisition outcomes. Thus, target firm CSR appears to be a key driver of acquisition performance.

Leveraging Compassion to Address Inequality at Work

Organizer: **Premilla D'Cruz**, *Indian Institute of Management, Ahmedabad*
Organizer: **Jason Kanov**, *Western Washington U.*
Panelist: **Ace Volkmann Simpson**, *Brunel Business School*
Panelist: **Ernesto Noronha**, *Indian Institute of Management, Ahmedabad*
Panelist: **Samantha Dodson**, *Sauder School of Business, U. of British Columbia*
Panelist: **Angela Pei Ju Chen**, *U. of Melbourne*
Panelist: **Reut Livne-Tarandach**, *Manhattan College*

Workplace compassion, an empathic behavioral response to suffering, is a means by which workplaces operate as caregiving systems and sources of social support, healing and health. Workplace inequalities, indicative of differences in status, power, resources and opportunities among people, arising due to social identities such as gender, race/ethnicity, age, class, religion, caste, sexual orientation, disability/chronic illness and so on and their intersectionalities as well as around workplace hierarchies, gives rise to forms of mistreatment ranging from incivility, discrimination, bullying and violence which can cause significant suffering. The juxtaposition of compassion and inequality opens avenues for better understanding and resolving challenges that trigger, define and emerge from workplace inequalities, cohering with and contributing to the contemporary quest for social responsibility, inclusion and ethics at work, thereby enabling employee dignity, well-being and thriving as well as organizational performance, success and flourishing. Compassion holds the promise of catalysing change and generating and sustaining workplace renewal, particularly in matters pertaining to workplace inequality which are associated as 'worlds of pain' (Rubin in DiTomaso & Parks-Yancy, 2014: 450). Recognizing that compassion at work undergirds a nurturing relational environment, strengthens interpersonal sensitivity and ties, and facilitates co-operation and collaboration among colleagues, this panel symposium examines the interface between workplace inequalities and workplace compassion. Panelists will draw on their own research and/or applied work to speak to the possibilities - and perhaps pitfalls - that a consideration of compassion affords in the attempt to address inequality and establish socially sustainable workplaces.

Does Employer Prosociality Reduce or Augment Wage Inequality?

Coordinator: **William Reuben Hurst**, *U. of Michigan, Ross School of Business*
Coordinator: **Mariana Oseguera**, *U. of Toronto, Rotman School of Management*
Participant: **Vanessa Burbano**, *Columbia Business School*
Participant: **Joel Adam Cobb**, *U. of Texas at Austin*
Participant: **Ray Fang**, *Boise State U.*
Participant: **Nathan Wilmers**, *Massachusetts Institute of Technology*

A growing body of research demonstrates that some workers are willing to accept lower wages from employers that engage in prosocial activity. This symposium brings together a range of scholars who are examining how variation across workers in this propensity to trade wages for prosociality may exacerbate or ameliorate wage inequality. On one hand, some work suggests that higher-earning workers (including those that are more educated and more productive) are more willing to give up wages for prosociality. From this perspective, employers will more successfully substitute prosociality for wages when recruiting relatively higher-earning workers and thus reduce income inequality. On the other hand, other work suggests that groups that already tend to earn less (including women and workers from lower social classes) may be more inclined to trade prosociality for wages. From this contrasting perspective, employers will more successfully trade prosociality for wages when recruiting relatively lower-earning workers and thus augment wage inequality. A fundamental question underpinning these emergent perspectives is whether and to what extent employers recognize and respond to variation in preferences for prosociality in terms of the wages they offer. This symposium will provide a venue for scholars at the forefront of these questions to share their research with the AOM community, benefit from audience and discussant comments, and chart avenues for future research.

Strategic Leadership

Session Moderator: **Carolin Krieweth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

STR: **TMT Heterogeneity and Strategic Learning: the Moderating Role of Receptiveness to Opposing Views**

Author: **Carolin Krieweth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*
Author: **Malte Brettel**, *RWTH Aachen U.*

Despite the well-recognized impact of a firms' strategic learning capability to enhance beneficial firm outcomes, studies on drivers and contexts that enable firms to develop such a capability remain scare. This study proposes that a ventures top management team (TMT) heterogeneity is positively associated with a firms' strategic learning capability. Results from 188 founders of new ventures indicate that the heterogenous perspectives, backgrounds and experiences of TMT members enhance a firms' strategic learning capability. This result contributes to and connects two distinct research streams, namely strategic learning and entrepreneurship literature by stressing the importance of team composition to enhance strategic learning in new ventures. Furthermore, this study demonstrates that the effect of TMT heterogeneity on strategic learning capability is moderated by the founders' receptiveness to opposing views (RTOV). This moderating effect suggests that the founders' openness towards opposing views, which are mirrored in the heterogenous perspectives of the TMT, strengthens the association between TMT heterogeneity and strategic learning capability. Since RTOV can be learned, practical and theoretical implications are drawn.

STR: **An Ecosystem View of Supplier Upgrading in Global Value Chains: Evidence from Taiwanese Suppliers**

Author: **Tsung-Yu Tsai**, *U. of Cambridge*
Author: **Florian Urmetzer**, *U. of Cambridge Department of Engineering*

This paper examines supplier upgrading strategies in global value chains (GVCs) by combining the business ecosystem and dynamic capabilities' perspectives. We draw upon seven Taiwanese subcontracting 'survivors' and examine the dynamic capabilities that enabled them to upgrade their business models under power asymmetries – and subsequently to sustain their competitive advantage. To this end, we identified nine ecosystem-associated dynamic capabilities from in-depth interviews with key management personnel. We also introduced a novel notion, managerial field-of-view, to illustrate how a firm's perceived opportunities could alter as its ecosystem roles change, resulting from business model upgrades. This paper contains rich insights for the GVC literature on supplier upgrading and latecomer survival strategies, as well as implications for business ecosystem studies.

STR: **Platform TMTs : A Communication Shift in New Organisational Forms**

Author: **Urszula Ayache**, *ESCP Business School*
Author: **Regis Coeurderoy**, *ESCP Business School*

We study the shifting grounds of Top Management Team communication between the traditional and the new organizational forms in the context of radical innovation. Academic research has shown the emergence of platform models in high-tech sectors. Platforms are particularly characterized by their emphasis on extensive interactions and much less on asset ownership than in traditional (pipeline) forms of organizing. Explaining the radical innovativeness of platforms can be well understood by studying their executives' communication. In this research, we show that platform leaders face a tension in the language style they use. On one hand, the platform model, organizationally based on interactions within ecosystems, allows leaders to develop a more inclusive and confident language style (clout) towards investors when communicating on innovation. On the other hand, the same platform model, whose boundaries remain elusive, leads executives to employ a less authentic style towards the same investors. These findings are based empirically on the analysis of 5869 NASDAQ executives' hearings with investors over the period 2015-2020, using natural language processing followed by a three-level regression model.

STR: **Leadership that is all in the Family Should Include all of the Family Business**

Author: **PJ Dillon**, *Duquesne U.*
Author: **Leslie Blake-Davis**, *UMass Amherst*
Author: **Eugene See**, *Coastal Carolina U.*
Author: **Mengjie Xu**, *U. of Massachusetts, Amherst*
Author: **Charles C. Manz**, *U. of Massachusetts, Amherst*

Family businesses typically incorporate hierarchical leadership reflecting the family power structure, posing challenges for successful innovation by limiting resource and knowledge sharing between familial and non-familial members. Shared leadership, supported by both empowering and self-leadership practices, helps overcome this challenge, leveraging familiness present in family businesses. Exploring the impact of shared leadership on innovation, familiness and social capital are proposed to improve innovation in the family business. Shared leadership is proposed as a key to unlocking the potential of familiness, enhancing bridging ties, contributing to resource and knowledge sharing between familial and non-familial members. Theoretical implication, future research directions and implications for managerial practice are presented.

Imitating or Being Distinctive?

Session Moderator: **Qiang Li**, *Peking U. HSBC Business School*

STR: **Shifting Motives to Imitate Prevalent Behavior**

Author: **Qiang Li**, *Peking U. HSBC Business School*
Author: **Bryan Kaiser Stroube**, *London Business School*
Author: **Bo Zhao**, *U. of Hong Kong*

Prevalent behavior is imitated. The predominant explanations for this phenomenon are that actors face performance imperatives and thus imitate others in hopes of making better choices, and that actors face social imperatives and thus imitate others to be like them. These explanations are traditionally addressed separately; in this paper, we suggest the possibility of within-setting shifts between them. We present evidence from two experiments (field and vignette), where providing information about both the prevalence of a behavior and its possible outcomes—versus information about prevalence only—led to different amounts and types of imitation. Results suggest that imitation results from actors inferring outcomes from prevalence information when outcome information was unavailable and from inferring legitimacy from the same prevalence when outcome information was provided.

STR: **The Role of Peers in Venture Investments - An Imitation Perspective on CVC Activities**

Author: **Frederik Fänder**, *Heinrich-Heine U. of Dusseldorf*
Author: **Verena Rieger**, *Heinrich-Heine U. of Dusseldorf*

This study examines whether corporates follow their peers' decision to invest corporate venture capital (CVC). We draw upon information-based herding theory to explain why CVC activities might be subject to herding and argue further that herding is fortified when corporates face substantial levels of market, technological or investment uncertainty. To empirically test our hypotheses, we construct a multi-source, multi-industry dataset of large U.S. corporates between 1993 and 2018. We measure herding by using a novel identification approach that grounds in social network theories and builds on the idea of partially overlapping peers. Our findings indicate that peer investments indeed influence a focal corporate's decision to invest CVC. Precisely, if average peer investments in our baseline models increase by 10%, a corporate's likelihood to invest CVC increases by 0.2% up to 4.4%. Against our expectation, we don't find a significant moderation effect for market uncertainty. In contrast, we argue and demonstrate that technological uncertainty positively moderates the baseline relationship. We find such positive effect also for investment uncertainty, for which our marginal effects analysis and plots show that with increasing CVC investment experience, herding becomes marginal and even disappears.

STR: **Processing Global Fads and Fashions: The Puzzle of Semi-Peripheral Upgrading**

Author: **Alexander Hoppe**, *Max Planck Institute for the Study of Societies*

The outsourcing of cultural or expressive work is believed to be extremely difficult. Still, a half dozen studies from Korea, India, Bangladesh, and Turkey have documented the outsourcing of apparel design. To understand how this is possible in terms of mechanisms and processes, I present ethnographic data primarily from two export-oriented, first-tier suppliers in India. Together these firms engage in design work for over 100 U.S. and European brands. Export-oriented designers collaborate with brands during buyer presentations to establish a mutual focus of attention and to create a shared mood. Suppliers respond to trend forecasts, anticipate buyer tastes, and share competitor information—all months ahead of impact—that facilitates global trend diffusion. There is a key role for emotions like boredom and excitement.

STR: **When Do Firms Provide Early Access? Evidence from Expanded Access in Oncology 1990-2020**

Author: **Sukhun Kang**, *U. of California Santa Barbara*
Author: **Sungyong Chang**, *London Business School*

While a growing number of firms provide early access to their innovative products before commercialization (i.e., before developing a full-blown product), we have a limited understanding of providing early access. We take an early step to explore when and why some firms are more likely to provide early access than others. On the one hand, early access could allow potential customers to learn about products before commercialization, speeding up the entry timing. On the other hand, products that are under the R&D process have more technological uncertainties than fully-developed products. We investigate three factors that can affect the balance between benefits from early entry and costs from greater uncertainties in the context of the oncology drug market 1990-2020. First, we argue that firms will be less likely to provide early access to a first-mover product than a latecomer product because a first-mover product tends to bear more uncertainties than a latecomer product. Second, we argue that firms will be more likely to provide early access to products if they receive a regulatory certification because receiving such certification eases uncertainties perceived by consumers. Lastly, we argue that entrepreneurial firms will be less likely to provide early access because they are more likely to lack the required resources for deploying early access. Our empirical analysis provides supporting evidence for our key arguments.

Corporate Political Activism

Session Moderator: **Angie Otteson Fairchild**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

STR: **Gender Inequality, Social Movement, and Company Actions: How Do Wall Street and Main Street React?**

Author: **Angie Otteson Fairchild**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Olga Hawn**, *U. of North Carolina, Chapel Hill*
Author: **Ruth V. Aguilera**, *Northeastern U.*
Author: **Anatoli Colicev**, *U. of Liverpool Management School*
Author: **Yakov Bart**, *Northeastern U.*

Companies face pressure from different stakeholders to address various environmental, social and governance issues. In their efforts to engage with these issues, they might pursue symbolic or substantive actions, either pre-emptively (proactive) or in response to specific targeted threats (reactive). Yet we know relatively little about how different stakeholders react to this repertoire of corporate actions. We ask this question in the context of gender inequality, an issue that has become increasingly salient for companies due to heightened societal attention culminating in the #MeToo movement. We analyze reactions to corporate actions among two stakeholder groups: "Wall Street" (investors) and "Main Street" (the general public). Our sample includes 886,000 company-day observations covering 442 companies between 2015 and 2020. We record 607 gender-related corporate actions across this sample. We find that while Wall Street does not react to any type of gender-related actions, Main Street punishes symbolic and reactive actions with reduced consumer perceptions of brand equity and declining social media valence. Their negative reaction is not evident before the #MeToo movement but is strong in its aftermath; moreover, the reduced consumer perception is moderated by negative social media. Our study shows that not all firm actions are created equal, and not all audiences value them equally, and highlights that it is important to delineate the different groups of stakeholders and their responses to different types of firm actions when making strategic decisions about how to act.

STR: **Corporate Social-Political Activism in Non-Western Context**

Author: **Kaixian Mao**, *Renmin U. of China*
Author: **Jiexin Zheng**, *HKUST Business School*
Author: **Lori Qingyuan Yue**, *Columbia Business School*

This paper extends the research of corporate social-political activism (SPA) from domestic controversies in the Western context to international controversies in an authoritarian context. We argue that endorsing the domestic government's policy standing in an international controversy is a way for firms in the authoritarian context to engage into corporate SPA. Doing so is both a political strategy for firms to build and main relationships with the government, and a market strategy to court domestic consumers. However, it also brings risks for firms that rely highly on overseas markets. But the upside of obtaining direct support from domestic shareholders and stakeholders can outweigh the downside of alienating foreign stakeholders, and consequently corporate SPA in international controversies can generate positive stock market returns. We exploit a natural experiment, the Chinese public firms' public endorsement of the Xinjiang cotton in March 2021, and find that Chinese firms with a higher percentage of private shares, receiving more government subsidies, and having domestic consumer brands are more likely to support Xinjiang cotton. But those with a higher percentage of overseas income are less likely to do so. Publicly endorsing Xinjiang cotton is associated with about 5% positive stock abnormal returns, and the positive effect lasts over 50 days.

STR: **Policing the World? Effect of U.S. Anti-Corruption Enforcement Actions on Non-Targeted Firms**

Author: **Si Cheng**, *ESSEC Business School*
Author: **Srividya Jandhyala**, *ESSEC Business School*

Firms regularly encounter pressure to engage in corrupt practices in their operations around the world. To deter such behavior, some countries adopted international anti-bribery conventions that monitor and penalize actions of home country firms in foreign markets. Focusing on the U.S. Foreign Corrupt Practices Act, we examine how U.S. enforcement actions against multinational firms operating in a given developing country influences how non-targeted (domestic) firms in that country assess their own bribing behavior. We contend non-targeted firms face negative spillover effects. To buffer against potential adverse consequences, they present more socially desirable responses following the enforcement action. We compare non-targeted firms' assessment of bribe prevalence shortly before versus after a U.S. anti-bribery enforcement action to obtain quasi-random variation in the extent to which non-targeted firms were exposed to the enforcement action. Our analysis of up to 9262 firms across 20 countries indicate non-targeted firms' responses are shaped by U.S. enforcement actions even when domestic firms are outside the jurisdiction of the regulation.

STR: **To Speak or Not To Speak? Corporate America and George Floyd**

Author: **Olga Hawn**, *U. of North Carolina, Chapel Hill*
Author: **Stephanie Mahin**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

Corporations and CEOs are increasingly expected to speak up and speak out on socially contentious issues. We examine investor and public reactions to corporate statements made in the aftermath of George Floyd's death. We conduct content analysis of these statements and assess which Fortune 500 companies issued the statements, how long it took to publish them and through which channel, what sentiment the statements contained, and ultimately, how investors and the public reacted to them. Results show significant variation in how companies responded to George Floyd's death and in how stakeholders reacted. Almost half of Fortune 500 issued statements and 99 made a pledge. Yet investors, on average, reacted negatively to these statements; and even more negatively if companies made a pledge. Surprisingly, they reacted more positively to statements with more positive and negative emotion. The public reaction on Twitter, on the other hand, resulted in more negative emotion and anger in response to tweets of companies with more conservative CEOs. The longer it took to issue the statement, the fewer replies and words in these replies the public used. Domestic firms generated more negative emotion and swearing in replies to their tweet. Other elements of tweets generated other public reactions. Our study sheds light on the trade-offs involved in organizational decision-making regarding social issues and the subsequent evaluations by different stakeholders.

Responding to Societal Grand Challenges

Session Moderator: **Dovev Lavie**, *Bocconi U.*

STR: **The Cooperative Economy: A Prosocial Alternative to Capitalism**

Author: **Dovev Lavie**, *Bocconi U.*

The caveats of contemporary capitalism are well acknowledged, but remedies fall short of reverting the concentration of wealth and economic inequality. This paper identifies the root cause in the design of capitalistic systems, which prioritize self-interested pursuit of profit and utility over societal values. A framework is introduced to explain how opportunistic behavior can be countervailed by prosocial behavior in a cooperative economy that follows a distinct institutional logic. This logic includes shifting focus to communities; instituting price subsidies, consumption limits, and earning caps; reinforcing quality and sustainability, fair competition, and respectful employment; rebalancing ownership; and fostering transparency. Using these principles, conditionally prosocial participants can enhance the welfare of others at a cost to themselves, which pays off emotionally and enhances psychological well-being. The transformation of economic exchange entails the social responsibility of all stakeholders in a community, including vendors, consumers, and employees, that would benefit from value redistribution.

STR: **Devising and Scaling Social Innovations—Exploring the Interplay of Strategy and Mission**

Author: **Esther Leibel**, *Boston U.*

Social and environmental challenges in our society offer opportunities for innovation. Having a sense of purpose may enhance both opportunity recognition and strategic alignment. However, aligning strategy and mission may be challenging when an organization's mission is pursued in pluralistic ways. How can mission-driven organizations manage pluralistic efforts while cohering to their mission? Using an inductive field study, I trace how Slow Money, an organization fostering sustainable local food systems by connecting food entrepreneurs with local investors, translated its mission into different local actions. I find that multiple local actions were recombined to create novel strategies curated and diffused by the central leadership. Rather than derail an organization's mission, I show how pluralistic local action fosters formation of strategies for social innovation.

STR: **Trade-offs and Complementarities in Multidimensional Company Purposes**

Author: **Jorge Tarzijan**, *Pontificia U. Católica de Chile*
Author: **Bryan W. Husted**, *Tecnologico de Monterrey*

The growing need to incorporate stakeholder groups in the company purpose has been discussed in the business and society, strategic management and corporate governance literatures for a long time. Highly influential organizations like the Business Roundtable and the Davos Manifesto of the World Economic Forum have conferred additional prominence to this concept by arguing in favor of including objectives beyond economic performance in the company purpose. In this article, we seek to add greater precision to the concept of a multidimensional corporate purpose by conceptualizing it with the use of iso-performance curves and production possibility frontiers. Our analysis facilitates the understanding of the complementarities and trade-offs that exist in multidimensional purposes and their impact on differentiation, imitation and industry structure. The article focuses on the need of managers to make clear-headed decisions coherent with the firm´s purpose and lays the groundwork for further theory development and empirical testing.

STR: **Greening the Future: Foresight, Imagination, Attention and Corporate Climate Change Strategies**

Author: **Stavros Vourloumis**, *Athens U. of Economics and Business*
Author: **Ioannis Thanos**, *Athens U. of Economics and Business*

Foresight is a widely known and discussed concept in the context of strategy-making, and more broadly in organizational and managerial affairs. Yet, it is rather underexplored – theoretically and empirically – in the strategy and management studies. Aspiring to better grasp how foresight aids firms in adopting choices that depart significantly from existing strategi repertoires, we examine how foresight affect the development of green (i.e., environmentally responsible) innovations, as a type of corporate response to climate change and to pressures for adaptation and mitigation. We leverage insights from cognitive and dynamic capabilities perspectives to propose that foresight is an important managerial capability that shifts the managerial attention towards future-looking – but possibly ambiguous at present – opportunities, which in turn prompts decision-makers to make strategic choices for embracing and developing green innovations. We also suggest that these effects are further strengthened by another crucial – and yet underexplored – collective managerial capability: the imagination of executives. Our empirical findings, from analyzing a unique panel dataset, provide support to our arguments and hypotheses, which we aspire that will pave the way for more systematic research on foresight and related concepts in strategy-making contexts. We also contribute empirically through developing two novel, language-based measures for foresight and imagination, aiming at making the two constructs more "visible" and usable for research purposes.

Complementors and Strategy

Session Moderator: **Shiva Agarwal**, *U. of Texas at Austin*

STR: **A Platform for Change? The Impact of Platform Core Component Innovations on Complementors' Actions**

Author: **Shiva Agarwal**, *U. of Texas at Austin*
Author: **Ram Ranganathan**, *U. of Texas at Austin*

We examine the consequences of ongoing innovations to a platform firm's core components, on the subsequent choices of its complementors. Our central thesis is that core innovations are a double-edged sword in ecosystems. While they boost value creation by enhancing recombination opportunities to generate novel complementarities, they also erode existing complementors' positions by enabling new entrants and imposing adaptation costs. Importantly, such tensions can trigger complementors to join competing platforms, thus blunting the platform's competitive differentiation. We demonstrate support for these mechanisms in the smartphone ecosystems, using a difference-in-differences design and novel iOS release notes data that reveal core component innovation information. Our findings provide a fresh evolutionary perspective on platforms and underscore the path-dependent pressures to co-innovation even in highly modular interorganizational contexts.

STR: **How Friends Become Foes: The Origins of Market Entry of Complementors in New Technology Generations**

Author: **Chang Liu**, *Bocconi U.*
Author: **Roberto Fontana**, *U. of Pavia & Bocconi U.*
Author: **Franco Malerba**, *Bocconi U.*

While previous management studies suggest that product complementarity may provide an important mechanism in firms' market entry behaviors, we still do not know whether this relationship may hold in industries characterized by discontinuous technological generations. In this study, we suggest that changes in technological generations are a critical source of misalignment among complementary firms by focusing on the entry decisions of complementary firms. Using a unique dataset drawn from the computer printer industry, we found that firms in a specific product complementary market, vis-à-vis a generic market, have a higher likelihood of market entry into the focal industry characterized by multiple discontinuous technological generations. More importantly, the empirical analyses suggest that acquiring recombinant capabilities facilitates market entry by allowing the firm to utilize the relevant knowledge associated with complementarity. In addition, we show evidence that entrepreneurial start-ups are quicker than diversifiers in new market entry, suggesting the importance of entrant types in market entry.

STR: **How Platform Integration Affects Knowledge Sharing among Incumbent Complementors**

Author: **Chengdi Fa**, *Amsterdam Business School, U. of Amsterdam*
Author: **Mohammad Taghi Ramezan Zadeh**, *Amsterdam Business School, U. of Amsterdam*
Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*

Research is burgeoning on how the platform's strategies influence the complementors' behavior. In this research, we provide a typology of platform integration and explicate how integrating two platforms—rather than integrating platform firms or integrating complementors—alters the complementors' knowledge-sharing. Building on resource dependence theory, we hypothesize about how complementors' incumbency attributions, i.e., position in vertical, homing strategy, and their incumbency time on the platform affects their knowledge sharing in the platform's online community after integration. We test our hypotheses using a rich data set on the integration of two Alibaba platforms: the largest Chinese wholesale platform, 1688.com, before and after integration with Taobao Deal, a fast-growing Chinese value-for-money consumer-to-manufacturer digital retail market. The empirical results support the hypotheses. Platform integration decreases knowledge sharing to a smaller extent among incumbent manufacturer complementors. However, platform integration decreases knowledge sharing to a larger extent among incumbent multihoming complementors. We also find that store age negatively moderates the relationship between platform integration and knowledge sharing. Through this research, we contribute to the literature on platform governance by clarifying platform integration, and how its impact on platform boundaries affects the dynamics of resource dependence and complementors' coopetitive behaviors.

STR: **Tradeoffs on Infrastructural-MSPs: How Coopetition Influences Innovation Efforts for Complementors?**

Author: **Huiyang Dai**, *School of Economics and Management Tsinghua U.*
Author: **Elton Li-Yi**, *U. of Wisconsin, Madison*

The improvement of platform functionalities has brought conversions to the traditional theory of coopetition. A framework of infrastructural multi-sided platforms (IMSP) is proposed to analyze the coopetition between complementors and the focal platform. For complementors on infrastructural multi-sided platforms, three cooperative benefits — connectivity, conformity and computation, and two competitive risks —single-homing and knowledge leaking come into being sequentially and motivate their innovation efforts on the infrastructural multi-sided platform. The results indicate that the cooperative benefits of connectivity, conformity, and computation on IMSP boost complementors' innovation efforts. Both connectivity and conformity are conducive to an increase in product refinements and expansions, while computation only promotes product refinements. Additionally, when complementors single home on the focal platform, the enhancement of innovation is weakened due to the competitive risk of opportunistic behavior by the focal platform. The findings provide implications for the literature on platform, coopetition, and innovation strategy based on infrastructure multi-sided platforms.

Organizational Culture and Change

Session Moderator: **Kramer Quist**, *Massachusetts Institute of Technology*

STR: **How Much Do CEOs Matter to Corporate Cultural Change? Evidence from Variance Decomposition (WITHDRAWN)**

Author: **Xina Li**, *INSEAD*

This study explores to what extent CEOs matter to corporate cultural change. We collect employee reviews to measure corporate culture and conduct a variance decomposition analysis to estimate how much CEOs explain the variance in cultural change compared to firms, industries, or years. The results suggest that CEOs matter to corporate cultural change, having a similar magnitude to industry effects but weaker than firm effects. Supplementing our analysis with an earnings calls-based measure of cultural change, we find that CEOs have a greater influence on cultural change among executives than at the broader employee level. Moreover, the influence of a CEO on corporate cultural change is stronger when the CEO is an outsider, when the predecessor CEO does not remain as board chair, and when the CEO serves as board chair. Our study contributes to the literatures on strategic leadership and corporate culture.

STR: **Complementing Diversity with Design: Cognitive Diversity, Organizational Structure, and Exploration**

Author: **Kramer Quist**, *Massachusetts Institute of Technology*

Cognitive diversity has long been thought to help organizations explore because employees with differing perspectives can collectively recognize more promising new ideas. However, cognitive diversity can also prevent an organization from reaching consensus about the quality of new ideas, leaving the organization stuck in gridlock. In this paper, I develop a mathematical model to analyze the effect of greater cognitive diversity on the organization's propensity to pursue exploratory ideas. I find that greater cognitive diversity leads hierarchical organizations to pursue exploratory ideas less often, and it leads flat organizations to pursue exploratory ideas more often. My results speak to how organizational structure can play a role in helping organizations harness cognitive diversity to become more exploratory. To empirically validate my model's primary predictions, I measure how exploratory a firm is using a dataset of 81 consumer- packaged-goods companies introducing over 5,600 products between 2010 and 2016; I measure (a form of) cognitive diversity using a dataset of 176,000 employee-generated, online reviews. The empirical results are largely consistent with those predicted by my model.

STR: **Caught in Culture? Patterns of Organizational Culture Change**

Author: **Patricia Wolf**, *U. of Southern Denmark, Odense, Denmark*
Author: **Pierre-Yves Kocher**, *Hochschule Luzern - Wirtschaft*
Author: **Kristina Vaarst Andersen**, *Technical U. of Denmark (DTU)*
Author: **Jessica Annalena Steppe**, *U. of Southern Denmark*

For organizations to stay competitive, organizational culture must constantly adapt to fit changes in the environment and organizational knowledge. Extant literature has analyzed how sudden events such as environmental jolts, threats or strategic cultural molding may change organizational culture, but the literature has neglected gradual, longitudinal changes to organizational culture. This paper presents an analysis of organizational culture change as a longitudinal organizational learning process. We use unique longitudinal interview data with 38 firms collected in 2006 and 2018 to analyze how the initial organizational culture and organizational learning change organization culture. Our findings show that organizations with different organizational cultures at the start of the studied period went through different organizational culture changes, while organizations with similar organizational cultures displayed similar organizational culture changes. This indicates that an organization's initial culture functions as a pattern for both learning and changes in organizational culture. Even when exposed to similar environmental development, organizations are so to speak caught in culture. Our findings contribute to the literature on both organizational learning and organizational culture with a much-needed integration of these to related perspectives on organizational knowledge.

STR: **The Influence of Middle Managers' Personality and Cultural Traits during Organizational Change**

Author: **Francisco Brahm**, *London Business School*
Author: **Shi Tang**, *City U. of Hong Kong*

Extant research has studied middle managers as a homogeneous group and focused on how external factors shape their influence on strategic change. We complement this work by highlighting the heterogeneity among middle managers and the internal locus of causation of their impact. We examine how two important sets of traits—personality traits and cultural traits—of middle managers matter in a context of organizational change. We exploit the reorganization of the salesforce of a large Chilean beverage company, where two decentralized, divisional salesforces with differing cultures—one "entrepreneurial" emphasizing autonomy and risk taking, the other "conservative" emphasizing tradition and control—were centralized into a single functional salesforce. This reorganization meant that new salespersons' teams were formed and thus, sales managers had new teams to supervise. The organizational change was challenging and relied importantly on middle managers for success. We show that i) the "openness to experience" of sales managers generates a positive impact on the salespersons' performance during the reorganization but only if accompanied by a "conscientiousness" personality-trait, ii) a sales manager that carries a "conservative" cultural trait into the new team—adopted in the "conservative" division before to the change—enhances the performance of salespersons but only if the newly formed team comes mostly from the "entrepreneurial" division, and iii) while the impact of personality traits remains constant over time, the impact of the manager's carried cultural trait fades away within a year.

Courts and Patent Litigation

Session Moderator: **Zhi Cao**, *U. of Arizona*

STR: **The Role of Judges' Political Ideology in Facilitating Patent Litigation Settlement**

Author: **Zhi Cao**, *U. of Arizona*
Author: **Andy El-Zayaty**, *Leavey School of Business, Santa Clara U.*

Patent litigation initiated by non-practicing entities (NPEs) is a threat to corporate innovation. One mechanism through which NPEs harm practicing firms is by pursuing settlement agreements in their litigation. Existing literature has focused on direct interactions between NPEs and practicing firms in settling patent litigation. However, it has often overlooked the role of judges, who are critical to settlement decisions and have their own set of interests and biases. This study examines the effects of judges' political ideology on litigation settlement. We hypothesize and find that, because liberal ideology puts less weight on being "pro-business" (e.g., protecting property rights) and more weight on ideas such as compromise, Democratic judges are more likely to promote settlement in NPE initiated cases than Republican judges.

STR: **Location Choice in Global Patent Litigation: Does the Landscape Matter?**

Author: **Shixiang Wang**, *Shanghai U. of Finance and Economics*
Author: **Byung Uk (Charlie) An**, *Washington U. in St. Louis, Olin Business School*
Author: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*

Firms asserting their patents globally face a dilemma: a legal verdict is binding only in the country of litigation, and yet litigating country by country is prohibitively expensive. Thus, firms have to be strategic in deciding where to sue. In this paper, we argue that litigation is not only to win a case, but to send a signal to global competitors. Whereas country characteristics affect signal strength, how far the signal can travel depends on the landscape: i.e., the relationships across countries. Our analyses on litigation cases in 50 countries over 13 years show that firms tend to concentrate litigation in few countries when the relevant markets historically share similar litigation outcomes, so signals from one country can potentially deter competition in others.

STR: **How Does Court Expertise Affect Court Targeting in Patent Litigation?**

Author: **Byung Uk (Charlie) An**, *Washington U. in St. Louis, Olin Business School*

A natural challenge that firms face when enforcing intellectual property rights at courts is the knowledge gap with the judiciary trained in law but not in cutting-edge technologies. Judges accumulate technological expertise mostly by reviewing actual cases. Unlike the immediate intuition, I argue that accessing the accumulated expertise of courts is not without costs. Firms need to deal with a) information revelation risk as discovery processes by experienced judges can further induce unwanted information disclosure and b) extensive research process since experienced courts tend to have a larger volume of precedents that can potentially affect litigation outcomes. By exploring patent litigation location choices during 2006~2016 in the US, I show that IT industry litigants are more reluctant to bring high stake patent cases to experienced courts and both IT and chemical/pharmaceutical litigants have to pay for substantial research costs. I provide further evidence by leveraging a plausibly exogenous policy shock that shifts the distribution of litigation cases.

Governance and Corporate Strategy

Session Moderator: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*

STR: **When do Firms Care to Share? An Examination of Resource Sharing Beyond Firm Boundaries**

Author: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*
Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

This paper uncovers the inducements for a firm to share a resource from its existing business with outsiders. Drawing on ideas about resource-based growth, we theorize that a firm's scale in a business influences its decision to share resources from that business. We predict that higher scale in a business will increase a firm's likelihood of sharing resources from that business with outsiders, and that scale has stronger effects on resource sharing when a firm's scope of business is higher and when it faces an exogenous increase in competitive difficulty in the business. While sharing beyond firm boundaries has been primarily viewed as a means to overcome resource deficiencies, the theoretical novelty of these arguments is that sharing can also be driven by a firm's resource abundance. We test our arguments by examining the decision of mobile network operators (MNOs) to share their networks with mobile virtual network operators (MVNOs), using a longitudinal sample of 448 mobile operators in 85 countries in a twenty-one year period from 2000–2020. The study extends theory about the origins of resource sharing beyond firm boundaries.

STR: **Plural Governance as a Safeguard: How Historical Choices Determine Transactional Risks (WITHDRAWN)**

Author: **Norbert Bach**, *Ilmenau U. of Technology*
Author: **Peter Galvin**, *Edith Cowan U.*

This paper analyzes plural governance, namely concurrent sourcing (upstream) and dual distribution (downstream), as safeguard mechanisms against opportunistic behavior. We show that depending on their initial or historical governance mode choice firms bear inherently different risks of opportunistic behavior by different actors. Based on the analysis of these different transaction environments in upstream and downstream transactions we suggest a two-stage model of governance mode choice based on traditional transaction cost economics concepts. Our conceptual model suggests that plural governance reduces information asymmetry for initial pure mode choices both make and buy, and thereby mitigates the risks of cheating suppliers (concurrent sourcing) and shirking employees (dual distribution). By surfacing fundamental differences in upstream vs. downstream transaction environments and explaining the safeguarding function of the respective plural governance modes our model also helps to resolve some supposedly contradictory empirical findings in the plural governance forms literature.

STR: **Implications of Capability Spillovers in Vertical Linkages for Heterogeneity in Firm Capabilities**

Author: **Gaurav G B**, *Doctoral Student at Indian Institute of Management Bangalore*
Author: **Prateek Raj**, *Indian Institute of Management, Bangalore*
Author: **Sai Krishna Yayavaram**, *Indian Institute of Management, Bangalore*

Classical microeconomic theory suggests that heterogeneity in capabilities between firms should decrease over time due to the exit of less capable firms. However, emerging economies are characterized by the presence of many less capable firms along with a select few high-capability firms. We argue that one source of this persistence in heterogeneity is the variation in capability spillovers received by firms through their vertical linkages. Using firm-level data of Indian firms for the period 1989-2019, we estimate firm capabilities and identify vertical linkages at the industry level using Input-Output tables. We find that all firms receive capability spillovers from highly capable upstream firms. Further, this upstream capability spillover is significant for standalone domestic firms and firms in less competitive industries. We also find that the capability spillovers from vertical linkages are higher for highly capable firms, especially when they are standalone domestic firms or operate in less competitive industries. Only highly capable firms receive spillovers from capable downstream firms. Overall, these findings demonstrate that capability spillovers from vertical linkages are significant and heterogeneous, providing a rationale for the presence of firm-level heterogeneity in capabilities.

STR: **Extending RDT and TCE to Address the Unique Resource-dependence Relationships in B2G Contexts**

Author: **Sanghyun Park**, *Korea Institute for Defense Analyses*
Author: **Paul L. Drnevich**, *U. of Alabama*
Author: **Jeffrey A. Martin**, *U. of Alabama, Tuscaloosa*
Author: **David R. King**, *Florida State U.*

Business-to-Government (B2G) contexts, such as defense procurement, offer a unique context in which to extend resource dependence theory (RDT) and transaction cost economics (TCE) theory. Among the B2G transactions, defense procurement by governments from defense firms creates somewhat unique propositions that are largely unaccounted for within existing theoretical approaches such as RDT and TCE employed in B2B and B2C research. In this context, government procurement faces diverse problems, such as cost and schedule overruns and both delivery quantity and product quality issues. Despite extensive practitioner research and government policies attempting to address such problems, they persist. To attempt to address these gaps, we review and extend resource RDT and TCE, following basic informed research, to develop propositions to better explain the unique resource dependence relationships between business and government. We conclude this study with a discussion of suggested theoretical and practical implications and a framework of considerations for future research.

Digital and Sustainable Strategies

Session Moderator: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*

STR: **Is State Participation a Blessing or a Curse for Green Innovation?**

Author: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*
Author: **Xu Jiang**, *Xi'an Jiaotong U.*
Author: **Ramiz Ur Rehman**, *Faculty of Business, Sohar U., Oman*
Author: **Adnan Ali**, *Doctoral Student at Xi'an Jiaotong U., Xi'an, Shaanxi, China*

The study develops a framework to examine how and under what conditions state participation affects firms' green innovation. Results from publicly listed firms in China show an inverted U-shaped relationship between state participation and green innovation, so that state participation in the form of minority ownership is most effective for firms seeking to conduct green innovation. This curvilinear relationship is negatively moderated by firm age and firm size, such that the inverted U-shape flattens when a firm is older and larger. The relationship is positively moderated by subnational institutional development such that the inverted U-shape steepens when institutional development is higher. These findings provide useful implications for resource dependence theory in explaining whether state participation serves as a facilitator of or a burden on firms' green innovation.

STR: **Industry 4.0 Strategy: State-of-the-art and Future Research Directions**

Author: **Giulio Ferrigno**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Author: **Andrea Piccaluga**, *Scuola Superiore Sant'Anna*

The adoption of Industry 4.0 has become a "new holy grail" in many industries. Correspondingly, management research on this topic has increased over recent years. Nonetheless, the extraordinary proliferation of studies on Industry 4.0 has also led to a fragmentation of ideas, results, and managerial suggestions. This circumstance calls for summarizing the state of the art in this stream of studies. By leveraging the extant literature, we build a conceptual framework of the literature linking the antecedents, management, and consequences of the Industry 4.0 strategy. We also consider the role of context - at micro, meso, and macro levels – in shaping the Industry 4.0 strategy. In light of our conceptual framework, we identify some critical research holes in previous literature and discern the main implications for business practices.

STR: **Environmental Aims and Resource Allocation Strategy for a More Sustainable Fashion Industry**

Author: **Ester Martinez-Ros**, *U. Carlos III de Madrid*
Author: **Ramon Rico**, *U. Carlos III de Madrid*

The textile sector is the second most polluting industry due to excessive CO2 emissions and water use (European Commission, 2019). Our research analyzes whether the inclusion of environmental goals in the formulation of strategies enhances the relationship between the allocation of innovative resources and innovation performance (i.e., new products launched) in the textile sector. We tested our model in a sample of Spanish textile companies, and found that allocating skilled Human Resources, physical assets and marketing actions increases firms' innovation performance. These relationships are positively moderated by firms' inclusion of environmental aims in their strategy, such as raw materials or energy reductions, lowering environmental impact or environmental standards compliance. Firms neglecting such environmental aims in their strategy report lower innovation performance levels.

STR: **Employee Protection and Innovation in SMEs: The Moderating Effect of Regional Digitalization**

Author: **Qian Xu**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Wanming Chen**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Beilei Dang**, *Nanjing Vocational College of Information Technology*
Author: **Yuling Shi**, *Nanjing U. of Aeronautics and Astronautics*

Prior research suggests the increasingly important role of employees in identifying and generating innovative opportunities in the digital economy, yet our understanding of the effect of employee protection on innovation of small and medium-sized enterprises (SMEs) remains limited. We integrate the resource-based view and institutional perspective to examine how employee protection affects SMEs innovation in emerging economies. The analysis of a national survey of Chinese private firms shows that employee protection has an inverted U-shaped effect on SMEs innovation. Furthermore, this curvilinear relationship is positively moderated by regional digitalization such that the inverted U-shaped relationship is intensified when firms are in regions with higher level of digitalization. Overall, this study contributes to the literature on SMEs innovation by examining how SMEs innovation is shaped by employee protection in the digital age. We also contribute to the employee protection literature by investigating its complicated effect on SMEs innovation in emerging economies.

Digital Business Models and Strategies

Session Moderator: **Ke Rong**, *Tsinghua U.*

STR: **Performance Feedback and Firms' Business Model Digitalization: The Role of Board Experience**

Author: **Yao Chen**, *U. of Science and Technology of China*
Author: **Meng Chen**, *U. of Science and Technology of China*
Author: **Hefu Liu**, *U. of Science and Technology of China*
Author: **Xinlin Tang**, *Florida State U.*

Business model (BM) digitalization is instrumental in shaping firms' competitive positions. However, many firms are hesitant to conduct BM digitalization because of the efforts needed and the high risks associated with such digitalization. Thus, there is a dire need to identify factors that motivate firms for BM digitalization. Drawing on the behavioral theory of the firms, we investigate how (in)consistency between historical and social performance feedback affects BM digitalization. Furthermore, boards experience with BM digitalization (BBMD) from other firms where they hold positions (i.e., interlock firms) serves as an indispensable conduit for BM digitalization practices, playing an increasingly important role in decision-making on BM digitalization. Thus, we examine the contingency role of BBMD in the relationship between (in)consistent performance feedback and BM digitalization. Empirical analyses of 2,373 Chinese-listed firms from 2008 to 2019 show that firms decrease (increase) BM digitalization as a response to consistently positive (negative) performance feedback. Firms decrease (increase) BM digitalization for responding to inconsistent performance feedback where performance is further above (below) historical aspiration but below (above) social aspiration. BBMD amplifies the negative effects of positive social performance feedback combined with both negative and positive historical performance feedback.

STR: **The Digital-Enabled Sharing Economy:The Role of Matching Technology**

Author: **Ke Rong**, *Tsinghua U.*
Author: **Huiyi Litan**, *Tsinghua U.*
Author: **Di Zhou**, *School of Economics & Management, Tongji U.*

Much of the success in the sharing economy surrounds digital platforms and other large-scale mediating technologies, especially matching technology. Our study analyzes how renters' sensitivity affects the sharing platforms' matching strategy in both B2C and C2C scenarios and investigates how this affects other parties, such as producers, consumers, and social welfare. We construct game-theoretic models and show that in the C2C scenario when the matching level is exogenous and renters' sensitivity is low, the platform profit and social welfare have an inverted U-shape relationship with the matching level. Notably, the platform-optimal matching level is less than the social-optimal level. And when renters' sensitivity is high, improving matching can achieve a Pareto improvement for the platform, the producer, the consumers, and the whole society due to the spillover effect. However, when the matching level is endogenous, the encouraging effect of renters' sensitivity on encouraging the platform to improve matching begins to emerge. And we show that renters' sensitivity can achieve a "win-win-win" situation for consumers, ?rms, and the social planner when it is too low or too high. Similarly, in the B2C scenario, the platform profit and social welfare have an inverted U-shape relationship with the matching level. However, we show a counter-intuitive result that the rental price increases as marginal product cost decreases, due to the renter effect. We believe that the renter effect is widely applied in sharing situations where the platform charge higher for lower-cost products, such as sharing power bank. Our study provides practical implications for sharing business operations and governments.

STR: **Disentangling the Digital Strategy Landscape: An Integrative Literature Review on Digital Business Models**

Author: **Marco Balzano**, *Ca' Foscari U. of Venice*
Author: **Andrea Ciacci**, *U. of Genoa*
Author: **Giacomo Marzi**, *IMT School for Advanced Studies Lucca*

Author: **Marina Dabic**, *U. of Zagreb*

Digital business models (DBMs) have emerged as a critical area of inquiry in response to the rapidly evolving business environment driven by digital technologies. To provide a detailed understanding of DBMs from a strategy perspective, this study conducts an integrative literature review, analyzing 147 articles published in top-tier management journals. Utilizing a theoretical lens grounded in strategic agility (emergent vs. problem-solving) and strategic orientation to the ecosystem (responding vs. shaping), we develop a 2x2 matrix that delineates four distinct strategic archetypes: Seekers, Game-Changers, Endurers, and Challengers. Seekers represent firms that proactively search for novel digital solutions and adopt a problem-solving approach to respond to ecosystem pressures. Game- Changers, on the other hand, strive to shape ecosystem dynamics through innovative DBMs grounded in problem-solving postures. Endurers demonstrate resilience by adopting an emergent approach to digital reconfiguration in response to ecosystem forces, while Challengers seek to enhance their competitive positioning by leveraging emergent paradigms in the digital realm. By synthesizing the existing literature and offering an archetype-based framework, this study elucidates the underlying strategic configurations of DBMs, thus contributing to a more nuanced understanding of digital strategies. Furthermore, we identify research gaps and propose future research directions that explore shifting boundary conditions, value reconfiguration, and strategically driven initiatives for competitive advantage in the context of digital business models.

STR: **Platform Leapfrogging in Turbulent Environments**

Author: **Angel Sevil**, *U. del Desarrollo*
Author: **M. Florencia Gabrielli**, -
Author: **Manuel Willington**, -
Author: **Maria Jose Murcia**, *CESIS Austral & IAE Business School*

This research explores how turbulent environments affect industry evolution and competitive dynamics in platform markets, breaking through the high entry barriers in place and allowing competitors with a superior price-performance proposition to improve their market performance and even leapfrog the market leader. In doing so, it extends traditional perspectives on platform competition that emphasize challenges associated with complementors, ecosystem governance, technology performance, and innovation, including an often forgotten but omnipresent and relevant factor: the environment surrounding firms and industries. Our study informs platform literature and management practice in turbulent environments and is supported by empirical research on the smartphone operating system industry.

Over the last two decades, there has been a growing academic and practitioner interest in the approaches entrepreneurs take to identify, evaluate, and pursue novel business opportunities. A focal tenet of this research is how entrepreneurs learn (e.g., by doing, by thinking, or by some combination of both) and what the effects of different approaches to learning are on entrepreneurial outcomes. For this symposium, we seek to continue a deep examination of entrepreneurial learning and decision making by bringing together four working papers that examine the use of learning by doing and thinking in empirical contexts and/or develop theoretical frameworks to understand the strengths, weaknesses, and trade-offs among different approaches to entrepreneurial action and learning. The papers in this presenter symposium use field experiments in developed or developing economy contexts, large scale case study analysis, or synthesis across recent theoretical advances in entrepreneurial learning.

Experience is a pervasive concept used in a variety of fields as well as laymen’s conversations. In the management field, the meaning has not only relied on individuals’ work experience but also grown beyond individuals to produce constructs such as teams’ shared experience and organizational-level experience. The richness in the use of experience has led to a variety of meanings, values, and applications for a concept that many scholars and readers might take for granted. Because experience work has spanned research traditions and levels of analysis, scholarly studies can simultaneously build upon one another, exist beside each other, or contradict each other. Therefore, the purpose of this panel symposium is to engage accomplished scholars who have significantly advanced the fields’ view of individual, shared, and/or organizational experience through their research to reflect on their use of experience in research as well as on the assumptions that underlie their research at the individual and/or organizational levels. This reflection and the subsequent moderated discussion aim to uncover the variation in measurement, value, and implications of experience in individuals, teams, and organizations and to better our collective understanding of both the diversity of experience research and its value overall for management scholars. Finally, the panelists will suggest avenues for future research and engage with the audience about promising areas for their work.

Few would disagree with the fact that the way organizations collectively anticipate, build, evaluate, and are affected by the future(s) should be at the front and center of management and strategy scholars' agenda. However, as a recently emerged topic in management and strategy scholarship despite its rich tradition in the field of futures studies, organizational foresight is currently conceptualized in various ways in our field, and if some of these conceptualizations are complementary to each other's, others may seem mutually antithetical. It is in view of this current state of organizational foresight scholarship in management that this symposium will feature papers from authors at the forefront of the various theoretical conceptualizations of organizational foresight to enable dialogue, encourage synthesis, and incentivize new theories on this important yet underinvestigated topic in management and strategy research.

Corporate Purpose and Strategy: A Microfoundational Perspective

Discussant: **Libby Leann Weber**, *U. of California, Irvine*
Discussant: **Sarah Kaplan**, *U. of Toronto*

This symposium aims to showcase novel insights of the growing body of research that examines corporate purpose through a microfoundational, stakeholder-driven lens. We selected papers that explore the role of a shared corporate purpose that goes beyond short-term profit generation on stakeholder resource provision. The first paper outlines the theoretical foundations of the relationship between a corporate purpose, stakeholder outcomes and firm performance, and the rest of the papers provide empirical examinations of how employee resource provision is impacted by what employees know about the purpose of their organization.

Cooperatives and Collective Action

Organizer: **Hyoju Jeong**, *U. of Minnesota*
Organizer: **Camille DOCHE**, *HEC Paris*
Discussant: **Jiao Luo**, *U. of Minnesota*
Discussant: **Stefano Brusoni**, *ETH Zürich*
Presenter: **Farzam Boroomand**, *U. of Minnesota*
Presenter: **Marc Legrand**, *HEC Paris*
Presenter: **Octavio Barros**, *Insper Institute of Education and Research*
Presenter: **Camille DOCHE**, *HEC Paris*

This symposium is built on four complementary papers that explore collective action and cooperatives, both theoretically and empirically with a heterogeneity in terms of methodologies. Two papers innovatively use simulations to theoretically analyze collective action as a mechanism per se and successful collective action situations, while the two other papers use cutting-edge empirical approaches in diverse contexts (the banking industry and the agricultural sector) to examine differences between cooperatives – as an exemplar of collective action – and their competitors. Altogether, the four studies contribute to deepen our knowledge on collective action, its characteristics for successful collaborations, and on cooperatives, as a paragon of collective action and an organizational form which can be an effective organizational structure under certain conditions. Last, the papers of this symposium are of the utmost relevance for strategy practitioners as they provide implementable strategies and policies to sustain collective action.

Technology, Policy and Society Track: The University-Startup-Innovation Landscape

Session Moderator: **Malin Fiedler**, *Technische U. München*

TIM: **The Impact of Institutional and Individual Determinants on Academic Patenting**

Author: **Malin Fiedler**, *Technische U. München*
Author: **Isabell Melanie Welpe**, *Technical U. of Munich*
Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*

Patenting, although a common and effective vehicle for knowledge diffusion, varies substantially between academic institutions. The present study investigates determinants and interactions of institutional- and individual-inventor-level variables that lead to varying patenting activity and success at academic institutions. On an individual level, an inventor's degree centrality (i.e., the number of connections) and betweenness centrality (i.e., influence of a person in the network) are known to influence innovative activity (e.g., patenting). Drawing from research on organizational creativity which has shown that both, institutional- and individual-level factors interact with each other and should not be viewed in isolation, we predict that an institution's reputation and resources strengthen the relation between degree and betweenness centrality of inventors and patenting success. Based on a sample of 148 academic institutions with 58,061 individual inventors, applying single- and multi-level analyses, and testing for cross-level interactions, we derive three main insights: First, a higher budget of an institution and a higher number of connections (degree centrality) of inventors help increase patenting activity. Second, a higher betweenness centrality of an institution's inventors in the network increases patenting success. Third, higher institution reputation and budget strengthen the relation between betweenness centrality and patenting success.

TIM: **The Role of Institutional Relationships for Academic Spin-offs**

Author: **Francesco Fasano**, *U. of Calabria*
Author: **Maurizio La Rocca**, *U. of Calabria*
Author: **Mariacarmela Passarelli**, *Management Department*
Author: **Alfio Cariola**, *U. of Calabria*

This paper studies an important driver of academic spin-offs' success, i.e., the institutional banking context in which they operate. We find that the development of the banking institutions does not affect academic spin-offs' performance at the time of incubation, when the main source of funding comes from public contributions. Conversely, there is a significant positive and growing influence of banking institutions when academic spin-offs enter the market and become independent of public resources. The findings suggest that governments and banking institutions should develop new financial instruments to support academic spin-offs, especially during the early stages of their life cycle. Academic spin-offs should consider bank debt as a complementary source of funding that allows them to encounter the vital growth opportunities emerging during the incubation phase.

TIM: **Do Universities Lead the Patenting Race for AI-based Inventions Tackling Grand Challenges?**

Author: **Quentin Plantec**, *TBS Education*
Author: **Clément Sternberger**, *World Intellectual Property Organization (WIPO)*
Author: **Mei Yun Lai**, *U. of Bremen, Institute of Project Management and Innovation*
Author: **Michael Rennings**, *Ruhr U. Bochum*

University patenting plays a crucial role in technology development. Trajtenberg, Henderson and Jaffe (1997)'s seminal work on a US-based dataset showed that university patents imply significantly more spillovers than industry patents due to a greater reliance on science and, as shown by other literature, a significantly greater knowledge disclosure. Surprisingly, only few studies dig into the differences between university and corporate patenting. In this paper, we therefore focus on the role of University patenting in the case of emerging technologies using the example of green-AI technologies – inventions that include artificial intelligence to solve some of the Grand Challenges of the 21st century. It is an interesting case as universities are encouraged to contribute more to such technologies and companies have invested heavily in fundamental AI research. Based on an analysis of 11,502 patent families, we show that overall, Trajtenberg et al. (1997)'s findings hold in the case of this emerging field. However, we demonstrate that for these initial results to hold, the technology field needs to reach sufficient maturity and university contributions are much less in the actual state of technology emergence (i.e., within the first 15 years). We also show that the role of universities is contingent on geographical factors: it only holds for Chinese university patenting activities. Our results have substantial implications for theory and practices, notably regarding the conditions for policymakers to encourage universities to patent in an emerging phase of technology development as well as for the specific case of green-AI technologies that contribute to tackling Grand Challenges.

TIM: **University Research, Technological Commercialization, and Location**

Author: **Daniel Fehder**, *USC Marshall School of Business*
Author: **Naomi Hausman**, -
Author: **Yael Hochberg**, *Rice U.*
Author: **Daniel Lee**, *U. of Delaware*

While universities are key sites for the development of new and innovative ideas, translating basic research into commercial products and companies is not so straightforward. The frequency and extent of commercialization of basic research findings varies significantly across universities. In this paper, we examine how commercialization of university-based research depends on the region in which the university sits. We merge data from the Association of University Technology Managers on licensing, spinoffs, and revenues with features local to the university, such as industry mix and availability of entrepreneurial finance. We find that being in a city significantly increases university commercialization outcomes, even after accounting for a robust slate of controls.

TIM: **Gender Diversity in Academic Entrepreneurship: Social Impact Motives and the NSF I-Corps Program**

Author: **April Burrage**, *U. of Massachusetts Amherst*
Author: **Nilajana Dasgupta**, *U. of Massachusetts, Amherst*
Author: **Ina Ganguli**, *U. of Massachusetts, Amherst*

We draw on the National Science Foundation's Innovation Corps (NSF I-Corps) program, which provides experiential entrepreneurship training to academic researchers, to understand whether there are gender differences in the social impact and commercial motives for entrepreneurship. We first use survey data from one I-Corps university site to show that women researchers had significantly higher social entrepreneurial intentions compared to commercial entrepreneurial intentions, and these social entrepreneurial intentions were higher than men's. We then extend and generalize this finding using national I-Corps data by analyzing publicly available project summaries of 1,267 NSF grants funded by the I-Corps program from 2012-2019. We find that women PIs proposed I-Corps projects that were more likely to be framed in terms of social impact compared to men, while projects for all PIs were more commercially-framed. We next estimate the causal impact of social impact vs. commercial motives by experimentally manipulating the recruitment messages inviting researchers to participate in the I-Corps training program. We find that women researchers were more likely to show interest in a social impact version of a message rather than a commercial version, while men were equally likely to show interest in both types of messages. Taken together, our results show that women are more interested in pursuing commercialization and entrepreneurship activities when they are framed as tackling important societal problems. Low-cost interventions that emphasize the social impact value of entrepreneurial opportunities appear to be a promising avenue to bolster gender diversity in participation in these activities.

Learning and Innovation Track: Organizational Learning & Strategic Renewal

Session Moderator: **Jose-Mauricio Galli Geleilate**, *UMass Lowell*

TIM: **The Nouveau Incumbents: Commercial Success and its Impact on Exploration**

Author: **Kaushik Bagchi**, *U. Ramon Llull, ESADE Business School*
Author: **Ivanka Visnjic**, *ESADE Business School*

While much attention has been devoted to how established organizations and entrepreneurial organizations explore, less attention has been devoted to how organizational exploration evolves for organizations that enjoy commercial success and are, therefore, able to manage the transition toward becoming established organizations – what we term the nouveau incumbents. Given the leading role that nouveau incumbents play in multiple industries, how and whether they continue to explore is of obvious practical importance. Does their exploration suffer as they manage the growing pains of building complementary assets? Do they become more risk averse and eschew novel exploration? We argue, instead, that nouveau incumbents enjoy the best of both worlds where they can leverage their entrepreneurial research capabilities and combine them with their new market orientation to engage in more novel exploration than previously. Our arguments suggest that this novel exploration is underpinned by a newfound appetite for untapped markets. Utilizing 30 years of drug discovery data, we conduct an event study of 38 biotech companies and examine how their exploration patterns evolve after they first enjoy commercial success. We find qualified support for our arguments.

TIM: **Innovation Drift: An Experiential Learning Perspective**

Author: **Jose-Mauricio Galli Geleilate**, *UMass Lowell*
Author: **Denise R. Dunlap**, *UMass Lowell*

Innovation drift occurs when organizations lack the ability to terminate failing innovation projects effectively. On the other hand, firms may accelerate termination decision-making when able to learn from their own experience and build new capabilities. While we have evidence supporting this phenomenon from qualitative investigations, there is no systematic quantitative evidence combining these assumptions. Drawing from a longitudinal sample of 6,018 innovation projects, we test hypotheses on the role of experiential learning from failures and successes on termination timing. Our results indicate that learning from failures can accelerate termination, but only when these failures are interpreted as non-threatening to the organization. When failures occur at high rates, the organizational reactions are conducive to innovation drift. In the case of experiences with success, we corroborate the literature showing that overconfidence emerges when organizations have success, leading to innovation drift. However, firms able to sustain high levels of innovation success will also build organizational capabilities that enhance efficiency in termination decisions.

TIM: **How and Why Firms Differ in Their Technological Paths: Evidence from the IC Foundry**

Author: **Shih-Chang Hung**, *National Tsing Hua U.*
Author: **PoYang Cheng**, *National Tsing Hua U., Hsinchu, Taiwan*
Author: **Jiun-Yan Lai**, *Shanghai U.*

Through a comparative case study of two semiconductor foundry firms, UMC and TSMC, we aim to examine how and why firms differ in their technological paths. The technological path can be described as an evolutionary, organization-level process of innovation, which is characterized by both the path-dependent and path-creating natures that build on each other. We draw on a topic modeling approach to distinguish between path dependence and path creation, and to discern into their different effects on the structuring of technological path inside a firm. Two different strategies were identified in the two firms – technology blending (in UMC) and technology deepening (in TSMC), serving as generative mechanisms for spawning a diversity in sources of technological advance that characterize distinctive technological paths, accounting for path difference across the two focal firms. Overall, our central contribution is a strategic structuring view of technological paths, whereby actions create structures.

TIM: **Creating Complementary Capabilities for Strategic Renewal**

Author: **Kathrin Borner**, *Vrije U. Amsterdam*
Author: **Hans Berends**, *Vrije U. Amsterdam*
Author: **Fleur Deken**, *Vrije U. Amsterdam*
Author: **Frans Feldberg**, *KIN Research, VU Amsterdam*

Incumbents set up corporate ventures to create new capabilities needed for strategic renewal. While corporate venturing studies largely focus on creating core capabilities, such as knowledge about a new technology, we shift attention to the creation of complementary capabilities, such as finance, logistics and customer service, which are required to benefit from core capabilities. These complementary capabilities may be perceived as stable and taken for granted, yet, need to be changed when aiming for strategic renewal. Based on a four-year ethnographic study following the three internal corporate ventures within a large home appliance manufacturer we identify a process model to create complementary capabilities for strategic renewal. Our findings show how corporate ventures and incumbents jointly create complementary capabilities and contribute to the literature on corporate venturing and capability creation.

TIM: **Technological Strategic Renewal: Transforming Knowledge on the Learning Journey**

Author: **Valerie Sy**, *Thunderbird School of Global Management at ASU*

Sustaining long-term viability requires that firms undergo many changes throughout their lifecycles. When a firm recognizes that its current strategy is unsatisfactory, it may engage in strategic renewal—a process of redirecting the firm's strategic intent and capabilities. But what exactly is being renewed and how does a firm go about this? In this study, I argue that strategic renewal involves renewing organizational knowledge through the mechanisms of technological innovation as firms alter their path dependence. Specifically, I investigate how organizational learning precedes strategic renewal as firms explore new knowledge while balancing internal exploitation of current knowledge and the external adoption of its current technologies utilizing patent data from 163 public U.S. communications equipment manufacturing firms between the years 1975 and 2020.

Ecosystems and Platforms Track: Co-creating Value in Ecosystems

Session Moderator: **Jing-Ming Shiu**, *National Cheng Kung U.*

TIM: **The Generational Transition and Sequential Ambidexterity in the Android Ecosystem**

Author: **Jing-Ming Shiu**, *National Cheng Kung U.*
Author: **Mark P. Dallas**, *Union College*
Author: **Zih-Rong Wang**, *National Cheng Kung U., Taiwan*
Author: **Pin-Yu Lin**, *National Cheng Kung U., Taiwan*

Simultaneous ambidexterity is valid for the punctuated equilibrium model, in which firms apply this organizational learning strategy to prepare for the occurrence of technology discontinuity. However, this study proposes that technology may change continuously and periodically in stable and incremental stages within the same technology regime, which we term a 'periodic punctuated model.' A periodic punctuated model reflects technologies that undergo rapid but not radical and incessant change organized within clearly defined periods of time. This study considers situations in which the periodic punctuated model is initiated by an external technology provider (Google Android), which triggers firms to conduct sequential ambidexterity to adapt to external technological change to achieve a higher new product introduction performance. Specifically, we examine how smartphone OEMs conduct sequential ambidexterity on the generational transition of Android OS and observe how it impacts Android OEMs' new product introductions. Our results show that when Android OEMs conduct exploitative learning on the maintenance version of old generation Android OS and exploratory learning on the developer version of next-generation Android OS, Android OEMs can achieve a higher new product introduction performance. This study provides empirical evidence that firms' sequential ambidexterity can help to manage generational technological changes within the same technological regime. Moreover, this study's empirical evidence also shows the premise of complementary effects from sequential ambidexterity is based on the contingent factors linked to environmental changes.

TIM: **Co-Creating Value Propositions in Ecosystems: How the Service-dominant Logic Complements Strategy**

Ecosystems promise their members to co-create values that cannot be achieved alone. Thus, this ecosystem value proposition (EVP) is widely regarded as the foundation of any ecosystem. Moreover, a sound understanding of the EVP and its interdependencies is essential for ecosystem development and orchestration. Unfortunately, strategy research on EVP emergence remains scarce. Therefore, this paper examines the contribution of aspects of the service-dominant logic to strategy. Three concepts – value, value proposition, and service ecosystem - are defined and compared with the structural ecosystem perspective of strategy. The value of these concepts is determined through a detailed longitudinal case study of a nascent digital health ecosystem. As a result, the EVP was constructed based on the experiences the ecosystem actors seek to create. Furthermore, a four-phase design process of how an EVP was cocreated through the actions of the ecosystem orchestrator and actors was assessed. This study contributes to a deeper understanding of ecosystem value proposition emergence by differentiating and integrating knowledge from marketing and strategy research.

TIM: **The Limits of Innovation Ecosystem Strategy: A Demand-side View**

Author: **Brice A. Dattee**, *EMLYON Business School*
Author: **Llewellyn D W Thomas**, *IESE Business School*
Author: **Erkko Autio**, *Imperial College Business School*

Increasing product variety enables a firm to better address the heterogeneous preferences of customers in a market, but a firm's ability to economically develop and manage coherent variety on its own is limited. An ecosystem strategy addresses this duality by distributing to ecosystem participants the generation of an increased variety of complements integrated by customers, who are axiomatically considered as highly heterogeneous. We discuss assumptions about demand heterogeneity and identify demand-side mechanisms which may affect customers' selection and integration ability, hence the realization of an ecosystem value proposition. We clarify the boundary conditions and delimit the domain of viability of an innovation ecosystem strategy based on a firm's innovation, orchestration, and integration capabilities, on customers' ability to integrate, and on varying degrees of demand heterogeneity.

TIM: **Enhancing Citizenship Behavior in Emerging Innovation Ecosystems**

Author: **Christina Dienhart**, *Institute for Technology and Innovation Management at RWTH Aachen*
Author: **Torsten-Oliver Salge**, *Institute for Technology and Innovation Management at RWTH Aachen*

This study adds to the literature on ecosystem emergence and ecosystem orchestration by exploring the concept and determinants of ecosystem citizenship behavior, defined as the willingness of eco-system actors to contribute more resources than contractually required. We propose that endoge-nous and exogenous uncertainty reduction measures, as reflected in role clarity and partner knowledge, respectively, will increase ECB, with the strength of this effect varying across distinct ecosystem orchestration modes. We test our hypotheses on a unique dataset of 218 ecosystem ac-tors in 20 ecosystems. Our findings show that lower endogenous and exogenous uncertainty con-tribute to an environment where ECB can flourish. These effects vary across ecosystem orchestra-tion modes (keystone-led orchestration, shared orchestration between keystone and members, or member-led orchestration).

The Fourth Industrial Revolution has already arrived and is revolutionizing the landscape of organizational research (e.g., Brynjolfsson & McAfee, 2014; 2017; Brynjolfsson & Mitchell, 2017). In particular, as organizations worldwide are navigating through this new wave of industrial revolution (in which intelligent machines are increasingly becoming part of modern workplace), our conventional wisdom about work practices, interpersonal relationships, and the management of organizations needs to be refined. Each of the papers provides a new avenue to the implications of intelligent technologies on people and practices in organizations by emphasizing how the incorporation of such technologies may specifically affect individuals, managers, as well as other organizational stakeholders. Towards this end, the papers in this symposium take on the challenge to understanding more broadly on how intelligent technologies may affect people and practices across different levels of theorization and analysis. Overall, this symposium seeks to continue the societal conversation inspired by the uprise of intelligent technologies and provide answers to outstanding questions (raised by both organizational scholars and managers), while also setting a research agenda for the future.

Interacting with Artificial Intelligence and Its Implications on Employee Work and Non-work Behavior

Complementary Assets and the Evolution of Industries

Organizer: **Charlotte Jacobs**, *Louisiana State U.*
Organizer: **Mara Guerra**, *Bayes Business School*
Panelist: **Francisco Polidoro**, *U. of Texas at Austin*
Panelist: **Rajshree Agarwal**, *U. of Maryland*
Panelist: **Brian Wu**, *U. of Michigan*
Panelist: **J.P. Eggers**, *New York U.*

The purpose of this panel symposium is to stimulate the debate on the role of complementary assets in the emergence and evolution of industries. Distinguished scholars who have studied complementary assets, and technology and industry evolution from different perspectives will provide their insights on the importance of complementary assets in the process of industry creation and development, while also highlighting consequences for the performance of firms. The discussion will also highlight avenues for future theoretical and empirical research that will take our understanding of the relationship between complementary assets, industry evolution, and firm performance a step further.

AI and Emerging Technologies Track: AI Adoption and Management

Session Moderator: **Peter Micah Madsen**, *Brigham Young U.*

TIM: **An Acquired Taste? How Past Employee Experience and Work Characteristics Influence Algorithm Use**

Author: **Peter Micah Madsen**, *Brigham Young U.*
Author: **Robin Dillon-Merrill**, *Georgetown U.*
Author: **Konstantinos Triantis**, *Virginia Tech*
Author: **Bart Roets**, *INFRABEL*

Many firms are currently implementing algorithmic solutions with the goals of increasing productivity and efficiency. Extant research suggests that employees may display algorithm aversion by underutilizing the algorithms available to them at work. One factor that may ameliorate employee algorithm aversion and increase algorithm use is employee experience using an algorithm, as familiarity with an algorithm may decrease algorithm aversion. But employee experience with an algorithm has also been hypothesized to decrease algorithm use because more experience gives employees more opportunities to observe an algorithm's limitations. Here, we integrate these two perspectives to hypothesize a curvilinear (inverted-u-shaped) relationship between past employee experience with an algorithm and current algorithm use. We also suggest that current work conditions (work volume and work complexity) may modify this relationship. We test these hypotheses using a unique data set of use of a rail traffic control algorithm by employees in a large European rail firm from 2018 to 2020, finding strong support for our theory and hypotheses.

TIM: **Introducing AI: The Search for Structure in Managing a General Purpose Technology**

Author: **David Michael Huber**, *Technical U. of Munich*

Organizations looking to employ a General Purpose Technology such as Artificial Intelligence face the challenge of managing the process of search for suitable internal structures. This search is complicated by uncertainty surrounding the new technology, which sparks power struggles and requires the organization to balance broad exploration for applications, the ramp-up of expertise, and employee engagement against transparency and control. This paper presents a qualitative analysis, with observations from three case organizations moving through their AI journey, resulting in a 4-stage model of GPT introduction. The key finding is that, even though emerging from diverse starting points, all organizations pass through similar movements of centralization and decentralization, eventually working towards broad diffusion within the organizations. This contributes to the discussion around the management of GPTs, where a previous focus was on central control, and integrates previous research on innovative search and AI management.

TIM: **The Disruptive Potential of AI System Solutions: Evidence from AI Translators**

Author: **Matthias Qian**, *U. of Oxford*

AI translators — business professionals with AI expertise — reduce the coordination costs that arise with the difficulties in the communication of hyperspecialized workers who engage in the division of labor to build and maintain disruptive AI systems. The intensity of a firm's AI translator use indicates the organizational changes associated with AI system solutions, which involve the redesign of decision making within an organization. The organizational inertia and imprints of incumbents slow their transition to AI system solutions, which is reflected in a lower share of their AI translator use. This yields a competitive advantage for startups that build and scale AI system solutions within new organizations. These young firms raise more funding, are more likely to go public, and have a lower failure probability. The exposure of incumbent firms to startups building disruptive AI system solutions contributes to knowledge spillovers and prompts incumbents to start similar initiatives. I identify 14 million AI translator jobs using NLP of task descriptors extracted from the full vacancy text of the near universe of the past decades' US online job ads. Merging the measure of AI translators to a dataset of 11,810 venture-capital-funded US startups and 6,382 incumbent firms, I find empirical evidence in support of the growing importance of AI translators who build transformative AI system solutions.

TIM: **What Drives Individuals to Participate in Co-creation of Artificial Intelligence for Sustainability?**

Author: **Philipp Laut**, *U. of Bamberg, Germany*
Author: **Alexander Fliaster**, *U. of Bamberg*
Author: **Elena Fabienne See**, *U. of Bamberg*

Digital technologies, in particular artificial intelligence (AI), are becoming an integral part of the solution to tackle sustainability challenges, such as green and social issues. From the organizational and innovation management perspective, co-creation is a suitable way to collect data and involve individuals in the further development of AI. However, co-creation and AI have been previously studied separately. Hence, no insights have been gained on the factors that influence individuals to participate in co-creation for sustainable AI projects. This study takes a configurational perspective to examine which combinations of personality factors (openness to ideas, susceptibility to social influence, autonomous motivation, and values) and AI technology-related factors (importance of privacy, trust in AI) affect individuals' participation in green and social AI co-creation projects. We conducted factorial survey experiments, using vignettes to collect data from 196 individuals with 784 vignettes, and analyzed data with fsQCA. We identify different solutions for green and social co-creation AI projects and reveal the interacting mechanisms of our conditions. In particular, we find that altruistic and biospheric value orientation have different effects, trust in AI has a large influence on participation, and susceptibility to social contagion and openness to ideas act as substitutes for various solutions. Furthermore, we reveal that people with autonomous motivation, trust in AI, and altruistic or biospheric value orientation, as well as little concerns regarding data protection participate in co-creation irrespective of the type of project.

AI and Emerging Technologies Track: Innovating with Big Data

Session Moderator: **Chiara Acciarini**, *Luiss U.*

TIM: **Big Data and Innovation: A Systematic Literature Review and Research Agenda**

Author: **Francesco Cappa**, *Luiss Guido Carli U.*
Author: **Chiara Acciarini**, *Luiss U.*
Author: **Raffaele Oriani**, *Luiss Guido Carli U.*
Author: **Paolo Boccardelli**, *Luiss Guido Carli U.*

The attention towards big data is increasing due to the many benefits it can bring to organizations. However, big data can also entail a number of drawbacks for firms, which have been often overlooked so far. Considering the turbulent context in which we live and the many new technologies that are now becoming commonplace, big data is growingly leveraged for innovation, while a clear understanding of its overall impact on firm innovation has not been fully acquired yet. To this end we have carried out a systematic literature review to address the following research question: How can big data be leveraged for innovation? With this aim in mind, we mapped out the state of the art of studies on big data for innovation by focusing on different aspects: i) theories used to analyze big data; ii) the effects of big data, i.e. positive, negative or both; iii) whether big data has been conceptualized as binary or composed of multiple dimensions; iv) the types of firms that have been shown to leverage big data for innovation, i.e. private companies or not; v) the types of innovation that have been considered in association with big data; and vi) research methodologies used and publication outlets. The outcomes of this study present an integrated view of cumulative knowledge on big data and innovation in order to advance understanding in this direction, to provide clear advice to managers and policymakers on how to leverage innovation through big data, and to reveal possible future research directions.

TIM: **Dual Role of Data in Corporate Research on Machine Learning and Artificial Intelligence**

Author: **Seokbeom Kwon**, *Sungkyunkwan U.*
Author: **Alan Porter**, *Georgia Institute of Technology*

Recent advances in Machine Learning and Artificial Intelligence (ML/AI) have led to new policy challenges regarding the potential anticompetitive effects of firms' exclusive data access for the application of ML/AI. In this context, this study contends that policy intervention limiting firms' exclusive use of private data needs careful coordination between competition and innovation policymakers as it may impede corporate science on ML/AI that exhibits significant research impact. Our analysis is based on unique data on arXiv-archived preprints of ML/AI research papers and the performance of their proposed algorithms. Our data provide multifaceted evidence that corporate ML/AI research has been notably significant in advancing the field of ML/AI. Importantly, we show that the significance of corporate research is more pronounced when it originates from the capitalization of private data. Based on the dual role of data in ML/AI research—data as the key complementary assets that incentivize corporate research on ML/AI and as the critical input for enabling novel ML/AI research—we argue that firms' exclusive data accessibility is instrumental in not only incentivizing, but also advancing corporate research on ML/AI.

TIM: **What are the Drivers and Barriers to the Adoption of Big Data and Data Analytics in Small Firms?**

Author: **Théo JUSTY**, *Institut Montpellier Management*
Author: **Estelle PELLEGRIN-BOUCHER**, *Institut Montpellier Management*
Author: **Denis Lescop**, *Montpellier Business School*
Author: **Julien GRANATA**, *Montpellier Business School*

Big Data is a major issue for small and medium-sized enterprises (SMEs). Literature shows that data analytics can improve the performance of SMEs. However, SMEs face many barriers in adopting this technology. Unfortunately, the literature on data analytics adoption in SMEs is limited. Our goal is to identify the drivers and barriers to data analytics adoption in SMEs. With 35 semi-structured interviews with SMEs in the manufacturing and agricultural industries, we establish two typologies of drivers and barriers. Our results show that exogenous drivers such as market, competition and the Covid-19 crisis have a stronger influence on data analytics adoption in SMEs than endogenous drivers. Endogenous barriers like lack of strategy, skills and organizational culture have a more negative influence on data analytics adoption in SMEs than exogenous barriers. This article contributes to better understanding of the adoption process of data analytics in SMEs and to guiding managers in successfully implementing this technology. Our research could help SMEs build stronger alignment between business strategy and information systems, which facilitates value creation.

TIM: **Leveraging Social Media for Innovation: A Conditional Mediation Model**

Author: **Elena Ji**, *Macquarie Business School, Macquarie U.*
Author: **Syed Rahman**, *Macquarie Business School, Macquarie U.*
Author: **Ralf Wilden**, -
Author: **Nidthida Lin**, *Macquarie Business School, Macquarie U.*
Author: **Norma Harrison**, *MGSM, & School of Management, Faculty of Business & Economics*

Previous research has highlighted the benefits of organizations leveraging external sources of knowledge to drive innovation, called open innovation. Social media is one mechanism to source such knowledge from customers; however, little empirical research has investigated how customer knowledge gained through social media may increase innovation performance. Further, while previous research has discussed the role of absorptive capacity, little research has investigated its link with social media and innovation performance, especially accounting for the firm-internal social context. Therefore, in this study we develop and empirically test a mediated moderation model of the effects of customer knowledge gained from social media on innovation performance contingent on internal information sharing and decision-making participation. Our results from a sample of Chinese SMEs show that information sharing enhances the effect of absorptive capacity on innovation performance, while decision-making participation does not have a significant moderation effect.

Technology, Policy and Society Track: Knowledge Network & Spillovers

Session Moderator: **Ecem Bilge DELICIK**, *CRG Ecole Polytechnique*

TIM: **The Emergence of Higher-Order Structure in Scientific and Technological Knowledge Networks**

Author: **Thomas Gebhart**, *U. of Minnesota Carlson School of Management*
Author: **Russell James Funk**, *U. of Minnesota*

The growth of science and technology is a recombinative process, wherein new discoveries and inventions are built from prior knowledge. Yet relatively little is known about the manner in which scientific and technological knowledge develop and coalesce into larger structures that enable or constrain future breakthroughs. Network science has recently emerged as a framework for measuring the structure and dynamics of knowledge. While helpful, existing approaches struggle to capture the global properties of the underlying networks, leading to conflicting observations about the nature of scientific and technological progress. We bridge this methodological gap using tools from algebraic topology to characterize the higher-order structure of knowledge networks in science and technology across scale. We observe rapid growth in the higher-order structure of knowledge in many scientific and technological fields. This growth is not observable using traditional network measures. We further demonstrate that the emergence of higher-order structure coincides with decline in lower-order structure, and has historically far outpaced the corresponding emergence of higher-order structure in scientific and technological collaboration networks. Up to a point, increases in higher-order structure are associated with better outcomes, as measured by the novelty and impact of papers and patents. However, the nature of science and technology produced under higher-order regimes also appears to be qualitatively different from that produced under lower-order ones, with the former exhibiting greater linguistic abstractness and greater tendencies for building upon prior streams of knowledge.

TIM: **Does Scientific Knowledge Flow Inspire Exploratory Innovation? Evidence from the US Biomedical Firms**

Author: **Xiangpeng Lian**, *Tsinghua U.*
Author: **Yi Zhang**, *U. of Technology, Sydney*
Author: **Mengjia Wu**, *U. of Technology, Sydney*
Author: **Ying Guo**, *China U. of Political Science and Law*

Exploratory innovation depends on the introduction of external knowledge which may promoting the exploratory knowledge recombination. Scientific knowledge flow (SKF) formed by searching knowledge in scientific research provides the necessary external knowledge elements for firm's exploratory innovation, while few studies explore the role of characteristics of SKF derived from the contained knowledge elements in such relationship. This study tests the impact of intensity, breadth, and novelty of SKF on corporate exploratory innovation, and further examines the moderating role of diversity of internal knowledge base on these relationships in the biomedical and life sciences. Results indicate that intensive SKF with novel knowledge elements can generate more exploratory innovation, while broad SKF will negatively influence firm's exploratory innovation. The diversity of internal knowledge base has negative moderating effects on the relationships between characteristics of SKF and exploratory innovation.

TIM: **Collaboration Networks and Inventor's Creativity: The Interplay Between Knowledge and Brokerage**

Author: **Ecem Bilge DELICIK**, *CRG Ecole Polytechnique*
Author: **Ludovic Dibiaggio**, *SKEMA Business School*
Author: **Zakaria Babutsidze**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

This chapter investigates how access to heterogeneous knowledge affects the relationship between brokerage and novelty of inventor's output. I distinguish between structural advantages brought by brokerage and those brought by diversity of knowledge coming from the collaboration network and scrutinize their effects on the level of novelty embedded in inventor's output. I use panel data of French inventors and examine the within-subject variation over time. Results suggest that the influence of being a broker on the novelty of an inventor's output is moderated by the level of knowledge heterogeneity accessed through disconnected collaborators. Results highlight that on the one hand, being exposed to heterogeneous knowledge compensates the costs of brokerage. On the other hand, being a broker significantly complements exposure to heterogeneous knowledge. At the same time, I observe that higher levels of brokerage create a negative effect on the novelty of an inventor's output despite its strategic advantages. Negative effects might be there also for low levels of brokerage, but those outweigh the advantages only for the high levels of brokerage. On the contrary, being a broker becomes more advantageous within non-redundant content collaboration networks. The study contributes to the social network literature and develops a deeper understanding of the brokerage's influence on inventors' creativity.

TIM: **Information Accessibility and Knowledge Creation**

Author: **Katrin Hussinger**, *U. of Luxembourg*
Author: **Lorenzo Palladini**, *U. of Luxembourg*

How important is Google for scientific research? This paper exploits the exogenous shock represented by the sudden Google's withdrawal of its services from mainland China to assess the importance of access to information for the knowledge production function of scientific scholars. For a sample of economists, a type of scholar with a simple knowledge production function, results from difference-in-difference analyses, which compare their scientific output to scholars in the neighboring regions, show that the scientific productivity declines by 28% in volume and 29% in terms of citations per publication. These results are consistent with the view that information accessibility is an important driver of scientific progress. Google's sudden exit from China, hence, bears the risk that Chinese researchers lose touch with the research frontier and persistently lag behind their foreign peers.

TIM: **Does Corporate Science Matter? Sources of Strategic Responses to Knowledge Spillovers**

Author: **Michael Blomfield**, *U. of Massachusetts, Amherst*

This paper delineates inventive- and scientific-focused R&D capabilities and shows how these lead to different strategic responses to changes in the external knowledge environment. Corporate R&D capabilities that focus primarily on invention lead firms to substitute internal R&D investment with knowledge from spillovers. Conversely, scientific-focused R&D capabilities provide firms greater ability to situate external knowledge in the scientific landscape and understand its potential more fully. This creates complementarities between internal R&D and knowledge spillovers by enabling firms to identify new opportunities for developing ideas. I use changes in corporate and R&D tax credit rates to generate exogenous variation in knowledge spillovers. I use this to identify systematic variation in the causal effects of spillovers on investment in R&D based on firms' ex ante inventive and scientific R&D capabilities. Greater inventive capabilities are associated with lower R&D investment, but not lower inventive outputs, in response to exogenous increases in the pool of knowledge spillovers (suggesting a substitution of internal R&D by spillovers). On the other hand, greater scientific capabilities are associated with increases in R&D investment as the pool of knowledge spillovers increases (suggesting complementarity between spillovers and internal research).

Digitization Track: Digitization, Organizations, and Markets

Session Moderator: **Sven M. Laudien**, *media Akademie - Hochschule Stuttgart (mAHS)*

TIM: **The Impact of Danmaku Information Quality on Consumers' Impulsive Consumption Behavior**

Author: **Mingyue Fan**, *School of Management, Jiangsu U., China*
Author: **Dragana Ostic**, *Jiangsu U.,Zhenjiang China*
Author: **Keyu Han**, *U. of Illinois at Urbana-Champaign*
Author: **Sanaullah Shar**, *U. of Tasmania*

The present study investigates: (a) the mediated mechanism underlying the sense of presence in the relationship between danmaku information quality and consumers' impulsive consumption behavior; and (b) the moderated mechanism of consumers' attitudinal ambivalence in the direct and indirect relationships between danmaku information quality and consumers' impulsive consumption behavior. Valid questionnaire data from 466 Chinese participants (49% male) was used in the study. Participants filled out questionnaires regarding danmaku information quality, sense of presence, consumers' attitudinal ambivalence, and consumers' impulsive consumption behavior. Research findings reflect that danmaku information quality is significantly associated with consumers' impulsive consumption behavior and that consumers' sense of presence partially mediates this relationship. The mediation role of consumers' sense of presence is weaker in predicting consumers' impulsive consumption behavior for consumers with high attitudinal ambivalence but has a stronger influence for consumers with low attitudinal ambivalence. The present study further explores how the direct and indirect relationships between danmaku information quality and consumers' impulsive consumption behavior are moderated by consumers' attitudinal ambivalence through moderated mediation analysis.

TIM: **Digitalization-based Business Model Innovation: Insights from a Multiple-case Study**

Author: **Sven M. Laudien**, *media Akademie - Hochschule Stuttgart (mAHS)*

Digitalization has become the buzzword of the 21st century. Although the development of new information and communication technologies provides opportunities for establishing innovative ways to create, deliver, and capture value, insights into detailed digitalization influences are limited. Establishing digitalization-based solutions is not an easy challenge for firms as they need to overcome a business logic that is based on an analog way of thinking and to establish a new strategic perspective that is reflected in a redefined business model. Against the background of an inductive multiple-case study approach that includes data from 16 case firms, this study develops a classification scheme and uncovers basic types of digitalization-based business models of manufacturing firms. The findings considerably enhance business model (innovation) literature and contribute to a deeper understanding of digitalization consequences on firm level.

TIM: **Building on the Generative Potential of Digital Technologies in Organisations with a Public Remit**

Author: **Beatrice D'Ippolito**, *U. of York*
Author: **Marcela Miozzo**, *King's College London*

Digital technologies have transformed innovation and competition, leading to important questions on organisations' technological choices, the nature of inter-organisational relationships, and their strategies. This paper explores how incumbent organisations that pursue value creation and value capture for the public interest harness the generative potential of digital technologies. Drawing on primary and secondary data collected in 2015-2022, this paper explores the response of the BBC to the disruption of digital technologies and related changes in the competitive arena. The generativity of digital technologies demands large audiences to deal with unprompted change; experimentation takes place in many forms with often unexpected outcomes, however, organisations with a public remit cannot pursue all opportunities on a large scale. Despite the BBC having a platform-like response aligned with the response of other incumbents who have been exposed to similar stimuli, the mandate of delivering societal impact steers how the organisation develops its technological infrastructure, experimental activities, and inter-organisational relationships. Ultimately, we show how the public remit can "steer" how organisations can harness the generativity of digital technologies shedding light on possible new sources of value and innovation.

TIM: **Integrated Management and the Construction of Large Digitally Enabled Systems** ☯

Author: **Robert C. Wood**, *San Jose State U.*
Author: **Joel West**, *Keck Graduate Institute*

Recent research on large, digitally enabled systems has emphasized decentralized evolution with many firms, interacting through the market, supplying modules for large complex systems. Yet some highly successful firms have built large systems that are more centrally directed, and despite their importance they have received relatively little research attention. We explore integrated management of large systems by examining development of cancer radiation therapy, where centralized management took control over previously decentralized processes and produced dramatically improved patient outcomes and extraordinary financial returns for the system leader. We use this to suggest why pursuit of more centralized approaches may represent an important opportunity for firms and industries seeking to create and benefit from long-term, complex, systemic innovation.

 Digitalization, Traceability, Trust and Commitment of Buyers: Smart Factory Applications in Korea

Author: **Chuljin Park**, *U. of New South Wales*
Author: **Ihsan Ullah Jan**, *Hanbat National U.*
Author: **Chygwan Park**, *Hanbat National U.*

This study aims to highlight the impact of digitalization of manufacturing process for small and medium enterprises (SMEs) in how they form their relationships with the buyers. We argue that digitalization for SMEs enhance the traceability in their manufacturing process, leading to improvement in the trust and commitment of buyers in the business transactions. We test our hypotheses using 103 supplier-buyer dyads, in the context of Smart Factory scheme set forth in South Korea in the past decade. Our results show that digitalization indeed enhances traceability of manufacturing processes for SMEs, and it leads to better trust and commitment from larger buyers. However, the results also indicate that traceability may not be the only mechanism for building better relationship between the suppliers and buyers. This paper provides theory and evidence of how digitalization can function to improve external relationships, as well offering practical implications for policy makers and managers on the need for digitalization.

The creation of technological innovations draws on knowledge of both the components that comprise the system and architectural knowledge of how the components are interconnected into a holistic system. Often, this knowledge integrates multiple domains of expertise. During evaluations of technological innovations, an evaluator's degree of domain overlap with the problem area is likely to shape their perceptions of the design toward either a componential or systems view. Yet we know relatively little about how expertise range—or the degree of knowledge overlap between an evaluator's domain(s) of expertise and the knowledge domains embodied in the problem area—shapes an evaluator's perceptions of the design and the effects of their perceptions on preferences for more novel versus more feasible solutions. To examine these relationships, we partnered with NASA and Freelancer.com to design an evaluation challenge, recruiting 374 evaluators from inside and outside the domains of aerospace and robotics design, to rate 101 unique solutions for a total of 3,850 evaluator-solution pairs. Our results show that univalent evaluators—with expertise in a single domain of the problem area—are more likely to prefer more feasible and less novel solutions, demonstrating a feasibility preference. This feasibility preference is attenuated when evaluators have multivalent expertise spanning both domains of the problem area. Topic modeling of the evaluators' open-text comments suggests that expertise range shapes how a design is perceived: whereas univalent expertise is associated with detailed assessments of a design's components, allowing for greater uncovering of a design's limitations, we find that multivalent expertise is associated with more holistic assessments of the design's overall functionality, resulting from evaluators' architectural knowledge of the system. Our findings suggest that selecting evaluators with varied expertise range in the problem area can lead to decisions to allocate resources to more novel, risky ideas that favor less familiar, untested technologies.

TIM: **When Evaluators Become Creators: Spillovers from Idea Evaluation**

Author: **Johanna Schnier**, *Kuehne Logistics U.*
Author: **Christina Raasch**, *Kühne Logistics U.*
Author: **Tim Schweisfurth**, *Hamburg U. of Technology*

Idea creation and idea evaluation are central to organizational performance. While extant research has studied how individuals' idea creation affects their evaluation performance, the reverse effect has received no attention: Does idea evaluation help or hurt individuals' creation performance? On the one hand, idea evaluation might take away attention from idea creation, dampening individuals' creation performance. On the other hand, the attention that individuals allocate to idea evaluation might spill over to idea creation, boosting their creation performance. Using large-scale firm data on employees' idea creation and evaluation activity over 14 years, we find substantial spillovers from idea evaluation. Event study designs suggest that employees are 2.60, 1.39, 1.28, and 1.20 times more likely to submit ideas on the same day of and one, two, and three days after idea evaluation relative to the day prior to idea evaluation. These spillovers persist for two weeks before employees' submission activity is back to pre-evaluation levels. We demonstrate that the spillovers from idea evaluation can best be explained with individuals shifting their attention to and being inspired by the issues raised in the ideas that they evaluate.

TIM: **Facial Expressions Predict Idea Evaluation – AI Can Tell From Your Face if You Like an Idea**

Author: **Jonathan Rupp**, *U. of Innsbruck*
Author: **Johann Fueller**, *U. of Innsbruck*
Author: **Katja Hutter**, *U. of Innsbruck School of Management*

This research investigates how one can predict idea evaluations and investment intentions by individuals' affective reactions to idea pitches. The generation and selection of ideas are fundamental for successful innovation, but companies tend to neglect emotions in the idea evaluation process. Affective Computing, a subfield of computer science that deals with recognizing affective states and emotions, makes it possible to study the affective reaction of subjects to product pitches or prototypes in an economical, low-threshold way. In this study, 60 German and Austrian participants watched 6 product pitches with ideas on how a major German electronics chain can better position itself in the well-being sector. Participants' facial expressions were analyzed to collect affective data on valence and arousal dimensions. Subsequently, participants rated the ideas, indicated their likelihood to invest, and reported their attitude toward the ideas presented. The results show that while valence and arousal alone could not predict idea evaluation, investment intention, or attitude, their interaction could. Furthermore, we demonstrated that idea evaluation and investment intention mediate the effect of affect on attitude. Finally, we showed that emotional expressivity and mood are essential in idea evaluation and investment intentions. This study contributes to a better understanding of how affect influences idea evaluations and attitudes and how Affective Computing may aid in idea selection.

TIM: **Using Imagination to Measure Innovation: Effect of Role Play on Idea Evaluation and Selection**

Author: **Arabella Pollack**, *Erasmus U.*
Author: **Dirk Deichmann**, *Erasmus U. Rotterdam*

Prior research and practice on idea generation, evaluation and selection has demonstrated that roles (being a customer, manager or a creator) matter for innovation outcomes. We ask what happens if it is not the individual in a particular role evaluating and selecting new ideas, but rather someone imagining themselves in that same role. This connects to design thinking where creators imagine themselves as the customer to improve idea generation. It also builds on research showing role play to be effective in other fields such as education and psychology. In an empirical study participants played the role of customers, creators or managers and subsequently evaluated and selected ideas. Our findings show role play affects evaluation and selection of innovation ideas in three ways. First, those playing the customer or creator role evaluated ideas higher on all attributes. Second, those playing the creator role prioritized novelty when selecting ideas. Third, we find that an individual difference in environmental sensitivity acts as a moderator for idea selection effects: the effects of a product's usefulness on selection were stronger for those that scored higher on sensitivity, no matter the role played. These findings have implications for both literature and practitioners.

TIM: **Impacts of Cognitive Traits in the Innovation Journey: A Configurational Perspective**

Author: **Erwin Hofman**, *U. of Twente*
Author: **Remco Siebelink**, *U. of Twente*
Author: **Tim Schweisfurth**, *Hamburg U. of Technology*
Author: **Matthias De Visser**, *U. of Twente*

The generation of high-quality ideas and the accurate evaluation and selection of ideas in a subsequent phase are critical activities for the ongoing survival and prosperity of firms. Previous research has suggested that these two activities are distinct and that excellence in them might require different cognitive capabilities in the individuals involved. This paper intends to increase insights into this area. Using data from two innovation tournaments, it employs a configurational view to explore whether consistent recipes can be identified of three cognitive traits – analytic skill, strategic intelligence, and creativity – for the ability to generate high-quality ideas and the ability to accurately evaluate such ideas. Ideas are operationalized as high quality when they have a high value and/or a high degree of novelty. Notably, the results show that specific combinations of cognitive traits exist that outperformed the other combinations in both idea generation and evaluation, whilst some overlap exist between the configuration found in the two phases. For practice, these findings suggest that employing individuals with particular traits in idea generation and idea evaluation tasks could boost the innovation performance of firms.

Presenter: **Arturs T. Kalnins**, *U. of Iowa*
Presenter: **Michele Williams**, *U. of Iowa*

The topic of diversity, equity, and inclusion of historically marginalized groups has recently garnered great scholarly interest in management. In this symposium, we build on this recent interest and examine the role of geography in promoting innovation and entrepreneurship of individuals from historically marginalized groups. Geography provides a platform for organizing regional innovation and entrepreneurial activity. Yet, relatively little empirical research examines how elements of the geographic environment influence the innovation and entrepreneurship of individuals from historically marginalized groups. The papers in this symposium specifically examine how geographic variations in regulations, industry agglomerations, research infrastructures, and concentration of businesses of marginalized groups affect the innovation and entrepreneurship of historically marginalized groups. Each study addresses the unique role geography plays, with potential implications for broader social issues on diversity, equity, and inclusion.

A large portion of the workforce carries an invisible stigmatized identity with them in the workplace. Despite this pervasiveness, employees with these stigmatized identities continue to experience bias and inequity. This presents difficulties not only for these employees, but also for the organizations that employ them, making it essential to better understand how employees with stigmatized identities can effectively navigate the workplace. To advance our understanding of stigmatized identities in the workplace, this symposium explores this question across multiple levels in organizations. By examining the impact of organizational contexts, interpersonal processes, and intrapersonal management strategies, five papers provide insights into circumstances which can mitigate negative outcomes and improve equity for prospective and incumbent employees with stigmatized identities.

Psychedelic Assisted Therapy: Refreshing Assumptions of What's Possible Through and In Organizations

Organizer: **Adelaide Wilcox King**, *U. of Virginia*
Participant: **Allison Elias**, *U. of Virginia Darden School*
Participant: **Yu Tse Heng**, *U. of Virginia - McIntire School of Commerce*
Participant: **Kisha Lashley**, *U. of Virginia*

This symposium is designed to initiate an informed and generative foundational conversation about the emergence of the psychedelic assisted therapy (PAT) ecosystem as viewed through an organizational lens. The panel aims to embrace the prospects and responsibilities for management scholars to study and inform the construction of an 'above ground' industry ecosystem, and how this experience, and the learning that emerges, may be integrated to enlighten our understanding of organizations more broadly. As organization scholars, we have a distinctive opportunity to engage with this burgeoning industry in ways that help guide business practices, theoretical approaches, and analytical methods that may enable unique opportunities to unleash value and address damaging patterns of rigidity and diminishment at the individual, organizational, and systems levels.

Gender and Career Challenges

Session Moderator: **Isabella Scheibmayr**, *U. of Salzburg*

CAR: **Female Doctors' Navigating Constellation of Logics to Leadership Careers**

Author: **Isabella Scheibmayr**, *U. of Salzburg*
Author: **Astrid Reichel**, *U. of Salzburg*

Working part-time is often considered a personal decision highly relevant for career progression, especially leadership positions, even though many context factors are shaping work-time regimes in organizations. One such context are institutional logics that provide identification to career actors and shape career paths considered legitimate in a field. Institutional logics thereby link individual career choices and organizational structure. In a career, multiple institutional logics interact in a 'constellation of logics' (Goodrick & Reay, 2011). Results from a mixed-methods study conducted with the Doctor's Association Salzburg indicate that these constellations as well as the underlying institutional logics are gendered with consequences for how part-time in leadership positions is discussed. Interviewing ten doctors in Salzburg hospitals we found part-time work in leadership positions both framed as possible and impossible at the same time. This part-time leadership paradox was resolved through the assumed reasons for part-time work framed around gender stereotypes. Two different constellations of logics were applied to (assumed) reasons for part-time, explaining how part-time in leadership positions is impossible under a family logic but possible under the professional/corporate/scientific logic dominant in doctors' careers. This multiple gendering of constellations of logics provides an explanation for the persistent barriers to women physicians in hospital leadership positions and contribute to our understanding of organizational HRM practices institutionalizing gender.

CAR: **The Dual Impact of Gender Homophily in Project-Based Networks on Female Employee Pay**

Author: **Asya Karabayeva**, *IE U. - IE Business School Madrid, Spain*
Author: **Monika D. Hamori**, *IE U. - IE Business School Madrid, Spain*
Author: **Marco Caserta**, *IE U.*

Project-based organizing has come to replace traditional bureaucratic hierarchies. However, little is known about how projectification of work impacts career outcomes of people working in these dynamic environments Using data from technology consulting company, we examine the gendered aspects of project-based work. We find, consistent with network literature, that females gravitate to other females, resulting in gender homophily in project-based networks. Further, we look at how this homophily impacts pay outcomes for female juniors. We base our prediction through integrating literature on relational demography, pay formalization and social capital theory of career success. The results show a dual impact: higher homophily in superior networks are instrumental to bonus pay (low formalization component of pay), whereas higher homophily in peer networks is detrimental to salary increase (high formalization component of pay).

CAR: **Hit or Sunk? Female Entrepreneurship and COVID-19 in Europe**

Author: **Raquel Justo**, *U. of the Balearic Islands*
Author: **Adrian Luis Merida**, *U. Carlos III de Madrid*
Author: **Antonio Golpe**, *U. OF HUELVA*

The outbreak of the COVID-19 pandemic and the measures that governments have implemented to combat it have disrupted the global economy in an unprecedented manner. Consequently, a rapidly growing body of literature assessing the impacts of this crisis on the labour market has emerged. While various studies suggest that women have been disproportionately affected by the pandemic, little is known as to its impact on female entrepreneurship. This article provides a comparative analysis of the probability of becoming unemployed of female entrepreneurs compared to male entrepreneurs and to men and women in other occupations. Our findings confirm that women in entrepreneurship have been hit the hardest of all groups by the pandemic. Further tests point to significant moderating effects of education and industry exposure to COVID-19 measures. Specifically, female entrepreneurs with tertiary education and those in industries with high levels of exposure appear to have been particularly harmed.

CAR: **Potential and the Gender Promotion Gap**

Author: **Alan M. Benson**, *U. of Minnesota*
Author: **Danielle Li**, *MIT*
Author: **Kelly Shue**, *Yale Business School*

We show that widely-used subjective assessments of employee ``potential'' contribute to gender gaps in promotion and pay. Using data on 29,809 management-track employees from a large North American retail chain, we find that women receive substantially lower potential ratings despite receiving higher job performance ratings. Differences in potential ratings account for approximately half of the gender promotion gap. Women's lower potential ratings do not appear to be based on accurate forecasts of future performance or attrition: women subsequently outperform male colleagues with the same potential ratings, both on average and on the margin of promotion, and women are less likely to exit the firm. Despite this, women's subsequent potential ratings remain low, suggesting that firms persistently underestimate the potential of their female employees.

Academic Careers

Session Moderator: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

CAR: **Network Gains from Co-Affiliation with Multiple Organizations: Insights from Academic Careers**

Author: **Olga Igorevna Ryazanova**, *Maynooth U.*
Author: **Paola Zappa**, *U. College London*

Co-affiliation with multiple institutions has become a widespread phenomenon in global academic careers. Placed in the middle between full-time employment by one institution and a "boundaryless career" with no stable employment, long-term involvement with multiple institutions has been claimed beneficial to individual and organizational performance outcomes. Yet, empirical evidence is still limited and fragmented. We advance knowledge about the influence of co-affiliation with multiple institutions on salient career-related outcomes by investigating the relationship between co-affiliation and the forging of intra-organizational networks of scientific collaboration – specifically, co-authorship ties with colleagues at the secondary institution. We use a dataset of 266 research active academics who have published in the 164 top journals in Business and Management categories of the Clarivate Journal Citation Reports in 2016-2018. Drawing on a wealth of secondary sources, we collect data on their career histories and co-authorship relationships to test our research hypotheses. We discuss the implications of co-affiliations for both academics and institutions.

CAR: **University Presidents' Road to the Top: An Accidental Meritocratic Career Trajectory**

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*
Author: **Huong Nguyen**, *La Trobe U.*
Author: **Sebastien Point**, *EM Strasbourg Business School*
Author: **Lisa Thomas**, *Kedge Business School*

Making it to the top of an organization is a career target for many, including for those in academia. The size and importance of the higher education sector is globally increasing, however, the literature on university president careers remains scarce. We interviewed 48 university presidents in the UK, France, and Vietnam, to identify the 'why' and 'how' of their career trajectories. While the academic career model resembles the nature of 'new careers' our findings support and expand several career theories. We identified a multi-stage career trajectory, where progress to the next stage is contingent on certain requirements being met as the career progresses. It is only from having achieved prior levels that the move to an executive leadership role becomes a consideration. Progress is largely informal, partly 'accidental' and sponsored by existing leadership or other colleagues. Critical drivers for this trajectory included intrinsic drivers such as "benevolence" and "the will to have an impact". Furthermore, we observed similarities and differences between selected enablers and barriers across national systems. Finally, we reveal the almost non-existence of HRM involvement in the process, providing implications for those in charge of people management in universities.

CAR: **Diversity and the Academic Career**

Author: **Damla Köroglu**, *Istanbul U.*
Author: **Elisabeth Mueller**, *U. of the Bundeswehr Munich*
Author: **Joachim Schnurbus**, *U. of Passau*

Building on diversity research and social identity theory, we investigate whether and how diversity characteristics influence the decisions of PhD graduates to pursue an academic career. Using panel data from a cohort of PhD students who graduated in the 2014 academic year in Germany, we find that, in general, surface-level diversity characteristics, such as gender, only influence the academic career choice when deep-level diversity characteristics, such as personality, preferences, values, and social class, remain unconsidered. Among surface-level characteristics, we only find consistent evidence for foreign-born PhD graduates to be more likely to stay in academia than the native-born. Among deep-level characteristics, the life goals and values of PhD graduates play a crucial role in their decisions. Those seeking to generate new ideas and work independently aspire to academic careers more than those whose intentions are spread around materiality, freedom, and sociality. In addition, individuals who have gained diverse experiences through research visits and research collaborations and those from a higher social class have a higher probability of pursuing an academic career. These findings emphasize the complexity of the academic career choice and the need to pay more attention to the effects of deep-level diversity characteristics in academia.

CAR: **An Exploration of Career Script Awareness Within the Academic Career**

Author: **Adam Keeley**, *Maynooth U., Ireland*
Author: **Peter McNamara**, *Maynooth U.*

As individuals seek to make career decisions, they rely on career scripts to guide them towards successful and prosperous careers. However, career scripts can only guide individuals successfully when they are complete and/or accurate. Individuals may face career-related challenges when making decisions with limited awareness of the appropriate script. From the perspective of an academic career, individuals are presented with incomplete career scripts at various stages of their academic career. This study takes two approaches to assess how individuals are made aware of the teaching component of an academic career script. Conducting content analysis on promotion documents of 183 higher education institutions from Ireland, the UK, the US, Australia, Canada, and New Zealand, we identify how important teaching is for promotion. From here, we conduct a systematic literature review to determine how teaching requirements are approached at the education and recruitment stages of the career. Our study found that while teaching plays an important role in the awarding of promotion, individuals starting out, are presented with limited to no awareness of the importance of teaching to their careers. Additionally, they are presented with limited exposure during the early stages of their first faculty appointments.

Participant: **Madison Avila**, *U. of California, Santa Barbara*

This symposium seeks to understand the experience of working fathers – from opportunities and constraints to support and stereotypes. The default for many working fathers is to fulfill the "ideal worker"—fully devoted to and available for the job, with no personal responsibilities or interests that interfere with this commitment to work – in their organizations and a "bread winner" – the sole or primary financial provider in their families. However, many working men also want to be engaged fathers. Given the competing pulls between roles at home and in organizations, many men are left feeling, as Erin Reid (2015) wrote: "over-worked and under-familied." Diving into the research on working fathers at this point in time is an opportune moment for scholars to support working fathers fulfilling their professional and caregiving ambitions, which can benefit them, their organizations and their families.

Toward a More Granular Understanding of Antecedents and Consequences of Employee Mobility

Organizer: **Seyeon Kim**, *Stanford Graduate School of Business*
Participant: **Ken Moon**, *The Wharton School, U. of Pennsylvania*
Participant: **Arianna Marchetti**, *London Business School*
Participant: **Viktorie Sevcenko**, *INSEAD*
Participant: **Federica De Stefano**, *HEC Paris*
Participant: **Julien Clement**, *Stanford U.*
Participant: **Roxana Barbulescu**, *HEC Paris*
Participant: **Shinjinee Chattopadhyay**, *U. of Illinois*
Participant: **Sukti Ghosh**, *INSEAD*
Participant: **Harshvardhan Ketkar**, *Bocconi U.*

Employee mobility has garnered substantial attention across academics and practitioners for its increasing relevance in the modern workplace and its significant impacts on outcomes that drive firm competitive advantage. Despite rich literature on the organizational impacts of employee mobility within and across organizations, it remains unclear when and how organizations are able to reap benefits from employee mobility given that mobility also disrupts shared knowledge, coordination, and relational ties. The proposed symposium serves to develop a deeper understanding of the antecedents and consequences of employee mobility by testing important factors that have been overlooked such as cultural strength and training investments and by making use of granular, big data to identify pathways by which harmful effects of worker mobility are produced and alleviated.

Trust and Relationship Building

Session Moderator: **Mingyu Li**, *HKUST Business School*

CM: **How Perceived Lack of Benevolence Harms Trust of Algorithmic Management**

Author: **Mingyu Li**, *HKUST Business School*
Author: **Thomas Bradford Bitterly**, *HKUST Business School*

Across four pre-registered experiments, we demonstrate that benevolence is an important, but previously neglected, predictor of trust in algorithmic management. We demonstrate that perceived benevolence of algorithmic managers is significantly lower than that of human managers, which harms trust in algorithmic management, and that these effects are robust when we control for perceived ability and integrity. Although individuals frequently attribute abusive working conditions to algorithmic management, we disentangle the effects of abusive management and algorithmic management. We find that algorithmic and human managers are equally distrusted in abusive work environments, but in supportive work environments, algorithmic managers are seen as lower in benevolence and trusted less than human managers. Combined, these findings deepen our understanding of trust and provide practical advice on the adoption of algorithmic management.

CM: **Consumer Trust Repair in Live Streaming Commerce**

Author: **Qiushi Wang**, *School of Management, Xi'an Jiaotong U.*
Author: **Ping Han**, *Xi'an Jiaotong U. School of Management*
Author: **Shuwei Hao**, *School of Management, Xi'an Jiaotong U.*

Consumer trust plays a fundamental role in facilitating transactions of live streaming commerce, yet the lack of mature norms makes consumer trust easily undermined. This raises the pertinent question of how consumer trust can be repaired after being damaged, which has been overlooked by the emerging literature on live streaming commerce. Drawing upon trust repair research, we theorize how broadcasters' combination strategies of different levels of responsibility-taking contribute to trust repair by influencing consumer forgiveness, and we investigate the moderating role of consumers' perceived parasocial interaction with broadcasters in such trust repair process. Through a scenario-based experiment, our results reveal that a high-level responsibility-taking strategy (i.e., a combination of acknowledging backward-looking responsibility and undertaking forward-looking responsibility) and a moderate-level responsibility-taking strategy (i.e., a combination of displacing backward-looking responsibility and undertaking forward-looking responsibility) are equally effective in repairing consumers' damaged trust in the broadcaster, whereas a low-level responsibility-taking strategy (i.e., a combination of displacing backward-looking responsibility and shirking forward-looking responsibility) cannot significantly repair consumers' trust. Furthermore, when consumers perceive higher parasocial interaction with broadcasters, broadcaster's moderate and high levels of responsibility-taking strategies are more effective in repairing consumers' damaged trust by facilitating forgiveness. This research contributes to the advancement of trust repair theory in live streaming commerce, and also provides practical insights for broadcasters to effectively resolve trust crises.

CM: **The Effects of Cognitive over Affective Empathy on Team Conflict and Performance**

Author: **Valentina Sara Schneider**, *London Business School*
Author: **Randall S Peterson**, *London Business School*

Empathy is the ability to understand others and comes in the form of a cognitive understanding of others' perspectives, or an affective matching of what others feel. We hypothesize that greater member cognitive empathy reduces the conflict teams experience and improves team performance. Greater affective empathy, we argue, increases conflict and reduces team effectiveness. We test our hypotheses on 624 graduate business students in 145 teams from 66 countries using a multi-wave data collection strategy. Our results support the hypothesis that cognitive empathy reduces dysfunctional conflict and improves team performance. However, we found mixed results regarding our hypothesis that affective empathy increases conflict and reduces team effectiveness and performance.

CM: **Exploring the Effect of Trust on Negotiation Outcomes Between Teams and Individuals**

Author: **Jacob Rathjens**, *The Ohio State U. Fisher College of Business*

Negotiations are a key endeavor in many parts of life. Many significant negotiations are conducted by teams of negotiators, rather than two individual negotiators. Supporting the value of having teams negotiate, team-on-team negotiations are associated with higher joint gain than one-on-one negotiations. However, teams of negotiators also report lower levels of trust in the other party than do individuals. With trust being an important, established, antecedent to joint gain, in this paper I argue that their relatively lower trust helps promote different behaviors than do individuals, which accounts for their higher achieved joint gain than solos. The hypotheses are tested in an experiment which provided partial support for the hypotheses.

Group Faultlines in Upper Echelons: Triggers, Challenges, and Outcomes

Session Chair: **Yunhyung Chung**, *U. of Idaho*
Organizer: **Taekjin Shin**, *San Diego State U.*
Discussant: **Sherry M. B. Thatcher**, *U. of Tennessee, Knoxville*
Discussant: **Siri Ann Terjesen**, *Florida Atlantic U.*

While there is a large body of research on team faultlines, a vast majority of diversity research in the upper echelons literature has mainly focused on diversity based on a single attribute separately (e.g., gender diversity and racial diversity) to understand how upper echelon diversity affects various firm-level outcomes. Thus, our symposium aims to contribute to the field of diversity in the upper echelons by incorporating the concept of faultlines into the research about management teams and boards of directors. In particular, presentations in the symposium aim to go beyond existing faultline research that has mainly focused on the strength of demographic faultlines. To resolve inconclusive findings on demographic faultlines, our symposium includes presentations that examine contextual factors that trigger the activation of dormant faultlines in the upper echelons, investigate various types of faultlines (e.g., ideology-based faultlines), and subgroup characteristics in the upper echelon teams to understand more precisely how subgroups formed by faultlines influence individual and social behavior. By exploring these new areas of research, presentations in this symposium advance research on faultlines in upper echelons.

CMS: **CEO Activism: Political Footprints Through Online Identity and Personal Branding**

Author: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **Caio César Coelho Rodrigues**, *U. de São Paulo - USP*
Author: **Benjamin Rosenthal**, *FGV EAESP*
Author: **Bruno Leandro**, *FGV EAESP*

CEO activism is increasingly important, and the literature on the topic has been advancing quickly, however it usually studies liberal and progressive CEOs from the global north. This article explores how a Brazilian CEO activist tailors his online identity through personal branding mechanisms to increase his footprint. We conduct a critical visual analysis of the Instagram profile of a right-wing Brazilian CEO activist. This shows a unique perspective on a conservative CEO from the global south. We bridge theories of personal branding and online identity to explain how CEO activists can engage larger audiences and foster ideologies. Specifically, adding to CEO activism, we claim that through personal branding mechanisms, CEO activists will intentionally establish an online identity that goes beyond any issue, empowering themselves to participate in the public debate. Personal branding mechanisms allowed the CEO activist we analyze to establish a mutualistic relationship with the values and ideas of the Brazilian conservative right and to engage large audiences by conveying authenticity in his personal brand.

CMS: **Messing Up Visual Organizational Studies**

Author: **Kaiyu Shao**, *China U. of Political Science and Law*
Author: **Maddy Janssens**, *KU Leuven*
Author: **Michelle Greenwood**, *Monash U.*

Visual and visual methods have this inherent ‘messy potential’ as they are potentially able to better capture the unspeakable, contradictory, elusive, sensory aspects of organization. Nevertheless, there are concerns that visual organizational studies (VOS) may not live up to their messy potential. We hereby aim to understand how VOS capture the messiness of organizational life. Analyzing this domain through a three-level ‘problematizing review’, we draw on the broad readings in visual studies (level 2) and reflexivity (level 3) to guide our review of the empirical VOS (level 1) with three questions: 1) which visual realities are created? 2) where does visual meaning reside? and 3) how is the visual researcher understood? Our analysis shows primarily an orderly way of knowledge production, where VOS tend to create tidy realities, reduce the multiplicity of visual meanings, and understand the researchers as authoritative knowledge producers. Based on our findings, we further re-imagine a messier VOS and conclude by offering our methodological contributions to the problematizing review method.

CMS: **Dog as a Quasi-Consumer**

Author: **Iida Hietala**, *Aalto U.*

This article explores the position of nonhuman animals, such as companion dogs, in moments of contemporary arts consumption. Companion dogs are a part of the everyday lives of millions of consumers and accompany urban experiences in consumption spaces. Despite numerous calls for understanding the realities of the co-existence of multiple species, there is insufficient discussion of these lived moments in marketing literature. By bridging consumer research and organisational studies in an interdisciplinarily manner and utilising autoethnographic and autonethnographic methods, I challenge this silence by illuminating consumers’ everyday lives as they are lived with other species, and trace the contours of formation of subjectivities precipitated in these moments of being-together. To go beyond the contested object/subject dichotomy, I draw on Michel Serres, arguing that canines are quasi-consumers – neither reduced to objects nor given the full agency of subjects – but acting as participants in the consumption processes that bring about a dynamic (re)configuration of the relationships between the actors, materials, spaces, technologies. I contribute to research by introducing new conceptual vocabulary and considering how new concepts help reveal abstracted commercial, economic, and artistic relations.

CMS: **From the Clap to the Finger! Rhetorical Genres, Audience and Critical Care Nurses (WITHDRAWN)**

Author: **Peter Hamilton**, *Durham U.*
Author: **Oonagh Hamilton**, *U. of Northumbria*
Author: **Martyn Griffin**, *U. of Sheffield*
Author: **Robert McMurray**, *Royal College of Surgeons in Ireland*
Author: **Nicki Credland**, *U. of Hull*

The COVID-19 pandemic witnessed untypical demonstrative public celebrations for front-line workers. In the UK this took the form of Clap for Carers (CfC), a ten-week initiative that was a purposeful, celebratory initiative that sought to praise so-called keyworkers. Here we identify CfC’s applause-based sonic rhetoric as an instance of Aristotle’s praise-oriented epideictic genre and in contra distinction to the tendency of rhetorical studies to focus on the speakers and/or message we focus on one CfC audience. Based on a longitudinal qualitative study with Critical Care Nurses (CCN) working through the pandemic we undertake a genre analysis on their reception and response to CfC’s epideictic rhetoric. On the basis that the audience of rhetoric can in turn become the producers of rhetoric, findings show that CCNs responsive rhetoric to the public aligned with Aristotle’s forensic genre, while their response to government hallmarked the deliberative genre. Respectively, the former was constructed through judgements that were accusatory and evidential, the latter through a critique of inadequate allocation of resources. A significant rhetorical device was antithesis, the word scheme based on contrasts. In exploring workers’ reception and response we show the need to understand the role of audience as a listener who become a speaker that craft a rhetoric in response to rhetoric aimed at them.

Dark Side Cases

Session Moderator: **Elina Riivari**, *U. of Jyväskylä*

CMS: **Dark Side Case: Rio de Janeiro, the Wonderful City, Gets Smarter, but for Whom?**

Author: **Manuela Lorenzo**, *Brazilian School of Public and Business Administration*
Author: **Bianca Sá**, *Brazilian School of Public and Business Administration*
Author: **Ana Christina Celano**, *IBMEC, Rio de Janeiro*

This teaching case illustrates a dilemma for Gabriel, a young man working as head of Rio de Janeiro's urban planning secretary in early 2022. Gabriel built a successful career at Brazil's most prominent technology company in the private sector. Still, a new challenge that was too big to refuse changed everything – now, starting in the public sector, Gabriel is the one responsible for a massive project that had the potential to change Rio de Janeiro's downtown and make Rio a leading smart city. The project attracted significant attention from construction companies interested in the benefits they would gain from the contract. Moreover, Gabriel needed the project to be approved by the city council. He was confident about the project and that it was the change Rio's downtown needed. But change for whom? A meeting with Teresa, a councilwoman with several criticisms of the project, unveiled the reality of the city center and its population to Gabriel. Teresa was an architect and urbanist, an activist for urban struggles, who had worked previously in urbanization and popular housing projects. Teresa forced Gabriel to see the elephant in the room, the reality he (and many others) overlooks every day: before being "smart," Rio's downtown needed social housing, culture, and security, in other words, basic needs. Now, Gabriel questioned which "change" Rio needed. Could Gabriel understand Rio's needs with his private sector mindset? Or a new one, a public manager mindset? But would the stakeholders still fund the project if he embraced Teresa's perspective? What should Gabriel do?

CMS: **Dark Side Case: Decisive Moment for Uber's Chief Security Officer**

Author: **Nour Abdul Wahed**, *Lazaridis School of Business & Economics*
Author: **Prescott C. Ensign**, *Lazaridis School of Business & Economics*

In November 2016 Uber's Chief Security Officer, Joseph Sullivan, was faced with making a critical decision. He had just learned that hackers were claiming they had gained access to the data 57 million users. They were also requesting $100k for their silence and the deleting of the private information they acquired. What should Sullivan do? Uber already has a negative reputation with the media related to a list of incidents including a large data breach in 2014. Uber did not need more negative publicity. Moreover, Uber's CEO, Travis Kalanaik, and the organization's culture would probably prefer hiding the breach and paying the hackers. Sullivan has a family and was fairly new in the job so he probably did not want to make any missteps and risk loss of his job. The case also raises the issue of whether to use a (retroactive) Bug Bounty Program – one in which he could hire (reward) the hackers to reveal how the breach was done and keep quiet about the breach. All in all, Sullivan had to decide if he should: pay or not pay the hackers ransom; hire the hackers on a Bug Bounty contract; publically disclose the breach or hide it; or even simplhy just ignore the whole thing and see what happens. Whatever decision Sullivan makes will have consequences for Uber, various stakeholders and him personally.

CMS: **Dark Sde Case We are all Misky Sonqo:Teaching and Struggling Against Higher Education Marketization**

Author: **Lucia B. Oliveira**, *FGV-EBAPE*
Author: **Patricia Calderón**, *Unigranrio Afya*
Author: **Ana Christina Celano**, *IBMEC, Rio de Janeiro*
Author: **Sergio Wanderley**, *Unigranrio Afya*

The case portrays the drama of a private university professor who, after 20 years of intense work and dedication, was fired. The family-owned organization she used to work for was recently purchased by an educational conglomerate and her fate was one of the many professors who were dismissed in the aftermath of the acquisition. The case addresses the issue of capital concentration and marketization among private higher education institutions and its consequences for professors who work in the sector. It also discusses the personal costs of labor precarization. Prepared for use in undergraduate and graduate human resources management, labor relations, and public policy programs, the case is expected to help students understand the challenges workers face in the labor market in a context of capital concentration and decreased opportunities.

Presenter: **Guy Huber**, *Oxford Brookes U.*
Presenter: **Kristiane Lindland**, *U.of Stavanger social sciences*
Presenter: **Alvin Panjeta**, *IRG, U. Gustave Eiffel, U. Paris-Est Créteil, F-77454 Marne-la-Vallée*

Organizational and management scholars have shown growing interest in classical pragmatism to think and act differently to address current problems and theoretical questions in a complex and uncertain world (Farjoun, Ansell & Boin, 2015; Simpson & den Hond, 2022). This interest has re-opened the work of the key classical pragmatists – John Dewey, George Herbert Mead, William James, Charles Sanders Peirce, Jane Addams and Mary Parker Follett – to novel interpretations to explore their distinctive, fruitful perspectives on organizational phenomena such as practice, routines, creativity, power, governance, and ethics (Elkjaer & Simpson, 2011; Kelemen & Rumens, 2013; Lorino, 2018; Wicks & Freeman, 1998). The distinctive features of pragmatist philosophy – such as a commitment to processual thinking that shifts the focus from stability to change; a future orientation and a disposition to act imaginatively in situations of uncertainty; and a sensitivity to ethics and democracy – all relate directly to the reconstruction of experience. This idea, at the heart of classical pragmatism, can help us in "putting the worker front and center" of collective experimentation for co-creating a sustainable society and better futures. The presentations in this symposium showcase how six scholars are translating pragmatist philosophy into theoretical perspectives to engage with current problems and theoretical questions.

Artificial Intelligence (AI) & Decision Making

Session Moderator: **Zhi Ming Tan**, *Cornell U.*

CTO: **"That's What the Computer Said": Understanding Models and Opacity in Decision Making**

Author: **Zhi Ming Tan**, *Cornell U.*
Author: **Diane E. Bailey**, *Cornell U.*

Models used to aid decision-making in work and organizations vary in terms of their formalism, typically interpreted as the extent to which they are expressed precisely in mathematical or logical terms. Understanding where AI models fall along the continuum from informal to highly formal models is important in shedding light on whether they might be accepted by decision makers. However, ambiguity in what is meant by formalism complicates placement of AI models on this continuum. We propose a 2x2 matrix of explicitness of computation versus specificity of relations that may prove a better conceptual device for understanding differences in formalism. Exploration of this matrix suggests that people who routinely work with structured scientific models may be most concerned about opacity in AI models while those who typically employ unspoken mental models might be most willing to accept AI models. We draw upon examples from our study of dairy farms, where sensor data increasingly serve as the input for computer-embedded models that are replacing or augmenting the mental and intuitive models previously employed by farmers. We argue that AI models' computer embeddedness and not the inexplicable logic of their computations will prove the bigger hindrance in their acceptance. AI models share this problem with many other computer-embedded models, a problem that arguably arises when model building shifts from users to computer experts.

CTO: **AI and Bureaucratic Decision-Making: A New Layer of Opacity**

Author: **Antonio Cordella**, *London School of Economics*
Author: **Francesco Gualdi**, *London School of Economics*

This article offers an in-depth analysis and explanation of the reasons whyof AI cannot solve the problems of transparency and accountability of public administration bureaucracies. The paper contributes offering an innovative theoretical framework for the analysis of AI: the theory of functional simplification and closure. Moreover, the paper contributes providing an innovative way to study AI in the context of public sector bureaucracies, shedding lights on the different impacts of AI on the transparency and accountability of public administration bureaucracies using Mintzberg's taxonomy of machinery and professional bureaucracy (Mintzberg, 1983). To support the theoretical argument the paper analyses the well-known public sector AI case of COMPAS, the algorithmic system used to assess offenders' risk score in US Judiciary – to illustrate how and why AI makes opaquer public bureaucracies decision-making.

CTO: **A Meta-Analysis and Review About the (Un)Fairness Perceptions of Algorithmic Decision-Making**

Author: **Josephine Mago Moritz**, *Heinrich-Heine U. of Dusseldorf*
Author: **Larissa Pomrehn**, *Heinrich Heine U. Düsseldorf*
Author: **Holger Steinmetz**, *U. of Paderborn*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

This meta-analysis investigates the relationship of algorithmic decision-making (ADM) and perceptions (e.g., fairness) as well as perceived organizational outcomes (e.g., organizational attractiveness), and further explores moderators (cultural cluster, gender, age) to understand algorithm aversion and appreciation within the business and management context. Previous research shows ambiguous results with ADM being perceived as either averse or appreciative. Hence, we propose a synthesis of existing research to shed light on the current status quo. Based on a sample of 21 studies and 67 effect sizes (N = 7,818) we find that, compared to human decision-making, the use of ADM was perceived as less fair and as a bigger threat, and organizations which use ADM were seen as less attractive. Cultural clusters moderated the relationship between perception of ADM and outcomes, whereas the samples' mean age and percentage of females did not. We developed a framework that qualitatively incorporated further proposed antecedents and contextual factors that affect perceptions of ADM. As algorithm aversion is prevailing, further research needs to be conducted to understand this phenomenon in more detail, so that managers and organizations are able to use ADM most effectively.

CTO: **Awakening to Algorithmic Transgressions: Non-Users Discovery of Algorithmic Decision Making**

Author: **Lisen Selander**, *U. of Gothenburg*
Author: **Sirkka Jarvenpaa**, *U. of Texas at Austin*
Author: **Charlotta Kronblad**, *Stockholm School of Economics*

Individuals in civil society are increasingly impacted by algorithmic decision-making but are often unaware that decisions targeting them are delegated to machines. Such unawareness is particularly problematic in the case of faulty decisions and institutional transgressions. How do individuals begin to suspect that they have been targeted by an algorithm and how do they uncover the hidden nature and opacity associated with these systems (their inputs, process, and outputs)? In resource-scarce environments, such as the public sector, noticing such transgressions and tracing them to the algorithm is crucial to protect social justice and public trust in institutions. In this manuscript, we build on the work of von Krogh (2018) on the discovery process of algorithmic decision-making and expand this theory to a non-user perspective exploring algorithmic decision-making from the perspective of the targets of the decisions. Our study contributes to the emergent literature on algorithmic decision-making and the theory on abductive reasoning by pointing at the emotional, cross-layered, and collective work associated with algorithmic discovery.

Information Technology & Workers

Session Moderator: **Sienna Helena S. Parker**, *U. of California, Santa Barbara*

CTO: **Burned Out by Technology: How Perceived Autonomy Shapes Strategies to Reduce Digital Exhaustion**

Author: **Sienna Helena S. Parker**, *U. of California, Santa Barbara*
Author: **Roni Shen**, *U. of California, Santa Barbara*
Author: **Paul Leonardi**, *U. of California Santa Barbara*

Knowledge workers report increasing burnout at work. Mounting evidence suggests that increased use of digital technologies in the workplace is one factor contributing to burnout. We integrate various streams of research on digital technology use to develop the concept of digital exhaustion, which we define as the overwhelming state of psychological and physiological fatigue that results from the cumulative use of multiple digital technologies in both work and non-work contexts. Through a qualitative study of digital technology use amongst knowledge workers across a variety of industries, we show that informants are acutely aware of the degree to which they are exhausted by their use of digital technologies in and outside of work and that they enact a number of strategies in an attempt to cope with their exhaustion. The data show that some of these strategies are targeted at the symptoms of digital exhaustion, while others are targeted at the sources of digital exhaustion. We identify a cycle in which a knowledge worker's level of perceived autonomy shapes the strategic approaches they choose to enact. Notably, perceived autonomy is also shaped by whether the chosen strategy is successful, reducing digital exhaustion. We build from these data to develop a grounded theoretical model that explains the relationship between perceived autonomy, strategies targeted at sources and symptoms, and ongoing levels of digital exhaustion. We explore the implications of this model for theories of digital technology use in organizations.

CTO: **What IT Professionals Value:The Curvilinear Relationship Between Relative Wages and Job Satisfaction**

Author: **Yao Zhao**, *Hong Kong U. of Science and Technology*
Author: **Dongwon Lee**, *Hong Kong U. of Science and Technology*
Author: **Sunil Mithas**, *U. of South Florida*

As the demand for IT professionals is growing in recent years especially in the post COVID period, talents retention becomes a critical issue for IT companies. The traditional labor economics literature suggests that higher compensation leads to higher job satisfaction. However, the recent notion of firm-specific incentives suggest that employees are willing to accept below-market wages for the extra positive utilities they gain at the focal firm. Our study examines the relationship between relative wages and job satisfaction for IT professionals and explores what aspects IT professionals value in their work experience. Using a dataset from 9,000 Indian IT professionals over 2007 to 2011, we found that there is a curvilinear U-shaped relationship between relative wages and job satisfaction such that IT professionals who have high satisfaction towards the work culture, growth opportunities, and work life balance have high job and pay satisfaction even though they receive relative low wages. The results have important practical implications for IT organizations by indicating that labor retention does not necessarily relate to offering a generous compensation. IT organizations should improve the cultural aspects of the work environment and provide career development opportunities to keep talents in a long-term tenure.

CTO: **Is Anyone Listening? Early Career Female IT Professional's Mistreatment, Voice and Burnout**

Author: **Riitta Hekkala**, *Aalto U. School of Business*
Author: **Emma S. Nordbäck**, *Hanken School of Economics*

Junior female IT professionals occupying more peripheral roles, such as business- or design-oriented, in information system development projects are prone to workplace mistreatment. We take stock on their well-being and investigate through a longitudinal case study how four early career IT professionals, holding more peripheral roles, cope with mistreatment through different voice and silence behaviors. Through yearly narrative interviews (2017-2020), we discovered that all professionals experienced role-based mistreatment – which took place through structural and interpersonal means. They all shared similar voice and well-being trajectories, in that they started off as engaged (engaging in constructive voice to improve the situation) but ended up disengaged (silenced) and resigned (lost hope, left for sick leave). We provide explanations to why shifts in voice behaviors take place, and how such voice trajectories impact well-being over time. Our study contributes to theory on voice processes and prolonged mistreatment among female IT professionals.

CTO: **Servant Leadership and Employees' Cyberloafing: A Moderated Mediation Analysis**

Author: **Anas A. Salameh**, *Prince Sattam Bin Abdulaziz U.*
Author: **Walaa A. Zabadi**, *College of Business Administration, Prince Sattam Bin Abdulaziz U.*

Building on social cognitive theory, the present study proposes a negative relationship between servant leadership and employees' cyberloafing. Furthermore, the study proposes an indirect relationship between servant leadership and cyberloafing via the sense of belongingness to the organization. The study also proposes the moderation effect of moral attentiveness on the direct link between servant leadership and cyberloafing and the indirect link between servant leadership and cyberloafing via the sense of belongingness to the organization. Using time lag survey data collected from the 303 employees enrolled as students in large universities in KSA, the findings showed that all the hypothesized relationships were supported. The present study contributes to the different streams of literature as well as offers several useful suggestions for managers and organizations.

Information Technology and Organizations

Session Moderator: **Franklin Nakpodia**, *Durham U. Business School*

CTO: **How Enterprise Systems Enable Strategic Change by Incoming CEOs Under Varied Loci of Complexity**

Author: **Ojaswi Malik**, *Indian School of Business*
Author: **Abhishek Kathuria**, *Indian School of Business*
Author: **Prasanna Karhade**, *Chinese U. of Hong Kong*

Enterprise systems play a key role in the execution of firm strategies. A critical strategic choice a new Chief Executive Officer (CEO) makes is of strategic change or strategic persistence, which are defined as change or stability over time in a firm's pattern of resource allocation in key strategic dimensions, respectively. In this study, we maintain that enterprise systems can enable or constrain an incoming insider or outsider CEO in implementing strategic change or persistence in the presence of environmental complexity, strategic complexity, and operational complexity. Accordingly, we adopt a configurational perspective accompanied by fuzzy-set qualitative comparative analysis (fs-QCA) to explicate complex nonlinear relationships among CEO succession, firm's enterprise system extensiveness, and complexities residing at three loci. Ultimately, the multiple equifinal configurations from our study are used to generate theoretical configurational propositions for two types of CEOs namely the "Internal Complexity Warrior" and the "Digital Warrior" CEO.

CTO: **The Nexus Between Digital Technology, Social Entrepreneurship and Resilience in a Developing Country**

Author: **Franklin Nakpodia**, *Durham U. Business School*
Author: **Folajimi Yesir Ashiru**, *Coventry Business School*
Author: **Jacqueline Jing You**, *U. of York*
Author: **Oluwasola Oni**, *Pan-Atlantic U., Lagos, Nigeria*

Social entrepreneurship (SE) is a complex phenomenon designed to resolve numerous societal challenges while remaining economically viable. However, how social entrepreneurs in developing countries have used digital technologies to address communal challenges during the Covid-19 crisis is largely undocumented. Thus, this research examines social entrepreneurs' adoption of digital technologies, the multi-level organisational conditions, and associated innovative outcomes of engaging digital technologies. Based on the theoretical framework of organisational resilience, this research employs a qualitative methodology (38 semi-structured interviews with Nigerian SE firms) to investigate social entrepreneurs' engagement with digital technologies. Our findings reveal 19 pathways through which digital technologies enabled organisational resilience outcomes by Nigerian SE firms during the Covid-19 pandemic. This allows us to show, via a 3x3 matrix, how social entrepreneurs deploy digital technologies to build proximate, dynamic, and continuous resilience in a weak institutional context. Our findings enable us to advance the SE - digital technologies - resilience scholarship in a developing economy.

CTO: **Aligning Business and IT as a Coevolution Process: From Principles to Practices**

Author: **Fabrizio Amarilli**, *Politecnico di Milano*
Author: **Mario Van Vliet**, *Vrije U. Amsterdam*
Author: **Bart Van Den Hooff**, *Vrije U. Amsterdam*

Despite an extensive body of research on Business-IT alignment, insight into the practices through which alignment can be realized is still relatively scarce. The interpretation of alignment as a coevolution process provides insight into the principles through which a persistent aligning of business and IT may be achieved. The incorporation of these principles in corporate practice, however, is still limited. In this paper, we address this gap, by combining insights from the literature with the empirical findings from five case studies. We identify four principles of coevolution, and 14 alignment practices through which these principles are operationalized. We also discuss how these principles and practices are interconnected. This paper contributes to filling the gap between theoretical alignment principles and operational practices that exists in literature. Identification of principles and practices and understanding their connection provides operational guidance for organizations to optimally shape the process of aligning business and IT.

CTO: **The Influence of Enterprise Social Media Ostracism on Digital Creativity**

Author: **Ahsan Ali**, *School of Economics and Management, Zhejiang Sci-Tech U.*
Author: **Ali Ahmad**, *Radboud U. Nijmegen*
Author: **Nazik Hangeldiyeva**, *Zhejiang Sci-Tech U.*

Although, a significant number of empirical evidence has demonstrated that ostracism has distressing effects on employees, knowledge about how such online experience impacts employees' job outcomes is limited. This research draws on the conservation of resources theory to develop and test a research model that specifies how enterprise social media ostracism impacts the digital creativity of employees. Using a time-lagged research design, this study found that enterprise social media ostracism is negatively related to employee digital creativity via serially mediated relationships including psychological distress and creativity goal striving. Furthermore, results demonstrate that performance tension strengthens the relationship between enterprise social media ostracism and psychological distress. In addition, performance tension moderates the serially mediated relationship between enterprise social media ostracism and digital creativity via psychological distress and creativity goal striving. Specifically, findings suggest that performance tension strengthens the negative indirect relationship between enterprise social media ostracism and digital creativity via psychological distress and creativity goal striving. This study discusses theoretical contributions and practical implications in a later section.

DEI: **A Worker and A Daughter: Building Women's Resilience when Coping with the Work-Eldercare Conflict**

Author: **Galy Binyamin**, *Ariel U. Department of Economics and Business Administration, Israel*
Author: **Hedva Vinarski Peretz**, *The Max Stern Yezreel Valley College, Israel*

As society is aging, middle-aged women are still experiencing the work-family conflict, not as working mothers, but as working daughters who must juggle paid work while providing informal care to their elderly parents. The aim of this study was to explore these women's subjective experiences in building resilience to better understand the socio-psychological mechanisms affecting their ability to cope with the ongoing work-eldercare conflict. It is grounded in the theoretical framework of Kobasa's 3Cs of resilience (hardiness): Challenge, Control, and Commitment. However, although employee resilience is often perceived as psychological trait, it is nested in the informal context of organizations. Thus, we expanded the construct of resilience by adding a fourth component, consideration, to capture a more comprehensive organizational construct of resilience. We analyzed 22 semi-structured interviews with middle-aged women, using a hermeneutic phenomenology approach. The findings revealed two coping strategies for each of the four components of resilience that these women use to build their resilience to cope with the continual work-eldercare conflict. These findings have implications for both line managers and human resource managers, especially since the percentage of caregivers in the labor market is likely to grow.

DEI: **Work-Family Habits? Exploring the Persistence of Traditional Work-Family Decision Making**

Author: **Laura Suzanne Radcliffe**, *U. of Liverpool*
Author: **Catherine Cassell**, *U. of Durham*
Author: **Leighann Spencer**, *U. of Liverpool Management School*

Decisions made within the family have long been recognized as a central obstacle to achieving gender equality, not only in the home but also in the workplace, due to the interdependent relationship between work and family domains. Here we focus particularly on how couple-level work-family decision-making processes influence (non)egalitarian work-family decisions. We draw on a qualitative diary study with 60 participants, comprising 30 dual-earner couples, to examine work-family decision-making in daily practice. Our findings demonstrate how egalitarian family identities, previously highlighted as important, are necessary but insufficient in enabling egalitarian work-family decisions. Instead, our findings demonstrate the fundamental role played by the decision-making processes couples engage in, particularly in relation to their frequently habitual nature. Thus, we show how, while family identities held by men and women may be converging, habitual decision-making processes often continue to prevent egalitarian daily practices. We introduce the concept of 'work-family habits' and develop a novel framework depicting daily work-family decision-making processes by dual-earner couples, demonstrating how each process leads to either more traditional or egalitarian work-family practices.

DEI: **Mothering Experiences of Migrant Architects While Navigating the Challenges of Occupational Closure**

Author: **Sreenita Mukherjee**, *Queen Mary U. of London*

This paper presents the findings of a research project on the lived experiences, career outcomes, and mothering experiences of female migrant architects from the Commonwealth in the UK architectural profession. The research design is qualitative, and I employed a postcolonial feminist analysis. This article finds that the intersection of occupational closure and motherhood impacted their lived experiences in the UK as they perceived that it would be challenging for migrant mothers to work and do mothering simultaneously, specifically while navigating the challenges of occupational closure and without social support in terms of childcare. During their fertile ages, some interview respondents chose to invest their time and energy in their careers rather than mothering and delayed their pregnancy; it shows that they believe in neoliberal ideologies as highly competitive human capital. However, the findings also indicate their ambivalent feelings regarding their motherhood role and professional identity.

DEI: **Putting the Behaviors into Family-Supportive Supervision: The Development of a Behavioral Typology**

Author: **Victoria Daniel**, *York U., Canada*
Author: **Amanda C. Sargent**, *Bentley U. - College of Business - Management Department*
Author: **Linda Shanock**, *U. of North Carolina, Charlotte*

Widely recognized as an essential management practice that can meaningfully shape key employee attitudes and behaviors, family-supportive supervision ("FSS") represents a form of managerial support aimed at helping employees effectively navigate the work-family interface. Despite the importance of perceived FSS for both individual and organizational outcomes, questions remain regarding the actual behaviors supervisors engage in to provide this targeted family support (or not). Consequently, substantive conceptual (e.g., ambiguity) and operationalization issues (e.g., confounded variance, abstraction) have stemmed from the lack of clarity and parsimony in the study of FSS. To address these limitations, we conducted a multi-phase mixed methods investigation with three unique samples of full-time employees to develop a behavioral typology of FSS behaviors. The resultant typology is distinguished by two dimensions (i.e., valence and effort) and organized into six categories that together span the full spectrum of unsupportive-supportive supervisor behaviors. This behavioral index and typological structure subsequently help to guide the refinement of the conceptualization of FSS and lays the groundwork for the creation of more objective FSS measures—a foundational step necessary for the advancement FSS research and practice.

DEI: **A Study of Family Helpers of Chinese Women Entrepreneurs**

Author: **Anna-Katharina Schaper**, *U. of Würzburg, Technical U. of Munich*
Author: **William B. Gartner**, *Babson College*

This study explores the kinds of help that family members provide to women entrepreneurs in China. We apply an explorative qualitative research design that draws on 23 semi-structured interviews of women who have started businesses in China. Based on an 'ideal type analysis,' we derive a typology of the following ways that family members give help: 1) 'Provide only business-focused instrumental and informational support,' 2) 'Mainly support with childcare and household-related tasks but also provide other instrumental and informational support,' 3) 'Provide all kinds of instrumental and informational support,' 4) 'Only provide instrumental support.' We show how entrepreneurial and non-entrepreneurial family members provide diverging kinds of help to childless and parent women entrepreneurs. In addition, key family helpers (partners/spouses, parents, in-laws) are identified. In contrast to other studies, our research emphasizes the role of in-laws and expands knowledge of the different roles of family help in entrepreneurship.

Socioeconomic Status, Class, Fairness, and Exclusion

Session Moderator: **Yang Bai**, *Guanghua School of Management, Peking U.*

DEI: **Procedural or Distributive Justice? The Role of Social Class in Justice Judgements Processes**

Author: **Yanzhao Su**, *Guanghua School of Management, Peking U.*
Author: **Yang Bai**, *Guanghua School of Management, Peking U.*

Although researchers are aware of the organizational phenomena caused by injustice treatment of social class, understanding of how organizational justice perceptions are responded differently by employees from the lower class and upper class is still very limited. The current study aims to address this issue by investigating the role of social class in justice judgments processes. Drawing on the social cognitive perspective of social class and fairness heuristic theory (FHT), we proposed that employee social class moderates the relationship between justice perceptions and job satisfaction and turnover intention. We further proposed that employees' perceived financial threat partially mediated the moderating effects. Our predictions were tested with a pre-registered archival dataset General Social Survey in the United States (Study 1) and a pre-registered 2-wave online survey in China (Study 2) of employed employees. In Study 1, the positive relationship between procedural justice and job satisfaction is stronger for lower than higher social class, while the positive relationship between distributive justice and job satisfaction is stronger for higher than lower social class. Study 2 replicated these findings, and additionally explored perceived financial threat as mechanisms for mediating the moderating effects of social class. Theoretical implications and future research directions are also discussed.

DEI: **Adding Insult to Injury: A Dual-Path Model to Working-Class Dignity Injury and Remediation**

Author: **Kristen Lucas**, *U. of Louisville*
Author: **Angela Gist-Mackey**, *U. of Kansas*

Managing and valuing diversity is a key strategic priority of contemporary organizations. But despite efforts to create inclusive and equitable organizational cultures for employees with diverse identities, social class is an identity frequently excluded from consideration. Consequently, the challenges working-class employees face in achieving dignity in the workplace are largely normalized and ignored. In this essay, we expose class-based vulnerabilities by outlining a dual-path model by which inequalities embedded within the workplace negatively impact dignity for working-class employees. In the first path, managerial practices that generate identity-indifferent material inequalities of financial reward, economic security, autonomy, and working conditions inflict direct workplace dignity injuries for those who are disadvantaged by those inequalities. In the second path, those same material inequalities cumulatively contribute to the construction of individuals' objective working-class identity, which may then trigger identity-sensitive social inequalities in interpersonal treatment that inflict dignity injuries across work and non-work domains. We introduce dignity equity as a novel concept that ultimately can inspire managerial practices that foster workplace dignity.

DEI: **The Pal-ly Equation:Decoding Friendship's Role in Dirty Workers' Lives Using Two Time-Lagged Studies**

Author: **Divya Tyagi**, *O.P. Jindal Global U., Sonepat, Haryana, India*
Author: **Mudit Shukla**, *Indian Institute of Management, Indore*

Dirty work entails roles, tasks, or occupations that are seen as demeaning or disgusting due to their association with physical, moral, or social taint(s). The scholarly interest in understanding the different facets of this form of work has risen in the recent Researchers have tried to uncover the features of dirty occupations, the challenges faced by the dirty workers, and the strategies they utilize to manage the taint due to their work. While these studies have been constructive in advancing the understanding of dirty work and dirty workers' experiences, they have majorly relied upon the assumption that dirty work's stigma is an occupation-level threat and dirty workers' perceive, experience, and respond to this threat collectively. Consequently, there is a major gap that has emerged in the dirty work literature. The understanding of dirty work's embodied aspects, including how the differences in the meanings ascribed to the dirty workers' bodies influence the way they encounter their work, is limited. The present study aims to bridge this gap by considering an important identity characteristic of dirty workers, i.e., their caste, and examining how it manifests itself in their work lives with the help of two time-lagged quantitative studies. In doing so, the present article makes significant contributions to theory and practice.

DEI: **Getting Inside: Class and Racialized Disadvantage Among Black Tech Entrepreneurs**

Author: **Alicia Sheares**, *UCLA*

Black people face various barriers in the technology industry, ranging from encountering micro-aggressions from their coworkers to facing blocked advancement in their professional careers. These challenges are particularly pronounced in entrepreneurship, where Black technologists receive less than one percent of venture capital funding. Existing research tends to focus on racial disparities within the industry, particularly between Black and White professionals. Consequently, we have relatively little insight into how Black technologists themselves understand racism, at which levels of society racism is occurring, and how these experiences vary by class. Through an inductive study of 46 Black tech entrepreneurs in Silicon Valley, I highlight how class shapes Black entrepreneurial processes, albeit in different ways. Lower- and middle-class Black entrepreneurs struggled to raise money from family and friends and had fewer and less effective networks when starting their businesses. Alternatively, Black upper-class entrepreneurs had familial wealth and personal networks that they could rely on to start their businesses but perceived that Silicon Valley's racial climate that centered and prioritized whiteness, and individual-level instances of discrimination where they were positioned and treated as outsiders, hindered their entrepreneurial efforts. This research advances existing scholarship, providing a first-hand account into the unique challenges members of this group face when engaging in entrepreneurship. Taken together, this work presents a fuller picture of the lived experience of Black tech entrepreneurs.

Work Climate and Inclusion

Session Moderator: **Yixuan Li**, *U. of Florida*

DEI: **The Antecedents and Outcomes of Organizational Climate for Work-Life Inclusion**

Author: **Yixuan Li**, *U. of Florida*
Author: **Haiyang Liu**, *Nanyang Business School, NTU Singapore*
Author: **Zhefan Huang**, *U. of Florida*
Author: **Mo Wang**, *U. of Florida*
Author: **Yueting Ji**, *Central U. of Finance and Economics*
Author: **Shengming Liu**, *Fudan U.*

Supporting employees to balance work and nonwork roles is important to contemporary organizations. Considerable research has focused on how formal organizational policies (family-friendly programs, flexible arrangements) and informal workplace support from the supervisor help employees navigate work-family issues. Nevertheless, less attention has been paid to work-family climates, another important form of informal workplace support from the organization. Adopting a work-home perspective, which highlights interdependencies in work-home relationships, we study the antecedents and outcomes of climates for work-life inclusion. For antecedents, we propose and test two organizational structural characteristics (the extent of women's top management representation and gender-inclusive HR practices) that may facilitate the formation of climates for work-life inclusion. For outcomes, we investigate the positive cascading effect of climates for work-life inclusion on employees' work-nonwork balance and whether women (vs. men) may benefit more from such climates. In addition, at the organizational level, we examine whether climates for work-life inclusion help promote financial performance (operationalized as return on sales) and prevent human capital loss (operationalized as voluntary turnover rate). We tested the research model with two waves of matched employer-employee survey data (2020-2021) from 207 firms in China and found general support for our hypotheses. We discuss future research implications.

DEI: **My Reality is Different from Yours: Incorporating Social Identity into Inclusion Climate Analysis**

Author: **Hilla Back**, *Aalto U. School of Business*
Author: **Philipp Back**, *Aalto U. School of Business*
Author: **Seonyoung Hwang**, *Aalto U. School of Business*

Inclusion climates are increasingly viewed as central in managing the benefits and challenges associated with diversity in organizations. However, as perceptions of inclusion climates have been found to violate some of the assumptions behind climate theory, much remains unclear regarding their appropriate analysis. Through an illustrative study, we offer an alternative way to analyze inclusion climates that provides more insights than has been previously achieved. This study advances conversations in the diversity and inclusion literature and also the organizational research methodology literature by highlighting the importance of combining both climate strength and climate level in inclusion climate analysis, and positing that inclusion climate may be most insightfully studied on the (intersectional) identity group level instead of the unit or organizational level that is most often used in extant climate research.

DEI: **Employees' Sense of Fit and Belonging: Seeking Communities to Buffer from Adverse Diversity Climates**

Author: **Antonio Carlos Jansch Porto**, *U. of Wisconsin - Milwaukee*

Incongruences between the diversity climate within organizations and external communities are perceived differently by employees part of dominant and non-dominant groups. A negative organizational diversity climate will pose difficulties for marginalized employees to develop a sense of person-environment fit and belonging. Actively seeking emotional support in external communities with positive diversity climates will restore the employees' psychological resources, buffering individuals from the negative diversity climate found in their workplace. This paper offers a model for the effects of diversity climates within and outside the workplace, leveraging and applying person-environment fit theory to the diversity literature. It also draws on positive organizational scholarship to illuminate processes and mechanisms through which marginalized employees cope with negative diversity climates in their workplaces, presents testable propositions, and suggests directions for future research.

DEI: **Whose Good Old Days? Emphasizing History Triggers Social Identity Threat Among Black Americans**

Author: **Laura Wallace**, *U. of Chicago Booth School of business*
Author: **Stephanie Reeves**, *WGU Labs*
Author: **Steven Spencer**, *Ohio State U.*

Many mainstream organizations celebrate and emphasize their historical successes. In their history, however, they often marginalized racial minorities, women, and other underrepresented groups. We suggest that when organizations celebrate their histories, even without mentioning historical marginalization, they can undermine belonging and intentions to participate in the organization among historically marginalized groups. Three experiments (N's = 198, 651, 811) demonstrate that Black participants who were exposed to an organization that celebrated their history versus the present showed reduced belonging and intentions to participate in the organization. These effects were mediated by expectations of biased treatment from coworkers in the organization. However, this negative effect of celebrating history no longer occurred when it was clear that the organization had a history of diversity and inclusion. Taken together, these findings suggest that emphasizing organizational history is a source of social identity threat among marginalized groups.

DEI: **Compromisers or Strategists? Relationship of Women Managers with other Women at Work in Saudi Arabia**

Author: **Hayfaa A. Tlaiss**, *King Fahd U. of Petroleum and Minerals*
Author: **Dmitry Mikhail Khanin**, *Monash U., Malaysia*

What is the nature of the relationship between women managers and other women at work in organizations with a history of gender discrimination? To answer this question, we used a qualitative interpretivist approach, and conducted face-to-face, semi-structured interviews with women middle and senior managers in Saudi Arabia. Applying positioning theory, our findings demonstrate how, motivated by their moral duties, Saudi women managers position themselves as supporters of other women at work. We identified two groups of women managers based on key differences in the unfolding of this support, the compromisers and the strategists. The compromisers assumed that their moral duty was to protect the proteges from being perceived as women's activists and advised them to act in compliance with the traditional gender roles and expectations, and to focus on their own work. In contrast, the strategists assumed that their moral duty was to provide their proteges with advice on how to solve their problems and make decisions, teach them to stand up for themselves, and showcase their accomplishments.

DEI: **The Effect of Ethno-Racial Stereotypes and Familiarity on Funding Worthiness of Latinx Entrepreneurs**

Author: **Sonia Siraz**, *U. of Essex, United Kingdom*
Author: **Bjorn Paul Claes**, *The Open U.*

Purpose: This paper investigates how ethno-racial stereotypes and familiarity affect the perceptions of funding worthiness of Latinx minority entrepreneurs compared to White American entrepreneurs. Our study contributes to a deeper understanding of how system inequality and prejudice endure in business lowering the economic potential of Latinx populations in the USA. Methodology: Conjoint experiments comprising 12,496 assessments nested in 781 evaluators. Findings: Latinx entrepreneurs are perceived as less funding worthy than White entrepreneurs due to their ethno-racial attributes. While the entrepreneur's lower level of debt increases funding worthiness, it does not fully eliminate the prejudice stemming from ethno-racial stereotypes. Evaluators' familiarity with Latinx minorities worsens the prejudicial effects of ethno-racial stereotypes on the perceptions of funding worthiness of Latinx entrepreneurs. Originality: Our work begins to address important gaps in the minority entrepreneurship and broader diversity literatures by investigating why evaluators judge Latinx minorities as less funding worthy in the post-failure phase of the entrepreneurial process and why inequalities endure. Our study reveals the causal effect that ethno-racial stereotypes have on unfavorable perceptions about Latinx entrepreneurs. In doing so, it sheds further light on hitherto inconclusive findings about whether familiarity increases or decreases the effect of stereotypes. Intriguingly, we find that Latinx evaluators judge Latinx entrepreneurs more harshly than White entrepreneurs.

DEI: **The 'Hijab' and Gendered Workspaces in Pakistan.**

Author: **Shehla Riza Arifeen**, *Lahore School Of Economics*

Drawing on signaling theory, this research argues the hijab (the headscarf) is a signal used to create a safe space within gendered workspaces in Pakistan. This study challenges the widely held view of the hijab as a largely negative signal in a western workspace, by offering a reconceptualization of the hijab as a positive signal. Based on semi-structured interviews, this qualitative research explores the voluntary use of the hijab by 25 women, as it is lived and experienced by female office workers in Pakistan. The hijab was chosen as a head covering to signal religiosity and piety. The hijab while making them visible, paradoxically made them invisible, desexualizing them and 'marking' them as 'serious Muslim'. It also became an instrument to escape sexual harassment at the workplace as the hijab accorded them a higher status than women who wore the chaadar or women who wore no head covering in the workplace. In a Muslim-majority country where gender segregation is still a norm, the hijab legitimized the presence of women in mixed-gender spaces and enabled them to negotiate gendered spaces with confidence.

DEI: **Rethinking Women in Entrepreneurship in China: A Family Perspective**

Author: **Sisi Sung**, *U. of Dundee*

Chinese female entrepreneurs dominate the world's richest group of female billionaires, but are strikingly marginalized in the current gender discourse and significantly underexplored in available studies. Despite the emerging scholarly interests in tandem with the increasing number of Chinese women entrepreneurs, existing discussions extensively focus on barriers to female entrepreneurship, and it remains unclear the identity of women engaging in entrepreneurship. The present study attempts to fill the gap by clarifying the identity of women in entrepreneurship. Based on in-depth interviews with 16 women in entrepreneurship, the study examines how their entrepreneurial identity and experiences are shaped by the Chinese family. Qualitative analysis indicates a pivotal role of family environment in shaping women's sense of self in entrepreneurship. On the one hand, women in entrepreneurship identify themselves in terms of family members. On the other hand, the context of family businesses prompts performative entrepreneurship that sheds new light on the commonly perceived image of women entrepreneurs. The family perspective sheds an alternative light to the generic interpretation of entrepreneurship by illuminating the dynamics of the identity of women engaging in entrepreneurship in China.

Presenter: **Katina Sawyer**, *U. of Arizona*
Presenter: **Bobbi Thomason**, *Pepperdine Graziadio Business School*

In this symposium, we explore the question: How can leaders best harness their own and others' identities to create diverse and inclusive organizations? We propose that, to do so, leaders must grapple with their own identity challenges as the representatives of the common purpose and as enablers of followers' unique identities. How they engage with their identity dilemmas will inform how they are able to create more or less complex and inclusive collective identities for their members. Our symposium features new and important work that delves into the identity complexities of leading diverse organizations. Across four papers, we consider how leading with identity can bring individuals together or invoke perceived estrangement at different levels of analysis, contexts, and types of identities. Collectively, our symposium moves beyond thinking of the leader as holding a single common identity to a more multi-faceted view of leaders as crafters of complex identities.

Allyship

Session Moderator: **Tsedale M. Melaku**, *Zicklin School of Business, Baruch College, City U. of New York*

DEI: **Taxonomy of Performative Allyship**

Author: **Tsedale M. Melaku**, *Zicklin School of Business, Baruch College, City U. of New York*
Author: **Angie Beeman**, *Baruch College, Marxe School Of Public And International Affairs, CUNY*
Author: **Anthony D. Meyers**, *Baruch College & The Graduate Center, CUNY*
Author: **David G. Smith**, *Johns Hopkins Carey Business School*
Author: **W. Brad Johnson**, *United States Naval Academy*
Author: **Darryl Rice**, *Miami U.*

Discourse about allyship became more prominent amidst the 2020 racial violence reckoning that disrupted the COVID-19 pandemic. Allyship requires that individuals in privileged positions recognize their privilege and actively work to deploy said privileges to break down a system of inequities that marginalizes others. Performative allyship involves individuals and organizations applying lessons of antiracism and equity in ways that recenter allies rather than support marginalized group members. There is a growing cynicism about people paying lip-service to social justice movements without pushing for concrete change. While research has continued to identify allyship's importance in shaping marginalized colleagues' experiences and advantages, fewer studies examine performative allyship at the individual and organizational levels. We propose a taxonomy of performative allyship informed by institutional theory to examine these actions within organizational structures. By using a grounded theory approach, this article develops a taxonomy of performative allyship through an analysis of survey and interview data collected from two qualitative studies examining the experiences of marginalized academics. Our work informs best practices that aspiring accomplices and marginalized groups can utilize in different contexts.

DEI: **Include The Included: The Role Of Allyship In Developing A Praxis Of Inclusion**

Author: **Sumita Datta**, *S P Jain Institute of Management and Research*
Author: **Snehal Shah**, *S P Jain Institute of Management and Research*

Enhancing the Diversity and Inclusion (D&I) climate to succeed in a dynamic environment has become a key priority for organizations globally. Adopting a qualitative approach, we explore the understudied yet relevant role of allyship – the extra role behaviours demonstrated by the dominant group members, in fostering a climate of gender diversity and inclusion. The main contribution of this study lies in the proposed model of a praxis of inclusion that is proposed by leveraging three key dimensions of inclusion viz. Dominant Group Allyship, Minority Group Inclusion and Inclusion Enhancing Management in organizations. The study thus sheds lights on the intricate interplay between deep seated sociological processes and management structures in pursuit of gender equitable organizations. We conclude by highlighting the theoretical and practical implications.

DEI: **A Helping Hand: Social Orientations Towards Disability and the Allyship Behavior of Coworkers**

Author: **Christopher Whelpley**, *Virginia Commonwealth U.*
Author: **Haley Woznyj**, *Longwood U.*

Allyship behavior is an important way to help minority groups and stigmatized individuals achieve greater inclusion and acceptance in organizations. Yet, how allyship behaviors manifest across dissimilar groups is not well understood. Our paper explores allyship through a neurodiverse lens rather than the more traditional demographic fault lines or sexual orientation. Using the "twin slate" approach to grounded theory, we use responses from coworkers of autistic employees to develop a multilevel model that connects societal orientations around disability to the attitudes that coworkers have towards autistic employees and the motivation they have to engage in allyship behaviors. Our work contributes to the literature by adding neurodiversity to the allyship field, investigates pity as a motivator for allyship, and connects to existing social psychological research about how societal orientations influence day-to-day behaviors in the work environment. We conclude with a discussion of how organizations could benefit by emphasizing coworker allyship behaviors and underscore how our results move the allyship field forward.

DEI: **How Male Managers' Allyship Practices Unintentionally Reinforce White Hegemonic Masculinity**

Author: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*
Author: **Arran Caza**, *U. of North Carolina, Greensboro*
Author: **Hise O. Gibson**, *Harvard Business School*

Allyship is important for advancing racial minority professionals to leadership roles. Yet, how gendered and racialized cultural ideals intersect to shape allyship behavior at work is currently unknown. In this paper, we develop a theory explaining how an organization's White hegemonic masculine ideals shape male managers' allyship practices that are intended to support racial minority professionals but unintentionally reinforce White hegemonic masculinity. We arrived at our theory inductively from analyzing data we collected from multiple sources, including 62 interviews with 35 U.S. Army officers, 14 supplemental stories from racial minority professionals about the types of support that male officers provided them at work, and a number of other supplemental accounts, documents, articles, and books that offer insights into racial dynamics, allyship, and cultural ideals in the U.S. Army. In doing so, we contribute a more nuanced understanding of allyship in the workplace by conceptualizing three allyship practices – Provider, Protector, and Promoter- that account for the different collections of beliefs, assumptions, and actions that male managers apply to support racial minority professionals. Ultimately, our emergent theoretical model built from these findings explains how White hegemonic masculine ideals – which typically impede the advancement of racial minority professionals – persist even when individuals engage in allyship practices intended to support racial minorities.

Diversity Dilemmas: Examining the Antecedents and Aftermath of Pro-DEI Behaviors

Organizer: **Preeti Vani**, *Stanford Graduate School of Business*
Organizer: **McKenzie Preston**, *The Wharton School, U. of Pennsylvania*
Presenter: **Rebecca Ponce de Leon**, *Columbia Business School*
Presenter: **Ezgi Ozgumus**, *London Business School*
Presenter: **Lauren A. Rivera**, *Northwestern Kellogg School of Management*
Discussant: **Lakshmi Ramarajan**, *Harvard U.*

Despite support for diversity, equity, and inclusion for both moral and financial reasons, only 12% of Fortune 100 CEOs are women, and only 14% are non-White (Heidrick & Struggles, 2022). Even in 2017, 42% of women say they've faced gender discrimination at work, and in 2020 about 25% of Black and Hispanic individuals reported experiencing discrimination in their workplace (Reiners, 2022). As a society, we have a long way to go in order to understand why our pro-DEI beliefs fail to line up with the current reality of our organizational world, and to ensure greater efficacy in our practices around diversity, equity, and inclusion. In this symposium, we offer five presentations that provide empirical tests of the antecedents (Presentations 1 & 2) and consequences (Presentations 3, 4 & 5) of pro-DEI behavior in organizations. This work builds upon existing theoretical frameworks on the antecedents (e.g., motivations; Radke et al., 2020) and consequences (e.g., impact; Selvanathan, Lickel, & Dasgupta, 2020) of pro-DEI behaviors, while empirically adding to our knowledge in several organizational literatures including those on motivation, hierarchy maintenance, and intersectionality. In a world where both individuals and organizations routinely engage in behavior to promote diversity, equity, and inclusion, our hope is that this collective work will illuminate both the antecedents and consequences of these pro-DEI behaviors.

Societal social justice movements such as Black Lives Matter and #MeToo have brought new life into scholarship surrounding contemporary diversity, equity, and inclusion (DEI) issues. Inherent to moving DEI scholarship forward is testing previous assumptions related to DEI workplace issues. This process is not meant to diminish foundational scholarship, but is intended to extend and refine theory and practice to better capture the experiences of diverse populations of employees. By challenging these assumptions (for example, ‘all employees who identify as racial minorities endure similar challenges’, or, ‘all manners of allyship are equally helpful’) we can move as a field toward a more comprehensive understanding of employee experiences. Coupled with the idea that DEI issues are fluid and constantly changing, it is important to be flexible in our own research to meet this head on. As such, we bring together five research teams that each challenge a DEI assumption in some manner and yield novel insights into DEI issues and populations. Spanning organizational (performative allyship and organizational efforts to meet grand social challenges) and individual (identity management and prototypicality) phenomenon, we hope to generate meaningful dialogue around different DEI topics and push the boundaries of previous theoretical and empirical research

Panelist: **Jennifer Elaine Sadler**, -

This panel symposium is built on research with Black, working mothers that was presented at the 2021 AOM Conference and later published in the Journal of Management, Spirituality & Religion. In that article (which received a best paper award), we developed the Contemplative & Anti-Oppressive Practice (CAOP) framework (Dillard & Walker, 2022). We proposed that contemplation, the process of cycling from stillness to action with God (Merton, 1971, 2007), if shaped by the six anti-oppressive “explanations of human social behavior” (Clifford, 1995, p. 66), can lead to a reduction in the actions and experiences of oppression. The two parts of contemplative practice—stillness and action—should feed each other in anti-oppressive work. For example, in discussing the role of contemplative practice in the civil rights movement, Holmes states, “You cannot face German shepherds and fire hoses with your own resources; there must be God in stillness at the very center of your being” (2017, p. 116). Considering the Academy of Management theme “Putting the Worker Front and Center,” we see an opportunity to gather a panel of Black working mothers, all of whom are also experts in the field of Diversity, Equity, and Inclusion (DEI), to explore how the CAOP model might support efforts to dismantle workplace oppression. Using practices of Critical Participatory Action Research (CPAR) the symposium panelist will be invited to engage in a community practice called counterspace (Olivos, 2006) where participants interact with the model so they can collaboratively provide recommendations about the framework and suggestions for how organizations might use the model to support workers and build an inclusive organization.

Leaders who don't fit the model of traditional and historical leaders (i.e. are not both white and men) often face issues of identity as well as differential treatment compared to their white male peers. Through a series of empirical papers, this symposium explores issues of leader identity, leadership aspiration, and the experiences of women and underrepresented minority leaders, with special emphasis on how our field needs to adapt to better serve these populations of leaders, as well as how leadership research can be more inclusive and more intersectional. Join to learn more about contemporary and cutting-edge research on underrepresented leaders as well as to discuss the future of leadership research.

Discussant: **Denise Lewin Loyd**, *U. of Illinois at Urbana-Champaign*

This symposium addresses two overarching topics: the perceptions of allyship actions and allies across social identity groups (presentations 1, 2 & 3), and ways to increase allies' and their actions' effectiveness (presentations 4 & 5). Specifically, the first two presentations elaborate the specific behaviors that represent allyship, and provide evidence of a miscalibration of how these actions are perceived depending on one's social identity groups. The third presentation focuses on how allies who are selectively silent (speak out about some social issues but not others) are perceived, compared to those choose to remain completely silent. The second part of the symposium considers allies' perspectives and identifies ways to increase their actions' effectiveness. The fourth presentation offers qualitative insights into how allies can remain committed to their allyship in the face personal discomfort, and the final presentation highlights the importance of male advocates to allyship effectiveness. Taken together, this symposium advances our understanding of allyship and offers nuanced views on how to be better, more effective allies.

Author: **Katie Brownell**, *U. of Southern California -Marshall School of Business*
Author: **Audra Grace Quinn**, *Ivey Business School*
Author: **Mark Bolinger**, *Appalachian State U.*

Across two studies (N = 264, N = 307), we apply self-regulation theory to theorize and test curvilinear relationships between Machiavellianism, narcissism, psychopathy, and new venture performance, and the mediating effects of knowledge sharing. We find support for curvilinear (inverted U-shaped) effects of two of the three traits – Machiavellianism and psychopathy – on performance, such that performance is maximized at a midrange of each trait. Further, we discover that knowledge sharing mediates the curvilinear effects at moderate and high levels of both traits. Our research has implications for how we conceive of and understand the influence of personality in the context of performance-related outcomes, offers a more comprehensive understanding of how self-regulation can explain differences in behaviors at varying levels of these traits, and highlights a unique paradox centering around the theme of control in entrepreneurship.

ENT: **Founders´ Narcissism and Acquisition of Venture Capital Seed Funding: Moderating Role of Location**

Author: **Victoria Berg**, *Heinrich-Heine U. of Dusseldorf*
Author: **Verena Rieger**, *Heinrich-Heine U. of Dusseldorf*

New ventures depend on early access to the external resources that especially venture capitalists can provide. We examine the role of narcissism and its seven dimensions, e.g. authority, entitlement or superiority in the seed funding acquisition process. Based on role congruity theory, we explore this relationship in the light of the location taking differing expectations towards the founder into account. Using a multi-source dataset of 634 new high-tech ventures in the US, we reveal the positive influence and even contradictory influence of the dimensions of narcissism on seed funding acquisition and show the importance of new ventures location differing expectations.

ENT: **Handling the Beast: How Entrepreneurs Deal with Their Obsessive Passion**

Author: **Mirjam Nicole Streeb**, *U. of Bayreuth*
Author: **Sonja Kristin Franzke**, *U. of Bayreuth*
Author: **Matthias Baum**, *U. of Bayreuth*

Recent research suggests that entrepreneurs are not only 'passive victims' (or beneficiaries) of their passion but can actively handle their passion to maximize advantages and avoid harmful consequences. Given that passion is an important antecedent of entrepreneurial success (Fisher et al., 2018; Murnieks et al., 2014; Zhao & Liu, 2022), exploring how entrepreneurs can manage their passion is of high interest for entrepreneurship research. We probe into this issue with qualitative data on 37 entrepreneurs, exploring their experience and handling strategies of obsessive passion. We find that there are several pathways to passion handling. The pathways differ regarding the degree of consciousness and active control entrepreneurs take over their obsessive passion. This has implications for how we regard obsessive passionate entrepreneurs: we move from regarding them as passive holders of an obsessive-passion-trait to active agents shaping their own obsessive passion. We show that when entrepreneurs successfully achieve to establish their own optimal obsessive passion level, they maximize the positive consequences thereof.

ENT: **Down but Not Out: Underdog Entrepreneurship and Depression Symptoms**

Author: **Hong-Ming Zhu**, *School of Management, Xiamen U.*
Author: **Daniel Lerner**, *IE Business School*
Author: **Marcus Wolfe**, *U. of North Texas*
Author: **Xiong-Hui Xiao**, *School of Business, Sun Yat-sen U.*

Business venturing may not only advance economies and societies, but also individual well-being. Specifically, especially for disadvantaged individuals, entrepreneurship might buffer or reduce depressive symptoms. While the potential of entrepreneurship for "underdogs" has been suggested (Miller & Breton-Miller, 2017) and received some empirical examination (Cheng et al., 2021; Churchill et al., 2021; Wiklund et al., 2016), the aforementioned remains unclear. In addition to the practical implications, better understanding such contributes to extant organizational behavior and entrepreneurship theory. With depression symptoms prevalent, especially among disadvantaged groups, we examined the effect of entrepreneurship on depressive symptoms using tracking samples of 17095 disadvantaged individuals. Based on a two-year lag and propensity score matching, results indicate that entrepreneurship appears to yield significantly lower depressive symptoms. We also observe two moderators, with lower financial investment and younger individual age linked to lower depressive symptoms. These insights have significant implications not only for understanding the effect of entrepreneurship on mental health and well-being but also for research on job demands-resources, personal startup investment, and career choice.

Impact Investing

Session Moderator: **Gilbert Kofi Adarkwah**, *HEC Montreal*

ENT: **Impact Investment as an External Enabler of Entrepreneurship**

Author: **Gilbert Kofi Adarkwah**, *HEC Montreal*
Author: **Peter Kalum Schou**, *BI Norwegian Business School*

Recently, there has been a rise in impact investment funds that seek to support the establishment and growth of sustainable ventures, especially in the Global South. But does impact investment have an effect, and if so, how? In light of the lacking evidence and theory on how entrepreneurship is enabled by the environment, there are few answers to these questions. In this study, we seek to answer whether impact investment serves as an external enabler of entrepreneurship. We theorize that impact investment enables entrepreneurship through two different mechanisms. Impact investment enables entrepreneurship through resource expansion, that is, access to funds, and through modifying the institutional environment, that is, strengthening market-supporting institutions in recipient countries, thus enabling entrepreneurship. Using a dataset of 4,691 impact investments in 122 countries, we find general support for our theorization. Our study contributes to the knowledge on impact investment as one of the first studies to show impact investment's effect on entrepreneurship. Furthermore, our study tests and extends the nascent external enabler framework.

ENT: **Brokering for a Better World: The Family Office's Role in Impact Investing**

Author: **Vivian Krohn**, *WHU Otto Beisheim School of Management*

The study identifies that multi family offices must handle different values and perspectives of their heterogeneous clients. Regarding impact investing decision-making, multi family offices cope with competing institutional logics. The study finds that multi family offices take over the role of a logics broker and either identify with brokering for transformation to a hybrid logic or with brokering for resistance of logics. As institutional complexity rises, the study contributes to research on hybrid practices of competing institutional logics and highlights the relevance of aligned values. The findings further contribute to research on institutional entrepreneurship and the role of intermediaries at the intersection of individual-level and organizational-level responses to competing institutional logics.

ENT: **Are Single Family Offices Good Entrepreneurial Investors?**

Author: **Myung-Seon Song**, *National U. of Singapore*

While previous research extensively examines whether family firms are more socially responsible than their non-family counterparts, it remains unanswered whether family investors engage more in socially responsible investing (SRI) than non-family investors in the entrepreneurial finance context. To address such a theoretical omission, I shift an academic focus from family firms to family offices and compare the SRI of single family offices (SFO) and non-family entrepreneurial investors. Drawing upon socioemotional wealth theory, I propose that SFOs engage more in socially responsible investing (SRI) than non-family entrepreneurial investors, such as independent venture capitalists, CVCs, accelerators, and angel groups. Furthermore, I investigate how three SFO heterogeneities – (1) ownership status of the original family firm (i.e., whether families still own their original family firm or not), (2) family firm industry (i.e., whether the original family firm is in a socially or environmentally devastating industry), and (3) SFO generation (i.e., which family generation is in control of SFO) make SFOs engage more versus less in SRI. Using 176,896 entrepreneurial investments between 2010 and 2019 combined with a proprietary, hand-collected US family office dataset, empirical results reveal that SFOs engage more in SRI than non-family entrepreneurial investors. However, such a tendency declines as families still own their original family firms and run businesses in contested industries. Interestingly, contrary to practitioner-oriented documents indicating that younger family generations are more socially-minded than their founder/first generations, empirical results reveal that SFOs run by later family generations do not engage more in SRI compared to those run by founder/first generation. Such a result reveals that the separation between "interest" and "action" in SRI is relatively strong. Overall, this paper contributes to family business, family office, and entrepreneurial finance literature.

ENT: **Impact Investors: A Typology and Unpacking Their Behavior Along the Investment Cycle**

Author: **Nazli Massihi**, *IESEG School of Management - KU Leuven*
Author: **Johan Bruneel**, *KU Leuven & ETH Zurich*
Author: **Filip De Beule**, *KU Leuven, Faculty of Economics and Business*

Impact investment has been under surging attention by scholars in recent years. Prior research has found impact investors as one of the most effective means of social entrepreneurial financing. Despite the rising interest, the field is suffering from limited understanding of the various types of impact investors, their different operations and strategies, and how they resemble or differ from their financially-oriented counterparts - venture capitalists. This qualitative study investigates 15 European impact investors, and identifies three different types, depending on their source of funding. The types are discussed in-depth in each investment stage using the investment cycle framework. Finally, practical insights on the outcomes, portfolio, the ecosystem, as well as comparison to venture capitalists are discussed.

ENT: **Welcome to my House! Family Impact Investors' Social Identity and Approaches to Impact Investing**

Author: **Jeanne Roche**, *IE Business School*
Author: **Cristina Cruz**, *IE Business School*
Author: **Braulio Pareja Cano**, *U. Pontificia Comillas, ICADE*

Impact investors have become a subject of increasing academic interest for their unique capacity to channel financial capital to social impact projects. Identity theories have proved particularly useful in understanding the peculiar behaviors of this new breed of investors. Yet, we know little about how the social identity of impact investors, crucial to comprehend other-oriented behaviors, influences their approach to the field. One type of impact investors, who are also some of the leading players in the sector, is likely to shed light on this question: those born to business-owning families. Based on a grounded theory methodology, we follow the case of eight family impact investors and find three types of investors with different levels of social identification to their family groups and different corresponding approaches to impact investing in terms of breadth of collaboration and degree of hybridity.

Hybrid Entrepreneurship from an Individual-Level Perspective

Session Moderator: **Ganqi Tang**, *U. of Fribourg*

ENT: **From Complexity to Hybridity: A Creation Model of Founder Identity**

Author: **Ganqi Tang**, *U. of Fribourg*
Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*
Author: **Tatiana Zabara**, *U. of Fribourg, Switzerland*

Organizational scholars have long been wondering why, when, and how entrepreneurs integrate diverse—sometimes even conflicting—goals, values, norms, and practices when they create new ventures. Identity theories suggest the development of hybrid founder identity as one key mechanism. Extant frameworks suggest that entrepreneurs' preexisting identities that are, for example, central or salient may leave imprints on their founder identity. Nevertheless, these frameworks rely on a common assumption that multiple identities are in the first place different in meaning—which can be captured by the identity network feature of identity complexity. Yet, it is unclear whether, how, and when such an identity network feature influences the development of hybrid founder identity. Integrating and extending recent works on identity work and identity complexity, we theoretically elaborate a creation model of founder identity, which explains how and when entrepreneurs' identity complexity fosters hybrid founder identity. Our empirical study reveals that identity complexity increases the odds of entrepreneurs' creating a hybrid founder identity (combining commercial and social-welfare-related norms, values, and practices), but only when the entrepreneurial context is appraised as an opportunity to enact identity complexity—that is, when entrepreneurs have high business or low social sector experience. Theorizing prior field experience as evaluative inputs for identity work around identity network features, our research highlights the critical roles of identity enactment and creation and complements the conventional imprinting perspective on how entrepreneurs influence new ventures.

ENT: **Hybrid Entrepreneurs: The Value of Experience**

Author: **Sebastian Uriarte**, *Business School, U. Adolfo Ibanez*
Author: **Jose Ernesto Amoros**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Vesna Mandakovic**, *U. del Desarrollo*

Hybrid entrepreneurs—individuals acting simultaneously as entrepreneurs and employees—are often considered to be in a transitional stage toward becoming full-time entrepreneurs. However, hybrid entrepreneurs may also exit the venture or remain as hybrid entrepreneurs. In this research, we investigate how the experience of being a hybrid entrepreneur is reflected in innovative opportunity recognition as part of entrepreneurial learning and how the exit experience may influence this relationship. We use a standard logit approach, a causal mediation analysis, and multilevel random effect as a robustness test on a large cross-sectional sample of individuals from 90 countries for different years to test our hypothesis. Our results show that hybrid entrepreneurs gain entrepreneurial knowledge through their entrepreneurship ventures and their employee role, which is reflected in the fact that hybrid entrepreneurs are more likely to recognize opportunities and engage in innovative entrepreneurship than full-time entrepreneurs. We also show that hybrid entrepreneurs are also more likely to exit other businesses. This suggests that in the hybrid entrepreneurship process, the exit could be part of a recursive stage instead of a final step. We also find that this exit experience mediates the relationship between the hybrid entrepreneurs and their potential to recognize opportunities and their innovative behavior.

ENT: **Heterogeneity Among Hybrid Entrepreneurs: Motives and Performance**

Author: **Alexandra Hofmockel**, *Philipps-U. Marburg*
Author: **Vivien Procher**, *Philipps-U. Marburg*
Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg / Indiana U. Bloomington*
Author: **Sandra Gottschalk**, *Leibniz Centre for European Economic Research*

We draw on a variety of research areas that explain why individuals combine paid employment and self-employment. We provide a comprehensive empirical comparison of the relevance and co-occurrence of multiple motives. Our analysis shows that motives can be meaningfully distinguished according to whether a motive is endogenously transitory or not, and suggests the presence of three dominant classes of hybrid entrepreneurs. In particular, learning and growth constraints, which we refer to as transitory motives resolving over time, play a crucial role in distinguishing between the three classes. Based on an analysis of 3,868 hybrid and pure entrepreneurs, we show that our typology helps better understand the potentially heterogeneous relationships between being a hybrid entrepreneur and entrepreneurial performance and innovation behavior.

ENT: **Learning To Be Well – Hybrid Entrepreneurship and Entrepreneurs' Psychological Well-Being**

Author: **Johanna Kuske**, *U. of Cologne*
Author: **Matthias Schulz**, *U. of Cologne*
Author: **Christian Schwens**, *U. of Cologne*

Following the increasing research interest in entrepreneurs' psychological well-being (PWB), recent research takes a dynamic perspective to determine how entrepreneurs' PWB unfolds over time in the entrepreneurial phases of envisioning, planning, implementing, and evaluating a business. We extend related theory by examining how an additional phase in hybrid entrepreneurship – that is, starting a new venture while keeping a wage job – affects entrepreneurs' PWB in the subsequent implementation phase. Drawing on entrepreneurial learning theory, we argue that a phase in hybrid entrepreneurship allows entrepreneurs to learn how to cope with stress so they can protect their PWB in the implementation phase. In addition, we argue that caring responsibilities negatively moderate the baseline relationship, as they constrain entrepreneurs' capacity to learn. We test our hypotheses using a large-scale yearly panel data set that follows individuals in the United Kingdom for 29 years. Our study highlights the value of taking a longitudinal perspective of entrepreneurs' PWB, as their actions and experiences in prior phases can affect entrepreneurs' PWB in later phases.

Family Firm and Employment

Session Moderator: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

ENT: **Hold It Tight: The Adoption of Digital Technologies for Monitoring in Family Businesses**

Author: **Paula Martínez-Sanchis**, *TUM School of Management, Technical U. of Munich*
Author: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*
Author: **Nadine Kammerlander**, *WHU Otto Beisheim School of Management*

The COVID-19 pandemic has revolutionized employees' work patterns. This study investigates why and how family businesses' idiosyncrasies influence the adoption of digital technologies to monitor their employees when working from home. Employing a multiple-case research design, we investigate the process of how firms adopt digital technologies for monitoring their employees during and after the strong working regulations were introduced in companies because of the COVID-19 pandemic. We derive a process model that shows different patterns of companies' behavior regarding the adoption of digital technologies for monitoring, unearthing the hindering or respectively enabling factors to companies' adoption. In particular our findings show that family business' paternalism and employees' workplace identity tied to strong need for physical presence at the offices hinder, while family business' openness to digital technologies and the perception of control as enabler foster the transition towards the adoption of monitoring digital technologies. With our findings, we contribute to family business research and organizational control theory.

ENT: **Measuring Family Influence from a Non-Family Employee Perspective: Development and Validation**

Author: **Philipp Köhn**, *U. of Siegen*
Author: **Sven Wolff**, *U. of Siegen*
Author: **Philipp Julian Ruf**, *U. of Siegen*
Author: **Petra M. Moog**, *U. of Siegen*
Author: **Giuseppe Strina**, *U. of Siegen (D)*

The goal of this article is the development of the Perceived Family Influence Scale (PFIS), which measures how non-family employees perceive family influence in family firms. Compared to existing scales, the PFIS is the first scale that captures family influence from a non-family member perspective. Therefore, it allows for the collection of more unbiased and holistic data, thus expanding our understanding of family influence. This helps to refine the family business definition and opens the gates for future research. In developing the PFIS, we follow a multi-level development approach. First, we theoretically and empirically generate initial scale items. Second, we improve these items through exploratory factor analysis. The subsequent confirmatory factor analysis indicates scale's validity and reliability and yields culture, involvement, and image as its three dimensions. Third, to prove PFIS's applicability, we test the effect of perceived family influence on the job satisfaction of non- family employees of German family firms.

ENT: **Antecedents of Intra-Family Conflict and Employee Outcomes in Family Firms**

Author: **Andreas Strobl**, *Lancaster U. Management School*
Author: **Giovanna Campopiano**, *U. degli Studi di Bergamo*
Author: **Martin Friesl**, *Otto-Friedrich U. Bamberg*

Family businesses are subject to intra-family conflicts, but we know little about their effect on employees, besides the family itself. Based on a mixed-method research design we draw on a qualitative study of family conflict and employees' perceptions, and on a quantitative study to investigate the antecedents of intra-family conflict and its consequences on employee outcomes. Using dyadic survey data, we provide evidence that internal and external dimensions of SEW attenuate and drive intra-family conflict. Employee bonds to predecessor generations are a further driver of intra-family conflict. In turn, intra-family conflict yields negative organizational consequences as it lowers non-family employee job satisfaction and indirectly increases their turnover intentions.

ENT: **Shedding Light on the Founder's Influence: Development of a Scale to Measure Employees Perceptions**

Author: **Liliana Dinis**, *Nova SBE, U. Nova de Lisboa*
Author: **Pedro Neves**, *NOVA School of Business and Economics*
Author: **Arménio Rego**, *Católica Porto Business School*

The founder's influence in the business long after her/his departure is a recurring notion in family business but also an unexplored aspect that warrants further scrutiny. In this article, we introduce the concept of "founder's shadow perception", which is mainly characterized by high levels of founder's influence in the organization's daily life long after his physical departure. The founder's shadow scale is tested rigorously, through a total of three studies (total N = 792), we develop a scale to measure the construct, establish its psychometric properties, through the application of exploratory and confirmatory factor analytic techniques, which led to a multidimensional scale (founder's shadow) comprising four dimensions: (1) fatherly figure; (2) founder admiration; (3) mimicking leadership; (4) stakeholder's relationships. The scale demonstrates high levels of reliability. We discuss the wide applicability of the scale and a variety of research opportunities.

Entrepreneurship and the Institutional Environment

Session Moderator: **Mark Mallon**, *U. of North Carolina, Greensboro*

ENT: **Ethnic Fractionalization and Informal Entrepreneurship: An Institutional Logics Perspective**

Author: **Mark Mallon**, *U. of North Carolina, Greensboro*
Author: **Stav Fainshmidt**, *Florida International U.*

Prior research tends to focus on weak state institutions as drivers of informal entrepreneurship. Drawing from the institutional logics perspective, we posit that informal entrepreneurship may be a consequence of the social structure that shapes prevailing logics. Specifically, ethnic fractionalization in society undermines social cohesion by casting ethnic identity as an alternative institutional logic to that of the bureaucratic state, increasing the likelihood that entrepreneurs will not register their ventures. However, we further argue that the effect of ethnic fractionalization is mitigated by the entrepreneur's ties with lawyers or individuals with business experience because such ties introduce legal and market institutional logics, respectively, to founders' cognition, emphasizing both the benefits of legal registration and the potential costs of not registering. We find support for these arguments using a sample of over 5,000 entrepreneurs operating in 29 countries. Our study explicates a novel socio-cultural antecedent of informal entrepreneurship, pinpointing ethnic embeddedness as a critical mechanism underlying critical business formation decisions. Further, by explicating that multiple embeddedness through social ties can shape the salience of particular logics in business registration decisions, we advance research on how entrepreneurs interact with the larger institutional environment.

ENT: **Breaking Down Barriers or "Chameleon Effect": Effects of a Reform in Business Registration Process**

Author: **Charles Bonani Oliveira**, *Adjunct Professor, Sebrae School of Business*

Several governments have implemented institutional reforms aimed at making company registration more agile and less costly. We used a reform implemented by the Brazilian government in 2007 to evaluate the effects in the registration processes of new companies, for different sizes, and its contribution to a greater inclusion of women as partners of new registered companies. Regarding the size of registered companies, we sought to assess the effect of the reform on the quality of new registered enterprises. In relation to the participation of women as partners in companies, these is a chronic problem, especially in developing countries, and evaluating policies that can contribute to a greater participation of women in the formal economy is essential to establish a promising path to follow. We used data from the Bureau of Trade of São Paulo State (Jucesp), which is the main body for registering new companies in Brazil. We took advantage of the publication of the new law to carry out a natural experiment, with the application of an event study design, which counted on staggered adoption (heterogeneity in the treatment) by the cities. The results pointed to a positive correlation between adhesion to the new law and the increase in new registered companies. Despite this, the results indicated a substitution effect, with an increase in new individual micro-entrepreneurs in detriment of registrations of larger companies. Lastly, the study also verified the beneficial effect of the new law on the gender issue, with an increase in the number of women who started to formalize their business.

ENT: **It is Not Just About The Law! A New Theoretical Framework of Informal Entrepreneurship Emergence**

Author: **Esther Salvi**, *LMU Munich School of Management*
Author: **Daniela Alejandra Gimenez Jimenez**, *TU Dortmund U.*
Author: **Diana Maria Hechavarria**, *Texas Tech U.*

Given the transition toward increasingly formalized, market-driven, capitalistic economies, recent management and international business literatures have witnessed great theoretical advances relating the role of formal institutions shaping various forms of new ventures. New institutional frameworks account for a multiplicity of formal institutions, such as the role of governance quality, state fragility, intellectual property rights, and premarket reforms. Nevertheless, formal institutions do not act alone, and their interaction with informal institutions becomes critical to understand how informal new ventures emerge, especially in fragile countries. Through the analysis of 40 countries across 12 years, we build a new theoretical framework to explain how distinct institutional interactions between formal and informal institutions lead to informal entrepreneurship across countries. Based on these findings, we point to more culturally aware theory and policy approaches.

ENT: **Can Social Media Improve Startups' Institutional Environments? Evidence from China**

Author: **Gavin Wang**, *Wharton OPIM*
Author: **Lynn Wu**, *The Wharton School, U. of Pennsylvania*

Institutional environments play an important role in entrepreneurial activities. In this study we examine whether startups' social media activities could improve the institutional environments that they face, and whether lesser-connected startups can benefit more. Using comprehensive firm information and social media data from WeChat for about 2,000 Chinese startups from 2011 to 2020, we find that social media activities can help companies with few political connections obtain institutional resources, including both formal and informal institutions: They are more likely to receive administrative approvals from the government to conduct their primary business activities. They are also more likely to receive positive media coverages. We find that social media can not only help these companies broadcast quality signals, but also direct public opinions and mobilize public support in their favor, all of which are essential to establish public legitimacy. These effects are especially strong for firms that face greater institutional barriers and have scarce political resources. In addition to social media engagement, the content of social media post also plays a critical role. We find that posts about corporate social responsibility (CSR) play a bigger role than others in helping firms receive favorable treatment and establish public legitimacy. Consistent with our proposed mechanism, we find social media's effect is significantly reduced after implementing policies that lower institutional barriers, such as after the Mass Entrepreneurship and Innovation Policy.

Corporate Venturing 2

Session Moderator: **Katie Brownell**, *U. of Southern California -Marshall School of Business*

ENT: **A Control-Oriented Perspective on Internal Corporate Venturing Program Performance**

Author: **Katie Brownell**, *U. of Southern California -Marshall School of Business*
Author: **Jeff Covin**, *U. of Wyoming*

It is suggested that all corporate venturing initiatives share similar managerial requirements as a consequence of the novelty inherent to the process of experimentation. As experiments, the common and predictable implications associated with managing corporate venturing initiatives demand that certain choice, adaptation, and termination capabilities must be present in order for corporate venturing to fulfill its promise as a driver of value creation. At least five such capabilities meet this screen – strategic intentionality, strategic recognition, organizational learning capability, organizational response capability, and options management capability. In this research, we develop a conceptual model capturing the constellation of organizational competencies necessary for the hazards inherent in the corporate venturing process to be better understood and managed. Implications for future research and managerial practice are discussed.

ENT: **Devil of a Time: Manifestations of Time and Temporality in Corporate Venturing During COVID-19**

Author: **Vareska Van De Vrande**, *Rotterdam School of Management, Erasmus U.*
Author: **Frank Siedlok**, *Heriot-Watt U.*
Author: **Corina Kuiper**, *Corporate Venturing Network*

We set out to better understand how corporate venturing managers made sense of the rapidly unfolding pandemic. Our findings are based on 38 interviews with CV managers from 31 large MNEs that represent a majority of the CV sector in the Netherlands. Drawing on the literature on temporality in organisations, we identify three main manifestations of temporality: compressing and decompressing of time and pace, coupling and decoupling of past, present and future, and synchronising and desynchronising temporal cycles. We further theorise how ego-centric and time-centric temporal agency impacts on CV activities and outcomes. We show that temporality can directly affect strategic horizons and diminish the remit of CV activities. Our findings contribute to debates on temporality in organization studies and extend our understanding of corporate venturing.

ENT: **Just the Two of Us? Investigating the Impact of Single vs Consortium Corporate Accelerators**

Author: **Robin De Cock**, *U. of Antwerp/ Antwerp Management School*
Author: **Lien Denoo**, *Tilburg U.*
Author: **Vincent Molly**, *KU Leuven*

There is an enormous variety of engagement models between corporates and new ventures in general and corporate accelerator programs in particular. While research is rapidly growing to understand the corporate side, we know little about the effects on the development of the new ventures involved. We investigate the impact of different types of corporate accelerators (single versus consortium) on the venture progress taking into account the venture's life cycle stage. Building on a dataset of 233 ventures, we find that corporate accelerator programs support venture growth, but that this effect mainly counts for "single accelerators". They proof to be generally better in comparison to "consortium accelerators", except for ventures in their scale-up phase. The latter seem to benefit more from accelerator programs run by a consortium of corporates. With these findings we contribute to both the entrepreneurship and the corporate accelerator literature.

ENT: **Incumbents' Deadly Sin? Organizational Envy and the Response to Competitive Threats**

Author: **Clau Sganzerla**, *Texas Tech U.*
Author: **Jared Shaw Allen**, *Texas Tech U.*

One of the dominant strategies deployed by incumbent organizations to respond to threats from disruptors is corporate entrepreneurship. Despite our ability to describe corporate entrepreneurship as a response strategy, we still lack theory to explain why and under which conditions incumbents choose one or more forms of corporate entrepreneurship strategy. In this paper, we offer a theory of managerial decision-making which centers on explaining the process by which incumbents choose a particular type of response strategy to competitive threats imposed by disruptors. We posit that the social comparison that occurs between incumbent and disruptor gives rise to what we call organizational envy, in analogy to the social comparison process that occurs at the individual level. We describe how two dimensions give rise to destructive and constructive forms of organizational envy, which moderate managerial decision-making. Our paper makes three important contributions. First, we offer theory on why incumbent firms decide on a particular strategic response to disruptors. Second, we propose that organizational envy may have broader implications to advance strategic decision-making and dysfunctional organizational behavior theories. Finally, we contribute to the theory-practice dialog in management by developing a conceptual framework that can be instrumental for decision-making in the field.

Entrepreneurial Identity

Session Moderator: **Sam Ruiqing Cao**, *Stockholm School of Economics*

ENT: **Founder Stories and Entrepreneurial Identity of Craft-Based Ventures**

Author: **Sam Ruiqing Cao**, *Stockholm School of Economics*
Author: **Mattias Nordqvist**, *Stockholm School of Economics*
Author: **Roberto Verganti**, *Stockholm School of Economics*

This study examines how entrepreneurial identity influences product strategies and performance in craft ventures. Analyzing a large sample of entrepreneurs from Etsy, an online marketplace for handcraft products, we show that entrepreneurs' personal experiences and values imprint on venture identity and lead to peculiar dynamics of business value creation. Specifically, craft ventures imprinted by the personal story of their founders offer a narrower range of items, sell lower volumes, and underprice their products. They also earn a higher reputation among customers, which implies an over-commitment to quality. These unusual dynamics emerge through entrepreneurs' search for authenticity, reputation and audience. Imprinting of personal experiences and values has more influence on product strategies when entrepreneurs find meaning in and emphasize their commitment to the act of handmaking.

ENT: **The Role of Entrepreneurial Identity in Finding Mitigation Strategies to Deal with Existential Risks**

Author: **Justin Grabow**, *U. of Twente*
Author: **Michel Ehrenhard**, *U. of Twente*
Author: **Frederik Wurm**, *U. of Twente*
Author: **Kaja Borup Løvschall**, *U. of Twente*

The consequences of accelerating climate change pose existential risks for business. Why affected entrepreneurs act and decide differently between multiple conventional and innovative alternatives to mitigate such risks remains an under-researched area. We conducted 35 semi-structured interviews with German winemakers from different winegrowing regions that directly suffer the consequences of climate change. Using a partially grounded theory approach, we found that entrepreneurial identity explains largely the variation in approaches of dealing with existential risks. The most striking differences are related to entrepreneurs' risk awareness, risk approach, risk-reduction requirements, and reputational risk management. With our research, we extend the literature on entrepreneurial identity and innovations, using two technologies as practice lenses. We also contribute to the research on risk society and existential risks.

ENT: **Entrepreneurial but not Entrepreneur: How Entrepreneurial Identity Shapes Career Identities**

Author: **Amr Kebbi**, *American U. of Beirut*
Author: **Benson Honig**, *McMaster U.*

Graduates of entrepreneurship programs acquire an entrepreneurial identity that empowers them with a creative mindset. In this paper, I answer the question, how does this entrepreneurial identity help graduates develop a meaning that conceptualize their entrepreneurial role in their future careers? I examine how entrepreneurial identities shape the future careers of those who study entrepreneurship. I analyzed and coded 83 interviews with students and graduates from an undergraduate (43 informants) and graduate (32 informants) entrepreneurship programs, in addition to eight informants who took entrepreneurship courses at some point in their university education and founded new ventures. I found that entrepreneurial identity acquired during entrepreneurship education shapes the profiles of graduates, and five career paths were identified: dream-building, entrepreneurship pop culture, institutional entrepreneurship, investment entrepreneurship, and new venture path. I argued that entrepreneurship education might not prepare its graduates to become founders, but it empowers them with entrepreneurial identity awareness and entrepreneurship institutional knowledge. Finally, graduates of entrepreneurship education can perform entrepreneurial activities beyond new venture creation.

ENT: **Founder Identity Threat in Nascent Entrepreneurs: Threatened Identity During New Venture Distress**

Author: **Han Ming Daniel Chng**, *China Europe International Business School (CEIBS)*
Author: **Matthew Rodgers**, *Hope College*
Author: **Oliver Yiang Zhou**, *China Europe International Business School (CEIBS)*
Author: **Yusen Dong**, *China Europe International Business School (CEIBS)*

We theorize about how nascent entrepreneurs experience founder identity threat, defined as an experience that potentially harms the founder identity's value, meaning, or enactment during new venture distress, and how their individual appraisal influences this experience. We elaborate on the psychological and behavioral consequences of founder identity threat and discuss their potential performance implications to better understand the challenges of entrepreneurship for nascent entrepreneurs

Entrepreneurial Exit or Failure 2

Session Moderator: **Emma Su**, *U. of Dayton*

ENT: **The impact of entrepreneurs' military experience on small business exit: Evidence from the U.S.**

Author: **Emma Su**, *U. of Dayton*
Author: **Zonghui Li**, *Jacksonville U.*

Entrepreneurship plays a critical role in economic growth, social development and innovation. However, a large number of small businesses cease operation every year. Based on insights drawn from the conservation of resources (COR) theory, this paper examines the impact of entrepreneurs' military experience on small business exit. We argue that entrepreneurs with military background are more conservative regarding the potential resource loss associated with the entrepreneurial process than entrepreneurs without military experience and, thus, are more likely to exit the business as a mechanism to cope the potential loss of resources. The usage of this coping mechanism before the actual loss occurs is further highlighted by veteran entrepreneurs' tendency to exit the business voluntarily rather than involuntarily which is likely to result in actual loss due to the lack of sufficient opportunities or business inefficiency. An empirical analysis of data from a 2007 Survey of Business Owners (SBO 2007) from the United States Census Bureau supports our hypotheses. This study contributes to our knowledge of how service in the military affects entrepreneurs' decision related to business exit.

ENT: **How Significant Events and Team Trust Predict Member's Exit in New Venture Teams**

Author: **Yvette Baurne**, *Lund U. School of Economics and Management*
Author: **Frederic Delmar**, *EMLYON Business School*
Author: **Jonas Wallin**, *Lund U., Shool of Economics and Management*
Author: **Anna Brattstrom**, *Lund U.*

This paper examines how the significant events and team member trust in new ventures affect exit from the team. We consider team member exit as an outcome that affects both individuals, the team, and the performance of the new venture. We develop our arguments based on event system theory, which is specifically beneficial to understand how new ventures develop. We test our arguments using a unique longitudinal data set that follows 108 teams and their 218 members over a year using repeated questionnaires (n=782). We use a Bayesian and joint modeling approach to model team turnover and correct for non-ignorable non-responses under population heterogeneity. We find that team members' level of trust affects how they perceive significant events (novel and disruptive). Trust does not affect team members' exit. Disruptive events are strongly associated with team members' exit. This suggests that disruptive events mediate the effect of trust on team members' exit. We discuss the implications of our results for theory.

ENT: **"Till Death Do Us Part": Applying the Marriage Metaphor to Investigate Co-founder Exits**

Author: **Nicola Anne Thomas**, *Sheffield U. Management School*
Author: **Carina Lomberg**, *Technical U. of Denmark*
Author: **Philip Cash**, *Technical U. of Denmark*

The co-founder relationship is frequently likened to a marriage. This has resulted in the dissemination of actual 'marriage therapy for co-founders', i.e., prescribing marital interventions to co-founders. Though intuitively there seem to be many parallels between a romantic relationship and a co-founder relationship, the marriage concept has yet to be tested in the entrepreneurship context. Building on theories of entrepreneurial affect, we adapt methodologies designed for marriage research to investigate the fundamental assumptions of the marriage and divorce metaphor: that relationship conflict and negative affect increase the likelihood of co-founder exits. By capturing dynamic, objective and continuous affective data in team conflict episodes, we find that relationship conflict and negative affect are not predictive of an eventual team separation. Yet surprisingly, task conflict and positive affect are highly predictive. Hence, we introduce a new variable—masked positivity—which is highly predictive of a subsequent co-founder exit and team separation. We discuss the implications of our study for research on affect, co-founder exits and founding team conflict.

ENT: **Supporting Ventures: How Cost Reduction Sponsorship and Agglomeration Impact New Venture Exit**

Author: **Silvia Carolina Reyes**, *Ent*
Author: **Larry Plummer**, *Ivey Business School*
Author: **Simon Parker**, *Ivey Business School*

Organizational sponsorship (OS) impacts new firm survival prospects by creating a resource-munificent environment that supports new firms during their early years in the market. While the extant literature focus has been looking at initiatives that provide resources to new firms, current theorizing largely overlooks how sponsorship initiatives that offset the cost of doing business might also be helpful in reducing ventures from exiting the market. In this paper, we extend the construct of buffering OS to include those initiatives that offset the cost of doing business for new firms. In doing so, we provide novel insights on how cost reduction buffering OS initiatives via state taxes impact new firm exits. We then explore how agglomeration factors-localized competition, industry diversity, and industry switching - moderate this main relationship. We test and find broad support for our hypotheses using data from 355 MSAs in the United States spanning 2003 to 2010.

Entrepreneurs' Characteristics

Session Moderator: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*

ENT: **Fear of Failure as the Ultimate Evil? – Understanding its Pathway Towards Employee Satisfaction**

Author: **Lisa Schrewentigges**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Steffen Strese**, *TU Dortmund U.*

Instinctively, entrepreneurs are often characterized as being passionate, curious and brave. But they may also be fearful. The amount of research on fear of failure in entrepreneurship is growing, especially with regards to individual-level antecedents and outcomes. However, literature remains silent on venture team-level outcomes even though existing research shows that founders' psychological traits, emotions and behaviors influence an employee's experience at work. We draw on the theory of emotional contagion and investigate the influence of an entrepreneur's negative emotion of fear of failure on employee satisfaction. We use a sample of 143 active entrepreneurs built from a mixed-data approach combining survey data and secondary data from an employer review platform. We find that fear of failure of entrepreneurs is negatively related to employee satisfaction. Moreover, we find that a team setting characterized by low participativeness in strategic decision-making strengthens this negative relationship. With our research, we complement the entrepreneurship literature on fear of failure by the venture team-level dimension. We also extend the theory of emotional contagion by introducing participative strategic decision-making as a team environment affecting the base relationship. From a practical perspective, we shed light on the phenomena of fear of failure among active entrepreneurs and accelerating team environments, which is so far a kind of taboo subject in entrepreneurship.

ENT: **The Impact of Entrepreneur's Time Perspective on Insomnia and Psychological Capital**

Author: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*
Author: **Masoud Karami**, *U. of Otago*
Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*

Although some scholars have investigated a particular aspect of psychological time called time perspective (TP), scholars rarely directly consider the impact of that cognitive and motivational construct. Yet, this investigation is important because TP plays a crucial role in entrepreneurs' decision-making and motivations in today's business contexts. Focusing on the complex and poorly-understood relationships between entrepreneurs' TP, their insomnia, and their psychological capital, we herein investigate how entrepreneurs' TP does impact their insomnia and (subsequent) psychological capital. Using a final sample of 399 entrepreneurs from New Zealand and the UK, we find that negative (past-negative and present-fatalistic) TPs have a positive impact on entrepreneurs' insomnia whereas positive (past-positive and future) TPs have a negative impact. We also find that a present-hedonistic TP has a positive (nonsignificant) impact on insomnia. Last, we find that gender plays a moderating role such that, in high insomnia conditions, women entrepreneurs have a lower psychological capital than men entrepreneurs.

ENT: **Disentangling the Impacts of International Experience on Graduates' Entrepreneurial Propensity (WITHDRAWN)**

Author: **Shiri Breznitz**, *U. of Toronto*
Author: **Qiantao Zhang**, *U. of Toronto*

Despite the large body of literature analyzing the role of international education in graduates' entrepreneurship, little research has been undertaken about the role of international employment. Drawing on a large-scale survey of alumni of the University of Toronto, our empirical results show that, for graduates, international education experience matters more for entrepreneurship than international employment experience. For international education, the experience seems to be more important than the subject studied or the degree obtained. However, for international employment, the nature of employment, the size of the firm, or the type of firm plays a more essential role in entrepreneurship than the experience does alone.

ENT: **Mindfulness Meditation and Entrepreneurs' Satisfaction: The Role of Goal Difficulty and Grit**

Author: **Alex Kier**, *Washington State U.*
Author: **Benjamin Warnick**, *Washington State U.*

Mindfulness and entrepreneurship appear contradictory in fundamental ways: whereas mindfulness is present-focused and emphasizes acceptance, entrepreneurship is future-focused and emphasizes disrupting the status quo. Exploring this apparent paradox, we theorize that while mindfulness increases entrepreneurs' business satisfaction, it also encourages them to set venture goals they believe are less difficult, thus revealing important downside implications of mindfulness meditation. We test our theorizing using a randomized experiment, finding that mindfulness meditation increased entrepreneurs' business satisfaction at the expense of perceived goal difficulty, such that the positive relationship between mindfulness meditation and business satisfaction was mediated by lower perceived goal difficulty. Furthermore, this indirect relationship between mindfulness meditation and business satisfaction via perceived goal difficulty was moderated by grit, such that the relationship was weaker the greater the entrepreneur's grit. As a result, gritty entrepreneurs appear well-positioned to reap the well-being benefits of mindfulness without setting lower aspirations. Our results hold important implications for theory and practice on mindfulness, entrepreneurial well-being, and grit.

Entrepreneurial Opportunities 2

Session Moderator: **Niharika Garud**, *U. of Melbourne*

ENT: **What About Family? An Institutional Logics Approach to Understanding Opportunity Evaluations**

Author: **Niharika Garud**, *U. of Melbourne*
Author: **Rakesh Kumar Pati**, *Deakin U.*
Author: **Christopher Sutter**, *Miami U. Ohio*
Author: **Tim R. Holcomb**, *Miami U.*

Recent calls to explore effects of institutions and institutional logics on entrepreneurial behaviors have become stronger. As the recent global events continue to disrupt the economic and labor markets across the world, understanding how institutional logics influence entrepreneurial opportunity evaluations has become urgent in today's world as it influences entrepreneurial activities and self-employment globally. In this study, we explore how institutional logic of family influence entrepreneurial opportunity evaluations when compared to evaluations done under the institutional logic of markets, using multiple experiments. We find empirical support for prior research in this field as we find significant effect of institutional logic of family on opportunity evaluations. Furthermore, in contrast to the settings of developed economies, we find that institutional logic of family has a stronger effect on entrepreneurial evaluations in the settings of emerging economies. We also identify and empirically test key decision context factors that moderate the effect of institutional logic on opportunity evaluation. This research contributes to the literature in the areas of institutional logics and entrepreneurship by unraveling how processes through which institutional logics impact entrepreneurial opportunity evaluation decisions in emerging markets.

ENT: **Beyond Cognitive Evaluation: Opportunity Attitude Construct and Scale Development**

Author: **Binyam Zewde Alemayehu**, *U. of Adelaide*
Author: **Paul Steffens**, *U. of Adelaide*
Author: **Scott Gordon**, *U. of Adelaide*

Opportunity evaluation is central to our understanding of entrepreneurship. Recent studies have conceptualized the character of first-person opportunity beliefs, culminating as opportunity attractiveness, as an important precursor to entrepreneurial action. Drawing on the theory of mind and attitude research, we extend opportunity evaluation beyond cognitive assessment, to incorporate affective attachment and conative engagement; the three components combining to form opportunity attitude (OA). This paper develops and validates a measurement scale for OA. Using four studies, the paper validates a 16-item OA scale and confirms the multidimensionality of the OA construct. Affective attachment and conative engagement are equally strongly associated with entrepreneurial intentions as cognitive assessment, and improve overall prediction.

ENT: **Mixed Embeddedness and Hispanic Entrepreneurship: Role of Hispanic Enclaves and Acculturation**

Author: **Haneul Choi**, *U. of Bristol*
Author: **Seungkyu Choi**, *Arizona State U.*
Author: **Ting Zhang**, *U. of Baltimore*

This research investigates how the different degrees of Hispanic embeddedness in the U.S. and in their own culture as well as Hispanic enclaves affect their decision to choose self-employment. Drawing on and synthesizing the literature on immigrant entrepreneurship, mixed embeddedness, acculturation, and ethnic enclaves, we theorize in what circumstances Hispanic's foreignness can be a liability or an asset in identifying and acting on the identified business opportunity. We find that Hispanics are most likely to be self-employed when they have knowledge of both the home and the host culture. We also find that living in a Hispanic enclave reduces the propensity of a Hispanic to choose self-employment. We interpret the findings considering both the push and pull factors of ethnic minority entrepreneurship while illustrating how incorporated versus unincorporated businesses might differ in nature.

ENT: **Learning Through Experimentation: Interpretation and Decision-Making under Ambiguous Feedback**

Author: **Jason Lee**, *The Wharton School, U. of Pennsylvania*

Entrepreneurs are encouraged to experiment with their business ideas to determine their potential value before making a full-scale commitment. Studies emphasize the scientific methodology of hypothesizing an opportunity, experimenting to test the hypothesis, and evaluating the result. However, experiments inherently produce noisy, ambiguous information, and entrepreneurs are susceptible to making inaccurate assessments. I focus on the interpretation process after conducting an experiment, where entrepreneurs assess the value of their ideas and take subsequent actions. Drawing from the organizational learning literature, I study how entrepreneurs interpret and behave in response to multidimensional information resulting from experiments. I also investigate the influence of ambiguity in feedback, namely when feedback is given broadly across dimensions (information breadth) and when it signals conflicting information (information conflict), on the entrepreneurs' response to multidimensional feedback. Empirically, I examine a global video gaming platform that was created for game developers to experiment with their ideas and find that decision-makers are more likely to respond to positive dimensions of feedback and the main effects are stronger under the ambiguity of feedback.

Entrepreneurial process: New Venture Formation and Growth 2

Session Moderator: **Johannes Brieler**, *U. of Bern*

ENT: **From Idea To Market: Configurations For Idea Stage Speed And Success Of New Ventures**

Author: **Johannes Brieler**, *U. of Bern*
Author: **Artur Baldauf**, *U. of Bern*

Getting an idea to the market is a crucial step in the development of a new venture. Research is inconclusive about what combinations of factors drive a new venture from an idea to the market. We address the issue by employing qualitative comparative analysis (QCA) to a longitudinal sample of 251 idea stage new ventures in the United States of America, from the Panel Study of Entrepreneurial Dynamics II (PSED II). We assess combinations of conditions in new ventures leading to an idea reaching the market (quickly). In doing so, we consider the Timmons (1999) model of the entrepreneurial process. Important factors are resources and the experience of the new ventures' entrepreneurs. They also point to the complexity of idea stage dimensions of new venture performance that are linked to new ventures reaching the market. This benefits research in providing insights into paths to success for idea stage new ventures.

ENT: **Do Scientific Entrepreneurs Invest Financial Resources Differently? Evidence From Two RCTs**

Author: **Daniele Battaglia**, *ESCP Business School*

In early entrepreneurship, the benefits of experimentation stem from two sources: the amount of information an experiment generates and the investments it requires. Previous literature has focused mainly on investigating the information generated by experimentation and how entrepreneurs can use it to further develop their entrepreneurial business. However, despite their importance, we have little knowledge on the investments entrepreneurs make as they learn about the prospects of their business, and on whether these investments are related with performance. Using a question-driven approach, we explicitly focus on the investments made by entrepreneurs by examining data from two field experiments in Italy with 382 early-stage start-ups. Both experiments followed the same structure: we created incubation programs where half of the participants learned about a scientific approach to decision-making and half did not. We observed all entrepreneurs for 14 months after the treatment and found that treated entrepreneurs invested more before and after entry, but generated higher revenues than those who did not learn about a scientific approach to decision making once entered on the market. We show that these higher investments take place because treated entrepreneurs have falsifiable hypotheses, which also lead to higher revenue. Elaborating on these results, we put forward several insights for literature on strategy and entrepreneurship.

ENT: **The Emergence of Organizational Culture**

Author: **Christopher Law**, *Texas A&M U.*

Culture is central to organizations and their outcomes. However, we know surprisingly little about how culture emerges because extant research generally examines large, established organizations. In this paper, I address this gap. I use an inductive longitudinal research design to study eight nascent technology companies over 22 months to generate a theory of culture emergence. My data point to the criticality of a few founder choices: how they imprint themselves on the organization, structure human capital, and manage the budding culture. Further, my data reveal that several "best practices" suggested by practitioners for culture creation appear to be more detrimental than helpful. More broadly, my findings contribute to strategy and entrepreneurship.

ENT: **Is The Venture Growth-Survival Relationship Inverted U-Shaped or Not? A Replication Study**

Author: **Yassine Lamrani**, *Erasmus U. Rotterdam*
Author: **Giuseppe Criaco**, *Erasmus U. Rotterdam*
Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*
Author: **Tom Mom**, *Erasmus U. Rotterdam*

Pe'er, Vertinsky and Keil, Strategic Management Journal, 2016, 37, 541–564, provide empirical evidence for an inverted-U shaped relationship between venture growth and survival. We replicate their study and extend it by distinguishing between exit and failure, addressing the assumptions of survival modelling, and examining potential reverse causality due to the notion that the prospect of failure may spur firms to downsize (temporarily) - a phenomenon referred to as the shadow of death. Even though we obtain nearly identical results when performing an exact replication of Pe'er et al.'s study, the findings of our extension reveal a relationship between growth and survival that is the exact opposite of what earlier growth-survival studies including Pe'er et al. (2016) have found.

Entrepreneurial Orientation

Session Moderator: **Chaffik Bakkali**, *Institut Montpellier Management*

ENT: **Entrepreneurial Orientation and Firm Performance: Does CEO Servant Leadership Play a Role?**

Author: **Sanjay Chaudhary**, *O.P Jindal Global U.*

Considerable consensus suggests that entrepreneurial firms perform better than more conservative firms. As knowledge about the benefits of embracing an entrepreneurial strategy has expanded, increased attention is being given to establish the conditions under which a firm's entrepreneurial orientation yields superior performance. To extend this ongoing conversation, we build on insights from upper echelons perspective and resource-based view to introduce servant leadership as a CEO-level moderator of the entrepreneurial orientation - firm performance relation. Predictions were validated using multi-point data collected from 172 small firms in India. We find that four servant leadership behaviors – altruistic calling, wisdom, emotional healing, and persuasive mapping – influence the association between entrepreneurial orientation and performance. Further, consistent with a systems logic, the performance benefits of entrepreneurial orientation are greater when the CEO's servant leadership comes closer to an 'ideal' configuration of behaviors. We discuss the study's implications and future research avenues.

ENT: **Levers of Control, Entrepreneurial Orientation, and Firm Performance**

Author: **Chaffik Bakkali**, *Institut Montpellier Management*
Author: **Jonathan Maurice**, *Toulouse School of Management*
Author: **Jeff Covin**, *U. of Wyoming*

Drawing on both management control and entrepreneurship literatures, this paper focuses on how different levers of control (Simons, 1995) influence firms' entrepreneurial orientation (EO) and its relationship to performance. In this research, we develop a conceptual model in which interactive control systems operate as an antecedent of EO while diagnostic control and boundary systems positively moderate the EO–performance relationship. Using data from 278 French firms, we tested through a structural equation modeling (SEM) approach our research model. The results indicate a significant positive relationship between EO and firm performance, as well as between interactive control systems and EO. Our research reveals that certain types of control systems – interactive control systems – operate as an antecedent of EO. However, our results do not support the assumption that diagnostic control and boundary systems separately influence the EO–performance relationship. Rather, the joint use of diagnostic control and boundary systems significantly moderates this relationship. In particular, EO has its most positive effect on firm performance when diagnostic control systems and boundary systems are concurrently emphasized.

ENT: **The Sales Manager as Entrepreneur – Are You Sure?**

Author: **Andreas Hinterhuber**, *Cà Foscari U. of Venice*

This study examines how and whether entrepreneurial orientation (thinking like an entrepreneur) and entrepreneurial intent (acting like an entrepreneur) influence performance within established firms. The context is sales, the function that within firms arguably has the largest scope for entrepreneurial activities but that has, surprisingly, not yet received scholarly attention. We test a framework that includes mediating mechanisms with 252 sales managers in the UK and find that entrepreneurial orientation improves performance both directly and indirectly, but that entrepreneurial intent does not have direct effects. Overall, we contribute to the literature by revealing how individuals translate entrepreneurial orientation into superior performance, thus advancing the emerging research stream on the causal chain between entrepreneurial orientation and performance. Findings have important practical and public policy implications.

ENT: **Business Group and Entrepreneurial Orientation: An Emerging Market Context**

Author: **Santosh Tiwari**, *Indian Institute of Management Amritsar*
Author: **Rihana Shaik**, *Indian Institute of Management, Indore*

This study investigates the relationship between business group (BG) affiliation and entrepreneurial orientation (EO) of affiliated firms in an emerging market context. We argue that BG affiliates have more EO than standalone firms as affiliates can access group-wide resources and capabilities. Affiliates of older BG have less EO since they are more entrenched in the institutional settings of their BG. Affiliates having more external linkages of board members will have a higher level of EO, as such linkages play complementary roles and subsidies have inertial tendencies. Further, the negative effect of BG age on EO is suppressed by external linkages.

Entrepreneurial Ecosystems 2

Session Moderator: **Samira Nazar**, *Australian National U.*

ENT: **Entrepreneurs: Navigate, Develop, and Transform Entrepreneurial Ecosystems**

Author: **Samira Nazar**, *Australian National U.*
Author: **Henri Burgers**, *U. of Queensland Business School*
Author: **Frederik Von Briel**, *U. of Queensland*

Our understanding of how entrepreneurs navigate entrepreneurial ecosystems to access resources and support remains limited. This is a particularly important issue to understand, as not all entrepreneurs have the same access to resources. To address this question, we studied 24 women entrepreneurs in Kabul (Afghanistan), an extremely adverse context in which the entrepreneurial ecosystem offers comparably little resources and support and where it is even harder for women to access the resources and support. Our findings reveal three mechanisms that successful women entrepreneurs draw upon: blending into their local ecosystem, bridging to other ecosystems and building their own support system that not only help them access resources and support but in turn also develop and transform their local entrepreneurial ecosystem. Developing a theoretical framework based upon these mechanisms, we contribute to the research of entrepreneurial ecosystems.

ENT: **An Exploration of an Entrepreneurial Ecosystem for Biopharma SMEs in a Second-Tier Region**

Author: **Jose Francisco Gonzalez Lopez**, *U. of Nottingham, UK*
Author: **Hannah Noke**, *U. of Nottingham*
Author: **Simon Mosey**, *U. of Nottingham*

Entrepreneurial ecosystems are a hot topic in academia as they are being adopted by governments as regional structures to improve entrepreneurship and innovation; nevertheless, their rapid implementation at a policy level has highlighted theoretical gaps regarding their genesis and development. For instance, contemporary policy adoption in the life sciences is typically built on the premise that establishing entrepreneurial ecosystems in second tier regions will encourage entrepreneurial performance as seen in first tier regions such as Boston, USA and the Oxford – Cambridge - London 'Golden Triangle' in the UK. To address theoretical concerns over such homogeneous approaches, we focus on one second tier region in the North of the UK that outperforms comparable second tier region, to investigate the influence of contextual factors such as the regional legacy and entrepreneurial interactions between local organisations without the munificent resources available within first tier regions. We deployed cognitive proximity as a theoretical lens to build a temporal framework depicting the interactions between the different organisations in this entrepreneurial ecosystem that were found to support entrepreneurial activities by the SMEs contributing the most significant entrepreneurial outcomes. We conclude that regional stakeholders specialised in facilitating interactions between organisations within ecosystems can be substitutes for a lack of private funding or regional government policy by enabling SMEs to engage in activities such as specialised networking, open innovation and business development activities that are challenging to implement outside of first tier regions.

ENT: **Giving Something Back - When Do Entrepreneurs Contribute to their Entrepreneurial Ecosystem?**

Author: **Johannes Hähnlein**, *U. of Bayreuth*
Author: **Carolin Durst**, *Ansbach U. of Applied Sciences*
Author: **Matthias Baum**, *U. of Bayreuth*

Current research on entrepreneurial ecosystems focuses on conceptual frameworks as well as the characteristics of individual elements and actors. Yet, ecosystems require the contributions of different actors (such as successful entrepreneurs) to become self-sustaining. This study sheds light on the questions of how and why entrepreneurs contribute to the development and reproduction of their entrepreneurial ecosystem. Applying a qualitative, inductive approach, a data sample of 32 semi-structured interviews with startup entrepreneurs from Germany was examined. The analysis reveals, that, amongst the personal traits of entrepreneurial passion and altruism, a perceived affiliation, reciprocity with and gratitude to the entrepreneurial ecosystem and its actors, influenced by antecedent experiences and relationships, are the core predictors for contribution activities such as mentoring, peering, or passing on experiences. These empirical insights are synthesized in a dynamic model, which adds further theoretical grounding to research on causal mechanisms and microfoundations in entrepreneurial ecosystems.

ENT: **Entrepreneurial Ecosystems: Quality Versus Quantity. Evidence Across US States**

Author: **Antonio Golpe**, *U. OF HUELVA*
Author: **José Carlos Vides**, *Complutense U. of Madrid*
Author: **Alejandro Almeida**, *U. Internacional de La Rioja*
Author: **Juan Manuel Martín**, *U. Internacional de La Rioja*

This paper has assessed the dynamics of entrepreneurial ecosystems across the US states by attending to their convergence. To do this, we have used the Startup Formation Rate (SFR) and the Entrepreneurial Quality Index(EQI) from a novel dataset called Start up Cartography Project, which spans from 1988 to 2014. For this purpose, we have applied the Phillips and Sul(2007,2009)'s club clustering algorithm in order to identify global or regional convergence. Our results suggestthe existence of two and three clubs convergence, respectively. More importantly, when attending EQI, California and Massachusetts form a club, being evidence of the importance of quality entrepreneurship over quantity. Furthermore, from a geographical point of view, SFR clubs show a scattered distribution throughout the national territory, while th eEQI clubs are more homogeneous .Finally, this gives valuable information for designing entrepreneur policies.

Entrepreneur Immigration

Session Moderator: **Horatio M. Morgan**, *U. of Waterloo*

ENT: **Immigrant Entrepreneurs' Equity Funding Outcomes Under Involuntary and Compensatory Signals**

Author: **Horatio M. Morgan**, *U. of Waterloo*
Author: **Annaleena Parhankangas**, *Iowa State U.*
Author: **Mauricio Mercado**, *Iowa State U.*

We develop a cognitive signaling perspective that systematically relates the financial outcomes of immigrant entrepreneurs' pitches to equity investors' heuristic screening of their involuntary and compensatory signals. Our analysis involves the funding results of 319 entrepreneurs from TechCrunch Disrupt pitch competitions. We identify a negative involuntary signal by associating immigrant entrepreneurs' accented pitches with amplified negative funding effects. But they can improve their fundraising performance by deploying multi-level compensatory signals, including information about their startup experience, venture quality, previous funding, and frontier industry status. Importantly, they could fare even better if they align their compensatory-signal level with investors' prevention-focus level.

ENT: **Responding to Financing Uncertainty in Complex Settings: The Case of Immigrant Entrepreneurs (WITHDRAWN)**

Author: **Bryan Malki**, *Jönköping International Business School*

This study advances the understanding of the response mechanism the immigrant entrepreneurs' (IEs') adapt when facing financing uncertainty in complex settings in host countries. Using qualitative data from thirty semi-structured interviews with IEs from Arabic background operating in Sweden, the paper introduces a decision-making process of multiple phases and factors involved. The findings suggest the process goes through three main phases: 'building a cognitive repertoire about financing'; the 'formation of financing preferences'; and the 'determination of the financing choice'. The emergence of the suggested phases was informed by the involvement of the following factors: 'structural integration in the host', the 'pull / push personality traits', 'perceptual appraisal of financing alternatives', 'financial adaptability', and 'situational conditions'. For a better understanding, the paper introduces a model that visually explains the suggested process. Finally, the paper provides theoretical and practical implications, and suggests future directions.

ENT: **The Role of Host Country and Home Country on the Performance of Immigrant Entrepreneurs**

Author: **Qiong Wu**, *IE Business School*
Author: **Julio O. De Castro**, *IE U. - IE Business School Madrid, Spain*

Immigrant entrepreneurship has received significant attention in the academic literature, with a focus on the success factors related to host countries. However, little research has examined the role of home country embeddedness in determining the performance of immigrant entrepreneurs. This paper examines how transnational social and institutional contexts in both the home country and host country affect the success of immigrant entrepreneurs. In addition, we investigate the role that fear of failure plays in this relationship. We test our theoretical model based on surveys from 267 immigrant entrepreneurs in four different countries. The results largely support our hypotheses and further indicate that home country embeddedness is an "invisible obstacle" for immigrant entrepreneurs. Our study contributes to a better understanding of the complex elements in home and host country contexts and their influence on immigrant entrepreneurship. Our findings also have important policy implications for both home countries and host countries.

ENT: **Early-Stage Business Failures of Immigrant Entrepreneurs: The Role of Liability of Foreignness**

Author: **Kristína Némethová**, *Jyväskylä U. School of Business and Economics, Jyväskylä, Finland*
Author: **Imran Muhammad Ilyas**, *Jönköping International Business School, Jönköping U., Sweden*

The study identifies and analyzes the role of liability of foreignness in the failure of immigrant owned new ventures. Building on literatures of immigrant entrepreneurship and liability of foreignness, we analyze the failure of 11 immigrant owned new ventures in Finland. In our comparative case study analysis, we find that entrepreneurial firms founded by immigrant entrepreneurs experience liability of foreignness due to foreign origins of their founders. We explore the concept of liability of foreignness at individual level and discuss five sources including unfamiliarity with the local environment, lack of legitimacy, constraints imposed by host countries, lack of cultural integration, and insufficient local language skills, that may affect the success of new ventures. Furthermore, a process is developed that outlines how various sources of liability of foreignness leads to failure of entrepreneurial firm founded by immigrants. In this process various factors are highlighted that play key role to make liability of foreignness work. The study contributes to literature on immigrant entrepreneurship, liability of foreignness, and entrepreneurial failure.

ENT: **Uncertainty and Immigrant Entrepreneurship: Evidence From Brexit (WITHDRAWN)**

Author: **Astrid Marinoni**, *Georgia Tech Scheller College of Business*
Author: **Camilo Acosta**, *EAFIT U.*

Immigrant entrepreneurs are a major driver of economic growth, and their decisions about where to locate can greatly affect the entrepreneurial ecosystem of a country. Meanwhile, increasingly uncertain immigration environments might discourage immigrants from establishing new ventures in host countries. This paper exploits the unexpected result of the Brexit referendum to investigate the relationship between immigration uncertainty and the entry of immigrant-founded ventures of different quality. We propose a model of immigrant entrepreneurial entry and introduce a new measure of venture quality at founding. We find that a surge in uncertainty decreases the growth rate of new immigrant-founded firms by 3.2%. The reliance on other immigrant actors exacerbates the negative effect that uncertainty has on entry. Moreover, low- and high-quality firms are the most affected, while the effect for medium-quality firms is negligible. Back-of-the-envelope calculations suggest that Brexit discouraged the entry of around 620 low-quality and 250 high-quality firms. Our model suggests that while founders of low-quality ventures might decide to take up employment, founders of high-quality ventures might be better off establishing their companies in another country.

Entrepreneurial Incubation and Acceleration 3

Session Moderator: **Giuliano Sansone**, *U. College Dublin*

ENT: **Place to Space: The Emergence and Evolution of Sustainable Entrepreneurial Ecosystems in Smart city**

Author: **Indu Khurana**, *Hampden-Sydney College*
Author: **Dev K. Dutta**, *U. of New Hampshire*

Drawing on the concepts of place and space in sociology, this research examines the process entrepreneurs adopt, in association with place-based enterprises, to address urban challenges and build sustainable entrepreneurial ecosystems in smart cities. We note that the process unfolds through problem identification at the entrepreneurial level, followed by resource mobilization at the place-based enterprise level, and culminating in scaling solutions across space at the ecosystem level. Based on an analysis of rich field data, we develop a process model of the emergence and evolution of a sustainable entrepreneurial ecosystem. In this process model, the place-based enterprise acts as a lynchpin between urban stakeholders and entrepreneurs, helping generate sustainable smart city solutions. The journey from place to space sets in motion a process of “sequential specificity” ranging from high to low, across problems, resources, and solutions. This process leads the sustainable entrepreneurial ecosystem to evolve over time, based on scaling and adopting spatially flexible solutions. Our study has important implications for both entrepreneurs and policymakers.

ENT: **What is a Startup Studio? Evidence from Europe**

Author: **Giuliano Sansone**, *U. College Dublin*
Author: **Davide Viglialoro**, *Norwich Business School, U. of East Anglia*
Author: **Elisa Ughetto**, *Politecnico di Torino*
Author: **Paolo Landoni**, *Politecnico di Torino*

Startup Studio represents a new relevant actor in the entrepreneurial ecosystem. Since it is a novel actor, to our best knowledge, only a few preliminary studies have analyzed it. However, the number of Startup Studios is increasing worldwide, and they are becoming more and more relevant to the entrepreneurial ecosystem. This study aims at presenting this new actor by performing a qualitative analysis of twelve Startup Studios in Europe. In conclusion, based on the theoretical lenses of the activity system framework and human capital, this paper presents the first in-depth analysis of Startup Studio in the entrepreneurship literature.

ENT: **Sun Cast A Long Shadow? The Long-Term Implications of Short-Term Frictions in Venture Investing**

Author: **Sayan Sarkar**, *Hong Kong U. of Science and Technology*
Author: **Gary Dushnitsky**, *London Business School*

Seed-stage funding affords capital and certification to nascent ventures. Yet, we know that the decision to invest can be infused with frictions unrelated to ventures’ intrinsic quality. We ask; Do seed-stage frictions impact the long-term prospects of viable ventures while propelling those serendipitously funded? Or does the effect dissipate with time? To inform this question, we track the lifecycle of 744 entrepreneurial ventures graduating from London-based accelerators. We exploit a unique feature of the setting (i.e., pitching on a Demo Day with more sunshine than the previous day, is associated with a greater likelihood of securing Demo-Day investment) to address the methodological challenge of separating quality-driven and serendipitous investments. Our results suggest that short-term friction dissipates, leaving little discernible impact on 5-year growth trajectory – and exit – of the ventures. We contribute to the entrepreneurship resource-assembly literature by documenting evidence about the long-term implications of short-term frictions.

ENT: **The Storytelling Entrepreneur Has No Clothes? Risks, Rewards of Narrative Pitching and Negotiation**

Author: **Brad Turner**, *MIT Sloan School of Management*

Diverse academic traditions have emphasized how story can inflate valuations, and rarely noted downside risks. Yet audiences are often skeptical of stories as fluff, mere story, or just-so story. To explore the preconditions for narrative persuasion, I inductively study a setting of social valuation: angel investing, where startup entrepreneurs seek investments, endorsements, and partnerships from high-net-worth individuals. I find that both entrepreneurs and investors use narrative claims of value to persuade each other. However, the use of narrative claims by entrepreneurs seems to heighten the inherent suspicion that investors have for story. Narrative claims are often discounted or dismissed, or countered with recourse to data, fact, and substance. In a quantitative exercise, I find that story negatively correlates with the likelihood of securing a deal and with valuation in the setting. The result is a mixed picture of legitimated narrative persuasion in the setting, which seems to rely on resonance, but which is also constrained by an opposite valorization of credible facts and demonstrated accomplishment.

Entrepreneur Well-Being Across Contexts

Organizer: **Ute Stephan**, *King's College London*
Organizer: **Philipp Sieger**, *U. of Bern*
Organizer: **Isabella Hatak**, *U. of St. Gallen*
Organizer: **Daniel Lerner**, *IE Business School*

Entrepreneur wellbeing and mental health is important for entrepreneurs' productivity and the performance of their businesses. Thus, attention to how to manage and protect entrepreneur wellbeing is timely and important, even more so as a growing share of the workforce either work as entrepreneurs or work in entrepreneurial firms. Yet, surprisingly little research on entrepreneur wellbeing has examined the implications of context, that is the persons, places/situations, organizations, and time frames, and thereby the constraints and opportunities arising from the 'who', 'where' and 'when' of entrepreneurship. However, context affects entrepreneur wellbeing more directly than employees for whom context effects are buffered by organizational structures. Moreover, recent events like the Covid-19 pandemic have powerfully illustrated the relevance of context especially for the wellbeing of entrepreneurs. Therefore, this presenter symposium introduces multifaceted perspectives on context which can shape entrepreneur wellbeing; ranging from contexts of personal (e.g., mental health conditions) and situational (the Covid pandemic or refugee crisis) adversity, to different 'places', i.e., national contexts (e.g., living in a democratic vs. autocratic country) and organizational contexts (venture teams or organizational practices). This symposium illustrates how context-sensitive perspectives can advance our understanding of entrepreneur wellbeing.

Panelist: **Diana Maria Hechavarria**, *Texas Tech U.*
Panelist: **Jeff York**, *U. of Colorado, Boulder*
Panelist: **Hans Nikolas Rawhouser**, *U. of Nevada, Las Vegas*

In a world that is changing rapidly, due to environmental (e.g., COVID-19 pandemic, global warming), political (e.g., Ukraine-Russia war), or social (e.g., poverty) climates, businesses have voluntarily or involuntarily committed to societal and environmental goals (Pacheco, York and Hargrave, 2014; George, Merrill and Schillebeeckx, 2021). With the urgency to address some of the world's most urgent matters, more and more businesses, both locally and across the globe, are adopting initiatives that are "doing good." Thus there is a stream of work that has looked at how businesses are solving these world problems. Research in strategy and entrepreneurship is dominated by the firm's perspective on creating value from an economic point of view. Moreover, the use of proxies has limited our understanding of additional dimensions that capture value for other stakeholders, like neighborhoods, communities, and the environment. Therefore, there is a need to capture other dimensions of value creation and value capture that can more accurately depict what matters not only to businesses but to society in general. The purpose of this panel symposium is to engage a group of distinguished panelists in a formal, moderated, interactive discussion of (1) the terms above in the context of social and environmental value creation, impact, value capture and distribution; (2) the panelists' interpretation of them; (3) the relationships or differences among these terms; (4) the implications of theorizing on these topics; and (5) how they can be measured.

How to Experiment: Lessons from Psychology

Host: **Naja Pape**, *INSEAD*
Host: **Chiara Spina**, *INSEAD*
Panelist: **Karim R. Lakhani**, *Harvard U.*
Panelist: **Isabelle Solal**, *ESSEC Business School*
Panelist: **Stefan Dimitriadis**, *U. of Toronto, Rotman School of Management*
Panelist: **Dana Kanze**, *London Business School*
Panelist: **Aleksandra Joanna Kacperczyk**, *London Business School*
Panelist: **Rajshree Agarwal**, *U. of Maryland*

This symposium proposes that experiments have the potential to be used more effectively in strategy and entrepreneurship research if they leverage methodological innovations from other disciplines that have a longer tradition of using experiments. The symposium combines the perspectives of leading experts on experiments in psychology captured on video with a live debate and commentary with management scholars with deep expertise in experiments. The management scholars participating in the live debate will 'translate' best practices from psychology, and discuss to what extent and how they can be applied to research in strategy and entrepreneurship by putting them in the context of their own work. Presenters will outline specific opportunities to advance the theory, techniques, and variety of topics that methodologically advanced experiments can address and provides actionable insights for researchers at all stages of their career. This symposium builds on the success of the symposium held during the Academy of Management 2022 that focused on insights from economics and saw participation from over 100 scholars (both in person and via Zoom).

Don't Let Me Down (Session 2): Adoption of Novel Management Practices and Delivery Systems

Session Moderator: **Charleata Battle**, *California State U., Los Angeles*

HCM: **Nursing Homes Adoption of Alzheimer Disease's Special Care Units: Does it Improve Quality of Care?**

Author: **Giovanna Pilonieta**, *U. of Alabama, Birmingham*

Objective: To evaluate the effects of adopting AD SCUs on nursing homes' processes (use of physical restraints, antipsychotic drugs, and use of feeding tubes) and residents' outcomes (proportion of long-stay residents with pressure ulcers, proportion of long-stay residents who have fallen, and hospitalization rate) measures of quality of care. Data Sources: This study utilized data from three different sources: Brown University's LTCFocus data, Online Survey, Certification, and Reporting (OSCAR) and Certification and Survey Provider Enhanced Reporting (CASPER), and the Area Health Resource File from 2006 to 2018. The sample consists of approximately 148,707 nursing home-year observations over the 13-year study period. This sample included a national population of Medicare and Medicaid-certified nursing homes that are categorized as nongovernment not-for-profit or investor-owned for-profit facilities. Study Design: We performed panel data linear regressions with facility fixed effects and year fixed effects to estimate the effects of AD SCUs on each of the dependent variables controlling for a range of organizational and market covariates. Principal Findings: Facilities that adopted AD SCUs had a lower prevalence of feeding tubes, pressure ulcers, and hospitalizations among nursing home residents. Furthermore, a higher percentage of AD SCU beds resulted in a marginal decrease in physical restraints. Conclusions: Our findings suggest differences in care processes and outcomes associated with AD SCUs adoption, such as reducing physical restraints, feeding tubes, pressure ulcers, and hospitalization rates. These findings will provide policymakers and nursing home administrators with a better understanding of quality nursing care and the relationship between AD SCUs and NHs' quality of care.

HCM: **Trust in Nurse Practioners and Physician Assistants: A Systematic Review** ☯

Author: **Tracy Hopkins Porter**, *Cleveland State U.*
Author: **Jessica Peck**, *Cleveland State U.*
Author: **Gina Phelps Thoebes**, *U. of Akron*

addThe use of physician extenders (e.g., nurse practitioners and physician assistants) has risen in recent years in the U.S. healthcare domain, yet some scholars have questioned if physician extenders are being fully utilized in the healthcare field. The purpose of this research was to conduct a systematic review to determine if trust in the NP/PA might be influential in the ways these professionals are utilized. We view trust through the lens of Mayer et al. (1995) and their model of organizational trust, and we seek to examine how patients, physicians, and NP/PAs themselves view one another. This systematic review spanned from1996 - 2022 and applied the Preferred Reporting Items for Systematic Review and Meta-analysis (PRISMA) strategy. The final sample consisted of 29 articles. The findings point to how the components of trust according to Mayer et al., (1995) (i.e. trustee's ability, benevolence, and integrity) influence the trusting relationships between patients and NPs/PAs and physicians and NPs/PAs. Importantly, a trustor's propensity to trust and repeat interactions over time (e.g. feedback loop) are influential to trusting relationships. These findings offer healthcare organizations insight into the mechanisms for building trust as physician extenders become more prominent in the healthcare field. at the end

Author: **Bert Meijboom**, *Tilburg U.*
Author: **Kristof Eeckloo**, *Ghent U. Hospital*

Integration efforts in response of the fragmentation of the healthcare sector often take the form of interorganizational networks. In this paper we focus on the interconnectedness between the actors operating at micro, meso and macro level of these networks. The aim of our study was to discover institutional arrangements at micro, meso and macro level by identifying the prioritized themes in terms of functional and normative integration, including an exploration to what extent these themes are shared between the levels of the service ecosystem. Empirically, we addressed the lack of research on integration in the palliative care setting within and across levels in a palliative care setting. We conducted a multi-method study consisting of four steps: (1) a literature review and interviews with experts in palliative care to determine themes for the organization of integrated care; (2) focus groups with patients, their relatives and caregivers to determine the completeness and relevance of the themes; (3) prioritization of themes by applying the Analytical Hierarchical Process (AHP) method on the basis of means of a questionnaire among 305 patients, relatives, caregivers and policy makers; and (4) a Delphi phase to transpose the findings into a reference framework regarding the organization of integrated palliative care. Our results show an imbalance in relative importance allocated to the macro, meso en micro level, with an underestimation of the macro level. Furthermore, functional integration scores higher at the macro level and at the meso organizational level, whereas normative integration scored higher in the meso professional level and at the micro level. To achieve integrated organization of palliative care the normative and functional institutional arrangements should be shared across the three levels of the service ecosystem. This means that a priority theme at the micro level (e.g. 'Transparent communication to patient, relatives and informal caregivers') can only be realized by sufficient communication between professionals and between organizations (e.g. 'sharing appropriate information between different levels of care and care disciplines within and across organizations') at the meso level, and should be supported by 'an integrated system for exchanging data and information' at the macro level. The developed COMPASS (COnstructing and Modeling Palliative care ServiceS), a connecting intermediary formal legal organization, is recommended to provide orientation in the field of palliative care to form connections between the different levels of care integration.

HCM: **mHealth Business Model Types in Maternal and Baby Care – A Service-dominant Logic View**

Author: **Christiana Ropposch**, *Graz U. of Technology*
Author: **Michael Rachinger**, *Graz U. of Technology*

The restructuring of the healthcare system as well as new technological innovations are driving the development of mHealth services. The successful introduction of such services to the market offers several challenges, including finding and implementing the right business model. Thus, it is necessary to develop a business model that suits the market environment it is applied in. Taking the lens of service-dominant logic, we conduct a mixed methods approach where we first qualitatively analyzed the business models of 74 entrepreneurial ventures in the context of maternal and baby care with the aid of a developed mHealth business model framework. Based on these results, we conducted a cluster analysis that revealed three distinctive types of mHealth business models. The findings are discussed against service-dominant logic and digital business model literature to contribute to different literature streams. With the aid of our findings, companies offering mHealth services can use our three business model types as a starting point when designing business models. In addition, the mHealth business model framework supports companies in developing, implementing and analyzing mHealth business models.

HCM: **Implementation of the VA Integrated Clinical Community Organizational Structure**

Author: **Justin Kane Benzer**, *U. of Texas at Austin, Dell Medical School*
Author: **Deborah Gurewich**, *U.S. Department of Veterans Affairs*
Author: **Joseph Mignogna**, *U.S. Department of Veterans Affairs*
Author: **Lexie Grove**, *U. of Texas at Austin, Dell Medical School*
Author: **Martin P. Charns**, *U.S. Department of Veterans Affairs*

Enhancing integration in health systems has long been seen as a way to improve patient care. Integration is conceptualized using a typology of structural, functional, interpersonal, normative, and process integration. This study empirically examines how interpersonal, normative, process, and functional integration may change in response to newly implemented structural change in the Veterans Health Administration, the largest Integrated Delivery System in the United States. A mixed quantitative-qualitative design was used to measure integration at baseline and at a two-year follow-up period. All data were analyzed qualitatively with survey measures selected to measure integration as experienced by facility-level and regional network-level leaders, and interviews used to measure integration as experienced by national leaders. Results indicated that minimal positive changes occurred in respect to functional, interpersonal, normative, and process integration. Reasons for the lack of change included a need for more national-level implementation support that proved challenging given the unexpected COVID-19 pandemic combined with top leadership turnover. Despite the lack of positive effects of the Integrated Clinical Communities organizational structure, this study is notable for prospectively measuring how integration may change following a large-scale organizational restructuring. Future work should use similar methodology to better understand how integration may improve following changes in structural integration.

A Hard Day's Night: Environmental Uncertainty and Resilience

Session Moderator: **Peter F. Martelli**, *Suffolk U.*

HCM: **Predicting and Responding to Change: Environmental Uncertainty among Addiction Treatment Providers**

Author: **Jemima Frimpong**, *New York U. (NYU), Abu Dhabi*
Author: **Erick Guerrero**, *I-LEAD Institute*
Author: **Yinfei Kong**, *Mihaylo College of Business and Economics, California State U. Fullerton*
Author: **Tenie Khachikian**, *U. Of Chicago*
Author: **Suojin Wang**, *Texas A&M U., College Station*
Author: **Thomas D'Aunno**, *New York U.*
Author: **Daniel Howard**, *Texas A&M U., College Station*

Substance use disorder (SUD) treatment programs offering addiction health services (AHS) must be prepared to adapt to change in their operating environment. These environmental uncertainties may have implications for service delivery, and ultimately patient outcomes. To adapt to a multitude of environmental uncertainties, treatment programs must be prepared to predict and respond to change. Yet, research on treatment programs preparedness for change is sparse. We examined reported difficulties in predicting and responding to changes in the AHS system, and factors associated with these outcomes. We analyzed data from cross-sectional surveys of SUD treatment programs in the United States in 2014 and 2017. We used linear and ordered logistic regression to examine associations between key independent variables (e.g., program, staff, and client characteristics) and four outcomes, (1) reported difficulties in predicting change, (2) predicting effect of change on organization, (3) responding to change, and (4) predicting changes to make to respond to environmental uncertainties. Findings show that the proportion of SUD treatment programs reporting difficulty predicting and responding to changes in the AHS system decreased from 2014 to 2017. However, a considerable proportion still reported difficulty in 2017. We identified different organizational characteristics associated with their reported ability to predict or respond to environmental uncertainty. Predicting change was significantly associated with program characteristics only, while predicting effect of change on organizations was associated with program and staff characteristics. Deciding how to respond to change was associated with program, staff, and client characteristics, while predicting changes to make to respond was associated with staff characteristics only. Although treatment programs reported decreased difficulty predicting and responding to changes, our findings identify program characteristics and attributes that could better position programs with the foresight to predict and respond to uncertainties more effectively. Given resource constraints at multiple levels in treatment organizations, this knowledge might help identify and optimize aspects of programs to intervene upon to enhance their adaptability to change in ways that positively influences processes or care delivery, and ultimately translate into improvements in patient outcomes.

HCM: **The Dynamics of Hospital Surve Capability: An Empirically Grounded Conceptual Framework**

Author: **Jeff Larson**, *U. of Arizona*
Author: **Brian Hilligoss**, *U. of Arizona*
Author: **Alden Lai**, *New York U.*
Author: **Matthew John DePuccio**, *Rush U.*

While high-impact events such as natural disasters and infectious disease pandemics have increased significantly in recent decades, we know little about how hospitals effectively organize and respond to surges, or sudden, unanticipated escalations in treatment needs. To address this gap, we conducted a longitudinal study of five multi-hospital health care systems in the U.S., as they experienced and worked through surges in demand associated with the COVID-19 pandemic. We discover a variety of organizational-level tactics that hospitals engage to effectively manage surge capacity, defined as a hospital's ability to manage surges that challenge or exceed present capacity to treat patients. We organize these tactics into an emerging, conceptual framework explaining three dimensions of hospital surge capability: overseeing capacity management efforts, managing capacity supply and managing capacity demand. We conclude that effective surge capability involves the dynamic adaptation of capacity at the hospital level, which is accomplished through the organizing of various surge response tactics. These tactics fit together to provide hospitals a strategic approach to surge management. We contribute to the surge management literature by developing a framework to explain effective surge response that extends beyond the accumulation of adequate space, staff, stuff, and structures and that addresses surges in demand at the hospital, as opposed to response unit (e.g., an Emergency Department) or community-wide levels.

HCM: **Validated Measures of Emergency Response for Resilience and Performance During Crisis: HERO Survey** ☯ 💻

Author: **Mariam Krikorian Atkinson**, *Harvard U.*
Author: **Paul Biddinger**, *Harvard Medical School*
Author: **Mah-Afroze Chughtai**, *Harvard T.H. Chan School of Public Health*
Author: **Tuna Cem Hayirli**, *Harvard Business School*

While organizational literature has provided much insight into the conceptual and theoretical underpinnings of organizational preparedness and response during emergencies, measures to operationalize such practices during crises remain sparse. To address this lacuna in research, we developed the Healthcare Emergency Response Optimization (HERO) survey. We applied confirmatory factor analysis to design a validated scale of formal and informal practices undergirding emergency response, based on prior research (Hayirli et al., under review). Within each formal and informal scale, we additionally produced subset measures reflecting specific practices. To test effectiveness of these practices, we regressed self-reported resilience and performance measures on formal and informal practice scales. These validated measures of practices during crises will allow researchers and practitioners to better evaluate emergency response during actual crisis or high uncertainty events, and subsequently modify preparedness and planning approaches to better manage future crises.

HCM: **Goal Setting: Discrimination in Health Service, Overspill, and the Perpetuation of Inequality**

Author: **Wen Wang**, *U. of Leicester*
Author: **Roger Seifert**, *U. of Wolverhampton*
Author: **Matthew Bamber**, *Schulich School of Business, York U.*

The disproportion Covid-19 related death tolls among National Health Service (NHS) staff from minority ethnic groups and minority ethnic community has raised concern on the approach to achieve its fundamental purpose - redress health inequality. More specifically, the reasons behind the persistent high level of discrimination experienced by NHS staff from minority ethnic groups internally (by managers or co-workers) and externally (by patients, relatives and the public) since 2014. Developed from goal setting theory, using panel data based on responses from more than 100, 000 NHS staff from this group between 2018 and 2020 of 207 NHS Trusts and hand-collected board diversity data, our analysis show performance management focused goals (end) at the cost of a tolerance of discrimination by this group of workers (means) has created an inequality feedback loop. Internal discrimination spill over to the wide society. This has led to higher levels of self-reported burnout and their intention to resign among this group, which manifest in lower levels of wellbeing and spiralling staff shortages. However, our moderated-mediating model confirms that positive perception of leaders' commitment to staff employment experience can significantly attenuate the association between internal discrimination and intention to resign.

HCM: **Preventive Resilience: The Role of the Agency Capacity of Long-term Care Organizations**

Author: **Holger Pfaff**, *U. of Cologne*
Author: **Timo-Kolja Pförtner**, *U. of Cologne*
Author: **Nadine Scholten**, *U. of Cologne*
Author: **Kira Hower**, *U. of Cologne*

The COVID-19 pandemic has strained health care organizations (HCO) such as long-term care organizations (LTCO) and placed new demands on them, in addition to the old chronic demands. The resilience of HCO depends in part on their ability to cope with these demands, in order to diminish them directly in a preventive manner. The hypothesis of this paper is that this preventive resilience is fostered in part by the general ability of a LTCO to act and react collectively as a social system, which we refer to as the agency capacity of an LTCO. We conducted a pooled cross-sectional study on long-term care organizations in Germany during the first and second waves of the pandemic (April 2020 and December 2020–January 2021). The sample consisted of 503 (first wave) and 294 leaders (second wave) of long-term care organizations. The top managers of these nursing facilities were asked to report their perceptions of the agency capacity of the LTCO, measured by the AGIL scale, and the extent to which the facility is confronted with general non-pandemic demands and pandemic-specific demands. We found a significant negative association between the leaders' perceptions of the agency capacity of their LTCO and their perceptions of the general demands. We found no association between the agency capacity and the amount of the pandemic-specific demands. The results tentatively support the idea that fostering the agency capacity of nursing facilities strengthens the ability to cope with known chronic demands in times of extraordinary stress.

In the post-pandemic era healthcare organizations and professionals are under many competing pressures. From financial strain to burnout and depression the healthcare industry is in battle on competing fronts. Unsustainable practices that started before the pandemic are no longer enough to make ends meet, both financially and in terms of human capital. Coaching in medicine and medical education has been at the forefront of research and practice in the past five years (Wolff et al., 2020). Informed by the first thematic meeting on coaching in medicine organized by the American Medical Association in 2018, coaching in medicine is defined as: "the art and science of facilitating sustainable change and growth of medical students and residents to realize their full potential as master adaptive learners. Key areas of change and growth include optimal learning, well-being, professional development and performance, and leadership," (Hammoud et al. 2020). The following symposium seeks to integrate research on coaching in healthcare by bringing together scholars whose research aims to study and contextualize coaching in healthcare. It is our vision for this symposium that all participants- presents, organizers and audience members – will leave inspired threefold. First, through a deeper understanding of coaching as a valuable tool that can help various challenges faced by healthcare organizations. Second, with a zealous desire to study coaching in healthcare. Third, by instilling a renewed sense of connection and partnership around this phenomenon.

In recent years, there has been a growing interest in understanding team creativity and team innovation. Despite the advances we have made in understanding the drivers of creativity and innovation at the team level, research calls for new perspectives to gain a better understanding of team creativity and innovation (Gilson et al., 2015). The current symposium showcases four pieces of research on team creativity/innovation and aims to provide a comprehensive understanding of current developments in this area of study. In this symposium, we aim to facilitate communication between team creativity and innovation researchers using different methodologies to fill the gaps in current knowledge and inform the latest research interests on this topic.

Participant: **Yongjin Nho**, *Seoul National U. of Science and Technology*
Participant: **Ernesto Noronha**, *Indian Institute of Management, Ahmedabad*

This proposed symposium contributes directly to the Academy of Management (AoM) 2023 Conference theme of 'Putting the Worker Front and Center'. The symposium examines emerging signs of human-centered human resource management (HRM) practices to increasing workplace productivity in four major economies in Asia, namely China, India, Japan and the Republic of Korea (countries listed in alphabetical order). This discussion will focus on the key characteristics of productivity in the four Asian countries selected for study and the role of labor productivity in contributing to the productivity of the respective countries. In particular, it examines the extent to which firms in these countries have adopted human-centered HRM practices to improve labor productivity, and ultimately firm's productivity.

Organizations has been using diverse tools to address the needs for the employees' well-being and individual development, investing growing budgets and efforts into this important goals. Peer coaching groups (PCGs) can become a low-cost, inclusive, and adaptive toolset to address these pressing needs. Hundreds of global business communities, Fortune 500 companies, non-profit organizations, and prominent business schools have successfully employed different PCG settings. At the same time, amidst the wide diversity of practitioners' approaches to PCGs, scholarly literature lacks explanation of what factors and why make PCGs effective in fostering the performance, learning, and well-being of the participants. Thus, this panel symposium provides an arena for scholars and practitioners to explore different designs of PCGs: the practitioners will explain their PCGs' designs and engage scholars in a discussion on underlying mechanisms that drive each setting and factors that impact its process and outcomes. As a result, we hope that the audience will learn about the value of PCGs, diverse approaches to designing PCGs, and the theoretical bases of their effectiveness.

No matter how well designed and intentioned HRM practices are, they amount to little if not properly implemented at the workplace. While the main implementers of HRM will vary, line managers are often at the center of the implementation process (Townsend, Bos-Nehles & Jiang, 2022). They are the "messengers" that translate corporate policies into their work units, crucially shaping employees' attitudes and behaviors (Townsend, Wilkinson, Allen, & Bamber, 2012; Kehoe & Han, 2020). As noted by Purcell and Hutchinson (2007), employees' experience of HRM practices "is inexorably linked with their relationship with their FLM [front line manager]" (p. 16) because line managers are regarded as agents of an organization. Thus, in line with this year Annual Meeting's running theme, whether workers experience being at the front and center of the organization significantly depends on their relationship with their supervisors, and the way line managers take on their HRM responsibilities. Underlying some of the research in this area, there has been the implicit assumption that effective implementation occurs when line managers faithfully and consistently translate corporate policies in the ways they are intended. Traditionally, the literature on HRM implementation has assumed that effective implementation by line managers requires them to closely follow HRM directives. When disconnections have been identified, this has often been framed as line managers' fault (McGovern et al., 1997), and seen as a problem to be solved in order to increase the strength of the HRM system (Bowen & Ostroff, 2004). While this idea is not inherently wrong, it tends to pay little attention to line managers' agency in that process, and to the need for workforce differentiation (Kehoe & Han, 2020). It also runs against more recent conceptualizations of implementation, which explicitly acknowledge its malleable nature, emphasizing variability in the way in which different actors directly or indirectly influence how a particular policy is used (Bondarouk, Trullen, & Valverde, 2018; Trullen, Bos-Nehles, & Valverde, 2020). Line managers may not only implement HRM in a narrow sense, but also complement, edit, and innovate in delivering HRM to their work units, modifying their HRM-related decisions as they see fit (Bos-Nehles, Bondarouk, & Labrenz, 2017). Understanding line managers' agency in HRM thus goes hand in hand with more nuanced and less linear perspectives on implementation (Brandl, Keegan & Kozica, 2021), which can acknowledge managers not as passive recipients or mere conduits of practices, but as active shapers embedded in particular cultural and political contexts (López-Cotarelo, 2018; Kurdi-Nakra & Pak, 2022). In this symposium we will aim to find answers to the following questions: How much agency should line managers get in the implementation of HRM practices? What factors influence line managers' implementation behaviors and with what consequences? And how do line managers' relationships with other actors (mainly HR and employees) affect implementation outcomes? The four papers in this symposium will address these questions from different angles. The first two papers will look at line managers' implementation behaviors as well as potential antecedents and consequences of those behaviors by means of 1) a systematic review of the literature on line managers and HRM implementation and 2) an in-depth exploratory study of variation in manangers' implementation of scheduling practices and its impact on performance. The next two papers will address the relevance of line managers' connection with other actors in implementing practices by 3) testing in a vignette experiment how employees react to implementation messages received from different sources - including the line - and 4) showing how HR and line managers mutually negotiate and socially construct the meaning of effective implementation at different stages of the implementation process. Because of the different methodologies and theoretical perspectives adopted and the common focus of study, this symposium has the potential to offer interesting avenues for future research in this area.

New Perspectives on Fostering Diversity, Equity, and Inclusion in the Workplace

Organizer: **Jerry Liu**, *Rutgers U., School of Management and Labor Relations*
Organizer: **Hannah Park**, *Rutgers U., School of Management and Labor Relations*
Moderator: **Lawrence Houston**, *Rutgers U., School of Management and Labor Relations*
Participant: **Jonathan Evans**, *U. of British Columbia*
Presenter: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*
Presenter: **Carolyn Thi Dang**, *Pennsylvania State U.*
Participant: **Marie S. Mitchell**, *U. of North Carolina, Chapel Hill*
Participant: **Robert Folger**, *U. of Central Florida*
Presenter: **Nicholas Connor Andriese**, *U. of Central Florida*
Participant: **Steven Whiting**, *U. of Central Florida*
Presenter: **Larissa R. Garcia**, *U. of Houston*
Participant: **Yoonjin Choi**, *Rice U.*

This symposium presents current research that aims to advance a nuanced understanding of diversity, equity, and inclusion (DEI) in organizations and to provide insights for future research. Across five presentations, this symposium brings together papers that helps organizations to diversify and foster inclusion and equity in the workplace. This set of five papers draws from diverse theoretical perspectives to provide nuanced understanding of DEI topics, including prosocial diveristy behaviors, ally behaviors, and diversity initatives. Overall, each paper contributes empirically to DEI research and provides meaningful implications for DEI issues in organizations.

Diversity Self-Efficacy: The Development and Validation of a Multidimensional Scale

Participant: **Mariella Miraglia**, *U. of Liverpool*

As a response to the COVID-19 pandemic, many organizations across the globe have had to execute and experiment with alternative work arrangements (AWAs). Taking a human resource (HR) process approach, the four papers presented in this symposium focus on how employees 'make sense' of AWAs and examine the effects of AWAs on employee outcomes, particularly on their wellbeing. The four papers share three themes. First, they all study AWAs during the COVID-19 pandemic, but focus on different forms, in different timings, and across different national contexts, thus offering a broad overview of AWAs during the COVID-19 pandemic. Second, they all include employee wellbeing as one of the outcome variables with the purpose of addressing the importance of employee wellbeing in the post-pandemic world. Third, they all adopt the HR process approach and use different theoretical frameworks to explain how employees make sense of AWAs. Together, they contribute to a strong understanding of AWAs (and their impacts) during the COVID-19 pandemic and offer practitioners some best management practices for designing and implementing AWAs.

Alternative Work Arrangements: A Sensemaking Approach

Freelance and self-employed workers are, arguably, older than employment itself. They have long been an integral part of the global workforce, yet considered as contingent, transitory or peripheral workers in organisations (Bidwell, 2009). Recently, the gig-economy has slowly redefined that vision, and has brought this way of work (back) into the public and academic consciousness (Keegan & Meijerink, 2022). Freelance and self-employed workers do core work of vital organisational importance, and contribute billions to national economies. Organisations that utilise freelancers are shown to be more productive and deliver greater value in a synergistic way that creates jobs rather than substitutes (Cross & Swart, 2022; Meijerink & Keegan, 2019). Nevertheless, how to manage, include, and promote good freelancing is something of a mystery. These workers are often ignored, neglected, or hidden from organisational management practices and policies, despite their valuable talent (McKeown & Pichault, 2021), as they fall through regulatory and conceptual cracks. Employees are seen to take precedence in organisations and in our conceptual approaches such that alternative ways of working such as freelancing are formally excluded (Sulbout et al., 2022), in contradiction with their substantive support needs (van den Groenendaal et al., 2022). We see this as problematic for the relevance of our theory, for the practice of good (HR) management and good self-employment. There is not just a business case to do this but a moral and ethical case (Cross & Swart, 2022). This symposium aims to bring these workers back to the front and centre by exploring how they can be managed, integrated, and utilised to the best effect by organisations. We further aim to examine how our traditional conceptualisations can be updated and adapted to ensure that these relationships are mutually beneficial; maintaining freedom and autonomy as part of a wider total workforce strategy management, yet ensuring that they are contributing to individual, organisational, and societal outcomes.

Putting the Worker front and center is fundamentally an invitation to rewrite the essence of management as a professional and scholarly practice. It is also an invitation to ask more fundamental questions about the human condition, the meaning and purpose of work, working and what the workplace represents that marks the contribution of the workforce not only in getting things done, but through collective action that serves the common good. These are not new questions, and the Human Resource Management field has been calling for shifting the focus away from treating workers as a resource and putting back the emphasis on the human and do so by reinventing management itself such that it can support the development of humanity. These calls return to the essence of management as Drucker originally conceived The Practice of Management as intimately connected to a new version of man – the Industrial Man – putting an end to earlier versions of the Economic Man. This is a critical juncture to also embrace 'human flourishing' more fully, mindful that it is anticipated to mark the makings of the 5th Industrial Revolution soon to be officially announced by the World Economic Forum in Davos, 2023. The symposium brings together a unique set of voices beyond the management field for a truly inclusive and interdisciplinary conversation which will also create room for outlining collective actions towards framing a new Management Manifesto as a key outcome of the event.

Author: **Na Liu**, *IMT School for Advanced Studies Lucca*

The accelerating development and application of digital technologies have been one of the major forces shaping today's world of work and management. The growing use of human resource analytics (HRA) and algorithmic management has been a major trend and fashion in human resource management (HRM) in the past ten years. HRA uses enhanced information technology to collect, analyze and report employee and work data to support people-related decision-making (Margherita, 2021; Marler & Boudreau, 2017a). It enables not only advanced and nuanced description and visualization of people data but also predictive capabilities of future trends that enable HR professionals to prescribe best practices to support organizational success (Margherita, 2021; Yuan et al., 2021). Relatedly, algorithmic management (AM), which uses computer-programmed procedures to collect and analyze people data to automate HRM practices, has spread from the online gig economy, where it originated, to various sectors and industries. Despite their growing implementation and the growing knowledge of their impacts, much is still unknown about the antecedents and outcomes of analytics and algorithms in HRM. This symposium consists of four presentations that delve into different aspects of HRA and algorithmic management. With our diverse focuses, theoretical perspectives, and methodological approaches, we hope to bring together a community interested in this topic and catalyze new thoughts and dialogues to further the knowledge of the future of HRM.

Organizational Culture: Emerging Perspectives and Practices

Discussant: **Jennifer Chatman**, *U. of California, Berkeley*
Presenter: **Glenn R. Carroll**, *Stanford*
Presenter: **J. Yo-Jud Cheng**, *U. of Virginia*
Presenter: **Jennifer Dannals**, *Yale School of Management*
Presenter: **Boris Groysberg**, *Harvard U.*
Presenter: **Charles A. O'Reilly**, *Stanford U.*
Presenter: **Lara Yang**, *Stanford Graduate School of Business*

The symposium addresses an important set of emerging developments in the practice and study of organizational culture. The issues are of interest to several divisions (OMT OB STR HR ODC) as well as the Meeting theme of "Putting the Worker Front and Center." Although culture has long been studied and managed, intensity of interest in the topic started in the 1980s with the rise of global Japanese companies. Today, executives and scholars continue to grapple with central issues, as well as innovate in practice and scholarship. The symposium brings together some of the leading scholars in the area and offers them a forum to discuss what they see today in management practice as well as academic research. Understanding the managerial challenges Of new research, as well as the efficaciousness of various managerial actions, are key agenda items for scholars and executives of organizations and management.

International Expansion of Business Groups

Session Moderator: **Prashant Salwan**, *Indian Institute of Management, Indore*

IM: **The Board Structure of Affiliates in Business Groups**

Author: **Bartolome Pascual-Fuster**, *U. de les Illes Balears*
Author: **Paula Maria Infantes Sanchez**, *U. Autónoma de Madrid*

This study explores how hierarchical business groups structure the boards of directors of their affiliated firms to control a potential agency conflict with the parent firm. We explore situations with different degrees of information asymmetries between the parent and the affiliate, derived from differences in the institutional context, to study how the structure of the affiliate board of directors varies with the relevance of the potential agency conflict between both firms. We find that the proportion of outside directors in an affiliated firm is positively related to that of the parent. We also find that the institutional difference between the context of the parent firm and the affiliate increases the proportion of outside directors in the affiliate and obstructs the transmission of the parent's board structure to the affiliate. These findings are consistent with the predicted preferences of inside and outside directors at the parent firm about the affiliate board structure to control the agency conflict between both firms. Our results suggest the importance of information asymmetries between parent and affiliate inside directors to the board structure of affiliated firms. The instrumental variable analysis shows evidence suggesting a top-down causality from the board structure of the parent company to the board structure of the affiliate. Our results remain robust in both wholly-owned and non-wholly-owned affiliates.

IM: **Lubricating Institutional Friction: How Ownership Advantage Shape Location Choice of Business Groups**

Author: **Rameshwar Arora**, *O. P. Jindal Global U., Sonipat, India*
Author: **Prashant Salwan**, *Indian Institute of Management, Indore*
Author: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*

We analyze the effect of the accumulated knowledge on circumventing the institutional friction in host nations. We build on the organizational learning and institutional friction perspectives and argue that the accumulated knowledge pool of business groups (BGs) facilitates foreign location choice in favor of religiously and linguistically diverse locations. We use a longitudinal dataset of Indian Business group affiliates and find that the accumulated knowledge base lubricates the institutional friction and enhances the propensity of firms to locate in religiously and linguistically diverse countries. Our study deepens the understanding of the internationalization behavior of business group affiliates and particularly sheds light on their location choice in diverse host nations.

IM: **How Founder CEOs Influence Family Firm Internationalization: The Family Identification Effect**

Author: **Anita Kerai**, *IIM Kozhikode*

This paper investigates internationalization decision by family firms from an emerging market, India. More specifically, we study founder CEO as a source of heterogeneity for family firm internationalization. We use literature from social identity theory and socioemotional wealth perspective to hypothesize that founder CEOs can achieve family-business identity fit to pursue risky strategies such as internationalization. We also examine the shared family-business name and family ratio in TMT as boundary conditions limiting founder CEOs' impact on the internationalisation of family firms. We empirically analysed public-listed family firms from 2008-2015 and found support for our hypotheses. Our findings enrich the family firm internationalization literature as we examine how family identity influence firms' decision-making to extend the literature on family involvement and its impact on family firms.

IM: **Role of HQ-subsidiaries' Institutional Distance on the Speed of Internationalization in Family Firms**

Author: **Atul Karwasara**, *Indian Institute of Management, Ahmedabad*
Author: **Chitra Singla**, *Indian Institute of Management, Ahmedabad*

In this study, we examine the role of family-owned emerging market multinational enterprises (FoEMNE) existing headquarter-subsidiaries (HQ-subs) institutional distance on the subsequent speed of internationalization (SOI). We focus on HQ-subs governance, knowledge, and administrative distances on the FoEMNE's SOI. Drawing on the organizational learning theory and springboard perspective, we argue that existing institutional distance negatively impacts FoEMNE's SOI. However, the relationship gets weakened if family owners belong to the trading community and the presence of the founder CEO. We test our hypotheses on a longitudinal panel data set of FoEMNEs listed in the NSE500 (National Stock Exchange) over a 15-year period from 2005-2020 and find support for our hypotheses.

MNE Non-Market Strategies

Session Moderator: **Linlan Huang**, *Birmingham City U.*

IM: **Facilitating Innovation Adaptiveness in the Low-Carbon Sector: Role of IJV-University Collaboration**

Author: **Linlan Huang**, *Birmingham City U.*
Author: **Huan Zou**, *SOAS U. of London*

Prior studies emphasize university-industry cooperation as a non-market strategy associated with the innovation performance of firms, in which universities directly provide advanced technologies to firms for commercialization. However, the role and mechanisms of university-industry collaboration in the context of IJVs operating low-carbon technology sector of emerging markets are still under debate. In this paper, we build on the dynamic capability concept and discuss the interaction between dynamic capabilities and IJV-university relationships to understand the innovation adaptiveness of low-carbon innovation in short-term, mid-term and long-term perspectives. Based on longitudinal multiple case studies, we undertook two rounds of fieldwork in 2018 and 2020, with 37 informants in 66 semi-structured interviews. Our findings propose that IJV-university cooperation takes different forms of learning channels over time. IJVs can develop sensing, assimilation and transformation capabilities by effectively leveraging their relationship with local universities to facilitate innovation adaptiveness to meet the needs of emerging markets. To facilitate innovation adaptiveness, sensing capabilities identify knowledge gaps in learning transferred knowledge and access external knowledge to fill the gaps, while assimilation/transformation capabilities use acquired external knowledge to enhance IJV's knowledge base through integration or reconfiguration. Overall, the interaction between dynamic capabilities and external knowledge builds a sustainable competitive advantage in the domestic market and approaching international markets.

IM: **Rhetorical Management of Liability of Foreignness in Capital Market**

Author: **Yuxuan Zhao**, *Tsinghua U.*
Author: **Yijie Min**, *Guanghua School of Management, Peking U.*
Author: **Yanlong Zhang**, *Peking U.*

Since 2005, U.S.-listed Chinese firms have been mandated a “Risks Related to Doing Business in China” section in their risk-factor disclosure in annual reports under the requirements of the Securities and Exchange Commission (SEC), which enables us to explore how foreign firms can rhetorically organize their country-risk disclosure to manage liability of foreignness (LOF) in capital market. A core paradox of country-risk disclosure is that firms disclose more country risks would gain more authenticity premium at the cost of higher risk perception of investors. We deconstruct such disclosure into a structure of systematic discussion (the elaboration of macro-level law, policy, and regulation) and idiosyncratic discussion (the causality between macro-level factors and focal firm’s operations), and explore the optimal rhetorical strategies in them. Using analyst coverage as a key indicator of LOF in capital market, our findings indicate that the relationship between the length of systematic discussion and analyst coverage would be more positive if firms employ more concrete language style, less positive tone, and less passive voice, while completely opposite rhetorical strategies are suggested in idiosyncratic discussions. These findings contribute to understanding of LOF from a rhetorical perspective as well as literature of organizational rhetoric and risk-factor disclosure.

IM: **Geopolitical Power Relationships and Foreign Investment Patterns**

Author: **Michael Herbert Wolfesberger**, *WU Vienna*
Author: **Jonas F. Puck**, *WU Vienna*

Geopolitical developments and power wrestling between countries assume an increasingly important role for MNCs and their international investments. We draw on theoretical insights from political science on global country governance to study how different types of power relationships between countries influence foreign investment patterns of MNCs. Specifically, we suggest that a country with direct power – influence via dyadic dependencies – provides countries with coercive means in international politics and thus propels its MNCs to assume more depth in their foreign investments by concentrating in single countries. Conversely, we expect that a country with diffuse power – influence mediated via formal and informal institutions – has more legitimacy concerning its economic and institutional interests and thus propels its MNCs to assume more breadth in their foreign investments by spreading investments across multiple countries. Additionally, we expect MNCs to pay more attention to these power relationships when they have political connections to their home-country. We test our hypotheses on a sample of 42,934 firm-year observations (2009-2018) combining different investment databases. We find support for most of our hypotheses. This study, therefore, extends theory on how influence of an MNC’s home-country in international politics bears different implications depending on the type of power relationship.

IM: **Global Digital Platforms’ Non-Market Strategies in Response to Institutional Pressure**

Author: **Yiwen Sun**, *Alliance Manchester Business School, U. of Manchester*
Author: **Jonatan Pinkse**, *U. of Manchester*
Author: **Mercedes Bleda**, *Alliance Manchester Business School, U. of Manchester*

Global digital platforms operate across areas ranging from social media to online marketplaces and all hold dominant power in their respective areas. As governments across the globe are taking regulatory action to counter such platforms’ excess power, the question arises how these platforms respond to such interventions in return. Platforms, with their ‘born-global’ mindset, operate in a range of different countries with contradictory, yet overlapping institutional demands. This paper analyses how platforms deal with conflicting demands from home and host-country government intervention and manage the political connections between the two parties. Taking an institutional perspective on international business, it analyses the ramifications of government intervention on digital platforms, using TikTok as empirical case. Although the US government has continuously challenged TikTok, the platform has employed various non-market strategies in response, ranging from content moderation to legal actions and measures to shake off its Chinese roots. This paper provides insight into how host country government concerns and interventions shape a dominant platform’s choices for its non-market strategy. It shows that platforms use a direct or indirect non-market response, depending on the salience of the concern at hand, and that home country involvement can both help and hinder the outcome of such political bargaining.

Internationalization and Performance

Session Moderator: **Kiyohiko Ito**, *U. of Hawaii at Manoa*

IM: **The Effects of Rival Foreign Entry and Exit Actions on Foreign Divestment Decisions**

Author: **Kiyohiko Ito**, *U. of Hawaii at Manoa*
Author: **Teresa Silvernail Hinnerichs**, *U.S. Army*

This study extends the foreign divestment research on the role of home-country rivals. Using a longitudinal dataset for the years 1972–2019 that captured foreign divestment decisions of large U.S. healthcare systems operating foreign hospitals, we analyzed the relationship between various factors and the timing of divestment. In addition to the traditional number of home-country competitors in the host country, we added the dual factors of new foreign market entries and exits of these rivals to reveal the more precise, dynamic nature of competitive interactions. We found that the recent foreign market entries of U.S. rivals into a host country and the concentration of U.S. rivals operating in a host country both decelerated foreign divestment decisions by the focal hospital, while the recent foreign market exits of rivals were not related to the focal hospital's divestment. The addition of rivals' foreign market entries and exits, in addition to the traditional number of current incumbent rivals, sheds new light on foreign divestments.

Management and organizational research employing a Latin American context has grown over the past two decades. Given the increased interest, we offer a review of this scholarship, mapping out contributions to the field and orienting future investigation. Consequently, this article examines publications in nine leading journals between 2000 and 2020 to describe contributions in terms of authors, institutions, and theories employed in management research in Latin America. We describe substantive literature in international management, strategic management, organizational behavior, and entrepreneurship, highlighting key findings of research based on Latin America and underlining relevant aspects to guide future research in this region. Finally, this paper aims for more research to sustain and make new contributions to the mainstream literature on international business, especially in multinational value chains, cross-cultural studies, and entrepreneurship.

IM: **Understanding Internationalization Patterns**

Author: **Leah Fischer**, *U. of Innsbruck*
Author: **Harald Puhr**, *U. of Innsbruck*

Internationalization of corporate activities is a core aspect of research in International Business. While several theories explain internationalization decisions, the understanding of non-incremental, non-linear internationalization processes remains incomplete. In particular, a large-scale empirical analysis of these deviations from "classic" internationalization theory is missing. To this end, this study applies a machine learning model to identify a set of internationalization-process clusters. Based on the clustering, the study investigates factors that determine according to which pattern individual firms internationalize and explains how firms draw on the organizational learning process. Thereby, the study outlines that multiple theoretically distinct internationalization patterns may exist in parallel but apply to different firms. The study's findings contribute to a more dynamic understanding of the heterogeneity of processes by which firms expand their foreign operations.

IM: **Motive Complexity of Chinese Multinationals in the African Context**

Author: **Yuanyuan Li**, *California State U., Los Angeles*

This research explores the FDI motive complexity of Chinese multinational enterprises (CMNEs) in Africa. Most of the literature on MNEs considers a single motive and seldom discusses that firms engage in multiple goals and desire flexibility in internationalization, especially in dynamic environments. This research combines the institutional logic theory and the real options theory (ROT) to explain what triggers CMNEs to implement strategic flexibility with respect to their FDI motive selection in an African context, as the environmental dynamism in Africa offers a perfect condition to test firm behavior under uncertainty. Examing a sample of 3142 outward FDI projects from 2030 Chinese MNEs between 2000 and 2014, the results suggest political uncertainty contributes to the FDI motive complexity of MNEs in Africa. MNEs' idiosyncratic responses to political uncertainty based on their ownership structure also is investigated. The findings provide the policy implication that improving local institutional quality in African countries can help lessen the degree of resource exploitation by foreign MNEs.

Identity and Firm Practices

Session Moderator: **Miikka J. Lehtonen**, *Rikkyo U. College of Business*

IM: **Humor-Based Identity Work and Its Implications in Complex Organizational and Cultural Environments**

Author: **Alexei Koveshnikov**, *Aalto U.*
Author: **Miikka J. Lehtonen**, *Rikkyo U. College of Business*

Drawing on 44 in-depth personal interviews with Nordic expatriates living and working in Tokyo, Japan, in this study, we explore how expatriate individuals make sense of their use of humour in their identity work as they navigate and cope with the complexities and contradictions of their novel and unfamiliar organizational and/or cultural environments. We also examine how through such humour-based identity work expatriates (re)construct their own subject positions in the new environments, the subject positions of relevant others, and the key attributes of the host country's culture. We argue that doing so carries emancipatory potential for expatriates as it allows them to discipline and relate to the other and the host cultural context in ways beneficial for them.

IM: **Identity Rhetoric for Corporate Diplomacy**

Author: **Jin-Su Kang**, *NYCU*
Author: **Sunghoon Kim**, *U. of Sydney Business School*
Author: **Chuan-Kai Lee**, *National Tsing Hua U.*
Author: **Huan-Yu Lin**, *NYCU*

The geopolitical tensions, as exemplified by the US-China trade disputes and Russia-Ukraine conflicts, are a major challenge to multinational enterprises (MNEs). Amid this, the notion of corporate diplomacy—MNEs' nonmarket strategy to respond to or shape international relations—receives growing scholarly attention. Our study advances the literature on MNEs' corporate diplomacy by focusing on how MNEs adopt rhetorical strategy to deal with 'polylithic pressures,' a situation in which MNEs find themselves caught in the conflicts between their country of origin and a host country of their major business operation. We analyze the cases of two high-profile Taiwanese companies, Foxconn and TSMC, and how they portray their (supra)national identity during which international politics around this territory substantially fluctuated (2000-2020). Based on results, we propose the model of corporate diplomacy under polylithic pressure: Depending on geopolitical tension and geopolitical interdependence, we suggest a range of rhetorical strategies around their (supra)national identity, including globalizer, glocalizer, arbitrager, and hedger.

IM: **Constructing an Organisational Identity of Unfluidity: National Identity Work in Huawei, 1987-2020**

Author: **Keyan Lai**, *U. of Edinburgh business school*
Author: **Johann Fortwengel**, *King's College London*

How multinational enterprises (MNEs) answer the question of 'who we are' has important implications for their global business. Having a fluid organizational identity allows them to downplay their national identity and avoid geopolitical controversy. In this paper, we present a case of an unfluid organizational identity, where national identity was consistently emphasized as core to who we are. Our inductive, longitudinal case study of Huawei reveals the process through which it constructed its identity by drawing on a key ideological shibboleth of the ruling Chinese Communist Party. We argue that the ideological imprinting resulted in the dominance of national identity and the unfluidity of its organizational identity. Our paper changes the way we think about national identity in today's multi-polar world order.

IM: **Do Liberal and Conservative-leaning CEOs Approach De-internationalization Differently?**

Author: **Yannick Thams**, *Florida Atlantic U.*
Author: **Luis Alfonso Dau**, *Northeastern U.*

We explore MNCs' de-internationalization at the onset of the 2022 Russia/Ukraine crisis, based on their CEO's political ideology. Using motivated cognition logic, we propose the differences between conservative- and liberal-leaning CEOs regarding their attitudes toward change and social justice influence their receptivity to stakeholders' demands regarding de-internationalization. Using a sample of US MNCs, we find support for our arguments. This research is of scholarly importance as this crisis may intensify the terrains of contestation which MNCs represent for stakeholders that are making claims over their location decisions, often perceived as a sign of acceptance into a country's political actions.

IM: **Cultural Product Adaptation and Export Performance: A Study of Chinese Online Novels**

Author: **Yanan Lin**, *Central U. of Finance and Economics*
Author: **Song Lin**, *Central U. of Finance and Economics*
Author: **Jingyu Yang**, *U. Of Sydney*

Accompanied by the cultural industry becoming the major driver of the global economy, international markets are increasingly important for cultural product producers to grow their businesses. Using the data of Chinese online novels translated and distributed via webnovel.com to foreign readers from 2018 to 2021, this study examines how adaptations in terms of the surface and deep structure of a cultural product affect its performance in international markets. The results reveal that title adaptation is positively while content adaptation is negatively related to a novel's export performance. Meanwhile, the positive effect of title adaptation becomes weaker, and the negative effect of content adaptation becomes stronger for novels with high cultural specificity and high initial product popularity in international markets. Our study contributes to the international business literature on the adaptation of cultural products, especially those introduced from developing country markets to developed country markets and advances current knowledge on cultural specificity and product popularity in cross-cultural research. It also carries several implications for producers engaged in international businesses of cultural products.

IM: **The Effects of Export Market Re-Entry and Time-Out Period on Innovation**

Author: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*
Author: **Josep Rialp**, *Autonomous U. of Barcelona*
Author: **Fernando Angulo-Ruiz**, *MacEwan U.*

While flourishing research has analyzed exporters' ex-post improvements on innovation via the learning-by-exporting (LBE) effect, we know little about how exporters' time-out periods and re-entry to foreign markets impact their knowledge stock and LBE processes. To analyze these issues, this paper draws on organizational learning and dynamic capabilities perspectives to assume that as international markets provide exporters with access to innovation knowledge and capabilities, re-entering those markets will enable firms to benefit again from these innovation inflows. Furthermore, re-entrants may be able to leverage their market-specific export heritage from prior entries. Still, export heritage may be subject to decay, so we also hypothesize that a long time-out period will have a negative effect on innovation outcomes at the time of re-entry. Finally, we argue that in markets with higher innovation levels exporters may experience greater depreciation of their export heritage, causing a long time-out period to have a larger negative impact on learning outcomes that in those markets with lower innovation levels. This paper tests these assumptions by drawing on a sample of 1151 Spanish manufacturing firms from 1990 until 2016. The results offer relevant implications for research, managers, and policymakers.

IM: **SME Performance After Exit from Exporting: Does it Always Decline?**

Author: **Andrea Kuiken**, *Faculty of Economics and Business, U. of Groningen*

The present study focuses on the conditions under which exit from export markets influences the performance of small-, and medium-sized firms (SMEs). Using longitudinal data from Swedish manufacturing firms, I find that exit can benefit firm performance if firms have high levels of available slack, whereas it can harm performance when levels of potential and recoverable slack are high. Moreover, I hypothesize and find that environmental dynamism has a positive moderating effect on the relationship between exit and SME performance. These findings add to the current literature on SMEs' export development and performance by adopting a contingency perspective and showing that exit from exporting can benefit SME performance under certain circumstances. Moreover, with the changing international environment, this paper makes practitioners more aware that in some situations, it might be beneficial for the firm to exit from exports.

IM: **Introducing 'Block Transaction' To IB Theory: An Appreciative Inquiry through the Lens of 'Commons'**

Author: **Atilla Onuklu**, *Bilkent U.*
Author: **Theodore L. Hill**, *Fox School of Business, Temple U.*
Author: **Charles Dhanaraj**, *Daniels College of Business, Department of Management*

We conduct an appreciative inquiry into the implications of the blockchain for the substantial and increasing transaction costs involved in managing international trade exchanges. Our inquiry introduces the concept of a "block transaction" which reframes the series of sequential transactions between highly interdependent parties as a single set of simultaneous, interdependent transactions. This reframing shifts the locus of governance control to the localized community of parties involved in the trade exchange and admits Ostrom's commons governance remedies as a complement to transaction cost economics market and internalization remedies to the challenges of bounded rationality and opportunism in international trade.

IM Division GWU-CIBER Best Paper on Emerging Markets Award Finalists

Session Moderator: **Yamlaksira Getachew**, *Babson College*

IM: **On the Location Choices of African Multinational Enterprises: Do Supranational Institutions Matter?**

Author: **Yamlaksira Getachew**, *Babson College*
Author: **Roger Fon**, *London School of Economics and Political Science*
Author: **Elie Chrysostome**, *SUNY Plattsburgh*

In this article, we examine the roles of supranational institutions in the location choices of African multinational enterprises (MNEs). In doing so, we first consider the main effect of supranational institutions. We then examine whether and how such institutions interact with national institutions to influence MNE location choices. Using data from intra-African investments across five African Regional Economic Communities (RECs), we find empirical evidence suggesting that supranational institutions promote foreign investments of African MNEs. However, we find that these effects of supranational institutions are stronger in host countries with better national institutions, suggesting that supranational institutions complement (rather than substitute) national institutions in influencing the location choices of African MNEs. By taking intra-African FDI and RECs as empirical contexts, the study not only contributes to filling a critical gap in our understanding of international business and institutions in Africa but also generates useful policy insights for the African Continental Free Trade Area (AfCFTA), which began operations on January 1, 2021.

IM: **Does Rapid Internationalization Enhance Innovation Performance of Emerging Market MNEs?**

Author: **Xiaoyuan Li**, *Sichuan Normal U.*
Author: **Yong-Suhk Pak**, *Yonsei U.*

Multinational enterprises from emerging market (EMNEs) rapidly expand to foreign countries to seek strategic assets and expand their knowledge bases. Based on organizational learning theory and a portfolio perspective, we examine how EMNEs' internationalization speed influences their innovation performance and which characteristics of subsidiary portfolio moderate this relationship. We tested the research hypotheses using data from listed Chinese MNEs between 2012 and 2019. The results revealed an inverted U-shaped relationship between EMNEs' internationalization speed and their innovation performance. More importantly, different characteristics of the subsidiary portfolio have significant different joint effects with internationalization speed on EMNEs' innovation performance. Irregular expansion of foreign subsidiary portfolio steepens the impact of internationalization speed on EMNEs' innovation performance. In contrast, institutional diversity of host market portfolio flattens the effect of internationalization speed and innovation performance of EMNEs.

IM: **Evidence of "Double-loop Springboard" Under De-globalization in China**

Author: **Nam Kim**, *Korea U. Business School*
Author: **Changwha Chung**, *Korea U.*
Author: **Young Bin Kim**, *Korea U. Business School*

In contrast to previous studies on springboard theory suggesting that emerging market multinational enterprises (EMNEs) increase their competitiveness through outward internationalization, we use the double-loop springboard theory to verify the roles of inward internationalization and outward internationalization of Chinese multinational enterprises (CMNEs) under the context of de-globalization. Additionally, we advocate the importance of technological alliances to resist de-globalization and maintain CMNEs' innovation achievements. By examining the bilateral foreign direct investment (FDI) between Organization for Economic Co-operation and Development (OECD) countries and China, our empirical results based on country-level and firm-level analyses suggest that after 2016, CMNEs' inward internationalization improves innovation performance rather than outward internationalization. Moreover, technical alliances enhance the effect of inward internationalization on innovation during de-globalization.

IM: **The Evolution of Agglomeration and Location Choice in Emerging Markets: Software Firms in Bangalore**

Author: **Vijayaraghavan Venkataraman**, *Indian Institute of Management, Bangalore*
Author: **Anna Lamin**, *Northeastern U.*
Author: **Sachidananda Benegal**, *IIM Indore*

We explore how the location decisions of domestic entrants change over time in an emerging economy. In these contexts, foreign firms are viewed as having sophisticated technological capabilities and protecting these capabilities from diffusing to domestic firms. Simultaneously domestic firms are attempting to upgrade their capabilities. Over time, domestic firms should absorb some knowledge and improve their capabilities. We argue that in early time periods domestic entrants will prefer locations with foreign firms over locations with domestic incumbents. But in later time periods, this will reverse. We test our arguments using 5,936 domestic software firm entrants during 2000-2014 into Bangalore.

Crossing the Chasm: Unlocking the Next Global Frontier of Female Entrepreneurship

Organizer: **Denise R. Dunlap**, *UMass Lowell*
Discussant: **Denise R. Dunlap**, *UMass Lowell*
Organizer: **Beth Kroner Humberd**, *UMass Lowell Manning School of Business*
Moderator: **Lani Faith Gacula**, *U. of Massachusetts, Lowell*
Presenter: **Kimberly A. Eddleston**, *Northeastern U.*
Presenter: **Lakshmi Balachandra**, *Babson College*
Presenter: **Pisitta Vongswasdi**, *WHU Otto Beisheim School of Management*
Presenter: **Eliana Crosina**, *Babson College*

The landscape surrounding female entrepreneurs has transformed significantly over the past 50 years. In 1972, there were 400,000 female owned businesses, a number that has risen to 13 million today (Poggesi, Mari, De Vita, and Foss, 2020; Women in Business Statistics, 2022). Indeed, female entrepreneurs and the businesses they run contribute significantly to economic growth and social development (GEM, 2016). To capitalize further on this growth, the literature advocates that females should play an even larger role in entrepreneurial endeavors (Yadav and Unni, 2016; Sarfaraz, Faghih and Majd, 2014). Despite the progress realized for female entrepreneurs, there remain ongoing challenges (Panda, 2018; Jennings and Brush, 2013). For instance, female entrepreneurs only account for 22.4% of entrepreneurial businesses overall, and the majority of these are small in scale, home-based and in non-technical disciplines focused on service and retail (Poggesi, Mari, De Vita, and Foss, 2020; Women in Business Statistics, 2022). Further, although women have made extraordinary strides in more technical related fields (Lee, Sugimoto, Zhang, and Cronin, 2013; Wang et al., 2020), females face persistent inequalities in entrepreneurial activities involving science, technology, engineering, and math (STEM) (Ding, Murray, and Stuart, 2006; Gans, Hsu and Stern, 2008; Thelwall, Bailey, Tobin, and Bradshaw, 2019; Wang et al., 2020). The inequalities facing female entrepreneurs are attributed to both psychological factors such as gender stereotypes and perceptions of STEM fields as masculine-typed; and structural factors, such as the lack of role models, limited access to networks, and engrained organizational cultures (Botella, Rueda, López-Iñesta and Marzal, 2019; Hardey, 2019; Vitores and Gil-Juárez, 2016; Vorley et al., 2022). Extant research demonstrates that female entrepreneurs' talents are often underestimated and even discounted (Tesfaye and Wainikka, 2022), which creates considerable difficulties in obtaining the financial and infrastructural support necessary for launching and growing new ventures (Panda, 2018). The challenges are exacerbated further for female entrepreneurs in developing countries, due to the lack of opportunities and resource constraints (Panda and Dash, 2014; 2016; Verhuel et al., 2006; Panda, 2018), and for female minority entrepreneurs, who encounter challenges based on both their gender and racioethnic identities (Smith et al., 2019; Rosette et al., 2018). While the landscape for female entrepreneurs has improved over the past five decades, significant obstacles to success undoubtedly remain; so, what now? The goal of this symposium is to dig into the challenges female entrepreneurs continue to face as the frontiers and boundaries of business expand. Drawing on a core concept in the entrepreneurship literature coined by Geoffrey A. Moore, we aim to shed light on how female entrepreneurship can collectively "cross the chasm" (Moore, 1991) and transition into more significant growth and success in the coming decades. To do so, we bring together accomplished scholars to share their novel empirical findings about the contexts facing female entrepreneurs and the factors that contribute to, and detract from, their ongoing effectiveness and success. Such a discussion is necessary if we are to reshape the entrepreneurial landscape for future generations of women.

Change Management and Consulting in VUCA Environment

Session Moderator: **Aldine Bell**, *Weatherhead School of Management, Case Western Reserve U.*

MC: **How Emotional Reactions to Change Efforts Influence Perceptions of Project Outcomes**

Author: **Aldine Bell**, *Weatherhead School of Management, Case Western Reserve U.*

There is a consensus in the change management literature that emotions have a significant role in the workplace. It has been studied and applied across the human resource domain including recruitment and selection, training, performance management, as well as within the customer service setting. This study has the potential for expanding that application within the context of organizational change efforts. Our data show that change agents rely on three focal areas (personal commitment to the project, resonance of relationships with colleagues, and work-life balance) as they gauge their role and maneuver through the highly complex and often stress-inducing nature of change efforts. We report that as affective qualitative components (executive sponsorship, shared vision and organizational readiness) in change efforts were less prominent, change agents become more inclined to seek and engage in external activities to maintain work/life balance. Interestingly, their outlook on project outcomes were more positive, notwithstanding final evaluations by third parties. This research offers insights to project management leaders and consultants that will enable them to develop and encourage a positive emotional setting throughout the project lifecycle as well as project change agents so they will focus on their self-care and well-being during organizational change efforts

---

MC: **Enduring in VUCA Environments**

Author: **Kurt Motamedi**, *Pepperdine U. - GSB*

Enduring social systems prosper and effectively respond in volatile, uncertain, complex and ambiguous (VUCA) environments and crises. Endurance is comprised of three mutually synergic processes of willfulness, adaptability, and capability (cope-ability). Will determines the drive and the commitment to achieve the overarching purposes. Adaptability is the capability to understand and make necessary adjustments to address requisite external factors. Copability is the internal processes that help maintain a sense of well-being and wholeness. Enduring social systems strive to achieve their will through adapting and coping. Those feeble are less capable of adapting while sustaining their internal wholeness. When facing complexity and change, the enduring willfully strives to build and maintain external relevance to adapt and sustain internal efficacy and coherence. The endurance to succeed is driven by the purposeful will and synergy of adapting and coping for responding to externally induced changes while assuring a well-functioning system internally. This article explores endurance as a requisite determinant of social systems' effectiveness, well-being, and revitalization in VUCA environments.

MC: **Facilitating Behavioral Change in Individuals with T2D: Considerations for Healthcare Consultants**

Author: **Yolonda Freeman-Hildreth**, *Case Western Reserve U.*

The prevalence of Type 2 Diabetes (T2D) in the U.S. has increased dramatically over the past forty years, despite advances in medical treatment. Unfortunately, African Americans experience higher rates of diabetes-related complications, morbidity, and mortality than other ethnicities. This paper uses grounded theory to explore the relational interactions that motivate long-term behavioral change in African Americans. Thirty African American individuals with T2D were interviewed. Findings revealed significant differences among the characteristics of participants who successfully adhered to their self-management plan and those who struggled with adherence. Notably, our analysis revealed that long-term adherence was impacted by unique internal and external motivational factors influencing participants' motivation to maintain long-term adherence. This research provides implications and recommendations for healthcare consultants working within healthcare organizations or non-profits to improve current T2D management. In addition, this research provides insight into African Americans' perspective of self-management burden along with tensions experienced as patients attempt to gain power and control over the disease.

Project, Investment, and Stock Market Management Consulting Practices

Session Moderator: **Shabir Ahmad**, *Al Yamamah U.*

MC: **Identifying Critical Success Factors for Construction Projects in Saudi Arabia**

Author: **Shabir Ahmad**, *Al Yamamah U.*
Author: **Kamran Ahmed Siddiqui**, *College of Business Administration, Imam AbdulRahman Bin Faisal U.*
Author: **Tarig Eltayeb**, -
Author: **Faisal Aftab**, *College of Business Administration, Imam AbdulRahman Bin Faisal U.*
Author: **Yazeed Alsuhaiban**, *College of Business Administration, Imam AbdulRahman Bin Faisal U.*

The construction projects of process industry plants are complex due to the involvement of numerous stakeholders and uncertainty in environmental factors. The internal and external factors affecting the successful execution of the projects vary across industries and countries. It is vital to identify the critical factors for a geographic region and devise the appropriate strategies for the successful execution of the projects. This study aims to identify the critical success factors for construction projects in Saudi Arabia. To achieve the objective, data collected through questionnaire surveys from 342 project managers, directors, engineers, staff, and construction directors were analyzed in SPSS. The findings showed that construction industry projects in Saudi Arabia are usually constrained by five major factors including the project manager's qualification and experience, project management practices, timely availability of skilled manpower and equipment, clarity of project definition and scope, and weather conditions, The findings imply that Saudi construction firms need to recruit professionally qualified project managers, establish project management office (PMO), revisit supply chain strategies, and provide alternate working hours during tough weather conditions. Further implications, recommendations, and future research directions are discussed in the end.

MC: **An Interpretive Study of Senior Managers' Conceptions of Project Portfolio Management Work**

Author: **Mariano Garrido-Lopez**, *Western Carolina U.*
Author: **Veronique Ambrosini**, *Monash U.*

Project Portfolio Management (PPM) is a discipline central to strategy implementation. Few empirical studies provide accounts of the key activities involved in PPM. Specifically, better insights need to be developed into the work that senior managers perform in PPM and into their competences. Current rationalistic approaches to the study of competence are limited because of their dualistic ontology, according to which, competence could be described as comprised of two separate components, some attributes that the worker possesses externally related to a list of work attributes. This research applies the interpretive research approach known as phenomenography to overcome this limitation. Phenomenography suggests that it is the meaning that work takes on for workers as they experience it that constitutes competence, rather than a set of attributes. Hence, we need to understand how senior managers conceive of their work in PPM. Analysis of the interviews with 32 senior managers revealed four different conceptions of PPM work, each with multiple attributes. The conclusions confirm the existence of a hierarchy of conceptions in PPM work of increasing complexity, richness and inclusiveness. This research makes a contribution to the PPM literature by providing an interpretive understanding of what constitutes senior managers' competence in PPM.

MC: **Foreign Direct Investment Decision Making: Perceived Environment Uncertainty and Digital Capability**

Author: **Lei Li**, *U. of Nottingham Ningbo China*
Author: **Yun Zhou**, *U. of Nottingham Ningbo China*
Author: **Wenjun Tu**, *Ningbo U.*
Author: **Yuxue Luo**, *U. of Nottingham Ningbo China*
Author: **Zhiang Lin**, *U. of Texas at Dallas*

This paper seeks to further advance the research in foreign direct investment (FDI) decision making by drawing upon the behavioral theory of the firm (BTF) and digital transformation perspective. We contend that FDI decisions are subject to perceived environment uncertainty and digital capability of top managers in the volatile, uncertain, complex and ambiguous (VUCA) environment. We illustrate different types and levels of environmental uncertainty and explore the impacts of top managers' perceived environmental uncertainty and digital capability on FDI decision making in terms of location, entry mode and timing. Overall, we enrich the application of BTF in firm internationalization by bringing to the fore the digital capability of decision makers. There are significant practical implications for policy makers, consultants and managers in face of FDI decision making.

MC: **The Quest for Abnormal Returns: More than a Century Evolution on Investment Strategy in Stock Market**

Author: **Sharneet Jagirdar**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*
Author: **Pradeep Kumar Gupta**, *L M Thapar School of Management, Thapar Institute of Engg. and Technology, India*

The present study reviews more than a century of research on investment strategy in stock markets in the quest for abnormal returns. The study summarizes the previous literature of more than 100 years and identifies the conflicts and the relationships that arise from such a wide variety of existing studies. The period under study is divided into three sub-periods to bring coherence and capture the characteristics of time with a chronological study of events namely Classical, Neoclassical and Modern. The classical era is dominated by CAPM, Fundamental analysis, Efficient Market Hypothesis and Random Walk Hypothesis. The neoclassical era marks the renaissance of technical analysis and the Modern era belongs to behavioral finance and technological advances in social media. This study helps present and future scholars identify previous researchers' ideas and create new theories in investment strategy in stock markets. The main contribution of this study is to provide a coherent picture of the seminal works on investment strategy in stock markets along with the current state of research.

MC: **<u>How Can Consultants Contribute to Organizational and Strategic Design for Attracting FDI</u>**

Author: **Mukhtar Abubakar Yusuf**, *Business Analyst and Independent FDI Decisions Researcher*

This study examines the factors that influence the interactive effects of investment facilitation services on investment promotion services and the ease of doing business on foreign direct investment decisions. The study's main aim is to develop working analytical tools for the consultants in FDI. Predictions were made using various Artificial Intelligence (AI) Algorithms models. The study provides in-depth insight into the dynamics of complex FDI decisions. We use structural equation modeling in the prescriptive component using preexisting data obtained from Qualtrics online survey. The results indicate that although there was a non-significant interaction effect, we may still consider moderation to be present for all values as they all fall within the confidence interval for effective FDI decisions. We used Support Vector Machine with varying models on the predictive component to evaluate the accuracy of predicting classes of individual investment risk decisions. We also use the ARIMA model in R and Python to forecast FDI inflows over the next decade. Naïve Bayes and Logistic Regressions have substantial classification accuracies. In addition, we predict that over the next ten years, there will be a steady above-average FDI Inflow. We suggest that IPAs use their investor services by establishing a new Investment Facilitation Center through Public-Private-Partnership to attract potential and undecided investors.

Removing Barriers

Session Moderator: **Shuang Frost**, *Aarhus U.*

MED: **Making “Liminal Community”: Identity Transformation of Black Women Tech Founders**

Author: **Shuang Frost**, *Aarhus U.*
Author: **Yuson Jung**, *Wayne State U.*
Author: **Marlo Rencher**, *TechTown Detroit*
Author: **Dawn Batts**, *TechTown Detroit*

Social inequality not only shapes resource access for minority entrepreneurs, but also limits their dreams and aspirations. Entrepreneurship education programs can play an important role in addressing this problem, but merely including them and teaching business skills does not guarantee their success. Attention to minority entrepreneurs’ identity transformation as part of entrepreneurship education can address inequality in productive ways. By returning to the anthropological roots of liminality, we highlight the community dimension that is understudied in management literature on identity work. Through an ethnographic study of STEEP, an educational program in Detroit focused on a culturally-relevant and context-sensitive entrepreneurial training for Black women tech founders, we demonstrate that individual and collective identity transformations are intertwined and shaped by their situated community, and how community building can sustain the identity beyond the liminal space-time. We propose a new concept called “liminal community,” an intentionally designed temporary organization with the explicit purpose of facilitating collective and individual identity transformation, and argue for its effectiveness in fostering emancipatory entrepreneurial identity that disrupts normative imaginations.

MED: **Bridging the Parenthood Penalty in Degree Completion & Management Career Growth**

Author: **Jennie L. Walker**, *U. of Arizona Global Campus*

Author: **Gwendolen Stutler**, *U. of Arizona Global Campus*
Author: **Kerissa Kuis**, *U. of Arizona Global Campus*

One in four students pursuing post-secondary degrees today are working parents. The rise of online and hybrid degree programs has opened access. However, this population faces many obstacles to complete their degrees, most notably socio-economic challenges. Research reveals that many post-secondary student parents have incomes at or below the poverty level and work while pursuing their degrees. They also tend to largely be from traditionally marginalized communities with limited support systems. Retention and completion statistics for this population are low, even compared to other non-traditional student populations. The stakes are high, as degree completion can facilitate career growth and provide financial stability for their families. This study explores the specific challenges working parent post-secondary students (WPPSS) who aspire to management-level roles face in completing their education and advancing their management careers. The findings point to success strategies and resources that higher education institutions and employers can consider sponsoring to enable their success, thereby creating stronger human resources bench strength in organizations and potentially lift these students and their families out of poverty.

MED: **Universal Design in Business Schools: How Management Education Can Help Advance Equity for PWD**

Author: **Toschia M. Hogan**, *Chaifetz School of Business, Saint Louis U.*
Author: **Yifeng Fan**, *Fairfield U.*
Author: **Sean E. Rogers**, *U. of Rhode Island*

Management education is uniquely positioned to advance equity and global access for people with disabilities. It has the potential to do so by progressively shaping disability-related attitudes and behaviors among future organizational leaders and decision-makers while also extending business education and learning opportunities to an increasing number of students with disabilities who can go on to influence corporate behavior. We argue, however, that business schools largely miss this opportunity to influence the hearts and minds of the next generation of leaders because of an overreliance on a deficit-focused, exception-driven approach to disability education and management. As a result, differences in individual ability are viewed as an aberration needing accommodations and caretaking rather than a contribution to the learning environment. In response, we offer universal design – an architecture-inspired concept that seeks to make constructed environments and processes usable by as many people as possible – as a means to reform the way business schools think about disability and inclusive learning. Through universal design, management education can be essential in alleviating social injustice for people with disabilities.

MED: **Escaping the Penalty of Marginalization through Management Education**

Author: **Indu Khurana**, *Hampden-Sydney College*
Author: **Jagannadha Tamvada**, *U. of Southampton*
Author: **Daniel Lee**, *U. of Delaware*

Drawing on the Social Dominance Theory and the Integral pheno-practice of well-being framework, we develop two new constructs: penalty and degree of marginalization. We then examine their impact on the occupational choice and economic returns of marginalized individuals in India. Using a large-scale administrative dataset, we demonstrate that socioeconomic inequalities manifest as the penalty of marginalization and limit occupational choice and subsequent earnings. The degree of marginalization suggests that the penalty varies significantly across social classes. Our findings provide evidence of positive externalities associated with management education in higher earnings and better occupational choices. However, though management education improves economic returns for those pursuing it; it, unfortunately, remains accessible only to a privileged few. Since most marginalized individuals typically cannot access or have limited access to management education, economic inequalities are perpetuated and exacerbated. Our findings have important implications for policymakers and business schools, as we highlight how management education reinforces existing socioeconomic inequalities and, therefore, underscores the need to limit barriers to access.

Business Schools: Getting it Right

Session Moderator: **Yuchen Carrie Wang**, *U. of California, Irvine*

MED: **Tackling the Relevance of Management Research as a Scholarly Enterprise**

Author: **Yuchen Carrie Wang**, *U. of California, Irvine*
Author: **Shaun Michael Pichler**, *California State U., Fullerton*
Author: **Gerardo Okhuysen**, *U. of California, Irvine*

The relevance of scholarly research is a central concern in the field of organizations and management, leading to an ever-growing body of literature. However, the same challenges and solutions seem to be repeated periodically with little progress made. In this review, we address this dissatisfying state of affairs and suggest directions to move the conversation forward. First, we present the different discussions and perspectives prominent in the literature. We build our critique based on two repetitive themes others have noted: the fragmentated nature of the conversations and the simplistic treatment of relevance within them. Next, we add to this critique with insights from peripheral perspectives in the literature, specifically on the nature of social science and on management education. Then, using our review and critique as a starting point, we propose three potential ways of redefining relevance that integrate the fragmented perspectives in a meaningful way. These three proposals help inform a more comprehensive understanding of the relevance of management research.

MED: **Getting Lost in Your Values: Espoused Values as a Representation of Enacted Organizational Values**

Author: **John Edward Fiset**, *Sobey School of Business, Saint Mary's U.*
Author: **Raghid Al Hajj**, *Gulf U. of Science and Technology*
Author: **Bui K. Petersen**, *Sobey School of Business, Saint Mary's U.*

As international business schools have been compelled to adapt to increased competitive pressures and demands to increase the integration of sustainability practices, many of these organizations have taken on the features of large corporations to increase their responsiveness to these stakeholder requirements. One of the features that have become increasingly important is explicitly articulating the school's core values. As values serve as a primary way of communicating central principles and beliefs and act as the bedrock for how decisions are made, clearly expressing these values plays a vital role in shaping institutional practices and how internal and external stakeholders evaluate the institution. The current study explores the proliferation of values among business schools and examines the manifestation of organizational authenticity—the coherence between a school's espoused and enacted values. Using a sample of 841 accredited post-secondary business schools from 62 countries across six continents, we map espoused values using two established values frameworks developed by Bourne, Jenkins, and Parry (2019) and Cardona and Rey (2008). Our results reveal a disconnect between espoused and enacted values that might undermine perceptions of organizational authenticity. Rather, we find evidence that the greater the number of espoused values, the lower the odds of value enactment. We discuss the theoretical and practical implications of this unanticipated finding and present suggestions for future research in this domain.

MED: **Business and Beyond: A Systematic Literature Review Exploring how Business Disciplines (don't) Work**

Author: **Martin Sposato**, *Zayed U.*
Author: **Paolo Mura**, *Zayed U.*
Author: **Heather Jeffrey**, *U. of Birmingham*

Academics (should) play a key role in creating a better world, but this paper seeks to explore how together we really are. Taking a sub-discipline (tourism) and mapping out its knowledge in parent disciple (business) journals the paper finds that even within (arguably) the same discipline we are not as together as we could be. The paper provides data on how tourism is conceptualised in business journals; the main keywords used to represent tourism-related work, the principal methodological approaches employed, the tourism and hospitality journals cited, and the affiliations of the authors. Overall, the analysis shows that business articles' understanding of tourism is rather narrow, confined within a limited number of publications originating from Western institutions, which merely frame tourism as a business or an industry. This body of knowledge rarely refers to the political and socio-cultural power structures underpinning tourism and overlooks the depth and complexity of the field discussed in niche tourism journals. Moreover, as tourism knowledge in business journals is mainly driven by quantitative, positivist stances, it does not reflect the diversity of non-positivist and critical developments characterising the field.

MED: **Holding Out for a Hero: The Need for Courage from Business Management Faculty**

Author: **Evan Hayden Offstein**, *Frostburg State U.*
Author: **Ronald L. Dufresne**, *Saint Joseph's U.*
Author: **J.Stephen Childers**, *Radford U.*

Most of the thinking regarding faculty development centers on improving instructor knowledge and expertise along with pedagogical tactics and skills to convey that expertise. Often lost in these dominant developmental approaches is the faculty-as-leaders paradigm where faculty enact, model, and demonstrate certain noble and needed leadership behaviors. In this essay, we express grave concern at this omission and advance a rather provocative position. Namely, we suggest that management faculty would go a long way in advancing the profession by exhibiting and modeling what many consider the most righteous and important of all leadership virtues—that of courage. In making the case for courage, we identify several potent forces, trends, and variables implying that faculty courage is needed now more than ever. Invoking several disciplines and theories across a multitude of varying stakeholders, we contend that cowardice, rationalization, disengagement, and excuse-making prevent faculty from exercising courage. This is unfortunate because courage, above, perhaps, all else is needed now to protect the profession, the institution, the students, and the search for knowledge, itself.

We were invited during May 2021 to join a small and focussed group of researchers working in the student-centered learning (SCL) space. The aim of our agreement was to open up opportunities for collaborative studies for students and staff. The idea was, at the time, that people would have the opportunity to visit physically and interact with like- minded learners and professional staff around matters of mutual interest in the practice-based and work-based education environment. During the COVID pandemic, other ways had to be found to work around the restrictions on travel and interaction. The invitation for collaboration involved three separate institutions from three countries and the call was to initiate our research based on the question: How can we move toward a joint research agenda for delivering professional practice programmes on the basis of the SCLT- review that makes sense both from a comparative perspective and from three, individual, institutional viewpoints? This is our story.

Origin Stories: Management History as a Lens to Understand Current Practices

Session Moderator: **Nicholous Mark Deal**, *Mount Saint Vincent U.*

Why is management the way it is? A standard answer is 'origin'. Namely, current practices depend on what occurred in the past. Accordingly, these papers look at the origins of current management practices.

MH: **French Language as a Missing Context in Histories of 'Doing' Business Education in Canada**

Author: **Nicholous Mark Deal**, *Mount Saint Vincent U.*
Author: **Rene Arseneault**, *Business administration faculty, Laval U. (Québec, Canada)*

Developing histories of business schools have long been a staple in the research of management and organization studies. Until recently, most of the work historicizing these institutions have neglected specific national contexts like Canada. Even within the histories of Canadian business education there is a missing French perspective. What we do in this research is advance an understanding of why this neglect of Canada's second official language exists in the first place and, in the process, problematize the role Anglocentrism has played in business education writ large. We forward a new history of French business education in Canada by offering three narratives from the recent past including: the (mis)representation of the French language across Canadian universities; a disadvantage of French business scholars in mobilizing knowledge in French scholarly outlets; and the prominence and impact of Anglocentrism that presents a conundrum for faculty in French-speaking universities to publish their scholarship in English outlets.

MH: **Origins of Management Education: A Historical Analysis of the Four Principles of Management**

Author: **Robert Lloyd**, *Fort Hays State U.*
Author: **Daniel P. Mertens**, *Jacksonville State U.*
Author: **Premysl Pálka**, *Tomas Bata U. in Zlin*
Author: **Salvador Villegas**, *Northern State U.*

Abstract Purpose: The purpose of this paper is to map the antecedents and precursory frameworks to the four principles of management. Moreover, a description of its codification and coalescence as a unified framework is provided, which critically reviews key theoretical underpinnings of management principles found in academic research and management textbooks. Design/methodology/approach: A historiographic approach reviewed seminal works for theory origins of the four principles of management, by analyzing 260 management textbooks from 1935 to 2013 to document their adoption in management education. This study employed critical hermeneutics (Prasad, 2002) to explore the framework's progression by providing the context of cultural, political, and economic influences. Findings: This research study tracked and mapped the creation of the four principles of management as it became the commonly accepted framework in management education. Today, every predominant Management Principles textbook utilizes the four-principle framework – plan, lead, organize, control - as the basis for teaching students the rudiments of managerial duty. Originality: Through a critical analysis into the formation of the four principles of management, this research not only provides a historical account of its construction, but as importantly, the influencing factors that led to its development. This research fills a gap in critical literature as a post mortem exegesis has never been conducted on the four-principle framework in the after-years of its amalgamation. Research limitations/implications: There is limited research on the application of the four-principle framework in contemporary management, despite its ubiquity in management education. Our historical account of its formation provides insights into its adoption and utilization in modern education context. The primary limitation of the study design derived from the lack of access to every management textbook in the study period (1917-2013). However, data saturation was achieved for the scale of textbooks and writings which was reviewed.

MH: **Alternative Institution Building As Ethics Leadership, Engagement and Praxis Method:**

Author: **Richard P. Nielsen**, *Boston College*
Author: **Elizabeth Hood**, *Boston College*

Albert Hirschman (1915-2012) developed an actor-agent based theoretical framework for politically and ethically acting in contexts of decline, including ethical decline, in "organizations, institutions, and states" which he termed "Loyalty, Voice, and Exit." Bernstein (1971) interpreted joined ethical and political activity as a form of Aristotelian praxis. The business ethics literature is reviewed to consider how the Hirschman model has been utilized in this literature. Initially, Hirschman considered these methods as mutually exclusive alternatives (Hirschman, 1970). Over the next 40 years Hirschman (1995, 1998; Adelman, 2013), as well as others in the area of business ethics who were influenced by the framework, expanded consideration of Hirschman's three praxis archetypes beyond use as alternatives to include sequential and simultaneous applications of the methods as well as a wide variety of different types of internal and external organizational voice methods. However, there is a type of situation and a key action method that Hirschman and the literature has not considered where employees-members of an organization simultaneously are loyal to the organization's espoused historical ethics mission, cannot support what they consider the current problematical organizational deviation from the ideals, do not believe that any internal or external voice methods can be effective, and believe that other organizations in the actors' accessible institutional field that they might exit to are not substantially different. The ethics leadership, engagement, and praxis method of "alternative institution building," in a sense a creative, developmental schism and then transformation, can: expand Hirschman's theoretical framework; and, provide a practical imitative model for how the organization the actor is exiting from as well as other organizations and institutions can transform to be more consistent with their espoused ethical missions. Two case examples are discussed from the perspectives of the historical agents: (1) the Norwegian ethical natural resources development and ethical investing model; and, (2) John Bogle's experience in developing the Vanguard alternative low-cost index and consumer-investor cooperative ownership and governance model of mutual fund investing. The agent-actor based historical case method of Jonas Ahlskog (2021: 59) which he referred to as "invoking the perspective of meaning of historical agents….is committed to understanding the meaning and significance of actions and events from the perspective of historically situated agents" is used in analyzing the cases. We do not all have to agree with the ethical action choices of the specific actors or the contemporary contexts where the method might be applicable, but it is a method that has succeeded for many actors, and can extend the Hirschman agent-actor based theoretical framework.

MH: **Forgotten Foundations: Alternative Worker-Centric Visions of the Good of Management and Enterprise**

Author: **Stephen Cummings**, *Victoria U. of Wellington*
Author: **Christina Lubinski**, *Copenhagen Business School*
Author: **Ellen O'Connor**, *Senior Research Fellow, Barowsky School of Business*
Author: **Christop Viebig**, *Copenhagen Business School*

Conventional histories present a view whereby the foundations of management as a discipline were revealed by thinkers like Frederick Taylor and Henry Gantt: mechanical engineers well suited to advancing the subject. Relatedly, the good of management – the end that management sought to serve – was defined as an economic efficiency that maximized the financial profit ratio of outputs over inputs. We examine three intellectual networks, centred around Boston, Paris and Leipzig, that developed alternative views of the good of enterprise and management in the early decades of the 20th century. At the cusp of the formation of management as a discipline, these networks created visions of management that viewed organizations as social beings; alternative views of management education; and regarded conservation, social association, and maximizing community and worker well-being as the goods that management should serve. We explore the re-inventive power that recovering these forgotten foundations could promote today.

Leader Experiences and Behaviors

Session Moderator: **Verena Krause**, *UCL School of Management*

MOC: **We Don't Need Another Hero: The Perils of Unauthorized Proactive Followership**

Author: **Carmit T. Tadmor**, *Tel Aviv U.*
Author: **Verena Krause**, *UCL School of Management*
Author: **Etti Doveh**, *Technion Israel Institute of Technology*
Author: **Jack Anthony Goncalo**, *U. of Illinois at Urbana-Champaign*
Author: **Barry M. Staw**, *U. of California, Berkeley*

We often hear stories of corporate heroes who had to buck higher authorities to improve organizational or stakeholder welfare. Yet, little is known about the consequences of this behavior for the employees who undertake such unauthorized action. Drawing on and extending the emerging literature of followership, we suggest this display of unauthorized proactive followership threatens supervisors and consequently is hazardous to employees' performance evaluations. A field study and three experiments demonstrate that, relative to passive followers who obediently do as they are told, not only is there substantial risk of derogation if unauthorized proactive followers fail (the rebel backlash effect), but there is also no reward and even denigration if they succeed (the unsung hero effect). Supervisor sense of threat mediates these negative effects. Thus, although organizations may benefit from unauthorized proactive followership, we warn that the best career advice for employees may be to just do exactly as they are told.

MOC: **Goaded into Gab: How Formalized "Management by Walking Around" Can Foster Organizational Complacency**

Author: **Alex Bolinger**, *Idaho State U.*
Author: **Tyler Burch**, *Idaho State U.*

Despite the appeal of "management by walking around" (MBWA) among practitioners, researchers have found that formalized organizational MBWA initiatives frequently hinder the organizational outcomes that they are intended to facilitate. To explain this puzzling finding, we theorize how the formalization of MBWA can create perceptions of ritualization that both consciously and subconsciously hinder information sharing between supervisors and their direct reports and, in turn, foster organizational complacency. We describe the role of "gab" as an insidious consequence of formalizing MBWA. We describe how gab occupies the space between employee voice and silence, distinguish it from concepts such as small talk and gossip, and theorize its potential effects on organizational complacency. Our discussion concludes with a framework for a more relational approach to implementing MBWA.

MOC: **My Youth Never Ends: How Do Executives' Zhiqing Experiences Impact Firm Perks?**

Author: **XIANJU ZENG**, *College of Management, Shenzhen U.*
Author: **KAI ZENG**, *College of Management, Shenzhen U.*
Author: **Zi Xuan Chan**, *U. of Macau*
Author: **Yishu CAI**, *Department of Management, Business School, The Chinese U. of Hong Kong,HK*

Our paper contributes to the literature by examining how the experiences of corporate executives influence their compensation and how the intra-firm context affects their experiences. We test our theory with data from Chinese corporate executives' Zhiqing experience, an early life experience related to the nationwide policy that required educated youths from urban areas to live and work in rural areas, which is significant and influential but underexplored in management research. We explore how the executives' Zhiqing experience affects the perks of firms. By integrating the theories of upper echelons and imprinting, we propose that the past Zhiqing experiences of executives are negatively associated with perks, due to the frugal lifestyles that were formed in their youth. In addition, we find that executive compensation and firm slack strengthen the relationship between executives' Zhiqing experience and firm perks. Our theory is supported by a sample of Chinese A-share listed firms on the Shanghai or Shenzhen Stock Exchanges between 2013 and 2016. These findings have implications for the literature on perks, early life experiences, and imprinting theory.

MOC: **Feeling Excluded from Followers: How Leader Structure Schemas Affect Daily Leader Self-esteem Threat**

Author: **Huong Pham**, *U. of St. Gallen (HSG)*
Author: **Karolina Wenefrieda Nieberle**, *Durham U.*
Author: **Angela Kuonath**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Dieter Frey**, *Ludwig Maximilian U. of Munich (LMU)*

While a formal leadership role may make individuals feel unique within their team, it can be a challenge for their daily experience of meaningful social connections at work. Our research aims to understand how leaders' daily experience of exclusion from their followers affects their leader self-esteem and subsequent well-being beyond work. Drawing on Optimal Distinctiveness Theory, we argue that daily exclusion from followers threatens the self-esteem of leaders who have a rather shared (vs. hierarchical) understanding of leadership (i.e., leadership structure schemas; LSS), because these leaders see exclusion as a signal of failed leadership. Daily leader self-esteem threat will in turn interfere with leaders' personal lives beyond work. In an experience sampling study across one work week (N = 140 leaders, 506 data points), we found support for our overall model: For leaders with shared LSS, but not for those with hierarchical LSS, daily exclusion from followers resulted in leader self-esteem threat, and subsequently in perceived work-life interference on the given day. Our findings advance the understanding of daily triggers of leader self-esteem threat as well as its cognitive boundary conditions.

MOC: **Dirty Heroes? Healthcare Workers' Experience of Mixed Social Evaluations During the Pandemic**

Author: **Devin Rapp**, *U. of Utah, David Eccles School of Business*

The sudden onset of the COVID-19 pandemic ushered in an unprecedented era of public admiration for healthcare workers. Indeed, the title "healthcare heroes" became a ubiquitous moniker for healthcare providers of all stripes during the pandemic, a sentiment reflected in countless television ads and banners. Paradoxically, these same "healthcare heroes" who were publicly celebrated for their work in the fight against the novel coronavirus also faced stigma for their work amidst the virus and infected patients. Using grounded theory, we explore how members of an occupation experience and respond to mixed—even conflicting—social evaluations. We contribute to the literature on stigma and social evaluations by showing how targets of stigma evaluate their evaluators through nuanced logical and emotional processing and, moreover, that such processing can lead recipients of mixed evaluations toward a number of outcomes not previously theorized. We also develop the concept of "hero-washing" to describe occasions when workers are publicly lauded yet given insufficient resources by their organizations and/or the public. Finally, we illustrate how mixed evaluations manifested within many of the same actors according to evaluative dimensions of work (i.e., physical, social, moral) and the intervening factors that influenced their salience in a given context.
Keywords: stigma, dirty work, social evaluations, heroes, health care, COVID-19 pandemic

MOC: **When Can Culture's Deficit on Individual Creativity be Mitigated? The Role of Empowerment**

Author: **Shu-Cheng Chi**, *National Taiwan U.*
Author: **MingJie Tsai**, *National Taiwan U.*
Author: **Ray Friedman**, *Vanderbilt U.*

We propose that the relatively lower level of creativity of employees in collectivistic cultures (compared to those in individualistic cultures) is due to their lower generalized self-efficacy. However, this cultural difference decreases when employees feel high level of psychological empowerment at work. Online samples from Taiwan and the U.S. confirmed our hypotheses. We discuss implications of our findings in terms of culture, generalized self-efficacy, psychological empowerment, and creativity.

MOC: **CEOs as a Prism: How CEO Self Promotion Affects Journalists' Evaluation of Controversial Firm Event**

Author: **Junbeom Park**, *U. of Illinois*
Author: **Michael Kay Bednar**, *U. of Illinois*

In this study, we investigate whether and how corporate leaders' tendency toward self-promotion can influence the tenor of journalists' reporting about controversial corporate events. Prior studies have suggested that CEOs are increasingly using self-promotion tactics to shape how external audiences perceive corporate actions. Drawing from the research on the social judgment process, we argue that CEO self-promotion can enhance the perceived competence of leaders and prompt journalists to render relatively more positive articles about corporate layoff announcements. We further identify conditions under which the self-promotion effect is attenuated. Specifically, we find evidence that the effectiveness of CEO self-promotion will depend on CEOs' tenure, gender, and level of compensation. We find strong empirical support for our hypotheses by utilizing a comprehensive media coverage dataset for large U.S. publicly traded companies between 2007 and 2017. Our results help to reconcile equivocal findings about the self-promotion effect in corporate leadership and make important contributions to research on social evaluation by highlighting limitations to the effectiveness of media as a social arbiter of corporate activities. More broadly, our study suggests that individual characteristics of CEOs can serve as a prism through which corporate actions may be differentially perceived by journalists.

MOC: **Individual Differences in Escalation of Commitment: A Multi-level Adaptive Learning Perspective**

Author: **Kin Fai Ellick Wong**, *Hong Kong U. of Science and Technology*
Author: **Jessica Yuk Yee Kwong**, *Chinese U. of Hong Kong*

Previous research has observed stable individual differences in making decision under escalation situations. Conventionally, this observation is explained by traits or dispositional factors. In this paper, we offer a multi-level adaptive learning (Wong & Kwong, 2018) as an alternative, positing that the stable individual differences can be developed (a) from an equal starting point that no individual differences among all simulated learners, and (b) without the presumption of influences due to dispositional factors. This idea was exam in three computer simulations of the multi-level adaptive learning. The results showed that after sufficient trials of learning, simulated individuals developed (a) stable escalation tendency, (b) stable individual differences of the escalation tendency, (c) the stability of individual differences decrease as more learning occurs, and (d) the test-retest correlation representing the individual differences decreases as the test-retest interval increases.

MOC: **Beyond Cognition: An Action Perspective on Intuition Effectiveness in Strategic Decision Making**

Author: **Tim Kastrup**, *Uppsala U.*
Author: **Arisa Shollo**, *Copenhagen Business School*

Managers' intuition can support effective strategic decision making under certain conditions. In a world where AI is overtaking continuously what once were exclusive human decisions, we revisit the question of intuition effectiveness. According to scholarly belief, effective intuitions are rooted in domain-specific tacit knowledge, so-called complex domain-relevant schemas (CDRS). Contrary to that, Kahneman and Klein's (2009) conditions for the development of expert intuition suggest that strategic decision making does not permit the development of valid CDRS. If it is not managers' CDRS, what explains the positive relationship between intuition and strategic decision making effectiveness under certain conditions? In response to this puzzle, we explore the possibility that expertise-based intuitive strategic decision making is effective for reasons beyond cognition. Based on Brunsson's (1982, 1990) action perspective on organizational decision making, we develop an action model of intuition effectiveness in strategic decision making which highlights socio-emotional links between expert intuition and action mobilization. In conclusion, we suggest that intuitive strategic decision making is effective, not despite the social dimension of expertise, and not despite the emotional dimension of intuition, but because of it.

MOC: **Moderated Mediation Model: Innovative Work Behaviour, Contextual Intelligence, Mindfulness, P. Empowerment** ☯

Author: **Jyotsna Bhatnagar**, *Management Development Institute, Gurgaon*
Author: **Rajesh Chandwani**, *Indian Institute of Management, Ahmedabad*
Author: **Parul V. Gupta**, *Associate Professor, Strategy, Management Development Institute, Gurgaon, India*

Innovative work Behavior(IWB) continues to be investigated by scholars, yet scholarly work on it's antecedents in Entrepreneurial context is sparse and few. Drawing on social cognition theory, we emphasize that the mental schemas of entrepreneurs shape their perception of the world and affect how information is integrated; both of which determine their IWB. We situate our study in the objectivism-subjectivism continuum and adopt a sequential mixed methods explanatory time lagged design to investigate the phenomenon. Rooted in self-regulatory theory we theorize how contextual intelligence links with Mindfulness and, when moderated by psychological empowerment, leads to innovative work behaviour (IWB) among entrepreneurs from India. In the first study, we empirically tested the hypotheses on a sample of 177 alumni, from reputed business schools. In the second study, we analysed comparative cases from an incubator situated in one of the leading business schools in India, as well as participants from our personal network. We hypothesize that both CI and mindfulness are positively related to IWB, such that a positive relationship between CI on IWB is both direct and mediated by mindfulness. We further state that PE moderates the positive relationship between CI and mindfulness and between CI and IWB. The study institutes the criticality of mindfulness in the entrepreneurial process by explicating its role in fostering innovative work behaviour (IWB). This study contributes to the literature domain of Innovative work behaviour as most studies on innovation have investigated macro level parameters rather than individual level parameters like CI, PE and Mindfulness .

MOC: **Breakthroughs: The Art of Intelligent Failure**

Author: **Valentina Forrer**, *Free U. of Bozen-Bolzano*
Author: **Alessandro Narduzzo**, *Free U. Bozen, Bolzano*

Extensive literature in management and organization shows that learning from failures is a problematic issue dominated by ambivalence. On the one hand, failure is framed as an unavoidable step in most of the learning processes, on the other hand, organizations are reluctant to learn from failures, and failures are avoided, if possible. In fact, while firms are traditionally described as risk-taking agents, there is a strong cognitive resistance to assume and take unnecessary risks, even in domains like the management of innovation characterized by uncertainty. However, failing "on purpose" through intelligent failure may be the only way to make breakthrough innovation. This paper aims to obviate the marginality to which IF has been confined in the academic literature, positioning and framing the intelligent failure concept in the learning from failure literature, investigating in a conceptual mode why and how organizations should fail on purpose while innovating. The elaboration of a positioning framework developed in this paper raises awareness of IF and proves its importance in supporting the acquisition of new knowledge in the organizational context. Indeed, through processes of knowledge creation and destruction that lead to incremental and breakthrough innovation, IF can drive organizations in revising the sets of assumptions that form their established knowledge systems. This study, combining several theories, provides a comprehensive view of the potential of IF, the related implications, and a future research agenda highlighting the need for further empirical analyses.

MOC: **Biased Interpretation of Performance Feedback: The Contingency Role of Risk**

Author: **Ran Quan**, *Syracuse U. Whitman School of Management*

This study examines how managerial risk perception change the interpretation of performance feedback and consequently, shape a firm's risk taking in response to it. Our formal analysis suggests that managerial risk perception of the firm's strategic decision prompts managers to interpret performance feedback differently. When the firm decision is perceived as low risk, positive performance feedback increases a firm's likelihood of persisting in prior strategic decisions, while negative performance feedback leads to strategic change and promotes exploration of new strategies. When the firm decision is perceived as high risk, positive performance feedback elicits gain framing from managers, thus discouraging the firm to continue prior risky behavior, while negative performance feedback elicits loss framing from managers and leads to more risk taking. We test the predictions empirically using 9242 M&A deals in the years 2006 to 2020. The results are consistent with the hypotheses and are robust to different empirical operationalizations of firm risk taking.

Participant: **Eliana Polimeni**, *Northwestern Kellogg School of Management*

In this symposium, we advance feedback research by considering how perceptions guide effective feedback interactions. By perceptions, we mean how providers and recipients view one another and their relationship, as well as how they view the feedback being relayed and tasks being evaluated. This symposium brings together leading scholars to consider the role of perceptions at each stage of a feedback interaction – at the beginning, when givers are considering feedback delivery, in the middle, when it is delivered and interpreted, and after the interaction, when its consequences unfold. In doing so, the symposium examines the implications of feedback interactions across multiple levels, building from the dyadic level, to the group level, crowd level, and ultimately, the societal level, yielding policy-relevant insights. The presentations were also selected to exhibit the breadth of methodologies that are being applied to explore the role of perceptions in feedback interactions. The papers include findings from surveys, archival field data, and experiments. Together, these presentations propose theories and offer practical implications that will advance our understanding of – and insight into how to improve – feedback processes.

Spiritual Leadership and Innovation in the Workplace

Session Moderator: **Mahdi Vesal**, *U. of Technology Sydney Business School*

This session will explore the intersection of spiritual leadership, workplace spirituality, and innovation. The papers will cover topics such as managing high workplace spirituality and employee flourishing during crises through the role of servant leaders, improving the triple bottom line through personal spiritual leadership and workplace spirituality, and cultivating innovative work behavior through workplace spirituality, with a focus on moderating working conditions. Attendees will gain insights into the potential benefits of integrating spirituality into leadership practices, fostering workplace spirituality, and promoting innovation in the workplace. Overall, this session aims to provide valuable perspectives on how spirituality can enhance individual and organizational outcomes.

MSR: **Managing High Workplace Spirituality and Employee Flourishing in Crises: The Role of Servant Leaders**

Author: **Mahdi Vesal**, *U. of Technology Sydney Business School*
Author: **Muhammad Aftab Alam**, *Macquarie Business School, Macquarie U.*

Employee flourishing has been emphasized as a vital determinant of organizational success and continuity in the long term. Although previous research has acknowledged the role of a spiritual work environment in promoting the well-being of employees, we lack understanding regarding whether workplace spirituality, constituted by meaningful work, sense of community, and organizational value alignment stimulate employee flourishing. Furthermore, despite recent studies highlighting the potential dark side of workplace spirituality, research has remained largely silent on diminishing outcomes of workplace spirituality, especially in the face of stressful and crisis situations such as COVID-19 pandemic. This paper builds on self-determination theory to investigate the potential benefits and drawbacks of individual dimensions of workplace spirituality on employee flourishing. We further provide a systematic assessment of the moderation effect of servant leadership in the relationship between each dimension of workplace spirituality and employee flourishing. An analysis of data obtained from 405 senior employees of Indian SMEs during the recent COVID-19 lockdown indicates that while meaningful work and sense of community drive employee flourishing, organizational value alignment has a curvilinear relationship with employee flourishing. Furthermore, while the above-mentioned linear relationships are strengthened, the curvilinear relationship is attenuated when CEOs adopt a servant leadership style. Our findings and discussion have substantial theoretical and practical implications for how practitioners can enhance or inhibit employees' positive emotions in difficult times.

MSR: **Improving Triple Bottom Line through Personal Spiritual Leadership and Workplace Spirituality**

Author: **Usman Riaz Mir**, *U. of Management & Technology Sialkot*

Using theoretical grounds of social learning and spillover theories, this study empirically tested the leadership model for maximizing the triple bottom line. Personal Spiritual Leadership was taken as a fundamental facilitator to cultivate a spiritual culture that helped improve performance across the triple bottom line. The study hypothesized the impact of personal spiritual leadership on the triple bottom line through the mediation of workplace spirituality. Using cluster sampling, data were collected in two waves with four months of time lag from employees of export-oriented large manufacturing organizations in Sialkot, Pakistan. Results from 304 cases supported the proposed mediation across the triple bottom line. The model's predictive power is more substantial for pro-environmental behavior than employee performance and psychological well-being. Multiple implications were discussed, along with future directions.

MSR: **Workplace Spirituality to Cultivate Innovative Work Behaviour with Moderating Working Conditions**

Author: **Damini Saini**, *Indian Institute of Management Raipur*
Author: **NAVAL GARG**, *Delhi Technological U.*

The twenty-first-century labour market needs employees who proactively develop innovations and face complexity and change. Professionals in the current organizations are expected to exhibit innovative behaviour that can realize, sustain and implement new ideas. Drawing from broaden and build theory, the present study explores the direct effect of workplace spirituality (WPS) on the innovative work behaviour (IWB) of 516 employees in supply chain companies in India. It also investigates the moderating effect of perceived working conditions on the relationship between employees' WPS and IWB. The relationship between the four dimensions of WPS (swadharma, a sense of community, authenticity, and lokasangraha) and IWB is investigated with the help of correlation and hierarchical regression analysis. The study also examines the moderating effects of three dimensions of perceived working conditions (decision authority, social support, and autonomy) using PROCESS macro in SPSS. Results revealed that four measurements of WPS significantly predict IWB among employees of selected companies. Also, the results suggest the significant moderating effects of decision authority, social support, and autonomy on IWB.

Making Calling Spiritually Whole

Organizer: **Sunny Jeong**, *Wittenberg U.*
Organizer: **Orneita Burton**, *Abilene Christian U.*
Panelist: **Susan Brownlee**, *The Center for Leading in Community*
Panelist: **Timothy Ewest**, *Houston Christian U.*
Panelist: **Lee Robbins**, *Golden Gate U.*
Panelist: **Christina M. Walker**, *Lenoir-Rhyne U.*

The definition of calling is believed to be fundamentally rooted in religious and spiritual domains as a transcendent summons (Dik & Duffy, 2009; Dik, Eldridge, Steger, & Duffy, 2012). Therefore, contemporary trends for research on calling in management and organizational literature exclude religious and spiritual orientations (Wrzesniewski, McCauley, Rozin, & Schwartz, 1997; Wrzesniewski, 2012), and thus do not consider calling a management construct. As such, concepts associated with calling are used loosely and often interchangeably with vocation, career, and job, and dismiss the complementary spiritual goals of service and personal transformation (Cho, 2021; Oswalt, 2000). This symposium intends to bring a component of spirituality back into the research on calling by addressing three salient questions: 1) What is the (spiritual) nature of calling? 2) How does a sense of calling emerge? 3) How do we explore and expose the "dark side" of calling? By doing so, we restore a spiritual component to calling in management scholarship which we believe will broaden the parameters of this research beyond the areas of vocation, career, and job.

Stay in the Moment: Understanding the Impact of Mindfulness on Employee Outcomes

Session Moderator: **Mariana Toniolo-Barrios**, *Simon Fraser U.*

OB: **Unpacking the Black Box of Mindfulness: The Psychological Mechanisms of Mindfulness**

Author: **Mariana Toniolo-Barrios**, *Simon Fraser U.*
Author: **Lieke Laura Ten Brummelhuis**, *Simon Fraser U.*

Whereas some people consider mindfulness a tool that allows individuals to step fully into their lives and approach their daily challenges more successfully, some consider mindfulness a tool that simply helps individuals not to be overly reactive to and overwhelmed by their daily experiences, and others even criticize it as being a practice that promotes passivity and numbness towards experiences. These contradictory views are also reflected in scholarly research on mindfulness, as there are theoretical claims asserting that mindfulness allows individuals to better respond to life situations whereas the definition of mindfulness characterizes it as being a neutral, non-evaluative state of mind. This raises the question of whether mindfulness makes individuals more active and agentic or more passive and neutral instead. To unravel the seemingly paradoxical effects of mindfulness, we systematically review empirical research on mindfulness to identify the psychological mechanisms of mindfulness. Then, based on the findings, we develop an organizing framework that identifies the major categories of mechanisms, and we put forward an integrative theoretical model to explain the psychological processes generated by mindfulness. Specifically, we posit that the mechanisms of mindfulness occur in a sequence of three overarching processes that unfold over time: dereification producing non-evaluative experiences in the very short run; reorientation producing positive modulated experiences in the short run; and internalization producing durable changes in one's self-determined behavior in the long run. Finally, we explain how the model can inform future research.

OB: **Breaking The Negative Spiral: A Diary Study of Employee Mindfulness and Job Crafting**

Author: **Yuen Shan Noel Wong**, *Hang Seng U. of Hong Kong*
Author: **Eko Yi Liao**, *Hang Seng U. of Hong Kong*

Employee mindfulness is beneficial to one's psychological wellbeing, regulation of feelings and emotions, and goal achievement at work. Regarding mindfulness as fluid states—that one's mindful experiences can change by time or situation—how mindfulness may sustain or decline throughout a workday is yet to be fully investigated. Specifically, much less is known about whether a low-level of morning mindfulness will carry negative impact on employees' work behaviors during the day and lead to low-level evening mindfulness. In addition, theoretical conceptualization and empirical research are yet to be extended in understanding whether the two mindfulness dimensions (i.e., mindful awareness and mindful acceptance) may demonstrate different day-level changes and exert distinct effects on employees' work outcomes. To address these research gaps, we adopted the Conservation of Resource Theory with a diary approach in exploring the daily cycle of employees' mindful awareness and mindful acceptance, and how they distinctively relate to employees' proactive behaviors such as job crafting. Specifically, we explored a negative spiral of mindfulness—whether and how a low-level morning mindfulness relate to a low-level evening mindfulness. Furthermore, we investigated the reciprocal relationship between mindfulness and job crafting from which morning mindfulness relates to day-time crafting behaviors, which in turn influence evening mindfulness. Regarding the two mindfulness dimensions as distinct cognitive resources, we proposed that low mindful awareness unfolds with a resource maintenance mechanism with its association with one's emotional exhaustion, while low mindful acceptance involves a resource restorative mechanism via triggering employees job crafting behaviors in reviving their mindfulness experiences. We surveyed 603 employees with various background with a four-day diary study. Our findings largely support the proposed. Theoretical and practical implications are also discussed.

OB: **Processing Organizational Paradox: The Role of Mindfulness**

Author: **Sophia Town**, *Fordham U.*
Author: **Gail T. Fairhurst**, *U. of Cincinnati*
Author: **Sarah Tracy**, *Arizona State U.*

How leaders navigate paradoxical tensions at work may result in productive or unproductive outcomes for the organization. In this qualitative study, we chose to explore whether and in what way leaders who practice mindfulness uniquely navigate paradoxical tensions at work. To do this, we interviewed two similar groups of senior leaders about their experience navigating paradoxical tensions. While the groups were demographically similar, the first group of leaders (N = 42) reported a long-term, regular mindfulness practice (in the form of meditation) and the second group of leaders (N = 35) did not report such a practice. Using grounded theory methods, we analyzed differences in how the two groups described the way they processed (made sense of) and responded to (took action toward) past or current paradoxical tensions at work. Results show that both groups' descriptions of how they navigated the paradoxical tensions reflect five different processing practices: rational, verbal, emotional, physical, and what we term suspended processing. Findings reveal differences in how the two groups make sense of paradoxical tensions and suggest that by drawing on mindfulness, leaders may engage in a more comprehensive and holistic approach to navigating paradoxical tensions than when mindfulness is not incorporated.

OB: **How Mindfulness Qualifies the Relationship between Negative Emotions and Developmental Outcomes**

Author: **Pisitta Vongswasdi**, *WHU Otto Beisheim School of Management*
Author: **Jochen I. Menges**, *U. of Zurich*
Author: **Jane Kirsten Le**, *WHU Otto Beisheim School of Management*

While prior work has argued that negative emotions can be detrimental to learning, leadership development theory and practice continue to advocate for emotionally challenging programs. Integrating the functionalist theory of emotions and the transactional model of stress and coping, we suggest that mindfulness plays a key moderating role in alleviating the known downsides of negative emotional experiences to achieving developmental benefits. Results from three studies support our hypothesis that the relationship between negative emotions and developmental outcomes depends on the extent to which one is mindful. While we found that negative emotions were inversely related to learning satisfaction outcome, the relationship between negative emotions and learning performance was more nuanced, depending on mindfulness: In study 1 with full-time residential MBA students participating in an action learning module, we found mindfulness to be a critical condition that helped to mitigate the negative effect of negative emotions on learning performance, and in study 2 we further demonstrated a positive effect on learning performance with EMBA students. In study 3, we ran a controlled intervention to show that challenge appraisal is the key mechanism explaining the interactive effect of mindfulness and negative emotions on learning performance. We discuss the contributions to the leadership development literature and the practical implications for leadership training.

Walking the Tightrope: Understanding Work-Home Conflict

Session Moderator: **Solomiya Draga**, *U. of Toronto*

OB: **Oppositional Occupations and Automatic Script-based Mechanisms of Work-Home Conflict**

Author: **Solomiya Draga**, *U. of Toronto*
Author: **Katherine Ann DeCelles**, *U. of Toronto*

Departing from predominant temporal and affective explanations of work-home conflict, we introduce novel theory to explain how some forms of work are particularly likely to foster conflict with family members. We argue that while all occupations have entrenched and prescriptively normative cognitive behavioral scripts that guide effective work task execution, some occupations' cognitive behavioral scripts are predominantly adversarial in nature and are largely inappropriate outside of the work domain. We label such occupations as "oppositional," and articulate four underlying dimensions of adversarial thoughts and behaviors (intellectual, interpersonally hostile, authoritarian, and physical) that are part of oppositional work. Further, we propose how each dimension of adversarial thoughts and behaviors might be inadvertently triggered at home, suggest the likely consequences for workers' family lives, and discuss for whom this might be most likely. We conclude with a discussion of how the consideration of oppositional occupations contributes to management theory and can generate research across work-home conflict, boundary theory, and occupations literatures, as well as practical implications.

OB: **Changing Placements: A Punctuated Equilibrium Model of Work-Family Role Boundary Reconstruction**

Author: **Matthew Piszczek**, *Wayne State U.*
Author: **Joseph Yestrepsky**, *Wayne State U.*

Drawing on punctuated equilibrium models of change and cognitive dissonance theory, we extend boundary theory through a conceptual model that explains how and when individuals may tear down and rebuild boundaries around the work and family roles. We argue that divergent external change events compel individuals to enact role boundaries inconsistent with those held internally in the mind, resulting in varying amounts of cognitive dissonance. We further argue that high levels of cognitive dissonance may require a revolutionary change in the deep structure of one's internally drawn role boundaries, resulting in a significant change in the extent to which work and family roles are segmented or integrated. We also argue that divergent changes that lead to low cognitive dissonance can be mitigated with boundary management tactics that create only incremental changes to work and family role boundaries. Our model advances a dynamic perspective of boundary theory and returns focus to the boundary placement process which is often overlooked in work-family research, with important theoretical implications for understanding of work-family processes and constructs.

OB: **Alone Together – Couples' Work-home Boundaries, Work-to-Home Conflict, and Loneliness in Remote Work**

Author: **Alejandro Hermida Carrillo**, *LMU Munich School of Management*
Author: **Felix Bölingen**, *LMU Munich School of Management*
Author: **Ingo Weller**, *LMU Munich*

Extant work has examined how individual traits interact with those of co-workers and managers to explain well-being at work. But what happens when work takes place in one's own living room, far away from the office? Incorporating boundary, balance, and family systems theories, we propose that fit among employee and romantic partner preferences for segmentation (vs. integration) of the work and home domains plays a critical role in understanding experiences of work-to-home conflict and loneliness of both partners, especially when working from home (WFH). In study 1, we test our theoretical model on a unique longitudinal dataset of 170 dual-earner couples during the COVID-19 pandemic. Using dyadic response surface analysis we find that, at high WFH intensity, fit in integration relates to lower work-to-home conflict than fit in segmentation, and that incongruence is harmful for males but surprisingly beneficial for females; work-to-home conflict mediates the effects of boundary preference configurations on employee loneliness after 8 weeks. In study 2, we use a higher-powered longitudinal sample of 1,561 dual-earner couples to replicate our effects of employee work-to-home conflict on employee loneliness and to test for crossover effects on partners' loneliness. We find strong evidence for both effects. Taken together, our findings hint that integration is an overall better strategy for couples to handle a world of blurred boundaries, and that work-to-home conflict is a powerful predictor of loneliness of couple members. We provide insights useful for individuals choosing their preferred WFH deals in the new world of hybrid work.

OB: **Compensatory Effect of Guilt: How and When Work-to-family Conflict Affects Unethical Pro-family Behav**

Author: **Geng Liu**, *Jiangxi Agricultural U.*
Author: **Yi Han**, *Zhongnan U. of Economics and Law*
Author: **Shuwei Zong**, *Southwestern U. of Finance and Economics*

Integrating the appraisal model of self-conscious emotions with gender role identity theory and moral identity theory, we develop a theoretical model that explains how work-to-family conflict (WFC) serves the instrumental function of spurring employees' unethical pro-family behavior (UPFB), examining the mediating role of feelings of guilt, and the moderating role of gender and moral identity in this relationship. Based on an analysis of 231 three-wave data, the hypotheses were tested and the results showed that WFC had a positive indirect effect on employees' UPFB via guilt, indicating guilt as a linking mechanism between WFC and employees' UPFB. We also found that female employees felt more guilt than more employees when experiencing WFC, thereby engaging in more UPFB. Moreover, morality identity moderated the positive effect of guilt on employees' UPFB as well as the mediating effect of guilt between WFC and employees' UPFB. This showed moral identity was a boundary condition qualifying the association between guilt and employees' UPFB. The theoretical and practical implications of our research were discussed. Limitations and directions for future research were also offered.

Methodological Advances in OB Research

Session Moderator: **Ranran Li**, *Vrije U. Amsterdam*

OB: **Revisiting Situational Strength: Do Strong Situations Restrict Variance in Behaviors?**

Author: **Ranran Li**, *Vrije U. Amsterdam*
Author: **Daniel Balliet**, *U. of Amsterdam*
Author: **Isabel Thielmann**, *Max Planck Institute for the Study of Crime, Security and Law, Freiburg*
Author: **Reinout De Vries**, *Vrije U. Amsterdam*

The idea that strong situations restrict variance in behaviors has been treated as a maxim in psychology. Prior work has, however, offered inconclusive support for this proposition. Here, we test the restricted variance hypothesis as derived from the situational strength framework with a preregistered meta-analysis (k = 301, N = 25,670), in the context of cooperative behavior observed within the standardized social dilemma paradigm. We found that strong, compared to weak, situations – characterized by the presence of punishment/rewards, low levels of anonymity, and low levels of uncertainty – indeed restricted variance in behaviors. Furthermore, four independent raters rated the perceived situational strength within a subset of studies (k = 138, n_studies = 41). Supporting the restricted variance hypothesis, situations hypothesized and/or perceived as strong were indeed associated with less variance in behaviors. We discuss the many important theoretical implications that have arisen, and how future work can apply this perspective to advance an understanding of the relation between personality and behavior.

OB: **A Review of Aggregate versus Lower-Level Correlations: When Does Correlation Strength Differ?**

Author: **Andre Havrylyshyn**, *Binghamton U.-State U. of New York*
Author: **Mark Maltarich**, *U. of South Carolina*
Author: **Sam Strizver**, *U. of South Carolina*

We review over 10 years of published multilevel results where authors have provided correlation tables containing both lower-level and higher-level correlations of the same variables. We use these 630 correlations to determine the degree of heterology in the strength of relationships across levels. Across all studies, we find that aggregate correlations are larger than lower-level correlations, but the effect size is modest (correlation difference of .02 in the weighted analyses). This finding suggests that heterologous relationships are not always observed simply as a function of aggregating variables and suggests that finding evidence of differences across levels likely reflects important theoretical processes. We further explored whether heterologous correlations were more likely to be observed for certain types of variables such as whether they are observable or whether they assess affect, behavior, cognition, or trait variables. Finally, we examine the role of specific study characteristics such as group size, whether the items had an individual or group referent, and whether the study was lab or field based. Results identified specific areas of research that appear particularly ripe for developing theory about why relationships differ across levels.

OB: **Development and Validation of the Brief Competitiveness Inventory**

Author: **Tyler Nicole Abayon Fezzey**, *U. of Alabama*
Author: **Peter Harms**, *U. of Alabama*
Author: **Justin A. DeSimone**, *U. of Alabama*

This article introduces a new measure of competitiveness, the Brief Competitiveness Inventory (BCI), developed based on both theoretical and empirical considerations. Two samples (N = 463 and N = 301) are used to assess the factor structure, reliability, convergent and discriminant validity, criterion-related validity, and incremental validity of the BCI. The BCI demonstrates adequate internal consistency as evidenced by coefficient alpha, inter-item correlations, and empirical reliability estimates. In addition, the BCI demonstrates strong convergent and discriminant validity with other competitiveness measures as well as with their nomological networks. Further, the new measure demonstrates incremental validity over an existing competitiveness measure and the Big Five Inventory. Analysis of the BCI using the Graded Response Model indicates that the BCI demonstrates adequate empirical reliability and is effective in assessing individuals with slightly low to moderately high levels of latent competitiveness.

OB: **The Multidimensionality of Overemployment: Development and Initial Validation of a New Scale**

Author: **Julia Hiemer**, *Technical U. of Applied Sciences Würzburg-Schweinfurt*
Author: **Maike Andresen**, *U. of Bamberg*

Recent research has conceptualized overemployment, i.e., working more than preferred, as a multidimensional and subjectivist construct that goes beyond the economic conceptualization of overemployment as a work hours mismatch. However, there is not yet any universally accepted and reasonably complex measure of overemployment. To address this issue, we developed a multidimensional overemployment scale (MOS). It is the first psychometrically tested scale for overemployment that can be used in both human resource management practice and research. In study 1 (N=26 and N=27), items were generated, and their content validity was assessed. In study 2 (N=303), we identified three dimensions of overemployment: work time duration, density, and distribution (on tasks). In study 3 (N=500) and study 4 (N=350), we tested the reliability and validity of the MOS across different samples. We confirmed the three-dimensional structure and provided evidence for construct validity by relating the MOS to traditional overemployment measures and to work–life balance. We tested the correlations with well-being, job attitudes, and work behavior for criterion validity. The MOS can be used in research to develop knowledge on overemployment and its antecedents and outcomes, and in practice for organizational diagnosis or coaching.

Give and Take: Providing and Receiving Employee Feedback

Session Moderator: **Wei Zhang**, *Department of human resources, School of Government, Beijing Normal U.*

OB: **Offering Feedback Makes My Day: An Enrichment Perspective of Feedback Provision**

Author: **Wei Zhang**, *Department of human resources, School of Government, Beijing Normal U.*
Author: **Irene E. De Pater**, *School of Business and Law, Edith Cowan U.*
Author: **Bin Wang**, *School of Management, Shanghai U.*
Author: **Baihe Song**, *Hong Kong U. of Science and Technology*
Author: **Jing Qian**, *Beijing Normal U.*

Departing from the well-established research on the effects of workplace feedback on the receiver, the current study focuses on the feedback provider. Drawing on the enrichment perspective, we propose that it may beneficial for leaders to provide feedback to their subordinates, because it can increase the perception of their prosocial impact and, thereby, positively affect their vitality. We conducted a two-week daily diary study with two daily measurements among 92 leaders. Multi-level analyses revealed that daily providing feedback was positively related to leaders' daily vitality through increased perceived prosocial impact. The indirect relationship between feedback provision and vitality through perceived prosocial impact was moderated by the quality of the relationships leaders have with their subordinates, such that this positive relationship was stronger for leaders who had low-quality relationships with their subordinates. Our findings highlight the beneficial effect of leaders' daily feedback provision in shaping their daily vitality.

OB: **Developmental Leadership and Employee Feedback Seeking Behavior: The Role of Goal Orientations**

Author: **Yao Song**, *Central U. of Finance and Economics*
Author: **Zhen Wang**, *Central U. of Finance and Economics*

Organizations operate in complex and dynamic environments, which place a premium on employees' proactively seeking information to develop. For the purpose of realizing organzational development, organizational leaders are being confronted with demands to equip employees with the skills to succeed in this new environment. An issue organzation faced up is taht to identify and cultivate a leadership style that can lead and impact employees to seek information proactively to develop and grow. Against this, we believe that developmental leaership is one of the most directly related to employee development. However, the existing literature, has paid scant attention to this question. To answer this issue, we base on goal orientation theory and propose that developmental leadership affects both employees' learning and performance via two mediations, learning goal orientation (LGO) and performance goal orientation (PGO). Furthermore, leaders' high performance expectations (LHPE) could strengthen the positive effects of developmental leadership. We tested our hypotheses using a two-wave survey of 416 employees in China. As predicted, developmental leadership affects employees' learning and performance through LGO, and LHE could strengthen these indirect effects. However, developmental leadership only promotes employees' performance through PGO, and this conditional effect will be stronger when the leader conveys higher expectations.

OB: **Organizational Performance Feedback and Challenge and Hindrance Appraisals**

Author: **Renata Mellupe**, *U. of Southern Denmark*
Author: **Stephan Billinger**, *U. of Southern Denmark*

Although response to a stressor is a continuous and dynamic process, most organizational research treats it as a static event. This experimental study addresses largely overlooked temporal aspects of the work stressor-performance relationship with a focus on task difficulty and challenge and hindrance appraisals. Specifically, we examine how task performance, provided as organizational performance feedback (i.e., the simultaneous display of objective feedback and upward social comparison feedback) is related to changes in challenge and hindrance appraisals in a low and high difficulty cognitive task. Task difficulty was manipulated in the n-back task. In a sample of 267 participants, we find that task performance, provided as organizational performance feedback, mediates change in challenge and hindrance appraisals. This finding supports the proposition that individual responses to a stressor are dynamic and change during a demanding encounter and that task performance, provided as organizational performance feedback can explain these changes.

OB: **How Subordinate Feedback Seeking is Associated with Supervisor Innovative Work Behavior**

Author: **Yanyan Liu**, *Business School, Nankai U.*
Author: **Katleen De Stobbeleir**, *Vlerick Business School*
Author: **Qian Shanshan**, *Business school, Guangdong U. of Foreign Studies*

Research on feedback seeking has focused on its benefits for the seeker, the team and even the organization, but far less research has explored how feedback seeking impacts the target of feedback seeking. In this study we explore how feedback seeking impacts one important target of feedback seeking, i.e., the supervisor. Drawing upon emotional labor theory model, we examine how subordinate feedback seeking impacts the supervisor deep and surface acting, and how this consequently impacts the supervisor innovative behavior. We further explore the impact of the supervisor liking of the subordinate on this relationship. We theorize that when the supervisor liking of the subordinate is high, the subordinate feedback seeking will be positively related to the supervisor deep acting, further benefiting supervisor innovative work behavior. In contrast, when the supervisor liking of the subordinate is low, subordinate feedback seeking will be positively related to supervisor surface acting, in turn hindering supervisor innovative work behavior. We found support for our hypotheses across 339 supervisor-subordinate dyads. Our findings demonstrate the impacts of subordinate feedback seeking on supervisor innovative work behavior from the emotional labor theory and the importance of supervisor liking of the subordinate in the process.

Exploring the Dark Side of Leader Behavior

Session Moderator: **Aristides Isidoro Ferreira**, *ISCTE - Instituto U. de Lisboa*

OB: **Overshadowed Leadership: The Grey Areas of Leadership Malpractice**

Author: **Aristides Isidoro Ferreira**, *ISCTE - Instituto U. de Lisboa*
Author: **Amalia Pérez-Nebra**, *U. de Zaragoza*
Author: **Paula Da Costa Ferreira**, *CICPSI, Faculdade de Psicologia, U. de Lisboa*

In times of uncertainty and absence of resources leaders may cause harm to their subordinates. Although the empirical research focuses on abusive supervision, we propose a scale of an overshadowed leadership construct, which may inform future research on the grey areas of leadership malpractice. In six studies we investigate the viability and importance of this construct. We develop and test a new instrument to measure overshadowed leadership, test the equivalence between different countries, examine the connections of overshadowed leadership with other constructs in a nomological network, and demonstrate its predictive validity for outcomes. The current findings proposed a reduced scale to evaluate a new unethical leadership dimension which is well supported by robust theoretical models that open interesting lines of research for future studies. Therefore, theoretical and practical implications, as well as limitations and future research are discussed at the end of the paper.

OB: **Observed Supervisor Being Abused, Perceived Leader Effectiveness, and Supervisor-Directed Deviance**

Author: **Guangdi Tian**, *U. of International Business and Economics*
Author: **Min Cui**, *U. of International Business and Economics*
Author: **Mingpeng Huang**, *U. of International Business and Economics*

Recent research on supervisor being abused has focused on its trickle-down effect on supervisors' further abusive supervision behavior. We take a third-party perspective to investigate its effect on employee's reaction to supervisors. Integrating organizational role theory and social role theory, we propose that observed supervisor being abused is positively related to supervisor-directed deviance via employee perceived leader effectiveness, this relationship is stronger for male supervisors. Results of a multi-wave field study supported our hypotheses. Our findings offer some important theoretical and practical implications.

OB: **When Creativity Suffers Due to Abusive Supervision: Moderated-Mediation on Workplace Loneliness**

Author: **Sudhanshu Maheshwari**, *S P Jain Institute of Management and Research*
Author: **Ashneet Kaur**, *assistant professor*
Author: **Mantasha Firoz**, *Goa Institute of Management*
Author: **Aamna Khan**, *Indian Institute of Technology Patna*

The present study draws on the conservation of resource perspective to hypothesize that abusive supervision directly affects subordinates' experiences of loneliness at work, which further affects their creative process engagement (CPE). The study also explored the moderating effect of psychological safety in the relationship. Through a two-wave research design (n = 216 employees), results revealed that abusive supervision positively affects workplace loneliness but negatively affects CPE. The results further demonstrated that psychological safety, when introduced as a boundary condition in the relationship between abusive supervision and workplace loneliness, it imparts a negative effect. Overall, the study revealed the link between destructive leadership in the form of abusive supervision and employees' creativity disposition via workplace loneliness, which weakens employees who perceive high psychological safety in the organization. More generally, it contributes to the ongoing discussion in the literature on the relationship between abusive supervision and CPE. Theoretical and practical implications and directions for future research are offered.

OB: **On the Structure and Nomological Network of Gaslighting in the Workplace - A Leadership Perspective**

Author: **Babatunde Ogunfowora**, *Haskayne School of Business, U. of Calgary*
Author: **Kaitlyn Guenther**, *Department of Psychology, U. of Calgary*
Author: **Josh Bourdage**, *Department of Psychology, U. of Calgary*

In recent years, the term gaslighting has become popular for describing deliberate attempts to undermine another person's reality by making them feel "crazy." Although it has mostly been studied in romantic relationships, recent work suggests that gaslighting occurs in other contexts where power imbalance exists. The current research aims to a) conceptualize gaslighting within the leader-employee relationship, b) differentiate between leaders' use of gaslighting tactics and employees' psychological experience of being gaslighted, c) develop and validate measures to captures these two constructs, and d) develop and test a comprehensive nomological network around them. First, we adapted and developed items based on a review of the broader gaslighting literature. Next, we tested the psychometric properties of our measures in two working adult samples (N = 314 and N = 398) and provide initial evidence of convergent and discriminant validity. Finally, we examine the proposed nomological network in a time-lagged study of 632 employees and 194 supervisors. The results show that employee experienced gaslighting state mediates the adverse effect of leader gaslighting tactics on self-focused (e.g., organizational-based self-esteem), performance-focused (e.g., task performance), supervisor-focused (e.g., supervisor-directed impression management), and coworker-focused (e.g., ostracism by coworkers) outcomes. Many of these indirect effects were stronger when the employee reported higher (versus lower) LMX relationship quality with the leader. We conclude with a discussion of the theoretical and practical implications of these findings.

Thinking Outside the Box: New Perspectives on Employee Creativity

Session Moderator: **Matej Cerne**, *School of Economics and Business, U. of Ljubljana*

OB: **Sweet Dreams or a Nightmare: Work Intensity, Stress, Sleep and Creativity**

Author: **Matej Cerne**, *School of Economics and Business, U. of Ljubljana*
Author: **Leja Dolenc Grošelj**, *U. Medical Center Ljubljana*
Author: **Amadeja Lamovšek**, *School of Economics and Business, U. of Ljubljana*
Author: **Mojca Marc**, *U. of Ljubljana School of economics and business*
Author: **Miha Skerlavaj**, *U. of Ljubljana, School of Economics and Business*

A high-demand high-intensity knowledge work context is set up to positively challenge and foster creative work, yet it also suffers from the adverse effects stemming from producing hindrance stressors. Based on the extended Job Demands-Resources model in combination with the Conservation of Resources theory, we propose that individuals' sleep patterns and quality over time represent important off-work resource replenishment mechanism in reversing potentially negative effects of work intensity on creativity. In an experience sampling study (twice a day) of 30 knowledge workers, combined with objectively-measured nightly sleep in a natural environment (using clinically-validated EEG-measuring headbands; resulting in 340 matched observations), we showed that generally, work intensity contributed to higher creativity. However, it also led to increased perceptions of stress, in turn decreasing creativity. Sleep quality has proven to be an important moderator in this mediated relationship, with key differences being observed across different operationalizations of this resource-replenishing construct. On a daily basis, subjective perceptions of sleep tended to be more important in contributing to coping with work intensity demands. However, objectively-measured sleep indicators did prove to matter in cumulative effects across multiple nights. Our study has important theoretical, practical and methodological implications for research of creativity, sleep and work performance.

OB: **Who You Know And What You Know: Multicultural Experience, Task And Relational Creativity**

Author: **Margaret A. Shaffer**, *U. of Oklahoma*
Author: **Hong Ren**, *U. of Wisconsin, Milwaukee*
Author: **Siu Yin Cheung**, *Hang Seng U. of Hong Kong*
Author: **Dilek Yunlu**, *Northeastern Illinois U.*
Author: **Olivier Wurtz**, *ESCP Business School*
Author: **Sarah E. Henry**, *U. of Oklahoma*
Author: **Akram Al Ariss**, *Toulouse Business School*

Drawing on conservation of resources (COR) theory (Hobfoll, 1989), we develop a model linking multicultural experience with task and relational creativity via creative process engagement. We also propose internal and external networks as boundary conditions on these relationships. Results from three waves of data supported our hypotheses, demonstrating that multicultural experience provided employees with the resources they need to engage in the creative process, which in turn led to both task and relational creativity. In addition, internal networks strengthened the positive relationship between creative process engagement and relational creativity while external networks strengthened the positive relationship between creative process engagement and task creativity. By applying the COR theory to examine the relationship between multicultural experience and creativity, we make several contributions to the creativity literature

OB: **Different Curvilinear Effects of Challenge/Hindrance Stressors on Creativity: The Role of Resource**

Author: **Jie Wang**, *U. of Nottingham Ningbo China*
Author: **XIAOLING YANG**, *U. of Nottingham Ningbo China*
Author: **Hong Deng**, *Durham U. Business School*

Researchers usually argue challenge stressors are beneficial while hindrance stressors are detrimental to work outcomes (e.g. LePine, 2022). However, inconsistent relationships between challenge/hindrance stressors and performance are found in empirical findings and meta-analysis work. This study aims to address the different effects of challenge and hindrance stressors on employee creativity and the contextual role of job resource. Building on challenge-hindrance framework and Job Demands and Resources (JD-R) model, the present study posits that challenge stressor of job required creativity and hindrance stressor of role ambiguity influence employee creativity differently through intrinsic motivation. Specifically, we argue that the indirect relationship between challenge stressor and creativity through intrinsic motivation exhibits an inverted U-shape; whereas the indirect relationship between hindrance stressor and creativity through intrinsic motivation exhibits a U-shape. We further identify job resource adequacy for creativity as an important moderator that influences individuals' intrinsic motivation. The data collected from 333 employees and 63 supervisors (two-wave time-lagged) showed support of these predictions. We discuss the implications of these findings for theory and practice.

OB: **Balancing Creative Tensions: A Leader-Paradox Model of Creativity**

Author: **Bradley J. Alge**, *Purdue U.*
Author: **Christopher James Hartwell**, *Utah State U.*
Author: **Jared Law-Penrose**, *Le Moyne*

Integrating micro-based concepts of creative tension with macro-based concepts of paradox (e.g., exploitation vs. exploration) and leader ambidexterity, we develop a leader-follower model suggesting that the conditions for individual creativity are most favorable when a follower is willing to be vulnerable and take risk in situations that are viewed as moderately ambiguous. The leader plays a critical role in influencing creative cognitions critical to the creative process. Moreover, the distance between a leader and follower serves as an important contextual constraint affecting key cognitions, but one that can be managed through the strategic use of transformational and transactional behaviors. We discuss implications for creativity and innovation, and how leaders help build organizational ambidexterity one relationship at a time.

OB: **Effects of Shared Managerial Coaching Perceptions on Creativity: Moderated Polynomial Regression**

Author: **Chunghyun Oh**, *Binghamton U.-State U. of New York*
Author: **Jinhee Moon**, *Binghamton U.-State U. of New York*

Although the benefit of managerial coaching (a manager provides one-on-one feedback to guide and inspire job improvements) has been empirically and practically outlined, we need more knowledge and understanding of how these give-and-take interactions embedded in the coaching process influence follower outcomes. To unfold this dyadic nature of managerial coaching, we investigate how shared perceptions of managerial coaching act as an antecedent of follower creativity. Furthermore, drawing on the leadership process framework, we examine leader gender and job autonomy as personal and situational moderators that could alter the relationship between shared perceptions of managerial coaching and follower creativity. Applying polynomial regression with response surface for a sample of 174 leader-follower dyads, we obtained support for the positive effect of shared perceptions of managerial coaching on follower creativity. This result confirms the dyadic premise of managerial coaching by demonstrating that follower creativity is the highest when leaders and followers share high-level managerial coaching perceptions. In addition, our result indicates that this relationship is strengthened when (1) leaders are female and (2) followers perceive a high job autonomy situation. The moderating effects of the personal and situational factors offer leadership insight into the boundary conditions of shared managerial coaching and follower creativity. Keywords: Managerial coaching; shared perceptions; follower creativity; leader gender; job autonomy

New Directions in Innovation Research

Session Moderator: **Timea David**, *ESSCA School of Management*

OB: **If You Only Knew: Contrastive Motivations in Envied Employees' Knowledge Behavior**

Author: **Timea David**, *ESSCA School of Management*
Author: **Hsi-An Shih**, *National Cheng Kung U.*

Employee innovation largely depends on effective knowledge transfer among coworkers, yet adverse work events might obstruct this process. The current study explores an understudied, but regularly occurring, affective work experience, namely that of being envied by others at work, and examines how perceptions of being envied may motivate opposing knowledge behaviors. We use an evolutionary framework to illuminate the contrastive motives for knowledge hiding and sharing, respectively, and their effect on employee innovation. The study further examines how the zero-sum game beliefs of the envied individual may moderate these mechanisms. We test a moderated mediation model through a multisource survey design involving 225 employees. The results are consistent with the idea that perceptions of being envied are linked to both knowledge hiding and knowledge sharing; however, the indirect effect of being envied on innovation is observed only through knowledge sharing. Furthermore, we find that the indirect positive link between perceptions of being envied and innovation through knowledge sharing is weaker when the envied employee holds high zero-sum game beliefs.

OB: **Aversive Workplace Conditions and Innovative Behavior: An Individual–Organization Relationship View**

Author: **Thomas Ng**, *U. of Hong Kong*
Author: **Haoran Xu**, *Department of Management and Strategy, The U. of Hong Kong*
Author: **Yinuo Zou**, *U. of Hong Kong*
Author: **HAOYANG CHEN**, *U. of Hong Kong*

Many management studies of the effects of work contexts on employees' innovative behavior adopt a motivational perspective to explain the psychological process. Advancing the literature, this study argues that the mechanism underlying the relationship between aversive workplace conditions and innovative behavior can be informed by a positive individual-organization relationship perspective, which suggests that psychological connectedness to the organization is the basis for individuals to engage in innovative behavior. Meta-analytical data from 488 samples (N = 169,521) provide support for the proposed theoretical processes: aversive workplace conditions weaken positive individual–organization relationships, and employees then withhold their innovative behavior. Crucially, a positive individual–organization relationship remains a significant mediator even when we control for the mediating effects of creative motivation and job motivation. These results highlight the value of the positive individual–organization relationship view.

OB: **A Resource-based Perspective between Organizational Cronyism and Innovative Work Behaviour**

Author: **Muhammad Aamir Shafique Khan**, *Jiangsu U.*
Author: **Jianguo Du**, *School of Management, Jiangsu U.*
Author: **Tehreem Fatima**, *Lahore Business School, The U. of Lahore*
Author: **Muhammad Waqas**, *Lahore Business School, The U. of Lahore*
Author: **Shuai Jin**, *Jiangsu U., China*

Organizational cronyism is a pervasive phenomenon in the South Asian region, where favors are granted to certain employees (i.e., associates, friends, acquaintances, etc.) based on non-merit factors that result in the formation of in-groups and out-groups. The current study aimed to find out the impact of organizational cronyism on out-group employees' innovative work behavior through a moderated mediation interplay of knowledge hiding and organizational cynicism. A three-wave data collection was done from 372 employees working in the software development organizations of Pakistan and the data were duly analyzed via PROCESS models 4 and 7. The results affirmed the hypotheses based on the tenet of Conservation of Resources (COR). The results revealed that the out-group employees indulge in knowledge hiding that in turn, impacts their innovative work behavior. Moreover, this indirect impact amplifies in the presence of organizational cynicism.

OB: **Serious Games as an Organizational Learning Tool for Sustainable Innovation: A French Case**

Author: **Ouiam Kaddouri**, *Leonard de Vinci Business School*

This study investigates serious games as a tool for organizational learning and the extent to which they can enable managers to understand, learn, and develop knowledge about urban innovations. In particular, we aim to determine whether serious games can be a substitute for traditional market exploration or traditional organizational training and enable managers to learn about sustainable innovations, such as smart cities. To answer this research question, we constructed a database through the design and creation of a serious game on smart cities for the business managers of the French subsidiary of a multinational company operating in the construction and energy sector and, through a questionnaire, collected data on the manager's post-game learning experience along with their characteristics. The analysis of the overall database enabled us to draw a set of results with both theoretical and managerial implications. The main contribution of this paper is to test the pertinence of serious games as a tool to address a pressing need for organizational learning about sustainable innovations.

OB: **Can the Organizational Innovation Climate Certainly Encourage Employees to Seek Knowledge?**

Author: **FANCHAO ZHUO**, *Business School of Hunan U., China*
Author: **LING YUAN**, *Business School of Hunan U., China*
Author: **Qihai Huang**, *Huddersfield Business School, U. of Huddersfield, UK*

As an important factor influencing organizational innovation, the influence of organizational innovation climate on knowledge behavior of employees has received increasing attention from knowledge management scholars. This study explores the role of ability-based Mianzi stress and individual psychological resilience level in the mechanism of organizational innovation climate's influence on employees' knowledge seeking behavior from the perspective of ability-based Mianzi, combining situational strength theory and situation construal theory, through empirical analysis of 543 valid survey data of knowledge workers collected at three time points. The results of the study indicate that the organizational climate of innovation positively influences employees' knowledge seeking behaviors; the ability-based Mianzi stress plays a mediating role between the organizational innovation climate and employees' knowledge seeking behaviors; employees' psychological resilience level negatively moderates the influence of the organizational innovation climate on ability-based Mianzi stress and knowledge seeking behaviors, and also moderates the indirect effect of ability-based Mianzi stress between the organizational innovation climate and employees' knowledge seeking behaviors. The higher the level of psychological resilience, the weaker the mediating effect of ability-based Mianzi stress and the knowledge seeking behavior.

New Perspectives on LMX Research

Session Moderator: **Hee Man Park**, *Pennsylvania State U.*

OB: **Developing Inclusive Teams and Fostering Knowledge Sharing: Role of LMX Disagreement**

Author: **Hee Man Park**, *Pennsylvania State U.*
Author: **Sung Mo Kang**, *Cornell College*
Author: **Na Yoon Kim**, *Wilkes U.*

Leadership is a key determinant of team member outcomes. Particularly, dyadic relationships between leaders and members (LMX) have been shown to influence members' proactive behaviors such as knowledge sharing. However, research has reported discrepancies between leaders and members regarding expectations of exchange relationships, which further influence employee outcomes. Yet, we have limited evidence on how LMX disagreement influences knowledge sharing. To address this theoretical problem, we draw on theories of LMX, and perceived inclusion and suggest that LMX disagreement has negative indirect effects on knowledge sharing through perceived inclusion. We further identified distributive justice climate as an important boundary condition for the proposed relationships of the effects of LMX disagreement. Specifically, we propose that the negative effects of LMX disagreement on knowledge sharing via perceived team inclusion are significant and stronger when distributive justice is low but not significant and weaker when distributive justice is high. With the multi-level data collected with 115 supervisors and 427 subordinates at multiple time points, we found support for our model.

OB: **Change-oriented Behavior as Double-Edged Sword: Leader Divergent Reactions Hinged on Goal Congruence**

Author: **Jih-Yu Mao**, *U. of Nottingham Ningbo China*
Author: **Xianhui Ning**, *Southwestern U. of Finance and Economics*
Author: **Guanglei Zhang**, *Wuhan U. of Technology*

Employee change-oriented behaviors can bring about organizational change but can also disrupt existing practices which are often overseen and managed by leaders. As such, employee change-oriented behavior likely stimulates both positive and negative leader responses. In this research, we examine the double-edged-sword effect of follower change-oriented behavior. Drawing upon the literature on person-environment fit and social exchange, we propose leader-follower goal congruence as a critical contingent factor determining leader responses to follower change-oriented behavior. The results of a scenario experiment (i.e., Study 1) and a multi-wave, multi-source survey (i.e., Study 2) reveal that follower change-oriented behavior leads to high leader-member exchange when leader-follower goal congruence is high, which in turn leads to leaders giving followers high performance ratings. In contrast, follower change-oriented behavior engenders leader status threat when leader-follower goal congruence is low, which in turn drives leaders to abuse followers. Implications for theory, practice, and future studies are addressed.

OB: **Which Leader-member Friendship Can Promote Exploitation? Professional or Personal**

Author: **Hongjiang Lv**, *School of Economics and Management, Southeast U.*
Author: **Lufeng He**, *School of Economics and Management, Southeast U.*
Author: **Man Cao**, *Southeast U.*

Friendship is a more intimate, enduring, and stable relationship than other informal relationships. Especially for leaders and members, friendship can convey work-related instrumental information and personal emotional information. Drawing on social information processing theory, we divided the leader-member workplace friendship networks into two types, namely professional-oriented friendship networks and personal-oriented friendship networks. Through social network methods, we defined and measured the leader's professional-oriented friendship networks and personal-oriented friendship networks, and analyzed the influence mechanisms of two types of leader's friendship networks on the leader exploitation activities. Using a multi-source social network data analysis, we found that leader's professional-oriented friendship networks and personal-oriented friendship networks were positively related to the leader exploitation activities via the leader psychological safety centrality (i.e., psychological safety obtained from members). Meanwhile, member-only psychological safety density weakens the positive effect of professional-oriented friendship networks but not personal-oriented friendship networks on leader's psychological safety obtained from members. On the whole, we provided a new theoretical framework and measurement for future research on friendship networks. In addition, we concluded by discussing theoretical and practical implications.

OB: **The Curvilinear Effect of LMX Differentiation: How Employees Evaluate and Respond to LMXD Legitimacy**

Author: **Sihong Huang**, *Hong Kong Baptist U.*
Author: **Siting Wang**, *Hong Kong Baptist U.*

Although substantial research assumes employees' legitimacy perception of leader-member exchange differentiation (LMXD) as a critical mechanism that influences the relation between LMXD and employees' behaviors, few studies examine how employees form the legitimacy perception of LMXD. Drawing from LMX theory and legitimacy framework, this paper examines employees' evaluating process of LMXD legitimacy and their subsequent behavioral responses. Specifically, we use perceived LMXD legitimacy (i.e., employees' perception that team members' LMXs are matched with their contributions to the team) to capture employees' legitimacy judgment of LMXD. We theorize that LMXD has an inverted U-shaped relationship with perceived LMXD legitimacy, and this curvilinear relationship is moderated by perceived team political climate. Furthermore, we expect that perceived LMXD legitimacy enhances employees' in-role performance and interpersonal helping. Using surveys from 207 leaders and 1163 employees, we found support for our predictions. An inverted U-shaped relationship between LMXD and perceived LMXD legitimacy was found, and this curvilinear effect became more pronounced for employees with high levels of team political perception. In addition, perceived LMXD legitimacy was linearly, positively related to employees' in-role performance and interpersonal helping. Theoretical implications and future research directions are discussed.

Communication Research in Organizational Behavior

Session Moderator: **Zachariah Brown**, *HKUST Business School*

OB: **Local and Global Status Concerns Independently Predict Jargon use Among Psychologists**

Author: **Zachariah Brown**, *HKUST Business School*
Author: **Eric Anicich**, *U. of Southern California*
Author: **Adam Galinsky**, *Columbia Business School*

When do academicians utilize circumlocutions and sesquipedalian pleonasms to elucidate discoveries and promulgate pedagogical proclamations? That is, when do scientists use jargon to describe their research? We argue that a speaker's social goals, above and beyond their communicative ones, influence their language use. The current research explores the use of one form of language—jargon—to symbolically signal a speaker's social standing. Existing theories in sociology, economics, and linguistics, which suggest that higher-status and embedded individuals within professional networks use more jargon than lower-status and newer members. In contrast, we propose that low status, both global (e.g., organizational status within an industry) and local (e.g., individual status within a team), increase jargon use in the hopes of securing higher status from audiences. To test our hypotheses, we constructed a novel dataset using seven years of academic poster titles presented at the largest annual personality and social psychology conference (N = 8,239). As public presentations, posters represent a highly evaluative context where people hope to secure respect from an audience. Analyses revealed that both global and local status concerns independently predicted jargon use in poster titles. For global status, the status of the authors' universities predicted jargon use; authors from lower-status schools included more jargon in their poster titles. For local status, first authors with a co-author from a higher-status university included more jargon in their titles. These results suggest that individuals use jargon to secure status, regardless of whether the source of their status concerns are global or local.

OB: **Fast-talking, Loud-voiced and Silver-tongued: Patterns of Prosody and Sales Performance**

Author: **James Oldroyd**, *Brigham Young U.*
Author: **Cody Jackson Reeves**, *Brigham Young U.*
Author: **Shawn Nissen**, *Brigham Young U.*

Prosody or the way in which we speak carries significance. It has the power to shape perceptions of speakers such as the degree to which they are influential, charismatic or trustworthy. Much of our understanding of prosody explores the link between a speaker and his or her perceived characteristics. Using a unique dataset of 351 phone calls collected from 99 sales reps and potential customer's phone calls, we extend our understanding of prosody by building measures of prosody for both parties and link these to sales outcomes. We suggest that base patterns of prosody, similarity in prosodic styles and mimicry of the prosodic style of the customer by the sales rep is associated with sales success. We find that the effects of prosody are more nuanced such that the customer's prosody is more predictive of sales success. This suggests that sales successful may be better indicated by customers' vocal prosodic features rather than by the prosodic features of sales reps

OB: **Ghosted? The Impacts of Ghosting in Interpersonal Communication**

Author: **Coral HY Zheng**, *Cambridge Judge Business School*
Author: **David Stillwell**, *Cambridge Judge Business School*

With the advancement in modern technologies, online communication has become prevalent. While online communication provides us convenience, it also makes withdrawal easier, simply by stop responding to the message sender. However, past research lacks quantitative findings regarding the impact of ghosting on the recipient's emotional as well as social outcomes. Thus, the current study aims to fill in this gap, examining the effect of ghosting when it is compared to explicit rejection. In another line, I will also explore the role of uncertainty: will holding response amplify or dampen the negative impact of rejection and ghosting? Along these two questions, I also investigate how individual characteristics affect the above effects. These individual characteristics are self-esteem, rejection sensitivity, and intolerance of uncertainty. Limitations and further directions are discussed in the end.

OB: **Information Desynchronization in Leader-follower Dyad**

Author: **Yuchang Liang**, *Guanghua School of Management, Peking U.*
Author: **Yuntao Dong**, *Peking U.*
Author: **Zhixue Zhang**, *Peking U.*

Leaders are a central source of information for followers. Given the knowledge-intensive and informationally interdependent nature of the contemporary workplace, synchronizing information via downward communication is crucial for evaluating leader effectiveness. Nevertheless, previous work suggests that followers suffer from information desynchronization, a state of informational unalignment with their leaders. What types of information are uniquely possessed by leaders? Why and when leader's unique information fails to become shared in leader-follower dyad? This study investigates these key issues through a qualitative study. We conducted open-ended structured interviews with 95 middle managers from a wide range of industries. We identified three major types of information exclusive to leaders and six categories of restrictors in information synchronization. We further integrated these inductive analyses into a process model toward information desynchronization, theorizing three distinct mechanisms through downward communication along a gradient of information bandwidth (i.e., the volume of information flow): withholding, gatekeeping, and disintegration. Our findings contribute to the literature on leader downward communication and knowledge management.

Author: **Frances J. Milliken**, *New York U.*

What began as a temporary solution to slow down the transmission of COVID-19 became a large-scale shift in the remote and hybrid work landscape. Although there is evidence that organizational networks and communication changed in the first several months of the pandemic (e.g. Yang et al., 2022), it is unclear which effects were a function of the crisis context and which were likely to endure. This study is a longitudinal investigation following a sample of 416 individuals of how the shift to remote work affected their organizational networks—both task and personal networks—beyond the initial shock of transitioning to remote work. In this paper we theorize and find evidence that the changes in the characteristics of employee task and personal networks have persisted years into the pandemic, and that men and women are maintaining their networks differently. We find evidence that these network changes are related to feelings of inclusion within and attachment to their organizations with downstream consequences on turnover. Our study contributes to an emerging perspective on the tradeoffs that long-term remote work provides, which is of mounting theoretical and practical importance.

OB: **Where's Your Head At? Exploring Role Transitions among Remote Workers**

Author: **Christopher Wiese**, *Georgia Institute of Technology*
Author: **Lindsay Dhanani**, *Rutgers U., School of Management and Labor Relations*
Author: **Michael Hunter**, *Pennsylvania State U.*
Author: **Yuhua Li**, *Georgia Institute of Technology*

Transitioning between work and nonwork roles is vital for employees as it facilitates critical work, family, and well-being outcomes. However, these transitions are particularly challenging for remote employees given that they need to switch between roles without the physical and temporal separation that traditional employees have. Given the rise of remote work, it is therefore important to understand the role transition process among remote employees and what characteristics of the transition lead to positive work and nonwork outcomes. The current paper correspondingly collected data from remote employees across four weeks to examine the role of cognitions during the commute and the perceived effectiveness of the commute in determining employees' reattachment and detachment. We also then examined reattachment and detachment as predictors of job satisfaction, engagement, and work-family conflict. Results indicated that perceived effectiveness of the transition is related to reattachment and detachment. We additionally found that reattachment was significantly related to work outcomes (i.e., job satisfaction and engagement) whereas detachment significantly predicted work-family conflict. These findings indicate the importance of employee perceptions about their role transitions and suggest that remote employees would benefit from developing role transition rituals. Organizations can also leverage our findings to facilitate role transitions among their remote employees.

OB: **Is Teleworking Working the Same? Comparing Remote versus In-person Employees' Fit and Work Outcomes**

Author: **Mengyue Fan**, *U. of Nevada, Reno*
Author: **Alexis Hanna**, *U. of Nevada, Reno*
Author: **Bret Simmons**, *U. of Nevada, Reno*
Author: **Jinyu Hu**, *U. of Nevada, Reno*

In the post-pandemic world, increasing numbers of organizations adopted remote work, and numerous workers now work from home. To progress knowledge of the remote work experience and the impact of working from home on organizational behavior and outcomes, we argue that more studies must compare samples of remote workers and in-person workers. To pursue this goal, we used a large sample of workers across jobs and industries to compare perceptions of person-environment fit, psychological experiences of work, and important work outcomes based on work context. This study tested a multi-group mediational model and found that relationships between fit, psychological experiences, and performance and turnover differed between remote and in-person workers. Although Person-Environment fit was important across the board, burnout was particularly important for remote workers, whereas engagement was particularly important for in-person workers. These findings have important implications for managers and organizations regarding how best to help employees achieve maximize their fit with their jobs and ultimately improve job performance and turnover intentions depending on whether they work in the office or work from home.

OB: **Managing Distributed Work: An Integrative Framework**

Author: **Julia Elisabeth Hoch**, *California State U., Northridge*
Author: **Steve W J Kozlowski**, *U. of South Florida*
Author: **James Dulebohn**, *Michigan State U.*

This review integrates the current literature and research on how to manage distributed work. First, we present a three-dimensional structure of distributed work that includes geographic distribution, electronic communication media usage, and cultural and national diversity. Each of these three dimensions is accompanied by its unique set of theories (i.e., social identity theory and information processing approach; media richness theory) and each pertains to a unique set of practical implications. Second, we present an input-process-output approach for the management of this type of work. The approach utilizes three input factors of structural supports, supervisory direct leadership and shared leadership by the colleagues, and emphasizes the role of mediating states, such as cognitive, motivational or emotional states, on distributed work outcomes, such as performance or satisfaction. It further highlights the degree of distribution of work itself as a moderator on the association between inputs, mediating factors and distributed work outcomes. Future directions for research and implications for leadership and management of distributed work are discussed.

Session Type: **Paper Session**
Program Session: **1847** | Submission: **20722** | Sponsor(s): **(OB)**

What Time Is It? Understanding Temporal Issues in Organizations

Session Moderator: **Biyun Hu**, *Shanghai International Studies U.*

OB: **Whether and Why do Time Theft Motives Matter?**

Author: **Biyun Hu**, *Shanghai International Studies U.*
Author: **Dizhen Lu**, *School of Business and Management, Shanghai International Studies U.*
Author: **Liang Meng**, *Shanghai International Studies U.*
Author: **Dishi Hu**, *U. of North Carolina Greensboro*

Though often viewed as harmful by employers, employee time theft may be functional and constructive. In two studies, we identify motives of employee time theft and examine the impact of time theft driven by different motives. Specifically, in Study 1, we used a qualitative method to identify 13 types of time theft motives. In Study 2, we used a scenario-based experiment to examine how time theft associated with different motives affects employee work outcomes. Overall, we found that employees engage in time theft for not only self-oriented but also others- and work-oriented motives, and time theft driven by different motives have differential effects on employee work effort and organizational citizenship behavior. Implications for research and practice are also discussed.

OB: **A Change of Pace: A Latent Profile Analysis of Pacing Styles at Work**

Author: **Craig Leonard**, *U. of Guelph*
Author: **Jeffrey R. Spence**, *U. of Guelph*
Author: **Deborah M. Powell**, *U. of Guelph*
Author: **Michael Daniels**, *U. of British Columbia*

When working towards a deadline, individuals allocate their effort over time in a multitude of ways, referred to as pacing style. The different styles that employees use to pace their work to meet deadlines have important implications for individual work outcomes, most notably performance. To date, researchers have largely focused on pacing styles in isolation, assuming that individuals have a dominant style that they use for all deadlines. However, individuals may use a combination of pacing styles for different tasks or deadlines. This consideration is important because the specific combination of pacing styles an individual uses provides a fuller picture of how they allocate time and effort as they approach deadlines. In an effort to advance the understanding of pacing style, we present two studies that use latent profile analysis to identify profiles of pacing styles and reveal how combinations of styles relate to work-related antecedents (e.g., role overload, work boredom) and outcomes (e.g., task performance, creative performance, emotional exhaustion). Our results reveal that combinations of pacing styles can provide a more nuanced understanding of how individuals distribute their effort over time in working toward deadlines and its impact in the workplace.

OB: **The Double-edged Sword of Time Pressure: A Meta-analysis of Investigating How and When Time Pressure**

Author: **Sidi Sui**, *School of Management, Shandong U.*
Author: **Sitong Liu**, *Shandong U.*
Author: **Chenghao Men**, *Shandong U.*
Author: **Haobo Tian**, *School of Management, Shandong U.*

Time pressure is always harmful? Not always. Previous research on the relationship between time pressure and creativity has been inconsistent. To clarify this association, based on cognitive appraisal theory of stress we synthesized 118 articles with 122 independent samples (N= 68523) using meta-analytical method and explored how and when time pressure affects employee creativity. The results demonstrated that burnout and learning orientation mediated the effects of time pressure on employee creativity. We further indicated the moderating role of national culture, mainly focusing on uncertainty avoidance and individualism/collectivism. When uncertainty avoidance is high and individualism is low, time pressure affects employee creativity negatively; When uncertainty avoidance is low and individualism is high, time pressure affects employee creativity positively. We also discuss the theoretical and practical implication and propose future research directions.

OB: **Leading from Diversity: The Team-level Antecedents and Consequences of Team Temporal Leadership**

Author: **Jiaxin Xue**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Jing-hao Zhang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Yuhui Li**, *Renmin U. of China*

Team temporal leadership has an important influence on team effectiveness, but little is known about the antecedents of team temporal leadership. By integrating the functional leadership theory and self-improvement literature, we focus on the contextual antecedents of team temporal leadership and propose time urgency diversity and leader time urgency interact to influence team temporal leadership, namely the urgent leaders tend to do more time management behaviors according to members time urgency diversity. We also argue that by facilitating team temporal leadership, the interaction of time urgency diversity and leader time urgency would indirectly increase team temporal consensus and, subsequently, team task cohesion. We empirically test the proposed model by a study of 56 R&D project teams. Our study contributes to the literature by identifying the temporal team composition might drive leaders to impose time management behavior.

Dynamics of Understanding Organizational Citizenship Behavior at Work

Session Moderator: **Emily David**, *China Europe International Business School (CEIBS)*

OB: **Trickle-down Effects of Corporate Social Responsibility on Employee Outcomes: Leader Role Modeling**

Author: **Emily David**, *China Europe International Business School (CEIBS)*
Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*
Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*
Author: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*

Corporate social responsibility (CSR) initiatives are increasingly being viewed not only as tools that benefit society but also as important drivers of employee behaviors. However, little is known about why and under what circumstances firm CSR practices relate to employee behaviors in their non-work lives (i.e., work-family positive spillover) and those directed towards their coworkers (i.e., organizational citizenship behaviors or OCB). With the aim of shedding light on this cross-level trickle-down effect, we conducted a multi-wave, multi-source study in 48 organizations. Aligned with social-learning theory, the results revealed that firm-level externally-focused CSR practices were positively related to employee OCB toward coworkers and work-family positive spillover via the role-modeling dimension of family-supportive supervisor behaviors (role-modeling FSSB). We also found that the aforementioned indirect effect of CSR practices on OCB toward coworkers through role-modeling FSSB was stronger among employees working for supervisors experiencing lower rather than higher work-family conflict. This study contributes to the work-family literature given by construing firm activities as the "source" in a trickle-down sequence and by moving firm-level correlates of role-modeling FSSB beyond family-family supportive policies and practices.

OB: **In-role to Extra-role: A Goal-based Analysis of Pro-environmental Behavioural Spillover**

Author: **Wenjing Guo**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Kerrie Unsworth**, *U. of Leeds*
Author: **Christian Bretter**, -
Author: **Matthew Christopher Davis**, *U. of Leeds*

Organisations are increasingly recognizing the need to engage their employees in pro-environmental behaviour, both within and outside their allocated job roles, but no consideration has been given to how engaging in one form of behaviour will affect the other. By integrating the proximity perspective of goal theories and crowding-out literature, we investigate how, when, and why employees' performance in in-role pro-environmental tasks can influence their extra-role pro-environmental behaviour. We propose that performance in in-role pro-environmental tasks can positively spillover to extra-role pro-environmental behaviour via employees' pro-environmental goal commitment when they have low level of intrinsic motivation for helping the environment, while this spillover effect will be negative when they have high level of intrinsic motivation. Using two experiments with employees from the retail (N = 338) and education (N = 448) industries respectively, the positive spillover in low intrinsic motivation context was supported. However, the negative spillover in high intrinsic motivation context was only supported by Study 1. Our findings make up a missing piece in organizational environmental management and pro-environmental spillover literature, and carry important implications for organisations.

OB: **Fitting In and Doing Good, or Doing Good to Fit In?**

Author: **Wouter Vleugels**, *Deakin U.*
Author: **Huw Flatau Harrison**, *Deakin U.*

A rich history of research on person-organization (PO) fit suggests that employees' fit with the organisation is positively related to organizational citizenship behaviours (OCBs). However, this prior research suffers from several shortcomings. Not only have researchers predominantly studied this relationship from an a priori defined normal causation perspective (confirmation bias), they also have overlooked the impact of variance in tenure on this relationship (representativeness bias). Moreover, past research has generally failed to consider dynamic relationships between PO fit and OCBs, assuming relationships are identical on the between and the within-person level (generalization bias). In response, we set out to perform a more thorough analysis of the PO fit-OCB relationship by investigating the causal nature of this relationship across different levels of analysis. In addition, we consider the moderating impact of employee tenure on this relationship. On the between-person level, we find that only reverse causation applies such that higher levels of OCBs increase PO fit. On the within-person level, we find that only normal causation applies, such that higher levels of PO fit increase OCBO. We find that tenure moderates within-person relationships in distinct ways, yet moderation effects did not extend to the between-person level of analysis. More broadly, our findings show that the relationship between PO fit and OCBs can deviate from the traditional, normal causation (PO fit ? OCB) logic that dominates the fit literature. Our study suggests the need for a more nuanced theoretical treatment of the relationship between PO fit and OCBs.

OB: **Designing the More or Less (In)Formal OCBs? A Status Hierarchical Approach**

Author: **Eugene Yi Cheong TUNG**, *Chinese U. of Hong Kong*

We conceptualize organizational citizenship behaviors (OCBs) as extra role (informal) social exchanges whose legitimacy has been partially given by the formal job requirements. We argue that the status hierarchy, which has grown from the formal job architecture, together inform the proactive and reactive natures of OCBs in work groups. The proposed model suggests that norm evolves from the three re-categorized types of OCBs: affirmative, balancing, and challenging with respect to particularistic relationships among managers and subordinates of all levels in the status hierarchies. Hence specifically, centralization of decision making in the leader of a unit, task interdependence among unit members, and managers' discretion in the use of power jointly explain the loose coupling between the formal job architecture and the informal social structure. Assumptions that base our arguments are discussed for generalizability and implications for organizational design.

Gender, Family and Leadership

Session Moderator: **Lydia Gross**, *Rotterdam School of Management, Erasmus U.*

OB: **The Effects of Leadership Levels and Gender on Leader Well-being (WITHDRAWN)**

Author: **Jing Hu**, *UNSW Business School, Australia*
Author: **Tony Huiquan Zhang**, *U. of Macau*
Author: **Christopher Jackson**, *U. of New South Wales*

Some research findings suggest more well-being among leaders and others less; still, others find no relationship. To explain this inconsistency, we consider how non-leaders, mid-level and high-level leaders differ in well-being. We anticipate that mid-level leaders will have lower well-being than senior leaders and non-leaders, and that females will be more vulnerable than males to the reduced well-being associated with mid-level leadership. In Study 1, we used multi-level models and propensity score matching on a representative sample (N= 24,067), and found mid-level leaders' well-being was lower than non-leaders or high-level leaders, and that this effect was more pronounced among females. In Study 2, we collected experience sampling data from 86 workers who completed a short survey four times a day for five consecutive working days (a total of 1,634 observations). Mid-level leaders reported more end-of-day negative emotions than high-level leaders and non-leaders, mediated by heightened job demands, and the effect was stronger among female respondents. We conclude that leadership levels and gender have an important but overlooked impact on well-being.

OB: **Who Needs More Love to Counter Loneliness? Female Versus Male Leaders**

Author: **Xinyan Mu**, *NingboTech U.*
Author: **Wen Xu**, *U. of Nottingham, China*
Author: **Li Guo**, *U. of International Business and Economics*

Although "lonely at the top" – leader loneliness, is a quite prevalent phenomenon, nobody really likes being lonely. Leaders implicitly need company to counter loneliness, whereas female and male leaders experience differently to the context with companionship and love. Drawing upon the belongingness theory, we investigate gender-contingent reactions to team companionate love culture. The results of a multi-wave, multi-source survey indicate that team companionate love culture reduces leader loneliness by motivating leader self-disclosure. In addition, this indirect effect is contingent upon leader gender. Specifically, male leaders are more likely to disclose themselves and experience lower loneliness with the influence of team companionate love culture, whereas female leaders are immune to team companionate love culture. Implications, limitations, and future directions are discussed.

OB: **Leader Development by Cross-role Enrichment: Effects of Parenting Experience on Leader Effectiveness**

Author: **Cheng Wang**, *Zhejiang U.*
Author: **Zhenkun Liang**, *Zhejiang U.*

Existing leader development studies have overwhelmingly focused on on-the-job resources within the work domain and the importance of developmental experiences beyond the workplace has been far ignored. In this empirical article, we integrated role accumulation theory and family-work enrichment theory and thus put forward the perspective of cross-role enrichment to explore how becoming a parent makes individuals a better leader and examine the enrichment mechanisms within the parent-leader dyad. A survey of 357 leaders from MBA programs (Study 1) revealed that parent-role leaders were more effective than non-parent leaders after controlling the interference variables through Propensity Sampling Matching, a quasi-experimental method. Further, a two-wave survey of 387 participants who occupy both parent and leader roles (Study 2) showed that one individual's positive parenting experience was associated with his or her effectiveness as a leader. Specifically, the results of the Structural Equation Model analysis showed the effects of positive parenting experience on leader effectiveness were serially mediated by instrumental path (i.e., belief about competence malleability and workplace mentoring behavior) and affective path (i.e., sense of parental responsibility and sense of leader's responsibility). Our research contributes to the diversification of leader development practices and the deepening of the family-work enrichment perspective.

OB: **When and Why Do New Leaders Get Endorsed? The Role of Gender and Tenure in Leadership Succession**

Author: **Lydia Gross**, *Rotterdam School of Management, Erasmus U.*
Author: **Daan Alexander Stam**, *Rotterdam School of Management, Erasmus U.*
Author: **Jasmien Khattab**, *Erasmus U. Rotterdam*
Author: **Juan Pablo Madiedo Montanez**, *Erasmus U. Rotterdam*
Author: **Ana Maria Sierra**, *Rotterdam School of Management, Erasmus U.*

Leadership succession is a frequent and inevitable occurrence in organizations. Yet, scholarly understanding of succession beyond the CEO-level is strikingly limited. We join a small but growing stream of literature on leadership succession at the team level and investigate the joint impact of new leader gender, prior leader gender and new leader organizational tenure on followers' endorsement of the new leader compared to that of the prior leader. Building on role congruity theory and contrast effect theory, we postulate that gender bias is exacerbated when there is a leader gender change. Moreover, we argue that when new leaders have high organizational tenure this conveys status and allows followers to fall back on person-specific information. Using archival data from a large multinational consumer goods company we find that, contrary to expectations, new leader gender and prior leader gender do not jointly predict new leader endorsement. In line with expectations, new leader gender, prior leader gender, and new leader tenure jointly predict new leader endorsement, such that tenure impacts the endorsement of new leaders succeeding a female, but not a male leader. We discuss implications for theory on leadership succession and gender and leadership.

OB: **Leadership Behaviors and Followers' Self-presentations as Counter-influence Tactics**

Author: **Leni Chen**, *Hong Kong Baptist U.*

Leadership research predominately treats followers as passive influence takers in the leadership processes and suggests that leadership behaviors influence follower performance by inducing followers' psychological processes. We challenge this view by proposing that followers' self-presentation tactics are important mediating mechanisms linking leadership behaviors and employee performance. Across two studies, we consistently find that authoritarian leadership enhances follower performance and promotability via employees' supplication tactics and leader's affective trust, whereas permissive leadership enhances employee performance and promotability via employees' self-promotion tactics and leaders' cognitive trust. We also theorize and demonstrate that employees are more likely develop appropriate tactics to counterinfluence their leaders if they have experience encountering the parents whose parental styles are similar to their leaders' style of leadership. In Study 2, we find that parental styles of employees' parents moderate the relationship between leadership styles and employees' self-representation tactics. Employees raised by authoritarian parents are more likely to react to authoritarian leaders using supplication tactics, whereas employees raised by permissive parents are more likely to react participative leaders using self-promotion tactics.

Then & Now: Psychological Ownership & Territorial Behavior

Session Chair: **Craig D. Crossley**, *U. of Central Florida*
Panelist: **Jon L Pierce**, *U. of Minnesota, Duluth*
Panelist: **Kurt T Dirks**, *Washington U. in St. Louis*
Panelist: **Graham Brown**, *U. of Victoria*
Panelist: **Markus Baer**, *Washington U. in St. Louis*
Panelist: **Christopher M. Stein**, *Siena College*

This is designed to be a fun and interactive session focused on the stories and people behind some of our major management theories. As a relatively young academic discipline, we are fortunate to have many pioneers and second-generation thought leaders that have observed and participated in the evolution of our theories from inception to present day. “Then & Now” is an annual symposium that appeals to new and seasoned scholars from across the academy. This year’s session focuses on Psychological Ownership. The symposium will begin with Jon Pierce and Kurt Dirks describing how they became interested in this topic, collaborators/supporters, and how this construct developed. Graham Brown and Markus Baer will talk about how their research on psychological ownership and territoriality has expanded into entrepreneurship and marketing. The “Now” panelist, Chris Stein, will describe how his recent research on territoriality has evolved from the original body of work, and where it is likely to go next. The symposium concludes with the audience sharing their own perspectives and stories related to the ideas and people who have shaped this growing body of research.

Author: **Sheila Keener**, *Old Dominion U.*

Employee recovery from work demands continues to be of interest to scholars, individuals, and organizations. This symposium provides four new explorations about recovery during various times (i.e., evenings and weekends) through multiple mechanisms (i.e., recovery activities and experiences) using different perspectives (i.e., recovery as an end state and recovery as a process) and diverse methodologies (i.e., path analysis, multilevel structural equation models, latent growth and discontinuous growth models). Following the presentations, Dr. Sabine Sonnentag will synthesize the papers and lead a discussion with participants about the current and future state of recovery research. Overall, this symposium offers new insights about recovery from work demands and employee well-being that fit well into the 2023 AOM theme of "Putting the worker front and center".

The interest in studying workplace conversations has grown, with increased scholarship focused on different types of work-specific conversations (e.g., gossip, incivility, small talk). Yet, family also comprises an important part of employees' identity, meaning that employees may choose to integrate family discussions into the work domain, or take proactive steps to share important work moments with their family. In the current symposium, four papers aim to probe into the intersection of the work-family interface and conversations in an effort to understand how employees' conversations with coworkers or family members end up not only affecting work and home relationships, but also performance across role domains. More specifically, the current papers highlight the role of venting about family at work; discussing parenting in the workplace as a means of intellectual stimulation; sharing about work with children to shape employees' and children's identities; and conversational challenges that working parents of teenagers face.

In recent decades research on new teams has flourished, covering topics ranging from temporary and fluid teams to multiple-team membership, multiteam systems, and increasing virtuality. This growing inquiry has greatly advanced our understanding of modern organizational teams—teams operating in dynamic, technology-driven, and boundary-less environments—but this work may be limited. Research on each topic mentioned above has largely evolved in isolation when, in reality, they commonly coexist. Our symposium consists of four papers that reflect varied and cutting-edge research on organizational teams that encompass multiple of the often distinctly considered features of modern teams. These papers also reflect a variety of perspectives, using both quantitative and qualitative approaches, varied contexts—from emergency response to surgery and project teams—and samples that range from thousands of teams across sites to deep dives into a few or even single teams (or team systems) to offer a rich understanding of processes over time. While each paper offers a unique contribution, we have designed the symposium to allow for drawing connections across the papers. We hope to provide an engaging forum for insights and conversation at the forefront of research on new team forms, the ways they may differ from traditional teams, and the possible mechanisms for supporting teamwork in more complex and dynamic contexts that reflect many modern organizations.

Moral perception—individuals' perception of what is right and wrong—shapes many important work outcomes. This symposium extends moral perception research by introducing recent scholarly works on the antecedents and consequences of moral perception in organizations. Specifically, this symposium asks two questions: How is the moral perception of work itself shaped and changing? What are the antecedents and consequences of moral perception and behavior at work? Using multilevel data in diverse settings, five presenters seek to answer these questions. Three presenters tackle the first question by showing (a) how employees collectively contest and deviate from a culturally upheld and valued way of relating to work, (b) how employees' positive valuation of intrinsic motivation affects their decisions to help their teammates, and (c) how the (mis)match between leaders' and followers' work orientations affects team performance. The other two presenters address the second question and investigate (a) the motivational consequence of misalignment between employees' ethical considerations and the law, and (b) the effect of observers' status and status consistency on their moral decision to stand up to abusive supervision. The discussion at the end of the symposium highlights opportunities for future research and seeks to stimulate conversations among the audience.

There are indicators we are entering a new era for MTM research, by moving beyond the structural approach that has characterized MTM research to date, to focus on important and under-researched issues, such as the nature of employees' experiences in an MTM context. Although team research suggests that the experiences of members impact team functioning, these lines of reasoning have not, until recently, made their way to MTM research. To overcome this limitation, this symposium showcases five papers that use a variety of theoretical perspectives, research designs (i.e., qualitative, quantitative), contexts (e.g., healthcare, automotive manufacturer, online panels), methodologies, and analytical methods (i.e., meta-analysis, content/thematic analysis). The symposium focuses on surfacing and advancing unanswered questions that extend theory and can offer fruitful directions for MTM research by examining critical individual and team level outcomes (e.g., individual/team performance, individual counterproductive and organizational citizenship behavior, individual learning, individual turnover intentions, organizational commitment) in the experiences of MTM employees across their teams (e.g., goals, functions, roles). We hope to provide a forum to advance unanswered questions that offer fruitful directions for MTM research.

Bottom-up Change: Mavericks, Activists, and Front-line Employees Making Change in Organizations

Session Moderator: **Ree Jordan**, *U. of Queensland*

ODC: **Let Them Disrupt You! Maverick Practice Benefits Your Organization**

Author: **Ree Jordan**, *U. of Queensland*
Author: **Terrance William Fitzsimmons**, *U. of Queensland*
Author: **Victor J. Callan**, *U. of Queensland*

This study focuses on exploring a particular form of non-conformist – the workplace maverick - who disrupts in a variety of beneficial ways. Interviews were conducted with 55 mavericks and observers of mavericks within 16 scientific and research organizations. Adopting a Bourdieusian lens, the interviews, explore how the maverick's practice in organizations involves a complex interplay between field, capital, habitus, doxa and illusio. This interplay shows how mavericks gain influence beyond accumulating traditional forms of valuable capital, but also through the recognition and conversion of other alternative forms of capital that are acknowledged as symbolically valuable by their respective leaders and organizations. In particular, six behavioral contributions are identified that combine to form a rare capital set which establishes mavericks as unique and valuable organizational agents rather than negatively disruptive employees. We propose a model of maverickism that guides future research and assists more successful efforts at organizational change.

ODC: **A Perfect Storm: Power and Activism Driving Radical Unplanned Change**

Author: **Natasha Winkler-Titus**, *U. of Stellenbosch Business School*
Author: **Anne Crafford**, *U. of Pretoria, South Africa*

Institutions are facing increasing pressures from social movements to make internal changes in response to pressing social issues. #BlackLivesMatter, #Metoo, and #Climate change have respectively pressured institutions to address racial equality, sexual harassment, and climate change. While much of the literature on social movements focuses on how these external forces influence change within organizations, less is known about how external social movements merge with internal worker demands to drive radical unplanned change. This paper focuses on marginalized workers trapped in an outsourced contract in an emerging market context, highlighting conditions that forced an organization into an unplanned change. Institutional logics was used to understand how different types of activism and power tactics influenced changes in the organization's outsourcing of labor. Through a case study of a large urban university, using a grounded theory approach, we present a non-linear process model to explain how forced unplanned organizational change occurs within a turbulent macro-socio political and economic context. Theoretically, the research provides a greater understanding of how radical unplanned change is forced onto an organization due to power tactics of their internal workforce and external social activism. Practically, it suggests managers must ensure a voice for all stakeholders to mitigate coercive forms of power tactics against the organization.

ODC: **Moving Fast, Going Big, and Playing for Keeps: The Rapid Institutionalization of Bottom-up Change**

Author: **Elisabeth Yang**, *Yale School of Management*
Author: **Julia DiBenigno**, *Yale School of Management*

Prior research suggests that frontline change ideas are especially valuable for improving organizational functioning. Yet bottom-up change processes are generally characterized as failure-prone, slow, and incremental, or as requiring heroic and politically fraught collective mobilization efforts. This paper offers a novel theoretical model that specifies how frontline change ideas can be implemented quickly, simultaneously, without protracted political battles, and in ways that seed their long-term institutionalization. We analyze data from a two-year qualitative field study of the trajectory of 33 change ideas introduced by frontline staff—bedside nurses, physicians, frontline managers, and others—to address longstanding issues at a U.S. hospital responding to the exogenous shock of the Covid-19 pandemic. By comparing ideas that had become integrated into normal operations nearly two years later to those that failed to be implemented or to persist, we induce a set of practices associated with the rapid institutionalization of bottom-up change ideas. Our study suggests that traditional bottom-up change processes designed to surmount steep barriers to change at the top and bottom of an organization, such as using a slow, experimental, "small-wins" approach or a political coalition-building approach to bottom-up change, may be less appropriate in the direct aftermath of a shock when normal barriers to change may be suddenly lowered. Shocks can temporarily shift both field-level and organizational-level opportunity structures in ways that create a favorable but unpredictably brief window of opportunity for implementing change amid these lowered barriers. We find that to seize such a moment may require an alternative set of change tactics that emphasize speed, going big, and avoiding characterizing a change as temporary or experimental.

ODC: **How Networks of Empowerment Disrupt Persistent Unethical Behavior and Foster Organizational Change**

Author: **Peggy Cunningham**, *Dalhousie U.*
Author: **Minette Drumwright**, *U. of Texas at Austin*

Unethical behavior persists within many workplaces despite internal policies designed to prevent it. Recent research found that one reason such behavior persists is because perpetrators formed networks of complicity that protected them, propagated increased unethical behavior, and created toxic organizational cultures. To investigate how such networks could be disrupted, we conducted 74 interviews in organizations where unethical behavior had persisted and was disrupted. In the face of organizational failure to disrupt persistent unethical behavior, we found that employees formed their own networks that we called "networks of empowerment." Two theories emerged for our data: social network theory provided a foundation for our findings while behavioral ethics helped explain why employees joined various networks. These networks evolved over time and took three forms. Whisper networks typically emerged first to warn others about perpetrators. If a leader emerged, whisper networks could evolve into transactional networks that used informal and formal procedures such as filing complaints against perpetrators to achieve organizational change. When societal norms supported problematic organizational behavior, transformational networks formed to span organizational boundaries and address broader issues that impacted organizations and society. Our findings contributed to the above noted theories and research on organizational change, ethical leadership, and whistleblowing.

Narrating Organizational Change: Future-Stories and a Story of the Past

Session Moderator: **Britt Smulders**, *Eindhoven U. of Technology*

ODC: **Playing With Boundaries: Designing Future-Oriented Narratives for Strategic Renewal**

Author: **Britt Smulders**, *Eindhoven U. of Technology*
Author: **Arjan Markus**, *Eindhoven U. of Technology*
Author: **Georges Romme**, *Eindhoven U. of Technology*
Author: **Rianne Valkenburg**, *Eindhoven U. of Technology*

Narratives can be pivotal in strategy development, especially in change and transformation. In the emerging body of literature in this area, however, little attention has been paid to how one uses future-oriented narratives deliberately in strategic renewal processes. This conceptual paper, therefore, explores how organizations can use a narrative approach to imagine alternative futures while simultaneously creating discretion for action in the present. We develop a narrative approach from several propositions about playing with contextual, social, and temporal boundaries. The proposed framework contributes to the literature in three ways. For one, it extends work on strategic renewal by theorizing how future-oriented narratives can support strategic renewal. Second, we contribute to research on temporal work by exploring how one constructs distant future narratives and uses the past as a resource for imagination. Finally, this paper contributes to the literature on boundary work by using 'boundary' as a core construct for theorizing about how playing with boundaries can enhance efforts to reinterpret path-dependent views.

ODC: **Setting the Same Goals, Traveling to Different Futures**

Author: **Olli-Jaakko Kupiainen**, *Aalto U. School of Science*

This qualitative case study examines an organizational transformation through a naturalistic inquiry. In this paper, I argue that organizational members engage in temporal work to shape and change their organization discursively. I adopt an abductive approach aiming at theory elaboration. An empirical material consists of organizational members' change talk on the corporation's internal social media discussion board when the organization went through significant changes. The study explores how organizational members address organizational goals by constructing different future narratives. The findings illustrate how organizational members provide solutions to change an unsatisfactory present and create 'if-then' plans to achieve the organizational goals and aim to have a controllable future during organizational transformation. I argue that participation in online conversations reflects organizational members' proactivity in goal-striving. Therefore, they engage in future-making.

ODC: **Future Stories of Meaningful Work and Leadership in Change**

Author: **Soila Johanna Lemmetty**, *U. of Eastern Finland*
Author: **Elina Riivari**, *U. of Jyväskylä*

The meaningfulness of work is an important factor guiding working life and work in both research and practice. Meaningful work means important and satisfying work. It promotes individual growth, strengthens the belief in one's own abilities, and supports a sense of belonging. It also provides opportunities for self-fulfillment and an experience of providing benefits to others. Moreover, the meaningfulness of work is linked to a sense of well-being at work, for example in terms of motivation and job satisfaction. It is therefore important to increase the knowledge about meaningfulness at work and how to manage it. In this paper, we explore future stories of meaningful work and provide insights into meaningfulness as part of managing well-being in the changing workplace. The qualitative data for the study consists of 25 stories collected from Finnish managers in spring 2022, using the empathy-based method. We identify three changing contexts for meaningful work: change in technologies, change in expertise, and change in values. We also examine the causes and consequences of these change contexts and discuss leadership practices that can support well-being at work through increased meaningfulness.

ODC: **Rise and Demise of the Ideal Doctoral Program**

Author: **Larry M. Starr**, *Thomas Jefferson U.*

During 2014 and 2015 more than 100 stakeholders working with five facilitators applied the systems thinking-informed methodology of Interactive Planning and Idealized Design to create an "ideal doctoral program for working professionals" for the School of Continuing and Professional Studies at the request of the Provost of the University. The resulting Doctor of Management (DMgt) in Strategic Leadership launched in 2016 and Doctor of Philosophy (PhD) in Complex Systems Leadership launched in 2019 admitted more than 60 people into the world's only leadership dual-doctorate. In Spring 2020, the University announced that both doctoral programs were closed and in Fall 2022 the University announced that effective January 1, 2023, the entire School of Continuing and Professional Studies would be closed. To honor the students, faculty and alumni, a narrative of the accomplishments and complexities of this remarkable community is presented.

Structures and Change Processes To Enable Adaptation, Learning, Agility, and Sustainability ✈💻

Session Moderator: **Daniele Mascia**, *Luiss U.*

ODC: **A Multilevel Investigation of Structural Change: Adaptation, Centrality and Collective Efficacy**

Author: **Daniele Mascia**, *Luiss U.*
Author: **Luca Giorgio**, *U. Cattolica del Sacro Cuore*
Author: **Francesca Pallotti**, *Greenwich U.*

Organizations frequently change to stay competitive in dynamic and complex environments. At the same time, however, organizational members often do not react as expected, and fail to implement structural changes. In this context, it becomes important to study under what conditions employees adapt to organizational change. This study used data from 175 employees nested in 29 work units in an organization undergoing a large-scale reorganization to explore how unit-level (work unit) exposure to structural change affects individual-level (employee) change adaptation. We propose that individual change adaptation is positively affected by work unit exposure to change and that such relationship is moderated by network centrality and perceived collective efficacy at unit level. In line with our predictions, our results revealed that work unit exposure to change is positively related to unit members' change adaptation. In addition, we found that the relationship between unit-level exposure to change and individual adaptation to change is moderated positively by work unit network centrality and negatively by collective efficacy. Overall, our findings contribute to shed more light on how unit-level characteristics – namely, collective work interdependences and collective efficacy – affect employees' individual adaptation to major reorganizations. We discuss how our findings contribute to multilevel organizational change research, and can become advantageous when designing large-scale changes.

ODC: **Outcomes of Learning Organisation: A Bibliometric Analysis and Future Research Agenda**

Author: **Mohini Yadav**, *Ph.D. Scholar, Faculty of Management Studies, U. of Delhi*
Author: **Sunil Budhiraja**, *Tata Institute of Social Sciences*

Becoming a Learning Organisation (LO) is an aspiration for every organisation as it offers internal capabilities, a competitive advantage and synergy gains to organisational members. Despite the enormous literature on the construct of LO, there is no systematic understanding and analysis on the multi-level outcomes of LO. Therefore, this study aims to synthesize, analyse and categorise the scientific literature around various levels of outcomes of LO to provide a clear future research agenda to researchers and academicians. The authors have performed bibliometric analysis using 603 research articles published in Scopus, entailing 1,345 authors from 77 countries, followed by a thematic cluster analysis using bibliographic coupling to understand the current research trends and to recommend a set of broad themes to provide direction for future researchers in this domain. The results are largely descriptive and aim at capturing a panoramic view of what has already written on the topic so far. The bibliometric analysis was conducted using different means like citation analysis, cluster analysis and keyword analysis to reveal the most significant publications, notable authors, keywords, current research trends, and future research questions. Further, the bibliographic coupling led to the categorisation of the outcomes of LO into the following five clusters (including sub-clusters): (ii) Leadership and Innovation (i) Individual Capabilities and Performance (iii) Organisational wide (iv) Post mergers, acquisitions and alliances, and (v) Knowledge Management. Based upon the gaps identified, the authors present a set of propositions which can be empirically tested by researchers in future.

ODC: **Organizational Changes in Adopting Agile Approaches: A Systematic Literature Review**

Author: **Maria Paula Perides**, *Faculty of Economics, Administration and Accounting of the U. of Sao Paulo*
Author: **Liliana Vasconcellos**, *Faculty of Economics, Administration and Accounting of the U. of Sao Paulo*

Although agile approaches to project management were originally developed for use by small software development teams, agile methods quickly began to be used by entire department processes and, in some cases, to the entire organization. Despite this quick adoption, there is a lack of studies seeking a better understanding of the changes that an organization needs to carry out for agile implementation at the organizational level. Therefore, a systematic literature review (SLR) was conducted to organize and synthesize knowledge in this field. In this study, 492 papers were identified in the first step. These were then rigorously analyzed, resulting in a final sample of 59 primary studies. As a result, a model was created, summarizing all the organizational changes implemented by the organizations that adopted agile approaches. Gaps in the literature were also identified, and recommendations were provided for future studies. In addition to contributing to the theory of agile approaches with a consolidated view of the changes that organizations need to undertake to implement the agile philosophy, it is also intended that this model will support the organizations that plan to undertake this journey of transformation, helping them plan the actions needed to achieve the desired results more consistently.

ODC: **How Agri-food Ecosystems are Organized for Implementing Ecological Sustainability: Systematic Review**

Author: **Matthew Ayamga**, *Wageningen U. & Research Center*
Author: **Maria Carmela Annosi**, *Wageningen U.*
Author: **Ayalew Kassahun**, *Wageningen U. & Research Center*
Author: **Wilfred Dolfsma**, *Wageningen U. & Research Center*
Author: **Bedir Tekinerdogan**, *Wageningen U. & Research Center*

Transitioning towards more sustainable agri-food ecosystems amidst the current global environmental change requires a shift in perspective. A perspective wherein agri-food ecosystems enact business strategies incorporating ecological concerns to address emerging environmental challenges. To unravel this perspective, we systematically reviewed the literature with the intent to extract information about: 1) the environmental challenges faced by agri-food ecosystems; 2) the business strategies incorporating ecological sustainability which are established to address the above challenges; 3) the design of agri-food ecosystems involved in the above business strategies and described as a constellation of actors, practices they enact and technological means they adopt. Drawing on this integrated view of ecological sustainability work, we discussed the configuration of agri-food ecosystems for addressing the different emerging challenges, provide the theoretical and practical contributions of the study and introduce future research avenues.

Team Dynamics: Adaptation, Restoration, Communication, and Change

Session Moderator: **Eva Van Baarle**, *Netherlands Defence Academy*

ODC: **Improving Organizational Responses to Sexual Boundary Violations: A Model to Restore Team Dynamics**

Author: **Eva Van Baarle**, *Netherlands Defence Academy*
Author: **Steven Van Baarle**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Jan-Willem Weenink**, *Erasmus School of Health & Policy Management, Rotterdam*
Author: **Roland Bal**, *Erasmus U.*
Author: **Guy Widdershoven**, *Amsterdam UMC*

Studying and discussing boundary violations between people is important for potentially averting future harm. Organizations typically respond to boundary violations in retributive ways, by punishing the perpetrator. Interestingly, prior research has largely ignored the impact of sexual boundary violations and retributive dynamics on teams. This is problematic as teams provide an obvious setting not only to detect and discuss troubling behavior by peers, but also for learning how to prevent future harm. Therefore, in this study we explore team-level experiences regarding sexual boundary violations and organizational responses to these incidents. Drawing on an in-depth case study, our findings shed light on the profound negative consequences of a retributive organizational response to sexual boundary violations. Additionally, our findings point to the possibility of supporting teams to recover in the aftermath of these violations. The main contribution involves a model based on our data. It demonstrates how to improve organizational responses to sexual boundary violations, mitigate the negative impact of retributive dynamics, restore team dynamics, and enable teams to learn from these violations. This model extends prior research focusing on individual actions and outcomes regarding violations. Additionally, by connecting retributive and restorative organizational responses in one model, we extend the literature on restorative organizational responses to boundary violations.

ODC: **The Long-Term Impact of Short-Term Teams: A Longitudinal Analysis of Co-authorship**

Author: **Maritza R. Salazar**, *U. of California, Irvine*
Author: **Selena Livas**, *UC Irvine*

This paper draws attention to the longitudinal impact of interdisciplinary team formation on scientific productivity. We focus on a relatively inexpensive, short-term, intervention that aimed to re-organized local collaboration networks within one research university. Our study reveals how the university's sponsorship of problem-focused teams helps to destabilize collaborator networks and fosters the formation of new co-authorship ties. Membership in these "semi-formal" organizational structures had a long-term impact on investigators' collaboration and productivity. We use a multi-level, social network analysis of data from 4,433 publications, along with team membership and departmental affiliation data, as well as external ratings of the effectiveness for our 64 teams. We find that team size, prior relationships, and gender diversity are all positively associated with team level productivity. Looking further into dyadic co-publication ties, we find that a history of prior publication is consistently the strongest predictor of collaboration. However we also find a consistently positive effect for new ties between collaborators with a prior co-author in common. Lastly, we find that the effect of the semi-formal problem-focused teams drives co-production more than formal departmental units for just shy of 10 years.

ODC: **Team Change Adaptation: Effects of Planned and Improvised Team Processes**

Author: **Annie Eunhee Kim**, *U. of Nevada, Reno*

Despite considerable scholarly efforts to understand how teams effectively adapt to a team change, most of prior studies have focused on factors predicting short-term performance after change but have relatively examined team adaptation processes in a longitudinal setting. In this research, I explore important team characteristics (i.e., team goal orientations) that influence team performance during both the immediate and recovery phases of team change adaptation. To develop a richer theory of team adaptation, I pay particular attention to two types of adaptation processes (i.e., team planned and improvised processes) and theorize how they uniquely and complementarily influence team adaptive performance. Overall, this study explains how teams effectively manage and respond to a change event, which ultimately contributes to team effectiveness during and after the change.

ODC: **Changing Virtual Team Communication by After-action Review with Objective Data**

Author: **Sixiong Peng**, *CHUO U.*

As virtual teams become more prevalent, there is a need to improve their effectiveness. After-action review (AAR) is a promising method for improving teamwork, and virtual teams can leverage naturally accumulated communication data to enhance the impact of AAR. To explore this potential, I introduced a Communication Feedback Report (CFR) consisting of various objective communication indicators extracted from video record of remote discussion. I then conducted experiment comparing virtual teams that conducted AAR with CFR and teams without CFR. The result demonstrated that providing CFR increased problem awareness on communication, help teams interpret local communication features, and facilitate sharing problems in teams, which in turn significantly changed team communication while team cohesion and the performance of idea selection were not significantly improved. The study also revealed the relationship between communication features operationalized by objective data and communication perception, cohesion, and team performance in idea selection. I discuss the theoretical and practical contributions of the findings for studies on virtual teams, AAR, and team communication.

The rapidity and intensity of changes spurred by demographics, technology, COVID-19, supply chain practices, and war, among many others, require organizations around the globe to adapt and survive. Importantly, however, change does not have to be limited to fixing the wrongs and passively adjusting to the inevitable. In this symposium, we explore how change can be a positive force for a better future, and how organizations can leverage change management practices to bring out the best of the new normal using a positive organizational lens. The Positive Organizational Scholarship (POS) movement that started in the early 2000s seeks to understand organizational strengths rather than weaknesses as it focuses on positive characteristics, processes, and outcomes (Cameron et al., 2003). Rather than focusing solely on resolving problems, POS looks at change through an optimistic lens and sees it as a positive development that can advance organizations further, helping reach peak performance through strengths rather than just correcting failures. One such example of using a positive approach to change is the appreciative inquiry (AI) method. This unique method was conceived to help generate new ideas on optimal organizing (Cooperrider & Srivastva, 1987; Cooperrider & Whitney, 2005), allowing organizational stakeholders to identify their path forward by taking a strengths-based approach and highlighting capabilities to manage change. Consistent with this perspective, our symposium aims to understand the role of positive change in organizations. This collection of papers explores change processes on different levels of analysis and in different contexts, examining how change can contribute to well-being of organizations and their members, helping them to not only overcome challenges but create a better, brighter future.

Creativity and Innovation in Organizations and Markets

Session Moderator: **Ibrat Djabbarov**, *Cranfield School of Management*

OMT: **How Theorization and Institutionalization Co-evolve Over Time**

Author: **Ibrat Djabbarov**, *Cranfield School of Management*
Author: **Andrey Pavlov**, *Cranfield School of Management*
Author: **David Denyer**, *Cranfield U.*

In this paper we explore how peripheral actors accomplish change in mature fields over time despite their low resource base and marginal position within a field comprised of actors with diverse interests and issues. We examine how through processes of sensemaking institutional entrepreneurs grasp field arrangements, issues, and interests pertaining to different categories of actors and formulate actor specific theorizations. We show how institutional entrepreneurs formulate multiple theorizations to accomplish a systemic change in a field with diverse actors which they subsequently assemble into a coherent master theorization and consolidate different categories of actors to institutionalize new arrangements. By elaborating how theorization and institutionalization co-evolve over time, our research advances our understanding of how peripheral actors navigate and negotiate mature fields to accomplish new institutional arrangements.

OMT: **Unfolding The Consecration Process: The Mobilization of Rhetorical Strategies At The Semi-Periphery** ✈ 💻

Author: **Gabriela Luz Antibas**, *Insper Institute of Education and Research*
Author: **Charles Kirschbaum**, *Insper Institute of Education and Research*
Author: **Fabio Ayres**, *Insper Institute of Education and Research*
Author: **Frederic Clement Godart**, *INSEAD*

Previous research on the creative industries has established consecration—the fact of being recognized by relevant industry stakeholders—as a central phenomenon. Through consecration, creative producers become 'separated' and seen as special. In this paper, we argue that scholars have traditionally conflated two distinct phases: first, inclusion in the critical appraisal process, and second ultimate recognition. In contrast, we argue that the mechanisms underlying these two phases must be distinguished. Consequently, we advance a 'two-stage' process of consecration, whereby producers must first attain membership, and then achieve critical recognition. To exemplify this process, we designed an abductive study in which we look at how high-end clothing producers (i.e. fashion houses) in Brazil employ rhetorical strategies in social media to participate and be awarded in the country's main fashion week, Sao Paulo Fashion Week (SPFW). Brazilian fashion offers an appropriate setting, between the core of the top fashion capitals in Europe and the United States, and the periphery of less salient ones to explore consecration processes. For that purpose, we built a unique database comprising fashion houses' posts at Facebook timelines. We identify topics associated to the houses by adopting a topic modeling approach. We conclude by discussing the critical elements of each stage.

OMT: **Towards a Conceptualization of Multimodal Theorization**

Author: **Ines Kuric**, *WU Vienna*
Author: **Markus A. Höllerer**, *UNSW Sydney & WU Vienna*

Theorization is integral to the diffusion of novel ideas. While much effort has thus gone into understanding what makes effectively communicated theorization, little attention has been paid to its expression as means of communication and to semiotic resources beyond verbal means. Addressing this concern is crucial given the potential multimodality of theorized text and its potency for refining and expanding the scope of theorization. Drawing on social semiotic insights, we offer a model of effective multimodal theorization specifying how, and under which conditions, multimodal designs – as the conjunction of content and expression – are effective in processes of the diffusion of novel ideas. We outline how effective theoretical formulations operate in a corridor of suitable complexity, which is further specified by attributes of the context of the communicational situation. We develop propositions regarding the sets of such contextual attributes that contribute to one of three archetypical configurations of multimodal theorization – expository, balanced, and suggestive – and provide examples of our typology using multimodal texts from corporate annual reports, business media, and urban planning manuals. Our work has implications for research on theorization, contributes to the emerging line of multimodal organizational research, and offers up avenues for future scholarship in the field of organizations and management.

OMT: **Leadership, Stress, and Politics: Influences on Creativity and Innovation in Emerging Markets** ☯ ✈ 💻 ✋

Author: **Mir Dost**, *Al-Maktoum College of Higher Education, Dundee, Scotland*
Author: **Khalid Al.Qatiti**, *Faculty of Business, Sohar U., Oman*
Author: **Hussain Bakhsh Magsi**, *U. PUTRA MALAYSIA*

This research explores the moderating role of empowering leadership, job-related stress, and workplace politics on the link between employee creativity and innovation output. To test the hypothesized relationships, we used a questionnaire survey to nest the data from subordinates (n=388) and their supervisors (n=151) working for the emerging markets of Pakistan. And analyzed the data by using descriptive statistics and SmartPLS-SEM techniques. The data revealed a relationship between employee creativity and innovation output. The moderating role of empowering leadership and employee job-related stress further strengthened the relationship between employee creativity and innovation. However, the creativity of employees was not directed towards innovation if they were involved in politics. The managers can benefit from the findings: a) to enhance the abilities of creative employees for innovation by practising the role of empowering leadership; b) The extent to which employees display job-related stress and enhance their innovation; and c) to be aware of the inverse effects of creative employees' involvement in workplace politics on innovation. Although the previous research was well established on the link between creativity and innovation, we knew little about the factors that can strengthen/weaken this relationship. We believe that the findings are a small effort to solve the pieces of the puzzle in the literature.

Managing Corporate Impressions, Expectations, and Reputation

Session Moderator: **Naomi A. Gardberg**, *City U. of New York, Baruch College*

OMT: **Exploring the Real Effects of Fake News on Corporate Reputation**

Author: **Naomi A. Gardberg**, *City U. of New York, Baruch College*
Author: **Elanor Colleoni**, *U. of Milan*
Author: **Michael L. Barnett**, *Rutgers U.*

Fake news is a growing characteristic of the signaling environment with exponential growth due to the advent of social media and technology. What are its implications for corporate reputation and strategic management, which rely on accurate information to make key decisions? Drawing from signaling and communications theories, we examine the real effects of fake news on the construction of corporate reputations and the efficacy of corporate response strategies. Using an experimental design, we find that exposure to fake news negatively affects corporate reputation evaluations. In addition, signaler credibility, in terms of the framing of the news source, and reputation framing, in terms of the capability and character dimensions of corporate reputation, moderate the relationship. As expected, fake news has a greater effect on corporate reputation when it is cued to originate from a prestigious news source than other sources. Counter to expectations, though, fake news about firm capability has a greater effect on evaluations than fake news about firm character. In contrast to ignoring fake news stories, firms that responded with either a denial strategy or a denial and accommodative response strategy mitigated fake news' negative effect on their reputations. We close by discussing the implications for reputation theory, fake news research, and society.

OMT: **Speak Softly and Use a Big Stick: Decoupling Symbolic and Substantive Aggressiveness** 💻

Author: **Izuchukwu Evans Mbaraonye**, *U. of Nebraska, Lincoln*
Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*
Author: **Varkey Titus**, *U. of Nebraska, Lincoln*

We leverage and extend the concept of decoupling to the impression management (IM) literature to argue that decoupling does not simply allow firms to manage impressions—rather, decoupling is an IM tactic. We examine this argument within the context of corporate political activity (CPA), which entails activities meant to sway the government to a focal firm's advantage. While CPA may offer a variety of benefits to a firm, it may also provoke public ire due to its reputation as an aggressive and anti-competitive activity. We therefore propose that as firms invest in CPA, they are more likely to engage in competitively aggressive market-based behaviors while concurrently using less aggressive rhetoric—that is, firms decouple their substantive actions from their symbolic rhetoric. We then examine the contingent nature of these behaviors based on a firm's social approval, and the extent of institutional ownership concentration. We test our hypotheses on a sample of S&P 1500 firms and find support for our hypotheses.

OMT: **Expectations (Un)Fulfilled: Reconciling Outcome & Behavior-based Reputations in Football Clubs** ☯ ✈ 💻

Author: **Owen Nelson Parker**, *UT Arlington*
Author: **Spencer James Fraseur**, *U. of Texas At Arlington*
Author: **Ipek Koparan**, *Bentley U.*

For many organizations, stakeholder support is critical for future revenue opportunities and survival. Organizations often possess two distinct types of reputation that actively shape managerial discretion and stakeholder support – those for their achievements (outcome-based reputation) and those for their behaviors (behavior-based reputation). We seek to answer lingering questions in management research regarding the fulfillment of reputation-based expectations, examining how expectation fulfillment "today" shapes stakeholder support "tomorrow". We predict and examine how an organization's fulfillment of an outcome- and behavior-based reputation drives stakeholder support, and whether fulfilling one or the other set of expectations arising from an outcome-based or behavior-based reputation has a stronger effect on stakeholder support. Using quantile regression, we measure this at different points along the continuum of support. In the context of European football (soccer) clubs, using a sample of 6,371 club-seasons across 740 clubs, we find that fulfillment of match performance reputation (outcome) outweighs fulfillment of recruitment style reputation (behavior) in predicting future match attendance (stakeholder support), and that this pattern holds no matter the base level of attendance. We conclude by discussing the critical implications of these findings for research on reputation and strategic decisions and discuss nuances that could manifest differently across various contexts.

OMT: **False Signaling – A Cross-disciplinary Review and a Research Agenda** 💻

Author: **Norbert Steigenberger**, *Umeå School of Business and Economics, Umeå U.*

False signaling is an omnipresent phenomenon that damages the efficiency of markets. Despite this empirical relevance, our knowledge of what false signaling specifically is, when it occurs, and which remedies exist are scattered over different fields and little conceptual work has been done to integrate false signaling succinctly into signaling theory. This both hampers progress in the development of a central theory in management and related disciplines and restricts our ability to explain a highly problematic everyday phenomenon. To resolve this issue, this paper provides a cross-disciplinary review on false signaling by organizations and organizational agents. I outline how false signaling has been theorized, and what the reasons, consequences, and remedies for false signaling are, based on our current knowledge in different disciplines. I then outline where theory work is needed to fully incorporate false signaling into signaling theory.

Examining Collaboration and Cooperation in Today's Organizations and Institutions

Session Moderator: **Francisco Brahm**, *London Business School*

OMT: **Reciprocity and Large-scale Cooperation: Evidence from the Field**

Author: **Francisco Brahm**, *London Business School*
Author: **Christoph Loch**, *Cambridge Judge Business School*
Author: **Cristina Riquelme**, *Economic department, U. of Maryland*

Direct reciprocity—cooperating with others if they have cooperated in the past—catalyzes cooperation in dyads but may be ineffective when it comes to sustaining large-scale cooperation. In contrast, indirect reciprocity—cooperating with others if they have a cooperative reputation, gained from their past cooperation with third parties—can sustain large-scale cooperation in humans but is more complex and subtle and could therefore be unreliable. Thus, the relation between reciprocity and large-scale cooperation is yet to be fully understood. This field study analyzes cooperation of workers volunteering to help colleagues and, focusing on the growth of the group of volunteers, it documents two findings: (1) indirect reciprocity does not support large-scale cooperation as a result of decreasing returns in the reputational benefits that volunteers receive; and (2) contrary to received wisdom but consistent with recent theoretical models, modifying the population structure (via a pre-registered field experiment), so that direct reciprocity is boosted, is conducive to large-scale cooperation. Our results add experimental evidence from the field to a lab-dominated literature and may generalize to additional settings because volunteering is widespread and important in society.

OMT: **Building Solidarity in Crisis: Why and How Emergent Groups Organize Cross-boundary Collective Action**

Author: **Ralph Hamann**, *U. of Cape Town*
Author: **Jenny Soderbergh**, *U. of Cape Town*
Author: **Annika Surmeier**, *U. of Cape Town*
Author: **Christine Fyvie**, *U. of Cape Town*
Author: **Thanyani Ramarumo**, *U. of Cape Town*
Author: **Mandy Rapson**, *U. of Cape Town*
Author: **Ashley Newell**, *U. of Cape Town*
Author: **Nadia Sitas**, *U. of Stellenbosch*

The literature on emergent groups, social identity, and solidarity suggests that emergent groups commonly focus on their own place-based communities, but we witnessed the coordinated, widespread enactment of solidarity across historically divided communities during the Covid-19 crisis in South Africa. To address this puzzle, we ask, Why and how do emergent groups organize collective action across community boundaries? Based on our analysis of documents and interviews with activists from disparate, historically divided communities in South Africa, we develop a model of how activists proactively accomplish the framing and enactment of solidarity in response to crisis. Our contributions are in explaining why and how activists foster cross-community solidarity in a crisis as an organizing accomplishment, establishing an extensive network across diverse suburbs with both pre-existing and new social capital, and how these efforts create tensions that in turn shape this organizing. We identify fertile areas for future research on framing, emotions, and tensions in collective action responses to crises.

OMT: **Working With the 'Enemy': Space Collaboration Amidst Geopolitical Rivalry**

Author: **Thomas John Fewer**, *Georgetown U., McDonough School of Business*
Author: **Dali Ma**, *Drexel U.*
Author: **Diego Coraiola**, *U. of Victoria*

Although scholars have long noted the strategies to manage the regulatory, technical, and cultural barriers to cross-border collaborations, knowledge of the processes that facilitate collaboration between organizations embedded within geopolitical rivalry is scanty. To understand the mechanisms that promote this important, yet understudied form of collaboration, we conduct a historical case study of the Apollo-Soyuz Test Project, a collaboration between the space programs of the United States and the Soviet Union during the Cold War. Our study demonstrates that the antagonistic governments attempted to restrict interactions between the organizations to a more formal, 'supervised' space, which nonetheless reinforced the regulatory, technical, and cultural barriers. Noting the limitations of the politically controlled space, organizational members gradually developed a more informal, 'free' space, built on open exchange, common ground, and interpersonal trust. We observe the interplay of these spaces, including the boundary work to create and maintain the autonomy of the free space outside of political control, and the translation work to exchange problems and solutions between these spaces and overcome the politicized barriers to collaboration. We advance the literature on cross-border collaboration by showing how free spaces can be used against the divisive forces of geopolitical rivalry to support successful partnerships.

OMT: **Getting into the Vibe: Affective Temporality and Collaborative Creativity in Recording Studios**

Author: **Christina Andrea Lüthy**, *Lund U.*
Author: **Silviya Svejenova**, *Copenhagen Business School*

Although the relationship between time and creativity has fascinated scholars for centuries, little attention has been paid to the temporality of creative work, particularly in collaborative settings. In this paper, we turn to the recording studio as a particularly useful context to understand different feelings of time shape collaborative creativity. We mobilize the concept of affective temporality to account for how different affectively charged temporal durations influence creative fluency and output in collaborative creativity. Our empirical study shows how collaborative creativity in the recording studio is patterned around four affective temporalities: immersive time, performance time, waiting time and play time. We elaborate how an attuned navigation of these affective temporalities in temporal work enables both creative fluency and output in collaborative creative work and produces emotional energy which enhances the collaborative process. In the discussion, we unfold the implication of our findings for our understanding of time in creative work and in relation to how temporal work tinkers with temporal experiences.

Power, Control, and Resistance in Repressive Environments

Session Moderator: **SM Musa**, *Erasmus U. Rotterdam*

OMT: **What if Tomorrow Never Comes? Chimeric Agency and Total Institutions in the Postmodern Era**

Author: **SM Musa**, *Erasmus U. Rotterdam*
Author: **Pursey Heugens**, *Rotterdam School of Management, Erasmus U.*

Drawing primarily on ethnographic fieldwork extended over 48 months in the world's largest refugee camp, Kutupalong-Bangladesh, we theorize the organizing dynamics and the institutional conditions of the camp and how they affect the lives of the inmates and their use of agency. We show that total institutions like refugee camps are now more driven by an identity motive than by a nation building motive that gave rise to such institutions at the first place. Through identity-control, today's total institutions make it possible to control both 'body' and 'mind' of the problem people of society. We show how these processes unfold over time at Kutupalong which evolved from a fairly open structure to an increasingly total institution, diminishing the agency of the refugees substantially and threatening their individual and collective dignity severely. From the unfolding processes we show that identity-based control is made possible through a welfare-state-like organizing that enables 'chimeric agency' – a tool to control inmates' behaviors to sustain the integrity of the camp.

OMT: **Building Resilience in Times of Rising Authoritarianism: Civil Society Organizations In Hungary**

Author: **Myrto Chliova**, *Aalto U. School of Business*
Author: **Farah Kodeih**, *IESEG School of Management*

Our paper explores how civil society organizations can effectively build resilience in the face of rising authoritarianism. Through a field study of progressive Civil Society Organizations (CSOs) in Hungary, we identified four types of resilience: operational, emotional, frame, and network resilience. Our data indicated that all four types of resilience increased across the field, but we also noted variations in the approaches used by single-issue/service provision organizations compared to multiple-issue/advocacy organizations. These differences were particularly pronounced for dimensions that extended beyond the organization and involved engagement with external stakeholders, such as frame resilience with the public and network resilience with other peer organizations. Our findings extend current research on the relationship between adversity and resilience, and provide valuable insights into the challenges currently faced by civil society organizations operating in repressive environments.

OMT: **Ad Extorquendum Veritatem: Denunciations at Inquisitorial Trial in the 14th Century**

Author: **Jose Luis Estevez**, *Väestöliitto*
Author: **Davor Salihovic**, *Masaryk U.*
Author: **Stoyan Vassilev Sgourev**, *New Bulgarian U.*

Denunciation furthers social control by providing access to hard-to-reach sections of social networks. We reconceptualize "voluntary" and "coercive" regimes of denunciation in terms of coercive pressure: the credible threat of use of violence by authorities. This allows us to articulate a processual approach to denunciation as situational in nature, adapting to shifting circumstances, rather than as a propensity characteristic of a regime. We test this approach using data from the trial of Waldensians in Giaveno, Italy, in 1335, headed by the inquisitor Alberto de Castellario. A dynamic network actor model attests that coercive pressure increases the rate of denunciation, as initial resistance gave way to cooperation, and decreases the social distance between denouncer and denounced, shifting the denunciation target from fellow villagers to congregation fellows and kinship members. The motivation to denounce was mixed in nature, as deponents simultaneously disclosed and concealed, protecting close ones until they could no more. The analysis implies that coercive regimes may be more effective instruments of social control than voluntary regimes.

Hiring the Best: Consequences for Organizations and Individuals

Session Moderator: **Claudia Gabbioneta**, *U. of York*

OMT: **Intra-and Inter-Group Dynamics and the Market for Quality: Examining Mobility of Elite Professionals**

Author: **Claudia Gabbioneta**, *U. of York*
Author: **John Mawdsley**, *HEC Paris*
Author: **Daniel Muzio**, *U. of York*

Knowledge-based organizations rely on the knowledge, skills, and relationships of their talented workers to build their competitive advantage. This creates incentives to recruit "the best and the brightest" professionals in their respective fields, with the expectation of improved performance. Prior research, however, challenges the assumption that recruiting talented workers necessarily improves group and firm performance, and has explored several key contingencies affecting this relationship. In this study, we investigate how intra- and inter-group factors moderate the relationship between recruiting a talented individual into a group and that group's quality-performance. Using a longitudinal panel dataset of the largest UK corporate law firms between 2000 and 2017, we show that while recruiting an elite professional into a group (legal practice) generally reduces group quality, this negative effect is weaker when the average quality of the incumbent professionals in the group is higher, and stronger when the organization comprises a higher number of other high-quality groups. Our study contributes to the strategic human capital, employee mobility, and team dynamics, literatures and has practical implications for managers.

OMT: **How Hiring Former Founders As Employees Shapes Incumbent Firms' Creative Performance**

Author: **Hangjun Cho**, *INSEAD*

Although firms searching for novel and useful information often hire people with entrepreneurial experiences, little research has addressed how such hiring will affect incumbent firms. In this paper, I explore when and how hiring ex-founders can hurt or benefit the hiring firm's performance. Drawing on the inter-organizational fit and the entrepreneurial identity literature, I theorize that the influence of the newcomers with entrepreneurial experiences may be overly amplified to the incumbents, yet the information they bring may not be equivalently 'fit' because of the idiosyncrasy of their expertise. Examining firms' hiring decisions on entrepreneurship-experienced individuals in the global high-end fashion industry from 2001 to 2019, I find that fashion firms that recently hired employees with firm-founding experiences yield a negative return for their creative performance. However, this effect is mitigated when a) the hiring firm holds a strong identity by having its own founder in its operation, and b) a more hierarchical structure of its design team presents. Overall, the results suggest that ?rms can suffer from hiring employees with entrepreneurial experiences, but they can buffer this effect with organizational capabilities. I discuss implications with additional experimental evidence supporting the suggested mechanisms.

OMT: **Breaking the Mold: Using Transformational Transitioning to Overcome Typecasting in Feature Films**

Author: **Xian Xu**, *TUM School of Management, Technische U. München*
Author: **Oliver T. Alexy**, *Technical U. of Munich*
Author: **Hamid Mazloomi Khamseh**, *Rennes School of Business*
Author: **Dilan Aksoy Yurdagul**, *ESCP Business School*

Candidates in labor markets are often advised to assume a simple, focused identity, which means specializing in a single or few categories. As typecasts, such categorical specializations become a mobility barrier for those aiming to diversify, as evaluators associate membership in one category with distinct skills and talents—and deficiencies in other categories. In this study, we look at a novel means of trying to escape a typecast: transformational transitioning, that is, candidates transitioning between categories also changing their identity by altering the features that bind them to the original category and sending out signals of competence and commitment to a new one. We test if applying transformational transitioning enhances candidates' chances of successful categorical diversification by looking at the odds of candidates who transition between genres to receive an Oscar nomination. We find that transformational transition increases the odds of successful categorical diversification, but primarily for male lead actors.

How Professionals Think and Work in Today's World

Session Moderator: **Ece Kaynak**, *Bayes Business School (formerly Cass), City, U. of London*

OMT: **"It Takes More than a Pill to Kill": Professional Self-Control in the Opioid Epidemic**

Author: **Ece Kaynak**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*

How professions regulate misconduct within their own ranks has come under increased scrutiny. Within the medical profession, the question of the efficacy of self-control has become especially pertinent considering the opioid crisis, where physicians' over-prescribing behavior has been linked to overdose deaths. Existing theory suggests that professions may be lenient towards misconduct behind closed doors, but will discipline members guilty of misconduct when their behavior publicly casts the profession in a negative light. However, this latter insight has not been empirically tested. To understand how a profession regulates misconduct when the misconduct attracts increased public scrutiny, we gained access to a U.S. State's Medical Board's internal deliberations regarding how to discipline physicians guilty of overprescribing opioids. We found that even in the most egregious cases of physicians overprescribing opioids, the Board allowed most guilty physicians to keep their medical licenses. Our analysis uncovers how this leniency was produced in spite of heightened legislative and media attention on addressing the opioid epidemic in the State. We show that leniency was produced through three mechanisms: the bureaucracy within which the Board was enmeshed, a professional belief in rehabilitation, and personal feelings of sympathy towards offending physicians.

OMT: **Professional Identity and Role Transition in Times of Adversity**

Author: **Corentin Curchod**, *U. of Edinburgh*
Author: **Grégory Reyes**, *IAE-CEREGE, U. de Poitiers*

The literature on role identity and identity work has explained how people in occupations experience identity tensions when their occupational role changes, and how they engage in identity work to re-establish a sense of coherence. Role change proves especially challenging for professionals, as their roles tend to be more rigidly scripted and more intertwined with their self than for non-professionals. Professionals are nevertheless likely to experience role change, in particular when they are mobilized to respond to crises. Existing literature has mainly focused on incremental role change that takes place during work transition, which is of limited help in explaining identity work in situations of turmoil. The objective of this paper is to investigate how professionals maintain a coherent sense of who they are in contexts of unexpected change in role expectations. We address this issue by using interview data gathered from pharmacists in France before and during the covid-19 pandemic. We found that their professional identity encompassed a hierarchy of role identities, and that the pandemic, by giving pharmacists the role of being the main point of contact with the population regarding healthcare, led to identity tensions and a rapid recalibration between their different roles. Our findings contribute to role identity literature by showing how hybrid roles may serve as a buffer between professional identity and sudden role change. They also shed light on the dynamics between professional identity, role structure, and moral judgment.

OMT: **Connecting with the Public: How Professionals Accomplish Relational Authority in Staged Performances**

Author: **Maximilian Heimstädt**, *Weizenbaum Institute*
Author: **Katharina Berr**, *Weizenbaum Institute*
Author: **Sascha Friesike**, *Weizenbaum Institute*
Author: **Tomi Koljonen**, *U. of Liverpool*

The preconditions for professional authority are changing. To accomplish authority, many professionals today need to actively develop more attentive relations with their stakeholders. In this study we examine how professionals can accomplish such relational authority over the public during staged performances. The research context of our study are science slams, events at which scientists take the stage to present their research to non-professional audiences. Analyzing video-recordings of more than 300 science slam performances, we found that the professionals on stage accomplish relational authority through two consecutive and closely linked steps. They first alienate the public by making protective claims to their professional authority. Subsequently, they relate with the public by making claims to a shared social world. Our study contributes to research on the changing nature of expert work, by unpacking how professionals can actively forge more meaningful connections with the public as an important but mostly overlooked stakeholder group.

OMT: **Validating Feeling Rules to Communicate Client Role Expectations in Patient-Provider Encounters**

Author: **Shibashis Mukherjee**, *Ahmedabad U.*
Author: **Clayton Thomas**, *Iowa State U.*

In professional-client relationships (such as those between healthcare providers and patients), an important underexplored topic concerns the emotional, symbolic strategies that professionals use to communicate their role expectations for clients. Interviews with healthcare providers and ethnographic observations of their interactions with terminally ill patients in a free health clinic in India show that providers validate a feeling rule to usher patients into the sick role. Providers validate the feeling rule of "it is appropriate to hope for a cure" to communicate their expectations that patients should want to get better and continue to seek treatment from physicians. Our study expands the social-symbolic perspective by identifying role expectations and feeling rules as targets of action and by linking relational work to emotion work through a holistic incorporation of emotional labor theory.

Tasks and Routines in Contemporary Organizations and Institutions

Session Moderator: **Thomas Richard Gill**, *U. of South Florida*

OMT: **An Ecological Model of Task Disruption: The Impact of Partial Automation of Jobs through AI**

Author: **Matissa Hollister**, *McGill U.*
Author: **Arvind Karunakaran**, *Stanford U.*
Author: **Lisa Ellen Cohen**, *McGill U.*

In this paper, we build on a relational perspective on tasks to develop an ecological model of task disruption that unpacks the subtle yet far-reaching impacts of task alterations as they reverberate through a web of interconnections within and across organizations. Tasks are central to organizational life, and yet they have been primarily theorized as atomistic and interchangeable plug-and-play components. We take a relational perspective of tasks as embedded into and playing an essential role in structuring a complex web of relationships among people, jobs, and roles in organizations. We argue that this relational perspective is particularly important for understanding the full consequences of task alterations occurring with the implementation of AI in organizations. We theorize first-order changes to tasks in organizations with the introduction of AI technologies, followed by how responses to initial disruptions trigger second-order effects, as additional tasks are shifted in response through a process that we call "task vacancy chains." Our ecological model also unpacks how these task disruptions will have broader consequences for jobs, job incumbents, and the organization's social fabric. We discuss the theoretical contributions of this paper and conclude by proposing directions for research on task disruption and its impacts.

OMT: **The Three Worlds of Task Complexity**

Author: **Thomas Richard Gill**, *U. of South Florida*
Author: **Thomas Gill**, *U. of South Florida*

The task complexity construct presents researchers with a quandary. While it appears useful on the surface, repeated attempts to define it rigorously have failed to gain traction in the broader research community. Our paper proposes a potential path forward by showing how many issues in past task complexity research can be reconciled by framing the construct according to Popper's 3 worlds: the world we experience, the world of human artifacts, and the "real world". Using a common framework that treats task complexity as a latent construct residing between sources and outcomes, moderated by both task familiarity and task discretion, separate models for each world are developed. The framework defines experienced complexity as occurring in the mind of the task performer while performing a single task instance, intrinsic complexity as a function of the internal characteristics of the problem space used to perform a bounded set of task instances, and extrinsic complexity as the ruggedness of the fitness landscape in which the task is performed. It then examines interactions between worlds, identifies potential research implications, and presents a hypothetical example of how the model might be applied to the task of salary determination.

OMT: **Theorizing the Interplay of Agency and Situational Novelty in Routine Enactment**

Author: **Dionysis Dionysiou**, *ALBA Graduate Business School, The American College of Greece*
Author: **Haridimos Tsoukas**, *U. of Cyprus / U. of Warwick*
Author: **Kathleen M. Sutcliffe**, *Johns Hopkins U.*

A considerable body of empirical studies in routine dynamics research suggests that the interplay between agency and situational novelty is key to understanding the dynamics of stability and change in routine enactment. In this paper, we unpack the agency-situational novelty interplay by stressing the role of agents' experience (both situated and historical) to propose an integrative, processual-cum-integrative model of routine enactment, drawing on the work of the founding fathers of pragmatism (primarily Dewey but also James and Mead). By bringing experience into routine dynamics, particularly the interplay between cognition, habit, and emotion, as well as the temporal nature of agency, our work advances our understanding of the dynamic nature of routines as processes, always in the making, and highlights the essential role of participants' lived experience in shaping responses to novelty and the unfolding of routines in time.

OMT: **Organizational Routines and the Capacity for Trustworthiness**

Author: **Robert Hurley**, -
Author: **Chris Long**, *St. John's U., New York*

In this article we extend research on an organizational capacity for trustworthiness (CFT) by exploring how this capability is constituted via organizational routines. We present a model for how firms enact this capability in multi-stakeholder environments and outline how different manifestations of a CFT can exist as a result of a path dependent evolution of organizational routines. We also show how different paths to the embedding of routines can influence the ways in which a firm is trustworthy and untrustworthy to stakeholders.

Understanding Employee Activism

Presenter: **Raquel Renee Kessinger**, *Massachusetts Institute of Technology*
Presenter: **Brayden G. King**, *Northwestern U.*
Participant: **Grace Augustine**, *School of Management, U. of Bath*
Presenter: **Forrest Briscoe**, *Pennsylvania State U.*
Presenter: **Winslow Ariel Robertson**, *IESE Business School*
Presenter: **Alexandra Rheinhardt**, *U. of Connecticut*
Discussant: **Mary-Hunter McDonnell**, *The Wharton School, U. of Pennsylvania*

This symposium showcases recent research projects on when and how employees engage in activism. Employees are engaging in social movements in and around their organizations using both persuasive and disruptive tactics to oppose their companies' practices and policies and to create change. We present new insights into how employees use internal and external digital communication tools to engage in activism. We also examine factors that promote or discourage employee activism, including gender, race, past performance, organizational culture, and occupational norms. Finally, we examine the career paths of occupational activists, including how their backgrounds may change as positions are institutionalized. We contribute to social movement theories including resource dependence, opportunity structures, perceptions of risk, and organizational change as well as the literatures on occupations and employee voice.

Discussant: **Joerg Sydow**, *Freie U. Berlin*

Emerging scholarship positions organizing as a critical, yet undeveloped aspect of navigating GSCs (Gümüsay, Marti, Trittin-Ulbrich & Wickert, 2022), with Biggart (2016: 1385) noting; "many of the problems that face global societies are organizing problems, problems that deal with systems, interfaces, culture, networks, institutions, and motivations in all their complexity – exactly the issues that need elucidation". In addition, in order to enhance not just organizational but also societal outcomes over the longer time, it is argued that time should be at the center of organizational theorizing (Bansal & DesJardine, 2014). Time and temporality are seen as fundamental (if underdeveloped) aspects of scholarship on sustainability and GSCs. From a development perspective, sustainability is viewed as an ongoing process (Reinecke & Ansari, 2015), aiming to secure intergenerational equity as an outcome. Given its processual nature, it is framed as involving long future time horizons (Bansal & DesJardine, 2014), with ambiguous distant undertones (Augustine, Soderstrom, Milner, & Weber, 2019; Hernes & Schultz, 2020). In addition, the centrality of time for sustainability and GSCs is foregrounded by their explicit future focus (albeit entangled with the past and present in various ways), coupled with the urgency frequently ascribed to them. It is precisely this urgency which is leading scholars to call for a rethink of current paradigms of organizing if we are to achieve more sustainable solutions (Pedersen, Lüdeke-Freund, Henriques & Seitanidi, 2020). In this symposium we bring together several contributions from leading scholars to consider organizing for sustainability and GSCs from the perspective of time and temporality, aspects of which remain significantly under-conceptualized. In so doing, we explore the opportunities for more novel theorizing and we call attention to possible future research avenues for organization and management scholars seeking to make academic, as well as practice, policy and societal contributions.

Sustainability as Culture: A Dialogue on 'Big S' Sustainability and Organizations

Organizer: **Jodie Koh**, *Northwestern Kellogg School of Management*
Organizer: **Klaus Weber**, *Northwestern U.*
Panelist: **Bobby Banerjee**, *Bayes Business School (formerly Cass), City, U. of London*
Panelist: **Andrew J. Hoffman**, *U. of Michigan*
Panelist: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*
Panelist: **Majken Schultz**, *Copenhagen Business School*

The symposium explores the intersection between culture and sustainability in organizations, through a panel discussion among four distinguished scholars that work at this intersection. The premise is that while corporate sustainability is becoming increasingly mainstream and important, organizational sustainability initiatives are often partial, uncoordinated and ineffective, because they stay at the level of adopting specific practices and technical solutions without changing the broader context of corporate practice. The panel explores the idea of 'sustainability as culture' and culture change, a more encompassing translation of sustainability into all dimensions of organization that may be required for organizations to become continuous engines of a sustainable future. Panelists draw on research on institutions, organizational and societal culture, temporality and postcolonial theory to revisit fundamental questions and identify research agendas.

Panelist: **Dennis Schoeneborn**, *Copenhagen Business School*
Panelist: **Jean Siobhan Clarke**, *EMLYON Business School*
Panelist: **Piotr Makowski**, *Queen's School of Management, Queen's U. Belfast*

This Symposium aims to cast light on the performativity of rhetoric. If conventional wisdom considers rhetoric as an instrument of persuasion, we wish to advance the scholarly discussion on particular capacities of rhetoric. That is, the capacity of rhetoric to transform meaning, even meaning that is taken for granted, by facilitating theorization. And, the capacity of doing so surreptitiously. In fact, rhetoric manifests not only in its most obvious forms—in spoken and written language, where we might be trained or attentive to recognize it or spot it—but it can also appear in the absence of words, as well as in images, gestures, and artifacts like monuments or sculptures, where we are not too accustomed to notice it. Starting with an overview of what we mean by performativity and rhetoric, we wish to draw insights from panelists and the audience to refresh our understanding of how important is to study rhetoric for organization and management scholars, how to study it, and how to assess its performativity. To push the agenda of this Symposium, we will benefit from the insights, knowledge, and expertise of various experts who have attended to different and manifold manifestations of rhetoric and have witnessed different and various effects. The goal is to renew our understanding of how central to management is the study of rhetoric.

Third-party evaluations -- such as rankings, awards, and aggregated consumer reviews -- have grown in influence over the last decades. This change has opened several important avenues of inquiry; yet, our understanding of how third-party evaluators impact markets remains nascent. One major knowledge gap involves understanding the complications that arise as evaluators proliferate and organizations increasingly receive multiple evaluations from different evaluators. In this symposium, we compile four different empirical studies using different contexts and methods to shed light on the complexity created by heterogeneous external evaluations. Through this symposium, we hope to build awareness of the unique dynamics of markets with multiple evaluators, as well as the unexpected consequences of third-party evaluations.

Workers and Green Initiatives

Session Moderator: **Miriam Kurth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

ONE: **Use or Lose: The Subtle Effect of Corporate Social Responsibility on Workers' Psychological Capital**

Author: **Miriam Kurth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Increasing uncertainty in the labor markets requires a rethinking of future-proof and sustainable workforce management. Previous micro-CSR research has found that employees' perceived Corporate Social Responsibility (PCSR) influences positive behaviors and attitudes. However, there is a lack of awareness of the subtle influences of CSR as a contextual corporate factor on the psychological state of individual beneficiaries beyond the directly intended effects. We draw on social exchange and deontic justice theories to analyze the relationship between PCSR and employees' Psychological Capital (PsyCap). We also account for the under-researched nuances of CSR by distinguishing between perceptions of internally and externally oriented CSR. At a time when employees are increasingly demanding, we examine the moderating influence of their level of psychological entitlement (PE). Survey data from 1,079 employees in over 400 firms in Germany confirm the significant effect of PCSR on PsyCap, which PE moderates significantly. Contrary to our hypothesis, perceptions of externally oriented CSR influence PsyCap more than internally oriented CSR. Our results do not only contribute a part to closing research gaps. We provide practitioners with the awareness to actively use the positive side effects of CSR. Otherwise, companies lose out on the subtle, less obvious benefits associated with CSR activities.

ONE: **Acting Pro-environmentally Friendly: How to Communicate Organizational Goals**

Author: **Eva Straus**, *U. of Vienna*
Author: **Kerrie Unsworth**, *U. of Leeds*
Author: **Christian Korunka**, *U. of Vienna*

More and more organizations try to motivate employees to act in an environmentally friendly way. With two pre-studies and a longitudinal experimental study design, we investigated how organizations should frame goals to encourage employees to engage in pro-environmental behavior (PEB). An intrinsic framing (e.g., PEB contributes to the preservation of the environment) is usually considered to perform best, but in workplaces extrinsic motivators are widespread. We therefore tested an extrinsic fit-based alternative to an intrinsic framing by investigating whether a self-concordant framing that fit personal values enhanced employees' PEB. Moreover, given that the success of extrinsic framed goals is more dependent on the environment, we examined whether organizational pro-environmental support aided the extrinsic framing. Drawing on a pre-registered experimental study that is properly powered to contribute to the PEB and SDT literature, we randomly assigned 1712 participants to four groups that received either a) intrinsic reasons, b) extrinsic reasons, c) only information, or d) nothing. Using a latent change score model for data analyses, our results show that self-concordant reasons do not have a direct effect on increase in PEB but extrinsic reasons lead to a significant higher increase in PEB than intrinsic reasons or only information. Perceived organizational pro-environmental support has a direct positive effect on increase in PEB. Social norms and implications for organizations and theory are discussed.

ONE: **Shaping Employee Green Initiative. The Role of Corporate Entrepreneurship Climate**

Author: **Aldona Joanna Glinska-Newes**, *Nicolaus Copernicus U.*
Author: **Dagmara Lewicka**, *Nicolaus Copernicus U.*
Author: **Beata Glinka**, *U. of Warsaw*
Author: **Anne Keränen**, *U. of Oulu*
Author: **Yusheng Fu**, *Nicolaus Copernicus U.*

Employee green behavior (EGB) is considered a significant determinant of the successful implementation of pro-environmental policies and practices in business. In particular, employee initiative and creativity, i.e. green behaviors beyond 3R (recycling, reducing and reusing), are important in this regard. This paper aims to investigate antecedents of employee green behaviors that go beyond 3R (EGB beyond 3R). The proposed conceptual model links green human resource management (GHRM) and EGB beyond 3R, while corporate entrepreneurship climate (CE climate) mediates the link. The model was tested in a quantitative study conducted in Poland on a sample of 1,228 employees. The results suggest that the relationship between GHRM and EGB beyond 3R is not direct but entirely mediated through three dimensions of CE climate: environmental proactiveness and transparency, work discretion and stakeholder salience. The study also suggests that the mediating role of environmental proactiveness and transparency is stronger than that of work discretion and stakeholder salience, and the mediating role of work discretion is stronger than that of stakeholder salience. The study provides new insights concerning categories of EGB and its antecedents; it also sheds new light on GHRM and CE climate, and specifically their role in encouraging employee green behaviors.

ONE: **Fostering Pro-Environmental Behavior at Work: A Self-Determination Theory Perspective**

Author: **Matus Maco**, *Hyundai Engineering*
Author: **Jimin Kwon**, *Yonsei U.*

With a growing corporate interest in pursuing public goods, numerous firms today endeavor to practice corporate social responsibility. Utilizing a multilevel structural equation modeling approach, we investigated the topic of employees' pro-environmental behavior, contributing to the growing literature on 'green' issues in the workplace. We incorporated self-determination theory to examine how individuals' perceptions regarding their corporate environmental policies reflected in firm-level green psychological climate influence their environmental-specific self-regulation, and whether support of autonomy, relatedness, and competence psychological needs moderates this relationship. The relationship between environmental-specific self-regulation and employees' engagement in pro-environmental behavior was also further explained. Analysis of the data from 649 employees working in 37 major South Korean companies revealed that firm-level green psychological climate is positively related to employees' environmental-specific self-regulation and that environmental-specific self-regulation is also positively related to their pro-environmental behavior. Moreover, while we found that the positive association between firm-level green psychological climate and employees' environmental-specific self-regulation was stronger when they had a higher level of relatedness need satisfaction, interactions between firm-level green psychological climate with autonomy and competence need satisfaction did not demonstrate any significant effects. Theoretical and practical contributions together with suggestions for related future research are discussed as well.

ONE: **Ethical Leadership as a Determinant of Green Service Innovative Behavior and Competitive Advantage**

Author: **Ali NAWAZ Khan**, *School of Economics and Management Hubei Engineering U.*
Author: **Zhang Hui**, *School of Economics and Management Hubei Engineering U.*
Author: **MUHAMMAD ALI**, *a: SEM, Dongguan U. of Tech., Dongguan; b: School of Mgt, USTC, Hefei, China*
Author: **Naseer Abbas Khan**, *U. of Sargodha*

Because of growing industry awareness of environmental preservation, employee green service innovative behavior (GSIB) and competitive advantage have grown to be significant performance factors for tourism organizations. This study examined how and when the ethical leader (EL) influences the GSIB and competitive advantage of hotel workers using the natural resource-based view (NRBV). This research utilized path analysis to evaluate a moderated mediation model after collecting data from hotel workers and their supervisors. Based on the study results, EL has a positive association with GSIB and competitive advantage in the hospitality industry, which is mediated by green intellectual capital (GIC). The results also demonstrated that proactive environmental strategy (PES) improved the indirect effect of EL on GSIB via GIC. Unexpectedly, these indirect effects had no effect on competitive advantage at the various levels of PES. The implications for hospitality literature and practice are discussed.

Paradox, Tensions, and Ambidexterity in Corporate Sustainability

Session Moderator: **Francois Labelle**, *UQTR*

ONE: **Monitoring the Dynamics of Tensions in an Industrial Symbiosis: A Paradox Perspective**

Author: **Francois Labelle**, *UQTR*
Author: **Aliénor De Rouffignac**, *U. du littoral*
Author: **Pierre-Olivier Lemire**, *UQTR*
Author: **Kadia Georges Aka**, *U. of Moncton*

Industrial symbiosis is a means to achieve sustainability at the systemic level. It involves different organizations in mutual exchanges and symbiotic collaborations to develop sustainable innovative solutions. Little is known about the dynamics of the evolution and management of tensions in an industrial symbiosis. This study seeks to fill this gap by answering this question: How do tensions emerge, evolve, and be managed in an industrial symbiosis? Based on the paradox's perspective, an analytical framework was built to monitor paradoxes in which various tensions coexist. It was applied to the case of an industrial symbiosis that aimed to establish the first forest residue biorefinery in Canada. The main results show that tensions are managed in four phases (tension identification, tension dynamics, paradox strategy, and paradox management). In particular, when a paradox leads to a tension of belonging (legitimacy and allegiance), a proactive "more-than" strategy (developing a new and creative synergy for transcending the paradox by a dynamic and interactive connection between the stakeholders) is needed under contextual factors to integratively manage the paradox and mitigate the tension. This study contributes to the sustainability management literature by suggesting a monitoring tool that can capture the dynamics of tensions and identify paradox strategies to manage them. This provides guidance for managers and other stakeholders involved in industrial ecology and symbiosis.

ONE: **Construal-Level Ambidexterity and Managing the Paradoxes of Corporate Sustainability**

Author: **Syed Eraj Hassan**, *Gustavson School of Business, U. of Victoria*

Research in the field of corporate sustainability has shown evidence of paradoxical tensions that exist at the interface of business and society. Unless these tensions are accepted and paradoxically managed, they are likely to reemerge over time. Managerial cognition has become an important area of study to understand how these paradoxical tensions are effectively dealt with by a few managers as opposed to others who eliminate these tensions. This paper proposes to build a conceptual base to understand the cognitive style or the processes by which managers deal with ambiguous informational cues of corporate sustainability. By using construal-level theory, I argue that construal-level ambidexterity is an important cognitive capability that managers use to deal with paradoxical tensions in corporate sustainability and propose ways in which it used and built over time by managers responsible for corporate sustainability.

ONE: **Willing & Able: Configurations for a Paradoxical Frame in Corporate Sustainability**

Author: **Simone Carmine**, *IESEG School of Management*
Author: **Valentina De Marchi**, *ESADE Business School*

Literature on cognitive frame in sustainability suggests adopting a paradoxical frame can support firms dealing with sustainability tensions, leading organizations to achieve better social and environmental outcomes. Against an increasing literature testifying the potential of this frame at the organizational leve, little is known about its antecedents. How can organizations develop this promising frame? Building on the existing, scattered knowledge within the literature on antecedents in paradox and sustainability research and on cognitive frame in sustainability we identify three key organizational-level conditions behind a collective paradoxical frame: sustainability relevance, resources availability, and stakeholder pressures. By mean of fuzzy-set qualitative comparative analysis (fsQCA) on original survey data, we offer a first attempt to define pathways to the development of a paradoxical organizational cognitive frame toward sustainability tensions, investigating the micro-foundations of paradox cognitive frame at the organizational level. Four paradoxical paths are identified (committed, value focused, strategic, will & able), showing the need for the concurrent presence of willingness to address sustainability – to respond to internal or external stakeholders' pressures – and the availability of resources to effectively address it.

ONE: **Does Green Ambidexterity Enhance Environmental and Economic Performance Simultaneously?**

Author: **Ming-Chang Huang**, *National Yunlin U. of Science and Technology*
Author: **Wan-Chien Lien**, *National Yunlin U. of Science and Technology*
Author: **Anchi Lai**, *National Yunlin U. of Science and Technology*
Author: **Guan-Ting Chen**, *National Yunlin U. of Science and Technology*
Author: **Mau-hsin Morris Lee**, *National Yunlin U.of Science & Technology*

Sustainability is a central issue that drives firms to adopt green transformation. However, paradox and tensions arise from environmental sustainability and economic profit, and green exploitation and green exploration are major challenges for firms in implementing sustainable strategies. Prior studies indicate that green ambidexterity may be a vital factor in balancing these tensions, but not all empirical studies support this theoretical argument. This study contributes to the literature by answering the following questions: Does green ambidexterity lead to better environmental and operational performance? Or are the relationships between green ambidexterity and performance supported in certain contingencies? By collecting data from firms' CSR reports, this investigation obtains a total of 252 firm-year panel data from 42 listed companies in Taiwan from 2014–2020 that cover a wide range of industries. The empirical results show that green ambidexterity has a positive impact on environmental performance. However, the impact of green ambidexterity on economic performance is insignificant. Industrial munificence positively moderates the positive relationship between green ambidexterity and environmental and economic performance. The empirical results indicate that green ambidexterity can improve environmental and economic performance simultaneously only in the contingency of high industrial munificence.

Improving Sustainability Performance: From Not our Business to Deeply Sustainable

Session Moderator: **Carina Keller**, *EBS U. für Wirtschaft und Recht*

ONE: **Not our Business: Why the Climate Crisis is Not Perceived as a Corporate Crisis**

Author: **Carina Keller**, *EBS U. für Wirtschaft und Recht*
Author: **Myriam N. Bechtoldt**, *EBS U. of Business and Law*
Author: **Karin Kreutzer**, *EBS U.*

Even though climate change poses a significant risk for organizations, they do not perceive the climate crisis as a corporate crisis and are hence not necessarily prepared to act or willing to mitigate future risks. We conduct a nineteen-month ethnographic case study of an Energy Company (EnCo) in Germany to understand why the climate crisis has not been perceived as a corporate crisis, and what we can learn from organizations' engagement with other socio-environmental corporate crises in terms of risk management. Through analysis of observational, interview, and documentary data we explore the engagement with three socio-environmental corporate crises and corporate actors' risk perception. We develop a theoretical model of corporate climate risk perception (PANNIC model) explaining socio-psychological factors that prevent organizational actors in their everyday risk work from perceiving the climate crisis as an unprecedented risk. We also show how sustainability-related risk tensions dissolve over time due to emerging risk translations. The paper contributes to the literature of climate change cognition and (bottom-up) risk management by drawing attention to the relevance of socio-psychological factors in steering corporate climate action.

ONE: **Effectively Changing Intra-organizational Behaviors for Environmental Performance**

Author: **Annemarie L. Dedden**, *Münster U. of Applied Sciences and U. of Twente*
Author: **Frank Lattuch**, *Münster U. of Applied Sciences*
Author: **Celeste P.M. Wilderom**, *U. of Twente*

Despite a broadly shared belief by most organizational members that their own organization's environmental performance should be improved, they frequently struggle to do so. Securing the required behavioral changes within their organization has frequently been identified as one of the crucial challenges encountered. Hence, there is an urgent need for actionable insights into how to develop and sustain these behavioral change processes. To this end, we systematically reviewed and compared research evidence of how intra-organizational behavior for environmental performance improvements develops over time. This review shows that extensive and long-lasting outcomes are achieved when environmental performance improving activities are advocated, role-modelled and endorsed by top and line managers. Shifts in social norms appear strongly associated with extensive and long-lasting behavioral changes, especially when they are broadly shared and embedded in a pro-environmental organizational culture. Initial evidence points towards the importance of role models throughout the organization in developing such a culture. Pro-environmental behavioral changes may be effectively instigated and sustained by: setting goals; providing instructions; facilitating desired behavior through redesigning organizational practices and procedures; and rewarding achieved outcomes. Furthermore, positive performance feedback catalyzes pro-environmental behavioral changes and employee participation in developing new practices and procedures is strongly associated with long-lasting environmental performance improvements. Heightened awareness of current environmental performance and an increase in specific knowledge of activities for environmental performance improvement appear to predict behavioral change. Initial evidence suggests that positive attitudes towards non-green aspects of improving environmental performance are crucial predictors of long-lasting and extensive pro-environmental behavioral changes.

ONE: **How to Make them Green? Antecedents of Homesharing Hosts' Sustainable Behavior**

Author: **Oliver Rossmannek**, *U. of Freiburg*
Author: **Natalie David**, *EM Strasbourg Business School, U. of Strasbourg, HuManiS UR 7308*
Author: **Carlos Sandoval Alvarez**, -
Author: **Lluís Garay Tamajón**, *U. Oberta de Catalunya*

For homesharing platforms, there is substantive pressure to become more environmentally sustainable. A major aspect of that challenge are the platform's homesharing hosts. Their accommodations offer several opportunities for more sustainability (e.g., water saving measures, more efficient heating systems, charging station for electric cars). Consequently, we analyze what drives sustainable behavior of homesharing hosts. Our empirical study is based on a large survey in Europe (offered in twelve languages) resulting in a sample of n=1,392 hosts. Building on the theory of planned behavior, we perform three analyses (I: quantitative and theory testing; II: quantitative and explorative; III: qualitative and explorative). We find that several aspects drive hosts' sustainability intentions. Platform managers should especially think about providing financial and organizational support to hosts. Moreover, it could make sense to clearly communicate guests' sustainable demands to hosts in order to improve hosts' sustainable behavior. In addition, we find that local service offices (i.e., a business model where the platform internalizes service operations from hosts) moderate the effects of sustainability antecedents.

ONE: **Portraying a Big Picture of Deeply Sustainable Firms: An Integrative Review of the Literature**

Author: **Mojtaba Mohammadnejad Shourkaei**, *PhD student at Asper School of business, U. of Manitoba*

An increasing number of scholars believe that the conventional approach to sustainable business is incapable of adequately addressing the social and ecological crises facing humankind and beyond. In response, scholars have begun promoting what in this article is called a "deep sustainability" (DS) approach that argues that firms must reconsider fundamental profit-first assumptions and become net-positive actors in terms of socio-ecological externalities. This paper reviews 92 articles and identifies 11 fundamental themes evident in the DS literature, which are further combined into three overarching constructs that are key to developing DS firms: interconnectedness, positive anarchy, and operating within planetary boundaries. The contributions and implications of the study for future research are discussed.

Environmental Information Disclosure and Responses to it

Session Moderator: **Yanying Chen**, *Dalian U. of Technology*

ONE: **Environmental Information Disclosure, Legitimacy Pressure, and Green Total Factor Productivity**

Author: **Yanying Chen**, *Dalian U. of Technology*
Author: **Tianyi Cao**, *Dalian U. of Technology, School of Economics and Management*
Author: **Feng Liang**, *Western Kentucky U.*

As a new tool of environmental regulation, environmental information disclosure (EID) and its effect on firm environmental performance are yet to be fully explored in emerging economies. We examine the effects of EID on firm green total factor productivity (TFP) through legitimacy pressure, using China's heavy polluting firms under government monitoring as the empirical context. The findings show that EID significantly improves firm green TFP, but the positive effect is weakened by firms' bargaining power against local government in environmental regulation. The positive effects are mainly through intensified government regulation and reputation penalty. The effects of green competition only manifest in consumer product industries but not in industrial product industries. Additional analysis suggests that the positive effects of EID on green TFP are more evident among private firms, in high-tech industries, and in regions with high quality business environments, and the improvement of green TFP is mainly through technology efficiency. This study contributes to the understanding of firm level effects of environmental information disclosure in emerging markets and provides important implications on the improvement of environmental policies.

ONE: **Strategic Responses to Climate Change: A Longitudinal Analysis of Energy Company Climate Reporting**

Author: **Melanie Feeney**, *Maastricht U.*
Author: **Wim Gijselaers**, *Maastricht U.*
Author: **Pim Martens**, *Maastricht U.*
Author: **Therese Grohnert**, *Maastricht U., School of Business & Economics*

This paper explores how European energy companies, some of the world's largest emitters of greenhouse gases, have understood and responded to climate change in recent years. Finding solutions to climate change is one of the greatest challenges facing governments, corporations, and society. In response to this challenge, many companies have declared their net zero carbon ambitions by 2050. However, recent studies suggest that we need drastic climate action by 2030, not 2050. Understanding a company's framing of climate change and their responses to it can provide a good indicator for how effective a company will be in achieving positive climate change outcomes in the future. We explore how ten European energy companies have framed climate change from 2010-2019, the actions they've taken in response to climate change, and what this may signal for future climate change responses in the energy sector. Through analysing 111 energy company sustainability reports, we propose a new framework (The Climate Framing Framework) that identifies four inter-related frames that energy companies use to make sense of, and respond to, climate change. We illustrate the actions that align with these four dominant climate change frames and explore how energy company framing has either stagnated, evolved, or rewound over time. Finally, by exploring the triggers that stimulated changes in framing, we draw attention to how the actions of government, civil society, and energy companies themselves can influence future climate change responses.

ONE: **Talk is (not so) Cheap: Investor Reactions to Environmental Rhetoric**

Author: **Rodrigo Luna**, *WU Vienna*

We address the importance of rhetorical signals in extending signaling theory and contribute to the corporate social responsibility - corporate financial performance debate. We theorize that because of penalty costs, rhetorical signals of environmental responsibility can convey meaningful information about firm characteristics. All firms can cheaply emit rhetorical signals, but firms perceived as sending false signals will face negative consequences for their signaling. Using 10,245 quarterly earnings calls spanning a period of ten years (2009-2019), we find evidence that signaling environmental responsibility through rhetoric during quarterly earnings calls generally results in positive stock market reactions. However, not all firms stand to benefit equally. Firms that have displayed low environmental responsibility face penalty costs for using rhetoric signaling environmental responsibility. Additionally, we find partial evidence that the international diversification of a firm and the absence of agency concerns influence the relationship between rhetorical signaling environmental responsibility and stock market reactions. Overall, our study suggests firms should be careful when signaling through environmental rhetoric.

ONE: **Changes in the Salience of a Collective Reputation: Information Disclosure and Shareholder Reaction**

Author: **Seonghoon Kim**, *U. of California, Santa Barbara*
Author: **Matthew Potoski**, *U. of California, Santa Barbara*

A collective reputation is stakeholders' mental image about how the observable characteristics of a group indicate members' performance along difficult-to-observe attributes. Collective reputations become less salient when stakeholders receive new information about individual members' difficult-to-observe qualities. In 1989, the US EPA published the Toxic Release Inventory (TRI) which provided for the first time detailed information on the pollution emissions of large facilities in manufacturing industries. We apply multiplicative heteroskedastic linear regression models to data on 617 firms across 42 industries to examine whether shareholders evaluated firms more individually relative to their industry following the release of the TRI data. The results suggested that the TRI release reduced the salience of the chemical industry's collective reputation but did not have similar effects for companies in other industries which had weaker collective reputations for their members' pollution practices.

Supply Chain Sustainability II

Session Moderator: **Sangho Chae**, *Warwick Business School*

OSCM: **Public Disclosure of Sustainability Information from Critical Suppliers and Buyer ESG Risk Exposure (WITHDRAWN)**

Author: **Jesus Diego Castillo**, *U. Carlos III de Madrid*
Author: **Maria J. Montes-Sancho**, *U. Carlos III de Madrid*

This paper contributes to the sustainable supply chain management literature by exploring an alternative mechanism to prevent buyer Environmental, Social, and Governance (ESG) risk exposure from lower tiers by relying on nexus supplier public disclosure of information. Our theoretical approach complements the notion of the buyer as the main orchestrator of initiatives in multi-tier sustainable supply chain management literature by giving prominence to critical suppliers in lower tiers. Building on nexus supplier and institutional theories, we argue that voluntary information disclosure of critical suppliers relaxes the complexity and transaction cost that otherwise buyers must bear to obtain similar information. We also contend that public disclosure of sustainability information results in the involvement of other stakeholders, which aids buyers in processing complex information and gaining legitimacy of sustainability practices in lower tiers. We also examine the active role of the focal buyer by assessing buyer supply network accessibility as a moderating factor. We analyze a sample of 457 extended supply networks, up to tier three suppliers obtained from Bloomberg SPLC. Critical nexus suppliers are identified using data envelopment analysis (DEA). The buyer's ESG risk exposure is obtained from the RepRisk database for 2019. Our results show that the benefits of nexus supplier public disclosure, such as reduced buyer risk exposure, differ depending on the type of nexus supplier and the buyer supply network accessibility. The findings also highlight circumstances in which disclosures from certain nexus suppliers actually increase buyer risk exposure.

OSCM: **Small Worlds Within Global Supply Chains: Implications for ESG Controversies**

Author: **Sangho Chae**, *Warwick Business School*
Author: **Seongtae Kim**, *Aalto U. School of Business*
Author: **Byung-Gak Son**, *Cass Business School, City U. London*

With increasing public attention on corporate sustainability, environmental, social, and governance (ESG) controversies such as toxic waste spills and modern slavery are becoming more prominent in global supply chains. This paper investigates whether buying firms with heterogeneous global supply bases are more prone to ESG controversies and proposes a structural characteristic of the supply network that can mitigate the buying firms' exposure to such controversies. We characterize heterogeneity in global supply bases by the diversity of supplier countries and ESG performance variation among suppliers. Building on the literature on small-world networks, we introduce a supply network structural characteristic that we call "ego small-worldness" and suggest that ego small-worldness of a buying firm can mitigate the impact of the heterogeneity in its supply base on ESG controversies. Our analysis of the Fortune 500 firms during the period of 2010 through 2018 reveals that buying firms with heterogeneous global supply bases indeed suffer more from ESG controversies while ego small-worldness weakens the relationship between the diversity of supplier countries and ESG controversies. Our findings contribute to the literature on sustainable supply chains and small-world networks by highlighting ego small-worldness as an effective governance mechanism for global supply bases.

OSCM: **Worker Wellbeing and Firm Performance: Are Long Term Oriented Firms Better at Handling Paradox?**

Author: **Mary Parkinson**, *U. College Dublin*
Author: **Jing Tan**, *Xi'an Jiaotong U.*
Author: **Mark Pagell**, *U. College Dublin*
Author: **Frank Wiengarten**, *ESADE Business School*

The wellbeing of workers is a key responsibility of sustainable operations management, but there are mixed findings on the relationship between worker wellbeing and firm thriving. We address this question by drawing from paradox theory to test the premise that firm temporal orientation determines how firms navigate tensions in the simultaneous pursuit of worker wellbeing objectives, and more traditional firm performance objectives. We test our hypotheses drawing from a sample of US based public firms. We find that firm temporal orientation moderates the effect of decent work on market value, and also moderates the effect of worker injuries and decent work on firm innovation performance. The results suggest that a focus on the long term facilitates firms in integrating worker wellbeing with other organizational goals.

OSCM: **Exploring Circular Supply Chain Designs in B Corps: The Role of Flows and Capabilities**

Author: **Lydia Bals**, *Mainz U. of Applied Sciences*
Author: **Kelsey Taylor**, *U. of Manitoba*
Author: **Eugenia Rosca**, *U. of Groningen*

Research on sustainable supply chain design has highlighted that three types of flows — material, information, and financial — are needed to arrive at sustainable supply chain designs with sustainable outputs and outcomes. This research investigates configurations of these flows in a circular supply chain context, the significance of each flow type in enabling circularity, and the role of capabilities in managing them. The winners of environmental awards within the B Corp certification scheme have been analysed. This entails data from 200 B Corps in a secondary data analysis as well as a qualitative data analysis of 15 interviews plus additional materials around six case study firms. The results highlight the need for integrative designs of all types of flows, as well as the paramount role of capabilities in the successful implementation of circular supply chain designs, including those related to stakeholder relationship management, supply chain collaboration for improved supply chain transparency, and systemic thinking.

Procurement and Adaptability

Session Moderator: **YIFAN CHEN**, *Arizona State U.*

PNP: **Organizational Capacity's Effect on Decision-making for Public Procurement in the US and Japan**

Author: **YIFAN CHEN**, *Arizona State U.*
Author: **Brian Seo**, *Arizona State U.*
Author: **Justin Michael Stritch**, *Arizona State U.*

In recent years, scholars argue that public agencies should incorporate sustainability concerns into their procurement activities. Whereas prior studies use a capacity-building approach to understand sustainability practices in local communities, few of them employ the approach to study sustainability public procurement. In addition, extant literature primarily pays attention to governments in the United States. We know little about whether the theories and findings generated in the U.S. context also holds in other countries, especially in those with different political systems or social cultures. Therefore, this study uses nationwide datasets from both the U.S. and Japan to investigate: (1) How different types of organizational capacity shape the pursuit of environmental and social sustainability in public procurement? (2) How organizational capacity affect the priority of decision-making criteria in public procurement? Our findings advance scholarly understandings by taking a capacity-building approach to examine government sustainability procurement. The results also provide insight to public managers as they develop strategies that seek to build and leverage organizational capacity towards a more sustainable and cost-effective procurement. Keywords: Organizational Capacity, Public Procurement, Environmental Sustainability, Social Sustainability, Cost-effective Performance

PNP: **Managing for the Ripples in the Pond: Brokering for Adaptability in Disaster Management**

Author: **Lauren McKeague**, *U. of Montana*
Author: **Sophie Wenzel**, *Virginia Tech*
Author: **Robin Hargroder Lemaire**, *Louisiana State U.*

Complex disasters require both stable, predictable tasks to be managed that are common in many types of complex events, as well as novel, unforeseen tasks that challenge existing response infrastructure and necessitate adaptability in organizing and structure to accomplish. The COVID-19 pandemic was a novel disaster that required communities to manage both routine and novel tasks, providing an opportunity to explore emergent ways of organizing that adapted to the changing needs of the pandemic over time. We analyze a community-based temporary, emergent network formed in a rural region of Virginia. Drawing on both qualitative and quantitative data collected from 23 semi-structured interviews with network organizational members and partners, we find that the network structure consisted of a densely connected core group of organizations with different types of organizational brokers that employed different methods of brokering between core and peripheral members throughout the pandemic. These findings suggest the vital role that community brokers play in integrating emergent or informal peripheral groups and importantly, that they utilize different processes of brokering during different disaster stages. This study has implications for future research into the ways communities might identify and incorporate community brokers prior to future crises, as well as which types and processes of brokering might be relevant during each phase of the disaster management lifecycle.

PNP: **An Analysis of Federal Purchasing of Personal Protective Equipment in the Aftermath of COVID-19 (WITHDRAWN)**

Author: **Eric Boyer**, *U. of Texas at El Paso*
Author: **Juan Rogers**, *Georgia Institute of Technology*
Author: **Frank Spampinato**, *FSC Management, LLC*

Contract managers change contracts to respond to unforeseen events and to improve the likelihood of securing critical supplies. This study examines the prevalence, reasons for and timing of contract modifications and terminations utilized in federal purchasing of personal protective equipment (PPE) in the first year of the COVID-19 public health crisis. Modifications that transform transactional contracts to more collaborative designs were utilized for some of the highest-risk contracts and were not associated with terminations, indicating that collaborative designs may improve the securing of PPE. Competitive selection increased the likelihood of termination and the rate at which terminations occurred, indicating that the consideration of rival bids did not improve the likelihood of securing PPE and increased the costs of contract administration. Agency characteristics also explain why contracts were changed in the purchasing of PPE.

PNP: **Managing the Fuzzy Front-End of Public Procurement of Innovation**

Author: **Morten Abrahamsen**, *Norwegian School of Management BI*
Author: **Ann Højbjerg Clarke**, *U. of Southern Denmark*
Author: **Majbritt Rostgaard Evald**, *U. of Southern Denmark*

Public procurement of innovation can be challenging, as procurers often need to purchase products and services yet to be created. Despite the complexities of managing the 'fuzzy front-end' of public procurement, the literature remains underdeveloped. This paper draws on two in-depth cases to explore the challenges and associated strategies for managing the complexities, ambiguities and uncertainties linked with the fuzzy front-end. The paper contributes to the literature by identifying different strategies used for managing the 'fuzzy front-end' and the underlying assumptions behind the strategies and critically reflecting on these strategies' implications for public procurers to yield innovative outcomes. By critically reflecting on the application of these strategies, the capability of public procurers to manage the range of fuzziness encountered can be improved.

A Closer Look at Motivation

Session Moderator: **Rick Borst**, *Utrecht U. School of Governance*

PNP: **Comparing the Employability of Public and Private Employees: Studying the Role of PSM and Red Tape**

Author: **Rick Borst**, *Utrecht U. School of Governance*
Author: **Rutger Blom**, *Utrecht U. Social and Behavioral Sciences*
Author: **Bart Voorn**, *Radboud U.*

Although the employability of employees has increasingly become an issue for both public and private employers (OECD, 2017), scholars argue that especially the employability in public organizations is under pressure due to its relatively aging workforce compared to the private sector (Van Harten & Vermeeren, 2021; Van Harten & Rodrigues, 2021). The scarce employability literature in public sector settings confirms that both public employees' self-perceived internal job opportunities in their current organization as well as external job opportunities to gain a job at other employers are low (De Cuyper & De Witte, 2011; Van Emmerik et al., 2012; Van Harten & Rodriguez, 2021). Moreover, scholars argue that employability outcomes such as work engagement are particularly under pressure among public servants relative to private employees because public servants have to deal with red tape and experience possible hindrance of their Public Service Motivation (Van Harten & Vermeeren, 2021). At the same time, the comparative empirical employability research studying these propositions is so far non-existent, and employability scholars therefore call for more rigorous contextualized research comparing the public and private sector (Van Harten & Vermeeren, 2021; Van Harten & Rodrigues, 2021; Forrier et al., 2018). Based on the above discussion, This study makes two important contributions to the Public Administration and employability knowledge base. First, it analyzes how public sector specific factors impact the relations between perceived employability and its outcomes (Van Harten & Vermeeren, 2021). Through the lens of the Job Demands-Resources model, several scholars suggest that since perceived employability is a personal resource which induces control over an employees' work life and inherently increases work engagement (De Cuyper, Van der Heijden, & De Witte, 2011;; Kirves, Kinnunen, De Cuyper, Mäkikangas, 2014), it could possibly be hindered by public context specific job demands including red tape or personal resources/demands including PSM (Van Harten & Vermeeren, 2021). Through a contextialized JD-R model we test these propositions. Second, this article is the first to compare the relations between employability and work engagement across public and private employees by taking into account two typical public sector conditions [i.e., red tape and PSM] (Van Harten & Vermeeren, 2021). Red tape and PSM are typical phenomena characterizing public servants and their work better than private sector employees. However, some studies also point at the importance of red tape and PSM in predicting outcomes of private sector employees (Andersen, Pallesen, & Pedersen, 2011; Taylor, 2010). Consequently, it can be discussed whether the assumption is correct that red tape and PSM particularly moderate the employability and outcomes of public employees compared to private employees. To date, employability studies that use data from multiple sectors have not investigated the influences of these sectoral differences (Van Harten & Vermeeren, 2021). This study therefore rigorously compares the moderating effects of PSM and red tape in the relationships between perceived employability and work engagement across the public and private sector. We apply comparative structural equation modeling on representative samples of Dutch government employees (N=9,427) and private sector employees (N=2,057).

PNP: **Do You Love Me? The Effects of Budget Cuts on Intrinsic Motivation in the U.S. Federal Government**

Author: **João V. Guedes-Neto**, *Fundacao Getulio Vargas*

What are the effects of budget cuts on bureaucrats' professional motivation? Relying on a panel study that considers longitudinal survey data from 20 US federal agencies and their budget appropriations, this paper causally demonstrates that the presence, not the magnitude of budget cuts exercises a negative impact on civil servants' intrinsic motivation. This finding suggests that despite the potential abandonment or reduction of government programs and professional limitations imposed by restrictive budgets, public employees feel aggravated and like their job less when elected officials decide to reduce their expenditures. This finding contributes to our understanding of human resources management and the relationship between politics and administration.

PNP: **The Public Service Priorities of Public Managers in Agencies and Corporations**

Author: **Bart Voorn**, *Radboud U.*
Author: **Rutger Blom**, *Utrecht U. Social and Behavioral Sciences*
Author: **Rick Borst**, *Utrecht U. School of Governance*

Corporatization – the delegation of public service delivery away from public agencies and towards public (state-owned) corporations – is an increasingly popular trend worldwide in local government. One reason for the popularity of corporatization is the idea that managers of public corporations will have a more professional (less political) focus than managers of public agencies. We study whether this is indeed the case, using a novel (implicit) measure of managerial priorities in public agencies and public corporations in Dutch local governments. Contrary to expectations, we find few differences in the priorities of managers of public agencies and managers of public corporations, with both primarily prioritizing efficiency, effectiveness, and quality measures of performance.

PNP: **Public Service Motivation and Employee Burnout and Turnover During Times of Crisis**

Author: **Shahidul Hassan**, *Ohio State U.*
Author: **Bradley E. Wright**, *U. of Georgia*
Author: **Darwin Baluran**, *Ohio State U.*
Author: **Daniel Baker**, *Appalachian State U.*

Using two-waive survey data and personnel records collected from a police organization, this study examines the relationship between public service motivation (PSM) and public employee burnout and turnover behavior during the COVID-19 pandemic and in the aftermath of the 2020 community protests for racial justice and police reform. Our analyses show a negative association between PSM and public employee turnover behavior and this relationship is significantly stronger among employees with shorter (in comparison to longer) job tenure. Moreover, we find a consistent negative relationship between PSM and work depersonalization but no relationship between PSM and employee emotional exhaustion. These results suggest the effect of PSM on public employee burnout probably depends on the dimension of burnout studied. The results contribute to public administration research by studying PSM's effects during times of environmental crisis and change.

PNP: **Local Immigrant Partnerships in Canada: Navigating Between Macro Teleology and Micro Deontology**

Author: **Sudhir Nair**, *U. of Victoria*
Author: **David Gordon Cohen**, *Skidmore College*
Author: **Chris Meyer**, *Baruch College*

Migration of all forms continues to grow rapidly across the globe. At the same time, the ethics of migration and migration policy is hotly contested. We explore the ethics of immigration in the Canadian context. The Canadian government has funded a new type of entity, referred to as the “Local Immigrant Partnership” (LIP) to help manage immigration. In this paper, we seek to understand this particular organizational form that has evolved in the Canadian context. Using a novel machine learning topic modeling approach, network analysis, and textual analysis, we examine archival documents for extant Canadian LIPs. We supplement these findings with primary data collected from LIP respondents. Our preliminary findings indicate that LIPs are currently primarily seeking legitimacy and trying to define a niche for themselves within the immigration space, so as to gain access to potentially shrinking critical resources. This leads to an ethical tension between the needs of governmental providers of capital and consumers of the services. We conclude by suggesting avenues of future research.

PNP: **The Effectiveness of Grassroots Leaders’ Affiliative Humor in Public Administration Management**

Author: **Zhe Shang**, *Department of human resources, School of Government, Beijing Normal U.*
Author: **Ziyan Cui**, *School of Economics and Management Tsinghua U.*
Author: **Siyuan Liu**, *School of Government, Beijing Normal U.*

This paper introduced leader humor into the context of grassroots public management from the perspective of behavioral public administration and explored the effectiveness of grassroots leaders’ affiliative humor based on social identity theory. We first conducted the text sentiment analysis of comments on grassroots leader humor topics on Sina Weibo during the COVID-19 (Study 1) and found general public positive attitudes toward grassroots leaders’ affiliative humor. Then an online survey was conducted (Study 2), and empirical analysis results of 273 questionnaires showed that: grassroots leaders’ affiliative humor had a positive effect on public relational identification with grassroots leaders, in turn increasing public satisfaction with the government; public traditionality negatively moderates the indirect effect of grassroots leaders’ affiliative humor on public satisfaction with the government via public relational identification. In addition, empirical analysis results of 241 questionnaires in our field study (Study 3) replicated the above findings, and further showed that grassroots leaders’ affiliative humor was positively related to public relational identification with grassroots leaders, in turn increasing public satisfaction with the government and ultimately promoting compliance behavior and subjective well-being.

PNP: **Public Participation in Abandoned Mine Land (AML) Program: Sufficient or Not?**

Author: **Karsyn Kendrick**, *George Mason U.*
Author: **Younsung Kim**, *George Mason U.*

For centuries, coal extraction and production provided low-cost energy that powered the American economy and produced damage in its wake, leaving thousands of acres of land unreclaimed, transforming landscapes, and disturbing natural ecology. Currently, an estimated 5.5 million people in the Appalachian region live within one mile of an Abandoned Mine Land (AML) site. These sites can pose serious hazards to public health, safety, and the environment while offering opportunities for public and community participation in restoring damaged lands and economic development on abandoned mine sites. Despite the long presence and significance of the program, little is known about how states and tribes in the AML program engage the public in decision-making. In this study, we conducted a systematic review of State and Tribal Reclamation Plans and Annual Evaluation Reports from 2015-2019 and surveyed community groups in the Appalachian region to understand the public participation process. We found that AML states and tribes heavily rely on traditional methods of public engagement, such as public meetings, hearings, and comment periods. We also found that major barriers to public participation include a lack of information and transparency around AML decision-making and the opportunities for public engagement. We recommend partnerships with nonprofits and community groups to mitigate the barriers and facilitate more active public engagement.

Challenges and Advancements in Meta-Analyses and Reviews

Session Moderator: **Benjamin Moon**, *U. of Calgary*

RM: **Comparing Findings in Pairwise vs. Network Meta-Analysis & Evaluating the Consistency Assumption**

Author: **Benjamin Moon**, *U. of Calgary*
Author: **Thomas Alexander O'Neill**, *U. of Calgary*
Author: **Kabir Daljeet**, -

Network meta-analysis allows researchers to synthesize empirical evidence across a network of interventions and conditions. While it has been seldom used in organizational sciences, network meta-analysis provides numerous methodological advantages over conventional pairwise meta-analysis. However, the validity of findings in a network meta-analysis is contingent on numerous assumptions, including consistency, which assumes that the estimates of direct and indirect evidence are in agreement. Using an example meta-analysis on faking warnings in pre-employment personality tests, the current study compares and contrasts the results of pairwise and network meta-analyses. Subsequently, we tested the assumption of consistency in the network meta-analysis through three commonly used methods in the literature. Overall, there were several differences in the findings of the pairwise and network meta-analyses. Furthermore, the results of the three tests of consistency indicated that the network meta-analysis met the assumption of consistency for all outcomes. Consequently, we can conclude that the results of the network meta-analysis on faking warnings are valid and interpretable. Researchers should be cognizant that the findings of pairwise and network meta-analyses may differ substantially, which may have implications on theory and practice. Furthermore, when using network meta-analysis, researchers should take proper steps to evaluate the assumption of consistency to ensure that the results are valid.

RM: **Challenges and Choices in Conducting Qualitative Meta-studies**

Author: **Stefanie Habersang**, *Leuphana U. Lüneburg*
Author: **Markus Reihlen**, *Leuphana U. Lüneburg*

Qualitative meta-studies have emerged as a promising methodology within organization and management studies for synthesizing larger bodies of qualitative research. Despite much progress, the challenges and choices researchers face when conducting a qualitative meta-study remain unclear. In this paper, we identify seven core challenges and the respective choices researchers have in addressing these challenges. In doing so, we provide researchers with essential arguments to evaluate the various trade-offs they face when conducting a qualitative meta-study. We further outline two archetypical forms of a qualitative meta-study following either an integrative or an emancipatory purpose.

RM: **Machine Learning Toolkit for Selecting Studies and Topics In Systematic Literature Reviews**

Author: **Andrea Simonetti**, *U. of Palermo*
Author: **Michele Tumminello**, *U. of Palermo*
Author: **Pasquale Massimo Picone**, *U. of Palermo*
Author: **Anna Mina**, *U. of Rome Lumsa*

Scholars conduct systematic literature reviews (SLR) to summarize what we know and discern what we should know about a specific theme. Machine learning (ML) can support researchers in conducting systematic literature reviews. We present an ML approach - based on Network Analysis and Natural Language Processing (NLP) - that allows extracting textual features to categorize papers. The method consists of an algorithm that allows: (a) to select relevant studies on a specific theme; (b) to discern the main topics around the theme. We offer two applications of our toolkit. Specifically, we select relevant studies and discern the main topics around cobranding and coopetition. We juxtapose ML results with previous systematic literature reviews and show that ML may boost the rigor of SLR (in terms of transparency, completeness, saturation, and universalism).

RM: **How and Where to Search in Systematic Reviews and Meta-analyses? A Detailed Guide**

Author: **Michael Gusenbauer**, *Johannes Kepler U. Linz*
Author: **Sebastian Peter Gauster**, *U. of Innsbruck School of Management*

Literature searching forms the backbone of every systematic literature review (SLR), meta-analysis (MA), and bibliographic study. Authors search on average four databases and review thousands of articles – a laboursome process. Despite the great increase in relevance of literature reviews, guidance on how and where to effectively search for literature is still inadequate, leading to methodical issues even in studies published in the most prestigious journals. Particularly, the wide variety of different databases and search options overwhelm scholars who frequently rely on outdated best-practices or just on what options seem available. Because not all databases and search heuristics identify literature equally well, the quality of SLRs and MAs varies substantially. This study aims at guiding scholars so their review hours are best used by finding studies more relevant and less irrelevant, and doing so in a transparent, reproducible manner. Our analysis bases on a detailed review of the search, screening and reporting process of 405 SLRs and MAs published in ABS 3-, 4-, and 4*-journals in 2021. Enabled by novel scientometric methods, we analyze all databases used in at least 1% of these studies and compare them to some still unknown newcomer databases. Comparing the coverages of 50 databases and the functionality of their search systems, we provide detailed guidance on how and where to search for literature. This guidance is intended to help researchers in management and adjacent disciplines to conduct more thorough searches as part of SLRs, MAs, and bibliographic studies.

Twenty-Five Years at Organizational Research Methods: The Past, Present, and Future

Moderator: **Jayci Robison Pickering**, *Oklahoma State U.*
Panelist: **Jeremy F. Dawson**, *U. of Sheffield*
Panelist: **Justin A. DeSimone**, *U. of Alabama*
Panelist: **Thomas Greckhamer**, *Louisiana State U.*
Panelist: **Tine Koehler**, *U. of Melbourne*
Panelist: **Dina Krasikova**, *U. of Texas At San Antonio*
Panelist: **Lisa Schurer Lambert**, *Oklahoma State U.*
Panelist: **Jane Kirsten Le**, *WHU Otto Beisheim School of Management*

In this panel symposium, the editorial team of Organizational Research Methods (ORM) will reflect on the past 25 years of ORM publications with the intent of providing guidance to attendees on developing future methodological contributions. Each member of the editorial team will introduce and discuss a paper published in ORM between 1998 and 2023; discussion will involve what they appreciate about the paper, how it enriched academic debate at the time of its publication, and its subsequent impact on the field. The members of the editorial team will then share insight regarding what distinguishes an exciting submission and marks an important contribution to existing debate in research methods scholarship. Additionally, the panel will discuss the types of publications, topics, and methodological approaches they believe will shape the future of the field, including necessary methodological developments and potential solutions to existing challenges and shortcomings. The overarching goal of the symposium is to provide resources to attendees in how to generate and write impactful methodological contributions. New and less experienced researchers often struggle with how to recognize, frame, and structure methodological contributions. Dissecting exemplary papers from ORM may help researchers see new possibilities for developing their own fledgling methodological ideas. Despite being trained in 1) how to structure empirical and theoretical papers and 2) the appropriate application of research methods, many attendees may benefit from guidance on how to develop methodological contributions. Moreover, authors interested in enhancing their methodological toolkit may also benefit from the advice and encouragement offered by the panel. The panelists will include the current Co-editors and Associate Editors of Organizational Research Methods. Together, these editors represent methodological expertise spanning the divisions of AOM. Accordingly, we anticipate discussion topics to be broad, ranging from micro to macro, and quantitative to qualitative methods. Attendees will have ample opportunity to ask questions enabling panelists to address specific topics, possibly including 1) how to conceptualize and structure methods articles, 2) the integration of and distinction between quantitative and qualitative approaches, 3) effective and ineffective ways of communicating methodological findings to a diverse audience, 4) the future of the field and relevant methodological developments, and more.

Contradictions and Paradoxes in Strategic Change

Session Moderator: **Rebecca Bednarek**, *Victoria Management School*

SAP: **Evolving Tensions Across Different Stages of Ambidexterity**

Author: **Arne Keller**, *TU Wien*
Author: **Alexander Martin**, *Brandenburg U. of Technology Cottbus-Senftenberg*
Author: **Stefan Konlechner**, *TU Wien*
Author: **Wolfgang H. Guettel**, *TU Wien*
Author: **Johann Fortwengel**, *King's College London*

Structural ambidexterity describes how firms can use specific organizational architectures to reconcile the contradictory requirements of exploitation and exploration. However, these ambidextrous architectures generate substantial tensions, often resulting in observable conflicts among different actors, that constantly need to be managed. Despite the sustained scholarly interest in organizational ambidexterity, to date, the precise nature of these tensions and conflicts and particularly how they evolve in the life cycle of structural ambidexterity remains largely opaque. Tracing the stony pathway of the development of a revolutionary fire truck in a tradition-steeped company, our longitudinal case study contributes to the emerging process perspective on ambidexterity by explicating the temporal nature of tensions and conflicts in initiating, balancing, and reintegrating explorative organizational units. Our study reveals how tensions and conflicts vary across different stages of structural ambidexterity, and how firms can manage them effectively.

SAP: **Using Strategic Episodes to Examine Internal Complexity in a Large Organization**

Author: **Hanan Alhaddi**, *Hult International Business School*

Complexity in organizations plays a critical role in strategic planning. I draw on this idea using a longitudinal case study to show how navigating the unclarity of organizational goals, contemplating competing priorities, and lack of business process standardization drive internal complexity in a large organization undertaking a strategic change, leveraging strategic episodes as a social mechanism. Further, I articulate a link between the three drivers and theorize about a trickling effect underpinning this finding initiated with goal setting by top management teams (TMTs).

SAP: **Resisting Change that Can't be Resisted**

Author: **Maria Skov Jensen**, *Aarhus U., Department of Management*

This paper explains how employees construct inconsistencies between two separate mandated changes and use these inconsistencies to progressively resist the full realization of both changes. Specifically, they use three practices – (1) linking elements of the changes, (2) framing these change elements as inconsistent, and (3) linking elements of one change to poor outcomes in the other change – to progressively build capacity to critique, revise, and eventually reject elements of both changes. As a result of this resistance, neither mandated change is fully realized. Our findings contribute to the literature on strategic change by illuminating the specific processual dynamics through which actors construct and manipulate the relationships between changes. We also contribute to the literature on resistance to change by illuminating the dynamics that over time allow actors to resist even mandated – i.e., externally imposed – changes, which draw sanctions if not fully realized.

SAP: **Management Control and Ambidexterity: How Nokia's Ambidextrous Capabilities Were Lost**

Author: **Henrik Johan Nyman**, *Arcada U. of Applied Sciences*

Studies show that sustained competitiveness relies on exploring new markets and products while exploiting established business models for efficiency. The ability to pursue both exploration and exploitation is also referred to as ambidexterity. This paper analyzes exploration and exploitation at Nokia Corporation over a period of roughly 20 years. During this time, Nokia moved from a challenger position to a market leader, and eventually found itself outpaced by competitors bringing new, innovative products to the market. The results demonstrate challenges with structurally aligning separate units that focus on exploration, while also demonstrating how a balance of formal and informal management control can act to create a supportive organizational context for ambidexterity.

Panelist: **Philipp Tuertscher**, *Vrije U. Amsterdam*
Panelist: **Anne-Laure Fayard**, *NOVA School of Business and Economics*
Panelist: **Ingrid Erickson**, *Syracuse U. School of Information*

Cross-boundary collaborations are necessary conditions when engaging with open science, innovation, and strategy to also tackle complex societal problems. While cross-boundary collaborations bring together a richness of benefits, they are also challenging due to heterogeneous and sometimes conflicting practices, backgrounds, or (temporal) structures, among others. To complicate matters, actors often cross multiple boundaries (e.g., community, cultural, disciplinary, gender, geographical, institutional, industry, knowledge, and organizational), and new boundaries may surface and disappear as collaborations evolve over time. Cross-boundary collaborations, with new forms and types emerging, challenge managers, employees, and workers. In this symposium, we set out to ask panelists about why and how a practice and process lens help to investigate challenges and opportunities related to "conventional" and new forms of cross-boundary collaboration.

Moral Character, Moral Repair, Moral Theorizing

Session Moderator: **Wim Van Lent**, *IESEG School of Management (LEM-CNRS 9221)*

SIM: **From Harm to Harmony? Epistemic Dominance and Moral Repair in the Wake of the Marikana Massacre**

Author: **Wim Van Lent**, *IESEG School of Management (LEM-CNRS 9221)*
Author: **Jordi Vives Gabriel**, *IESE Business School*
Author: **Imran Chowdhury**, *Wheaton College*
Author: **Hugo Van Der Merwe**, *Center for the Study of Violence and Reconciliation*

ABSTRACT Scholars increasingly recognize that efforts to alleviate capitalism's negative externalities can harm vulnerable groups. Although some would argue for rethinking capitalism, the ethical frameworks for mending damaged stakeholder relations are already available. The challenge is therefore less one of a socio-economic paradigm shift than of understanding the difficulty for (willing) firms to effectively practice moral repair following corporate wrongdoing. Confronting moral repair theory with on-the-ground reality, we ask which factors hamper its procedural execution and why. Our analysis is set in the aftermath of the 2012 "Marikana massacre", which cost the lives of thirty-four striking employees of Lonmin, a mining company, and injured many more. Although victims have been provided with various material and symbolic amends, many of them are still traumatized. Based on semi-structured interviews and document analysis, we find that the practice of moral repair is stifled by epistemic dominance, which exists most manifestly in the clash between a Western, "rational" process focus and local traditional thinking, and leaves many victim groups unknowing about (the pursuit of) their rights. Viewing moral repair through a postcolonial lens, we advance understanding of its practice, foregrounding discursive reflection and epistemic empowerment as keys to building more cooperative business-society relations.

SIM: **Longtermism: Business Ethics for a Shared Future**

Author: **Samuel Mortimer**, *Saïd Business School U. of Oxford*

The discipline of business ethics is roiled by conflict between two camps. One holds that the fundamental interests of business and society ultimately converge. The other holds that they are irreconcilably in tension. What these ongoing debates miss is that the respective interests of business and society are not ossified, but instead depend on contingent market conditions, legal norms, and consumer behavior. These can be changed. With coordinated action by businesses, legislators, and consumers, the interests of business and society can be made to converge in the long run. Should businesses seek such long-term convergence? I argue that there are both moral and self-interested reasons for businesses to work toward this goal.

SIM: **Beyond the Dualism of Agency and Communion: An Evaluation of Social Entrepreneurs' Moral Character**

Author: **Morteza Taghdisi Masabi**, *Concordia U., Montreal*

While social entrepreneurs are often lauded for their commitment to creating social value at the core of their ventures, recent scholarship has taken a more critical approach to the field of social entrepreneurship. A central aspect of this critique is the portrayal of social entrepreneurs as moral heroes. Accordingly, this study aims to explore these criticisms, employing the agency-communion reconciliation model established in the context of moral heroism. The findings of this qualitative pilot study suggest that the motivational profile of social entrepreneurs aligns with the structure proposed by the agency-communion reconciliation model. Given the significance of the moral portrait of social entrepreneurs for the advancement of social entrepreneurship, this research endeavors to provide a more nuanced depiction of social entrepreneurs' moral profile. This study, therefore, responds primarily to the question of whether social entrepreneurship is a moral career or not.

SIM: **Supererogation as a Bridge between Moral Doctrines: Developing a Comprehensive Account of Morality**

Author: **Sergiy Dmytriyev**, *James Madison U.*

We attempt to bridge major ethical theories based on deontic (deontology and utilitarianism) and aretaic (virtue ethics and ethics of care) doctrines. In doing so, we demonstrate that supererogation – going above and beyond the call of duty – serves as a temporal connection that unifies the moral domain. By separating in time aretaic and deontic judgments (depending on the development stage of an agent's particular virtues), supererogation enables a shift between deontic and aretaic values in the agent's mind.

Author: **Hsing-Er Lin**, *National Sun Yat-Sen U.*
Author: **Jeongho Choi**, *St. John Fisher College*
Author: **Andy Yu**, *U. of Wisconsin-Whitewater*
Author: **Ping-Hsun Li**, *National Sun Yat-Sen U.*
Author: **Yefeng Wang**, *U. of Wisconsin, Whitewater*
Author: **Dexi Zheng**, *McDonald CPA LLC, USA*

The study examines how managerial attention to social and commercial goals affects the dynamic capabilities of social enterprises. Balanced attention leads to greater dynamic capabilities, and there is a U-shaped relationship between combined attention agreement and dynamic capabilities.

SIM: **A Meso-Theory of Impact Evaluation: How and When Social Enterprises Use Impact Evaluation**

Author: **Heather Hachigian**, *Royal Roads U.*
Author: **Saurabh Lall**, *Adam Smith Business School, U. of Glasgow*
Author: **Karim Harji**, *Oxford U., Saïd Business School*

Impact evaluation is used by mission-driven organizations to not only identify but also to create impact. In this article, we explore how and when social enterprises use impact evaluation to create social impact. We find impact evaluation adds value by supporting social enterprises to set goals, innovate, scale and expand scope, and when mission is aligned with mandate. Mission reflects the internal impact goals of an organization and mandate is externally imposed by powerful resource providers including funders and investors. Building on these findings and resource dependency theory, we theorize a recursive process of impact evaluation where alignment between mission and mandate allows impact evaluation to be tightly coupled with an organization's impact creation activities but as an organization develops, its mission and mandate can become misaligned, requiring it to also direct impact evaluation toward managing resource dependencies. We theorize two different outcomes: mission drift and mission perseverance. Taken together, our findings and theoretical model contribute to a more dynamic and strategic understanding of impact evaluation that accounts for its multiple uses and the interactions between them.

SIM: **Social Entrepreneurship and Social Innovation: A Bibliometric Review and Research Agenda**

Author: **Andrea Sottini**, *U. Cattolica del Sacro Cuore*
Author: **Ivan Zupic**, *Goldsmiths, U. of London*
Author: **Alessandro Giudici**, *Bayes Business School (formerly Cass), City, U. of London*

Scholars' interest in social entrepreneurship (SE) and social innovation (SI) has been growing in recent decades. Despite increasing scientific maturity of these fields, it is still unclear whether social innovation occurs within social entrepreneurship. We address these theoretical and methodological limitations via a bibliometric analysis of the intersection of SE and SI theoretical domains. We combine co-citation analysis, historiography, and bibliographic coupling. Demonstrating the recent theoretical evolution of social innovation research under the social entrepreneurship umbrella, we document the beginning of a new trend that can open new research pathways. Thus, we contribute to academic research by documenting the theoretical developments, clusters, and groups of interests at the intersection of SE and SI. Finally, our analysis identified four fruitful avenues for future research: (1) combining SE and SI, (2) orchestration of SI, (3) measurement of SE and SI and (4) context-dependent studies. This future research agenda may support the proliferation and cross-pollination among future studies.

Impact Investment, Crowdfunding, and Impact Measurement

Session Moderator: **Violetta Sulzbach**, *EBS U. für Wirtschaft und Recht*

SIM: **Accelerator or Obstacle: Organizational Responses to the Implementation of the Impact Principles**

Author: **Violetta Sulzbach**, *EBS U. für Wirtschaft und Recht*
Author: **Karin Kreutzer**, *EBS U.*
Author: **Falko Paetzold**, *EBS U. of Business and Law*

Drawing on a multi case study with six impact investing organizations we investigate how these organizations respond to the voluntary introduction of the Operating Principles for Impact Investing (Impact Principles) from 2019 to 2023. We identify different trajectories of the signatory organizations during the implementation of the voluntary standard and explore the internal and external circumstances that lead to the creation of different versions of the standard.

SIM: **Designing Markets Together: Nascent Financial Engineering for Social Innovation** ☯ 💻

Author: **Gorgi Krlev**, *ESCP Business School*
Author: **Saurabh Lall**, *Adam Smith Business School, U. of Glasgow*
Author: **Heather Hachigian**, *Royal Roads U.*

Social innovations create social value, but are severely underfunded. Globally, new public-private initiatives seek to build special financial infrastructures for social innovation. We study these initiatives under the lens of nascent markets and as a new type of financial engineering, which refers to purposeful, public-private efforts of creating new market infrastructures that support social value. We develop a typology of how these efforts pursue modest adjustments or more radical alternatives to capitalism. We also specify the inherent partnership and governance challenges, and how this affects the functioning of markets. First, financing social innovation introduces impact in addition to return and risk as a key criterion for governing markets. Second, there are positive and negative consequences of state intervention in promoting alternative models of capitalism. Third, shaping the social relations and institutional structure of markets in parallel can help unplug Ayn Rand's famous Atlas, who holds capitalism in a deadlock.

SIM: **Shared Impact: Changing Perspectives Towards Collaborative Achievements**

Author: **Sarah Jastram**, *Hamburg School of Business Administration*
Author: **Zara Berberyan**, *Leuphana U. Lüneburg*
Author: **Johanna Foersterling**, *Hamburg School of Business Administration*

In this article, we are proposing a new concept called 'shared impact', which reflects the joint achievements of actors working towards the goal of creating social and/or ecological value in highly complex, interdependent contexts. We contribute to institutional theory, particularly to the decoupling discourse, by differentiating the construct 'ends' and distinguishing between individual and shared impacts. Moreover, we build the bridge between the decoupling theory and the empirical analysis of ends. We critically discuss impact measurement in highly complex contexts and suggest holistic, triangulated methods for shared impact assessment. Our shared impact concept is also relevant for managers and policymakers aiming to address complex socio-economic issues in fields such as Corporate Social Responsibility and Sustainability.

🏳 *SIM:* **Social Threat Framing on the Fundraising Performance: Evidence from Equity-based Crowdfunding Firms**

Author: **Jingnan Li**, *U. of Manitoba*
Author: **Jijun Gao**, *U. of Manitoba*
Author: **Xianzhe Jin**, *Business School, Sun Yat-Sen U.*

In this study, we seek to investigate the impact of a firm's social threat framing on its fundraising performance in equity-based crowdfunding. Crowdfunding ventures have growingly committed to social initiatives to attract investors. However, the success crucially depends on how much the investors value the prosocial cues presented in the proposal. Drawing on the perspective of threat framing, we argue that firms' framing of social issues as a societal threat in their crowdfunding proposals promotes the fundraising performance. A social threat framing increases perceived importance of the firm's business and sustainability initiatives in the eyes of investors by developing a sense of urgency and commitment towards the social issues. Using a sample of 229 U.S. equity crowdfunding firms from 2015 to 2021, we found a significant positive relationship between social threat framing and the fundraising performance. We also examined some conditional variables for such an effect, such as firm characteristics and the linguistic styles used in the crowdfunding proposals.

Responding to Regulation and Legal Processes

Session Moderator: **Xiwen Zhao**, *U. of Kentucky*

SIM: **Legalization Processes and Market Reactions to Businesses**

Author: **Xiwen Zhao**, *U. of Kentucky*
Author: **Zhi Huang**, *U. of Kentucky*
Author: **Daniel S. Halgin**, *U. of Kentucky*

We reconceptualize organizations' legal environments to include legalization processes as opposed to just passed laws as prior studies primarily focused on. We then test a proposition that different types of legal events (i.e., ruling decisions, stance signals, ambiguous signals) during legalization processes trigger distinct reactions from stock markets. The event study of the legalization of same-sex marriage in the United States provides support. Following ruling decisions, firm LGBT-inclusive practices are found to affect firm stock returns through subtle moderating effects of firm slack, suggesting that investors mainly interpret ruling decisions to have substantive effects on firms. Following stance and ambiguous signals, firm LGBT-inclusive practices have effects on stock returns not moderated by firm slack, suggesting that investors mainly interpret both types of events to have a symbolic reputation effect on firms. Moreover, stance and ambiguous signals exert a symbolic reputation effect differently; firm LGBT-inclusive practices are found to be related to firm stock returns in a linear fashion for stance signals but a U-shaped fashion for ambiguous signals. These nuanced novel findings suggest the necessity and fruitfulness of considering legalization processes and redefining organizations' legal environments as a dynamic series of multiple events to better understand their effects on organizations.

SIM: **Substitutes or Complements: A Finer-grained Understanding of CSR Dimensions to an Exogenous Shock**

Author: **Pengcheng Tang**, *China U. of Geosciences*
Author: **Chao Wang**, *China U. of Geosciences*
Author: **Lili Mi**, *Griffith U., Brisbane, Australia*

Although it is widely acknowledged that corporate social responsibility (CSR) is a multi-dimensional construct, it is still nebulous whether these dimensions are substitutes for or complements of one another. Empirically, it is challenging to conclude with a clear answer because decision-making on the resource allocation to these dimensions are simultaneous and interrelated. To control endogeneity, we employ an exogenous shock, i.e. China's new Environmental Protection Law, to investigate how the changes in corporate environmental responsibility (CER) engagement impact other CSR activities. Our findings suggest that increased CER engagement crowds out the product-related CSR activities primarily because of the overall CSR strategy. In contrast, it crowds in the community-related CSR activities to gain government support. Our study contributes to a nuanced understanding of firms' optimal resource allocation across different CSR dimensions in China and, potentially, in other developing countries with similar traits of low CSR level and reliance on government-driven CSR.

SIM: **The Government and Authority Spillover in Bottom-Up Processes of National Legal Norm Adoption**

Author: **Stephanie Villadiego De La Hoz**, *U. of Neuchatel*
Author: **Emmanuelle Reuter**, *U. of Neuchatel*

To address global governance gaps, the literature on the 'hardening' of MNCs' responsibility has re-emphasized the top-down processes which suggest that the state is in authority for adopting legal norms into national law. In turn, the bottom-up-driven processes in which the constituents are in authority and their interplay with the government and the social movements remains poorly understood. We perform an inductive case study of the Swiss Responsible Business Initiative, through which a movement sought to incorporate the principal's liability legal norm into national law with the aim to increase the MNCs' accountability for irresponsible conduct. We develop novel theory on the critical role of the government's authority spillover for shaping whom the constituents accept as an authority. Because it provoked the constituents' adoption of the countermovement's (and not the movement's) framing of the legal norm, the constituents eventually failed to adopt the legal norm into national law. Our study contributes to the literatures on the hardening of business responsibility, policy diffusion, and social movements.

SIM: **Impact of Mandatory CSR Compliance on the Cost of Debt**

Author: **Tara Shankar Shaw**, *Indian Institute of Technology, Bombay*
Author: **Naina Duggal**, *Indian Institute of Technology, Bombay*

We study how the new mandatory CSR regulation in India changes banks' behaviour towards pricing their debts for the publicly listed companies that are under the mandatory CSR regulation. The reform in the Indian Companies Act 2013 made it mandatory for firms with a net worth of rupees 500 crores or more, or a turnover of rupees 1000 crore or more, or a net profit of rupees 5 crores or more during any financial year to spend 2% of their average net profits of the prior three years on CSR activities. This regulatory reform is a major departure from the practice in major parts of the developed world where disclosures related to CSR activities are voluntary. Since the Indian corporate sector is mostly reliant on bank debt, especially debt from public sector banks (PSBs), the mandatory CSR reform is likely to change banks' debt contracts and screen firms based on their CSR compliance. Unlike previous research in the voluntary CSR paradigm where CSR is used as a signalling mechanism by the firm, we argue theoretically that banks are likely to screen firms based on their CSR behaviour and design favourable debt contract with lower cost debt for firms complying with mandatory CSR regulation. We argue that the primary channel of screening firms by their mandatory CSR performance would reduce the bank's ex-ante non-compliance risk and the risk of asset substitution, ultimately reducing their credit risk. However, we envisage that this effect would be weaker for the family firm due to its opacity and stronger for a firm that performs better than the industry average. We examined the impact of mandatory CSR compliance on the cost of debt of 1500 listed firms in India from 2015 to 2019. We found that firms that comply with the mandatory CSR regulation had a lower cost of debt measure in terms of interest incidence and higher credit rating rated by independent credit rating agencies. Further, in our estimation, we found that the effect is weaker for family firms and stronger for firms whose ROA is higher than the industry average. Our result is robust to various tests of endogeneity like 2SLS, and regression discontinuity analysis. Our result shows that the government of India's policy in encouraging CSR among Indian corporate is instrumental in changing bank's lending behaviour making them proactive in accommodating firms in their lending portfolio that complied with mandatory CSR policy.

Corporate Social Irresponsibility

Session Moderator: **Ashley Salaiz**, *U. of Tampa*

SIM: **Dealing with Organizational Legacies of Irresponsibility**

Author: **Jordi Vives Gabriel**, *IESE Business School*
Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*
Author: **Diego Coraiola**, *U. of Victoria*

Organizations are increasingly confronted with critical questions and concerns posed to their legacies of irresponsibility, i.e., the decisions and actions taken by past generations of managers deemed unethical, immoral, and with enduring negative social and environmental consequences in the present. Despite advances in scholarship in organizational irresponsibility and historic corporate social responsibility, there is limited guidance to organizations and their managers on how to deal with organizational legacies of irresponsibility. The purpose of this paper is to discuss how organizations can deal with their legacies of irresponsibility. We draw from the literature on transitional justice, an approach developed to assist nations undergoing political transition in the aftermath of widespread violence and repressive regimes, to outline an approach for organizations to deal with their legacies of irresponsibility. Our paper contributes to organizational irresponsibility and historic corporate social responsibility literatures and provides practical guidance for the development of organizational policies to deal with legacies of irresponsibility.

Author: **Herman Aguinis**, *George Washington U.*

We conducted a systematic review and meta-analysis (i.e., 169 studies, 182 independent effect sizes, and 534,007 firm-years) to gain a deeper understanding of the what, how, and when of the relation between corporate social irresponsibility (CSI) and financial performance. Regarding what, CSI and corporate social responsibility are distinct constructs given their unique relation with different types of financial performance. Regarding how, the negative relation between CSI and financial performance is bidirectional. Regarding when, the CSI-financial performance relation is contingent upon CSI intentionality, degree of harm, and type of stakeholders (primary vs. secondary) affected. In sum, we contribute to strategic management theory and practice by providing novel insights into what CSI is, what it is not, and how and when it is related to financial performance.

SIM: **Corporate Social Irresponsibility Under the Media Spotlight and Firm Market Value**

Author: **Elisabet Garrido Martinez**, *U. of Zaragoza*
Author: **Jaime Gomez**, *U. de La Rioja*
Author: **Juan Pablo Maicas-Lopez**, *U. of Zaragoza*
Author: **Raquel Orcos**, *U. de La Rioja*

This research aims to expand our understanding of how media coverage of corporate social irresponsibility (CSI) negatively affects a firm's market value. Drawing on attribution theory, we contend that three features of CSI controversies reported by the media – i.e. the type of stakeholder involved, the scope of controversies, and the persistence of controversies - determine what stakeholders consider to be the drivers under firms' misconduct, shaping their reaction and, therefore, the negative impact of CSI on firm market value. The results, based on an international sample of 535 firms and 2,502 observations along the period 2002-2020, show that the scope and persistence of CSI controversies are detrimental for firm market value.

Organizational Practices

Session Moderator: **Dimo P. Ringov**, *ESADE Business School*

STR: **Replication as Strategy: When Organizations Distinguish between Required and Optional Practices**

Author: **Dimo P. Ringov**, *ESADE Business School*
Author: **Haibo Liu**, *U. of California, Riverside*
Author: **Megan Lynn Lawrence**, *Vanderbilt U.*
Author: **Gabriel Szulanski**, *INSEAD*

Multiunit organizations create value by replicating productive practices in different geographical locales. Extant research finds such replicators either copying established practices precisely or adapting those practices to cater to each local context in which replication occurs. Both theory and evidence, however, increasingly point also to a relatively unexplored “middle ground” where replicators thrive by carefully distinguishing between required and optional practices which they handle differently. Not much is known about the performance implications of such replication strategies where individual units, while expected to replicate all required practices, adapt to their local environments by selecting idiosyncratically from a set of optional practices. In this paper we theorize and empirically examine the performance consequences of such replication strategy using a proprietary dataset that tracks for 11 years the thousands of U.S. units of one of the world’s largest non-food franchise organizations which explicitly distinguishes between required and optional practices. We hypothesize that standardization, i.e., implementation of the set of required practices, will improve the performance of local units but that there is a curvilinear, inverted U-shape relationship between a focal unit’s performance and its extent of local adaptation, as represented by the number of optional practices it implements. We find robust empirical support for our predictions. Our research contributes one more answer to the fundamental question of “how much to copy”. We show that standardization and adaptation, rather than being mutually exclusive, often co-exist in replication/imitation strategies and point to the relationship and contribution of each to overall unit performance.

STR: **Having Your Cake and Eating it Too: Scaling a Chain Rapidly and Healthily**

Author: **Dimo P. Ringov**, *ESADE Business School*
Author: **Aman Asija**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **Gabriel Szulanski**, *INSEAD*

Replication of operational routines is an important source of value creation for chain organizations. Once initially adopted, however, routines must be maintained. This creates a potential tension, as attention to replicating operational routines in new outlets may affect the organizational capacity to maintain adherence to those routines at existing outlets. Surprisingly, little is known about how this tension is managed and what types of experience may improve the ability to manage the ensuing dual imperative. Drawing on the replication and organizational learning literatures, and using data from a Fortune 100 franchise chain with thousands of outlets, we examine whether and how replicating operational routines in new outlets influences a chain’s ability to maintain adherence to those routines in existing outlets over time. We posit and find evidence of a spatio-temporal trade-off in replication, whereby as speed of scaling in an area increased, adherence to operational routines at existing outlets in that area decreased. Our central finding is that this trade-off is moderated by individual outlets’ learning from their own operating experience, as well as by area units’ learning from their prior adherence-related failure and rhythm of scaling experience. The findings point to important hitherto neglected learning and attention mechanisms operating at different levels within chain organizations, which shape their capacity to scale rapidly yet healthily, i.e., to replicate operational routines across both space and time.

STR: **The Value of Data is in the eye of the Beholder: The Role of Resource Cognition in Data-driven Firms**

Author: **Nooa Nykänen**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Jukka Luoma**, *Aalto U.*
Author: **Timo Olavi Vuori**, *Aalto U.*

Digital businesses generate an abundance of data, which can be used to make better decisions, optimize operations, and even modify the firm’s business model and enter new markets. However, there seems to be large and persistent differences in firms’ ability to adopt and leverage the value of their data assets. This study advances the notion that resource cognition, or managers’ perceptions of the uses and limits of their resource base, can explain the extent and ways in which firms end up creating value from their data assets. We conduct a multi-case study of 8 firms who employ data-generating business models to explore how and why firms view and exploit their strategic data resources in different ways. While the business models of all the studied firms generated a wealth of data, the firms developed very different orientations towards their data assets over time. Our findings suggest that firms' data-related resource cognitions and resource orchestration related to the development and utilization of data assets constitute a mutually reinforcing cycle. This cycle can explain why the development of data analytics capabilities can sometimes lead to data becoming to be seen as a core strategic asset in the firm while in other cases data remains in a peripheral role. Overall, our findings contribute to a resource-based view of data-driven firms by highlighting the impact of cognition in firms’ valuation of their data resources.

STR: **The Modern Manager: The Adoption of Emerging Management Practices and Firm Performance**

Author: **Todd Hall**, *U. of Kansas*

Many studies have demonstrated that adopting managerial best practices improves firm performance. However, management practices are not static. Firms face an ever-growing array of possible management practices and must decide which to implement and when. These decisions are particularly difficult in the early days of a practice's emergence. A variety of theories offer contrasting predictions regarding when adopting emerging management practices will be profitable. In this study, I look for evidence of these contrasting predictions using the case study of Agile Marketing. Specifically, I ask which firms are at the forefront of adopting Agile Marketing and which benefit from adoption. I find evidence that the relationship between Agile Marketing adoption and firm revenue is positive after several years of adoption. The results highlight the importance of learning when assessing the potential returns to adopting emerging management practices.

Agency Considerations beyond the TMT

Session Moderator: **Luchi He**, *London Business School*

STR: **How Pay Comparison Affects Employee Performance: Evidence from Waiters' Tip Comparison in Restaurants**

Author: **Luchi He**, *London Business School*

Prior literature on compensation has predominantly argued that pay dispersion could fuel the social comparison of pay among employees and it will reduce individual performance. However, those studies mostly theorized on the effect of upward social comparisons (i.e., individuals socially compare with others who earn more) and overlooked the effect of downward social comparisons (i.e., individuals socially compare with others who earn less). This paper will fill this gap by examining the unique impact of both upward and downward social comparison of pay on employee performance under the pay dispersion, and testing whether the social comparison processes do mediate the negative effect of pay dispersion on performance. I apply a novel method to measure waiters' upward and downward comparison tendency of pay using an individual-level dataset of waiters' earnings in a restaurant chain. I find that the social comparison of pay partially mediates the relationship between pay dispersion and individual performance. It means that although pay dispersion and the social comparison of pay are related, they may have unique impacts on individual performance. Regarding the impact of social comparison of pay on individual performance, I find that individuals react differently to the upward and downward comparison of pay, such that upward pay comparison is negatively associated with employee performance, whereas downward pay comparison is positively associated with employee performance. These results are contingent on the intensity of environmental competition and individuals' intrinsic capability.

STR: **Tired Minds Don't Plan Well: How Exhaustion Affects Team Performance**

Author: **Luca Berchicci**, *Erasmus U. Rotterdam*
Author: **Richard Franciscus Johannes Haans**, *Erasmus U. Rotterdam*

In spite of rising interest in the effects of exhaustion on decision-making processes and outcomes in management research, little work has studied its effects outside artificial or theoretical domains. In addition, work has largely remained at the individual level even though decisions often get made in teams operating in a wider competitive and environmental context. In this paper, we develop novel theory about the effects of team-level exhaustion on team performance. Specifically, we theorize how competitive pressures and environmental dynamism ameliorate the negative effects of exhaustion. We test our theory in the context of the 2017-2018 Volvo Ocean Race, in which elite teams compete under extremely challenging conditions in a series of multi-day races. Our results show support for a negative effect of exhaustion on the quality of teams' decision-making, which becomes weakened when the team is in close proximity to competitors or in highly dynamic conditions. In all, we offer some of the first empirical evidence on the influence of sleep deprivation on team-level decision.

STR: **Mystery Shopping as a Strategic Management Practice in Multi-Site Service Firms**

Author: **Nick Zubanov**, *U. of Konstanz*
Author: **Matthias Heinz**, *U. of Cologne*
Author: **Sidney Block**, *U. of Cologne*
Author: **Guido Friebel**, *Goethe U.*

Anonymous and unannounced worksite inspections known as ``Mystery Shopping" (MS) are common in multi-site service firms, but little is known about the strategic importance of this practice. We conceptualize MS as a monitoring tool firms use to implement the optimal allocation of site resources between sales- and service-related activities in the presence of cross-site reputation spillovers, which is to maximize sales while maintaining service standards. Consistent with this view, data from three retail chains reveal (i) low variation in MS scores, (ii) little correlation of MS scores with sales, and iii) high correlation of sites' MS scores with the likelihood of their supervisors receiving incentive bonuses. Our findings are robust to different model specifications, and shed new light on a ubiquitous yet little-studied management practice.

STR: **How Do Agents Incentivize Agents? Ratchet Incentives in Hierarchically Nested Relationships**

Author: **Hisan Yang**, *U. of Utah, David Eccles School of Business*

This study examines the interaction among threshold-type contracts at different vertical layers of hierarchically nested principal-agent relationships. Using a proprietary panel on a salesforce organization, I find that lower-level salespeople always restrict output to secure easy future targets regardless of how the upper-level strategic interaction between the CEO and the sales branch manager turns out. I also demonstrate that a sales branch manager may not adjust target difficulties for salespeople when the branch exceeded its threshold in the previous period. Doing so fails to induce more effort from the subordinate workers, thus the manager can restrict the branch output and prevent the elevation of the branch-level threshold in the next period. These findings extend previous studies that have examined the dynamics of agency problem at the dyad level.

Innovative Methods for Strategic Leadership Research

Session Moderator: **Stefan Maric**, *Eli Broad School of Business, Michigan State U.*

STR: **Managers and Complementarities**

Author: **Stefan Maric**, *Eli Broad School of Business, Michigan State U.*
Author: **Robert Wiseman**, *Michigan State U.*
Author: **Adam Oppenheimer**, *U. of Minnesota*

Understanding how much influence managers have over firm performance has been one of the central questions in strategic management during the last five decades. Despite sustained scholarly interest in this question, the results of the empirical studies have been inconsistent and increasingly divergent. While some studies have suggested that managers dominantly shape firm-level outcomes, others have supported the notion that managers are entirely interchangeable and hold very little influence. In this paper, we suggest that the current theorizing on this question has failed to consider the role of complementarities – or fit – between managers and firms in determining firm performance. To illuminate the role of complementarities as a source of variation in firm performance, we combine a proprietary dataset containing information on top management teams for every company in the Compustat sample with a novel econometric estimator based on machine learning. Our findings have implications for the Upper Echelons and agency theories while advancing our understanding of the critical factors that shape firm performance. We find that complementarities are an economically significant source of performance variation relative to manager effects. Additionally, we find that the results of existing studies are biased due to the incidental parameter problem and endogenous manager mobility.

STR: **Green Strategic Leadership Capability: Scale Development Study**

Author: **Eijaz Khan**, *James Cook U.*

The role of green strategic leadership capability (GSSLC) in nurturing firm environmental performance has considerable gained attention among the practitioner and academic communities. However, empirical study in this area has been dogged by scant conceptualisation and the lack of a validated scale. This study focuses these shortcomings by theoretically conceptualising and empirically validating a multidimensional GSLC scale. The findings show that GSLC is a multidimensional, hierarchical, and reflective construct, which consists of three primary dimensions and nine subdimensions. The results also confirm that the GSLC scale is more effective with green training and predicting firm environmental performance in a nomological network.

STR: **The Face of Fortune: A Review on How Machine Learning Can Address Limitations in Past Research**

Author: **Dawei Wang**, *Northwestern Kellogg School of Management*
Author: **Yali Che**, *Zhejiang U., China*
Author: **Haibin Yang**, *Chinese U. of Hong Kong*
Author: **Fan Zhou**, *School of management, Zhejiang U.*

In recent years, an emerging number of studies have linked CEO faces to an array of company outcomes. The current research connects with this burgeoning line of research by first providing a comprehensive review of past studies, and then categorizing studies according to their micro-theoretical foundations, namely the thin-slice literature, evolutionary psychology and facial perception. Drawing from psychological studies of human faces, we identified two major limitations in the existing CEO faces literature—the problem of small sample size and the lack of standardization of facial images. While these limitations tremendously hamper the replicability and generalizability of studies on CEO faces, we argue that recent advancements in machine learning can help researchers alleviate the limitations. We demonstrate in details how to apply these techniques and empirically show how they help to improve standardizations in facial images. We also provide an open dataset that is processed by machine-learning and that meets the standards in social psychology research, to facilitate future studies of CEO faces. We conclude by discussing how these machine learning techniques as well as this open dataset can contribute to the study of CEO faces and the upper echelons research.

STR: **Strategic Leadership Capabilities for Innovation: Scale Development and Empirical Validation**

Author: **Gaurav Dilip Tikas**, *International Management Institute New Delhi*

A multi-method approach to conceptualize and measure strategic leadership capabilities for innovation (SLCI) has been posited. Drawing upon expert interviews and previous studies on strategic leadership and innovation capabilities, a novel (SLCI) construct and a psychometric scale to measure it within organizational settings has been proposed. Factor analysis helped in exploring the three-dimensional factor structure underlying the SLCI conceptualization. A two-stage validation (N2 = 312 respondents) and (N3 = 240 respondents) confirmed that SLCI can be reflected through three sub-dimensions – dynamic envisioning, ambidextrous resource utilization and empowering support for innovation. This unique conceptualization, scale development and empirical validation contributes to the extant literature on strategic leadership for managing innovation within organizations.

Microfoundations of Strategy

Session Moderator: **Ann-Kathrin Schill**, *U. of Passau*

STR: **All the World is on Stage: Social Dynamics in Q&A Situations**

Author: **Ann-Kathrin Schill**, *U. of Passau*
Author: **Friederike Hawighorst**, *U. of Passau*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Basak Yakis-Douglas**, *King's Business School*
Author: **Richard Whittington**, *U. of Oxford*

We theorize how social dynamics between top executives and constituents in question-and-answer situations (Q&As)—such as earnings calls, press conferences, and U.S. congressional hearings—affect social evaluations of organizations. We define Q&A social dynamics as relational episodes that unfold between executives and questioners or between participating executives while they verbally interact with each other in a Q&A situation. We first provide a typology that distinguishes four generalized types of Q&A social dynamics. Second, we theorize that Q&A social dynamics induce audiences to draw a unique set of inferences regarding the executives' and the top management team's (TMT) cognitive and affective dispositions and abilities, specifically: the executives' responsiveness; their respect for stakeholders; the degree to which the TMT members share mental models; and the TMT's cohesion. Finally, we formalize nomothetic propositions on how these inferences, and, in turn, different kinds of social evaluations are driven by specific examples of Q&A social dynamics. Our conceptual framework contributes by moving beyond audiences' evaluative responses to substantive informational aspects of Q&A situations and executives' isolated (verbal) behavior, focusing instead on audiences' evaluations associated with the inherently interactive nature of Q&A situations—a ubiquitous, theoretically distinct, but undertheorized setting of external communication.

STR: **How Does Internal Competition Size Affect Firm Performance When Employees' Tasks Are Interdependent?**

Author: **Patrick Hallila**, *Bayes Business School*

Prior work has found contradictive evidence on how internal competition size affects employees' collaboration, and thus firms' performance, in interdependent settings. In this study, we clarify how internal competition size affects firm performance in interdependent settings and how the effect is dependent on the type of interfirm competition – i.e. where and who the firm competes against – the firm faces. We first argue that increasing internal competition size decreases firm performance. We then borrow from the competitive dynamics literature to argue that the type of competition the firm faces moderates the effect of internal competition size on firm performance. That is, internal competition size is less harmful to firm performance when the firm competes in its identity domain – a competitive arena strongly connected to the firm's identity – and more harmful when the firm competes against its relational rival – a firm with whom the focal firm has developed a long-standing competitive relationship. We test our hypotheses using panel data (2014-2020) from the National Hockey League (NHL). Our results show that internal competition size reduces firm performance, but the effect is smaller when the firm competes in its identity domain and larger when it competes against a relational rival.

STR: **Strategy as (a causal) Theory of Change**

Author: **Sergio Giovanetti Lazzarini**, *Ivey Business School*
Author: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

An emerging theory-based view of strategy proposes that a strategist's task is to present a theory that addresses relevant problems and moves an organization toward a place or position of greater value, with clear causal paths that can be confronted with data and evidence. We contribute to this literature in two main ways. First, we propose a structure way to specify and depict causal paths based on the "theory of change" framework, common in policy analysis, and anchor the building blocks of the theory on strategic management constructs. Namely, we propose a causal chain linking resources, practices, and performance. Second, to assess and compare strategic theories, we analyze the theory structure as a directed graph and propose a set of metrics operationalizing key theory attributes: complexity, difficulty to falsify, and difficulty to replicate. We discuss the strategic relevance of those metrics and extend our proposed theory structure by considering the possibility of feedback loops and the presence of distinct organizations (or organizational units) linked with the overall theory of change but focusing on particular problems and interventions. We conclude the paper with several suggestions for future research.

STR: **What A Surprise! Whether And How Evaluator Disagreement Dampens Expectancy Violations**

Author: **Yuri Mishina**, *Imperial College London*
Author: **Maxine Yu**, *Imperial College Business School*
Author: **David M. Gomulya**, *Singapore Management U.*

Participants in many markets use public measures, such as rankings of universities and colleges, analyst estimates and Yelp restaurant ratings to reduce the likelihood of adverse selection and moral hazard. However, evaluators producing these measures may not always agree on how they assess a particular target, the effect of which remains poorly understood. We examined whether and how disagreements across evaluators might impact the reactions of market participants in the context of investor reactions to analysts' earnings estimates. We find that when there is disagreement across evaluators about a target ex ante, market participants' reactions to expectancy violations by those targets are dampened. We further demonstrate that this dampening effect is weaker when the target firm violates expectations in a negative, rather than positive manner.

The Role of the CEO in Strategy

Session Moderator: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*

STR: **Mitigating CEO Overconfidence: A Stakeholder Perspective**

Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*
Author: **Stevo Pavicevic**, *Frankfurt School of Finance & Management gGMBH*

Overconfident CEOs – CEOs with exaggerated beliefs in their own judgment and abilities – tend to expose firms they manage to excess levels of strategic risk-taking. Adopting a shareholder-oriented perspective, prior research has highlighted the role of shareholders and boards of directors in mitigating the influence of overconfident CEOs on strategic risk-taking. In this paper, we depart from prior research by adopting a stakeholder-oriented perspective to investigate if and how non-shareholding stakeholders might influence strategic risk-taking by overconfident CEOs. We argue and show that stakeholder orientation – the degree to which firms are attentive to non-shareholding stakeholders and integrate their interests in the strategic decision-making processes – decreases, for better or worse, the tendency of overconfident CEOs to inflate strategic risk-taking.

STR: **Towards the Finish Line: Marathon CEOs, Strategic Persistence and Firm Performance**

Author: **Jueni Lyu**, *Hong Kong Baptist U.*
Author: **Yi Tang**, *U. of Hong Kong*
Author: **Guoli Chen**, *INSEAD*

In response to the recent call in the upper echelons research for more attention to executives' off-the-job experiences, this study examines an interestingly prevailing facet in CEOs' personal lives: running-marathons. Running marathons shapes not only CEOs' physical fitness but also their cognitions and values, affecting their firms' decisions and outcomes. Specifically, we examine how a CEO's running a marathon is associated with his/her firm's strategic persistence and firm performance under various environmental conditions. We tested our predictions using a unique, hand collected dataset from the World Marathon Majors (WMM) participation records during 2009-2019. Our results suggest a positive relationship between marathon CEO and firm strategic persistence. Moreover, the relationship between marathon CEO and strategic persistence turns stronger when the CEO runs more marathons and when the CEO run marathons for longer time. Finally, we find that when environmental adversity is high, there is a positive relationship between marathon CEO and firm performance. However, when environmental dynamism is high, the relationship between marathon CEO and firm performance becomes negative. Implications to upper echelons theory and strategic leadership literature are discussed.

STR: **Do First Impressions Matter? Initial CEO Performance and Dismissal**

Author: **Steffen Burkert**, *LMU Munich School of Management*
Author: **Yannik Gehrke**, *U. of Goettingen*

In this study, we examine how boards' initial performance impression of CEOs affect their decision to dismiss CEOs. Psychological work on human information processing outline that first impressions can sustainably bias the perception of other persons. Drawing on these insights, we argue that the CEO performance at the beginning of his or her tenure likely shapes boards' perception of CEOs and thus affects the board's decision to dismiss the CEO in later years. Consistent with this argumentation, we find that CEOs with better (worse) performance in the initial stage of their tenure are less (more) likely to be dismissed in later years. This effect becomes weaker over time, but is present throughout the tenure of the CEO. We also find that the effect is stronger if the board is busier and if there is a female CEO. Finally, we provide evidence that negative initial CEO performance has a stronger effect than positive one. In sum, this study enriches the literature on potential biases in the decision-making of boards.

STR: **Do We Really Deserve It? The Impact of Female and Foreign CEOS on Shareholder Activism**

Author: **Hwayoung Kim**, *U. of Texas at Dallas*
Author: **Yilin Liu**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Cuili Qian**, *UT Dallas*

The current study examines how the prevailing bias in leadership roles arising from prototypes induces more scrutiny on minority CEOs, leading to more shareholder activism towards the firm led by them. Shareholder activists are salient stakeholders who express displeasure with a particular way a firm is operated and are a force to change the firm's strategy or governance. Integrating the framework of corporate opportunity structure with the research on prototype bias, we hypothesize that firms led by female and foreign CEOs are more likely to suffer from shareholder activism as minority status is a crucial factor for assessing the possibility of campaign success. More importantly, we develop argument that female and foreign CEOs can mitigate such bias by employing different linguistic techniques that can show their leadership capability and effectiveness. Our results largely support our predictions. The display of specific values can mitigate the negative impact of leadership prototypes.

Information and Choices in M&A

Session Moderator: **Jan Christian Bauer**, *U. of Goettingen*

STR: **Comprehensiveness vs. Speed – The Role of Industry Conditions for the Optimal Due Diligence Length**

Author: **Jan Christian Bauer**, *U. of Goettingen*
Author: **Jan Christoph Hennig**, *Groningen U. (RuG)*

In this study, we examine how M&A due diligence length affects deal announcement reactions under varying industry conditions. Information asymmetries in M&As confront acquirers with an adverse selection problem which they aim to mitigate by conducting due diligence. However, the optimal due diligence length is likely to be a trade-off between information comprehensiveness and decision speed. We theorize that industry conditions influence the risk posed by different decision error types and thereby alter the aptness of due diligence length depending on relatively stronger preferences for either information comprehensiveness or decision speed. Based on our theorization, we argue that under greater industry complexity, longer due diligence is considered beneficial, while under greater industry munificence and dynamism, longer due diligence appears to be less beneficial. Using M&A deals from S&P 1500 firms between 2005 and 2018, we find results consistent with our argumentation. By offering a nuanced perspective on the relationship between due diligence length and deal announcement reactions, we provide valuable insights for theory and practice on an otherwise only theoretically considered trade-off choice.

STR: **How AI Startups' Focus on Technology or Application Affects the Acquisition and Alliance Decision**

Author: **Jae Young Cho**, *PhD Student at U. of Colorado, Boulder*
Author: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*

Firms often source technologies externally from startups, and the uncertainty surrounding these transactions leads incumbents to pursue flexibility through partnerships rather than incurring sunk investments through acquisitions. In recent years, incumbents have increasingly sourced technologies from artificial intelligence (AI) startups and encounter a new tradeoff related to flexibility and commitment. AI is a general-purpose technology with broad potential across different markets, so while some AI startups focus on specific uses or application areas, others focus on developing AI technologies per se. Incumbent firms partnering with technology-focused AI startups can therefore face difficulties in securing startups' commitments to specific applications. Despite the technological uncertainties surrounding such startups, incumbents may therefore acquire them, rather than partner with them, to co-create value to profit from AI. These concerns of incumbents amplify when a startup's technology is potentially utilized across more diverse application areas or an incumbent's knowledge is diverse. Our theory and evidence therefore identify new conditions when incumbents can benefit from committing via acquisitions to source technologies externally from startups.

STR: **Once Bitten, Twice Shy: Unconsummated Deals and Subsequent M&A Cautiousness**

Author: **Robert James Campbell**, *U. of Nebraska, Lincoln*
Author: **Peter Limbach**, *Bielefeld U.*
Author: **Johannes Reusche**, *MIB AG Immobilien und Beteiligungen*

Companies occasionally are unable to finalize publicly announced M&A bids—a phenomenon referred to as unconsummated deals. Despite their commonality, the implications of unconsummated deals for bidding firms are not well understood. We thus theorize about and empirically investigate the relationship between unconsummated deals and subsequent M&A behavior. In doing so, we present multiple reasons for what we term the "once bitten, twice shy effect," whereby firms act more cautiously in the M&A context following unconsummated deals. In a sample of M&As across North American and European firms, we find empirical support consistent with our theorizing suggesting the cautiousness following unconsummated deals is associated with smaller target firm size, a greater likelihood of advisor usage, a greater likelihood of toehold acquisitions, and a longer time-period between acquisition bids.

STR: **Information Institutions and Returns in International Acquisitions**

Author: **Jaideep Anand**, *Ohio State U.*
Author: **Philipp Meyer-Doyle**, *INSEAD*
Author: **Tiancheng Wang**, *INSEAD*
Author: **Qi Zhou**, *U. of Arizona*

The quality of information institutions governing corporate transparency varies tremendously across countries and is increasingly important for information asymmetry in international acquisitions. Information asymmetry in corporate acquisitions exists because there is an imbalance in the information available to the potential acquiring firms. In this study, we examine the implications of such information asymmetry using a strategic factor market based framework. We empirically analyze acquirer returns in 598 international acquisitions made by U.S. firms in 36 countries during 2000-2009. We find that, on average, acquiring firms may be able to find bargains in opaque markets for corporate control, particularly when acquiring firms in different industries and using non-cash forms of payment. Further, heterogeneity in such outcomes is explained by the acquirer's ability to use private information in such an opaque market and interests alignment between acquirers and targets.

Research has shown that family firms are unique in both motives and behaviors compared with nonfamily firms. Yet, we have very scant knowledge about whether and how family and nonfamily firms differ in interfirm networks, despite the rich literature on firm behaviors in pursuing inter-organizational networks and how they impact firm and market outcomes. This study aims at expanding our knowledge on the network embeddedness of family firms. Drawing insights from socioemotional wealth theory and network analysis, we argue that family firms tend to be disconnected and closed in the interlock network to secure family control, identity, and other emotional endowments. Moreover, to address the information disadvantages associated with network closure, family firms present a closed-but-diverse configuration by inviting more functionally diverse directors on board while being closed in interlocks at the same time. Our analysis of Chinese family firms from 2008 to 2019 lends robust support to these arguments. This study sheds light on the network characteristics of family firms. By revealing the socioemotional motives of organizational networking and drawing the connection between network structure and board design, it also has implications to research on networks and organizations.

STR: **Will IPO Over-Financing Accelerate Family Firm's Internationalization?**

Author: **Yingxian Zeng**, *School of Business,Sun Yat-sen U.*
Author: **Xinchun Li**, *Sun Yat-Sen U.*
Author: **Likai Zou**, *Shantou U.*
Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*

To further understand family firms' internationalization, we tried to explore whether family firms' attitude to international market entry will change. This study proposes that IPO over-raised funds, a kind of unexpected wealth from outside the controlling family, reduce risk aversion and bring financial resources to explore new markets and seek future SEW gains, promoting family firms' internationalization. Using a sample from China, this study found a positive relationship between IPO over-financing and the scale and scope of family firms' internationalization. Moderating analysis suggested that family excess control weakened this relationship while institutional investors strengthened it.

STR: **Born to Rebel? How Family Chairmen's Birth Order Affect Family Firm Internationalization**

Author: **TAO WANG**, *School of Economics and Management of Wuhan U.*
Author: **Yue Wang**, *School of Economics and Management of Wuhan U.*
Author: **Wenlong Mu**, *School of Journalism and Communication, Wuhan U.*

This study investigates the effect of family chairmen's birth order on family firm internationalization (FFI). We propose that family firms headed by later-born family chairmen are more likely to be internationalized. This is because later-born family chairmen are less likely to perceive internationalization as a threat to socioemotional wealth. Using a large sample of Chinese family-owned listed firms with data spanning 2009-2019, we find that there is a positive relationship between family chairmen's birth order and FFI; the effect of family chairmen's birth order on FFI is stronger when family chairmen early-life exposure to Confucian culture, have no international experience, and are founder generations. We contribute to the emerging literature on the micro-foundations of FFI.

STR: **What do Families in Business Want? Theory and Evidence from Brazilian Firms**

Author: **Susan Perkins**, *NYU Stern School of Business*
Author: **Edward J. Zajac**, *Northwestern U.*

While research on family-owned firms has typically sought to contrast their motivations/expected behaviors to those of nonfamily-owned firms, we argue that such a bifurcation masks meaningful differences among family-owned firms. We develop and test a tripartite typology of family-owned firms and link this typology to differences in expected behaviors. We contextualize and test our hypotheses using the recent Brazilian financial market reform, where firms could self-select into new trading sub-segments characterized by increased stringency of corporate governance requirements. We find that our tripartite typology of family-owned firms predicts which firms will opt for better governance practices, and also how the financial market will respond. We conclude with implications of our theoretical framework and findings for future research on corporate governance, family-owned firms, and institutional change.

Ecosystem Strategy

Session Moderator: **Georg Reischauer**, *WU Vienna U. of Economics and Business*

STR: **Strengthening the Identity of Incumbent Ecosystems After New Rival Entry**

Author: **Georg Reischauer**, *WU Vienna U. of Economics and Business*
Author: **Alexander Engelmann**, *WU Vienna U. of Economics and Business*
Author: **Werner Helmut Hoffmann**, *WU Vienna U. of Economics and Business*

Ecosystem identity – the mutual understanding of the central, enduring, and distinctive features of an ecosystem value proposition – is key to the growth of incumbent ecosystems. It is established by ecosystem orchestrators through framing tactics. However, little is known about how orchestrators frame to strengthen ecosystem identity when facing new rivals. We address this gap with a longitudinal qualitative study of a European carmaker whose location-based mobility services ecosystem was challenged by Google. The carmaker deployed distinct framing tactics – straightening up, future-proofing, and valorising – each time incumbents questioned the ecosystem's future. In doing so, the carmaker gradually revitalized the identity and continued the growth of its ecosystem while other carmakers abandoned their own respective ecosystems in favour of Google. Based on these findings, we advance a process model for strengthening the identity of incumbent ecosystems after new rival entry. We contribute to research on ecosystems and the framing literature.

STR: **Power To The People: Power Practices Achieving Stability in the Decentralized Techno-Music Ecosystem (WITHDRAWN)**

Author: **Juliet Vink**, *Vrije U. Amsterdam*
Author: **Elco Van Burg**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Brian Vincent Tjemkes**, *Vrije U. Amsterdam*
Author: **Omar Solinger**, *Vrije U. Amsterdam*

Stability of a business ecosystem enables actors to reap benefits from their participation. Extant business ecosystem research explains this stability through reference to formal, centralized power; where a focal actor enforces compliance of others in a centralized ecosystem. However, not all business ecosystems are centrally led or structured. Yet, current theorizations advanced in business ecosystem research offer limited insight into power practices and resulting stability within these decentralized ecosystems. The present single case study of a techno-music ecosystem reveals how stability in a decentralized ecosystem is maintained by power practices harnessing a multi-layer structure containing conflicting norms and behaviors. The results show how power practices divide and unite actor interdependencies into three contrastive layers. Specifically, deviant norms and behaviors are fostered in the underground, regulated by the bridging ground, and commercialized by the upperground. Unravelling the power dynamics in a decentral ecosystem from a relational perspective, we extend the current structuralist perspective of power to set the first steps towards a more comprehensive and inclusive understanding of power in business ecosystem literature.

STR: **Ecosystem Bottlenecks and Value Dynamics in the Lifecycle of the Online Video Ecosystem**

Author: **Jungyoon Jang**, *U. of Pittsburgh*
Author: **Asli Musaoglu Arikan**, *Kent State U.*
Author: **John E Prescott**, *U. of Pittsburgh*

Ecosystem bottlenecks limit or provide opportunities for actors to create and capture value. Although extant research has highlighted the importance of interfirm relationships in facilitating ecosystem and firm growth, it mainly focuses on a single bottleneck type and does not differentiate the impacts of bottleneck-level strategic actions with diverse ecosystem actors. Our research draws on the theory of constraints and the ecosystem perspective to classify bottleneck types and examine how actors' bottleneck-level strategic actions impact performance in the context of the online video ecosystem lifecycle (2007-2019). We theorize that during the nascent stage, when focal actors conduct technical bottleneck alliances with suppliers and/or competitors or demand bottleneck alliances with complementors, deal performance will be positive. We further theorize that during the growth stage, when focal actors conduct technical bottleneck acquisitions of complementors or demand bottleneck acquisitions of suppliers and/or competitors, deal performance will be positive. We employ multi-methods (content analysis, surveys, and multivariate analysis) with hand-collected and proprietary data. We find considerable support that our 3-way interaction hypotheses explain firm heterogeneity in deal performance. We contribute to bottleneck and ecosystem research by including both positive and negative effects of bottlenecks and illustrating how actors' partner/target type choices influence investor reactions.

STR: **Center to Component to Complement: Incumbents' Product Strategy in Response to Ecosystem Emergence**

Author: **Najoung Lim**, *Melbourne Business School, U. of Melbourne*

The paper examines the evolution of firms' product scope as their once independent products turned into components of an integrated product system and ultimately complements of an open ecosystem. An increase in interdependencies with other actors' products creates opportunities for governing components internally but also reduces the benefit of internalizing complements due to the ease of mix and match by end-customers. Following a research-question approach with quantitative and qualitative data in the U.S. medical imaging device industry (1981-2008), I find that on average incumbent imaging equipment firms reduced product diversity when they became part of integrated product systems or an ecosystem but diversified when they gained access to the connecting technology early on. These findings suggest that the nature of interdependencies and the (timing of) access to the core innovation for managing interdependencies matters.

Technology M&As

Session Moderator: **Tuhin Chaturvedi**, *Tulane U.*

STR: **Technological Acquisitions: The Enabling and Constraining Role of Financial Investors**

Author: **Tuhin Chaturvedi**, *Tulane U.*

Industry convergence i.e., the blurring of boundaries between industries is a pervasive form of technological change in the modern industrial landscape. In this paper, I examine how financial investors may enable or constrain the acquisition activity of firms attempting to adapt to industry convergence, particularly when these acquisitions are done with the intent of technological exploration. I theorize that differences in the beliefs, expectations, and preferences of investors in terms of how firms do and should create value lead to whether firms are likely to explore via acquisitions and survive industry convergence. Using a multi-industry sample of convergence between the telecommunication equipment and data networking industries and the photography industry, I find that firms with stocks owned by investors with a greater preference for revenue growth were more likely to explore via acquisitions and survive convergence relative to firms that had stocks owned by investors with a greater preference for profitability (or margins). This study extends research that examines the reaction of financial investors to firm strategies during technological change. It also posits investor expectations as a novel source of inertia for firms that may preclude them from exploration and adaptation to technological change. The study also presents implications for policy making institutions such as governments, technology standards organizations, and financial markets by suggesting a collaborative effort on their part to develop a more level playing field for firms during technological change.

STR: **Technology Differentiation, Product Market Rivalry and M&A Transactions**

Author: **Sam Arts**, *KU Leuven*
Author: **Bruno Cassiman**, *KU Leuven*
Author: **Jianan Hou**, *KU. Leuven*

We study how the uniqueness of firm technology relates to M&A transactions among US public firms between 1984 and 2015. Relying on a new text-based method to map each firm's competitive position in technology space relative to all other firms and to measure the uniqueness of a firm's technology portfolio, we find that firms with unique technology are typical targets and receive a higher acquisition price. Moreover, firms with unique technology are particularly targeted by close competitors in the product market as measured by the overlap in 10-k product descriptions of firms. Our findings illustrate that a unique technology portfolio is an important resource traded in the market for corporate control and a key driver of M&A transactions, particularly between close competitors in the product market.

STR: **Organizational Learning in Acquisition Programs: Flow and Heterogeneity of Experience**

Author: **Jonas Geisen**, *Radboud U., Netherlands*
Author: **Hendrik Leeendert Aalbers**, *Radboud U. Nijmegen*
Author: **Killian J. McCarthy**, *U. of Groningen*

In pursuit of their strategic goals high-tech serial acquirers engage in acquisition programs. It remains unclear, however, how learning impacts acquisition programs' performance. So far, the flow of experience – that is, the rate and rhythm of the acquisition program – has been the predominant explanation how experiential learning affects serial acquirers' performance. Furthermore, organizational learning theory suggests, that the heterogeneity of experience – that is, the difference in what a firm learns – is important. Building on literature highlighting that acquisition motives matter, we argue that experience's heterogeneity – in terms of motives across acquisitions and within acquisition programs – affects experience's flow which, in return, affects acquisition programs' performance. Based on temporal cycling we distinguish between acquisition programs which: (1) stick to one motive creating homogenous experience; (2) switch once between motives gaining both homogenous and heterogenous experience; and (3) oscillate back and forth between motives creating heterogenous experience. We argue, that sticking with a higher acquisition rate and rhythm reduces programs' performance while switching and oscillating with a higher rate and rhythm improves programs' performance. We test our hypothesis using a sample of 3.029 acquisitions conducted by 352 high-tech serial acquirers between 2000 and 2020. Our results match our expectations. By doing so, our study adds to discussions on organisational learning, to the discussion on repetitive momentum as well as the discussion on sequential ambidexterity and temporal cycling.

STR: **The Effect of Accidental Returnee Engineers on Post-acquisition Knowledge Integration**

Author: **Seungho Choi**, *Ewha Womans U.*
Author: **Jeonghwan Lee**, *Myongji U.*
Author: **Sang-Joon Kim**, *Ewha Womans U.*

Post-acquisition knowledge integration leads to a surplus over and above the value that an acquiring firm's and a target firm's resources could generate independently. This paper identifies a unique group of mobile engineers who left an acquiring firm for a target firm, or vice versa, before an acquisition and then interact with their previous firm after an acquisition. We refer to them as accidental returnee engineers (AREs), and we examine how their intellectual and relational capital affects post-acquisition knowledge integration between acquiring and target firms. We find that AREs' intellectual and relational capital promotes post-acquisition knowledge integration and that structural integration positively moderates this relationship. We argue that AREs, who are in a unique position due to their mobility in the pre-acquisition period, can serve as a conduit between the acquiring firm and the target firm by facilitating knowledge flow and nurturing personal interactions; thus, they support post-acquisition knowledge integration.

Challenges of Free Market Institutions

Session Moderator: **Luis Diestre**, *IE Business School*

STR: **The Role of Resource Stakeholders in Mitigating Short-termism under Capital Market Pressure**

Author: **Najoung Lim**, *Melbourne Business School, U. of Melbourne*
Author: **Jingoo Kang**, *Nanyang Technological U.*

We examine whether and when the relative importance of resource stakeholders reduces managerial attention to shareholder value under abrupt capital market pressure. Drawing on the stakeholder resource-based view, we conceptualize firms' value distribution as a bargaining process and theorize that the salience of resource stakeholders that directs managerial actions hinges on two factors: value-creating capability of contributed resources and stakeholders' bargaining position within a firm. Our empirical context is the U.S. stock market (2002-2007), when the SEC's randomized experiment removed short-sale restrictions from randomly selected stocks. Using a difference-in-difference-in-differences design, we find that increased short-selling pressure led to an increase in firms' marketing and selling activities, but the tendency was mitigated in the presence of other important stakeholders—repeat customers and a downstream workforce.

STR: **Buy Legal or Illegal? How Side-Effect and Medical Malpractice Risks Shape Illegal Pharmacies' Sales**

Author: **Luis Diestre**, *IE Business School*
Author: **Antonella Fazio**, *IE Business School*
Author: **Yasser Fuentes**, *IE Business School*

We develop new theory about the relative performance of legal and illegal organizations looking at pharmacies dispensing prescription drugs to U.S. citizens. We argue that customers value the flexibility provided by illegal pharmacies—they can freely choose what drug to buy, in what quantity, and for how long—and the oversight provided by legal pharmacies—they receive medical supervision during their treatment and the FDA guarantees drug quality. The relative advantage of each of these two types of pharmacies, we propose, depends on the kind of risks customers face. Side-effect risks, we claim, will lead customers to value relatively more the oversight provided by legal pharmacies, increasing these pharmacies market share; whereas medical malpractice risks will lead customers to value illegal pharmacies' flexibility relatively more, increasing these illicit pharmacies' market share. We find support for our theory using a novel methodology to estimate illegal pharmacies' market share relative to legal pharmacies across 5,270 drugs between 2018 and 2021.

STR: **Corporate Social Responsibility Strategy: Resource Conservation or Relationship Preservation?**

Author: **Yah Ling Liew**, *Singapore Management U.*
Author: **Xuesong Geng**, *Singapore Management U.*

Extant studies have shown how institutional complexity, posed by the incompatibility of shareholder logic and stakeholder logic, affects firms' corporate social responsibility (CSR). Yet little is known about how institutional logics are internalized in CSR strategizing. Using Agency theory and Stakeholder theory, Behavioral Theory of the Firm, attention-based view, this paper conceptualizes resource conservation and relationship preservation, two distinct mechanisms in CSR strategizing informed by shareholder logic and stakeholder logic respectively. The use of CSR strategy is to complement the market-oriented strategies that firms' attention and resources are drawn to. Under the condition of negative performance feedback, the master switch that intensifies firms' market-oriented actions, this paper finds that firms reduce CSR consequentially. The motivation is to release resources for actions targeted to close the performance gap. Situational context also moderates firms' prioritization of resource allocation. Bankruptcy risk intensifies the reduction in CSR as resource conservation becomes salient. While reputation risk attenuates the reduction in CSR as relationship preservation becomes salient. China offers a rich context to examine institutional complexity as CSR is mandated by the company act. Using 11,716 firm-year observations from 1,013 Chinese listed firms from the year 2007 to 2021, this paper found support for the theory.

STR: **Trying the Well-Tried: Short-Term CEO Bonus Pay and Corporate Emissions**

Author: **Catrina Achilles**, *U. of Goettingen*
Author: **Yannik Gehrke**, *U. of Goettingen*

Since CEOs' direct monetary incentives for environmental performance remain low, the ques-tion of how established forms of CEO performance pay relate to corporate environmental goals is important. We study the performance sensitivity of the pervasive short-term bonus incentive mechanism and how it relates to corporate greenhouse gas (GHG) emissions. From the agency perspective, short-term performance pay may foster efficiency gains and cost reductions, but might reduce incentives for fundamental changes that may only pay out in the long term. We provide evidence for an on average negative association between GHG emissions and short-term CEO bonus pay. This relation is more pronounced for environmental-material firms and younger CEOs. The former arguably pay more attention to achieving short-term improvements in environmental issues to respond to external pressure and have more potential for short-term emission reductions. The latter are more reluctant to long-term investments and more prone to short-term monetary incentives. Our study provides primary evidence on the role that short-term managerial incentives play for environmental performance.

Shocks, Uncertainty, and Stakeholders

Session Moderator: **Qinyu Wang**, *Hong Kong Polytechnic U.*

STR: **Throw out the Baby with the Bathwater? OSS Contributors' Response to the Facebook Scandal**

Author: **Qinyu Wang**, *Hong Kong Polytechnic U.*
Author: **Yanfeng Zheng**, *Hong Kong U. of Science and Technology*

Firms initiate long-term community projects to engage stakeholders in the hope of doing well by doing good. The central premise is that these prosocial projects can yield positive evaluations and contributions from participating stakeholders. Drawing insights from the cognitive dissonance theory, our research however suggests that to attract stakeholders' contributions, firms must attend to their moral expectations in addition to extrinsic motivations. If a firm violates these expectations even in unrelated activities, stakeholders may respond negatively and withdraw the engagement. The disengagement is greater if the stakeholders are less embedded in the community or they can find substitute projects. However, if stakeholders keep their engagement, our framework theorizes that they will employ cognitive work to justify their decision and counterintuitively increase their engagement intention. Exploiting Facebook's involvement in a mass data scandal in 2018 and analyzing open-source contributors' behavioral change afterward, we find evidence in support of our cognitive dissonance framework. Our theory and findings suggest that firms should nurture an authentic social reputation among stakeholders to attract their contributions which are vital to the strategic goals of community projects.

STR: **Heterogeneity in Perceptions of the Temporal Duration of External Events: The Case of the COVID-19**

Author: **Dongge Zhou**, *Rensselaer Polytechnic Institute*
Author: **Shyam Kumar**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Tailan Chi**, *U. of Wisconsin, Milwaukee*

We examine the degree to which firms varied in their perceptions of the temporal duration of an external event using the COVID-19 pandemic as the context. Temporal duration refers to perceptions regarding how long an event is likely to last, the length of time over which its consequences would be felt, and whether it is short term or long term in nature. Using word embedding models and Group Based Trajectory analysis we found that in a sample of S&P 1500 firms, 87.1% firms perceived the pandemic to be a long-term event with relatively little change in these perceptions over time. In contrast 12.9% firms perceived the pandemic to be short term in nature, while adjusting these perceptions to long term by the end of the observation period. Building on the notions of temporal structures and temporal work, we found firms' initial time horizons prior to the pandemic and their endowment of slack resources to be influential determinants of their temporal duration perceptions. Our research highlights the subjective nature of temporal duration, while underscoring the importance of temporal sense making within firms.

STR: **C-R-C Model of Organizational Resilience: Firm's Responses to a Prolonged Turbulent Environment**

Author: **Jin Hooi Chan**, *U. of Greenwich, Business School*
Author: **Xiaoguang Qi**, *Cambridge Judge Business School*
Author: **Jingjing Guan**, *ZheJiang GongShang U.*
Author: **Maohua Sun**, *Vocust, China*

Despite building organizational resilience being key in coping with these challenges imposed by turbulent environments, we have a limited understanding of how firms cope with a prolonged period of turbulence such as the Covid-19 pandemic. This study conducted a case study on the world's larger online travel agent, with interviewing of the founder and senior managers and analyzing of secondary data, aiming to understand "How does the organizational resilience of the firm being developed in a turbulent environment? This study builds a model for organizational resilience from a resource-based perspective. A novel model of organizational resilience: R-C-R Model, is proposed, incorporating Resources, Capabilities, and Response Strategies. This article contributes to the understanding of organizational resilience for an intermediary and e-commerce firm and sheds light on the managerial practice of OTA business under a turbulent environment.Online travel agencies (OTA) are exposed to turbulent environments. Despite building organizational resilience being key in coping with these challenges imposed by turbulent environments, there needs to be more research conducted, which is directly being hit by turbulence. This study conducted a case study on the world's larger online travel agent case study method, this article analyzed attempts to build a model for organizational resilience from a resource-based perspective Online travel agencies (OTA) are exposed to turbulent environments. STR: **The Contingent Financial Impact of Company Philanthropy under High Uncertainty**

Author: **Luis Ballesteros**, *Boston U. Questrom School of Business*
Author: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*
Author: **Michael Useem**, *U. of Pennsylvania*

Studies routinely show that companies benefit from engaging in philanthropy and these benefits are enhanced when actions are perceived as generous and sincere. However, firms are increasingly being asked to respond to urgent and unpredictable issues, like pandemics and natural disasters, which lack clear stakeholder expectations for what constitutes an appropriate response. In the face of this uncertainty, we argue that the material features of the philanthropic action are not useful for assessing a company's response, and audiences will rely on cues, heuristics unrelated to the donation. Based on an analysis of corporate responses to every epidemic, disaster, and terrorist attack worldwide from 2007-2019, we find that the financial outcomes of disaster philanthropy strongly reflect the reputation of the first firm to donate. Well-regarded first donors benefit from philanthropy, regardless of how much they donate, while ill-regarded first donors are punished. These judgments then transfer to followers that match these donations. Regardless of their own reputations, firms that match well-regarded first donors benefit from philanthropy, while firms that match ill-regarded first donors are punished. Our findings have implications for research on corporate philanthropy in uncertain contexts and offer managers practical advice for how the firm can benefit from its giving.

Stakeholder Governance

Coordinator: **Anita McGahan**, *U. of Toronto*
Discussant: **Sandro Cabral**, *Insper Institute of Education and Research*
Presenter: **Aline Gatignon**, *The Wharton School, U. of Pennsylvania*
Presenter: **Aseem Kaul**, *U. of Minnesota*
Presenter: **Peter G. Klein**, *Baylor U.*
Presenter: **Anita McGahan**, *U. of Toronto*

Scholars of strategic management, entrepreneurship, and social issues in management have recently sought to understand how stakeholder interests and stakeholder representation can be integrated into organizational governance. In this Symposium, we propose to advance research on this topic through the presentation of scholarly papers by four authors, each of whom will present recent findings developed with co-authors. The papers will be discussed formally by a leading scholar in this domain. The symposium will support scholarly dialogue among participants and the discussant in a question-and-answer session with attendees. We envision that this dialogue will advance frontier approaches on how stakeholder governance can be discerned analytically. This advancement will enhance linkages between stakeholder research and conceptualizations of governance in the fields of strategy, entrepreneurship, and social issues in management.

Participant: **Linus Dahlander**, *ESMT European School of Management and Technology*
Presenter: **Matthew Yeaton**, *HEC Paris*

In this symposium, we take stock of existing literature on online user communities and move forward for future research opportunities. Prior research has attempted to understand online user communities through investigating individual users that contribute. Researchers have focused on the individual users' characteristics as well as their motivation. Amidst this development in research, online community scholars have begun to investigate the interactive dynamics within communities. In this symposium, we suggest that understanding the interaction dynamics within and between the community and its contents provides opportunities for future research. Our three empirical papers examine how the interactions impact organizational behavior, cognition, and outcomes. They also open up new avenues for scholars interested in online communities. We contribute to the Strategic Management (STR) and Technology and Innovation Management (TIM) division.

Artificial Intelligence and Firm Strategy: New Perspectives and Opportunities

Organizer: **Hyunjin Kim**, *INSEAD*
Organizer: **Harshvardhan Ketkar**, *Bocconi U.*
Panelist: **Felipe Csaszar**, *U. of Michigan*
Panelist: **Joshua Gans**, *U. of Toronto*
Panelist: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*

The development of artificial intelligence (AI) technologies has the potential to significantly impact how organizations approach tasks and decision-making processes that were previously in the domain of human judgment, such as resource allocation and innovation. This symposium aims to bring together experts in the field of AI and strategy to present and discuss their research. The focus will be on understanding how predictive algorithms and the automation of cognitive tasks are shaping various processes and decisions within organizations. Additionally, the symposium will provide opportunities for new streams of research to be discussed. The goal is to provide an overview of ongoing work in this field and generate new ideas for research.

Technology, Policy and Society Track: Gender & Minority Innovation

Session Moderator: **Denis Trapido**, *U. of Washington, Bothell*

TIM: **Differentiation from Mentors and the Gender Productivity Gap in Research**

Author: **Denis Trapido**, *U. of Washington, Bothell*

The gender productivity gap is a major contributor to gender inequality in science and technology careers. To explain the gap, researchers have documented its macro-level correlates such as male-female differences in employment, human capital, and social capital but have done less to show how the gap is produced by actions and relations that disadvantage women. Extending the extant research on mentoring, atypicality in creative work, and their relationship to productivity, this study suggests that the gender productivity gap may stem from early-career mentoring relations, particularly from the different trajectories that women's and men's work takes relative to their academic mentors. An analysis of careers in a subfield of electrical engineering showed that female researchers differentiated more from mentors than male researchers: a significantly larger share of their work was not co-authored with academic advisers, was published in different research domains, cited different anteceding work, and had co-authors outside the adviser's co-authorship network. All of these differences except the last accounted for a significant portion of the gender productivity gap. These findings advance our understanding of the origins of gender inequality in research careers and suggest reward and diversity policies to remedy it.

TIM: **Changing the System, Not the Seeker**

Author: **Amisha Miller**, *NYU Stern*

Female founders raise less resources from investors for novel ideas, even when their ventures are similar or identical to those of all male teams. This disparity is concerning for investors aiming to identify value-creating opportunities and for resource allocation in the market for startups. Scholars have designed interventions to change resource-seekers' behavior and overcome individual investor biases, but few have causally examined the effects of systemic evaluation processes on investment outcomes. Without examining these processes, we cannot fully explain how investment outcomes are produced, nor how they might be changed. How do the evaluation practices investment organizations use affect the types of founders funded? I ran a two-stage global experiment with investors making 1,871 decisions on early-stage startups, which resulted in $320,000 invested into 16 startups. I changed an organization's evaluation framework to systematize how investors were prompted to: (1) collect information on risks from all startups; and (2) evaluate startup progress during the evaluation period. This caused treated investors to seek consistent information across all founders and assess startups dynamically. It eliminated, even reversed, the gender gap. These results have implications for entrepreneurship theory, provide insight on the role of organizations in evaluation, and have policy implications for any organization interested in reducing discrimination.

TIM: **Gender Differences Impact in Creativity Controlled by Technology Affordances and Knowledge Sharing**

Author: **Itzhak Tabatchnik**, *Bar-Ilan Uni. & Ariel Uni*
Author: **Iris Reychav**, *Ariel U.*
Author: **Roger McHaney**, *Kansas State U.*
Author: **Jacob Weisberg**, *Bar Ilan U.*

Human nature inspires creativity in the workplace which often leads to novel and useful ideas and products. New technology enriched environments and tools have certainly impacted creativity but are influenced by factors such as knowledge sharing and gender. This research investigates the relationship between affordances, knowledge sharing, and creativity, and a specifically considers whether gender has a significant impact on these relationships. The study uses affordance theory as an underlying framework with a research design that differentiates between individual work and teamwork divided into two levels: collective and shared. The research methodology relies on self-report questionnaires that combines previously validated questionnaires, together with a tool developed to measure affordance. Results show that gender is significant. Specifically, employee-computer interactions have a positive contribution to knowledge sharing and creativity that vary in magnitude and importance by gender. Overall, this research informs companies regarding technology implementation to ensure their workforce has access to the most advanced toolsets which consider their employee gender characteristics.

TIM: **Excluding the Deserving: Failing to Assign Credit When Updating Systematic Reviews (WITHDRAWN)**

Author: **Rossella Salandra**, *School of Management, U. of Bath*
Author: **Marisa Miraldo**, *Imperial College Business School*
Author: **Paola Criscuolo**, *Imperial College London*

There are well-documented disparities in the number of minority groups' scientists — such as female and racial minority communities' researchers — mentioned in scientific outputs. These disparities might be the result of productivity differences (contribution), or they might be due to minority groups' contributions not being acknowledged (attribution). We consider scientists contributing to systematic reviews of healthcare interventions published by Cochrane and leverage a unique attribution of credit guidance to explore whether deserving scientists are properly credited in the reviews' acknowledgements (potential omission bias in the acknowledgements). We document some disparities in the attribution of credit in this setting, providing evidence that the lack of recognition of minority groups' scientists is also noticeable through omission bias in the acknowledgements.

TIM: **Publish or Procreate: The Effect of Motherhood on Academic Performance**

Author: **Sofie Cairo**, *Harvard Business School*
Author: **Sofie Dalum**, *Copenhagen Business School*
Author: **Valentina Tartari**, *Stockholm School of Economics*

Women are underrepresented in science and representation deficits are even greater for more senior positions and in STEM fields. The dominant explanation is that male and female scientists, even within the same field, publish at unequal rates. Prior studies on select fields suggest that the gender gap in academic productivity reflects differential effects of childbearing on men and women, as women face tensions between the two greedy institutions of family and academia. We study the full population of STEM academics in Denmark and investigate parenthood penalties on scientific productivity of mothers and fathers, who are active in research after the birth of their first child. We employ an event-study approach on annual research publications, an outcome especially relevant in the science domain, and rely on a unique combination of Danish registers and granular bibliometric data on publications from the database Scopus. We find that, on average, the first childbirth results in an annual penalty of 24 percent on scientific productivity of mothers in STEM fields relative to fathers in the first 5 years after birth. This reflects a drop in annual research publications of mothers relative to their own pre-birth productivity. Hence, unequal impacts of parenthood may be an important driver of gender inequality in science.

Ecosystems and Platforms Track: Dynamics of Platform Ecosystems

Session Moderator: **Ying-Ying Hsieh**, *Imperial College Business School*

TIM: **Evolving a Decentralized Platform Ecosystem: Self-reorganization and Complementor Participation**

Author: **Ying-Ying Hsieh**, *Imperial College Business School*
Author: **Jonas Valbjørn Andersen**, *IT U. of Copenhagen*

Platform ecosystems have increasingly adopted self-organization to facilitate peer-to-peer decentralized collaboration. Just like any organizational system, decentralized platform ecosystems reorganize to update their alignment with the internal and external environments. However, unlike reorganizations of centrally managed ecosystems performed by the owners, reorganizations of decentralized platform ecosystems do not rely on formal authority. Instead, the network self-reorganizes to renew the structure, rules, and information to evolve. Despite the interdependence between the complementors (i.e., components) and the platform (i.e., core), little is known about how self-reorganizations influence complementor participation and engagement. In this study, we investigate all self-reorganization events (i.e., hard forks) that have taken place on Ethereum, a blockchain-based decentralized smart contract platform, to unpack how self-reorganizations of a complex decentralized platform ecosystem influence the participation of complementors. We find that, while self-reorganizations disrupt general complementor participation at transition, they facilitate the adaptation of complementor technical engagement over time. In addition, the relationship between self-reorganization and complementor participation is moderated by the nature of self-reorganization, i.e., the degree to which governance-related rule changes are involved. Our study integrates the organization design and platform literature and contributes to a deeper understanding of the interdependence of decentralized platform ecosystem evolution. In practice, our findings have implications for entrepreneurs building decentralized applications on top of decentralized platform infrastructures (e.g., smart contracts).

TIM: **Unraveling Multihoming Sellers' Coping Strategies to Platform Information Quality Control**

Author: **Jie Fang**, *U. of Nottingham Ningbo China*
Author: **Zhao Cai**, *U. of Nottingham Ningbo China*
Author: **Hefu Liu**, *U. of Science and Technology of China*
Author: **Chee-wee Tan**, *Copenhagen Business School*

To mitigate sellers' misinformation on e-marketplace platforms, platform owners impose information quality control to ensure authenticity of information presented to consumers. Although information quality control is conducive to bolstering the credibility of information on platforms, it may encourage sellers to pursue multihoming strategy on other platforms, thereby undermining the attractiveness of the platform implementing information quality control ("focal platform" thereafter). Building on coping theory, this study aims to investigate how sellers cope with information quality control imposed by platforms by observing their information withholding and multihoming strategy. The moderating influence of multihoming experience is further considered in this research. To validate our hypotheses, we collected data from two dominant e-marketplace platforms in China. Based on quasi-experimental design, this we employed propensity score matching and difference-in-difference methods to analyze our data. We discovered that platform information quality control culminates in sellers' information withholding and service-related multihoming strategy but has no impact on product-related multihoming strategy. Additionally, we revealed that sellers tend to react differently to the platform information quality control depending on their multihoming experiences. Findings from this research can be harnessed by platform owners to refine their control policy in the multihoming context.

TIM: **Cooperating in Innovation Contests: Effects and Boundary Conditions of Competitive Reward Structures**

Author: **Christoph Grimpe**, *Copenhagen Business School*
Author: **Marion Kristin Poetz**, *Copenhagen Business School*
Author: **Nathan Rietzler**, *Copenhagen Business School*
Author: **Florian Waldner**, *Copenhagen Business School*

Many platforms hosting innovation contests allow their participants to share ideas and knowledge with each other and many participants take advantage of this opportunity, questioning common beliefs that competitive rewards lead individuals to withhold knowledge and impair the progress of others while cooperative rewards promote knowledge exchange. In this paper, we build on social interdependence theory to analyze how and when competitive reward structures influence the likelihood that contestants cooperate. Using an experimental vignette study, we first test the effects of competition on cooperative behavior (Study 1) and find that competitive reward structures negatively impact an individual's likelihood to cooperate, with the effect being more pronounced for sharing compared to absorbing knowledge. In Study 2, we apply a multi-stage configurational approach to first identify, categorize and specify attributes that influence individuals' decision to cooperate (or not) and then explore their importance weights and inter-relatedness in an adaptive choice-based conjoint analysis combined with an ensemble cluster analysis. We find that it is not a single, but bundles of attributes dominated by either the fear of misappropriation in all competitive reward structures or by extrinsic motivation in the non- and lowly competitive conditions and intrinsic motivation in the highly competitive condition. Our findings hold important implications for the design of innovation platforms and contests.

TIM: **Health Data Co-specialization Model. A Study of MedTech Incumbents-born Digital Healthcare Platforms**

Author: **Asta Pundziene**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Pia Hurmelinna-Laukkanen**, *U. of Oulu*
Author: **Wim Vanhaverbeke**, *U. of Antwerp*
Author: **Jialei Yang**, *U. of Oulu*

The limited success of digital healthcare platforms prompts discussion on how to benefit from digital innovations. So far, scholars have analyzed technological innovation, capabilities, network effect and business model contributions to advance digital healthcare platform performance. However, the role of health data as a co-specialized complementary asset is yet to be unveiled. We address this knowledge gap through the multiple-case study of three global digital healthcare platforms initiated and orchestrated by MedTech incumbents. The study conceptualizes data as a co-specialized complementary asset and explores the assumptions of health data co-specialization. We extend profiting from innovation (PFI) and platform literature by offering health data co-specialization model based on three components: data power mobility, data completeness, and data integrity. Furthermore, the study has practical implications for platform owners suggesting structural changes in collaboration to ensure data co-specialization critical to reap benefits from digital healthcare platforms.

TIM: **Which Platform Complementors Adapt Better to Changes in External Market Conditions?**

Author: **Juan Santalo**, *IE Business School*
Author: **Rosario Silva Froján**, *IE Business School*

In this paper we posit that complementor's attention is key to achieve a better adaptation to changing external market conditions. We argue that complementors make the best of external market shocks 1) when they multi-home; 2) when their level of involvement in the platform is regular, and 3) when the number of complementary products they offer is neither too high nor too low. Using Airbnb data as well as a novel empirical strategy to identify external market shocks, we find empirical support for our hypotheses. We estimate that multi-homing complementors have a 357% higher revenue growth rate during a positive demand shock. Moreover, an increase in one standard deviation of the irregularity of the historical activity of the complementor in the platform is related to 337% lower revenue growth rate that results from positive shocks. We find similar results for the adaptation to negative market shocks using the context of Covid19. Overall, our findings contribute to the theory about complementor's attention that has been overlooked in the platform literature.

AI and Emerging Technologies Track: AI in the Workplace

Session Moderator: **Kamila Moulaï**, *Marie Sklodowska Curie Postdoc, Rotterdam School of Management, Erasmus U.*

TIM: **When AI Acts as an Enabler: Towards a Teleological Job Crafting for Managers in AI Contexts**

Author: **Kamila Moulaï**, *Marie Sklodowska Curie Postdoc, Rotterdam School of Management, Erasmus U.*
Author: **Flore Bridoux**, *Erasmus U.*

Job crafting has been claimed to be an important way in which employees respond to the implementation of new technologies. As it creates the conditions for lower-level employees' job crafting, managers' job crafting is likely to be especially important for a successful implementation. Yet, we know very little about managers' job crafting and nothing about this job crafting in the context of Artificial Intelligence. Studying qualitatively managers' job crafting linked to the implementation of AI, our interviews revealed that the implementation of AI enables managers to engage in a teleological job crafting whereby managers reimagine their job to express their latent sense of self and vision of human relations and society. Contrary to the idea in the literature that managers' job crafting is inwardly focused, the managers' job crafting we uncovered is deeply relational with at its core the mission to "bring people together" as a positive response to the fear that employees will self-exclude and self-marginalize in response to AI. To the AI literature, we contribute a view of augmentation that is spontaneously humane rather than focused on employees' acquisition of new skills.

TIM: **Artificial Intelligence Advancing Firm Innovation: Evidence from the Medical Device Industry**

Author: **Yan Bai**, *ESADE Business School*
Author: **Dimo P. Ringov**, *ESADE Business School*
Author: **Esteve Almirall**, *ESADE Business School*

Artificial intelligence (AI) has greatly increased firms' capacity to translate business functions into code, transforming industries and markets and changing the rules of competition in the process. It has facilitated firm innovation by making it possible to manage – create, retain, recombine, and transfer – knowledge in new ways. This paper proposes and empirically examines both the direct and indirect effects of AI innovation capabilities on firm innovation performance, i.e., the direct effect of AI on AI-enabled innovations and its indirect effect on non-AI innovations through spillover effects, as well as how both effects are shaped by pertinent AI regulations. Evidence from the U.S. medical device industry from 2010 to 2020 shows that AI adoption indeed positively influences firm innovation performance both directly and through spillover effects, and that AI regulation reinforces this positive relationship. The findings further our understanding of how AI adoption and AI regulations shape firm innovation performance.

TIM: **Elevating Employees' Psychological Responses and Task Performance Through Responsible AI**

Author: **Surabhi Verma**, *Aarhus BSS, Aarhus U.*
Author: **Vibhav Singh**, *Great Lakes Institute of Management, Gurgaon*
Author: **Ana Alina Tudoran**, *Aarhus U.*
Author: **Som Sekhar Bhattacharyya**, *Indian Institute of Management Nagpur*

Today's employees are experiencing stress associated with the use of technologies such as artificial intelligence (AI). Several researchers have argued that this technostress may have both positive and negative effects. In this study, we investigated the positive and negative effects of stress that is driven by responsible artificial intelligence (RAI) principles on employee job outcomes by adapting the challenge–hindrance stressors model and empirically validating the proposed model on 299 respondents who use AI for work-related tasks. The results revealed several RAI-driven challenge and hindrance stressors related to employees' positive and negative psychological responses and task performance in a digital workplace. Practitioners could use the RAI characteristics to improve employees' RAI-driven task performance.

TIM: **How Employees Adapt to AI in the Workplace**

Author: **Jieqiong Cao**, *Singapore U. of Social Sciences*
Author: **Jingxian Yao**, *Singapore U. of Social Sciences*

AI has become a revenue driver, which propels companies to invest more in AI applications. A growing body of research suggests contrasting views of AI's implication on employees, with some consider AI will augment employees' capabilities, and others regard AI will substitute employees. This study assumes the key difference lies in whether employees or AI takes control over the tasks. Based on this assumption, we use the lens of need satisfaction to posit that AI control will reduce employee autonomy and competence need, which further decrease employee approach-oriented crafting and increase employee avoidance-oriented crafting. We then examine the contingency – AI task complexity on the relationship between AI control and need satisfaction. Three studies were employed to test the hypothesized relationships. Study 1 developed a reliable and valid measure of AI control construct. The results from Studies 2 and 3 (Study 2: N = 271; Study 3: N = 113) presented how AI control influence employees' reactions. This set of studies provides evidence of the impact of AI control on employee need satisfaction and further job crafting actions, and the effect of AI task complexity, thus providing timely insights on employees' reactions to the implementation of AI in the workplace.

TIM: **Neural Network-enhanced Analysis: How Risk Perceptions of Artificial Intelligence Diffuse**

Author: **HAN WU**, *Dublin City U. Business School*
Author: **Tian Wei**, *NEOMA Business School*
Author: **Michael Dowling**, *Rennes School of Business*

Previous research has shown that a firm's use of artificial intelligence (AI) in daily management tasks is influenced by their employees' risk perceptions regarding AI implementation. These risk perceptions can be categorized as functional, anthropogenic, and financial. As employees' risk perceptions are partly derived from their cognition of AI's features, we proposed that there is a positive correlation between each risk perception category. In addition, we anticipated that employee work experience would also enhance the associations between these categories. Thus, we conducted two studies within the accounting industry using linear correlation and an artificial neural network. Our results indicate that employees with high levels of functional and anthropogenic risk perception also have higher levels of financial risk perception. Additionally, although working experience seemed irrelevant to the relationships between risk perceptions, it determines the employees' perception of financial risks in a non-linear and complex manner. Our findings suggest that firms should improve their employees' abilities to perceive risks to enable the efficient implementation of AI technologies within their firms.

AI and Emerging Technologies Track: Blockchain, Coins, and Beyond

Session Moderator: **Ziyi Xiong**, *U. of Tennessee at Chattanooga*

TIM: **Overcoming the Novelty Discount: The Roles of Open-source Development in the Initial Coin Offerings**

Author: **Ziyi Xiong**, *U. of Tennessee at Chattanooga*
Author: **Rong Liu**, *Stevens Institute of Technology*
Author: **Yan Chen**, *Stevens Institute of Technology*
Author: **Chihoon Lee**, *Stevens Institute of Technology*

Extensive literature has indicated that investors are biased against novelty in the evaluations of new ventures. However, few studies have focused on identifying avenues to help entrepreneurs and innovators overcome this bias. In addition to confirming the existence of a bias against novelty in initial coin offerings, our research draws on signaling theory to suggest such bias can be mitigated by reducing the technological uncertainty. From an analysis of 1845 new ventures raising funds through initial coin offerings, we find that publishing open-source codes—and especially signaling the activeness, richness and popularity of the development process through the open-source repositories—can alleviate information asymmetry and technical uncertainty, helping dissolve or even reverse the bias against novelty.

TIM: **The Co-Creation Conundrum: Investigating Negative Signaling Effects for Blockchain-Based Ventures**

Author: **Michael Rammert**, *Chair of Innovation Management, TU Dortmund U.*

The emergence of blockchain technology resulted in the creation of many new ventures. Blockchain-based ventures utilize the technology to operate in an open and transparent manner and leverage the crowd to promote new product development. Crowd members in the blockchain ecosystem can act as customers and investors, but they can also act as developers and involve in ventures' innovation activities through open-source development. However, little is known about what drives crowd involvement in blockchain-based ventures. Drawing on signaling theory, we examine how blockchain-based ventures can shape the level of crowd involvement. We analyze a unique longitudinal dataset of 1,878 observations to examine the relationship between market orientation and crowd involvement. We find that signals of a strong market orientation discourage developers from engaging in open-source development, leading to a negative relationship with the level of crowd involvement. Moreover, we reveal that the environmental cues of token returns and contributor diversity are boundary conditions that strengthen this negative relationship. Our study advances signaling theory by shedding light on the harmful signal of market orientation on the attraction of external co-developers and extends the literature on software co-creation by developing theory on its antecedents. We offer practical contributions for blockchain-based ventures.

TIM: **Value Creation and Value Capture with NFTs: Use Cases, Mechanisms and Business Models**

Author: **Arash Rezazadeh**, *Catolica Lisbon School of Business and Economics*
Author: **Rene Bohnsack**, *Catolica Lisbon School of Business and Economics*

This paper sets out to explore how Non-Fungible Tokens (NFTs) are influencing future business applications with unique value creation and capture mechanisms. Building on existing theoretical insights and a multiple case study of Portuguese NFT ventures, we demonstrate how NFTs enable a new business model type, which we coin the Polyadic Business Model. A clarification of NFTs and related concepts, together with their unique use-values and exchange value determinants led us to argue that the Polyadic Business Model differs from dyadic and triadic business models. The involved stakeholders and relationship levels are analyzed to provide a better understanding of how value is created and captured. We find four types of use cases, three constituents of the ecosystem, and three important mechanisms. Based on the insights we discuss the implications for theory, policy, and practice.

TIM: **Transferring Digital Twin Technology on Employee Skills: A Framework to Support Human Resources**

Author: **Leonie Rebecca Freise**, *Research Center for Information System Design (ITeG) - U. of Kassel*
Author: **Anna Hupe**, *Research Center for Information System Design (ITeG) - U. of Kassel*

Skill assessment has become increasingly important in recent years. The shortage of skilled workers has demonstrated the need to identify suitable candidates for jobs and to develop existing employees. However, human resources processes rely on resumes, references, or job certifications to assess their employees' skills. A few years ago, the concept of a digital twin was introduced, which is a digital replica of a physical entity. While using blockchain, the digital twin technology offers tremendous potential for transfer to other contexts. In the context of these considerations, we present a framework that allows the technology of the digital twin to be combined with that of skill assessment to create an enhanced skill profile. With a job market signaling perspective, we integrate knowledge about skills, clarify the opportunities of assessment, and develop a framework for a digital skill twin. In doing so, we argue that the multi-source and multi-method approach of such a digital skill twin leads to increased validity, reliability, and standardization. We thereby contribute to theory and practice by developing a new framework that offers employees to know their strengths and development potential and organizations to assess their employees' skills.

Digitization Track: Digitalizing, Sensing & Innovating

Session Moderator: **Danilo Pesce**, *Politecnico di Torino*

TIM: **Managing Technology Uncertainty: Proof-of-Concept for Digital Transformation Projects**

Author: **Maryia Zaitsava**, *U. of Cagliari*
Author: **Elona Marku**, *U. of Cagliari*
Author: **Maria Chiara Di Guardo**, *U. of Cagliari*

Proof-of-concept (PoC) is often used to prove a new concept in Digital Transformation (DT) projects. Despite the belief that PoC helps to overcome the most common challenges of DT, innovation management research on PoC is still in its infancy. The present paper aims at disentangling technological uncertainty at the level of PoC. Using a qualitative case study, we explore PoC for the DT project when firms face the challenge of proving new technology potentiality under uncertainty and driven by awareness and perceptions. The research allowed discover the dynamic of how perceived technology potentiality changes during PoC due to the cognitive biases that affect it. Moreover, we found that technology awareness evolves step-wise from borrowed and minimum acquired to enhanced technology awareness as the firm accumulates knowledge on the technology. These two constructs directly influence PoC development. This research makes several contributions to technology innovation literature. First, the research enlarges understanding of the existing cognitive biases and derived specific uncertainty situations during PoC when those biases may occur. Further, the paper introduced the notion of technology awareness degrees in PoC. Finally, implications for innovation managers in the context of PoC for DT are exposed and further discussed.

TIM: **Digital, Faster, Better? How Digital Transformation Relates to BMI and New Product Development**

Author: **Malte Hans Georg Schneider**, *HHL Leipzig Graduate School of Management*
Author: **Dominik Kurt Kanbach**, *HHL Leipzig Graduate School of Management*

Companies' distinct value framework is subsequently altered because of digital transformation, which include the acceleration of technical breakthroughs, the challenge of business models, and the disruption of the processes involved in the production of new products. This study sheds light on the relationships between digital transformation, business model innovation, and new product development by employing a sequential explanatory approach, combining quantitative and qualitative research methodologies, utilizing structural equation modeling based on 430 questionnaire respondents, and a multiple case study design using 4 cases. The research model demonstrates that digital transformation has a pervasive impact, with business model innovation and new product development speed serving as crucial mediators. Although a faster rate of new product development is directly correlated to improved performance, the relationship between digital transformation and new product development performance is much more nuanced and requires the integration of several different maturity needs. As a result, this research contributes to the literature on digital transformation and new product development by providing a more in-depth problematization. It also assists managers in developing a finer-grained understanding of the necessary prerequisites to transform their organizations.

TIM: **Androrithms vs. Algorithms: What Prevents Knowledge from Being Digitalized?**

Author: **Danilo Pesce**, *Politecnico di Torino*
Author: **Daniele Battaglia**, *ESCP Business School*
Author: **Emilio Paolucci**, *Politecnico di Torino*

We investigate the attributes that prevent the digitalization of tacit knowledge in the innovation management function through a longitudinal case study in the luxury fashion industry. We find that was supposed to improve the creativity phase of innovation (Digital Twin), creates new bottlenecks in the recombination mechanisms of tacit knowledge. In particular, our results show that the cognitive and procedural components of tacit knowledge (knowing how to do something) can be encoded in “if-then” rules and codified as “frozen knowledge” in and algorithm. However, as digitalization changes the interfaces through which the physical reality is perceived, the emotional – creative and experiential – components of tacit knowledge remain “ineffable” and therefore not codifiable in an algorithm. We also investigate the organizational mechanisms that enable the recombination of these “ineffable” forms of knowledge and find that they are underpinned by mutual adaptation through informal communication and task integration.

TIM: **Sensing in the Digital Age: A Systematic Review of Sensing and Related Concepts**

Author: **Sebastian Woelke**, *Johannes Gutenberg U. Mainz*
Author: **Andranik Tumasjan**, *Johannes Gutenberg-U. Mainz*

In the digital age, sensing activities to identify relevant technologies, trends, and business opportunities are crucial for organizations in dynamic and increasingly digital market environ-ments. However, research on sensing and related concepts (e.g., environmental scanning) is highly scattered across different research streams, leading to a large number of closely related concepts and insights in different literatures. To consolidate the field and perform a construct clean-up, we review the literature on sensing and integrate extant sensing-related concepts. Based on our sys-tematic review of N=116 articles and our conceptual integration, we provide a comprehensive overview and framework of the field of sensing research. Differentiated by sensing at the individual and firm level, we identify a diverse set of their antecedents, outcomes, and moderators. Building on our findings, we outline a research agenda that proposes to investigate (1) the characteristics and requirements of a multi-level sensing process and (2) the role of IT and digital technologies for sensing, as well as the role of sensing in change processes driven by the digital age.

Innovation Processes Track: Motivating Innovation

Session Moderator: **Matthias Fink**, *Johannes Kepler U. Linz*

TIM: **Sense and Scope of Responsibility – How Managers Feel Right about Responsible Product Innovation? (WITHDRAWN)**

Author: **Matthias Fink**, *Johannes Kepler U. Linz*
Author: **Kirsi Maaria Snellman**, *Lappeenranta U. of Technology*
Author: **Henri Hakala**, *LUT U., School of Business and Management*

In this study, we develop a framework to explain how managers develop a feeling of making the right choice in the appraisal of novel product ideas and how that feeling steers their commitment to responsible product innovations (RPIs), novel products that do good and avoid harm. The framework is rooted in appraisal theory, recent developments in management research on emotions, and a qualitative study of 26 managers from trailblazer companies pursuing RPIs. Our findings indicate that when managers appraise an RPI, cognitive and emotional knowledge fuses into a holistic feeling of rightness, or one of wrongness. The feeling of making the right choice reinforces managers' commitment to RPIs. The feeling of making the wrong choice erodes managers' commitment to RPIs. However, these effects are contingent on a manager's sense and scope of responsibility and are subject to paradoxes. These findings contribute to management literature by providing a theoretically and empirically informed explanation of why some managers commit to RPIs and others do not. Specifically, they extend the understanding of socially situated managerial decisions by linking managers' individual-level appraisal process of RPI to the established meso-level dimensions of responsible innovation: responsiveness, inclusion, anticipation, and reflexivity. The mechanisms and contingencies revealed inform product innovation practice and policy. The identified paradoxes call for caution and further research.

TIM: **Product Innovation & Share Repurchase: Evidence from the Manufacturing Industry in China**

Author: **Changhong Han**, *Henley Business School, U. of Reading, United Kingdom*
Author: **Nada Kakabadse**, *Henley Business School, U. of Reading*
Author: **Nadeem Khan**, *Henley Business School, U. of Reading*

Motivated from the shortage of research studies that examine how share repurchase influence product innovation in China, this study investigates the relationship between share repurchase and product innovation in the manufacturing industry in this country. By employing the collective case studies with the involvement of 25 listed manufacturing firms as samples, this study has revealed that Chinese manufacturing firms have perceived the importance of product innovation and invested in product innovation as a key strategy for its survival and growth but such investment is still limited because of the lack of funds, the demand for short-term cash out of shareholders, the difficulties to connect with required technologies and R&D experts. In this industry, share repurchase is a popular phenomenon, but this practice is mostly used for equity incentive programs and for addressing the stock split scheme. Chinese manufacturing firms did not use share repurchase as a mean to boost product innovation directly. However, through the equity incentive programs, this practice indirectly foster innovation since R&D team members are motivated and their interests are aligned with shareholders.

TIM: **The Non-linear Relationship between Horizontal Pay Dispersion and Technological Knowledge Production**

Author: **Louise Lindbjerg**, *Aalborg U. Business School*

Firms' pay structure alter individual and collective behavior through motivation and coordination mechanisms, and thus, designing a pay structure that balances the need to incentivize both individual effort such as hard work and collective effort such as knowledge sharing is a challenge for decision makers trying to incentivize innovation. In this paper, I replicate previous findings that high horizontal pay dispersion among R&D workers, is negatively associated with knowledge production. However, when firm fixed effects are considered the effect becomes positive. I show that this inconsistency is due to a non-linear relationship between pay dispersion measured by the Gini coefficient of R&D employees' salaries and technological knowledge production measured as number of new patent filings. Furthermore, pay dispersion appear only to alter knowledge production in single-establishment settings indicating that social comparison is a driving mechanism, and in settings with a dynamic labor market, i.e., large supply of both R&D employees and R&D intensive firms. These results suggest that the negative externality of pay dispersion kicks in at a later stage and that innovative firms may benefit from a more hierarchical pay structure than what we have thought, traditionally.

TIM: **Are Constraints the Mother of Innovation? Innovation Effects of the Global Financial Crisis**

Author: **Ed Saiedi**, *BI Norwegian Business School*

How do financial constraints during crises affect firms' R\&D and innovation? Utilizing a novel dataset of financials, patents and trademarks matched to a broad survey of European firms during the global financial crisis, and a Difference-in-Difference estimation, I find that the crisis-era constraints hampered firms' R\&D expenditures of firms and this relationship crucially depends on firm size. Patenting rates of firms remained unchanged, however surprisingly, crisis-era financial constraints increased patenting impact and breadth, and firm trademarking. Exploring the mechanisms underlying this latter effect, I find support for the crisis triggering social and cognitive mechanisms within R\&D teams.

Unveiling the Secrets of Studying Innovation Processes

Organizer: **Hila Lifshitz-Assaf**, *Warwick Business School*
Organizer: **Steven Randazzo**, *Warwick Business School*
Discussant: **Mary Tripsas**, *U. of California, Santa Barbara*
Presenter: **Michael L. Tushman**, *Harvard U.*
Presenter: **Katherine C. Kellogg**, *MIT*
Presenter: **Eivor Oborn**, *U. of Warwick*
Presenter: **Michael Barrett**, *U. of Cambridge*
Presenter: **Laia Pujol Pujol Priego**, *IESE Business School*
Presenter: **Hila Lifshitz-Assaf**, *Warwick Business School*
Presenter: **Steven Randazzo**, *Warwick Business School*

Innovation is complex, and has been studied across industry and settings, with different actors and at varying hierarchical and temporal levels (Barely, 1990; Bechky, 2003; Bechky, 2020; Garud and Kumaraswamy, 2011; Lifshitz-Assaf, 2018; Orlikowski 2000). Within innovation research there has been a focus on the study of innovation processes. Van de Ven and colleagues (1999) refer to the innovation process as a "journey." These extensive and complex processes take time to develop and implement as they involve high levels of technological uncertainty (Brown and Eisenhardt, 1995; Garud et al. 2011; Smith and Tushman, 2005). It is the complexity and depth of the innovation processes that make field research a natural fit when considering how to study these complex phenomena. Qualitative research methods, like field research, allow a researcher to focus on process rather than things (Rasche and Chia, 2009). Process studies are focused on answering the how and why questions more than the what of innovation, as phenomena of different kinds are intertwined (Langley, 1999). To explore and find new meanings in processes, Langley and colleagues (2013) note that longitudinal data, including field observations, are necessary to observe processes over time. Field research lends itself well to the collection of new and reliable data (McKinnon, 1988) and new understanding of the natural world (Burt, 2015). Field research allows researchers to gain understanding of process data that is typically messy, with many different kinds of phenomena intertwined (Langley, 1999). To create new knowledge, process theorization must go beyond surface level description to capture rich data such as temporal and behavioral patterns (Langley, 1999; Langley et. al, 2013). Within the study of processes are challenges that researchers face such as ambiguity of boundaries in units of analysis, varying temporal embeddedness and eclectic data that includes interpretations, feelings and changing relationships (Langley, 1999). These challenges are faced by those who conduct innovation process research. This symposium seeks to showcase the latest in innovation process field research. This topic is particularly timely, as over the last three years innovation has taken different shapes and forms as organizations had to maneuver the uncertainty associated with COVID-19. With the world opening back up post-pandemic, field research has transformed with researchers adopting a combination of new and old methods to learn and collect rich data that is embedded in organizations. This symposium proposes to bring together a diverse group of field researchers studying topics that are broadly related to the innovation processes. The opening presentation will provide an overview of the study of innovation processes in the field. The second presentation examines algorithmic aversion, a phenomenon where users are reluctant to accept AI technologies and how it can be addressed through end-user focused technical features and organizational implementation solutions. The third presentation will explore how digital transformation is reshaping the delivery of care, the stakeholders involved and their roles. The fourth presentation will examine the role of technological instruments in research, which has been largely obscured across theory-driven versus experiment-driven discourses. The final presentation will investigate the innovation process of new medical devices, specifically ventilators - the last line of defense for patients experiencing respiratory failure - during the COVID-19 pandemic.

Participant: **Elizabeth J. Altman**, *U. of Massachusetts, Lowell*
Participant: **Pinar Ozcan**, *Oxford U., Saïd Business School*

This symposium extends the discourse on the non-linearity in industry evolution by exploring the multitude of uncertainties that characterizes nascent industries and how firms' distinct ways of addressing various uncertainties can dramatically shift the process of industry evolution. Five featured papers discuss the uncertainties associated with technologies, demand, and ecosystems in nascent industries and investigate the changes in evolutionary patterns, innovation trajectories, and knowledge generation. The papers use both quantitative and qualitative methods across different empirical settings, approaching the topic of uncertainty and industry evolution from complementary angles.

Participant: **Peter Dacin**, *Queen's U.*

While recently scholarly inquiry has been foundational in our understanding of how social innovation can be influential in tackling some of society's most deeply-rooted problems, recent years have witnessed a burgeoning interest in moving beyond focusing on organizations' isolated actions towards an understanding of how communities may be centrally implicated in social innovation. Such perspective matters, as many social innovations are created in locally embedded contexts. Yet, what is surprising is that beyond the successful cases of community involvement, little has been said about the potential 'dark side' of communities and community dynamics in organizations' pursuit of social innovation. Indeed, most of the social innovation literature to date has focused on the positive impact of good intentions by community actors, leaving the unintended consequences and the potential challenges of community dynamics in the organizational pursuit of social innovation underexplored. In this symposium we bring together four experts to discuss this matter in detail and provide an outlook for future research.

Mitigating the Racial Wealth Gap in the United States: Multi-disciplinary Perspectives and Partners

Panelist: **Eliana Abu-Hamdi**, *Syracuse U.*
Panelist: **Patrick Berry**, *Syracuse U.*
Participant: **Charisse L'Pree Corsbie-Massay**, *Syracuse U.*
Panelist: **Gisele Marcus**, *Washington U.*
Panelist: **Kira Kristal Reed**, *Syracuse U.*
Panelist: **Yutaka Sho**, *Syracuse U.*
Panelist: **Danielle Smith**, *Syracuse U. School of Arts and Sciences*

Syracuse University has announced a three-year partnership between MetLife Foundation and the Syracuse University Lender Center for Social Justice in the form of a $2.7 million grant to employ multi-disciplinary approaches to address both factors which contribute to and factors which potentially mitigate the racial wealth gap in the United States. The long existing racial wealth gap is complex, and public, private, and nonprofit organizations have contributed to and sustained it; importantly, they are now working to minimize it. Three inter-disciplinary research themes explored in the first year of this initiative are: 1) structural and systemic factors; 2) public policies which affect generational wealth and disparities in wealth across racial and gender identities; and 3) individual and organizational-level factors which impact educational attainment, career preparation and career development. This panel discussion brings together scholars from the academic disciplines of management, African American studies, architecture, communications, and writing and rhetoric to illustrate multi-level and multi-stakeholder approaches which inform policies and interventions to lessen the racial wealth gap. Central to each approach discussed in the panel are workers and organizations, demonstrating why it is critical for management and other scholars, and practitioners across public, non-profit, and for-profit entities to collaborate in this work. Audience members will be invited to weigh in on the challenges and rewards which accompany these approaches and to potentially collaborate with us in this initiative.

School-to-Work Transition: Career Interventions, Social Media, and Other Influencers

Session Moderator: **Manuel J. Vaulont**, *Northeastern U.*

CAR: **The School-To-Work Career Transition of Gen Z Chinese University Students**

Author: **Milad Jannesari**, *UNSW Sydney Business School, Australia*
Author: **Sherry E. Sullivan**, *Bowling Green State U.*
Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

China is one of the fastest-growing global markets, yet relatively little is known about how workers in China enact their careers. We explore factors that influence important career outcomes of young adults as they transition from university students to members of the labor force. Specifically, we examine how protean career orientation, employability, mother's and father's career support, and human capital may influence the adult child's career satisfaction and employment status. We collected survey data in two waves, six months apart, as well as ratings from university officials who used government standards to determine scores for the human capital variables of English proficiency and physical fitness. The career support of the father and mother were each positively related to employment status, but not to career satisfaction. The career support-employment status relationship was fully mediated by protean career orientation and employability. Contrary to expectations, the human capital variables did not moderate the serial mediation involving either career satisfaction or employment status. By integrating career theories, human capital theory, and research on parental support, we offer an interdisciplinary contribution on the school-to-work transition.

CAR: **Cross-Generational Effects of Parents' Overqualification on Children's Human Capital and Work Income**

Author: **Manuel J. Vaulont**, *Northeastern U.*
Author: **Zhen Zhang**, *Southern Methodist U.*

This study examines the long-term effects of parents' perceived overqualification on their children. Specifically, we draw from social learning theory (Bandura, 1971, 1977) to theorize that parents serve as role models for their children such that parents' perceived overqualification during their children's adolescent years deters their children from obtaining more human capital thereby influencing children's subsequent work income. We test our hypotheses by examining participants from a Swiss longitudinal panel study across more than 15 years. We find support for our theorizing. Our study contributes to the literature by exploring the interpersonal, long-term effects of overqualification and its implications for workers' careers.

CAR: **Pressure from Social Media: The Influence of Social Media Usage on Career Exploration and Well-being**

Author: **Shiyu Zhou**, *Fudan School of Management, Fudan U.*
Author: **Yan Wu**, *Fudan School of Management, Fudan U.*
Author: **Longfei Cui**, *Tongji U.*
Author: **Biya Ren**, *U. of Glasgow*

Social media has become an important communication platform in today's society. With this trend, scholars are increasingly interested in exploring the effect of social media usage on psychological reactions in life and employee behaviors in the workplace. Drawing on social comparison theory, our research extends this line of literature by investigating the influence of career-oriented social media usage on graduates' career exploration and career well-being. Results from a multi-time survey suggested that career-oriented social media usage increased career anxiety, which in turn promoted career exploration while reducing career well-being. Furthermore, social comparison orientation strengthened the influence of career-oriented social media usage. Theoretical and practical implications are discussed.

CAR: **Career Interventions: Promoting Engagement in Career Behaviors**

Author: **Julian Marciniak**, *U. of Bern*

The transition from school to work is an important developmental step during adolescence. Hence, many career interventions have been examined in order to facilitate the transition. Many of these interventions have used an approach that largely focuses on matching the person to the environment. However, as the world of work has become increasingly unpredictable, research has suggested that individuals need to learn how to proactively deal with barriers and setbacks during their careers. Thus, we tested two interventions that are based on (a) a traditional person-environment approach, and (b) a proactive preparedness approach. The results show that the person-environment approach compared to a control group was effective in raising career decision self-efficacy four months after the intervention, which in turn mediated goal engagement eight months after the intervention. On the other hand, the proactive preparedness intervention proved to be non-significant, when compared to a control group. We compare both interventions to each other, offer a discussion of the results, and make suggestions for future career intervention research.

Expatriates and Global Careers

Session Moderator: **Susan Kirk**, *Newcastle U.*

CAR: **More than a Feeling: Intuitive Decision Making in Global Careers**

Author: **Susan Kirk**, *Newcastle U.*
Author: **Liza Jane Howe-Walsh**, *U. of Portsmouth*
Author: **Joyce Osland**, *San Jose State U.*

The aim of this interpretivist research study was to explore how senior managers in a multinational organisation make decisions about mobility opportunities in their global careers. Such decisions differ from strategic decisions in that they impact on both the working and personal lives of the decision maker and their families. This study is novel in that it explores the experiences of 38 senior managers who describe regularly using intuition, as well as facts to guide their global career decisions. Through the analysis of data from semi-structured interviews, the findings reveal some hitherto unidentified internal and external factors that influence how and when intuition and facts are used. The decision maker's identity was found to be of key significance. Previous experience of global mobility was also found to be influential, not only the lived experience of the decision maker but also the vicarious experiences of external stakeholders (such as family, colleagues). Trust of external stakeholders' and their intuition also emerged as important. Thus, such global career decisions are a complex amalgamation of internal and external factors that are both individual and collective in nature. This article offers a theoretical contribution to the fields of decision making and global careers. We also outline the practical relevance of the findings in terms of supporting global careers.

CAR: **Meaning Matters: Exploring the Impact of Expatriates' Meaning in Life on Taking Charge Behavior**

Author: **Yu Song**, *Southeast U.*
Author: **Peng Peng**, *Central U. of Finance & Economics, China*
Author: **Xiaoran Hu**, *London School of Economics and Political Science*
Author: **Guangtao Yu**, *Central U. of Finance and Economics*

We utilize career construction theory to understand why and when expatriates adjust and perform well in a foreign country. We contend that expatriates possessing meaning in life (MIL), or who search for it, are motivated to augment career adaptability, which enables them to adjust as expatriates, and in turn, have the energy take charge at work. We further argue that organizational and community embeddedness impact the relationship between career adaptability and expatriate adjustment, and then the serially mediated relationship, differently. We assert that organizational embeddedness strengthens the likelihood of a positive relationship between MIL and taking charge behavior via career adaptability and expatriate adjustment, whereas community embeddedness reduces the positive association between the two via career adaptability and expatriate adjustment. Using a sample of 344 expatriates and collecting data in four waves, we tested our theoretical model, and our results provide general support for our hypotheses. We discuss theoretical and practical implications, and opportunities for future research.

CAR: **Home Run? Returnees' Repatriation Adaptation and Career Success**

Author: **Ni Liu**, *U. of Goettingen*
Author: **Yuan Pan**, *U. of Electronic Science and Technology of China*
Author: **Shanzi Xue**, *Georg-August-U. Göttingen*

While prior research has focused on corporate expatriate and entrepreneur returnees, little is known about foreign college graduates who return and start their careers in their home countries. Returnees who study abroad and return to their home country bring valuable advantages to their home-country organizations and society. Drawing on career construction theory and acculturation theory, we investigate the adaptation outcomes and early career success of returnees according to their career capabilities and cross-cultural adjustment in their home country. Findings from a qualitative study of interviews with 57 Chinese returnees and 47 HR managers highlight reciprocal inter-relationships between the work, interaction, and general adjustment and suggest that the factors mutually influence returnees' early career success in the home country. Our study contributes to returnees' repatriation research and provides theoretical and practical implications.

CAR: **International Experience and Subjective Career Success: Career Construction Through Global Mobility**

Author: **Sina Alessa Kraus**, *ESCP Business School*
Author: **Benjamin D. Blake**, *U. Wisconsin Oshkosh*
Author: **Marion Festing**, *ESCP Business School*
Author: **Margaret A. Shaffer**, *U. of Oklahoma*

While international experience has been associated with various benefits for global workers and especially their organizations, research mostly applied human or social capital perspectives for explaining these effects, albeit with inconclusive findings. We add further insights to the discussion by positioning "the [global] worker front and center" and introducing career construction theory as a psychosocial explanation linking international experience to subjective career success. In addition, we acknowledge that social capital in the form of career sponsorship might act as a boundary condition. Further, we extend the understanding of international experience by including general, work, and educational experiences. We tested a time-lagged model of career construction by which global workers' international experience, interacting with career sponsorship, promotes career adaptability and, finally, achieves three dimensions of subjective career success: training and development, work-life balance, and financial security. Our hypotheses were mostly supported. However, international experience was only associated with career adaptability and subsequent career success when global workers received career sponsorship, emphasizing the importance of considering arguments from both career construction as well as social capital theory. We discuss both theoretical and practical implications at the intersection of global mobility and careers research.

(Im)Migrant Careers

Session Moderator: **Hui Zhang**, *Sprott School of Business, Carleton U.*

CAR: **Formal Mentoring Programs for Immigrant Employment: What Works and What Doesn't**

Author: **Hui Zhang**, *Sprott School of Business, Carleton U.*
Author: **Luciara Nardon**, *Carleton U.*

Formal mentoring programs are increasingly used by organizations to socialize new employees, retain existing workforce, and increase diversity in organizations. This study examines formal mentoring programs in a novel context – as support interventions to assist immigrant employment. Facilitated by immigrant-serving organizations, sometimes in partnership with employing organizations, pre-employment mentoring programs recruit volunteer mentors to help immigrant protégés navigate the job search process. Drawing on interviews and archival data, we critically explore the benefits and challenges of pre-employment mentoring programs and their implications for immigrant workforce integration. While these programs have the potential to benefit immigrant-serving organizations, employers, mentors, and immigrants, they face a series of issues, including mentor-protégé mismatches, perceived lack of commitment, and unmet expectations, which are consistent with previous research on formal mentoring. We found these challenges to be caused by the programs' reliance on volunteering and stakeholders' varying understanding and expectations of mentoring. The study contributes to the literature on immigrant work integration by recognizing the important role of immigrant-serving organizations in facilitating access to mentors while highlighting limitations in pre-employment mentoring programs resulting in inconsistent outcomes.

CAR: **The Liminal Careers of Skilled Migrants**

Author: **Edward O'Connor**, *Maynooth U.*
Author: **Marian Crowley-Henry**, *Maynooth U.*

This micro-level study examines the individually crafted careers of international skilled migrants as they transition from home to host country careers. It moves beyond a focus purely on the occupational change of skilled migrants to also encompass wider career-influencing structures, including family concerns and lifestyle. Liminality denotes both the place and period between transitional states and stages. From a qualitative study of skilled migrants in Ireland, we expose how the liminal career experiences (after separation from their home country careers) shape their subsequent idiosyncratic careers in the host country. The findings reveal that both the decision to migrate and the decision to develop long-term post-liminality careers in the host country were, for many, their response to different career transitions, both preceding and post-dating the liminal career in the host country. Different career outcomes are guided by institutional and agential barriers and enablers over time, space and circumstance. The resultant matrix of career orientations post-liminality, while developed from the empirical study in this paper, has wider implications in explaining occupational career transitions in the wider population.

CAR: **Cultural Barriers to Skilled Migrants' Career Success in the Host Labour Market**

Author: **Thi Tuyet Tran**, *RMIT U., Australia*
Author: **Roslyn Cameron**, *Torrens U. Australia*
Author: **Nuttawuth Muenjohn**, *School of Management, RMIT U.*
Author: **Shea Xuejiao Fan**, *RMIT U.*
Author: **Alan Montague**, *Dr*

Skilled migrants (SMs) have become a significant and growing workforce in the world economy, especially in the developed world where SMs are considered important to sustain the population and foster economic growth. However, the management literature indicates that this international mobile workforce is vulnerable when they self-initiate their international careers while searching for permanent resettlement. A large cultural distance between the host and home countries is considered one of the significant factors preventing SMs from pursuing a successful career upon arriving in the host destination. This research explores professional skilled Vietnamese migrants' (PSVMs') perceptions of career success in Australia and the cultural factors that impact it. The study utilised a qualitative approach with fifty semi-structured interviews conducted with employed PSVMs who migrated to Australia within the last five years, and twelve semi-structured interviews with recruitment staff to gain added insights into the barriers PSVMs may face. Findings point to various cultural obstacles that PSVMs faced as they transitioned from Vietnam, a developing country with a collectivist and high context culture, to Australia, a developed country with a very individualistic and low context culture. In most cases, PSVMs had to experience career failure before recognising and devising strategies to overcome these hurdles.

CAR: **Managerial Career Aspirations: Examining Migrant Experiences via the Career Self-Management Model (WITHDRAWN)**

Author: **Melissa A. Parris**, *Deakin U.*
Author: **Uma Jogulu**, *Edith Cowan U.*

There remains limited research on migrants' career development, whether in their initial employing organization or elsewhere. In addition, clear insight into the influence of cultural values on individuals' career goals has been difficult to achieve. This paper reports on how do personal and contextual variables influence migrants' career development, specifically, their career goals and their subsequent career actions? Using social cognitive career theory, which acknowledges the role of a range of personal and contextual factors over time in individuals' careers, this research focuses on the managerial career aspirations (MCA) of migrants, and how differences in personal, organizational, and cultural factors influence individuals' managerial career goals and actions. This study contributes to theoretical models of MCA and career self-management, explicitly focusing on managerial aspirations within the career self-management framework. It affirms the role of both self-efficacy and outcome expectations in relation to career goals and actions. Our study also reinforces the distinctiveness of desired vs enacted MCA, with only indirect relationships found between self-efficacy and enacted MCA. Suggestions on how a deeper understanding of these influences can inform both organizational and governmental policy and practice in order to identify, utilize and (ideally) enhance the career capital of migrants are discussed.

Perceived overqualification, when an employee possesses excess education, experience, or skills, affects a growing number of employees around the world. As such, academics and practitioners alike seek to understand the experiences and outcomes of overqualified workers. This symposium brings together four exciting new research directions for perceived overqualification (POQ) from leading authors. POQ expert, Berrin Erdogan, serves as discussant and provides insights into future research directions for this important topic.

Power, Status, and Politics

Session Moderator: **Yujia Jin**, *Fuqua School of Business, Duke U.*

CM: **The Effect of Social Media on Dominance**

Author: **Yujia Jin**, *Fuqua School of Business, Duke U.*
Author: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*

Across the world, social media has become an indispensable part of people's personal and professional lives. However, little research has examined how social media affects people's tendencies to exert influence over others. In this research, we identify a novel unintended consequence of social media: people's tendency to act in dominant manners. We propose that using more social media is associated with higher self-enhancement motives, which will in turn predict higher dominance. Three studies supported our theoretical perspective (social media use -> self-enhancement motives -> preference for dominance social influence strategies), including an online survey study (Study 1), an experience sampling study on current company employees (Study 2), and a field study on intact work teams located in India (Study 3). Our research contributes to existing theories on the psychological consequences of using social media, and on the potential behavioral antecedents of people's dominance social influence tactics.

CM: **A Sense of Social Status: Antecedents and Relationship to Academic Performance**

Author: **Ingvild Müller Seljeseth**, *Kristiania U. College*
Author: **Christina Nerstad**, *BI Norwegian Business School*
Author: **Henrik Sørlie**, *U. of Bergen*
Author: **Karoline Kopperud**, *OsloMet - Oslo Metropolitan U.*
Author: **Dominique Kost**, *BI Norwegian Business School*
Author: **Don Vandewalle**, *Southern Methodist U.*

Although social status attainment is related to a host of positive outcomes for individuals, we know little of personal antecedents of self-perceived status attainment. Building upon the "information goods" theory, self-efficacy theory, and prosocial motivation, this study tests general self-efficacy, academic self-efficacy, and prosocial motivation as antecedents of self-perceived social status. A three-wave field study spanning approximately 18 months, including 424 first-year university students, reveals that general self-efficacy, academic self-efficacy, and prosocial motivation at the study start positively predicts students' sense of social status at the beginning of their second semester. Further, self-perceived social status positively predicts objective academic performance in the third semester. Monte Carlo simulations suggest that self-perceived social status represents a significant mechanism in the relationship between general self-efficacy, academic self-efficacy, prosocial motivation, and academic performance. The theoretical and practical implications of these findings are discussed.

CM: **Work-Family Conflict and Helping Behaviors: The Roles of Detachment and Ingratiation Skills**

Author: **Muhammad Umer Azeem**, *ESSCA School of Management*
Author: **Sharjeel Saleem**, *Government College U., Faisalabad, Pakistan*
Author: **Imran Sharif**, *U. of Lahore*
Author: **Khadija Munir**, *Riphah International U.*

The present study explores the path of influence between work-family conflict and helping behaviors, with psychological detachment as a mediator. We use conservation of resources theory to explore resources losses/gains through conflict/detachment towards behaviors. In addition, ingratiation is explored as a moderator, and we argue its use as a political tactic might provide resources that minimize conflicts detrimental influence. Ultimately, we test a moderated mediation model to determine whether ingratiation acts as a boundary condition. Using data from 253 employees across three time periods including supervisor-ratings of employee behaviors, we find work-family conflict is negatively related to helping behaviors and positively related to psychological detachment. Further, detachment negatively influences helping behaviors and plays a minor mediation effect. Ingratiation is positively related to helping behaviors and interacts with work-family conflict towards psychological detachment and helping behaviors. As expected, two-way interactions show that when ingratiation is high, it is most beneficial, reducing the reduction is helping behaviors and minimizing the increase in detachment. A significant moderated mediation effect is also found whereby the indirect of work-family conflict on helping behaviors becomes non-significant at high levels of ingratiation. The implications for understand these findings are addressed.

CM: **"It's All for Show": Performative Allyship as Saying One Thing but Doing Nothing**

Author: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*

The current research calls into question the universal benefits of allyship and investigates the pitfalls of allyship. I break new ground by proposing performative allyship, in which organizational leaders publicly tout their solidarity with equity, diversity, and inclusion (EDI) issues but withhold actual support (i.e., "saying one thing but doing nothing"), as a common allyship phenomenon with important implications for individual and organizational outcomes. Eight preregistered studies using recall, scenarios, behavioral games, and qualitative questions reveal that populations facing disadvantages from race, gender, sexual orientation, or indigenous status evaluate leaders who exhibit performative allyship as being hypocritical, self-serving, and image-managing through sending false signals about their moral virtues. Specifically, performative allies are judged even more negatively than those who disregard allyship and consistently show no ally actions. The negative evaluations lead to lower perceptions of the organization's diversity climate and higher minority turnover. On a positive side, attributing performative allyship as hypocrisy ignites moral outrage, and therefore motivates marginalized employees to advocate for social change, representing a silver lining to this dark side allyship phenomenon. This research contributes to false signaling theory and the allyship literature, with profound practical implications for organizational EDI practice.

Stressful work events are a daily reality for workers. Given its prevalence, understanding how workers deal with stressful work events is both theoretically and practically imperative to "putting the worker front and center" (Academy of Management, 2023). We extend the extant focus on employees' responses by exploring both employees' and managers' experiences of stressful events, and hence more fully capture workers' experience. Our symposium gathers international scholars from Austria, Canada, Finland, Germany, the Netherlands, and the United States to investigate workers' experiences of stressful work events using diverse situations, perspectives, and methodologies. Specifically, our papers investigate (a) employees' experience of, and responses to managerial inaction as a stressful event, (b) how leadership role occupancy and autonomy influence the specific self-regulation strategies workers pursue to cope with taxing work demands, (c) how the enactment of justice is a form of identity work in managers during challenging work events, (d) how self- and other-directed assessments of identity threat emerge during the stressful situations of layoffs and denied promotions in managers and employees, and (e) how interpersonal justice assists/impedes professors in reacting to negative student feedback. Following the paper presentations, Dr. Laurie Barclay will conclude the symposium with an engaging, interactive discussion that highlights key insights and future research directions. By showcasing theoretical and practical insights into how workers (i.e., employees and managers) and organizations can more effectively manage stressful work situations, we aim to fulfill the Academy of Management's objective to "putting the worker front and center".

Session Moderator: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*

CMS: **Understanding the Role of Social Workplace Activities on Performance: A Case Study of Celiac Disease**

Author: **Anne Steinhoff**, *U. of Essex Business School*
Author: **Rebecca Warren**, *U. of Essex*
Author: **David J. Carter**, *U. of Canberra*

This paper explores the relationship of the (un)healthy body and the performance expectations of social interactions at organizations. Through oral history interviews with Celiac afflicted individuals who work in intellectual labour settings, we illustrate that accountability and performance measures in organizations are imbued with requirements that go beyond what we may usually think of being included in performance management. For this illustration, we concentrate on the way that employees socially interact. Not meeting and fulfilling social activity standards leads to an effect on performance even if the individuals produce all the necessary work outputs. The paper explores how social activities and socialising are implicated in performance measurement in immaterial labour and highlights the exclusionary impact that social activity expectations have on those with the autoimmune disorder celiac disease. In response to this, we argue, employees with celiac disease attempt to embody an able body, hiding experiences with the disease. Our findings show that these employees become socially controlled and have to outperform healthy colleagues due to the stigmatization and ignorance surrounding the disease and the way this stigma and ignorance interacts with the social conditions, behaviours and norms of performance management. With this paper, we contribute to a growing body of literature in critical accounting that researches the way that accounting practices restrict the experiences of the embodied self and hidden conditions that are required to be accountable and perform well in organizations. In particular, we extend such efforts by exploring these shortcomings of accounting practices in the area of long-term health and disease management at work.

CMS: **Elite Discourse and Preserving Social Hierarchies: The Case of School Education in India**

Author: **Ahmad Faraz Khan**, *Department of Business Administration, Aligarh Muslim U., India*
Author: **Suhaib Riaz**, *Telfer School of Management, U. of Ottawa*
Author: **Arjun Bhardwaj**, *Ivey Business School*

We examine how emerging policy change towards egalitarian outcomes is stalled through elite discourse in a context with highly stratified social hierarchies. We investigate this in the setting of school education in India over a period of 10 years following a major policy change in 2009 known as the Right to Education Act. Using principles of qualitative content analysis, we analyse elite discourse in media on the topic, complemented with understandings from field immersion and multiple sources of secondary data. We find that elite discourse is comprised of four interconnected and mutually reinforcing dimensions that ensure an exclusion of holistic and structural issues, pushing solutions to a narrow space of concerns for quality without inclusivity and a focus on social categories. These dimensions are set in a mutually reinforcing cycle through two loops of reinforcing mechanisms – preserving distinctions, and thinking in group identities. We draw on Bourdieusian insights to interpret these and contribute to research on elites, social hierarchies, and societal grand challenges. Specifically, we delineate how elite discourse frames a trade-off between forms of capital, and locks marginalised social groups in an illusio of pursuing narrow outcomes, thereby stalling long-term meaningful change towards universal and egalitarian outcomes.

CMS: **Pushed to the Edge? Entrepreneurs with Disabilities, Ableism, and (the Lack of) Social Justice**

Author: **Sara Csillag**, *Budapest Business School*
Author: **Anna Hidegh**, *Corvinus U. of Budapest*
Author: **Carmen Svastics**, *Eotvos Lorant U. of Budapest*
Author: **Zsuzsanna Gyori**, *Budapest Business School*

In our article we connect Fraser's social justice theory with ableism as a construct. Based on our qualitative interviews with 29 Hungarian entrepreneurs with disabilities (EWD) we present how disability hinders social justice through the interconnected problems of economic maldistribution, cultural misrecognition and political misrepresentation in a post-socialist country. After the identification of various patterns of social injustice and ableism, we conclude by discussing affirmative and transformative techniques which are used by EWD to counteract these. Our findings suggest that in the economic and political domains these responses either reinforce the existing capitalist system or can only effect change in a very long term. However, EWD succeed in shaping society's cultural image of people with disabilities through their entrepreneurship, advocacy, volunteering, and other activities.

CMS: **Absent Patients: The Discursive Positioning of Patients in Multistakeholder Research Collaborations**

Author: **Pasi Hirvonen**, *U. of Eastern Finland*
Author: **Eeva Aromaa**, *U. of Eastern Finland*
Author: **Paivi Eriksson**, *U. of Eastern Finland*

This article focuses on the discursive construction of patients as absent stakeholders in health research collaboration. More specifically, the article shows how patients are positioned as absent actors in multistakeholder collaboration between universities, companies, and non-profit organizations (NPOs). Today, both public universities and companies are expected to partner and engage with patients in their research activities. However, little is known about how health researchers and their stakeholders understand the patient role in their routine research processes. The article draws from the literature on research collaboration with stakeholders, the discursive construction of stakeholders, and positioning theory, asking how health researchers and their stakeholders construct patients and their agency in their narratives about research collaboration. The article is based on data collected through 44 open-ended interviews with health researchers in two Finnish universities, as well as their company and NPO collaborators. The findings illustrate how patients are positioned as absent, passive actors—resources and objects of research—rather than active partners and agentic actors in research collaboration. The study contributes to research collaboration literature by illustrating discursive positions of how one group of actors—here, patients—are positioned as an absent actor in the context of health research collaboration.

Technologies of Resistance and Control

Session Moderator: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*

CMS: **Mimicry and Resistance in Management and Organizational Knowledge Production in Brazil**

Author: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*
Author: **Fernando Ressetti Pinheiro Vianna**, *Fundação Getulio Vargas - EAESP*

Discussions about the internationalization of organization and management knowledge and education in the periphery have focused on the center-periphery knowledge flow or how the periphery reacts when management knowledge and education come from the center. However, researchers have less often discussed efforts to "internationalize" the production of management knowledge from the non-English speaking periphery to the center. In the case analyzed here, the "internationalization" of organizational and management knowledge production was done by Brazilian journals editors that published articles only in Portuguese demanding authors to have English versions of their papers. Moreover, there is scant research on non-English organization and management knowledge production. Thus, this paper addresses the following research question: What happens when journals published in the local language from a peripheral location in organization and management knowledge production decide to adopt English as the paper publication language? To address this, we analyzed Brazilian management journal documents and interviewed 47 Brazilian scholars. We identified that Brazilian organization and management academy mimicry internationalization through an English-language fetishization. At the same time, local journals demanding paper versions in English do not produce internationalization but produce internal inequality and meaningless knowledge. To resist the requirement for papers with an accompanying English version, researchers adopt "decaf" resistance practices such as using translation software to reduce costs. Nevertheless, some researchers and journals adopt effective resistance practices, where researchers do not publish in journals which require an English version, and journals do not publish articles in English, even if such decisions negatively impact their metrics.

CMS: **State Discourse, Violence Mobilization, and Fear Politics**

Author: **Xiaoran MA**, *U. of Melbourne*
Author: **Vanessa Pouthier**, *U. of Melbourne*

With the paradigmatic shift from viewing organizations as merely contexts for violence to perpetrators of violence, organization scholars have been uncovering oft-obscured structural injustices. Nevertheless, few studies anchor their units of analysis in the organization of nation-states with their active, ongoing role in inflicting violence, and even fewer studies examine how the states justify and mobilize violence such that collective interpersonal violence may emerge and sustain. Aiming to address this puzzle, we draw upon Butler's (2009) discussions regarding the intimate relations between language and state violence and Massumi's (2010) writings on the significance of fear to bodily (re)actions to inform our inquiry. We ask: how does the organization of nation-states justify the "necessity" of violence through fear-producing discourse? We explore the case of McCarthyism, a notorious state-organized, mass-administered violence purging Communists and their sympathizers in the post-war US. Our findings surface two techniques underpinning the state's violence-mobilizing discourse: chiaroscuro (i.e., a sharp contrast between the virtuous, vulnerable self and the monstrous ideological other) and decontextualization (i.e., uprooting monster bodies from the localities where their words and deeds make sense). We make a two-fold contribution to the violence literature. First, we lay bare nation-states' discursive techniques whereby individual citizens are mobilized to embody and execute violence against each other. Second, our study illuminates further the role of affect in violence mobilization by dissecting how the state organizes by fear & hatred via discourse, thereby unveiling the mechanisms and the consequences of instrumentalizing affect in the service of ideological wills. Keywords: violence, state, discourse, otherness, fear & hatred

CMS: **Porn, Business and Morality: Examining Discursive Repertoires in Doing Feminist Porn**

Author: **Louise Lecomte**, *PSL U. - U. Paris Dauphine*
Author: **Flora Antoniazzi**, *Copenhagen Business School*
Author: **Florence Villeseche**, *Copenhagen Business School*

In this study, we examine how persons working in feminist porn make sense of their practice. Feminist porn is a media genre made for profit that at the same time sets out to be an alternative to the mainstream by promoting liberal views on gender and sexuality and being committed to depicting diversity in gender, race, ethnicity, sexuality, body size, ability, and age. We thus understand feminist porn as a movement that seeks to moralize the pornographic market. We collected both primary and secondary data that we approach with poststructuralist feminist discourse analysis. We outline three discursive repertoires: feminist porn as an alternative and inclusive product offer; feminist porn as an ethical product; feminist porn as socio-political activism. With these findings, we contribute to scholarship on porn as an industry by showing how feminist porn, as a moralized segment of this market, consists of a complex set of discourses with inherent tensions about commodifying feminism into a moral product and the ethics of authenticity in commercial fictions. We thus bring nuance to the pro vs against debates around feminist porn, put a much needed emphasis on the organizational and economic dimensions of discourses in feminist porn, and take the voices of feminist pornographers seriously.

CMS: **Resistance and Control in a Culture Programme: Disrupting Hierarchies of Social Identity**

Author: **Martijn Pieter Van Der Steen**, *U. of Groningen*
Author: **Robert Scapens**, *Alliance Manchester Business School, U. of Manchester*

This paper contributes to a debate which questions whether employees have the means and the motivation to resist the incorporation of identity attributes implied by culture programmes such as lean, TQM, and JIT. Drawing on social identity theory, this paper finds that these identity attributes lead to identity mobility for groups whose social identities are high on the "salience-prominence differential" – a concept that denotes social identities which are either highly desirable but unlikely to be enacted, or vice- versa. The paper argues that such social groups may more readily accept the incorporation of alternative identity attributes into their social identities, because such acceptance provides alternative ways for gaining positive distinction. We differentiate between consent and colonisation to theorise variations in agency. The paper also highlights how social groups which are low on the salience-prominence differential may resist attempts to incorporate alternative social identity attributes, specifying the origins of substantive as well as symbolic resistance.

Digital Technologies & Consumer Behavior

Session Moderator: **Yaqiong Zhang**, *China U. of Political Science and Law*

CTO: **The Influence of Anthropomorphic Appearance of Artificial Intelligence Products on Consumer Behavior**

Author: **Yaqiong Zhang**, *China U. of Political Science and Law*
Author: **Shifu Wang**, *China U. of Political Science and Law*

With the rapid development of artificial intelligence technology, artificial intelligence products are widely used in the market. The degree of artificial intelligence product appearance anthropomorphism has been a hot topic in product strategy as well as consumer behavior research, however, the related research in this field has not reached a unanimous conclusion. This study systematically investigated the influence of AI anthropomorphic appearance on consumer behavior and brand evaluation under different product types through four experiments. It was found that for hedonic AI products, anthropomorphic appearance improves consumers' purchase intention and brand evaluation through perceived entertainment, and intelligence level significantly moderates the mediating effect of perceived entertainment; while for practical AI products, anthropomorphic appearance improves consumers' purchase intention and brand evaluation through perceived usefulness, and intelligence level does not significantly moderate the mediating effect of perceived usefulness. There is no significant moderating effect of intelligence level on perceived usefulness. This study enriches the research on the anthropomorphic appearance of AI products in consumer behavior and provides effective guidance for companies to develop appropriate anthropomorphic images and marketing strategies when designing and producing AI products.

CTO: **The Effects of Online Social Identity Signals on Retailer Demand**

Author: **Yash Babar**, *U. of Wisconsin, Madison*
Author: **Ali Adeli**, *U. of Memphis*
Author: **Gordon Burtch**, *Boston U. Questrom School of Business*

Recent shifts in societal discourse have led digital platforms to support equity, inclusivity, and diversity by introducing identity signaling features, e.g., indicators of owner race or gender. In this work, we explore whether, when, and how using those features may impact retailer demand. We tackle this question via a multi-method study. We begin by conducting a controlled experiment on Prolific.co, presenting subjects' with actual Google Places business profiles for a set of Black-owned restaurants in Chicago. We randomly vary the presence of Black-owned and Women-owned labels in these profiles and assess subjects' expectations of popularity and quality along various restaurant dimensions. Our results demonstrate that the Black-owned label, in particular, drives significant increases in all outcomes, with the effects arising primarily from Black and democratically liberal subjects. Next, we conduct an archival analysis of the effect label adoption has on the physical foot traffic that retailers receive, based on SafeGraph's mobile patterns database. Our difference-in-differences estimations yield consistent results; we find evidence of a positive average effect on foot traffic volumes. Further, we show that a rise in visitors from liberal-leaning geographies drives these effects. We discuss implications for digital platform operators and for retailers.

CTO: **The More Similar, the Higher the Price? The Effects of Visual Congruence on Premium Rate**

Author: **Ke Cheng**, *Xi'an Jiaotong U.*
Author: **Chengli Shu**, *Xi'an Jiaotong U.*
Author: **Yao Wang**, *Xi'an Jiaotong U.*

How to outperform other suppliers on digital platforms in the sharing economy becomes an essential question that practitioners and scholars are interested in answering. Taking the Airbnb platform as an example, it has attracted many studies that primarily focus on uncovering how factors related to a focal firm, the platform, and customers impact host and/or room performance. It is, however, unclear how visual congruence between rooms on Airbnb and tourist attractions influences the room premium rate. Thus this study first constructs a dataset including 4,7481 images from 2,578 individual Airbnb listings. Then this study calculates the color similarity between interior pictures of a particular listing on Airbnb and the pictures of the selected tourist attractions. Finally, the empirical findings show that visual congruence is positively associated with room premium rate, and such an effect is contingent on essential factors related to rooms (distance to tourist attractions and the number of amenities) and pictures (human-cue absence and indoor photos quantity). This study contributes to the meaning transfer model by expanding the scope of endorsement to objects (tourist attractions). In addition, we enrich the MTM by offering an essential factor—visual congruence and explicating the moderating roles of important cost factors.

CTO: **Video Moves You: Field Experiment Shows How Demonstrator Videos Increase Physical Activity**

Author: **Christoph Riedl**, *Northeastern U.*
Author: **Koen Pauwels**, *Northeastern U.*

Physical activity is important to health, and videos demonstrating exercise by other users could help stimulate engagement. Evidence is lacking as to whether such videos increase exercise completion and spill over to other exercises. Moreover, do the number of videos, the user-demonstrator gender fit, and demonstrator popularity matter? We ran a field experiment in a health and fitness app that randomly blocked videos among almost 2,000 exercises for about 3,000 users who recorded 35,000 completed exercises. We leverage pre-experiment workout histories to assess possible mechanisms through which videos may affect physical activity. We find that giving users access to exercise videos increases both immediate completion of the demonstrated exercise, and longer-term physical activity, in terms of spillovers to exercises without videos and more gym sessions overall. The uncovered mechanism is consistent with an information effect rather than a motivational effect of behavior change theory. Women and men respond positively only to videos with demonstrators of their own gender, with negative effects for cross-gender videos, and the number of videos depicting the same exercise. These findings suggest nuanced implications for managers and policy makers: only specific demonstrator videos have the power to move the app user.

Digital Strategy 1

Session Moderator: **Can Tihanyi**, *WU Vienna*

CTO: **When Does it Pay to Have a Chief Digital Officer?**

Author: **Can Tihanyi**, *WU Vienna*
Author: **Alexander Toni Mohr**, *WU Vienna U. of Economics and Business*
Author: **Christian Schumacher**, *Assistant Professor, Copenhagen Business School*
Author: **Valentin Kiefner**, *WU Vienna U. of Economics and Business*

We examine the circumstances in which having a Chief Digital Officer (CDO) increase firm performance. Drawing on upper echelons theory we argue that the effect of having a CDO on firm performance will vary with the attention that the firm's Chief Executive Officer (CEO) and its board of directors (BOD) give to digital transformation. We suggest that both CEO's and the BOD's attention to digitalization influences the performance effect of having a CDO, because it (1) improves the CDO's ability to drive and coordinate the digital transformation, and (2) it reduces the potential obstacles that the CDO confronts when digitally transforming the organization. We test our hypotheses using a newly created dataset containing information on 535 S&P 500 firms over the period 2010-2019. Our empirical support for the proposed contingent performance effect of having a CDO has implications for both practice and research.

CTO: **Digital Technology and Qualitative Soft Information for Firm Growth**

Author: **Francesco Fasano**, *U. of Calabria*
Author: **Maurizio La Rocca**, *U. of Calabria*

Soft information is at the core of lending decisions of banks, as it allows alleviating information asymmetries. Cash resources provided by banks are essential for firms' growth and human contacts in bank-firm relationships is important to acquire soft information. The advent of digital technologies could change the way the bank and the firm communicate in the information collection process. This work, using a large sample of Italian SMEs from 2011 to 2020, suggests that the rapid increase and use of digital instruments has reduced the positive influence of bank-firm relationship on the amount of cash resources obtained. We have also found that the COVID-19 crisis did not amplify this moderating effect. The paper suggests that close human ties are still extremely relevant and digital technology should be exploited to support the collection of the kind of qualitative soft information that is crucial to support corporate growth.

CTO: **Digital Technologies, Innovation Ambidexterity, and Business Performance**

Author: **Zifeng Li**, *Central U. of Finance and Economics*
Author: **Xiji Zhu**, *Central U. of Finance and Economics*
Author: **Jinliang Chen**, *Central U. of Finance and Economics,Beijing,China*
Author: **Ran Li**, *Beijing Normal U.*

Digital technologies differ in their potential contribution to firm performance. Understanding the underlying mechanism and boundary condition are key to explaining the variability in performance. Drawing on information processing theory (IPT), we theorize that digital technologies improve business performance through innovation ambidexterity, which reflects the information processing capabilities of firms. Considering the organizational structure factors, we draw on the digital innovation head's managerial level and centralization and expect centralization to weaken the positive role of the digital innovation head's managerial level in strengthening the digital technologies–innovation ambidexterity link. Performing ordinary least squares (OLS) regression with 174 samples in China, we find that innovation ambidexterity is a key mechanism linking digital technologies to business performance. Our results also provide good support for a three-way interaction effect of digital technologies, the digital innovation head's managerial level and centralization on innovation ambidexterity. We advance research on digital and information processing theory (IPT) and recommend that digital transformation enterprises balance between the digital innovation head's managerial level and centralization, thus better coping with the performance of digital technology adoption.

CTO: **The Impact of Digital Transformation on the Internationalization Process of Family Firms**

Author: **Christian Keen**, *U. Laval*
Author: **Mikel Alayo**, *U. of the Basque Country UPV/EHU*
Author: **Valeriano Sanchez-Famoso**, *U. of the Basque Country UPV/EHU*

Internationalization is an important business strategy that offers opportunities for growth and contributes to the long-term goals of family firms. Although previous research has highlighted the importance of internationalization, to date little research has looked at the effect of digitalization on the internalization process of family firms. Digitalization facilitates information gathering, communications and network expansion in foreign markets, hence reducing the risks of liability and newness. Thus, there are several reasons why digitalization can be an important driver of family firms' internationalization in a globalized digital economy. We base our analysis on a sample of Spanish SMEs and test the proposed relationships using structural equation modelling technique. Our results reveal a positive effect of digitalization on the internationalization of family SMEs. Moreover, we also found positive moderating effects of the generation in charge and generational involvement in management.

Crowds & Contests

Session Moderator: **Kathrin Reinsberger**, *Stockholm School of Economics*

CTO: **Birds of a Feather Crowd Together: Skill-Based Self-Selection in Crowdsourcing Innovation Contests**

Author: **Kathrin Reinsberger**, *Stockholm School of Economics*
Author: **Nikolaus Franke**, *WU Vienna*
Author: **Philipp Topic**, *Fraunhofer IPA*

Self-selection on the basis of problem-solving capabilities constitutes a powerful and convincing principle in crowdsourcing. The self-selection principle describes that among the huge mass of potential problem solvers particularly those individuals decide to participate in the contest who have the best problem-solving capabilities with regard to the problem at question. The classic argument from tournament theory is that higher skills increase the individual's chance of winning. However, there are also counter arguments: High-skilled potential participants may also have better alternative options to invest in than low-skilled individuals. We investigated how effectively self-selection in crowdsourcing works and how seekers can boost self-selection? Extant research on crowdsourcing success factors does not provide answers to this as studies exclusively rely on participants, i.e. the "survivors" of the self-selection process. By applying a unique research design - combining behavioral data from a real crowdsourcing contest with data from a survey and archival data - we were able to overcome several methodological challenges. Our findings suggest that individuals with strong skills indeed tend to self-select into the contest and those with lower skills tend to self-select out. However, this desired self-selection effect is far from being perfect as the effect size is only moderate. We also observe a significant difference in idea quality between high-skilled and low-skilled individuals. To mitigate the loss of high-skilled individuals and subsequently increase the quality of the contest output, our analyses emphasize the importance of the award structure and distribution in the self-selection process.

CTO: **Problem Specification in Crowdsourcing Contests: A Natural Experiment**

Author: **Kai Ye**, *HKUST Business School*
Author: **Tat Koon Koh**, *HKUST Business School*

Problem specification is a key aspect in crowdsourcing contests through which seekers convey their requirement and taste for the desired submissions. Hence, it is important to understand how problem specification should be framed to achieve better crowdsourcing contest outcomes. In this empirical study, we investigate the effects of a relatively more structured problem specification on contest quantity, solver quality, and idea quality. We leverage on a natural experiment setup on a major crowdsourcing contest platform where the problem specification of logo design contests changed from open-ended to structured. Our results show that the specification change impacts both seekers and solvers. Specifically, the number of contests increases after the change but the efficacy of top solvers and idea quality in the respective contests tend to be lower. We discuss the theoretical and practical contributions of this research.

CTO: **Contest Diversification and Solvers' Earning Performance**

Author: **Kai Ye**, *HKUST Business School*
Author: **Tat Koon Koh**, *HKUST Business School*

Winning is a key but challenging objective for solvers competing in crowdsourcing contests. Given solvers' low winning prospects in individual contests, they could win one contest but still perform poorly on the whole due to their results in other contests. Hence, it is important to know how solvers can improve their overall earnings performance across contests. To address this, this longitudinal research theorizes how solvers' contest portfolio diversification affects their performance in terms of the amount of prize won. As solvers face resource constraints, we also examine how the effect of diversification is moderated by contest portfolio size and idea quantity submitted. To validate our theorizing, we analyze the contest participation and earning performance of 2,928 solvers over 32 weeks on 99designs, a design contest platform. We find that the contest diversification positively affects solvers' earnings. Furthermore, the effect of contests diversification is positively and negatively moderated by contest portfolio size and idea quantity, respectively. This suggests that participating in more contests concurrently weakens whereas submitting more ideas strengthens the effect of diversification. We discuss the theoretical and practical contributions of this research.

CTO: **Investor Attention and Crowdfunding Performance**

Author: **Lin Hu**, *Australian National U.*
Author: **Kun Li**, *Australian National U.*
Author: **Zhenhua Wu**, *Nanjing U.*
Author: **Bin Gu**, *Boston U. Questrom School of Business*

Today's digital era facilitates the rise of crowdfunding markets by allowing entrepreneurs to seek funding directly from crowds. Crowdfunding, as IT-enabled disintermediation, lowers entry barriers for crowds to invest in business projects and entrepreneurs to obtain funding, yet may exacerbate information asymmetry and absorb investor attention to process information about the potential projects. Therefore, understanding how distractions that divert investor attention influence investor behavior and crowdfunding performance is very important for entrepreneurs as well as crowdfunding platforms, especially in today's fast-paced information era. To that end, we develop a model wherein investors with limited attention aggregate personalized information about (reward-based) crowdfunding projects and conduct comparative analyses on how rises in investors' unit attention cost (associated with greater distractions) affect investor attention, investment decisions, and crowdfunding performance. We then exploit a novel measure of distraction—news pressure—to test the effects of distraction on investor engagement and crowdfunding performance empirically, and the results support our model predictions.

Coordination in Organizations

Session Moderator: **Jingyi Sun**, *Stevens Institute of Technology*

CTO: **Who are Boundary Spanners of Virtual Organizations? A Multirole Network Personality Approach**

Author: **Jingyi Sun**, *Stevens Institute of Technology*

In online communities, boundary spanning individuals who change group memberships play an important role in the evolution of groups. Do boundary spanners have a specific personality type? This study follows Burt's (2012) construct of multirole network personality, which refers to a consistent personal preference for building certain type of social networks across multiple roles. Drawing from brokerage theory and category theory, both interpersonal bond and individual-group interaction focus on the distinction between diversification and concentration in terms of resource access pattern. This study thus seeks to answer if individuals who prefer building diversified or focused social networks would have consistent or complementary patterns when interacting with groups. This study examines 96,203 players who changed roles within/across groups over 32 months in the gaming community World of Tanks, and used relational event models to assess group joining patterns. The results show that brokerage-prone individuals are more likely to be boundary spanners, and less likely to rely on the referral by co-members to switch group memberships.

CTO: **Interdependent Within a Crowd? A Test of Interdependence Theory in Team-Based Microtasking**

Author: **Mehdi Bagherzadeh**, *NEOMA Business School*
Author: **Andrei Gurca**, *Queen's School of Management, Queen's U. Belfast*
Author: **Andrew Loignon**, *Center for Creative Leadership*

Drawing on recent innovations within crowd-based microtasking, we test current interdependence theory. Historically, microtasking featured crowds of anonymous, distributed workers performing simple, repetitive tasks. However, some firms have decided to use teams to enhance the performance of the crowd. Current views of interdependence would assume that the well-defined and simple nature of microtasks precludes any need for interdependence. Based on data from crowdworkers associated with a platform-based, microtask crowdsourcing enterprise, we found evidence that contradicts extant interdependence theory. Specifically, even with consistently low levels of task interdependence, the more crowdworkers held collective, team-based goals the more revenue they generated. Furthermore, the benefits of goal interdependence were enhanced when teams readily shared their knowledge. Thus, although there is an apparent tension between the logics of microtasking (i.e., segmented, simple, and repetitive tasks), and team-based organizing (i.e., encouraging crowdworkers to engage and interact with each other), our findings suggest that teams of distributed crowdworkers can leverage goal and knowledge interdependence to achieve substantial increases in performance, even in the absence of task interdependence. Implications for future research on microtask crowdsourcing and interdependence are presented and discussed.

CTO: **Short and Long-Term Informal Coordination for Resilience: A Relational Event Modeling Approach**

Author: **Nevena Ivanovic**, *Faculty of Economics and Business, U. of Groningen*
Author: **Aaron Schecter**, *U. of Georgia*
Author: **Thomas Arend De Vries**, *U. of Groningen, Faculty of Economics and Business*
Author: **Gerben S. Van Der Vegt**, *U. of Groningen*

Organizational resilience research has mostly investigated formal coordination during large-scale disruptions. Yet, in practice, it is the small-scale, day-to-day disruptions that affect most of the operational and financial losses in organizations. Timely resolution of day-to-day disruptions depends on effective real-time, informal coordination. Current research has provided limited evidence on effective informal coordination for resilience. Thus, we rely on the modular system design and improvisation literature to propose short- and long-term informal coordination mechanisms likely to balance the control and flexibility necessary for real-time disruption response. We apply relational event modeling across 1,177 disruptions and 184,795 communication events in a water supply company and demonstrate that long-term decentralization and loose coupling combined with short-term restructuring characterized by routine breaking and centralization help solve disruptions faster. Further, we empirically demonstrate that mechanisms forming employees' reactions to disruption occurrence do not necessarily match the mechanisms shown to help resolve them faster. In this way, we point to potential reasons behind the failures to flexibly adapt coordination when disruptions occur. This study contributes to the resilience literature by demonstrating previously unexplored mechanisms behind effective real-time informal coordination during day-to-day disruptions and provides valuable practical insights for managers in organizations dealing with frequent disruptions.

CTO: **Misalignment in Technology Perceptions Predicts Advice Tie Dissolution**

Author: **Y. Jasmine Wu**, *The Wharton School, U. of Pennsylvania*
Author: **Brennan Antone**, *Cornell U.*
Author: **Noshir Contractor**, *Northwestern U.*

Shifts to hybrid work prompted by the COVID-19 pandemic have the potential to substantially impact social relationships at work. Hybrid employees rely heavily on digital collaboration technologies to communicate and share task-related information. Therefore, employees' perceptions of the technologies are critical in shaping networks within organizations. The dyadic-level misalignment in these perceptions, however, may lead to relationship dissolution. To explore the social network consequences of hybrid work, we conducted a two-wave survey in a department of an industrial manufacturing firm (N = 169). Our results show that employees were less likely to maintain their advice-seeking ties when they had a mismatch in the ease-of-use perception of technology with their colleagues. The effect was stronger when advice-seekers tended to work remotely. The study provides empirical insights into how congruence in employees' perceptions of organizational communication technologies affects the way they churn advice networks during hybrid work.

The Changing Role of Digital Platforms for Organisational Audiences in an Age of Polarisation

Participant: **Itziar Castelló**, *Bayes Business School (formerly Cass), City, U. of London*
Participant: **Michael Andreas Etter**, *King's College London*
Participant: **Naomi A. Gardberg**, *City U. of New York, Baruch College*
Participant: **Elanor Colleoni**, *U. of Milan*

In this symposium, we aim at discussing the changing role of digital platforms for the way organisational audiences relate to firms. From different perspectives, we will elaborate the antecedents, conditions, and consequences of initial empowerment of organisational audiences and their decline for the democratic social evaluation, mobilisation, and social control over businesses. In acknowledging social-material relations, we will not only emphasise the central role of digital platforms, but also critically highlight the role of increasing conflict, polarisation, and radicalization of audiences active on such platforms. By stimulating a discussion on the challenges ahead, panellists will develop reflections around different related topics, such as the ways digital platforms exercise power, create organized immaturity of organizational audiences, and amplify societal polarisation; how such immaturity and polarization undermines social control of organizations and promises of democratic engagement; how a decrease of trust challenges our understanding of how organizations and audiences relate; and how a multiplicity of voices eventually may find convergence and exercise power.

Women in Leadership

Session Moderator: **Isabel Metz**, *Melbourne Business School, U. of Melbourne*

DEI: **Male Champion Advocacy Groups: Too Much of a Good Thing?**

Author: **Isabel Metz**, *Melbourne Business School, U. of Melbourne*
Author: **Carol T. Kulik**, *U. of South Australia*

Women continue to be underrepresented in senior leadership roles around the world, yet few organizations are making gender equality a top strategic priority. As stakeholders increase pressure on organizations to advance gender equality, male champion groups are emerging as an innovative change strategy. Drawing on the individual-level allyship and group-level dynamics literatures, we investigate how and why members of male champion groups engage in gender equality inside and outside the members' own organizations. We interviewed 42 senior leaders (and two convenors) across five champion groups in Australia, supplementing the interviews with data from company reports and news media. Our findings demonstrate that male champion groups are differentially effective. Members of an inaugural group experimented with gender equality initiatives in their own organizations and publicly advocated for gender equality; in other groups, members engaged in low-impact scoping activities and avoided public advocacy. Our analysis highlights the unique challenges experienced by male champion groups. As groups proliferate, it becomes more difficult to assemble a critical mass of high-commitment members and manage high-status members. We recommend realistic previews and team charters as strategies for harnessing the potential of male champion groups.

DEI: **What Are We Waiting for? How Gendered Temporal Experiences Maintain the Gender Leadership Gap**

Author: **Kathleen Ann Stephenson**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Svetlana Khapova**, *Vrije U. Amsterdam*
Author: **Ernst Graamans**, *Vrije U. Amsterdam, School of Business and Economics*

This paper explicates the concept of waiting as a temporal experience of women in leadership development pipelines. By drawing on Simone de Beauvoir's work that emphasizes the way time is organized and lived is gendered, we aim to explain what women are waiting for, why they wait, and trace some of the career and leadership development consequences of waiting for women. Based on 81 interviews with both women and men directors who are part of a corporate leadership development pipeline, we discovered four forms of waiting can be ascribed to women through women's own experiences and through observations from their peer male colleagues: to be recognized, to be ready, for the firm to direct their career, and for the right time to relocate with their family. We show that in some situations women enact a waiting temporal mode, which is a passive, constrained embodied style that is gendered and learned. We explain why they wait and theorize how waiting in the context of the firm's leadership development program creates dilemmas that women have to grapple with on top of the challenge of becoming a competent leader. Our study contributes to the literature on leadership development by bringing attention to a common and mundane, yet undertheorized temporal phenomenon that has implications for how leadership development processes should be designed and executed. In doing so, it decenters the focus on becoming to show how individuals experience their development in different ways with varying consequences. Further, our discussion of waiting contributes an explanation regarding how gender disparity is maintained in leadership positions.

DEI: **Does Female Management Representation Affect Corporate Financial Fraud? An Institutional Perspective**

Author: **Yuehua Xu**, *Shandong U.*
Author: **Vishal K. Gupta**, *U. of Alabama*
Author: **Shan Xue**, *Lingnan U. / Sun Yat-sen U.*
Author: **Sandra Mortal**, *U. of Alabama*
Author: **Honghui Chen**, *Lingnan U. / Sun Yat-sen U.*

To make progress on the debate about whether and when the presence of women managers is more or less beneficial for the firm and its stakeholders, the present study takes an institutional perspective to develop a theoretical account linking female representation in top management teams (TMTs) with corporate financial fraud. We offer two main insights: (a) female TMT representation is associated with lower incidence of corporate fraud, and (b) the relation weakens for firms domiciled in regions with historical- and cultural-contingent norms that are more gender inegalitarian. The results of our main study, based on archival data about Chinese public firms and simultaneous estimation of fraud commitment and detection probabilities, support our predictions. We also validate otherwise difficult-to-observe aspects of our theory, including confirming that male and female executives differ in risk preference and conformity to hierarchy, and illuminating stereotype threat effects for women executives. Several alternative econometric specifications, including (but not limited to), instrumental variable analysis, enhance confidence in the robustness of our findings.

DEI: **Combining Agency and Communality for a Female Leadership Advantage in a Societal Grand Challenge**

Author: **Kayla Stajkovic**, *U. of California, Davis*
Author: **Alexander Stajkovic**, *U. of Wisconsin, Madison*
Author: **Jenny M. Hoobler**, *NOVA School of Business and Economics*

Based on the “Big Two of Social Perception” and the “think manager-think male” paradigm, women have been misaligned perceptually with leadership roles. For decades, literature demonstrated that women are judged to be less effective leaders due to a perceived mismatch between an assumed need for agency, and communal traits stereotypically associated with women. Social perceptions about leadership, though, are changing. We build on top female leadership advantage research and draw from the new CADDIS model of agency to examine the agency-communion divide between men and women leaders. In contrast to literature essentializing men and women’s styles, we bridge theory lenses to articulate how agency interacts with communality and gender to manifest in a female top leadership advantage. We pooled data from multiple sources into a dataset including 389 leaders responsible for managing organizations serving homeless individuals. Results from complementary analyses suggested that women leaders who express higher communality and prescriptive agency were associated with more effective outcomes. Additional analyses revealed that women tended to embrace a community-engaged, relational discourse that emphasized caring, by highlighting services and programs available to individuals to help meet their needs. In contrast, men manifested a style characterized more by a data and systems focused approach.

Sustainability and Societal Concerns

Session Moderator: **Kendall Cox Park**, *Vanderbilt U.*

DEI: **Women on Boards and Environmental Innovation: The Roles of Well-Being and Women's Representation**

Author: **Huafang Liu**, *Zicklin School of Business, Baruch College, City U. of New York*
Author: **Kendall Cox Park**, *Vanderbilt U.*

Environmental innovation allows companies to create new products, processes, and services that meet the needs of customers while also preserving natural resources and protecting the environment. In this study, we examine why and under what conditions women on boards foster environmental innovation. While prior research has yielded many useful insights about the value of female representation on boards, little is known about the relationship between women on boards and environmental outcomes. We draw from upper echelons theory and tokenism theory to argue that workplace well-being and women's representation across the organization can explain and enhance the relationship between women on boards and environmental innovation. Specifically, we argue that women on boards achieve positive environmental outcomes through improvements in workforce well-being. Furthermore, we expect that increasing women's representation across all levels of the organization will create a context that allows more gender-diverse boards to have a stronger effect on both well-being and environmental innovation. We tested and found support for our hypotheses using a large panel dataset from S&P 1500 firms from 2002-2020. Our results suggest that women on boards influence environmental innovation through well-being and that this effect is strongest when women's representation in the organization is high.

DEI: **Factors Affecting Green Products Consumption Behavior: Testing a Moderated Mediation Model**

Author: **Ali NAWAZ Khan**, *School of Economics and Management Hubei Engineering U.*
Author: **Ali Ahmad**, *Radboud U. Nijmegen*
Author: **Chenglong Zhang**, *School of Economics and Management Hubei Engineering U.*
Author: **Fu Jing**, *Business English, English teaching, English learning*
Author: **Ding Yi**, *School of Economics and Management Hubei Engineering U.*

This study aims to investigate the role of socially excluded consumers in green product consumption behavior (GCB) through green identity. Additionally, this research examined the moderating role of pro-environmental. Data were tested using structural equation modeling on a time-lagged survey. The findings showed that social exclusion was a strong predictor of green identity. Results also showed a positive relationship between green identity and GCB. Moreover, the association between social exclusion and GCB was mediated by green identity; furthermore, this mediation was moderated by the pro-environmental attitude so that social exclusion exhibits stronger green identities in the presence of the pro-environmental attitude. Finally, the outcomes suggest that social exclusion can have a positive impact on green identity and GCB under the boundary conditions of the pro-environmental attitude. This study has implications for theory and practice.

DEI: **A systematic review of literature: women in business and their approach to sustainability**

Author: **Anna Lucia Missaglia**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Vincenza Vota**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Valentina Minutiello**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Patrizia Tettamanzi**, *LIUC U. Cattaneo, Castellanza (VA), Italy*

The aim of this paper is to understand which is the approach of women in business towards sustainability. Hence, two research questions have been answered: 1. What is the current state of literature regarding the commitment of female managers and entrepreneurs towards sustainability, and which are the main topics debated? 2. What are the future research directions according to current trends and further relevant issues? A "Systematic Literature Network Analysis" (SLNA) was performed combining a Systematic Literature Review with citations- and keywords-networks analysis, i.e. the main path of the biggest connected component, the Citation Score analysis and the co-occurrence of authors' keywords analysis. Thanks to the citations analysis, four main clusters of emerged, i.e. studies on the Board of Directors' (BoD) impact on sustainability commitment (1), performance (2), disclosure (3) and BoD diversity, personal characteristics and innovation (4). Instead, other issues emerged through the keywords analysis, i.e. the approach of gender-diverse BoD to CSR and sustainable development (1), the attitude of women entrepreneurs in developing contexts (2), emerging topics such as innovation, D&I and ESG (3) and the contexts of gender diversity studies (4). The main limitations are the use Scopus as only database and the eventual presence of subjectivity through the first steps of analysis or in the interpretation of findings. This paper contributes to literature being the first review on those topics, hence providing suggestions for future research and confirming the effectiveness of the SLNA in systematizing a broad research field and helping the location of future trends.

DEI: **Religious Rituals and the Transmission of Gender Beliefs from Society to Markets**

Author: **Rajiv Krishnan Kozhikode**, *Simon Fraser U.*
Author: **Rekha Krishnan**, *Simon Fraser U.*
Author: **Neethu Parvathy**, *Beedie School of Business Simon Fraser U.*

Using ethnographic, experimental, and survey data from an indigenous community in India, this study examines whether participation in rituals that reinforce gender stereotypical beliefs influences the ritual participants' gendered market preferences. Based on the findings from ethnographic fieldwork, we hypothesized that during the non-ritual period, people would exhibit gender homophiles in the market by preferring same-gender sellers over opposite-gender sellers. However, after participating in a religious ritual enacted with gender stereotypical beliefs, the participants will drift from gender homophily by choosing to buy products from the sellers whose gender was venerated in the ritual. We propose that the mechanism underlying this behavior is the internalization of the gendered beliefs conveyed through the ritual: people who are exposed to a culturally relevant and powerful ritual internalize the beliefs conveyed through the ritual and carry these beliefs to the market arena. We tested our theory using a natural experiment where indigenous people from one village participated in a three-day-long clan ritual that strictly enforced purity restrictions and treated men as inherently pure and women as inherently impure; only men were allowed to participate in ritual preparations and enactment, and women were only allowed to be spectators to the ritual. Indigenous people from two other villages who were not exposed to this ritual became our control group. Whereas control group villagers exhibited homophily when choosing vendors to buy merchandise, treatment group villagers preferred to buy predominantly from male vendors. This paper contributes to our understanding of how moral codes penetrate the market structure.

Intersectionality

Session Moderator: **Sally Rao Hill**, *U. of Adelaide*

DEI: **An Intersectional Exploration of Migrant Women's Entrepreneurial Experiences**

Author: **Sally Rao Hill**, *U. of Adelaide*
Author: **Xin Deng**, *U. of South Australia*
Author: **Subhadarsini Parida**, *Lecturer*
Author: **Shruti Sardeshmukh**, *U. of South Australia*

Despite the significant contribution of migrant entrepreneurs to society and the economy, the migrant entrepreneurship literature does not focus on the gendered experience of such endeavours. This study explores how the intersection of foreignness and gender shapes the experiences of migrant women entrepreneurs. Taking micro perspectives on business, ethics, and migration, we employed a qualitative research method and conducted in-depth interviews with 32 female migrant entrepreneurs in Australia and New Zealand. We situate their experiences in sociocultural terms to show how the intersection is manifested in their agentic role in entrepreneurship. While gender often intertwines with foreignness in impacting on this group's decisions, in contrast to what is portrayed in the literature as the "double disadvantage" of ethnicity and gender, we found that neither of them is necessarily a disadvantage. Indeed, despite some challenges, this new generation of migrant businesswomen is highly capable and can ride the unprecedented economic opportunities arising from home and host countries to establish their business ventures. Our study contributes to intersectionality debates by illustrating the positive manifestations of generally perceived negative social categories and unpacking the roles of gender and foreignness of this group of migrants through their entrepreneurial experiences.

DEI: **Intersectional Labour Market Experiences of Discrimination of Muslim Employees**

Author: **Debora Gottardello**, *Edinburgh Business School - School of Social Sciences*
Author: **Rosalia Montserrat Cascón Pereira**, *U. Rovira I Virgili*
Author: **Deirdre Anderson**, *Cranfield School of Management*

This article examines discrimination and oppression in the workplace experienced by those who identify as Muslim. We draw on interviews with Muslim men and women working in various employment sectors in the Catalonia region of Spain, where people of the Islamic faith represent the largest religious minority. The lens of intersectionality is used to explore triggers for discrimination and to develop an understanding of the repercussions for Muslim employees, in terms of their opportunities, interactions with colleagues and supervisors, and positions in structures of power. The results show that Muslim employees face challenges and barriers based on prejudice and stereotypes founded on their religious identity; this manifests in many stages of their working life, from recruitment to selection and promotion decisions. However, the type of discrimination experienced by Muslim women and men differs by age, gender and occupational role. The study contributes to scholarship by highlighting strategies that Muslims adopt to enter, integrate or advance professionally in their career, and offers proposals for HR practitioners to support Muslim employees in their organizations.

DEI: **The Intersectionality of Race and Female Gender in STEM Career Ascendance**

Author: **Dawn Adams-Harmon**, *Kean U.*
Author: **Nancy Greer-Williams**, *Grand Canyon U.*

Purpose-The purpose of this paper was to explore the intersectionality issues experienced and success strategies utilized by minority, female executives as they attempted to advance into leadership positions within STEM industries. Design/methodological/approach-Intersectionality challenges and successes were explored through the lens of Adams-Harmon and Greer-Williams (2020) theory on barriers that prevent women from advancing the corporate ladder, called the 360-Degree Gender Sphere. The material for the study was grounded in 15 in-depth interviews with executive, minority women who experienced intersectionality challenges, in their professional lives. A Qualitative, Transcendental, Phenomenological research approach was leveraged and the interview data was analyzed by means of thematic analysis. Findings- Minority women in STEM suffer from discrimination, biases, and inequities at both the gender level and at the racial level. Intersectionality coping strategies are essential to provide support and create resilience to overcome these inequities. Originality-Intersectionality issues and successes that impact female minorities in STEM careers, is an interesting yet under-researched area. The research results will impact the scholarly, leadership, and practitioner fields and will create impetus for changes in society, women at large, businesses, geo-political entities, and political systems across the country, and globally. This research explains why minority women have not ascended seamlessly in STEM, due to intersectionality barriers encountered, and will illustrate how women can overcome barriers through awareness and resilience strategies.

DEI: **Women in Business: The Role of Gender and Professional Identities in Negotiation**

Author: **Chi-Ying Cheng**, *Singapore Management U.*
Author: **Amy Lim**, *Murdoch U.*
Author: **Fiona Lee**, *U. of Michigan*

Gender expectations for women have largely been blamed for the widely documented "gender gap" in negotiations between men and women. However, women in business have both gender and professional identities. Drawing from the psychological literature on multiple identities, this paper examines the role of businesswomen's perceived compatibility between their gender and professional identities–captured by the construct Gender-Professional Identity Integration (G-PII)–in shaping their negotiation behaviors. Two studies were conducted to examine how G-PII interacts with the salience and valence of identity cues to influence negotiation outcomes. The results showed that those who perceived their gender and professional identities as compatible (high G-PII) exhibited an "assimilation" effect by negotiating more effectively when their professional identity is salient and when prototypical female traits were positively linked to negotiation success; they negotiate less effectively when their gender identity is salient and when prototypical female traits were negatively linked to negotiation success. However, those who perceived their gender and professional identities as incompatible (low G-PII) exhibited the opposite "contrast" effect. This work sheds new light on the boundary conditions of the gender gap in negotiations, as well as ways to reduce the gender gap in organizations.

Stereotypes and Intersectionality

Session Moderator: **Bahar Kagitcibasi**, *Koç U., College of Administrative Sciences and Economics*

DEI: **Stereotype Content at the Intersection of Age, Sex and Social Class**

Author: **Bahar Kagitcibasi**, *Koç U., College of Administrative Sciences and Economics*
Author: **Justin Marcus**, *Koç U.*
Author: **Nicholas Anthony Smith**, *ohsu-psu school of public health*
Author: **Pinar Imer**, *Bahcesehir U.*

Although stereotype content regarding the three prime facets of demography including age, sex and race is firmly established, the study of intersectionality in DEI is nascent – there are multiple competing theoretical perspectives and no empirical evidence exists on stereotype content involving the conjoint tripartite of age, sex and race. Accordingly, we conduct the first study in DEI investigating stereotypes at the intersection of these facets of demography. Via three separate experimental studies sampling 333 participants and involving a variety of targets, stimuli, and settings, we utilize Grounded Theory and abductive logic to analyze 16,385 different words and find unique stereotypes associated at the intersection of age, sex, and race. Racialized stereotypes of Blacks vs whites in a highly diverse country, the US, was found to converge with status-based stereotypes of low vs high status ethnic Turks in a highly homogenous country, Turkey. Results support the notions that race and social class (job status) occupy the same construct space and that there are unique, cross-cultural stereotypes typifying young vs. old men vs. women of low vs. high social classes. Implications for theory and practice are discussed.
Keywords: age; sex; race; social class; ageism; sexism; racism; intersectionality; stereotypes

DEI: **Minding the Gender Gap: The Consequences of a Slimmer Stereotype Gap among Non-White vs. White, Men**

Author: **Erika V. Hall**, *Emory U., Gozuieta Bus Sch*
Author: **Arielle Lewis**, *Emory U., Goizueta Business School*

There is a stark gender gap in American society, whereby women are associated with feminine stereotypes (e.g., warmth and kindness) and men are associated with masculine stereotypes (e.g., aggressiveness and dominance). This potent divide contributes to sex-segregation within feminine- and masculine-typed occupations. Nonetheless, this simple account of gender-typing neglects the influence of employee race. We theorize that gendered race stereotypes and attention to minorities' racial, rather than gender, categories may mute the contrast in gender stereotypes for men and women of color. Study 1 finds that gender stereotypes are more divergent between White (vs. non-white) men and women. Study 2 shows that gender stereotypes more intensely affect the representation of White (vs. non-white) men and women in occupations. In Study 3, we survey White, Asian, Latinx, and Black participants and find that their personal perceptions of fit with occupations are guided by gender normative beliefs, regardless of racial group.

DEI: **Foregone Potential? The Effects of Gender and Ethnic Diversity on New Venture Funding**

Author: **Riccarda Anna Joas**, *Technical U. of Munich*
Author: **Lukas Heidegger**, -
Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*
Author: **Isabell Melanie Welpe**, *Technical U. of Munich*

Investors have been found to be subject to biases and homophily, which influence their evaluations of entrepreneurs and their subsequent investment decisions. Surprisingly, little is known about how investors perceive gender and ethnic diversity or intersectionality within a new venture team (NVT). To address this research gap, we use a large secondary dataset that puts the NVT diversity dimensions in relation to the investor funding raised. Our results reveal that gender diversity is significantly related to the total amount raised but not ethnic diversity or the simultaneous presence of gender and ethnic diversity. Our findings challenge studies that reveal a positive relation between gender or ethnic diversity of NVTs and funding. Our study is important because it indicates that the team setting does not mitigate gender-based biases as present for individual entrepreneurs. In addition, this study extends the perspective of past studies by not only differentiating between the male and female gender but including NVT members that are agender or non-binary. Finally, building upon a secondary dataset, this study limits shortcomings that usually result from primary studies, e.g., biases due to accessibility of participants. Overall, our findings pave the way for new discussions surrounding NVTs.

DEI: **The Role of Language in International Migrants' Work Life Experiences**

Author: **Claudine Gaibrois**, *B. U. of Applied Sciences*
Author: **Natalie Victoria Wilmot**, *Bradford U.*
Author: **Wilhelm Barner-Rasmussen**, *Hanken School of Economics*

This paper analyses international migrants' experiences of work life in their new locations specifically from the perspective of how these experiences are (co-)shaped by language. Based on an exploratory qualitative study conducted in the German-speaking part of Switzerland, we identify commonalities and differences between different types of migrants', ranging from highly qualified self-initiated expatriates to recognized refugees. The findings show that: 1) Limitations on the job market and the need to find a niche as well as the role of the national context, e.g., in the form of prevalent language ideologies, affect all migrants, 2) a hierarchy of languages creates status differences between migrants, which sometimes intersect with nationality- or culture-related preconceptions. We then discuss the implications for conceptualizations of language proficiency and for language expectations towards migrants.
Keywords: Migration, migrant, language-sensitive IB, fluency, intersection, employment, work life

Leadership and Gender

Session Moderator: **HeyIn Gang**, *Saginaw Valley State U.*

DEI: **Gender Differences in Strategic and Supervisory Leadership**

Author: **HeyIn Gang**, *Saginaw Valley State U.*
Author: **Marc H. Anderson**, *Iowa State U.*

Numerous studies have suggested that women leaders are more effective than men leaders, but women remain underrepresented at the upper-management level. The current study examines this paradox from a strategic and supervisory leadership perspective. Strategic leadership concerns the functions performed by individuals at the top levels of an organization, whereas supervisory leadership focuses primarily on leading subordinates. If women are seen as being less effective as strategic leaders than men, this finding might help explain the persistent underrepresentation of women at the top executive positions. We investigate how female and male leaders are perceived in terms of being strategic or supervisory leaders as represented by the instrumental leadership style (representing strategic leadership) and the servant leadership style (representing supervisory leadership). We conducted two experimental studies. In study 1, we conducted a study that examined the extent to which female and male leaders are seen as displaying the instrumental and servant leadership styles. In study 2, we examined whether people consider these leadership styles as differentially important for middle versus upper management levels, and also whether each is seen as more or less important for male versus female leaders for their promotions. Overall, the results showed no differences in perceptions regarding gender and instrumental leadership, but that female leaders were seen as both displaying more servant leadership and being expected to show greater levels of servant leadership. The current study suggested that stereotypical beliefs about leaders may still hold for women, but perhaps not for men.

DEI: **Service with a Smile: Gender Role Conformity, Servant Leadership, and Followership**

Author: **Sonia White**, *U. of South Alabama*
Author: **Rachel Meuleman O'Sullivan**, *Athens State U.*
Author: **Robyn Brouer**, *U. of South Alabama*

Although women represent half of the workforce, they remain underrepresented in leadership, especially senior leadership. Women are often expected to exhibit communal traits, while “leaders" are traditionally seen as demonstrating agentic traits. Therefore, women engaging in traditional leadership forms have greater gender role schema dissonance. As a communal and follower-focused leadership form, servant leadership is viewed as a natural fit for women. The communal aspects and focus on follower needs and well-being of servant leadership are aligned with the traditional gender role schemas of women, creating gender role schema congruency. This research examines how the servant leader’s gender role schema congruency or dissonance impacts follower liking and job engagement.

DEI: **Excluded from Exchange: How Social Exchange Theory Privileges Men Leaders**

Author: **Karryna Madison**, *Monash Business School*
Author: **Nathan Eva**, *Monash Business School*
Author: **Zen Goh**, *Monash Business School*
Author: **Helen De Cieri**, *Monash U.*

Social exchange theory has become synonymous with leadership research seeking to explain why positive leader behaviors elicit positive follower behavior. This is based on an argument that when leaders display positive behaviors to the followers, followers reciprocate in return due to feelings of obligation. Yet, leadership research continuously overlooks how gender role expectations may influence followers’ perceptions of leader behavior. Given its widespread use within leadership research, and organizational studies more broadly, such oversight may negatively influence the fields progression. Against this backdrop, this study examines how gender (dichotomized due to the sample as women or men) differences in helping expectations may disrupt leader-follower social exchange relationships. Drawing on data from a multi time-point survey (n = 171), we hypothesize and find that men leaders who engage in helping behaviors elicit follower reciprocation in the form of felt obligation and task helping, but not women leaders. Our findings illuminate how organizational research reliance on older theories may be insufficient to understand today’s workforce and highlight the need to reimagine existing theoretical frameworks within leadership research for a more inclusive workforce.

DEI: **The Gendered Effect of Leader Family-Related Information Sharing**

Author: **Yuhui Li**, *Renmin U. of China*
Author: **Jiaying Chen**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Jason Huang**, *Michigan State U.*

Sharing family-related information, used by leaders to demonstrate their affinity and concern for their subordinates, has yet to receive systematic investigation with regards to how it influences subordinates. We examine how supervisors' family-related information sharing is perceived by employees, how such perception further influences employees' taking charge behavior, and, more importantly, whether this non-work information sharing behavior is contingent on supervisor and subordinate genders. To explore these questions, we propose that supervisors' family-related information sharing can promote subordinates' perceived leader relations-orientation, and thus motivate employees to be more willing to take charge at work. We further propose that the gender composition of the superior and subordinate pair will moderate the positive effect of supervisors' family-related information sharing on subordinates' perceived leader relations-orientation. Specifically, relative to other gender compositions, when the leader is male and the subordinate is female, supervisors' family-related information sharing has the weakest effect on subordinates. In a 3-wave survey with 726 employees, our hypotheses received general support. The conclusions contribute to the supervisors' nonwork information sharing, leader relations-orientation, taking charge, and complexity of gender impact in the workplace literature. Our findings also provide guidance for how leaders may apply family-related information sharing to affect employees' initiative in practice.

Marginalization and Bias in Career Making

Session Moderator: **Sarah Federman**, *U. of San Diego*

DEI: **Transformative Negotiation: Strategies for Everyday Change and Equitable Futures**

Author: **Sarah Federman**, *U. of San Diego*

This paper is based on the forthcoming book "Transformative Negotiation: Strategies for Everyday Change and Equitable Futures" (University of California Press, Fall 2023) This next-generation approach to negotiation promises to shake up the field by placing the worker and historically marginalized groups at the center. Moreover, it shows how the central role of negotiation in the pursuit of equity for those seeking it as well as those with power. Instead of the usual examples of big corporate deals or a hostage crisis, this approach explores the sorts of real-world examples faced by masters' students needing to negotiate in hierarchical workplaces, with courts to get their kids back, or with the IRS to reduce late fees. The author explains how heritage, ethnicity, wealth, gender, age, education, and other factors influence what we ask for, how people respond to our requests, as well as what is at stake when we negotiate. The same strategies used in the boardroom, if deployed in the streets, can lead to dangerous altercations Based on the wisdom of over 100 individuals who negotiate successfully from the margins, Transformative Negotiation provides tools for those who need them most, and guidance for instructors and managers wishing to support them.

DEI: **Women Athletes in Semi-Professional Sport: Exploring the Psychological Contract**

Author: **Tracy Lynn Taylor**, *College of Business and Law, RMIT U.*
Author: **Wendy O'Brien**, *Victoria U. Australia*
Author: **Clare Hanlon**, *Victoria U.*
Author: **Kristine Toohey**, *Griffith Business School, Griffith U.*

Women's semi-professional sport is a rapidly changing landscape; with athletes striving to redefine the employment relationship with their clubs. Positioning our research in a postfeminist sensibility, we explore implicit and explicit expectations and obligations through psychological contracts (PC) theory. We conducted interviews across two semi-professional sport leagues, with 30 athletes, 20 coaches and managers and two league level representatives. Three themes emerged: 1. Obligations, commitment, and choice: whereby athletes felt obliged to deliver a professional product while not receiving commensurate remuneration; while employers noted they expected time and effort commitments to increase in line with salary. 2. Expectations of conformity: Rules of the game: athletes felt obligated to be positive role models and grateful for the chance to play for pay; and employers wanted athletes to 'act' professionally. 3. Fulfilling organisational goals: athletes took on emotional responsibility for the league's success; correspondingly employers placed accountability on athletes for fan and community engagement. Many athletes struggled to balance their time commitments and power imbalances in the PC were evidenced as employers relied on athletes' desire to play at almost any cost. Athletes felt they had little choice but to accept the current state of employment, endure sacrifices and hope for a future when they could reach their potential through viable career pathways and a living wage. Our research provides a better understanding of the PC employment relationship. Greater knowledge about PC's could be used to develop work practices and relations that enhance and benefit both athlete and employer.

DEI: **A Social-Symbolic Framework of Stigma-Management Processes Through the Lens of Motivation**

Author: **Jingyi Wei**, *U. of Macau*
Author: **Joanne Chan**, *U. of Macau*

Stigma management of dirty workers is a process where, instead of 'playing Whac-A-Mole', workers devote purposeful efforts to negate the negative impacts of stigma. Our qualitative study explores the lived experiences of dirty workers in the animal production industry in China and introduces a concept of 'stigma-symbolic work' based on their experiences. Using stigma-symbolic work, dirty workers who pursue the fulfillment of basic needs combine the strategies of boundary setting, negative-identity destruction, emotional detachment, and meaning sustaining in parallel to avoid cognitive and emotional threats, while those seeking to satisfy advanced needs use the strategies of boundary spanning, positive-identity construction, emotional attachment, and meaning making in sequence to enhance self-esteem at work and in life. This study sets the stage for future research on different types of dirty workers and their variations in the stigma-management processes.

DEI: **Investor's Bias in the Funding of Women Ventures – A Qualitative Narrative Enquiry Using LIWC**

Author: **Kashika Sud**, *Indian Institute of Management, Ahmedabad*
Author: **Neharika Vohra**, *Indian Institute of Management, Ahmedabad*

The start-up ecosystem in India is currently the third largest in the world, trailing only behind USA and China. However, there are striking gender differences in the business ownership and funding practices. Only 11% of the Indian start-ups have women founders. Starkly, only 6% of the funding goes to companies with women as a founder or co-founders and for companies with only women founders, the percentage of the total funding drops to 1.5%. This research primarily explored the role investor biases play in explaining the persistence of gender-gap in accessing funds. While the existing research focuses on the notion of deficit in women's attitude or personality as evidence of gendered disparity in entrepreneurial potential and success, there is little attention on alternate stream of research focussing on investor's perceptions and prejudices that restrict women's performance. We focus on the perceptions of venture capitalist, angel funds, and private equity players in the start-up landscape, to understand how their biases towards women entrepreneurs are manifested at the individual and group level, gaining legitimacy and being institutionalized in the long-run. The study is an observational field-based study, focused on the nature of linguistic and psycholinguistic patterns of interactions of investors with men and women founders. Textual analysis (LIWC-22) was used to analyse 42 such conversations, and differences were found in expressed emotion, motivational words, stances and social processes toward men and women founders. Drawing from social-role theory and principles of homophily, we contribute to the literature on systemic patterns of investor bias at the individual and group level towards women-led ventures.

Power Dynamics and Leadership Outcomes

Session Moderator: **Sonal Kumar**, *Assistant professor of finance, Bryant U.*

DEI: **Lingua Franca Proficiency and Task Expertise: Multiple Status Signals in Multinational Teams**

Author: **Thao Phan Hanh Nguyen**, *Cornell U.*
Author: **Yu Yuan**, *Cornell U.*

Lingua franca proficiency and task expertise coexist in multinational teams as prominent status signals that are often relied upon to infer a member's competence. These personal attributes, however, do not always suggest consistent information since those with lower lingua franca proficiency might be more expert at the task and vice versa. In examining their joint implications, we draw on status characteristics and expectation states theories to identify the signaling nature of each attribute. Unlike the categorically specific quality of task expertise, lingua franca proficiency possesses characteristics defining both specific and diffuse signals: it represents a social group and, at the same time, carries valid information about performance for certain tasks. Using archival (Study 1) and experimental (Study 2) data, we explore how the hybrid nature of lingua franca proficiency shapes its interaction with task expertise and study the resultant leadership outcomes of such an interaction.

DEI: **When Distinction Disguises Discrimination: A Look at Female and Non-White CEO Performance**

Author: **Sonal Kumar**, *Assistant professor of finance, Bryant U.*
Author: **Rahul Ravi**, *John Molson School of Business, Concordia U.*
Author: **Sandra Betton**, *Professor at John Molson School of Business, Concordia U.*
Author: **Gillian Leithman**, *John Molson School of Business, Concordia U.*

Extant research presents superior performance of women CEOs as evidence in support of differences between the genders. We argue that this body of research suffers from joint hypothesis problem. Although it is possible that female executives are superior, another possibility could be that discriminatory practices impose higher entry barriers allowing for only above-average female executives to occupy these positions. We find that stratified by gender and ethnicity, the female CEO of color emerges as best performer, followed by white female CEOs and men CEOs of color. The white male CEO is among the worst performers. The woman of color faces the highest barriers as she is subject to both gender and ethnic discrimination. Thus, those from this group who do manage to make it to top are among the best performers.

DEI: **Sustainability Framing Increases Women's Likelihood to Apply for Leadership Positions**

Author: **My Nguyen**, *Singapore Management U.*
Author: **Michael Schaerer**, *Singapore Management U.*

Reducing the underrepresentation of women in leadership positions is one of the most vexing issues plaguing contemporary organizations. Past research has primarily focused on identifying structural solutions to women's underrepresentation in leadership positions (e.g., affirmative action), yet "supply-side" interventions (e.g., increasing the attractiveness of leadership positions to women) are lacking. Drawing on research on gender differences and person-environment fit, we propose sustainability framing— an organization's explicit emphasis of their commitment to sustainable development, ethically- and socially-responsible practices, and a future-focused mindset—as an intervention that increases the likelihood of women to apply to leadership positions. Results from three experiments (N = 2,161) showed that although women were generally less likely to apply to leadership positions than men, this gap was attenuated when the recruiting organization explicitly highlighted that they value sustainability. This effect was mediated by women's increased perceived fit with the position and organization. The present work suggests that women are not by default less interested in leadership positions and that incorporating sustainability in organizational business models may help solve the gender gap.

DEI: **Empowering Asians' Leadership Advancement with Debate Training: A Longitudinal Field Experiment**

Author: **Jackson Lu**, *MIT Sloan School of Management*
Author: **Michelle Zhao**, *Washington U. in St. Louis*

To date, researchers and practitioners have a limited understanding of what specific interventions help ethnic minorities move up the leadership ladder. In particular, despite East Asians' educational and economic achievements in the US, they are disproportionately underrepresented in leadership partly because their tendency to be verbally unassertive is culturally incongruent with the American prototype of how leaders communicate. To break this "Bamboo Ceiling," we conducted a preregistered, three-wave longitudinal field experiment to test whether a 9-week debate training could increase Asian employees' leadership advancement by improving their assertiveness. 471 Asian employees at an S&P 100 technology company in the US signed up for the debate training, but were randomly assigned to either receive it or not. 18 months later, individuals in the treatment group were significantly more likely to advance in leadership level than individuals in the control group. Improved assertiveness mediated this effect. The debate training was similarly effective (a) for men and women and (b) for US-born and foreign-born employees. While our novel research causally identified a leadership advancement intervention empowering employees, it is important for future research to also explore interventions targeting organizations, as the onus to change should not fall solely on the employees.

Measuring the Pulse of DEI in Organizations: Reducing the Chasm BetweenTheory and Practice

Organizer: **Carla Jones**, *Sam Houston State U.*
Organizer: **Bina Ajay**, *Sam Houston State U.*
Organizer: **Huda Masood**, *Sam Houston State Uni*
Panelist: **David Porter**, *Bi-Coastal Consulting, LLC*
Panelist: **Carliss D. Miller**, *The Toro Company*
Panelist: **Kemi Anazodo**, *Odette School of Business, U. of Windsor*
Panelist: **Anica Zeyen**, *Royal Holloway, U. of London*

The overarching goal of this symposium is to begin to bridge gaps between the theory that supports DEI practice and the implementation of DEI, while discovering methodologies for implementing DEI more fully. The discussion will broadly revolve around DEI theories that inform practice, DEI practices that cannot be adequately explained by extant theory, and the mechanisms through which organizations determine DEI priorities and implement DEI holistically. We have invited panelists who are prominent organizational leaders with experience in developing scholarly DEI research and developing and implementing DEI initiatives in organizations. This dynamic session will provide a unique opportunity to engage both theoretical and practical perspectives of DEI. We develop a discussion platform that we hope will continue to be revisited as the field and literature continues to advance.

Participant: **Lucinda Iles**, *Centre for Transformative Work Design / Curtin U.*

The age demographics in the modern workforce are shifting dramatically, with modern workplaces looking older and more age-diverse than ever before. Although existing work has made significant contributions to our understanding of age in the workplace, answers to fundamental questions such as how worker age affects performance remain unanswered. Age scholars have argued that in order to resolve existing inconsistencies and advance understanding of this timely topic, the field ought to take a more nuanced and multidimensional view of age in organizations. The current symposium aims to respond to this call by exploring (1) how age and gender interact to shape stereotype content, (2) how generational identity as a millennial and racial identity jointly predict turnover intentions, (3) how older workers' temporal social comparisons with younger versus older colleagues shape engagement and withdrawal from work, (4) how subjective age (i.e. how old one perceives oneself to be) affects organizational outcomes, and (5) attitudes toward all (not just older) age groups, and people's assumptions about society's attitudes towards these groups. By looking at age through many different lenses, including intersectionality, subjective age, social comparisons processes, and ageism against the young, this symposium helps inject much-needed nuance and multidimensionality into the older worker literature, toward stronger theoretical perspectives and definitive conclusions.

The Implications of Gendered Expectations for Worker Outcomes

Organizer: **Mabel Abraham**, *Columbia Business School*
Organizer: **Brittany Bond**, *Cornell U.*
Discussant: **Emilio J. Castilla**, *MIT Sloan School of Management*

Whereas feminine stereotypes center on communal characteristics such as helpfulness and cooperativeness, male stereotypes center on agentic characteristics including competence and assertiveness (Abele, 2003; Fiske & Stevens, 1993). Broad beliefs and specific stereotypes about gender do more than just describe common gender differences in behavior, they also prescribe how men and women ought to behave (Gorman, 2005; Heilman, 1983; Perry, Davis-Blake, & Kulik, 1994). Such prescriptions may lead to gender inequality by shaping expectations in two distinct ways. First, evaluators assessing both men and women are apt to interpret behaviors demonstrated by male and female candidates based on the consistency of these behaviors vis-à-vis dominant gendered beliefs (e.g., Correll, Weisshaar, Wynn, & Wehner, 2020). Second, gendered beliefs shape people's understanding about how others expect them to behave, thus, at times, leading individuals to conform to what they see as the desired, or expected, behaviors based on their gender (e.g., Correll et al., 2017). The aim of this symposium is to deepen and expand our understanding of how such gendered beliefs and expectations both shape the how men and women are evaluated by others and lead men and women to engage differently, specifically in ways that often disadvantage women. This symposium brings together economic sociologists, strategic management scholars, and organizational behavior scholars using a wide range of methods (e.g., observational, natural language processing, experimental) to uncover the processes leading to gender inequalities in the workplace. In line with the annual meeting theme, Putting the Worker Front and Center, each of the papers in this symposium focuses on worker behavior and the ways these behaviors can lead to gender differences in outcomes. Furthermore, the papers in this symposium examine these gender dynamics both at the hiring interface and over time among existing employees within organizations, thus offering insights about worker experiences with inequality at numerous critical moments for organizations seeking to create equitable workplaces.

Sí Se Puede: Supporting Latina Faculty Workers to Succeed in Academia

Session Chair: **Patricia Guerrero**, *U. of Texas At Arlington*
Participant: **Angelica Gutierrez**, *Loyola Marymount U.*
Participant: **Monica C. Gavino**, *San Jose State U.*
Participant: **Carolina Gomez**, *Florida International U.*
Participant: **Patricia G Martinez**, *Loyola Marymount U.*

As the representation of Hispanic and Latinx business students continues to increase to an expected 4.1 million by 2026, Latina faculty only represent about 3 percent of full-time faculty across disciplines. In efforts to put the worker front and center, faculty should consider understanding the issues of representation within the academy. There are unique barriers that Latinas face contributing to a disconnect between the representation of students and faculty. The purpose of this session is to create an open dialogue on the cultural differences of Latina faculty workers and what we can do to support their success in the academy. This session aims to discuss four key themes centered around why few Latinas are represented in academia: 1) Latina's value of family and collectivist culture, 2) mitigating impostor syndrome and negotiating equal pay, 3) navigating the tenure process, 4) research and academy success. This session will benefit current faculty in business schools to increase their awareness of issues pertaining specifically to Latinas and help current Latinas be successful in their academic career.

Inclusion and Exclusion in Organizations: Behaviors, Experiences, and Solutions

Organizer: **Hans Van Dijk**, *Tias Business School*
Discussant: **Denise Lewin Loyd**, *U. of Illinois at Urbana-Champaign*

Despite the widespread consensus among researchers and practitioners about the importance of inclusion, reports of excluding actions and experiences continue to abound, and have become more salient in the wake of the MeToo, Black Lives Matter and Stop Asian Hate movements. This paradox raises the question of why exclusion remains so prevalent when there seems to be near-unanimous support for inclusion. In this symposium, we aim to address this question by shedding more light on (a) the nature of including and excluding behaviors, (b) how those including and excluding behaviors relate to experiences of inclusion and exclusion, and (c) ways to mitigate behaviors that yield experiences of exclusion and propagate behaviors that foster experiences of inclusion in organizations. This symposium consists of five presentations of studies on these topics and is rounded up by a discussant who is a leading researcher in the field as well as the vice-dean of equity at a prominent U.S. business school.

Participant: **Dustin Maneethai**, *U. of Houston*
Presenter: **Tiffany Trzebiatowski**, *Colorado State U.*
Presenter: **Phillip M. Jolly**, *Pennsylvania State U.*

Research on diversity, equity, and inclusion has expanded rapidly over the past decade or so. This symposium makes note of that expansion by considering existing definitions (and related epistemologies) of diversity and presenting novel research in some key areas of the diversity literature. We do so by presenting a literary review of diversity definitions and new research on effects of diversity, equity, and inclusion definitions and processes on leadership, diversity climate and constituent attachment, and stereotype threat in pre- and post-selection situations.

Social Entrepreneurship From an Individual-Level Perspective

Session Moderator: **Maria Riniker**, *Bern U. of Applied Sciences*

ENT: **Conceptualizing Social Entrepreneurial Personae in Crowdfunding**

Author: **Maria Riniker**, *Bern U. of Applied Sciences*
Author: **Pascal Dey**, *Bern U. of Applied Sciences*

Crowdfunding has been identified as an apt mechanism for financing social enterprises' projects and ventures. While the academic literature has offered detailed analyses of specific elements and success factors of social entrepreneurial crowdfunding, we argue that this research endeavor is getting 'too narrow too early.' Specifically, we claim that the dominance of quantitative studies based on publicly available data and the lack of conceptual clarity have produced many detailed but isolated findings that do not combine to form a comprehensive understanding of social entrepreneurial crowdfunding. This points toward the importance of a relational ontology that conceives of the relations between the elements and success factors of social entrepreneurial crowdfunding identified in extant research as more fundamental than the entities themselves. As a path forward, we use this paper to offer a more integrative understanding of social entrepreneurial crowdfunding that theorizes how social entrepreneurs utilize crowdfunding platforms to create value for their ventures and stakeholders. Drawing on previous research on social entrepreneurial crowdfunding and various additional bodies of literature, we conceptualize four social entrepreneurial personae – fundseeker, networker, buzzmaker, and crowdsourcer – that describe the different ways social entrepreneurs use crowdfunding, what their goals are, what specific tactics they use, and what problems they might face. Apart from offering a more holistic understanding of the inner workings of social entrepreneurial crowdfunding, this paper aims to point out future research directions that will help us maintain the relevance and 'promise' of our field.

ENT: **Who are the Nonprofit Entrepreneurs?**

Author: **Farzana Chowdhury**, *Durham U. Business School*

Understanding the antecedent of engagement in non-profit entrepreneurship is important since non-profit organizations combine two competing organizational objectives – creating social values and economic wealth. Drawing from the norm-activation theory (NAT) and resource-based view lenses, we address the following questions: What are the antecedents of undertaking non-profit entrepreneurial activity? What is the role of entrepreneurs' knowledge resources in the decision to exploit a non-profit entrepreneurial opportunity? We test the propositions of this paper by focusing on the type of entrepreneurship chosen by 8544 entrepreneurs. Our study results show a significant linkage between entrepreneurs' different job-related experiences and social orientation and non-profit entrepreneurship compared to education and entrepreneurial experience —the results of our study hold for several robustness analyses.

ENT: **Social Entrepreneurs Emerging from Adversity: A Perspective of Identity Construction via Sensemaking**

Author: **Fangjie Wang**, *U. of Warwick*
Author: **Mona Mensmann**, *U. of Cologne*
Author: **Nicos Nicolaou**, *U. of Warwick*

While research has shown that social entrepreneurs can emerge from adversity, we know very little about how adversity leads an individual to become a social entrepreneur. Building on a grounded theory study of social entrepreneurs, we develop a model explaining how individuals develop identities relevant to being social entrepreneurs through sensemaking of adversity. Drawing on a sample of 221 podcast episodes, 34 videos, and 43 online articles involving 62 social entrepreneurs facing 72 adversities, we unpack the sensemaking of adversity by examining different ways people may interpret and respond to their adverse environments. We find that individuals' perceptions of themselves in relation to other victims of adversity direct their sensemaking towards different directions, resulting in different identities relevant to being a social entrepreneur. We also find that adversity is only one factor contributing to social entrepreneurship and discuss other conditions that are necessary for people to become social entrepreneurs following adversity. The findings contribute to a better understanding of social entrepreneurship and add to the literature on sensemaking and identity

ENT: **The Role of Perspective - Taking in Social Venture Opportunity Development**

Author: **Raja Singaram**, *Audencia Business School*
Author: **Sarnish Kour**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*

We study the role of perspective-taking in social venture opportunity development by performing content analysis of the stories of 109 founders of social ventures. Perspective-taking, the ability to view a situation from others' point of view, is an essential socio-cognitive skill that drives opportunity development. We find that cognitive and affective perspective-taking enable founders to garner crucial insights into the situations of the customers. These insights guide the generation and selection of effective solution alternatives, which in turn contribute to the viability of the new social venture. We derive a process model that illustrates the role of perspective-taking in advancing social venture opportunity development through solution ideation.

Politics shaping Entrepreneurship

Session Moderator: **William John Wales**, *U. at Albany, State U. of New York*

ENT: **How Does Politics Shape the Performance of Entrepreneurially Oriented Strategic Business Units**

Author: **William John Wales**, *U. at Albany, State U. of New York*
Author: **Safal Batra**, *Indian Institute of Management, Kashipur*
Author: **Uma Shankar Rangaswamy**, *Indian Institute of Management, Kashipur*

In this study, we examine the entrepreneurial orientation (EO), political behavior, and leader discretion of an organization's strategic business units (SBUs) to determine whether and how a unit's interpersonal political dynamics affect its performance. Building our arguments within a social information exchange perspective, we argue that politically charged SBUs are less capable of translating EO into improved performance. However, we observe the harmful influence of SBU politics on the EO-performance relationship is partially alleviated when SBU leaders have greater discretion over unit actions. We examine our theoretical model using robust, multi-level data collected from 320 SBU leaders and 1181 reporting unit managers within a large multi-national information technology firm headquartered in India. Implications for theory and practice are discussed.

ENT: **Political Turbulence and Decision Making of Potential Entrepreneurs**

Author: **Daxin Sun**, *Shanghai Jiao Tong U.*

Prior studies on political turbulence have highlighted the role of treat rigidity induced by external political environment in driving entrepreneurs to adjust their strategies to reduce uncertainties. However, an-corruption campaign, regarded as an effort made by government to fight against corruption, not only posts the treats on the stability of firms' operations, but also signals their responsiveness and benevolent intentions to the public, and therefore providing more confidence with the social members. In this case, the causal effect of anti-corruption campaign on the decision making of entrepreneurs is still not well understood. This paper investigates whether and how political turbulence influences the decision making of starting business for entrepreneurs by focusing on the anti-corruption investigations since 2012 in China. Using a panel dataset of China Family Panel Studies (CFPS) surveys over the period 2012 to 2016, we find that exposure to anti-corruption campaign increases rather than decreases the possibility of individual entrepreneurship. Furthermore, we test two potential mechanisms underlying the focal relationship: political experience and social comparison. We find that those people having positive interactions with government before or affiliated with lower economic status are more likely to start new business than others. Our findings provide fresh insights into the corruption literature and studies on the determinants of entrepreneurship by clarifying the heterogeneous response of entrepreneurs facing anti-corruption campaign.

ENT: **Windfalls of Political Shield: Government Capital and Venture Innovation in China**

Author: **Chengyan Zhan**, *National School of Development, Peking U.*
Author: **Xuanli Xie**, *Peking U.*
Author: **Peiyuan Huang**, *Peking U.*

In the past two decades, infusing government capital into new ventures to support innovation has drawn increasing research attention. Prior literature, however, overlooks the nuances within government venture capital (GVC) and focus disproportionately on its direct investment in new ventures (GOVC), and has not paid enough attention to the alternative investment mode, indirect investment through funding other venture capitals (GSVC). This paper specifically examines the different impacts of these two types of government capital on their investee ventures' innovation. We argue GOVCs and GSVCs bring different information advantages and fulfill different intermediary roles. Using data from biotech and IT industries in China from 2009 to 2019, we find that GOVCs and GSVCs contribute to different venture innovation outcomes. While GOVC-back ventures create more novel innovations, GSVC-backed ventures tend to produce more focused innovations. The above effects are further moderated by regional government industrial policy and regional industry development.

ENT: **Like Knows Like: The Power of Proximity Between Entrepreneurs & Government Officials**

Author: **Zi Xuan Chan**, *U. of Macau*
Author: **YUMIN CAO**, *U. of Macau*
Author: **Xiaoyun Chen**, *U. of Macau*
Author: **Lin Yuan**, *U. of Macau*

This paper studies the contingent role of political ties from proximity perspectives on the innovation initiative of entrepreneurial firms in an emerging market. By using an 8084 national questionnaire survey of Chinese private firms in 2016, we first examine how the regional institutional environment influences firm innovation. As expected, our findings show that a more market-develop institutional environment favours the firm to innovate. More importantly, this effect will be further strengthened when the proximity-based political tie between entrepreneurs-government officials is strong. In contrast to prior literature on entrepreneur-government relationships that focus on relational-based political connection, we introduce a new perspective to study political ties, namely, the proximity-based political attachment, exploring the proximity mechanism of the entrepreneur-government official's "invisible tie". Unlike previous political ties from relational perspectives that required continuous interaction and will become a burden to the firm, we find that the results will be further bounded by the availability of the interaction, depending on the nature of the proximity dimension. Our findings, therefore, contribute to the social network, institution, and innovation literature by integrating both macro and micro perspectives to explore the extrinsic and intrinsic power that fuelled firm innovation in the emerging market.

Organizational context: Self-employment, and SMEs 2

Session Moderator: **Viktoriia Pisotska**, *Department of Business and Management, LUISS Guido Carli U.*

ENT: **How Do Entrepreneurial Practices Balance Art and Business?**

Author: **Viktoriia Pisotska**, *Department of Business and Management, LUISS Guido Carli U.*
Author: **Kerem Gurses**, *La Salle, U. Ramon Llull*

Relying on the literature on tensions and contradictions and the theory of practice, coupled with the literature on creative industries, this study uncovers how creative entrepreneurs balance the tension between art and business and respond to other challenges of creative entrepreneurship. The multiple case studies method is adopted by examining founders, co-founders and main employees of European film production companies. We reveal the perception of creative entrepreneurs towards the relationship between art and business. We explore different organizational and industry-level challenges experienced by creative entrepreneurs and uncover the organizational practices they adopt to deal with the identified challenges. The research contributes to the phenomenon of creative entrepreneurship by introducing the practice perspective, to the literature on paradox and contradiction by exploring the micro-foundations of tensions and paradox responses in high intensity situations, and to practice-based studies by investigating a domain specific practice theory and highlighting the agency of creative entrepreneurs in adapting practices necessary to deal with conflicting demands of creative entrepreneurship.

ENT: **Examination of the Person-Job Fit of Entrepreneurs, Joiners, and Employees of Established Firms**

Author: **Danny Chung**, *California State U., Chico*

Many individuals pursue entrepreneurship in hopes of finding an occupation that fits well themselves. However, existing scholarly research on person-job fit and entrepreneurship does not provide a definitive answer on whether entrepreneurs do indeed enjoy a better person-job fit. Using a large dataset derived from the 2010, 2013, and 2015 waves National Survey of College Graduates, this study examines the level of person-job fit among entrepreneurs, employees of startups (a.k.a joiners), and employees of established firms. The results show that while entrepreneurs enjoy a better fit, joiners experience worse fit compared to employees of established firms. Further analysis finds that both entrepreneurs and joiners enjoy better fit in terms of the pecuniary attributes associated with their jobs, but experience worse fit in terms of the non-pecuniary attributes.

ENT: **A Business of Small Size is not a "Small and Medium Enterprise"**

Author: **José Osvaldo De Sordi**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*
Author: **Wanderlei Paulo**, *Centro U. Campo Limpo Paulista*
Author: **André Rodrigues Dos Santos**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*
Author: **Reed Nelson**, *U. of Louisiana Lafayette*
Author: **Marcia Carvalho De Azevedo**, *U. Federal de São Paulo*
Author: **Marcos Hashimoto**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*

Composite categories such as "small and medium enterprise" (SME) violate canons of the categorization process, such as mutual exclusion, configuring a scientific-ontological problem and also a business-pragmatic one, as such categories make it difficult to understand and seek solutions for these companies. In order to explore this difficulty, this study analyzed the concepts recently used by researchers and practitioners to characterize businesses of small size. Two sets of texts were analyzed: i) defining documents from society (laws, norms, ordinances); and ii) scientific articles published in important journals that focus on businesses of small sizes. The analysis of the subcategories and the values of the delimiting properties showed that the defining documents work with typologies of businesses of small size that are more consistent and precise than those found in the articles, with articles being marked by the presence of many composite subcategories. We questioned editors and authors of articles from journals specializing in "small business" regarding the reasons for the prevalence of the SME to the detriment of the "small business" subcategory. A contemporary myth is highlighted, characterized by a dichotomous view of the business universe, covering large and non-large companies, with SME being an expression of the latter group.

ENT: **More Than a Feeling – Conceptualizing Mittelstand Mindset for International Application**

Author: **Ann-Christin Groezinger**, *U. of Siegen*
Author: **Miriam Hiepler**, *U. of Siegen*
Author: **Donald F. Kuratko**, *Indiana U.*
Author: **Petra M. Moog**, *U. of Siegen*

Our world is becoming increasingly volatile, which leads to economic systems having to withstand significantly more crises. In comparison to others, the German economy remains relatively stable in such situations, which can be attributed to its strong Mittelstand, a type of companies featuring long-term orientation and moderate growth. Common Mittelstand definitions refer to the German (research) context and are mainly unsuitable for international research. Research on the German Mittelstand increasingly shows that this type of company is characterized by an entrepreneurial mindset that is probably transferable to other national context. Thus, based on this special mindset, we conceptualize observable characteristics of Mittelstand that allows the identification of Mittelstand-like companies in an international context.Our study follows a qualitative multiple case study approach, to enhance the accuracy and generalizability of the emerging definition approach and provide a testable theory. We use two different data sources: First, 17 relevant research papers on Mittelstand companies were identified and analyzed utilizing a qualitative inductive coding process. Second, case data (based on interviews, websites, and archival data) of 64 potential Mittelstand companies was analyzed in the same way as the scientific articles. This approach allows to identify the Mittelstand mindset and the resulting observable characteristics in an in-depth way. We identify eight characteristics of Mittelstand that emerge from the mindset of those companies, namely owner-management, responsible identity, rurality and regional embeddedness, internationalization, product orientation, service orientation, value orientation and, SME. We enrich the international debate on Mittelstand by developing a framework that applies to the international level. This opens the opportunity for researchers to investigate the (societal) contribution of Mittelstand beyond national borders in Germany and thus entails the opportunity to include those types of companies in the respective political debates, as well into the debate on an entrepreneurial continuum.

Crowdfunding 3

Session Moderator: **Fang He**, *U. of St. Gallen*

ENT: **The Crowd Beyond Funders: An Integrative Review of and Research Agenda for Crowdfunding**

Author: **Fang He**, *U. of St. Gallen*
Author: **Matthias Troebinger**, *ESSEC Business School*

Crowdfunding, or seeking contributions from dispersed individuals through online platforms without financial intermediaries, is an increasingly indispensable strategy for established firms, young ventures, and aspiring entrepreneurs alike. We propose an integrative review of the crowdfunding research accumulated over the past decade. We aim at breaking down disciplinary silos to develop a framework that integrates the insights from research across distinct disciplinary traditions, and synthesized research in the fields of management, entrepreneurship, innovation, operations, information systems, and marketing. Our goal is to develop a comprehensive and balanced understanding of the phenomenon by integrating insights gained by different communities of practice. Our analyses reveal three critical issues. First, the literature has treated the crowd primarily as funders, paying insufficient attention to its other indispensable roles at the critical stages before and after the crowdfunding campaign. Second, most empirical studies focus on the campaign in isolation, although campaigns involve heterogeneous actors and a multitude of complementary stakeholders. Third, most theorizing has been variance-based, leaving the temporal dynamics and the generative forces within the process inadequately addressed. Our review addresses these issues and provides an integrative framework to guide future research.

ENT: **Country-Level Drivers of Crowdfunding Platform Creation in Africa**

Author: **René Guy OMENGUELE**, *U. of Dschang*
Author: **Yimpi Cedric MBOUOLANG**, *U. of Dschang*
Author: **Anne-Laure Boncori**, *INSEEC Business School*
Author: **Eric Braune**, *INSEEC Business School*

Given the ongoing debate on the relationship between institutions and the development of crowdfunding, this study aims to better understand the joint effects of country-level formal and informal institutions on crowdfunding platform (CFP) creation in African countries. To achieve this goal, the current study uses multiple datasets, including the World Development Indicators (WDI), World Economic Forum (WEF), World Bank/International Finance Corporation (IFC) and the International Telecommunication Union (ITU). The data cover 33 countries from 2011 to 2017. The results suggest that corruption impedes formal institutions from significantly influencing the creation of domestic CFPs in African countries. Consequently, the development of the domestic crowdfunding industry in Africa is linked to the centuries-old and culturally rooted African practices of individuals helping one another. Furthermore, the negative relationship between financial market development and the rise of CFPs enables us to conclude that the crowdfunding industry and traditional sources of financing are substitutable.

ENT: **Analyzing Advancement in Crowdfunding Research and Envisioning its Future: A Bibliometric Approach**

Author: **Swati Oberoi**, *Indian Institute of Management, Shillong*
Author: **Smita Srivastava**, *Wichita State U.*
Author: **Rohit Joshi**, *Associate Professor, Indian Institute of Management Shillong*
Author: **Atul Mehta**, *Indian Institute of Management, Shillong*

Crowdfunding represents an emerging alternative means of marshaling resources which may prove to be a game-changer in the entrepreneurial finance landscape. Although the rapid growth in this field has yielded a multidisciplinary body of work, the scaffolding of this vast body of work is still largely unknown in the scholarly domain. We conduct a bibliometric analysis of 534 crowdfunding articles to uncover the intellectual landscape of crowdfunding research. Our comprehensive co-citation analysis reveals two generations of crowdfunding research, identifies the most researched themes in area, and highlights its theoretical and disciplinary anchors. In addition, our bibliographic cartography traces the shifts in areas of interest of scholars within the heterogeneous field. Overall, our critical analysis of the most influential conversations in crowdfunding research helps reveals gaps in the extant literature which act as fertile directions for its future inquiry.

ENT: **Sustainability Orientation and Crowdfunding Performance: A Perspective of Resourcefulness**

Author: **Xiaojuan Hu**, *School of Economics & Management, Tongji U.*
Author: **Vincenzo Buttice**, *Politecnico di Milano*

Drawing on theories of resourcefulness and optimal distinctiveness, we propose that the relationship between sustainability orientation and crowdfunding performance changes under different levels of project creativity, project transparency, and third-party endorsements. Two studies were conducted to test hypotheses at the project level and backer level respectively. In the field study (Study 1), 1,233 data were collected from Kickstarter at Time 1 (projects were live) and Time 2 (projects were completed). In the experimental study (Study 2), 649 data were collected from participants at Amazon Mechanical Turk. The results indicate that sustainability orientation positively affects crowdfunding performance and backers' attitudes. Project creativity moderates the relationships between sustainability orientation and crowdfunding performance (funding ratio, funding amount, and number of backers) in an inverted-U shape. Project transparency moderates the above associations in a U shape. Third-party endorsements positively moderate the above links. Thus, sustainability orientation has stronger positive effects on crowdfunding performance when project creativity is at a moderate level, project transparency is at a low or high level and the project has third-party endorsements. Furthermore, the same effects of sustainability orientation, project creativity, and third-party endorsements are observed at the backer level. These findings can provide guidance for creators to obtain better crowdfunding performance. It can also help backers make more knowledgeable decisions.

Entrepreneurial Ecosystems 3

Session Moderator: **Paul Steffens**, *U. of Adelaide*

ENT: **Configurations of Entrepreneurial Ecosystem Well-Being**

Author: **Iulia Stroila**, *FH Muenster U. of Applied Sciences*
Author: **Paul Steffens**, *U. of Adelaide*
Author: **Carolin Plewa**, *U. of Adelaide*

While the importance of well-functioning entrepreneurial ecosystems is well understood, broad configurational perspectives on ecosystem health remain limited, with a narrow focus on economic, quantifiable elements. Drawing on the concept of ecosystem well-being from ecology, we develop and employ a new configurational perspective within entrepreneurial ecosystems. Through 52 interviews with local experts in Amsterdam, Berlin, Medellín, São Paulo, Silicon Valley, Stockholm, and Tel Aviv, we investigate combinations of ecosystem well-being dimensions—diversity, quality, resilience, opportunity and choice provision for entrepreneurs and their ventures. Four distinct configurations emerge: Expansive, Instrumental, Grassroots, and Limited Ecosystem Well-Being. Accordingly, our study extends entrepreneurial ecosystem research by shifting the analysis focus from an economic perspective to one that combines economic and non-economic elements of an ecosystem and by acknowledging the configurational character of entrepreneurial ecosystems.

ENT: **Circular Ecosystems Intermediation: The Transition to Circular Textiles and Fashion**

Author: **Lori DiVito**, *Amsterdam U. of Applied Sciences*
Author: **Jakomijn Van Wijk**, *Maastricht School of Management*
Author: **Iteke Van Hille**, *Amsterdam U. of Applied Sciences*
Author: **Zita Ingen-Housz**, *Amsterdam U. of Applied Sciences*

We investigate circular ecosystems that supports circular start ups and innovation. We argue that circular ecosystems extend across spatial and disciplinary boundaries, requiring system intermediaries to bridge contextual environments and provide access to actors and resources. Focusing on the emerging circular transition in the textiles and fashion industry, we gathered data from in-depth interviews, field observations, and archival documentation over a five-year period. Our findings show that circular ecosystems are nested and interdependent and that ecosystem intermediation is distributed across various ecosystem actors. We elucidate the role of ecosystem intermediation that aligns multiple ecosystem actors. We observed how ecosystems co-evolve and converge on different levels towards a circular transformation and developed a model that illuminates ecosystem intermediation across geographic and sectoral boundaries. Our study contributes to the literatures on circular entrepreneurship, circular ecosystems and system transitions as well as provides practical implications for practitioners and policy makers.

ENT: **The Impact of Nonprivileged Catalysts on Entrepreneurial Action**

Author: **Ouafaa Hmaddi**, *City College - City U. of New York*
Author: **Lauren Lanahan**, *U. of Oregon*

Scholars have identified several privileged catalysts such as prior employers, educational programs, and connections that push prospective entrepreneurs to act on their ideas and share them with external audiences. However, entrepreneurial action is often pursued by individuals without access to such catalysts. We focus on nonprivileged catalysts—resource spillovers available to the population at-large that do not depend on direct access to the underlying resource for their effects to be realized—and whether they kickstart entrepreneurial action. Using data from the U.S. State Small Business Credit Initiative and Kickstarter, we find evidence that entry of a nonprivileged catalyst increases entrepreneurial action.

ENT: **Iron Cages or Open Horizons? Entrepreneurial Ecosystems and the Shaping of New Venture Ideation**

Author: **Austin R. Brown**, *Belmont U.*
Author: **Matthew Wood**, *U. of Oklahoma*

Entrepreneurial ecosystems as an enabling force in the formation of new ventures has emerged as an influential scholarly conversation. This study adds to that conversation by elaborating theory at the individual level, examining how variation in entrepreneurial ecosystems impact the new venture ideas entrepreneurs generate. Specifically, we deploy a verbal protocol experiment where the focus and coherence of structural factors and key actors in the ecosystem (i.e., ecosystem convergence) are manipulated and entrepreneurs engage in think-out-loud new venture ideations under the different configurations. An analysis of the qualitative data from 110 new venture ideas generated by 28 entrepreneurs resulted in a novel conceptual model that identifies three distinct types of ecosystem-driven ideation (mimetic, synthetic, and agentic). We then explicate the ecosystem conditions under which each form of ideation is likely to occur. Doing so, we delineate ecosystem convergence around a specific industry as increasing the likelihood of mimetic ideation, with decreasing convergence leading to greater likelihoods of synthetic and then agentic ideation. Our theoretical insights culminate in a set of propositions that improve our understanding of the ways in which entrepreneurial ecosystems shape entrepreneurs thinking and action.

Entrepreneurial Digital Transformation 2

Session Moderator: **Yingzhu Fu**, *central south U. business school*

ENT: **Digital Opportunity Development and Corporate Entrepreneurship During COVID-19**

Author: **Yingzhu Fu**, *central south U. business school*
Author: **Marilyn Ang Uy**, *Nanyang Business School, NTU Singapore*
Author: **Wai Fong Boh**, *Nanyang Technological U.*

Drawing on the theory of situational strength, this research investigates the extent to which perceived organizational climates interact with corporate entrepreneurs' (1) emotional reactions to COVID-19's impact on business and (2) digital technology choices to influence digital opportunity development. We conducted an eight-wave longitudinal survey study involving 108 leader managers in Singapore and found that, depending on the perceived climate for initiative and psychological safety, corporate entrepreneurs' emotional reactions and digital technology choices can have positive or negative impact on digital opportunity development. Our findings shed light on digital opportunity development and corporate entrepreneurship during the COVID-19 pandemic.

ENT: **Export Performance of Emerging Economy Enterprises: Institutions and Digital Capability**

Author: **Chao Zhang**, *Autonomous U. of Barcelona*
Author: **Joan-Lluís Capelleras**, *U. Autònoma de Barcelona*
Author: **Victor Martin-Sanchez**, *U. of Southern Denmark*

We employ a two-stage theoretical model which argues export performance of emerging economy enterprises (EEEs) depends both upon their home country institutional environments and firm-specific capability. Specifically, we test this theoretical model based on Heckman two-stage procedure using a large dataset of 30,978 firm-level observations and covering 76 emerging economies globally. Our findings suggest EEEs will be more likely to export (i.e., export propensity) when facing low corruption, strong political stability, and high government effectiveness, not in line with weak institutional escapism. Besides, and surprisingly, firm digital capability influences post-entry performance (i.e., export intensity) in a U- shaped way. Taken together, our study enhances and advances understanding of determinants of EEEs' export performance, contributing to the explanations of institutions and firm capability on exporting activities.

ENT: **From Musicians to Entrepreneurs: The Effect of Business, Music, Creative and Digital Competencies**

Author: **Richard Aristeo Rodriguez**, *U. of Texas Rio Grande Valley*
Author: **Sibin Wu**, *U. of Texas Rio Grande Valley*

As a result of the digital disruption of the music industry supply chain, many music artists now have the option of acting as independent business units with their artistic identity serving as an entrepreneurial venture that can be marketed online through social media and delivered through digital platforms such as Spotify. However, why do some musicians emerge as entrepreneurial and others do not? We provide a theoretical model to answer the question. Basing on Jack-of-all-Trades Theory, we identify four sets of competencies (business, music, creative, digital) that music entrepreneurs need to be successful. We then relate the competencies with music entrepreneurial performance indicators. Specifically, we propose that the competencies affect both financial and non-financial music entrepreneurial performance. Further, digital competencies moderate the relationship between the other competencies and music entrepreneurial performance.

ENT: **Optimal Distinctiveness and "Entrepreneurial Construal" in Digital Health Business Model Innovation**

Author: **Jay Inghwee Chok**, *Keck Graduate Institute, Claremont Colleges*
Author: **Chiung-Yi Hwang**, *National Yang Ming Chiao Tung U.*

We qualitatively ground digital health entrepreneurship by studying "entrepreneurial construal" – a central category that emerged and was refined through our iterative coding. In our sample of digital health startups, we find that the cognitive distance between the top management team and the "prototypical user" affects the entrepreneurial learning processes associated with construing opportunities as either concrete or abstract. We coded this process as "entrepreneurial construal", which follows two distinct paths. In the first path, learning embedded with a profit logic is relatively more abstract. By contrast, in the second path, founding teams invoke a social welfare logic in their learning processes to construe opportunities in a more concrete fashion. These findings led us to develop a framework for how the learning trajectory is affected by an identity-logic nexus (i.e. commercial vs. social welfare) informed by recent scholarly discourse about optimal distinctiveness within institutional theory. Our findings help ground and advance a novel yet nuanced line of inquiry focused on how "entrepreneurial construal" embedded within optimally distinct identities may shape learning among top management teams in early-stage startups.

Presenter: **Dimiana Farag**, *Said Business School*
Presenter: **Viktor Salenius**, -

What are the distributive consequences of innovation ecosystems? In recent decades, innovation has led to significant productivity gains and wealth creation, but the distribution of these benefits has been uneven, with the majority staying at the top rather than flowing to the bottom. Academic fields such as public policy, political economy, and economic geography have long debated distributive consequences of technological change under the umbrella of the efficiency-equality tradeoff, but innovation studies has not fully integrated these learnings. By conceptualizing and evaluating distribution-sensitive innovation policies and institutions, this symposium aims to address this gap and better understand how innovation can be leveraged to counteract the global "race to the bottom" resulting from liberalization and promote more equitable outcomes.

Entrepreneurial Passion

Session Moderator: **Inna Kozlinska**, *U. of Groningen, Faculty of Economics and Business*

ENT: **Meta-Analytical Investigation of the Nature and Pathways of Passion in Entrepreneurship**

Author: **Vanessa Naumann**, *Paderborn U.*
Author: **Holger Steinmetz**, *U. of Paderborn*
Author: **Michael Marcus Gielnik**, *Leuphana U. Lüneburg*
Author: **Slawa Tomin**, *Paderborn U.*

The concept of passion in entrepreneurship encounters growing inconsistencies, both in terms of its conceptualization and measurement. Passion in entrepreneurship is a formative composite of the dimensions of entrepreneurial identity and intense positive feelings. However, the theoretical meaning and methodological operationalization of that composite is discrepant in the literature. Due to the inconsistencies, we see the need to consolidate the current research and provide a meta-analytic examination of the nature of passion in entrepreneurship. First, we conduct a meta-analytical structural equation model (MASEM) including 66 studies to examine the pathways of how passion influences entrepreneurial effectiveness through cognitive and motivational mechanisms. By this we validate the theory of entrepreneurial passion by Cardon et al. (2009). Second, we investigate what the nature of passion is and strengthen our theoretical understanding of passion in entrepreneurship. Following the approach of Cardon et al. (2009), we test the theory of passion in entrepreneurship as a formative construct and compare it to the umbrella term and the superordinate construct. We advance the theoretical understanding of the construct of passion in entrepreneurship and its nature by showing the predictive validity of the conceptual model of Cardon et al. (2009) and display that all three variants (formative and superordinate construct as well as umbrella term) are functional and need to be tested in practice as a basis for future research.

ENT: **Envisioning the Future: The Role of Passion in Eudaimonic Well-Being of Entrepreneurs**

Author: **Inna Kozlinska**, *U. of Groningen, Faculty of Economics and Business*
Author: **Sílvia Fernandes Costa**, *U. of Groningen*
Author: **Florian Noseleit**, *U. of Groningen*

We theorize and test a model that emphasizes the role of envisioning in translating the experience of entrepreneurial passion for founding a venture into higher levels of eudaimonic well-being among entrepreneurs. Additionally, acknowledging the heterogeneity of well-being outcomes in entrepreneurship, we propose that the motive driving the creation of a new venture (necessity- or opportunity-driven entrepreneurship) moderates this process. We find that envisioning partially mediates the relationship between passion for founding and eudaimonic well-being. Additionally, necessity-driven entrepreneurs experiencing lower levels of passion tend to engage less in envisioning, which leads them to lower levels of eudaimonic well-being. Our study contributes to a more comprehensive understanding of entrepreneurial well-being by considering affective, cognitive and motivational determinants.

ENT: **The Structuring of Organizational Attention by Contagion of Entrepreneurial Passion (WITHDRAWN)**

Author: **Minh Hoang Vo**, *INSEAD*

Passion plays a prominent role in the experience and success of entrepreneurial ventures. Entrepreneurship research recognizes how entrepreneurial passion contributes to venture performance by creating the motivational energy needed for opportunity search, by helping to persuade resource holders, and by embodying key practices in entrepreneurial organization. Yet, for decades, the entrepreneurship literature remains focused on the contagion mechanism of entrepreneurial passion and under explores how, as a high-activation emotion, entrepreneurial passion may narrow organizational attention in critical ways. My inductive, longitudinal study of a nascent venture successful in mobilizing support and achieving growth by using entrepreneurial passion shows how contagion of entrepreneurial passion leads to neglect treatment and competitive aggression among venture workers. This organizational dynamic emerges through three interlinked mechanisms: reconfiguration of worker's attention boundary, worker's boundary-focused coping, and top-down socialization of attention focus. Presented in a process model, this finding provides an alternative perspective to the literature on venture growth, which values entrepreneurial passion for the resources it enables to support venture growth rather than a potential contributor to dysfunctions in organizational collaboration. My finding also addresses the paucity of empirical and theoretical work on cultural processes in growing ventures. While the prevailing view espouses founders' determination of culture in ventures from the top-down, I provide a bottom-up account by examining the journey of workers and by highlighting their ongoing enactment of culture.

ENT: **Antecedents and Outcomes of Entrepreneurial Passion: A Meta-Analysis**

Author: **Frederik Riar**, *U. of Bern*
Author: **Shanshan Qian**, *Towson U.*
Author: **Chao Miao**, *Salisbury U.*
Author: **Bart J. Debicki**, *Towson U.*

Entrepreneurial passion has gained increasing scholarly attention in recent years. The various constructs and contexts that have been studied present a need for the entrepreneurial passion literature to be effectively analyzed. Using meta-analytic techniques, we systematically review constructs that have been investigated as antecedents and outcomes of entrepreneurial passion and its inherent domains (i.e., passion for inventing, founding, and developing). Our results, based on a sample of 54 studies containing 332 effect sizes, provide empirical insights into the impact of individual-level antecedents (e.g., age, gender, self-efficacy, human capital), firm-level antecedents (e.g., firm age, firm size), and macro-level antecedents (e.g., environmental dynamism) on entrepreneurial passion and its domains. Furthermore, our results show the implications of entrepreneurial passion and its domains for individual-level outcomes (e.g., entrepreneurial intention, opportunity recognition) and firm-level outcomes (e.g., firm performance).

Entrepreneurial Process: New Venture Formation and Growth 3

Session Moderator: **Emiliia Karpinskaia**, *National Research U. Higher School of Economics*

ENT: **Dynamics and Constraints of the Start-Up Legitimation Process: Role of Organizational Identification**

Author: **Emiliia Karpinskaia**, *National Research U. Higher School of Economics*
Author: **Galina Shirokova**, *HSE U. St. Petersburg, Russia*
Author: **Tatiana S. Manolova**, *Bentley U.*

From inception, start-ups are torn between two opposing legitimacy pressures: the need to differentiate from competitors and the need to conform to stakeholders' expectations. In this study, we adopt an organizational identification perspective, coupled with a legitimacy-seeking lens, in order to explore the start-up legitimation progress for entrepreneurs who identify with their ventures either intrinsically or instrumentally. Applying a longitudinal multi-case study design and using rich interview data, we track the decisions and actions of ten Russian high-tech start-ups over a twenty-month period. Our findings reveal that start-up legitimation is a dynamic process that is guided by the organizational identification of the founders and bounded by identity tensions. The study extends the literature on new venture legitimation and its constraints. Theoretical and practitioner implications are discussed.

ENT: **Lean Startup-Based Business Coaching And The Acceleration Of Deep Tech Ventures**

Author: **Syeda Nimra Batool**, *Ruhr U. Bochum*
Author: **Jana Thiel**, *ETH Zürich*

Over the past decade, lean startup methods have fundamentally shaped the approach to coaching and mentoring in entrepreneurial support programs around the globe. More recently, the scholarly debate has voiced concerned about the uniform application of this method across all venture types, especially deep tech ventures. In this paper, we are using a longitudinal multi-case study on 13 deep tech projects in a university-based entrepreneurial support program to offer novel insight into the micro-level dynamics around the lean startup focused training and business coaching. We find a number of contingencies and progress catalysts that facilitate the productive convergence on the venture's business case as well as contribute to the build-up of entrepreneurial capital. A major intake contingency is technology readiness, which impacts to what extent lean principles can be beneficially applied in their original prescriptions. We find that specific creative method adaptations and judgement-supporting coaching interventions are furthermore key to increase program engagement and learning. Our insights contribute to practical concerns of accelerator program design but also offer new insights for the theorising on lean startup and entrepreneurial experimentation.

ENT: **Senior Entrepreneurship: An Integrative Framework of Self-Efficacy, Motivation, and Intention**

Author: **Maria Luiza C.A. Pinho**, *Widener U.*
Author: **Daniela Rivera Piedra**, *Georgia State U.*
Author: **Fernando Trochez**, *Doctoral Student*
Author: **Seyda Deligonul**, *Professor of Business Strategy, Retired*
Author: **S. Tamer Cavusgil**, *Georgia State U.*

What drives individuals to engage in entrepreneurial activities later in life? Guided by this question, we explore the senior entrepreneurship literature and propose a conceptual framework explaining this phenomenon. In particular, we contend that older people experience higher levels of self-efficacy and higher autonomous and control goals, which translate into entrepreneurial intentions. Drawing on somewhat contradictory empirical literature around senior entrepreneurship, we emphasize the importance of integrating personal judgments, goals and needs to explain this phenomenon. We conclude by proposing an extensive research agenda for future scholars of senior entrepreneurship.

ENT: **Feasibility Perceptions, Goal Commitment and Entrepreneurial Effort in Nascent Entrepreneurs**

Author: **Sufia Mohand-Amar**, *U. of Granada*
Author: **Matilde Ruiz-Arroyo**, *U. of Granada*
Author: **Maria Del Mar Fuentes**, *U. of Granada*

The aim of this study is to offer new insights into the factors that determine nascent entrepreneurial effort within the process of new venture creation, by exploring two main questions. First, we analyse the role of goal commitment as an antecedent to entrepreneurial efforts. Second, we examine the twofold effect of perception of feasibility, by exploring its direct and indirect role in explaining entrepreneurial efforts, and by distinguishing between its internal dimension (entrepreneurial self-efficacy) and an external one (perceived availability of external financial resources). Drawing on a sample of 151 nascent entrepreneurs from PSED II, our results show that goal commitment exerts a direct effect on the entrepreneurial effort of nascent entrepreneurs, and that entrepreneurial self-efficacy seems to affect effort through goal commitment. These results contribute to a better understanding of the self-regulatory mechanisms underlying entrepreneurial effort in nascent entrepreneurs.

Family Business Succession 2

Session Moderator: **Bidisha Bhattacharjee**, *IIM Bangalore*

ENT: **Patriarchy In Indian Family Firms: Origins And Performance Impact**

Author: **Bidisha Bhattacharjee**, *IIM Bangalore*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

Family businesses tend to follow the cultural norm of primogeniture and show a strong preference for male successors. Daughters are often given cash, real estate, or other assets, and sons are given shares in the family business. Even when women are allowed to hold a share of the family business, they rarely hold formal leadership positions in the firm. We theorize and investigate the antecedents and consequences of these patriarchal choices in family firm leadership. Based on prior theory on scarcity and attention, and prior research on cases where daughters took on leadership roles in the family, we theorize that the patriarchal preference for male successors is weakest among firms founded in times of scarcity. In addition, we theorize that patriarchal intra-family leadership choices impact the quality of the successor and negatively impacts organizational performance. We find support for our hypotheses among the population of listed Indian family business firms. Our research contributes to our understanding of intra-family dynamics and its impact on family business performance.

ENT: **The Initiation of Family Succession in Lone-founder Firms and Multiple Audience Reaction**

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*
Author: **Yufeng Xia**, *Peking U.*
Author: **Xiangru Zhou**, *Peking U.*
Author: **Junyan Lu**, *Guanghua School of Management, Peking U.*
Author: **Wanfang Hou**, *School of Information Management, Nanjing U.*

Family succession plays as an important route of entrepreneurial exit in lone-founder firms. Though a great number of studies have explored “actual exit” events of this route (i.e., decisive power transfer from founder to family), far less is known about its initiations. This study aims to explore how multiple audiences with heterogenous evaluation schemas evaluate and react to the initiation of family succession. By theorizing lone-founder firms’ initiation of family succession as an incorporation of multiple organizational forms, we find the first-time familial appointment, as a key substance regarding the initiation, results in increased TMT turnover and lowered analyst recommendation; the congruent familial rhetoric plays paradoxical roles, as it strengthens the TMT turnover effect while weakens the analyst devaluation effect after familial appointments. The above findings contribute to both entrepreneurial exit and corporate governance literature.

ENT: **It’s Signaling Game Time! Investigating Search Fund Successions in the Context of Family Firms**

Author: **Tobias Reif**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Recently, the private equity phenomenon of search funds seems to gain certain momentum for family firms as demonstrated by succession/acquisition numbers and success stories. Within current studies and media reports, we identify hints for a special match between searchers and family firms, but the antecedents and formations of these unique bonds remain unclear. In this article, we aim to investigate the underlying rationales of searcher–family firm matchings and their effects on the designation of searchers as successors. We argue the application of signaling theory on the procedure of search fund successions/acquisitions to result in clearer information about the antecedents and their interrelationships. To address this aspiration, we conduct a qualitative research design of multiple case study methodology containing nine European search fund cases. We reveal searchers to rely on the stage specific application of costly and hard-to-fake signals to achieve the perceived objectives of initial recognition, credibility, and finally conviction. In addition, we find the succession preferences of family firm leaders to influence the efficiency of the searchers’ signaling activities. Besides, we identify a further influencing effect of other present family members on the signaling efficiency of searchers.

ENT: **Intra-Family Successor Selection: The Signaling Value of Entrepreneurship**

Author: **Massimo Bau**, *Jönköping International Business School*
Author: **Jasper Brinkerink**, *U. of Edinburgh*
Author: **Alfredo De Massis**, *Free U. of Bolzano, IMD Business School and Lancaster U.*
Author: **Johan Karlsson**, *Centre for Family Entrepreneurship and Ownership*
Author: **Philipp Sieger**, *U. of Bern*

Entrepreneurial parents aspiring to transfer their business to one of their children face information asymmetries regarding the entrepreneurial commitment and competence of each of their offspring, complicating identification of the most suitable successor. We posit that offspring’s independent entrepreneurial experience and performance serve as costly and hard-to-imitate signals of their entrepreneurial commitment and competence, respectively, mitigating these information asymmetries. Accordingly, we assess the signaling value of entrepreneurship in a large sample of Swedish intra-family successions. In line with our predictions, we find that offspring’s independent entrepreneurial experience positively affects the likelihood of becoming a successor in their parents’ business, and that this effect is stronger at higher levels of parental firm performance. Partly contradicting our curvilinear hypothesis, however, we find a distinctly negative effect of offspring’s independent entrepreneurial performance on the likelihood of becoming a successor. Our findings thus suggest that offspring’s early-career entrepreneurial activities indeed signal information relevant to the intra-family succession process, yet may do so in ways that do not guarantee selection of the most capable intra-family successors for the parental firm. We thereby contribute to literatures on entrepreneurial careers, succession, entrepreneurial families, and signaling theory.

Entrepreneurial Performance and Outcomes 2

Session Moderator: **Hang Do**, *U. of Southampton*

ENT: **Known for being different? Reputation, status, and the optimal distinctiveness of new ventures**

Author: **Jonas Janisch**, *U. of Siegen*
Author: **Alexander Vossen**, *Tilburg U.*

We investigate how evaluation of new ventures' distinctiveness changes when they accumulate status and reputation. Using longitudinal data on 4,279 products offered by 853 new ventures over 211 weeks on the U.S. Amazon Launchpad, we observe status through new ventures increasing tenure in the respective product category, and reputation through the increasingly available evidence on their products' past performance. Building on the notion of optimal distinctiveness as the trade-off between legitimacy and differentiation, we propose that increasing status and reputation steepens the U-shaped effect of new ventures' distinctiveness. While this steepening benefits highly distinct ventures the most, especially averagely distinct ventures face an ever increasing "stuck in the middle" problem as their status and reputation grows. Our study shows that the effectiveness of a new venture's distinctiveness is not only contingent on audience preferences or competitive and categorical contexts, but also on evolving degrees of complementary organizational traits. Our results provide guidance on how to achieve optimal distinctiveness while evolving into more mature market actors. Managers need to consider that the favorable appeal of distinctiveness they used to enter a market may change as their status and reputation grows.

ENT: **Great Expectations? Insights into UK SMEs' Optimism From the Inside and Outside View**

Author: **Hang Do**, *U. of Southampton*
Author: **Chris Hand**, *Kingston Business School*

Entrepreneurial optimism has generated academic interest in the last two decades, drawing on research on biases in human cognition, in particular the inside view (i.e. focussing on the specifics of the case) and the outside view (i.e. based on the outcomes of other similar cases). Inside view thinking is associated with more optimistic (and over optimistic) expectations than outside view thinking. Our study links these notions to determinants of the expected firm growth. Drawing on a sample of 12,273 UK small and medium sized enterprises (SMEs), we found evidence for both inside view and outside view thinking influencing expectations of the future. Our findings suggest that the innovation novelty, firm characteristics and behaviour, and network have an impact on the expected returns, whereas business planning has no effect. The reflection from the inside or outside view based on the information perceived is also likely to drive the impact of these factors on the expected growth. Additionally, we find some indirect evidence of learning from experience insofar as firm age moderates some of these effects.

ENT: **Entrepreneurial Quantity and Quality: The Configurational Impact of National Environmental Elements**

Author: **Yeyao Ren**, *Xi'an Jiaotong U. & City U. of Hong Kong*
Author: **Liang Zhang**, *Business School, Central South U.*
Author: **Wenhong Zhao**, *Xi'an Jiaotong U.*
Author: **Juan Li**, *City U. of Hong Kong*

Prior literature has ignored the complexity of entrepreneurship phenomenon, i.e., the interdependencies among entrepreneurial environmental elements and the multidimensional nature of entrepreneurial output, resulting in mixed findings regarding the net effects of national environmental elements on entrepreneurship. Building on entrepreneurial ecosystem perspective, we examine the configurational effect of eight environmental conditions from cultural, social, and material elements on two dimensions of entrepreneurship (i.e., entrepreneurial quantity and entrepreneurial quality). Employing fuzzy set qualitative comparative analysis to data from 44 economies, we find that it is not isolated environmental conditions but their various combinations that lead to entrepreneurial quantity and quality. There are asymmetries between configurations leading to high entrepreneurial outcomes and those leading to not-high entrepreneurial outcomes. Moreover, configurations leading to high (or not-high) entrepreneurial quantity partly differ from those leading to high (or not-high) entrepreneurial quality. This study extends entrepreneurship literature by utilizing a novel approach to capture and validate the systemic nature of entrepreneurial environment and its heterogeneous impacts on entrepreneurial quantity and quality. This study also informs policymakers by suggesting various recipes for improving entrepreneurial quantity and quality.

ENT: **Does Entrepreneurial Hustle Predict New Venture Performance? And if so, Why?**

Author: **Devin Burnell**, *Neeley School of Business - Texas Christian U.*
Author: **Emily Neubert**, *Texas Tech U.*
Author: **Greg Fisher**, *Indiana U.*
Author: **Matt R. Marvel**, *Ball State U.*
Author: **Donald F. Kuratko**, *Indiana U.*
Author: **Regan M. Stevenson**, *Indiana U.*

Entrepreneurial action theory suggests individuals demonstrate agency to bring forth new ideas into viable enterprises. Recent research suggests one way in which entrepreneurs might express agency is through entrepreneurial hustle—urgent and unorthodox actions intended to overcome challenges and seize opportunities during venture development. But does entrepreneurial hustle predict venture performance and stakeholder enrollment in entrepreneurial endeavors? And if so, why? In this study, we develop a theoretical model linking entrepreneurial hustle to venture performance and stakeholders' willingness to invest. We hypothesize that entrepreneurial hustle leads to venture performance and willingness to invest because urgent behaviors allow individuals to advance their goals and unorthodox behaviors allow entrepreneurs to be more innovative. To test this theory, we first develop and validate a scale to measure individual's behavioral tendency to engage in entrepreneurial hustle. We then test our hypotheses using data from mentor-entrepreneur dyads from entrepreneurial support organizations across the United States. Overall, we find empirical support for our dual-path model. Our research advances knowledge of what entrepreneurs do to demonstrate agency during venture development.

Entrepreneurship from a life-course perspective

Session Moderator: **Ahmed Maged Nofal**, *EMLYON Business School*

ENT: **Does Child Labor during Adolescence Impact Entrepreneurial Entry?**

Author: **Ahmed Maged Nofal**, *EMLYON Business School*
Author: **Frederic Delmar**, *EMLYON Business School*

There is a widespread recognition that child labor during adolescence has both detrimental, and developmental consequences for the labor market, which raises an important unanswered question: Does child labor during adolescence play a role in the labor market through entrepreneurial entry? We propose that child labor during adolescence plays a positive role in the engagement of formerly working adolescents in the labor market through entrepreneurial entry, rather than the employment route. We combine two longitudinal datasets from the UK with census data to test our proposition. We account for endogeneity using coarsened exact matching, Mundlak Chamberlain estimator, and a within twin fixed effects estimation. Our findings indicate that child labor during adolescence positively correlates with entrepreneurial entry. This finding, however, is observed among people with limited human capital, particularly people with no education qualification. Critically, our results present some differences when disentangling sole-entrepreneurial entry, and job-creating entrepreneurial entry. We explain two channels: education, and health.

ENT: **The Influence of Parenting Roles and Styles on Subsequent Entrepreneurial Behavior in Adolescents**

Author: **Angela Randolph**, *Babson College*
Author: **Alisa Boguslavskaya Jno-Charles**, *Babson College*
Author: **William B. Gartner**, *Babson College*

This paper explores a variety of characteristics of parents (business ownership, parenting styles, and socioeconomic variables) and their effect on subsequent adolescent entrepreneurship. We measure both the choice of adolescents to enter entrepreneurship (pursuit) as well as the length of time an adolescent continues in entrepreneurship (persistence). Using the National Longitudinal Survey of Youth (NLSY97), we find that a father who owns a business has a positive effect on an adolescent's choice to pursue entrepreneurship but that parents who own a business have no effect on adolescent entrepreneurship persistence. The moderating effect of business ownership on different parenting styles affects adolescents' future entrepreneurial persistence and entrepreneurial pursuit. Other findings are discussed, and implications for research and practice are offered.

ENT: **Entrepreneurship and Workforce Age and Tenure: Breaking Through the "Grey" Ceiling**

Author: **Rui Agostinho**, *CEG-IST, Instituto Superior Tecnico, U. of Lisbon*
Author: **Rui Baptista**, *CEG-IST, Instituto Superior Tecnico, U. of Lisbon*
Author: **Jolanda Hessels**, *Erasmus U. Rotterdam*
Author: **Hugo Castro Silva**, *CEG-IST, Instituto Superior Tecnico, U. of Lisbon*
Author: **Peter Van Der Zwan**, *Leiden U., The Netherlands*

This study investigates whether increases in workers' age and tenure are associated with a decline in entrepreneurship, at the industry level. As the workforce ages, entrepreneurship should slow down, because older workers will tend to monopolize the managerial ranks that provide crucial skills for entrepreneurship. We propose that this "rank effect" is not solely associated with workforce age, but also with tenure (i.e., time spent in the firm). We propose that the age and tenure of an industry's workforce are positively related with the age and tenure at which workers reach managerial ranks and negatively related with the proportion of industry workers who become entrepreneurs. We confirm these predictions using microdata from a longitudinal linked employer-employee dataset for Portugal. Our findings suggest that tenure plays a key role in the rank effect. Our study provides a more direct test of the rank effect compared with previous studies by including managerial experience in the analysis.

ENT: **Work Ability, Satisfaction with Life, and Aging Small Business Owners' Exit to Retirement**

Author: **Monika Von Bonsdorff**, *U. of Jyväskylä School of Business and Economics*
Author: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*
Author: **Susanna Reetta Emilia Mansikkamäki**, *U. of Jyväskylä School of Business*

Entrepreneurs exit their firms for various reasons. For aging entrepreneurs, exiting during late career may be linked to a decline in resources and bring about uncertainty. In the present study, we draw on the job-demand resources model as we examine work ability and the role of life satisfaction in the later career exit phase. Using empirical data from 198 Finnish small business owner-managers who intended to retire within two years from an entrepreneurial career, and employed at least one person in addition to themselves, we found a negative relationship between perceived work ability and company exit. Furthermore, we found that for those small business owners, who reported low or average satisfaction with life, the association between work ability and exit is stronger. Our ?ndings highlight the importance and complexity of the entrepreneur's late career exit and retirement phase of the life course, as well as the role of work ability and general life satisfaction as a job-resource factor in aging small business owner's exit.

Entrepreneurship and Innovation 2

Session Moderator: **Wei Wang**, *Xi'an Jiaotong U. School of Management*

ENT: **Small firm innovation: The role of geographic proximity with competitor**

Author: **Wei Wang**, *Xi'an Jiaotong U. School of Management*
Author: **Qiaozhuan Liang**, *Xi'an Jiaotong U.*
Author: **Wei Deng**, *Northwestern Polytechnical U.*

We build a framework on how geographic proximity with competitor impacts small firm innovation, based on the theoretical perspectives of liability of smallness and theory of knowledge spillovers. We find that geographic proximity with competitor has a U-shaped relationship on R&D intensity (innovation input) and a moderating effect on R&D intensity-small firm innovation relationship (innovation output generation). We further posit that the relationship between geographic proximity with competitor and R&D intensity is moderated by industrial park entry. Using data from a sample of representative small firms via the China Micro and Small Enterprise Survey (CMES), our findings suggest geographic proximity with competitor matters for small firm innovation, and, moreover, the effects differ in different stages of innovation.

ENT: **Nonmonetary Awards and Innovation: Evidence from Winning China's Top Brand Contest (WITHDRAWN)**

Author: **Zhiming Cheng**, *Macquarie Business School, Macquarie U.*

We use the short-lived, but high-profile, China Top Brand Award to examine the causal effects of nonmonetary awards on firm innovation. To do so, we create a panel dataset by matching official China Top Brand Award recipients to the innovation outputs of listed companies. Results from difference-in-differences estimates show that firms that received the China Top Brand Award have a higher number, and better quality, of filed patents. We find that the positive effects of winning the China Top Brand Award on innovation outputs are mediated through higher government subsidies to winning firms. We also find that the positive effects of award-winning are stronger among state-owned enterprises, larger enterprises and better-performing enterprises, as well as in provinces with stronger intellectual property rights protection. Our results are robust to a series of sensitivity checks.

ENT: **Going the Distance: How Proximity to Metropolitan Regions Influences Small Firms' Innovation Modes**

Author: **Philip J. Piercey**, *Haskayne School of Business, U. of Calgary*
Author: **Chad Saunders**, *Haskayne School of Business, U. of Calgary*

We question the necessity of geographic proximity for innovation policy through an investigation of innovation modes among small firms. Our cross-economy sample of 4,887 Canadian small firms enabled an examination of innovation mode use per firm location. It revealed that geographic proximity, as distance to metropolitan regions, is more critical for some innovation mode learning processes than others. Although the science-technology-innovation (STI) mode (e.g., R&D) and the external dimension of the doing-using-interacting (DUI) mode (e.g., supply chain collaborations) feature prominently in policy, small firms are less likely to engage in these activities as their distance to metropolitan regions increases. Whereas use of STI and external DUI relies on external knowledge sources, the internal activities associated with the DUI mode (e.g., cross-functional teams, employee training) remain comparatively viable for small firms in less proximal locations. For small firms far from metropolitan regions, we propose that impactful innovation policy should aim to support the internal capacities of small firms, thereby serving as a counterweight to a policy tradition dominated by STI interventions stressing external interactions. Our findings further endorse the important role of geographic contexts for innovation modes and add to the currently thin research on the DUI innovation mode.

ENT: **Corporate-Startup Collaborative Innovation Forms: A Systematic Literature Review**

Author: **Ferhat Demir**, *Doctoral Candidate*
Author: **Martin Lukes**, *Prague U. of Economics and Business*

Although various forms of corporate-startup collaboration have been identified, it remains unclear how corporate managers should select the most suitable ones. The purpose of this study is to identify, organize, and synthesize the relevant literature on corporate-startup collaborative innovation and, subsequently, to develop integrative frameworks that help to differentiate individual collaborative innovation forms and provide criteria for choosing the right ones. This study reveals several important trends: 1) in literature and practice, a wide range of forms for corporate-startup collaboration exists, 2) new forms emerged from established modes, 3) various forms of collaboration can be synchronized and employed in parallel, 4) some forms of collaboration act as a mediator between corporates and startups. The proposed framework enables managers to select the ideal form of collaboration with startups.

Undocumented, Immigrants, Asylums & Entrepreneurship: How Different or Similar are These Groups?

Organizer: **Essam M. Boraey**, *U. of Connecticut*
Organizer: **Karla Corres**, *U. of Massachusetts, Boston*
Panelist: **Aki Harima**, *U. of Bremen, Germany*
Panelist: **Exequiel Hernandez**, *Wharton*
Panelist: **Benson Honig**, *McMaster U.*
Panelist: **Alexandra Rheinhardt**, *U. of Connecticut*
Panelist: **Ana Cristina O. Siqueira**, *William Paterson U.*

Most of the work related to 'undocumented entrepreneurs' is related to refugee, asylum seeker entrepreneurs in the European context, and undocumented immigrants in the U.S. (mainly Mexican and Central American). This stream of research has emerged and diverged from international migration scholars and the purpose of this panel symposium is to bridge the conversation as it relates to undocumented immigrant entrepreneurs generally, and we hope to explore the various ways that these two groups overlap or not. Some of this work has focused less on the effect of undocumented immigrants on informal entrepreneurship and the role of local/national/domestic policies of this group as it relates to people shifting from informal to formal entrepreneurship. We aim to provide a space for scholars from different backgrounds to enrich the discussion of potential future studies for undocumented immigrants' entrepreneurship.

There is a growing interest in the ways in which entrepreneurial endeavors extend over time and space. Unfortunately, however, much of entrepreneurship research has adopted shorter time horizons and has revolved around the (often under-contextualized) figure of the “hero-entrepreneur”. We seek to extend entrepreneurship research by focusing on how preserving, transmitting, revitalizing and reinvent social-symbolic resources from the past, such as legacy values, stories, and traditions, can trigger entrepreneurial endeavors and facilitate, instead of constraining, entrepreneurial agency. We nest such set of activities within institutional theory, and specifically, with respect to the idea of “custodianship” which highlights the role of tradition in entrepreneurial action. In particular, the proposed symposium emphasizes two interrelated perspectives on custodianship: custodianship-through-time and custodianship-through-space. The first perspective seeks to investigate how the social construction of temporality and history by entrepreneurial actors situates and favors entrepreneurial endeavors. The second perspective focuses on how institutionalized communities of individuals that claim attachment to a bounded space curate and mobilize social-symbolic resources to favor entrepreneurship. In this way, the proposed symposium seeks to foster opportunities for the development of an approach to entrepreneurship research that foregrounds transformative action that occurs over broader spans of time and space.

Startup Employees: Current Research and Future Research Directions

Coordinator: **Travis Howell**, *Arizona State U.*
Panelist: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*
Panelist: **Olav Sorenson**, *UCLA Anderson School of Management*
Panelist: **Florence E M Honore**, *U. of Wisconsin, Madison*
Panelist: **Jiayi Bao**, *UNC-Chapel Hill*
Panelist: **Henry Sauermann**, *ESMT European School of Management and Technology*

Human capital plays a key role in determining entrepreneurial success. Yet, historically, the primary focus of research on human capital in new ventures has been on the founders of new companies. Much less attention has been paid to the early employees of new companies. This omission is problematic, as hiring early employees is one of the most important and yet also one of the most difficult responsibilities in a startup. Overall, more data and analysis are needed to understand startup employees. Therefore, the purpose of this panel symposium is to engage a group of panelists in a discussion of (1) what we have learned from recent research in this area, and (2) areas for future research.

Presenter: **Gianluigi Viscusi**, *Linköping U.*

The last two decades have seen increasing interest in entrepreneurial experimentation, both from academia and practice, with a focus on better understanding the efficacy of adopting an experimental approach to guide entrepreneurs' decision-making. While the survival and performance benefits of adopting different types of experimental approaches are increasingly well-understood, relatively little research examines different underpinning processes both at the organizational and individual levels that guide experimentation processes and choices as well as their performance implications. The papers in this proposed symposium address the gap in existing literature through multiple perspectives. First, they explore how different strategic choices support entrepreneurial experimentation. Such choices include organizational decision-making processes, management of internal and external key stakeholders, real-options-based decision-making, and the adoption of a scientific approach for opportunity creation. Second, these papers draw upon different theoretical perspectives to enrich our understanding of experimentation. We expect this symposium to add value to the field by facilitating discussion across different aspects of experimentation and generating insights for future research. Third, all of these papers consider experimentation as "part of a larger system," investigating different factors and processes that underpin a focal venture's experimentation. Collectively, the papers to be presented in this symposium highlight different pathways that entrepreneurs might undertake to better manage experimentation.

HCM: **Evaluating the Impact of Genome Sequencing on Healthcare Resource Use: Evidence from Cancer Patients**

Author: **Sandra Barbosu**, *New York U.*
Author: **Sarah Wordsworth**, *U. of Oxford*
Author: **John Buckell**, *U. of Oxford*
Author: **James Buchanan**, *U. of Oxford*

Precision medicine, a model in which prevention, diagnostics, and treatments are targeted to individual patients based on their genetic makeup, promises better patient outcomes and substantial healthcare savings in the long run. A key component of precision medicine is information on individuals' genetic data, often obtained through genome sequencing. Recent advances in next generation sequencing technologies and subsequent cost reductions have accelerated sequencing initiatives around the world, leading to the production of unprecedented amounts of genomic data and spurring innovation in precision medicine. Yet the development of scientific breakthroughs and their adoption into the clinic requires, among other factors, an understanding of the economics of precision medicine, particularly which interventions are cost-effective. This is important as it can inform both pharmaceutical companies' research and development (R&D) efforts, and policymakers' healthcare resource allocation decisions. However, research on the cost effectiveness of genome sequencing is limited. This paper seeks to provide early economic evidence on the impact of genome sequencing on healthcare resource in oncology, the medical field accounting for the largest share of the global sequencing market. It does so by evaluating the resource use of cancer patients enrolled in the UK's 100,000 Genomes Project (100KGP), one of the earliest large-scale sequencing efforts in the world. Resource use is a key component, when combined with unit costs, of economic evaluations. A staggered difference-in-differences analysis shows that sequencing reduces patients' healthcare resource use. Namely, patients whose genomes are sequenced experience fewer and shorter hospital episodes compared to non-sequenced patients. These effects also vary over time and across cancer types. These findings can be used as input parameters in future economic evaluations of genome sequencing that can inform both pharmaceutical companies' strategies and result in health policy implications.

HCM: **Corporate Ownership and Firm Performance: Evidence from Fertility Clinics**

Author: **Ambar La Forgia**, *Haas School of Business, UC Berkeley*
Author: **Julia Bodner**, *Copenhagen Business School*

Corporate investors have fueled the corporate transformation of medicine by acquiring and affiliating with healthcare organizations. This paper studies how corporate ownership impacts firm performance. We collect novel data on US fertility clinics that join corporate-backed fertility networks and use difference-in-differences methods to estimate changes in clinic volume and the success of In Vitro Fertilization (IVF). We find that post-transaction, clinic volume (measured by IVF cycles) increases by 25.8%, and IVF success rates (measured by the live birth rate) increase by 2.5 percentage points (6.7% increase). This improvement in IVF success rates is driven by clinics that are directly owned by the corporate parent: acquired clinics increase IVF success rates by 5.1 percentage points (13.6% increase), while affiliated clinics experience no change in IVF success rates. In addition to differences in ownership structure, we provide qualitative and quantitative evidence that resource and knowledge transfer within networks most likely explain increases in clinic performance. In particular, we find that clinics change processes and procedures towards quality enhancement, that larger improvements occur among underperforming clinics, and that clinics expand the IVF market instead of capturing market share from independent clinics. Private equity investment into networks also largely explains increases in clinic volume but not IVF success rates. This paper sheds light on the conditions under which corporate ownership can improve life-changing healthcare outcomes.

HCM: **In Search of Quality of Care in Hospitals: A Mixed-methods Approach on Practicing Nurses**

Author: **Tiago Rodrigues Gonçalves**, *ISEG (Lisbon School of Economics & Management), U. de Lisboa*
Author: **Carla Curado**, *ISEG (Lisbon School of Economics & Management), U. de Lisboa*
Author: **Lucía Muñoz-Pascual**, *IME, U. de Salamanca*

Understanding quality of care in the current healthcare context is a complex endeavor. Recent conceptual and empirical literature in healthcare management discusses challenges pertaining to quality of care, stressing the importance of individual professional input as effective predictors of such healthcare outcome. Nevertheless, evidence suggests a lack of input from several healthcare professional groups, such as nurses, being of importance to improve quality of care in the direct aftermath of the global pandemic. The goal of this paper is to study the role of the pervasive competitive culture found in healthcare and of knowledge management systems (as organizational factors of influence), and the contribution of workplace happiness (as an individual level of influence) in their contribution to quality of care in hospitals. We use a mixed-methods approach, combining a partial least-squares structural equation model (SEM-PLS) and a fuzzy-set qualitative comparative analysis (fsQCA) to study the linear and non-linear complexity between the variables. Data from the study comes after a survey conducted to 127 practicing nurses working in Portuguese hospitals. Quantitative results suggest a positive relationship between workplace happiness and quality of care. Similarly, findings also show that knowledge management systems positively influence quality of care. Qualitative findings, show a single complex configuration combining that contributes to top quality of care. On the other hand, results also present two complex configurations contributing to the lack of quality of care. Our work offers an original insight to healthcare managerial practice by providing an overview of both individual and combined organizational influences promoting quality of care. This research provides and discusses theoretical contributions driving future research, while acknowledging the study's limitations.

HCM: **Internal and External Factors Influencing Hospital Responsiveness to International Medical Travelers**

Author: **Suzanne Garber**, *U. of Alabama, Birmingham*
Author: **Katherine A. Meese**, *U. of Alabama, Birmingham*
Author: **Kristine Ria Hearld**, *U. of Alabama, Birmingham*
Author: **S Robert Hernandez**, *U. of Alabama, Birmingham*

Medical tourism has been of interest to US hospitals seeking to alleviate financial pressures with the greater reimbursements typically paid by international patients. Existing literature on the topic of medical tourism is scant regarding hospital leadership's ability or desire to construct a management strategy and assign resources to attract international patients. The purpose of this study was to assess the responsiveness of U.S. hospitals to prospective international medical travelers to determine organizational and environmental predictors for those hospitals best poised to attract higher-paying patients from beyond the country's borders using contingency theory as a theoretical framework. Data for this study come from empirical evidence obtained through written queries in Spanish and Arabic made to 372 US hospitals from March – May 2022. Organizational and environmental factors such as specialized structures, inter-organizational networks, and external infrastructure contribute to the responsiveness of US hospitals toward, and ultimately attraction of lucrative international patients. As US hospitals seek to strengthen and diversify sources of revenue, these findings can help inform strategies to better engage with potential international patients.

HCM: **Towards Medical Pluralism: Boundary Expansion of the Drug Regulatory Category in India**

Author: **Anupama Kondayya**, *Indian Institute of Management, Bangalore*

The World Health Organization sees the integration of traditional medicine in national health systems as an important way to ensure the United Nations' Sustainable Development Goal of health for all. It has deemed Indian drug policy and India's Drugs Act, 1940, as exemplary in its integration of traditional medicines. However, the Drugs Act, 1940, explicitly excluded traditional drugs from its ambit while defining the regulatory category of 'drug'. They were only included through an amendment in 1964. This paper studies this change of policy and expansion of the drug regulatory category to include traditional drugs in India, using the lens of discursive boundary work to theoretically study regulatory categorization. Using the text of legislative debates from the Indian parliament, the paper finds that legislators engaged in expansionary boundary work through anthropo-centering, problematizing and equalizing. It contributes to the literature on regulatory categorization, discursive boundary work, policy change and medical pluralism.

'Cause I'm the Taxman: Regulation- and Policy-Implicated Management

Session Moderator: **Shalini Bhawal**, *Millsaps College*

HCM: **Regulation Mandates and Incentives: Examining Implementation Challenges in the Healthcare Industry**

Author: **Shalini Bhawal**, *Millsaps College*
Author: **Manjula S. Salimath**, *U. of North Texas*
Author: **Robert Pavur**, *U. of North Texas*

The effect of regulatory mandates and their implementation challenges in the healthcare industry remains largely under explored. While the US healthcare system is highly respected for its breakthrough scientific advances, it has also been critiqued for its operational inefficiency. Hence, from the government's perspective, improving the overall efficiency of its healthcare is a priority. We examine how regulatory requirements imposed for this purpose (specifically related to the adoption of electronic health records and interoperability across systems), have paradoxically created implementation challenges for healthcare service providers and their ensuing effect on hospital outcomes. We develop and test a process type relationship, based on theoretical insights from resource-based view of the firm, dynamic capability and regulatory literature. Results from a longitudinal, multi-source dataset from over 400 hospitals indicate a complex interdependency between regulatory incentives and health outcomes. Thus, we contribute to explicating the role of regulatory incentives and challenges, e-system infrastructure, and interoperability capability on hospital outcomes. Key words: Interoperability, Regulation, Healthcare, Electronic Health Records, HITECH Act

---

HCM: **Friend or Foe: The Impact of a Reimbursement Policy Change on US Nursing Homes**

Author: **Gregory N. Orewa**, *U. of Texas At San Antonio*

In an effort to promote more value in skilled nursing facility spending in the US, the Centers for Medicare and Medicaid Services modified the way it pays for nursing homes services on October 1, 2019. With the change in the Medicare reimbursement methodology from a system based on therapist minutes to a value-based and important residents clinical classification, nursing homes must respond to these changes. Using contingency theory, this study investigates nursing homes responses to the policy change. Particularly, examining whether nursing homes are aligning their therapist and nursing staffing patterns with the new policy incentives and if the changes are resulting in better financial performance. Seven different datasets were merged for the periods 2017 – 2021, (CMS Medicare cost reports, CMS Payroll-Based Journal, CMS Nursing Home Compare, Area Health Resource File, Provider Relief Fund distribution from the U.S Department of Health and Human Services, Nursing home COVID-19 public file from Centers for Disease Control and Prevention, and COVID-19 Data Tracker from CDC. The data was modelled using random-effect regression, and mediation was tested using Kenny & Barron four step approach. Dependent variable for the first model was staffing intensity (nursing and therapy staffing) while the independent variable was PDPM. For the second model, the dependent variable was operating margin, mediator variable was staffing intensity and independent variable was PDPM. Organizational, market level and COVID-19 related variables were used as controls. Results suggest an increase in nursing staffing intensity for both RN and LPN, and a decrease in CNA staffing intensity over the two-year study period. Therapy staffing intensity also decreased for PT, PT Assist, OT and OT Assist post-PDPM. PDPM had negative impact on nursing homes financial performance which was partially mediated by LPN. With respect to therapy staffing intensity mediated by PT Assistant, OT, and OT Assistant. Some nursing homes may still be using the same tactics to improve their financial performance as they did prior to the policy's implementation, which may explain why it is taking them longer to change their behavior. Policymakers must monitor nursing homes billing practices. Keywords: Patient Driven Payment Model (PDPM), Staffing Intensity, Financial Performance

---

HCM: **Managing the Obesity Epidemic in Underresourced Nursing Homes in the US**

Author: **Gregory N. Orewa**, *U. of Texas At San Antonio*
Author: **Ganisher K. Davlyatov**, *U. of Oklahoma Health Sciences Center*
Author: **Rohit Pradhan**, *Texas State U. San Marcos*
Author: **Justin Lord**, *Louisiana State U. Shreveport*

Obesity is a growing concern in the delivery of high-quality nursing home care. Obese nursing home residents often require specialized equipment and resources. High Medicaid nursing homes have limited financial ability and may lack the necessary equipment and staff to address the needs of obese residents. However, there are variations across high Medicaid nursing homes with respect to the availability of obesity-related specialized resources. Therefore the purpose of this research was to explore the organizational and market factors associated with the availability of such resources in high-Medicaid nursing homes. Survey and secondary data sources from 2017-2018 were utilized. Data on the availability of obesity-related specialized resources was collected via mail surveys sent to Directors of Nursing in high-Medicaid nursing homes. The survey was merged with Brown University's Long Term Care Focus (LTCFocus), Nursing Home Compare, and Area Health Resource File. The dependent variable was the composite score of obesity-related specialized resources, ranging from 0-19. An ordinary least square regression with propensity score weights (to adjust for potential survey non-response bias), and appropriate organizational/market level control variables were used for our analysis. Results suggest that payer mix (>Medicare residents) and facilities with a higher proportion of obese residents were positively associated with the availability of obesity-related specialized resources. Policymakers may consider incentives for high-Medicaid nursing homes, for example, by boosting Medicaid payments to help these facilities address the specific needs of obese residents.

HCM: **Alignment of Substance Use Community Benefit Prioritization and Service Lines in US Hospitals**

Author: **Cory Cronin**, *Ohio U.*
Author: **Luke Kubacki**, *Ohio U. Heritage College of Osteopathic Medicine*
Author: **Lauren Donovan**, *Ohio U. Heritage College of Osteopathic Medicine*
Author: **Neeraj Puro**, *Florida Atlantic U.*
Author: **Dakota Lavinder**, *Ohio U.*
Author: **Kristin Schuller**, *Ohio U.*
Author: **Berkeley Franz**, *Ohio U. Heritage College of Osteopathic Medicine*

Objective. To assess the relationship between a hospital's prioritization of substance use within their community benefit documents and its offerings of substance use services in its clinical setting. Data Sources and Study Setting. This study of a national sample of U.S. hospitals utilizes secondary data sourced from the 2021 American Hospital Association (AHA) Annual Survey and data collected from publicly available Community Health Needs Assessments (CHNAs) and Implementation Strategies (ISs) produced by hospitals between the years 2018-2021. Study Design. This cross-sectional study employs descriptive statistics and multivariable analysis to assess relationships between prioritization of substance use on hospital ISs and the services offered by hospitals, with consideration of community and hospital characteristics. Data Collection/Extraction Methods. Hospital CHNA and IS documents were collected by research team members from hospital websites or by contacting hospitals directly and were then coded to identify whether the substance use needs were prioritized by the hospital. The collected data were incorporated into a data set along with the secondary data sourced from the 2021 AHA Annual Survey. Principal Findings. Multivariable analysis found a significant and positive relationship between the prioritization of substance use as a community need on a hospital's implementation plan and the number of the services included in this analysis offered by the hospital. Significant and positive relationships were also identified for five of the six specific service categories assessed, as well as for hospital size. . Conclusions.The availability of service offerings is related both to a hospital's prioritization of substance use as a community need and to its size, indicating that these factors are likely all inter-related in regard to a hospital's sense of its ability to address substance use as a community need. . Policymakers should be attuned to why hospitals may not prioritize a need prevalent within their community, such as whether the organization feels like it lacks the resources or infrastructure to take such steps. This study also highlights the value of the assessment and implementation strategy process as a way for hospitals to engage with community needs.

HCM: **To Be or Not to Be Compliant? Hospital Strategic Responses to the Federal Price Transparency Rule**

Author: **Jessica N. Mittler**, *Virginia Commonwealth U.*
Author: **Jean Abraham**, *U. of Minnesota*
Author: **Julie Robbins**, *Ohio State U.*
Author: **Paula Song**, *Virginia Commonwealth U.*

The hospital price transparency rule requires hospitals to publicly report prices for a prescribed set of medical services in both machine readable and consumer shoppable formats effective January 1, 2021. Early quantitative analyses consistently have found limited compliance with this regulation, but do not provide insight to why. This study's objective was to understand hospitals' strategic responses to this new regulation. We conducted in-depth, semi-structured, qualitative interviews between November 2021 and March 2022 with 12 not-for-profit hospital organizations. The sampled organizations were located in six geographically-diverse and compliance-diverse markets, and 11 were multi-hospital organizations. Drawing on Oliver's "Typology of Strategic Responses to Institutional Processes" (1991) and broader strategic management theory, the interview protocol was designed to solicit data about internal, organizational factors (e.g. resource constraints) and external, market factors (e.g. market position, peer behavior) affecting their responses. Transcribed interviews were coded and analyzed using the constant comparative method. Among the 12 organizations, we found that strategic responses skewed towards compliance, especially for the consumer shopping requirements. Only 3 organizations demonstrated any elements of an avoid strategy and only one organization had contingency plans to enact a defy strategy contingent upon being fined by the federal government. How hospitals responded (i.e. acquiesce, compromise, avoid, defy, manipulate or some combination) was influenced internally by the degree of the regulation's alignment with the organization's values and goals, and task complexity vis-a-vis available resources. We found extensive variation in organizational capabilities to comply, and particularly the reliance of hospital organizations on consultants and vendors to provide key support. The key external factors driving hospital organizations' strategic responses were hospitals' variable perceptions related to how making available price information may affect their competitive position, bottom line, and reputation with key stakeholders. Organizations with more confidence in their interpretation of the environment, including how others (peers or purchasers) would behave, as well as greater clarity in understanding their own organization's position and goals had more definitive, and typically more compliant, strategic responses. This exploratory study provides insights about how hospital organizations are navigating their strategic responses and suggests that a deeper understanding of the realities of operationalizing price transparency for hospital organizations is needed to improve the impact and implementation of price transparency and consumerism policy.

Participant: **Neal Outland**, *U. of Georgia*

Institutions around the world are focusing increasingly on issues of diversity, equity, and inclusion (DEI), not just to improve organizational performance, but also as a means of delivering positive societal impacts by ameliorating barriers and providing opportunities to members of hitherto marginalized groups (DEI, 2022a; Gabriel et al., 2022; Roberson, 2019, 2022). And while the management field has made progress in advancing our understanding of DEI-related issues, much more is needed if we are to effectively answer this “grand challenge” (Benschop, 2021; George et al., 2016; Hideg et al., 2020). This presenter symposium presents novel approaches to help advance management research and practice by recognizing, measuring, and addressing racial biases in organizations. Together, the five papers identify how racial biases continue to influence business schools today (Ramani, McGinley, & Desir), how intersectionality of gender and racial stereotypes about Asians affects organizational employees (Khatija & Bilimoria), and in particular female professors (Radhakrishnan, Romain, Thavarajah, & Huang), how subtle acts of racial discrimination (i.e., microaggressions) are enacted in the workplace (Harmata), and how employees adopt particular behaviors in response to these discriminatory acts (Lumbreras, Melson-Silimon, Robertson, & Outland). Overall, the symposium provides new perspectives on how racial and gender biases affect minority employees, and offers recommendations for future research as well as practical advice for organizations seeking to address such issues.

Recognizing, Measuring, and Addressing Racial Biases in Organizations

The Impact of Pronouns and Gender Fair Language in the Workplace

Organizer: **Hayden DuBois**, *U. of Texas At Arlington*
Organizer: **Wendy J. Casper**, *U. of Texas At Arlington*
Presenter: **DC De La Haye**, *Florida State U.*
Participant: **Samantha C. Paustian-Underdahl**, *Florida State U.*
Discussant: **Christian Noble Thoroughgood**, *Georgia State U., J. Mack Robinson College of Business*
Presenter: **Brooke A. Gazdag**, *U. of Amsterdam*
Discussant: **Mateo Cruz**, *Bentley U.*
Participant: **Niels Van Quaquebeke**, *Kühne Logistics U.*

Pronouns and gender fair language have become an increasingly prevalent conversation in society and the workplace. Through a collection of three papers, this presenter symposium highlights critical exploratory work being done to better understand the motives and implications of the use of pronouns and gender fair language in the workplace. The first paper examines the use of pronouns through a hiring manager lens. The second presentation investigates the motives to use pronouns, perceptions of those who do present their pronouns, and the potential negative implications of pronoun use. Finally, paper three provides an overview of gender fair language and the implications of its use through a three-study design. The symposium concludes with insight on the papers, thoughts on the state of the field, and the application of this work by Dr. Thoroughgood and Dr. Cruz.

Participant: **Adrian Ritz**, *U. of Bern*

Strategic human resource management (SHRM) research has shown that employees' perceptions of human resource (HR) practices, rather than the implemented HR practices as rated by managers influence employees' behavior and outcomes. Despite the indications of the importance of employee perceptions of HR practices, we still have a limited understanding of the influence of the salience of HR practices on how employees evaluate and respond to HR practices. Accordingly, the set of papers in this symposium aims to shed light on (1) the employee perspective on HR salience, i.e., the temporality issues concerning HR practice salience for individual employees and the role of HR practice salience in influencing employee perceptions of HR practices and employee outcomes and (2) the employer perspective on HR salience, i.e., the salience of HR systems and its impact on employee outcomes. Collectively the papers suggest that HR salience plays an important role in how employees experience and react to HR practices.

With the rapid development and widespread application within organizations, technologies of various types are changing the workplace and significantly shaping our work and important work outcomes. To advance our understanding of the multifaceted influences of technologies on our work and work experiences, this symposium consists of five papers that investigate how the adoption, implementation, and use of different categories of technologies (incl., information and communication technology, algorithm, artificial intelligence, big data and machine learning) are changing the multiple aspects of work, work experiences and employee outcomes (incl., cognition, affect, well-being, identity, inter-unit coordination, and performance evaluation). Moreover, these studies are conducted using different research methods in diverse settings, including a quantitative work with archival data of gig workers, a diary work in the context of virtual work, an ethnography study of medical staff in a hospital, and a machine learning study in a call center. With an explicit focus on putting the worker front and center in the digital era, the papers offer insights into how workers are encountering changes triggered by the applications of different technologies in a variety of organizational contexts. Therefore, this symposium provides important managerial implications for both workers and organizations in understanding the changing nature of work in the digital workplace.

Physical distances (e.g., office versus home), temporal difference (e.g., work time or non-work time), and distinctive role identities are greatly reduced while employees work from home. Work relationships in the context of work from home are thus likely to differ from relationships taking place in the traditional, office-based context. The key question that guides this symposium is: How do employees engage in work relationships while working from home to achieve desired goals? To begin answering this broad question, we focus on five relationship settings: relationships with coworkers in the context of networking, relationships with managers and within teams in the context of learning, relationships within teams in local and multinational contexts, relationships with customers in the context of cyber misbehavior, and relationships with the broader society in the context of cultural norms. Our goal is to spark a debate around the changing nature of boundaries, relationships, and consequences in remote work environments. This symposium brings together a collection of papers that examine how the challenges and opportunities related to working from home, which intensified during the COVID-19 pandemic, can have far-reaching implications for future theorizing and research.

Research on the causes and consequences of employee turnover has been marked by its diversity, from the micro focus of human resource management and organizational behavior research to the macro focus of strategic management research. Although we have learned much from this research, one major challenge has been that extant research has largely occurred within disciplinary boundaries, rarely crossing levels or otherwise communicating with each other. Another major challenge is the research-practitioner gap, as research often fails to offer actionable practitioner advice. This symposium seeks to address these challenges by presenting research from leading turnover scholars. In different ways, each paper shows the value drawing from theoretical developments from other disciplines and offering guidance to fill the research-practitioner gap.

The aim of this presentation symposium is to highlight the importance of understanding and mitigating the effects of customer mistreatment on employees, customers, and the workplace. Utilizing field studies, laboratory experiments, and bibliometric reviews, this symposium will contribute to the AOM 2023 conference theme of 'putting the worker front and center' by discussing new directions in customer mistreatment research, providing measurement scales for use in future research, and building bridges between various disciplines engaged in understanding and managing this phenomenon.

Organizational Citizenship Behavior (OCB) has been studied by numerous researchers, almost as if no stone is left unturned. Yet, despite the concern, scholars are still finding ways to contribute to the OCB literature by challenging its long-held assumptions and finding new discoveries. The purpose of this symposium is to add momentum to the development of this line of research by bringing papers that address a few of the assumptions and identify novel research ideas in the area of OCBs, in particular, OCB directed toward individuals (OCB-I) or helping behavior. Specifically, Kim, Chawla, Doyle, and Shea question the assumption that help is always granted by showing that there are times when help does not manifest (heightened mortality salience), yet also provide a way to encourage helping (intragroup-cohesion) despite the circumstances. Hu, Lin, and Liu also question the assumption that help is always granted by examining the psychological and behavioral outcomes of rejecting help requests. Lee, Koopman, Rosen, Kluemper, Wayne, and Sun question the assumption that help is beneficial for the recipients and show the emotional consequences of receiving help and the downstream negative effect it has on third parties. Lastly, Brooks, Thompson, and Bolino develop and make a unique connection with organization-level factors (perceived organizational support for social justice initiatives) and OCB-I to show that there are still important organizational factors that can contribute to more OCBs in the workplace. The papers in this symposium demonstrate the ways in which researchers can continue to expand the OCB literature in meaningful ways.

Working from home has become an increasingly common work practice in recent years. Due to advances in communication technology and even more so following the outbreak of the COVID-19 pandemic, many organizations adopted various forms of remote working. While working from home provides autonomy and flexibility, the consequent social distancing may take a toll on workers, blurring the boundaries between work and personal life, and impacting their well-being, recovery, and work-home balance. Moreover, the lack of social interaction with other employees may decrease work engagement. The outcomes of working from home, as outlined in the existing literature, are mixed. Our symposium presents a complex picture of the implications of working from home, illuminating both advantages and disadvantages. Moreover, the presentations suggest several factors that could serve to buffer the possible negative effects of working from home, as well as alternative work frameworks that can address the shortcomings of working from home. We hope following the papers to spark an interesting discussion on the topic.

Participant: **Debbie Stevens-Gill**, *U. of Wolverhampton*

Despite extensive research on workforce gender equality, research on the underrepresentation of women in STEM remains siloed and with minimal focus on avenues to optimally provide support to women. Literature also fails to provide an exhaustive list of stereotypes and biases faced by women in STEM fields. Additionally, uncertainty about actionable steps to empower women in STEM and tackle gender inequality persists. Thus, the comprehensiveness of research on women in STEM fields remains rigged with gaps. This session seeks to bring together a group of research teams that extend previous findings to contribute to a comprehensive understanding of women in STEM positions. Each study takes a different approach, but the common goal among them is to identify salient barriers, and maybe more importantly, identify strategies that women can use to overcome these barriers.

Participant: **Caroline Moughan**, *Old Dominion U.*

Feedback is an integral part of organizational life and a critical enabler for employee development and performance. Past research found that individual's attitudes towards feedback and their likelihood to give and seek feedback is caused by and depends on the multilevel factors, namely those at the individual, team and organizational levels (e.g., Anseel et al., 2015; Finkelstein et al., 2017; Sijbom et al., 2018). However, recently scholars point out that there is still relatively little research into team and, particularly, organizational level factors that shape feedback behaviors and its effect on performance, rending further investigations into this research area necessary (e.g., Mockeviciute et al., 2022; Schleicher et al., 2018). This symposium is designed to advance organizational research by building a deeper, multilevel understanding of how factors at the individual, team, and organizational levels, and their interactions shape individual's attitudes and reactions towards feedback, as well as their feedback seeking and giving behaviors. Specifically, this symposium introduces most recent research and further advances scholarly discussion on feedback attitudes, behaviors, and feedback context by showcasing four cutting-edge studies. To achieve this goal, this symposium features four papers. The first two papers focus on individuals' attitudes and reactions towards feedback. Specifically, the first paper presents a meta-analysis on the literature on individual's attitudes towards feedback, i.e., feedback orientation, and its relationships with feedback seeking behavior and other variables. The second paper, using an experimental research design, investigates how an individual level factor, such as gender, shapes one's reactions to feedback. In turn, the third and the fourth papers focus on the dyadic and organization level influences on one's feedback seeking and feedback giving behaviors. Specifically, the third paper presents a scale development to measure organizational feedback norms and subsequently investigates to what extent, how, and under what conditions these perceived organizational feedback norms shape employee's feedback seeking behaviors. Thereby this paper focuses on the organizational level factors and their interaction with individual level factors in shaping one's feedback seeking behavior. Similarly, the fourth paper investigates how social relationships between feedback givers and recipients affect feedback giving behavior using a longitudinal research design, thereby contributing to a better understanding on how dyadic level factor shapes one's likelihood to give feedback. Following the presentations, prof. Dr. Frederik Anseel (UNSW Sydney) will synthesize the symposium papers and facilitate an interactive discussion on the current state of research. With this symposium we aim to broaden the understanding of the multilevel factors that shape feedback attitudes and behaviors at work, as well as develop new avenues and possibilities for future research in this field. Taken together, these papers will provide important insights for practitioners and scholars in the interrelated disciplines such as human resource (HR), organizational behavior (OB), and managerial and organizational cognition (MOC), on the multilevel factors that affect individual's feedback attitudes and behaviors at work.

Institutions and Leadership in MNEs

Session Moderator: **Madelynn R. D. Stackhouse**, *U. of North Carolina, Greensboro*

IM: **Global Leaders Personality Profiles and C-suite Ascendance: A Person-centered Approach**

Author: **Madelynn R. D. Stackhouse**, *U. of North Carolina, Greensboro*
Author: **Marketa Rickley**, *U. of North Carolina, Greensboro*

With data from 618 global leaders in various levels of management, this study identified latent subpopulations of global leadership types based on configural profiles of personality. We further examined how different combinations of personality traits (Big Five: agreeableness, conscientiousness, extraversion, openness to experience, and neuroticism) relate to global leader career ascendance to top management. Using a person-centered approach and latent profile analysis, we found evidence of five empirically distinct personality profiles among global leaders (in order of prevalence): moderates (46.8%), extreme undercontrollers (21.0%), extreme overcontrollers (15.4%), extreme resilients (11.0%), and creatives/vulnerables (5.8%). Of these, the extreme resilient profile (neuroticism low, all other traits high) and the extreme overcontroller profile (neuroticism and conscientiousness high, all other traits low) are most discriminative in meaningfully predicting ascension to top management. This research demonstrates that qualitatively and quantitatively distinct personality types can be identified among global leaders, and that the unique trait combinations found within individual global leaders have important career consequences. Implications of our findings for theory, practice, and the use of person-centered approaches for studying leadership are discussed.

IM: **Formal versus Informal Institutional Distance Impact on Strategic Assets Seeking Foreign M&A**

Author: **Hongshu Wang**, *Beijing Foreign Studies U.*
Author: **Xinwei Shi**, *Newcastle U. Business School*
Author: **Wenwei Chen**, *Regent's Park College, Oxford U.*
Author: **Zeyu Chen**, *SOAS U. of London*
Author: **Zhijie Wang**, *U. of Manchester*

This study intends to probe into the influence of different specific dimensions under formal versus informal institutional distances on sub-motives of emerging-market (EM) multinational enterprises (MNEs) strategic-asset seeking (SAS), in order to gain insights into the understanding of new trend of outward foreign direct investment (OFDI) from emerging economies like China. By adopting multinomial logistic regression through accessing to both macro and firm level data, we find that EMNEs would focus more on formal rather than informal institutional distance for seeking all types of strategic assets. Simultaneous results show that with higher formal institutional distance between home and host countries, the possibility of acquiring both patents and trademarks has significantly increased. While the informal distance is solely correlated with the motive of seeking trademarks only.

IM: **Space as a Novel Space for International Business: An Introductory Research Note**

Author: **Sebastian Herbert Fuchs**, *Tecnologico de Monterrey*
Author: **Marc Ventresca**, *U. of Oxford*
Author: **Tim Vorley**, *Oxford Brookes Business School*

Companies venturing in low earth orbit (LEO) and beyond pose challenges for the theory and practice of international business (IB) – and, a set of opportunities on par with prior shifts in field focus. There is considerable scholarship on the role of diverse distances in IB: Physical distance, places and locations, as well as cultural and institutional distance and distinct geographies have been prominent dimensions of analysis. These build from a focus on the successful management of the distributed multinational corporation, a core of IB since 1960s. This research note opens up a novel avenue of space and distance in IB: Contemporary commercial ventures in outer space, along with associated governance issues. These developments not only challenge traditional IB terminology and focus but also raise questions of how to integrate commercial engagements in outer space into IB research and practice. We reflect on core IB themes and past and contemporary developments around space activities that since early 2000s become increasingly commercialized, enabled by emerging technologies and changed funding sources, and posing novel analytic challenges. Based on this elaboration, we suggest future research topics around starting space ventures, international space law and institutions, internationalization into space, space MNC (SMNC) management, and provide some concluding considerations about the complexity of the study of outer space in the IB field.

IM: **Complexity Theory and International Business Research**

Author: **Sokol Celo**, *Associate Professor*
Author: **James Nebus**, *Suffolk U.*

Complexity Theory and Complex Adaptive Systems have been extensively used in management and organization science research but less so in international business research, despite the fact that multinational corporations are arguably among the most complex organizations. Using complexity theory for international business research requires first a 'translation' of its fundamental constructs into IB-equivalents and a depiction of the MNC as a complex adaptive system. This view of the MNC can then be applied in various ways to IB-research from simply providing new explanations to IB-phenomena, to conduct agent-based modeling and computer simulation techniques to build theory, to finally conduct empirical research to test theories whose propositions are complexity-inspired. The paper offers several recommendations to help IB scholars apply complexity theory in their research and practitioners to use it in practice.

Contextual Factors and Firm Internationalization

Session Moderator: **Der-Ting Huang**, *U. of Illinois at Urbana-Champaign*

IM: **Trade and Investment in a Regional World:The Asymmetric Effects of International Economic Agreements**

Author: **Der-Ting Huang**, *U. of Illinois at Urbana-Champaign*

International economic agreements—classified as multilateral, regional, and bilateral economic agreements—mitigate institutional barriers and reduce uncertainties for firms engaging in cross-border business activities. Building on new institutional economics and the regionalization literature, this paper brings the regional dimension into the institutional analysis. Due to the small but optimal group size and close geographic proximity of similar countries in a region, this paper argues that regional agreements are of higher safeguarding quality than other types of agreements. Specifically, I theorize that regional economic agreements involve greater safeguarding advantages in terms of enhancing trade and FDI as compared to multilateral and bilateral economic agreements. The empirical analysis employs panel data techniques on the trade and FDI relationships in Asia from 2000 to 2016, and the results empirically corroborate the hypotheses. This paper thus highlights that regional agreements help define regional borders that matter for foreign transactions, which contributes to research on the nexus between regions and international business.

IM: **Does Excess Cash Encourage R&D? A Cross-Country Examination**

Author: **Santanu Bhadra**, *Indian Institute of Management Raipur*
Author: **Palash Deb**, *Indian Institute of Management, Calcutta*
Author: **Vipin Sreekumar**, *Masters' Union School of Business*

Although current management research suggests the twin possibility of both positive and negative effects of excess financial slack on a firm's innovation efforts, there are several open questions about the contingencies that lead to one over the other. Relying on a large sample comprising multiple countries, we find that excess cash generally encourages innovation efforts by firms, supporting that managers are encouraged to do 'slack search'. Furthermore, we find that the extent of country-specific technology orientation and market competition can facilitate such innovation initiatives. We also find that a country's corporate governance regulations also influence the extent to which firms use excess cash for R&D. These findings underline the crucial role of institutional context in shaping a firm's innovation efforts from financial slack.

IM: **Electing to Defer: Political Real Options and Project Investment Financing Trends Around the World**

Author: **Harald Puhr**, *U. of Innsbruck*
Author: **Paul M. Vaaler**, *U. of Minnesota*

Competitive elections create temporary policy uncertainty with alternative outcomes that can help or hurt investors leading large infrastructure projects substantially reliant on debt financing. We develop a framework grounded in real options theory to explain when those investors are more or less likely to defer project financing until after an election primarily based on two factors: 1) project investor motive—the election is close with a potentially beneficial switch in governing parties and partisan policies; and 2) project investor opportunity—there is a substantial demand for project output, thus assuaging concerns of pre-emption by competitors. We find support for these and other framework assumptions in financing decisions for 3,030 projects announced in 80 countries holding 269 national competitive elections from 1998-2020. We advance strategy research and related practice and public policy debates with a "political real options" framework and broad-sample statistical evidence to guide understanding of infrastructure investment decision making during constitutionally mandated moments of policy uncertainty.

IM: **Globalization Paradox Under Crises Like the COVID-19 Pandemic**

Author: **Qi Wu**, *School of Management, Xiamen U.*
Author: **Bin Liu**, *School of Management, Xiamen U.*
Author: **Andrew Delios**, *National U. of Singapore*

Is it possible for there to a globalization paradox such that the extend of globalization increases the pace of de-globalization under the national crisis? Invoked on the idea of antipathy from social psychology literature, we propose that that de-globalization sentiments encapsulated in foreign antipathy would increase when local residents feel stronger ontological insecurity during crises like the pandemic because of globalization. By investigating a large dataset of social media posts in 2020 via the deep learning (DL) approach, the study has found that people resident in cities with more foreign imported COVID-19 cases would express stronger foreign antipathy controlling factors like inequalities. Such foreign antipathy caused by globalization becomes weaker when the focal city has better health care capabilities whereas stronger if the municipal political leader carries stronger ideological conservativeness. Overall, the study is among the first to unveil that globalization facilitates de-globalization sentiments under the national crisis while highlighting that the impacts are asymmetrical under different subnational contingencies. The study further reminds that social media data can be a nuanced data source to capture public sentiments and potential behaviors toward (de) globalization.

Acquisitions and Buyer-Supplier Relationships in Cross-Border Activity

Session Moderator: **Naaguesh Appadu**, *Bayes Business School (formerly Cass), City, U. of London*

IM: **Performance of Serial Acquirers: A Configurational Analysis of Firm's Multilevel Acquisition Rhythms**

Author: **Cong Cheng**, *zhejiang U. of technology*
Author: **Lulu Yan**, *zhejiang U. of technology*
Author: **Fuming Jiang**, *Royal Melbourne Institute of Technology U.*

Serial acquisitions, as strategic initiatives, often execute streams of mutually interrelated acquisitions aimed at specific strategic objectives. However, serial acquirer encounters the change-stability paradox as well as at their own rhythms or entrain with external environment. While interest in exploring temporal rhythms in serial acquisitions has gained momentum, it has fallen short on providing insights about interdependence of rhythm conditions and multilevel rhythms on acquirer performance. Using a fuzzy-set Qualitative Comparative Analysis of 129 firms engaged in 891 acquisitions during the 10 years between 1 January 2010 and 31 December 2019, we discover that intra- and inter-organizational rhythm can influence acquirer performance and identify four patterns of multilevel temporal rhythm patterns (i.e., Adaptive-orientation, Routine-orientation, Experimental-orientation, Analytical-orientation) that can result in high performance. Our findings contribute to multilevel temporal acquisition rhythms research and respond to calls to balance change-stability paradox across hierarchies by proposing the temporal rhythms that serial acquirer may balance the internal need for rhythms with the entrainment need for responses to environmental change. Our study also enriches the implications for practitioners who influence acquisition decisions.

IM: **Acquisition Experience in Level 3 & 4 Institutional Environments and Post-M&A Performance**

Author: **Nandakumar Mankavil Kovil Veettil**, *Indian Institute of Management, Kozhikode*
Author: **Naaguesh Appadu**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Rajaram Veliyath**, *Kennesaw State U.*
Author: **Ambra Galeazzo**, *U. of Padova*

We use institutional distance and organizational learning as conceptual frameworks to examine the moderating effect of the acquiring firm's prior cross-border M&A experience in level 3 and level 4 institutional environments on the relationship between institutional distance and post-M&A performance. These environments determine the "play of the game" directly linked to firms' cross-border acquisition strategies. This is one of the first studies assessing the performance impacts of learning engendered by the firm's prior operating experience across different country-level institutional environments in their cross-border M&A experiences. As expected, there was tentative evidence of a negative relationship between institutional distance and post-M&A performance, even though it was not conclusive. In contrast, we found a positive impact of the acquiring firm's prior cross-border M&A experience in different country-level institutional environments on post-M&A performance. Most importantly, through moderating the relationship between institutional distance and post-M&A performance, acquiring firm learning engendered by prior cross-border M&A experiences mitigated any residual negative impacts of institutional distance.

IM: **Performance Feedback, CEO Power and Timing Choices of Cross-border Acquisitions in Host Merger Waves**

Author: **Tingting Zhang**, *China U. of Political Science and Law*
Author: **Zhengyi Zhang**, *Capital U. of Economics and Business*
Author: **Incheol Kim**, *U. of Texas Rio Grande Valley*

Drawing on a behavioral theory of the firm with corporate governance theory, our study addresses the question with 4,222 cross-border acquisitions in 1999-2019 of acquiring firms from 60 countries. We firstly differentiate the effects of acquiring firms' historical and social performance feedbacks on their entry timing choices in a host merger wave into a host country via cross-border acquisitions. The results show that as historical performance shortfall enlarges, acquiring firms eager to conduct cross-border acquisitions earlier of host merger waves. Meanwhile, based on a consolidated social aspiration that we construct to unify domestic and host industrial average performance as thresholds, we find acquiring firms will postpone the implementation of cross-border acquisitions in host merger waves as their social performance gets negatively and positively remote to social aspiration. Moreover, we scrutinize the extent to which their power matters in aforementioned relations. The results show that powerful CEOs will propel earlier cross-border acquisitions as acquiring firms' historical/social performance shortfall enlarges or as social performance surplus increases.

IM: **Building Greener Chains: The Role Of Mnc Disclosure, Monitoring And Buyer-Supplier Relationships**

Author: **Julianne Sellin**, *Fox School of Business, Temple U.*
Author: **Theodore L. Hill**, *Fox School of Business, Temple U.*

Encouraged by stakeholders, multinational corporations (MNCs) are increasingly concerned with limiting the negative effects of their operations on the natural environment. Although multiple studies have touted the MNC's potential role in driving environmental performance through its supply chain, few studies have empirically investigated the actual effect on emissions of MNCs' endeavors to green their supply chains. Building on insights from management, accounting, finance and supply chain management literatures, we explore the effects of MNC environmental disclosure and direct monitoring on suppliers' environmental performance, as well as the mechanisms underlying these effects. We also consider two contingencies: MNC bargaining power and buyer-supplier relationship length. Using a sample of the direct suppliers to 15 smartphone original equipment manufacturers (OEM/MNC) between 2012 and 2020, we find that monitoring in a collaborative context is associated with improved environmental performance, contributing to the literature on the propagation of sustainability in global supply chains.

Environmental Challenges and Opportunities for MNEs

Session Moderator: **Jude Edeh**, *INSEEC Business School*

IM: **Nested Local, National, and Global Identities in the Context of Existential Threat**

Author: **Anna Katherine Ward**, *Virginia Tech*
Author: **I-Heng Wu**, *U. of South Alabama*
Author: **Nancy Buchan**, *Darla Moore School of Business, U. of South Carolina*
Author: **Sophia Soyoung Jeong**, *New York U. Abu Dhabi*
Author: **Nasima Mohamed Hoosen Carrim**, *GDO*
Author: **Isis Olimpia Gutierrez Martinez**, *U. de las Américas Puebla*
Author: **Chang-Ya Hu**, *National Chengchi U.*
Author: **Sofia A. Johan**, *Florida Atlantic U.*

Although various theories on identity exist, each with its own vast literature, the extant research does not fully address change in nested identities in the presence of an existential threat – one that threatens both sub- and superordinate identity groups. Further, the identity literature lacks attention to workplace consequences of nested identity in the context of existential threat. We conducted a mixed-methods investigation to address these gaps. All data were collected in the presence of sub- and superordinate identity group threatening forces including Covid-19, supply chain disruptions, and social protests. In Study 1, we asked 27 adults working in the United States about their identification with their local community, nation, and world as a whole both pre-Covid and during the Summer of 2020. Their responses allowed us to develop a deeper understanding of how these nested identities changed in response to threat. In Study 2, we tested workplace implications of identification at each level by administering two surveys (separated by one month) to 337 adults working in Mexico, South Africa, Taiwan, and the United States. Results supported global identification as a useful tool for coping with existential threat, as it showed a positive influence on both satisfaction and performance.

IM: **Federalism, Political Uncertainty and Location Choice of Foreign Investors**

Author: **Ziko Konwar**, *U. of Leeds*
Author: **Christopher Hartwell**, *ZHAW School of Management and Law*
Author: **Timothy Michael Devinney**, *Alliance Manchester Business School, U. of Manchester*

The state of IB research is relatively weak on establishing a systematic understanding of micro-level determinants relating to political uncertainty that are likely to influence foreign investments, especially for host countries with a high degree of subnational institutional, cultural, and socio-political differences. Although broader frameworks relating to institutionalism and public choice have been integrated into such analyses, the context-specific workings of local politics make it difficult to fit into a broader theory of political uncertainty for foreign investors. This conceptual study explores how the political arrangement of federalism acts as a channel to increase or dampen uncertainty for MNE subsidiaries. In particular, we identify two important mechanisms associated with federal politics, namely the systems' capacity for federal integration and degree of centripetality/centrifugality within a federation, which is likely to exacerbate (reduce) degree of within-country political uncertainty and influence the location choice and timing of foreign investors. Drawing on a diverse stream of literature from political science, economics and international business, we focus on leadership stability and political regime changeability within federalist systems and develop an organising framework to capture the generators of political uncertainty arising from these two drivers and how they matter for foreign investors. We outline key theoretical and managerial implications along with avenues for future IB research.

IM: **Government Support, Venture Capital, and Regional Innovation: The Role of Firms' R&D Human Capital**

Author: **Jude Edeh**, *INSEEC Business School*
Author: **Frederic Prevot**, *Kedge Business School*

Technological innovation is at the heart of economic growth and a critical factor in determining the competitiveness of regions, particularly for emerging economies opening rapidly and implementing catch-up policies. Using panel data of 31 provinces in China, this study examines the impact of government R&D support and venture capital investments on regional innovation and the interaction with firms' R&D human capital. The econometric estimates reveal that R&D human capital has strong moderating effects, indicating that external support for firms in China does not lead to increased regional innovation performance except through R&D human capital. The study makes theoretical contributions on the effect of government support and venture capital investments on regional innovation performance of firms. It also offers practical implications for policymakers and private investors on how to maximize the efficiency of their R&D investments in regional economic growth.

IM: **Introducing Cultural Tolerance: Developing a Composite Index and Exploring its Impact**

Author: **Anthi Avloniti**, *U. of Central Lancashire*
Author: **Christiana Anaxagorou**, *Dr*
Author: **Spyridona Theocharous**, *U. of Central Lancashire*

This paper introduces the concept of Cultural Tolerance (CT) and indicates its role in examinations of multinational companies. CT is the degree of openness toward different cultures and acceptance of diversity in terms of values, beliefs, and behaviours. We argue that CT is a significant determinant of the host country environment and can moderate the impact that Psychic Distance between home and host countries has on firm performance. We develop a framework of CT by incorporating 13 dimensions across the four level of tolerance and we construct a composite index based on 45 reliable indicators. Following confirmation of the internal consistency of CTI, we then test its impact on multinational companies, by focusing on a sample of 718 SMEs with 2,395 foreign subsidiaries across the EU. Our findings confirm the significance of CT in cross-cultural examinations and indicate that in countries where cultural tolerance is deemed to be low (range of 0 to 0.4), the effect of PD on performance is statistically insignificant. Furthermore, the results show that CT positively moderates the impact of home-host PD on performance.

Knowledge Management Across Borders

Session Moderator: **Hina Mehreen**, *U. of Technology, Sydney*

IM: **Managing International Knowledge in MNEs – What Aids its Effectiveness and Efficiency?**

Author: **Hina Mehreen**, *U. of Technology, Sydney*
Author: **Hussain Gulzar Rammal**, *U. of Adelaide*
Author: **Stewart R. Clegg**, *U. of Technology, Sydney*

Knowledge transfer in multinational enterprises (MNEs) is a critical skill that can provide organizations with a competitive advantage across markets worldwide. However, knowledge-intensive organizations find it challenging to transfer technology due to the tacit nature of the knowledge, especially in intra-organizational settings. The transfer requires a degree of sensemaking and sensegiving interactions between the knowledge source and recipient. This study addresses how knowledge is translated in MNEs and critically reviews the knowledge and technology transfer literature. Using the knowledge-based view of the firm and organizational knowledge creation theory, we conceptualize that prioritizing personalization and socialization of tacit knowledge can help minimize the challenges involved in tacit knowledge translation. This is because for effective translation of tacit knowing there must be a realization that as knowledge travels it changes, and these changes depend on subtle tacit cues. We find that if knowledge source attractiveness, recipient learning intention, and relationship quality are well-aligned then the translation of tacit knowledge is more likely and sensegiving and sensemaking likely to be closer.

IM: **Organizational Embeddedness and Reverse Knowledge Transfer in Emerging Multinational Corporations**

Author: **Chansoo Park**, *Memorial U. of Newfoundland*
Author: **HUIMIN OUYANG**, *Central U. of Finance and Economics*

A central question for international business researchers and practitioners is if and how organizational embeddedness in multinational corporations (MNCs) can help subsidiaries transfer knowledge to their parent firms. It has been suggested that different types of embeddedness provide different benefits for knowledge transfer. This paper aims to investigate the relationship between the level of subsidiaries' relational and structural embeddedness and the degree of reverse knowledge transfer. To contextualize this relationship, drawing from social network theory and institutional theory, we develop a theoretical model showing how firms' home country contexts (industry knowledge intensity and ownership) facilitate the importance of structural and relational embeddedness to reverse knowledge transfer. Using survey data from 197 Chinese MNCs, and by applying structural equation modeling (SEM) and fuzzy-set qualitative comparative analysis (fsQCA), our results show that relational embeddedness, and the combination of industry knowledge intensity and structural embeddedness, facilitates reverse knowledge transfer. Moreover, private firms can achieve high levels of reverse knowledge transfer in the absence of structural embeddedness. By considering the interplay of country and organizational level variables, and using both SEM and fsQCA, our study provides new insights on reverse knowledge transfer in emerging MNCs and contributes to growing methodological considerations regarding complexity theory.

IM: **How National Innovation Systems Influence Knowledge Flows in International Alliances**

Author: **Jens-Christian Friedmann**, *Bocconi U.*
Author: **Torben Pedersen**, *Copenhagen Business School*

International alliances facilitate learning among firms by providing access to complementary knowledge embedded in different countries, yet we do not know how the partnering firms' distinct national contexts shape their learning in alliances. This study brings together research on learning in alliances and research on national innovation systems to examine how innovation policies in the respective home countries of the focal firms and their partners can increase the effectiveness of knowledge acquisition in alliances. Our analyses indicate that supply-side innovation policies in the focal firms' home countries and demand-side policies in their partners' home countries increase the focal firms' knowledge acquisition from their partners.

IM: **The Effects of Host Country Nationals' Role Overload on their Knowledge Sharing Toward Expatriates**

Author: **Haiying Kang**, *RMIT U.*
Author: **Ying (Lena) Wang**, *School of Management, RMIT U.*
Author: **Yi Cao**, *Hebei Finance U.*

Host country nationals (HCNs) possess unique and valuable knowledge which is critical to expatriate and multinational company (MNC) success. Drawing on conservation of resources (COR) theory, we explore the negative effect of role overload on HCNs' knowledge sharing toward expatriates. Using multiple-wave data from 512 HCNs, we find HCNs' role overload inhibits their knowledge sharing behavior via prosocial motive. The results also show that HCNs' agreeableness buffers the negative relationship between role overload and prosocial motive. Our study provides significant theoretical and practical implications to expatriate literature.

IM Division Best Paper in International Corporate Governance Award Finalists

Session Moderator: **Jan Schmitt**, *Amsterdam Business School, U. of Amsterdam*

IM: **Returning Home: CEO Pre-career Overseas Experience and Firm Cross-border Acquisitions**

Author: **David Weng**, *California State U., Fullerton*
Author: **Yi Tang**, *U. of Hong Kong*
Author: **Xuefei Yu**, *U. of Hong Kong*

Drawing on the imprinting and place attachment theories, we propose that a CEO's pre-career overseas experience of growing up and/or studying overseas in the formative years affects the firm's propensity and intensity of cross-border acquisitions. Results with a sample of U.S. established firms suggest that pre-career overseas experience increases a CEO's inclination and intensity to acquire targets in a country where the CEO has spent his or her formative years. This effect is further moderated by whether a CEO has worked in the host country and a firm's prior acquisitions in the host country. Our findings suggest that CEOs' pre-career overseas experiences can shape, or even distort, firms' cross-border acquisitions.

IM: **Growing the Business in the Regions: TMT Member's Regional Responsibility and Regional Performance**

Author: **Che Tang**, *U. of St. Gallen*
Author: **Winfried Ruigrok**, *U. of St. Gallen*

Studies find that some multinational enterprises (MNEs) pursue business opportunities globally while others focus on certain regions. Firm-level factors such as technological advantages and complexity management may contribute to this difference, but the results are not conclusive. This paper argues that MNE top executives' regional responsibilities and successful role enactment also influence the development of MNE's footprint in different regions. Our analysis with data from international automotive companies' regional sales development from 2003 to 2019 showed that top management team (TMT) member's regional responsibility positively contributes to development of regional performance when the executive does not have parallel corporate functional responsibilities. Meanwhile, regional economic growth and the leadership from a foreign CEO strengthen this positive effect of regional heads in TMT. We discussed how our findings enrich the understanding of MNE geographic scope and contribute to the literature of regional management as well as foreign executives.

IM: **Import Penetration and Corporate Misconduct A Natural Experiment**

Author: **Christopher Dupuis**, *Bryant U.*
Author: **Ying Zheng**, *Bryant U.*

Import penetration from China is largely exogenous to the U.S. product market. Using this natural experiment, we find that heightened China import penetration curbs corporate misconduct of U.S. firms. The effect is more pronounced for firms with weaker corporate governance and firms that could better withstand product market competition. The findings suggest that when import penetration increases, firms may improve corporate governance, and differentiate themselves through product innovation or corporate social responsibility to cope with the competition. In addition, we address the exogeneity concern derived from the influence of China value penetration. Furthermore, we find that competition related policies such as tariff reduction and U.S. granting China Permanent Normal Trade Relations (PNTR) status also lower corporate misconduct. Our work adds to the debates on competition and corporate misconduct at a cross-country competitive landscape.

IM: **Top Management Triads: Role Theory and Top Team Relationships Following Chair and CEO Separation**

Author: **Faisal AlReshaid**, *American U. of Kuwait*
Author: **Kathleen Park**, *Boston U.*
Author: **Bernd Vogel**, *Henley Business School, U. of Reading*
Author: **Nour AlBuloushi**, *Gulf U. for Science and Technology*
Author: **Kolawole Monsuru Yusuff**, -

Relationships in the top management team (TMT) have been explored through dyads involving the chair and CEO. We take a triadic perspective to examine two focal roles—the chair and CEO—and three sets of relationships: chair-CEO, chair-TMT executives, and CEO-TMT executives. We examine the question of how the separation of the CEO and chair roles affects the newly constituted roles and the subsequent relationship between the role-holders, in the context of interactions with other TMT members. Using interviews, site visits, observations, and documentary evidence in a large EMNC, we find that the disruption ensuing from the statutory separation of the chair and CEO roles can be counterbalanced by multiple relationship development and maintenance mechanisms. The relationship development (history, tenure, and initiation) and quality (respect, trust, support, and honest communication), plus time spent by team members together and the nurturing of a shared vision can strengthen chair-CEO-TMT member relationships and mitigate relationship degeneration and organizational dysfunction

Teaching Methods: Options to Pursue

Session Moderator: **Mai P. Trinh**, *Arizona State U.*

MED: **How Fun Overcame Fear: The Gamification of a Statistics Course**

Author: **Mai P. Trinh**, *Arizona State U.*
Author: **Robert Chico**, *U. of Washington, Seattle*
Author: **Rachel Reed**, *Arizona State U.*

Innovative instructional methods can help improve student engagement and learning outcomes when teaching difficult subjects, such as statistics. This instructional innovation paper illustrates how gamification can be applied in management education to improve students' learning experience, engagement, and acquisition of knowledge. Our purpose is to demonstrate how gamification is not only a powerful way to build on the use of games and game thinking in our field but also a versatile application of education technology that could potentially disrupt the way management knowledge is taught. We document the gamification design principles, attributes, and processes in a graduate-level statistics class. With student data and feedback, we demonstrate that gamification helped create a positive learning experience for students, facilitated frequent interactions in the course, and assisted their learning of statistical knowledge.

MED: **The Art of Learning: Introducing the SpaceJam Pedagogical Strategy for Business Ethics Education**

Author: **Joé T. Martineau**, *HEC Montreal*
Author: **Audrey-Anne Cyr**, *UNCC*

Teaching business ethics and related soft skills in higher education is critical, but also challenging. This article introduces an innovative pedagogical strategy, which we termed the SpaceJam strategy, that aims at developing empathic dispositions, a core soft skill that is known to support ethical decision-making and behavior in organizations. Located at the intersection of experiential learning and learning spaces, the SpaceJam pedagogical strategy involves mobilizing arts-based and service-learning experiential pedagogical approaches while situating learnings in multiple spaces. At the center of this strategy is the creation of an analytical, introspective, and artistic portfolio. This self-expressive portfolio articulates the different pedagogical approaches and activities carried out in the different learning spaces while providing a material anchor for students to make sense and take ownership of the learning done across spaces. This paper provides instructions for implementing such a strategy in a business ethics course as well as qualitative evidence drawn from a dedicated pedagogical action research project. It also discusses how it could be transferred to other pedagogical contexts for developing all sort of soft skills.

MED: **Far Yet Close: An Experiential E-Learning Model for Developing Relational Competencies**

Author: **VIdyut Lata Dhir**, *S.P. Jain Institute of Management and Research*
Author: **Sumita Datta**, *S P Jain Institute of Management and Research*
Author: **Snehal Shah**, *S P Jain Institute of Management and Research*

Recent research suggests that learning and developing relational competencies are critical for managers to succeed in meeting the global challenges of present-day context. Experiential pedagogies are recommended in management education to enhance learning of relational competencies. With the advent of electronic education platforms and environmental disruptions like Covid-19, business schools have adopted on-line platforms for management education extensively, world over. The role of experiential e-learning for developing relational skills is emerging as an important theme, both for academicians as well as practitioners, and therefore, needs to be further explored. In this paper, employing qualitative research methods, the authors explore an experiential e-learning model that leverages positive technology enabled corner stones of learning viz. emotional arousal, cognitive engagement and social connectedness to develop relational competencies. The present study is concluded by highlighting the theoretical and practical contributions of this research.

MED: **Generative AI as a Teaching Tool: A Practical Guide**

Author: **Steven James Hyde**, *Boise State U.*
Author: **Antoine Busby**, *Stephen F. Austin State U.*
Author: **Robert Lee Bonner**, *San Francisco State U.*

Recent advancements in generative artificial intelligence (Gen-AI) technology have resulted in the development of models such as Chat-GPT, capable of producing human-like text on various topics and styles at a rapid pace. This paper highlights the potential of Gen-AI to enhance the educational experience through the provision of interactive, personalized learning experiences and increased accessibility to diverse student populations. We also emphasize important ethical considerations and best practices of using this technology in a classroom setting.

Students’ Perspectives

Session Moderator: **Emma Bettinson**, *Cardiff Metropolitan U.*

MED: **The Perceived Value of Using a Team Charter in Business Education**

Author: **Maureen Andrade**, *Utah Valley U.*
Author: **Jonathan Westover**, *Utah Valley U.*
Author: **Letty Workman**, *Utah Valley U.*

Schools of business seek to prepare students for the workplace with employer-valued skills such as communication, teamwork, and application of knowledge. As such, a common practice for business and management educators is to involve students in collaborative team-based assignments and community projects. To facilitate the development of teamwork skills, faculty members may have students create a team charter, which involves student teams identifying goals, roles, and norms. However, empirical evidence of the value of team charters is limited. This study examined student perceptions of team charters to determine if they played a role in effective teamwork or if other variables accounted for team success. The study entailed an analysis of a mid-semester team evaluation survey and an end-of-semester team charter survey. Findings indicated that overall, the inclusion of the development and application of student charters in student group projects leads to several important benefits and learning outcomes. However, the perceived usefulness of charters varies among students by level of experience and year in school.

MED: **Students’ Conceptions of Quality and Value in Higher Education**

Author: **Kelly Young**, *Cardiff Metropolitan U.*
Author: **Emma Bettinson**, *Cardiff Metropolitan U.*
Author: **Claire Haven-Tang**, *Cardiff Metropolitan U.*
Author: **Jillian Cavanagh**, *School of Management, RMIT U.*
Author: **Ron Fisher**, *Cardiff Metropolitan U.*
Author: **Mark Francis**, *Cardiff Metropolitan U.*

The purpose of this study is to discover students’ conceptions of quality and value associated with higher education. Quality and value in higher education are often linked though the relationship is unclear. Students are an important stakeholder group whose conceptions of the relationship between quality and value are not well understood. In this qualitative study we collect data by interviewing undergraduate business students at a UK university. We then analyse data using a phenomenographic approach to determine the qualitatively different ways in which students make sense of the relationship between quality and value. Conceptions of quality and value are based on actors’ individual, experiential actions. Understanding how important stakeholders such as students conceive the relationship between quality and value in higher education is important given the competitive pressures on universities. The outcomes of the research reinforce the experiential and idiosyncratic nature of conceptions of quality and value. Three conceptions of quality and value in higher education are discovered and discussed. The research provides important insights for researchers and practitioners through clearer understanding of how quality and value are related for this important stakeholder group.

MED: **The Development and Validation of The Assessment of Sustainability Knowledge (TASK) Tool**

Author: **Talia Stough**, *The Open U., Netherlands*
Author: **Alexander Brewer**, *Sulitest*
Author: **Aurelien Decamps**, *Kedge Business School*
Author: **Scott Blair**, *Sulitest*
Author: **Marjolein C.J. Caniels**, *The Open U., Netherlands*
Author: **Wim Lambrechts**, *The Open U., Netherlands*
Author: **Jean-christophe Carteron**, *Kedge Business School*

As education for sustainability becomes mainstreamed, being able to assess the “sustainability literacy” of individuals is increasing after. Building on their repertoire of existing tools, in 2021, the Sustainability Literacy (Sulitest) organization began the development of a new assessment tool for sustainability literacy—The Assessment of Sustainability Knowledge (TASK). With the ambition to be a theoretically grounded, valid, and reliable standard in the landscape of assessment tools for sustainability knowledge (i.e., appropriate in the context of learning assessments, benchmarking, internal learning and governance, accreditations, rankings, etc.), a robust process was followed to develop the TASK tool. In this article, we describe the development and validation of the TASK tool, occurring in three subsequent phases: 1) defining the latent construct of sustainability used in TASK, 2) developing and revising the item pool, and 3) analysis of the TASK tool through a pilot study. We demonstrate how TASK is a valid and reliable measurement of sustainability knowledge—appropriate as a diagnostic tool—and we contribute to the theoretical debate of assessing epistemology in the context of education for sustainability/sustainable development.

MED: **Development of a Scale to Measure Behavioral Intentions Related to Irresponsible Management**

Author: **Kai N. Hockerts**, *Copenhagen Business School*
Author: **Anne-Karen Hueske**, *Copenhagen Business School Department of Management, Society and Communication*

This paper explores the variables predicting the behavioral intentions of students in response to perceived irrespon¬sible management conduct. Rather than conceptua¬lizing these reactions as a dichotomous variable (to acquiesce or to oppose) we propose that behavioral intentions can vary. We differentiate between an intention (1) to acquiesce if the perceived cost to society is smaller than the individual benefit created, (2) to quit the situation altogether, (3) to confront colleagues about perceived irresponsible behavior, or (4) to report them to appropriate stakeholders / authorities. Using data obtained from a survey of business school students, the paper develops and validates measures. Secondly, the paper tests the dimensionality of the constructs and their distinctiveness. In particular, we test how antecedents such as a attitudinal tolerance towards irresponsible behavior, perceived norms by respected peers, self-efficacy, and expected support from colleagues affect the different behavioral intentions. In doing so the paper proposes and validates measures of both student reactions to perceived irresponsible management behavior as well as their antecedents. The resulting scale provides the basis for future research into responsible management education.

Management, the State, and Politics: An Interrelated History

Session Moderator: **Eric B. Dent**, *Florida Gulf Coast U.*

The relationship between the State, corporations, and management practice has been a common theme in general historical literature but sometimes does not receive real consideration in management history literature. Recently, there have been some papers that have researched these issues. These contributions build on this theme.

MH: **The Face-off between Communism and Moral Re-Armament in North American Aviation 1941-1945**

Author: **Eric B. Dent**, *Florida Gulf Coast U.*
Author: **Craig Randall**, *Florida Gulf Coast U.*

The struggle in the early American labor movement over the control of its political orientation has been a topic of academic interest for decades. The focus of this paper is how that struggle manifested itself in North American Aviation's aircraft manufacturing plant in Inglewood, California, USA during World War II, primarily as a face-off between the principles of communism and Moral Re-Armament (MRA). Self-avowed communist party members had significant and growing positions of power in parts of the union movement during the war. Olszowka (2008) argued that the controversial wildcat strike by Local 683 of the United Auto Workers (UAW) in 1941 "greatly hindered the UAW efforts in aircraft and opened the door to fierce competition from the rival union International Association of Machinists" (p. 297). The strike ended when President Roosevelt sent in the United States Army. Although this event represented one of the most rancorous moments in U.S. labor history, only a few years later this same plant went on to have incredibly amicable labor/management relationships that allowed it to break records for aircraft production and serve as a model for employee-employer partnership. Labor and management worked together, largely guided by the practices of MRA. This clash represented the "precarious balancing act of appearing stridently anti-communist while still benefiting workers through collective bargaining, which would undermine the appeal of communism by showcasing a capitalist model where workers benefited" (Grimm, 2021, p. 489).

MH: **Where is Harry Hopkins Hiding? Recovering Insights from the New Deal for Management History**

Author: **Mark MacIsaac**, *St Francis Xavier U.*
Author: **Nicholous Mark Deal**, *Mount Saint Vincent U.*
Author: **Albert J. Mills**, *Saint Mary's U., Canada/U. of Eastern Finland*
Author: **Jean Helms Mills**, *Saint Mary's U., Canada/ U. of Jyväskylä, Finland*

Despite calls for more work to reveal processes of neglect in historicizing the individual, the field has only now begun surfacing key junctures and hidden figures from the past with insights and contributions to management. The New Deal and its untold influence on shaping the intellectual heritage of management and organization studies is one of many examples of this historical-narrative privileging. In this paper we revisit the potential of the New Deal as a research context and attempt to bring forward one of its chief architects, Harry Hopkins. Using elements from ANTi-History and microhistory, we follow the life and work of Hopkins to surface the role he played in the New Deal, his influence in the Roosevelt Administration, and his contribution to early management and organizational thought vis-à-vis crisis management. Hopkins, his politics, and lessons from the New Deal – how each prove relevant for MOS today – is discussed. The paper concludes with a call for space dedicated to studying topics and individuals neglected, marginalized, or forgotten in history.

MH: **The Employee Representation Plan Movement in the United States 1913 -1935**

Author: **Kevin D. Tennent**, *U. of York*
Author: **Andrew D A Smith**, *U. of Liverpool*
Author: **Patricia McLaren**, *Wilfrid Laurier U.*

In this paper, we develop our understanding of employee voice by analyzing the rise and fall of employee representation plans in the United States in the interwar period. Using original archival research and an exploration of the literature we examine why American managers had previously embraced the idea of creating elaborate systems of non-union employee representation. We argue that the employee representation movement of 1913-1935 enjoyed widespread support because it promised to help solve many of the problems that confronted American managers in the wake of the emergence of Big Business in the late nineteenth century. These problems included reduced legitimacy in the eyes of workers and other key stakeholders and a variety of technical challenges related to inefficiency and the dispersed nature of knowledge in large firms.

MH: **Historical Embeddedness and Rhetorical Strategies: The Case of Medicare's Enactment, 1957–1965**

Author: **Markus Kantola**, *U. of Turku, School of Economics*
Author: **Hannele M J Seeck**, *The London School of Economics and Political Science*
Author: **Albert J. Mills**, *Saint Mary's U., Canada/U. of Eastern Finland*
Author: **Jean Helms Mills**, *Saint Mary's U., Canada/ U. of Jyväskylä, Finland*

This paper explores the role of history and agency in new institutional theory (NIT). The themes of history and agency in NIT are examined through a case study of the use of rhetorical strategies in introducing Medicare in the United States (U.S.). The study is empirically grounded in archival research, involving an analysis of over 9,590 pages of congressional hearings on Medicare covering the period 1958–1965. In the process, the paper contributes to three major debates: the historic turn in management and organization studies (MOS); NIT and agency; and rhetoric and organizational legitimacy.

Sustainability and Corporate Social Responsibility

Session Moderator: **Yujie Wang**, *China U. of Political Science and Law*

MOC: **Regulatory Focus of the Top Management Team and Firms' Green Innovation**

Author: **Yujie Wang**, *China U. of Political Science and Law*
Author: **Can Li**, *China U. of Political Science and Law*

Firm green innovation is vital for both the sustainable development of the society and the firm. However, existing literature examining the drivers of green innovation pays far more attention to the external regulations and internal resources. The question of whether and how the cognition of TMT relates to firm green innovation is underexplored. Drawing upon the upper echelons' theory, we argue that the regulatory focus of top management team explains the heterogeneity of firms' strategic choices in green innovation. While TMTs' promotion focus, featured achievement in goal pursuing, is a positive predictor of the firm's green innovation, TMTs' prevention focus, featured risk-aversion in goal pursuing, is a negative predictor of the firm's green innovation. We also identify an important contextual condition, firms' environmental underperformance, which weakens the cognition effects of TMTs. Analysis of China's listed firms from 2011 to 2020 provides corroborating empirical evidence for our hypotheses.

MOC: **You are Who You Were: Prior Activist Experience and Firm Change**

Author: **Eugene See**, *Coastal Carolina U.*

Recent years have seen the appointment of activist appointed directors onto the boards of firms. Extant work in this area has largely taken a rational approach in explaining how such directors bring about activist change, and in doing so has assumed for the behavioral implications that follow their placement on boards. Building upon theory involving alignment and legitimacy at the team level, this paper adopts a behavioral approach in theorizing about how prior experience with shareholder activism may affect activist appointed directors as they seek to bring about activist change in firms. It finds that prior experience with shareholder activism lends to a negative influence on firm change. Further, it finds that board similarity and size serve as boundary conditions governing this relationship.

MOC: **Psychological Micro-processes of Business Leaders CSR Decision-making: An Integrative Review**

Author: **Niall Gavin**, *U. College Dublin*

I review and synthesise research on the psychological processes that drive business leaders' corporate social responsibility (CSR) decision-making. This is a review of conceptual and empirical papers on CSR decision-making approached from various disciplines including management, ethics, cognition, neuropsychology, and social psychology. This review outlines differences in how these papers conceptualise CSR, and how they conceptualise psychological CSR decision-making. The review extracts and synthesises the cognitive and affective underpinnings and phenomena of these CSR-related judgements and decision-making that can be categorised under a dual-process framework of decision-making. It demonstrates how business leader decision-making is impacted by reactive and proactive psychological processes of CSR and associated organisational conflicts. This review extracts and synthesises research findings and suggestions on how top managers and echelons overcome such biases and conflicts and proactively engage in CSR decision-making. To expand on and integrate these findings and syntheses, this review presents a multilevel, filtering process model capturing how business leader CSR decision antecedents and CSR decisions are related. This is followed by a conclusion describing implications for future research.

MOC: **Temporality and Social Entrepreneurship: The Role of Temporal Distance for Money and Social Outcomes**

Author: **Donal Crilly**, *London Business School*
Author: **Cedric Gutierrez**, *Bocconi U.*
Author: **Keun Woo Jeong**, *London Business School*

Social entrepreneurs face the challenge of communicating monetary and social prospects of their venture that are temporally distant from investors' immediate concerns. While prior research on intertemporal choice has explored how people evaluate delayed financial returns, documenting a general preference towards short-term returns, we know little about how investors evaluate delayed returns when the beneficiary is a social entity. In this paper, we conduct three studies to analyze the effect of temporal distance of social and financial returns on investors' behavior. The first experimental study assesses investors' patience for monetary rewards and social benefits, finding stronger patience for socially directed returns. The second policy-capturing experiment uses social enterprise pitches that vary in their temporal distance of financial and social outcomes. While both temporal distances in financial and social domains reduce the likelihood of investment, the effect is significantly stronger for the financial domain. Our final observational study, which examines the funding outcome of almost 1,300 pitches from a social venturing platform, adds external validity to our findings. While temporal distance in the financial domain decreases the number of supporters and the funding outcomes, there is no penalty for longer temporal distance in the social domain. We also observe that the effect of temporal distance is contingent on the valence of the project, with temporal distance in the social domain harming investment outcomes of projects framed using a positive valence (doing good) and improving investment outcomes of those described using a negative valence (do-no-harm).

Exploring Knowledge, Well-being, and Performance in Organizations

Session Moderator: **Bin Ma**, *IE Business School, IE U.*

This session will feature research papers that delve into various aspects of knowledge management, employee well-being, and performance in organizations. The papers will cover topics such as multi-dimensional knowledge management within the context of MSR, the relationship between proactive behaviors and outcomes, the consequences of insufficient sleep on job satisfaction and performance, creating awe-inspiring organizations, and the impact of eldercare burden on employee performance and creativity. Attendees will gain valuable insights into how organizations can manage knowledge, promote employee well-being, and enhance performance through innovative strategies and practices. Overall, this session aims to provide a thought-provoking discussion on how organizations can create environments that foster knowledge, well-being, and performance.

MSR: **The "Sense" Behind Proactive Behaviors: Relationships, Dynamics, and Outcome**

Author: **Siyao ZHU**, *Instituto de Empresa, Madrid*
Author: **Bin Ma**, *IE Business School, IE U.*
Author: **Kriti Jain**, *IE Business School*

Because organizations today require employees to proactively manage their performance, a growing body of research has explored a diverse set of proactive behaviors (e.g., feedback-seeking behavior, personal initiative, voicing, etc.). Yet very few studies have explored the relationship among various proactive behaviors, as well as the underlying process of one resulting in another. This study examined the intrapersonal dynamic process between two types of proactive behaviors: feedback-seeking behavior (FSB) and personal initiative (PI). Based on sensemaking theory, we argue that change in employees' FSB over time contributes to change in their perceptions regarding work meaningfulness, which further influences the adjustment of their PI and eventually predicts the change in their performance over time. We collected panel data from 207 full-time employees using three-wave surveys separated by 2-week intervals. The results of latent change score (LCS) modeling supported our hypotheses. Our findings suggest the need to recognize the distinctiveness of and the relationships among various forms of proactive behaviors, as well as the underlying mechanism of how they synergistically contribute to employees' performance. Moreover, we also illustrated that employees can construct work meaningfulness in an agentic manner by seeking and incorporating others' feedback.

MSR: **The Awe-inspiring Organization**

Author: **Thomas Kelemen**, *Kansas State U.*
Author: **Samuel Matthews**, *Gonzaga U.*

Awe is an emotional reaction caused by transcendent and vast stimuli. Awe creates a sense of wonderment that makes one feel small and interconnected with others and the world. Research in psychology, neuroscience, and ecology has found beneficial effects of awe, and research on awe continues to accumulate. Despite the growing interest in understanding awe in the broader scientific community, organizational research has generally overlooked this affective state and its potential impact on employees and organizational life. This shortcoming is surprising given that a wide variety of practitioners are adopting awe-focused initiatives within their organizations. We develop a theoretical model to understand what awe-focused organizational practices are and how they can give rise to employee state and persistent awe. The model helps show the link between awe experienced at work and critical employee work-related behaviors and perspectives, thereby demonstrating why this phenomenon warrants organizational scholars' interest. Our theorizing also highlights areas that future organizational scholars should explore to enhance our understanding of positive workplace design.

MSR: **Putting All of Human-knowing Front and Center: Multi-dimensional Knowledge Management within MSR**

Author: **Vanessa Carina Maria Englert**, *Vrije U. Amsterdam*
Author: **Welmoed Van Hoogen**, *None*

The Management, Spirituality and Religion (MSR) Interest Group of the annual Academy of Management Conference (AOM) has been a melting pot of different disciplines, research paradigms and cultural backgrounds since its founding. With its heterogeneous demographic of researchers and areas of interest, the group lends itself as a case to discuss which approaches to research values, ways of knowing and selection of research topics may yield research results that are relevant for society as end-customer, for academia, and for the academics who do the work – putting the (MSR) researcher front and center. Based on a previously written open letter to the Interest Group executive committee, the authors link relevant knowledge management (KM) literature to the opinion piece in order to enrich the KM body of knowledge. They follow a non-instrumental approach to KM, viewing it as a tool to serve the subjects whose knowledge is being managed. Further, they apply some of the various ways of knowing and approaches they suggest to their piece. Lastly, they give practical suggestions for skill development for those interested in multi-dimensional knowledge creation and systems.

MSR: **I'm Tired and Unhappy at Work: Consequences of Insufficient Sleep**

Author: **Mavis Agyemang Opoku**, *U. of Guelph*
Author: **Seung-Wan Kang**, *Gachon U.*

Drawing from the conservation of resources theory, this paper investigates sleep as an important resource with consequences on work outcomes. Using a sample of 322 call center employees, the results show that insufficient sleep has a direct positive impact on burnout. This relationship is mediated by psychological capital. Additionally, insufficient sleep has a negative effect on employee job satisfaction via its impact on psychological capital and burnout. The findings from this study provide insights for theory and organizational management about the effects of sleep. From a theoretical perspective, this study contributes to the extant literature by uncovering the underlying mediating mechanisms that explain the sleep-burnout link as well as the sleep-job satisfaction link using a serial mediation model. From a managerial perspective, this study highlights the need for managers and supervisors to enact policies and cultivate a work culture that takes into account employees' sleep needs.

MSR: **How and When Eldercare Burden Hinders Employee Performance and Creativity**

Author: **Inamul Haq**, *Leonard de Vinci Pole U., Paris, France*
Author: **Farooq Anwar**, *The U. of Lahore. Pakistan*
Author: **Muhammad Umer Azeem**, *ESSCA School of Management*
Author: **Fayyaz Ghafoor**, -
Author: **Saeedeh Rezaee Vessal**, *EMLV Business School, Paris*

This study unpacked how employees' eldercare burden undermines employee performance, OCB, and creativity through mental and physical exhaustion. This study also revealed that employee personal resources of religiousness moderate and reduce the effects of eldercare burden on employee mental and physical exhaustion. Three waves and multisource data were collected from an employee working in various sectors of Pakistan. Results of the study suggested that employee eldercare burden negatively affects employee performance, OCB, and employee creativity. The mediation results indicated that employee elder care burden negatively affect work outcomes through employee mental and physical exhaustion. Employee religious beliefs buffer the negative effect of eldercare burden on caregiver employees' physical and mental exhaustion such that the positive relationship was weakened in the case of highly religious employees. The results also revealed the presence of moderated mediations: the indirect effect of employee elder care burden on work outcomes through mental and physical exhaustion is moderated by their religiousness.

Applications of Regulatory Focus in OB

Session Moderator: **Pearlyn Ng**, *U. of Waterloo*

OB: **How Follower Regulatory Focus Impacts Reactions to Leader Self-serving Behavior**

Author: **Pearlyn Ng**, *U. of Waterloo*
Author: **Kristyn A. Scott**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Leader self-serving behaviour is a form of destructive leader behavior, characterized by self-interest, that sometimes – but not always – occurs at the expense of others. Previous research shows somewhat varied results in how followers react to self-serving leaders due to the context-dependent interpretations of self-serving behavior compared to other forms of destructive behaviour. With this paper, we aim to address a gap in understanding follower reactions to self-serving leaders. In two studies, we examine how follower regulatory focus impacts their responses to self-serving leader behavior. Overall, we find that follower promotion focus is a better predictor of follower exit, defensive voice, and neglect behavior than follower prevention focus. We conclude by discussing implications for future research and for organizations.

OB: **Higher-up Managers' Behavioural Integrity and Subordinate Managers' Use of Power**

Author: **Xu Huang**, *Hong Kong Baptist U.*
Author: **Fuli Li**, *Xi'an Jiaotong U.*
Author: **PAN FAN**, *Xi'an Jiaotong U. School of Management*

Past literature posits that power can motivate both destructive and constructive leadership behaviors, primarily depending on powerholders' internal regulatory forces. This research breaks from this predominant perspective by identifying a new external regulatory force in regulating subordinate managers' use of power: higher-up managers' behavioral integrity. Drawing on the focus theory of normative behavior, we theorize that higher-up managers' behavioral integrity functions as norm activators and determines whether subordinate managers translate their experience of power into self-serving behavior through psychological entitlement or servant leadership leader behavior through prosocial motivation, respectively. Results of a multi-wave, multisource field study based on a sample of 297 subordinate managers and 1281 followers have largely supported our propositions. As predicted, the positive effect of subordinate managers' psychological power on psychological entitlement was weakened when higher-up managers' behavioral integrity was higher (vs. lower), reducing their subsequent self-serving behavior. Unexpectedly, psychological power was positively related to prosocial motivation regardless of integrity level. Our findings shed new light on how organizations can adopt effective external monitoring mechanisms to contain powerholding managers' power abuse.

OB: **Longitudinal Message Framing Intervention: The Benefits of Prevention Focus Framing During Change**

Author: **Patrick Flynn**, *North Carolina State U.*
Author: **Ian Siderits**, *North Carolina State U.*
Author: **Paul W Mulvey**, *North Carolina State U.*

Returning to in-person work and adapting to "the new normal" brought on by the COVID-19 pandemic creates a period of organizational dynamism which has the potential to be beneficial or disruptive. We develop and test competing hypotheses with a randomized trial longitudinal intervention in the context of an organization undergoing change in work arrangements. Based on regulatory focus theory, it is possible that either promotion or prevention focus may facilitate more favorable job satisfaction and affective commitment trajectories in times of change. We tested the effects of the randomized trail intervention with 240 university faculty members across five months. Results shows that prevention focus facilitated job satisfaction and affective commitment trajectories that were stable over the period of organization dynamism, while promotion focus facilitated trajectories of decline. Further, supplemental analysis showed that the effects of the intervention were contingent upon individuals' affective experience of the pandemic. The effect size for the intervention was stronger for individuals who had an unfavorable pandemic experience, while the more favorable pandemic experience group showed no significant difference.

OB: **The Role of Regulatory Focus in Cognitive and Performance Reactions to Negative Workplace Gossip**

Author: **Chen Ding**, *Nanjing U.*
Author: **Yueyue Liu**, *Hohai U.*
Author: **Meng Xi**, *Nanjing U.*

Despite the fact that destructive consequences for targets have featured prominently in the negative workplace gossip literature, it has recently been insinuated to yield beneficial results. Integrating the transactional theory of stress with the regulatory focus of targets, we shed new insights into the dysfunctional and functional roles of negative workplace gossip via conceptualizing it as an invisible stressor. Results from a multi-source, time-lagged field study indicate that the regulatory focus moderates the relationship between negative workplace gossip and work-related rumination. such that gossip targets are more likely to experience affective rumination under a prevention focus but more likely to experience problem-solving pondering under a promotion focus. In light of this, affective rumination and problem-solving pondering, two different perseverative cognitions, produce poor or better task performance. These results allowed us to further examine how general interpretations of targets' personality traits shape their cognitive and performance responses to perceived negative workplace gossip. Additionally, theoretical and practical implications are discussed.

Family and Work: Striking the Right Balance

Session Moderator: **Mireya Las Heras**, *IESE Business School*

OB: **Trickle-down and Trickle-up Effects of Employee Perception of Family Friendly Organisational Culture**

Author: **Mireya Las Heras**, *IESE Business School*
Author: **Yasin Rofcanin**, *School of Management, U. of Bath*
Author: **Siqi Wang**, *School of Management, U. of Bath*

In the context of rising pressures on balancing work-family lives of employees, organizations have increasingly realised the value of developing and supporting family friendly organizational cultures. This study explores trickle up and trickle down effects of the perceptions of family friendly organizational culture (i.e., FFOC) of subordinates and supervisors. Regarding the former, we explore how subordinate perceptions of FFOC impact on the family performance and turnover intentions of supervisors. Regarding the latter, we explore how supervisor perceptions of FFOC impact on the family performance and turnover intentions of subordinates. Adopting Actor-Partner Interdependence Model (APIM) with a matched dyad of subordinates and their supervisors from Peru, our findings support our research goals and provide important theoretical contributions to research on trickle effects, social learning theory and bottom-up approaches to work in organizations.

OB: **Creative Work–family Strategy of Married Couples with Young Kids, and How it May Spillover to Work**

Author: **Shen-Yang Lin**, *Aston Business School*
Author: **Lynda Song**, *Leeds U. Business School*
Author: **Giles Hirst**, *Australian National U.*

Creativity—the generation of new and novel ideas—is probably the most important factor in organizations' survival and success in the current fast-changing environment. Can creativity be as important in the family as it is in the workplace? Due to the COVID-19 pandemic, an increasing number of working parents with young children face ever more blurred work–family boundaries, and dealing with this needs more creative work–family strategies at home. Building on broaden-and-build theory, we propose that a romantic love relationship is a key antecedent of creative work–family strategies, which in turn spill over to influence a parent's work outcomes (engagement, creativity, and performance), and family-supportive coworker behavior (FSCB)/family-supportive supervisor behaviors (FSSB) moderates the impact of romantic love relationship on creative work–family strategies. Results from two-wave data from Prolific in the UK supported our model. In doing so, this research contributes to the creativity literature by showing that creativity is important not only at work but also in the family domain. We also contribute to the understudied family-to-work enrichment literature, and speak to the FSSB and FSCB literature by showing that creative work–family strategies exist not only at work but also at home.

OB: **Longitudinal Association between the Rates of Change in FWE, LMX, and Job Satisfaction**

Author: **Ying Chen**, *U. of Rhode Island*
Author: **Guozhen Zhao**, *Delta State U.*
Author: **Meng Yu Cheng**, *Feng Chia U.*

By integrating the work-home resource model with the leader-member exchange (LMX) theory, we take a change perspective to examine the effects of the change rate in family to work enrichment (FWE) on change rate in job satisfaction through change rate in LMX. Using a longitudinal, multilevel sample of 360 employees in 68 groups, the over-eight-months, three-wave data results reveal that beyond the static relations between FWE, LMX, and job satisfaction consistent with the literature, FWE change rate positively predicts LMX change rate, which, in turn, positively predicts change rate in job satisfaction. Furthermore, we show that LMX differentiation at Time 1 moderates the effect of FWE change rate on LMX change rate over time such that the relation is stronger when Time 1 LMX differentiation is high. Moreover, LMX change rate mediates the interactive effects of FWE change rate and Time 1 LMX differentiation on change rate in job satisfaction over time. These findings emphasize the importance of studying changes in family-work research and provide new insights into the change processes of the effects of FWE change rate on change rates of important work outcomes over time.

OB: **The Double-edged Sword Effect of Performance Pressure on Employees' Work Passion and Family Life (WITHDRAWN)**

Author: **Hantao Ren**, *Faculty of Psychology, Beijing Normal U.*
Author: **Qinyun Zhang**, *Faculty of Psychology, Beijing Normal U.*
Author: **Ruoyu Gao**, *Faculty of Psychology, Beijing Normal U.*
Author: **Nan Zheng**, *Faculty of Psychology, Beijing Normal U.*
Author: **Xiao-Hua Wang**, *Beijing Normal U.*

Drawing on the Work-Home Resource Model, this study proposed a double-edged sword model that reveals the impact of performance pressure on employees' work passion and their family life. The data was collected from 202 employees and their spouses. First, employees' perceived performance pressure is both positively related to their harmonious work passion and obsessive work passion. Second, performance pressure can increase employees' family performance and reduce their family undermining via harmonious work passion, while it can also increase their family undermining via obsessive work passion. Finally, we discuss the moderating effect of pay for performance. High pay for performance enhances the positive relationship between performance pressure and obsessive work passion. Theoretical contributions and practical implications are also discussed.

OB: **The Drawbacks (and Potential Benefits) of Cross-Domain Attention Residue**

Author: **Marcie LePine**, *Arizona State U.*
Author: **Soohyun Yoon**, *Arizona State U.*

Work-from-home has gained significant attention over the past few years and predictions are that it will increase in 2023 (Robinson, 2023). We propose that recent research on attention residue (Leroy, 2009; Newton et al., 2020) and intrusions—or unexpected encounters with another that interrupt one's work (Bush et al., 2022; Jett & George, 2003)—can provide insights into understanding the unique challenges that work-from-home employees encounter. Specifically, we integrate research on attention residue, intrusions, work-family conflict, engagement, and family supportive behaviors using the job demands-resources model (JD-R model; Bakker & Demerouti, 2007) and its extension (Crawford et al., 2010) and boundary theory (Ashforth et al., 2000) to examine how cross-domain attention residue impacts work-family conflict and work engagement, as well as work and family performance. In addition, we examine whether family supportive behaviors buffer the negative effects of cross-domain attention residue on work-family conflict and work and family performance. In a sample of 183 matched participant-partner pairs, we tested and found support for several of our hypotheses. The current study has important implications for organizations and employees who work remotely from home.

In this symposium, we aim to explore the cognition, attitudes, and behaviors of individuals who identify as minority group members about building, maintaining, and utilizing social connections with other minority group members, as well as connections with individuals who identify as majority group members. By digging more into individuals' cognition, attitudes, and behaviors when it comes to networking, we strive to better understand the role of networks in combatting racial and gender inequality from a variety of organizational and social angles.

Money and Work

Session Moderator: **Zhenyu Liao**, *Northeastern U.*

OB: **When Monetary Value Erodes Social Value: Motivations, Rewards, and Occupational Pride of Frontline P**

Author: **Zhenyu Liao**, *Northeastern U.*
Author: **John Dencker**, *Northeastern U.*
Author: **Ying Liu**, -
Author: **Emma Y. Zhao**, *U. of Virginia*

To address challenges posed by social crises, organizations often leverage monetary rewards to mobilize essential frontline workers. However, little is known about how such a reward scheme affects frontline employees. Situated in the healthcare context during the COVID-19 pandemic, our research integrates motivation crowding out theory with appraisal theories of emotions to study how healthcare professionals respond to monetary rewards in exchange for their frontline participation. Results of two field studies that combined objective salary data with survey data showed that when healthcare professionals experienced high prosocial and low extrinsic motivations, large monetary rewards diminished their occupational pride, reducing positive work behaviors after they shifted back to routine work. Our findings derive important implications for strategic policy-making on mobilizing essential labor forces to address socially disruptive events.

OB: **The Impacts of Role Commitment and Pay-for-Performance on Proactive Career Behavior**

Author: **Jie Liu**, *Beijing U. of Posts and Telecommunications*
Author: **Hui Chen**, *Beijing U. of Posts and Telecommunications*
Author: **Yu Wang**, *Beijing U. of Posts and Telecommunications*
Author: **Ning Yang**, *Beijing U. of Posts and Telecommunications*
Author: **Xiao-Hua Wang**, *Beijing Normal U.*

Proactive career behavior is an effective form of career self-management that has positive impacts on individual career development and career success. Drawing on the interactionist perspective and situational strength theory, our study examined the independent and joint effects of role commitment and pay-for-performance on employees' proactive career behavior. Based on data collected from 298 Chinese private enterprise employees at two time points, we found that occupational role commitment, parental role commitment and pay-for-performance were positively related to proactive career behavior. Furthermore, pay-for-performance moderated the relationship between occupational role commitment and proactive career behavior and the relationship between parental role commitment and proactive career behavior, such that the two relationships were stronger when pay-for-performance was low. The implications and limitations of this study are discussed.

OB: **Information and Discrimination in Employer Responses to the Salary History Ban**

Author: **Laura Adler**, *Yale School of Management*

Recent policy efforts to address employment inequality have focused on excluding information that might serve as the basis for discrimination from decision-making processes. However, research shows that reducing information can lead employers to discriminate more broadly, based on prior beliefs about social groups. This paper uses the case of the salary history ban to contribute to the understanding of how incomplete information leads to biased employment decisions. Using a full-cycle method, it addresses, first, whether using salary history in pay-setting disadvantages women; second, how employers respond to a prohibition on salary history information; and, third, how those responses intersect with demographic characteristics to mitigate or entrench inequality. I set the stage using survey data to document gender effects of using salary history in pay-setting. Qualitative analysis of 83 interviews shows that, when salary history is prohibited, employers seek out alternative information, requesting candidates' salary expectations. An experiment with 928 human resources practitioners shows that relying on expectations results in lower offers for job candidates. This penalty is particularly strong for women. The results shed light on the processes that occur when specific information, which might be the basis for discrimination, is prohibited. They also illustrate the double-bind created for women, who experience penalties whether they disclose the prohibited information, salary history, or take advantage of the protections of the new law and share only their expectations.

OB: **Money Cannot Be Green: Performance Incentives, Attention to Money, and Organizational Sustainability**

Author: **Julia D. Hur**, *New York U.*
Author: **Yuan Tian**, *New York U.*
Author: **Linhui Wu**, *U. of Minnesota Carlson School of Management*

Environmental sustainability is one of the most pressing problems of our time, but the progress towards it has remained stagnant. The current work identifies performance incentives as a critical barrier that prevents organizational decision-makers from supporting sustainability initiatives. Across two laboratory experiments (n = 702) and one large-scale panel dataset on executive compensation, corporate annual reports, and firm-level environmental performances (n = 14,126), we show that people whose pay is more contingent on performance are less likely to support the sustainability initiatives of their organization. We also provide evidence for a novel mechanism whereby performance incentives create attentional fixation on money, which further reduces support for organizational sustainability. This effect persists even in the absence of evidence that these initiatives are in fact more costly than their less-sustainable alternatives. Together, our findings suggest that one of the most common types of incentives might be inadvertently undermining the pursuit of one of the most urgent organizational changes.

I'm Too Good for this Job! Understanding the Dynamics of Overqualified Employees

Session Moderator: **Baihe Song**, *Hong Kong U. of Science and Technology*

OB: **Unpacking Interpersonal Dynamics Between Overqualified Employees and Coworkers: The Role of Status**

Author: **Baihe Song**, *Hong Kong U. of Science and Technology*
Author: **Jingjing Ma**, *Hong Kong U. of Science and Technology*

Existing studies propose competing hypotheses about how and why overqualification negatively versus positively impacts the interpersonal interactions between overqualified employees and coworkers. The predications and identified findings thus are inconsistent and contradictory. In this article, we solve this contradiction by developing a theoretical framework to synthesize current overqualification studies into a unifying research picture. In doing so, we incorporate the status framework into the overqualification literature. We suggest that overqualification exerts negative versus positive effects on interpersonal interactions through causing two contrasting types of status discrepancy (i.e., undersupply versus oversupply of status). Specifically, we firstly show how and why overqualification impacts overqualified employees' status expectation. Then, we present how, why, and when overqualification influences coworkers' status affordance towards overqualified employees. Last, we explicate the dynamic processes in which the two types of status discrepancy between status expectation and affordance lead to subsequent interactions that in turn change the magnitude of the original discrepancy, ultimately causing a reciprocal versus a revengeful interaction loop to develop between the two parties. Collectively, this article advances the overqualification literature by unpacking the positive versus negative interpersonal dynamics between overqualified employees and coworkers.

OB: **Different Reactions to Perceived Overqualification: The Role of Age, Organizational Tenure, and Pay**

Author: **Sunghyuck Mah**, *Seoul National U.*
Author: **Chengquan Huang**, *U. of Florida*
Author: **Donghwan Lee**, *Seoul National U.*

Overqualified employees are those with more knowledge, skills, and abilities than what their job requires. The literature has largely assumed homogeneity regarding how perceived overqualification impacts employees at different stages of their individual life (age) and organizational life (organizational tenure), which may lead to misunderstanding about how organizations manage overqualified employees. Drawing on the theories about growth need, we proposed a novel theoretical framework that examines the critical role of growth need unfulfillment in understanding the consequence of perceived overqualification and relevant boundary conditions. Using longitudinal data over three years (from 2017 to 2019) with a large sample of workers ($N = 3,080$), we found that perceived overqualification is associated with growth need unfulfillment, which further led to actual turnover. The effect of perceived overqualification on growth need unfulfillment was stronger for those with shorter organizational tenure but weaker for those with longer organizational tenure. We further examined whether and for whom compensation mitigates the effects of overqualified employees' growth need unfulfillment on their actual turnover. Interestingly, higher pay alleviated this effect only for older workers and those with longer organizational tenure. However, higher pay did not weaken this effect for younger workers and those with shorter organizational tenure, suggesting that firms may consider compensation designs more strategically for overqualified ones. This study helps organizations understand how to manage overqualified employees effectively.

OB: **The Effect of Coworker Relative Overqualification on Employee Reaction from Social Comparison Theory**

Author: **Yanghao Zhu**, *Huazhong U. of Science and Technology*
Author: **Yunpeng Xu**, *Zhongnan U. of Economics and Law*
Author: **Yannan Zhang**, *Southwestern U. of Finance and Economics*

Perceived relative overqualification (PRQ) is a big step forward on the overqualification theme. The only two papers available on PRQ focus on downward comparison (Jahantab et al., 2021; Li et al., 2022), yet this may only consider one side of the coin. Drawing on social comparison theory and upward comparison perspective, this paper examines perceived coworker relative overqualification on their subsequent knowledge behavior and to examine the underlying mechanisms and boundary conditions. Through the 315 employee-coworker dyadic data collected at the three time points in East China, we found that when the cooperative goal interdependence between employee and coworker is high, the perception of coworker's relative overqualification will cause benign envy of employees, which in turn promote employees to engage in knowledge seeking from coworker. However, when the competitive goal interdependence between employee and coworker is high, the perception of coworker's relative overqualification will cause malicious envy of employees, which in turn promote employees to engage in knowledge sabotage towards coworker. The theoretical and practical implications of the findings are discussed.

OB: **How Relationships with Leader Help or Undermine the Management of Overqualified Employees**

Author: **QingHan Liu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Yiyong Zhou**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Haixin Liu**, *Beijing Jiaotong U.*

When feel overqualified for the job, employees exert both beneficial and detrimental subsequent behaviors, implying the importance of boundary conditions in the management of overqualified employees. Drawn from shared reality theory (Hardin & Higgins, 1996), the current research adopts a relational perspective to examine how relationships with leader may shape the functioning of overqualification at workplace. Using a time-lagged data from 259 individuals, the results showed that work-based relationship with leader (i.e., leader-member exchange, LMX) aggravated the negative impacts of overqualification on employee work alienation and trust in leader, while nonwork-based relationship with leader (i.e., supervisor-subordinate guanxi, SSG) alleviated those negative influences. More importantly, shared reality between supervisor and subordinate, defined as the subjective experience of sharing thoughts, feelings, or beliefs in common with a particular interaction partner, mediated the above interaction effects. We discuss theoretical and practical implications for the study of overqualification, the relational approach of leadership, and shared reality.

New Perspectives in Human Resource Management

Session Moderator: **Alexander Emmanuel Eng**, *National U. of Singapore*

OB: **Trickle up Effects of Child Job Search Anxiety on Parent Retirement Intentions**

Author: **Alexander Emmanuel Eng**, *National U. of Singapore*
Author: **Liuxin Yan**, *National U. of Singapore*

Rising costs of living, low wages, and a high youth unemployment rate have caused adult children to be more financially dependent on their parents than ever. Accordingly, we examine the consequences of this dependency on parents' well-being and career decisions. In this paper, we examine whether adult children's (aged 17-25) job search anxiety has crossover effects to influence their parent's financial anxiety, and subsequently retirement intentions. Across three studies, we find that adult children's job search anxiety positively predicts their parent's financial anxiety, using a multi-source (Study 2) research design to establish this crossover effect. We also find that parental financial anxiety mediates the negative relationship between children's job search anxiety and their parent's early retirement intentions. Additionally, we also find that parent's social economic status weakens the positive relationship between children's job search anxiety and parental financial anxiety.

OB: **The 'Room to Share': A Systems Theory Framework for Understanding Mental Health Disclosure at Work**

Author: **Jane O'Reilly**, *Telfer School of Management, U. of Ottawa*
Author: **Silvia Bonaccio**, *Telfer School of Management, U. of Ottawa*
Author: **Laurent Lapierre**, *Telfer School of Management, U. of Ottawa*
Author: **Yanhong Li**, *Odette School of Business, U. of Windsor*

The relevance and impact of mental health conditions (MHCs) in the workplace is becoming an increasingly important topic within management research and practice. Within the growing body of research that seeks to understand how employees navigate living with a MHC is a focus on understanding how and why employees disclose their MHC to colleagues. Previous models of disclosure have applied a concerted 'decision model' perspective, focusing on the cost-benefit analyses employees might apply to deliberately choose to disclose. However, the disclosure process is complex, with scholars recognizing that no 'one size fits all'. To dive deeper into the disclosure process and build theory that extends beyond the existing decision models, we conduct an in-depth qualitative narrative study. We interview 27 employees living with a MHC. Through inductive analyses, we uncover that not all MHC disclosure is premediated or deliberate. Based on the narratives we collect we conceptualize the idea of disclosure opportunities, which are situations that enable employees to share their MHC at work. We also identify four overarching structural elements of the work environment (i.e., time and physical space, bureaucratic structure, social structure, and mental health programs) that interact together to either facilitate or constrain disclosure opportunities. We then develop a systems theory model of MHC disclosure at work that complements the decision models that have thus far predominantly informed research in this area.

OB: **Great Resignation: An Experimental Study of Labour Market Failures in Management Talent Acquisition**

Author: **Amon Chizema**, *Loughborough U.*
Author: **Ganna Pogrebna**, *AI and Cyber Futures Institute, CSU and U. of Sydney Business School*

Using an experimental setting, this paper considers leaders' decision making on labor markets to explain two major post-pandemic problems in managerial talent acquisition: on the one hand, many leaders resign from their positions early after recruitment; on the other hand – many leaders regress to unemployment experiencing difficulty in finding suitable positions. We design an iterated game with two experimental markets: (i) an ambitious job market with relatively high cost of entry and relatively low market capacity as well as (ii) a safe job market with relatively low cost of entry and relatively high market capacity and observe managerial decisions to enter or not to enter these markets. We find that coordination failures cause both problems: managers very rarely coordinate on Nash equilibria, exhibiting either overentry or underentry into experimental labor markets. We demonstrate that market characteristics and observation of previous market success or failure have significant effects on leaders' job market entry decisions. We also show that men are more likely than women to enter ambitious job markets or to diversify their entry strategies by competing on ambitious and safe markets simultaneously. This disparity in leadership ambition constitutes an important factor contributing to the prolonged gender imbalance in both C-suite as well as first-level managerial roles.

OB: **The Impact of Subjective Socioeconomic Status on Job Insecurity and Its Detrimental Outcomes**

Author: **Feiyue Chen**, *School of Business,Sun Yat-sen U.*
Author: **Meishi Liao**, *Sun Yat-Sen U.*
Author: **Xiao Meng**, *School of Business, Sun Yat-sen U.*
Author: **Xue Peng**, *Sun Yat-sen -U.*
Author: **Tian Jiang**, *School of Business, Sun Yat-sen U.*

Drawing on the conservation of resource theory and literature on job insecurity, this study examines how employees' subjective socioeconomic status (SES) negatively affects their depletion and work-to-family conflict (WFC) through the mechanism of job insecurity and the buffering role of nostalgia in weakening the negative impact of job insecurity. In a sample of 45 employees, we collected daily diary data from multiple time points of twenty days and found that subjective SES was negatively associated with job insecurity, which, in turn, decreased depletion and WFC. Moreover, nostalgia mitigated the harmful impact of job insecurity on depletion, whereas the buffering effect on WFC was not significant. Theoretical contributions, practical implications, limitations, and future research directions were discussed.

Motivation and Employee Creativity

Session Moderator: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*

OB: **Stretch Goals and Radical Creative Engagement: Cognitive Flexibility as a Key Contingency**

Author: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*
Author: **YUPING XU**, *Huazhong U. of Science and Technology*
Author: **Ziyi Yu**, *Huazhong U. of Science and Technology*
Author: **Bingqing Wu**, *U. of Wisconsin Parkside*
Author: **ZIjing Wang**, *Huazhong U. of Science and Technology*

Stretch goals are designed to encourage employees to break routines and engage in radical creative behaviors. Nonetheless, employees may not notice or interpret them as such. Moreover, even if they translate stretch goals correctly, they may not engage in radical creative behavior owing to the high probability of failure. This situation thus begs the following question that we seek to answer: Do stretch goals foster employee radical creative engagement, and, if so, how and with which employees? From a sense-making perspective, we propose that, depending on employees' cognitive flexibility, stretch goals influence their willingness to take risks, which, in turn, affects their radical creative engagement. We conducted two studies to test our hypotheses. The results showed that for employees with higher cognitive flexibility, stretch goals had a positive impact on their radical creative engagement through increased willingness to take risks. In contrast, for those with lower cognitive flexibility, stretch goals had a negative influence on willingness to take risks and radical creative engagement. Theoretical contributions and practical implications are discussed.

OB: **The Double-edged Sword Effect of Creativity Failure on Creativity**

Author: **Yuhui Jiang**, *Xi'an Jiaotong U. School of Management*
Author: **Yufan Shang**, *Xi'an Jiaotong U.*
Author: **Malika Richards**, *Pennsylvania State U.*

Why are some individuals able to generate creative products, despite repeated frustrating failures, while others are not? The relationship between creativity failure and individual outcomes is inconsistent in the current research. We use cognitive appraisal theory to explain these contradictory findings. We hypothesize that individual goal orientations play a pivotal role in explaining successful creative outcomes after repeated failed attempts. We construct a mediated moderation model in which cognitive appraisal is a mechanism to uncover the impact of failed attempts on individual creativity. Specifically, we found that individuals with a learning goal orientation will appraise creativity failure as a challenge, which in turn enhances creativity. However, individuals with a performance goal orientation will appraise creativity failure as a threat rather than a challenge, which ends up inhibiting creativity. Our study offers novel insights into the understanding of when, in the face of prior failures, individuals will make further efforts in creative activities.

OB: **Directional Relationship Between Creative Self-Efficacy & Intrinsic Motivation in Affecting Creatity**

Author: **Tingting Chen**, *Lingnan U.*
Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*
Author: **Yaping Gong**, *The Hong Kong U. of Science and Technology*
Author: **Jessica (Yongyi) Liang**, *school of management, Jinan U.*

Ample research has examined creative self-efficacy and intrinsic motivation as important antecedents to employee creativity, but little is known about how the two relate to each other to foster employee creativity. Drawing on social cognitive theory, we propose two theoretical possibilities. First, capturing the critical role of efficacy beliefs in the self-regulation of motivation, we expect that creative self-efficacy can promote intrinsic motivation for creative activities, which in turn boosts employee creativity. Job autonomy further strengthens creative self-efficacy's effect on intrinsic motivation and employee creativity (through intrinsic motivation). Second, by fostering enactive mastery, intrinsic motivation can promote creative self-efficacy, which boosts employee creativity. Leader creative role modelling further amplifies the effect of intrinsic motivation on creative self-efficacy and employee creativity (through creative self-efficacy). We collect cross-lagged data from a sample of 421 dyads of employees and their supervisors. The results largely supported the hypothesized relationships, except the indirect relationship between intrinsic motivation and employee creativity via creative self-efficacy and the moderating effect of leader creative role modelling. We extend organizational creativity literature by untangling the interrelationship between creative self-efficacy and intrinsic motivation in shaping employee creativity.

OB: **Imprisoned Mindset: How and When Employee Bottom-Line Mentality Impedes Employee Creativity**

Author: **Yujie Shi**, *Southwestern U. of Finance and Economics*

Intense competition has driven many organizations to demand their employees to meet the bottom line, such as certain work goals and performance standards. As such, it is unsurprising that many employees embrace a bottom-line mentality (BLM), which refers to one-dimensional thinking revolving around meeting bottom-line outcomes to the exclusion of other considerations. While embracing such mentality may advance particular task assignments, we argue that it prevents employees from holistic thinking. Drawing upon goal shielding theory, we suggest that employees' BLM decreases their construal levels and subsequent creativity. Leader BLM plays an important moderating role to amplify this negative influence. Findings of a multi-wave, multi-source survey support our contentions, cautioning practitioners about implicitly encouraging employee adoption of a BLM. Study limitations and implications for theory, practice, and future research are addressed.

Spotlighting Women's Lived Experiences of Work and Life

Session Moderator: **Mikaila Ortynsky**, *Telfer School of Management, U. of Ottawa*

OB: **Menstruation's Effects on Work: A Resource Perspective**

Author: **Mikaila Ortynsky**, *Telfer School of Management, U. of Ottawa*
Author: **Alyson Byrne**, *Memorial U. of Newfoundland*
Author: **Anika Cloutier**, *Rowe School of Business, Dalhousie U.*
Author: **Erica Carleton**, *U. of Saskatchewan*

How menstruation affects individual work outcomes is not well understood. Given that menstruation presents a variety of physical, emotional, and behavioral symptoms, it is important to understand how this bodily process influences worker behaviors and respective work outcomes. The purpose of this study is to examine how menstruation affects women's daily work experiences, predicting that, via the Conservation of Resources theory, women would be more likely to be depleted when menstruating, thus increasing their work withdrawal and decreasing their levels of job satisfaction. We predict that these relationships would be mediated by self-control and affect. Using experience sampling methodology with 96 participants over 30 consecutive days (daily time-points=2650), results indicate that when women experience menstrual bleeding, they experience increased work withdrawal via decreased self-control and decreased job satisfaction via negative affect. The findings of this research speak to the influence of a monthly bodily process nearly half the workforce faces each month. Practical and theoretical implications are discussed.

OB: **The Unique Benefits of Maternity Leave on Mothers' Social Identities at Work**

Author: **Natalie Lynn Croitoru**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Jessica Siegel Christian**, *U. of North Carolina, Chapel Hill*
Author: **Matthew Pearsall**, *U. of North Carolina, Chapel Hill*

Researchers have highlighted the numerous challenges of pregnancy and postpartum for women at work, demonstrating mostly negative effects of taking maternity leave on women's work outcomes and experiences at work. Yet, we argue that the experience of taking maternity leave also has important and unique benefits for a woman's perceived status within her organization and work relationships, demonstrating that she is valued enough to be able to take needed time away from work to care for family and thereby reaffirming her work identity. We rely on social identity theory (Tajfel, 1981; Tajfel & Turner, 1985) and take a person-centered approach to understand the benefits of maternity leave for women's social identities at work upon reentry. We investigate how social identity outcomes—status and quality of relationships with coworkers and supervisors—are strengthened by maternity leave experiences (as compared to employees who have not taken leave). We also examine how the degree to which new mothers are kept informed by their organization and keep in touch with coworkers and supervisors during their leave further strengthens these positive effects of maternity leave. Empirical results from a field study of employees recently returned from leave uncover the unique benefits of maternity leave.

OB: **How Higher Intra-household Status Differentially Affects Job Satisfaction for Women**

Author: **Pooja Mishra**, *Indian School of Business*
Author: **Subhasree Basak**, *Indian School of Business*
Author: **Hirakjyoti Basak**, *Indian School of Business*

We posit that attaining higher intra-household status, i.e., headship reduces job satisfaction among married women. The proposition draws upon the social role theory and own gender referent hypothesis to explain the reason for dissatisfaction with the job. We find that this adverse effect becomes insignificant after 3-5 years from the time of becoming head. For the empirical evidence, we run two studies. In Study 1 (N=15,890) we use a cross-sectional survey of married women who are in full-time jobs in the US and find that job satisfaction decreases when they become household heads. Study 2 (N=79,422) supports the result using a longitudinal survey in the UK. Since for the longitudinal survey, the same individuals were interviewed over the years, we could track job satisfaction in different years under different conditions. Using that data, we perform an event study analysis to test temporal persistence of the negative effect on job satisfaction after becoming the head. We find that this negative effect dissipates after 3-5 years from the time of becoming head. While previous works recognized factors within the organization affecting job satisfaction, the current study suggests that household-level conditions can also shape women's attitude toward work.

OB: **How Women Benefit from Being Prosocial: The Role of Advice Networks and Leadership Emergence**

Author: **Hanho Lee**, *Ohio State U.*
Author: **Jia Hu**, *Ohio State U.*
Author: **Pengcheng Zhang**, *School of Management, Huazhong U. of Science and Technology*

This paper explores how prosocial motivation and gender have interactive effects on task performance and voice behaviors through advice network centrality and leadership emergence. Across two studies (i.e., a three-wave field study and an experiment), we find that prosocial motivation has positive impacts on both task performance and voice, which were serially mediated via advice network centrality and leadership emergence. Moreover, these relationships are conditional on the gender of individuals, where women are more benefited than are men in terms of its outcomes. This research extends our understanding of the outcomes of prosocial motivation by illustrating how it affects one's place in his or her groups, and whether he or she can benefits themselves and others. Overall, the findings of the research shed light on beneficial aspects and a boundary condition under which prosocial motivation could be rewarded at work, which may inform on how to use prosocial motivation to their best interests for not only individuals but also organizations.

The Role of Leadership in Creativity and Innovation

Session Moderator: **Yuming Wang**, *School of Economics & Management, Tongji U.*

OB: **Proving My Creativity: When and Why Leader's Idea Rejection Leads to Employee's Creative Deviance**

Author: **Yuming Wang**, *School of Economics & Management, Tongji U.*
Author: **Jinlian Luo**, *Tongji U.*
Author: **Wenan Hu**, *Shandong U.*
Author: **Jing Zhong**, *Tongji U.*

Examples in practice that employees engaged in creative deviance after their ideas have been rejected by leaders are not rare, whereas it is naive to assume that leader's idea rejection will lead to employee's creative deviance for every employee. In the current research, we invoke identity theory to disentangle when and why will leader's idea rejection lead to employee's creative deviance. Specifically, we posit that employees with high creative role identity will experience greater creative identity threat when encountering leader's idea rejection, as idea rejection transmits feedback that inconsistent with their identity expectations. Furthermore, the senses of threat will prompt them to reconfirm their threatened identity by endorsing creative deviance, as this means of creative activity can satisfy both sides, namely reconfirming one's identity and avoiding going against leaders immediately. Empirical Results from a scenario-based experiment and a three-wave time-lagged survey supported our predictions. Theoretical and practical implications are then discussed.

OB: **Idea Attributes Matter! Understanding Idea Implementation from the Supervisor Perspective**

Author: **Mingxuan Wang**, *Chongqing U.*
Author: **Xiaoya Wen**, *Chongqing U.*
Author: **Yiwen Tuo**, *Chongqing U.*
Author: **Yong Zhang**, *Chongqing U.*

Although previous research has highlighted the pivotal role of supervisors in innovation, little is known about how supervisors influence the implementation of their subordinates' creative ideas, especially when facing alternatives. Drawing on the work motivation model of expectancy theory, this study examined the linkages from idea attributes, namely, novelty and usefulness, to idea implementation and the moderating roles of supervisors' Zhong-Yong thinking and uncertainty avoidance. Time-lagged data from 365 employee-supervisor dyads showed that (1) the novelty of an idea was negatively related to its implementation, whereas the usefulness of an idea was positively related to its implementation; (2) supervisors' Zhong-Yong thinking strengthened the negative relationship between idea novelty and idea implementation and the positive relationship between idea usefulness and idea implementation; and (3) supervisors' uncertainty avoidance augmented the negative relationship between idea novelty and idea implementation. The implications for innovation management are discussed.

OB: **A Daily Diary Investigation of the Impact of Leaders' Recognition on Innovative Work Behavior**

Author: **Wilfred Van Den Brand**, *The Open U., Netherlands*
Author: **Irina Nikolova**, *Maastricht U., School of Business & Economics*
Author: **Marjolein C.J. Caniels**, *The Open U., Netherlands*

Building on affective events theory and broaden and build theory, we examine the indirect effect of daily leaders' recognition behavior on daily innovative work behavior (IWB, measured with idea generation, idea promotion, and idea application), via daily positive affect. In addition, we tap into the work conditions that emerged after the COVID-19 outbreak, by investigating the moderating role of daily work-related isolation. To test the hypotheses, a diary study was conducted. Data was collected from 39 Dutch employees who completed a daily questionnaire during ten consecutive working days, delivering 231 daily observations. Results largely supported our hypothesis, suggesting an indirect effect of daily leaders' recognition on daily innovative work behavior through daily positive affect for two of the three dimensions (i.e., for idea promotion and idea application, but not for idea generation). In addition, daily work-related isolation moderated the relationship between daily positive affect and daily idea promotion and daily idea application. Moreover, the indirect positive effect of daily leaders' recognition on both daily idea promotion and daily idea application through daily positive affect was only significant for the low levels of daily isolation. Theoretical and practical implications are discussed.

OB: **To Err is Human: Error Reporting Boosts Social Perceptions**

Author: **Bin Ling**, *Hohai U.*

Prior work reported that individuals are reluctant to report their errors to leaders because they fear negative evaluation. We found that this fear is misplaced. We proposed that employee error reporting increases positive social perceptions. In this article, we rely on the broaden and build theory to investigate how employee error reporting influences social perceptions and use error management theory to explore under what conditions error reporting influences social perceptions. In five experiments and one survey study (Ntotal = 1247), our findings demonstrate that leaders perceive those who report errors as more competent and warmer than those who do not. Leaders' positive affect and positivity ratio act as intervening mechanisms to partially explain why employee error reporting positively relates to perceived competence and warmth. We also found that error management climate (EMC) moderates the error reporting–social perception relationship; leaders perceive those who report errors as more competent and warmer under high EMC than under low EMC. This research suggests that error reporting does not lead to negative evaluations of employees, but rather that leaders promote error reporting among their employees and give positive evaluations.

Politics and Organizational Behavior

Session Moderator: **Benjamin Korman**, *U. of Konstanz*

OB: **Political Context and Immigrants' Work-Related Performance Errors: Insights from the NBA**

Author: **Benjamin Korman**, *U. of Konstanz*

International migration has been increasing for decades, bringing with it rising regional support for far-right political parties. Understanding how regional far-right political support affects the immigrants working in these regions is therefore vital for executives and organizations as a whole. Integrating political science research at the macro-level with stereotype threat theory at the individual level, we argue that regional far-right political support makes negative immigrant stereotypes salient, increasing the number of work-related performance errors conducted by immigrants while reducing those by natives. Using objective field data from a professional sports context, we demonstrate how subordinates' immigrant status interacts with the political context in which they reside to predict their frequency of performance errors.

OB: **The Cost of Not Acting Out: A Nonlinear Approach to Organizational Politics and Job Satisfaction**

Author: **Swati Tripathi**, *International Management Institute New Delhi*

We employ benevolent political will as a motivation that affects job satisfaction positively up to a certain level after which we begin to observe negative effects. Drawing upon the too-much-of-a-good-thing effect and self-determination meta-theory, we argue that employees who do not engage in political behavior often experience the exhausting effect of possessing benevolent political will, and their job satisfaction levels take a hit. However, employees who do use non-sanctioned political tactics frequently are able to thwart the too-much-of-a-good-thing effect and experience better job satisfaction which has been explained using self-determination theory. The present study examines the restricted nonlinearity perspective of the relationship between benevolent political will and job satisfaction which is dependent upon the frequency of nonsanctioned political tactics used by employees. Data analyses of a sample of 356 bureaucratic employees done using SmartPLS 3 test the main and quadratic effects of benevolent political will and the moderating effects of nonsanctioned political tactics with job satisfaction as the dependent variable. We probed the interactions using the PROCESS macro. Post analysis, we observed an inverted U-shaped graph between benevolent political will and job satisfaction. Employees who do not engage in politics experience low job satisfaction at low and high levels of benevolent political will. This relationship takes a linear and positive form for employees who engage in politicking. Thus, our hypotheses are supported. This study is one of the first to explore the restricted non-linear nature of the relationship between benevolent political will and job satisfaction, calling attention to the intrinsic, agentic nature of the political motivations of employees. It also expands our understanding of non-sanctioned political tactics as a boundary condition and its interaction with intrinsic motivations and work outcomes. The study also implicitly explores the too-much-of-a-good-thing effect and intrinsic mechanisms that may thwart it.

OB: **How Political Context Affects Immigrants' Social Contact Dynamics and Mental Health at Work**

Author: **Benjamin Korman**, *U. of Konstanz*
Author: **Florian Kunze**, *U. of Konstanz*
Author: **Sebastian Koos**, *U. of Konstanz*

International migration has been rising across the globe for decades, making the integration of immigrants into host societies a central challenge for many countries. Although the successful labor market integration of immigrants is considered a key boon to their economic independence and broader social integration, rising political polarization in many western societies with increasing far-right political support might put integration efforts at risk. Challenging core assumptions of intergroup contact theory (Pettigrew, 1998), we propose that strong community support for far-right political parties affects how immigrants are treated by their coworkers when entering a new workplace, thus undermining the potential benefits of social contact between immigrants and natives. Specifically, we propose that immigrants perceive negative social contact with their direct colleagues that increases over time when employed by a company located in a region with high far-right political support. Being confronted with a growing perception of negative contact will then take its toll on employees' mental health, assessed by their emotional exhaustion at a later time point. We test and find support for our theoretical model in a unique dataset matching 481 trainees in Germany (tracked from day one of their traineeships over a period of 13 weeks) with data from the 2021 German federal election.

OB: **The Role of Political Skill in Advancing Teamwork Skill Development in Temporary Teams**

Author: **Olli-Pekka Kauppila**, *NEOMA Business School*
Author: **Katja Einola**, *Stockholm School of Economics*
Author: **Christina Butler**, *Kingston U.*

As temporary teams have become common practice in knowledge-intensive work settings, the skills of individuals to operate effectively in any teams is increasingly important for both individual and team performance. While learning-by-doing is an obvious way of learning skills for teamwork, we know very little about factors facilitating these skill developments. We integrate insights from political perspectives on organizations into the teamwork literature to suggest that by helping to make sense of socially complex dynamics and to reflect on their experiences, political skill is a key driver of teamwork skill development. In addition, we theorize that politically skilled individuals have higher capacity to turn common teamwork-related challenges—namely, team task conflict and a lack of team leader direction—into learning experiences which they take with them to their next team. The article presents two studies to test our predictions. Study 1 analyzed a sample of 259 business school students in 77 project teams to investigate our core hypothesis that political skill advances the development of teamwork skills. Study 2 employed nested data collected from 110 junior investment bankers and their experiences in 434 teamwork projects to retest our core hypothesis with individuals operating across multiple team-based projects and extend our investigation to the moderating effects of political skill. We contribute to the present understanding of teamwork, individual learning, and political skill to show that highly politically skilled individuals are better able to turn temporary teams into learning experiences.

Bouncing Back: Understanding the Power of Resilience in Organizations

Session Moderator: **Fizza Kanwal**, *U. of North Texas*

OB: **Lending a Hand: An Application of Social Network Analysis on Employee Resilience in Organizations**

Author: **Fizza Kanwal**, *U. of North Texas*
Author: **Virginie Lopez Kidwell**, *U. of North Texas*

Management literature on employee resilience argues that employees need emotional and cognitive resources from within and outside the organizations for being resilient to adversity at work. We integrate this view with the social network perspective to explain that employees can access more emotional resources if they are embedded in a closed network structure, however, being a part of an open network structure enables access to more cognitive resources. Thus, we investigate the mediation effect of the access to these resources between social network structures and employee resilience. We also examine the moderating roles of connection homophily and heterogeneity for accessing the emotional and cognitive resources while being a part of closed or open network structure respectively. Data was collected from 240 employees about their personal networks using name generator, name interpreter and name inter-rater questions, which were used to calculate variables measuring closed and open networks in addition to connection homophily and heterogeneity through ENET software. Regression analysis and PROCESS Macro were used to test the hypotheses, and the results provided some of the pioneering empirical evidence about the predictive value of social network structures for employee resilience. The theoretical implication and limitations of this study have also been discussed.

OB: **Resilience Developed as a Result of Bricolage: The Prism of the Social Information Processing Theory**

Author: **Ying-Jung Yeh**, *National Taiwan U. of Science and Technology*
Author: **Han-Yu Lee**, *National Taiwan U. of Science and Technology*

This study introduces the emerging concept of bricolage into the domain of organizational behavior and examines it in relation to the important workplace competence of psychological resilience. Most research on psychological resilience has emphasized promoting resilience via positive resources and traits. This study draws on the social information processing (SIP) theory to suggest that resource constraints may also encourage employees to engage in bricolage at work, thereby building psychological resilience and producing the effects of negative emotional control at work. Moreover, power distance in the team is considered key social information in the organization to investigate the moderating relationship between this cultural variable and psychological resilience. Data were collected from an aggregate of 63 teams of registered professional nurses, with approximately 323 valid questionnaires. The results indicated that performing bricolage at work under resource constraints helped the employees build their psychological resilience and further control negative emotions. Resultantly, the power distance culture in the team positively moderated the relationship between bricolage and psychological resilience. Therefore, the theoretical model of this study confirms that through the lens of the SIP theory, resource limitation may also represent a way to promote the generation of resilience.

OB: **Power to Push Through? A Resilience Perspective on Disability Relationships and Leader Performance**

Author: **Terrance L. Boyd**, *Louisiana State U.*

Despite the growing research on the workplace impacts of individuals with disabilities, the outcomes of providing care or having a relationship with these persons with a disability have been relatively unexplored. This lack of research is concerning given that informal caregivers make up a large portion of the workforce and that the number is expected to rapidly grow. Importantly, the work that has considered these impacts has been theoretically limited, largely taking a deficit-based perspective to consider the harmful outcomes of this disability relationship. In contrast, we conceptualize this relationship as a potential source of resilience in employees, affecting their performance and allowing them to be better organizational leaders. We present three studies that constructively replicate results across design and sample type (multi-rater, time-lagged [Study 1]; unit-level, time-lagged [Study 2]; & longitudinal [Study 3]). Results consistently show that a disability relationship is positively associated with a leader’s performance through the leader’s psychological resilience. Overall, our results challenge the deficit-based view of disability relationships found in the literature, suggesting that caregiving for a person with a disability may be a key source of strength for leaders. Implications for the disability, caregiving, and stress literatures are discussed.

OB: **Team Structure for Tough Cookies: Team Resilience in Creative Teams**

Author: **Aleksandra Klein**, *Vlerick Business School*

With the turbulent nature of the environment surrounding organizations today and prevalence of teams in contemporary project-based organizational structures, ensuring team resilience becomes necessary for organizations and their employees to overcome adversity and ultimately succeed. Existing research shows that team design choices, including team structure, influences teamwork and team output in many ways. Yet, little is known on how team structure is associated with team resilience Using data on 101 creative project-based teams working in European advertising agencies, this study investigates how team structural control mechanisms of centralization and formalization are associated with team resilience, depending on the level of stability in team membership. Given the importance of creative output for creative project-based teams, I examine the effect of team resilience on team creativity and its mediating role in the relationship between team structural controls and team creativity.

Doing the Right Thing: Exploring the Bright Side of Ethical Leadership

Session Moderator: **Yu-Fang Yvonne Yen**, *National Quemoy U.*

OB: **Ethical Leadership and Employee Turnover Intention: Exploring Multiple Mediation Mechanisms**

Author: **Yu-Fang Yvonne Yen**, *National Quemoy U.*
Author: **Hsing-Kuo Wang**, *Department of Business Administration, National Quemoy U.*

The current study adopts the social exchange perspective to propose a conceptual model and examine how ethical leadership influences employee turnover via affect-based trust and affective commitment. We used a survey-based methodology to collect data from 254 employees of service firms in Taiwan and hierarchical regression to examine the hypotheses model. The results reveal that ethical leadership has a negative effect on employee turnover intention. Both affect-based trust and affective commitment fully mediate the ethical leadership-employee turnover intention. Previous studies have emphasized the direct influence of ethical leadership on employee turnover intention; however, no clear explanations have been provided explaining its influence on employee turnover intention. We advance our understanding of why ethical leadership enhances and reduces employee turnover intention and the means by which this occurs.

OB: **3-way Interaction Between Ethical Leadership, Workplace Uncertainty, and the Need for Status on OCB**

Author: **Jinhee Kim**, *Chonnam National U.*
Author: **Soojin Lee**, *Chonnam National U.*
Author: **Gukdo Byun**, *Chungbuk National U. South Korea*
Author: **Seokhwa Yun**, *Seoul National U.*

Drawing upon the substitutes for leadership theory, we examined the three-way interaction effect between ethical leadership, workplace uncertainty, and employee need for status on organizational citizenship behavior (OCB). The findings from a two-wave study suggest that workplace uncertainty and employee need for status jointly moderate the effect of ethical leadership on increasing OCB. Specifically, the results show that the influence of ethical leadership can weaken or be negative in promoting OCB 1) for employees with low needs for status in situations of low uncertainty and 2) for employees with high needs for status in situations of high uncertainty. The results of our study indicate that successful implementation of ethical leadership for OCB may depend on circumstances being tied not to a single determinant but rather by the conjunction of organizational context and employee characteristics.

OB: **Ethical Leadership During a Pandemic: Two Sample Study of Leader Effectiveness and Business Outcomes**

Author: **Kate Marie McCombs**, *Brock School of Business, Samford U.*
Author: **Ethlyn Anne Williams**, *Florida Atlantic U.*
Author: **Rajnandini Pillai**, *California State U., San Marcos*
Author: **Kevin B. Lowe**, *U. Of Sydney*

This research examines the influence of executive-level ethical leadership on ratings of crisis leader effectiveness and business-related outcomes during the COVID-19 crisis. We examined results when comparing distal and proximal leadership. We conducted two studies; one assessing distal executive-level leadership perceptions (voter perceptions about the leadership of President Biden) and examined its influence on evaluations of improved business outcomes reported during the COVID-19 crisis and one assessing proximal executive level leadership (employee perceptions of CEO leadership) and examined its influence on evaluations of improved firm-specific outcomes reported during the COVID-19 crisis. Our findings confirmed that President Biden and CEOs' ethical leadership positively predicted crisis leader effectiveness and improved business-related outcomes. Further, the results yielded the expected indirect effect of the ethical leadership of President Biden and CEOs on business-related outcomes (mediated by crisis leader effectiveness). Because a crisis intensifies decision making and the impact of leaders, research that extends our understanding of the influence of ethical leadership for ratings of crisis leader effectiveness and their implications for evaluations of business-related outcomes is important for examining executive-level leadership.

OB: **Ethical Leadership, Signaling Theory and Innovative Work Behavior: A Moderated Mediation Model**

Author: **Roopak Kumar Gupta**, *IIM Kozhikode*

Despite the knowledge that ethical leadership has beneficial effects on follower-level innovative work behavior (IWB), the individual-level psychological mechanisms underlying this linkage and the boundary conditions remain to be explored. Building signaling theory, this study examines whether the link between ethical leadership and IWB is mediated by individuals' role breadth self-efficacy (RBSE) and prosocial motivation. The study further examines the role of followers' innovation-specific perceived supervisor support (PSS) in moderating the indirect effects of ethical leadership on IWB through RBSE and prosocial motivation. I test my hypotheses across two studies; using multi-phase survey data in a range of industries (Study 1), and a time-lagged multi-source supervisor-follower objective field investigation in a different manufacturing organization (Study 2). Largely consistent with the study hypotheses, regression analysis of the data collected from both studies demonstrated that ethical leadership was positively and significantly related to followers' IWB and this relationship was mediated by RBSE and prosocial motivation. Additionally, the study analysis found moderated effects of PSS on the twin mediating mechanism, influencing their strength to transmit ethical leadership effects on IWB. By explicating these insights of how and when ethical leadership facilitates followers' IWB, the study assists organizations and managers in designing and enabling followers' IWB outcomes. Implications are discussed for theory and practice.

Take It From the Top: New Perspectives on Top Management Teams

Session Moderator: **Yongheng Yao**, *Wilfrid Laurier U.*

OB: **On a Refined Theory of Racial Diversity Congruence: An Extension to Richard et al.'s (2021) Study**

Author: **Yongheng Yao**, *Wilfrid Laurier U.*
Author: **Zhenzhong Ma**, *U. of Windsor*

Richard et al.'s (2021) recent AMJ article aims to demonstrate that matching levels of racial diversity in upper management and lower management (i.e., racial diversity congruence) leads to optimal firm productivity. In this study, we point out several flaws in their study. For instance, it is premature to theorize a match between upper management racial diversity (UMRD) and lower management racial diversity (LMRD) as the locus of optimal firm productivity. Their empirical testing is also flawed. We then integrate the upper echelons theory and the holistic perspective of congruence to build a refined theory of racial diversity congruence. Specifically, we theorize that a slight mismatch between UMRD and LMRD with UMRD slightly exceeding (leading) LMRD leads to optimal firm productivity. We also propose the boundary condition of this congruence effect. We test and provide empirical support for our refined theory using Richard et al.'s (2021) published data. Our study not only offers a refined way to expand the upper echelons theory, but also calls for revising or abandoning many conclusions drawn in Richard et al.'s study, thereby improving the theoretical and practical implications of their study.

OB: **Digital Empowerment: Top Management's Ambivalent Effects Related to Expertise and Heterogeneity**

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Florian Schmitt**, *U. of Bayreuth*
Author: **Till Marius Gantert**, *U. of Bayreuth*

Digitalization and the digital transformation of firms demands motivated and knowledgeable employees for coping with the changes and for providing inputs to further adaptations and developments of new digital solutions. First, the qualitative study of our multi-method study informs about the concept of digital empowerment. Our six identified components of the digital empowerment bridge structural and psychological empowerment linking it to digital matters. Our interviews point towards influences from functional heterogeneity of the top management team and the expertise of the CEO. In testing the relationship, our quantitative study shows that digital empowerment proliferates under more heterogeneity of the firm's top management team. Counterintuitively, our findings reveal that digital empowerment declines when the CEO has greater digital expertise.

OB: **Sweating It Out Pays Off: An Evolutionary Perspective on CEO Compensation Based on Physical Activity**

Author: **Maria Kakarika**, *Durham U. Business School*
Author: **Breeda Comyns**, *Kedge Business School*

We integrate the CEO compensation literature with research on evolutionary leadership and cognitive biases to examine whether and how CEOs' physical activity influences their pay. We first hypothesize a direct effect of CEO physical activity on CEO compensation, arguing that physically active CEOs may be perceived as more formidable and leader-like due to evolved implicit bias concerning who is categorized as a leader. We find support for this hypothesis in a field study (Study 1), with a male sample from HBR best CEOs ranked in 2015-2017, and a unique measure of CEO physical activity derived from secondary data. In a follow-up experimental study (Study 2) with an original manipulation of CEO physical activity, we demonstrate that physical activity results in leader prototypicality, thereby encouraging decision-makers to grant CEOs higher pay. Our findings confirm the results of Study 1 and address issues of reverse causality; they also uncover an important psychological mediating mechanism. We thus offer novel empirical evidence and insight into physical activity as an explanatory factor for executive compensation.

OB: **TMT Power Concentration and Firm Innovation—The Mediating Role of Managerial Myopia**

Author: **Xuejiao Zheng**, -
Author: **Xiumei Zhu**, *Chinese Academy of Sciences*

Upper echelon theory has suggested that TMT power concentration has important effects on firm innovation. But there is a dearth of mechanism discussion in the existing literature. The present research posits that managerial myopia may serve as a mediator linking TMT power concentration to firm innovation. Moreover, TMT formal power concentration has a stronger negative correlation with managerial myopia rather than informal power concentration. Analysis of 5236 firm-year observations from publicly listed Chinese firms during the period of 2010-2018 yields results that support our hypotheses. The research contributes to the literature on TMT power structure and upper echelons theory and provides several implicate insights for firms' innovation.

Spread the Wealth: New Perspectives on Shared Leadership

Session Moderator: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*

OB: **Getting Fit (with tasks and teams): A Team-level Investigation of Fit and Task Allocation Preference**

Author: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*

Although several fit theories describe the intricacies of aligning preferences with tasks to improve team performance, extant research has not fully explained team-level fit and its associated mechanisms, such as how team performance is impacted by the fit between (1) the aggregated composition of each team member's task allocation preference and (2) how the team is allocated tasks. Further, it is unclear how this relationship may be mediated by shared leadership. To redress this, I adopt an abductive reasoning approach to propose and test a shift of the individual-level person-task fit theory to the team level (i.e., team-task fit) via an integration of fit theory with team preferences literature, which allows us to better understand how the composition of team task allocation preferences and team task allocation fit contributes to team performance. In doing so, a multi-method package of studies revealed that in a qualitative study (Study 1), the fit between a team's task allocation preference composition and the way the team is allocated tasks increases team performance, and that this relationship is mediated by shared leadership. Then, a dynamic team-level project study (Study 2) empirically supported the qualitatively-generated model. Finally, a discussion explicates how these contributions can be applied by managers and working professionals to better allocate tasks to teams and work in teams of mixed compositions. As these theoretical, empirical, and practical contributions highlight, the findings are robust across research settings and support extending fit theory to the team level of analysis.

OB: **The Leadership Signatures of Effective Multiteam Systems**

Author: **Megan Alexis Chan**, *Northwestern U.*
Author: **Noshir Contractor**, *Northwestern U.*

Multiteam systems (MTSs), systems of interdependent teams, tackle complex organizational problems requiring input from multiple teams. The complexity of MTSs, originating from boundary issues to the disruptive effects of a large system, require effective leadership systems. Many MTSs lack formal leadership structures and rely on shared and coordinated leadership from individuals embedded in different teams. This study examines the social organization of leadership and its effects on individual and team performance. Leadership networks were investigated during a laboratory experiment conducted in a NASA space analog involving 120 individuals working in twenty-five 4-component team MTSs. Leadership networks were assessed after a 60-minute simulation, and performance indicators were derived based on a collective MTS decision and individual, team, and MTS outcomes. ALAAMs (Auto-Logistic Actor Attribute Models) were used to understand how leadership organizing signatures affect performance. Findings indicate that popularity and transitive leadership structures positively predicted individual performance. Followership activity and engaging in transitive structures negatively affected team performance. This study provides four contributions: 1) theorizing structural signatures characterizing collective leadership, 2) mapping those signatures onto performance, 3) expanding the conceptualization of MTS performance to incorporate interdependence, and 4) applying advances in network analysis to understand the effects of leadership organization.

OB: **The Effect of Vertical Leader's Multi-Source Power on Shared Leadership**

Author: **Zhigang Song**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Qinxuan Gu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Shared leadership plays an increasingly important role in knowledge-based teamwork effectiveness, yet existing research exploring the antecedents of shared leadership is still in its infancy. Drawing on power approach-inhibition theory, this study explores how position and expert power of vertical leader impact members' shared leadership. With multi-source data collected from 944 employees in 164 teams from 14 companies, this study found that the interaction of team vertical leader position power and expert power was positively related to their empowering behaviors, which in turn were positively associated with shared leadership. Moreover, team power distance orientation mitigated the positive relationship between team vertical leader empowering behaviors and shared leadership. This paper makes important theoretical contributions to current leadership literature and power theories, and also provides practical implications.

OB: **The Curvilinear Relationship Between Shared Leadership and Team Creativity in Time-constrained Teams**

Author: **Zhipeng Zhang**, *China U. of Labor Relations*
Author: **Chao Liu**, *National School of Development at Peking U.*
Author: **Runna Wang**, *Beijing Institute of Fashion Technology*

In practice, time-constrained teams are increasingly commonplace to accomplish specific tasks. Although it is widely assumed that shared leadership is beneficial to team creativity, the potential outcomes of shared leadership in time-constrained teams may be uncertain. Drawing on social information processing theory, we reason that shared leadership has an inverted-U-shaped relationship with team creativity, such that moderate shared leadership can foster team creativity via team voice in time-constrained teams. Besides, we propose that team voice also has an inverted-U-shaped effect on team creativity in time-constrained teams, which is moderated by temporal leadership. To examine our predictions, we collected data from 83 leaders and their 560 subordinates in the business simulation courses. Across our studies, our data support the inverted-U-shaped relationship between shared leadership and team creativity, as well as team voice and team creativity. Moreover, our data reveal that the curvilinear effect of team voice on team creativity is moderated by temporal leadership in time-constrained teams.

Organizational Interactions: An Integration of the Dialogues on Vertical and Horizontal Distance

Presenter: **Nicholas Hays**, *Michigan State U.*
Presenter: **Grace Cormier**, *Harvard Business School*
Presenter: **Soojin Oh**, *Pennsylvania State U.*
Organizer: **Laurel Detert**, *U. of Michigan, Ross School of Business*
Presenter: **Sarah Doyle**, *U. of Arizona*
Discussant: **Nancy Rothbard**, *U. of Pennsylvania*
Organizer: **Lindred L. Greer**, *U. of Michigan, Ross School of Business*

From interpersonal interactions to organizational structures, the most fundamental mapping of human relationships can be understood by arraying relationships based on their relative vertical and horizontal distances (Abele et al., 2021). However, research lines on vertical distance (i.e., organizational hierarchy) and horizontal distance (ie., interpersonal relationships) have largely developed separately from one another. In this symposium, we discuss what can be gained by studying vertical and horizontal dimensions of workplace relationships in tandem. We bring together top scholars across the field that study vertical distance, horizontal distance, and their combination. Across four empirical papers and one review paper, we explore the nuances in research on vertical distance (status, hierarchy, etc.), the double-edged sword of horizontally close workplace relationships (friendships, etc.), and what new research suggests about these topics in combination. Our discussant, Nancy Rothbard, a leading scholar at the intersection of horizontal distance (e.g., workplace identities) and vertical distance (e.g., social evaluations), will close the session with a discussion with the audience about how future research can better integrate both horizontal and vertical distance into the study of social relationships at work.

Participant: **Jeffrey Sanchez-Burks**, *U. of Michigan*

Emotions have important implications for workplace outcomes. Equally important is how people respond to the expressed emotions of others. However, key questions remain regarding the antecedents and consequences of such emotion responses at work. In this symposium, we highlight the different perspectives on the causes and consequences of responding to the emotions of others in the workplace. The five papers presented cover the antecedents and work-related consequences of a broad range of emotion-response strategies (e.g., collective emotion regulation, emotion validation) and represent different theoretical and empirical perspectives (e.g., employing both laboratory and field studies). Our discussant, Gerben van Kleef, a leading scholar in the study of emotions in organizations, will close our symposium by synthesizing the presented papers and facilitating a discussion regarding the future directions for this area of research. Through this symposium, we aim to generate new insights about how scholars can continue to study and improve the research on responding to the emotions of others in the workplace.

Panelist: **Keimei Sugiyama**, *U. of wisconsin milwaukee*

As organizations have focused on reducing the symptoms of harm evoked by gendered racism of women of color (e.g., Asian, Black, or Latin) in the workplace, healing-centered practices to cultivate their mental health, well-being, and career advancement have been overlooked. Traditional management research on women of color in the workplace has generally centered on the consequences of being a woman of color. Accordingly, gendered racism in organizations can invoke psychological harm for women of color, often resulting in symptoms of posttraumatic stress disorder experienced at greater rates than their White counterparts and career impediments. Trauma-informed organizational approaches have recently emerged to reduce practices that may re-traumatize marginalized employees. However, moving from trauma-informed to healing-centered can highlight the systemic barriers that oppress women of color as well as the organizational capacity to promote wholeness and well-being. In this symposium, we aim to devise a framework of multilevel practices to not only redress oppressive systems and behaviors toward women of color, but also to enable their overall thriving and growth.

For many employees, the Covid-19 pandemic and the period following it has become a moment to redefine where and how to work. Following the pandemic, employees across industries in the United States are placing an increased importance on time flexibility and autonomy and leaders are looking for ways to implement flexible work strategies that create equitable opportunities for all employees. This renewed focus on flexibility leads us to question whether policies that existed before the pandemic are still effective today (e.g. flexible work policies) and whether policies that were deemed to be harmful in the past are effective now (e.g., telecommuting). To address these critical questions, this symposium looks at how time and autonomy-related rewards, policies, and norms shape the employee experience. Specifically, across five talks, we explore the psychological factors that influence whether telecommuting has positive or negative consequences for the employee experience, the downstream benefits and costs of time-based rewards like vacation and flexible work, how to offer choice to employees in a way that encourages them to express their true feelings (i.e. consent), and how to manage increased interruptions that arise from hybrid work. By studying the informal (team collaboration norms and consent) and formal (telecommuting and flexible work) policies and rewards (paid vacation) that impact the experiences of workers in today's economy, the papers in this symposium provide novel and timely insights into when and how certain time and autonomy-related practices are beneficial (or harmful) to employees' organizational identification, commitment, career outcomes, and well-being, with potential implications for how leaders should promote these policies and practices.

The field of leadership research has the problem of construct redundancy, both conceptually and empirically. While the importance of integrating the bewildering number of leadership constructs seems to be unquestioned, the current state of science leaves us in the dark as to which common framework is sufficient to capture the essence of leadership behaviors and is theoretically sound. Addressing this challenge, this symposium focuses on research that uses a taxonomic approach to develop a reduced set of leadership behaviors (i.e., the Big X of Leadership). The four papers included in this symposium present new theoretical concepts and empirical evidence offering a clear path forward for mapping the basic ingredients of leadership. Further to this, they also provide novel perspectives which serve to extend previous leadership hyper-taxonomies (e.g., DeRue et al., 2011; Yukl et al., 2002, 2012). We believe this symposium will stimulate the discussion among leadership researchers who are intrigued by the idea of developing a higher-order level of leadership framework and will contribute to future research, as well as the professional standards of leadership development in practice.

Artificial intelligence (AI) and algorithms are increasingly prevalent in the management of organizational processes. Organizations use algorithms and AI for a variety of functions—from providing advice and assistance, to monitoring and evaluating performance, to automating roles altogether. Whereas much interdisciplinary research has focused on the creation and optimization of AI and algorithms, relatively less research has examined how human workers react to the implementation and utilization of AI in organizations. Given the importance of understanding the ways in which these technological advancements impact organizational members and outcomes, this symposium brings together papers identifying the effects of AI and algorithms upon individual perception, cognition, and behavior across various organizational domains. The research showcased in this symposium explores (1) how assistance from algorithms affects perceptions of authorship credit, (2) the role of inventor bias in the implementation and utilization of algorithmic advice and automation, (3) the role of stereotypic bias on judgments of algorithmic advice quality, (4) how evaluation by AI can affect behavioral consequences for organizational creativity, and (5) the effects of algorithmic management on worker's perceived autonomy and engagement in resistance behaviors. Specifically focusing on the perspective of the worker, this symposium aims to shed further light on when and how the utilization of AI engenders algorithm aversion or appreciation and the resulting impact on various individual and organizational outcomes. In doing so, it provides insight on how to harness the benefits of AI and algorithms, while mitigating the negative downstream consequences that can arise when AI and algorithms are implemented in organizations without consideration for the workers within them.

Organizational Errors: Updating the Research Agenda

Session Chair: **Peter F. Martelli**, *Suffolk U.*
Session Chair: **Zhike Lei**, *IMD Business School*
Panelist: **John S Carroll**, *Massachusetts Institute of Technology*
Panelist: **David A Hofmann**, *U. of North Carolina, Chapel Hill*
Panelist: **Rangaraj Ramanujam**, *vanderbilt*
Panelist: **Kathleen M. Sutcliffe**, *Johns Hopkins U.*

Errors are a recurring fact of organizations and workplaces, and prevail in various aspects of society, the economy, the environment, and the political arena. Since errors in and by organizations are a window into a range of organizational phenomena, organizations scholars have emphasized that errors merit study in their own right as a phenomenon of growing theoretical and managerial significance (Goodman, Ramanujam, Carroll, Edmondson, Hofmann, & Sutcliffe, 2011). Our panel of scholars represents several major research streams in organizational errors, resilience, learning, psychological safety, and innovation, with the aim of fostering a rich, thought-provoking discussion. Each panelist was co-author of the seminal article on organizational error (Goodman et al., 2011). This panel will explore a potential new research agenda based in a strong grounding of the conceptual and methodological history of organizational error. Discussion topics include: (i) definitional issues concerning organizational errors or errors in organizations; (ii) patterns of errors involving antecedents and mechanisms across different levels and across time; and, (iii) opportunities to advance the study of organizational errors across different research lenses, disciplines, and contexts.

Participant: **Öykü Arkan**, *Sabanci U.*

Employees frequently encounter morally ambiguous decisions - decisions that do not involve a clear right or wrong choice. Yet, despite its relevance to organizational life, the phenomenon of employees encountering moral ambiguity in the workplace has remained underexplored. This symposium aims to advance knowledge in this domain by including five empirical papers that examine how employees experience and resolve morally ambiguous decisions. In doing so, we shed light on the different sources of moral ambiguity in organizations. The first two papers focus on cases where moral ambiguity stems from individuals being uncertain about other people’s intentions. Wallace and Levine investigate how people infer whether another person’s falsehood is due to bias versus dishonesty and the consequences of making one attribution versus the other, and Kundro, Tedder-King, and Walker explore how the gender of an individual reporting abusive behavior affects whether corrective action is taken against the transgressor. The following three papers focus on instances where organizational members experience ambiguity due to a moral contradiction they must resolve. White, King, and Levine explore how decision-makers evaluate the costs of committing necessary evils, Warren and Arkan discuss how sources of guidance affect ethical decision-making when navigating moral ambiguity, and Loo and Smith-Crowe examine how decision frames can influence the resolution of moral ambiguity. Taken together, these papers provide theoretical and practical insight into how employees experience and navigate the complexities of being moral, and open up promising directions for future research on behavioral ethics.

Presenter: **Justin M. Berg**, *Stanford Graduate School of Business*

Creativity—defined as the generation of novel and useful ideas—is often considered the starting point of a creative process that starts with initial idea generation and ends with idea implementation in an organizational or social context. Decades of research demonstrate that creativity propels careers and drives performance. However, more recently, creativity scholars are recognizing the literature's myopic focus on idea generation alone (i.e., the first step of the creative process). As a consequence, the literature knows less about the activities of the creative process that occur between initial idea generation and eventual idea implementation. Addressing this gap, our symposium features five papers that each investigate a different aspect of the creative process after initial idea generation. We explore aspects of developing idea, promoting/selling ideas, and iterating through the creative process. Collectively, these papers deepen our understanding of the path creative ideas traverse between generation and implementation.

Participant: **Anne L.J. Ter Wal**, *Imperial College Business School*
Participant: **Siyu Yu**, *U. of Michigan*

This symposium aims to investigate the connection between micro-level processes and macro-level phenomena in social networks. It will specifically focus on understanding the individual factors that contribute to the formation of social connections, the influence of formal organizational structures on social interactions, and how individuals and organizations can or cannot gain from being part of a network. The symposium also aims to explore new ways of understanding social network mechanisms. To gain a comprehensive understanding of the challenges and potential solutions to causality in social network analysis, the symposium will feature four papers, three of which use a mixed-method approach and one of which uses a qualitative, inductive study.

Adaptability in Organizations. The Importance of Vertical Development, Intuition, Empathy, and CQ

Coordinator: **Steven Poelmans**, *U. of Antwerp/ Antwerp Management School*
Presenter: **Mohammed Chaara**, *U. of Antwerp/ Antwerp Management School*
Presenter: **Steven Poelmans**, *U. of Antwerp/ Antwerp Management School*
Presenter: **Duijnisveld Sabrina**, -
Presenter: **Danilo Martins Coelho**, *PhD student at U. of Antwerp*

This interdisciplinary presenter symposium brings together four studies from different fields, developmental cognitive psychology, organizational psychology and human resource management, cross- cultural psychology, and artificial intelligence, each looking at adaptability in organizations through different theoretical lenses: (1) A reflection on the history and development of human and artificial intelligence, comparing and contrasting vertical cognitive development in humans and machines; (2) An empirical study based on the I-adapt Theory, reviewing a broad range of variables identified in different fields of psychology as antecedents of adaptability in organizations, like intuition, empathy, and meta-cognition; (3) A theoretical contribution on adaptability in cross-cultural settings, focusing on leader cultural intelligence; A qualitative study of adaptative performance - studying what distinguishes superior performers in the workplace. Together, these different researchers represent four different continents, North Amerika, Africa / Middle east, Europe and South-Amerika, offering a broad, international perspective.

Making Sense of the Initiation and Unfolding of Change in Organizations from Diverse Perspectives

Session Moderator: **Gediminas Baublys**, *Vilnius U.*

ODC: **Scenting Out Change: The Role of Attention and Sensemaking in Proactive Transformation Initiation**

Author: **Gediminas Baublys**, *Vilnius U.*

As the business landscape becomes increasingly volatile and unpredictable, organizations must continuously adapt and transform in order to remain competitive. However, the mechanisms through which organizational change occurs are still shrouded in mystery and remain poorly understood. To shed the light on this elusive subject, this research delved into the realm of proactive change initiation, an area that has been largely overlooked in previous research. By utilizing an integrated approach of multiple case study and grounded theory development, it sought to understand the organizational characteristics and strategies that enable organizations to initiate transformational change in a proactive manner. The results of the study highlight the vital role that "organizational olfaction," defined as the capacity to sense and interpret stimuli and shifts in the external environment, plays in the process of proactive transformation initiation. Additionally, the research identified specific organizational attributes that enhance an organization's proactive transformation competence. By illuminating the four-phase process of proactive change initiation and the key role that organizational attention and sensemaking play in it, this research aims to bridge the gap between academic understanding and practical application and, ultimately, in a tangible way, help organizations navigate the tumultuous waters of change more effectively.

ODC: **Organizational Change as a Resocialization Process: A Blueprint for Theory and Research**

Author: **Cheri L. Ostroff**, *U. of South Australia*
Author: **C. Ashley Fulmer**, *Georgia State U.*

Theory and research on change in organizations has accelerated in recent years. Progress has been made in reflecting change as a complex planning and implementation process as well as identifying antecedents and consequences of change motivation, attitudes, and readiness. Yet, fundamental gaps remain. One missing piece is that transformative change requires the development of a new climate that reflects the new practices, procedures, and routines. Given that major change entails significant alterations in 'what the organization is like,' employees need to acquire information about the change to reformulate their climate perceptions. We use the literature on socialization as a lens to refocus change theory and research. To make sense of the change, employees engage in information acquisition from different sources and use different tactics to gather needed information. This information acquisition process is expected to reduce employee uncertainty about the change, and foster sense-making that results in new perceptions of the climate of the organization. Potential pitfalls are addressed that can create misalignments between the new climate and what was intended by the change, as well as future directions to understand the interplay of diverse information sources and tactics and their roles in generating a new organizational climate as intended.

ODC: **A Quantum Approach to Planned Organizational Change: Constraints, Resources, and Temporary Results**

Author: **Lin Shi**, *Macau U. of Science and Technology*
Author: **Maris G. Martinsons**, *City U. of Hong Kong*

Why and how do organizational changes unfold and result in temporary outcomes that diverge from the original plan? To help managers better understand and prepare for the process of planned organizational change, this paper integrates the quantum approach to organizational change developed by Lord, Dinh, and Hoffman (2015) and the resource-based paradigm to develop a theory. We suggest that organizational change processes are quantum deterministic and can be illuminated by examining constraints and resource availability. Developing the necessary resources is a key part of the change process from setting a goal to achieving a desired outcome, and developing these resources can be anticipated and managed by examining properties of relevant constraints. With the constraint and its properties as our basic units of analysis, a strategy of three scenarios is recommended to plan and manage large-scale organizational change. Integrating the quantum perspective and the resource-based concern contributes to not only a deeper understanding of how organizational changes unfold but also an analytic tool to improve decisions about organizational change and development.

Organizing for Purpose, Ethical Responsibility, and Compassion

Session Moderator: **Mzamo P. Mangaliso**, *UMass Amherst*

ODC: **Infusing Compassion and Humanity into the Organizational Praxis**

Author: **Mzamo P. Mangaliso**, *UMass Amherst*
Author: **LaStarr Hollie**, *UMass Amherst*

Drawing from philosophies that venerate the value of humanity and in which compassion features prominently, in this paper we explore the compassion-based ethos from two perspectives. We first use the taxonomy of philosophy of science to compare and contrast natural and social sciences to show the folly of the social sciences in blindly imitating the natural sciences. We then explore the assumptions in organizational research and practice underlying the natural science paradigm (homo economicus) and social sciences paradigm (homo sociologicus) and propose a hybrid paradigm, which we named homo humanum that incorporates the strengths of each. We deliberate on the theoretical and practical significance of the proposed paradigm suggesting that management and organizational studies will be enriched with more holistic research questions regarding sustainable, humane forms of organizations that will advance the field far beyond the limitations of the homo economicus lens. The implications of effectively drawing on the homo humanum paradigm in managing globalized, cross-cultural organizations are discussed.

ODC: **The Foundations of Dialogic Organising: A Study on Embedding Responsible Management Education**

Author: **Valtteri Aaltonen**, *U. of Jyväskylä School of Business and Economics*

Scholars have presented dialogic organising as a solution for disruption and crisis of our times. However, its theoretical foundation has only started to take shape. This paper suggests that Follettian pragmatism, with its notions of linearity (the static and hierarchical) and circularity (the dynamic and interactive), could offer a basis for this emerging theory. This proposition is examined empirically with qualitative interview and survey data, focusing on the embedding of responsible management education in Finnish business schools. The findings of this study suggest that the emergence and continuity of dialogic organising results from a carefully crafted rhythm of linearity that affirms circularity.

ODC: **A Process Perspective On Purpose: A Systematic Literature Review On Purpose-Driven Transformation**

Author: **Albena Björck**, *ZHAW School of Management and Law*
Author: **Richard Blaese**, *ZHAW School of Management and Law*
Author: **David Schoch**, *ZHAW School of Management and Law*

Purpose is the new imperative in economic literature: Accelerated by multiple crises and the hybridization of the business environment, the corporate purpose has re-emerged as a promising key concept to streamline organizational energy to create new meaning for stakeholders and to positively affect economic growth. Although there is growing evidence of the value of purpose, there is still limited understanding of how organizations can archive corporate purpose. To address this void, a multidisciplinary systematic literature review was conducted on the fragmented current state of research on corporate purpose and its transformational impact. We identified a total of 43 key articles published between 1989 and 2022 out of 3,269 and synthesized them into a dynamic process framework that conceptually maps management decisions and actions, interactive feedback loops, and underlying moderating factors. Findings revealed seven process steps in managing the transformation journey: situation analysis, definition, translation, gap analysis, stakeholder communication and onboarding of change agents, alignment of business practices, and performance measurement and corrective actions. Furthermore, the research revealed the influencing role of motivation drivers, leadership actions, authenticity management, strategic management, risk management, ambidextrous structure, and governance as well as ongoing stakeholder dialogue to (re)create culture. Our framework contributes to the strategic management and organizational development and change literatures by developing a process perspective on purpose-driven transformation and can serve as a guide for practitioners when transforming into a purpose-driven organization.

ODC: **Examining the Contemporary Worker and the Workplace Using a Leadership-as-Practice Lens**

Author: **Joseph A. Raelin**, *Northeastern U., D'Amore-McKim School of Business*

In this essay the author uses the lens of leadership-as-practice (L-A-P) to analyze the concerns of the worker in the contemporary workplace and proposes both new insights and potential remediations through a post-humanistic leadership centered on practice. L-A-P is designed to probe underneath the accepted or “natural” practices to uncover the power dynamics in the workplace that have led to challenges to the worker in the form of burnout, lack of autonomy, and detachment. After introducing the practice approach to the workplace, the paper interrogates the potential value of leadership being viewed as a collaborative agency constituting changes in the trajectory of prefigured work practices that can have affirmative consequences via its ethical and critical approach to leadership.

ODC: **Buurtzorg Nederland: Explicating a Self-Management Homecare Model**

Author: **Elham Malik**, *Department of HSS, Indian Institute of Technology (Banaras Hindu U.)*

“Humanity above bureaucracy” was the motto of Jos De Blok, a community nurse from the Netherlands with rich experience in the homecare industry, who founded Buurtzorg Nederland, a self-managed non-profit home care organization, in 2006 to present an alternative to the conventional home care organizational model. He mentioned this motto in his 2015 TEDxTalk. He hired the nurses with the right skills, experience, and entrepreneurial attitude to work as caregivers at Buurtzorg. Caregivers operated in small teams of ten to twelve members. These teams were distributed all across the Netherlands. The caregivers at Buurtzorg Nederland provided care facilities to the critically and sub-critically ill home care subscribers while also serving the senile population in the locality of their operation. At Buurtzorg Nederland, the nurses provided the medical and support services in contrast to their bureaucratic counterparts. Less than one percent of staff acted as the formal support staff. The rest of the staff, including the founder, were qualified community nurses. Buurtzorg Nederland garnered an annual turnover of 280 million euros by 2014. Buurtzorg Nederland operated with over 850 teams, with 10000 caregivers serving all across the Netherlands by 2016 and had become functional in 24 countries. At Buurtzorg, the nurses were de-conditioned to develop the ability and freedom to inquire into whether their day-to-day job activities were meaningful or there existed a more uncomplicated way to perform them and know the modus operandi of the organization. Is self-managed homecare the future of the homecare industry? Are the revolutionary Human Resource Management practices at Buurtzorg an answer to recruitment inconsistencies? Are self-managed homecare organizations relevant in the Indian context with Buurtzorg Nederland’s subsidiary inaugurated in India in 2018? If so, what are the metrics of success and applicability of self-managed homecare organizations in the Indian context?

Top Management Teams, Boards, and Firm Performance

Session Moderator: **Ruibin Zhang**, *Dongbei U. of Finance and Economics*

OMT: **How Top Management Team State Orientation Influences SOEs' Corporate Social Performance**

Author: **Ruibin Zhang**, *Dongbei U. of Finance and Economics*
Author: **Shihua Chen**, *Dongbei U. of Finance and Economics*
Author: **David H. Zhu**, *Arizona State U.*
Author: **James D. Westphal**, *U. of Michigan*

Building upon social role theory and upper echelons theory, we seek to advance research on SOEs and strategic leadership by examining how major aspects of SOEs' corporate social performance (CSP) are influenced by top management teams' (TMT) state orientation, the degree to which top executives represent the government's ideology in decision making. SOEs have grown in both number and size around the globe and their total assets are half of global GDP. Our theory explains why a stronger TMT state orientation in China leads to a greater focus on achieving harmony, which can result in 1) better environmental performance, 2) better societal outcomes, captured by less corruption-related spending and more charitable donations, 3) higher employee compensation and lower intraorganizational pay dispersion, but 4) worse financial performance. Using an original set of unobtrusive indicators of TMT state orientation, we find support for our theoretical expectations after analyzing a large and longitudinal sample of public SOEs in China between 2003 and 2017. In explaining how TMT state orientation influences SOEs' CSP, our study offers a theoretical explanation for the heterogeneity in the CSP of these organizations while significantly broadening the ambit of upper echelons research. Our study also contributes to upper echelons research by developing theory about how the governmental system and state ideology influence organizational outcomes through top managers.

OMT: **Facilitating Resilience from The Top: The Effect of CEO Future Focus and Optimism in Extreme Context**

Author: **Yan Ling**, *Oakland U.*
Author: **Michael Greiner**, *Oakland U.*
Author: **Jianhong Chen**, *U. of New Hampshire*

In this study, we intend to enrich the emerging upper echelons view of leading firms to strategize in and for extreme contexts. We theorize that two future-oriented characteristics of CEOs— future focus (as a cognitive trait) and optimism (as an emotional trait) in combination impact firms' strategic change in extreme contexts, which in turn promotes firms' post-crisis financial performance. Moreover, we also propose that financial slack moderates the effect of strategic change on financial performance. We examine these issues in the specific extreme context of the 2008-2009 global economic crisis and use a sample of 228 firms based on observations from 2008 to 2012. We find support for our arguments. Our conceptual model and findings from this world-wide crisis in 2008-2009 have implication for firms' ability to cope with the present and future extreme situations.

OMT: **Negative Performance Feedback and Structural Changes Within Top Management Teams**

Author: **Aras Can Aktan**, *Sabanci U.*
Author: **Fabrizio Castellucci**, *Bocconi U.*

The research on top management teams (TMTs) has mostly focused on the composition, processes, incentives, and leaders of TMTs, with limited attention to the structural aspects. In this study, we develop a comprehensive model for TMT structural reconfigurations by integrating the TMT structural interdependence framework with the behavioral theory of the firm. By characterizing decision makers as boundedly rational that rely on performance feedback, we investigate how negative performance feedback influences TMT horizontal, vertical and reward interdependence. After analyzing data from 260 Standard and Poor (S&P) firms between 2007 and 2018, we find that when firms face negative performance feedback, its TMT horizontal interdependence decreases but its TMT vertical and reward interdependence increases. Additionally, we discover that TMT horizontal and reward interdependence are impacted more from social and vertical interdependence more from historical aspirations. The findings of this study introduce important contributions into the literatures on top management teams and behavioral theory of the firm.

OMT: **You're Still the One? A Negotiated Order Model of CEO Retention**

Author: **Danuse Bement**, *Texas A&M U., Mays Business School*
Author: **Michael C. Withers**, *Texas A&M U.*

In this paper, we reconceptualize the CEO dismissal process as a negotiation between the board and CEO that is set in a broader structural context and a specific negotiation context. To do so, we leverage negotiated order theory to theorize about the explicit and implicit negotiations that occur during a strategic-governance event (SGE) during which boards increase their strategic involvement in their firms. In particular, SGEs lead to an increase in a board's attention toward CEO strategic fit. CEOs, in turn, engage in sensegiving and sensebreaking activities to address any concerns and maintain their positions within their firms. Following negotiated order theory, we consider important contingency factors at the structural context level (i.e., availability of CEO replacements) and the negotiation context level (i.e., CEO-board interdependence and CEO-board affiliation). We also discuss the important boundary conditions of environmental uncertainty, CEO power, and board expertise.

High-Status, Powerful, and Well-Connected Individuals and Organizations

Session Moderator: **Mario David Molina**, *New York U. (NYU), Abu Dhabi*

OMT: **To Rest on One's Laurels: Effectiveness and Sustainability of Status Orders**

Author: **Mario David Molina**, *New York U. (NYU), Abu Dhabi*

Individuals recognized and celebrated by their peers are generally more productive and cooperative, turning status rewards into critical organizational features to motivate individual behavior and build successful collective enterprises. However, a significant limitation of the studies on this topic is that they fail to show whether status attainment can produce sustainable performance and cooperation as status increases. As individuals climb the status ladder, a high social standing may create opportunities for distraction and complacency, rendering status hierarchies ineffective in producing long-term cooperation. To tackle this puzzle, I compare the cooperative behavior of high-status individuals with similar others who are not high-status (i.e., their counterfactuals). I collect the data from a large Q&A online community comprising 130 million contributions and 235 million status changes from 16 million users. The findings uncover the benefits of status for collective efforts by showing that high status motivates cooperation among the most celebrated. Nonetheless, this effect declines over time, revealing that status orders cannot secure collective outcomes effectively in the long run. More generally, this investigation helps us understand the broader structural consequences of social rewards for cooperative behavior.

OMT: **High-Status Halo or Eclipse? Status-Asymmetric Collaborations and Credit Attribution**

Author: **Chunhu Jeon**, *Morgan State U.*
Author: **Heewon Chae**, *Arizona State U.*
Author: **Pino G. Audia**, *Dartmouth College, Tuck School of Business*

Credit allocation is a strong incentive for collaborations and actors are often willing to collaborate with higher-status partners because such collaborative projects are more visible and highly evaluated by market audiences, facilitating status spillover from the higher-status partners. There is, however, a dearth of research on how much and under what conditions credit is attributed to lower- and higher-status collaborators. Building on insights from research on status inequality and attribution theory, we argue that actors may not receive a fair fraction of credits from collaborating with higher-status partners when external audiences attribute the performance of their collaboration more to higher-status partners. Analyzing collaboration networks among jazz musicians between 2002 and 2013, we suggest and find that over-attribution to higher-status actors occurs (and lower-status actors gain less credit) when the performance of a collaborative project is greater and when the project originates in a novel market category. This study contributes to research on status spillover and inequality by examining both benefits and costs of collaborating with high-status partners.

OMT: **Deference in Competition: Deference Dynamics in Social Contests**

Author: **Henning Piezunka**, *INSEAD*
Author: **Philipp Reineke**, *Stanford U.*

Social contests are time- and space-delimited containers of competition. Theory suggests—and society depends upon—the deference of lower-status actors to their higher-status opponents once having lost a contest. However, status difference between actors and their opponents does not exhaust the competitive content in a specific contest. We theorize that when contest-losing actors categorize their relationship with an opponent as adversarial beyond the current contest and may obtain some contest-specific gains independent of the focal encounter, they will not defer as much as expected. Advanced analyses of unique data from Formula One racing strongly support these expectations. Our findings contribute to research on deference, competition, and linkages between micro- and macro- explanations of social polarization and violence.

OMT: **Shining Along with the Sun: Contingent Signaling Effects of Links with Stars on Network Growth**

Author: **Yue Zhong**, *Graduate School of Commerce, Waseda U.*
Author: **Hitoshi Mitsuhashi**, *Waseda U.*

Whether establishing links with stars triggers non-stars' subsequent network growth remains an open question. On one hand, status transfer theory posits that the establishments generate endorsement effects and expand non-stars' networks. On the other hand, Matthew Effects theory argues that the establishments would not always increase non-stars' network size since non-stars' contributions to joint work with stars can be mis-specified and underestimated. Moreover, stars might have been socially motivated to form links with non-stars, whereby the establishments poorly signal non-stars' quality. This study examines the conditions wherein establishments effectively signal non-stars' quality and subsequently trigger their network growth by identifying three pre-establishment conditions for non-stars: (1) productivity records shown prior to the establishment, (2) knowledge developed that does not overlap with stars' knowledge, and (3) networks independent of stars' networks. Under these conditions, establishments can signal non-stars' quality. Moreover, we argue that the signaling effect is more pronounced for prospective partners with higher instrumental motivations, such as those who are also non-stars and those who have already established links with some stars. Analyzing scholarly publication data of economists during 1953–2012 rendered an overall support for our arguments. Our study fills a gap in the star literature by specifying conditions wherein the establishments of links with stars can generate non-stars' network benefits.

The (Technology-based) Formal Side of Organizations and Control

Session Moderator: **Matteo Devigili**, *Bayes Business School*

OMT: **CTRL-OSS: Controlling Linux**

Author: **Matteo Devigili**, *Bayes Business School*
Author: **Simone Santoni**, *Bayes Business School*

This study considers the problem of control in open-source software. In particular, it aims to characterize control manifestations in an organizational setting where no formal authority exists. In so doing, it studies what control is, how it is enforced, and with what consequences for open-source software goals. To do so, it leverages naturally-occurring data from the 'Linux Kernel' project, analyzed by integrating a qualitative approach to the study of meanings with a text classifier based on Deep Learning. Hence, it charts the topology of control as situated in peer-to-peer interaction, uncovering the individual facets of control and appreciating their relationship with linguistic means offered by online sociality. The topology results in a set of control foci, linguistic tools, and their association which is further tested against the community-level goals of participation and contribution. Overall, the project enquires about the boundaries and nature of control, offering momentum on how independent or organizational agents enforce control within organizations whose actors are not bound by any employment relationships and pursue different goals.

OMT: **Rules as Reminders: Exploring the Formal Side of Organizational Memory**

Author: **Nathan Betancourt**, *Amsterdam Business School, U. of Amsterdam*
Author: **Ona Akemu**, *Amsterdam Business School, U. of Amsterdam*
Author: **Pursey Heugens**, *Rotterdam School of Management, Erasmus U.*

While formal rules undoubtedly have many functions within organizations, how they help organizations preserve information from the past, or act as a repository of organizational memory, is one of the most important. Nevertheless, the specific activities underlying how formal rules facilitate memorizing and remembering (the storage and retrieval of information) have either not been detailed or are weakly understood. To address this, we take a closer look at the process of formalizing through an in-depth qualitative study of the Dutch technology venture Fairphone. Leveraging rich longitudinal data over a two-year period between start-up and maturity that covers a critical period for formalization, we describe a set of interrelated activities that are involved in this process. We find that while formalizing can facilitate memorizing and remembering, whether it does so depends on the different activities of the formalizing process. The ideas developed in this paper can inform future research on formal rules and organizational memory.

OMT: **Computer Vision for Visual Analysis: New Insights From Product Design Visual Similarity**

Author: **Egbert Amoncio**, *Goethe U.*
Author: **Tian Heong Chan**, *Emory U., Goizueta Business School*
Author: **Cornelia Storz**, *Goethe U. Frankfurt, Germany*

Computer vision (CV) is a way to process and understand images. In this study, we use CV to detect visual similarities in product design. We analyze 619,088 images of US design patents granted from 1976 to 2020 and use the Structural Similarity Index Measure (SSIM) to measure the visual similarity among these product designs. Our results show that while design knowledge flows are geographically localized, they become less localized when the professional identity of designers is highly similar. This finding suggests that designers seek knowledge from more distant peers when co-located designers have a similar professional identity. Our research builds new insights on local knowledge flows and clustering when accounting for visual similarity. We also validate our measure and discuss how CV can be used to measure visual similarity across images in strategy research. Lastly, we provide open-access code and data.

Strategic Frames and Narratives in Organizational Life

Session Moderator: **Emily Cox-Pahnke**, *U. of Washington*

OMT: **Dynamic Strategic Framing and Accelerating Product Launches by New Ventures**

Author: **Emily Cox-Pahnke**, *U. of Washington*
Author: **Tiona Zuzul**, *Harvard Business School*
Author: **Michael Deane Howard**, *Iowa State U.*

We draw on novel data to examine how the strategic framing choices that new medical device firms make affect how rapidly they receive regulatory approval from the FDA, and evaluate differences between firm's first and second products. Building on in-depth field research, including more than 50 interviews with entrepreneurs and regulators, we create product-level measures of a firm's strategic framing strategies. We test our hypotheses using data from the complete population of the first devices from 239 US based, venture-backed medical device firms granted 510(k) clearance by the FDA between 2001 and 2017. We find that for both first and second products, positioning relative to fewer other products is associated with more rapid product approval. But we also find evidence that a firm's optimal framing strategy changes over time. While positioning relative to category exemplars is associated with faster clearance for a first device, we find that firms that position second devices relative to first devices receive more rapid clearance than those that do not.

OMT: **Who Claims to be Most Distinctive? Inventions and the Distinctiveness of Entrepreneurial Narratives**

Author: **Karl Taeuscher**, *U. of Manchester*

Optimal distinctiveness research provides nuanced insights about the consequences of distinctiveness but largely ignores that organizations likely differ in their abilities and incentives for differentiation. Aiming to shed light on the conditions that affect organizations' claimed distinctiveness, this study explores the relationship between startups' stock of patented inventions and the distinctiveness of their entrepreneurial narratives. Primarily drawing on cultural entrepreneurship theory, we outline two opposing mechanisms through which its inventions may simultaneously enhance a startup's ability to claim distinctiveness (as unique narrative ingredients) while lowering its incentives for doing so (as quality signals). Anchored to these two mechanisms and drawing on a study of the entrepreneurial narratives of all startups founded in the United Kingdom between 2010 and 2022 (N=32,124), we test hypotheses about the contingencies that shape the invention-distinctiveness relationship. We find that inventions have, on average, a positive effect on startups' claimed distinctiveness, but this relationship is strongly attenuated if startups are affiliated with (a) an attractive industry, (b) a hot technological category, or (c) reputable venture capital firms.We discuss how our theoretical framework and findings elaborate our understanding of optimal distinctiveness and cultural entrepreneurship theory.

OMT: **Organizational Framing and Engagement with Experimental Spaces:Transforming a Dysfunctional System**

Author: **Hani Tarabichi**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Henri Schildt**, *Aalto U. School of Business*
Author: **Farah Kodeih**, *IESEG School of Management*

Our paper contributes to the growing scholarly discussion on experimental spaces by investigating how diverse organizations engage with experimental spaces and the implications of these varied approaches. We employed an inductive comparative study of 3 cities in the capital region of Finland participating in a trial for the integration of long-term unemployed vocational immigrants. Our findings highlight how each city's motives and resources led to varied framing and enacting of the experimental space, which led the cities to assume different roles at the field level. We conclude by elaborating how divergence in framing can be attributed to the extent of distancing from institutionalized practices, thus affecting greatly organizational learning capacity. We further elaborate on how large-scale trials can lead to "nested" experimental spaces. The study highlights the role of experimental spaces in inciting institutional innovation that can lead to the deinstitutionalization of well-structured practices, roles, and regulations.

The (Un)Intended Consequences of Organizational (Non)Compliance and (De)Coupling

Session Moderator: **Satwant Dahiya**, *Carl von Ossietzky U. Oldenburg*

OMT: **Compliance vs. Outcome: Elaborating Theory on Means-Ends Decoupling**

Author: **Satwant Dahiya**, *Carl von Ossietzky U. Oldenburg*
Author: **Christian Busse**, *Carl von Ossietzky U. Oldenburg*

How does the need to comply substantively with institutional policies push field actors away from the intended outcomes? Elaborating on means-ends decoupling, we develop a theoretical model explaining how the gap between policy-prescribed practices and the intended outcomes manifests. Seventy-one interviews from a qualitative case study in the highly opaque field of private social regulation in fashion supply chains show the presence of what we term 'systemic deadlock' (SD). Arising from numerous actor-level lock-ins, SD depicts a vicious circle where actors advance their core goals through their pursuit of substantive compliance with the field demands, where their inflexibility lets them undermine the intended outcomes that generate these demands, and where their self-silencing attitude with respect to the effectiveness of the compliance processes stabilizes the situation to the detriment of intended field outcomes. Additionally, it shows how the lack of intended outcomes is recursively used to advance the core goals of the field actors. The model explains the dynamism unfolding amongst the institutional fields, the adopters, and the institutions and elaborates on how means-ends decoupling emerges. It additionally reflects on the connection of institutionally driven practices to the organization's core goals and urges a revised understanding of the phenomenon. On a practical front, the study calls for reconsidering whether substantively chasing demands for compliance is the most effective use of field actors' time and resources vis-à-vis the desired outcomes.

OMT: **Limits of ESG Investing: Challenges from Supply Chains (WITHDRAWN)**

Author: **Fan Zhang**, *Bentley College*
Author: **Shipeng Yan**, *U. of Hong Kong*
Author: **Zhengyu Li**, *The U. of Melbourne*

Coupling is an institutional mechanism describing how symbolic adoption leads to alignment with intended outcomes. However, prior literature does not adequately consider organizational plasticity which can help create an impression of coupling, without achieving it. Extending institutional research, we uncover a novel mechanism termed "spurious coupling" in which a spurious correlation between symbolic policy and intended outcome is established. We develop a theoretical framework to account for spurious coupling and find empirical support in the context of environmental, social, and governance (ESG) investing. Using investors' signatory status of Principles for Responsible Investment (PRI) as a proxy for the institutional demands of ESG, we find strong evidence that ESG ownership of a corporation reduces the environmental performance of suppliers. The effect is stronger when the ESG investors as agents of private governance are weak in overseeing organizational plasticity. The effect is weaker when public governance of organizational plasticity is higher, such as when focal corporation is in a civil law country, rather than in a common law country. We contribute to research on institutional theory, ESG investment, and pollution outsourcing.

OMT: **On The Edge of Noncompliance: How Firms Approach Institutional Pressure through Regulatory Tolerance**

Author: **Ashenafi Gebremichael Biru**, *RMIT U.*
Author: **Pia Maria Arenius**, *EMLYON Business School*

The literature on regulatory compliance and entrepreneurship broadly agree that entrepreneurs have agency in the compliance process. However, there is little scholarly research on how entrepreneurs who are dependent on their constituents for resources and other support, can actively influence the enforcement of regulation. Many enforcement and compliance studies have overlooked the ways smaller entrepreneurs work with authorities to advocate for regulatory concessions. This paper explores how formally registered entrepreneurs in developing economies reduce regulatory pressures on their venture by encouraging enforcement authorities to tolerate non-compliance. Through a qualitative research approach, we extend previous research investigating entrepreneurs' strategic responses to institutional pressures. This topic is particularly salient because inconsistent enforcement of regulations is a prevalent phenomenon in developing economies where entrepreneurs tend to directly work with enforcement agents to minimize costly institutional pressures. We identify and analyze the mechanism through which entrepreneurs anticipate and strategize to influence enforcement authorities to ignore or tolerate non-compliance of the regulatory guidelines they are tasked to uphold. This study is particularly relevant in the context of the renewed interest in the understanding of the interplay between regulatory institutions and entrepreneurial ventures in developing economies.

OMT: **Organizational Conformity in an Institutionalized System: The Case of Local United Way**

Author: **Hyunseok Hwang**, *U. of Houston*
Author: **Megan LePere-Schloop**, *Ohio State U.*
Author: **Wenpei You**, *Indiana U.- Lilly Family School of Philanthropy*
Author: **Laurie Paarlberg**, *Indiana U. / Purdue U., Indianapolis*

To what extent do organizations conform to external pressures and expectations within a highly institutionalized federated system? Drawing on organization theories, this paper investigates how organizational and contextual factors lead to variation in conformity across the United Way (UW) system. Although the United Way Worldwide (UWW) provides templates and training to align strategy across the United Way system, local UWs vary in their degree of conformity to the UWW's new community impact model. Using a unique set of data collected from multiple sources, we analyzed internal and external factors shaping local UWs' conformity to mission language associated with the community impact model. We found a curvilinear relationship, with middle-status UWs more likely to conform to community impact language than low- and high-status UWs. This study contributes a novel operationalization of organizational conformity and re-affirms the theory of middle-status conformity in the context of a highly institutionalized federated system.

Addressing Climate Change and Other Complex Environmental Problems

Session Moderator: **Sylvia Grewatsch**, *Brock U.*

OMT: **Project Energy Breakthrough: Scaling the Impact of Solutions to Complex, Large-scale Problems** ☯ 💻

Author: **Sylvia Grewatsch**, *Brock U.*
Author: **Pratima Bansal**, *Ivey Business School*

Although the role of organizations in fomenting complex, large-scale problems such as climate change or the global energy crisis is attracting increasing attention, few organizational scholars have examined how scalable solutions can be developed. Research on issue scale and organizational attention has revealed that the challenges of problem recognition and solution deployment can thwart the development of scalable solutions. Drawing on a historical organizational study about the 1970s energy crisis in Canada and the establishment of the Alberta Oil Sands Technology and Research Authority (AOSTRA) from 1974 to 1994, we show how the dynamic interplay between three scaling practices—breaking, bridging, and building—facilitates the continuous intertwining of the large-scale problem and emerging smaller-scale solutions, thereby ensuring that the aggregate solution is scalable and effectively addresses the original issue. We conclude by discussing theoretical and practical implications of our findings, highlighting how governmental organizations in particular can leverage scaling practices to develop solutions for complex, large-scale problems.

OMT: **Beyond Incremental vs. Radical: Multi-sectoral Organizing to Expand the Business Case for Climate**

Author: **Todd Schifeling**, *Fox School of Business, Temple U.*
Author: **Sara B. Soderstrom**, *U. of Michigan*

Organizational reforms to mitigate climate change face resource constraints and the limits of tradeoffs with organizations' primary missions. Consequently, win-win solutions with a strong "business case" are an attractive path for reformers. However, these types of solutions are thought to be limited to low-hanging fruit and incremental changes, which cannot address the scale of the climate problem. An important possibility that is not well understood is how the zone of readily actionable improvements can expand. We relax the assumption that the business case for reform has clear limits and investigate how a multi-sectoral network operates to construct the business case, expanding the ambitions of organizations across sectors. The results of descriptive and regression analyses illuminate a dynamic alternative to incremental and radical change.

OMT: **"Without Nature We Have Nothing"** ✈ 💻

Author: **Laura Albareda**, *LUT U., School of Business and Management*
Author: **Oana Branzei**, *Ivey Business School*

Social-symbolic work explains how actors purposefully transform selves, organizations, and institutions by creating and connecting a variety of social-symbolic objects. While occasionally present in social-symbolic work studies, biophysical objects are often under-theorized. This oversight is particularly problematic in the Anthropocene because the cumulative negative impact of unreflective and exploitative people's actions on nature threaten ecological ecosystems, some of which are now on the verge of collapse. This study elaborates the social-symbolic lens by foregrounding biophysical objects and their decline. We abductively theorize how human actors deliberately integrate deteriorating biophysical objects with proliferating social-symbolic objects: they collectively perform a specific form of social-symbolic work we label biocentric to emphasize its intent and effect to reorient people towards nature. We explain how two complementary types of practices (inversion and bio-objectification) allow multiple actors to collaboratively co-specialize and collectively sustain a mindful and mutually beneficial relationship with ecological ecosystems over time.

OMT: **Beyond Net Zero: Advancing Moonshot Carbon Pledges Through Aspirational Communication Practices**

Author: **Alexandra Leonor Barrueta-Sacksteder**, *Alliance Manchester Business School, U. of Manchester*

Addressing current climate concerns requires organisations to go beyond and do more than merely what is expected of them to adhere to the status quo. Drawing on performativity and practice theories I analyse publicly available documents from Unilever, Ikea and Microsoft in order to empirically investigate 'beyond net zero' carbon pledges: pledges that not only go beyond what is expected but that present current organisational climate aspirations as not enough or lacking ambition. First, by identifying how the organisations communicate and define 'carbon positive', 'carbon negative' and 'climate positive', here deemed critical aspirations, through an analysis of communication practices. Then, using the identified practices as a basis for coding, examine how these practices and subsequent pledges develop over time, empirically extending theories of communicative performativity and aspirational talk. Outlying the critical and idealistic dimensions of critical aspirations as felicitous conditions provides insight into how corporate communication affects global climate discourse and how the iterative nature of the Paris Agreement has opened the door for "beyond net zero" pledges to be performed at an organisational scale.

OMT: **B' the Change you Want to See: How Commensurating Water Health Impedes Collective Action**

Author: **Fannie Couture**, *HEC Montreal*
Author: **Jane Kirsten Le**, *WHU Otto Beisheim School of Management*

We study commensurating in a multi-stakeholder partnership established to address waterway health degradation in Australia's critical Great Barrier Reef region. Actors of this partnership engaged in commensurating this issue, reifying it into a report card. This tool became central in representing the group's assessment of the sustainability issue and driving collective action towards mitigation. As actors sought to commensurate the issue, they increasingly became dubious as to the real impact of their tool. Even so, they continued to engage in counterproductive commensurating practices that limited their impact. We offer two contributions based on these findings. First, we extend our understanding of the pitfalls attached to commensurating sustainability issues by revealing how efforts put in altering a commensuration tool can gradually shift actors' attention away from ensuring the tool enables them to take impactful collective action. Second, we open the commensuration "black box" by revealing the interactional dynamics nested within the commensurating of sustainability issues. Specifically, practices aimed at including additional sustainability data in the tool are often met with practices seeking the opposite, that is, to exclude data. These countervailing practices eventually coalesce into changes to the commensuration tool which generate 'small wins' for actors, diverting their attention away from ensuring the tool enabled them to take impactful collective action.

Organizational Purpose, Norms, and (Network) Practices in Today's Labor Markets

Session Moderator: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*

OMT: **Purpose Claims and Capacity-Based Credibility: Evidence from the Labor Market**

Author: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*
Author: **Oliver Hahl**, *Carnegie Mellon U. - Tepper School of Business*
Author: **Leon Valdes**, *U. of Pittsburgh*
Author: **CB Bhattacharya**, *U. of Pittsburgh*
Author: **Evan Gilbertson**, *U. of Pittsburgh*

Organizational scholars have long recognized the importance of corporate purpose, defined as a goal beyond profit maximization, meant to galvanize workers in the firm. Increasingly, however, companies are making claims about corporate purpose to external audiences, and we have little understanding how these claims may be perceived. A key question is credibility; under what conditions are these claims believed by audiences? We argue that purpose claims can attract external stakeholders, and that the ambition and future-orientation of these claims makes firm capacity a key source of credibility. We examine these issues in the labor market context, where employers make claims of corporate purpose in recruitment efforts. In our first study, with job posting and application data from an online job board, we develop a novel measure of purpose claim language and examine its effect on application likelihood. We then examine the moderating effect of firm size, as a proxy for capacity. We find that high purpose job posts receive approximately 52% more applications than low purpose job posts when the firm has more than 1,000 employees, but only receive a 13% increase when the firm has fewer than 50 employees. In a second study, we use an online experiment to test whether differences in firm size are interpreted as differing degrees of capacity to realize purpose claims, and whether these different perceptions of capacity impact application likelihood. Our results confirm that perceptions of capacity help to explain the relationship between corporate purpose claims, firm size, and job attraction.

OMT: **The Balancing Act: The Balancing Act: Corporate Norms & Practices that Affect Work-Life Balance**

Author: **Heather Haveman**, *U. of California, Berkeley*
Author: **Jasmine Sanders**, *U. of California, Berkeley*

Balancing work and life outside of work is a challenge for many employees. Lack of work-life balance hampers employee performance and health, and prompts exit. It has especially negative effects on female employees because women do more domestic labor than men. We focus on firms in the tech sector and capture norms and practices concerning work-life balance by analyzing employees' descriptions of their firms using natural-language-processing techniques. We develop and test arguments about who discusses work-life balance. One-quarter of employees discuss work-life balance. Supporting our arguments, these are mostly women in their 30s, and women in privately owned and smaller firms. Second, we develop and test arguments about opinions about work-life balance. Most tech employees express positive opinions about work-life balance. But, contrary to expectations, there are no gender differences. Analyzing a random sample of reviews for other themes revealed a common concern that firms did not have uniform work-life balance policies; instead, managers had considerable discretion to approve or deny employee requests to deal with life outside work. Because this is an important issue for many employees, male and female alike, all firms would gain from standard policies that offer cafeteria-style work-life-balance benefits that fit employees' personal circumstances.

OMT: **The Dual Structure of Network Hiring**

Author: **Thomas Lyttelton**, *Copenhagen Business School*
Author: **Lasse Folke Henriksen**, *Copenhagen Business School*
Author: **Emil Begtrup-Bright**, *Copenhagen Business School*

Previous research on the value of contacts in job search and hiring considers contacts' strategic positions in job seekers' extra-organizational networks, but ignores their position within hiring organizations. Contacts sit in dual organizational structures - formal hierarchies and informal workplace networks - each of which shape the value of contacts. We examine whether contact networks or authority provide most utility, and if they are equivalent or complimentary structures. Drawing on eighteen years of Danish administrative data, we identify 680,000 job movers and their network of ex-coworkers in hiring organizations, to examine the effect of network reach, network closure, and connections to managers. Using matching we identify plausible counterfactual jobs to assess the utility of contact networks on two key hiring outcomes: employment and pay premia. We find that authority and network structures both influence the value of contacts independently, with contacts more useful when they are managers and more useful when they are embedded in networks that boost information flows and coordinate influence. Manager contacts are particularly useful, however, when they sit in highly interconnected networks, likely by ameliorating the problem of information redundancy and increasing the effectiveness of influence coordination.

CEO Ideology, Agency, and Activism

Session Moderator: **Krishnan Nair**, *U. of Illinois Urbana-Champaign*

OMT: **Liberal/Conservative Asymmetries in Stakeholder Responses to CEO Activism**

Author: **Krishnan Nair**, *U. of Illinois Urbana-Champaign*
Author: **Marlon Mooijman**, *Jones Graduate School of Business, Rice U.*

Recent years have witnessed a surge in CEO activism, with CEOs frequently taking public stances on contentious social and political issues. A burgeoning literature has begun to examine how stakeholders respond to CEO activism. Stakeholder alignment theory assumes that liberal and conservative stakeholders, to a similar magnitude: 1) favor CEOs supporting causes aligned with stakeholder ideology, 2) disfavor CEOs supporting causes misaligned with stakeholder ideology, and 3) disfavor CEOs staying silent on sociopolitical issues. We question this assumption of liberal/conservative symmetry. Drawing from research on political ideology and organizations, which illustrates that liberals display greater concern for the perceived benefits and costs businesses impose on society than conservatives, we theorize that liberals respond more favorably to ideologically aligned activism, and less favorably to ideologically misaligned activism and non-activism, than conservatives. Preregistered experiments examining reactions to CEO activism among job seekers and consumers support our predictions. Interestingly, we also find that conservative stakeholders, unlike their liberal counterparts, prefer CEOs who stay silent over those pursuing ideologically aligned activism. Our findings challenge prevailing assumptions in research on stakeholder responses to CEO activism, shed new light on the strategic implications of CEO activism, and help explain why conservative CEO activism is exceedingly rare.

OMT: **Salient Intentions? CEO Ideology-Stance Incongruent Activism and Investor Reactions**

Author: **YUN Miao**, *City U. of Hong Kong*
Author: **Longwang Fu**, *City U. of Hong Kong*

Emergent research on CEO sociopolitical activism has begun to explore its impacts on different stakeholders, particularly the contentious debate over whether investors consider it as a profits-deviated or value-enhancing action. However, prior studies have assumed that CEO activism is a behavioral reflection of political ideology and thus represents an authentic action in the eyes of stakeholders. In this study, we theorize that CEO activism stances may be incongruent with their political ideology, which serves as a crucial cue for investors to infer the CEOs' intentions underlying activism. Specifically, this ideology-stance incongruence provokes the investors' situational attribution in which CEOs' intentions underlying their activism is more likely to be ascribed as strategic-oriented rather than self-focused, thus leading to investors' positive reactions. We further argue that this relationship is stronger when investors perceive fewer agency concerns for CEOs with higher ownership and firms covered by more analysts. We test these predictions using a sample of CEO sociopolitical activism events for S&P 500 firms from 2011 to 2020 and find support for all hypotheses. These results advance our understanding of strategic CEO activism and provide a novel perspective to understand CEO incongruent behavior.

OMT: **Whose fault is it? CEO Ideological Self-Attribution and Firm Resistance to Hedge Fund Activism**

Author: **Longwang Fu**, *City U. of Hong Kong*
Author: **Jane Lu**, *City U. of Hong Kong*

Much research on hedge fund activism (HFA) has focused on its antecedents and outcomes, but little is known about what occurs during the campaign process, especially how target firms respond to activists. Building on ideo-attribution effect, we develop an explanation concerning the role of CEO political ideology in determining target resistance. We argue that the more liberal (versus conservative) the target CEOs are, the more likely they will attribute the causes of HFA to contextual factors over which they may perceive little control and personal responsibility, which then leads to the target firms' higher level of resistance to activists. This impact of CEOs' political ideology is contingent on their perceived activism uncertainty and managerial discretion. In a sample of U.S. public firms from 2009 to 2020, we find support for our contentions. Our findings contribute to research on the HFA process, ideo-attribution effect, and corporate response to investor activism.

OMT: **Explaining Differences in Conformity between Republican CEOs and Democratic CEOs**

Author: **Krishnan Nair**, *U. of Illinois Urbana-Champaign*
Author: **Eric Y. Lee**, *The Pennsylvania State U.*

While the burgeoning literature examining the relationship between corporate leaders' political party preference and firm outcomes has conceptualized party preference in purely ideological terms, our research suggests the importance of also considering party preference as a social identity. Insights from both the ideology perspective and identity perspective in political psychology suggest that Republican CEOs likely prefer conformity more than Democratic CEOs, albeit for starkly different reasons. The ideology perspective sees differences in preference for conformity as an internal dispositional difference between Republicans and Democrats. In contrast, the identity perspective suggests that both Republicans and Democrats prefer to conform to co-partisans, but since Republican CEOs predominate in large public firms, Republican CEOs display greater conformity. Integrating insights from both perspectives, we suggest that Republican CEOs display greater conformity than Democratic CEOs, and that this difference is mitigated, but does not completely dissipate, as the proportion of Democratic CEOs in a given industry increases. Finally, we draw on self-concordance theory to hypothesize about the performance implications of fit between CEO political party preference and the firm's pursuit of conformity. We find support for our predictions in a sample of S&P 500 firms from 2010 to 2019.

OMT: **Behavioral Agency Theory and Corporate Social Irresponsibility**

Author: **Tanusree Jain**, *Copenhagen Business School*
Author: **Rashid Zaman**, *School of Business and Law, Edith Cowan U.*

The behavioral agency theory (BAM) posits that executive risk preferences are influenced by losses to their current option wealth relative to gains from their prospective option wealth. Accordingly, current option wealth attenuates risk-taking while prospective option wealth amplifies risk-taking. In the context of corporate irresponsible behaviors, this study attempts to advance BAM by theorizing how the presence of conditions that give rise to distributive and procedural injustice in CEO compensation can further amplify the positive effects of CEO prospective option wealth on risk-taking, thereby destroying stakeholder value. Our findings based on a longitudinal cross-sectional sample of 8,669 firm-year observations for the period 2001-2018 support our theorization that CEO perceptions of unfair compensation amplifies excessive risk-taking thereby increasing corporate social irresponsibility. Our study has important implications for advancing BAM and for the study and design of executive compensation.

Professionalization and the Rise of New Experts and Professionals

Session Moderator: **Laurens Vandeweghe**, *ETH Zürich*

OMT: **Professionalization as Translation: A Process Study**

Author: **Laurens Vandeweghe**, *ETH Zürich*
Author: **Aleksandra Petersone**, *Six*

Professionalization is a dynamic process during which organizational functions within an entrepreneurial firm are transformed by professional managers to become more formalized, structured, and institutionalized. While prior research has shed much attention to the antecedents and outcomes of the hiring of professional managers, we know relatively little about how professionalization unfolds when these specialized people are brought in. Using the literature on institutional translation and drawing on rich interview and ethnographic data from the professionalization of the innovation function at a fast-growing scale-up, we find three distinct phases of professionalization: (1) importation, (2) familiarization and (3) sedimentation. We contribute to the literature on professionalization by showing that the professionalization of an organizational function differs from just mirroring that of established corporations in the field, thereby bringing together the persistence and change perspectives on scale-ups. We also contribute to the literature on translation by adding to our understanding of different types of translation.

OMT: **Professional Institutional Maintenance in the Age of Artificial Intelligence**

Author: **Masashi Goto**, *Kobe U.*

This study examines approaches that a profession can take to maintain its professional jurisdiction when facing an emerging technology that has the potential to disrupt its professional institutional arrangements. Through the theoretical lens of institutional maintenance work, I conducted a case study of the auditing profession and artificial intelligence (AI) in Japan between 2015 and 2020, with a particular focus on the way that the professional association and dominant large firms coped with negative social perceptions about the future of their profession. The analysis reveals that the professionals engaged in a mix of internal and external institutional maintenance work at both the field and firm levels, even before specific disruptors or alternative solutions to the existing auditing practices emerged. Their institutional work focused on developing new practices enabled by advanced digital technologies and on establishing a renewed theory of their legitimacy as a leader in digitalisation. This study expands our knowledge of institutional work and professions by introducing both proactive digitalisation as an important form of institutional work in our digital age and 'preventive defence' institutional work as a neglected strategic approach to nullifying potential threats to institutions.

OMT: **The Rise of Neo-Experts: Sources, Characteristics, and Implications**

Author: **Valerio Iannucci**, *Boston U. Questrom School of Business*
Author: **Michel Anteby**, *Boston U. Questrom School of Business*

Experts are central to today's knowledge economy. Yet despite their centrality, our understanding of their expertise remains surprisingly nebulous. This article offers more conceptual clarity around this question of expertise by detailing its varying sources, characteristics, and implications. The impetus for such a revisiting is the increasing lay intrusion, enabled by social media, in professional domains, and the parallel rise of what we label neo-experts. We identify four distinct kinds of actors that may claim expertise: traditional experts, lay-experts, non-experts, and neo-experts. By traditional experts, we mean people typically embodying legitimized expertise (such as lawyers). Lay experts (such as patient activists) are individuals who aspire to gain a substantive understanding of a domain and who want to convince legitimized experts to revise their views. They differ from non-experts or people who develop a limited understanding of a domain based on their unique experiences. Increasingly, however, we note the rise of neo-experts who operate in a yet to be claimed jurisdiction and self-develop a form of practice-based expertise that a following recognizes as such. By accounting for all these experts in the making of expertise, we provide a fuller account of expertise and discuss how modern technologies render it more inclusive.

OMT: **The Microfoundations of Craft Accessibility: How Social Interactions Open Up Craft**

Author: **Cyrus Dioun**, *U. of Colorado, Denver*
Author: **Vontrese Deeds Pamphile**, *George Washington U.*
Author: **Andreea Gorbatai**, *Vlerick Business School*

Craft offers a path to enchantment and meaningful creation in an increasingly rationalized society. Yet, engaging in craft can be difficult for novices who often lack the necessary time, networks, and resources. While a growing group of studies documents that creative crafts like beer brewing are more accessible to novices and amateurs than other forms of craft, we lack understanding of how craft is made more accessible to broader audiences. We explore this question with the case of the makers, a diverse DIY movement that embraces all forms of craft and making. Using interview and observational data from Maker Faires – events wherein makers exhibit their projects and invite attendees to take part in craft activities – we induce an interactional model of how craft is made to feel accessible by broader audiences. We identify four interactional mechanisms that enable novices to feel craft is accessible: two mechanisms which make craft knowledge accessible – providing craft scaffolding and transmitting craft knowledge – and two mechanisms which foster emotional connection to craft – relationality and cultivating fun and whimsy around craft. We further reveal the curatorial role of craft leaders, who intentionally design and curate spaces to provide opportunities for positive interactions around craft. Our model contributes a social interactional perspective to craft entry, theorizing the role of micro-level interactions in making craft knowledge and emotions accessible. We also contribute ideas about the role of craft leaders in curating brief interactions to both disseminate knowledge and build emotional connection to craft, the role of amateurs in supporting craft survival, and the emotional dimension of craft configurations.

While decades of research have demonstrated that networks, through their structural configurations, powerfully influence people's behaviors, attitudes, and outcomes, recent work has sought to better understand the role of individuals in shaping network processes. There are increasing appeals, for instance, to devote greater attention to the differences individuals exhibit in establishing, managing, and navigating social relations. Such differences are meaningful, as they influence the nature and form of the network around actors, and ultimately the opportunities available to them. In response to these emerging discussions, our symposium aims to contribute to a better understanding of individual agency in network theory. Questions include: What role do individuals play in shaping the process of network evolution? And, how do these dynamics impact the distribution of social capital (positive or negative) among actors within networks? Two of our presentations examine individual network agency through the lens of "microfoundations" perspective of social relations. One paper takes the "individual advantage" perspective, delving into individuals' agency in responding to the structure of their networks. The rest one emphasizes a dynamic view of network agency - one in which individuals' level of agentic control in their networks ebbs and flows over time.

Studies of Sensemaking and Judgment in Decision-Making and Practice

Session Moderator: **Nora Meziani**, *ESCP Business School*

OMT: **Sensemaking in Adversity: Navigating the Unknown with Embodied Resources**

Author: **Nora Meziani**, *ESCP Business School*
Author: **Laure Cabantous**, *Bayes Business School*

In this paper, our objective is to elaborate on the intriguing, but nonetheless underdeveloped idea, that sensemaking is an embodied process – a process that involves both mind and body. To this end, we believe that it is important to systematically study the first-person lived experience of being a body. We therefore ask, How does the body (including the mind) enable people to overcome a collapse of sensemaking associated with emotional overwhelm? Empirically, we rely on first-hand data of sensemaking in adversity, and we take inspiration from sensory ethnography – a form of ethnography that recognizes, attends to, and seeks to understand, experience, knowledge and practice as involving the body and the senses. Our findings are twofold, we show how negative emotions and cognition interplay with intuition and imagination –that we refer to as 'embodied resources' as they operate at the nexus of mind and body; and how the more people engage with embodied resources, the more future-oriented and social the sensemaking process becomes. Building on these findings, we develop a process model of the role of embodied resources in individual-level sensemaking, which reflects the ways through which these resources affect sensemaking. Our work contributes to organizational scholarship by offering a process model that explicates the crucial role of a new category of sensemaking resources that operate at the nexus of mind and body, that we refer to as "embodied resources"; and reflects the ways through which these resources reboot sensemaking in adversity.

OMT: **Eureka!: Improving the Effects of Artificial Intelligence on Serendipitous Innovation**

Author: **Christian Busch**, *USC Marshall School of Business*
Author: **Matthew Grimes**, *Cambridge Judge Business School*

Organizations increasingly rely on artificial intelligence (AI) to improve both the quantity and quality of innovative outputs. However, while a growing body of research suggests that AI is well-equipped to improve innovation-related search processes amid distributed information, several recent studies offer cautionary evidence that organizations often fail to benefit from AI-produced findings. In this study we theorize the cross-cutting effects of AI on the realization of serendipitous (or unplanned) innovation. Specifically, we propose that serendipitous innovation requires exposure to new and unexpected information but also that organizational actors collectively imbue that information with meaning. We draw from theory on innovation search, technological affordances, and sensemaking to theorize why AI is likely to undermine the attribution of meaning in the context of new and unexpected information. Moreover, we highlight the organizational conditions that are necessary to overcome the challenges posed by AI, thereby producing AI-human interactions that allow for serendipitous innovation at scale. Our theory contributes to existing studies on the role of technology in innovation, while theoretically bridging the innovation search and sensemaking literatures.

OMT: **Judgment-in-Practice: A Phenomenological Perspective**

Author: **Demetris Hadjimichael**, *U. of Cyprus*
Author: **Gerardo Patriotta**, *U. of Bath*
Author: **Igor Pyrko**, *U. of Bath*

Judgment is broadly understood as a process wherein people draw on their understanding of extant situations to evaluate developments and possible responses. Thus far, organization and management theory (OMT) research has sought to understand judgment by differentially emphasizing cognition and wisdom. Studies emphasizing cognition, conceptualize judgment as a predominantly mental process of evaluating options. Studies emphasizing wisdom, conceptualize judgment as a reflective process that goes beyond information processing and is essentially situated and context-dependent. Despite the valuable contributions of extant studies, judgment is thus far seen as an activity, but it has not been conceptualized as a fundamental aspect underpinning the very nature of organizing which is present at all times and emerges in practices. This paper aims to complement existing understandings of judgment in OMT by offering a theorization that integrates insights from both perspectives. We seek to do so by theorizing the lived experience of judgment and illustrating that the latter is entwined with practices that practitioners inevitably engage with as part of their everyday work. To illustrate our conceptual framework we draw upon the memoirs of Martin Luther King Jr during the beginning of the Montgomery Bus Boycott.

New Modes of Work and Play in Organizations

Session Moderator: **Anca Metiu**, *ESSEC Business School*

OMT: **Deep Play, Work Engagement, and Creative Problem Solving in a High-tech Organization**

Author: **Anca Metiu**, *ESSEC Business School*
Author: **Jinia Mukerjee**, *Montpellier Business School*

Based on an ethnography of a high-tech firm, we show how deep play — the voluntary immersion in an enjoyable activity unrelated to work but symbolically connected to employees' fundamental concerns — is integrated in the creative work process. Specifically, we show how episodes of work engagement alternate with episodes of deep play, how this dynamic sustains work engagement and results in creative problem solving; and how this dynamic held even during crises. We identify three mechanisms enabling the integration of deep play and work engagement: the similarities between these flow states, the visibility of both engaged work and deep play, and employees' constant calculations about work. We also identify the contextual factors fostering both deep play (particularly the freedom to play) and work engagement (particularly work autonomy). Finally, we show how non-immersive diversionary play is integrated with mindless work – thereby offering a richer, more complete understanding of the role of various types of play in the creative process. Our work advances the understanding of micro-processes of creative work, enriches our understanding of flow, extends the theory of play, and deepens our understanding of the growing array of organizations embracing various forms of play.

OMT: **Asymmetries in the Hybrid Workplace and their Impact on Knowledge Network Churn**

Author: **Paola Zappa**, *U. College London*
Author: **Tatiana Andreeva**, *Maynooth U.*
Author: **Guillermo Antonio Dávila**, *U. de Lima*

An increasing number of organizations are transforming into a hybrid workplace – where employees adopt various combinations of working from the office and remotely. While recent research has explored the implications of individual-level hybrid work for participation in informal collaboration and knowledge sharing - i.e., organizational social networks - little is known about the effects of the organization-wide adoption of the hybrid work arrangements. We advance knowledge on this topic by examining the effect of adopting a hybrid workplace model on network churn - the tendency to reshape individual social networks by creating new ties and dissolving existing ones. We explore whether and how network churn is triggered by the combination of two types of asymmetries within pairs of employees stemming from 1. the differences in the work arrangements and 2. the type of interdependence in the task relationships. We use two waves of data that we have collected in a sample of 37 individuals employed in a software house during the COVID-19 pandemic. We combine data on their changing work arrangements across phases of the pandemic with organizational data on the task interdependencies among employees and network data capturing information seeking relationships. We derive implications for both employees and organizations.

OMT: **"Just Put It on the Backburner": The Perils of Neglecting Paradoxical Modes of Work**

Author: **Marina Fedorova**, *UC Irvine*
Author: **Melissa Mazmanian**, *U. of California, Irvine*
Author: **Paul Dourish**, *UC Irvine*

This article draws on eight months of ethnographic research to describe paradoxical tensions in a small gaming studio. As managers struggled to keep up with the investors' demands, we uncovered a type of an organizing paradox that we term a "modes of work" paradox. We examine how the organization privileged the work practice of software engineers, who preferred an atomized mode of work, at the expense of the equally important artists and designers, who engaged in a holistic mode of work. By focusing on situated moments of misalignment (meetings, sprint planning, and tool use) we show how, by systematically mismanaging this latent paradox, the core product of the organization suffered. We assert that this is not an issue of resource scarcity, but one of not deploying resources in service of two distinct modes of work that both need to be supported simultaneously. We argue that to successfully manage the modes of work paradox, the studio needed to foster two modes of work and periodically bring these modes of work into alignment. Finally, we offer possible ways of managing this organizing paradox and explore how the attention to tool use can be helpful in both managing the paradox and studying it.

OMT: **The Eudaimonia of Job Satisfaction: Challenging a Paradigm**

Author: **Samuel John Boyce**, *Manchester Metropolitan U. Business School*

Eudaimonia is said to be many things (e.g., happiness, well-being, prosperity, flourishing) and many things are said to be expressions of eudaimonia. However, there is one expression that is rather conclusively excluded from the eudaimonic domain: job satisfaction. This study sets out to challenge the modern wisdom regarding workplace well-being by critiquing the argument that job satisfaction conveys only hedonic happiness at work. This paper begins with a systematic search of the business and management literature to determine how job satisfaction is conceived in hedonic or eudaimonic terms within the field. It then presents an inductive inquiry comprising interviews with workers of a UK-based tourism organization openly discussing their job satisfaction. The results of the literature review and the interviews are analysed through a eudaimonic well-being theoretical lens. The results put forth support the notion that job satisfaction is both an expression of hedonic and eudaimonic well-being. In light of these findings, the article closes with suggestions for the advancement of management theory and practice with this novel interpretation of job satisfaction.

Since Hirschman's Exit, Voice, and Loyalty (1970), worker voice was largely seen as an extension of Hirschman's conceptualization as a mean to "change, rather than escape from an objectionable state of affairs." Many organizational scholars conceptualize voice as "the communication of ideas, suggestions, concerns, problems, or opinions about work-related issues, with the intent to bring about improvement or change" (Morrison, 2023). In the management literature, voice is usually framed as a prosocial behavior (Organ, Podsakoff, & MacKenzie, 2006) intended to benefit the organizations (Detert & Burris, 2007; Morrison & Milliken, 2000; Van Dyne, Ang, & Botero 2003). Much of the management research is preoccupied with macro, meso, and micro-level antecedents of voice as well as the consequences of voice for individuals, teams, and the organization. Voice is of interest to scholars and practitioners alike because cultivating worker voice may lead to improvements in efficiency (Kim, MacDuffie, & Pil 2010), quality (Litwin & Eaton 2018), turnover (Batt, Colvin & Keefe, 2002), and safety (Li, Liao, Tangirala, & Firth, 2017). Although management scholars have developed rich theories on worker voice, a sizable voice gap exists in American workplaces today. Many workers today just don't have much clout when it comes to the things that matter most to them on the job. A survey of American workers found that a majority of American workers report having less influence at work than they believe they should have on benefits, compensation, promotion, job security, respect shown to employees, protection from abuses, and new technologies (Kochan, Yang, Kimball, & Kelly, 2019). To close the voice gap, it requires us to develop and evaluate multi-option systems of worker voice in contrast to both labor law and prevailing managerial practices. In this symposium, we challenge the traditional conceptualization of worker voice and explore how different group of workers exercise voice in their everyday lives and how their voice can shape their job quality and working conditions. In keeping with the theme of the annual meeting—putting the worker front and center—our symposium raises the question of how and when workers voice in service of their specific needs. We explore this question by centering the problems that workers raise about organizations, be they material, emotional, and/or moral issues. Recent work has documented worker participation can aid in organizational problem-solving (Satterstrom, Kerrissey, & DiBenigno, 2021), but scholars know less about how and why specific problems get identified, socialized, and addressed by workers themselves. Set against a pervasive norm not to complain or talk about issues, it is crucial for contemporary research to amplify the organizational issues that workers experience and to explain how and why such problems are ignored or solved.

Panelist: **Beverley Wenger-TRayner**, *Independent*

More than thirty years after Lave and Wenger's Situated Learning: legitimate peripheral participation (1991), the concepts of communities of practice and situated learning are widely used by academics and practitioners. In this symposium, we aim to revisit the past developments around CoP and situated learning and offer insights for future research. We will a) take stock of the use of the concept of CoP in management and organization studies since its introduction in 1991 and examine whether the concept is still relevant in the current historical conditions (Davide Nicolini and Paul Duguid) b) examine how the concept can be further expanded and elaborated (Etienne and Beverley Wenger-Trayner) and c) Examine new research opportunities that could arise from a dialogue between the study of COPs and future of work.

Participant: **Jon Banner**, *McDonald's Corporation*

This panel will explore the strategic, managerial, workforce, financial, economic, and political dimensions of companies exiting Russia after the Russian invasion of Ukraine, and this panel will analyze what these exits mean for stakeholders ranging from workers to investors. This discussion is made even more timely and salient given the ongoing economic pressure campaign against Russia amidst the continued conflict in Ukraine. Economic sanctions, voluntary business boycotts, and talent and capital outflows from Russia have made for a devastating economic blockade of the Putin regime by the private sector working in parallel with global governments. With new sanctions being implemented continually, including potentially secondary sanctions extending to neutral countries continuing trade with Russia, what this economic blockade means for companies, their workforces, and their investors will continue to dominate C-suite discussions, with workers having to balance the turbulence of newfound geopolitical volatility.

Environmental Policy, Regulations, and Green Growth

Session Moderator: **Arkangel Miguel Cordero**, *U. of Texas At San Antonio*

ONE: **Environmental Policy (re)Design and Implementation**

Author: **Arkangel Miguel Cordero**, *U. of Texas At San Antonio*
Author: **Wesley Sine**, *Cornell U.*

A foundational tenet of neoinstitutional theory posits that when actors adopt policies due to normative, coercive or other legitimacy motives, these policies tend to be symbolic and rarely implemented. However, this raises a pointed question: if actors adopt only symbolically (as a legitimacy-garnering strategy), how can they maintain legitimacy without implementing? We argue that one reason symbolic adopters can often conceal the symbolic nature of their policies is that implementation is typically conceptualized solely as compliance, the extent to which an actor meets policy mandates, frequently measured as a fraction (i.e., a percentage) of an overall policy. However, when actors choose their own policy requirements, compliance offers an incomplete picture of implementation, allowing actors to obfuscate their symbolic adoption. Rather than treating this self-selection as a nuisance in need of correction via fancy econometric methods, we see it as an informative phenomenon worthy of attention. To redress the limitations of compliance as the sole measure of implementation, we conceptualize the latter as consisting of four different, albeit interrelated, dimensions and discuss their importance in the context of state-level Renewable Portfolio Standards (RPS), also known as Alternative Energy Portfolio Standard (AES), in the United States.

ONE: **Ready or Not: How Readiness Shapes Government Responses to Mandatory and Voluntary Regulations**

Author: **Alexis Yong**, *IESE Business School*
Author: **Horacio Enrique Rousseau**, *Florida State U.*
Author: **Ines Alegre**, *IESE Business School*
Author: **Pascual Berrone**, *IESE Business School*
Author: **Joan E. Ricart**, *IESE Business School*

This study explores how government organizations respond to transnational regulation promoting transparency and environmental responsibility in public procurement. We draw on institutional theory to disentangle contradictory predictions on how government entities' level of readiness (defined as their ability and willingness) shapes their response to mandatory and voluntary regulations. Based on EU Directive 2014/24, our results show that regulation impacts compliance asymmetrically contingent on readiness, suggesting complex interactions with synergistic or substitute effects. We thus reveal nuances in the effectiveness of regulatory pressures, resulting from the interaction between their nature (mandatory or voluntary) and the readiness level of adopting organizations. Our findings also offer insights for policymakers on using public procurement to fight corruption and meet sustainability goals.

ONE: **Degrowth vs. Green Growth. A Computational Review and Interdisciplinary Research Agenda**

Author: **Stephan Hankammer**, *Alanus U. of Arts and Social Sciences*
Author: **Robin Kleer**, *Vlerick Business School*
Author: **Max Polewsky**, *Alanus U. of Arts and Social Sciences*

The concepts of green growth and degrowth represent two major narratives in the public and academic debate on socio-ecological transformation. Using a computational literature review based on the Latent Dirichlet Allocation algorithm, we systematically review 1449 journal articles on green growth and degrowth published between 1972 and 2020. Based on a comprehensive full-text analysis, we uncover the hidden topic structure in the literature and identify a total of 50 topics. Based on a comparative analysis of the two research fields, we confirm that green growth research is highly policy oriented, focused on practical implementation and builds on empirical research methods, while degrowth research is much more theory-driven, less focused on practical implementation and remains largely descriptive. Our analysis further reveals that green growth and degrowth are two rather isolated fields of research with little exchange and mutual reference on related topics. However, the topic of social change and transition represents an intersecting and promising future research area. We derive six generalizable recommendations that address current shortcomings and interdisciplinary potentials of degrowth and green growth research and contribute to shaping the future of social-ecological transformation research.

Leadership (or not) for Sustainability

Session Moderator: **Shivendu Pratap Singh**, *Southern Illinois U., Edwardsville*

ONE: **The Effect of Indigenous Leadership on the Sustainability Performance of Businesses**

Author: **Shivendu Pratap Singh**, *Southern Illinois U., Edwardsville*
Author: **Rajeev Sharma**, *Waikato Management School, The U. of Waikato*
Author: **Nirosha Hewa-Wellalage**, *Waikato Management School, The U. of Waikato*
Author: **Krishna Reddy**, *Toi Ohomai Institute of Technology*
Author: **Ploypailin Kijkasiwat**, *The Faculty of Business Administration and Accountancy, Khon Kaen U.*

Following recent recognition of the role of traditional and Indigenous knowledge in achieving sustainable development, this research investigates the effect of Indigenous leadership on the sustainability performance of businesses. Drawing upon stakeholder theory and upper-echelon perspective, we hypothesize that indigenous ownership positively influences the sustainability performance of businesses. We surveyed 159 indigenous and non-Indigenous businesses in the Greater Waikato and Auckland regions of New Zealand. Our analysis shows that businesses lead by indigenously owned businesses have better sustainability performance compared to non-Indigenously owned businesses. However, the findings are not linear and we observed heterogeneity in the sustainability performance of based on other firm-level attributes. The policy implication of our findings is that decision-makers can simultaneously achieve the financial goal and sustainability goals of indigenously and non-Indigenously owned businesses. This research extends our understanding of the sustainability performance of businesses, contributes to improving the sustainability performance of businesses, and suggests ways to achieve the United Nations' 2030 Agenda for Sustainable Development.

ONE: **Organizing for Non-capitalist Decolonial Autonomy: An Analysis of a Leaderless Indigenous Movement**

Author: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*

I focus the empirical work of this article around the Casa de los Pueblos (People's House in English) movement which was formed by Indigenous groups influenced by the Zapatista movement in the region of Cholula in the state of Puebla, Mexico. The People's House collective was originally formed to stop the extraction of their water by Bonafont a Mexican mineral water company owned by multinational Danone. The activists decided on World Water Day (8th March) in 2021 to set up a campsite outside the entrance to the Bonafont water bottling plant. This led to the plant's shutdown (which remains closed at the time of writing) and according to all interviewees shortly after the recovery of groundwater levels in wells. Around 400 mostly local protestors (including many families with children) lived in this campsite living in a collective manner.

ONE: **Sense of Place and Sustainable Development**

Author: **Haitao Yu**, *IESEG School of Management*

This study investigates how sense of place guides an organization to contribute to sustainable development. Sustainable development challenges such as poverty and climate change, despite global phenomena, are locally addressed and require local understanding. Sense of place, the attitude and feeling that individuals and groups hold vis-à-vis the geographic areas in which they live, focuses on local phenomena that are critical for sustainable development. This paper presents an in-depth case study of LuxuryYak, an enterprise contributing to sustainable development in a nomadic village on the Tibetan Plateau. Data were collected through a three-month ethnography. I identify and theorize three underlying forms of sense of place: functional dependence, emotional attachment, and mutual dependence. These forms of sense of place guide organizational practices to actualize sustainable development in three dimensions: poverty alleviation, heritage preservation, and sustainable livelihood. This study advances organization studies on sustainable development and sense of place.

Supply Chain Management III

Session Moderator: **Nagarajan Sethuraman**, *U. of Kansas*

OSCM: **Impact of Women in the Invention Team on Product Development Outcomes**

Author: **Nagarajan Sethuraman**, *U. of Kansas*
Author: **Deepak Jena**, *Indian School of Business*
Author: **Rachna Shah**, *U. of Minnesota Twin Cities*
Author: **Shashi Kant Kumawat**, *Indian School of Business*

Does having additional women participate in research and product development teams result in more successful products downstream? We examine this question in the context of the pharmaceutical industry which has suffered from historically low women participation in the patent invention teams, leading US congress to act. Using a unique database compiled from data obtained from the FDA through a Freedom of Information Act, US Patent and Trademark Office, and Compustat, we examine our central hypothesis that women's participation in patent invention teams is associated with a higher likelihood of FDA-approved drug, but with diminishing returns. Results from 268,631 patents filed by 214 US publicly traded companies show support for the negative U-shaped relationship. We validate our results with numerous robustness checks. We also demonstrate two mechanisms for the relationship: novelty and attention to women subjects in the early stages. A post hoc analysis shows that women's participation in patent invention teams also reduces the probability of future recall of a patented invention. Our study is particularly timely because women's participation rates have stagnated at around 12% since 1998, while our results show that the highest likelihood of FDA approval is when women's participation proportion is at around 40%. We posit that these results provide a strong economic rationale and empirical support to managers and policymakers respectively, for increasing women's participation in research and product development initiatives.

OSCM: **Rethinking the Theory and Practice of Process Improvement**

Author: **Rima Al Hasan**, *U. of Jordan*

An increasing number of organizations have adopted process improvement (PI) programs to increase speed, reduce cost, and better address customers' needs. However, studies show that PI programs based on approaches such as lean, Six Sigma, and total quality management are often ineffective. There is a gap between the theory and the practice of PI in organizations. In this paper, we argue that this gap can be due to how PI approaches are being studied by researchers. We propose an alternative perspective to the positivistic paradigm that dominates both scholarly debates and practical implementations. Drawing on interpretivism, we argue that process improvement theory and practice could be advanced by focusing on the roles of actors in shaping the deployment of PI approaches, and by considering these approaches adaptable rather than static and in combination rather than as single entities.

OSCM: **Product Recalls and Insider Trading**

Author: **Rachna Shah**, *U. of Minnesota Twin Cities*
Author: **Finn Petersen**, *U. of Minnesota Carlson School of Management*
Author: **George Ball**, *Indiana U. - Kelley School of Business*
Author: **Salman Arif**, *Carlson School of Management*

The product recall process is well documented but evidence of whether corporate insiders use it to engage in nefarious activities is scarce. We use data on the timing of medical device product recalls and trading data from officers and directors to study whether firm insiders engage in insider trading during the product recall process. To detect the presence of insider trading we analyze if insiders sell more stock on days on which they have non-public information about upcoming recalls. We find that insiders sell more stock on these days and that insiders perform much better on those sales than what is expected. Together, these results provide evidence of the presence of insider trading during the product recall process and indicate a collaboration opportunity for the authorities to mitigate and prosecute insider trading.

Project Management

Session Moderator: **Amol Dhaigude**, *S P Jain Institute of Management and Research*

OSCM: **Determinants of Knowledge Transfer Outcomes in International Partnership Projects**

Author: **Deepak Sardana**, *U. of South Australia*
Author: **Amol Dhaigude**, *S P Jain Institute of Management and Research*
Author: **Narain Gupta**, *Management Development Institute Gurgaon*

This paper investigates the relationship between cognitive capital (CC) and knowledge transfer outcomes (KTO), along with exploring the serial mediation of project management processes (PMP) and management of partnership with international partners (MPIP). PMP is considered as the key driver impacting the CC internal to the firm, and MPIP is seen as contributing to the structural and relational aspects with the external partner. Data was collected using a structured questionnaire with the help of a cross-sectional survey design. Structural equation modelling was applied to the collected data for analysis. The results showed that the cognitive capital has indirect effect on the knowledge transfer outcome via project management processes, via management of partnership with international partners, and both as well. It is interesting to note that the direct effect of cognitive capital on the knowledge transfer outcome is not significant. This confirms a full mediation result in our structural relations. The findings use social capital theory as the theoretical framework and makes contribution to it. The results also have practical implications as knowledge transfer outcomes is of strategic significance to any firm and understanding the underlying mechanism and key contributors to it is valuable to the top management.

OSCM: **Understanding the Meaning and Management of Scale in Projects**

Author: **Joseph William Harrison**, *School of Management, U. of Bath*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Michael Lewis**, *School of Management, U. of Bath*

The scale of a project (i.e., large, small and, rarely, medium) is frequently used as a meaningful descriptor in project studies, without any associated definition or discussion of what this means. In this paper, we draw three conclusions from a systematic literature review and synthesis of 172 project management papers which explicitly mention project scale. First, the analysis confirms that the vast majority (90%) of the papers address scale by implication or assumption and consequently there is a clear definitional and conceptual gap (which we begin to address). Second, most (65%) mentions of scale are associated with “large”-ness with few papers describing small(er) or mid-size projects (10%). Third, the inconsistent and underdeveloped basis for categorizing scale, raises important questions for the clusters of practice associated with the management of scale.

OSCM: **Uncertain Decision Making in Large-scale Projects:**

Author: **Mehdi Rajabi Asadabadi**, *U. Of Sydney*

Large-scale projects may take considerable time to deliver (years or decades). However, there are decisions to be made in the project front-end phase. Many of such decisions are made subjectively or intuitively. This is because structuring this decision-making process can become too complex. Decisions for the distant future need to take into consideration several events that are likely to happen in the future, each of which may dramatically change such decisions. Considering several events may result in tens or hundreds of future possible scenarios, including the occurrence of the events and their combinations. This hinders structuring the decision-making process. The literature provides approaches to handle uncertain reasoning. However, the approaches suggested in the literature are insufficient to handle such complex problems. This paper suggests the development of a version of a recently proposed approach, namely the stratified approach, to address such complicated problems. This paper contributes to the literature through the development of a novel approach to handle uncertain reasoning. Furthermore, the paper also has a practical value as it introduces a novel platform to support decision making in highly uncertain environments. The proposed approach is illustrated on a complex project by the Australian Government to procure twelve Attack-class submarines.

OSCM: **What Mediate Cognitive Capital & Organization Projects Performance in International Partner Projects**

Author: **Deepak Sardana**, *U. of South Australia*
Author: **Amol Dhaigude**, *S P Jain Institute of Management and Research*
Author: **Narain Gupta**, *Management Development Institute Gurgaon*

Research on the management of international partnership projects and their impact on organizational projects performance is increasingly getting the attention of management scholars. An area that is often neglected is the important role of cognitive capital in the management of international partnership projects; research on this topic remains sporadic and dispersed. In this empirical research, conducted in an emerging economy context of India, we present a serial mediation model to showcase the positive contribution of cognitive capital to organizational projects performance via internally driven project management processes (PMP) and externally oriented project risk management (PRM). We draw from the social capital and contingency theories to describe the orchestrating mechanism. This study contributes directly to the scholarly literature and managerial practices focusing on the governance of international partnership projects that are often more complex and riskier, but they play an important role in the sharing and acquisition of knowledge across borders.

Supply Network and Risk

Session Moderator: **Anni Rajala**, *U. of Vaasa*

OSCM: **Examining the Effects of Supply Chain Digitalization on Firm Performance: A Meta-analysis**

Author: **Anni Rajala**, *U. of Vaasa*
Author: **Tuire Hautala-Kankaanpää**, *U. of Vaasa*

The purpose of this study is to meta-analytically investigate the relationship between supply chain digitalization (SCD) and firm performance. We treat firm performance as an aggregated construct involving different types of performance, as well as, we study whether SCD have different magnitude of effect on the different types of performance. Further, we also investigate whether the performance effects vary according to the digitalization type. This study contributes to the prior literature of SCD by integrating findings from several research streams and by demonstrating that SCD has positive effects on performance. This meta-analysis is one of the first attempts to integrate a wider range of supply chain digitalization related empirical studies. Further, this study contributes to the digitalization literature by focusing on the inter-organizational aspects of digitalization.

OSCM: **Managing Coopetition in a Multiparty Supplier Alliance**

Author: **Renate Taubeneder**, *U. of Bath*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Beverly B. Tyler**, *Virginia Tech*
Author: **Brian Squire**, *U. of Bath*
Author: **Devi R. Gnyawali**, *Virginia Tech*

Construction of utility projects consistently run over time and budget. Some of the most significant challenges are the dominance of short-term competitive tendering, and an adversarial mindset, resulting in suppliers with similar capabilities competing for work across the project lifecycle. This competitive and adversarial approach is particularly problematic when considering the complexities involved in sequencing and coordinating suppliers, calling for high levels of cooperation. The simultaneous tension between cooperation and competition is known as coopetition, and prior studies have not yet considered the potential for a buyer to balance these tensions between multiple suppliers. Our longitudinal study follows a new buyer-initiated MPSA within the utility sector from inception to final contract signature, examining the introduction of (in-)formal governance mechanisms as the buyer seeks to balance cooperation and competition. Our study contributes to OSCM literature on multiparty alliances by examining a novel structure between a utility provider and suppliers, with no shadow of the past but overlapping capabilities. Second, we extend coopetition literature by examining the experimental process of a utility provider establishing a coopetition logic, analyzing adjustments to (in-)formal governance, their impact on and balance of cooperation and competition in the MPSA, and their effects on the buyer.

OSCM: **Federated Diversity and Inclusion-focused NLP-based Supply Chain Risk Prediction System Design**

Author: **Dequn Teng**, *U. of Cambridge*
Author: **Veronica Martinez**, *U. of Cambridge*

The supply chain has been challenged globally by COVID, geopolitical issues, and natural disasters. It is important to model the global supply chain so that early indicators of risk can be found. Traditionally, supply chain risk modeling research has concentrated on operational data modeling, such as production lean time and logistics ETA. But diversity, equity, and inclusion (DEI) are now much more important to operational performance than they used to be. The existing literature focuses on corporate-specific performance indicators, with little consideration given to the supply chain operation domain. The lack of supply chain aspects comes from the lack of a reliable data-sharing scheme, and the researcher is proposing federated learning (FL) principles for modelling the supply chain process without sharing data in the multi-entity supplier's network. Specifically, the researcher aims to apply FL on the diversity and inclusion focused on natural language processing (NLP) task for supply chain risk prediction system design. The researcher has tested based on the natural disaster risk prediction data and has achieved 0.95 prediction data accuracy based on the diverse and inclusive data sharing on social media data based on Kaggle open data. The implications of the research lay on introducing the framework in applying the DEI data for the federated NLP-based supply chain risk modelling system.

OSCM: **Pressure Makes Diamonds: How Organizational Culture Bolsters Supply Chain Resilience**

Author: **Nils-Ole Hohenstein**, *Cooperative State U. Mannheim, Baden-Wuerttemberg*

The COVID-19 pandemic has affected profoundly firms' operational and ?nancial performance. The crisis has led to global supply chain (SC) disruptions and showcases how fragile and vulnerable intertwined SC networks are nowadays. This paper examines how corporate culture has influenced supply chain resilience (SCRES) during competitive dynamics to control and respond to the COVID-19 crisis. Our study extends the understanding of SCRES practices by exploring the cultural effects of risk awareness and organizational learning on SC adaptation and reconfiguration. Thus, we draw on the dynamic capability theory and combine an extensive literature review with a rigorous methodological multiple case study based on 15 interviews with seven firms operating globally in different industries. Our findings provide empirical evidence that a powerful corporate culture has a strong positive influence on handling the severe impacts of crises like the COVID-19 pandemic in globe-spanning SC networks. The study highlights not only that the dimensions of employee engagement, communication (internal and external) and collaboration determine how effective firms' cultures are in handling large-scale disruption robustly and agilely, but also that the COVID-19 crisis has positively affected firms' learning orientation. The critical requirement of digital SC transformation to strengthen SCRES during pandemic conditions has reinforced the dynamic adaptation and reconfiguration of firms' culture and employee skillsets. Hence, this paper provides valuable insights on how a favourable corporate culture can improve SCRES in crisis conditions.

Managing Human Resources

Session Moderator: **Marlene Walk**, *U. of Freiburg*

PNP: **Investigating Turnover Intentions in the Face of Organizational Change**

Author: **Marlene Walk**, *U. of Freiburg*
Author: **Amanda Stewart**, *North Carolina State U.*
Author: **Kerry Kuenzi**, *U. of Wisconsin Green Bay*

COVID-19 has been regarded as a critical incident that catalyzed a multitude of organizational changes in nonprofit organizations. This study centers on the nonprofit workers' perspective of change by investigating to what extent and how negative appraisals in the midst of the pandemic are related to intentions to leave the organization about a year after the start of the pandemic, at a point in time when the initial shock of changes spurred on by COVID-19 had settled into a sense of the "new normal." Findings indicate that harm but not threat appraisals predicts to psychological contract violation and that psychological contract violations are related to resistance to change as well as intentions to leave. Unexpectedly, neither threat appraisal nor resistance to change was related to turnover intentions.

PNP: **The Conditional Effect of Abusive Supervision on Turnover Intention among Public Servants**

Author: **Nhung Nguyen**, *U. of Economics Ho Chi Minh City*
Author: **Diep Nguyen**, *Northumbria U.*
Author: **Stephen Teo**, *Northumbria U.*
Author: **Matthew J. Xerri**, *Griffith Business School, Griffith U.*

Public administration literature highlights the prominent role of leadership in retaining engaged and committed public servants. While much research has focused on the constructive behaviors of supervisors, evidence of destructive and unethical leadership in public administration literature is still lacking. This study uses social cognitive theory and the sample of 468 US public servants to contribute to the deficiency of research on abusive supervision in the public sector. We found an indirect relationship between abusive supervision and turnover intention via psychological distress. The impact of abusive supervision is more detrimental among subordinates with a high person-organization fit. As the public sector has contemporarily faced staffing and retention issues, our study offers new insights into how public organizations can retain those highly fitted to the work environment by considering the growth of healthy interpersonal relationships.

PNP: **Employee Work Engagement and Organizational Engagement within the Hybrid Work Model**

Author: **Hedva Vinarski Peretz**, *The Max Stern Yezreel Valley College, Israel*
Author: **Aviv Kidron**, *Max Stern Yezreel Valley College*

The hybrid work model which is based on technology-enabled job autonomy is one of the emerging features in the post-pandemic future of work in both private and public sectors. This article explores the socio-psychological mechanism of employee work and organization engagement within the context of a hybrid work model integrates working at the office and remote working. The research model links multi-dimensional support - i.e. organizational, managerial, social and professional support, autonomy needs satisfaction, and two distinct types of employee engagement - work and organization. The study was performed using a cross-sectional correlational design among 352 public servants and private sector employees (173, 179 respectively). The relations between the variables of interest in our work are understood through the integration of the Self-Determination Theory and the Job Demands-Resources framework of engagement. Mediation analyses revealed that employees' satisfactory with needs of autonomy mediated the effect of three sources of support - perceived organizational support, manager's support and social support on work engagement. But, this sense of satisfaction did not mediate other support effects on organizational engagement, where mediating the effect of professional support on engagement was completely inactive. Namely, no indirect effect was found between professional colleagues' support and the two types of engagement. This suggests that three sources of support - organizational, supervisor and social, play an important role in leveraging employee work engagement, but are less relevant for their organizational engagement.

PNP: **Reflected Governance Culture: Effects of CEO Characteristics on Comply-or-Explain Quality**

Author: **Ulf Papenfuß**, *Zeppelin U.*
Author: **Zino Manuel Roos**, *Zeppelin U.*
Author: **Claudius Stritt**, *Zeppelin U.*

Self-regulation through public corporate governance codes (PCGCs) are a crucial governance mechanism for good governance, political control and policymaking in the context of state-owned enterprises (SOEs) on all government levels. In many countries the central mechanism of PCGCs is the comply-or-explain principle which allows SOEs to deviate from recommendations, given the deviation is disclosed and justified in a published declaration of compliance. The comply-or-explain principle has great potentials in the public sector in different contexts, but critical research gaps exist. In particular, the theoretical understanding on the effects of CEO characteristics is limited. Drawing on upper echelons theory, the present study analyses 240 German SOEs from 2016 to 2020 and shows a significant positive effect of female executive directors on the quality of declarations of compliance, whereas private sector experience is insignificant. The findings enhance the theoretical understanding on the comply-or-explain principle and CEO characteristics and give conceptual impulses to assess the diffusion and effects of comply-or-explain quality in future research for the public sector and for policy making. Regarding the conference theme "Putting the Worker Front and Center", PCGCs using the comply-or-explain mechanism have special potential to address current workplace challenges.

Collaborations and Crisis

Session Moderator: **Tero Montonen**, *U. of Eastern Finland*

PNP: **Contracting 'Person-centred' Working by Results: Street-level Managers and Frontline Experiences**

Author: **Eleanor Carter**, *U. of Oxford*
Author: **Fernando Deodato Domingos**, *EAESP - FGV*
Author: **Franziska Rosenbach**, *U. of Oxford*
Author: **Felix-Anselm Van Lier**, *U. of Oxford*

Despite growing interest, little is known empirically about the impact of Outcomes Based Contracting (OBC) on public service delivery at the street level. This longitudinal study evaluates the contractual shift of a British support service for adults with multiple, complex needs from bilateral fee-for-service arrangements to an outcomes contract in the form of a 'social impact bond'. These findings add much-needed empirical evidence on the impact of OBC on the discretion, personalisation, and co-production of public service delivery at the frontline; and pushes conceptual boundaries by emphasising the importance of governance and management conditions for the work of street-level bureaucrats.

PNP: **Dynamics of Collaboration Modes and Mindsets: Health Researchers' Interaction with Stakeholders**

Author: **Tero Montonen**, *U. of Eastern Finland*
Author: **Eeva Aromaa**, *U. of Eastern Finland*
Author: **Pasi Hirvonen**, *U. of Eastern Finland*

This article focuses attention to research collaboration with multiple stakeholders in public universities. In prior research, organisation and management scholars have focused on academic researchers' collaboration with companies, often with rather static research designs. The main objective of this study is to extend attention to the dynamics of university-society collaboration in which public and third sector organisations may have key roles. Drawing from the literature on research collaboration and knowledge production we ask: how do researchers collaborate with stakeholders, and how do shifts emerge from one collaboration mode to another? The article is based on thematic interview data from health researchers in two of the largest universities in Finland. The findings illustrate four trajectories of collaboration dynamics: seizing the opportunity, problem solving, orchestrating, and weaving. The contribution of this article is three-fold. First, it argues that research collaboration in public universities increasingly extends to university-society relationships. Second, it extends the concept of knowledge production in research collaboration by adding the dimension of collaborative mindset. Third, it demonstrates how a focus on the dynamics of research collaboration offers fertile ground for the development of a better understanding of knowledge production with multiple stakeholders.

PNP: **The Role of Leadership in Managing Stakeholders and Grand Health Crisis**

Author: **Prem Sagar Menghwar**, *Luiss Guido Carli U.*
Author: **Fabian Homberg**, *Department of Business and Management, LUISS Guido Carli U.*
Author: **Dr. Zafar Zaidi**, *Indus U. of Health Sciences*
Author: **Dr. Ashar Alam**, *The Indus Hospital*

The coronavirus crisis has created multiple challenges for leaders and has subjected healthcare institutions and other organizations to severe hardships. The prior literature on crisis leadership and crisis management is mainly based on historical data, scattered under different labels, and inconclusive. These limitations have resulted in the failure to understand the leadership's role and the firm's strategies in ensuring health care. We conducted a longitudinal real-time case study on a health institution that provided healthcare services to people at zero cost during the Covid-19 crisis. Our findings suggest that leadership is a social process that allows multiple leaders to share power, responsibilities, and purpose. We found that these leaders have two essential characteristics - shared social purpose and shared work. This contrasts with past literature that promotes heroism and focuses on one single leader. We show that if multiple leaders work together for a common purpose doing the administrative as well as ordinary jobs performed by subordinates, they will inspire group members to work with dedication under extreme conditions. Furthermore, we explain that leadership proactively prepares and involves stakeholders in managing crises rather than simply communicating with stakeholders. We theorize that by involving stakeholders in the process of managing a crisis, organizations address their concerns. These emerging findings contribute to existing work on leadership and strategies during crisis times.

PNP: **Creeping Crises and Public Administration: A Time for Dynamic Governance?**

Author: **Isabella M. Nolte**, *Harz U.*
Author: **Jörg Lindenmeier**, *Lehrstuhl für Public und Non-Profit Management - Corporate Governance und Ethik*

Public management scholars have long explored how public administrations respond to sudden crises. However, because sudden crisis management entails returning to normal, whereas creeping crisis management calls for adapting to a new normal, studies of sudden crises rarely contribute to creeping crisis management. Using data from 186 German health authorities, this study explores how four governance strategies and stakeholder collaboration affect public administrations' success in adapting to creeping crises. While dynamic governance strategies entailing digitalization and agility strongly affect adaptability, public administrations that want to successfully adapt to changing environments need to strike a balance between dynamism and stability.

Rethinking Theorizing and Categorizing in Management Research

Session Moderator: **Elizabeth Demissie Degefe**, *Fuqua School of Business, Duke U.*

RM: **Moral Relativism Reduces Sexism: Using Machine Learning to Generate Theoretical Insights**

Author: **Elizabeth Demissie Degefe**, *Fuqua School of Business, Duke U.*
Author: **Abhishek Sheetal**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Krishna Savani**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

The pervasiveness of sexism prevents organizations from making full use of their available talent. To quash sexism, management studies have attempted to address the contextual factors that lead to bias. However, without addressing the psychological factors that contribute to sexism, no change can be made at the organizational level. Thus, we need to identify the values and belief systems underlying sexism. However, most existing research on the psychological precursors of sexism focuses on a narrow range of constructs, even though many inconspicuous values are likely to uphold sexism. To identify the strongest predictors of sexism, we trained a machine learning model to classify individuals as sexist vs non-sexist based on 408 attitudes, values, and beliefs in the World Values Survey (Study 1). The model identified moral relativism as a strong predictor of sexism. No past research had examined a link between these two constructs. We thus tested this relationship in four follow up studies. Men who were more morally relativistic scored lower on modern sexism (Study 2) and workplace sexism scales (Study 3). Documenting the underlying mechanism, we found that gender determinism mediated the relationship between moral relativism and sexism (Study 4). An experiment found that those made to be more morally relativistic were less likely to gender stereotype androgynous faces (Study 5). Using machine learning, we were able to find a novel predictor of sexism that displayed how a moral value with no clear connection to sexism upheld it through its effects on peoples' understanding of gender's impact on personality and ability. These findings illustrate that machine learning can be used to provide novel perspectives on important societal and organizational problems.

RM: **Using Counterfactuals for Theory Building in Management and Organization Studies**

Author: **Gizem Kadioglu**, *U. della Svizzera Italiana*
Author: **Bareerah Hafeez Hoorani**, *Nijmegen School of Management*
Author: **Michael Gibbert**, *U. della Svizzera Italiana*

Counterfactuals can be an important ingredient in theorizing. Qualitative research is particularly useful as a theory-building tool given its openness to context, and counterfactuals provide a welcome broadening of scope when it comes to exploring contexts. Nevertheless, we currently do not know whether and how counterfactuals are used in qualitative research. To rectify this, we offer a systematic review of all empirical qualitative papers actively engaged with counterfactuals published in five top-tier management journals, from the first volume to the most recent. We find that the authors draw on counterfactuals stemming either from within or beyond the empirical context. In addition, counterfactuals (somewhat surprisingly) can take the form of a factual scenario (i.e., an unexpected occurrence within an empirical setting or a contrasting case outside) or of a fictional scenario (i.e., mentally generated 'what-if' schemata that probe the causality of the emerging findings – again with sources taken from within the context or beyond). We illustrate the different theoretical gains accruing to the authors by using these four types of counterfactuals individually. Notably, we find that only a minority of authors used several of these types in concert and we reveal how their complementarity can provide further impetus to theorizing.

RM: **How Management Scholars Categorize Concepts & Phenomena: A Multi-study Review and Recommendations**

Author: **Jason R. Pierce**, *U. of North Carolina, Greensboro*

Theorizing has longed reigned as the preeminent activity in the management and organizational sciences (MOS). Though forebearers of the field once acknowledged categorizing as a separate and possibly more important activity, MOS scholars have since viewed categorizing as merely part of theorizing. The four studies reported here challenge this view by showing how categorizing can answer important questions and yield valuable insights apart from theorizing. First, an exploratory (Study 1) and etymological review (Study 2) in tandem distilled a framework of three general approaches—classical (Aristotelean), commonsense (intuitive), and contemporary (evolutionary)—historically taken in all sciences, including MOS, to categorize concepts and phenomena. Next, a qualitative review (Study 3) revealed that MOS scholars overwhelmingly take commonsense approaches independent of formal standards. This combined exercise demonstrates how categorizing alone can expose and mitigate the kinds of semantic confusion that have long troubled MOS scholars. In doing so, it confirms the three step-sequence of science—categorizing, theorizing, testing—pioneers of the field espoused and provides insights for making categorizing more rigorous.

RM: **AI-Duction for Organizational Theory Building: (How) can we Overcome Ontological Neglect with AI?**

Author: **Itziar Castelló**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Leroy White**, *Warwick Business School*

With rapid advancements in (AI), we consider it presents an emerging issue for organizational theory building. AI is increasingly being used in organizational research, but recently it has been highlighted that there is ontological neglect. While it is acknowledged that AI can advance human reasoning in organizational research, the risk is that it reduces the task of research to essentially prediction only, thereby neglecting the branch of organizational research concerned with understanding and interpretation of social phenomena. This neglect comes at a cost in explaining social phenomena in organizations. Thus, our paper progresses in three sections. First, we provide an overview of three principle forms of AI (assistive, interpretative, and augmentative). We explain them in relation to common modes of human intelligence in research (i.e., supervised, unsupervised and reinforced learning), their role in research and their explorative quality. We also show examples relating to qualitative organizational scholarship, highlighting the contribution and limits of AI-supported research. Next, we present a model that shows the potential for AI to support research and theory building we call AIduction. Through this model, we propose that AI can help theory building via continuous hermeneutic cycling. Finally, we show how AI can support theory building that pays attention to the ontological appreciation - closely linked to the hermeneutical cycle - that can explain relationships between constructs in more enriching ways.

Person-Centered Techniques: An Expert Panel

Organizer: **Mahira Ganster**, *U. of Arizona*
Organizer: **Nathan Philip Podsakoff**, *U. of Arizona*
Panelist: **Allison S. Gabriel**, *Purdue U., West Lafayette*
Panelist: **Joanna Tochman Campbell**, *U. of Cincinnati*
Panelist: **Hoda Vaziri**, *U. of North Texas*
Panelist: **Mo Wang**, *U. of Florida*

Known by a variety of labels (e.g., latent profile/class analysis, latent growth curve modeling, latent transition analysis, fuzzy set qualitative comparative analysis), person-centered techniques represent a conceptual, methodological, and analytic departure from traditional variable-centered approaches to studying organizational phenomenon. Focused on identifying subpopulations, patterns, clusters, or classes of observations within samples, person-centered techniques represent an area of increased attention over the past decade in organizational behavior and human resource management. However, this increased attention has come with some "growing pains," as researchers still have questions about the value and design of person-centered studies, the application of person-centered techniques and the interpretation of findings, and the publication of articles based on person-centered techniques. This panel includes four experts on this topic who will address questions pertaining to three thematic domains: person-centered concepts and theory, research design and methods, and analyses, reporting, and interpretation. The panelists will provide their assessment of the current state of this research, and their recommendations for future research taking a person-centered perspective in an effort to inform organizational behavior and human resource management scholars interested in this approach.

Why and How to Replace Statistical Significance Tests with Better Methods to Evaluate Hypotheses

Presenter: **William H. Starbuck**, *U. of Oregon*
Presenter: **Andreas Schwab**, *Iowa State U.*

This symposium will introduce and discuss how scholars can improve upon statistical significance tests, which continue to constrain the production of knowledge in management science. The extensive use of these tests in quantitative research has led to the accumulation of "statistically significant" results that are both too small to be practically relevant and so small that they are unlikely to replicate. A field that aspires to provide useful advice to managers needs to focus on practically important and robust effects. The proposed symposium introduces and discusses alternative approaches to overcome the limitations of statistical significance tests -- such as, effect size measures, confidence intervals, graphs, meta-analyses, baseline modeling and the implications of these approaches for the accumulation of scientific knowledge. A final "Question and Answer" session will offer additional opportunities for further discussions, advice and recommendations.

How Deficiencies of Statistical Significance Tests Have Corrupted Management Research

SIM: **The War on Drugs: How Multi-stakeholders Transform a Drug-based Economy into Sustainable Economy (WITHDRAWN)**

Author: **Hee-Chan Song**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*

Multi-stakeholder research suggests that multiple stakeholders across different sectors can resolve societal problems when they unite their complementary resources and skills. The studies highlight that global multi-stakeholder initiatives play a pivotal role in building such partnership processes. However, geographically and culturally isolated regions, such as ethnic minority areas, are often in a blind spot concerning the dissemination of the global initiatives and the relevant stakeholders' attention. Drawing upon a long-term fieldwork that took place in ethnic minority villages near the Thailand and Myanmar border, this study investigates how collective interventions of multi-stakeholders transformed the illicit drug-based economy of the region into an alternative sustainable economy. The region once supplied 60% of the illicit drugs distributed worldwide, yet a series of cross-sector interventions transformed the region into a non-drug-driven, sustainable economy over the last 60 years. This study reconstructs the process, and in doing so discloses the role of Japanese multinational enterprises that facilitated government and non-government sectors to effectively tackle the problem. The findings of this study shed light on the importance of authentic cross-sector partnerships in dealing with sustainability issues of ethnic minority regions.

SIM: **Labour Market Integration of Ukrainians in Europe: Differentiation and Ethical Dilemmas**

Author: **Almina Besic**, *Johannes Kepler U. Linz*
Author: **Henriett Primecz**, *Johannes Kepler U. Linz*
Author: **Johannes Brandstetter**, *Johannes Kepler U. Linz*

The arrival of displaced persons from Ukraine predominantly in European Union countries has furthered the debate about refugee labour market integration anew. At the same time, the unprecedented implementation of the temporary protection directive allows for immediate access to the labour market for these newcomers. In this study we address the integration of Ukrainians into the labour market at the example of Austria as one of the receiving countries in Europe. We analyse the potential ethical dilemmas that support organisations in the integration field encounter, the specificity of the integration of the newcomers compared to other refugees (most notably those that arrived in 2015/2016) and the various pressures put on the newcomers. We identify a pragmatic approach to integration that relies heavily on employment. At the same time, we see that support organisations rely on this approach due to political pressure that fosters self-reliance and 'usefulness' of the displaced individuals. This is correlated with the political landscape in the receiving country, where issues of refugee integration are frequently used for political gains.

SIM: **The Emergence and Evolution of Organizational Fields: Toward a Theory of a Place Based Field**

Author: **Rama Krishna Reddy Kummitha**, *U. of Essex Business School*

Building on the idea of organizational field, this article examines the emergence, evolution, and stabilization of the smart cities field. By drawing examples from Barcelona theoretical case, we argue that the initial field emergence is coupled with the promotion of corporate logic, which failed to take the 'place' into account. The 'means' in which the field emerged gained enormous critical exposure, attracting resistance from a key stakeholder group. This process led to field level negotiations and change in logic prioritization. We theorize this process and propose a theory of place-based field to emphasize that the field emergence needs to focus on the means, by which it engages different actors that would offer prescription for legitimacy and survival.

SIM: **Doing Good While Saving Money? The Formation of Initial Reputation of a New Social Venture**

Author: **Carolin Johanna Waldner**, *ESCP Business School*
Author: **Antoaneta Petkova**, *San Francisco State U.*
Author: **Jurgen Willems**, *Vienna U. of Economics and Business*

This paper addresses recent calls for in-depth research and theorization of the cognitive and emotional basis of reputation and the processes through which the perceptions that comprise new venture reputations form and change over time. Following a new social venture through its first year of operation, we analyze the formation of its initial reputation with customers. Using inductive theory building and theory extension methods, we identify specific components of customer evaluations that comprise the rational, emotional, and moral basis of new venture reputation. Our findings offer new understanding of the initial reputation perceptions of social ventures, and the potential gaps that may occur between the desired reputations that venture founders aim to develop through their reputation-building efforts and the actual perceptions that emerge based on customers' interactions with the ventures.

SIM: **How Much You See Depends on How You Look: A Mutual Bank Story**

Author: **Chao Ren**, *U. of New South Wales Canberra*

Cooperative and mutual financial organisations are in natural conflict as a result of their for-profit and for-purpose objectives. Drawing on insights from the literature on sustainability, management controls and Sociology of Worth (Boltanski and Thévenot, 1991, 2006), we reveal the potential conflicts and examine how management control systems put opposing values to test. Powerful symbolic activities are used to represent civic and environmental goals while operating a for-profit business impinges on managerial thoughts, cultures, and practices. This study shows that the work to sustain pluralism overrides the need to manage compromise arrangements between competing values, specifically where management control systems and some orders of worth could themselves subliminally support working towards transcendence. We argue realisation of mutual value is a reflexive process exercised explicitly by senior managers, which is further shaped by the mutual interplay between multiple values and management control practices.

SIM: **Bricolage as a Mechanism to Address Resource Limitations: A Processual Approach**

Author: **Pradeep Kumar Hota**, *Indian Institute of Management, Udaipur*
Author: **Padmanetri Panigrahi**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*

Social enterprises (SEs) primarily aim to create social value i.e. generate benefits or reduce costs for society, while maintaining financial sustainability. Extant research shows that SEs need the same set of resources as required by their commercial counterparts. However, owing to their unique operating condition and organizational characteristics, SEs face severe resource challenges. These resource challenges are further exacerbated for SEs operating in emerging economy. Overcoming these resource constraints is vital for SEs in order to address their mission. In this paper, we show that SEs facing resource constraint environment adopts bricolage process to mobilize required resources. Through inductive multiple case study approach we identified eight different sub-processes of bricolage, which were further aggregated in to three bricolage process namely- Accessing, Organizing, Enacting. In doing so, we contribute to the social entrepreneurship literature as well as entrepreneurial bricolage literature. Our study has important implications for future research and practice.

Sustainability, Performance, and Innovation

Session Moderator: **Minna Halme**, *Aalto U. School of Business*

SIM: **Sustainability-Oriented Innovation for System-Level Impact**

Author: **Jennifer Goodman**, *Audencia Business School*
Author: **Minna Halme**, *Aalto U. School of Business*
Author: **Jouni K. Juntunen**, *U. of Vaasa, School of Technology and Innovations*

Our study advances knowledge on the system-level impact of stakeholder integration in firms' sustainability-oriented innovations (SOI). We develop a conceptual model for understanding such SOI in the context of socio-ecological systems (SES) and operationalize it with a set of components for assessing SOI's system-level impact. Taking a configurational approach, we empirically study the impact of innovations from 14 firms in eight countries using qualitative comparative analysis (QCA). Our analysis uncovers two configurations of stakeholder collaboration associated with system-level sustainability impacts and makes the case for a high level of openness to external influence as a recipe for system-level impact. Early inclusion of stakeholders in SOI processes is needed, but it must be coupled with a high majority of non-profit oriented stakeholders or an impact extender stakeholder who intensifies the impact of SOI. We contribute to research on systems within management studies, as well as SOI and SES literatures by identifying conditions that advance the system-level impact of firm action.

SIM: **How Does Perceived Corporate Social Responsibility Affect Organizational Performance?**

Author: **Jihoon Song**, *Doctoral Student at Yonsei U.*
Author: **Joonghak Lee**, *Gachon U.*
Author: **Sungjun Kim**, *Kookmin U.*

This study examines the impact of the organizational level of perceived corporate social responsibility (CSR) on organizational performance. Multinational corporations (MNCs) have emphasized the importance of social responsibility to address environmental, social, and governance issues across the globe. Therefore, we investigate whether a firm's CSR in the workplace influences employee-related attitudes and organizational performance. Based on 1,509 employees nested in 47 firms, our multilevel analysis shows that perceived CSR is positively related to employees' affective commitment, and the relationship between CSR and organizational performance is partially mediated by affective commitment.Our findings suggest that a firm with a higher level of perceived CSR can have a better organizational performance. Also, an employee's attitude can act as a mediator between a firm's CSR and organizational performance. Because we use data from single organization in South Korea, the finding might not be generalized to other organizations or countries. We also have limitations in that we have only used perceived organizational performance measurement from employees. This study can solve the mixed results between a firm's CSR and organizational performance. In addition, it reveals the mechanism of how perceived CSR can contribute to performance through affective commitment.

SIM: **Keeping Up With the Joneses: The Role of Investee Peers Corporate Environmental Responsibility (WITHDRAWN)**

Author: **Yixue Wu**, *Chinese U. of Hong Kong*
Author: **Senhua Chen**, *Nanjing U. of Finance and Economics*

Scholars have investigated the industry peer effect of corporate social responsibility (CSR). Borrowing from the awareness–motivation–capability (AMC) framework from competitive dynamics literature, we shift attention to focus on an important but neglected peer—investee peers—and argue that the corporate environmental responsibility (CER) of investee peers positively affects a focal firm's CER. Using data from Chinese listed firms from 2008 to 2018, we find that firms invest more on CER in response to increasing CER investment by investee peer firms (more awareness). This relationship is further affected by the firm's motivation (when the common shareholder is a foreign investor) and ability (when the focal firm's financial performance is high) to respond to competitive threats and tensions from investee peers. Our study contributes to the literature on CSR (specifically CER) by introducing the role of investee peers and extending the AMC framework to the CER literature.

Institutional Logics and Diversity

Session Moderator: **Fanny Salignac**, -

SIM: **The Evolution of Competing Logics: A Stage Model Approach**

Author: **Fanny Salignac**, -
Author: **Ralf Barkemeyer**, *Kedge Business School*
Author: **Elizabeth Jean Franklin-Johnson**, *Kedge Business School*
Author: **Tulin Dzhengiz**, *Manchester Metropolitan U. Business School*

As the marketization of care develops, actors have had to navigate competing institutional logics and, thus, competing demands – e.g. enhancing quality while reducing the costs of care. While extant studies have largely relied on actor-centric and event-based explanations, we aim to show how competing logics evolve following a scripted set of stages. We put forward a stage model and argue that it is not merely the characteristics of the given event or the actors associated with it that determine the evolution of competing institutional logics but how actors follow a scripted process. Our study takes place in the context of Australia's National Disability Insurance Scheme (NDIS). We use a mixed methods approach, conducting a quantitative sentiment and frequency analysis and a qualitative content analysis of policy documents and mass media coverage. We conclude with implications for researchers and practitioners.

SIM: **How Do Female CEOs Affect Corporate Pay Dispersion?**

Author: **Ying Zhang**, *Northwestern Polytechnical U.*

Extant gender–compensation literature has dominantly held a passive perspective on the compensation contracts of female leaders. However, scant attention has been paid to the proactive aspect of this gender–compensation relationship. This study fills this research gap by incorporating female leaders' initiatives and integrating their proactive preferences to establish a link between gender and corporate pay dispersion. We first develop the theoretical argument that firms with female leaders or CEOs (SHE'-E-Os) have low pay dispersion as determined by their behavioral preferences — risk aversion and competition avoidance. Furthermore, since the risk aversion and competition avoidance vary with organizational environments, we attempt to elaborate more on how SHE'-E-Os' behavioral patterns change over time -- heterogeneous life-cycle stages – which provides a long-term perspective further enriching our understanding of the gender and organizational compensation structure. The implications of our findings for literature on female leadership and pay dispersion are discussed.

SIM: **Academics' Engagement in RME: The Interplay Between Institutional Logics and Hidden Curriculum**

Author: **Chu Thi Mai Huong**, *Huddersfield Business School, U. of Huddersfield, UK*
Author: **Eshani Samanthi Beddewela**, *U. of Huddersfield*
Author: **Rabake Nana**, *U. of Huddersfield*

The past decade has seen a proliferation of research on responsible management education (RME), as a direct result of the criticism placed upon 'responsible' business education, after the global financial crisis in 2007/8. However, there is lack of research examining RME at the 'micro-level', specifically focusing on individual academics' decision-making related to their engagement of RME within business schools. Thus, we pose the question, what drives business educators to follow RME? In order to find answers to this question, we explore what incentivises and motivates them to engage in RME. On the one hand, we discuss the relationship between academics and the hidden curriculum because of the impact of its implicit dimension upon creating and setting values in business schools. On the other hand, to get a better sense of the involvement of academics in RME, we bring in the institutional logics perspective as a framework to explain their engagement in RME. Based on our conceptualisation, we propose a framework aimed at discovering how academics' experience and respond to multiple institutional logics and hidden curriculum when they engage in RME. This framework is also expected to provide new insights into the micro-foundations of institutional logics at an individual level in a hybrid organisational context and explore the interplay which could occur, between institutional logics and hidden curriculum when implementing RME.

SIM: **Workforce Diversity and Discrimination Issue Facing Employees: Evidence from S&P 1500 Firms**

Author: **Jingnan Li**, *U. of Manitoba*
Author: **Jijun Gao**, *U. of Manitoba*

In this study, we focus on a seemingly paradoxical phenomenon: while more firms are increasingly committed to diversity initiatives, the discrimination issues in business have ironically increased. Using a sample of S&P 1500 firms from 2009 to 2021, we found that a firm's workforce diversity commitment increased the incidents of discrimination issues facing employees. We aim to provide insights on why a firm's workforce diversity might fail to achieve its intended goals, or even worsen the underlying issues. We argue that firms might fail to walk the talk in implementing their diversity initiatives commitments. Employee silence could prevent firms from noticing the discrimination issues or receiving the feedbacks about the diversity initiatives. Also, workforce diversity might lead to unfavourable stereotypes against the targeted employees. We also examined the conditions under which a firm's diversity initiatives tend to be more or less effective in addressing the issues of discrimination in employment.

Top Management Team Gender Diversity and Social Issues

Session Moderator: **Yuliya Shymko**, *Audencia Business School*

SIM: **Mitigating Liability of Ascribed Status: Female CEO and Corporate Philanthropic Foundations**

Author: **Yuliya Shymko**, *Audencia Business School*
Author: **Na Ni**, *SABS - Shenzhen U.*
Author: **Weiting Zheng**, *UNSW Sydney*
Author: **Joyce Yu**, *U. of Queensland*

Existing research has demonstrated that a favorable public perception of CEOs has a positive impact on firms; however, researchers have paid less attention to how a change in leadership through CEO succession may trigger the risk of a negative evaluation and prompt the firm to address such risk. We argue that not all changes in leadership require the risk mitigation response and suggest that the firm is more likely to do so in the case of a gender-specific change in its leadership that lowers the ascribed status of the firm's CEO, i.e., a male-to-female CEO change. Specifically, firms are more likely to pursue highly visible and status-enhancing stakeholder management strategies, such as establishing a corporate philanthropic foundation, when they experience a male-to-female CEO succession. However, this effect becomes attenuated when the new CEO possesses a higher achieved status derived from their political ties and professional standing, which compensate for the lower ascribed status of the CEO. Using a difference-in-difference method with a propensity score matching technique (PSM-DID), we test and find support for our hypotheses on a unique dataset for corporate foundations for publicly listed firms in China from 1999 to 2020. This study contributes to the literatures on social evaluations and stakeholder management.

SIM: **The Impact of Board Gender Diversity on Corporate Human Rights Performance**

Author: **Angel Morán-Muñoz**, *U. of León*
Author: **Roberto Fernández-Gago**, *U. of León*
Author: **Jose Luis De-Godos-Diez**, *U. de Leon*

The duty of businesses to observe and promote Human Rights (HR) has been a matter of widespread discussion at the political, corporate and academic levels over recent decades. However, little is known yet about the organizational drivers that make firms pursue higher levels of Corporate Human Rights Performance (CHRP). In an attempt to fill this gap, we present the first global study on the influence that one element of board diversity, gender, has on CHRP and the key interactive role that institutional pressures play in this relationship. We evaluate a panel data of 570 companies worldwide from 2012 to 2021 by using the two-step System Generalized Method of Moments (GMM) together with a subgroup analysis. Our results show that board gender diversity has a positive effect on CHRP and that this impact is greater in firms from developed economies and smaller in those headquartered in developing countries. These findings call for future CHRP analyses to acknowledge institutional contingencies and show that board gender equality may be key for safeguarding HR internationally.

SIM: **Gender Diversity and Environmental Innovation: The Role of Stakeholder Strategy and Analyst Feedback**

Author: **Mehdi Samimi**, *City College - City U. of New York*
Author: **Punit Arora**, *City U. of New York*
Author: **Tanusree Jain**, *Copenhagen Business School*

This paper examines the effect of strategic leadership team's gender diversity on environmental innovations. Drawing upon theories from strategic leadership and gender diversity literatures, we argue that TMT and board gender diversity collectively and separately promotes environmental innovations. We also examine the pathways through which gender diversity of strategic leaders influence environmental innovations. Using an unbalanced panel data of 8,403 observations for 1,290 U.S. firms for the period 2011-2021, with dynamic panel generalized method of moment regressions, we find that gender diversity in strategic leadership teams leads to higher environmental innovations. This relationship is mediated via improved CSR strategy response and moderated via external feedback from stock market analyst recommendations. In contrast to our hypothesis, the joined interactive effect of BoD and TMT diversity was found to have a small but significant negative effect on environmental innovations, suggesting a rather complex process through which the impact of diversity across levels of strategic leadership unfolds. We discuss the results and provide future research directions.

Collaboration and Coopetition

Session Moderator: **Qingqing Chen**, *The Wharton School, U. of Pennsylvania*

STR: **WHO STEPS INTO THE VOID? A 3rd-party Perspective on the US Sanctions on Huawei in International SSO**

Author: **Qingqing Chen**, *The Wharton School, U. of Pennsylvania*
Author: **Lori Rosenkopf**, *U. of Pennsylvania*

This paper examines the role of third-party companies in the standard-setting process when the cooperation between two groups of key players is exogenously disrupted. By jointly considering technology interdependence and cooperative interactions between players in an innovation ecosystem, the paper builds a framework to understand the third party's technological and sociological salience in the face of disruptions. The paper argues that after the disruption, a third-party player will become more influential in the standard setting process if it could (1) replace either party in the disrupted relationship (the substitution effect); or (2) serve as an information broker connecting the two groups of key players (the brokerage effect). Past cooperation experience magnifies the substitution effect, and the technology proximity between the disconnected two parties negatively moderates the brokerage effect. The theory hypotheses are supported by evidence collected in 3GPP, an international telecommunication standard-setting organization, during the recent US sanctions on Huawei. By tracking 130 active third-party companies' standard proposals in 535 3GPP meetings, I find supportive evidence for the substitution and the brokerage effects.

STR: **Choosing Differentiation or Cost Based Strategies**

Author: **Han Smit**, *Erasmus U. Rotterdam*
Author: **Lenos Trigeorgis**, *Durham U.*

We revisit competitive strategy under uncertainty where the structuring of the industry and the type of competition are endogenous choices by rival firms rather than a feature of the environment. As these choices interact, we identify the conditions when each of four competitive strategies may prevail based on the firms' stance towards industry structuring (aggressive vs. rivalry restraint) and the type of competition chosen (prices vs. quantity). Using strategic NPV via real option games, we analyze the boundary conditions that may tilt the balance between competition and collaboration and between commitment and flexibility value under uncertainty. Our study findings offer implications for strategy theory development concerning when it is best to choose cost based vs. differentiation strategies or to emphasize value appropriation leveraging competitive advantage vs. value creation strategies based on rivalry restraint.

STR: **Exploring the Dimensionality of Opportunism in Inter-Organizational Relationships with Meta-Analysis**

Author: **Linda Hofsäss**, *Freie U. Berlin*
Author: **Max Braun**, *Freie U. Berlin*

What is opportunism, actually? Willamson's canonical definition of self-interest seeking with guile contains a broad range of opportunistic behaviors. We argue that opportunism is a multi-dimensional concept and study which aspects of the different opportunistic behaviors have the most harmful consequences in inter-organizational relationships. We combine qualitative content analysis with meta-analysis and investigate the survey data of 178 primary studies at the item level. In the first step, we synthesize a taxonomy of the dimensions of opportunism. In the second step, we meta-analytically test the dimensions' moderating effects on the relationships between opportunism-performance and opportunism-trust. The results show that certain aspects of behaviors – the type of claim violation, the degree of activity, the disclosure certainty, and the behavioral medium – determine how strongly opportunism harms performance and trust. Our study offers a taxonomy of the dimensionality of inter-organizational opportunism and compares the aspects of organizational behaviors that have the most harmful consequences. It further provides an empirical synthesis of the consequences of opportunism. Opportunism harms integrity trust and long-term value creation more than short-term financial performance highlighting the dramatic economic consequences of opportunism for value creation in inter-organizational relationships.

STR: **Streetlight Effects in the Study of Employer Collusion in the Labor Market**

Author: **Peter Norlander**, *Loyola U. Chicago*

This paper discusses how research and regulation of anti-competitive behavior in the labor market may suffer from a streetlight effect: looking for evidence where the light is already shining. Drawing from a text corpus of 151,708 franchise documents assembled from public records, I demonstrate gaps in knowledge about the extent and variety of anti-competitive language in this domain. Using new open-source methods and data to classify the unstructured text, I demonstrate a variety of language with anti-competitive effects, and illustrate patterns in their use over time. I provide evidence that hundreds of "naked" no poach and noncompete clauses continue into the present moment, despite their legally suspect nature. To shine a new light on this growing area of research, this paper reports on and releases to the public: the text corpus, the software used to build data, a knowledge base of rules to detect anti-competitive clauses, and an open-source machine learning classifier to detect no poach clauses.

Managers and Organizational Design

Session Moderator: **Sarah Wolfolds**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

STR: **How are Allocation Decisions Made? Managerial Autonomy and Institutional Factors**

Author: **Sarah Wolfolds**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*
Author: **Daniela Scur**, *Dyson School / Cornell U.*

Observed resource allocation is the result of a resource allocation process where managers implement that intended allocation. Extant research has focused on capital allocation within a corporation, and a variety of organizational and institutional characteristics that are associated with different levels and types of capital allocation. This paper will focus on the resource allocation practices regarding how these decisions are made across personnel activities (hiring and firing) and product activities (sales and marketing and new product development expenditures). We document new patterns of managerial autonomy in resource allocation decisions across countries, institutional contexts and governance structures. We find significant heterogeneity in autonomy across these categories, and that these differences in autonomy are associated with differences in final expenditure allocations.

STR: **Firms' Use of Roles with General Purpose Skills: Evidence from US Job Postings 2010-20**

Author: **Piyush Gulati**, *INSEAD*

How do firms enable integration of efforts across workers? Prior research has predominantly focused on the managers' role in enabling coordination and cooperation through their authoritative influence and dynamic capabilities. In this paper, we explore microfoundations of this process. We focus on skills, and argue that managers use coordination skills (such as negotiation, relationship building, communication) and business planning skills (such as process planning, project management, resource allocation) for effort integration. As coordination and cooperation are universal issues, we refer to these skills as general purpose – expected to add value across firms and application areas, like general purpose technology. Additionally, as these are skills, and not authoritative influence, we argue that non-hierarchical information harmonizing roles, in business operations and administrative support units, also use them for integration of effort. We test and find evidence for our theory in a sample of ~24 million job postings by public firms in the United States in the years 2010-20.

STR: **Expectation versus Reality: Social Comparison of Contract Terms Offered by Potential Partner**

Author: **Jessica Jeesoo Kim**, *U. of California, Irvine*
Author: **Libby Leann Weber**, *U. of California, Irvine*

Prior studies suggest economically equivalent but differently framed contracts have a psychologically distinct impact on exchanges and partner relationships. One significant difference is the divergent expectations of partner motivations they set, which can be confirmed or violated in the exchange. Yet, these studies do not consider that the partner likely has multiple simultaneous exchanges, allowing the focal firm to make comparisons of contract terms, which may also meet or violate partner expectations. Drawing upon social comparison theory and expectancy violation theory, we examine how expectations set by prevention and promotion contract frames are confirmed or violated by this comparison. Further, we predict these confirmations and violations lead to distinct focal firm managers' emotions, as well as systematic impacts on focal firm investment in the exchange, and trust towards the new partner.

STR: **Playing for Keeps: CEO Incentive Horizon and Executive Departure**

Author: **Ahmet Sezer**, *Bocconi School of Management*
Author: **Cedric Gutierrez**, *Bocconi U.*

Firms increasingly use long-term incentives to curtail CEOs' short-termism. While long-term incentives positively affect organizational outcomes and help retain the CEO, they may have important implications for executives aspiring to rise to the top. We explore a potential spillover effect of CEO incentive horizon on executive turnover at Fortune 500 U.S. public firms. As a longer incentive horizon entice a CEO to stay longer within the firm, they may delay the opportunity for an executive to be promoted to the CEO position and increase voluntary turnover. Our results suggest that a CEO's incentive horizon is positively related to voluntary executive turnover and highlight the importance of the relative incentive horizon between CEOs and executives. Executives are more likely to leave when the CEO's incentive horizon is larger than theirs. Robustness analyses show that this effect is absent for involuntary turnover and for executives with peripheral backgrounds, who are less likely to ascend to the CEO role. Our results highlight the importance of considering not only the value of executive compensation packages but also their horizon. While increasing CEOs' long-term incentives has a negative spillover effect on executives' turnover, firms can alleviate this by strategically adjusting CEO and executives' incentives horizons.

Partner Similarities and Dynamics

Session Moderator: **Liwen Wang**, *SABS - Shenzhen U.*

STR: **Technological Capability Strength/Asymmetry and Supply Chain Process Innovation**

Author: **Liwen Wang**, *SABS - Shenzhen U.*
Author: **Jason Lu Jin**, *City U. of Hong Kong (Dongguan)*
Author: **Kevin Zheng Zhou**, *U. of Hong Kong*

Despite the importance of process innovation in fostering supply chain competitiveness, existing studies primarily emphasize product innovation and overlook institutional environments. This study builds on the dyadic capability-based view and institutional theory to investigate how buyer's and supplier's technological capabilities jointly affect supply chain process innovation in China. We differentiate between two distinct dimensions, technological capability strength and technological capability asymmetry, and propose that technological capability strength negatively influences supply chain process innovation whereas technological capability asymmetry promotes such innovation. We also examine how formal (i.e., government intervention) and informal (i.e., guanxi importance) institutional factors moderate the effects of technological capability strength and asymmetry on supply chain process innovation. Empirical analyses based on 157 buyer–supplier dyads in China offer strong support for our hypotheses, which provide important implications for the supply chain innovation collaboration literature and managerial practice.

STR: **The Hidden Influences of Blockchain Governance: A Study of Organizational Imprinting**

Author: **Curtis Goldsby**, *Rotterdam School of Management, Erasmus U.*
Author: **Marvin Hanisch**, *U. of Groningen*
Author: **Helge JD Klapper**, *Purdue U.*

Blockchain technologies are increasingly being used as algorithmic governance mechanisms for interorganizational transactions. Despite blockchains' promise of decentralized governance and full automation, the underlying algorithmic protocols are often insufficient to align incentives, regulate behavior, and ensure trust. As a result, organizations typically introduce additional centralized governance structures to fill the gaps in the algorithmic governance layer, but this can lead to serious governance conflicts in complex network constellations with many stakeholders and divergent interests. Using an imprinting lens, we examine such complex governance issues in three interorganizational blockchain networks that differed dramatically in terms of success despite similar goals and founding conditions, with one network shutting down, one stagnating, and another continuing to operate. Drawing on extensive qualitative evidence from 56 interviews and comprehensive internal and external records, we found that the initial imprints from the shared technology provider played a significant role in the initial governance choices, maladaptation problems, and ultimately the success of these blockchain networks. By introducing imprinting theory into governance research, we can explain subconscious, latent, and persistent mechanisms that influence governance decisions at a profound level, often without the actors involved being aware of it.

STR: **Trajectories Matter: A Study of Interfirm Technological Convergence and Alliance Formation**

Author: **Chenlu YIN**, *Tilburg U.*
Author: **Zi-Lin He**, *Tilburg U.*
Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

We introduce technological convergence to capture the similarity in two firms' historical trajectories in the knowledge space and distinguish it from technological overlap that is grounded in the static and ahistorical conceptualization of firms' knowledge bases. Drawing on the evolutionary theory and the dynamic capabilities view, we theorize historical trajectories as manifestations of purposive-rational actions by firms to transform their knowledge bases, which are accumulated from past technological search and tend to settle into stable and self-reinforcing patterns. At the firm-dyad level, to account for the multifaceted nature of search, we further dimensionalize technological convergence and differentiate the effects of exploration convergence, exploitation convergence and mixed convergence on alliance formation. We test our predictions on a sample of horizontal alliances in the U.S. semiconductor industry, showing clear and robust evidence that technological convergence exerts a strong influence on alliance formation, above and beyond the nonlinear effect of technological overlap that has been commonly reported in the literature.

STR: **How do Alliances Emerge as Mini Societies? Social Construction Processes of Negative Alliance Events**

Author: **Darcy Kathryn Fudge Kamal**, *Sacramento State*
Author: **Ramin Vandaie**, *UNCA*
Author: **Akbar Zaheer**, *U. of Minnesota*

Although episodes of negative events in the life cycle of alliances are common, understanding how they might impact the persistence or termination of alliances remains limited. In this study, we develop a process model to explain how partners socially construct and attribute causes to such events which ultimately decide the fate of their partnership. We argue that alliance conditions – specifically trust, dependence, and alliance experience – lead to a set of social construction processes that, in turn, influence the attributions of the negative event. We theorize that the alliance's unique cultural dynamics morph into a mini society, which in turn governs the critical processes of interpretive intensity, collaborative flexibility, and an iterative bilateral negotiation. As a consequence, the partners form attributions that culminate in alliance termination (with a partner attribution), continuation (with an external attribution), and reconfiguration (with a relational attribution). Our contribution lies principally in going beyond either an individual partner or even a dyadic level to portray the alliance as a mini society with its own unique cultural dynamic and, indeed, its entitativity. By conceiving alliance processes as socially-constructed responses to a negative event, we provide a theory of how alliances might strengthen as an outcome of negative events.

Resource Redeployment

Session Moderator: **Jasmina Chauvin**, *McDonough School of Business Georgetown U.*

STR: **Resource Redeployment as an Entry Advantage in Resource-Poor Settings**

Author: **Jasmina Chauvin**, *McDonough School of Business Georgetown U.*
Author: **Carlos Inoue**, *U. of Illinois at Urbana-Champaign*
Author: **Christopher Poliquin**, *UCLA Anderson School of Management*

Scarcity of productive factors poses a challenge for firms entering underdeveloped regions. We examine resource redeployment as a strategy to overcome scarcity in factor markets by modeling when expanding firms will internally redeploy versus hire workers via external markets. Our model predicts that redeployment is most valuable when there are large differences in resource scarcity across factor markets and when output is highly sensitive to worker skill and complementarities between labor and other resources. The ability to overcome resource scarcity allows firms with redeployment capabilities to enter markets that other firms would not. Data on sugar mills in Brazil, where a sudden demand boom incentivized expansion, corroborate the predictions. Our research identifies new entry advantages from resource redeployment.

STR: **Inventor Characteristics and Redeployment**

Author: **Kyungsoo Kim**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Isin Guler**, *U. of North Carolina, Chapel Hill*
Author: **Samina Karim**, *Northeastern U.*

While the literature on resource redeployment shows that firms redeploy resources when inducements exist, there is less empirical guidance on which resources are most likely to be redeployed. We integrate the literatures on resource redeployment, intrafirm inventor mobility and inventor characteristics to argue that firms navigate the tension between commitment and flexibility by selectively redeploying human capital. We argue that inventors with high inventive breadth as well as high collaborative breadth are more likely to be redeployed than those with low inventive and collaborative breadth. We test these arguments by analyzing the redeployment of inventors following a profitability shock in the petrochemical industry in 2012. Our results suggest that generalist inventors with more collaborative ties to other inventors are most likely to be redeployed.

STR: **Flow like Water: Reallocation of Human Capital Resource in the Project-based Industry**

Author: **Dongwook Kim**, *North Dakota State U.*
Author: **Sharon Alvarez**, *U. of Pittsburgh*
Author: **Asli Musaoglu Arikan**, *Kent State U.*

There is increasing interest in how firms in the project-based industry can achieve sustainable competitive advantage from human capital resources (HCR). This paper suggests that firms can achieve a competitive advantage by managing HCR fluidly among multiple projects and reallocating them between multiple business units. By analyzing the human capital data from the video game industry, this research shows that the impacts of reallocating HCR on firm outcomes will vary depending on the characteristics of the HCR: creative workers and analytical workers. The empirical result shows that reallocating analytical workers can have a significant impact on efficiency in revenue generation in a way that decreases at first but later increases, resulting in a U-shaped relationship. We also find that the greater a firm's focus on acquisitions in reconfiguring business units, the greater the benefit of reallocating analytical workers.

STR: **The Hidden Cost of Redeployment: The Impact of Geographic Redeployment on Inventor Performance**

Author: **Hyoungwon Thomas Yoon**, *Bocconi U.*

Although research on strategic human capital and resource redeployment suggests relative benefits of human capital redeployment in enabling effective knowledge transfer and integration over between-firm mobility, geographic relocations may have differential implications on redeployed individuals due to hidden costs associated with geographic redeployment. Empirical analysis of individual-level patent data on inventors and their performance among major U.S. technology firms confirms that individuals who are geographically redeployed experience more significant performance reductions due to interpersonal challenges and career complications, even compared to those who experienced the same geographic relocations across firms. Sub-group analyses further explicate why and how only exceptionally capable individuals may avoid those above negative consequences, suggesting the necessity of careful redeployments of human capital across geographic locations.

Behavioral Considerations in Strategic Leadership

Session Moderator: **Bingkun Zhang**, *U. of Hong Kong*

STR: **Effort Redirection Across Multiple Career Tracks: Salary-cut Policy and SOEs in China**

Author: **Bingkun Zhang**, *U. of Hong Kong*
Author: **Kevin Zheng Zhou**, *U. of Hong Kong*

Prior literature in agency theory assumes that when incentive reduces, agents may shirk and reduce effort. We extend this work to multiple career tracks and suggest that salary decrease may not necessarily lead to effort reduction, but instead may redirect efforts across multiple objectives. By using an exogenous salary-cut policy shock levied on Chinese central SOE top executives, our difference-in-differences estimates reveal that salary cut motivates SOE executives to redirect effort from improving internal management (i.e., operational efficiency) to gaining political appointment. Moreover, chairman age, as an indicator of political incentive, and analyst coverage, which reflects external monitoring, weaken the impact of salary-cut policy on effort redirection between two career tracks. These findings provide strong implications for research on agency theory, SOEs, and public policy.

STR: **Read Like a Book: Strategic Predictability and Decreasing Firm Performance with CEO Tenure**

Author: **Peter Micah Madsen**, *Brigham Young U.*

Competitive dynamics work suggests that leaders of firms attempt to predict the likely future actions of their competitors, and that firms that can successfully make such predictions gain competitive advantage. In this paper, we integrate competitive dynamics theory with upper echelons theory to propose that CEO tenure plays a key role in strategic predictability in that competitors have more opportunity to observe, and learn the behavioral tendencies of, more tenured CEOs, creating a negative relationship between CEO tenure and firm performance. Our theory also suggests that factors that influence competitors' motivation to learn about a CEO—such as competitive rivalry and competitive interaction importance—strengthen the negative effect of CEO tenure on firm performance. We test our theory of strategic predictability in the context of the National Football League (NFL) from 1970-2019, finding strong support for our hypotheses and theory.

STR: **Aspired to Improve Oneself or to Outperform: A CEO Perspective on Performance Feedback**

Author: **Irina Orbes**, *Australian National U.*
Author: **Lin Cui**, *Australian National U.*

CEOs are responsible for delivering on performance expectations based on either past (historical) or peer firm (social) comparisons. A performance shortfall from the historical or social expectations will motivate CEOs to promote changes or investments in search for solutions. Integrating research on the behavioral theory of the firm and goal orientation we propose that CEO goal orientation influences what performance shortfall is perceived as salient by CEOs and subsequently triggers firm response. We theorize that, performance shortfall from a firm's historical aspiration level triggers problemistic search in the presence of a learning oriented CEO. In contrast, performance shortfall from a firm's social aspiration level triggers problemistic search in the presence of a performance oriented CEO. Data from S&P 500 firms over a thirteen-year period (2006-2019) compromising 2,075 observations provides support to our hypotheses. Overall, our findings suggest that firms' search behavior is a function of matching performance feedback with CEO goal orientation.

STR: **Performance-aspiration Gap and Strategic Change: Is Short-term Horizon Always Myopic?**

Author: **Nauman Asghar**, *NEOMA Business School*

Performance feedback theory suggests that poor performance, compared with aspirations, may result in a change in strategic direction of the firm. Exploring heterogeneity in response to performance below aspirations, existing studies have pointed to the influence of interpretation of performance feedback, slack resources, and hierarchical level of decision makers. This paper explores the role of a hitherto unexplored mechanism i.e., heterogenous demands of institutional owners. I propose that increasing ownership by short-term institutions is more likely to influence managers to break strategic inertia after performance falls below aspirations because these owners are more sensitive to negative feedback. Conversely, long-term institutional owners may exert less pressure on managers to change firm's strategy when the performance-aspiration gap is still small. Further, I examine institutional owners' influence when performance is significantly below aspirations. I argue that long-term institutional owners are likely to drive a change in firm strategy to initiate corporate turnaround when the performance-aspiration gap becomes severe. In contrast, owners with short-term orientation are focused on the liquidity of their investments and will choose to reduce risk because of enhanced uncertainty. I test my predictions in a sample of publicly traded firms, between 2000 and 2018. Using an instrumental variable approach to identify exogenous increase in short term versus long-term institutional ownership, I find results consistent with these predictions.

Minority and Foreign CEOs

Session Moderator: **Kamil Stronski**, *TUM School of Management, Technical U. of Munich*

STR: **How Minority Executives Affect the Hiring of Migrant Workers (WITHDRAWN)**

Author: **Kamil Stronski**, *TUM School of Management, Technical U. of Munich*

Management scholars suggested that employing minority leaders, including CEOs, will further motivate firms to hire more minority job candidates. But empirical research examining the effect of minority leaders on hiring minority employees reported mixed results, further suggesting the need for careful investigation of the conditions under which minority leaders support minority job candidates. In this paper, I focus on foreign CEOs and argue that their firms will hire more foreign job candidates than will firms led by domestic CEOs. Building on social identity theory, I suggest that foreign CEOs will identify more strongly with foreign job candidates because, as they advanced to their position as CEO, they encountered substantial barriers and disadvantages caused by their foreigner status. This stronger identification will then lead them to shape their firms' hiring policies to promote the hiring of foreign job candidates. Moreover, I argue that those foreign CEOs whose experienced a more challenging process to achieving their position, such as foreign CEOs stemming from lower-income countries, will also be more motivated to promote the hiring of foreigners. I carefully tested these ideas using German data on 9.157 independent firms across 18 industries between the years 1993 and 2014.

STR: **The East Asian CEO Pay Discount**

Author: **Seung-Hwan Jeong**, *U. of Georgia*
Author: **Ann Mooney Murphy**, *Stevens Institute of Technology*
Author: **Saehee Kang**, *Florida State U.*

Asian Americans are often considered the "model minority" because of evidence that they are more educated, have higher starting salaries, and lower unemployment than all other racial groups including Whites. In this research, we build on emerging work showing these advantages may not persist for East Asians. We focus on CEO compensation and find that there is a pay discount for East Asian CEOs - they earn the least compared to White CEO and CEOs from other racial minority groups. We also explore the mechanisms behind this phenomenon and find East Asian CEOs' tendency to talk less, an indicator of lower agentic qualities that may compromise impressions of them as effective leaders, mediate the East Asian – CEO compensation relationship. Finally, we find that when firms have a more racially diverse board, the East Asian pay discount dissipates, evidence that governance mechanisms can indeed work in promoting pay equity. Implications for theory and practice are also discussed.

STR: **Scapegoats or Change Agents?: Examining the Promotion of Racial Minority CEOs to Firms in Crisis**

Author: **Yangyang Zhang**, *Loyola Marymount U.*
Author: **Ann Mooney Murphy**, *Stevens Institute of Technology*
Author: **Seung-Hwan Jeong**, *U. of Georgia*

While past research has found that occupational minorities including female CEOs are more likely to be appointed to top positions when the firm is performing poorly, a phenomenon referred to as the "glass cliff", very little attention has been paid specifically to racial minority CEOs' experiences. This study aims to improve the understanding of the "glass cliff" effect for racial minority top leaders. Using extensive data of 2,399 CEO appointments, including 171 racial minority CEOs, we found the evidence of "glass cliff" for racial minority leaders. Further, we found that investors reacted more positively to the announcement of racial minority CEO appointments than White CEO appointments, especially under conditions of poor performance. We also found that racial minority CEO appointments are positively related to more strategic changes in the following year. Our findings suggest that the "glass cliff" phenomenon for racial minority leaders are driven by the perceptions of racial minority CEOs being potentially more capable of creating the change needed to turn firm performance around.

STR: **Racial Minority CEOs and Likelihood of Dismissal**

Author: **Yangyang Zhang**, *Loyola Marymount U.*

While scholars have started to shed light on the disadvantages racial minority leaders face in ascending to the most senior ranks, less is known about the challenges they face during their tenures. In this study, we focus on their risk of CEO dismissal. Using extensive data we collected on 1866 CEOs from 2001-2020, we found racial minority CEOs are more likely to be dismissed than White CEOs. We also found that their dismissal risk is especially high under conditions of poor performance, suggesting a double standard whereby boards more harshly evaluate and penalize racial minority CEOs compared to White CEOs. We discuss plans for expanding our research beyond this proposal, as well as the theoretical and practical implications of our work for research and practice.

Advances in Business Model Research

Session Moderator: **David Nico Redaschi**, *U. of St. Gallen*

STR: **Business Model Design: a Review, Framework, and Future Research Possibilities**

Author: **David Nico Redaschi**, *U. of St. Gallen*
Author: **Karolin Frankenberger**, *U. of St. Gallen*

Business model design is an important topic among business model research as it focuses on the architecture of a business model. Although the growing business model design literature is a self-contained topic, it lacks a clear conceptualization and is not cumulative. Thus, this paper aims to extend prior business model reviews by specifically focusing on its design and architecture. Based on 87 articles, we provide the first systematic review of the existing business model design literature, elicit research streams, develop a research framework, and identify future research possibilities. We thereby contribute to the vibrant business model and business model design literature by structuring and synthesizing prior research for more cumulative advancements.

STR: **Business Models and Strategy**

Author: **Charles Baden-Fuller**, *Bayes Business School*
Author: **Stefan Haefliger**, *Bayes Business School*

In the literature, the concept of the business model is claimed to help us understand how the firm links its value creation strategy with that of value capture. Here we elaborate on this idea by carefully examining what is happening along both sides of the buyer-seller boundary under different conditions, paying special attention to specific investments related to the engagement surrounding the transaction. We compare the firm that puts its offer on the market using the product business model with the same firm using the solutions business model, which provides the buyer with additional value dimensions on the original offer in exchange for the buyer undertaking firm specific investments that create a lock-in between the buyer and the seller. The combination of the superior buyer value and the "lock-in" gives the opportunity for the seller to make additional profits. Our ideas can be extended to Specific investments by buyers in the engagement process can be especially promising in multisided platform businesses where solutions style engagement can be employed with every customer group, amplifying traditional platform because of the complementarities arising on both sides of the buyer-seller boundary. We use the concept of articulate the business model ideal types as a way of framing our ideas into that provide a useful toolkit for strategists and managers to unlock these profit opportunities. Finally, we explore the implications for strategy, competitive advantage and the theory of the firm.

STR: **Servitization: A Powerful Tool to Fill Relational Asymmetry**

Author: **AIZA DE TORRES ASI**, *Sophia U. Institute*
Author: **Michela Floris**, *U. of Cagliari*
Author: **Giuseppe Argiolas**, *Sophia U. Institute*

This paper aims to investigate how firms such as Xerox, which have transitioned to a digital servitization business model, bridge relational asymmetry. It continues the theme of sustainability from the traditional three pillars—environmental, economic, and social sustainability—to relational in terms of the quality of the relationship between the service provider and the customers. Adopting an exploratory approach, qualitative data has been gathered from the case of Xerox, a pioneering company that adapts servitization business models. The combination of exploratory archival and literature search studies allowed a deeper understanding of servitization and how it directly or indirectly bridges (or does not) the relational asymmetry. The results reveal that a relational dimension is inherent in the servitization business model, whereas in order to achieve sustainability, it must leverage transparency, which may be either an enabler or an impairing factor. A borderline for a transparent relationship that distinguishes these two parameters is established. This exploratory paper gives managers rational insight into whether and when it is sustainable to fill the relational asymmetry between them as service providers and their customers in delivering quality service. Moreover, this study takes a fresh look at servitization, arguing that the relational asymmetry filled by servitization will define the future of businesses that differentiate themselves through quality relationships.

STR: **Business Model Types: An integrative and Systematic Review (WITHDRAWN)**

Author: **Sergio Alves**, *Umeå School of Business, Economics, and Statistics*
Author: **Sujith Nair**, *BI Norwegian Business School*
Author: **Herman Ivar Stål**, *School of Business, Economics and Law U. of Gothenburg*

Business Model Types, broadly defined as generic ways of creating and capturing value, have long been an important element of the Business Model literature. Yet, on par with other areas within the literature, extant work suffers from limitations that previous literature reviews have not manage to address. As a result, we conduct an integrative and systematic literature review of the concept to provide a much-needed clarification of its definition and integration of its literature. We develop a definition of Business Model Types and a conceptual framework that accounts for what they are, where they come from and what they do. Based on the definition and the framework, we assess the literature to find two main limitations and provide three areas of future research. We contribute to the Business Model literature by enhancing conceptual clarity, provide an integrative view of the literature that can support the development of better and more relevant work on Business Model Types, and open links to connect the literature to broader work on management studies.

New Behavioral Perspectives on Strategy

Session Moderator: **Harrison John Munro-Clark**, *HEC Paris*

STR: **Multiple Goals and Firm Performance: Reviving a Managerial Theory of the Firm?**

Author: **Harrison John Munro-Clark**, *HEC Paris*
Author: **Rodolphe Durand**, *HEC Paris*

How can some purpose-based firms achieve superior financial performance in comparison to their non-purpose-based rivals despite the performance costs associated with the pursuit of a greater plurality of goals? Whereas the behavioral theory of the firm contends that the performance detriment associated with the pursuit of multiple goals stems from a weakened managerial performance improvement capacity, the managerial theory of the firm (Bartlett and Ghoshal, 1993; Ghoshal and Bartlett, 1994) posits that purpose helps orient managers' autonomous decision-making and should positively influence the relationship between the number of goals and performance. Hence, we replicate and develop an existing computational model and explore the effect of an interaction between a firm's managerial autonomy and the number of goals it pursues on its performance. We illustrate that there exist numerous situations in which, with high managerial autonomy, firms that pursue a greater plurality of goals are at a performance advantage relative to firms that pursue fewer goals with lower levels of managerial autonomy. We test further this hypothesis empirically using a sample of 270 firms from a consulting survey over the period 2015 to 2021. We find that the relationship between the pursuit of a corporate purpose and financial performance is positively moderated by the firm's managerial autonomy. Our findings enrich our knowledge on multi-goal firms and contribute to a revival of the managerial theory of the firm.

STR: **The Strain-based Model of Overperformance and Corporate Financial Misconduct: The Role of Ownership**

Author: **Wei Yu**, *National U. of Singapore (NUS)*
Author: **Yeyanran Ge**, *U. of Nottingham Ningbo China*

Performance feedback is recognized as a trigger of corporate misconduct, but there remains much uncertainty about the misconduct tendencies of well performing firms. We develop a strain-based model with two latent mechanisms related to past achievement: the pressure to catch up and the pressure to keep up. We contend that the two strains jointly create a U-shaped relationship between firm overperformance and financial misconduct. We further theorize that firm owners (state and family) are not likely to feel the strains uniformly nor respond similarly to political pressures to curb misconduct. Our analysis of 3528 Chinese public firms before and after President Xi Jinping's era provides support to our theoretical model and important advances to behavioral theory of the firm and corporate misconduct research.

STR: **Quo Vadis, Behavioral Strategy? A Conceptual Framework, Review, and Research Agenda**

Author: **Matteo Cristofaro**, *U. of Rome Tor Vergata*
Author: **Mie Augier**, *Naval Postgraduate School*
Author: **Dan Lovallo**, *U. Of Sydney*
Author: **Gianpaolo Abatecola**, *U. of Rome Tor Vergata*
Author: **Luna Leoni**, *Tor Vergata U. of Rome*

Behavioral Strategy (BS) is a field that merges psychology with strategic management theory and practice. Despite the importance of BS and its increasing popularity within strategic management, no contributions provided a comprehensive and systematic analysis of BS that reflects the richness of the research, while at the same time taking steps towards synthesizing it into a cohesive, overarching framework and proposing a future agenda. Departing from the historical roots of BS, we then perform a thematic analysis of 204 scientific papers. We then develop a conceptual framework specifying antecedents, mechanisms, moderators, and outcomes of BS identified in the literature to date. Our study shows where research has made the most progress and where gaps remain. Based on this analysis, we propose a forward-looking research agenda for future research.

STR: **Attentional Variations in Aspiration Adaptation**

Author: **Anshuman Sinha**, *U. of California, Irvine*
Author: **Philip Bromiley**, *U. of California, Irvine*

While March & Simon's Organizations largely focuses on individuals and their decisions within organizations, Cyert & March's Behavioral Theory of the Firm uses a very similar framework strictly at the organizational level. These foundational contributions to what has become known as the behavioral theory of the firm emphasize the importance of attention: the aspirations and attainment discrepancy model so studied in recent years is essentially a model where attention goes to areas with performance below aspirations. We examine the differences between individuals and collective decision makers (groups) in their attention to past performance and performance of others in determining their aspiration levels. Using data gathered from MBA students in simulated organizations, we directly observe the self- and social aspiration reference points that have been theorized to affect aspirations. We find that groups focus attention to prior organization performance and, marginally, prior aspirations. In contrast, individual decision-makers distribute attention amongst prior aspirations, prior performance and social comparison as predicted by Cyert and March (1963). Only individuals follow the original Cyert and March model of aspiration adaptation i.e., they consider the independent and additive effects of parameters in the adaptation function. Our results suggest that research should differentiate between individual and collective decision-makers. More generally, our approach provides a better understanding of the theoretical underpinnings of aspiration adaptation and compare the assumptions of aspiration adaptation theory with actual behavior.

International Strategies

Session Moderator: **Hyewon Ma**, *U. of Illinois at Urbana-Champaign*

STR: **The Strategic Responses of MNEs to Trade-Policy Shocks: MNE Subsidiary Networks and a Trade War**

Author: **Hyewon Ma**, *U. of Illinois at Urbana-Champaign*

Trade policies are increasingly a source of uncertainty in the contemporary environment for global business; thus, calling for real-options-based analysis of the strategic responses undertaken by MNEs. Specifically, this study observes that trade wars lead to scaling down of subsidiary operations by involved-country MNEs and scaling up of subsidiary operations by third-country MNEs. Furthermore, MNE subsidiary networks characterized by different degrees of multinationality, relatedness, and equity ownership provide operational flexibility that accentuates MNE responses. Using the US-China trade war as an empirical context, this study employs panel data composed of 1,424 (975) Chinese subsidiaries of US (EU) MNEs covering the 2016-2019 period to conduct a difference-in-differences analysis. The empirical results corroborate the theoretical priors as US (EU) MNEs downscaled (upscaled) their Chinese operations, and these effects were pronounced for MNEs of which subsidiary networks are characterized by higher multinationality, industry relatedness, and equity ownership.

STR: **How does OFDI in Developed Economies Benefit EEFs? A Composite View of Market and Nonmarket Strategy**

Author: **En Xie**, *Tongji U.*
Author: **Huahua LI**, *School of Economics & Management, Tongji U.*
Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*
Author: **Honghui Zou**, *School of Economics & Management, Tongji U.*

Emerging economy firms (EEFs) aggressively make outward direct investments in developed economies (OFDI-in-DE) that have received both attention from scholars and practitioners. However, current IB scholars mainly take EEFs' OFDI-in-DE as their market strategy to pursue strategic assets in developed countries to recursively increase their competitiveness in the domestic market. What is missed is that EEFs' OFDI-in-DE could be their nonmarket strategy. Based on the springboard theory and social exchange theory, we argue that EEFs' OFDI-in-DE is not only conducive to their domestic technological innovation as a market move, but also facilitates EEFs' entry into domestically regulated industries as a nonmarket strategy. Furthermore, these relationships are moderated by managers' political connections and technological experience, respectively. Our proposals are supported by 13309 firm-year observations of Chinese publicly listed firms from 2010 to 2018. It provides new sights into how EEFs' OFDI-in-DE can be a composition of market and nonmarket strategies.

STR: **Firm Competitiveness and Subnational Region: A Resource-Based Strategy of Business Localization**

Author: **Sandra Lorena Tovar-Gasca**, *U. de los Andes, Colombia*
Author: **Veneta Andonova**, *American U. in Bulgaria*
Author: **Guillermo Ruiz Pava**, *Pontificia U. Javeriana*

The firm competitiveness within subnational regions is not homogeneous as firm resources change their value and productivity depending on the local specificities. This paper shows that differences in firm competitiveness depend on three underlying dimensions of the environment: quality of the business environment, presence of civil control and accountability, and basic services coverage. We use the firm-level Return on Assets (ROA) as a performance measure. In regions with a low-quality business environment, a more significant share of explained variance of ROA is attributed to firm-level characteristics than in regions with better quality of the business environment. The share of ROA variance explained by industry-level factors is positively related to the regional quality of the business environment. In regions with poor civil control and accountability, the share of ROA variance explained by industry factors is higher, as collusion is arguably a possible competitive tactic. Finally, in regions with better basic service coverage, the share of ROA variance explained by firm-level factors is higher, as the ability of the individual firms to mobilize such contextual resources for building firm-specific competitive advantage is arguably more significant. This study encompasses 2013- 2020, 27 regions in Colombia, and 10000 firms.

STR: **Time to Exercise Options: Post-entry Modes of IJVs from a Real Options Perspective**

Author: **Yunok Cho**, *Southern Methodist U.*
Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*

This study explores the dynamic evolution of IJVs, focusing on the decisions of MNEs to maintain, buyout, or divest their IJVs. Drawing on real options theory, in which an IJV is viewed as a reservoir of future embedded options, we develop a theoretical framework wherein the three possible post-entry modes of IJVs—IJV continuation, buyout, and divestment—are conceptualized as the exercise of different options by MNEs. Analyzing a sample of IJVs located in Korea over the years 2007–2019, we find that hysteresis forces MNEs to asymmetrically shun exercising an abandonment option (divestment) more than they do exercising a growth option (buyout). We also find that while minority ownership shortens the zone of inaction in options exercise decisions by increasing the likelihood of choosing buyout over IJV continuation, the same is not the case for divestment vs. IJV continuation choices. However, unfavorable economic condition shifts the zone of inaction to lessen ownership claims by increasing the likelihood of divestment over IJV continuation and decreasing that of buyout.

Purpose-Driven Innovation and Transformation: Trajectories, Mechanisms, and the Human Impact

Panelist: **Ranjay Gulati**, *Harvard U.*
Panelist: **Henk W. Volberda**, *Amsterdam Business School, U. of Amsterdam*
Panelist: **Alvaro Lleo**, *U. of Navarra*
Panelist: **Johanna E. Pregmark**, *Chalmers U. of Technology*
Panelist: **Albena Björck**, *ZHAW School of Management and Law*
Organizer: **Tobias Fredberg**, *Chalmers U. of Technology*
Organizer: **Fredrik Hacklin**, *ZHAW School of Management and Law*

Purpose is the new imperative in business: On the background of multiple crises and the hybridization of the business environment, the purpose has re-emerged as a key concept that promises to streamline organizational energy to create new meaning for stakeholders and to positively affect economic growth (Gartenberg & Serafeim, 2019) . Purpose balances conflicting commercial, societal, and functional goals and meets diverging expectations by multiple stakeholders: Henderson (2021a) describes this as “reinventing capitalism” and Beer et al. (2011) call this balanced view with multiple stakeholders in mind to lead with a “higher ambition”. A growing body of literature documents the rise of purpose and its positive effects on competitive advantage, innovation capabilities, stakeholder engagement, and corporate resilience (Gulati, 2022, Volberda et al., 2022, Knowles et al., 2022, Lleo et al., 2022, Fredberg & Pregmark 2018). A key academic and business challenge is the implicit nature of purpose and the allegation of purpose-washing or misalignment of the articulated purpose with the company’s conduct, which results in corporate scandals or failures. But empirical insights are rare on how organizational purpose is transformed into strategies, practices, structures, and cultures so that it leads to value creation for employees, the firm, and society. To answer this challenge, we propose to shift the academic discourse from investigating what a purpose is and why a company should have a purpose to how the purpose is implemented. Building on emerging empirical research, this symposium aims to explore the key themes around the triggers, trajectories, mechanisms, factors, and the human impact of the implementation of organizational purpose. The members of the panel have academic as well as practitioner backgrounds and represent five research initiatives from USA, Netherlands, Spain, Sweden, and Switzerland.

Technology, Policy and Society Track: Greening Innovation

Session Moderator: **Sandra Hasanefendic**, *Vrije U. Amsterdam*

TIM: **The Effects of Business Cooperation on Eco-innovation: Where do Environmental Benefits Materialize?**

Author: **Henar Alcalde-Heras**, *Deusto Business School*
Author: **Francisco Carrillo-Carrillo**, *Orkestra - Instituto Vasco de Competitividad*

This paper explores the relationship between cooperation modes and eco-innovation. We analyse how effective are cooperations based on science and technology (STI) and doing, using, and interacting (DUI) in generating firm-level eco-innovations leading to environmental benefits within the firm and during use or consumption by the end user. The empirical analysis uses a propensity score weighting method based on data from 968 Basque firms during the period 2018-2020. Our findings indicate that the STI cooperation has greater impact (than DUI) on product eco-innovation leading to environmental benefits inside the firm. In addition, DUI cooperation is likely to have greater impact (than STI) on product eco-innovation leading to environmental benefits obtained during use or consumption by the end user. Finally, DUI cooperation shows greater impact (than STI) on process eco-innovation. Policy implications highlight the need of a region's specific institutions fostering interorganisational cooperation and building in already strong partnerships.

TIM: **Upscaling Sustainable Energy Demonstrations**

Author: **Bart Bossink**, *Vrije U. Amsterdam*
Author: **Marlous Blankesteijn**, *Vrije U. Amsterdam*
Author: **Sandra Hasanefendic**, *Vrije U. Amsterdam*

This research identifies the mechanisms that stimulate the upscaling of sustainable energy technologies within demonstration projects and programs, and in larger general and conventional application areas. By analyzing core publications about sustainable energy demonstration projects and programs of the last six years (2017-2022) an overview is made of the mechanisms that are active in demonstrations, and their scaling up effects within and outside sustainable energy demonstrations. The six mechanisms in demonstrations that stimulate upscaling within demonstrations, and in conventional settings outside demonstrations, are university-industry-government interaction, a coordinated flow of successive demonstrations, a supportive government policy, investments in complementary technology and infrastructure, presence of stimulating market forces, and usage of the economic benefits of scaling up. These mechanisms have a stimulating effect on two types of upscaling, which is demonstrative upscaling, which consists of three subtypes (growing, replicating, and accumulating), and transformative upscaling, which consists of two subtypes (reframing and anchoring). Policymakers, university researchers, and company professionals can use the insight into these mechanisms and upscaling effects to develop future policy, research, and practice that aims to further effectuate and accelerate the upscaling outcomes of sustainable energy technology demonstration projects and programs.

TIM: **Diversification and Multilevel Policy Support as Enablers of Specialization in Green Technologies**

Author: **Zhuoying You**, *KU Leuven, Faculty of Economics and Business*
Author: **Peter Teirlinck**, *KU Leuven*

This study focuses on the influence of related and unrelated diversification on the new and on intensification of green specialization at the EU regional level. Intensification of specialization in green technologies is linked with the exploitation process, whereas the creation of new specialization in green technologies is paralleled to the process of exploration. In addition, we investigate the moderating role of policy supports at regional level, national level, and EU level. Based on panel data Poisson models on patent data across 195 European NUTS2 regions, we measure revealed technology advantage to track the intensity of specialization in green technologies, we confirm a positive effect of related diversification on the intensification of specialization in green technologies. Moreover, we demonstrate a weakening effect of national policy support and of EU policy support. For new specialization in green technologies, panel data Logit models reveal a positive role of unrelated diversification. We find a positive moderating effect from EU policy support, whereas regional policy support exerts a negative effect. However, the moderating effect from multilevel policy supports varies with different aggregation levels and the threshold of revealed technology advantage.

TIM: **Understanding the Barriers to Eco-innovation in European Companies**

Author: **Silvia Donis**, *U. de La Rioja*
Author: **Jaime Gomez**, *U. de La Rioja*
Author: **Idana Salazar**, *U. de La Rioja*

The aim of this study is to provide an overview of the barriers perceived by companies and empirically analyse their influence on eco-innovation. Thus, in the article, we consider financial, knowledge, market, and regulatory barriers, since they have been shown to be crucial in the context of innovation management. For the empirical analysis, we use data from Flash Eurobarometers 426, 456 and 498. The three samples used include European companies and provide information on the development of eco-innovative activities, as well as on their drivers and barriers. The use of these data allows us not only to analyse the barriers to eco-innovation, but also their possible changes between the three years selected; 2015, 2017 and 2021. The results obtained show that the perception of barriers is positively related with eco-innovation, forming part of the experiential learning process. Financial and regulatory barriers show some predominance, although in 2021 knowledge and market barriers also become particularly relevant.

TIM: **Regional Technology Planning and Green Generic Technology: A Spatial Difference-in-difference Method**

Author: **Yuan Zhou**, *Tsinghua U.*
Author: **Qintian Zhang**, *School of Public Policy and management Tsinghua U.*
Author: **Yanmeng Wang**, *Beijing U. of Posts and Telecommunications*
Author: **Guannan Xu**, *Beijing U. of Posts and Telecommunications*

Green generic technology (GGT) is the key to achieve green development in a large scope. Regional science and technology planning (RSTP) is believed to promote the development of GGT, but it remains to be explored. This study aims to reveal the relationship between regional technology planning and GGT in different aspects. Based on the panel data of 284 cities in China from 2011 to 2020, we adopt a spatial difference-in-differences (SDID) model to investigate the direct effect and heterogeneous spillover effect of regional RSTP on GGT. We further uncovered the underlying characteristics of RSTP and examined the heterogeneous effect of the policy. The results are as follows: Firstly, RSTP significantly stimulates the development of local GGT. Secondly, RSTP has positive spillover effects on GGT in co-inventors' cities, while no significant spillover effects on geographic neighboring cities. Thirdly, RSTP will more effort into the strategy platform exhibit more significant spillover effects. The results can help to realize the influence of RSTP on GGT, and have crucial empirical significance for regional green innovation development.

Ecosystems and Platforms Track: Towards a Better Understanding of Ecosystem Management

Session Moderator: **Peter Gustafsson**, *Umeå School of Business, Economics, and Statistics*

TIM: **A Collective Action View on the Orchestration of Emerging Ecosystems**

Author: **Peter Gustafsson**, *Umeå School of Business, Economics, and Statistics*

This paper analyses the collective orchestration of an emerging ecosystem within the maritime industry. Orchestration is typically conceptualised as a process driven by a single focal firm that does so by controlling a platform, technology, resource or knowledge. This paper analyses a case of collective orchestration, where a group of firms jointly establish an ecosystem vision and implement activities towards its realisation. This paper contributes to the literature on ecosystem orchestration with a process model on collective orchestration that explains how a collective orchestrates an emerging ecosystem and simultaneously coordinates its internal activities to maintain cohesion. Thus, the paper complements current understandings of ecosystem orchestration and leadership. The process model was developed through the longitudinal analysis of a case using an abductive approach, iteratively moving between data analysis and drawing on prior literature on ecosystem orchestration and collective action theory.

TIM: **Sectoral Ecosystem of Innovation? A Comparative Review and an Integrative Framework**

Author: **Daitian Li**, *U. of Electronic Science and Technology of China*

This paper provides a comparative review of two different yet related innovation literatures focusing on sectoral-level analysis. The innovation system literature originates from macro-level studies (e.g., national innovation system), but it gradually zooms into meso-level studies. Instead, the innovation ecosystem literature originates from micro-level studies (e.g., business ecosystem) but also gradually migrates into meso-level studies. Since both literatures address the innovation topic from a “system” perspective, we have seen increasing confusion among scholars regarding the similarities and differences between the two approaches. Surprisingly, there has been little conversation between these two streams of literature. To solve this problem, we conduct a comparative review of the two streams of literature, clarifying the intellectual roots of the two literatures and proposing future directions for advancing sectoral innovation studies.

TIM: **A Business Model Perspective on Ecosystem Bottlenecks**

Author: **Adam Uhrdin**, *KTH, Royal Institute of Technology*
Author: **Mats Engwall**, *KTH Royal Institute of Technology*

Research has highlighted how technical bottlenecks or constraints in one technological sub-system can reduce the overall performance of an emerging ecosystem, which can hold back a technology transition. This paper examines the under-theorized role of business models and their (mis-)alignment within an ecosystem as an alternative type of bottleneck beside technical bottlenecks. In the context of electrification of the road transport industry, we find that the necessary realignment of business models may fail to make certain crucial ecosystem nodes sufficiently attractive. Due to high uncertainty or insufficiency of the value capture potential tied to certain value propositions and value creation activities these subcomponents of a nascent ecosystem may remain underdeveloped without any actor stepping in to shoulder the task of delivering these missing pieces. As a result, the ecosystem is impeded to take form and the technology transition do not take place. We term this phenomenon “business model bottlenecks” and contrast this to the more studied phenomenon of technical bottlenecks. Although business model bottlenecks manifest themselves as lack of incentives to take on certain key activities within an emerging ecosystem, we find that solving them requires readjustments of several business models, upstream as well as downstream the bottleneck. These findings contribute to a more nuanced understanding of ecosystem evolution and the interrelation between technology transitions and business model innovation.

TIM: **Ecosystems in Transition: Managing Complementor Bottlenecks with Disruptive Innovation**

Author: **Yue Song**, *San Diego State U.*
Author: **Yue Maggie Zhou**, *U. of Michigan*
Author: **Xiaoping Zhao**, *Shanghai Jiao Tong U.*

The diffusion of a disruptive innovation depends not only on the performance of the focal new technology, but also on the availability of the complementary products and services in the ecosystem (e.g. charging infrastructure for electric cars). Lack of support from incumbent complementors often becomes an important bottleneck in the introductory stage of a disruptive innovation. In this study, we examine how disruptors improve the diffusion of disruptive innovation by managing the complementor bottleneck. Using data from the small satellite ecosystem, we show disruptors such as small satellite manufacturers use technological standardization (the CubeSat design) and customer integration (vertical integration with satellite operators) to reduce resistance from incumbent complementors (launch vehicle providers) thereby increasing the number of small satellites getting launched.

TIM: **Proposing a New Capability for Ecosystem Management: The Complementarity Management Capability**

Author: **Fabio Emanuel Farago**, *U. of Sao Paulo*
Author: **Felipe Mendes Borini**, *U. of Sao Paulo (FEA/USP)*
Author: **Leonardo Gomes**, *U. of Sao Paulo (FEA/USP)*
Author: **Ana Lucia Figueiredo Facin**, *São Paulo State U.*

Complementarity is a central feature of ecosystems. However, despite its relevance being widely recognized, it is still unclear how focal firms develop and manage complementarity in ecosystems. While the current literature implicitly places complementarity as if it emerges automatically inside ecosystems, we propose that they need to be nurtured and managed by the focal firm through a new ecosystem management capability. Our methodology consisted of a qualitative and a quantitative phase. We started with an exploratory multiple case study in ten ecosystem focal firms, from which we proposed a new capability: the complementarity management capability. We described this capability with its own set of activities, definition, and measurement scale. The quantitative phase consisted of a survey with 275 executives. First, we used principal component factorial analysis, which resulted in the creation of two constructs: i) ecosystem connections and ii) integration. We then applied structural equation modeling (SEM) to validate the scale, which provided evidence to empirically support that the development of innovation can be associated with the development of the complementarity management capability. Our findings contribute to the capabilities-based view by showing a new type of capability that goes beyond the individual firm and considers its interaction with the ecosystem. For the ecosystem literature, we contribute by presenting an understanding of how focal firms articulate the most central feature of ecosystems into a new capability. Finally, we also contributed by developing and validating a new construct, a scale to measure complementarity for focal firms.

AI and Emerging Technologies Track: Automation & Employment

Session Moderator: **Jette Ernst**, *Roskilde U.*

TIM: **Automation Technologies and their Impact on Firm Employment**

Author: **Emilia Filippi**, *U. of Brescia*
Author: **Mariasole Bannò**, *U. of Brescia*
Author: **Sandro Trento**, *U. of Trento*

This paper analyses how innovating in automation technologies (industrial robots, artificial intelligence, and big data) affects employment in firms that innovate in these technologies. Innovating in automation technologies increases firm employment, especially for industrial robots and big data. Jointly innovating in the three automation technologies also increases firm employment. Innovating in industrial robots decreases firm employment in SMEs, while innovating in industrial robots and in artificial intelligence decreases firm employment in young firms. Policies should promote innovation in automation technologies given the positive impact on firm employment and SMEs and young firms must be supported in protecting affected workers.

TIM: **Human and Robot Complementary Practices in Relations of Dependence in a Hospital Laboratory**

Author: **Jette Ernst**, *Roskilde U.*

The paper presents a study of the work of human staff with robots in a hospital laboratory. I suggest that deeper insights can be gained by combining an ethnographic approach with a novel conceptualization of human and robot relations of dependence in the performance of work as complementary practices. This approach illuminates the nature and practical details of complementary practices for the accomplishment of work. I suggest that a complementarity practice perspective extends the literature by illuminating the ways in which the complementary work that robots may perform for human staff depends on the complementary work that humans provide for robots. Moreover, by including a case of several robots, the study extends the literature by pointing out how complexity increases when several robots and humans are brought together in complementary practices. I suggest that understanding humans' and robots' complementary practices in and for the accomplishment of work tasks bears implications for the increasing use of robots in the hospital sector and beyond, specifically for politicians, planners and managers when assessing the intended and unintended effects of automation.

TIM: **The Effect of Automation and Organizational Context on Workforce Aging and Labor Productivity**

Author: **Byung-Im Kim**, *Seoul National U.*
Author: **Yejoo Lee**, *Seoul National U.*
Author: **Jeong-Yeon Lee**, *Seoul National U.*

This study examines the effect of workforce aging on labor productivity and the moderating effect of automation machinery at an organizational level. We argue that workforce aging adversely affects labor productivity while automation machinery alleviates this adverse effect. Furthermore, firm innovativeness and performance-based management systems were found to strengthen the moderating effect of automation machinery. Thus, this study presents the importance of automation machinery on the productivity of an aging workforce, but also highlights the need for certain institutional contexts to maximize the effect of automation machinery.

Ecosystems and Platforms Track: How Platforms and Ecosystems Emerge & Evolve

Session Moderator: **Greetje Frankje Corporaal**, *U. of Oxford*

TIM: **Explaining Variation in B2B Platform Adoption: Evidence from Digital Labor Platforms**

Author: **Greetje Frankje Corporaal**, *U. of Oxford*
Author: **Pinar Ozcan**, *Oxford U., Saïd Business School*

Scholarship on platform ecosystems has mostly focused on business-to-consumer (B2C) platforms and organizational users supplying complementary products or services. We focus instead on the impact and value of platform adoption for corporate end-users. To examine how firms pursue business-to-business (B2B) platform adoption, we conceptualize it as an instance of new technology adoption. Drawing on an inductive field study situated at the interface between the organization operating one of the world's largest digital labor platforms and (prospective) clients, we show that firms can follow different pathways to platform adoption. Our study provides more nuanced findings than previous literature on B2B platform adoption, showing how the potential changes in organizational roles and power relations create trade-offs, with no outcome being the 'perfect one' as intended by the platform provider. Our findings thus uncover the interplay and tensions between organizational roles and power dynamics in the face of new technology adoption, showing how B2B platforms—intended to help certain occupational groups in organizations—'get stuck' in the adopting organization in different ways depending on their locus of entry and the subsequent power battles they create. We discuss contributions and implications to platform literature and more broadly, new technology adoption by organizations.

TIM: **Estimating and Comparing Cross-side Network Effects for Three Types of Platform Markets**

Author: **Kimmo Karhu**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Jani-Pekka Jokinen**, *Aalto U., Department of Industrial Engineering and Management*

The rise of the platform economy has completely changed the growth dynamics for businesses, such as Apple iOS and Uber, as well as for nonprofits, such as Wikipedia. The exponential growth of these platforms stem mainly from the cross-side network effect, i.e., a feedback loop, between the platform sides. In this paper, we set out to develop a generic differential-equation-based model for cross-side network effects. We evaluate our model with historical observed data from three platforms—Apple iOS, Uber, and Wikipedia—which represent three distinct types of platform markets—complementary innovation, transaction, and information markets—respectively. We estimate not only the overall strength of the cross-side network effect in both directions but also their dynamic behavior including: saturation level, exponential boost/decay, and network effect cutoff value. We compare and discuss these results for the two sides and between the platforms. Our contribution is threefold: (1) we distinguish between the growth from the feedback loop and the Metcale's law style exponential factor; (2) we model two types of declining dynamic behavior in both directions; and (3) based on our generic model we offer a first comparison of cross-side network effects between three distinct types of platform markets.

TIM: **Knowledge Ecosystem Emergence: Organizing Participation, Identity and Actorhood**

Author: **Ermal Hetemi**, *School of Business and Economics, Linnaeus U.*
Author: **Paavo Ritala**, *LUT Business School*
Author: **Mats Magnusson**, *KTH Royal Institute of Technology*
Author: **Anna Jerbrant**, *KTH Royal Institute of Technology, Dept of Industrial Economics and Management*

Collaboration involving large variety of actors across sectors, industries, and institutional settings have become prevalent in searching and creating new knowledge for variety of wicked and complex problems. These fluid forms of collaboration – labelled as knowledge ecosystems – allow organizations to collaborate with other organizations and individuals in a quest to search for and create new knowledge. The literature has thus far helped recognize the prevalence of knowledge ecosystems and their potential benefits, but is relatively silent on their origins and emergence. To bridge this gap, in this paper we theorize knowledge ecosystems as meta-organizations that pursue organizationality via establishment of organizing elements that aim for joint search of new knowledge. By virtue of this foundation, we analyze a longitudinal case study of High-Capacity Transport ecosystem in Sweden, and demonstrate the key organizational elements that emerged over the course of over ten years. We distinguish a process model explaining how three elements of organizationality in a knowledge ecosystem – participation, identity, and actorhood – emerge sequentially and by building iteratively on each other. The process model contributes to the theory, practice, and policy of knowledge ecosystems emergence.

TIM: **How Making Crowdworkers' Ratings Portable Across Platforms Can Increase Market Concentration**

Author: **Laura Thäter**, *Johannes Kepler U. Linz*
Author: **Timm Teubner**, *TU Berlin*
Author: **Diana Tran Nhat**, *TU Berlin*

Online labor platforms have been criticized for fueling precarious working conditions. Today's reputation systems are platform-bound which locks workers in to the platform. One widely discussed approach to address this issue and improve workers' position is the portability of reputational data. However, such a measure could have unintended side effects such as increased demand concentration to the benefit of workers with particularly high rating volume ("superstars"). In this study, we conduct an online experiment with 239 participants to test the effect of introducing reputation portability and study the demand effect of onsite and imported ratings. We find a positive effect of both onsite and imported ratings, where the effect of imported ratings corresponds to about 35% of onsite ratings. Moreover, the results imply the possibility for unintended cross-market demand concentration effects that particularly work in favor of superstar workers.

Digitization Track: Managing Digital Innovation

Session Moderator: **Maximilian Deist**, *U. of Bayreuth*

TIM: **The Art of Not Fitting In: Exploring Success Factors for Digital Innovation Units**

Author: **Corinna Bertling**, *LMU Munich School of Management*

One way to organize for innovation in the digital age is through establishing Digital Innovation Units (DIUs), nascent organizational units that are exclusively tasked with the digital transformation of organizational innovation. These separate structural units combine organizational tasks and objectives commonly inherent in IT units (ITUs) and research and development (R&D), namely digitalization and (product) innovation. Despite their omnipresence across industries, their overall value is still a point of debate in numerous organizations as many DIUs seemingly do not deliver on their promised benefits or attain their goals. This might partly be due to the fact that a DIU's novelty and obscurity hinders their integration and legitimation within the organization they serve, especially in the eyes of ITU and R&D as the more established and traditional core units. Despite their indisputable presence, there is an evident lack of knowledge on what makes a DIU a successful and legitimate organizational unit. Research on the legitimation of new entities and optimal distinctiveness theory would suggest that for DIUs to be successful and perceived as legitimate, they need to meet two opposing needs, namely the need for (intra-group) inclusion as well as (inter- group) differentiation from R&D and ITU. Yet, this might not be enough. Building on belief-congruence theory, I suggest that for DIUs to be successful, they need to further encompass a value-based congruence to R&D and ITU. Following a multi-source study design, I conduct a Necessary Condition Analysis (NCA) that empirically tests the necessity of inclusion and distinctiveness conditions for a DIUs' success in terms of their goal attainment. I discuss the findings, their implications for theory and practice, and point to interesting opportunities for future research.

TIM: **Digital Units: Balancing Fluid Organizational Structures for Digital Innovation**

Author: **Maximilian Deist**, *U. of Bayreuth*
Author: **William Mcdowell**, *Texas State U.*
Author: **Till Marius Gantert**, *U. of Bayreuth*

Digital units – specialized departments for digital innovation – have become the nexus for transformative efforts in incumbent firms worldwide. Knowledge sharing is, therefore, an indispensable task for digital units to facilitate the recombination of knowledge needed to explore digital innovations. Through an inductive case study approach based on 18 interviews, we uncover how digital units easily become trapped in a vicious cycle where missing interfaces with the core organization prevent knowledge sharing, lead to its stickiness, and reinforce organizational rigidities because of solidifying organizational silo-mentalities. To prevent digital units from failing, firms must create an environment that advocates fluidity instead of promoting a dualism where the digital unit is regarded as the innovator while the rest of the organization is seen as the rigid core. Our findings emphasize the need for providing a framework within which employees have a certain level of stability that enables creative knowledge recombination.

TIM: **Emerging Market Firms' Digital Transformation and Market Performance: The Role of Leadership style**

Author: **Khanh Nguyen Hoang**, *16550*
Author: **Yuosre F. Badir**, *Asian Institute of Technology*

Digital transformation (DT) is an issue of strategic importance to the firm's leadership who views it as multidisciplinary phenomenon that correlates to numerous dimensions of firm's performance; i.e., market performance. This study aims to understand the key drivers of a firm's successful DT and the role of leadership styles (transformational and transactional) in leading this transformation. Data were gathered through questionnaires from cross-industries (eight industries) sample of 288 middle managers. The findings show that the degree of DT is positively related to firm's market performance. The results also found that both transformational leadership and transactional leadership are positively related to degree of DT. Furthermore, transactional leadership is positively related to firm's market performance whereas, contrary to our hypothesis, the transformational leadership is not significantly related to firm's market performance. Additionally, degree of DT is fully mediating the relationship between transactional leadership and firm's market performance; and partially mediating the relationship between transformational leadership and firm's market performance. This study makes substantial contribution to emerging market firm's digital transformation and the role of leadership style in this transformation.

TIM: **Data Sovereignty as Organisational Competence for Digital Innovation in Industrial Incumbents**

Author: **Lukas Moschko**, *Institute for Technology and Innovation Management at RWTH Aachen*
Author: **Vera Blazevic**, *Radboud U. Nijmegen*
Author: **Frank T. Piller**, *RWTH Aachen U.*

For industrial incumbents, the development of digital innovations represents a particular challenge, as it requires new competencies. Especially, the use of data, which includes e.g. data collection, storage, processing, analysis and exchange with relevant stakeholders, for a company's value creation and capture currently appears to pose difficulties. In an explorative study based on expert interviews, we therefore investigate why and how data sovereignty should be developed as an organisational competence and which connections to digital innovation management exist or should be taken into account. Using strategy-as-practice theory, we were able to show in an integrated approach that this requires, among other things, a collaboration of interdisciplinary actors as well as consistent practices for handling data, the possibility of flexible and agile project management and reducing existing reservations about data and their use. In addition, we were able to demonstrate numerous interrelationships between organizational data sovereignty and digital innovation management, since, on the one hand, the sovereign handling of data is a hitherto underestimated competence for the development of digital innovations and, on the other hand, some characteristics of digital innovation management also entail effects on organisational data sovereignty. Our research thus helps companies to create the conditions for better exploitation of data in their value creation and their digital innovation management.

Session Type: **Paper Session**
Program Session: **2057** | Submission: **20285** | Sponsor(s): **(TIM)**

Innovation Processes Track: New Product Development: from Idea to launch

Session Moderator: **Xinyi Lin**, *School of management, Zhejiang U.*

TIM: **Interfirm Ambidextrous Control and New Product Development Outcomes: The Role of Market Environments**

Author: **Ting Wang**, *Xi'an U. of Technology*
Author: **Chongchong Lyu**, *School of Management, Lanzhou U.*
Author: **Jie Li**, *School of Management, Xi'an Jiaotong U.*

The critical question of how to adopt a "both-and" approach to analyze interfirm control mechanisms for managing the complex process of new product development (NPD) remains poorly explained. This study addresses this gap by developing a research model that examines the relationships between interfirm ambidextrous control and NPD outcomes (i.e., innovativeness and speed) as well as the contingent roles of market environments. Survey data from 267 Chinese firms reveal that interfirm ambidextrous control adopted by focal firms helps partners simultaneously achieve NPD innovativeness and NPD speed, but through different mechanisms: the balance dimension better enhances NPD innovativeness through a compensatory fit between interfirm formal and informal control, whereas the combined dimension better improves NPD speed through a supplementary fit. Moreover, balance using the two controls by focal firms better helps partners enhance NPD innovativeness under high market uncertainty, whereas the combined use that focal firms resort to is particularly relevant for partners to accelerate NPD speed in highly competitive market environments. This study not only offers new insights into the role of control mechanisms in NPD partnerships, but also extends the control-outcome framework by illustrating how interfirm ambidextrous control—as a new governance mechanism adopted by focal firms—helps manage complex NPD partnerships and makes it easier for partners to attain the desired NPD outcomes.

TIM: **Cross-Functional Integration, Value Co-Creation and New Product Development Success**

Author: **Xinyi Lin**, *School of management, Zhejiang U.*
Author: **Dong Wu**, *School of management, Zhejiang U.*

The rise of new information technology and an increasingly competitive environment accelerate the digital transformation of firms and enhance the degree of cross-functional integration. Previous studies have shown that cross-functional integration will affect new product development success. This study builds a moderated mediation model based on absorption capacity theory and value co-creation theory to explore the mediation mechanism and boundary conditions of cross-functional integration affecting the new product development success. This paper argues that cross-functional integration indirectly impacts new product development success positively through the mediating role of value co-creation with customers and suppliers. Further, when the degree of structural empowerment is low, the mediating role of value co-creation disappears, on the contrary, when the degree of structural empowerment is high, the mediating role of value co-creation is enhanced. Using the survey data of 267 advanced manufacturing firms (machinery, electronics, automobile) worldwide, the results support the expectations of this study. The research results of this paper are conducive to understanding the internal mechanism of cross-functional integration affecting new product development success from the perspective of value co-creation and provide a reference for the management practice of firms developing new products in the Internet era.

TIM: **Spend it Wisely: Market and Non-market Strategies in the Development of New Drugs**

Author: **Vareska Van De Vrande**, *Rotterdam School of Management, Erasmus U.*
Author: **Annapoornima Manathattai Subramanian**, *National U. of Singapore*
Author: **Moren Levesque**, *York U.*
Author: **Patricia Klopf**, *Erasmus U. Rotterdam*

Pharmaceutical firms are top lobbying spenders in the United States (US). While the potential strategic benefits of lobbying are recognized in the literature, the criticism against unethical aspects of lobbying warrants pharmaceutical firms to strategize their lobbying activities. Our study addresses the question "How do market and non-market strategies interact in the context of new drug launches?" Specifically, we investigate the interaction between lobbying and the intellectual capital (human, structural, and social capital) of firms. We use a formal model to develop our hypotheses, which we test on a sample of the largest US-listed pharmaceutical firms between 1999 and 2021. Our analysis suggests a substitutive relationship between a firm's human and structural capital and lobbying and complementary relationship between a firm's social capital and lobbying.

TIM: **Customization, Innovation and the Particularization Trap: Evidence from Knowledge-intensive Firms**

Author: **Panos Desyllas**, *School of Management, U. of Bath*
Author: **Hsing-Fen Lee**, *School of Business and Management, Royal Holloway, U. of London, UK*
Author: **Ian Mils**, *Alliance Manchester Business School, U. of Manchester*
Author: **Marcela Miozzo**, *King's College London*

We study the link between customization and innovation that remains underexplored and contested in the literature. On the one hand, because customization requires suppliers to gain knowledge of customers and the product features they require, and since this knowledge is generally held to be critical for innovation, a positive association may be anticipated. On the other hand, when customization is closely coupled with a focus on particular clients' requirements – what we term here "particularization" - it may limit awareness of broader or different requirements and potential applications to other markets. We call this a "particularization trap". We examine empirically this link in the context of Knowledge-Intensive Business Services (KIBS) firms because they tend to be more prone to produce solutions through close interaction with clients. We develop a measure of a firm's customization, as displayed through its portfolio of services, and we relate this to innovation. We also consider the boundary conditions of the customization-innovation relation by examining the potentially moderating roles of the firm's collaboration with clients and its deliberate learning processes. The results reveal a significantly positive association between the customization of a firm's portfolio of services and its innovation. Nevertheless, this association is weakened when firms collaborate closely with specific clients, unless these firms simultaneously engage in deliberate processes to leverage learning from client-specific offerings. Our study contributes to an improved understanding of the ways in which customization can affect the knowledge mobilized by firms.

TIM: **Responsible Design Thinking**

Author: **Minu Kumar**, -

Author: **Jatinder Singh**, *EADA Business School*

Design thinking (DT) has generated significant attention in relation to new product development and innovation and, more generally, value-creation activities. Despite its focus on user-centeredness and empathy, doubts have been raised about the recent use of DT in the development of ethically questionable products and services. In this research, we adopt a “theories in use” approach to understand the main ethical concerns with DT as currently practiced and to explore how DT teams could better include ethical considerations in their work. Based on our analysis of qualitative data gathered from in-depth interviews with DT professionals, we identify four ethics-related blind spots: (1) the environment as a macro-level participant without agency, (2) the definition and inclusion of external stakeholders, (3) risk-benefit assessments, and (4) concerns arising from increasing scale. To mitigate these blind spots, firms can: adopt a systemic perspective; deploy specific practices to anticipate and mitigate potential harms; and explicitly include ethical aspects in their leadership, governance and incentives. We conclude by offering propositions on how this approach – that we call Responsible Design Thinking - can help design thinking teams and firms achieve more inclusive and sustainable innovation outcomes.

Presenter: **Dokyun Lee**, *Boston U. Questrom School of Business*
Participant: **Prasanna Tambe**, *The Wharton School, U. of Pennsylvania*
Presenter: **Xubo Cao**, *Stanford Graduate School of Business*

Until now, Artificial intelligence (AI) has primarily created economic value through applications of supervised learning, a process in which an algorithm is trained to categorize data into specific classes (e.g., label customers as churners or non-churners) or predict a sequence of labels (e.g., text translation). However, recent advancements in generative AI have enabled the generation of complex and diverse outputs such as images and written text. These systems evoke the impression of being capable of creative behavior. The introduction of large language models, such as ChatGPT, and large text-to-image engines, such as DALL-E, Midjourney, or Stable Diffusion, has created a lively debate on their potential use in organizations, schools, and the broader society. Given the rapidly growing need for a better understanding of generative AI and its implications on creative processes, this symposium aims to present the most recent perspectives and insights on this topic, as well as integrate across the different views and provide fruitful directions for future research. Specifically, in this symposium, we will discuss how new generative AI technologies impact organizational ideation and innovation in both desirable and undesirable ways and reflect on respective research avenues. In the session, we will have an introduction presenter, four paper presentations, and an integrative discussion.

In this symposium, we will examine a wide array of questions and hypotheses that focus on the people who conduct science -- as a complement to more established research traditions that focus on the publications and patents that people produce. Talks will cover topics that relate to a variety of career stages and background characteristics such as: What are the influences of socioeconomic diversity on the careers of doctoral graduates? How does citizenship tend to influence job choice? How do individuals who take on the task of conducting interdisciplinary research navigate working in different fields? Talks will also feature innovative data resources including two presentations that are able to examine the ways in which External Letters variably influence academic careers with respect to tenure and promotion decisions.

Participant: **Quinn Cunningham**, *Rider U.*

Sometimes described as 'opening-up', self-disclosure, or the act of sharing personal/relevant information with another party is acknowledged in psychology as an important interpersonal behavior. Despite this evidence on the importance of self-disclosure, research on self-disclosure in organizations is sparse. In recent years there is rising interest in the study of self-disclosure in the workplace. Often viewed as a positive behavior to show goodwill, the effects of self-disclosure on organizational outcomes at various levels have received little empirical and theoretical attention from management scholars. This symposium explores the interpersonal and group effects of self-disclosure on employees at both the individual, interpersonal, and group levels. The symposium consists of four papers—one theory, two field studies, and one experimental study—that explore the effects of self-disclosure and its role in organizations. Specifically, the first paper offers new theoretical insights about the gendered effect of self-disclosure in the context of remote working and what that means for careers. Also fuelled by the use of remote working, the second paper investigates self-disclosure concerning individual leaders' perceptions of loneliness. The third paper explores the effects of self-disclosing virtually, private medical information about suffering from remote work conditions during the COVID-19 pandemic, and a group of colleagues. It uses experimental vignettes to investigate the potential benefits of virtual self-disclosure to a group of colleagues regarding private medical information. The final paper delves deeper into employees' position to self-disclose. It examines the role of self-stigmatization in the relationship between employee mental health disease diagnoses and employee decisions to self-disclose. These papers advance our understanding of the effects of self-disclosure at various levels in organizations. We believe the symposium is a step toward uncovering the importance of self- disclosure and will encourage future research.

Newcomers, Socialization, and Early Careers

Session Moderator: **Olga Epitropaki**, *Durham U.*

CAR: **Graduate Insights and Sustainable Outcomes: The Advancement of Person-Organisation Fit Theory (WITHDRAWN)**

Author: **William E. Donald**, *Southampton Business School, U. of Southampton*

Drawing on a framework of Person-Organisation Fit (POF) theory, this paper aims to understand how organisations can establish and maintain sustainable early-career talent pipelines. Research question one asks, 'How do graduates feel that organisations can attract early-career talent?'. Research question two asks, 'How can graduates' views concerning the evolution of POF over time facilitate organisations to create an environment that improves retention rates of early-career talent?'. Twenty-eight graduates from UK universities participated in semi-structured interviews in early 2022. Cohort one was composed of 15 individuals who graduated in 2008. Cohort two was composed of 13 individuals who graduated in 2020. The findings identified two themes associated with attracting early-career talent: 'Company Culture' and 'Supply & Demand'. However, 2020 graduates prioritised the job role and job security, whereas 2008 graduates prioritised job location and commute duration. Three additional themes were related to the retention of early-career talent: 'Career Progression', 'Health & Well-being', and 'Remuneration'. Findings also highlighted how POF could evolve over time, whereby retention can be beneficial or detrimental to either party. The study extends POF research and bridges the shared sustainability themes of 'person', 'context', and 'time' from vocational behaviour and HRM literature streams. The study identifies innovative approaches to attracting and retaining early-career talent and understanding how graduates' views on POF evolve over time.

CAR: **Experiencing Tournament Socialization: First-Term Politicians' Strategies For Survival**

Author: **Helena Cooper-Thomas**, *Auckland U. of Technology (AUT)*
Author: **Joanne Silvester**, *Loughborough U.*
Author: **James Greenslade-Yeats**, *Auckland U. of Technology*

Early research on new employee socialization identified a tournament tactic which pitted newcomers against each other. Winners remained and continued competing whereas losers moved into less desirable roles and received less attention or exited. Since these initial investigations, the tournament socialization tactic has been neglected. Our own qualitative interview research investigating the socialization of first-term politicians (N = 23) to New Zealand's parliament unexpectedly identified the process as representing tournament socialization. Our inductive approach uncovered key tournament socialization elements, their effects, and new politicians' reputational strategies for survival. Thus, we shed light on key socialization challenges posed by the neglected tournament tactic in the context of senior newcomers. Moreover, our findings reveal the consequent vulnerability felt by new politicians, which in turn informed the strategies they implemented to defend and build their reputations as they vied for success in the ongoing tournament.

CAR: **The Effects of Early-Career Unemployment Scarring on Future Leadership Role Occupancy**

Author: **Olga Epitropaki**, *Durham U.*
Author: **Panagiotis Avramidis**, *ALBA Graduate Business School*

Whereas the scarring effects of unemployment on future income, health and well-being are well-documented, little is known about its potential effect on future leadership emergence and development. Using data from the National Longitudinal Study of Youth (NLSY97) and drawing from life course theory, we examine the effects of employment gaps in emerging adulthood, during the global financial crisis, on leadership role occupancy in middle adulthood. Based on a sample of 4,567 respondents, we find evidence for significant scarring effects of early-career unemployment on individuals' future chances to occupy leadership positions in work settings. We further examine the moderating role of sex and early life disadvantage. Our results support the role of early life disadvantage showing that individuals from disadvantaged backgrounds experience stronger negative effects on leader role occupancy due to employment gaps in emerging adulthood. No significant sex differences are found. Implications for theory and practice are discussed.

CAR: **How can Newcomers Enhance Thriving During Organizational Entry: The Critical Role of LMX**

Author: **Lu Yu**, *Missouri State U.*
Author: **Hong Ren**, *U. of Wisconsin, Milwaukee*
Author: **Romila Singh**, *U. of Wisconsin, Milwaukee*

We aim to explore how newcomers can proactively improve the quality of their relationships with supervisors during organizational entry. We found that feedback-seeking behavior can effectively enhance the quality of leader-newcomer exchange during the first three months of organizational entry, and the effect of proactive feedback-seeking is especially strong for newcomers with high self-efficacy. Feedback-seeking behavior is also an agentic work behavior that enables newcomers to experience thriving at work. The moderated mediation effect is also significant, signaling that the indirect relationship between feedback-seeking behavior and thriving is stronger when newcomers have high self-efficacy.

Proactivity and Mentoring in Careers

Session Moderator: **Samina M. Saifuddin**, *Morgan State U.*

CAR: **Are Proactive Employees More (or Less) Likely to Leave? A Dual-Path Model**

Author: **Yanjun Guan**, *Durham U. Business School*
Author: **Qing Liu**, *Durham U. Business School*
Author: **Jingyi Zhao**, *UCL School of Management*
Author: **Qin Zhou**, *Leeds U. Business School*
Author: **Shanshan Wen**, *School of Management, Shenzhen U.*
Author: **Xin Zhang**, *Peking U.*

Research on the relationship between proactive personality and turnover has yielded inconsistent results (i.e., positive, negative, and non-significant relationships). Using the boundaryless and protean career perspectives, we conducted two empirical studies among Chinese employees to reconcile the discrepancies in the literature by testing both the staying and leaving paths between proactive personality and turnover intention/behavior and exploring the moderating role of protean career orientation. The results of Study 1 (N = 148) showed that employees' proactive personality (Time 1) had a negative indirect effect on turnover intention (Time 3) through internal employability (Time 2) and a positive indirect effect through external employability (Time 2). The results of Study 1 also suggested that internal and external employability offered a more coherent and powerful explanation for the mixed relationship between a proactive personality and turnover intention than other mediators (career satisfaction, internal networking, and external networking). Study 2 (N = 188) controlled for the effects of baseline turnover intention (Time 1) and adopted turnover behavior (Time 3) as the outcome variable predicted by employee proactive personality (Time 1). The results replicated the contrasting mediating effects of internal and external employability (Time 2) and revealed that protean career orientation strengthened the indirect positive effect of proactive personality on turnover behavior through external employability. These studies provide a more comprehensive view of the contrasting effects of a proactive personality on turnover and have important implications for talent retention in a boundaryless career world.

CAR: **Acceptance of Disability and Proactive Career Behavior**

Author: **Xiji Zhu**, *Central U. of Finance and Economics*
Author: **Kaiyi Wang**, *Central U. of Finance and Economics*
Author: **Zijun Cai**, *Beijing Normal U.*
Author: **Cong Cai**, *U. of Chinese Academy of Social Sciences*
Author: **Yu Yang**, *Central U. of Finance and Economics,Beijing,China*

Digital technology enables people with disabilities (PWD) to pursue more boundaryless and flexible careers. To grasp the opportunities brought by digital technology, PWD could not simply stick to the limited traditional job choices but need to display more proactivity in their careers. However, we have a limited understanding of whether and when PWD would display proactive career behavior. To fill this research gap, this study builds on social cognitive theory and proposes acceptance of disability as a key antecedent of PWD's proactive career behavior. We further propose the mediating role of self-efficacy and the moderating role of contextual barriers on the relationship between acceptance of disability and proactive career behavior. To test this moderated mediation model, we collected survey data from 260 people with visual disabilities in China. Our findings are consistent with our theoretical arguments that acceptance of disability increases PWD's proactive career behavior through the mediating effect of self-efficacy. Moreover, contextual barriers hampered this positive relationship by impeding the positive effect of self-efficacy on proactive career behavior. Our study demonstrates the importance of high acceptance of disability, high self-efficacy, and low contextual barriers in promoting PWD to conduct proactive career behavior to break through career boundaries.

CAR: **Why Proactivity Matters When You're Being Mentored by a Narcissist: A Trait Activation Perspective**

Author: **Thomas A. Birtch**, *U. of Exeter*
Author: **Zhenyao Cai**, *Shanghai U.*
Author: **Flora Chiang**, *China Europe International Business School (CEIBS)*

This study introduces a trait activation theory conceptualization for formal mentoring that is then tested using a multi-source dyadic sample of 151 protégés and their mentors. In support of our predictions, we found that a protégé's proactive personality leads to his/her narcissistic mentor providing a greater level of mentoring support. Further, relationship quality was found to mediate such relationship. Our findings therefore contribute to the literature by explicating how and when mentor narcissism may have positive effects on mentoring support and, interestingly, that a personality trait frequently shown to have deleterious consequences can be productive under the right conditions. The study also cautions organizations that only matching mentors and protégés with similar characteristics may be restricting the potential of formal mentoring and that further consideration should be given to the situational relevance of personality traits and how they can be harnessed to the benefit of mentoring outcomes. Implications to theory and future research directions are discussed.

CAR: **Understanding Mentoring in the Context of Bangladesh**

Author: **Samina M. Saifuddin**, *Morgan State U.*
Author: **Laila Zaman**, *East West U.*
Author: **Md. Sajjad Hossain**, *East West U.*

While mentoring research has drawn considerable attention from researchers and practitioners, most of this research is situated in Western or developed countries' contexts. Bangladesh is a non-Western, under-researched context. The present study aims to understand how individuals working in Bangladeshi organizations perceive the meaning of mentoring and mentoring support as a career strategy. We conducted 42 in-depth interviews. Findings from the study suggest mentoring is not well-understood as a career strategy, and the conceptualization and understanding vary with the management levels. Junior-level employees aligned mentoring with receiving training or assistance from a supervisor or manager to carry out their job duties and tasks. In comparison, the mid-level employees highlighted receiving task assistance and some career assistance. The senior level was the only group that adequately described the meaning and highlighted mentoring provided them with career assistance and psycho-social support. Mentoring is associated with protégés instrumental and psycho-social career benefits and is a vital human resource management (HRM) tool for talent development. Thus, inadequate understanding and practice can affect employees' career outcomes and a talent-driven approach. Theoretically, the research contributes to a better conception of mentoring in an under-researched context. Ragins and Kram (2007b) emphasized that contextualized comprehension of mentoring allows scholars and practitioners to build better bridges. From a career and HRM perspective, a richer understanding of how mentoring is perceived can help design and implement context-appropriate mentoring models in organizations that accrue the most benefit to mentors and protégés careers. Finally, the study contributes to context-based scholarship.

Participant: **Daniel Kim**, *U. of Florida*
Participant: **Nora Berghoff**, *Leeds U. Business School*

Impostorism—also commonly known as imposter syndrome or impostor phenomenon—describes a subjective experience whereby people perceive themselves as frauds, despite objective evidence of success and accomplishment. Impostorism has been found to be positively linked to an array of negative, but more recently also to positive outcomes relevant in the workplace, such as interpersonal effectiveness or organizational citizenship behaviors. To enhance the understanding of impostorism in the workplace, this symposium presents four studies of diverse methodology, focussing on how workplace impostorism develops, the consequences it entails, and how individuals cope proactively with impostorism. Finally, a general discussion will highlight the current findings and discuss future research directions. Given the scope of the presentations, this symposium provides theoretical and practical implications to better understand impostorism in the workplace.

Counterproductive Behavior

Session Moderator: **Chieh-Yu Lin**, *National Sun Yat-sen U., Taiwan*

CM: **How a Toxic Coworker Makes you Withdraw From Work and Unwell: Effects of Coworker Social Undermining**

Author: **Chieh-Yu Lin**, *National Sun Yat-sen U., Taiwan*
Author: **Mayya Achyldurdyyeva**, *National Sun Yat-Sen U.*
Author: **Fu-Chen Kuo**, *Institute of Human Resource Management, National Sun Yat-sen U., Taiwan*

The present study investigates the impact of daily coworker social undermining on employees' daily work withdrawal and daily somatic health complaints. We empirically test the mediating role of the experienced hostility and cognitive rumination, as well as the role of neuroticism as a moderator. We collected data from 133 service employees across ten working days (resulting in 1,197 daily surveys). The results show that: (a) coworker social undermining had a positive indirect effect on work withdrawal via the experienced hostility, and (b) coworker social undermining had a positive indirect effect on somatic health complaints via cognitive rumination, with neuroticism strengthening this positive indirect effect. These results suggest that coworker social undermining leads to negative job-related behaviors and employees' physiological symptoms via emotional (i.e., the experienced hostility) and cognitive (i.e., cognitive rumination) pathways. Theoretical and practical implications are further discussed.

CM: **Paternalistic Managers: Organization-Based Relational Work and the Production of Consent**

Author: **Qi Song**, *Northwestern U.*

What makes workers consent to repressive norms in the workplace? This study contributes to current discussions on how relational work creates consent in the workplace by examining the organizational conditions that produce the paternalistic leadership of managers, and by analyzing the rhetorical strategies of managers that help workers internalize working norms. Drawing upon the case of gas station attendants in China who are frequently harassed by customers but actively embrace service norms, I present evidence from 30 interviews and a survey with 2,588 attendants and managers. I demonstrate that three organizational settings of petroleum companies—the collective dormitory system, the shift system, and the promotion system—shape managers as paternalistic leaders, who are both authoritative and protective to workers. Building upon their authority and reliability, managers use a variety of rhetorical strategies to normalize customer-worker conflicts and convince workers to adopt service norms.

CM: **Understanding When and How Customer Mistreatment Inhibits Sabotage Behaviors but Increases Apology**

Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*
Author: **Long Wai Lam**, *U. of Macau*
Author: **Julie Zhu**, *Fuzhou U.*
Author: **Pei-Chi Chen**, *National Dong Hwa U.*

While scholars have argued that personal resources can buffer adverse effect of customer mistreatment on sabotage, empirical findings have been less conclusive. We also have little evidence of whether employees can correct customer misbehaviors by behaving more constructively. To resolves these issues, guided by the recent theoretical development in self-control, this present study examines whether, how, and when customer mistreatment influence two behavioral reactions: service sabotage and apology behaviors. We propose that the indirect effect of customer mistreatment on service sabotage and apology behaviors will be mediated by ego depletion, and moderated by both emotional stability and perceived pay-performance contingency. We found support of our model in two dairy studies involving service workers' encounter of customer mistreatment and customers' ratings of their sabotage and apology. More importantly, this study revealed the self-control conditions in which service workers would do more apology but less sabotage to their customers. Theoretical and practical implications were provided.

CM: **Adversaries or Synthetic Co-workers: Exploring the Relationship Between Gig Workers and Employees**

Author: **Michael Maffie**, *Cornell SC Johnson College of Business*

This article explores conflict and cooperation between gig workers and more conventional employees. Drawing on original qualitative and quantitative data from Instacart shoppers and grocery store staff, this article shows how Instacart's algorithmic management system pushes shoppers to abuse in-store staff. Yet for shoppers who frequently interact with staff, I find they develop cooperative, synthetic co-worker relationships. These relationships grant shoppers access to resources typically reserved for staff, allowing them to overcome the algorithmic pressures Instacart places on them. These findings show how platform companies' algorithmic pressures spillover onto conventional workers; yet gig workers can overcome these pressures by building relationships with their conventional peers.

Tradeoffs in Prosocial Behavior

Session Moderator: **Matthew Lupoli**, *Monash U.*

CM: **Lacking Desired Passion Increases Unethical Pro-Organizational Behavior**

Author: **Matthew Lupoli**, *Monash U.*
Author: **Jon Michael Jachimowicz**, *Harvard Business School*
Author: **Zachariah Brown**, *HKUST Business School*
Author: **Joel Brockner**, *Columbia U.*
Author: **Adam Galinsky**, *Columbia Business School*

Research has identified numerous benefits of experiencing passion for employees and organizations. The current research explores a drawback to a focus on passion: it can make people vulnerable to passion gaps, i.e., a negative discrepancy between actual and ideal levels of passion. Given strong demands for employees to be passionate, we propose that passion gaps are self-threatening, or—in the language of self-affirmation theory (Steele, 1988)—reduce people's sense of self-integrity. This threat to self-integrity, we suggest, subsequently increases unethical pro-organizational behavior (UPB)—immoral acts intended to benefit their organization—because UPB represents a pathway for individuals to counteract the threat to self-integrity elicited by passion gaps. Two online survey studies, a field study, two experimental causal chain studies, and a self-affirmation intervention (N=2,268) offer converging evidence that passion gaps increase willingness to engage in UPB because they reduce self-integrity. Providing support for our hypothesized mechanism and suggestive evidence for a strategy to deter UPB, our final study demonstrates that engaging in self-affirmation mitigates the tendency for those experiencing passion gaps to engage in UPB. We also present evidence of discriminant validity by showing that the passion gaps-UPB link does not extend to: (1) related independent variables which are not met by similarly strong demands, (2) pro-organizational behaviors that are less costly than UPB, or (3) unethical behaviors reflecting greater self-interest. Collectively, these results highlight a potential downside associated with the continuous call for people to follow their passion.

CM: **Asymmetric Expectations for Emotional Acknowledgement on Teams and Implications for Team Performance**

Author: **Christina Bradley**, *U. of Michigan, Ross School of Business*

Emotional acknowledgement (i.e., verbally recognizing the displayed emotions of others) is an important tool in workplace relationships. However, the responsibilities for providing such emotional acknowledgement are often asymmetric, such that leaders are expected to bear the primary responsibility for emotional acknowledgement in teams. We challenge the utility of this expectation and suggest that upward emotional acknowledgment is also surprisingly beneficial. We demonstrate the existence of these asymmetric rank-based expectations and show that when this expectation is countered (and employees dare to emotionally acknowledge their leaders), this enables leaders to engage in more downward emotional acknowledgment, which in turn helps team performance. We find support for our hypothesis across seven studies, including four online experiments, three field surveys, and one laboratory experiment of interacting task groups. This work highlights the importance of two-way emotional acknowledgement across layers of hierarchy in teams.

CM: **Why Prosocial Decision Making Is Transformed By Risk: Prospect Theory, Self-Image, and Risky Choices**

Author: **Polly Kang**, *INSEAD*

In classic judgment and decision-making research, a fundamental distinction was made between riskless choices and risky choices. Surprisingly, this distinction has largely been neglected in prosocial decision-making research, which has focused on examining riskless prosocial choices (e.g., tipping, dictator game giving) while implicitly assuming findings will generalize to risky prosocial choices (e.g., volunteering to try to help someone, while knowing that one's attempt to help might fail). We challenge this assumption. We assert that risk transforms prosocial decision-making: Specifically, we argue that self-image concern influences both risky choices and prosocial choices in different ways, which interact to produce a unique combined impact on risky prosocial choices. Consistent with our theory, incentivized experiments (Experiments 1-2) show that risk reduces prosocial choices less than proself choices (if outcomes are viewed as gains), and that this interaction effect is mediated by self-image concern. Further consistent with our theory, an 18-round incentivized experiment (Experiment 3) shows that describing prosocial outcomes using loss (versus gain) frames boosts risky prosocial choices more than riskless prosocial choices. This result was driven by the fact that, for risky prosocial choices, using loss (versus gain) frames acted as a powerful nudge that boosted prosocial choices by 40%–an impact nearly ten times larger than leading prosocial-choice nudges, with significant practical implications for policymakers and leaders who wish to encourage prosocial choices. Our findings suggest that risk transforms prosocial decision making, and our results point to fundamental differences in the decision processes underlying riskless prosocial choices versus risky prosocial choices.

CM: **Helping More Won't Always Earn You More Trust: The Role of Power**

Author: **Leander De Schutter**, *Erasmus U. Rotterdam*
Author: **Marius Van Dijke**, *Erasmus U. Rotterdam*
Author: **Flore Bridoux**, *Erasmus U.*

One of the most effective ways to earn the trust of other organizational members is through helping others. Helping, however, comes at a cost because it drains the resources of helpers, which can contribute to them burning out. It is therefore important for organizational members to strike a balance between providing enough help to build trust without overextending their resources. Hence, it is worth exploring if there is an optimal level of help to foster interpersonal trust. We argue that the location of this optimal point differs depending on organizational member's relative access to resources, that is, their relative power. Specifically, we argue that for less powerful organizational members the benefit of providing help on received trust diminishes as help increases. In contrast, for more powerful organizational members this is not the case, helping increases received trust in a linear fashion. We further propose that this effect is mediated by justice perceptions because more powerful organizational members have an expectancy to be generous, while less powerful organizational members do not have this expectancy. We find evidence to support our hypotheses in an incentivized behavioral experiment where we manipulated structural power among interaction partners and in a field study among employees of various organizations.

Imaging a Different Future

Session Moderator: **Gemma Lord**, *The Open U., United Kingdom*

CMS: **Critical and Collective Entrepreneurship in Charity Organization Strategies of Change and Resistance**

Author: **Gemma Lord**, *The Open U., United Kingdom*

This paper draws upon data from an ethnographic study of a charity delivering social care services. It empirically demonstrates the organizational strategies that were used within an organizational change process wherein dominant understandings of entrepreneurship were mobilized. A 'professionalization project' relied upon neat trajectories to identify individual's skills-shortfalls, rectify deficits, inculcate competition, set finance-based targets and monitor individual progress in the adoption of these changing role expectations. Drawing upon empirical data from 12 months ethnographic fieldwork undertaken within the charity organization, the paper explores the empirical setting through the lens of Critical Entrepreneurship Studies (CES) in order to examine how conceptions of entrepreneurship operate and are operated, and the micro-processes of how these are attached to and perpetuated. Findings suggest that the 'project' displayed an enduring commitment to the "'traditional' attempts at theorizing entrepreneurial processes" (Verduyn, Dey and Tedmanson, 2017: 41) through analysis of organizational strategies that functioned in the attachment to and embedding of individualized conceptions of entrepreneurship within this charity. Accounting systems functioned to restrict practices of care-based work; both in terms of the capacity to continue in their daily realization and also in terms of their expression as entrepreneurship. In an effort to 'de-naturalize' this restrictive move, the paper foregrounds workers' practices and their interpretations of how past practices are (de)valued in a financialised charity organization setting. It specifies the entrepreneurial activity that is obscured from view because it does not fit pervasive understandings of what 'counts', in order to highlight acts of resisting organizational manifestations of broader states of political economy that are experienced in the tension between enterprise and 'other' organizations founded to achieve a communal purpose. CES proposes the reimagining of entrepreneurship along social and collective lines. The paper contributes to this endeavour via an empirical analysis of the practices of work that constitute a form of 'collective entrepreneurship'.

CMS: **Social Entrepreneurship Education: Changing the World or Maintaining the Status Quo?**

Author: **Laure Leglise**, *Catolica Lisbon School of Business and Economics*
Author: **Emily Cook-Lundgren**, *NEOMA Business School*

Amidst growing calls for business schools and management education to play a leading role in social change, social entrepreneurship has emerged as a popular strategy. While generally portrayed as a positive force for social change, critical perspectives highlighting the implication of business and management education in the (re)production of inequality point to the need for a more nuanced examination of social entrepreneurship. Following this call, this paper critically examines discourses of social entrepreneurship in business and management education, and their implications for inequality. More precisely, we draw upon Fairclough's social theory of discourse to examine how elite business schools construct social entrepreneurship as a solution to global social challenges, identifying four discourses that together function to construct a particular hegemonic discourse of social entrepreneurship: business-managerialist solutionism, savior and salvation, win-winism, and elitism. We propose four effects of this hegemonic discourse in relation to inequality -- universalizing, individualizing, objectifying, and obscuring. In doing so, we contribute to debates on the role of the business school and management education in social change, arguing that any potential for a positive contribution rests on attending to these inequality-(re)producing effects. We conclude by delineating considerations for business school educators towards this end.

CMS: **Democratising Bureaucracy: Finding Freedom at Work Through Co-Creating Rules and Procedure (WITHDRAWN)**

Author: **Martyn Griffin**, *U. of Sheffield*
Author: **Daniel King**, *Nottingham Trent U.*
Author: **Simon Pek**, *U. of Victoria*

Conventionally bureaucracy is contrasted with freedom in organizational life. Rules and procedures are often portrayed as constraining free choice and the capacity of individuals to make decisions and express their agency in the workplace. In this article, however, we ask: what happens when bureaucracy is democratised and workers are directly involved not only in shaping and co-creating the rules that govern them but have the capacity to challenge and change them as well? Our study explores the experiences of individuals within democratised bureaucracies – in the form of sociocratic workplaces – in which we analyse 71 interviews that reveal experiences of freedom through the use of micro-bureaucratic rules and procedures. We explore the tensions that emerge between what we call different blends of freedom in these organizations and consider how different factors within the organizations shape how freedom is experienced. The practical implications of our results suggest bureaucracy need not be seen as an enemy of freedom in the workplace, but can – if democratised – play a central role in supporting people to be free from arbitrary interference and domination in their work.

CMS: **Performance Indicators, Healthcare Management and Organizational Rationality**

Author: **John S Hassard**, *U. of Manchester*
Author: **Edward Granter**, *U. of Birmingham, UK*
Author: **Paula Hyde**, *U. of Birmingham, UK*
Author: **Jeremy Aroles**, *U. of York Management School*
Author: **Leo McCann**, *U. of York, UK*

Reports into the infamous mismanagement of care at the (UK) Mid Staffordshire NHS Foundation Trust (2005-2008) suggested a prioritization of performance indicators significantly jeopardized patient safety. We contend a range of critical theories addressing rationality and ideology can explain this historic case of the use of targets to guide resource management. Drawing initially on radical Weberian sociology, we argue this use of target-setting management was a classic victory of formal over substantive rationality. We argue subsequently that such analysis be joined by wider theorizing to elucidate the ideological mechanisms behind 'deliverology' (Barber, 2015). We draw inter alia on writings by André Gorz, Michel Foucault and the Frankfurt School – and notions of economic rationality, governmentality, and technocratic rationality – to illuminate ideological reasons for deploying performance indicators in healthcare. The result is a critical-pluralist analysis of organizational culture and change: one that assembles a range of social and organizational theories to explain practices at the heart of the Stafford Hospital scandal.

Gendering Class and Work

Session Moderator: **Cat Spellman**, *Durham U. Business School*

CMS: **Gendering 'The Hidden Injuries of Class' and In-Work Poverty in Britain**

Author: **Cat Spellman**, *Durham U. Business School*
Author: **Jo McBride**, *Durham U. Business School*

This paper argues for the need to reconsider the usefulness of the concept of 'The Hidden Injuries of Class' established in Sennett and Cobb's (1972) classic study. Here, we develop its use, complemented by feminist theory, to encapsulate the nuanced experiences of women. It is used as an investigative lens to help understand the individualised positions of working-class women in the UK who are in employment, but still depend on food banks to feed themselves and their families. Using an ethnographic qualitative approach, we identify various emotional impacts of in-work poverty that women encounter and the coping strategies they adopt to preserve their self-dignity when facing hardship. Our evidence demonstrates how the use of food banks, and the plight of in-work poverty is experienced by working-class women. We explore how they confront a complex internalised conflict heavily impacted by the classed and gendered structures that characterise their realities, manifesting in guilt and shame but also resilience allied by the food banks and volunteers that support them.

CMS: **Can You See the Pain? Menstruations, Pain, and Identity in the Workplace**

Author: **Kamila Moulaï**, *Marie Sklodowska Curie Postdoc, Rotterdam School of Management, Erasmus U.*

This study elaborates on how the intense physical pain menstruations can sometimes give rise to intermingles with external gazes in the workplace. It further unwraps the salient role organizations -taken holistically- play in producing a system of gazes that intersects with the meaning-making process of suffering and which becomes intrinsically connected with identity processes. Using the phenomenology of perception by Merleau-Ponty and a Foucauldian approach to the normalizing gaze to question identity reasonings, this work disentangles identity work in a series of defining contexts, including technological ones. Going beyond the assumed vulnerability and malleability of bodies, we explore how (human and robots') gazes - in their plurality, normalizing effect, and subjectivity- participate in human-contextual identity interplays. The understanding of such interplays contributes to developing an ethics of care that organizations can deploy to better align with their responsibility of inclusion toward menstruators.

CMS: **When Class, Gender and Occupation Intersect: Surviving the Bermuda Triangle of Occupational Limbo**

Author: **David Sanson**, *École des sciences de la gestion (ESG UQAM)*
Author: **Claire Le Breton**, *Grenoble Ecole de Management*

This paper relies on a longitudinal immersion in the intervention unit (Inter unit) of a chemical plant situated in France to explore the experiences and practices of working-class men in a context marked by an increased importance of neoliberal standards. In this investigation, we focus on an interstitial work situation that we refer to as 'waiting times'. Our analysis points to three mechanisms that animate the tensions at the core of this occupational limbo: the kraken of idling work, the maelstrom of rejection, and the sirens of intimacy. This paper calls for further explorations of organizational interstices: when different expectations meet, the tensions between contradictory demands appear more clearly than in monolithic contexts. Especially, as neoliberal sensibilities rise (Skeggs, 1997; Slutskaya et al., 2016, Hanna et al., 2018) and challenge diverging identities, organizational interstices such as the waiting times studied in this paper allow to scrutinize the various tensions and interlaced mechanisms that emerge when gender, class and occupation intersect.

CMS: **Gendered Entrepreneurship: Emancipation and Empowerment**

Author: **Devi Akella**, *Albany State U.*
Author: **Niveen Eid**, *Birzeit U.*

This paper revolves around entrepreneurship and its ability to emancipate and empower women, whereby allowing them to envisage better socio-economic conditions. The theoretical framework of patriarchy is integrated to comprehend factors behind the historical subjugation and oppression of women within societies. Entrepreneurship without seeking to confront age-old traditions, values, and assumptions, in a subtle manner, enables women to become independent and self-reliant and, in the process, discover their own identity. In-depth interviews with African American and Palestinian entrepreneurs conducted in two different countries, the occupied territory of Palestine in the Middle East and the Southeast region of the USA, provide the empirically based evidence to support all the arguments raised in this paper. The insights and experiences of women entrepreneurs from these two dispersed contexts, culturally, economically, and socially diverse, are deconstructed to understand the factors influencing gendered entrepreneurs, women empowerment, and emancipation.

CMS: **How Gender Informs Support Nudges for Women STEM-Entrepreneurs by Women Business Incubation Managers**

Author: **Lorna Treanor**, *Nottingham U. Business School*
Author: **Susan Marlow**, *U. of Birmingham*

This paper critically analyses the influence of gendered ascriptions and assumptions upon support offered by women business incubation (BI) managers to women STEM entrepreneurs. We draw upon the concept of nudges to illustrate how women managers guide female clients to behave to navigate gendered challenges during the investment-readiness process. Using an interpretive ontology and social constructionist feminist epistemology we draw upon in-depth, semi-structured interviews with women BI managers and women STEM entrepreneurs. Findings illustrate the gendered BI context encourages gender-aware managers to nudge clients towards behaviours congruent with prevailing masculinised norms, navigating rather than challenging gender-bias, to secure investment.

Consumer Satisfaction & Engagement

Session Moderator: **Reza Alibakhshi**, *IE Business School*

CTO: **Trust and Risk Mediate the Relation between Platforms' Functions and Customers' Satisfaction**

Author: **Cinzia Calluso**, *Department of Business and Management, LUISS Guido Carli U.*
Author: **Antonio Daood**, *SPRU U. of Sussex UK*
Author: **Andrea De Angelis**, *Department of Business and Management, LUISS Guido Carli U.*

For platforms to ensure value generation via users' interaction, three fundamental functions must be performed: matching the right users with one another (match); attracting and retaining new users (pull); and facilitating their interactions (facilitate). Further, customers' satisfaction plays a central role in enhancing platforms' performances by stimulating positive consumers' behaviors. Literature suggests that while trust represents a significant predictor of customers' satisfaction, risk perception has a negative impact. The aim of this paper is to explore the relationship between the platform's fundamental functions – match, facilitate, pull - and customers' satisfaction, and test whether they are mediated by customers' risk perception and trust. To this aim, the paper investigates the case of Uber, by collecting and analyzing measures of risk perception, trust, customers' satisfaction, and the three fundamental functions - match, pull, facilitate - on a cohort of Uber's users. The results revealed that customers' satisfaction is positively affected by the platform's ability to match and pull users, and to facilitate their interactions; further, such relationships resulted positively mediated by trust, and negatively mediated by risk perception. These results contribute to understanding how platforms can leverage their functions to increase customers' satisfaction, with positive outcomes in terms of willingness-to-reuse and profitability.

CTO: **Does 'Emotional Variability' in Social Media Video Ads Foster User Engagement?**

Author: **Reza Alibakhshi**, *IE Business School*
Author: **Shirish C. Srivastava**, *HEC Paris*
Author: **Sunil Mithas**, *U. of South Florida*

How can firms increase the success of their social media (SM) video advertisements (video ads) in terms of higher viewership and engagement? With growing SM advertising expenditures, understanding how SM users can be motivated to watch video ads and engage with them actively will be of value to both research and practice. Given the salience of emotional cues in SM content for attracting and retaining attention of SM users, we build on the tenets of Emotion Dynamics and Capacity Theory of Attention to examine how the extent of "emotional variability" in the "initial" and "overall" phases of video ads influence the number of "views" and "likes" that videos receive. Employing novel video analysis techniques, our study leverages publicly available data of video ads curated by 71 active brands of Fortune 500 companies on Instagram. We find that the extent of emotional variability in the initial phase of the video ad fosters higher viewership. However, higher extent of emotional variability in the entire duration of the video has a negative impact on the active engagement of the SM users indicated by the number of 'likes' the video receives. The contrasting influence of emotional variability in the initial and overall phases of video ads on user engagement has important and interesting theoretical and practical implications. Through our study, we build on and complement prior literature on user engagement in SM video ads and make important theoretical contributions.

CTO: **The Speed of Software Functionality Evolution and Software Performance Evolution**

Author: **Jong Seok Lee**, *U. of Tennessee, Knoxville*
Author: **Jeffrey Kaleta**, *Appalachian State U.*

In today's business environment, customer needs change rapidly, and new technological advances appear frequently. As a result, software must evolve progressively to meet evolving requirements and deal with environmental pressures. In addition, it is important to note that software can evolve in two distinct ways. On the one hand, software can evolve to incorporate new features in response to new or changing requirements (functionality evolution). On the other hand, software can evolve to address performance issues in response to bugs found in the operating environment (performance evolution). Nonetheless, how these two distinct ways in which software can evolve influence user satisfaction is not well-understood both theoretically and empirically. In this research, we draw from regulatory focus theory, and conceptualize increasing the speed of functionality evolution as a promotion-focus strategy and increasing the speed of performance evolution as a prevention-focus strategy. We assembled a dataset containing data on 3,429 apps across 29 categories in Apple's app store. We empirically show that increasing the speed of both functionality evolution and the speed of performance evolution has an interaction effect on user satisfaction (i.e., user ratings of apps). Further, we empirically show that the relative position of a software project in the market (i.e., app ranking) moderates this interaction effect.

CTO: **The Spillover Value of Repeat Buyers: An Empirical Investigation of "Updated Reviews" on Yelp**

Author: **Gujie Li**, *U. of Maryland, College Park*
Author: **Jui Ramaprasad**, *U. of Maryland*

Repeat buyers are increasingly critical for businesses to generate profits in the long run. To cultivate and retain repeat buyers, businesses have developed a series of strategies such as loyalty programs and advertising. While previous studies focus mostly on the direct value of repeat buyers, their spillover value to businesses (i.e., how repeat buyers affect other potential consumers) is seldom investigated, mainly because repeat buyers are hardly observable by others in offline settings. Thanks to digital footprints on review platforms, this challenge can be addressed in online settings. Leveraging a unique feature on Yelp, the Updated Reviews, we design a difference-in-difference-in-difference framework to empirically study the spillover effect of repeat buyers on two aspects of online word of mouth: review volume and review valence. Our findings suggest that repeat buyers significantly attract new reviews by 5.3% in volume, but their impact on review valence is not evident. Heterogeneity analysis suggests that the leading mechanism driving the boost in review volume is that repeat buyers serve as a quality signal. Finally, we provide actionable insights for both businesses and review platforms.

Innovation Ecosystems

Session Moderator: **Sabine Brunswicker**, *Purdue U., West Lafayette*

CTO: **The Effects of Human and Machine Feedback on Productivity in Innovation Communities**

Author: **Sabine Brunswicker**, *Purdue U., West Lafayette*
Author: **Stefan Haefliger**, *Bayes Business School*
Author: **Ann Majchrzak**, *U. of Southern California*

Communities have captured the attention of strategic management given their importance as source of firm innovation. Prior literature suggests that feedback from peers in the community has a significant effect on the productivity of individuals in solving innovation problems shared within the community. In this paper we focus on a source of feedback that has been ignored in prior work: machines. Specifically, we study the effect of two types of feedback (performance and solution) offered by humans and machines on community members' productivity in solving innovation problems. Borrowing from Attentional Control Theory, we hypothesize that performance feedback from a machine and performance and solution feedback from a human have distinct individual effects and interact in affecting productivity. We examine our hypotheses using data from an Open Source software development community, in which 1,219 developers produce 36,878 solutions to successfully solve 5,108 problems. The results suggest that human and machine performance feedback act in opposing directions taken separately: negative human performance feedback increases productivity while negative performance feedback from a machine decreases productivity. Further, machine performance feedback, even if negative, tends to positively moderate the negative impact of human solution feedback in the community: hence machine feedback is productivity enhancing. Human and machine feedback interact in complex ways because the machine feedback triggers emotional states in humans that change the way community feedback is processed. We discuss implications for the strategic management of innovation communities

CTO: **Role of Contributor Diversity in New Product Development: Lessons From an Open Innovation Platform**

Author: **Lusi Yang**, *Georgia State U., J. Mack Robinson College of Business*
Author: **Zhiyi Wang**, *U. of Colorado, Boulder*
Author: **Steven Lawrence Johnson**, *U. of Virginia*

Open innovation platforms support new product development by soliciting, evaluating, and integrating voluntary contributions. Platforms decompose complex processes into discrete tasks to reduce barriers to participation and, accordingly, facilitate broad participation. Discrete tasks also enable efficient evaluation of and recognition for individual contributions. In this study, we explore the relationship of contributor diversity to individual and product-level outcomes. We focus on diversity in contributor behavior patterns based on two dimensions: task type and product domain. Analysis of 10,938 quarterly contributions by 1,684 active contributors to 424 new product development efforts on the Quirky open innovation platform provides evidence in support of our hypothesized relationships. Contributors' diverse task experiences are positively associated with their subsequent contribution performance; yet, at the platform level, having a heterogeneous group of contributors with varying degrees of task diversity is associated with better product development performance. On the contrary, contributors' diverse domain experiences are negatively associated with their contribution performance; and, at the platform level, having a homogenous group of contributors with largely similar degrees of domain diversity is associated with efficient product development. Considering both individual and product-level results demonstrates the importance of incentive (mis)alignment. Our findings further illustrate the importance of considering multiple dimensions of diversity of experience when studying new product development and other forms of online knowledge generation supported by open innovation platforms.

CTO: **The Joint Effects of Novelty and Familiarity on Creativity Adoption in Content Creation Platforms**

Author: **Yuhan Zuo**, *Central U. of Finance and Economics*
Author: **Hongling Ye**, *School of management, Zhejiang U.*
Author: **Dawei Wang**, *Northwestern Kellogg School of Management*
Author: **Junjie WEI**, *School of management, Zhejiang U.*
Author: **Xiaoyun Xie**, *Zhejiang U.*

The rapid rise of content creation platforms in the digital age has provided new incubators for mass creativity, and also fundamentally reconfigured the production and consumption of creative works. For content creators seeking personal achievements on these platforms, how to produce works that are more likely to be adopted by platform users is a key concern. Based on optimal distinctiveness theory, this study draws on unobtrusive data of 174,053 posts from 2,450 content creators in a major Chinese content creation platform to explore the joint effects of novelty and familiarity of the creative works on creativity adoption. We constructed measurements of novelty and familiarity based on hashtags of the post, and conducted polynomial analysis and response surface analysis to test our hypotheses. Our findings complement existing creativity adoption research which mainly focus on the effects of novelty, and extend the explanatory power of optimal distinctiveness theory in the new context. We also offer practical guidance for both content creators and platform governors. Limitations and future directions are discussed.

CTO: **Introducing Contests to a Social Community: The Effects of Competition on a User-Generated Content**

Author: **Jörg Claussen**, *LMU Munich & Copenhagen Business School*
Author: **Maria Anna Halbinger**, *City U. of New York, Baruch College*
Author: **Lior Zalmanson**, *Coller School of Management, Tel Aviv U.*

Maintaining active user contributions is a key challenge for user-generated platforms. We argue that contests could be a promising tool for managing the operations of user-generated content platforms because they can activate the community and steer platform participants to explore new terrains for creation, but that they could also have adverse effects on regular content creation. While contests themselves have been studied extensively, we are the first to explore the impact of launching a contest on a user-generated content (UGC) platform centered around users' community contributions. We argue that contests lead to increased community reaction as humans are drawn to contests, as contests attract competent contributors, and they incentivize increasing efforts. But we also expect a downside of community reaction as the social comparison between contributors creates negative incentives for a future content generation if they do not achieve high relative levels of community reaction. We finally expect that contests trigger more exploration by contributors and that these effects also translate into future content creation. Our empirical context is the 3D printing platform Thingiverse, for which we can compare regular platform content creation activities with 3D designs that have been submitted. Using a large sample of contest submissions, we find strong support for our hypotheses and identify mechanisms that drive the results.

Data & Organizational Management

Session Moderator: **Katharina Cepa**, *Vrije U. Amsterdam*

CTO: **Experimenting with Data: How Data Shape, Direct, and Sustain Attention Across Managerial Levels**

Author: **Katharina Cepa**, *Vrije U. Amsterdam*
Author: **Fleur Deken**, *Vrije U. Amsterdam*
Author: **Dennis Van Kampen**, *Vrije U. Amsterdam*

Digitalization creates a wealth of new datafication data, data that are created in use through digitally mediated processes that can be used to observe, analyze, and optimize this process. Scholars and practitioners are increasingly interested in how such data can be valuable to organizations. Adopting an attention-based view lens, we explore this question by asking how data shape, direct, and sustain attention in strategic decision making. Our 25-month case study of an Innovation Lab where multiple firms that span a supply chain in the heavy manufacturing industry collaborate to experiment with sensor data to innovate maintenance processes shows that data is not per-se valuable. Instead, we see that data have a strategic value in directing strategic problem solving by steering middle and operational managers' attention and by providing them with something concrete to engage over. This makes two theoretical contributions at the intersection of information systems and strategic management theory: First, this contributes to the attention-based view by showing the importance of middle and operational managers' attention dynamics for driving digital transformation in industrial organizations. Second, it explores the power of data to remake organizational processes by describing how datafication data guide strategic decision making, where data interpretation focuses attention by engaging managers in-depth with specific problems and solutions, and data observation widens the scope of managers' attention by opening up analysis for re-evaluation, or moving from one problem or solution to the next.

CTO: **The Experimenting Firm: Data-Driven Decision-Making Under Bounded Rationality**

Author: **Michael Zaggl**, *Aarhus BSS, Aarhus U.*

Modern information technology enables firms to run digital business experiments (e.g., a/b testing) to identify superior decisions regarding their digital products, such as website designs, advertisements, games, etc. Examples of such firms are Amazon, Google, Booking.com, Facebook, Netflix, and Udacity. To examine the effectiveness of digital business experiments under the conditions imposed by the interdependence of design elements and prediction errors (omission and commission errors), this study uses an NK fitness landscape model in which digital business experiments are formalized as a form of search, referred to as experimental search. The model compares single-factor and multi-factor experimental search to traditional decision-making, formalized as local search. It shows that multi-factor experimental search is highly effective under interdependence by overcoming the path dependencies that local search and single-factor experimental search are subject to. Errors of commission—but not errors of omission—are critical boundary conditions that impair multi-factor experimental search. Sequencing experimental search (i.e., using the results of experiments to inform follow-up experiments) can help reduce the negative impact of commission errors. This paper contributes to the discourse on the relationship between information systems and productivity by characterizing digital business experiments as a new way firms can act under bounded rationality. It extends the literature on the boundary conditions of business analytics methods. The paper also has implications for the current discussion on organizing data science activities in organizations.

CTO: **On the Right Track? Studying the Use of Biometric Data to Manage People in a Sports Organisation**

Author: **Lorna Anne Downie**, *Vrije U. Amsterdam*
Author: **Stella Pachidi**, *U. of Cambridge*
Author: **Marleen Huysman**, *Vrije U. Amsterdam*
Author: **Ella Hafermalz**, *Vrije U. Amsterdam*

Over the last decade we have seen a significant shift in how organisations monitor and control their workforce. People analytics is becoming ever more extensive and invasive - from cameras checking if workers are at their desk to wearables reporting on worker wellness. We know little, however, on how such technologies of control are supporting management in making well informed decisions about their workers. Drawing from insights from a 16 month ethnographic study, we address this shortcoming through exploring how biometric data is being used to manage people in an elite sports organisation. Our study sheds light on a new form of control enacted through the use of biometric data - a shared control of the body - which calls for a closer relationship between managers and workers as they together attempt to control the body as the main subject of work performance. In particular, we follow the ways in which managers and workers negotiate towards a shared control of the body. Encompassing our findings as part of a theoretical model, we highlight how our findings have implications for theory on organisation control and resistance as well as for people analytics.

CTO: **Meeting Information Needs in a Natural Hazard: Development of Crisis Information Needs and Adequacy**

Author: **Ryan Patrick Fuller**, *California State U. Sacramento*
Author: **Amy Mickel**, *California State U. Sacramento*
Author: **Laura Riolli**, *California State U. Sacramento*
Author: **Andrew Pyle**, *Clemson U.*

The frequency of natural-hazard crises is on the rise. These crises create a great deal of uncertainty, which in turn, generates stress and negatively affects individuals' psychological well-being. To mitigate these feelings and symptoms, people seek information from a wide range of sources, including non-crisis-response organizations with which they are affiliated. More specifically, individuals seek information from places where they work, volunteer, attend school, and/or worship. However, there is limited research on the information needs internal stakeholders seek from their organizations and the adequacy of the information provided. In this paper, a new reliable and valid scale, Crisis Information Needs and Adequacy for Internal Stakeholders (CINA-IS) is introduced. Three studies to develop and test this scale are described in detail. This 6-item, one-factor scale can be used to both (a) measure the construct of crisis information needs of internal stakeholders from non-crisis-response organizations and (b) assess the extent to which these types of organizations have met those needs – from the perspective of internal stakeholders. Organizations and those who study them are encouraged to use this scale to improve crisis communication planning. Adequately meeting internal stakeholders' information needs has the potential to help reduce uncertainty and negative psychological impacts on an organizations' most important asset – its people.

Team Collaboration

Session Moderator: **Ignacio Perez Sepulveda**, *U. of Sheffield Management School*

CTO: **Teams' Media Capabilities Repertoires: An Alternative Approach to the Study of Virtuality**

Author: **Ignacio Perez Sepulveda**, *U. of Sheffield Management School*
Author: **Carolyn Axtell**, *U. of Sheffield*
Author: **Jeremy F. Dawson**, *U. of Sheffield*

Previous research has shown that team members rely on multiple media to interact with each other, combing information and communication technologies (ICTs) and face-to-face interactions, which have been studied in terms of virtual teams and team virtuality. Yet, a limitation of this research is that it has assumed a dichotomous view of ICTs and face-to-face exchanges, ignoring the differences and similarities in attributes and capabilities they offer. This is of relevance because these capabilities can be instrumental in understanding how the use of different media can impact team members' interactions and the overall functioning of teams. To address this limitation, this article will present the new construct of teams' media capabilities repertoires - reflecting the examination of how team members use the media capabilities they have at their disposal to support their interactions - and its relationships with relevant team variables. This article contributes to the virtuality literature by offering researchers a more nuanced and in-depth understanding of virtuality that could help to explain some of the dissimilar results in the literature, and by giving practitioners (e.g., managers and team leaders) robust guidelines to manage the use of multiple media in their teams.

CTO: **Understanding the Affective Layer of Online Collaboration: Toward a Media Affectivity Theory**

Author: **Maylis Saigot**, *Copenhagen Business School - Department of Digitalization*
Author: **Rob Gleasure**, -
Author: **Ioanna Constantiou**, *Copenhagen Business School*

As workplaces increasingly rely on digital media to conduct business, teams are developing new habits and processes to ensure continued performance. However, the recent shift toward online and hybrid collaboration highlighted the important, yet often overlooked, implications of affective processes for online collaboration. Not only do aligned affective states across team members increase this team's ability to develop cognitive alignment, but they also create a sense of connection and belonging that is essential to effective, sustainable, and fulfilling teamwork. In this article, we conduct an extensive review of the literature on affective alignment and media capabilities. Based on this review, we propose a synthesis model of affective alignment in online collaboration that outlines the mechanisms that enable and constrain the emergence of aligned affective states between the participants of an online collaborative task. We then develop a theory of media affectivity, which posits that a digital medium's enabling and constraining capabilities to support affective processes strongly influence the emergence of affective alignment in online teams. Taken together, the model of affective alignment in online collaboration and the theory of media affectivity can be used by researchers interested in understanding the unfolding of communicative failure and community breakdown in organizations. Moreover, the new theory of media affectivity has implications for critical and related areas of research and practice, such as workers' social and mental well-being.

CTO: **Boundary Blurring and Temporary Teams' Performance: The Case of 3D Printing Technology in Surgical**

Author: **Leila Ahmadpour**, *U. of Bologna*
Author: **Alberto Leardini**, *IRCCS Istituto Ortopedico Rizzoli*
Author: **Riccardo Fini**, *U. of Bologna*
Author: **Daniele Mascia**, *Luiss U.*

We build on boundary blurring research to explore the relationship between temporary teams' characteristics and their performance. We focus on the three main drivers of boundary blurring, namely fluidity, overlap and dispersion, and we develop hypotheses on their direct effect on temporary teams' performance. Furthermore, we explore to what extent their effect is moderated by different levels of task complexity. We use data on 107 orthopaedic teams using 3D printing technology in a highly specialized research hospital in Italy. Our analysis shows that team overlap has a negative impact on team performance and the impact is stronger when the task complexity is high. Conversely, team dispersion positively impacts team performance, and the positive impact is reinforced in more complex cases.

CTO: **Do Brokers Help Innovation in Globally Distributed Teams? A Survey Study in a Multinational Company**

Author: **Elisa Mattarelli**, *San Jose State U.*
Author: **Julia Eisenberg**, *Pace U.*
Author: **Carlotta Cochis**, *Modena*
Author: **Amar Gupta**, *MIT*

Organizations have been increasingly relying on globally distributed teams for innovation, and these teams frequently experience issues related to the emergence of geographical subgroups. We propose that the presence of brokers addresses some of the challenges related to subgroups, by increasing perceptions of proximity and knowledge sharing, positively influencing team innovation, but reduces shared leadership within a team, negatively influencing innovation. Our analysis includes the evaluation of 1334 responses from employees in 111 globally distributed teams, which were independently evaluated by 97 stakeholders in a multinational company engaged with developing new IT systems for global clients. We found support for the mediating effects of knowledge sharing and perceived proximity between brokerage and team innovation. Our work has implications for the understanding of global teams functioning, team innovation, and the role of brokers in organizations.

Human - Artificial Intelligence (AI) Interaction

Session Moderator: **Jingyao Li**, *Bentley U.*

CTO: **Ethical Implications of AI Use in Practice**

Author: **Jingyao Li**, *Bentley U.*
Author: **Yulia Litvinova**, *WHU Otto Beisheim School of Management*
Author: **Marco Marabelli**, *Bentley U.*
Author: **Sue Newell**, *Warwick Business School*

In this paper, we focus on the ethical implications of long-term use of AI systems. We do so by considering the AI lifecycle, here conceptualized as design, implementation and (long-term) use in practice. We see the AI lifecycle as a nonlinear, messy unfolding of practices where AI is constantly tweaked (design, implementation) as societal consequences (use) surface. While we recognize the relevance of the design and implementation phases, we suggest that to fairly assess AI it is of paramount importance to focus on long-term use, where most (wanted or unintended) ethical issues surface. To support our claims, we present six illustrative vignettes concerning AI characteristics, and showcase how ethical issues often emerge only after these systems are designed and rolled out, i.e., placed into specific social, cultural, organizational and business settings. We conclude the paper with a discussion of the implications for organizing associated with opportunities and challenges of revising AI systems once shortcomings are spotted and addressed.

CTO: **Are Numbers or Words the Key to User Reliance on AI?**

Author: **Jörg Papenkordt**, *Paderborn U.*
Author: **Axel-Cyrille Ngonga Ngomo**, *Paderborn U.*
Author: **Kirsten Thommes**, *Chair of Organizational Behavior, U. of Paderborn*

Calls for artificial intelligence (AI) systems to become explainable have been heard increasingly in recent years. Yet, the debate about what this entails is still ongoing. Some researchers advocate that AI explanations should be as humanized as possible, e.g., using explanations by example or counterfactuals. However, these explanations are difficult to generate, may be flawed, and were found not to elevate human understanding all that much. In this paper, we take a step back and analyze how AI explanations being part of the AI contribute to human understanding. We focus on two types of explanations that can be generated by every AI: certainty measures and examples. Concretely, we use a real AI recommender system and conduct an experiment on human interaction with the system. Our findings reveal that differences in the type of explanation affect whether participants rely on the AI's recommendations. Additionally, our results indicate that numerical certainty measures reach the human decision-maker and improve decision quality for all individuals equally. However, humans face some restrictions when assessing numerical certainty measures. Verbal explanations via examples about classes, on the other hand, increase reliance by a larger extent, depending on the humans' willingness to ask for such explanations.

CTO: **Turning Off Your Better Judgment – Conformity to Algorithmic Recommendations**

Author: **Yotam Liel**, *Coller School of Management, Tel Aviv U.*
Author: **Lior Zalmanson**, *Coller School of Management, Tel Aviv U.*

In many practical settings, humans rely on artificial intelligence algorithms to facilitate decision processes: from choosing driving routes and picking leisure activities to defining investment plans and guiding judicial procedures. Given that algorithms are known to be vulnerable to systematic errors and biases, this research seeks to understand: To what degree do humans take algorithmic advice at face value, even when such advice might be expected to conflict with their better judgment? To address this question, we draw from classic studies of social conformity and explore the extent to which gig-economy workers engaged in simple and objective perceptual-judgment (image classification) tasks conform to algorithmic recommendations that are clearly erroneous. Results from three studies (n = 1,085) show that substantial percentages of workers follow erroneous algorithmic recommendations (on 8.8%–26.5% of tasks); workers who do not view such recommendations do not make similar mistakes independently (only on about 1% of tasks). Moreover, workers are more likely to conform to erroneous algorithmic recommendations than to identical recommendations generated by other humans. We further show that workers become less likely to conform to an erroneous algorithmic recommendation when it is presented alongside a second, conflicting (correct) recommendation. Finally, conformity diminishes when workers perceive the real-life impact of their decisions as high (versus low). Given our realistic setup, our findings are directly applicable to workers engaged in hybrid machine–human judgment tasks, in addition to providing broader insights into the nature of human reliance on algorithms—and the risks it might entail.

CTO: **The Social and Moral Dimensions of Algorithm Aversion**

Author: **Marialena Bevilacqua**, *PhD Student at U. of Notre Dame, Mendoza College of Business*
Author: **Tawfiq Alashoor**, *Georgia State U.*

Throughout the evolution of algorithm aversion, it is repeatedly shown that people prefer human over machine judgment, although the recent literature shows that humans also appreciate machine judgment. As algorithms are increasingly involved in moral decision making about humans, it is critical to understand how this distrust in algorithms develops. Since much of the existing literature focuses on the individualistic dimension of algorithm aversion, this study aims to determine if social influence impacts one's permissibility beliefs of algorithmic moral judgements. In measuring this impact, our experimental analysis suggests that social influence impacts human's beliefs about who, or what, are permissible in making these moral judgments. Furthermore, the impact of negative social influence and positive social influence is not symmetric. Results support findings of algorithm aversion, and additionally, that negative social influence has a greater impact than positive social influence on one's beliefs about who, or what, is permissible in making algorithmic moral judgements. The details of these conclusions, the study's limitations, and future research directions are discussed.

Experiencing Inequity and Bias

Session Moderator: **Sadia Nadeem**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*

DEI: **Colonial Mindset Discrimination: Scale Development and Impact on Employee Outcomes**

Author: **Sadia Nadeem**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*
Author: **Talha Aamir**, *FAST School of Management, FAST NUCES*
Author: **Ayesha Bano**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*

The literature on discrimination covers a variety of biological characteristics or associations with different social groups as the basis of discrimination. Bano and Nadeem (2018) added to this list by suggesting that discrimination may also exist in organizations on the basis of international experience because of colonial mindset bias. They explored and identified circumstances where those with international experience were given preference over those without such experience, when international experience may not have been a genuine occupations requirement; they attributed this to colonial mindset bias. However, there has been limited additional work to examine bias or discrimination on the basis of colonial mindset in management sciences. This paper develops a scale to measure the construct of colonial mindset discrimination (CMD) following Hinkin's (1998) guidelines to develop a psychometrically sound scale. The presented CMD scale has the three dimensions of CMD opportunities, CMD treatment and CMD HR practices. The scale will allow future scholars to measure CMD, and gain insights into how CMD, in addition to other forms of discrimination, impacts individual and organizational level outcomes.

DEI: **Heterogeneity Among Migrant Workers and Creating Inclusive Organizations**

Author: **Kamini Gupta**, *King's College London*
Author: **Hari Bapuji**, *U. of Melbourne*

Economic migration has changed the composition of organizations and societies around the world, but current research has largely treated international migrants as a monolithic group of individuals whose motivations for migration and experiences of integration are similar. In this paper, we argue that the social position of an immigrant in the host country and their immigration experience differs based on the privilege that their demographic category bestows on them (or not). We elucidate our arguments by unpacking the concept of 'privilege' to theorize two key sources of privilege – locational and historical – and explain them using the global economic divide (Global North vs. Global South) as well as local social divides (race and caste). We propose that locational and historical privilege manifest as various types of capital that immigrants carry into their host countries. We juxtapose these two sources of privilege and their levels (low vs. high) to develop a typology of immigrants – Marginalized, Peripheral, Model-Minority, and Wanted – that captures differences among immigrants and their immigration experiences. By shining a light on the systematic differences among immigrants based on privilege, our research brings nuance to the scholarship on immigrant workers and inclusive organizations.

DEI: **Gender Differences in Perception of Gender Inequity in HCM Practices**

Author: **Ankita Agarwal**, *California State U., Bakersfield*
Author: **Dynah A. Basuil**, *Asian Institute of Management*
Author: **Jennifer Grace Manegold**, *Florida Gulf Coast U.*
Author: **Wendy J. Casper**, *U. of Texas At Arlington*

Drawing from equity sensitivity theory, we used an extensive sample covering 3 countries to study the influence of gender on employees' perception of gender inequity in HCM practices. We examined the direct effect of the employees' gender and when moderated by the gender composition of the organization's management and the national culture of gender egalitarianism on the employees' perception of gender inequity. We found evidence supporting gender differences on gender inequity perceptions, albeit in unexpected directions which can provide insights on how gender inequity perceptions between female and male employees may be shaped by factors within the environment.

DEI: **Guilty Until Proven Otherwise: High Status and the Burden of Proof Under Socialism**

Author: **Rajiv Krishnan Kozhikode**, *Simon Fraser U.*
Author: **Rekha Krishnan**, *Simon Fraser U.*

In this paper, we challenge the universality of a central assumption in extant status theory that high-status actors are beneficiaries of biased evaluations of their audience. While this assumption is consistent with the principles of free-market capitalism, where societal institutions encourage and reward individual economic and social aspirations and wealth accumulation, it is inconsistent with the principles of socialism that view high-status actors as the source of inequality and seek to remedy it by redistributing the excess wealth of high-status actors to low-status actors. So, we contend that in socialist settings, high-status firms invoke a negative stereotype in the eyes of their adjudicators who evaluate their integrity. They may use a firm's high status as a heuristic of bad behavior and rule against it. This negative stereotype held against high-status firms in socialist settings may be more decisive when a left-wing government is in power, but a high-status firm may demystify the stereotype when its visible actions run contrary to the stereotype. We find support for our theory in our analysis of the verdicts on lawsuits between commercial banks in India and their defaulting borrowers in the High Court of Kerala, an Indian state reputed for its deep-rooted socialist leaning.

Diversity Training and Bias

Session Moderator: **Joseph Vitriol**, *College of Business Lehigh U.*

DEI: **Backlash Against Bias Education: Strategies for Increasing Awareness**

Author: **Joseph Vitriol**, *College of Business Lehigh U.*

Anti-bias interventions and theories of prejudice-regulation share the assumption that increasing awareness of psychological sources of bias is necessary to reduce its negative impact on discriminatory judgments and behavior. For this reason, policy makers, industry leaders, and organizations invest substantial resources to educate people on the science of implicit bias and its consequences. However, people are often distressed by information that challenges their self-image, and so many respond defensively to evidence of implicit bias. Across 5 independent samples and 3 experimental paradigms (N > 3500), we test the effectiveness of a novel strategy for reducing defensive responding to implicit bias feedback and, as a result, increasing bias awareness, by leveraging motivations for cognitive consistency. We find that by asking people to evaluate the validity of a measure of implicit attitudes before receiving unflattering feedback, they may be less defensive and more willing to regard that feedback, once provided, as credible. These pre-feedback commitments impose rational constraints and powerful psychological motivations that hinders the ability to ignore or dismiss evidence of bias. By promoting more favorable test attitudes and acceptance of test results in a socially sensitive domain, the intervention increased bias awareness and support for diversity and for actions to combat bias. Thus, learning that one may harbor bias towards members of disadvantaged groups is a necessary (but insufficient) step towards prejudice- regulation; strategies that can help manage the extent to which learning about bias is aversive and stigmatizing will likely bear fruit for bias education and diversity science.

DEI: **Evidence from an Experience Sampling Study About a Mindfulness Intervention Against Gender Bias**

Author: **Nadja Mirjam Born**, *Harvard Kennedy School; Technical U. Munich*
Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*

Gender bias is still a serious issue for organizations and their employees, harming women’s wellbeing and equal rights and costing organizations billions of dollars, e.g., due to turnover. Many of the current diversity interventions fall short in effectively addressing gender bias at the workplace because of only affecting bias for a short time or effects being influenced by social desirability. We address this important research need by conducting a pre-registered experience sampling study in which a representative sample of 410 German-speaking working individuals either engages in a daily, digital mindfulness exercise or in no treatment. Our findings indicate that a short mindfulness intervention can effectively decrease gender bias and that this effect was mediated by a decrease of negative emotions. Thus, the bias-reducing effect of mindfulness has the potential to improve the work lives of those who practice it, as well as the targets of gender bias.

DEI: **When Does Diversity Training Produce Unintended Outcomes in Organizations?: A Systematic Review**

Author: **Guler Kizilenis Ulusman**, *York U., Canada*
Author: **Ayesha Tabassum**, *York U., Canada*
Author: **Duygu Biricik Gulseren**, *York U., Canada*
Author: **Zhanna Lyubykh**, *Beedie School of Business Simon Fraser U.*

While diversity training has become a popular tool for organizations with goals of increasing performance through diversity and inclusion, these training programs are often criticized for not always working as anticipated. Scholars argue that research on unintended outcomes (non-significant or negative outcomes) is fragmented, and they do not adequately identify when and how diversity training works as intended. This article clarifies the confusion regarding the effectiveness of diversity training by utilizing a systematic literature review to identify the unintended outcomes of diversity training and explore the boundary conditions for these unintended outcomes. By doing so, the article advances our understanding of diversity training outcomes beyond the intended outcomes. This systematic review synthesizes 23 articles and reveals the unintended outcomes due to no change in participants' attitudes, knowledge and behaviors or negative effects on individuals or organizations. The review also uncovers two broad categories of the potential moderators that explain when diversity training produces these unintended outcomes: (a) training design and (b) the organizational context. We suggest that future research can examine the long-term outcomes of diversity training research.

DEI: **Micro-Affiliation Theory**

Author: **Xian Zhao**, *Northwestern Kellogg School of Management*
Author: **Soo Min Toh**, *U. of Toronto*
Author: **Geoffrey Leonardelli**, *U. of Toronto*

The existing research on building workplace inclusion has been mostly focused on eliminating biases and micro-aggressions that reduce it. This approach is important, but far from enough. We propose a micro-affiliation theory, where small gestures can promote inclusion. The theory further identifies two dimensions – group-directed/individual-directed, appreciating difference/recognizing similarity and four kinds of micro-affiliation – micro-celebration, micro-normalization, micro-socializing, and micro-affirmation. We explain why intervention that is designed based on micro-affiliation is a more effective approach than others and propose some conditions under which each kind of micro-affiliation can best exert its positive influence. The remainder of the paper focuses on the implications of micro-affiliation, including its potential of changing workplace acculturation, and impressions of actors and recipients. Micro-affiliation also has the capacity to increase employee retention, maintain and strengthen diversity among emerging leaders, promote organizational citizenship behaviours in the workplace, and create better work-family balance. Our approach complements those focused on eliminating biases and micro-aggressions – behaviors arguably that reduce inclusion – by focusing on those that increase it. This model points to new directions on where the literature on inclusiveness – arguably one of the most defining topics of the social sciences – can go for improving organizational and societal diversity and effectiveness.

Leadership, Behavior, and Diversity

Session Moderator: **Lale Guler**, *Imperial College London*

DEI: **Gender-Based Experiential Risk Aversion Driving Women Appointed CEO Strategic Risk-Taking**

Author: **Lale Guler**, *Imperial College London*
Author: **Miranda Welbourne Eleazar**, *U. of Iowa*

Women, including women CEOs, are often considered to be uniformly more risk averse than men. The upper echelon research has found support for this ubiquitous assumption, although recent literature has begun to find that women, compared to men, may take more risk in leading firms. We argue that these findings may be affected by the fact that women are not all the same; they have historically faced glass-ceiling challenges in reaching the upper echelon, and once they do, they may be confronted with different types of challenges than men. We take a nuanced approach and consider how individual and situational factors affect women CEOs' strategic risk-taking. In doing so, we aim to develop the concept of gender-based experiential risk aversion. We test our hypotheses using a sample of 802 CEO appointments to the S&P 1500 and a proprietary dataset that includes the pre-appointment career trajectories of CEOs. Our results challenge universal assumptions of women CEOs' risk aversion by indicating that female CEOs are more likely to choose risky strategies when they are younger, have less years of executive experience, and are appointed to less stable firms. Our findings contribute to the literature on upper echelons, strategic risk-taking and experiential learning.

DEI: **Silence is Not Always Golden: Impact of Leader Intervention Against COVID-19 Microaggressions**

Author: **Jennifer Kim**, *Tufts School of Medicine, Center for the Study of Drug Development*
Author: **Regina Kim**, *Fairfield U.*
Author: **Caryn J. Block**, *Teachers College, Columbia U.*

The racialization of COVID-19 as an Asian virus has been linked to growing reports of racial harassment and violence targeting Asian Americans. We examine one such manifestation of racial harassment against Asians in the form of COVID-19 related microaggressions, such as having a coworker refer to the virus as the "Chinese virus." Bringing together the microaggression and inclusive leadership literature, we examine the negative impact of such racial microaggressions on the employee experience and highlight the positive impact of leaders who condemn these microaggressions and the negative impact of leaders who stay silent. We found that Asian Americans are more likely to ruminate and report more negative perceptions of the aggressor compared to Whites. We also found that leader intervention improved perceptions of leader effectiveness, especially among Asian Americans. Additionally, we found that leader intervention decreased turnover intentions.

DEI: **Discrimination in Fortune 500 Companies: How Women of Color in Leadership Positions Cope**

Author: **Ayesha Sengupta**, *Postdoctoral Research Associate at U. of Illinois, Urbana-Champaign*
Author: **Debra Louis**, *Maharishi International U.*

This paper investigates the meaning and understanding of spirituality and empowerment from the perspective of women of color in Fortune 500 companies and the impact on their leadership. By taking a hermeneutic approach, detailed data was collected documenting their experience as lived in the context of their daily work environments. Eight women of color in leadership positions were interviewed and transcripts were analyzed using thematic analysis. Their narratives provide insight into their experiences of discrimination and bias and the stress and disenfranchisement that results. Analysis shows how these women draw on spirituality to cope and suggest a strong connection between spirituality and empowerment that is carried forward to their leadership styles. Their commentary is interpreted in the light of current research and adds insight to that literature by providing a rich context. Implications for organizations and recommendations for creating more compassionate and inclusive environments that draw on principles of empowerment and spiritual leadership are provided.

DEI: **Stereotype Threat Explicitness, Ethnic Minority Status, and Women's Leadership Outcomes**

Author: **Stacy Boyer**, *Moravian U.*

Stereotype threat describes the concern that one might be judged or treated in accordance with a negative ingroup stereotype or confirm such a stereotype in a valued domain. Contending with threat is an effortful process that can have debilitating effects on cognition and behavior, resulting in withdrawal from the domain. This process of disidentification reduces diversity in important domains such as leadership, further perpetuating these stereotypes. However, there is some indication that stereotype threat can also have a performance-enhancing effect. I integrate stereotype threat theory (Steele, 1997; Steele & Aronson, 1995) with reactance theory (Brehm, 1966; Brehm & Brehm, 1981) and develop a theoretical framework for understanding how stereotype threat explicitness influences women's directive leadership behavior through the arousal of reactance responses, which has an indirect effect on team potency. I conducted a between-group experiment (n = 78 female-led teams) utilizing a team simulation in an undergraduate business course. Consistent with my framework, stereotype threat explicitness was associated with affective changes that align with reactance. My findings provide support for the indirect effect of stereotype threat explicitness on team potency via directive leadership, although this effect was conditional on leader ethnicity. This study underscores the importance of examining stereotype threat explicitness in contexts where reactance can arise and calls for further research on the intersection of identities in the leadership domain.

Research presented in this symposium focuses on the experiences of employees at the intersection of their work and non-work identities. Every employee has a different experience in life, and it is inevitable that their personal life will impact their work and subsequent performance. Employees who are new parents, who are parents to school age children, or who have experienced divorce have life events that vary uniquely from one person to another but has an equally significant impact on who they are as employees.

Overcoming Defensiveness in Response to DEI-Related Challenging Feedback

Organizer: **Anusuya Banerjee**, *U. of Washington*
Panelist: **Ethan Burris**, *U. of Texas at Austin*
Panelist: **Anyi Ma**, *U. of Wisconsin-Madison*
Panelist: **Ting Zhang**, *Harvard Business School*
Panelist: **Taylor Philips**, *nyu*
Panelist: **Sora Jun**, *Rice U.*

Management research often emphasizes the importance of how people speak up (e.g., in terms of content and delivery) to help ensure that information or perspectives being offered are received well by others. However, less attention has been paid to the importance of recipient preparedness for receiving challenging feedback, and how organizations can equip leadersmanagers to better receive such input. This may be especially important to consider within the context of diversity, equity and inclusion (DEI). Members of non-dominant social groups (whether along the lines of race, ethnicity, gender, sexuality, class or otherwise) may have better insight into ways that existing organizational practices, structures and systems detract from equity and inclusion goals because of their own experiences and the experiences of their communities. However, they are often put in the position where sharing this insight requires speaking to dominant group members in higher positions who may see such feedback as a threat on multiple levels (e.g., moral identity, managerial competence, expert identity). This may be true even if the feedback recipient holds positive diversity beliefs and egalitarian ideals. Defensiveness of gatekeepers in response to such feedback can impede organizational efforts to achieve equity and inclusion. And, putting the onus on employees from non-dominant groups to manage how their feedback is received,when they may be suffering or exhausted from going unheard in the past, is problematic. In this panel symposia, scholars who investigate responses to voice/feedback and the psychology of dominant groups, will come together to discuss: a) why research on recipient-driven psychological barriers to benefiting from challenging feedback is important for achieving organizational equity & inclusion goals, b) how we can build upon existing work across management sub-fields to investigate the factors that influence how dominant group members respond to challenging DEI-related feedback, and c) how these insights can inform evidenced-based approaches for organizations to prepare leaders from dominant groups to better receive such feedback.

Well-being and Entrepreneurship

Session Moderator: **Bach Nguyen**, *U. of Exeter Business School*

ENT: **Eudaimonic Well-being and Entrepreneurs' Pivots During a Resource Shock**

Author: **Bach Nguyen**, *U. of Exeter Business School*
Author: **Hai-Anh Tran**, *Alliance Manchester Business School, U. of Manchester*

This study examines the effect of entrepreneurs' eudaimonic well-being (EWB) on their pivot decisions during a resource shock (i.e., Covid-19). Drawing on the conservation of resource theory and using a multi-method approach (i.e., a panel dataset and a retrospective survey with textual analysis) this research demonstrates that EWB during a resource shock exerts an inverted U-shaped effect on the likelihood of entrepreneurs conducting pivots. Moreover, external resources obtained from family support and bank loans reduce the negative effect of an exceedingly high level of EWB on pivot. This research highlights the importance of understanding the role of EWB in driving entrepreneurs' pivot decisions during a resource shock and how external resources could influence the effect of EWB on pivots.

ENT: **A Value Perspective on Entrepreneurs' Well-Being.**

Author: **Pierre-Jean Hanard**, *King's College London*
Author: **Ute Stephan**, *King's College London*
Author: **Uta K. Bindl**, *King's College London*

Drawing on Shalom Schwartz' theories of personal and cultural values, we introduce a value perspective on entrepreneurs' wellbeing that considers personal-cultural value congruence. We ask whether the personal values typically associated with entrepreneurship (openness-to-change, self-enhancement) may benefit entrepreneurs' wellbeing (life satisfaction), and whether the strength of these value-wellbeing relationships is contingent on the prevailing cultural values in the region where entrepreneurs are located. In multilevel analyses of a sample of 2,364 entrepreneurs based in 139 European regions, we find that entrepreneurs' openness-to-change values are positively, and their self-enhancement values negatively, related to their life satisfaction. The strength of these associations is moderated by regional cultural values.

ENT: **(Don't) Light My Fire—A Dual-Pathway Model of Entrepreneurs' Stress Mindset, Passion, and Well-Being**

Author: **Anika Thurow**, *U. of Bremen*
Author: **Julia Kensbock**, *U. of Bremen, Germany*

In light of the stressful working conditions that entrepreneurs face, their beliefs about the nature of stress (i.e., their stress mindset) can have considerable influence on their well-being. In contrast to employees, who benefit from a positive stress mindset (i.e., believing in the positive outcomes of stress), we propose that the relationship between stress mindset and well-being is more complex in entrepreneurs. In this research, we address whether and how a positive stress mindset can help or harm entrepreneurs' well-being. Theoretically grounded in self-determination theory and the dualistic model of passion, we examine a dual-pathway model in which the relationship between stress mindset and well-being (vigor and emotional exhaustion) in entrepreneurs is mediated by two forms of passion: an adaptive form (harmonious passion) and a maladaptive form (obsessive passion). We conducted a time-lagged and an experimental study with more than 300 entrepreneurs in total. The combined results support the dual-pathway model and indicate that the effects of a positive stress mindset on well-being in entrepreneurs can be positive (via harmonious passion) or negative (via obsessive passion). The beliefs that entrepreneurs hold about stress carry important implications for how they deal with their passion and well-being.

ENT: **Well-Being and Entrepreneurship: Empirical Evidence of the Relationship and Its Mechanisms**

Author: **Vu Chu Tuan**, *PhD candidate*
Author: **Hien Tran**, *Telfer School of Management, U. of Ottawa*

Research on the antecedents of entrepreneurial activity is largely dominated by economic and institutional factors. This paper offers new insights into the psychological determinants of entrepreneurship and their interaction with the embedded institutional and societal context. Building on a high-quality, harmonised cross-country micro-aggregated panel database from different sources, our multilevel model shows that individual mental health and wellbeing significantly affect his or her decision to enter an entrepreneurial career path. While a high level of subjective (hedonic) well-being is associated with lower prospect of being an entrepreneur, a comparable level of psychological (eudaimonic) wellbeing stimulates the choice for an entrepreneurship career. This relationship is moderated by the quality of the types of institutional settings: the positive effect of eudaimonic wellbeing on entrepreneurial engagement is strengthened by both high-quality formal and informal institutions, whereas the negative impact of subjective wellbeing is mitigated by formal institutions but exacerbated by informal institutions. Finally, societal wellbeing mediates the relationship between eudaimonic wellbeing and entrepreneurship but has no association with hedonic wellbeing.

Theoretical Perspectives: Opportunity Recognition and Evaluation

Session Moderator: **Jue Wang**, *Penn State U.*

ENT: **Policy Learning in Nascent Industries' Venue Shifting: A Study of the U.S. Small Unmanned Aircraft S**

Author: **Jue Wang**, *Penn State U.*
Author: **Lori Qingyuan Yue**, *Columbia Business School*

Industry groups can engage in a venue shifting strategy through targeting one political venue to veto or change restrictive regulations enacted by another. A critical step in adopting this strategy is how industry groups resolve uncertainties surrounding the preference of the targeted venue and the nature of the policy issues. While existent studies emphasize a long-term trial-and-error process of "policy learning", we focus on nascent industries and argue that other information sources can help resolve these uncertainties without invoking a lengthy process. Nascent industry groups are likely to perceive that the targeted venue will support their policy proposal if it is ideologically distant from the venue that has enacted restrictive regulations, if it has recently supported other nascent industries' similar policy proposals, and if they are more exposed to industry peers' success in adopting the same venue shifting strategy in other jurisdictions. Under these conditions, they invest more to influence the targeted venue in response to restrictive regulations. We find support for our theory by examining how the Small Unmanned Aircraft Systems (UAS) Industry trade associations lobby state governments to nullify local regulations in the United States from 2013 to 2019.

ENT: **Unleashing B2B Data Sharing: How Types of Opportunism Relate to Managers' Willingness to Share Data**

Author: **Nicolas Oliver Gilgen**, *U. of St.Gallen Institute of Management in Asia*
Author: **Matthias Alfred Tietz**, *U. of St.Gallen - Singapore/Switzerland*

Business-to-business (B2B) data sharing promises to add significant value by unleashing innovation potential in organizations. But companies are reluctant to share data. They have security and privacy concerns, fearing opportunistic behavior against them, thus limiting the innovation that could ensue with data sharing. This paper addresses this challenge and investigates how different types of opportunism influence senior managers' willingness to engage in B2B data sharing. Analyzing 484 data-sharing decisions from 121 Thai managers across varied scenarios reveals that endogenous opportunism promotes data sharing, whereas active opportunistic behavior deters it. Furthermore, the impact of active opportunistic behavior is stronger than that of endogenous opportunism. Interestingly, endogenous opportunism mitigates the negative effects of active opportunistic behavior, demonstrating their intricate interplay. We derive implications from these results.

ENT: **Location Choice of Academic Entrepreneurs: The Case of Spinoffs from Public Research Organizations**

Author: **Nina Bachmann**, *Fraunhofer Institute for Industrial Engineering IAO*
Author: **Katharina Hoelzle**, *U. of Stuttgart*

Public research organizations (PROs) have the potential to significantly influence innovation and entrepreneurship in a region through technology transfer, fostering a culture of innovation, and supporting local entrepreneurs. One way that PROs can do this is by encouraging their researchers to start their own ventures, known as academic spin-offs. Keeping these academic entrepreneurs in the location where they have conducted their research before can have positive impacts, i.e., increasing knowledge and innovativeness in a region. In this study, we use the knowledge spillover theory of entrepreneurship to better understand the location choices of academic entrepreneurs and put a special emphasis on understanding how the digital transformation and its impact on knowledge creation, sharing, and utilization may have an impact on location. We conduct an ordered logistic regression using variables from the individual, organizational, and regional level to examine those factors that may influence the firm location choice for 567 spin-offs started by 1157 academic entrepreneurs from 142 public research institutes. In our empirical analysis, we find that some typical measures for the entrepreneurial attractiveness of a region do not apply to academic entrepreneurs from PROs, such as physical proximity to venture capitalists. Much rather, the breadth of professional networks and the geographical reach of the parent research institute play a significant role in location choices of academic entrepreneurs. In an increasingly digitalized world, academic entrepreneurs' location choices are fundamentally changing. Our results have implications for research policy and future academic entrepreneurs.

ENT: **Insiders, Outsider, Evaluators: Differing Relationships Between Perspective Taking and Opportunities**

Author: **Shelby Meek**, *Kennesaw State U.*
Author: **Matthias Alfred Tietz**, *U. of St.Gallen - Singapore/Switzerland*

This paper examines the differing effects of perspective taking on entrepreneurial opportunity identification and evaluation. Proposing creative opportunities requires both novelty and usefulness and we find that individuals differ in contributing as well as appreciating one or the other. Data from three different experiments suggest that perspective taking among organizational insiders is beneficial for identifying useful opportunities, while organizational outsiders use their perspective taking abilities to identify novel opportunities. Opportunity evaluators high in perspective taking, similar to insiders, are better at understanding the usefulness of opportunities.

Scaling Entrepreneurial Ventures

Session Moderator: **Nora Zybura**, *U. of Mannheim*

ENT: **The Scaling Process: How Do High-tech Start-ups Transform during Scaling?**

Author: **Claire Mula**, *Made for Scale*
Author: **Nora Zybura**, *U. of Mannheim*
Author: **Thomas Hipp**, *U. of Mannheim*

While many firms are started each year, those that scale-up are exceptionally rare. Scale-ups are different from start-ups and other firms, not only by virtue of how rapidly they grow, but how efficiently. Increasing attention has been given in entrepreneurship literature to scale-ups but a comprehensive framework of the scaling process is lacking. Empirical research on firm growth generally has been criticized for failing to consistently explain differences in growth between firms and overly focusing on determinants, rather than 'how' firms grow. This research aims to further our understanding of scale-ups and their growth process by examining how high-tech start-ups transform during scaling. We examine the internal workings of the firm and the transformation taking place therein distinct from the firms' start-up phase. Through qualitative in-depth interviews and inductive analysis, we gain rare insights from founders regarding their scaling process. We find scaling in high-tech firms is a complex mix of related internal activities, priorities, and trade-offs summarized in a scaling process framework. Three firm-level priorities and goals and four related trade-offs relevant to the scaling process emerge from our analysis. While a fourth priority relevant to the founders' transformation to CEO also emerges. We conclude that although their growth patterns may be heterogeneous, high-tech scale-ups have commonality in their scaling process. The study furthers understanding of the firm growth process and nascent literature specific to scaling, contributing a scaling process framework. It delivers practical value to founders who must successfully navigate new priorities during early scaling, despite being faced with seemingly insurmountable odds.

ENT: **Organizing in Entrepreneuring: Developing Interpretive Capacity in Entrepreneurial Scaling**

Author: **Silvia Sanasi**, *Free U. of Bozen-Bolzano*

Once new ventures reach product-market fit and consolidate their business model, they proceed to "scale up". Yet, a new venture's failure to scale often translates into failure to survive altogether. New venture scaling entails increasing complexity in the venture's organization, as it implies a process of organization creation. However, previous studies focused exclusively on the organizational challenges faced by early-stage ventures. This study bridges this gap with the objective of investigating how scaling—i.e., the process of organization-creation from new venture to full-rounded organization—occurs, considering the increasing complexity it entails. The study employs a comparative multiple-case study research design to examine how three fintech ventures engaged in the organization-creation process as they underwent scaling. The findings disclose that the organization-creation process in new ventures is centered upon the development of the venture's interpretive capacity, represented by the process of detecting and gathering information from outside the venture, and translating it by capitalizing on the venture's existing knowledge base. This study holds multiple contributions for the ongoing theoretical debate, responding to recent calls for developing surrounding organization creation in entrepreneurial scaling and extending extant scholarship in organizational learning. The study also offers actionable insights for practitioners on how to govern the process of organization creation within a scaling entrepreneurial venture.

ENT: **Entrepreneurial Ecosystems for Scaling Businesses: Understanding Scaling Ecosystems**

Author: **Vanessa Bretas**, *Dublin City U.*
Author: **Esther Tippmann**, *U. of Galway*
Author: **Jonathan Levie**, *U. of Galway*

Entrepreneurial ecosystems (EE) are an important enabler for venture success. However, focused mainly on the productive entrepreneurship of start-ups, it has been under-explored how ecosystems support scaling organizations. Our goal is to understand ecosystems for scaling organizations and how they operate to help them in accessing required scaling expertise and support. A single-case study of an ecosystem was conducted with key stakeholders involved in supporting scaling activities of indigenous and foreign-owned organizations in Ireland. We identify the scaling ecosystem (SE) as distinct from EEs for start-ups and reveal the specific components, mechanisms and role of stakeholder agency in the dynamics of a SE. Further, our findings show that scale-ups can access specific supports by being part of an internationalized, loosely coupled SE that is distinctly different to EEs. This study contributes by elaborating the concept of SE as a unique ecosystem and by advancing insights on the impact of digitization on ecosystems supporting entrepreneurship.

ENT: **Scaling Microfinance: Local Resources as a Pathway to Growth**

Author: **Andrew Spicer**, *U. of South Carolina*
Author: **Joshua Ault**, *Thunderbird School of Global Management at ASU*
Author: **Chanyong Yoo**, *U. of South Carolina*
Author: **Asif Dowla**, *St. Mary's College of Maryland*

While previous studies have demonstrated that entrepreneurial firms that mobilize locally oriented resources improve their ability to scale deeply by adding a greater range of services for low-income customers in a single community, they also propose that a local resource mobilization strategy is likely to limit a firms' long-term ability to scale broadly across multiple locales. In contrast, we propose that pathways to growth at Grameen Bank represent a case where an entrepreneurial firm scaled both deeply and broadly to serve the poor, funded primarily through local resources. Through an in-depth, longitudinal analysis, we examine how Grameen's unexpected success in scaling its microsavings business as an independent marketplace in its own right acted over time as a source of local capital to scale its branch network and microcredit activities across Bangladesh. Based on the Grameen case experience, we propose that scaling deeply through offering new types of services may create entrepreneurial opportunities that create new value for the poor and allow the firm to capture local resources capable of expanding growth and expansion over time.

International Entrepreneurial Ventures

Session Moderator: **William Chongyang Zhou**, *UMass Lowell*

ENT: **Scaling Up Business Models Across Foreign Markets**

Author: **William Chongyang Zhou**, *UMass Lowell*

What is the role of business models in new ventures' international expansion? Drawing upon up the international entrepreneurship literature and the activity-system perspective of business model, we theorize that business model scalability is a key driver of foreign market entry. It is easier for new ventures with more scalable business models to be replicated and reconfigured across national borders, because the core activities of more scalable business models do not need changes; only the peripheral activities need to be adjusted. In comparison, both the core and peripheral activities of less scalable business models need to be modified. Using disruptive business model as a representative business model of high scalability, we further explore the boundary conditions and find that information infrastructure of the host country and venture capital support strengthen the relationship between business model scalability and foreign market entry likelihood, while venture age weakens it.

ENT: **Risk Evolvability and International Entrepreneurship: A Generalized Darwinian Evolutionary Approach**

Author: **Iman Rakhshani**, *Semnan U.*
Author: **Salman Kimiagari**, *Thompson Rivers U.*

We provide a conceptual model to understand what key abilities bear on the risk system and how to develop a diagrammatic risk evolvability model to theoretically explore how key abilities and risk dynamics can be seen within the Darwinian evolutionary mechanism on a population scale. We link the key abilities (Adaptability, Credibility, Predictability, and Interactive) to the nature of risk. We found the analysis level of prior studies concerning risk and IE literature bound to individual/firm. A population-level analysis (population ecology) is a gap. So, we take the risk notion into the generalized Darwinian evolutionary approach of variation, selection, and retention (VSR). Collective adaptability, trustworthiness, legitimacy trade-offs, the pace of trends, rate of repeatable patterns, and competence mutation are highlighted as the main findings explained in detail in the paper. Finally, we discuss the implications of models and outline the future research agenda on using the generalized Darwinian evolutionary approach in risk and international entrepreneurship studies.

ENT: **International Entrepreneurship and Performance: A Meta-Analytic Investigation**

Author: **Dibyendu Sharma**, *Indian Institute of Management, Ahmedabad*
Author: **Saneesh Edacherian**, *Birmingham Business School, U. of Birmingham*
Author: **Amit Karna**, *Indian Institute of Management, Ahmedabad*

We conduct a meta-analysis using 292 independent samples having 598525 firm year observations to explore the moderating effect of foreign market knowledge (FMK) and home country institutions (HCI) on the equivocal empirical evidence on the relationship between entrepreneurial internationalization and firm performance. The results of our study reveal that FMK positively moderates the relationships between the degree, scope, and speed of internationalization and performance. We find that the level of development of HCI positively moderates the relationship between the scope of internationalization and performance. Based on the results, we systematically identify future research opportunities and discuss implications for IE scholars.

ENT: **An Open Innovation Perspective on International Entrepreneurship**

Author: **Amon Simba**, *Nottingham Business School, Nottingham Trent U.*
Author: **Mahdi Tajeddin**, *Sobey School of Business, Saint Mary's U.*
Author: **Mehdi Farashahi**, *Concordia U.*
Author: **Leo Dana**, *Rowe School of Business, Dalhousie U.*
Author: **Amir Hossein Maleki**, *Northeastern Illinois U.*

It is crucial for overseas businesses to select a proper entry mode. However, international business research remains underdeveloped when it comes to understanding open innovation's (OI) role, purpose, and value for high-tech SMEs involved in overseas business. Our bibliometric mapping of 2501 articles related to international business, international entrepreneurship, and international management reveals that existing research does not readily connect OI and SME internationalization. Hence, this study provides novel propositions and introduces a mid–range OI theory to advance OI as a conduit for high–tech SMEs' internationalization and thus setting an agenda for internationalization research. Novel OI perspectives on high–tech SMEs' internationalization hold theoretical and practical implications for academics, international business managers, and practitioners.

Family Firm and Social Responsibility

Session Moderator: **Aeson Luiz Dela Cruz**, *Macquarie U.*

ENT: **Socioemotional Wealth and Unethical Pro-Organizational Behavior: Test of a Trickle-Down Model**

Author: **Aeson Luiz Dela Cruz**, *Macquarie U.*
Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*
Author: **Laramie Tolentino**, *Macquarie U.*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*
Author: **Robert Lu Tang**, *De La Salle-College of Saint Benilde*

The study extends the family business and ethics literatures by deconstructing socioemotional wealth (SEW) into its restricted (SEWr) and extended (SEWe) forms while unpacking the mechanisms through which these forms trickle-down to influence group-level unethical pro-organizational behavior (UPB) in family firms. Specifically, we hypothesize that compared to SEWe, SEWr promotes a sense of psychological entitlement among family business leaders, driving them to commit to unethical pro-organizational behavior (UPB). Drawing on social learning theory, we further predict that family firm leaders' engagement in UPB increases the likelihood that their subordinates will also engage in UPB via vicarious learning. The proposed model was tested using multi-source data from 146 family leaders and 435 subordinates. Our results show that SEWr indirectly enhances group-level UPB via increasing psychological entitlement and leader UPB. No trickle-down effects were found for SEWe. Theoretical and practice implications are discussed in the concluding section.

ENT: **We Need to Talk. How Family Firms Develop Sustainability Strategies.**

Author: **Andrea Gerlitz**, *U. Witten/Herdecke*
Author: **Maike Gerken**, *U. of Witten/Herdecke*
Author: **Marcel Huelsbeck**, *Hochschule München*

Family firms are the predominant organizational form in the world. A growing body of research has explored how family firms integrate family and business logics in their strategic decision-making. However, literature has yet not understood how and why family businesses develop environmental sustainability strategies. Specifically, we ask in our paper what roles family and management play in this strategy formation process. To address this question, we conducted original research, employing a qualitative multi-case study of eight large family firms. We conducted 29 in-depth interviews with members of the owning family and their C-level management. Additional focus groups ensured trustworthiness of our results. Our findings indicate that business logic dominates the environmental sustainability strategy process, while family logic adds the unique flavor of each company at various stages of the strategic development process. We synthesize our findings in a comprehensive model. Our research inspires practitioners to better manage the strategic process and provides insights and implications for research. Our paper contributes to the literature on family business, socio-emotional wealth, environmental strategy, dominant logic, and strategy formation process.

ENT: **Seeing Eye to Eye? Socioemotional Wealth Congruence and Prosocial Behavior in Family Firms**

Author: **James Vardaman**, *U. of Memphis*
Author: **Benjamin David McLarty**, *Mississippi State U.*
Author: **Min Z. Carter**, *Southern Illinois U. Carbondale*

Family firms differ from other types of business structures due to a focus on the noneconomic benefits derived from the business, also known as socioemotional wealth (SEW). The focus on these benefits makes extra-role behaviors such as proactivity and organizational citizenship vital for family firms. This study explores the counterintuitive notion that incongruence in the importance family owner-supervisors and their employees place on SEW drives extra-role behavior. Results from our complacency theory-based model support this hypothesis and suggest that congruence between family owner-supervisors and their employees in the importance they place on SEW stifles extra role behavior, while incongruence counterintuitively supports them. Results further show that leader-member exchange (LMX) moderates the relationship, such that the negative effects of congruence on prosocial behaviors are alleviated by higher levels of LMX, demonstrating that high-quality LMX offsets the negative effects of congruence.

ENT: **Imprinted Socioemotional Wealth and Community Commitment**

Author: **Joaquin Cestino**, *Jonkoping International Business School*
Author: **Rachel Matthews**, *Coventry U.*
Author: **Luis R. Gomez-Mejia**, *Arizona State U.*

We qualitatively study how socioemotional wealth shapes decisions about socially oriented behavior in firms. We inductively compare how four local newspapers in the United Kingdom made decisions about serving the good of their communities. We show how family newspapers are less likely to engage in symbolic announcements decoupled from substantive actions, even if that requires bearing greater financial performance hazard. Moreover, we introduce the concept of imprinted socioemotional wealth by showing that socioemotional wealth in family firms is not restricted to family owners, but that it becomes pervasive throughout the organization, and can be experienced and preserved by non-family employees.

ENT: **Competitive Dynamics in Family Firms: Transactional Versus Communal**

Author: **Isabelle Le Breton-Miller**, *HEC Montreal*
Author: **Danny Miller**, *HEC Montreal*

Scholars of competitive dynamics have emphasized economic and psychological drivers of rivalry. But in overlooking owner objectives, most have neglected important socioemotional priorities that can shape competitive conduct. Using the example of family firms, a dominant form of enterprise globally, we explore these influences. Drawing on the socioemotional wealth perspective we argue that family firms whose owners prioritize long term generational involvement as a source of socioemotional wealth will favor stakeholder-friendly, socially inclusive communal competition. By contrast, owners favoring current economic benefits for today's family members will favor more short-term, family oriented transactional competition. We develop propositions differentiating these competitive models in core characteristics, competitive interactions, and repertoires, and draw implications for the classic AMC (awareness, motivation, capability) model of competitive behavior. We conclude that socioemotional priorities manifested by many family firms, require both recontextualization and rethinking of current understandings in competitive dynamics.

Family Dynamics in Family Firms

Session Moderator: **Marco Mismetti**, *Free U. of Bozen-Bolzano*

ENT: **Managing the Ability-Willingness Paradox Through Family Firms' Discretion in Digital Transformation**

Author: **Samuel Wayne Appleton**, *U. of Bergamo*
Author: **Marco Mismetti**, *Free U. of Bozen-Bolzano*
Author: **Emanuela Rondi**, *U. degli Studi di Bergamo*

The ability-willingness innovation paradox derives from the sometimes-contrasting family's ability, which enables innovation, and willingness, which may constrain innovation. Using an explorative qualitative approach, we found that discretion of the family members, meaning their ability to exercise control and influence the firm's innovations, influenced this paradox. In the context of Industry 4.0 (I4.0), we elaborate the ability-willingness innovation paradox claiming that the individual level discretion decreases (increases) the paradox. We present two polarizing situations, firstly, high discretion which decreases the paradox and enables more I4.0 adoption. Secondly, low discretion which increases the paradox constraining I4.0 adoption. Informed by empirical evidence, we contribute to theory by elaborating on the family's influence on the firm by introducing an additional factor to consider when thinking about the ability-willingness innovation paradox. Thereby furthering knowledge by underlining the importance of discretion for individual family members in managing the paradox. This expands the innovation literature identifying the underlying mechanisms of the family that influences innovation.

ENT: **Dealing with Paradoxical Tensions in Family Firms - Insights From a Game-Based Approach**

Author: **Clemens Christian Krueger**, *FIF@Zeppelin U.*
Author: **Laura Aline Bechthold**, *Technische Hochschule Ingolstadt*
Author: **Reinhard Prugl**, *FIF@Zeppelin U.*

Entrepreneurs in general often have to deal with seemingly conflicting goals in a rapidly changing and complex world. Family entrepreneurs are particularly prone to paradoxical tensions due to the interconnectedness of the family and the firm. Despite their relevance in entrepreneurial practice, current research lacks methods to examine both microfoundations of and individual behavior in the management of paradoxes. In this paper, we introduce the application of serious games as a method capable of simulating context-rich paradoxes in an immersive environment to analyze entrepreneurial decision-making. Therefore, we developed a text-based game that simulates decision-making behavior in family firms regarding the innovation-tradition-paradox. We quantitatively analyze the behavior of 199 players and explore the relationship between player behavior and variables reflecting microfoundations of entrepreneurial decision-making which are highly relevant in the family firm context like for example socioemotional wealth reference points. Our results indicate a positive relationship between a paradoxical mindset and socioemotional wealth and the choice for an ambidextrous firm strategy. With this study, we demonstrate the potential of serious games as a method for advancing (family) entrepreneurship research and behavioral management theories.

ENT: **The Quest for Two Tales - The Dual Balance of Financial and SEW Reference Points in Family Firms**

Author: **Clemens Christian Krueger**, *FIF@Zeppelin U.*

Decision-making in a family business can be complex and multifaceted, especially for family entrepreneurs who most likely have a personal stake in both the financial success of the business and the preservation of Socioemotional Wealth endowments. Thus far a trade-off perspective regarding those two reference points prevails in research. Contrary to this dominant perspective we examine how individuals balance both financial and socioemotional reference points. Theorizing from paradox theory, we develop a choice experiment to foster the understanding of the behavior in a dilemma situation in the context of a family business by manipulating the entire sociomaterial context, i.e., the financial and socioemotional performance. The resulting data show that individuals develop strategies to pursue financial and socioemotional goals simultaneously. We show that not only financial resource scarcity but also SEW scarcity are sources of perceived paradoxical tension.

ENT: **Bringing Back Family into Family Business Research: A Sociological Perspective**

Author: **Moksh Garg**, *Indian School of Business*
Author: **Sougata Ray**, *Indian School of Business*

Over the past few decades, family business scholarship has witnessed an exponential increase in research, making the field ripe for a multidisciplinary mode of investigation. However, a closer look at the extant literature reveals the selective application of concepts and paradigms to theorize these hybrid entities. Acknowledging the importance of even-handed borrowing, we emphasize the need for a balanced theoretical integration to safeguard family business research against inexcusable reductionism. Correspondingly, we resuscitate scholarly focus on the family subsystem and recommend using a sociological standpoint to identify, envision, and analyze family businesses. Employing targeted search and text analysis, we identify major theoretical gaps in the extant literature and develop an integrative framework to systematically address these gaps. We then conclude our paper by proposing avenues for future research and by highlighting the importance of theorizing business families to develop a fine-grained understanding of family businesses.

Entrepreneurial Ambidexterity

Session Moderator: **Vivek Kumar Jha**, *Doctoral Student at Indian Institute of Management Lucknow*

ENT: **The Role of Founders' Ambidextrous Orientation in Unicorn Valuation: A Study of Indian Start-Ups** ☯ 💻

Author: **Vivek Kumar Jha**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Ravi Roshan**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Sabyasachi Sinha**, *Indian Institute of Management, Lucknow*

While many entrepreneurship studies have explored factors that influence the birth and growth of start-up firms, there appears to be a dearth of studies examining the influence of founders' ambidextrous orientation, on start-ups' success and speed to success. This study aims to fill this void by proposing that as a part of investment due diligence, investors assess the founders' characteristics, particularly their ambidextrous orientation, before making an investment decision, which influences the start-up firms' speed to success. This study empirically analyses 196 interviews by the founders of 72 Indian unicorns and examines the influence of the founders' ability to explore or exploit on their firms' speed to achieve the 'unicorn' status. Cox Hazard Model and linear regression were used to test the hypothesized relationships. Authors find a strong positive relationship between founders' positioning in the ambidexterity continuum and the speed of becoming a unicorn. Furthermore, the results demonstrate that investors may value the exploratory skills of the founders rather than their exploitation skills. This study offers meaningful insights into the decision thesis of the investors. In so doing, this paper builds on the theories of entrepreneurship and ambidexterity, bringing out implications for research on characteristics of entrepreneurs and founding teams.

ENT: **Origins of Ambidexterity: Entrepreneurial Orientation and Continuous Improvement**

Author: **David Foord**, *U. of New Brunswick*
Author: **Maha Mohamed Tantawy**, *Odette School of Business, U. of Windsor*
Author: **Jeffrey John McNally**, *U. of New Brunswick*

Power utilities around the world face decarbonization challenges which require them to innovate and improve their operations to transform their operations while at the same time ensure high performance levels. In this context, we examine electric power utility employees' perceptions about individual entrepreneurial orientation (EO) and continuous improvement (CI) of a Canadian power utility firm as key antecedents to ambidexterity, which in turn impacts teams' performance. Drawing on a dynamic resource-based view, we collect responses from 337 employees via a company-wide survey. The results show that CI and EO foster both exploitation and exploration capabilities. While exploitation and exploration capabilities on their own directly impact teams' performance, employees do not perceive EO to directly impact teams' performances. The insignificant interaction impact of exploitation and exploration orientations on teams' performance warrants a closer look at finding the optimal balance between the two.

ENT: **Ambidexterity in Small Organizations: A Review and Research Agenda**

Author: **Latasri Hazarika**, *Indian Institute of Management, Kozhikode*

Pursuing simultaneous exploration and exploitation, that is, ambidexterity is vital for growth-oriented small organizations for their survival and growth. However, the defragmented knowledge of small organizations' ambidexterity makes it difficult to exercise and manage it in the resource-constrained environment faced by small organizations. Therefore, our paper systematically reviews and synthesizes the extant knowledge on small organizations' ambidexterity and identifies the gaps. Our review of 165 articles reveals a lack of knowledge on the cognitive underpinnings of ambidexterity in small organizations. We propose nine clearly stated future research questions to investigate ambidexterity in the context of small organizations.

New Theoretical and Conceptual Approaches to Entrepreneurship

Session Moderator: **Jing Zhang**, *Old Dominion U.*

ENT: **A Typology of Student Managed Venture Fund (SMVFs)**

Author: **Joanne Jin Zhang**, *Queen Mary U. of London*

A new breed of venture funds is emerging. Student-managed venture funds (SMVFs) have been established in and around universities channelling funds into early-stage start-ups founded by university students, alumni and faculties. In this paper, we examine the functions and types of these newly emerging funds. We propose the multi-dimensional roles of this new type of fund and highlight it as an innovative pedagogy of entrepreneurship education. We contribute to the literature on entrepreneurship education as well as entrepreneurial ecosystems.

ENT: **A Design Science Methodology for the Entrepreneurship Field**

Author: **Christoph Seckler**, *ESCP Business School*
Author: **Rene Mauer**, *ESCP Business School*
Author: **Jan Vom Brocke**, *U. of Liechtenstein*

Entrepreneurship scholars increasingly embrace the design science approach. While established design science methodologies from other fields have distinct strengths, they provide little guidance for a particularly relevant type of design science project for entrepreneurship scholars, namely exploration projects. In this article, we propose a methodology for exploration projects which we refer to as the infinity methodology. The infinity methodology builds on scientific knowledge of the entrepreneurial process, design science activities, and principles. More specifically, the infinity methodology guides scholars through two interrelated entrepreneurial cycles (i.e., opportunity exploration and exploitation), each of which involves three key design science activities (i.e., analysis, design, and evaluation). The infinity methodology makes a unique contribution to the methodological repertoire of design science scholars and provides a common framework for publishing design science in entrepreneurship.

ENT: **Limitations of Limitations: A Review of Self-Acknowledged Limitations in Entrepreneurship Research**

Author: **Taiyuan Wang**, *China Europe International Business School (CEIBS)*
Author: **Hao Zhao**, *China Europe International Business School (CEIBS)*

How much and how do entrepreneurship researchers disclose limitations of their studies? We content analyzed self-acknowledged limitations in 651 empirical articles published between 2011 and 2021 in the Entrepreneurship Theory and Practice, the Journal of Business Venturing, and the Strategic Entrepreneurship Journal. There is a significant increase in the number of self-acknowledged limitations over time, and the exact type of limitations varies across articles using different research methods and theories. Although some authors dodge, euphemize, or self-promote when acknowledging their limitations, other authors make it more meaningful by discussing the impacts on the interpretation of results and how to overcome such limitations. We offer several guidelines to help researchers make the best of the limitation section.

ENT: **A Dynamic Theory of Firms' Embeddedness in Entrepreneurs' Lives**

Author: **Mateja Andric**, *U. of St. Gallen, Switzerland*

Entrepreneurs experience a variety of events in their lives, such as marriage, the birth of a child, divorce, but also health shocks and deaths of relatives. Such events do not only change the lives of entrepreneurs, but likely also affect their firms. Integrating theories from literatures on the work-life interface, human life-span development, and on power and dependence, a dynamic multi-level theoretical framework is introduced that outlines the processes linking entrepreneurs' life events and changes in firm goals and firm performance. The proposed theory also explicates the boundary conditions that influence the magnitude of firm-level changes in response to life events and explains why and how temporal patterns of change in firm-level outcomes differ across life events. The introduced theory advances a perspective of firms' temporal embeddedness in entrepreneurs' lives, suggesting that changes in firm goals and performance over time can mirror changes in entrepreneurs' lives emanating from life events that entrepreneurs experience.

Exploring Entrepreneurial Ecosystem (EE) Heterogeneity

Organizer: **Lei Xu**, *U. of Wisconsin, Whitewater*
Organizer: **Shu Yang**, *Hofstra U.*
Organizer: **Yu Liu**, *Erasmus U. Rotterdam*
Discussant: **Scott L. Newbert**, *City U. of New York, Baruch College*
Discussant: **Christina Theodoraki**, *Toulouse Business School*

An entrepreneurial ecosystem (EE) is “a set of interdependent actors and factors coordinated in such a way that they enable productive entrepreneurship within a particular territory” (Stam, 2015: 5). By incorporating both “entrepreneurial” and “ecosystem” elements, EEs are argued to constitute “organized attempts to establish environments that are conducive to increasing the success for newly established ventures” (Audretsch, Belitski, & Desai, 2019: 313). Interest in EEs by scholars, policymakers, and practitioners has grown rapidly in recent years given the impact that their complex interdependencies between inter- and intra-EE factors have on the entry, growth, and exit of new ventures (Xu, Yang, Liu, Newbert, & Boal, Conditionally accepted), which, in turn, fuels regional economic development and growth. Such an progress contributes to the scholarly conversation regarding “EE heterogeneity” (Theodoraki, Dana, & Caputo, 2022), that is, why some EEs can foster entrepreneurial activity while others cannot. As Storper (2013: 7) observe, “regional business ecosystems or clusters generate or attract their own factor supplies, and create their institutional and interactive environments. These conditions can not be readily imitated, nor can their costs or prices be bid down through interregional competition and sorting of firms and people.” Along with scholars in related social science disciplines, such as economic geography (Storper, 2013), we seek to explore the drivers of change in EE development and their resultant social and political implications. In light of the challenges facing scholars interested in making a contribution to the EE literature, this symposium is intended to achieve two objectives by engaging a group of leading voices in the EE field. First, by highlighting interesting and important questions some of the leading scholars in the field are asking about EE heterogeneity, this symposium seeks to provide insight into the current conversations in the EE area and, in turn, help identify fruitful areas of inquiry going forward. Second, by soliciting expert feedback on these research projects by editors at top-tier journals in the field, it seeks to provide a viable roadmap toward publishing EE research in the very best management and entrepreneurship journals.

Entrepreneurial Finance: Angel Investment

Session Moderator: **Yohan Choi**, *Southern Illinois U., Edwardsville*

ENT: **Homophily and Status Difference in the Angel Investor Market**

Author: **Yohan Choi**, *Southern Illinois U., Edwardsville*

This study examines whether and when personal characteristics influence angel investors' desires to co-invest in a startup. It highlights potential benefits of co-investment with similar investors, such as smoother coordination, effective information exchange and enhanced trust, as antecedents of the co-investment. This study hypothesizes that angel investors sharing the same gender or ethnicity are more likely to co-invest in a startup, i.e., ascribed homophily, and angel investors sharing the same education or career background are also more likely to co-invest in a startup, i.e., achieved homophily. Further, it suggests that investors' personal characteristics and status difference jointly directs the formation of such a homophilous tie. It argues that similarity in ascribed characteristics including gender and ethnicity mitigates concern about dysfunctional tensions that often arise from status difference, whereas similarity in achieved characteristics including education and career background amplifies it. Findings from a study of U.S. angel investors support the hypotheses. A supplementary analysis uses local angel investors' ascribed and achieved characteristics similarity as instrumental variables to establish causality and finds that both ascribed and achieved homophily enhances investment performance.

ENT: **The Relationship Between Business Angels' Psychological Attributes and Investment Success**

Author: **Angela Altmeier**, *U. of Luxembourg*
Author: **Christian Fisch**, *U. of Luxembourg*

The psychological attributes of individuals determine their behaviour and decisions. While initial studies investigate the effect of psychological attributes on the investment behaviour of different investors, there is limited evidence on how business angels' psychological attributes relate to their investment success. Against this backdrop, we argue that psychological attributes affect the selection of portfolio ventures and consequently the success of business angel investments. We perform a language-based text analysis using Twitter data to gain insights into the psychological attributes of 1,839 US business angels who made 9,775 investments. Our results show that the psychological attributes of religion and clout, which describe the level of certainty and confidence exhibited in peoples' speech, negatively relate to successful investments for business angels. Our findings mainly contribute to the entrepreneurial finance literature that explores the investment success factors of business angels.

ENT: **It's a Match: How Heterogeneity in the Angel Investor-Entrepreneur Dyad Drives Venture Performance**

Author: **Patrick Sven Gaßmann**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

With an investment in early-stage ventures of more than $29 billion in the United States in 2021, business angel investors play a pivotal role in fostering entrepreneurship. Next to providing the equity for new ventures to scale, business angels are hands-on investors who leverage their own human and social capital to mentor, coach and advise the entrepreneurial founding teams of their portfolio firms. Nevertheless, the angel investor-entrepreneur dyad remains substantially understudied. We draw on human capital theory, enriched with relational perspectives from social capital as well as team conflict literature, to investigate the fit and interplay between both parties. Specifically, we study the effect of human capital heterogeneity between business angels and entrepreneurial founding teams on venture performance using a unique, large-scale secondary data set of 861 angel-backed ventures headquartered in the United States and their more than 2,500 angel investors and founding entrepreneurs. We find an inverted U-shaped relationship for specific, and a positive association for general human capital heterogeneity and new venture performance, while establishing the presence of venture capitalists as a clear boundary condition. We contribute to the entrepreneurship domain by expanding research on the dyadic angel investor-entrepreneur relationship and add to human capital theory.

ENT: **Institutional Logics of Investment Decision: Analysis of Angel Investment Strategy Based on ML**

Author: **Song Wang**, *Zhejiang U.*
Author: **Hanru Zhang**, *Zhejiang U., China*

In recent years, angel investment intention has become an important topic in entrepreneurship research. However, most of the existing studies explore the differences between investor groups based on the nature of identity, and the analysis of individual investment style differences is not sufficient. In addition, previous studies focused on the impact of entrepreneurs' initiative on financing access, ignoring the objective characteristics of entrepreneurial projects. To address this gap, we adopt the perspective of institutional logic to investigate angel investor classification. Specifically speaking, we probe into the mechanism of the entrepreneurial projects' objective characteristics on angel investment intention under different decision logics, in virtue of machine learning clustering and predicting algorithm for data mining. Based on the above efforts, we expand the research on the micro-process of institutional logic and the conclusions have certain guiding significance for entrepreneurs, investors, and angel investment platforms.

Entrepreneurial Platforms 2

Session Moderator: **Lucas Willcke**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

ENT: **Unleashing the Digital Power: Digital Technologies as a Signal to Investors of Sustainable Ventures**

Author: **Lucas Willcke**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Creating a more sustainable way of living is the greatest challenge of our time – and entrepreneurship has the potential to take on a pivotal role. Nonetheless, sustainable entrepreneurs continue to face structural disadvantages, diluting their potential impact on sustainable change. With the importance of digital technologies striving, new opportunities for sustainable entrepreneurs to overcome these disadvantages arise. We draw on signaling theory to investigate the impact of digital technology signals on venture performance for sustainable new ventures in different environmental and human capital contexts. Based on a sample of 486 sustainable new ventures founded between 2014 and 2019, we find that digital technology usage is a credible signal accelerating new venture performance. Also, we expand the understanding of technology signaling in sustainable entrepreneurship for different contextual settings.

ENT: **Digital Affordance Actualization and Douyin (TikTok) Participants' Entrepreneurial Endeavors** 💻

Author: **Qingqing Bi**, *U. of Canterbury*
Author: **Biao'an Shan**, *Jilin U.*
Author: **Xiaoyun Ren**, *Jilin U.*

With the popularity of digital platforms, more and more people engage in business activities and explore entrepreneurial opportunities in these multi-sided markets. Due to the unique nature empowered by digital technologies, such as openness and generativity, online platforms have attracted a large user base which bring heterogenic user groups. In this study, we adopt the technology affordance lens and explores the digital affordance actualization by platform participants. Based on an exploratory case study, we reveal the complexity of modern digital platforms and the variety of digital affordances provided by the integrated technologies. The results also show that due to the differences in platform users' motivations, skills, and resources, digital affordances actualization result in varied entrepreneurial endeavors. The preliminary research findings contribute to our understanding of platform-based entrepreneurship from platform users' perspective and have practical implications for both platform-dependent entrepreneurs and platform owners.

ENT: **Digital Identity Creation: Entrepreneurs Navigating Current Events on Social Media** ☯

Author: **Agnieszka Kwapisz**, *Montana State U.*
Author: **Monika Blue Kwapisz**, *U. of Washington, Seattle*

Entrepreneurs increasingly use social media in their marketing strategy. They post news about their company, share industry insights, and engage with potential clients. Recent research showed that strong relationships developed with external constituencies on social platforms contribute to venture funding and survival. However, building online social capital is challenging due to the complex dynamics of social platforms and the research on the subject is limited. In particular, we still don't know if addressing current events on social media benefits organizations' social capital. Our discovery takes place in the context of the two major events of 2020: COVID-19 and the U.S. presidential election. Using a language text processing tool (Linguistic Inquiry and Word Count), we discovered that tweets discussing these difficult events produced a greater number of retweets and favorites. This effect was enhanced by using first-person singular references and diminished by using language centered around achievement. Using positive sentiment in tweets about the election was also an effective strategy.

ENT: **The Home of the Unicorn: Digital Entrepreneurial Ecosystem Necessity Levels and Venture Growth** 💻

Author: **Simon Hensellek**, *TU Dortmund U.*
Author: **Julius Maximilian De Groot**, *TU Dortmund U.*
Author: **Tim Haarhaus**, *TU Dortmund U.*

Research has shown that (digital) entrepreneurial ecosystems are an important lens to analyze the factors that enable successful entrepreneurship at a respective location. Moreover, scholars found that local ecosystems differ significantly in their entrepreneurial output and that entrepreneurs even choose the location to start or grow their venture depending on the support they can access within the (digital) entrepreneurial ecosystem at the respective location. However, current research about digital entrepreneurial ecosystems (DEE) is largely still of theoretical nature or ignores the complex interdependencies among the different elements of DEEs. Therefore, we used data from the European Digital City index (EDCi), CB-Insights, and Eurostat to analyze the effect of ten salient DEE elements on the emergence of unicorns, digitally-enabled unicorns, and the general new business density across 60 European cities. Using fuzzy-set qualitative comparative analyses complemented by necessary condition analyses, we identified necessary conditions as well as minimum levels of DEE elements (i.e., bottlenecks) for various levels of entrepreneurial outputs. Our study contributes to literature and practice by informing entrepreneurs and policymakers about the importance of certain DEE elements for enhancing the entrepreneurial output of cities, especially when it comes to high-quality output in the form of unicorns.

Participant: **Ralph Hamann**, *U. of Cape Town*
Presenter: **Annika Surmeier**, *U. of Cape Town*
Presenter: **Constance Dumalanède**, *Tecnologico de Monterrey*

Entrepreneurship is frequently considered by academics and practitioners as valuable mean to achieve social transformation (for instance in tackling poverty, inequality, homelessness, and environmental issues, such as ecological degradation, and climate change), and how these social changes are created continues to generate interest among researchers (e.g., Saebi, Foss, & Linder, 2019; George, Howard-Grenville, Joshi & Tihanyi, 2016). Considering the growing literature on entrepreneurship and social entrepreneurship, and the size and scale of the African continent, surprisingly few studies have engaged with and explored how different types of entrepreneurship can lead to social change in African countries (Rivera-Santos, Holt, Littlewood, & Kolk, 2015; Zoogah, Peng, & Woldu, 2015). Moreover, while many in Africa seek profound societal change, research on social change is limited and fragmented, and ultimately fails to put the people (entrepreneurs, customers, communities and the civil society) at the centre of such societal transformation. This presenter symposium seeks to address two fundamental shortcomings in current organization, management, and entrepreneurship scholarship. First, the symposium seeks to provide deeper knowledge on the practices and processes that lead to social change in African contexts. Particularly, African countries seek societal transformation, but people tend to be at the margins of such processes and practices of social change. On one hand, entrepreneurs seek to exploit market opportunities for social change, but face several constraints, such as lack of resources, weak institutions, marginalization etc. (Littlewood, Ciambotti, Holt, & Steinfield, 2022; Busch & Barkema, 2020). On the other hand, people and communities in such contexts face severe challenges such as poverty and resource-scarcity, making change difficult to happen. This evidence calls for peculiar and localized processes and practices to social change which take effectively in consideration such challenges. Second, the symposium responds to the critique that prior research has silenced theory development in non-Western contexts (Hamann et al., 2020; Banerjee, 2022). Most recently scholars have highlighted the need to explicate how the learnings derived from a better understanding of how African communities organize local responses to local needs creates opportunities for indigenous people-centric theory development (Bruton, Zahra, Van de Ven, & Hitt, 2022). Such broader knowledge contextualizes social change by revealing 'decolonized' approaches to social change in Africa, as well as 'unconventional' approaches (Slade-Shantz, Kistruck, & Zietsma, 2018; Weber, Fasse, Haugh, & Grote, 2022; Bakker & McMullen, 2023). The paper presentations included in this symposium shed light on four practices and processes that lead to social change in Africa, while putting people at the center of this important transformation.

A Day In The Life: The Patient Experience

Session Moderator: **Daan Westra**, *Maastricht U.*

HCM: **Multiplex Hospital Networks: The Relation Between Shared Physicians and Shared Patients**

Author: **Daan Westra**, *Maastricht U.*
Author: **Peter Makai**, *Erasmus School of Health & Policy Management, Rotterdam*
Author: **Ron Kemp**, *The Netherlands Authority for Consumers and Markets*

Healthcare is increasingly delivered through networks of providers. Well organized networks of shared (i.e. transferred) patients have the potential to improve the quality of health services delivery. However, these networks are typically studied in isolation, without considering their multiplex nature (i.e. the other network ties organizations are embedded in simultaneously). We therefore test the relation between networks of shared patients and shared specialists amongst providers of dermatological care using Bayesian zero-dispersed Poisson regression models of all-payer claims data from 2017 in the Netherlands. Our results indicate that 2.2% of all dermatological patients are shared between one or more providers. Specialized organizations (i.e. academic hospitals and hospitals treating a greater volume of skin cancer patients) receive significantly more patients, albeit with a limited effect size. Multiplex network ties had the strongest association with shared patients. That is, organizations that share medical specialists, share more than double the average amount of patients between them. Similarly, organizations that have an emergency contract with one another also share significantly more patients. These results highlight the magnitude of the social and relational component in healthcare delivery in general, and patient networks in particular. However, they also raise questions about the potential anti-competitive nature of this specific type of cooperative behavior between competing organizations. Conceptualizing patient sharing as a relation influenced by various other relations can help future research to unpack this paradox in more detail.

HCM: **Understanding Patient Engagement in Remote Consultation: A Comprehensive Review**

Author: **Zhening Liu**, *U. of Bath*
Author: **Alistair Brandon-Jones**, *School of Management, U. of Bath*
Author: **Christos Vasilakis**, *U. of Bath*

The purpose of this paper is to explore the concept of patient engagement in healthcare remote consultation services. The authors investigated the contextual factors that positively or negatively affect patient engagement, and discussed possible metrics to measure the different dimensions of engagement in various healthcare service stages, designed interventions, and potential improvement options for engagement. We undertook a comprehensive review of the extant literature using a systematic review approach. Sixty-three articles published in peer-reviewed scientific journals from 2003 to 2022 were identified and analysed. We conceptualised engagement with patients in remote consultation across three key aspects: dimensions, process, as well as antecedents and consequences of engagement. We identified contextual factors that influence patient engagement in nine categories. We put forward several possible metrics for measuring patient engagement during three stages (before service, at service, and after service), as well as interventions and possible improvement options for increasing patient engagement. We contribute by putting forward a comprehensive framework for further investigating engagement in remote consultation. Our conceptual framework brings together different strengths of literature from different domains. We also extended service operations extant literature in deepening our understanding of the concept of engagement more broadly and applying it to the remote consultation service.

HCM: **Caring and Organizing with Compassion Love and Dignity**

Author: **Henri Slob**, *Erasmus U. Rotterdam*
Author: **J. Arie Biemond**, *Erasmus U. Rotterdam*

Human flourishing in organizations receives increasing scholarly attention. However, key ethical underpinnings of human flourishing, like human dignity and compassionate love, are still hiding in the background. In this paper we reflect on the strong relationship between human dignity and compassionate love, and its implications for the organization. After we present our framework, we provide the preliminary findings of a Q study in Dutch healthcare organizations. With this mixed methodology we are able to identify three clusters of viewpoints on the role of human dignity and compassionate love in healthcare practice. Two viewpoints mainly focus on the flourishing of the employee while the third viewpoint combines a patient-centred approach with the limitations a hierarchical and bureaucratic organizational context. The theoretical and analytical insights combined contribute to the field of healthcare management and governance.

HCM: **A Novel Method of Patient Narrative Feedback Reporting and Learning: Results from a Field Experiment**

Author: **Dale Shaller**, *Shaller Consulting*
Author: **Ingrid Nembhard**, *The Wharton School, U. of Pennsylvania*
Author: **Sasmira Matta**, *The Wharton School, U. of Pennsylvania*
Author: **Rachel Grob**, *U. of Wisconsin, Madison*
Author: **Yuna Lee**, *Columbia U.*
Author: **Mark Schlesinger**, *Yale U.*

Many healthcare organizations are exploring the use of patient narratives—feedback from patients in their own words— to inform their efforts to improve patient care experiences. They have observed that leveraging narratives requires an effective method of reporting them to administrators, staff, and clinicians, which is often missing. We applied research on performance feedback design, organizational behavior, and innovation implementation to create an intervention composed of an online reporting interface with active user support. We then conducted an experiment in which we used patient surveys, staff surveys, and staff interviews from 12 intervention and 10 comparison ambulatory care sites in one system to assess intervention effects and lessons for organizational theory. We found positive and significant differences in intervention sites' patient survey scores for three out of four measures targeted for improvement. Staff surveys indicated two mechanisms underlying effects: increasing useful information and motivating behavior changes. Interviewees indicated that the intervention reduced the complexity of accessing, interpreting, and using narrative feedback. We discuss implications of our results for healthcare management and organizational learning theory, particularly about learning from successes and failures and from customers. Our study is an example of using theory to evolve practice and practice to inform theory.

This symposium presents a series of novel insights into a spectrum of employee wellbeing experiences across a variety of understudied contexts. Using both qualitative and quantitative methods, these presentations highlight the unique challenges of farming occupations, music performance professions, the employee medical leave process, and the experience of working with colleagues who are recipients of partner violence. Our papers highlight a range of health outcomes, from the positive effects of stress habituation to the negative impacts of nonwork spillover from coworkers. Our papers also highlight how both positive and negative wellbeing experiences (such as passion and burnout) are often intertwined and embedded within certain professions. Together, these presentations offer both a glimpse into unique populations as well as a high-level perspective of the range of mental health & wellbeing experiences for modern workers.

Author: **Arun Kumar**, *King's College London*

Executive doctorates in management disciplines have witnessed strong and sustained growth in the number of graduates in the recent past, as opposed to traditional PhD programs, which have stagnated or decreased. As a result, there is a need to develop new curricula and learning models to teach these management executives and cultivate a practitioner-scholar mindset. To that end, we examine the application of several co-creative strategies to diagnose and reconfigure executive doctoral education. First, the study analyses current business models and educational practices of selected Euro-Chinese programs and shows how 12 constructs promote mentoring and coaching techniques appropriate for executive doctoral learners. The constructs direct a participative, learner-centered process. A second lesson includes developing an innovative delivery method by the local Chinese partner of international doctoral programs. The approach incorporates five components: a supervisor from an outside institution, Chinese academic mentors, a workshop on publishing for the Euro-China Research Network (ECR), a workshop on supervision, and student-led conferences. The final contribution uses case study research to show how the students lead and operate a knowledge-sharing project. The results show that the mentoring system's three novel components perform better than traditional approaches. The practice-oriented contribution emphasizes the change in responsibilities that management educators and researchers should consider while creating and promoting transformative educational experiences. This finding might alter how business schools conduct research and instruct about organizational phenomena – i.e., the knowledge creation and dissemination process. The theoretical contributions of this study include learning models for executive doctoral programs, appropriate curricula and pedagogy, and research-based insights on student engagement and learning.

MED: **Pathways to Female Leadership through Game of Thrones (WITHDRAWN)**

Author: **Fiona Moore**, *U. of London*

This paper addresses both the management studies literature on gender in leadership, and the media-studies literature on gender and leadership in telefantasy, through an exploration of portrayals of female leadership in the television series Game of Thrones. Building on Martin et al's (2018) proposal for using literature by and about women as a tool by which management educators can address the lack of material relating specifically to women's issues in leadership, I propose to examine three cases of female leadership in Game of Thrones (Daenerys Targaryen, Catelyn Stark and Sansa Stark), with a view to, first, analysing its construction of different forms of female leadership, and, second, developing its potential as a tool for management paedagogy and theory-building.

MED: **College Student Mental Well-Being: The Role of School-Life Conflict and Recovery**

Author: **Sarah E. DeArmond**, *U. of Wisconsin, Oshkosh*

Stress and mental health are significant issues for society as a whole and younger adults particularly. Many colleges and universities are increasingly focused on what they can do to enhance the mental well-being of their students. Work and its interface with life has been a major topic studied in conjunction with the health and well-being of working adults; however, there has been less emphasis placed on the study of the school-life interface among college students. The current study addresses this by exploring the connection between school-life conflict and mental well-being among college students across a two-week timeframe. I propose that this relationship is at least partially mediated by recovery experiences. A parallel mediation model was tested using PROCESS in SPSS. The sample consisted of 336 students recruited from business courses at a Midwest university. The results demonstrate that school-life conflict has a significant positive relationship with mental health symptoms. I found support for relaxation and control partially mediating this relationship. I also observed significant relationships between school-life conflict and all of the recovery experiences and between nearly all of the types of recovery experiences and mental health symptoms. Implications for research, employers, and business education practice are discussed.

MED: **Online Learning During COVID-19: Role Conflict and Working Executives**

Author: **Rashmi Shukla**, *Indian Institute of Management Raipur*
Author: **Sourya Joyee De**, *Indian Institute of Management Raipur*

This study aims to (a) explore adult-working students' experiences with the new online learning environment, (b) determine how they have managed work-family-study responsibilities during the pandemic, and (c) identify the role of educational institution in facilitating this new learning environment. A qualitative exploration using semi-structured interviews of 25 adult-working students of higher education program was conducted. Interview transcripts were analyzed using the thematic analysis approach, resulting in a thematic framework. Findings suggest (a) adult-working students' work and family roles potentially facilitate their studies and vice versa, (b) institutional facilitation such as guidance programs for adult-working students, plays an important role in their satisfaction, (c) instructors, with proper training from the institutes, need to continuously adjust their teaching strategies, and (d) educational institutes must focus on designing effective courses, moving beyond generic teaching standards. This study furthers research on adult-working student education by understanding how they managed work and family roles through the lens of role conflict and role facilitation, and institution facilitation in the context of the pandemic. This study also proposes a framework of how adult-working students' satisfaction is shaped in the new normal, seen through the lens of Expectancy Violations Theory.

Reflexivity & Better Thinking

Session Moderator: **Peter Smith**, *U. of Auckland*

MED: **Developing Interdisciplinary Understanding to Span Disciplinary and Organizational Boundaries**

Author: **Peter Smith**, *U. of Auckland*
Author: **Lisa Jane Callagher**, *U. of Auckland*
Author: **Paul Hibbert**, *U. of St Andrews*
Author: **Elisabeth Krull**, *Alliance Manchester Business School, U. of Manchester*

Based on a study of postgraduate students, we show how—through the processes associated with applying a strategic tool—students developed the understandings that allowed them to span disciplinary and organizational boundaries. We show how the students, working in teams and acting as consultants to industry clients, developed specific boundary-spanning skills that were learned through a combination of mimesis and reflection. In developing a course design that included four iterations of learning-by-observing, learning-by-doing, and learning-by-reflecting, we show how these insights add to pedagogic debates spanning interdisciplinary and inter-organizational learning challenges.

MED: **Addressing the Challenges of Theory Building in Doctoral Education: Reflections from a PhD Workshop**

Author: **Sascha Albers**, *U. of Antwerp/ Antwerp Management School*
Author: **Jenny Gibb**, *U. of Waikato*
Author: **Volker M. Rundshagen**, *U. of Applied Sciences Stralsund*

This paper addresses the issue of theory development training in PhD programs at business schools. More specifically, we critically reflect on how doctoral students benefited from a PhD workshop on theory development that we offer. Using the reflection assignments of three cohorts of PhD students that completed our course, we uncover two skill development dimensions: guiding enquiry and building confidence. Furthermore, we identify empowering intent as a third motivational pillar that supports skill development in these two dimensions. This paper underscores how the motivation and arguably the success of the PhD experience is influenced by the availability of adequate structures and processes that encourage students to develop their own skill sets. We contribute to current debates on improving meaningfulness and effectiveness of doctoral education, specifically in encouraging the design of PhD workshops to emphasize theory building and conceptual paper development.

MED: **Exploring the Aesthetics of Organizational Life in Management Education**

Author: **Kathy Mack**, *U. of South Carolina-Aiken*

In recent years, art and aesthetics have contributed to shifts in management education practices. Aesthetic forms of knowing prioritize sensory perceptions that evoke aesthetic tastes, preferences, judgments, meanings, affects, feelings, and emotions associated with organizations and work-based practices. Likewise, the arts-based movement challenges traditional logical-analytical approaches to learning and student engagement. Drawing on both the field of organizational aesthetics and artistic pedagogies, this paper explores artistic-aesthetic interventions with online MBA students. In connection with the conference theme, it is suggested that students' sensible knowledge affords unique insights on the aesthetic dimension of work and organizational life. Implications and directions for future research are also considered.

MED: **Identity Work as Response to Epistemic Intervention in Business School Education**

Author: **Marianne Storgaard**, *Associate Professor*
Author: **Jesper Piihl**, *U. of Southern Denmark*

Twenty-first century businesses need professionals excelling in higher-order-thinking skills. Classic positivistic epistemic systems of business schools are, however, impeding the fostering of such skills, because these are better advanced in more constructivist epistemic systems. Requirements of higher-order-thinking skills in business school education tend to frustrate students because they become torn between worldviews from two different epistemic systems. This empirical study unpacks such frustrations and inquire into how students cope with epistemic gaps. By introducing an epistemic intervention in a business school course, we find that students perceive being placed in an identity gap. Torn by conflicting identity expectations from two different epistemic systems students engage in identity work. Results from our inductive analysis show that students engage in three phases of identity work relating to the identity of 'being a positivist', the identity as 'successful student' and the identity as 'academic learner'. We provide an in-depth insight into these aspects of identity work and, based on that, we suggest possible approaches for business schools and individual teachers to support students' identity work in order for that to elicit epistemic progression and ultimately fostering of higher-order-thinking skills.

Creating a Culture of Employee Development

Organizer: **Ellen B. Van Oosten**, *Case Western Reserve U.*
Organizer: **Scott N. Taylor**, *Babson College*
Presenter: **Richard E. Boyatzis**, *Case Western Reserve U.*
Presenter: **Darren Jason Good**, *Pepperdine U.*
Presenter: **Christopher James Lyddy**, *Providence College*
Presenter: **Udayan Dhar**, *Bucknell U.*
Presenter: **Jodi Berg**, *Case Western Reserve U.*

Perhaps at the heart of employee engagement concerns and work overload are employees wanting to be in workplaces where they have meaningful connections and where their "whole self" can be valued and developed. The presenters in this symposium call for a rethinking of how we conceptualize employee development, including further research that, views employees as active agents. Our presenters expand on prior work by asking what an employee-centric approach to employee development might look like and how such inquiry can open new frontiers in research and practice. Presenters address what creating a culture of employee development might entail when an intentional approach of viewing employees as agents unto themselves is assumed.

CEO Characteristics and Decisions

Session Moderator: **Alaric Bourgoin**, *HEC Montreal*

MOC: **Theorizing CEO Loneliness: A Behavioral Strategy Perspective**

Author: **Alaric Bourgoin**, *HEC Montreal*
Author: **Saouré Kouamé**, *HEC Montreal & U. of Ottawa*

Claiming that "it is lonely at the top" has become somewhat of a cliché in the popular press; yet there are very few scientific studies that investigate this topic, and none of them, to our knowledge, has specifically tackled CEO loneliness. This article provides empirical evidence from in-depth interviews with 46 CEOs of leading Canadian organizations. We found that CEOs do experience feelings of loneliness in their job, but in a way that differs from dominant psychological and sociological accounts—e.g. as a subjective negative emotions deriving from a lack of meaningful relationships. Building on the behavioral strategy literature, we show that CEO loneliness stems from an assessment of organizational vulnerability coupled with a sense of uselessness in proximal task-network, which translates into increased task-challenges. We also argue that CEOs thwart their feeling of loneliness through two dominant strategies that aim at increasing their self-agency and reinforcing their (proximal and distal) task-networks. We propose a task-related model of CEO loneliness that unpacks its organizing effects, thereby offering a perspective that nuances former psychological and sociological accounts, as well as contributes to the behavioral strategy literature.

MOC: **Performance Feedback and Impression Management: The Moderating Role of CEO Overconfidence**

Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*
Author: **Hazel Husne Dadanlar**, *Coastal Carolina U.*
Author: **Soumendra Banerjee**, *Misericordia U.*

We propose that while positive performance feedback is positively related to firm sentiment, negative performance feedback is negatively related to firm sentiment. Additionally, overconfident CEOs will improve the positive relationship between positive performance feedback and firm sentiment and reduce the negative relationship between negative performance feedback and firm sentiment. Using 7,186 firm-year observations for 2004-2017 period, we show that positive performance feedback positively affects firm sentiment and negative performance feedback negatively influence how firm sentiment is communicated to firm stakeholders. We also found that higher levels of CEO overconfidence will minimize the negative impact of negative performance feedback on firm sentiment. Our research extends the current discourse on firm organizational impression management and CEO overconfidence research as we provide a nuanced context to the intriguing relationship between firm performance feedback and impression management (proxied by firm sentiment). Our findings have several implications for corporate governance leaders and shareholders.

MOC: **Performance Shortfalls and Strategic Risk Taking: The Moderating Role of CEO Personality Traits**

Author: **Xiwen Kang**, *School of Business, Sun Yat-sen U.*
Author: **Weiwen Li**, *Sun Yat-Sen U.*
Author: **Ziye Chen**, *School of Business, Sun Yat-sen U.*

Firms regulate their adaptive risk taking based on performance evaluations. Problemistic search model embedded in the behavioral theory of firm predicts that performance below aspirations induce subsequent risk-taking actions. However, there exists empirical inconsistency as to whether underperformance drives increased risk taking. We reconciled the conflicting empirical findings by relaxing the assumption that firms automatically respond to performance feedback, which is prevalent in extant problemistic search studies. We incorporate managerial agency into problemistic search studies, and examine the moderating role of CEO Big-Five personality traits. Our empirical results demonstrated that the relationship between performance shortfalls and risk taking was more positive for CEOs with high levels of openness, but low levels of conscientiousness and neuroticism. Implications for theory and practice are discussed.

MOC: **The More, The Better: How Overconfident CEOs Shape Their Firms' Digital Orientation**

Author: **Julie Saesen**, *Chair of Innovation Management, TU Dortmund U.*

The ability to innovate proves to be especially crucial in times of global crisis, amplifying the urge for digital transformation. A key instrument to help firms organize for innovation is to adopt a digital orientation (DO). DO is a strategic orientation helping firms to prepare for a successful digital transformation by defining how to nurture digitalization strategies. Although extant literature reveals that CEOs shape firms' strategic orientations by allocating digital resources towards innovative investments, we lack a comprehensive understanding of the influence of CEOs on their firms' DO. We address this gap and propose that CEO overconfidence positively relates to DO. Our results indicate that the relationship between CEO overconfidence and DO is stronger in industries with low market turbulence and low competitive intensity. Our study offers two main contributions. Firstly, we add to the literature on information systems (IS) by providing evidence on potential antecedents of DO and how firms leverage their organizational and technological capabilities to support the ongoing quest for digital transformation. Secondly, we advance the upper echelons perspective by showing how the interplay of managerial characteristics and external dynamic environments, specifically market turbulence and competitive intensity, influence the relation between CEO overconfidence and a firm's DO.

A Conversation on Cognitive Aids in Strategy

Organizer: **Kristian Johan Sund**, *Roskilde U.*
Organizer: **Robert Galavan**, *National U. of Ireland, Maynooth*
Panelist: **Robin Gustafsson**, *Aalto U.*
Panelist: **Robert Phillip Wright**, *Hong Kong Polytechnic U.*
Panelist: **Cole Evan Short**, *Pepperdine Graziadio Business School*
Panelist: **Timothy David Hubbard**, *U. of Notre Dame*
Panelist: **Matthew Spaniol**, *Roskilde U.*

This is a proposal for our fifth annual panel symposium exploring new horizons in managerial and organizational cognition research. In previous years we respectively covered perceived uncertainty, advances in methods, innovation, and business models. This year we propose a conversation to explore the theoretical foundations of cognitive aids in strategy. Strategy work has witnessed a proliferation of frameworks and tools over the past few decades, now including a plethora of 2x2 matrices, canvases, scenario and war games, Lego, doodling and drawing, music… all supposed to aid processes of organizational cognition and planning in the context of strategy work. We aim to take stock of some of the theoretical foundations of why and how such tools impact cognition. This conversation precedes an anthology that will be published later in 2023 under the title Cognitive Aids in Strategy (the latest volume in the Emerald series New Horizons in Managerial and Organizational Cognition).

Organizational Change and Transformation

Session Moderator: **Sandor Talas**, *U. of Queensland*

MOC: **Merger Failure as Self-Regulation Failure: An Organizational Change Phenomenon in Merger Integration**

Author: **Sandor Talas**, *U. of Queensland*
Author: **Andre Pekerti**, *U. of Queensland*
Author: **Neal M. Ashkanasy**, *U. of Queensland*

The success of corporate mergers and acquisitions is largely determined by the outcome of the post-merger integration (PMI) process. There is a growing consensus however that the human aspects of organizational change and various elements of sociocultural integration, like cultural differences, trust, identity, and organizational justice, are key to PMI success. Despite decades of studies, there is no established mechanism for the formation of the near-ubiquitous merger syndrome and the way different aspects of sociocultural integration influence PMI outcomes. We posit that the common underlying micro-level mechanism is the depletion of an employee's self-regulatory resources caused by the increased affective-cognitive load and heightened demand for self-control during organizational change and sociocultural integration. The consequences of the resulting self-regulation failure of employees are well-known PMI phenomena, like performance deterioration, ego depletion, and expression of unregulated emotions and behavior. Our proposed approach to explaining PMI-related issues based on self-regulatory resource depletion is grounded in established psychology theory. It provides a common framework for the impact of different PMI phenomena, including various aspects of sociocultural integration, like cultural differences, identity, justice, and trust. Thus, it provides a possible explanation that the compound impact of these sociocultural aspects of organizational change can have a detrimental effect on employees even when they appear to be managed with no major issues separately.

MOC: **Managerial Myopia and Digital Transformation: The Role of Executive Incentive and Market Pressure**

Author: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*
Author: **Su Yaxin**, *School of Management and Economics, Beijing Institute of Technology*
Author: **Zhaohui Wang**, *The U. of Hongkong*

Digital transformation has become a crucial engine for countries and enterprises to master new competitive edge and achieve sustainable development. However, not all executives in the strategic apex take a long-term vision. Drawing on the management cognition theory, upper echelons theory, and modern agency theory, this paper employs text-based machine learning method and empirically investigates the impact of managerial myopia on firm digital transformation as well as the contingent role of executive incentive and market pressure by employing a multi-sourced panel dataset consisted of 2,795 publicly listed firms in China from 2011 to 2019. Among them, indicators of managerial myopia and firm digital transformation are constructed via text analysis and machine learning. Empirical results show that 1) managerial myopia significantly inhibits digital transformation; 2) market pressure and equity incentive aggravate this negative impact while it is on the contrary for salary incentive. The additional analysis finds that the impact of managerial myopia on digitalization is mainly reflected in digital product and digital marketing rather than digital finance. Series robustness checks reaffirm the above findings. By exploring the negative role of managerial myopia and the contingent factors on digital transformation, this study opens new doors and therefore contributes to the theory development and managerial practice on digitalization in a more volatile and dynamic market.

MOC: **The Legitimation Game – Leveraging Organisational Stigma to Legitimate Institutional Change**

Author: **Louis Lines**, *AAU*

This paper investigates micro level processes that underpin macro level change. It proposes the rhetorical leveraging of organisational stigma as a mechanism for building, achieving and consolidating audiential support for drastic multilateral institutional change in the case of Brexit. It makes the case that the micro level foundational processes associated with organisational stigma can support, justify and validate macro level institutional change by cultivating a micro-level perceptions from which change framing and discursive rhetoric derives its legitimacy. Whilst extant theoretical and empirical work has established the importance of micro-level (individual) perceptions in establishing taken-for-granted legitimacy (Bitektine & Haack, 2015), less works has been undertaken to establish how micro-level perceptions translate into institutional change. The objective of this study was to understand how individual perceptions inform change processes. It contributes by demonstrating that the discursive leveraging of organisational stigma provides a mechanism through which micro level observations of normative deviance (Devers et al., 2009) are translated into vilifying rhetoric that is capable of supporting change framing efforts. It demonstrates a process model though which organisational stigma can function as an important tool for building a support base, serving to intensify audiential responses, whilst also generating the relative stakeholder group homogeneity and critical mass necessary for initiating institutional change. As an empirical base this study examines statements by members of the Eurosceptic European Research Group made in the House of Commons between 2010-16. It utilises tools from grounded theory, employing the Gioia method (Gioia et al., 2013).

MOC: **Executing Change: Behavioral Implications of CEO Cognitive Complexity and Flexibility Across Tenure**

Author: **Philipp Benedikt Becker**, *WU Vienna U. of Economics and Business*
Author: **Patricia Klarner**, *WU Vienna U. of Economics and Business*

Prior research established that CEO mental models explain heterogeneity in strategic decision-making but neglected their dynamic nature. Our novel methodological approach enables us to study two fundamental thinking styles that become explicit as mental model characteristics: cognitive complexity and cognitive flexibility. Our panel data analysis of 7,536 firm-year observations of S&P 500 companies reveals an intriguing paradox: while cognitive complexity and cognitive flexibility might enable CEOs to understand the firm´s multifaceted and dynamic situation, both cognitive complexity and cognitive flexibility decrease the CEO´s capacity to execute far-reaching strategic change. As the CEO´s tenure progresses the negative effect of cognitive complexity on strategic change strengthens, while cognitive flexible CEOs retain their capacity to initiate strategic change. Our results highlight the dynamic behavioral implications of CEO cognition.

Allocating Time and Effort

Session Moderator: **Frida Pemer**, *Stockholm School of Economics*

MOC: **Time Flies: How Becoming a Professional Changes the Memories of Time**

Author: **Frida Pemer**, *Stockholm School of Economics*
Author: **Ruilin Huang**, *Stockholm School of Economics*

Why does time "fly," and why do we feel there is not enough time? Drawing on the cross-fertilization of literature on Organizational Memory Studies (OMS) and Occupations and Professions in Organizations (OPO), we conduct an empirical longitudinal study to capture how the memories of temporal speed change as individuals become socialized into occupations. Based on an inductive analysis, we identify five mechanisms that accelerate the individuals' memories of temporal speed as they transition from being students to becoming knowledge workers: interdependent work, work-life boundaries, the economization of time, the disciplining of and by time, and a moderating sense of enjoyment. We further summarize our contribution to the literature on social memory in OMS and the becoming lens in OPO research into a conceptual model of mnemonic time.

MOC: **Regain Control of Time in Remote Work: Incorporating the "Self" and the "Home"**

Author: **Ruilin Huang**, *Stockholm School of Economics*

Do you manage time, or does time manage you? Drawing on the literature on time management and temporal structuring, we empirically explore the temporal relationships between individual knowledge workers and their environment in remote work. The data include interviews, reflection diaries, and email explanations. Based on an inductive data analysis, we found that knowledge workers are commonly managed by "time" (the dominant yet problematic organizational time norm) in remote work, unless they take actions to regain control over it. We identify three prime factors behind being managed by "time": frequent calendar bookings, ad hoc tasks, and blurred work-life boundaries. Whereas the actions to regain control of time include: time blocking, strategic "gap-filling", self-scheduling and forming routines, and synchronizing with the home dimension. We further summarize our contribution to the time management and temporal structuring literature into a conceptual model of the temporal relationships between individual knowledge workers and their environment in remote work.

MOC: **The Motivational Effects of Hope on Effort: Hope for Success With or Without Effort**

Author: **Sarah Klein**, *Brandenburg U. of Technology Cottbus-Senftenberg*
Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg / Indiana U. Bloomington*

Existing research focuses on hope as a motivational driver for personal effort. We argue that hope can facilitate individuals' decisions for and against effort, depending on specific conditions. Based on a vignette study with 350 subjects, we test this suggestion with a scenario where a person decides for or against an effortful training that experts consider appropriate for that person, presuming that one could hope for success based on training but also for success without training. We find that hope can leverage individuals' decisions to engage in and avoid effortful behavior. Moreover, ambiguity in a behavioral outcome strengthens the effect of hope on the likelihood of choosing the corresponding behavior. Separating internal from a more general kind of hope, we find that hope for success by training is mainly driven by internal hope but hope without training relates less to internal hope. Carefully separating the effects of hope from the effects of optimism, our study highlights the relevance of hope beyond optimism.

MOC: **The Micro-Foundations of Overwhelm: Components of a Stress State Conquering the Workplace**

Author: **Nele Dael**, *IMD Business School*
Author: **Alyson Meister**, *IMD Business School*
Author: **Franciska Krings**, *U. of Lausanne*

Chronic stress is increasingly pervasive in contemporary workplaces, which are characterized by ongoing uncertainty and complex demands stemming from both work and personal life. The phenomenon of 'overwhelm' is colloquially well known and used by individuals who experience stress. However, beyond its brief definition as a 'threat state', scholarly work has not addressed this phenomenon nor offered an in-depth understanding of the subjective experience of overwhelm and its effects. Drawing together a wealth of fragmented literature with our study of 94 first-person narratives, we define overwhelm as a predominantly negative stress state specified by the perception of having reached a tipping point where the individual has no longer sufficient resources to meet the excessive demands of the situation. In unpacking overwhelm in terms of its associated feelings, appraisals, action readiness, physiological and bodily expressions, we find that it has critically important implications for workers' ability to cope, their performance, and their well-being. Our research not only integrates and contributes to the stress, emotions, and management literatures by empirically exploring and building theory surrounding overwhelm, but it equips practitioners with the tools to better understand and address stress before it leads to negative downstream consequences for individuals and organizations.

Emotions Among Leaders and Employees

Session Moderator: **Suvi-Tuuli Helin**, *Aalto U.*

MOC: **From Grieving to Career Change: How Personal Grief-inducing Events Affect Work Identity**

Author: **Lidiia Pletneva**, *ESSEC Business School*

Building on an inductive, qualitative study of employees, who experienced grief-inducing events such as termination of significant relationship as the result of bereavement or separation of strong committed partnership, this paper explores how such events affect professional life, in particular work identity. Using the results of 51 in-depth interviews, I develop a process model of the impact of personal grief-inducing events on work identity. I find that these events prompt a new emphasis on work identity meaningfulness as well as work identity humanizing that can take three paths: rebalancing work and non-work identity, humanizing work identity as a coworker or a manager, and humanizing work identity as an employee. Such processes were induced by affective, cognitive, and relational triggers generated by grief-inducing events. In turn, work identity humanizing and meaningfulness lead to career path change or job crafting. This paper advances theorizing on identity, the meaning of work, and the work-life interface.

MOC: **Using Researcher's Emotions for Doing Qualitative Emotion Research**

Author: **Suvi-Tuuli Helin**, *Aalto U.*

Qualitative researchers studying emotion-related phenomena in organizations engage closely with their research contexts. When researchers spend a long time in the field, their reactions toward issues in the environment can become more and more similar to the organizational members' reactions. This process also enables the researcher to investigate his or her reactions, emotions, and thoughts as relevant data. We present a processual description of how the researcher can utilize his or her own emotions for data collection by following a three-stage process: (1) attaching to the research site: recognizing own emotions to understand the research participants' experiences; (2) becoming insider: using emotional sensations to follow-up questions and additional data gathering; and (3) building boundaries: detaching own emotions from research participant's emotions to improve the reliability of the study. We will use our experience and anecdotes from a five-year qualitative emotion study conducted in a management consulting agency to illustrate how the researcher's emotions enabled us to understand more deeply the emotional phenomenon in the field. With this embodied research process, we add new information sources to emotion-related research that has so far remained underutilized.

MOC: **Are You Envious of Me? Employees' Envy Attribution and Behavioral Responses to Coworkers' Incivility**

Author: **Fangzhou Lin**, *U. of Macau*
Author: **Long Wai Lam**, *U. of Macau*
Author: **Ou Yang**, *Crystone Tech Co., Ltd. Zhuhai*

Focusing on the perspective of the envied person, this paper extends the envy literature by answering two fundamental questions raised by Duffy et al. (2021) in their review study: How does the envied person detect the envy toward them? and how they cope with others' envy? Guiding by the envy attribution model, we posit that (1) envy may be perceived by individuals who are targets of others' uncivil behavior; and (2) the envied person will engage in either advantage protection or relationship promotion behavior afterwards. In Study 1, a two-wave survey of full-time employees, we found that experienced incivility was positively associated with the perception of being envied. In Study 2, a three-wave survey involving employees and their supervisors, we found that, experienced incivility was again associated with the perception of being envied, which in turn was related to self-rated political behavior and supervisor-rated interpersonal helping. Perceived leader's empowerment accentuated such indirect relationships. We explained theoretical and practical implications of our study's findings.

MOC: **It Is OK to Express Guilt: The Prosocial Interpersonal Effects of Leaders' Guilt Display**

Author: **Beier Hong**, *Renmin U. of China*
Author: **Jianghua Mao**, *Zhongnan U. of Economics and Law*

Despite the important role of moral emotions in leadership, we still know little about whether leaders' expression of self-directed moral emotions can have interpersonal effects. By highlighting a typical self-conscious moral emotion—guilt—in this research, we explore the prosocial interpersonal effects of leader guilt expression. Drawing from emotion as social information theory, we propose that leader guilt expression promotes followers' forgiveness and organizational citizen behaviors by invoking followers' moved emotions and increasing their benevolence inference of the leader. Additionally, we anticipate that the quality of leader–member exchange influences the interpersonal effects of leader guilt expression. Utilizing a two-wave field survey (Study 1) and an experiment of critical incident technique (Study 2), most of our hypotheses are supported. Theoretical and practical contributions are discussed.

Participant: **Timothy Kundro**, *U. of North Carolina, Chapel Hill*
Participant: **Nour Kteily**, *Northwestern Kellogg School of Management*

Engaging in wrongdoing at work is extremely costly to organizations and employees. Past work suggests that wrongdoing must be condemned in order to mitigate the costs and deter future transgressors. However, much of this past work has ignored the relational context, stripping away established relationships between people involved in the transgression (e.g., between witness and transgressor), and specific attributes of those involved (e.g., demographics). This presents a problem for our understanding of morality, as wrongdoing at work occurs within relational contexts embedded in organizations. The present symposium seeks to broaden our understanding of morality at work by focusing on the relational contexts in which moral transgressions occur. Specifically, we demonstrate how the relationships to a wrongdoer shapes observers' moral judgments and decisions to report, how the status and behavior of people who condemn transgressions impacts third-party judgments, and how potential transgressors navigate a decision to transgress based on the context.

The COVID-19 pandemic saw employees deal with loss of closed ones, social isolation, increased family obligations, health issues, all at once. This has brought a renewed spotlight on how employees deal with their mental health, well-being as well as grief of losing loved ones. While employees continue to adjust and explore what work means to them, organizations acknowledge the need to address the concerns of their employees. Against this phenomenological backdrop, our symposium aims to explore to the conference's theme of putting the worker front and center from a mental health perspective. We present qualitative, quantitative, and theoretical work aimed at advancing our understanding of grief, well-being, and mental health at work. The symposium includes five papers showcasing the perception of mental health, the impact of grief and mortality salience on employees and organizations, and the impact of workplace relationships with colleagues on well-being. Together with discussion, led by Prof. Michelle Duffy, the papers aim to provide insight into the context of grief, stress, and well-being and build, support, and sustain a community of scholars interested in grief, wellbeing and employee mental health.

Exploring Spiritual Entrepreneurship, Yoga Practices, and Financial Well-being in Career Transitions

Session Moderator: **Juha Kansikas**, *U. of Jyväskylä School of Business*

This session will include papers that examine spirituality, well-being, and career transitions. The session will cover topics such as the paradox of spiritual entrepreneurship and the interpretative assumptions on entrepreneur archetypes, the ability of yoga-based practices to cope with goal difficulties, the transition of military veterans into civilian work environments, and an integrated framework of financial well-being from an evolutionary perspective. Attendees will gain insights into how spirituality and yoga-based practices can enhance coping skills and improve overall well-being during career transitions, as well as how to better support military veterans in their career transitions. Additionally, the session will explore an integrated framework of financial well-being and how it evolves over time. Overall, this session aims to provide a thought-provoking discussion on how spirituality, well-being, and career transitions intersect and can be effectively managed.

MSR: **Paradox of Spiritual Entrepreneurship: Interpretative Assumptions on Entrepreneur Archetypes**

Author: **Juha Kansikas**, *U. of Jyväskylä School of Business*

Spirituality, and ideologies of both leaders and organizations, have gathered attention in management science. Studying entrepreneurs from the perspective of spiritual and ideological thinking needs more attention because of conceptual challenges. Ideologies of entrepreneurs are seen at the current research typically as political thinking. Therefore, this chapter aims to increase conceptual understanding on indicative typology of spiritual entrepreneurs and contesting ideologies entrepreneurs have. Mindset and values of entrepreneurs, stemming from spiritual knowledge, are discussed at the context of entrepreneurial reasoning. Contribution on how entrepreneur spirituality, and values related to it, will be discussed. By using typological analysis on the selected current research literature, and the classification theme of cognitive-conative-affective approach, the study shows that the typology of the spiritual entrepreneurs consists of societal entrepreneurs, family-centric entrepreneurs, environmental entrepreneurs, religion-centric entrepreneurs, anti-social entrepreneurs, and opportunistic entrepreneurs.

MSR: **Towards An Integrated Framework Of Financial Well-Being: An Evolutionary Prespective**

Author: **Nishant Garg**, *Indian Institute of Management, Lucknow*
Author: **Pushpendra Priyadarshi**, *Indian Institute of Management, Lucknow*
Author: **Ashish Malik**, *Newcastle U. Business School*

Financial well-being (FWB) is a trending area of research as it stands perennially at the crossroads of money and human well-being, a relationship that has been extensively examined over the two decades. Nevertheless, the literature fails to capture the interrelationships between various themes of FWB due to the multidimensional nature of the construct. Motivated by this diverse yet unresolved viewpoint on FWB, this research develops a framework to integrate the growing literature, and highlight its major themes and their interrelatedness, thus bringing clarity to the intellectual narrative of FWB. A comprehensive bibliometric analysis of the FWB domain covering 682 research articles and 24,000 citations from 2002–2022 period are analysed. This review contributes theoretically by offering definitional clarity, highlighting major themes, and delineating the intellectual structure through our integrated conceptual framework by interpreting the results through the evolution, valence, and actor perspective. Implications for theory and practice are also discussed.

MSR: **How do Yoga-based Practices Build the Ability to Cope with Goal Difficulties?**

Author: **Soumya Dutta**, *Doctoral Student at Indian Institute of Technology Bombay (IIT Bombay), India*
Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

Goal-setting theory is widely used in public and private organisations. Although, according to existing research, difficult goals can encourage people to take unnecessary risks, cheat and engage in socially irresponsible behaviour. In this regard, effective self-management education would play a vital role in building the capacity to cope with goal difficulty. However, little research has investigated how to increase the ability to overcome goal difficulty. To address this need, we propose that Yoga based practices(YBP) can develop the ability to cope with goal difficulty by enhancing equanimity and reducing mind wandering. We report two studies respectively to examine this hypothesis. In Study 1, a survey-based study, we examine the impact of equanimity(EQM) on goal difficulty (GD) mediated by mind wandering. The results supported the hypothesised model. In study 2, we examine the impact of YBP on equanimity, mind wandering and goal difficulty using pre-post experiment design. The findings of study 2 suggest that YBP enhanced equanimity and that YBP are effective, efficient, and sustainable training tools for building coping ability with goal difficulty among management students.We discuss the importance and implications of this finding for the field of Management, Spirituality and religion research, organisations and management education. We consider the study's limitations and propose future research directions.

MSR: **From the Military to Civilian Work Environment: A Study of Veterans' Career Transition**

Author: **Kevin Sanford**, *Los Angeles Community College District*
Author: **Adam Wood**, *Woodbury U.*
Author: **Svetlana S. Holt**, *Woodbury U.*

Military service is a transformative experience that leaves an indelible mark on all who serve. Once separated from the military way of life, many veterans find that they yearn for the structure, camaraderie, and discipline they experienced while in the military. These feelings of attachment to the military can make the transition back to civilian life difficult and pose a barrier to success in a civilian workplace. As military service members separate from their military service obligation and transition to the civilian workforce, they experience numerous challenges leaving behind the culture of the military and adapting to the civilian way of life. The purpose of this study is to explore the experiences of junior enlisted Marine Corps veterans as they address their feelings of attachment and transition out of the military and into the civilian workforce. Using Transition Theory and Attachment Theory, as they impact veterans transitioning out of the military and into the civilian workforce, this study explains the intersection of veterans' struggles with both transition and feelings of attachment to the military lifestyle so that the military, veterans, and civilian employers can develop strategies to ease the transitions of the current generation of warriors back to civilian life and foster success in the workplace. Qualitative interviews with former military service members were conducted to collect data and information on their individual personal experiences.

Understanding Trust in Organizations

Session Moderator: **Mingshuang Ji**, *U. of Illinois at Urbana-Champaign*

OB: **A Dyadic Understanding of Trust in Negotiations: The Role of Trust Congruence**

Author: **Mingshuang Ji**, *U. of Illinois at Urbana-Champaign*
Author: **Alex Fogel**, *U. of Illinois at Urbana-Champaign*

This paper examines the role of trust in negotiation from a dyadic perspective. Based on the theories of trust congruence and social exchange, this paper hypothesizes that negotiation dyads will get better subjective outcomes when their trust in each other is more aligned rather than diverged, and this relationship will be mediated by integrative and distributive negotiation behaviors. Polynomial regression is applied to analyze data from a sample of 120 students (60 dyads) enrolled in an MBA program. Results suggest that negotiators get most favorable subjective outcomes when their trust in each other converges at a high level of trust, and this relationship is mediated by negotiators' integrative behaviors. The discussion of dyadic states of trust in this study will help to understand the dilemma of trust in negotiation and fill the literature gap by empirically testing the trust congruence theory using a bilateral perspective. Practically, the findings of this paper will help negotiators make wiser decisions of trust by showing them that successful negotiations not only need 'trust, but verify', but also need both actors to be 'on the same page'.

OB: **Trusted Voices: How Employees Generalize Trust to Other Departments and Transfer Group Trust**

Author: **James Coutinho**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Giuseppe Labianca**, *U. of Massachusetts, Amherst*
Author: **Seong Won Yang**, *U. of Kentucky*
Author: **Dean Lusher**, *Swinburne U. of Technology*
Author: **Peng Wang**, *Swinburne U. of Technology*

Trust in other departments is important for cross-unit collaboration as it helps employees to quickly form effective working relationships with others whom they do not know well or with whom they have not worked previously. Our field social network study of individuals' trust in other departments in a project-based global design and advanced manufacturing firm has three main findings. First, we find that trust is generalized from employees' direct trust relationships with known members of another department to the department as a whole. Second, that trust generalization is moderated by formal workflow dependence, such that an employee's trust in another department is determined most strongly by department members whom they depend on highly for work inputs, but in whom they lack trust. Third, that trust in other departments is transferred indirectly via relationships with trusted colleagues who themselves trust the judged department. Our paper advances understanding of trust as an organizing principle by elucidating the roles of trust generalization and group trust transfer, as well as the interplay between formal and informal organization in determining trust in other organizational groups.

OB: **A Dynamic Perspective on Coworker Trust Change Over Time**

Author: **Jiping Li**, *Frankfurt School of Finance & Management*
Author: **Prithviraj Chattopadhyay**, *U. of Auckland*
Author: **Elizabeth George**, *Cambridge Judge Business School*

We examined the trajectory of coworker trust change among newcomers across six years. Integrating research on the dynamics of personality and temperament with the literature on newcomer socialization, we argue that changes in newcomers' approach and avoidance temperaments influence changes in their coworker trust over time after joining the organization. Our results reveal that approach and avoidance temperaments decrease linearly in the first six years after joining; the trajectories of approach and avoidance temperaments predict the coworker trust trajectory. Moreover, the task interdependence characteristics moderate the trends of the approach and avoidance temperament, which subsequently, via coworker trust trend, predict the speed and occurrence of employee turnover over the first six years of employment.

OB: **Time Will Tell or Will it?: Power Inequality Hinders Trust Meta-Accuracy Development Over Time**

Author: **Leander De Schutter**, *Erasmus U. Rotterdam*
Author: **Xue Zheng**, *China Europe International Business School (CEIBS)*
Author: **Marius Van Dijke**, *Erasmus U. Rotterdam*

Feeling trusted is beneficial for employees and organizations. However, we know little about whether employees' felt trust becomes accurate over time. Building on the realistic accuracy model and power literature, we theorize and test a moderated mediation model where trust meta-perceptions become accurate over time from the inception of a relationship. We also propose that power inequality as a defining feature of work relationships moderates the effects of time on trust meta-accuracy development such that dyads with equal power become more accurate in their trust perceptions over time more quickly compared to dyads with unequal power. Furthermore, we propose that trust meta-accuracy positively influences dyadic performance. We found supporting evidence from a 9-day diary field study among 214 newcomer-supervisor dyads and 222 newcomer-coworker dyads (Study 1) as well as from a well-controlled experiment among strangers in which we experimentally manipulated power equality (vs. inequality) and included an objective measure of dyadic performance. Our research presents pioneering work that examines the temporal dynamics of trust meta-accuracy development and its downstream effects on dyadic performance among newcomers and strangers in their initial relationship formation. Our theoretical development and empirical findings have important implications for trust meta-perceptions research.

Understanding Employee Job Satisfaction

Session Moderator: **Samantha Jordan**, *U. of North Texas*

OB: **How Death Trajectories and Job Satisfaction Impact Responses to a Generationally-defining Event**

Author: **Samantha Jordan**, *U. of North Texas*
Author: **Wayne Hochwarter**, *Florida State U.*
Author: **Gonzalo Molina Sieiro**, *U. of Nevada Las Vegas*

Constant media coverage of high mortality macro-level events (Fishman, 2017) has made death increasingly salient for all workers. Drawing from event system theory (EST; Morgeson, Mitchell, & Liu, 2015) and transactional stress theory (Lazarus & Folkman, 1984), we examine employee reactions to high mortality events, using the current COVID-19 crisis as our context. We posit that death-related inferences impact employees' perceptions of an event's strength characteristics (i.e., novelty, disruptiveness, and criticality), which subsequently determine the event's impact on employee well-being and behavior. Additionally, given that job satisfaction is utilized as a reference point when employees interpret and respond to their environment, we theorize that high job satisfaction amplifies the effects of an event's death trajectory on perceptions of the event's strength. Using a multi-wave investigation of 871 full-time employees, results indicate that perceptions of the event's novelty, disruptiveness, and criticality depend on both death trajectories (i.e., increases in geographical proximal deaths) and generalized employee attitudes (i.e., general job satisfaction). These findings support the proposed event-systems model of large-scale mortality events.

OB: **Sustaining Work Life Balance Toward Job Satisfaction and Employee Intention to Leave Universities**

Author: **Roselina Binti Ahmad Saufi**, *MGSEB, U. Malaysia Kelantan (UMK)*
Author: **P.Yukthamarani Permarupan**, *U. Malaysia Kelantan*
Author: **SAMSIDINE AIDARA**, *U. Malaysia Kelantan*
Author: **Noor Raihani Binti Zainol**, *U. Malaysia Kelantan*
Author: **Noor Ullah Khan**, *MGSEB, U. Malaysia Kelantan (UMK)*

Retaining, maintaining, and sustaining brilliant and competent workers with excellent academic credentials is a major challenge in the industry of higher education, given the fast-changing environment and the increasing trend of global competition. Universities struggle to find, attract, and retain outstanding talent because academic attrition is rising in the higher education industry. With job satisfaction as a mediator and outside employment opportunities as a moderator, this study aims to examine how university organizational policies regarding work-life balance (WLB) practices enhance job satisfaction and reduce employee intent to leave. Social Exchange Theory served as the study's theoretical foundation. Data was collected from 466 participants in an online survey using a cross-sectional research methodology, and partial least square structural equation modelling (PLS-SEM) was used to analyze the results. The outcome confirmed that sustaining WLB practices were positively related to job satisfaction and negatively related to academic employees' intention to leave. Further, the study's results confirmed that job satisfaction significantly mediates the relationship between WLB practices and employee intention to leave. The study analysis demonstrated that job opportunity significantly moderates the relationship between job satisfaction and employee intention to leave. The paper's main contribution is a coherent and comprehensive model of retention strategy that academic HR specialists, legislators, and university administrators would find highly beneficial in implementing WLB principles and policies into practice.

OB: **Personality and Situational Strength Interactions on Job Satisfaction: Trait Activation Perspective**

Author: **Keisuke Mikami**, *Ohio U.*
Author: **Jeffrey B. Vancouver**, *Ohio U.*

Antecedents of job satisfaction focus on the main effects of person and situational characteristics, which likely provides a myopic view of the interplay. The present study aimed to elucidate person-situation interactions on job satisfaction by focusing on personality (conscientiousness and agreeableness) and situational strength. Using the survey data obtained from Amazon's Mechanical Turk workers, we examined both the main effects of situational strength and personality-situational strength interactions on job satisfaction. Hypotheses regarding interactions were proposed based on trait activation theory (TAT). Results showed significant main effects of situational strength facets on job satisfaction. Furthermore, moderated multiple regression showed that positive relationships between conscientiousness and job satisfaction as well as agreeableness and job satisfaction were moderated by situational strength facets as predicted by TAT.

OB: **Hustling or Bustling? Self-Determination Theory to Predict Attitudes and Behaviors of Side-Hustlers**

Author: **Cagla Celik**, *U. of Pittsburgh*
Author: **Liam Patrick Maher**, *Boise State U.*
Author: **Charn Patrick McAllister**, *Northern Arizona U.*

Side hustles, independent and temporary income generating jobs performed in conjunction with full-time work, have drastically increased in popularity over the past decade. Despite the proliferation of side-hustles, scholars know fairly little about the consequences for individuals and organizations, as side-hustles may enrich or conflict with full-time jobs. The purpose of this paper is to address this gap in knowledge by synthesizing self-determination theory with role enrichment and role conflict perspectives to evaluate how psychological need satisfaction and frustration within side-hustle and full-time work environments interact to predict attitudinal and behavioral outcomes. Using polynomial regression and surface response methodology, we analyzed data from 136 side-hustlers who rated their psychological need satisfaction and frustration in both side-hustle and full-time domains and then reported their psychological well-being, full-time job satisfaction, and full-time organizational citizenship behavior. Although results were mixed, the preponderance of the evidence supported a role-conflict paradigm, where low need satisfaction or high need frustration created negative spillover into full-time attitudes and behaviors. Contributions to theory, limitations, directions for future research, and implications for practitioners are discussed.

New Research on Social Identity Processes at Work

Session Moderator: **Rebecca Mitchell**, *U. of Colorado, Boulder*

OB: **Better Than Myself: A Translation and Extension of Internal Comparison Theories**

Author: **Rebecca Mitchell**, *U. of Colorado, Boulder*

Social comparison theory (SCT; Festinger, 1954: 22) is ubiquitous and underlies much of modern management research, However, in addition to comparing ourselves externally to similar others, educational psychologists study how internal comparisons affect children (Albert, 1977; Marsh, 1986; Möller & Marsh, 2013). Internal comparison theories (ICTs) fall into two categories that include (a) temporal comparisons, that is, comparisons between our current self-evaluation and a past or future evaluation, and (b) dimensional comparisons, that is, comparisons between our evaluation in one dimension (e.g., teaching skills) to our evaluation on another dimension (e.g., research skills). Comparing ICTs to existing management theories and SCT, we translate ICTs into the adult working context, linking the internal comparison processes to domain-specific task performance. Additionally, we introduce novel theory building about why ICTs influence task performance as well as when, where, and for whom these relationships are stronger or weaker. Thus, we present a comprehensive theoretical model of the outcomes, mechanisms, and boundary conditions of ICTs at work that contributes to research in both management and educational psychology. Finally, we outline applications of this theory to the identity, justice, emotions, and leadership literatures.

OB: **The Hedges Have Eyes: Third-party Evaluation of Social Networking in Organizations**

Author: **Kun Luan**, *China U. of Petroleum*

Research on social networking has focused almost exclusively on the ego-centric perspective of positive pursuit of network ties with alters. The pervasive context, which has received less attention, suggests that the ego-alter connection is surrounded by a series of active third-party observers, who can observe, evaluate and reciprocate to ego's social networking behaviors. Taking a third-party perspective, we conducted three studies using both qualitative and quantitative designs to explore how third-party observers perceive and evaluate egos' social networking behaviors. Based on an inductive analysis, Study 1 initially categorizes two distinct observed networking approaches within organizations: horizontal networking with colleagues and upward networking with leaders, and proposes a new framework revealing how third-party observers evaluate egos' horizontal and upward networking across two dimensions: affective resources and information resources. A whole-network field survey in Study 2 empirically verifies that third-party observers are more likely to perceive egos as having affective resources when the latter are engaging in horizontal networking. Alternatively, third-party observers are more likely to perceive egos as having information resources when the latter are engaging in upward networking. An experiment in Study 3 fully replicates these findings. Multiple mediation analysis further shows that perceived affective resources play a salient mediating role in third parties' tie preferences than perceived information resources in both friendship and task-related networks. In the end, we discuss contributions of our study to the integration of social network and psychological perspectives in organizational studies.

OB: **"Now the Army is who I am": Socializing for Identity Fusion in French Military Cadets**

Author: **Lucas Dufour**, *Toronto Metropolitan U.*
Author: **Meena Andiappan**, *U. of Toronto*

In this paper, we qualitatively investigate how an organization like the Army strategically employs a broad range of intensive socialization tactics to attain newcomer identity fusion (a visceral feeling of oneness with one's group) while limiting the disadvantages normally associated with this approach (attrition and ambivalence). We use data collected from 71 longitudinal interviews conducted over two-years during initial three-month training periods with cadets, instructors, and staff members of an Army training camp, supplemented with observation data and archival data. We find that the Army and its instructors engage with cadets with the objective of altering their values (e.g. from individuality to collectiveness; from understanding to obeying), which commonly resulted in identity denial. To combat this outcome, instructors used a specific set of socialization tactics (e.g. extreme physical training; isolation; process standardization) to help newcomers limit their time spent on self-reflection and to instead encourage them to experience identity revealing (i.e. becoming the best version of themselves). In parallel, another set of tactics was used (e.g. constant group interactions; instructor's unwavering support) to achieve group cohesion and trust in the organization. When successful, this process ultimately resulted in an ideal socialization outcome: identity fusion. We further discuss implications for managers, employees, and organizations.

OB: **Mobilization of Followers by Leaders for Partisanship and Collective Action**

Author: **Henrique Minetto Brabo**, *FGV EAESP Sao Paulo School of Business Administration*

Political identity produces mobility of its followers in laboratory experiment (Khumalo, Dumont & Waldzus, 2022). Taking advantage of the municipal Brazilian party experience with quasi-electoral experiments and a methodology causal (regression discontinuity), we show that this experience is not reproduced when we observe different ideological identities of leaders (basically comparing mayors from right vs center, right vs left, and center vs left) on the collective action captured by party filiation of individuals. Our result only corroborates the political identity of collective action when we compare municipalities elections (almost 1,000 municipalities per each one of four elections distributed across the country: 2004, 2008, 2012, and 2016) with left-wing elected mayors and municipalities with center-wing elected mayors. We observe that elected left-wing mayors produces more individuals affiliated with their identity (left-wing) than those affiliated with the same identity of mayors when the elected are from center-wing (over 14 million individuals over the lifespan studied in this investigation).

Personnel selection uses various tools such as interviews, personality tests, and resumes to identify the best applicant for an open position. While there is vast knowledge on the validity of and reactions to these tools, research tends to overlook the what, how, and why of information sharing and reactions. This symposium features five studies examining the processes involved in various stages of the selection. They investigate the cognitive processes that occur during the interview, applicant reactions to different types and formats of questions, and impression management behavior of applicants and recruiters. Thereby, they address influences both by characteristics of the tools and the applicants. Collectively, these papers help advance our understanding of some of the processes underlying commonly used selection tools, which can help refine theories for science and retrieve more specific contributions for the practice of modern personnel selection.

New Directions In Teams Research

Session Moderator: **Michela Carraro**, *TUM School of Management, Technische U. München*

OB: **The Emergence Engine: Socially Mediated Individual Change**

Author: **Mark Maltarich**, *U. of South Carolina*
Author: **Andre Havrylyshyn**, *Binghamton U.-State U. of New York*

The emergence of collective-level constructs has important theoretical and practical significance. Compared to a wealth of research into the antecedents and consequences of group-level emergent characteristics, the processes that account for group emergence remain relatively unexplored. We enrich the emergence literature by reviewing and integrating knowledge about socially mediated influence processes, which describe more precisely how members of a group influence or change each other. We first identify individual-level characteristics that may emerge through social influence, then selectively review the broad literature on socially-mediated interpersonal influence. We integrate knowledge about social influence to produce insight into emergence and provide examples of approaches to future research that can leverage the social influence literature to advance our understanding of the processes that account for group emergence

OB: **Getting Employees Back on Track: The Antecedents of Perception Accuracy**

Author: **Michela Carraro**, *TUM School of Management, Technische U. München*
Author: **Andrea Furlan**, *Department of Economics and Management, U. of Padova*

The literature on team cognition emphasizes that shop floor employees need to develop accurate perceptions about their tasks in order to effectively accomplish the team's objectives. However, how can managers help employees to develop accurate perceptions? To address this question, we draw on work design theory and we examine whether and how the accuracy of shop floor employees' perceptions is related to characteristics of their work environment. Analyzing data from 309 shop floor employees and 57 team leaders, we find that job autonomy positively affects the accuracy of individuals' perceptions. However, this relationship is significant only when moderated by supervisor support, such that the higher supervisor support, the stronger the positive effect of job autonomy on perceptions' accuracy. Moreover, we find that coworker support moderates the effect of job autonomy on perception accuracy such that the lower coworker support, the stronger the relationship between job autonomy and perception accuracy.

OB: **Familiar Teams in Unfamiliar Situations: The Influence of Rewards on Team Creative Problem-Solving**

Author: **Matthias Felix Sinnemann**, *Westfälische Wilhelms-U. Münster*
Author: **Matthias Weiss**, *Radboud U. Nijmegen*
Author: **Kyle Brykman**, *Odette School of Business, U. of Windsor*

In most organizations, it is common practice to attempt to boost teams' motivation by prospecting rewards. However, whether and how rewards affect team creative problem-solving is still unclear. Moreover, there is little understanding of what other contextual factors may shape this relationship. Building on recent team creativity literature, we argue that the separate prospect of either individual or team rewards hampers team creative problem-solving, whereas a mixed reward design of individual and team rewards has the potential to facilitate team creative problem-solving. In addition, and drawing on Evaluation Apprehension Theory, we argue that the effects of reward structure interact with the level of team member familiarity. Specifically, we hypothesize that team rewards have a more positive effect in teams with lower levels of team familiarity as compared to teams with higher levels of team member familiarity. In an experimental escape room study with 117 teams, we find support that mixed rewards positively influence creative problem-solving and that the prospect of a team reward has a more positive influence in unfamiliar teams.

OB: **How Multiple Team Members Allocate Engagement and What Leaders can do About It**

Author: **Diana Santistevan**, *EM Normandie*
Author: **Anna Obermöller**, *EM Normandie*

Engaging team members who work on multiple teams is a central challenge for leaders. However, the literature on multiple team membership, work engagement, and leadership does not address how leaders engage multiple team members in complex environments. Using grounded theory, we studied a division of a large multinational enterprise where multiple team membership was highly prevalent. Our results show that multiple team members make decisions about where to engage, a practice we call "engagement allocation." We describe that practice and explain why multiple team members prefer to engage in some teams over others. We contribute to the literature by offering a theoretical framework that models the relationships between engagement allocation, engagement, and leadership functions.

OB: **A Moderated Mediation Model of Shared Team Identification, Newcomer Embeddedness, and Work Outcomes**

Author: **Qingyue Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Ya Liu**, *Eli Broad School of Business, Michigan State U.*
Author: **Jingqiu Chen**, *Shanghai Jiao Tong U.*

Research on the relationship between off-the-job and on-the-job embeddedness has reached inconsistent conclusions, and the relationship is even more ambiguous for newcomers given their unique experience during the onboarding stage. Drawing on conservation of resources (COR) theory, we suggest the motivational ambient context at the team level—shared team identification— as a key contingency factor in the relationship between community embeddedness and team embeddedness. Specifically, we propose a moderated mediation model in which the indirect effect of the community embeddedness of newcomers on work outcomes (i.e., organizational citizenship behavior (OCB), job performance, and turnover) through team embeddedness is contingent on the level of shared team identification. We tested our hypotheses in a longitudinal field study across three time points with a final sample including 265 newcomer-supervisor dyads and 488 veterans in 76 work teams. Our findings demonstrate that with high levels of shared team identification, newcomers' community embeddedness is positively related to their team embeddedness, which in turn is associated with their OCB, job performance, and voluntary turnover. Accordingly, we offer a more nuanced understanding of the relationship between newcomer community embeddedness and team embeddedness and contribute to the job embeddedness and newcomer socialization literature.

Doing the Wrong Thing: Exploring the Dark Side Effects of (Un)Ethical Leadership

Session Moderator: **Jing-hao Zhang**, *Faculty of Economics and Business, U. of Groningen*

OB: **A Relational Attribution Model of How Leaders Objectify Followers**

Author: **Jing-hao Zhang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Stefan Berger**, *U. of Groningen*
Author: **Onne Janssen**, *U. of Groningen*
Author: **Liying Bai**, *Fuzhou U.*

Leaders as organizational agents may instrumentalize and dehumanize subordinates to achieve collective goals. However, limited scholarly attention was paid to this destructive phenomenon in leader-follower relationships. Drawing on relational attribution theory, we propose a serial mediation model of how and why followers make sense of leadership behaviors as well as the subsequent influences on perceived objectification and job performance. We conducted a two-wave survey study, a video-based lab experiment, and a scenario-based experiment (total N = 753). Our research findings show that task- and relationship-oriented leadership behaviors interact to influence followers' self-concern attribution to leadership, which in turn increases their feelings of being used as tools rather than human beings. Furthermore, other-concern attribution of leader behaviors buffered the effect of self-concern attribution on followers' perceived objectification. We also found that the perception of being objectified by leaders undermined followers' job performance. Our research points out a novel perspective to approach workplace humanity. Theoretical and practical implications are discussed to improve managerial effectiveness and employee well-being.

OB: **Differential Implications of Promotion-and Prevention-focused Ethical Leadership**

Author: **Chu-Ding Ling**, *Renmin U. of China*
Author: **Meng Zhang**, *Renmin U. of China*
Author: **Jinlong Zhu**, *Renmin U. of China*

Ethical leadership is important for promoting ethical behaviors and prohibiting unethical behaviors enacted by employees in organizations. How and when do ethical leadership with different foci relate to employees' ethical and unethical behaviors? Drawing on the social cognitive theory of self-regulation, we propose that promotion-focused ethical leadership is positively related to ethical voice through moral awareness, while prevention-focused ethical leadership is positively related to workplace deviance through more disengagement. Moreover, we propose that when perception of leader moral decoupling is higher, the indirect relationship between promotion-focused ethical leadership and ethical voice via moral awareness is weaker, while the indirect relationship between prevention-focused ethical leadership and workplace deviance via moral disengagement is stronger. Using three-wave field survey data collected from a large company in China, we found supportive findings for our hypothetical model. In sum, our research unveils the differential implications of ethical leadership by taking its content into account and provides pertinent theoretical and practical insights into how to improve the effectiveness of ethical leaders.

OB: **A Qualitative Investigation of Unethical Leadership: Toward a Model of Antecedents and Consequences**

Author: **Gabriela Rivera**, *Penn State Smeal College of Business*
Author: **Linda K Trevino**, *Pennsylvania State U.*
Author: **Marie S. Mitchell**, *U. of North Carolina, Chapel Hill*

Unethical leadership has been shown to harm organizations and their stakeholders, such as employees and customers. Previous work related to unethical leadership has been fragmented, with studies primarily focusing on interpersonal leader behavior (e.g., abusive supervision), others focusing on unethical acts (e.g., cheating, lying), others discussing leader attributes (e.g., narcissism), and still, others concentrating on leader strategies (e.g., performance pressure). The different approaches have created confusion and potential confounds in understanding unethical leadership and separating it from its causes and consequences. Moreover, the extant literature and existing measures and constructs often presume these constructs embody unethical leadership – without asking employees. Thus, it is essential to understand what employees perceive to be unethical leadership as a starting point for conceptualizing it and then investigating its antecedents and consequences. To understand and focus on employees' perceptions, we take an inductive approach, exploring how employees perceive unethical leadership and identifying what they believe are the perceived causes and consequences of it. We offer an emergent model and discuss implications for theory, practice, and future investigations.

OB: **The Double-Edged Sword of Ethical Leadership for Leader In-Role and Extra-Role Performance**

Author: **Grace Ching Chi Ho**, *Arizona State U.*
Author: **David Welsh**, *Arizona State U.*
Author: **John Bush**, *U. of Central Florida*

Given the positive effects ethical leaders have on their followers' performance, the literature has largely assumed that ethical leadership also facilitates the performance of leaders themselves. We challenge this assumption by adopting a within-person perspective to reveal more nuanced relationships between distinct forms of daily ethical leadership and daily leader performance. Building on the affect theory of social exchange (Lawler, 2001), we develop a dynamic model to suggest that daily promotion- and prevention-focused ethical leadership might have diverging effects on daily leader performance through the reciprocal influence of followers' affective reactions. Specifically, we predict that daily promotion-focused ethical leadership will foster followers' gratitude toward their leader, whereas daily prevention-focused ethical leadership will elicit followers' feelings of anger directed at their leader. Downstream, we predict that receiving follower gratitude and anger will influence leaders' in-role and extra-role performance later that day. We also explore how overall social exchange quality shapes the daily affective and behavioral dynamics between leaders and followers. Results from an experience sampling methodology (ESM) study largely supported our model. Overall, this research offers theoretical insights about the potentially unexpected leader-centric consequences of ethical leadership and practical recommendations for managers seeking to become more effective ethical leaders.

New Directions in Proactivity Research

Session Moderator: **Siqi Wang**, *School of Management, U. of Bath*

OB: **Integrating a Concern for Health with Playful Design: A Daily Diary Study Using the APIM Model**

Author: **Siqi Wang**, *School of Management, U. of Bath*
Author: **Mireya Las Heras**, *IESE Business School*
Author: **Yasin Rofcanin**, *School of Management, U. of Bath*
Author: **Zeynep Yesim Yalabik**, *U. of Bath*

How do proactive behaviors of employees at work affect their health-related behaviors and that of their partners at home? Integrating conservation of resources, spillover theory and crossover theory, we test a couple-dyadic model to examine the impact of playful work design on the focal person's and his/her partner's health-related outcomes. We collected daily survey data from 65 dual-earner couples over a period of 15 working days. Drawing on the multilevel Actor-Partner Interdependence Model (APIM), our results reveal that playful work design is positively related to healthy eating motives and self-care through playful leisure design, for both male and female partners. Moreover, the positive relationship between the playful leisure design and the healthy eating motives is moderated by the individual's motivation for healthiness. Our results also show that there is a gender difference in the crossover effects from playful leisure design to health-related outcomes such that the crossover effects are only significant from the female partner to the male partner. The study contributes to the literature by examining the associations between proactive behaviors at work and health-related outcomes in the couple-dyadic setting. It also extends the couple-dyadic model discussion to the leisure domain.

OB: **Coworkers' Reactions to Proactive Employees: A Contingent Dual-path Model**

Author: **Xin Liu**, *Renmin U. of China*
Author: **Xiaoming Zheng**, *Tsinghua U.*
Author: **Jia Yu**, *U. of Nebraska, Lincoln*
Author: **Byron Y. Lee**, *China Europe International Business School (CEIBS)*
Author: **Yu Yu**, *Southwestern U. of Finance and Economics*

Proactive employees are increasingly important in modern organizations. Although prior research has primarily focused on the impact of proactive personality on the outcomes of such employee, emerging studies have started to highlight the importance of how coworkers respond to employee proactivity. Extending such investigations, we take an associative evaluation framework to develop theory that explains when and why coworkers respond both positively and negatively to the proactive employee. Specifically, we propose a contingent dual-path model where the coworker evaluates the proactive employee with higher work ability as responsible to the organization and responds by increasing help towards such employee. In contrast, when a proactive employee is lower in work ability, the coworker evaluates the proactive employee as distracted from work tasks and responds with less help towards this employee. We utilize social relations analysis to test our model through two-wave and multi-source round-robin survey data and find support for our hypothesized contingent dual-path model. Our findings provide novel insights that show both the positive and negative pathways through which coworkers evaluate proactive employees which in turn influence the help that coworkers extend towards such employees.

OB: **What Impedes Pro-social Motivation Among Hospitality Frontline Workers?**

Author: **Juman Iqbal**, *U. of kashmir*
Author: **Shameem Shagirbasha**, *Great Lakes Institute of Management*
Author: **Kumar Madhan**, *NSB Academy, Bangalore*

Proactive workers have an innate tendency to contribute optimally to the organization. However, very few studies have been conducted on the antecedents of proactive behavior among frontline hotel workers. Therefore, drawing on self-determination and psychological empowerment theories, this study investigates the association between psychological empowerment and proactive behavior in the presence of prosocial motivation as a mediator and horizontal collectivism as a moderator. A structured questionnaire was distributed in three waves (T1, T2, T3) among hotel frontline workers, out of which only 507 were retained and found useful for analysis. The analysis was carried out using PROCESS macro models 4 & 5. The findings revealed that psychological empowerment is linked to proactive behavior through the partial mediation of prosocial motivation. Further, when horizontal collectivism is high, the favorable association between psychological empowerment and proactive behavior is much higher. To the best of our knowledge, there are hardly any studies that have examined the moderating role of horizontal collectivism in between psychological empowerment and proactive behavior. Practical implications related to ways to improve psychological empowerment among frontline hotel workers in order to boost proactive behavior are discussed.

OB: **Careful or Reckless? A Configural Approach to Understanding Proactivity Process and Its Mechanism**

Author: **Liyuan Li**, *School of Economics and Management Tsinghua U.*
Author: **Wei Jee Ong**, *National U. of Singapore*
Author: **Xiangyu Gao**, *School of Economics and Management Tsinghua U.*

Despite considerable evidence of the bright side of employee proactivity, a growing body of evidence highlights that proactivity can be counterproductive. Previous research on the effectiveness of proactivity focused only on the influence of overt behavioural element of proactivity but neglected the influence of covert behavioural elements and the synergistic effect of all elements in a proactive process. In fact, proactivity is a process including not only overt element (i.e., enacting), but also covert elements (i.e., envisioning, planning, reflecting). Different combinations of these four elements could form different types of proactivity process, which could lead to positive or negative outcomes. So, we adopt a person-centered approach to identity what types of proactivity process can produce effective or detrimental outcomes, and further explore how these types of proactivity process influence employees' job performance and co-worker interpersonal conflict. By using fuzzy set qualitative comparative analysis (fsQCA), we identify three important types of proactivity process: (1) deliberate proactivity process (high envisioning, high planning, high enacting and high reflecting) is sufficient for high job performance and low co-worker interpersonal conflict; (2) careless proactivity process (low envisioning, low planning and low reflecting) is sufficient for low job performance and high co-worker interpersonal conflict; (3) idealistic proactivity process (high envisioning, high envisioning, low enacting, and high reflecting) is sufficient for low co-worker interpersonal conflict. Further, by combining fsQCA and mediation analysis, we further find two mediation mechanisms between deliberate/careless proactivity process and outcomes: employees' ambiguity and employees' impression management motive perceived by co-workers. We contribute to proactivity literature by providing a configural perspective to explain the inconsistent effects of employees' proactivity on their performance and interpersonal outcome, and advance our understanding about such proactivity configurations by further exploring different mechanisms by which they affect actors and their environments.

OB: **The Role of Leaders' Social Dominance Orientation in Shaping Proactive Employees' Promotability**

Author: **Ui Young Sun**, *U. of Illinois at Chicago*
Author: **Dong Ik Sun**, *Korea National Defense U.*
Author: **Seung Yeon Son**, *Korea National Defense U.*
Author: **Ran Ahn**, *U. of Illinois at Chicago*

Faced with today's turbulent environment, organizations need proactive employees who initiate and implement constructive changes more than ever before. Thus, it may be in the interest of organizations to ensure proactive employees' promotability, because it gives proactive employees a sense of advancement and the intention to stay in their organizations. Relatedly, the relational perspective of proactivity suggests that proactive employees establish high-quality relationships with their leaders, which is conducive to their promotability. However, the proactivity literature also suggests that leaders may regard employees' proactivity as a threat to their status at work, in which case the quality of leader-proactive employee relationships and, correspondingly, proactive employees' promotability get damaged. In this research, we resolve this controversy by considering the role of leaders' social dominance orientation (SDO). Building upon dominance complementarity theory and the literature on SDO, we suggest that proactive employees are unlikely to build high-quality relationships with high SDO leaders, which in turn negatively impacts proactive employees' promotability. To test our hypotheses, we conducted a field study with three time separations and two data sources (employees and supervisors). Our findings provide support for our contentions. Overall, our research offers an alert to organizations that they need to be concerned with their leaders' dispositional ideological perspectives such as SDO.

Moral- and Ethical-Related Emotions

Session Moderator: **Paul Hibbert**, *U. of St Andrews*

OB: **Moral Emotions and Their Functional Conflicts: Effects in Organizational Contexts**

Author: **Paul Hibbert**, *U. of St Andrews*

Often, emotions are seen to be a threat to organizations; they are perceived to require regulation and containment to limit their disruptive effects. However, individuals' moral emotions can have positive effects for organizations, by motivating appraisal of the context in which inappropriate conduct takes place to support adaptation and encouraging action. These are effects that organizations will likely wish to promote. To enable more thoughtful engagement with the positive potential of moral emotions, it is necessary to understand how and why these effects may be constrained in organizational contexts such that negative outcomes arise. Accordingly, this paper builds on current research on moral emotions and mobilises functional conflict theory to theorise how the communication or regulation of moral emotions – and the conflict between these alternatives – may exacerbate issues with authentic communication, effective learning and adaptation. The paper also theorises how limiting outcomes may arise when the organizational context for an experience of moral emotion favours rapid association of the context with earlier concerns, rather than a more adaptive pathway afforded by the alternative response of motivated, thoughtful appraisal. Practical suggestions for addressing these issues, along with suggestions for future research, are also outlined.

OB: **Emotions and Moral Insight**

Author: **Thamer Alanazi**, -
Author: **Z Alsayed**, *Surrey Business School*
Author: **Irina Cojuharenco**, *Surrey Business School*
Author: **Sebastiano Massaro**, *Surrey Business School*

Moral insight (the identification of solutions to right-right moral dilemmas that satisfy competing moral norms) is particularly important in an increasingly fast-paced, complex, and interdependent world. We theorise about the role of emotional valence (positive versus negative) in moral insight, and how levels of divergent and convergent thinking engendered by the emotion, may mediate the effect of emotional valence on moral insight. The predictions are tested by means of a large pre-registered experiment (N=1004), in which valence is manipulated via four positive (joy, surprise, satisfaction, and peace) and four negative emotions (anger, fear, dissatisfaction, and sadness), and participants are tasked with finding solutions to moral dilemmas. Our findings show that positive emotion increases the likelihood of moral insight by fostering convergent thinking, and that both divergent and convergent thinking relate positively to moral insight. We discuss the implications of these findings for ethical decision-making and the role of emotions for individuals and organizations.

OB: **A Reparatory Model of Ethical Silence**

Author: **Mayowa Babalola**, *Royal Melbourne Institute of Technology U.*
Author: **Yuanmei Qu**, *Rowan U.*
Author: **Moazzam Ali**, *COMSATS U., Islamabad, Lahore Campus*
Author: **Jennifer A. Harrison**, *EM Normandie Business School, Métis Lab, France*
Author: **Muhammad Usman**, *National U. of Sciences and Technology, Islamabad*

Drawing from the appraisal theory of emotion and self-conscious emotions literature, this study proposes a reparatory model of ethical silence at work. We posit that when employees maintain silence on ethical issues, they experience feelings of guilt. This guilt, in turn, propels them to engage in ethical performance as reparatory behaviors. Results from a multisource, three-wave field study supported these hypotheses. Overall, this research contributes to silence literature and provides insights into how and when ethical silence may, paradoxically, facilitate more ethical performance later on.

OB: **Managers' Emotional Theatre: Necessary Evils, Anticipatory Emotions, and Con-/Destructive Responses (WITHDRAWN)**

Author: **Julia Zwank**, *SRH Mobile U.*
Author: **Francesco Sguera**, *UCP - Católica Lisbon School of Business & Economics*
Author: **Marjo-Rlitta Diehl**, *Aalto U. School of Business*

Necessary evils are tasks in which a person must knowingly and intentionally cause emotional or physical harm to another human being in the service of achieving some perceived greater good or purpose. Although the negative effects of necessary evils on respondents are well-examined, the emotional rides and moral considerations of managers who perform these acts, as well as the ensuing behaviors, remain poorly understood. Our research focuses on the behavioral effects of four discrete anticipatory moral emotions (i.e., anger, disgust, shame, guilt) stemming from managers' knowledge of upcoming necessary evils at work. In Study 1, we use an inductive grounded theory approach to investigate the emotional fallout of conducting layoffs in a sample of managers undergoing substantial change in a financial institution. In Study 2, we use an experimental vignette study to corroborate and extend our findings. We show that other-condemning (anger, disgust) and self-conscious (guilt, shame) anticipatory moral emotions, resulting from the envisioned necessary evils enactment, differentially trigger constructive (i.e., voice and loyalty) and destructive (i.e., exit and neglect) responses.

Participant: **Simon Lam**, *U. of Hong Kong*

Attention plays a central role in many contexts, and its role has become more important in the information age. Due to its powerful role, it becomes important to understand how attention-related processes unfold and how they shape outcomes. This symposium brings together current, behavioral research on attention. The studies examine antecedents and outcomes of attention behavior in organizations, employ diverse methods and data for their analysis, and offer new directions for behavioral models and micro-level theories of attention-related processes.

Resilience in the Face of Identity Threat: The Intersection of Adversity, Identity, and Resilience

Organizer: **MaQueba Massey**, *Jackson State U.*
Organizer: **Cassandra Phetmisy**, *Rice U.*
Presenter: **Neveen Mohamed**, *Vlerick Business School*
Presenter: **Andrea Alonso**, *U. of Texas At Arlington*
Presenter: **Beth Buchanan**, -
Presenter: **Braydon Shanklin**, *U. of Georgia*
Presenter: **Hyunji Suh**, *College of Business, Clemson U.*

All employees are expected to encounter adversity or challenges while at work (Kossek & Perrigino, 2016), and organizations may expect that their employees will be resilient in the face of these hardships given the negative consequences of adversity (e.g., Aronsson et al., 2017). Broadly defined as one's ability to continually strive towards goals despite adversity (King, DeShon, Phetmisy, & Burrows, 2022), resilience has become an important characteristic that organizations consider for hiring (King, Lyons, & Phetmisy, 2021) and has been linked to positive well-being and performance outcomes for both employees and organizations (e.g., Linnenluecke, 2017). Although employees may need to navigate adversities that affect the general workforce or organization (e.g., economic downturns, supply chain shortages), employees may also experience challenges that directly affect them on an individual and personal level, such as challenges encountered due to one's identity. Identity refers to relatively stable characteristics of oneself that are typically determined by factors outside one's control, whether involving interactions with individuals in a social environment (DeRue & Ashford, 2010), who one wants to become (i.e., desired or wanted selves), or who one wants to avoid becoming, (i.e., feared or unwanted selves; Markus & Nurius, 1986). Thus, leaders may desire to encourage general resilience within their organizations, yet they may miss the opportunity to address the needed resilience that is specifically related to employee identity. Identity threats are linked to crucial job outcomes (e.g., decreased performance, lower work productivity; Greenbaum, Deng, Butts, Wang, & Smith, 2022; Nguyen & Ryan, 2008) that have downstream effects on overall organizational performance. This highlights the crucial need for scholars and organizations to understand how employees may navigate these identity-based adversities and demonstrate resilience. In this symposium, we explore the importance of understanding hardships specifically related to identity factors, discuss the role of organizations in addressing identity-specific adversities, and demonstrate why individual resilience has implications for others (e.g., coworkers and teams).

The Customer Isn't Always Right: The Effects of Mistreatment by Customers on Employee Outcomes

Session Moderator: **Miaojia Huang**, *U. of Western Australia*

OB: **Mistreatment in the Moment: The Role of Perpetrator Status on Employee Perpetrator-Directed Outcomes**

Author: **Miaojia Huang**, *U. of Western Australia*
Author: **Rajiv Amarnani**, *U. of Western Australia*
Author: **March L. To**, *U. of Western Australia*
Author: **Gillian Yeo**, *U. of Western Australia*

Customer mistreatment—the poor-quality treatment of service workers by customers—is a prevalent and problematic occurrence, which has been linked to lower-quality performance to customers in general and to subsequent customers. However, surprisingly little is known about how employees treat the customers who actually perpetrate customer mistreatment. This study aims to investigate how perpetrator characteristics—specifically perpetrator status—inform perpetrator-directed and perpetrator-instigated outcomes of customer mistreatment that occur during the mistreatment events themselves. Building on principles of social information processing theory, we propose that high-status perpetrators of customer mistreatment receive more perspective-taking and ultimately more help from targets of customer mistreatment on the one hand, but also instigate more job-related stigma and job-related shame in the moment for the focal employee on the other hand. We tested our proposed parallel mediation model using the critical incident technique based on customer mistreatment events reported by 162 service employees. Our theoretical model was supported and was robust to adjustments for alternative explanations. Implications for research in customer mistreatment events, the role of the perpetrator in customer mistreatment, as well as the influence of perceived perpetrator status, are discussed.

OB: **Customer-to-Colleague Incivility, Observers' Self-reflection, and Improved Service Performance**

Author: **Wenyang Gao**, *U. of Science and Technology of China*
Author: **Qingxiong Weng**, *U. of Science and Technology of China*
Author: **Anastasiia Popelnukha**, *school of management, USTC*

Customer incivility has become an increasingly prevalent workplace stressor that negatively impacts service employees' performance. Yet, recent research indicated that customer incivility sometimes could be helpful for the targeted employees, leading to improved service creativity. In this work, we want to extend the previous research and suggest that observed customer-to-colleague incivility also contains an instrumental value for bystander employees. Integrating the instrumentality perspective of workplace incivility with theories related to self-reflection, we propose that observed customer-to-colleague incivility may increase bystander employees' self-reflection, thereby enhancing their service performance. Furthermore, we suggest that bystander employees' importance of performance to self-esteem (IPSE) is a moderator of this relationship. We adopt an experience sampling study to examine these predictions within healthcare settings. Multilevel analyses of daily survey data collected from 100 nurses across two weeks revealed that bystander employees' daily self-reflection mediated the relation between observed daily customer-to-colleague incivility and their daily service performance. In addition, IPSE significantly moderated the link between observed daily customer-to-colleague incivility and bystander employees' daily self-reflection, as well as the indirect relation between observed daily customer-to-colleague incivility and bystander employees' daily service performance via their daily self-reflection. Theoretical and practical implications are discussed.

OB: **Explaining Inter-individual Differences in the Interpretation of Negative Beneficiary Contact**

Author: **Xiaoqun Wang**, *U. of Nottingham Ningbo China*
Author: **Alim J. Beveridge**, *U. of Nottingham, China*
Author: **Xuan Feng**, *Nottingham U. Business School China*

Although in relational job design beneficiary contact has been shown to increase employees' perceived meaning at work, research on the effects of negative beneficiary on employees is so far lacking. We propose that employees, particularly in a relational context, are capable of actively reinterpreting negative experiences with beneficiaries as meaningful and the exact content of such interpretations depend on individual differences in self- and other-orientation and in the tendency to rely on deliberative or intuitive cognitive processing. Using an inductive research approach, we analyzed qualitative data collected from nurses and doctors and found 6 dispositions of prosocial motives, that can be represented by a 2×3 matrix. These dispositions were associated with distinct ways of interpreting negative contact. Hence, prosocial motives are shown to influence employees' interpretations of negative relational contact with beneficiaries.

OB: **Customer Mistreatment and Employees' Coping Strategies: A Meta-SEM Analysis**

Author: **Yu Ma**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Xinru An**, -
Author: **Zhongda Wu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Pei Liu**, *Sun Yat-Sen U.*
Author: **Changqin Lu**, *Peking U., School of Psychological and Cognitive Sciences*

Although the number of empirical studies on customer mistreatment has grown in volume, our understanding of how and why customer mistreatment relates to its outcomes is still limited. This paper aims to provide a meta-analytic structural equation modeling (Meta-SEM) analysis regarding how customer mistreatment leads to employees' distinctive coping strategies and subsequent outcomes. Draw on the regulatory focus theory, we categorize coping strategies into three types: promotion-focused coping, prevention-focused coping and customer-directed sabotage. Further, we propose that employees would adopt different strategy types to coping with customer mistreatment, and consequently experience different well-being, job attitudes, and job performance outcomes. We conducted a Meta-SEM and tested our hypothesized mistreatment–coping–outcomes model based on 110 articles and 126 independent samples ($N = 34756$). The results showed that promotion-focused coping, prevention-focused coping, and customer-directed sabotage significantly mediated the mistreatment–outcomes relationships, and that adopting promotion-focused coping was related to more beneficial outcomes such as better job attitudes and job performance. This is the first meta-analysis examining the mediating mechanisms of how customer mistreatment is associated with its outcomes, which contributes to the literature by revealing three core coping strategies as mediators.

Understanding Stigma in Organizations

Session Moderator: **Francisco Moreno**, *Louisiana State U.*

OB: **We Are "Dogs of the Docks": Maintaining Occupational Entitativity in the Face of Diminishing Stigma**

Author: **Lucas Dufour**, *Toronto Metropolitan U.*
Author: **Meena Andiappan**, *U. of Toronto*

This longitudinal study explores how and why a historically stigmatized occupation, longshore workers, choose to maintain the tainted nature of their occupation even as the stigma that once characterized their work largely fades. Relying on data collected from 72 interviews, supplemented with observational and archival data over a 70-year period, we examine how factors both internal (e.g., changes in hiring practices) and external (e.g., technological advances) to the occupation influence longshoremen's response to diminishing stigma. Significantly, we find that longshoremen work to actively disengage from certain forms of stigma (e.g., theft), while simultaneously strategically retaining other forms (e.g., violence). Our data suggests that to retain the stigmas that they consider central to the maintenance of their entitativity, longshoremen employ various strategies, including reviving past stigmas and overemphasizing current taint. Answering why an occupation would actively insist on retaining parts of their stigma, we find that longshoremen's stigma allowed them to enact and justify occupational closure when their jobs – once reviled – become coveted. In contrast to previous work on occupational stigma cooptation, we find stigma being used to repel outsiders, reinforce misconceptions, and maintain negative occupational evaluations. Our findings contribute to the literatures on stigma, entitativity, and occupational closure.

OB: **Coping With Occupational Stigma: Role of Self and Work Affirmations in Identity Processing**

Author: **Prakriti Soral**, *O. P. Jindal Global U., Sonipat, India*
Author: **Surya Prakash Pati**, *Indian Institute of Management, Kozhikode*

Occupational stigma stigmatizes the occupational members' identity and brands them as 'dirty workers.' Attending to these identity threats makes coping strategies critical. The study emphasizes how amid identity threats, occupational members safeguard their identity process with the help of affirmations. The study emphasizes the importance of self and work affirmations as coping mechanisms against occupational stigma. Borrowing from self-affirmation theory and identity process theory, we propose an affirmation-assimilation-accommodation framework of coping that explains how affirmations prevent threatening information from entering the identity processing and aid in achieving a positive coping outcome. Also, the study underscores the role of organizations in the individual coping process by evaluating a moderated mediation effect of organizational culture. We test the research model using a sample of 304 hospital nurses in India. Our analysis showed empirical support for our conceptual framework. This study contributes to the coping literature by suggesting two new coping methods: (a) self and work affirmations; (b) building clarity in self and work.

OB: **Second Chance Hiring at the Intersection of Stigma and Ethics: Implications for Company Hiring**

Author: **Francisco Moreno**, *Louisiana State U.*
Author: **Terrance L. Boyd**, *Louisiana State U.*

Despite widespread support for fair chance hiring initiatives, those with criminal backgrounds face substantial difficulty in finding and maintaining work. Some studies suggest that one-third of those released from prison will find steady employment. Given the widespread population with a criminal record, as much as one-third of those in the United States, these issues have relevance for modern societies. In this manuscript, we explore one perspective on why companies do not fully embrace their nominal support for fair chance hiring. Drawing on stigma theory, we examine applicants' reactions to companies who have a hiring policy that supports the hiring of those with a criminal background, and fair chance hiring policies. We integrate this perspective with deonance theory to consider what types of ethical language may cause applicants to overcome potential stigmatization. By integrating the stigma and behavioral ethics literatures, we use the convict stigmatization context as an opportunity to re-evaluate workplace stigmatization more broadly. Two behavioral experiments show that when companies incorporate ethical justifications for their former convict hiring policies, it causes third-party applicants to overcome convict stigmatization. Implications for practice and the stigma literature more broadly are discussed.

OB: **Recovered Physically but Not Socially: COVID-19 Survivor Identity and Workplace Discrimination**

Author: **Puchu Zhao**, *School of Business,Sun Yat-sen U.*
Author: **Xiaowei Dong**, *Business School, Sun Yat-Sen U.*
Author: **Yuqing Gan**, *School of Business, Sun Yat-sen U.*
Author: **Chen Chen**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Xin Qin**, *Sun Yat-sen Business School, Sun Yat-sen U.*

COVID-19 survivors have become one of the largest minorities in healthy field, accounting for 7.70% of the global population. While most of these survivors are of working age and have returned to work, there is a lack of understanding regarding how they will be perceived and treated by their coworkers. In this research, we focus on COVID-19 survivors and the social stigma they experience in the workplace. Drawing on attribution theory, we propose that because the prevalent social narratives during the pandemic has framed COVID-19 infection as the outcome of violating social norms, employees with COVID-19 are stereotypically perceived as being high in social norm violation trait. Thus, they may encounter coworkers' discrimination including less cooperation intention and more workplace ostracism. We further predict that coworkers' perceptions of focal employees' controllability of COVID-19 infections can mitigate the social stigma surrounding COVID-19 survivor identity. We found support for our hypotheses across two studies in the U.S. and China, respectively. We discuss theoretical and practical contributions behind these findings and aim to offer implications for how to prevent social stigma toward survivors of a wide range of challenging pandemics that global society has faced or might face.

Understanding Crisis Leadership

Session Moderator: **Evita Huai-ching Liu**, *Bocconi U.*

OB: **Leader Communication and Stakeholder Responses in the COVID-19 Pandemic**

Author: **Evita Huai-ching Liu**, *Bocconi U.*
Author: **Cassandra Chambers**, *Johns Hopkins Carey Business School*

Crises require leaders to deliver negative messages, which stakeholders typically receive badly. When leaders have negative information to communicate (i.e., the act of "necessary evils" which will do harm to their stakeholders), how can they do so in the best way? Drawing on the process view of crisis leadership and affective adaptation theory, we argue that leaders' delivery of unpleasant information does not have a universally negative effect on their stakeholders because of stakeholders' evolving emotional needs and mental processes in the complex and dynamic process of a crisis. Although people will react strongly and negatively to bad news at first, as time goes by, they will come to understand, adapt to, and eventually approve leaders' negative communication which potentially signals sincerity and honesty. Using COVID-19 speeches and Twitter posts from leaders of English-speaking OECD countries, as well as 107 million coronavirus-related tweets made by stakeholders worldwide, we investigated how stakeholders respond to leaders' negative communication throughout different phases of the global pandemic. Consistent with our predictions, we find in relatively early phase of the crisis, stakeholders react negatively to leaders' bad news, whereas in relatively late phase of the crisis, stakeholders come to appreciate leaders' necessary evils and respond positively to leaders' negative communication. Implications for leadership and crisis research are discussed.

OB: **Leading Through the Crisis: Conceptualization and Scale Development of Crisis Leadership**

Author: **Yijie Zhang**, *School of Economics and Management Tsinghua U.*
Author: **Xiaoming Zheng**, *Tsinghua U.*
Author: **Yirong Guo**, *Xiamen U.*
Author: **Zhengguang Liu**, *Zhejiang U.*
Author: **Xiaoxuan Li**, *School of Economics and Management Tsinghua U.*

"How to lead through a crisis" has become a critical issue of this era. Despite the growing calls for crisis leadership in organizations, there is a lack of an agreed-upon definition and operationalization for crisis leadership. Drawing on contextual leadership theory, we clarify the conceptualization of crisis leadership and advance understanding regarding its behavioral manifestations. Across seven phases with eight independent samples, and using both qualitative and quantitative approaches, our results suggest that crisis leadership could be a reflective and multidimensional construct (including sensitivity to context, responsibility shouldering, empathic consideration, adaptation to change, and reflective learning) and could positively influence employees' work attitude, performance, adaptability, and resilience. Moreover, we find that crisis leadership has configural invariance across Chinese and American contexts. Our definition and operationalization of crisis leadership offer new opportunities for both researchers and practitioners to better understand and investigate crisis leadership.

OB: **Unpacking Crisis Leader Behaviors: Exploring the Boundaries of Leader Effectiveness During Crises**

Author: **Liana Kreamer**, *U. of North Carolina, Charlotte*
Author: **Andrew George McBride**, *U. of North Carolina, Charlotte*
Author: **George Stock**, -
Author: **Janaki Gooty**, *U. of North Carolina, Charlotte*
Author: **Scott Tonidandel**, *UNC-Charlotte*

While there is a large body of research on crisis leadership, this line of work lacks a systematic review of how crisis leader behaviors and crisis leader effectiveness are explored and conceptualized. More specifically, the field has underexplored the target of crisis leader behaviors and the actual beneficiaries of those behaviors. Adopting a multi-disciplinary, narrative technique, we reviewed 50 studies (2010-2020) on leader behaviors and effectiveness during crisis contexts that answer three key questions: 1) What leader behaviors are enacted in a crisis context? 2) Who are the main targets/stakeholders of leader behaviors in a crisis context? 3) Who benefits from leader behaviors in a crisis context (e.g., who are the behaviors effective for)? We report findings from our review, identifying six themes that emerged from the data: leader behaviors are context-specific, leader behaviors are primarily intended to create stability (compared to enhancement), leader behaviors are primarily internally focused, the public is a relevant stakeholder of leader behaviors, there is a target-benefit mismatch, and a general lack of clarity in the literature regarding what effective leader behaviors are and who they serve in a crisis context. We provide avenues for future research in the domains of crisis leadership, leader behaviors, and leader(ship) effectiveness - encouraging scholars and practitioners to consider the boundaries and consequences of leader behaviors.

OB: **The Longitudinal Effectiveness of Directive versus Participative Leadership Amid the COVID-19**

Author: **Limei Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Meilin Liu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xinxin Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Effective leadership is vital for teams to adapt to an exogenous crisis. However, it remains controversial whether participative or directive leadership is more effective in crisis management. We clarify this issue by taking a dynamic approach and considering the stages of crisis management (i.e., the disruption stage and the recovery stage) as a key boundary condition. We examine the effects of participative and directive leadership on team performance changes in the context of the coronavirus disease-2019 (COVID-19) pandemic. We argue that directive leadership prevents team performance loss in the disruption stage after the pandemic via promoting team coordination, whereas participative leadership facilitates the speed of team performance growth in the recovery stage via enhancing team learning. We tested these hypotheses with the discontinuous growth model in two studies. Via a single-survey study (Study 1), we confirmed the presence of the disruption stage and the recovery stage after the pandemic and found the expected different functions of participative and directive leadership in the two stages. We replicated these results and found support for the mechanisms of team coordination and team learning with a longitudinal study of 74 teams (Study 2). We discussed theoretical and practical implications for leadership and crisis management.

New Directions in Emergent Leadership

Session Moderator: **Lioba Gierke**, *WHU Otto Beisheim School of Management*

OB: **Entrainment in Meetings: Patterns of Manager and Employee Leadership Claiming and Granting Over Time**

Author: **Lioba Gierke**, *WHU Otto Beisheim School of Management*
Author: **Fabiola Heike Gerpott**, *WHU Otto Beisheim School of Management*
Author: **Florian Erik Klonek**, *Centre for Transformative Work Design / Curtin U.*
Author: **Niels Van Quaquebeke**, *Kühne Logistics U.*

Although leadership is constructed over time in interactions between managers and their employees, respective leadership claiming and granting behaviors are empirically only considered as static snapshots measured via surveys. This completely ignores the dynamic nature of the leadership process. Drawing on entrainment theory, we put forth that distinct patterns of leadership claiming and granting are likely to unfold throughout a manager-employee interaction. To this end, we use interaction coding to capture verbal leadership claiming and granting behaviors of both interaction partners (manager and employee) in 103 workplace meetings (37,011 interaction points) and compute a relational influence index that reflects the development of the conversational dynamics. Graphical analysis of our data reveals five clearly distinguishable entrainment types, i.e., distinct entrainment patterns of how leadership between managers and employees evolves over time. We discuss how our research advances theoretical perspectives on patterns of behavioral leadership dynamics as well as the power distribution between managers and employees. We end with future research suggestions such as further validating the five entrainment types.

OB: **Home Is Not a Shelter & Workplace Is a Warm Harbor: Childhood Emotional Abuse and Leader Emergence**

Author: **Minya Xu**, *Guanghua School of Management, Peking U.*
Author: **Beini Liu**, *Beijing Technology and Business U.*
Author: **Jingjing Yao**, *IESEG School of Management*

Despite the fueling interest in uncovering antecedents associated with leader emergence, the passage of family growth environment as a distal contributing factor has received little scientific scrutiny. To explore this uncharted area, we aim to explore why and when childhood emotional abuse diminishes later workplace leader emergence. Drawing on attachment theory and implicit leadership theory, we build and test a model that investigates labile self-esteem as a unique mechanism and identifies organizational familism as a key boundary condition. Data from a multi-source, multi-phase survey design based on 285 employees and their direct supervisors provide empirical support for our hypothesized model. Specifically, childhood emotional abuse was negatively associated with leader emergence through labile self-esteem, and the negative effect being buffered for those who are embedded in organizations with higher organizational familism. This research establishes the theoretical and empirical link between childhood mistreatment and leadership development, opening a new research avenue for scholarly understanding of the relationship between childhood family experiences and adulthood workplace outcomes.

OB: **Conflict and Aspiration at the Same Time: Understanding Emergent Leaders' Turnover**

Author: **Yifei Wang**, *Tongji U.*
Author: **Hongmi Jiang**, *Shanghai Pinghe School*
Author: **Zhiwen Shan**, *School of Business Administration and Customs Affairs, Shanghai Customs College*

Emergent leaders substantially contribute to organizational effectiveness, but it remains unexamined whether they will stay with their organization. Drawing on the approach-inhibition theory of power, we propose that leadership emergence has both positive and negative indirect effects on turnover, which are moderated by contextual factors. Multi-source, time-lagged data from 3021 employees in 108 work teams revealed that leadership emergence was positively related to turnover via leadership aspiration, which was strengthened when the density of advice-seeking network of the team was high, and was also negatively related to turnover via perceived team conflict, which was strengthened when formal leader prestige of the team was low. Our work advances the understanding of emergent leaders' turnover, provides a more balanced and complete view of the effects of leadership emergence, and also contributes to the approach-inhibition theory of power.

OB: **Leadership Emergence through Advice-Seeking Network: A Moderated Mediation Model**

Author: **Yi Yang**, *School of Economics & Management, Tongji U.*
Author: **Limei Chen**, *U. of Hong Kong*
Author: **Feng Wei**, *Tongji U.*
Author: **Yiwen Zhang**, *U. of Hong Kong*

Leadership aspiration is an important predictor of leadership emergence, but current research ignores the key process of how leadership aspiration leads individuals to get leadership positions. On the awareness that leadership is embedded in social interactions within the team, we introduce the individual's network indicator, closeness centrality in the advice-seeking network to explain the process of leadership emergence. Using the large-scale field study with multisource, time-lagged data from 5422 employees across 218 teams, the results show that employees' leadership aspiration drives two processes (i.e., social status and social capital perspective). Empirical results show that leadership aspiration is positively related to actual promotion through the employee's in-closeness centrality in the advice-seeking network and informal leadership, while is negatively related to promotion through the employee's out-closeness centrality in the advice-seeking network and informal leadership. Moreover, the serial indirect effect of an employee's leadership aspiration on actual promotion through the employee's in-closeness centrality in the advice-seeking network and informal leadership is stronger for males. Our research provides a refined framework for understanding how leadership emerges.

Panelist: **Kira Franziska Schabram**, *U. of Washington*
Panelist: **Rachel Lise Ruttan**, *U. of Toronto*
Panelist: **Kevin W. Rockmann**, *George Mason U.*
Panelist: **Katina Sawyer**, *U. of Arizona*
Discussant: **Jason Kanov**, *Western Washington U.*

Emotional distress is a common workplace occurrence, with up to a third of the working population suffering from poor psychological health. Pressures on workers' psychological health have been particularly relevant in recent years, as workers have navigated work during the currently ongoing COVID-19 global pandemic. Existing scholarship on workplace distress has recognized and focused on the causes and consequences of distress, as well as the characteristics of individual employees that impact their ability to cope with distressing events at work. However, less attention has been paid to the direct experience of distress, as well as the organizational and interpersonal factors that can help mitigate employee suffering. To consider these topics, we have assembled a panel of scholars who study distress and well-being within workplaces. Each panelist brings a theoretically unique perspective, contributing valuable insights into this important, timely, topic.

Leadership researchers have enticing yet formidable challenges to look forward to! We argue that these challenges, first and foremost, require a conversation within the community. In this symposium, panelists will offer their unique perspectives on these challenges and offer advice from their experience and work based on opinion pieces they have written (and which are available in the symposium). These ideas will be discussed by other distinguished scholars and the audience. Our goal in this panel is to engage in a conversation and create a space for collective reflection on the state of leadership as a science and a practice.

Although past research has illuminated, to varying degrees, many of the questions surrounding leadership in the workplace, challenges persist in the understanding and developing of high-quality leadership in the modern workplace. Recent work in the leadership literature space has offered some critiques of the ongoing work, encouraging scholars to 'go back to the drawing board' on some of its most fundamental theories This symposium serves to answer this call by establishing new takes on well-established leadership theories to push the boundary of our knowledge in the leadership literature, refine existing leadership constructs, and inform best practices for organization. Taken together, the presentations in this symposium provide valuable insights to organizations, researchers, and leaders on how to effectively develop their current leaders, improve engagement with subordinates, and carefully consider the pros and cons of claiming leadership. It may also inspire future research that helps to bridge the gap between academia and practitioners and push forward the boundaries of relevant, meaningful research.

Participant: **Hannah Birnbaum**, *Washington U. in St. Louis, Olin Business School*

Organizational researchers have been studying women's experiences in the workplace for decades. Recently, however, they have more deeply examined how gender interacts with other aspects of identity to shape these experiences. To further this emerging research, we bring together four papers that build theory and provide closely examined evidence about how gender – together with other aspects of identity – drives professional experiences, opportunities, and outcomes. Two papers advance work on gender and race, demonstrating that while women of color might be advantaged in organizational selection processes when hiring managers are told to keep a diversity goal in mind (Yan & Leigh), they are still devalued in team information sharing processes, diminishing team performance (Masters-Waage et al.). The two remaining papers highlight the notion that gender interacts with other less studied forms of identity to dictate the experiences and behaviors of individuals themselves: age (Strassman & Harrison) and social class (Dittmann & Birnbaum). These papers show that women nearing or at middle age (but not others) experience stereotype threat about being perceived as young in a markedly different way than men of the same age, and that upwardly mobile women adopt a "work-harder" ethic more so than all others, potentially leading to increased burnout. Together, these papers point to the notion that gender in the workplace is best studied through an intersectional lens, and that organizational members' genders intersect with other aspects of their identities to significantly impact individual- and team-level outcomes.

Rapid advancements in technology and changing social and economic climates have led to new business landscapes and the creation of new working practices. The traditional 9-5 work model has been challenged with growing demands for greater flexibility in the workplace. Growing bodies of research suggests that more non-traditional forms of work including remote and agile work improves employee work-life balance, job satisfaction and productivity, whilst reducing burnout. Further, they are becoming easier to accommodate due to advanced technological capabilities, allowing work to span spatial and temporal boundaries. The outbreak of the COVID-19 pandemic has significantly shifted the conversation towards how and where people work from, the level of choice individuals have in this, and how much time is required in the office. This symposium presents four studies with diverse methodologies, exploring the changing nature of work, facilitated by technology. The symposium presentations consider; 1) a new dimension of uncertainty in a hybrid working era, 2) work design configurations for on-site, remote and hybrid working, 3) implications of technostress on work-family conflict and performance and 4) exploring emerging challenges in creative industries as they adapt to digital work. Finally, a general discussion considers the theoretical and practical implications of the current research and future directions. Thus, furthering our understanding of an increasingly digitalized workplace. Keywords: hybrid work; work design; digital work; flexible work

The past few years has heightened the need to understand how work and family impact each other. While there exists a plethora of research exploring the interface between work and family, particularly for working parents, existing research tends to present the experience through the lens of work-family conflict, neglecting that the work- family interface goes beyond interrole conflict (Allen, 2012) and overlooks important nuances that could deepen our understanding of the work-family interface. For example, in a recent systematic review, Arena and colleagues (2023) point out that, despite decades of research, the literature on maternity in the workplace still assumes that "women underwent a seemingly normal and intentional pregnancy that resulted in a live birth" while paying limited attention to maternity experiences such as pregnancy loss. Additionally, while previous work-family research has examined the crossover effect (the interpersonal process that occurs when experiences, emotions, and attitudes of one individual affect another individual in the same social system; Bolger et al., 1989), the focus has been mainly on spousal dyads (e.g., Carlson et al., 2019; Li et al., 2021) while overlooking other family members such as one's children. The purpose of this symposium is to explore such nuances within the work-family interface overlooked by the existing literature. Our curated collection of four interrelated papers examines the interplay between work and various stages of parenthood (from pregnancy to adult children) while highlighting the impact on both the parents as well as their children. Specifically, research in our symposium looks at the influence of being pregnant at work (Presentation 1), pregnancy loss at work (Presentation 2), parents work characteristics on their children's leadership motivations (Presentation 3), and the relative earnings of mothers on children's gender attitudes (Presentation 4). Our symposium addresses the various stages of working parents and our discussant, Dr. Julie Holliday Wayne, will synthesize the impacts of these stages on workers, their children, and organizations as a whole. Ultimately, this symposium contributes to the AOM 2023 theme of "Putting the Worker Front and Center" by using multiple methodologies and research questions to highlight one of the most important role domains of many workers, that is of being a parent, and examining how this role influences various aspects of their own lives and that of their children.

Supporting employee well-being is increasingly critical not only for attracting and retaining employees, but also for encouraging performance. Yet, many leaders and organizations are ill-equipped to effectively foster well-being. This symposium brings together stellar junior and senior academics who will present novel research insights on how to promote and support workplace well-being. Specifically, the set of papers included in the symposium challenge erroneous assumptions about well-being, such as whether and how disclosure of mental health challenges backfires, or whether employees should be solely responsible for maintaining their well-being. Moreover, the papers explore a critical yet often overlooked challenge around workplace well-being, namely, how the well-being of leaders is as, if not more important for supporting the well-being of those they lead. Taken together, this symposium underscores the importance of overcoming barriers to workplace well-being and offers research-driven solutions for protecting the well-being of both leaders and employees.

When leveraged correctly, motivation can be a powerful organizational tool. More motivated employees are likely to persist longer on tasks, (Bargh et al., 2001), pay more attention to details (Botvinick & Braver, 2015), and expend more effort (Amabile, Barsade, Mueller, & Staw, 2005; Isen, Daubman, & Nowicki, 1987) than those who are less motivated. Organizations are also instrumental in designing motivational systems. For example, people were less motivated to volunteer when asked to volunteer for 200 hours, compared to when the same 200 hours was broken up over 4 hours per week or 8 hours every 2 weeks (Rai et al., 2022). While much research has examined the positive effects of motivation, there is also research suggesting that motivation can backfire. For example, highly motivated people are more likely to "choke under pressure" (Beilock & Gray, 2007) and offering money for prosocial behaviors can decrease their uptake (Gneezy & Rustichini, 2000). Understanding the contexts in which motivation can lead to negative outcomes is a key organizational concern. In this symposium, we bring together leading and emerging scholars with the aim to answer three questions: (1) when does motivation lead to negative organizational outcomes, (2) are people's expectations for motivation's impact on organizational outcomes calibrated to reality, and (3) once these negative outcomes are anticipated, can interventions be designed to overcome them? Together, the papers in this symposium offer important empirical insights into how conventional wisdom about the effects of motivation can lead us astray. Practically, the collection of papers also provides managers and policymakers with insights as to how to design motivational systems that are consistent with their desired outcomes.

The theme of this year's conference, Putting the Worker Front and Center, calls on scholars to shed light on the challenges employees face. In light of "increasingly severe talent shortages," we spotlight research insights into the process of gaining expertise and the subsequent implementation of expertise in moments of crisis. A common theme of a worker's career is the accumulation of expert knowledge. Scholars must therefore understand both how workers strive to achieve expertise through education, emulation, and advice seeking, and how they apply their expertise when it is needed. It is especially critical to understand common psychological misconceptions and unintended consequences on the road to expertise. These are the focus of our symposium. We present new research on expertise from management and applied psychology, with each project providing important insight into the consequences of the way in which expertise is gained. At early stages of developing expertise, formal education lends knowledge but also leads to systematic overconfidence (Paper 1). When cultivating expertise by seeking advice from experienced others, people suffer from costly misconceptions: they overvalue learning from success stories (Paper 2), and overvalue expertise that is based on personal experience (Paper 3), undervaluing alternatives to their detriment. When high levels of expertise are tested in a crisis, as when aircraft pilots are faced with an emergency, specialized and generalized expertise both contribute to outcomes: specialized knowledge gives an edge, but only up to a point. Specialization can be too narrow, leading to poorer outcomes (Paper 4).

For a long time, social network literature has focused on network structure and its effects, thereby paying little attention to how networks themselves form, change/evolve and disappear over time. This, however, has started changing recently, as more network scholars are examining network dynamics and its implications for a whole array of organizational phenomena. While this progress is positive, there is still much to be learned about the processes by which network change occurs, how and why this change affects certain outcomes, and how network and actor attributes coevolve over time. The papers in this symposium address these questions in an attempt to further the development of intra-organizational network dynamics research. The research in this symposium draws on a number of different data sets, including a longitudinal study with employees working in a boutique consultancy firm, a study of student teams engaged in a complex business simulation, a field study of employees working across eight divisions of a large government agency, and a study involving time-stamped email data obtained from a healthcare company.

Although there appears to be a shared understanding of the need for (understanding) care in organizations among both practitioners and scholars, organizational behavior research on care remains fragmented, not least due to a proliferation of, and lack of a clear definition of, different care-related concepts. The purpose of the current symposium is to refocus the debate on the umbrella concept of care by bringing together and showcasing examples of cutting-edge research on how organizations, managers, and employees care and how we can theorize care in relation to other closely related OB concepts, such as organizational justice, psychological contracts, compassion, and benevolence. The papers included in this symposium improve our understanding of care in the aftermath of the COVID-19 pandemic, of the different sources of care in organizations and of the potential counterintuitive effects of care and challenge our thinking of organizational justice and care. By acknowledging both the enriching aspects of care and the challenges that can confront caring managers and organizations, this symposium contributes to the present understanding of enactment and expressions of care within organizations and offers practical insights as to how to put employees front and center and create fairly caring – and caringly fair – work environments.

Participant: **Nazifa Zaman**, *Rutgers U., School of Management and Labor Relations*

Ethical issues are ubiquitous in workplace interactions, whether among employees or between leaders and their subordinates, and these interactions can influence interpersonal relationships. However, much of what we know about ethics in the business environment overlooks the interpersonal processes and perceptions that influence moral perceptions and ethical actions. In this symposium, we bring together five papers that explore how ethical and moral issues are felt, expressed, managed, and perceived between organizational members in existing relationships. These papers bring new insights into theoretical and methodological approaches to studying ethics and morals in workplace relationships. In addition, we hope these findings provide guidance for leaders and organizations to develop effective approaches to managing and addressing ethical concerns.

Identity-based Perspectives on Organizational and Individual Change Processes

Session Moderator: **Yasuhiro Karakawa**, *Vrije U. Amsterdam*

ODC: **Identity Playground in Organizations**

Author: **Yasuhiro Karakawa**, *Vrije U. Amsterdam*
Author: **Oli Mihalache**, *Athabasca U.*

The necessity to incorporate play into organizational context in order to encourage employees' individual diversity, creativity and work meaningfulness has been increasing among many contemporary companies. Play is beneficial for some companies, but it can also become a drain on resources for others. Drawing on theories of play and organizations, identity play and identity play spaces, we introduce the concept of "identity playground in organizations", defined as organizational mechanism to leverage employees' identity play from leisure time into organizational identity play in work time. The conceptual mechanism presented in this paper provides key elements of identity playground in organizations to manage the key challenge as "organizational identity paradox", the tension between encouraging intrapersonal heterogeneity and controlling interpersonal heterogeneity simultaneously.

ODC: **An Identity-framed Perspective on Organizational Capability Development**

Author: **Johanna Gruenauer**, *Johannes Kepler U. Linz*

While current theory largely views capability development as the rational combining of given organizational resources to seize optimal opportunities, instances of organizational failure besides the presence of resources have led to consider implications of cognition in this process. It was found that the core process of capability development, the allocation of managerial resources to perceived opportunities, depends on a common purpose. Since purpose is one of the defining core attributes of "who we are" as an organization, we dedicate this article to the relationship of organizational capability development and organizational identity as a form of collective cognition. We summarize evidence on the interlevel connections and introduce organizational identity as boundary condition to capability theory. We contribute to capability development by theorizing identity-framed opportunity spaces that are narrow on identity-defining dimensions. Identity thereby influences the perception of developmental opportunities and the perception of change as incremental or fundamental. Since associated feelings of continuity or threat influence developmental success, theory and practice will benefit from incorporating an identity perspective.

ODC: **The Temporal and Spatial Tensions Driving Strategy-Identity Change**

Author: **Yentl Dudink**, *Vrije U. Amsterdam*
Author: **Yvette Taminiau**, *VU*

Strategy and identity are considered 'loosely coupled' concepts and key processes for explaining organizational change, yet what mechanisms drive change inside strategy and identity change processes requires further exploration. While temporality has been a focus of multiple strategy-identity studies, spatiality has not received the same level of attention even though time is never completely separate from space. Based on a single case study of an incumbent bank in the midst of a strategic change to business sustainability, we make two main contributions. First, our findings demonstrate that through experiencing contingent interactions of tensions, organizational members make interpretations about 'what we do' or 'where we are going' simultaneously with interpretations about 'who we are' or 'who we are becoming'. Members do this through accelerating or delaying identity change (temporal tension), expanding or contracting the strategic direction (spatial tension) and through plural/singular conceptions of who we are resulting in changing or stagnating strategic change developments (temporal-spatial tension). We illustrate this dynamic in a process model. Second, contrary to popular belief, we argue that this dynamic entanglement substantiates that strategy and organizational identity are more tightly coupled than previously assumed. The spiralling model of organizational becoming offers an alternative view to the concept of 'alignment' between strategy and identity.

ODC: **Change Manager Job Crafting: Strategies for Successfully Managing the Process of Change**

Author: **Danielle Tucker**, *U. of Essex*
Author: **Jane Hendy**, *Brunel Business School*

The complexity and political nature of change means that change managers may often experience feelings of inauthenticity, conflict and tension in navigating the job of driving change in their organisation. When this happens, even if a change has been financially and strategically successful, unresolved personal identity tension can leave change managers with negative feelings about their role in the change. Job crafting provides the opportunity for change managers to redesign the characteristics of their role in the change to create alignment between their own needs and those of the organisation. In this paper we examine the job crafting experiences of 17 change managers throughout the process of change at their organisations. Our findings reveal three approaches to job crafting, each aimed at resolving identity tensions and creating meaning in their work. We find that change managers job craft (i) to feel authentic in their role, (ii) to resolve identity ambiguity, and (iii) to feel that they are 'good' at their job. This extends research on change management by highlighting the important role of identity struggle in a more dynamic process of job crafting.

Current Methodological Approaches to Studying Organizations, Markets, and Products

Session Moderator: **Anne Sophie Barbe**, *Aalto U., Department of Management Studies*

OMT: **Product Evaluations in Emerging Market Categories**

Author: **Anne Sophie Barbe**, *Aalto U., Department of Management Studies*
Author: **Nina Granqvist**, *Aalto U.*

Product evaluations guide the ordering of products categorized together and thereby shape the resources available to their producers– and are thus fundamental for the study of product categories. Studies have explored evaluation criteria used in established product categories but overlook their emergence in novel categories. Valuation studies provides relevant analytical tools to study that question by arguing that valuation processes are characterized by controversies, but there is a void of understanding on how such controversies lead to the emergence of plural evaluative landscapes which are suspected to characterize the early days of emerging product categories. Drawing on a major and partly real-time qualitative dataset on the emergence of the quantum computing market category, the study contributes by showing how the pluralizing of the evaluative landscape occurs during the early emergence of product categories, several tentative product measures proliferating in a setting where producers and audiences are driven by conflicting value-related assumptions. We also uncover categorization-based controversy as a new type of valuation controversy, going beyond the value and measure-based controversies to the more foundational question of whether, or not, a set of things can be evaluated with a single measure.

OMT: **Organizational Limits of Market Design**

Author: **Georg Rilinger**, *MIT Sloan School of Management*

Despite much research on market design, we know little about the conditions under which market design projects fail. Starting with the insight that digital markets are built and maintained inside organizations, the paper finds that modularization can derail market design work for complex problems. The argument emerges from the analysis of an extreme case: the creation and collapse of California's electricity markets between 1993 and 2001. Despite careful planning by the world's foremost experts, the auction systems produced a variety of incentives for manipulative behavior. Drawing on data from four archives and semi-structured interviews, the paper explores why designers may inadvertently adopt problematic design features. It argues that designers often seek to devise market architectures of inter-connected modules that break complex problems into more manageable chunks. This helps to avoid 'Normal Accidents,' which arise if systems become too complex to control. But to work as intended, all modules must be connected to each other in the right way and in de-signer markets , this requires that actors face globally consistent rules and procedures. However, modularized design work tends to produce only locally consistent rules, obscures global inconsistencies, and resists iterative problem-solving. This can produce gaming incentives and reintroduce the complex interdependencies designers tried to avoid .

OMT: **Solving Problem with Generalists and Specialists: An Agent-based Simulation Model**

Author: **Junyi Li**, *National U. of Singapore*
Author: **Junjie Zhou**, *National U. of Singapore*
Author: **Jungpil Hahn**, *National U. of Singapore*

Organizations must often solve problems with insufficient knowledge. A solver can be specialized in a narrow area of expertise or be a generalist with a broader (yet shallow) understanding of the problem. Despite this well-recognized difference in knowledge structure between generalists and specialists, little is known about its implication on problem-solving performance. This is due to a lack of theoretical understanding of the distinction between knowledge depth and breadth that recognizes that deepening knowledge implies accumulating outcomes within a narrow set of domains, as opposed to broadening knowledge which implies being able to make connections between more domains. In this paper, we model generalists and specialists using knowledge depth and breadth, which alters their search behaviors on a multi-level NK fitness landscape. We propose that generalists and specialists have structurally different knowledge sets, which affords them to have different problem-solving capabilities and consequently will contribute solutions differently, especially when collaborating. Specialists can perceive finer granularity and provide local refinement, while generalists can perceive more interdependencies and provide broad repositioning of problems. Generalists and specialists also differ in the way they misunderstand the problem space. These insights advance our understanding of how we might best coordinate generalists and specialists within organizations.

OMT: **A Different Kind of Tradeoff: Partitioning in Markets for Time and Attention**

Author: **James Mellody**, *MIT Sloan School of Management*

Work in resource partitioning and the sociology of markets finds that markets are partitioned into two segments: a mass-market center dominated by generalists and peripheries dominated by specialists. Organizations thus face a tradeoff in how they position themselves. The bulk of existing research examines such tradeoffs in traditional consumer and labor markets. I ask whether tradeoffs exist in a similar form in markets for time and attention, as seen in online communities, voluntary organizations, open-source communities, and the gig-economy. I argue that in such markets, differences in the nature of both organizations and audiences generate a different kind of partitioning. Specifically, these markets are defined less by formal exchange and costly decisions and more by open boundaries and flexible allocation of resources. While audiences in traditional markets match cultural identities of organizations to certain market segments to ensure quality, here audiences use cultural identities as guidance in allocating their time and attention across multiple organizations. I examine tradeoffs in the context of Reddit, an online community comprised of numerous subreddits. Leveraging user participation data and the text of over 2 billion comments, I find a partition within the market center, such that generalists and specialists can coexist, taking advantage of the greater volume of flexible demand available there. This simultaneously means that organizations face a tradeoff in how they position themselves culturally in the market center. In the market peripheries, no such tradeoff exists. In examining these tradeoffs, I propose a more general theory of market partitions.

OMT: **Singulare Tantum: Product Valorization in the Emergence of Oppositional Identities**

Author: **Merve Gül Barut**, *U. of Lugano/U. Della Svizzera Italiana*
Author: **Filippo Carlo Wezel**, *USI Lugano*
Author: **Stefan Arora-Jonsson**, *Dept of Business Studies Uppsala U.*

New oppositional identities are organized around specialty products that inhere a direct opposition to incumbents' industrialized production processes. Earlier research has identified the strength of producers' oppositional identity as key to explaining when and why it becomes successful. The process by which oppositional identities are translated into market value however is not well understood. Through an inductive case of the emergence of the market for handmade Turkish cymbal (1981-1997) that oppose to industrialized production practices and products of incumbent firms, we develop a process model of product valorization that underlies oppositional identities. We take a social constructionist perspective and explore the role of different market actors – producers, intermediaries and consumers – in valorizing singularized products and in sustaining the emergence of oppositional identities. We find that producers enrich their products in multiple ways, intermediaries desingularize the products to improve commensuration within the market, and the consumers resingularize the products for self-expression purposes. The complex relationships between market actors sustain a self-reinforcing process that brings momentum to the growth and success of oppositional identities.

The Dynamics of Discourse, Framing, and Strategy Mapping in Organizations

Session Moderator: **Marko Kohtamäki**, *U. of Vaasa*

OMT: **The Affordances of Strategy Mapping**

Author: **Marko Kohtamäki**, *U. of Vaasa*
Author: **Suvi Einola**, *U. of Vaasa*
Author: **Yassine Talaoui**, *U. of Vaasa*

Little research has focused on the role of strategy map and its affordances when developing a joint account of strategy in the context of a multidivisional organization. Building on the Strategy-As-Practice (SAP) research agenda, this paper draws attention to the affordances of the strategy map in creating collective meaning around strategy to advance the achievement of strategic targets. The study utilizes ethnographic action research and longitudinal multilevel data from a case organization, observations from 105 strategy workshops and 42 interviews, and an analysis of strategic documents from a 10-year period (2012-2021). The study contributes to the discussion about the affordances of strategy tools-in-use by identifying four specific affordances of enacting strategy mapping: 1) inclusive, 2) reconstructive, 3) comprehensive, and 4) persuasive, which enable the creation of joint account of strategy in a pluralistic organization by focusing the strategists' attention toward the vision and goals of the city. Thus, the study highlights the specific affordances of the strategy map as a tool-in-use.

OMT: **Frames and Complexity: Evidence from the Federal Reserve**

Author: **Joosef Valli**, *Aalto U. School of Science*

This essay investigates the role of cognitive frames in decision makers' ability to perceive complexity. By focusing decision makers' attention on a few features of the environment, a cognitive frame can push them to perceive interdependencies not visible without that focus. However, interdependencies amongst the screened-out features of the environment are ignored. A single frame therefore helps decision makers to perceive low-levels of complexity but hinders the attainment of higher-levels of complexity. In highly complex environments, therefore, decision makers should attend the problem at hand through multiple frames. This essay describes three decision making processes through which complexity is perceived: agenda-driven and frame-driven decision making to attend low-level complexity, and frame combining to attend high-level complexity. The study applies qualitative research methods on the meeting transcripts of a high-level decision making committee, the Federal Open Market Committee (FOMC). The committee is responsible for the monetary policy of the Federal Reserve.

OMT: **Discursive Dynamics Around the Belt and Road Initiative: An Interactional Approach**

Author: **Chuqiao Zhou**, *Erasmus U. Rotterdam*
Author: **Tal Simons**, *Erasmus U. Rotterdam*
Author: **Mirjam Werner**, *Erasmus U. Rotterdam*

This study explores the discursive interactions around a megaproject between China and the West over time and the discursive strategies underlying these dynamics. Employing discourses from a wide timespan, we explore how interpretations around a developing megaproject from the different sides involved changed through interactions at the macro level. We further uncover the discursive strategies that were used by the different sides. Based on corresponding discursive strategies, through frame extension and counter-frame, we identify emerging discursive interactions around how to interpret and co-construct the meaning of this developing project. Furthermore, we stress the political dimension that shape the development of megaprojects.

Transparency and Secrecy in Organizations

Session Moderator: **Li Cheng**, *Eli Broad School of Business, Michigan State U.*

OMT: **The Nuanced Role of Stakeholders in Shaping Supply Chain ESG Transparency: A Fashion Industry Case**

Author: **Li Cheng**, *Eli Broad School of Business, Michigan State U.*
Author: **ManMohan Sodhi**, *Cass Business School, City U. London*
Author: **Veronica Haydee Villena**, *W. P. Carey School of Business, Arizona State U.*

As a company's supply chain geographically spans across a wide range of countries upstream or downstream, its operations are exposed to a diverse set of stakeholder demands. To date, scholars have primarily focused on the direct influence of a specific stakeholder group (most of which directly surround the company such as industry peers) on promoting supply chain transparency. They also examined supply chain transparency of specific issues (mostly environmental, such as carbon emissions). Building on their work, we also consider stakeholders of the firm's supply chain—those residing in countries with the firm's supply chain operations—and take a broad view of transparency on issues across environmental, social, and governance (ESG) dimensions. Our research investigates how and in what conditions firms with a supply chain that geographically spans across countries upstream and downstream responds to supply chain stakeholders' diverse demands for supply chain transparency. We gathered data on 122 of the largest fashion brands regarding its ESG supply chain transparency, geographic locations of supplier and customer bases, and supply chain stakeholders from multiple databases. The results show a positive link between the variety in stakeholder demands – captured by the number of supplier countries and sales dispersion across downstream countries – and a firm's supply chain ESG transparency. Moreover, the salience of certain stakeholders' demands – the pressure of groups (e.g., NGOs and regulatory bodies) upstream and downstream – further shapes this link. Particularly, while upstream NGOs' pressure is found to have no further influence on this link, downstream NGOs' pressure buttresses the positive response to supply chain transparency by firms with high sales dispersion across downstream markets. Interestingly, for these firms, if the regulatory pressure downstream is too high, they tend to exhibit less of supply chain transparency across a broad set of issues. Our results contribute to the literature on supply chain transparency by providing a nuanced view of supply chain stakeholders' role in shaping supply chain transparency across the various ESG dimensions.

OMT: **Relational Approach to Secrecy in Inter-organizational Cooperation: Overcoming Boundary Paradox**

Author: **Irina Liubertė**, *ISM U. of Management and Economics*

Secrecy is critical to successful value capture in innovation. However, it is not an easy task to accomplish, especially in case of inter-organizational cooperation. Cooperating companies struggle with so called "boundary paradox" when they need both to share and to protect their knowledge. Based on the previous research studies of inter-organizational relations we know about the circumstances when secrecy is appropriate and what the likely consequences of its use are; however, we have very limited knowledge about the actual ways— practices—that help to enact secrecy in the challenging environment of inter-organizational cooperation. This study therefore takes a novel approach to secrecy as a relational phenomenon and a social practice and presents a qualitative case study conducted in the biotechnology industry. Based on interviews with managers of a large biotech company, interviews with their partners, and secondary data, the study identifies secrecy practices and three basic mechanisms of secrecy—information control, partial disclosure, and "smokescreen", as well as how their use dynamically change across the different stages of cooperation. In doing so, the study contributes to the theories of knowledge protection in inter-organizational relations.

OMT: **How Transparency via Digital Media can Sustain Liminal Business Practices in the Ethical Gray Zone**

Author: **Dennis Schoeneborn**, *Copenhagen Business School*
Author: **Elena Bruni**, *Luiss Guido Carli U.*
Author: **Fabian Homberg**, *Department of Business and Management, LUISS Guido Carli U.*

Within research on ethically problematic business practices, a majority of works rests on the assumption that transparency can work as effective deterrent against such wrongdoings. In this paper we problematize this premise by arguing that for liminal business practices in the ethical gray zone, an increased transparency of ethically problematic practices (e.g., via digital platforms) can actually be conducive and co-constitutive of these practices. To investigate this phenomenon, we conducted a qualitative empirical study of self-reports on a social media platform where users share experiences on how to best apply a liminal practice of 'bribery-tipping' to attain complimentary room upgrades in hotels. Our study identifies five main forms of legitimation of how users rhetorically frame the practice as a normal thing to do: legitimation through (1) strategizing, (2) analogizing, (3) routinizing, (4) calculating, and (5) authorizing. Furthermore, by drawing on methods of sequence analysis, we identify recurrent rhetorical patterns of how the practice is maintained. Our study makes three main contributions: First, we develop theoretical explanations on how the visibility and transparency provided by a digital platform helped sustain a liminal business practice despite its inherent ethical ambiguity. Second, on the empirical level we showcase the usefulness of online self-reports for studying the communicative dimension of ethically questionable business practices. Finally, on the practical level, our study implies rethinking measurements against organizational misconduct as a matter of collective meaning-making.

Advancing the Study of Organizations and Management: Theories and Methods

Session Moderator: **Christina Hoon**, *Bielefeld U.*

OMT: **From Ambivalence to Stewardship Commitment - Toward a Behavioral Model of Stewardship Governance**

Author: **Constantin Ludwig Zeif**, *Bielefeld U.*
Author: **Christina Hoon**, *Bielefeld U.*
Author: **Hans Van Ees**, *Groningen U. (RuG)*
Author: **Anne Sanders**, *Bielefeld U.*

The goal of this paper is to synthesize the rich body of empirical research on governance practices and structures in the context of stewardship theory. Stewardship research acknowledges that individuals act upon pro-organizational intentions rather than self-serving goals and are committed to common responsibilities, intrinsic satisfaction, and collaboration. To explore how stewardship commitment is stimulated from the ambivalent individuals' motivational intentions through corporate governance practices and structures, we draw on a qualitative meta-analysis to theorize from extant qualitative works in this field. Our findings indicate that stewardship commitment develops from processes of alignment, deliberation, and direction embedded within trust-based and control-based governance structures through practices of (1) directive-, (2) facilitating-, and (3) participation work. We contribute by proposing a behavioral model on stewardship governance demonstrating that pro-organizational intentions are stimulated over self-serving intentions. Trust- and control-based structures allow the behavioral practices of directive, facilitating, and participation work to take place, which in turn determine the structures to further unfold. If members perceive a positive alignment of intentions with the organizational context, a commitment to stewardship is likely to further develop. Thereby, we contribute to opening up the 'black box' of actual stewardship commitment and offer better insights into how and why individuals may serve corporations as stewards.

OMT: **A Dynamic Self-Regulation Perspective on Individual Ambidexterity**

Author: **Hossein Heidarian Ghaleh**, *allameh Tabataba'i U.*
Author: **Huikun Chang**, *Seoul National U.*
Author: **Jongwook Pak**, *U. of Auckland Business School*

The richness of organizational progression and growth in such a turbulent business landscape relies on the individuals' capacity to pursue diverse sets of goals by actively engaging in exploitative and exploratory activities and manifesting ambidextrous behavior upon their substantive rationality. A plethora of management studies, to date, have attributed individual ambidexterity to a large set of personal and environmental factors and listed heaps of desired outcomes being brought forward by individual ambidexterity through linear cause and effect relationship tests, governing the field for decades. This is problematic because previous research portrays individuals as passive respondents to many scattered antecedents, failing to reflect the complexity, persistently, and active nature of individual ambidexterity. In response to this, in this paper, we outline a conceptual model, grounded in self-regulation theory, explaining how and why individuals consciously orient themselves toward exploitative and exploratory behaviors by synchronously juxtaposing extrospection and introspection processes. More specifically, the integration of individual ambidexterity with self-regulation theory allows us to clarify that individual ambidexterity is a cyclical self-improving process, wherein individuals deliberately record and monitor themselves and struggle to adjust and re-regulate their behaviors upon self-observation and active feedback seeking. Finally, we close with a discussion of the implications of our conceptual model and discuss potential avenues that may guide future research.

OMT: **Using Shape-constrained Regression to Evaluate Inverse U-shaped Theories in Data**

Author: **Scott Cohn Ganz**, *Georgetown MSB*

Theories that predict u-shaped and inverse u-shaped relationships are ubiquitous throughout the social sciences. As a result of this widespread interest in identifying non-monotonic relationships in data and the well-known problems with standard parametric approaches based on quadratic regression models, there has been considerable recent interest in finding new ways to evaluate such theories using alternative approaches. In this paper, I propose a new semi-parametric method for evaluating these theories, which I call the ``Goldilocks" algorithm. The algorithm is so named because it involves estimating three models in order to evaluate a u-shaped or inverse u-shaped hypothesis. One model is too flexible (``too hot") because it permits multiple inflection points in the expected relationship between x and y. One is too inflexible (``too cold") because it does not permit any inflection points. The final model (``just right") permits exactly one inflection point. In a simulation study based on 405 monotonic-increasing or inverse u-shaped functional forms and over 200 thousand simulated datasets, I show that my proposed algorithm outperforms the current favored method for testing u-shaped and inverse u-shaped hypotheses, which uses the Robin Hood algorithm in conjunction with a two-lines test, in terms of controlling the false rejection rate and the power of the test. I also show that these advantages of the Goldilocks algorithm can be further leveraged when it is used in an ensemble method that utilizes the output from both algorithms.

Social Movements and Corporate Activism Today

Session Moderator: **Florian Ueberbacher**, *Montpellier Business School*

OMT: **Balancing the Tension Between Growth and Worthiness: The UK Uncut Anti-Austerity Movement**

Author: **Florian Ueberbacher**, *Montpellier Business School*
Author: **Andreas Georg Scherer**, *U. of Zurich*
Author: **Julia Grimm**, *Stockholm Business School*
Author: **Marius Andersson**, *Norwegian U. of Science and Technology*

This paper uses an in-depth single case study to investigate how the social movement organisation UK Uncut succeeded in gaining the public attention and support necessary to challenge the institutional status quo of corporate tax avoidance in the UK. Our longitudinal process analysis highlights the critical role of dramatic enactments and image management tactics in gaining sufficient attention, positive media evaluation and support in the public sphere for institutional disruption to occur. Following the process of how the movement recovered from a legitimacy loss after a disruption event, our exploration highlights the tensions that can occur between the growth of a movement and its perceived worthiness.

OMT: **Tempest in a Teapot? Market Reactions to Social Media Chatter About Social Movements**

Author: **Joel Andrus**, *U. of Missouri*
Author: **Yan Chen**, *U. of Missouri*
Author: **Xinran Joyce Wang**, *Zicklin School of Business, Baruch College, City U. of New York*
Author: **Rhonda K. Reger**, *U. of North Texas*

In the social media era, our understanding of how social movements influence firms is limited, as social media has fundamentally changed how stakeholders access information about firms. We argue that social media conveys to shareholders important information that is distinct from that conveyed by traditional media about the seriousness of a social movement event. Analyzing 124 social movements between 2007–2018 and controlling for the influence of traditional media, we find that social media tenor is positively related to shareholder reactions and that firm reputation can shield firms from these threats. However, the impact social media has on the ability of a social movement to capture shareholder attention is short-lived compared to that of traditional media, often lasting for just a few days. Further, we find that firms can utilize social media to manage shareholder reactions—that is, firms that respond on social media about serious threats—see increased returns. Our study offers robust evidence of the ability of social media to heighten the impact of social movements on firms. We contribute to social movement theory by clarifying how the influence of social movements on firms can be disrupted or enhanced through social media. Our theory suggests that shareholders incorporate social media tenor and prior reputation with the information provided by traditional media in their reaction to a social movement. We also contribute to the social evaluation literature concerning how firms use social media to manage shareholder support.

OMT: **The Role of Self-Regulation in the Spillover of Social Activism**

Author: **Richard Devine**, *DePaul U.*
Author: **Bruce Lamont**, *Florida State U.*

The primary purpose of this study is to examine how activism in one organizational field can affect the responses of organizations in another field. Our focus is on how self-regulation affects when firms notice and how they respond to activism beyond their organizational field. Self-regulation involves the adoption of practices in line with a social movement to forestall activist pressures. Drawing on political economics and old institutional theory, we develop a novel view of self-regulation, where self-regulation is forward looking but anchored in the past and reflected in currently institutionalized values and practices. From this novel view of self-regulation, we develop theory about when and how organizations in one field respond to activism, and the precipitating events underlying the activism, occurring in another organizational field. We test our hypotheses during a foundational period of the Black Lives Matter (BLM) social movement and examine the responses of U.S. colleges and universities to the threat of the emerging movement targeting criminal justice reform during the 2015-2016 academic year and find strong support for the theory.

OMT: **Vote the Assholes Out: How Value Congruence Work Aligns Stakeholders for Corporate Activism**

Author: **Sean Buchanan**, *U. of Manitoba*
Author: **Mojtaba Mohammadnejad Shourkaei**, *PhD student at Asper School of business, U. of Manitoba*
Author: **Bruno Dyck**, *U. of Manitoba*

As more firms take stands on contentious social issues, research has pointed to alignment between the values of a firm and its stakeholders as a key driver of this corporate activism. However, this “stakeholder alignment” model of corporate activism has not offered insights into how the values of a firm and its stakeholders become and remain aligned. Drawing from an inductive study of Patagonia, Inc., we introduce the concept of value congruence work — the purposeful efforts of firms to align the values of stakeholders with their own — as a central activity for firms engaging in corporate activism. Our analysis highlights two forms of value congruence work: attractional value congruence work serves to draw in stakeholders with aligned values to engage with the firm, and co-evolutionary value congruence work serves to grow and enhance value congruence over time through different forms of learning. Our findings offer new insights for research on corporate activism and social-symbolic work.

OMT: **Threading the Needle: How Firms Frame their Stances on Polarizing Social Issues**

Author: **Sung Hun Chung**, *Rice U.*
Author: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*
Author: **Alessandro Piazza**, *Rice U.*

Corporate activism, or the active involvement of business in contested social and political issues, presents strategic challenges for organizations. Companies that speak out on socially contested issues may face backlash from stakeholders who disagree, leading to reduced stakeholder support or even mobilization against the firm. Despite these risks, corporate activism is on the rise. While existing work seeks to explain this quandary by identifying predictors of the decision to speak out, we suggest that part of the answer may lie in how firms speak out on polarizing social issues to minimize these risks. We leverage press releases and Twitter accounts of Fortune 500 companies that expressed a stance on LGBT rights between 1999 and 2019, as same-sex marriage progressively became legal across the United States. Through a difference-in-differences design, we find that prior to same-sex marriage being legalized in their home state, firms default to touting their track record on LGBT rights, without wading into contentious debates. Once marriage equality comes to pass, however, firms tend to shift their stances towards activism, advocating for broader societal change. Further, we find this general trend to be moderated by firm-level and stakeholder characteristics. Our findings thus point to an irony: corporate "activism" in the pursuit of broader social change often takes place only after polarizing social issues have been settled.

Gendered and Racialized Structures of Work and Opportunity

Session Moderator: **Jirs Meuris**, *U. of Wisconsin-Madison*

OMT: **Devaluation by Association: Gender Diversity and Performance Recognition in Masculine Occupations**

Author: **Jirs Meuris**, *U. of Wisconsin-Madison*
Author: **Jennifer M. Merluzzi**, *George Washington U.*

Responding to persistent gender inequalities, organizations have adopted initiatives to increase women's representation in male-dominated occupations. Although sociological research has identified many challenges for the women entering, we know less about the impact on workers inside these occupations. We propose a devaluation-by-association penalty, where incumbent men and women in male-dominated occupations are less likely to be recognized for their performance when their work unit includes more women peers. We test our thesis using longitudinal data on non-monetary awards recognizing front-line police officers in the line of duty. While women officers were less likely to receive an award relative to men regardless of unit gender composition, this likelihood declined for all officers when a larger proportion of women worked in their unit. This devaluation occurred for awards recognizing routine and exceptional performance and regardless of any gender-typing of work tasks in the unit. Further, both men and women managers contributed to this devaluation in their nomination of officers for performance awards, with men managers devaluing men officers more strongly. Collectively, our findings identify a barrier to diversity initiatives aimed at increasing women's representation in male-dominated occupations as incumbents become penalized for their association with work units that include more women peers

OMT: **How Structural Disadvantages Affect Job Histories of African America Applicants at a Tech Company**

Author: **Ming De Leung**, *U. of California, Irvine*
Author: **Prasanna Parasurama**, *Emory U., Goizueta Business School*

By combining the literature on the effects of category spanning on hiring with the work on African American job seeking, the authors propose a novel structural mechanism that contributes to the well-established labor market hiring disadvantage Black job seekers face. Black job seekers respond to labor market discrimination by applying to a greater range and less related occupational job categories. Employers generally shun job seekers with more disparate and less related job histories because they are perceived as less skilled or less committed. Broader job-seeking behavior leads Black applicants to have more disparate and less relevant job experiences which also reduces their employment prospects. This theory is tested with over 400,000 job applications for all 3,600 publicly posted jobs over 5 years at a Fortune 500 technology company. Black applicants have greater diversity and less relevant past job experiences than White applicants. Both the disparate categorical experiences and less relevant job backgrounds significantly contribute to their lower likelihood of being called back for an interview. Furthermore, this effect is more pronounced earlier in one's career, because one's identity is being established. Consequences for racial hiring discrimination, category-spanning, and job seeking are discussed.

OMT: **Racialized Expertise: The Consequences of Perceiving the Race of Workers as a Type of Expertise**

Author: **Sandra Portocarrero**, *Columbia Business School*

I use data from a two-year qualitative study of workers at a large, elite public university to examine how the race and ethnicity of workers became a signal for organizational actors when forming perceptions of the expertise of workers. Through an analysis of members of an occupational category in which the ethnoracial background and experiences of workers are considered an intrinsic part of the expertise necessary to fulfill the job tasks—diversity, equity, and inclusion (DEI) workers, I develop the concept of racialized expertise. Organizational actors gave different racial and social meanings to the ethnoracial background of workers in relation to their expertise in DEI issues. The differences in attributions of expertise given to white and non-white DEI workers led to differences in task allocation and, consequently, in the job content of DEI workers. An unexpected but valuable finding is that the racialized differences in perceptions of expertise seem to have influenced how non-white DEI workers presented their ethnoracial background as a type of expertise. This article advances our theoretical knowledge of expertise by introducing a new perspective that centers the race and ethnicity of workers in theorizing expertise.

OMT: **Equity Crowdfunding: Game Changer or Empty Promise for Inclusive Entrepreneurship**

Author: **Melody Chang**, *USC Marshall School of Business*

Does allowing the general public to invest in startups democratize capital access by supporting underrepresented entrepreneurs? Despite growing interest in equity crowdfunding among entrepreneurs and policymakers, it is unclear how crowd investors choose investments and whether their decisions differ from those of professional investors. Extant theories suggest two conflicting views on whether equity crowdfunding can improve capital access for underrepresented entrepreneurs. Sociological research on resource exchanges suggests that broadening the pool of investors would help entrepreneurs overcome structural barriers. However, research on the wisdom of crowds suggests that crowd investors would be attracted to the same types of startups as professional investors, thereby perpetuating funding disparities. To resolve this puzzle, I examine the differences in firm and founding team characteristics of startups funded by crowd and professional investors. Leveraging novel data on startups that participated in Regulation Crowdfunding in the U.S. and data on startups that could have decided to crowdfund, I find that equity crowdfunding helps improve capital access for some groups of underrepresented entrepreneurs, but not all. Equity crowdfunding has reduced structural barriers for entrepreneurs overlooked by professional investors for reasons related to embedded resource exchange dynamics (i.e., shared educational and professional background, region, and industry). Yet gender and racial biases appear to persist among crowd investors.

Studying Social Impact: The Role of Investors, Producers, and Other Intermediaries

Session Moderator: **Karthik Rapaka**, *Erasmus U. Rotterdam*

OMT: *Burdensome Gifts: Interactional Trials Between Nascent Social Entrepreneurs & Impact Intermediaries*

Author: **Karthik Rapaka**, *Erasmus U. Rotterdam*

How do interactions with social impact intermediaries shape the emotional energy of nascent social entrepreneurs operating in distressed geographies? This is an important question given the growing prevalence of exchanges between impact intermediaries and nascent social entrepreneurs in addressing wicked social problems amidst severe resource scarcities. To answer the above question, we investigate the case of Systemic Leap, a philanthropic intermediary and its portfolio of nascent social entrepreneurs carrying out social missions in remote rural areas or urban slums in India. Drawing on two-year ethnographic observations, interviews, and archival data, we develop a process model of intricate social impact intermediation. Our model shows that intricate impact intermediation work is enacted through five main practices: (a) exacting rhetorical expositions, (b) entangling funding with intensive interactional rituals, (c) evangelizing de-contextualized templates, (d) endearing repeated articulations, and impact measurements, and (e) realizing disconnections and reducing interactional intensity. Through our findings, we show that intricate impact work aids in the continued sustenance and greater formalization of a very small portion of nascent social entrepreneurs but not without emotional energy drain which mostly goes unnoticed. Intricate impact work makes nascent social entrepreneurs feel exhausted, confused, yet relieved and grateful for exchanging with intermediaries. Our paper contributes to the growing literature on unintended dark sides of social entrepreneurship by drawing attention to the interaction rituals, and the emotional and cognitive dissonance caused via intermediation practices.

OMT: *The Art of Engaging Audiences: How Impact Producers Run Film-based Campaigns for Social Change*

Author: **Stephan Davys Manning**, *U. of Sussex*
Author: **Ana Paula Suarez Lopez**, *U. of Sussex*

Cultural products, such as art, music and film, are increasingly used strategically to promote social change. In film, so-called impact producers run film-based impact campaigns to raise awareness on social issues, and promote behavioral and policy change. These campaigns can be conceived as interstitial spaces between creative content production and issue-based fields. Because of their growing importance, we need to better understand these interstitial spaces and intermediary roles within them. Based on primary and secondary data, we discuss how impact producers set up and maintain these spaces. We find that they operate as strategic convenors and amplifiers by leveraging film narratives for issue-based impact objectives, while also building on existing movements and campaigns, and mobilizing impact partners at multiple levels, to engage target audiences. Findings have important implications for research on interstitial spaces, creative industries and social change processes.

OMT: *Entangled value(s): Valuation as Critique in Impact Investing*

Author: **Kaja Kirstine Hegstad Lilleng**, *Aalto U., Department of Management Studies*

Practices where economic value and environmental value entangle are becoming more prevalent. Impact investing is one emerging approach aimed at boosting long term sustainable solutions. This aim, however, is hampered by economized valuation practices in financial investments and the challenge of assessing impact. I explore how impact investors attribute value in novel ways. This is done through a qualitative study of early-stage private equity impact investors in the Nordic region, drawing on interviews and field observations. I analyse the emerging valuation process by looking at how impact investors select which objects should be paid attention and qualify values through their critique and criticisms. This highlights practices and assumptions the investors challenge and discard of, and attributes they value instead. The findings show how investors criticise simplified measures and shallow understandings of impact and value frames that can encompass complexity and uncertainty, valuing profound and intentional approaches. Overall, the study contributes insights into new and changing modes of valuation in a highly economized setting. By exploring how financial value and environmental value(s) entangle and shape novel forms of valuation I advocate for a better understanding of valuation processes that try to look beyond the financial imagination.

OMT: *Creating Spaces to Translate between Near and Distant Futures*

Author: **Kiia Strömmer**, *Maastricht U.*
Author: **Jarrod Ormiston**, *U. of Technology, Sydney*

Research on organisations and future-making has tended to treat the future in undifferentiated way. Prior studies have mainly focused on the conceptualisations of the near future, with limited exploration of how organisations imagine distant futures and how they connect distant futures with near futures and the present. This paper aims to understand the future in a more nuanced way by unpacking how organisational actors translate between near and distant futures. To shed light on these phenomena, we conduct interviews with 40 impact investors in Europe to understand how they engage with near and distant futures as they make impact investment decisions. The findings reveal how some organisations get stuck within near or distant futures and shows the ways in which other actors create and find spaces to translate between near and distant future. Our paper contributes to the understanding of temporality and future-making in organisational studies by illustrating how actors create spaces for hyperprojectivity to imagine alternative pathways of the future and escape the divides between the present, near and distant future. We unpack the role of foresight and backcasting as reflective processes to translate between current temporal structures and the near and distant future. We also highlight the role of utopian and dystopian thought in generating distant future imaginaries.

Studying Firm Structures and Networks

Session Moderator: **Lisha Liu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

OMT: **Group Membership in the Interlock Network and Cooperation in Financial Risk-sharing between Firms**

Author: **Lisha Liu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Prior research has shown the role of network governance in sustaining dyadic cooperation between organizations. This study extends this approach by noting that shared group membership in the interlock network facilitates private information flow, accelerates the emergence of trust, and increases the costs of opportunistic behaviors in risk-sharing between firms. Firms refrain themselves from taking advantages of exchange partners from the same interlock group, which safeguards the interests of participants in informal exchanges. I also analyze how shared interlock neighbors foster information flow and the development of trust, and how firm status amplifies the costs of opportunism, thus strengthen the main effect of group membership in the interlock network on cooperative risk-sharing among firms. My study of interlocking directorates and loan guarantees among publicly listed firms in China during the period 2007–2016 lends support to the hypotheses. The paper advances the literature on social capital, inter-firm collaboration management, and financial risk-sharing between firms.

OMT: **Firm Formalization Amid Institutional Imperfections: The Roles of Bricolage, Networks, & Firm Growth**

Author: **Everlyne Misati**, *George Washington U.*
Author: **Fred Ochieng Walumbwa**, *Florida International U.*

Research suggests that the benefits firms derive from formalization—registration—outweigh those of operating informally. Thus, one wonders why entrepreneurs start their firms informally and what eventually influences their intentions to formalize. On the one hand, extant theory contends that imperfections in formal institutions, i.e., laws and regulations, provide the impetus for informal firms. On the other hand, theory also suggests that the higher the quality of formal institutions, the more likely informal entrepreneurs are to formalize. This reveals an implicit assumption and presents an interesting puzzle: in developing and emerging markets, where informal firms are more prevalent, the imperfections in formal institutions, which engender informality, tend to persist. Yet, some entrepreneurs in these contexts still transition from informality to formality. Thus, a salient question remains: what influences informal entrepreneurs' intentions to formalize in developing and emerging markets? We employ a mixed methods approach, drawing on primary interview and survey data, and find that informal entrepreneurs exert their agency, via bricolage, i.e., by making do with the scarce resources at hand, and network relationships, to grow their firms. This initial growth then serves as a signal of viability, which incentivizes them to formalize, to facilitate broader access to resources and markets. Our study contributes in two key ways. First, it highlights an understudied yet important context of informal firms, which provide a source of livelihood for nearly two-thirds of the global workforce, and significantly contribute to the world economy. Second, it shows how, when operating in contexts with sustained imperfections in formal institutions, rather than wait perennially for conditions to improve, entrepreneurs turn lemons into lemonade. These entrepreneurs take action: they leverage what they have (resources), what they can do (capabilities), and who they know (networks), to formalize and thus conceivably contribute to innovation. We discuss implications for theory, practice, and policy.

OMT: **Co-Parenting In Multi-Subsidiary Firms**

Author: **Metin Sengul**, *Boston College*
Author: **Maciej Workiewicz**, *ESSEC Business School*

We examine the factors that influence the formal authority structure in multi-subsidiary firms, focusing on co-parented subsidiaries that have two or more direct owners who themselves belong to the same firm. We argue that a subsidiary is more likely to be co-parented when its need for intrafirm coordination, and thus the need for information processing, is high. Accordingly, the likelihood that a subsidiary will be co-parented increases with the number of other units in the firm and the relatedness of the focal subsidiary to them. Results of analyses, based on the population of subsidiaries of manufacturing firms operating in France between 1999 and 2004, support the predictions.

OMT: **Resource Dependence Effects in Formalized Inter-organization Exchanges: The Case of F&A Rates**

Author: **Yong In Choi**, *Georgia Institute of Technology*
Author: **John P. Walsh**, *Georgia Institute of Technology*

Resource Dependence Theory argues that the resource dependencies between organizations, characterized by the degree of power imbalance and of mutual dependence, predict the outcomes of resource exchanges. A primary condition of the theory is that actors should have discretion over resource allocation. It is, however, an open question whether and to what extent such power and interdependence effects operate in a formalized dependence relation, such as between the government and a government contractor under a highly specified set of procurement rules. While such rules are supposed to reduce the discretion of the actors and remove informal elements from the organizational relationship, Resource Dependence Theory, combined with prior work on informal processes in organizations, predicts that power asymmetry and mutual dependence are strong predictors of the outcomes even in such regulated interorganizational relationships. Furthermore, prior work suggests that the degree of informal processes varies across agencies within the same regulated environment. Hence, we will test these competing perspectives on the resource allocation outcomes of formalized interorganizational relationships. We test these research questions using data on variations in federal Facilities and Administration (F&A) cost reimbursement rates negotiated between the U.S. Federal government and research universities. The results show that there is substantial variation in the rates across universities. We find that universities' F&A rates are related to the degree of interdependence and power assymetries between the university and the cognizant funding agency that sets the rate, showing support for Resource Dependency Theory even in a highly formalized interorganizational relationship. Furthermore, this effect varies across agencies, with a significant relation between mutual dependence and the negotiated rate for only one of the two cognizant agencies, suggesting that the role of power and informal processes may depend on the specifics of agency practices. Hence, even a highly regulated system may provide space for power asymmetry and mutual dependence to affect the resource exchange. We conclude with a discussion of the implications of these findings both for organization theory and for science policy.

OMT: **Turnover Sequences and Cascades: An Intertemporal Model of Behavioral Aggregation and Acceleration**

Author: **Kris Mikel-Hong**, *School of Economics and Management Tsinghua U.*
Author: **Ning Li**, *School of Economics and Management Tsinghua U.*
Author: **Xilan Zhang**, *School of Economics and Management Tsinghua U.*
Author: **Jingzhou Pan**, *Tianjin U.*

We explore turnover aggregation processes to develop a model of turnover cascades, sequentially accelerating turnovers in network clusters. Using one year of high-frequency data from an organizational network of 19,098 full-time employees, we find that localized turnovers tend to occur more quickly the longer the sequence continues. While turnover accelerates, we identify there are limits on maximum turnover velocity. Considering how a localized network community may experience multiple turnover cascades over time, we also find evidence of between-cascade acceleration. Furthermore, our findings show that industry crisis conditions increase the velocity of turnover cascades. This study helps bridge micro turnover contagion with macro collective turnover rates, providing insights into the potential risks of uncontrolled cascading turnovers.

Occupational Groups, Boundaries, and Ideals

Session Moderator: **Luc Pierre Bres**, *FSA ULaval (Laval U.)*

OMT: **Occupational Osmosis: How Biologists Maintained the Boundaries of their Profession by Crossing Them**

Author: **Luc Pierre Bres**, *FSA ULaval (Laval U.)*
Author: **Thomas J. Roulet**, *U. of Cambridge*

Occupational groups often have to defend and expand the boundaries of their professions, but they are also increasingly in need of crossing them to address environmental and social change. Traveling back and forth through those boundaries can help combine knowledge, and resources to address those challenges. While we broadly know about the benefits and costs of crossing boundaries, we have limited knowledge of how they add up, in which case they counterbalance each other and how individual actors practically cross instead of simply span across boundaries. By looking at how actors strategically move in and out of their professional boundaries to achieve a professional project, we can paradoxically explore how boundaries can be erected and maintained through the act of crossing them. Empirically, we focus on a profession that has needed to cross boundaries to achieve their goal: biologists in Quebec entered different professional fields to preserve the natural environment. Through a qualitative study, drawing from extensive longitudinal archival data spanning over 40 years and interviews, we explore how actors cross boundaries in a strategic manner. Doing so, they solidify and maintain them, and bring symbolic and tangible resources to their group. Our study also shows, how, as an unintended consequence, crossing cam reinforce the boundaries between fields.

OMT: **Building Jurisdiction on the Common**

Author: **Bomi Kim**, *House of Innovation*
Author: **Mohammad Hosein Rezazade Mehrizi**, *KIN Research, VU Amsterdam*
Author: **Diane E. Bailey**, *Cornell U.*

Workplace is populated with various occupational groups, each asserting control over an area of work through a jurisdictional claim. However, as emerging digital technologies link together occupational groups and generate data and information artifacts that are increasingly shared across groups, the boundaries between groups may become more penetrable and the bases for jurisdictional claims may flounder. We examine how occupational groups might create jurisdiction when the traditional bases for claiming jurisdiction are eroded in the context of emerging digital technologies. Through an ethnographic study, we examine how a new medical image processing group at an academic medical center established and sustained jurisdiction successfully despite sharing data, information artifacts, technologies, and much knowledge with neighboring groups. We show how jurisdiction is enacted through "interlacing practices": practices through which the group intricately crossed nearby groups, shared work artifacts and technologies to improve its own knowledge and work procedures as well as the overall work processes across groups. We discuss how such an enactment view can enrich our theories of organizational jurisdiction and boundary work in the context of emerging digital technologies by suggesting a more synergetic and collaborative understanding of organizing work across porous boundaries.

OMT: **Occupational Ideals and the Effect of Task-focused versus Identity-focused Practices on Diversity**

Author: **Joelle Evans**, *Bayes Business School*
Author: **Celine Flipo**, *IESEG School of Management*
Author: **Thierry Amslem**, *IE Business School*

How do occupations diversify? Occupations tend to integrate candidates with similar cultural backgrounds, thus playing a role in the reproduction of inequality. When culturally diverse employees are hired, their career outcomes are poorer than other employees and they are more likely to select out of an occupation. Although research shows that occupations can be heterogeneous to some extent, we have little understanding of how diversification occurs. Drawing on a longitudinal study of culturally diverse apprentices in a large media group, we examine the inclusion practices enacted by these apprentices and the evaluation of these practices by permanent employees. We find that newcomers enact two sets of practices: task-focused and identity-focused practices. Permanent employees evaluated the task-focused practices as extending and enriching their occupation but considered identity-focused practices as disruptive to the occupation. Further analysis unearthed how occupational ideals shaped employees' evaluations of these practices. An examination of job offers received by a panel of apprentices at the end of their contract shows that newcomers who enacted identity-based practices did not receive job offers. We derive an explanatory model for how occupational ideals shape occupational diversification. We offer theoretical implications for research on occupational control and diversity, resource-based approaches to diversity and the organizational reproduction of inequality.

Status Signals and their Effects on Organizational Processes and Outcomes

Session Moderator: **Bo Kyung Kim**, *Yonsei U.*

OMT: **Closing the Gap: How Status-inconsistent Firms use Identity Claims in International Markets**

Author: **Bo Kyung Kim**, *Yonsei U.*
Author: **Youchung Kwon**, *Cornell SC Johnson College of Business*
Author: **Heeyon Kim**, *Cornell U.*

Many organizations experience status inconsistency as they are embedded in multiple status hierarchies. While prior research has documented the negative outcomes of status inconsistency, we have limited understanding of how organizations try to reduce the level of inconsistency. To this end, we explore how organizations use identity claims in response to status inconsistency. Specifically, we argue that status-inconsistent organizations that have higher status in a less prestigious market while having lower status in a more prestigious one have the most ambiguous and confusing identity, and thus have the strongest pressure to respond with consistent identity claims across their markets. Using data from the fashion magazine Vogue, U.S. and Spain editions, we find that status-inconsistent fashion firms with the higher status in the Spanish market are most likely to present identical advertisements across the two markets.

OMT: **The Effect of Status on Reference Group Selection: Evidence from Regression Discontinuity Approach**

Author: **John Kim**, *Chinese U. of Hong Kong*

It is important to articulate the specification of reference groups as they are a central source of organizational learning and play a critical role for several organizational decision-making processes. This study aims to address the neglected area of research on specification of reference groups by focusing on the role of organizational status. Drawing on features of status, I theorize and find that high firm status increases the level of status of firms in reference groups, decreases reference group size, increases the use of non-conforming reference groups and the number of mentions as referents by other firms. I investigate the causal effect of status on the process of organization's selection of reference groups empirically by utilizing Fortune 500 rankings and applying a sharp regression discontinuity design (RDD) approach. Overall, this study offers a better understanding for how organizations form reference groups, contributing to the literatures on behavioral theory of the firm, organizational learning, and status.

OMT: **Status and Risk Taking in Core-Periphery Networks**

Author: **Demetrius Lewis**, *U. of California, Riverside*

Organizations in the core of organizational fields access exchange relationships that provide resources critical for survival. However, organizations maintain access to these relationships and resources through following the core's conventions, which presents a barrier to pursuing novelty in the core. Even in fields where the inter-firm network is designed to encourage novelty, being in the core can limit novelty. Although organizations in the core are similar, there remains differentiation in terms of social influence. Core organizations higher in social status are able to justify actions that do not follow conventions and mobilize support for novel ideas. The interaction of being in the core and high status allows organizations to leverage their influence to pursue novelty while maintaining access to exchange relationships and resources, providing an ideal social position for pursuing novelty. Empirical analysis of the venture capital industry finds that investment firms in the core of the co-investment syndication network accumulate more resources, but make less novel investments. High-status firms in the core exhibit the most novelty and also more success in their investments. Contrary to conventional wisdom about the widespread pursuit of novelty in the venture capital industry, novelty is driven largely by a smaller group of high-status firms in the core.

OMT: **Reputation Signals and the Evaluation of Middle- and Low-Status Organizations**

Author: **Francois Herve Collet**, *U. Ramon Llull, ESADE Business School*
Author: **Olga Bruyaka**, *West Virginia U.*
Author: **Alex Makarevich**, *California State U., East Bay*
Author: **Lucie Baudoin**, *Excelia Business School*
Author: **Ralf Wilden**, *Macquarie Business School, Macquarie U.*

Status and reputation both play important roles in the evaluation of organizations, but prior research has shown that reputation signals are often discounted in the evaluation of high-status organizations. As extant research has focused on the differentiated effect of reputation between high-status versus non-high-status organizations, it has left under-researched the question of how decision makers may evaluate middle-status and low-status organizations differently, even though such evaluations account for a large number of consequential decisions. The legitimacy of low-status organizations is in doubt, which raises questions about their ability to perform on dimensions that are crucial to be considered as an acceptable option. Consequently, when evaluating low-status organizations, decision makers lay emphasis on reputation signals related to outcomes that need to be at an acceptable level before even considering other criteria. By contrast, decision makers take for granted that middle-status organizations are acceptable options; their legitimacy is not in doubt. Thus, when evaluating middle-status organizations, decision makers focus on reputation signals that provide information relevant to outcomes that they seek to maximize. We test and confirm our hypotheses in an empirical study of 411,530 applicants for MBA programs in the United States embedded in a status hierarchy structured by third-party rankings.

From a Work(er) Point of View: Reinvigorating Management Research Through the Study of Work

Organizer: **Pedro Monteiro**, *Copenhagen Business School*
Organizer: **Greetje Frankje Corporaal**, *U. of Oxford*
Discussant: **Beth Bechky**, *UC Davis*
Discussant: **Davide Nicolini**, *U. of Warwick*
Presenter: **Jennifer Rhymer**, *UCL School of Management*
Presenter: **Anastasia Sergeeva**, *Vrije U. Amsterdam*
Presenter: **Pedro Monteiro**, *Copenhagen Business School*
Presenter: **Greetje Frankje Corporaal**, *U. of Oxford*

This symposium contributes to AOM's goal of "putting the worker front and center" by explicitly adopting a work lens to advance our knowledge of contemporary issues in management scholarship. The world of work is rapidly changing in this post-pandemic phase. This includes the growing popularity of remote work and calls for more openness and transparency. Getting work done also increasingly involves digital technologies and interactions with specialists from multiple domains. Such trends pose unique challenges—including the reconfiguration of what it means to be a manager or employee. Thus, we need research that re-grounds our understanding of how work is accomplished amidst these changes in traditional and new settings. To that end, the papers in this symposium, based on in-depth fieldwork, examine how work is done in light of changing conditions in a variety of empirical contexts. For workers, the symposium provides much-needed insight into how individuals develop connections and a sense of belonging and work collaboratively in (inter-)organizational settings increasingly digitally mediated. For managers, it showcases a range of meaningful responses to contemporary workplace challenges via structural, cultural, and technological tools. Finally, the symposium offers suggestions for advancing management research by foregrounding how the study of work raises new questions on power dynamics, social ties, expert-client relations, and organizational forms.

Firms, Occupations, and Markets as Tools for Combating Systemic Racism: Challenges and Opportunities

Organizer: **Summer Jackson**, *Harvard Business School*
Organizer: **Vic Marsh**, *U. of Toronto, Rotman School of Management*
Participant: **Ray Reagans**, *MIT Sloan School of Management*
Participant: **Ezra Zuckerman**, *Massachusetts Institute of Technology*
Presenter: **Adia Harvey Wingfield**, *Washington U. in St. Louis*

Presenter: **Summer Jackson**, *Harvard Business School*
Presenter: **Vic Marsh**, *U. of Toronto, Rotman School of Management*
Discussant: **Orlando Patterson**, *Harvard U.*

Can for-profit firms, occupations, and markets be part of the solution to systemic racism rather than part of the problem? Past research provides considerable reason for doubt. After all, there is voluminous evidence of racial bias in the allocation of opportunities for employment and career advancement (Fernandez & Fernandez-Mateo, 2006; Pager, 2003; Pager, Bonikowski, & Western, 2009; Pager & Pedulla, 2015; Pedulla & Pager, 2019). Moreover, in Ray's (2019) influential theory of "racialized organizations," he argues persuasively that (American) racist schemas have become embedded in organizational rules, routines, and structures. It is in organizations (not via ambient logics alone) that schemas are fused with resource-richness. While social forces act upon the organizations ("racial superstructures"), the reverse path is also well-trod: organizations' resources enable reinforcement of racist schemas in their own fields, markets, and wider classes, and in society writ-large - systemically (Bonilla-Silva, 1997, 2001; cf., Omi & Winant, 2014; Wilson, 1976, 1987). Ray's (2019) diagnosis does not deny that organizations change (for good or ill) at certain times, the underlying racist schemas "remain largely stable." For would-be reformers of for-profit firms, occupations, and markets, this account is daunting because it is a theory emphasizing major stability (amidst minor moves and counter- moves by reformers). For major change ambitions, this implies that organizations should either de-racialize or disband altogether. Yet de-racialization seems impossible given that any cultural expression in an historically racist society—including those by which organizational "spaces" are constructed—are necessarily racialized (Anderson, 2015; 2022). The recognition that it is impossible for firms to de-racialize implies that we should seek alternatives to firms. But it is notable that neither Ray (2019) nor the scholarly publications extending the theory has proposed alternatives to formal organizations as a way to better combat systemic racism. This stands to reason. Research by organizational sociologists and management theorists are unified in noting that while informal groups and networks can achieve remarkable feats of coordination and cooperation over the short term (e.g., Majchrzak, Jarvenpaa, & Hollingshead, 2007; Mollick & Kuppuswamy, 2014; Quarantelli & Dynes, 1977; Wachtendorf, 2004), however, the disquieting potential for informal groups and networks to further systemic racism exists precisely because it is hard to hold them accountable for their actions (Du Bois, 1926). The hierarchical governance mechanisms that constitute formal organizations are essential for providing the "reliability" and "accountability" for efforts that need to be sustained over time and place and in engagement with interested stakeholders (Freeland & Zuckerman Sivan, 2018; Hannan & Freeman, 1984; cf., King, Felin, & Whetten, 2010; Turco, 2016). The potential for reliability (and especially) accountability has been noted as essential (if difficult to achieve) for mitigating discrimination (Castilla, 2015; Foschi, 1996; Lerner & Tetlock, 1999). Accordingly, insofar as recent trends have witnessed a slowly "vanishing corporation" and the "uberization" of the workplace with the rise of the "gig economy," scholars have tended to see these trends as worrisome rather than promising from the standpoint of combating (racial) injustice (Schor & Vallas, 2021). In short, accountability is essential for dismantling systemic racism and formal organizations are creatures of accountability. As such, formal organizations have the unique potential—however rarely realized—to become tools for dismantling systemic racism rather than tools for perpetuating it. This symposium showcases recent research projects focused on the social processes of inequality and interrogates the role of firms, occupations, and markets in redressing systemic racism in society. In particular, the presenters are focused on the guiding question of how firms might realize this potential, and what are the opportunities for organization theorists to provide guidance in this regard.

The 21st century is a century of dystopian nightmares and utopian dreams. Perpetual, parallel crises are creating a sense of impending doom – alongside an increasing sentiment that the established ways of coordinating social life are not only incapable of addressing these crises but might, in fact, be part of the problem. Simultaneously, new technologies and the (re-)discovery of marginal forms of organizing are spurring a renewed organizational imagination, causing key social actors to fundamentally rethink how we might organize society. In a world of collapsing and challenged institutional logics, practices, and sensemaking, what role can and should management scholars play? And how to fulfill this role in a way that enables “alternatives” that are more conducive to the flourishing of people and the planet? This symposium spurs a conversation around the potential of organization studies to both contribute to and learn from alternative (organizational) imaginaries. It aims to foster an international community of scholars from across disciplines, career stages, and regions of the world around the shared interest in understanding the organizational processes surrounding the recursive construction, maintenance, and disintegration of utopias, dystopias, and organizational imaginaries.

Understanding how to organize for open social innovation in order to generate and implement new ideas is essential to unlock their potential for creating impact and addressing societal challenges. Despite the development of scholarship on open social innovation, research on the topic is still underdeveloped. We believe that reflecting on different forms of open innovation (from open science to innovation contests) and how they organize to engage multiple stakeholders to generate new ideas and create impact is essential and timely. There is a growing interest among scholars from different fields as well as from practitioners in understanding better the conditions to increase the success/effectiveness of open social innovation. This symposium aims at contributing to this understanding by shedding light on pioneering new studies that present empirical work that describes different forms of open social innovation and contexts in order to unpack practices for successful open social innovation. We aim to engage the audience in a timely discussion about the conditions that facilitate idea generation as well as implementation and collective action in open social innovation context.

Grand challenges, such as global warming and social inequality, are evaluative, complex and uncertain global problems that manifest locally and operate across different scales and geographical locations. Addressing these challenges requires deep knowledge of affected communities and the broader value systems that shape them. Over time, research has focused on leadership styles, intra- and interorganizational mechanisms that enable actors to deal with the multidimensionality proper of grand societal challenges. However, more research is needed on how leaders adapt their leadership style over time to mobilize support among stakeholders to address grand challenges, how they change their perception of themselves and the challenges they are addressing. Furthermore, we need a deeper understanding of how organizations can deal with actors operating at different scales and locations as well as of the conditions that favor the implementation of innovative solutions to address grand challenges. The objective of this symposium consists in addressing these issues and in providing a comprehensive view of the different challenges and opportunities that individuals and organizations face when providing innovative solutions to grand challenges. We bring together four papers, that collectively contribute to a multilevel understanding of the mechanisms and processes that can be performed to address grand challenges.

Consumers and Sustainable Product Perceptions, Concerns and Acceptance

Session Moderator: **Rüdiger Hahn**, *Heinrich-Heine U. of Dusseldorf*

ONE: **The More, the Better? Sustainability-related Signals and Consumers' Perception**

Author: **Stefanie Fella**, *Heinrich-Heine U. of Dusseldorf*
Author: **Melina Burkert**, *U. of Hohenheim*
Author: **Rüdiger Hahn**, *Heinrich-Heine U. of Dusseldorf*
Author: **Verena Hüttl-Maack**, *U. of Hohenheim*

Nowadays, consumers increasingly face the challenge of assessing the sustainability of products based on various sustainability signals sent by manufacturers. Building on an integrative approach to map this complexity, we conduct two factorial surveys to identify the relative impact of different product-related sustainability signals and the number of signals on consumers' perceived product sustainability. Study 1 reveals significantly varying impacts of signals relating to different sustainability domains, life cycle phases, and validation levels on perceived sustainability. In addition, Study 2 finds support for providing more sustainability signals to positively influence consumer perceptions. In light of signaling theory, the results show the importance of signal content and the effects of multiple signals sent simultaneously. This work contributes to a synthesis of research on consumer sustainability perceptions and enriches literature on signaling theory in a consumer behavior context. For practitioners, our results provide a basis for more effective corporate sustainability communication.

ONE: **Sustainable Product Purchase: Role of Eco-labeling, Environment Concern, Consumer Demographics**

Author: **Muhammad Mollah**, *St. Louis U.*
Author: **Kaushik Mukherjee**, *Worcester State U.*
Author: **Keith Ferguson**, *4276*
Author: **Joseph Hair**, *U. of South Alabama*

In today's tumultuous society, consumers ask companies not only what they stand for but also what they are ready to stand up for and protect. Accordingly, companies are becoming more concerned about sustainable products that benefit the society and its economy and the environment, which is essential to save the planet. Consequently, consumers may be positively inclined towards such products during their purchase decisions. Accordingly, in this study, four first-order constructs, including consumption level, values, waste reduction, and defaults were examined in light of the higher-order construct of sustainability initiatives and its influence on likelihood of purchasing sustainable products. Applying Social Cognitive Theory (Bandura, 1986) and using a partial least squares structural equation modeling (PLS-SEM) approach, it was found that consumers are more likely to purchase sustainable products. The results also show that a consumer with greater environmental concern, higher age, and male gender has even greater likelihood of purchasing sustainable products. Ways in which managers and policymakers can leverage these sustainability initiatives so that companies provide greater benefits to the environment and society are discussed.

ONE: **Circular Economy and Consumer Acceptance on Product-Service System: A Customer-Dominant Logic View**

Author: **Chang H. Kim**, *James Cook U.*
Author: **Adrian T. H. Kuah**, *James Cook U.*
Author: **Pengji Wang**, *James Cook U.*
Author: **K Thirumaran**, *James Cook U.*

Product-service system (PSS) is an integrated product and service offering that could be used as a business-level strategy to provide a circular economy solution. However, the preference over certain PSS elements or its combination remains unknown for large electrical home appliances. This study adopted a customer-dominant logic (CDL) approach to assess South Korean consumers' acceptance of PSS elements for refrigerators. A two-phase mixed method including focus groups, conjoint analysis, and Kano modeling was used to analyze the responses from 244 Korean consumers. Our results identified three groups of consumers showing different preferences. PSS elements such as durability, energy efficiency, and long-term warranty were of the highest priority to consumers. This study contributes to the PSS literature by providing empirical and methodological insights into understanding consumer acceptance of PSS. Our findings will help businesses develop relevant value propositions.

Organizational Adaptation and Resilience in a Changing Biophysical Environment

Session Moderator: **Soolim Park**, *George Washington U.*

ONE: **Firms' Exposure to Severe Natural Disasters and Changes in Greenhouse Gas Emissions**

Author: **Soolim Park**, *George Washington U.*

Although natural disasters, exacerbated by climate change, disrupt businesses, existing literature on natural disasters and climate change is fragmented to explain how a firm's exposure to natural disasters can lead to the adoption of climate change mitigation strategies. Through the lenses of the literature on attention, perceptions, and the behavioral theory of the firm (BTOF), this study explores whether the absolute and/or the socially or historically relative number of severe natural disasters can explain changes in greenhouse gas (GHG) emissions by firms. Data on some of the large GHG emitters in the U.S. suggest that the more a firm is exposed to severe natural disasters, the more it tries to reduce its GHG emissions. A firm's above-average exposure to natural disasters (i.e., negative social aspiration feedback) is negatively associated with changes in GHG emissions. Finally, the negative social aspiration feedback strengthens the relationship between absolute exposure to severe disasters and changes in GHG emissions. This study integrates literature on natural disasters and climate change by elucidating the mechanism of how exposure to severe natural disasters leads to climate change mitigation strategies based on BTOF. It also contributes to BTOF by suggesting exposure to natural disasters as an alternative aspiration.

ONE: **Collaborative Governance Organizations Attention in the Face of Emerging Ecological Adversity**

Author: **Lucie Baudoin**, *Montpellier Business School*
Author: **Francois Herve Collet**, *U. Ramon Llull, ESADE Business School*
Author: **Daniel Arenas**, *ESADE Business School*

To foster the resilience of Social-Ecological Systems (SES), governance structures must pay timely attention to emerging ecological adversity. Past research shows that both public and private organizations can be slow to acknowledge such threat. Collaborative governance organizations may be more adaptive, but their attention capacity is constrained, stretched between the diversity of topics to cover and the challenges of their own organizational structures. We seek to uncover the conditions that foster or hinder collaborative governance organizations allocating attention toward ecological adversity with conceptual insights from the literatures on SES resilience, collaborative governance, and organizational attention. Specifically, we study attention to ecological adversity in the context of four French river basin committees, examining meeting minutes over almost 30 years using natural language processing methods. By identifying tensions critical to attention allocation to emerging ecological adversity, we develop a model and recommendations to foster resilient collaborative attention in governance organizations.

ONE: **Adaptation Strategies to the External Biophysical Environment as a Source of Competitive Advantage**

Author: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*
Author: **Jorge Rivera**, *George Washington U.*

We draw on the resource-based view (RBV) of the firm and resource dependence theory (RDT) to study how the external biophysical environment impacts firm decisions and performance in the California wine industry. We draw on RBV to show that firm adaptation to the external biophysical environment can be a source of competitive advantage to firms. Further, we draw on RDT to highlight how it can add to RBV to explain why firms adapt to natural conditions. Firms adapt to the biophysical environment to secure access to natural resources in the face of environmental uncertainties, and, subsequently, firms gain value from those adaptations. We test our hypotheses with a sample of 50,156 wine-winery-year observations for 535 wineries covering the years 1981-2019. Our results indicate that the adoption of adaptation strategies in response to biophysical conditions are a source of competitive advantage for firms. They also show that firm adaptation strategies mediate the relationship between external biophysical conditions and product price.

ONE: **Does Regenerative Corporate Orientation Support a Firm's Resilience? An Empirical Investigation**

Author: **Louisa Desel**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Today's leaders (founders, CEOs, and top managers) face turbulent times in which they must position their organizations for resilience. Mounting ecological degeneration, challenging social imbalances and environmental dynamism stimulate leaders to rethink strategic position from sustainable towards regenerative orientation. Regenerative orientation is an organizational strategic direction that serves the entire social-ecological system by promoting an understanding of human and environmental patterns in corporate alignment. Regenerative orientation aims to create a net-positive impact by working jointly with the social-ecological system. As precursor, sustainability orientation intents on environmental protection and social responsibility as separate aspects while aiming for a net-zero environment. We contribute to literature by empirically examining the relationship of both strategic orientations towards firm resilience moderated by environmental turbulence. Regenerative orientation is a new strategic positioning; thus, we use a new measurement tool developed based on literature, pilot study and survey-based data samples with 1500 valid responses. Drawing from the theory of resource-based view, our findings suggest that both sustainable and regenerative orientation are positively associated with firm resilience and environmental turbulence partially moderates these positive relationships. An ad-hoc study shows regenerative orientation has a steeper slope. We provide research avenues and discuss implications for literature on organizational studies, strategic orientation, and corporate sustainability.

Pursuing Sustainability through Partnerships and Alliances

Session Moderator: **Emma Perriton**, *U. of Southern Denmark*

ONE: **A Configurational Approach to Portfolios of Partnerships for Sustainability**

Author: **Tulin Dzhengiz**, *Manchester Metropolitan U. Business School*
Author: **Jouni K. Juntunen**, *U. of Vaasa, School of Technology and Innovations*
Author: **Samuli Patala**, *Aalto U. School of Business*
Author: **Andra Riandita**, *U. of Stavanger Business School*

Existing literature on sustainability-oriented partnerships has rarely taken a portfolio approach. Furthermore, to date, there have not been any studies that analyse the effect of different portfolio configurations on firms' sustainability performance, especially regarding diversity dimensions. Motivated by this gap, we analyse 1022 partnerships of 42 global textile firms using the QCA methodology in this study. We find three strategic approaches to diversely configuring portfolios of sustainability-oriented partnerships for enhanced sustainability performance. We also find two paths to poorer sustainability performance due to the lack of diversity in these portfolios of sustainability-oriented partnerships. We contribute to the literature on strategic partnerships by showing how different portfolio configurations jointly impact performance, demonstrating that there are alternative paths firms can follow in their portfolio management. Furthermore, we add to the literature on sustainability-oriented partnerships by demonstrating how firms can manage the configurations of their portfolios in different ways for enhanced sustainability performance.

ONE: **The SDGs as Epistemic Objects: Addressing Grand Challenges through Cross-Sector Partnerships**

Author: **Emma Perriton**, *U. of Southern Denmark*
Author: **Steffen Korsgaard**, *U. of Southern Denmark*
Author: **Mads Bruun Ingstrup**, *U. of Southern Denmark*
Author: **Majbritt Rostgaard Evald**, *U. of Southern Denmark*

This study explores the role of the UN’s Sustainable Development Goals (SDGs) in a cross-sector partnership and innovation project. Based on a single and unique case, this study follows the design phase of creating ReWater, a new plant that is to be the world’s most resource efficient wastewater treatment plant. Contrary to the intention of the overall SDG framework, we find that the SDGs are epistemic objects – vague and flexible, much like the broad sustainability agenda that the SDGs were meant to make more concrete. We further find that the epistemic nature of the SDGs enables mobilisation of partners as it allows for organisational aspirations being projected unto the SDGs, while suggesting some potentially detrimental effects. Our study contributes with knowledge about how the SDGs can play a vital role in achieving collaborations between diverse and multiple actors that ambitiously seek to address grand challenges, but in a different way than originally intended.

ONE: **Effective Multi-Stakeholders Partnership in Climate Change in Agriculture: The Case of Egypt**

Author: **Rachad Bani Samari**, *American U. of Cairo*
Author: **Sherwat Elwan Ibrahim**, *American U. in Cairo*

Multi-Stakeholders Partnerships (MSP) are innovative governance models addressing a particular grand challenge through multiple institutional partnerships (Momen, 2019). This research conducts an empirical investigation on implementation gaps of climate adaptation strategies in Agriculture from a management and governance perspective through an MSP framework developed mainly for this study. The research builds on the premise that over the years, national adaptation policies and strategies to the effects of climate change on agriculture have recorded limited results; and seeks to understand the factors limiting the effective implementation of such policies through an MSP lens. The researchers argue that effective MSP in addressing the grand challenge of adaptation to the effects of climate change on Agriculture in Egypt depends on a three-pronged approach: Stakeholders' power dynamics, governance mechanism, and availability of financial resources.

ONE: **Tackling ESG Performance in the Renewable Energy Sector: Are Strategic Alliances the Answer?**

Author: **Jenny Carita Twyford**, *Alliance Manchester Business School, U. of Manchester*
Author: **Silvia Massini**, *U. of Manchester*

Strategic alliances in the renewable energy sector are global in nature with complex motivations. This research focuses on using strategic alliances in the renewable energy ecosystem and investigates whether strategic alliances are conducive to enhancing a company’s ESG performance. The relationship between ESG performance and a company’s use of strategic alliances was analysed using data from the Securities Data Corporation, Dow Jones Factiva and Datastream databases for the years 2005 to 2019. The research utilised the Heckman model, where a probit regression was first run to examine the relationship between a company having a positive ESG score and a company’s characteristics (industry, company size, ownership status, etc.). Secondly, an OLS regression was used to estimate the relationship between the motivations to enter a strategic alliance and the ESG score. The results indicate that companies in the renewable energy ecosystem who have had a motivation to enter into strategic alliances with the intention of enhancing their environmental legitimacy, reduce operational costs and investment tend to have higher ESG scores. The research indicates that entering a strategic alliance to enhance environmental legitimacy is likely to lead to higher ESG scores, suggesting that environmental legitimacy is essential to a company’s overall attempt to strengthen its ESG score and that engaging in strategic alliances for this purpose is an effective strategy to achieve this.

ESG: From Bookkeeping to Trends

Session Moderator: **Jilde Garst**, *Wageningen U. and Research*

ONE: **Double-entry Bookkeeping for Non-financial Performance - CO2 Emissions Integrated in Bookkeeping**

Author: **Sander Renes**, *Delft U. of Technology*
Author: **Jilde Garst**, *Wageningen U. and Research*

This paper analyses the underlying assumptions of the double-entry bookkeeping system to show how we can expand this system to integrate ESG information in the financial data collection and reporting processes. Our analysis identifies five axioms that shape double-entry bookkeeping. By relaxing one of these axioms, the monetary unit assumption in accounting, we can apply double-entry bookkeeping to non-monetary performance measures and integrate a wider range of value flows into our accounting system. We show that this change does not affect the core strengths of double-entry as a recording system, and allows the production of a wider set of performance measures from the records that include net income. We provide a proof of concept by applying our framework to firm-level data on greenhouse gas emissions and corporate income taxes to show how the evaluation of performance changes for firms if we integrate more dimensions of performance into a single, consistent bottom-line number that generalizes net income.

ONE: **ESG and Firm Value Effects of Shareholder Proposals**

Author: **Timo Busch**, *U. of Hamburg*
Author: **Lisa Scheitza**, *U. of Hamburg*
Author: **Tobias Bauckloh**, *U. of Cologne*
Author: **Christian Klein**, *U. of Kassel*

We investigate environmental, social, and governance (ESG) and firm value effects of more than 7,000 shareholder proposals submitted between 2006–2020. Using propensity score matching and a difference-in-differences setting, the results indicate that firms that receive an ESG- or carbon-related proposal have higher ESG Scores and lower carbon emission intensities than non-target firms in subsequent years. These effects are particularly pronounced for proposals sponsored by conventional investors that have no explicit sustainability agenda. We do not observe an influence on firms' absolute carbon emissions. These observations suggest that shareholder proposals have a limited effect on firms' carbon performance. With regards to financial performance, we find positive, albeit small, abnormal market reactions when information on ESG- or carbon-related proposals becomes available. This outcome may explain firms' tendencies to implement the demands of the proposal.

ONE: **Accommodating Demands for Calculability: The Financialization of ESG in the Swedish Financial Market**

Author: **Rachelle BELINGA**, *California Lutheran U.*
Author: **Emma Sjöström**, *MISUM, Stockholm School of Economics*

Financial market actors are subject to mounting demands to integrate environmental, social and governance (ESG) issues into financial analysis. To make non-financial issues "work with" the existing modus and format of financial analysis has however turned out to be something of a struggle. In this paper, we explore how financial actors cope with ESG integration, and in particular the financialization of ESG. More generally we seek to better understand how existing calculative practices accommodate new "frames" (Callon, 1998). To do this, we draw on the notion of sociomaterial assemblages i.e. the arrangements of human beings and material entities, and examine existing and ESG-oriented assemblages in the Swedish financial market. We propose a sociomaterial process model of calculability for how new frames are introduced, in four parts. We find that central to this process is bricolage, which contributes to the reframing process and to a better appropriation of new frames by existing assemblages.

The Influence and Role of CEOs and Other Senior Executives in Corporate Sustainability

Session Moderator: **Christian Franz**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

ONE: **Too Afraid To Act? How CEO Political Ideological Divergence Influences Environmental Innovation**

Author: **Christian Franz**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Firms increasingly engage in environmental innovation to enhance environmental and financial performance. Although CEOs are central in shaping environmental innovation strategy, previous research has neglected to examine CEO-level antecedents. Drawing on upper echelons and threat response theory, we investigate the impact of CEO political ideological divergence on environmental innovation, using a longitudinal dataset of S&P 500 CEOs from 2010 to 2018. Our results show that CEO political ideological divergence is negatively associated with environmental innovation, and this relationship is strengthened by CEO structural power, but attenuated by sustainability orientation. These findings have important implications for both theory and practice.

ONE: **CEO Narcissism and Corporate Environmental Strategy: An Inverted U-Shaped Relationship**

Author: **Jianzu Wu**, *School of Management, Lanzhou U.*
Author: **Chaojie Zheng**, *School of Management, Lanzhou U.*

Combining the upper echelons theory with the narcissistic admiration and rivalry perspective, we empirically test the effect of CEO narcissism on corporate environmental strategy using a sample of 357 Shanghai and Shenzhen A-share listed companies from 2010- 2019 in China. We found that CEO narcissism has an inverted U-shaped relationship with corporate environmental strategy due to positive but marginal diminishing self-enhancement and negative self-defense effects. The board monitoring mechanism weakens the self-enhancement effect and enhances the self-defense effect, thus weakening the inverted U-shaped relationship between CEO narcissism and corporate environmental strategy. When the intensity of board monitoring exceeds a certain threshold, the inverted U-shaped relationship between CEO narcissism and corporate environmental strategy will flip to a U-shaped relationship. This study provides insights into CEO narcissism research and implications for corporate environmental strategy practice.

ONE: **CEO Cognition and Corporate Sustainability Performance: An Empirical Examination**

Author: **Ajith Venugopal**, *Texas A&M International U.*
Author: **Abdul Rasheed**, *U. of Texas At Arlington*
Author: **Sagar Surendran**, *U. of Texas At Arlington*

We study how the CEO cognition of chief executive officers (CEOs) impacts the corporate sustainability performance of their firms. Drawing on the literature of upper echelon and cognitive frame perspective in corporate sustainability, we examine how CEO cognitive structure (measured using cognitive complexity) and cognitive content (measured using self-focus and external focus) are related to corporate sustainability performance. We conduct our empirical examination on a sample of 371 CEOs of 277 S&P 1500 firms. We developed measures for cognitive structure and content using the language patterns of CEOs in the question-and-answer section of quarterly conference call transcripts with the support of two linguistic tools-Receptiviti and LIWC. Our results indicate that CEO cognitive complexity is curvilinearly related to corporate sustainability performance. Besides that, CEO self-focus is negatively related to corporate sustainability performance, while the external focus is positively related to corporate sustainability performance. Subsequently, we discuss the implications of our findings.

ONE: **Female Directors' Independence, Performance Feedback and Corporate Environmental Strategy**

Author: **Jianzu Wu**, *School of Management, Lanzhou U.*
Author: **Xinyu Guo**, *School of Management, Lanzhou U.*

Previous studies on the impact of board gender diversity on corporate environmental strategy failed to reach a consistent conclusion and paid little attention to the role of female directors' independence. We develop a behavior-selection model to explore the impact of female directors' independence on corporate substantive environmental strategy. We combine female director literature with the insights of corporate governance theory and integrate knowledge about board diversity and independence to theorize how and when female directors cause firms to choose their substantive environmental strategy. We reconcile the tension among extant inconsistent results invoked to explain how female directors' independence might affect the decision of corporate substantive environmental strategy. Empirical data from around 3,800 Chinese public firms from 2011 to 2020 shows that not all female directors contribute to substantive environmental behavior. Specifically, only female independent directors can promote corporate substantive environmental behavior, while non-independent female directors impede corporate substantive environmental behavior. Interestingly, we find that negative performance feedback weakens both the effects of independent and non-independent female directors on corporate substantive environmental behavior. These findings expand the boundaries of corporate governance theory and gender diversity research, highlighting the importance of considering both independence and financial performance in the relationship between female directors and corporate substantive environmental strategy.

ONE: **Corporate Climate Change and CEO Compensation: Behavioral Agency Model and Social Capital**

Author: **Maretno Agus Harjoto**, *Pepperdine Graziadio Business School*

Based on the behavioral agency model (BAM), this study argues that CEO options compensation is related to risk-taking on corporate adverse impact on climate change (corporate climate change risk-taking). CEOs with higher current (prospective) wealth tend to have higher loss aversion (risk-taking) against (toward) corporate climate change risk- taking behavior. Using social capital theory, we also argue that social capital is negatively related to corporate climate change risk- taking behavior and social capital is expected to moderate the relationship between CEO options compensation and corporate climate change risk-taking behavior. Based on a sample of 1,397 US firms during 2005 to 2019 and several measures of corporate climate change and social capital, we find evidence to support our hypotheses. This study contributes to the literature by extending the BAM to explain managerial risk-taking behavior toward climate change and integrates the social capital theory into the BAM to explain the importance of social norms on corporate climate change and its moderating role on the relationship between CEO options compensation and corporate climate change. Our findings also provide practical implications on how CEO incentive compensation structure is related to corporate climate change risk-taking behavior.

Stakeholder Pressures, Engagement, and Implications for Sustainability Strategies and Performance

Session Moderator: **Lutz Preuss**, *Kedge Business School*

ONE: **Stakeholder Pressures and Decarbonization Strategies in Mittelstand Firms**

Author: **Lena Benz**, *U. of Trier*
Author: **Joern Hendrich Block**, *U. of Trier*
Author: **Pramodita Sharma**, *U. of Vermont, Grossman School of Business, US*

Decarbonization strategies are a firms' response to environmental concerns. This study differentiates between symbolic decarbonization strategies focused on compensating CO2-emissions, and the substantive strategies and actions taken by a firm to reduce its harmful emissions. The influence of internal and external stakeholder pressures, and the effect of family ownership on the strategic decarbonization choices is examined. Data from 444 'Mittelstand' manufacturing firms, reveals that overall stakeholder pressures lead to a proactive pursuit of decarbonization strategies. We find that internal stakeholders push a firm more strongly towards substantive decarbonization strategies. In contrast, external stakeholder pressures lead firms to pursue a mix of symbolic and substantive decarbonization strategies. Interestingly, even under external pressures, family-owned firms tend to be less drawn towards symbolic decarbonization strategies than their non-family owned counterparts. In addition to confirming the positive relationship between stakeholder pressures and the decarbonization strategies of a firm found in the literature, this study reveals that internal stakeholders are more influential in steering mid-sized German firms to take substantive actions to mitigate their carbon emissions. Implications for theory, practice, and policy makers are discussed.

ONE: **Differences in the Complexity of Decision-Maker Cognition: Implications for Stakeholder Engagement**

Author: **Lutz Preuss**, *Kedge Business School*
Author: **Isabel Fischer**, *Warwick Business School*
Author: **Bimal Arora**, *Aston Business School*

Characterizing major sustainability issues as 'grand challenges' has led to a call for collaboration among heterogeneous stakeholder groups, not least in multi-stakeholder initiatives (MSIs). Research into MSIs has made huge progress in understanding their workings; yet, it is still criticized for remaining undertheorized, echoing a criticism of management studies generally as paying insufficient attention to the micro-macro divide. Hence, we examined differences between stakeholder groups in the complexity of their cognitive frames on the topic of sustainability. We analysed 265 cognitive frames across four stakeholder groups (business, government, NGO, education). Analyzing these frames in terms of the two dimensions of complexity – differentiation and integration – we found statistically significant differences in frame complexity between stakeholder groups. These micro-level cognitive differences can explain macro-level problems in stakeholder engagement and communication. As effective stakeholder dialogue is crucial to MSI success, our findings have implications for the enhancement of the democratic quality of MSIs.

ONE: **Hybridizing Life Cycle Assessment (LCA) with Local Stakeholder Inputs**

Author: **Matthew Kingston**, *U. of Alberta & Future Fields*
Author: **Maggie Cascadden**, *U. of Alberta*
Author: **Kylie Heales**, *U. of Alberta*
Author: **Pia Heidak**, *Pforzheim U.*
Author: **P Devereaux Jennings**, *Alberta School of Business*

Life cycle assessment (LCA) is the centerpiece of ISO 14040/44 certification as well as the United Nations' Environmental Program. However, LCA and similar sustainability tools have been criticized as leading to loose coupling, misalignment, and symbolic usage. LCA experts have partly addressed these problems by developing Social LCA or by incorporating stakeholder multi-criteria preferences into LCA decisions. But systematic methods for engaging with stakeholders, including their local logics, and for weighting their preferences are lacking. In this study, we draw on a combination of stakeholder and institutional theory to detail a co-design engagement method that also accounts for differences among local stakeholder logics in order to hybridize LCA as a sustainability tool. In Study 1, we construct a standard LCA of two novel Oil Sands wetland remediation products: chicken feathers and biochar. In Study 2, we run an experiment with local stakeholders to identify those with more balanced (versus polarized) environmental and economic logics and then incorporate their preferences in a modified LCA of the remediation materials. Our research contributes to sustainability tool development as well as to stakeholder and institutional theory.

ONE: **Take Itself as a Mirror: Social Performance Feedback and Corporate Carbon Reduction Management**

Author: **SIjia ZHANG**, *Northwestern Polytechnical U.*
Author: **Ming Jia**, *Northwestern Polytechnical U.*
Author: **Yi Xiang**, *Xi'an Jiaotong U.*

Corporate social responsibility (CSR) is a multidimensional concept that includes responding to the demands of discrepant stakeholders. However, existing studies have neglected the satisfaction of different demands put forward by the same stakeholder. According to performance feedback and legitimacy theory, we subdivide different CSR dimensions and argue that the previous demand responses of firms in the social dimension accumulate different degrees of legitimacy. Thus, we examine how the social performance feedback affects the subsequent carbon reduction management of the environmental dimension. Based on the research context of China, our empirical study finds that when social performance is higher than aspiration, firms likely regard collective carbon reduction management as the optimal strategy; by contrast, when social performance is lower than expected, firms tend to show outstanding carbon reduction management. Furthermore, we observe the moderation effects of state ownership, industry stigma, and low-carbon pilot construction on the choice of carbon reduction management strategy. This study extends our understanding of CSR subdimensions and helps firms recognize how to manage the legitimacy of different demands of the same stakeholder through social performance feedback.

Supply Chain Management II

Session Moderator: **Remi Charpin**, *HEC Montreal*

OSCM: **The Influence of National Animosity on International R&D Collaborations**

Author: **Remi Charpin**, *HEC Montreal*
Author: **Jake London**, *Loyola U. Maryland*
Author: **Nicolas Vincent**, *HEC Montreal*

Firms lacking innovation capabilities are enticed to seek knowledge in foreign countries. However, international conflicts and intercountry relations may hamper firms' ability to exchange knowledge across national borders. Accordingly, firms may adjust their international research collaborations (IRCs) because geopolitical tensions can disrupt knowledge flows for firms that have foreign partners. The purpose of this study is to examine how national animosity affects IRCs between firms. We use secondary data covering 11,160 firms in 55 countries over the period 2010-2019 to test whether bilateral conflictual interactions and political divergence reduce the occurrence of IRCs. We find that political divergence decreases IRCs, while the effect of conflictual interactions on IRCs is contingent on the degree of political divergence between the two countries. Our study contributes to the global operations literature by showing the importance of using an intercountry relations perspective to understand how political risk impacts the sharing of knowledge internationally. Furthermore, we suggest strategies that may help practitioners to mitigate government interventions that could target their IRCs after a rise in geopolitical tensions. This paper also has implications for the innovation literature as it highlights the role played by national animosity on firms' ability to access global knowledge networks.

OSCM: **Supply Chain Learning of Higher Education Institutions in Low- and Medium-Income Countries**

Author: **Mohammad Moshtari**, *Tampere U.*
Author: **Aline Seepma**, *Faculty of Economics and Business, U. of Groningen*

Higher education institutions (HEIs) provide teaching and research services to multiple service recipients in society, including students, firms, non-governmental organizations, and policymakers. The performance of HEIs is vital to the growing knowledge economies of countries in general and to human capital development in low- and medium-income (LMI) countries in particular. HEIs need to match their education and research with the needs of society to provide services that are useful for their countries' development. Adopting a service supply chain perspective, we provide deep theoretical and empirical insights into how supply chain learning is limited in the higher education setting in developing countries. Building on extensive primary data (i.e., 92 interviews and three focus groups with policymakers, university managers, and faculty members and researchers) and secondary data (i.e., university webpages, strategic planning reports, relevant panel discussions in media or conferences, and regulations), the study suggests that distance between HEIs and their stakeholders and delays in processes of acquiring, interpreting, and applying information reduce interactions between HEIs and their service recipients, which diminishes the quality of their services and their ability to respond to socioeconomic needs and resolve wicked problems at the national and international levels. We show how the characteristics of higher education public policy and HEIs interact to leverage delay and distance. In addition to offering research avenues for future studies, our findings suggest managerial and policy implications for modifying policies and practices and building capacity to overcome learning blocks in the higher education of LMI countries. The present study contributes to supply chain learning research and our knowledge of the interactions between supply chain management and public policies in the public sector. Although the results are drawn from a single case study, the findings are generalizable to other LMI countries and certain countries in East Asia and Eastern Europe that have centralized HE systems and have practiced HE massification while limiting autonomy for HEIs.

OSCM: **An Empirical Investigation into Customers Perception of UK Legal Services and Operations**

Author: **Iain Reid**, *Manchester Metropolitan U. Business School*
Author: **David Bamford**, *Manchester Metropolitan U. Business School*
Author: **Rob O'Neil**, *U. of Manchester*

Designing a service operation that aligns business systems and customer perception, experience and outcomes is an essential part of the customer value proposition for business. This paper examines this aspect within legal services by exploring the paradox between the perception of operational service quality and the legal judgements reached. The paper collates responses from 8,192 law sector customers, and proposes that legal services need to be reconfigured. Findings indicate that clients perceived poor operationl value, but that this is perhaps due to their own lack of knowledge of the legal process. Through the development of a clear evidence base and a defined business model this research informs how an improved legal services could be operationalised. This would improve service quality from the customers perspective via efficiency gains through greater operational transparency and more effective communication from legal services.

OSCM: **Can Product Substitutability Ameliorate the Adverse Effects of Inventory Stockouts?**

Author: **Robert F. Jensen**, *U. of Arkansas*
Author: **Saif Mir**, -
Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

The adverse effects of retail service failures in the form of inventory stockouts may be ameliorated when consumers substitute products. Using data from the field featuring 30,646 observations of on-shelf inventory across seven product categories in 36 stores, we estimate the loss in revenues from inventory stockouts in these product categories. We propose and test three alternative theoretical lenses that may explain product substitution and find that one is consistent with the field data. The evidence suggests that consumers substitute other products within a category in response to a stockout of a focal product in horizontally differentiated product categories. The data featured a natural experiment that allows us to manipulate stockouts through an RFID-based in-store inventory tracking implementation the natural field experiment by manipulating in-store inventory stockouts which allows us to test the robustness of our findings. Our research provides theoretical contributions to the literature on retail supply chain management and service operations, as well as practical insights for supply-chain managers who need to prioritize assortment and replenishment decisions.

Service Operations and Disasters

Session Moderator: **Chao Wu**, *W. P. Carey School of Business, Arizona State U.*

OSCM: **Examining the Impacts of Crowd Size and Crowd Diversity on Solution Quality in Innovation Contests**

Author: **Ming Zhao**, *Dongwu Business School, Soochow U. China*
Author: **Zhongzhi Liu**, *Dongwu Business School, Soochow U. China*
Author: **Xiaosong Peng**, *college of business, Lehigh U.*

As an emergent business practice in the era of open innovation, innovation contests can be an effective approach to solving firms' innovation-related problems, but high-quality solutions are not guaranteed. Although the innovation contest literature has examined the structural contest settings that affect solution quality, the impacts of crowd characteristics – namely, crowd size and crowd diversity – remain under-examined. On the one hand, empirical findings related to the impact of crowd size on solution quality are inconsistent. On the other hand, scholars overlook the influence of crowd diversity, which relates to crowd size but is theoretically distinct. Further, the theoretical underpinnings of relevant studies tend to be one-sided. Drawing upon knowledge from the innovation contest and innovation search literature, we attempt to conceptualize and empirically examine the main effects and mechanisms through which crowd size and crowd diversity affect solution quality in innovation contests. Based on the analyses of 6,251 programming contests organized by a leading programming crowdsourcing platform, our results demonstrate that crowd size has a consistently negative impact on solution quality, while crowd diversity positively affects solution quality in an innovation contest. Overall, our study highlights the importance of competition in explaining the negative effect of crowd size on solution quality and uncovers the role of innovation search in explaining the positive impacts of crowd diversity on solution quality. These findings are useful for managers in designing innovation contests that positively influence solution quality.

OSCM: **Does Volunteering Crowd Out Donations? Evidence from Online Experiments**

Author: **Chao Wu**, *W. P. Carey School of Business, Arizona State U.*
Author: **Mahyar Eftekhar**, *Arizona State U.*

A conventional wisdom cautions charities against providing volunteer opportunities to potential donors because volunteers are considered as unreliable source of labor supply, and volunteering is assumed to crowd out monetary donation. We question the assumption that volunteering crowds out donation, and study the causal relationship between individuals' volunteering and their subsequent donation decisions. We present two consequential experiments where individuals are asked to engage in some virtual assignments, and then are asked to make a donation to an existing charity. In the first, they were asked to make affectionate cards for homeless persons. They were given autonomy to make the card however they wished. In the second, participants were asked to color patterns with different levels of complexity. Although volunteering increased the likelihood and amount of donation that participants made, a general concave relationship between individuals' volunteering efforts and subsequent donation is observed indicating that the causal relationship between volunteering and donation cannot be explained by a single mechanism. Further, volunteers who were assigned more time-consuming tasks and volunteers who were given less autonomy to complete tasks were likely to make lower donations. Our results suggest that (i) volunteer programs not only build up a charity's labor source, but may also increase their donation income; (ii) charities should consider developing virtual volunteering programs that increase their resources by connecting them with more volunteers; and (iii) to maximize donations, charities should carefully design light volunteer tasks that incorporate participant autonomy.

OSCM: **The Anatomy of Man-Made Disasters: Implications of Excess Cooperation and Whistleblowing for Safety**

Author: **Akhil Bhardwaj**, *Tilburg U.*
Author: **Henk Akkermans**, *Tilburg U.*

Reducing the likelihood of man-made disasters that cause much harm to life, property, and the environment, is a key societal goal. To that end, regulatory agencies are responsible for ensuring man-made disasters do not occur. In order to accomplish this task, regulators invariably have to rely on, and cooperate with, operators. However, how much cooperation is optimal? In this study, we examine if and how (excess) cooperation between operators and regulators can lead to man-made disasters, and the role whistleblowers can play in attenuating such unwanted outcomes. We synthesize various theories and accounts of man-made disasters to construct a systems dynamics model of the dynamic mechanisms that lead up to them. We find that excess collaboration that arises as a consequence of bounded rationality, prompts operators and regulators to infer absence of accidents as evidence of safety. This mistaken inference contributes to drift of operational practices away from safety standards, thereby increasing the likelihood of a man-made disaster. To mitigate this tendency towards excess cooperation, we investigate the role whistleblowers can play in introducing necessary "friction" between operators and regulators, and find that timely whistleblowing can aid in mitigating man-made disasters. We provide managerial and policy implications including establishing internal informational channels, setting up a joint task force between operators and regulators, and incentivizing and safeguarding whistleblowers while protecting their target organizations from false claims. Finally, we offer a potentially fruitful new research direction for the OM community.

OSCM: **Coopetition in First Response Operations to Global Disasters**

Author: **Hasti Rahemi**, *U. of Colorado, Boulder*
Author: **David Drake**, *U. of Colorado, Boulder*

Research suggests that cooperation between humanitarian organizations (HOs) can help improve efficiency in disaster response, which is often among donors' and practitioners' priorities. Yet, the real-life impediments to cooperation, such as competition among HOs over donors' attention in the field of disaster response, is rarely addressed in the literature. We investigate the effects of competition in the field on HOs' decisions. We further study the prospect of cooperation among HOs given this competition. We look at this problem from the perspective of the United Nations Humanitarian Response Depot (UNHRD), where HOs pre-position stockpiles of relief commodities to ship to the field in case of a disaster. Through interviews, we learned that cooperation in the form of transshipment among HOs within a depot is highly encouraged by the UNHRD, yet HOs rarely engage in such cooperation. We examine the coopetition in this setting through a combination of competitive and cooperative game theory to analyze the cooperative transshipment of inventories positioned within a UNHRD warehouse and to understand its effect on HOs' disaster response. We show that field competition discourages HOs from cooperating within the UNHRD and generates aid overflow---more aid sent to the disaster field than required in aggregate---which is costly for the HOs and the region they serve. In addition to identifying conditions when cooperation arises in equilibrium and the magnitude of aid overflow, we also propose a variety of allocation policies, outlining when and how they can incentivize the HOs to create stable coalitions. Our results provide insights into the effects of field competition, especially as it pertains to the success of cooperation between HOs. In addition, this study helps the UNHRD and similar disaster relief cooperation platforms employ allocation policies that incentivize cooperation, which benefit both HOs and their beneficiaries.

COVID-19 and Supply Chain Management

Session Moderator: **Wan Ri Ho**, *Swiss Federal Institute of Technology Zurich, ETH*

OSCM: **Keeping Open Innovation Projects Alive: A Multiple Case Study of Covid-19 Ventilator Projects**

Author: **Wan Ri Ho**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Nikolai Kazantsev**, *Institute for Manufacturing, Engineering Department, U. of Cambridge*
Author: **Torbjørn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*

We use a case study approach to investigate antecedents of success in open innovation projects. Although open innovation is a long-standing topic, the literature on organizational roles during open innovation projects is fragmented and limited. This paper analyzes eleven case studies of open innovation projects during the Covid-19 demand shock for respiratory ventilators. From our semi-structured interviews of 50 respondents, we identify organizational roles and their impact on open innovation projects conducted under extreme conditions. Our analysis highlights three critical organizational roles determining successful or unsuccessful outcomes of open innovation: visionary, curator, and expert. We illustrate our findings using the open innovation funnel phases. We contribute new theoretical insights into organizational roles and success factors during open innovation projects to the open innovation and project management literature. The findings help practitioners plan better collaborative responses to demand shocks and disruptions.

OSCM: **Enabling Frontline Employee Innovation in Hospitals – Evidence from Multiple Case Studies**

Author: **Felix Mosner**, *U. of Cologne*
Author: **Fabian J. Sting**, *U. of Cologne*
Author: **Aravind Chandrasekaran**, *Ohio State U.*

In this paper we study how middle managers' behavior can help foster frontline innovation. First, we develop theory via multiple case studies to identify concrete actions and viewpoints of various management levels regarding frontline ideas. The case data comes from more than 25 semi-structured interviews with representatives from all hierarchy levels at 4 different acute care hospitals in Germany. We further develop a measurement for frontline innovation performance and survey the respective frontline representatives (N=88) from these hospitals. To further delineate the impact of middle manager behavior from other influences, such as top management support, we conducted a second survey with external nurses (N=151) belonging to 16 different hospitals from Germany, who evaluated the frontline innovation involvement of nurses in the studied hospitals. Nothwithstanding the innovation potential of middle managers, our cross-case comparison finds that their own innovation activities can distract them from shaping and supporting the innovation activities of their frontline staff. In contrast, middle managers who are focused on encouraging and involving their frontline staff were able to substitute a lack of top management support and foster a strong frontline innovation performance. Overall, this study sheds light on the intricate role of middle managers as agents for bottom-up frontline innovation and offers important implications for service-driven organizations.

OSCM: **Examining the Role of Decision-Making Process in Patient Care**

Author: **Deepa Goradia**, *Georgia State U., J. Mack Robinson College of Business*
Author: **Aravind Chandrasekaran**, *Ohio State U.*

The attending physician and the operating physician are typically the key decision-makers in a patient's treatment plan. In this study, we examine whether a single decision-making approach or a dual decision-making approach is better for patient outcomes. While research outside healthcare operations management has argued for benefits from both single and dual approaches to decision-making, very little knowledge exists in healthcare settings. In this study, we address this gap by investigating the impact of single and dual decision-making on multiple patient care outcomes We draw insights from several physician leaders to guide our study and to account for both the patient and physician selection issues for choosing a particular decision-making strategy. Results from our analyses improved outcomes on efficiency measures from a single decision-making approach Our results also suggest that patient complexity contributes to this effect. Our results are robust to alternate explanations and demonstrate the role that physicians can play in effective care treatment during a hospital stay.

OSCM: **Speeding Up Capacity Building under Time Pressure to Produce COVID-19 Vaccines**

Author: **Leonardo Santiago**, *Copenhagen Business School*
Author: **Hugo Defendi**, *Instituto de Tecnologia em Imunobiológicos - Fundação Oswaldo Cruz*

Swiftly reacting to unforeseeable events is of utmost importance for firms. The COVID-19 outbreak has not only severely impacted individual and collective health worldwide but also hindered the global economy. The COVID-19 vaccine was considered by many specialists the best strategy to face this pandemic. Developing a vaccine in a timely manner was as daunting a task as scaling-up manufacturing to produce billions of doses. To swiftly increase the production capability, pharmaceutical companies needed to rely on technology transfer to build organizational capability and ramp-up production. There was a clear paradigm shift as speeding up of capacity building and technology transfer was driven by volume maximization, as opposed to profit, and characterized by cooperation as opposed to being a reaction to competitive pressure. We consider the question of how to speed up capacity building under time pressure. We thoroughly explored the empirical setting with multiple case studies across the pharmaceutical industry and supplemented our findings through an in-depth case study with a vaccine manufacture firm. Our findings suggest that celerity in producing vaccines was achieved by managing the interdependency across key enables with regards to production setup, relationships across the supply chain, and knowledge novelty.

Presenter: **Thomas Rundall**, *U. of California, Berkeley*
Presenter: **Stephen M. Shortell**, *U. of California, Berkeley*
Presenter: **Noa Ebenstein-Ziv**, *Technion – Israel Institute of Technology*

The complexity, pace, and volatility of present-day work demands more dynamic organizational management systems. More recent management systems, e.g., agile or design thinking, have not proven to be the “silver bullet” to improved dynamic capabilities in part due to the paradoxical nature of multi-faceted organizational outcomes (e.g., people v. profit, quality v. innovation). Thus, scholars seek to examine the underlying principles and theories of management approaches, regardless of origin or age. Our proposed presentation symposium combines historical and futuristic perspective to examine 21st century lean practices through the lenses of temporality, centrality of work teams, and problem solving. The use of lean management approaches shifted significantly since 2000, from primary use in manufacturing settings to achieve efficiency, to extensive use knowledge-based settings, including hospitals and R&D, to achieve improved efficiency, quality, and innovation. This symposium includes three presentations and a discussion from internationally renowned scholars that collectively highlight temporality, centrality of work teams, and problem solving as critical lenses through which to study and improve management systems. Building upon a pluralistic approach, this symposium will take a significant step in advancing knowledge and provoking new directions for future research on team-oriented management systems.

Organizations Behaving Badly

Session Moderator: **Mathieu Molines**, *ESCE International Business School*

PNP: **Managing my Shame: Investigating the Effects of Organizational Identity Threat on Exemplification**

Author: **Mathieu Molines**, *ESCE International Business School*
Author: **Anthony Perrier**, *TBS Business School*

How do public employees respond to organizational identity threats? In this research, we investigate how public employee make sense of these threatening events that may call into question organization's core attributes and status and how it affects their attitudes and behaviors. Drawing on social identity theory and appraisal theory of emotions, we develop and test a model in which organizational identity induced by negative media coverage threat provokes shame which then results in exemplification as a constructive strategy to protect the threaten self. We further explain the role of public service motivation, that represent a close connection between the self and an organizational threat, as a moderator of the proposed mediated relationships. We tested our predictions across two studies: an experimental vignette study (Study 1) and a field study (Study 2) involving French police officers. Our results show that shame mediated the positive effect of organizational identity threat on police officers' exemplification behaviors. We demonstrate that when public service motivation is high, police officers are more likely to engage in exemplification as a constructive response to cope with organizational identity threat compared to when it's low because they are more likely to interpret the organizational threat as personally threatening. Theoretical and practical implications and future direction are discussed.

PNP: **Navigating Organizational Politics at Work: What Type of Support Do Employees Need?**

Author: **Ju Won Park**, *U. of Georgia*

A large number of empirical tests have found detrimental effects of organizational politics (i.e., back-stabbing and lobbying) on public employees' key attitudinal and behavioral consequences. However, relatively few studies have explored how these adverse effects can be mitigated by support from organizations. Drawing on the Job Demands- Resources (JD-R) theory, this paper proposes that instrumental and emotional support can help alleviate the harmful effects of workplace politics on public employees' job attitudes. Results from Korean firefighters reveal that instrumental support can be more effective than emotional support when enhancing job attitudes and mitigating the adverse effects of workplace politics. Public organizations and managers seeking to manage organizational politics may give weight to providing instrumental and emotional support to their employees.

PNP: **The Conditional Effects of Developmental HR Practices on Public Sector Employees' Workload**

Author: **Nhung Nguyen**, *U. of Economics Ho Chi Minh City*

Heavy workload is a ubiquitous problem in public workplaces, but how to appropriately use managerial practices to address it has often been overlooked. This study provides important theoretical and practical implications to deal with heavy workload in the public sector. Drawing on the job demands-resources model, it is argued that developmental human resource practices help reduce employees' workload. Moreover, coworker support and affective commitment are theorized as contextual and personal factors that separately and jointly moderate the above negative relationship. Results from hierarchical regression analysis with data from the survey of the US Federal government support the hypothesized model. This study contributes to effective management of workload and expands strategic approach to human resource management research in the public sector. It also furthers the job demands-resources model by exploring two-way and three-way interactive effects of different resources on job demands.

Does Leadership Matter?

Session Moderator: **Breck Wightman**, *Brigham Young U.*

PNP: **Holding Out for a Hero: Linking Hiring Duration and Managerial Fit**

Author: **Breck Wightman**, *Brigham Young U.*

Although prolonged executive vacancies are commonly viewed in a negative light, little empirical evidence exists to support such claims. In practice, governing boards and decision-makers intentionally extend the hiring process—even incurring long vacancies—in an attempt to identify the right fit. As prior public management research has empirically connected managerial fit to organizational performance, is it beneficial or detrimental for organizations to strategically extend the hiring duration? What is the relationship between the time needed to fill a position and the level of fit in the new hire? Using original data of 231 presidential hires of the top 150 doctoral-granting institutions of higher education in the U.S. between 2005-2018, this study aims to identify the effects of 1) the duration of the executive search and 2) the duration of the vacancy on the level of fit in the eventual successor. Findings indicate that the duration of the executive search is positively associated with the likelihood of selecting an outsider and negatively associated with institutional fit. This relationship is also modeled nonlinearly, suggesting that the highest levels of fit occur when the search duration is either very low or very high, with an inflection point of ~75 weeks. The study also finds a strong but statistically insignificant relationship between vacancy duration and fit. This implies that the duration of search process should be a primary concern of governing boards and hiring managers, regardless of whether a vacancy occurs.

PNP: **Public Leadership Upward, Outward or Inward? A Discrete Choice Experiment**

Author: **Joris Van Der Voet**, *Leiden U., The Netherlands*
Author: **Benjamin Stanley Kuipers**, *Leiden U., The Netherlands*
Author: **Sandra Groeneveld**, *Leiden U., The Netherlands*

The public management literature portrays public leadership behavior almost entirely as the supervision of individual employees. This paper advances a broader view of public leadership as a social process at multiple levels aimed at the fulfillment of a diverse set of public values. We conceptualize public leadership as behavior repertoires in three directions: inward, upward and outward leadership behavior. Relying on implicit leadership theory, this study informs to what extent public managers and employees on different hierarchical levels deem upward, outward and inward leadership required for the realization of public values. The theoretical expectations are that upward and outward leadership behavior are more strongly deemed required on higher hierarchical levels, as compared to inward leadership behavior. In a preregistered discrete choice experiment among managers and employees within the national civil service of The Netherlands (N = 1996), participants indicate their leadership requirements concerning consecutive comparisons of manager profiles that describe varied combinations of upward, outward and inward leadership behavior. The results provide partial support for the theoretical expectations. Compared to inward leadership behavior, outward leadership behavior is more strongly deemed required on higher hierarchical levels, but upward leadership behavior is not.

PNP: **Impact of Principals' Leadership on Teacher Retention: A Review, Integration, & Investigation**

Author: **Abram Walton**, *Florida Institute of Technology*
Author: **Shellie Halstead**, *Florida Institute of Technology*
Author: **Natalie Shah**, *Florida Institute of Technology*

Teacher turnover rates have long been analyzed and dissected from the teacher's perspective. However, recent literature is encouraging researchers and professionals to look beyond just the teachers and the principals working within the school district and have instead advised scholars and practitioners to approach the problem with a more systematic way of thinking. This paper methodologically evaluated relevant literature to understand the impact of principal leadership, and limitations, within a school system; with a goal of systematically identifying the factors that influence teacher turnover and retention. The study seeks to close the gap regarding which relationships and interactions within a school district are most critical: 1) teachers to students, 2) principals to teachers, or 3) district leadership to principals. The study demonstrated a trend supporting the significance of the principal's role, specifically at the school-level unit of analysis.

PNP: **Education Leaders Learning Health Systems: A Local Response to a Global Crisis**

Author: **Maritza R. Salazar**, *U. of California, Irvine*
Author: **Sara O'Connor**, *UC Irvine*

For the last 29 months, school leaders have had to weigh educational objectives against public health considerations in debating whether to open schools. At the onset of the pandemic, schools opted to use alternative modes of instruction. Millions of children did not enter the classroom but learned using hybrid or distance learning modalities. Schools are in constant flux: opening and closing, going virtual, offering hybrid programming, or requiring in-person attendance while preparing at all times for any of these possibilities. Concurrently schools have taken on the burden of providing various social services and resources including COVID testing, rental assistance, food assistance, Wi-Fi, and community guidance. The roles schools played depended heavily upon the needs of their specific communities, presenting unique and situated challenges to their leadership. Managing a school amidst an ever-evolving backdrop of COVID-19 and its variants has become increasingly complex and political. Drawing upon qualitative data gathered from four schools within the same county in southern California from 2021 to 2022, we seek to understand: how can school leaders successfully operate under and adapt to changing public health conditions in a crisis. Our analysis highlights unique and contextually situated challenges that school leaders face, the need for dexterity and maximizing existing human resources of those within and outside of formal leadership circles, and the changing role of schools. The importance of leaders' connections to the community has significant implications for what competencies, experiences, and leadership abilities school leaders need and their ability to navigate a crisis.

Complex Organizational Phenomena: Methodological Challenges and Solutions

Session Moderator: **Farzad Haider Alvi**, *Athabasca U.*

RM: **Researching the Unsaid Directly and Explicitly**

Author: **Marilieke Engbers**, *Vrije U.*

People communicate through words but also through their non-verbal communication. When faced with tension or incongruence, people intuitively tend to believe the tonality and nonverbal behavior more than what is said. So, when individuals perceive incongruence, 'the unsaid' might shape the organization's performance more than what is said. Despite many researchers try to infer what is not said by means of a rich variety of research methods, few have explored the unsaid directly and explicitly. Drawing from my PhD research on how the unsaid shapes decision-making in boards and exploring what 119 board members of 17 boards said in an interview what they had not said during the board meeting I therefore in this essay share my reflections on studying the unsaid.

RM: **Practicing Context in Organizational Research: An Auto-ethnographic Model for Manager-Scholars**

Author: **Farzad Haider Alvi**, *Athabasca U.*
Author: **Kai Lamertz**, *Athabasca U.*

This theoretical methodology paper examines the practice of context in management research, and the unique role that can be played by researchers with a managerial background. Context often appears as an ephemeral framing device, drawing an imaginary line between the researcher and research field. We argue that the line between researcher and research field can be blurred or even erased through the research lens of a manager-scholar. In contrast to the customary pursuit of a sanitized objectivity, researchers can generate novel insights by embracing the messiness of context. By creating a methodological model for autoethnography by a manager-scholar, we theorize that the practice of context occurs as a radically reflexive process in two moments of time, one as manager and the other as scholar. The researcher is left vulnerable to the messiness of context, sharing the results not as a sanitized narrative, but recursive contextualization.

RM: **The Methodological Struggles of Studying Silence: A Review and Recommendations for Research Practice**

Author: **Irina Liuberté**, *ISM U. of Management and Economics*
Author: **Dovile Petreikiene**, *ISM U. of Management and Economics*
Author: **Bernadeta Gostautaite**, *ISM U. of Management and Economics*
Author: **MARGARITA PILKIENE**, *ISM U. of Management and Economics*

Silence is omnipresent in organizations, yet we have very limited empirical evidence and moderate progress in conceptual development. Certain characteristics of silence itself impede the progress of empirical investigations and call for more detailed methodological guidance. Therefore, we conducted a systematic review of articles and collected expert opinions through an online survey. Based on the data, we analyzed the methodological challenges that scholar experience when studying silence, and the potential solutions to those challenges. We provide practical guidance that we hope will help accumulate empirical evidence and gain more conceptual clarity in this field. The study's results may also be important to scholars who conduct empirical research about other similarly complex phenomena, for example, mistreatment, passiveness, counterproductive behaviors, and abuse in organizations.

RM: **Understanding Context: Exploring the Potential of Conceptual Tools from Gamification**

Author: **Aleksi Niittymies**, *Aalto U., Department of Management Studies*
Author: **Eetu Wallius**, *Tampere U.*
Author: **Elina I. Mäkinen**, *Tampere U.*

This paper argues that the next step towards more contextualized theorization in management disciplines is to identify methodological tools for uncovering the explanatory factors from context that drive and influence human behavior. For these ends, we explain – and empirically illustrate – how conceptual tools from gamification research provide useful lenses for mapping out gameful motivational affordances (GMAs) that are embedded in organizational contexts shaping the motivational drivers, behaviors, and perceptions of those involved. First, we show how social GMAs explain how social relationships satisfy actors' innate need for relatedness thus enhancing their motivation. Second, we explicate how achievement and progression GMAs reveal the ways in which experiences of advancement, success, and mastery satisfy actors' innate need for competence thus increasing their motivation. Third, we consider how immersive GMAs allow us to explore how role adaptation relates to the innate need for autonomy and enhanced motivation. Our work advances management scholarship by (1) clarifying the roles of individual agency and context in shaping organizational behavior, (2) specifying the existing theories and their boundary conditions, and (3) advancing the integration of management research and gamification research at a more general level.

Novel Roles, Tools, and Approaches for Strategizing

Session Moderator: **Richard Whittington**, *U. of Oxford*

SAP: **Building Tools that Enact Strategy – Redistribution of Strategic Power**

Author: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Tero Ojanpera**, *Aalto U.*

Algorithmic tools enact strategy to an increasing extent, but their role in strategizing is not well understood. We studied how a large organization develops and uses strategically important algorithmic tools. We describe how strategic power shifts in tool development as strategy is encoded into the tools through the processes of negotiating a role for the tool and making abstract concrete and in tool use through masking of uncertainty. We contribute to strategy-as-practice literature by detailing technology as another channel for strategy enactment and describing some of the dynamics of encoding strategy into algorithmic tools. We also describe how strategically important algorithms are built and used in an organization, and especially how the negotiated role of such tools can influence organizational dynamics and behavior.

SAP: **Reframing Human Resource Managers' Role when Navigating the Covid-19 Crisis: A Netnography**

Author: **Galy Binyamin**, *Ariel U. Department of Economics and Business Administration, Israel*

The COVID-19 pandemic has radically altered the role of human resource (HR) managers. This study employed netnography, a new approach to conducting ethnography on the internet, to explore HR managers' roles while navigating the COVID-19 crisis. It explored the issues, dilemmas, recommendations, and steps taken which were raised by Israeli HR managers in real time on a professional Facebook forum. 998 user-generated posts were analyzed using a mixed-method qualitative (content analysis) and quantitative (frequency analysis) approach. The findings revealed eight areas of practice in which the HR managers responded to the Covid-19 crisis. Conceptualizing these practices in a broader context of meaning-making and identity formation suggests that HR managers can best be characterized, not by their reactive management of the crisis, but rather by their servant leadership style, which was found as effective in times of crisis and uncertainties. This study makes theoretical and practical contributions to the unexplored domain of HR's role in organizational crisis management. It also sheds new light on the complex mission of HR managers and helps connect leadership and HRM literatures in a novel way.

SAP: **Integrating Design Practitioners and Design Practices into Strategy Practice**

Author: **Leanne Sobel**, *U. of Technology, Sydney*
Author: **Jochen Schweitzer**, *U. of Technology, Sydney*
Author: **Natalia Nikolova**, *U. of Technology Sydney*
Author: **Lindsay Asquith**, *U. of Technology, Sydney*

The purpose of this paper is to explore ways design practices are interacting with strategy practices and the role and value of designers in proximity to strategy practice. Despite the growing recognition of design thinking in the management literature, we still know little about how designers contribute to strategy and how design and strategy practices interact. To address these gaps, we draw upon findings from a qualitative study with 16 strategic designers and strategists. We use a grounded theory approach to share emerging themes that outline the ways design practitioners and desig(ing) are featuring in strategy practice and outline the factors that enable and inhibit the integration of design practices into strategy practices. Our analysis suggests that, first, design practices have influenced strategy formulation by integrating some of its specific characteristics into strategy practices. Second, that design in strategy practice is seen as a valuable extension to traditional practice in a number of ways. Third, as design practice is being integrated into strategy practice, there is a need to understand the placement of strategic design practitioners in strategy practice. We conclude the paper with a discussion of our findings and avenues for further research into the relationship of design practices in strategy practice.

SAP: **Chief Digital Officers' Social Construction of and Coping with Digital Transformation**

Author: **Felix Lorenz**, *Witten/Herdecke U.*
Author: **Arne Buchwald**, *Vlerick Business School*

While mastering digital transformation is seen as critical for the survival of incumbent firms, the understanding of the strategic leader, the Chief Digital Officer (CDO), driving this organizational transformation remains limited. Previous research on the CDO has mostly focused on the structures, configuration, and outcomes of the CDO role. We still need to improve our understanding of how the strategic leader holding that CDO position views the environment and its challenges. This study draws on sensemaking theory to understand how CDOs construe their critical task – digital transformation – and consequent challenges in incumbent firms. We address this in a qualitative study, drawing on 53 expert interviews with CDOs. Our analysis shows that CDOs unanimously perceive digital transformation as a challenge of cultural change that necessitates sensebreaking. Depending on their framing, CDOs adopt a different sensebreaking approach to digital transformation, namely a fighting, collaborating, and persuading approach. We extend the present understanding of digital transformation as a cultural challenge and contribute to theorizing on sensemaking, sensebreaking, and the literature on digital transformation.

Poverty, Subsistence Markets, and Microfinance

Session Moderator: **Zhang Zhe**, *Xi'an Jiaotong U.*

SIM: **How and When Top Management Team Temporal Focus Influences Corporate Poverty Alleviation**

Author: **Zhang Zhe**, *Xi'an Jiaotong U.*
Author: **Zhi Zhang**, *Xi'an Jiaotong U. School of Management*
Author: **Yi Xiang**, *Xi'an Jiaotong U.*

This study explores the effect of top management team (TMT) temporal focus on firm’s participation in targeted poverty alleviation (TPA), which is a national campaign guided by the poverty alleviation strategy of the Chinese government. Integrating upper echelon theory and time perspective theory, we find that TMTs high in past (future) focus are more (less) willing to engage in TPA. Moreover, we find that government support (as a formal institution) and religious atmosphere (as an informal institution) positively moderates this relationship. Based on a sample of Chinese privately owned listed firms from 2016 to 2020, we capture TMT temporal focus by computer-aided text analysis. Findings from this study suggest that executives’ subjective time perception is a significant factor for CSR of achieving common prosperity and eliminating poverty.

SIM: **Empowering Women through Microfinance in India**

Author: **Prof. Rajiv Chopra**, *Delhi College of Arts & Commerce, U. of Delhi*
Author: **Dr. Ethi Jain**, *Assistant Professor, Delhi College of Arts & Commerce, U. of Delhi, Ind*
Author: **Dr. Bhajneet Kaur**, *assisstant professor, Fortune Institute of International Business (FIIB)*

Purpose- This study aims to search for the determinants influencing women empowerment in Uttar Pradesh (UP) State of India. Research methodology- The research is done using primary data of 200 women borrowers. Using SPSS, Factor analysis is conducted to find out the determinants which lead to empowerment of women after joining microfinance program. Moreover, ANOVA and t- test was also applied. Findings- Seven factors were extracted namely domestic violence, mobility, social decision making, basic amenities, asset creation, economic decision making, income & savings. Furthermore, family system does not significantly contribute towards women empowerment. Whereas, age and marital status significantly contributes in some aspects of social and economic empowerment. Research Implication- The findings of this research recommend policymakers to provide an appropriate platform to market and sell the products manufactured by women entrepreneurs. Originality/ Value- This research will serve as a foundation for future researches in the area of microfinance and women empowerment among emerging economies. Keywords- Microfinance, Women Empowerment, Social Empowerment, Economic Empowerment.

SIM: **Leave No One Behind: How Firms React to the State Anti-Poverty Program?**

Author: **Zhaowei CHEN**, *National U. of Singapore (NUS)*
Author: **Bernard Yeung**, *National U. of Singapore Business School*
Author: **Andrew Delios**, *National U. of Singapore*

This paper examines how institutional complexity (i.e., co-existing divergent expectations from multiple stakeholders) affects firm responses to the central government’s call for anti-poverty actions. We use a 2019 policy in China – tax deductions for corporate spending on registered poverty – to identify firm-level responses. We find that central-SOEs respond with more donations than local-SOEs, while private companies' responses are insignificant. Firms donate more if (i) they locate in or closer to Beijing and (ii) their local governments have higher fiscal income or corporate tax revenue. Furthermore, only the central government gives out awards to corporations for anti-poverty actions. These are consistent with that local governments, especially those with weak economic performance, apply less pressure than the Central to mobilize firms to donate and that firms conform more to their immediate level of government. Public scrutiny also matters: firm donations increase with analyst followings, and firms issuing CSR reports do not donate significantly until the revealing 2019 tax-deduction, especially central-SOEs. Private companies do not respond significantly to the policy, perhaps they are less obliged to follow the policy agenda, but they do donate more to redistribution programs. Overall, the tax-deduction program does elicit corporate donations that reduce poverty.

SIM: **Subsistence Marketplace: A Structured Review and Implication for Future Research**

Author: **Padmanetri Panigrahi**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*
Author: **Pradeep Kumar Hota**, *Indian Institute of Management, Udaipur*

The subsistence marketplace has received increasing attention from academics and practitioners across the management domain considering its huge market size. An analysis of existing literature suggests that research has been conducted in diverse areas and there is a need to integrate the diverse literature to identify different themes of research. To bridge this gap, this study presents a structured review of 94 articles published on the subsistence marketplace in the last five completed years, 2017-2021. It organizes the research into eight themes while studying thrust areas in each of the themes. Based on this research presents fruitful areas of future research.

Investors, Ownership, and Governance

Session Moderator: **Peng Wang**, *BNU-HKBU United International College*

SIM: **Ownership Structure, Geographical Distance, and Corporate Litigation among SMEs in China**

Author: **Ao Shen**, *Xi'an Jiaotong U. School of Management*
Author: **Peng Wang**, *BNU-HKBU United International College*

The literature of corporate litigation remains silent about how ownership structure affects firms' engagement in corporate litigation. This paper endeavors to fill in this gap by investigating the relationship between the ownership structure, i.e. individual versus organizational equity owners, and firms' engagement in formal legal litigations. Building on the institutional theory with a focus on both formal and informal institutions, we propose an inverted U-shaped relationship between the number of organizational owners and corporate litigation preference. Through a longitudinal dataset of 440 technology-based small and medium-sized enterprises (SMEs) in different regions of China, the results generally support our speculations.

SIM: **Foundation Ownership and Sustainability**

Author: **David Jonas Schroeder**, *Copenhagen Business School*
Author: **Steen Thomsen**, *Copenhagen Business School*

Concerns about the sustainability of contemporary capitalism have inspired a search for organizational forms that are more concerned with solving environmental and social problems and less focused on short-term shareholder value maximization. We examine whether one such model – foundation ownership of business companies – is associated with better sustainability outcomes. We suggest modelling foundation-owned companies as institutional hybrids that combine the characteristics of (charitable) foundations and (for-profit) business companies. We propose that foundation-owned companies are influenced by the philanthropic logic that characterizes foundations and therefore are more inclined to environmental and social considerations than business companies characterized by a for-profit mindset. Using hand-collected data on listed foundation-owned companies during 2003-2020, we find support for this hypothesis. Foundation-owned firms tend to receive higher environmental, social, and governance (ESG) ratings, specifically along both the environmental and social dimensions. The results hold across alternative ESG ratings, quantitative output measures, difference-in-differences testing and instrumental variable estimations.

SIM: **Corporate Governance: Do Ethics Policies and Investor Protections Substitute or Complement?**

Author: **Thomas Weber**, *U. of Southern Indiana*
Author: **Krista Lewellyn**, *Florida Southern College*
Author: **Kaveh Moghaddam**, *U. of Houston, Victoria*
Author: **Amir Hossein Maleki**, *Northeastern Illinois U.*

This study empirically investigates the direct and interactive effects of firm-level ethics policies and country-level investor protection on firm corporate governance transparency. Using 9,298 observations from the Bloomberg database, we find that there is a positive relationship between country-level investor protection and firm corporate governance transparency. The results also support the argument that firms with existing ethics policies exhibit higher corporate governance transparency. We also find that in countries with weaker investor protection, the impact of firm-level ethics policies on corporate governance transparency is stronger. This study advances our understanding of the corporate governance transparency determinants, and the empirical evidence supports the notion that firm-level factors such as ethics policies may compensate for the lack of formal national investor protection regulations.

SIM: **Platform Governance, Openness, and Inclusion**

Author: **Hussein Fadlallah**, *Schulich School of Business*
Author: **Robert A. Phillips**, *Schulich School of Business, York U.*

Research into digital platforms has highlighted the challenges that platform owners face in governing the exercise of voice of autonomous platform users within their respective platforms. These challenges have reflected recently in criticism and scrutiny as platform owners were questioned directly and indirectly with regards to their platform governance. The calls for platform owners to address what many consider political problems (e.g., marginalization, hate speech, political influence, etc.) have not only resulted in negative publicity, but more critically for this study they have been deemed detrimental to the viability and competitiveness of their respective platforms. In this study, we propose a change to underpowered conceptions of platform governance in extant research. Invoking conceptions of governance that account for power relations between different actors and the political role of the corporation, we propose the norm of inclusion as an alternative logic. By this logic platform owners govern the contest inherent in digital platforms as arenas of citizenship. This logic is further illustrated through two mini case studies that surface the challenges of a conception of platform governance devoid of power considerations.

Management and Stewardship of Ethics and CSR

Session Moderator: **Yoonjeoung Heo**, *Xi'an Jiaotong-Liverpool U.*

SIM: **Implementation and Development of an Ethics and Compliance Program: A Middle Management Perspective (WITHDRAWN)**

Author: **Renato Chaves**, *FSA ULaval (Laval U.)*

This paper examines how middle managers experienced the implementation and development of an ethics and compliance program. Based on semi-structured interviews and archival data, it shows how the program evolved in a context of regulatory reform and intense stakeholder pressure in Brazil. In 2015, the program was characterized by a coercive environment featuring strict rules and procedures, internal investigations, and an unprecedented sanctioning system. It was consolidated through major changes in key organizational processes, especially centralization of procurement processes and segregation of duties. In 2019, middle managers experienced a new phase in the program's development, characterized by an approach that advocated the moral development of employees. This paper argues that middle managers play three roles in the development of an ethics and compliance program under intense stakeholder pressure—pathfinder, investigator, and promoter. It contributes to a better understanding of ethics and compliance programs as dynamic processes and to the roles played by middle management in their development.

SIM: **Are Family Firms Stewards? Public Family Firms' Stewardship Toward Shareholders and Stakeholders**

Author: **Yoonjeoung Heo**, *Xi'an Jiaotong-Liverpool U.*

Stewardship theory often remains unclear about how controlling families serve their stewardship under the conflicting goals across non-family stakeholders. We examine this issue by distinguishing family firms' stewardship as financial and social stewardship. We propose that, in publicly listed family firms, controlling families' stewardship in financial dimension decrease their stewardship in social dimension. Furthermore, the negative relationship will be greater for family firms with a large stake of foreign ownership but lesser for firms with family CEOs. We tested our hypotheses based on publicly listed firms in Korea. Our study contextualizes the family firms' stewardship behaviors by considering goal heterogeneity.

SIM: **Walk the Talk or I Will Get Emotional and Leave: CSR Managers Response to Perceptions of Decoupling**

Author: **Susana Esper**, *IESEG School of Management*
Author: **Frank G.A. De Bakker**, *IESEG School of Management*
Author: **Nico Heuvinck**, *IESEG School of Management*

Corporate social responsibility (CSR) managers are middle managers, tasked with the integration and implementation of CSR and sustainability strategies into their organizations' daily operations. In this role, they may frequently be confronted with decoupling between CSR and sustainability policies and practices but little is known on how these managers react to such corporate greenwashing. We draw on the literature on decoupling and on CSR managers to develop a mixed-methods research design that consists of a qualitative analysis of French CSR managers' experiences and an experiment testing CSR managers' responses. We unveil how perceptions of decoupling affect their emotions, cognitions, and behaviors. Our results indicate three sources of decoupling: top-down decoupling (generated by top management practices); lateral decoupling (coming from peers); and bottom-up decoupling (coming from external stakeholders, especially customers), which in turn lead to different affective, behavioral, and cognitive responses by CSR managers. Our study enriches prior intraorganizational studies on decoupling, explaining how CSR managers respond to, and try to overcome, decoupling and expands the micro-perspective on CSR by bridging the intra-individual level (how CSR managers perceive CSR decoupling) and the inter-individual level of analysis (how they participate in social practices that prevent or foster CSR decoupling).

SIM: **When CSR Implementation Requires Collaboration**

Author: **Giovanni Radaelli**, *Warwick Business School*
Author: **Toloue Miandar Esfahani**, *Alma Mater Studiorum U. di Bologna*

The research reported in this paper investigated the collaboration between two different groups of social issue sellers during the implementation of new CSR practices. Our ethnography followed the implementation of CSR in a large-scale utility company where, prompted by their top management, a group of occupational professionals (functional managers) and a group of organizational professionals (CSR managers) were expected to collaborate in a joint project of social issue selling, i.e. one implementing new 'CSR golden practices'. We investigated the motives and actions of the CSR managers and the functional managers as they organized themselves for the collaborative implementation of new CSR practices in the company. Our data analysis revealed that collaborative issue selling was interpreted by both the CSR managers and the functional managers as a re-professionalization project that would alter their established jurisdictions. The CSR managers feared that collaboration with business units would lead to their marginalization because they would have to externalize their core knowledge base. The functional managers instead feared an undue expansion of their jurisdiction to maintain and expand the CSR in the organization (i.e. the 'compensation effect'). Theoretically, we argue that complementary fears of re-professionalization based on the 'compensation effect' trigger a tactical use of voice and silence (specifically: defensive voice, relational silence, ineffectual silence, and 'issue pitching') to slow down the implementation of new CSR practices, and prevent the 'compensation effect'.

SMEs and Sustainability

Session Moderator: **Sushil S. Chaurasia**, *U. of New Brunswick*

SIM: **Co-creation, Dynamic Capability, and Sustainability Performance in SMEs: A Micro Foundational Lens**

Author: **Sushil S. Chaurasia**, *U. of New Brunswick*
Author: **Dhirendra Shukla**, *U. of New Brunswick*
Author: **Muhammad Mazhar Ullah Rathore**, *U. of New Brunswick, Canada*
Author: **Manoj Motiani**, *Indian Institute of Management, Indore*
Author: **Kapil Khandeparkar**, *Goa Institute of Management*

Despite the critical role of value co-creation and dynamic capability in sustainability performance, value co-creation and dynamic capability lack a holistic approach. So as an alternative theoretical framework, the current investigation combined the elements of the hierarchical and micro foundational views of value co-creation and dynamic capability with an eco-centric taxonomy. The investigation uses the micro-foundational lens to empirically investigate how value co-creation can impact sustainability performance through dynamic capability. Data was collected using a survey from 523 SMEs. Encompassing economic and social welfare logic can be conflicting for resource constrained SMEs, but the investigation found even though economic considerations take precedence, the potential for social and environmental sustainability to impact overall competitiveness is not overlooked. Our findings can help practitioners is identifying micro foundation techniques that are more likely to help in improving SME's sustainability performance in the ex-ante setting.

SIM: **Performance Implications of SMEs' Sustainability Orientation: The Role of Non-profit Organizations**

Author: **Joshua Victor White**, *U. of Dayton*
Author: **Yulia Aray**, *Graduate School of Management, St. Petersburg State U.*
Author: **Karina Bogatyreva**, *Graduate School of Management St.Petersburg State U.*

This paper explores the sustainability orientation of SMEs and its impact on performance level and performance variability. We also evaluate the role of non-profit organizations (NPOs) as important ecosystem stakeholders that shape the efficacy and efficiency of these relationships. Though we find that sustainability orientation is beneficial for improving firm performance and reducing performance variability, we show that the concentration of NPOs in a region negatively affects both relationships. We argue that SMEs diminish their endorsement of and involvement in sustainability initiatives in regions where NPOs are more capable of achieving social objectives. In such environments, SMEs may be reluctant to engage in sustainability because it is less unique and may invite unwanted attention and external monitoring from ecosystem partners. We build our arguments primarily on the resource-based view and stakeholder theory, by bringing conceptual premises of social movement theory. We extend prior literature on sustainability by testing our hypotheses on data sourced from an emerging economy, as 333 Russian companies from 59 regions participated in this research.

SIM: **Adoption of ESG Practices by SMEs: Evidence from Canada**

Author: **Sadi Koray Demircan**, *U. of Victoria*
Author: **Basma Majerbi**, *U. of Victoria*

Although small and medium-sized enterprises (SMEs) constitute more than 90 percent of businesses, employ around 70 percent of the global workforce, and create more than 50 percent of the global economic value, prior research pays disproportionate attention to large companies' corporate responsibility (CR). In this study, we focused on SME adoption of environmental, social, and governance (ESG) practices as constituents of CR. By considering the complex and dynamic interdependencies among multiple stakeholders at multiple levels, we took a holistic and inductive approach to understand the interconnectedness between SMEs' ESG consciousness and adoption. By conducting 32 semi-structured in-depth interviews with SME managers and the representatives of two stakeholders with critical roles in SMEs' ESG adoption as finance and ESG-related support service providers, we developed a grounded theoretical model that explains the relationship between SMEs' ESG consciousness and adoption. Our analysis reveals that depending upon their idiosyncratic circumstances, SMEs are conjointly under opposing enabling and constraining forces that have heterogeneous effects on their ESG consciousness and adoption. While their financial and human capital limitations, when coupled with competition, forces them to prioritize immediate survival and growth and constrain their ESG adoption, firm-specific incentives for positive impact and penalties for negative impact enable their ESG adoption. By accentuating the tension felt by SMEs between the choices to fit current versus future contexts, we contribute to the resource dependence and contingency theories in the SME CR field.

Mobilizing Resources and Routines at the Base of Pyramid

Session Moderator: **Aindrila Chatterjee**, *Institute of Management Technology Hyderabad*

SIM: **Value Creation through Resource Mobilization in Social Enterprises: Evidence from a PPP**

Author: **Aindrila Chatterjee**, *Institute of Management Technology Hyderabad*
Author: **Amit Jain Chauradia**, *Doane U.*

In a resource-scarce world, social enterprises compete for funds. They need to create more value for their customers by judiciously using their scarce financial resources to mobilize other non-financial resources like physical, human, and social capital. Resource mobilization in social enterprises happens predominantly through optimization, which acquires resources with proven efficiencies, or bricolage, which utilizes resources available at hand and uses them in unique ways. Physical capital, acquired through optimization, can generate traditional Ricardian rents, while human and social capital, acquired through bricolage, can generate non-traditional Ricardian and entrepreneurial rents. We hypothesize resources obtained through optimization are necessary but may not be sufficient to create value. Resources mobilized through bricolage can be ingeniously used for value creation. Even the level of bricolage matters; resources that have been fully bricolaged add more value than those that have only been partially bricolaged or not bricolaged at all. We test our hypotheses in a public-private partnership setting comprising of 1,400 training centers and 4616 vocational programs for underprivileged participants to make them employable.

SIM: **The Two Faces of Routines: Combating and Enabling Process Failure**

Author: **Julia Roloff**, *Rennes School of Business*
Author: **Clément LONGONDJO**, *Rennes School of Business*

This study sheds light on the question how and why individuals contribute to the perpetuation of grand challenges, even though they know and usually employ problem-solving behaviours. Using routines as our analytic frame, we observe in the context of solid waste management (SWM) failure in Kinshasa, DRC, that actors from all parts of the SWM process occasionally engage in repetitive disruptive behaviours, e.g. dumping waste illegally, perpetuating the grand challenge posed by SWM. We identify resource depletion, protest, ignorance and natural disruptions as factors leading to social loafing in the form of inactivity, inappropriate performance of SWM routines and switching to problematic behaviours that take the form of disruptive routines. Two mechanisms drive the switch to disruptive routines: When disruptive behaviours are socially shared and to some degree acceptable and when actors are experience resource depletion and frustration because they are suffering because of the grand challenge without sufficient support from society.

SIM: **Political Social Capital: How A Government-Induced Social Venture Sustains Dual Value Creation**

Author: **Tian Wei**, *Fudan U.*
Author: **Qianwen Wan**, *East China U. of Science and Technology*
Author: **Israr Qureshi**, *Australian National U.*

Many governments are proactive in fostering firms and industries, and in some cases, in facilitating the founding of social ventures. However, it remains unclear how such government-induced social ventures continue to create economic and social value when government sponsorship ends. Drawing on a longitudinal case study, we develop an integrated framework of value creation by social ventures through political social capital inherited from the government. First, we conceptualize that government legacy contains heritage assets and administrative heritage. Second, we find that government legacy renews the value of social ventures in evaluating resources. Third, we enrich the understanding of resource mobilization by explicating the four strategies of resource optimization and identifying political social capital as the essence of resource bricolage. Our study contributes to governmental facilitation, the resource bricolage of social ventures, and entrepreneurial resource mobilization.

SIM: **Frugal Entrepreneurship to Solve Pressing Social Challenges at the Grassroots Level**

Author: **Mokter Hossain**, *College of Business and Economics, Qatar U.*
Author: **Sukyung Park**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

This study explores how entrepreneurs solve social challenges with frugal products at the grassroots level for marginalized customers. This study is in the context of South Asia. It is a qualitative study with inductive research approach. Interview data with founders and top managers of 13 case companies that are operating in South Asia are used as the main data source for this study. This study sheds light on how to solve pressing social challenges with frugal products at the grassroots level. We identified individual level barriers and drivers that lead to frugal innovation actions. Entrepreneurs use frugal marketing strategy such as media coverage, award ceremony and word of mouth. We also reveal that the lack of funding for frugal entrepreneurs leads them to highly risky borrowing. They turn institutional voids as an opportunity to create venture and they face partnership challenges. Despite many challenges, frugal entrepreneurs solve numerous social problems with both business and inclusive growth.

Innovation and Social Issues

Session Moderator: **Tim Bonowski**, *Goethe U. Frankfurt*

SIM: **Vanguard Companies Pursuing Public Good: Towards A Model for Corporate Social Innovation Development**

Author: **Cheng Lu**, *U. of Edinburgh*

Corporate social innovation (CSI) refers to companies taking socially relevant actions that involve novel ideas or measures to generate financial and social benefits concurrently. While CSI is an increasingly recognized and growing area of scholarship, it remains a largely underexplored topic within both the fields of social innovation and corporate social responsibility. The present study examines the case of the SK Group – a vanguard company that has effectively integrated CSI initiatives into its business strategies and management – seeking to gain a more nuanced understanding of the organizational dimensions of CSI. Our analysis reveals three crucial components that underlie the organization's development of CSI: namely, social innovation intention, social innovation toolkit, and social innovation operational mechanism. We further propose a theoretical model that explains how companies could progress their CSI over time through the dynamic interplay and integration of these components, facilitated by a few mediating factors. This research contributes to a systematic and processual understanding of CSI and enriches empirical evidence for successful CSI practices in different settings, providing avenues for future studies exploring the role of business in addressing social challenges.

SIM: **Navigating Ethical Complexities in Blockchain-enabled Food Supply Chains: Evidence from Vietnam**

Author: **Mohammad Zainuddin**, *Australian National U.*
Author: **Shouxiang Qiu**, *Australian National U.*
Author: **Babita Bhatt**, *IE U.*
Author: **Israr Qureshi**, *Australian National U.*

Blockchain has been touted as a game changer in supply chains. While the technology can greatly improve the overall supply chain management, there are ethical challenges in its implementation which has been mostly overlooked in the existing literature. We are therefore yet to know the underlying ethical dilemmas as well as how to navigate the varied ethical complexities while creating value through blockchain-powered supply chains. Using the theoretical lens of normative ethics, this study detects various ethical complexities faced by a social intermediary during the implementation of blockchain technology in food supply chains in a developing country. The study identifies four types of ethical challenges (digital literacy, information asymmetry and trust, data hosting and ownership, and environmental sustainability) that demand a proper balance between ethical dualism of four types: balancing design efficiency with ease of use, balancing transparency with privacy, balancing open sharing with adequate data protection, and balancing user concerns with environmental concerns. The study offers rich contextual insights and has both theoretical and practical implications.

SIM: **Bridge Builders and Privacy Cops: Divergent Paths of Corporate Norm Entrepreneurship among Tech**

Author: **Tim Bonowski**, *Goethe U. Frankfurt*
Author: **Anton Peez**, *Peace Research Institute Frankfurt*

Data protection and information security are challenging normative environments, spanning territorial and legal boundaries, and undergoing rapid technological development. These challenges give standard-setting agency to technology firms, which in turn opens up opportunities for shaping relevant standards in economically advantageous ways. Previous studies of corporate norm entrepreneurship have emphasized the importance of coalition-building. We show that coalitions are not the only strategic goal for an economically motivated norm entrepreneur. Rather, whether efforts are advantageous depends on a corporation's competitive strategy and consumer relations. To illustrate, we contrast two contemporary cases: Apple's standalone efforts regarding privacy protections and Microsoft's cybersecurity coalition-building. We show how ``going solo'' derives economic and reputational value from differentiating oneself from competitors by promoting norms others cannot meet. In contrast, ``bridge-building'' does so by cooperating to advocate for norms to be adopted by others. We generalize our case analysis by proposing that norm entrepreneurship can be either ``inclusive'' or ``exclusive'' ways of non-price competition, depending on the underlying incentives. We conclude with consequences for the legitimacy of the established norms and implications for policy making.

SIM: **In Pursuit of Lasting Change: A Review on Corporate Social Innovation by Multinational Enterprises**

Author: **Bas Van Heerwaarden**, *Radboud U. Nijmegen*
Author: **Ayse Saka-Helmhout**, *Radboud U. Nijmegen*
Author: **Marleen Wierenga**, *Nijmegen School of Management*
Author: **Hans Van Kranenburg**, *Radboud U. Nijmegen*

In the midst of pressing societal grand challenges, multinational enterprises (MNEs) are increasingly pursuing dual social and commercial goals through corporate social innovation (CSI). Despite recent advancements in our understanding of this phenomenon, we know little of the ways in which MNEs overcome the wide range of challenges associated with CSI implementation, and the value that these initiatives create as a result. To address this gap, we systematically review the scholarly conversation on MNEs and CSI in the international business and general management literature. We demonstrate that while CSI strategies and consequences are broadly discussed, the literature falls short in its ability to predict and explain under which conditions these arise. Consequently, we argue for the value of analyzing CSI strategies as MNE responses to contradictory institutional logics. We draw on insights from development studies to pave the way forward for future CSI research that is better able to establish causality between project activities and societal consequences, and put forward a configurational approach to measuring societal consequences that can assist scholars embarking on this endeavor.

Organizing for Complexity

Session Moderator: **Daniel Albert**, *Drexel U.*

STR: **Attention to Multiple Goals Affects Performance: Evidence From Behavioral Experiments**

Author: **Ann Xavier**, *Doctoral student, ETH Zurich*
Author: **Daniella Laureiro Martinez**, *ETH Zürich*

We examine the cognitive mechanisms that play a critical role in problem problem-solving with multiple goals. Specifically, we focus on problems that demand the simultaneous pursuit of multiple goals with equal importance. Through behavioural experiments (preregistered), we explore how performance across goal dimensions – sustainability and profitability - can be maximized. Study 1 investigates attention - i.e. when a decision-maker should attend to goals - as a key mechanism that impacts performance across the two goal dimensions. Study 2, which builds on the findings of Study 1, further focuses on how the perceived relationship between goals – i.e. their conflict or compatibility - influences the performance outcome on both goals. The findings of Study 1 suggest that when goals are considered together at the outset of the process, decision-makers achieve higher performance on both goal dimensions. The findings of Study 2 suggest that regardless of how decision-makers perceive the goal relationship, their performance is not affected when goals are attended to simultaneously. Our results advance behavioural strategy as they identify cognitive mechanisms that facilitate the concurrent attainment of multiple goals and extend the behavioural theory of the firm (Cyert and March 1963).

STR: **Searching Under Multiple Goals: Exploring the Role of Corporate Social Responsibility Heuristics**

Author: **Daniel Albert**, *Drexel U.*
Author: **Felipe Csaszar**, *U. of Michigan*

How should managers search for alternatives when evaluation requires comparing along multiple performance dimensions? This is a fundamental question in strategy, especially in the context of Corporate Social Responsibility (CSR), where firms aim to do well financially as well as contribute to social and environmental goods. To understand this question, we develop a simulation model that compares the social and financial performance of five "CSR heuristics"---Maximize, Combine, Alternate, Penalize, and Satisfice---used by firms to make CSR decisions. We show that these heuristics not only differ substantially in the social and financial performance they are likely to achieve but also that some of these heuristics can accomplish or even outperform a purely financially motivated maximization strategy.

STR: **Bottom-up Evolution of Organizational Structures: Organizations as Evolving Neural Networks**

Author: **Sangyun Kim**, *U. of Zurich*

In this paper, I propose that an organizational structure can be determined not only by a top-down authority but also by a bottom-up evolution, in which heterogeneous ideas about the appropriate organizational structures compete with one another within the organization. In particular, modeling organizations as groups of topology-evolving neural networks, I study the evolution of organizational complexity of firms competing in the market. The findings suggest that, contrary to conventional intuition, firms facing more difficult problems posed by the environment evolve simpler rather than more complex organizational structures.

STR: **Achieving a High Performing Ecosystem by (not) Coordinating: A Complexity Based Approach**

Author: **Ram Ranganathan**, *U. of Texas at Austin*
Author: **Puneet Sachdeva**, *U. of Texas at Austin*

Ecosystems create value when firms coordinate choices to realize complementarities. We compare inter-firm collaborations in classical industrial settings vs ecosystems. In ecosystems, firms aim to materialize the dynamic potential to gain complementarities, and goals of collaboration co-evolve as autonomous firms make interdependent innovations. Through a simulation model, we analyze how the canonical recommendations for achieving joint goals i.e. sharing more detailed information and coordinating more frequently affect joint performance in ecosystem settings. We show that when ecosystem firms have high trust that the complementors target similar goals, sharing more information can actually lead to sub-optimal outcomes in the long run. The short-run performance penalties for obscuring information can be partially set off by increasing coordination frequency. We discuss implications for the literature on the governance of ecosystems.

People and Corporate Strategy

Session Moderator: **Kalin D. Kolev**, *Marquette U.*

STR: **Driven by Values or Context? How CEO Political Orientation and Contextual Factors Drive Acquisitions**

Author: **Kalin D. Kolev**, *Marquette U.*
Author: **Stefan Wuorinen**, *Xavier U.*
Author: **Gerry M. McNamara**, *Michigan State U.*
Author: **Jerayr M. Haleblian**, *U. of California, Riverside*

Research has shown that CEO political orientation has a strong influence on a range of actions, including risk taking, with liberal CEOs evidencing greater risk taking than conservative CEOs. We extend this research by utilizing the attention-based view to identify conditions under which external forces (bottom-up factors) attenuate the influence of CEO political orientation (top-down factor) on firm risk taking, as seen in acquisition behavior. Drawing on the Threat-Constraint Model, we show that when faced with situational threats, more liberal CEOs are differentially less inclined to make acquisitions and exhibit behavior similar to more conservative CEOs. Also, drawing on agency theory and relative pay theorizing we show that compensation-based incentives lead more conservative CEOs to pursue acquisitions at a similar level to more liberal CEOs.

STR: **Full and Partitioned Human Capital Redeployment and Business Unit Exit**

Author: **Christopher Albert Sabel**, *Rotterdam School of Management, Erasmus U.*
Author: **Amir Sasson**, *BI Norwegian Business School*

Multi-business firms redeploy resources, specifically human capital, internally to manage the establishment and termination of business units. Prior work has not investigated different human capital redeployment (HCR) strategies and their outcomes. We identify three generic HCR strategies and explore their respective impact on unit exit. We find that HCR in general decreases the likelihood of unit exit. However, full HCR - employees work full-time at the receiving unit - and partitioned HCR in which the sending parent remains the main employer drive these results. Partitioned HCR in which the receiving unit becomes the main employer does not affect exit. We attribute the differing impact on exit to strategies' idiosyncratic capacity availability, adjustment costs specifically multiple jobholding costs, and interfirm ties.

STR: **The Many Shades of Political Conflict at Work: Effective Governance for Distinct Political Conflicts**

Author: **Christopher James Lam**, *UC Irvine*
Author: **Libby Leann Weber**, *U. of California, Irvine*

Not all political conflict in the workplace is the same. Increasing disclosure of political identities and political discussions in the workplace have led to unprecedented political conflict in organizations, leading to toxic work cultures and costly employee turnover. As such, addressing this conflict ex ante has become a strategic issue grappled with by the C-suite, rather than a reactive intervention by HR. Yet, executives have little guidance on crafting governance mechanisms to prevent workplace political conflict. We suggest rather than one-size-fits-all policies (e.g., banning sensitive political discussions), it is necessary to understand how differences between liberals and conservatives, and the organization's political composition, affect the type of political conflict that emerges. Drawing on regulatory focus theory, we predict the likely type of political disclosure and resulting conflict for conservatives and liberals in organizations with different political compositions. We then predict the most effective governance mechanism for preventing political conflict in the organization.

STR: **How in a World that Emphasizes Harmony, Less Harmonious CEOs Shape Firms and Markets**

Author: **Meiling Tang**, *College of Management and Economics, Tianjin U.*
Author: **Taco Reus**, *Rotterdam School of Management, Erasmus U.*

Culture and personality have an ambiguous relation. On the one hand, psychological anthropologists view personality as the outcome of an enculturation process – the cultural norms and values someone shares with others become manifest in someone's own personality. On the other hand, not all people conform to the culture around them, and nonconformity to cultural norms and values can also become manifest in someone's personality. Building on the stream of work that reveals that CEO personalities shape corporate strategies, we argue conforming versus nonconforming personalities of CEOs reflect in norm-following versus norm-breaking corporate strategies. Specifically, we focus on harmony, a personality trait that is a manifestation of the indigenous Chinese cultural dimension that reflects an individual's tendency to value and uphold peaceful relationships with others. Building on cultural psychology, we consider how a CEO's personality deviating from the cultural norm of harmony affects their firms and markets. Specifically, we argue that less harmonious CEOs are less likely to follow harmonious norms in decision making. Supporting this view, in a sample of 253 Chinese CEOs, we find that less harmonious CEOs are more likely to make acquisitions even if doing so will be seen as intrusive in a culture that values harmonious relations. We find that the effect weakens in more competitive markets, in which acquisitions tend to be more accepted as the norm, and in regions in which the culture of harmony is so strong that the repercussions for norm-breaking are too severe.

Stakeholders and M&A

Session Moderator: **Taeksang Jang**, *Korea U. Business School*

STR: **What do Acquirers Want? The Relationship between Target's ESG Transparency and M&A Deal Completion**

Author: **Taeksang Jang**, *Korea U. Business School*
Author: **Jon Jungbien Moon**, *Korea U.*
Author: **Jiyoung Shin**, *Groningen U. (RuG)*

In this study, we explore the relationship between the ESG transparency of a target and the outcome of the M&A deal process by shedding light on the costs associated with the amount of available ESG information. We hypothesize that the ESG transparency of the target decreases the completion likelihood of an M&A deal because of the heightened difficulties stemming from disagreements in price negotiation and information processing costs. Also, we propose that this negative relationship depends on whether an acquirer has prior M&A completion experiences and whether the deal is a cross-border acquisition conducted in a different institutional environment. We find that the ESG transparency of the target decreases the completion likelihood of an M&A deal. In addition, the effect of the ESG transparency of the target is stronger for acquirers with acquisition experiences in the past, while the effect is weaker for cross-border acquisition. The empirical result of 851 M&A deals from 2010 to 2021 supports our hypotheses.

STR: **Thrilled to Announce: Linguistic Disclosure Tone as Anticipatory Impression Management**

Author: **Jonas Röttger**, *Radboud U., Netherlands*
Author: **Hendrik Leeendert Aalbers**, *Radboud U. Nijmegen*
Author: **Koen Heimeriks**, *Warwick Business School*
Author: **Saeed Khanagha**, *Vrije U. Amsterdam*

Impression management scholars have provided rich insights into how firms, anticipating negative evaluations of strategic announcements, nudge outsiders' perceptions using anticipatory impression management (AIM). More recently, managerial research has turned to AIM's linguistic attributes, showing that not only the content but also linguistics influence stakeholder perception. We add to this evolving stream by incorporating strategic linguistic tone, the difference between firms' baseline tone and their strategic announcement tone, into the AIM literature. While linguistic disclosure tone has been investigated widely in management-adjacent disciplines, both its role as an AIM tactic and its effect on investors' evaluation of strategic announcements is underexplored. We develop and test theory on a sample of 1859 acquisition announcements conducted by S&P500 companies between 2010 and 2019. Our results show that firms' linguistic disclosure tone in acquisition announcements is higher than the firm's regular baseline tone. These findings indicate that firms expecting negative reactions to acquisition announcements, increase their linguistic disclosure tone to attenuate negative repercussions. However, higher tone levels tend to negatively affect investor evaluation of acquisitions unless the linguistic disclosure tone can be bolstered by more substantive signals of acquisition success.

STR: **Stakeholder Synergies in Mergers and Acquisitions**

Author: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*
Author: **Exequiel Hernandez**, *Wharton*
Author: **Emilie Feldman**, *U. of Pennsylvania*

We investigate how mergers and acquisitions (M&A) can create value by merging the complementary relationships of the acquirer and target with nonmarket stakeholders (e.g. governments, communities, NGOs). We propose two mechanisms that can lead to stakeholder synergies. The first is the "reset effect," which occurs when a firm with cooperative stakeholder relationships merges with a firm that has conflictual stakeholder relationships. This allows for a reset in the pre-M&A conflictual interactions, enabling the combined firm to satisfy its stakeholders more efficiently and with less conflict. The reset effect is likely to occur when the merging firms have relationships with stakeholders that are socially connected or concerned with similar issues. The second mechanism is the "recombination effect," which occurs when the merging firms bring cooperative stakeholder relationships involving different issues. This allows the combined firm to better serve a wider range of stakeholder needs more efficiently than before. We test our hypotheses by analyzing changes in the cooperative and conflictual relationships of Fortune 500 firms with environmental movement organizations before and after M&A events. Our results provide support for both mechanisms.

STR: **Institutional Blockholder Networks and Corporate Acquisition Performance**

Author: **Gishan Dissanaike**, *Cambridge Judge Business School*
Author: **Wolfgang Drobetz**, *U. of Hamburg*
Author: **Marwin Mönkemeyer**, *U. of Hamburg*
Author: **Henning Schroeder**, *U. of Flensburg*

We examine 17,207 U.S. mergers and acquisitions by public firms over the 1980–2019 period and find that the acquirer abnormal announcement returns are higher for firms held by more central investors in the network of active institutional blockholdings. This finding is robust to firm and deal characteristics, and it also extends to alternative network and return measures. To provide evidence on causality, we exploit extreme industry returns that lead to plausibly exogenous variation in investors' monitoring ability. The positive effect of blockholder centrality on acquirer abnormal announcement returns only exists in information-sensitive (i.e., private) deals and only among institutions that have a comparative advantage in exploiting monitoring information. Our findings suggests that institutional investors obtain an information advantage through the network, which increases their monitoring ability.

Managing Multiple Stakeholders

Session Moderator: **Yuxi Cheng**, *U. of Liverpool Management School*

STR: **Immigration-Induced Labor Mobility and Firm Skill Downgrading: Evidence from DACA**

Author: **Yuxi Cheng**, *U. of Liverpool Management School*

How do firms change their labor market strategies in response to immigration policy? Using high frequency data on over 200 million online job postings, I analyze firms' labor market response to the passing of Deferred Action for Childhood Arrivals (DACA) in 2012. I first use American Community Survey data and find that DACA triggers upward mobility among eligible recipients. In addition, post the DACA announcement, firms increase the number of job postings in counties that are more exposed to DACA eligible undocumented immigrants, especially for low-skilled jobs requiring less complex problem solving skills, jobs that require only high-school degrees, and part-time jobs. These effects are most prominent among financially constrained firms and those that express greater concerns about immigration in conference calls. The effects on firm skill downgrading are only significant among states that have better worker protection, with no enacted Right-to-Work laws, and those that grant easier access to higher education for DACA recipients. My results highlight the impacts of immigration policy on firms' labor market strategies and the corresponding implications for firms' financial constraints.

STR: **Beyond Smoke and Mirrors: Examining the Effects of Stakeholder Governance Mechanisms**

Author: **Emily Salmon**, *U. of Victoria (PhD Student)*

A firm's shareholders are not the only stakeholders to appropriate value from a firm's actions; however, the mechanisms through which non-equity stakeholders appropriate value remain unexplored within the strategic management literature. In this paper, we examine how a specific stakeholder governance mechanism – community benefit agreements (CBAs) can either create or destroy value for local stakeholders – specifically Indigenous communities. Using a difference-in-difference model of 234 communities across a 10-year time period, this study shows that communities that possess contractual agreements are statistically no different than those without. Contrary to prior theorizing, both groups of communities have unchanged labour market activity, despite employment opportunities being a common and vital term within these contracts. Both groups of communities also experience value destruction in terms of community safety. This study contributes to both the stakeholder theory and strategic management literature by empirically testing prior theorizations, revealing the need for more nuanced attention to predictors of economic and non-economic value capture.

STR: **Entrepreneurial Projection Strategy**

Author: **Aticus Peterson**, *Harvard Business School*
Author: **Andy Wu**, *Harvard Business School*
Author: **Haiyang Zhang**, *Harvard U.*

To raise money or mobilize other resources, an entrepreneur provides information about the projected business opportunity to a prospective investor. However, existing literature overlooks that this information is largely forward-looking and unverifiable. To fill this gap, we seek to understand how investors interpret this information, and in turn, what information an entrepreneur should strategically provide. We advance a theory of entrepreneurial projection strategy that addresses how aggressive or conservative an entrepreneur should be in the projections provided to a resource holder. In a study of 460 investors evaluating 286 business plans, we find that entrepreneurs benefit from providing to investors larger five-year revenue projections if they take a number of steps to package that projection as credible. In particular, more aggressive projections are more likely to persuade investors when the entrepreneur also provides information about the potential risks and a plan of action, and when the investor lacks relevant experience and a competitive comparison group.

STR: **Strategic Confusopoly: Evidence from the UK Mobile Market**

Author: **Ambre Nicolle**, *LMU Munich*
Author: **Christos Genakos**, *Cambridge Judge Business School*
Author: **Tobias Kretschmer**, *LMU Munich*

Do firms strategically confuse their customers to raise prices? Using a detailed dataset covering virtually all mobile phone tariffs and their handsets in the UK between January 2010 and September 2012, we examine the evolution of quality-adjusted prices and find that they increased until December 2011, even though the industry is mature, technologically homogeneous, and competitive. We show that this price increase closely correlates with the rate at which operators introduced dominated tariffs, suggesting that firms use obfuscation strategies to reduce the transparency of their products, helping them increase the overall level of prices of efficient (i.e. non-dominated) tariffs. We explore alternative explanations, such as increased product differentiation or product proliferation and show that obfuscation by firms is very likely the mechanism at play. This exploratory study is one of the first to offer suggestive evidence of the existence and role of obfuscation as a firm strategy.

Venture Capital and Corporate Venture Capital

Session Moderator: **Hanei Son**, *HEC Paris*

STR: **Autonomy of Corporate Venture Capital Units and Exclusivity in Early-stage Venture Investments**

Author: **Hanei Son**, *HEC Paris*

This study examines corporate investor decision-making on forming exclusive relationships with ventures, focusing on exclusive valuable resource access as a key advantage of early-stage corporate venture capital (CVC) investment. While exclusivity can be a strategy for corporate investors to form strong bonds with early-stage ventures, a trade-off arises from information asymmetries caused by the lack of external information to value these ventures as partners. I theorize that the organizational structure of CVC units influences corporate investors' decisions on forming exclusive relationships. Through an empirical analysis using venture–firm pairs of early-stage CVC investment deals, I demonstrate that corporate investors with autonomous CVC units are more likely to opt for exclusive ties with early-stage ventures, as opposed to integrated CVC units, which are more sensitive to risk and managerial consent. In addition, this trend is moderated by the knowledge originality of corporate investors' existing knowledge stocks. This study expands the understanding of the organizational features of corporate investors as they influence investment decisions and the role of knowledge stocks on firms' explorative behavior.

STR: **Strategic Focus of Corporate Venture Capital Portfolio Configuration and Venture Exit Mode**

Author: **Zhuo Chen**, *China Europe International Business School (CEIBS)*
Author: **Peiyuan Huang**, *Peking U.*

Corporate investors, who provide specialized complementary assets beyond financial capital, have been a critical force in nurturing new venture success. Extant literature has unpacked the pros and cons of receiving corporate venture capital (CVC) investments from a venture's perspective, but it is equally important yet overlooked on the distinction of complementary resource provision from a corporate lens. We investigated how corporations with different portfolio configuration demonstrate heterogenous investment logic in resource commitment and therefore cast distinctive effects on venture performance. We theorize that as corporate investors strategically invest in different domains to access future technology and business opportunities, the portfolio concentration of their investee venture's domain distribution constitutes a key reflection of the corporate investment logic and thereby its strategic focus. High portfolio concentration of corporate investor can be a double-edged sword that enhances a venture's IPO exit but hampers its acquisition exit likelihood. We test and validate our theoretical hypotheses using data on corporate investment relationships formed by U.S.-based ventures in biotech and ICT industries. Our study contributes to understanding the strategic relationship between corporate-venture collaboration by taking interdependencies across all portfolio ventures of focal corporation into consideration.

STR: **Rush to Fail? Signaling imperative and Product Recalls in New Ventures**

Author: **Sae Young Lee**, *China Europe International Business School (CEIBS)*
Author: **Taiyuan Wang**, *China Europe International Business School (CEIBS)*

We develop and introduce signaling imperative to management research. Under high information asymmetry, market participants feel compelled to create a signal in time for a high-stakes transaction, a tendency we conceptualize as signaling imperative. We theorize that signaling imperative drives the signaler to rush signal creation, which can lead to negative consequences long after the transaction is complete. In a study of 2,065 medical devices launched by 284 ventures, products launched prior to initial venture capital (VC) funding displayed a higher likelihood of recall. We attribute this finding to a rush to launch products to obtain VC and confirm our tenet in a randomized experiment, where entrepreneurs in the pre-VC condition decided to rush while feeling the need to signal to potential VC investors. By revealing how organizations accelerate actions to signal, our theory and findings contribute to a more comprehensive understanding of signaling in organizations.

STR: **Dynamic Signaling for Venture Capital Obtainment: The Roles of CEO Humility and TMT's Human Capital**

Author: **Wei Liu**, *School of Economics & Management, Tongji U.*
Author: **Xinghui Lei**, *School of Economics & Management, Tongji U.*
Author: **Zhiwen Shan**, *School of Business Administration and Customs Affairs, Shanghai Customs College*

We use signaling theory and stakeholder theory to explain whether and how humble Chief Executive Officers (CEOs) in new firms signal firm's future performance to secure venture capital (VC). Drawing from a sample of 222 new ventures in China, we show that CEO humility leads to the increase of the likelihood of receiving VC investment. In addition, this signaling effect is contingent upon the signal of the top management team's (TMT) human capital, including TMT experience and education. Further, our study also reveals how the main effect and the interactive effect vary across different life stages in entrepreneurial firms. We find that the signaling effect of CEO humility and the interaction effect are stronger in the earlier stage than in the growth stage of new ventures. Based on these findings, we discuss the implications of our research on young firms when seeking VC funding.

Corporate Transformation

Session Moderator: **Natalya Vinokurova**, *Lehigh U.*

STR: **Commensuration and Expanding Category Boundaries: Evidence from Mortgage-Backed Securities**

Author: **Natalya Vinokurova**, *Lehigh U.*

Categories can play an important part in the process by which customers evaluate innovations. Indeed, several studies have documented instances of innovators creating new categories to help audiences make sense of their products. However, we know little about the process by which innovators fit new products into established categories. I study this process in an historical case study of the emergence, evolution, and acceptance of mortgage-backed securities (MBS) as bonds between 1970, when the first MBS were issued and 1995, when the bond category boundaries were redrawn to include MBS. In seeking to promote the acceptance of MBS by bond investors, the innovators sought to make MBS comparable to bonds and, in so doing, thus, expanded the bond category boundaries to include MBS. My findings suggest that changes in product design may not suffice to secure category membership for an innovation and that efforts to change the meaning of a category can facilitate the innovation categorization process.

STR: **A Resource Configuration Perspective to Examine Strategic Renewal: A Study of Movie Franchises**

Author: **Avimanyu Datta**, *Illinois State U.*

We employ a resource reconfiguration perspective of strategic renewal to examine how the reconfiguration of the core crew influences Hollywood movie franchises' strategic renewal process through narrative transformation. We further examine the impact of such strategic renewal on the movie franchise's commercial success. Specifically, we argue that in the context of the motion picture industry, represented through intensive human capital use and shorter product cycles, franchises' financial performance is influenced by the reconfiguration of the core crew members and their initiating of the narrative transformation. Utilizing a large set of hand-collected longitudinal data for a sample of 1,120 movies nested among 337 franchises produced between 1948 and 2019 (over 71 years), we find that sequels or prequels made by reconfigured core crews motivate narrative transformation and attract audiences, generating superior revenue. Our results highlight that human resource reconfiguration triggers a strategic renewal process via narrative transformation that leads to higher financial performance.

STR: **The Collateral Use Problem: Between Coherence and the Creation of Complexity**

Author: **Constantin Prox**, *INSEAD*
Author: **Phebo Derk Wibbens**, *INSEAD*

This paper investigates when innovating firms can profit from their existing resources and activities in new markets. We build a model of the general case where resources and activities are not reallocated or replicated, but used "collaterally", meaning a new use is built on top of an existing use. Collateral use is an implicit assumption in theories of complementary asset advantages as well as multi-product synergies, and is commonly observed in scale-free assets such as software, product design components, routines, or brands. While the benefit of collateral use has mostly been explored in static environments, we provide a model that characterizes its utility in the emerging and evolving markets where collateral use is prevalent. We find that while collateral use creates immediate benefits when entering new markets, it does poorly over time in settings that require continued adaptation to environmental changes. The reason for this reversal of fortunes is the inadvertent creation of internal complexity that accompanies collateral use decisions. We develop a way to model this endogenous creation of complexity by firms, finding that the internally created complexity at the core of the firm can be many times higher than the complexity determined by a firm's environment. Our novel modeling of the collateral use decision explains why organizations become complex and provides a boundary condition on the usefulness of complementary assets for creating value in innovative industries.

Session Moderator: **Jingning Ao**, *U. of Pittsburgh*

STR: **When Leaders' Linguistic Openness Leads to Innovation Outcomes Throughout Three-staged R&D Process?**

Author: **Jingning Ao**, *U. of Pittsburgh*
Author: **Saadet Elif Esposito**, *PhD Student at UMass Lowell*

This paper aims to answer the question: When will open innovation have a positive impact on innovation outcomes (e.g., radical innovation)? Exploring the answer to this 'when' inquiry can help firms leverage external and internal resources to improve innovation outcomes in a timely manner. Building on the burgeoning research on the human side of open innovation, we introduce CEOs' linguistic openness, defined as an individual-level construct that highlights CEOs' expressions of openness and captures the utilized language in explaining firms' open innovation strategy. We hypothesize that linguistic openness is positively associated with total innovation outcome in the three-staged R&D process. Specifically, the positive relationships start at the second stage (experimentation) and continue to the last stage (commercialization, representing radical innovation performance). Analyzing data from the world's 24 largest pharmaceutical firms during 2000-2018 based on topic modeling technique and fixed effects negative binomial models, we find support for most of our hypotheses. This paper contributes to the intersection of open innovation and strategic leadership literature, suggesting that CEOs' linguistic openness is a meaningful measure of open innovation and that leaders' language matters to firm innovation.

STR: **Complementary Workforce Development: The Impact of Staff and Manager Training on Productivity**

Author: **Susan Schwarz**, *King's College London*
Author: **Jun Du**, *Aston Business School*
Author: **Uzoamaka Nduka**, *Aston Business School*

Productivity is a crucial goal for firms, yet training investments to support employee development, improve workers' skills, and enhance productivity face scrutiny. Despite considerable research into training inputs and workplace outcomes, theoretical and methodological gaps remain. We investigate the differential effects of staff and managerial training on firm productivity, extending theory on human capital and workforce development. The analysis focuses on 16,463 firm-year observations from the UK Employer Skills Surveys and Investment in Training Surveys paired with the Business Structure Database in four waves over a seven-year period, accounting for potential selection bias. Examining baseline training rates and firms' deviation above industry training rates, we find that productivity rose with more intense training expenditure for non-supervisory staff and a higher proportion of managers trained. The interaction of staff and managerial training generated further performance gains, illustrating the value of complementary skill development for employees at different levels. The findings suggest that managerial competence is not the sole solution to the productivity problem, because positive outcomes hinge on preparation of non-supervisory staff. As employers face talent shortages and potential worker disengagement, the findings help firms, policymakers, and labor leaders invest training funds wisely to enhance workforce potential and productive enterprise.

STR: **Local Drinking Culture, Government R&D Subsidies, and Firm Innovation**

Author: **Yu Zhang**, *China Europe International Business School (CEIBS)*
Author: **Danqing Wang**, *Hong Kong U. of Science and Technology*
Author: **Hong Zhang**, *Lee Kong Chian School of Business, Singapore Management U.*
Author: **Nianhang Xu**, *Renmin U. of China*
Author: **Zhe Li**, *Central U. of Finance and Economics*

Prior studies accounting for innovation activities in emerging economies have centered on institutional, governance and resource explanations, but less explored is how local culture shapes the way firms obtain innovation resources and produce innovative outcomes. We hypothesize that local drinking culture, by influencing the granting of government subsidies on innovation and related firm incentives, may have given rise to lower efficiency in innovation in the context of China. We argue that the prevalence of a local drinking culture shapes politicians' willingness to engage frequently and legitimately in informal networking occasions with firms, as well as creates a path dependency for firms to rely on informal networking for gaining access to the government, which lead to enhanced probability of government approval of R&D subsidies. Nonetheless, firms immersed in a heavier drinking culture produce more patents that are less innovative (i.e., falling into the category of the "utility" as opposed to "inventions"). As a result of being indulged in hedonism and short-term enjoyment. We further show how such effects of the drinking culture vary based on the legal development, firms' political connection as well as technological capabilities. This study contributes to the innovation literature by providing a culture-based explanation. We also discuss the implications of the impact of culture on business activities and the substitution effect between formal institutions and culture.

STR: **The Social Context of Innovation: Protests, Diversity, and the History of American Invention**

Author: **Michael Blomfield**, *U. of Massachusetts, Amherst*

Extensive research has examined how incentives to innovate are shaped by factors such as appropriability conditions, competition, uncertainty, and costs in identifying and accessing relevant information. However, the rate of innovation and technological change also depends on the ability of would-be innovators to generate new ideas. The social context in which people are located shapes the ways they can conceive of such opportunities. This paper analyzes how changes in a local social environment that increase openness and tolerance to diversity affect local innovation rates. I use historical patent data to identify county-level patent rates based on the location of inventors. I match this to data on the location of U.S. civil rights protests from 1960 to 1964 inclusive, during which time public participation in, and attention to, the Civil Rights Movement peaked. Prior research has found that local protests increased liberal social attitudes among the proximate population. In this paper, I show that areas in which there were local civil rights protests in the early-1960s subsequently experienced higher rates of innovation. I control for a range of demographic variables and use local precipitation as an instrument for protests to support a causal interpretation of my results. While the primary social value of the Civil Rights Movement is its hard-won gains for marginalized groups, my findings suggest that the changes brought about in local social context by the movement also led to increased innovation. The results demonstrate the importance of social norms and values to innovation.

Drivers of Corporate Social Responsibility

Session Moderator: **Kexin She**, *Peking U.*

STR: **Local Media Coverage and Corporate Social Responsibility: Evidence from a Natural Experiment**

Author: **Zhiyan Wu**, *Erasmus U. Rotterdam*
Author: **Jun Ho Lee**, *U. of Kansas*
Author: **Michael Kay Bednar**, *U. of Illinois*

This study examines the impact of local media coverage on corporate social responsibility (CSR) activity. To obtain an exogenous variation in a firm's coverage by local media, we exploit a quasi-natural experiment provided by the closures of local newspapers that occurred between 1996 and 2014 in the United States. Using a difference-in-differences methodology, we find that firms respond to an exogenous decrease in local media coverage by increasing their engagement in CSR. This effect appears stronger among high-performing and larger firms, and it becomes stronger over time. Our study represents one of the very first attempts to examine the impact of local media coverage on CSR behaviors and informs our understanding of the importance of local media in the information environment of firms.

STR: **Speak Different and Donate Less: The Influence of Linguistic Diversity on Corporate Philanthropy**

Author: **Kexin She**, *Peking U.*
Author: **Xuanli Xie**, *Peking U.*

Using a sample of Chinese listed firms during the period of 2008-2015 and a county-level dialect dataset, this study examines the effects of linguistic diversity on corporate philanthropy. Results show that firms located in a place with a higher degree of linguistic diversity are less likely to donate, suggesting that linguistic diversity plays a negative role in improving corporate social responsibility. Based on the social identity theory, the negative relationship between linguistic diversity and corporate philanthropy is stronger when firms face lower level of trust and diverse stakeholders, as indicated by non-state-owned enterprises and local firms. The findings are robust to the potential endogeneity of linguistic diversity and after concerning the time-invariance variable effect and culture effect. Our study suggests that linguistic diversity is an important cultural factor that is omitted in the literature of corporate philanthropy.

STR: **Multicultural Leaders, Psychological Comparative Process, and Conflict Engagement**

Author: **Hongfei Ruan**, *Harbin Institute of Technology*
Author: **Ying Zhang**, *Northwestern Polytechnical U.*
Author: **Xueyan Zhang**, *Northwestern Polytechnical U.*

We investigate how CEOs with multicultural experience can shape firms' conflict engagement. We examine this phenomenon in the context of litigation against other firms, which signifies firms' willingness and ability to manage conflict with others. CEOs' multicultural experience may provoke their psychological comparative process, documented in the social psychology literature. We find that firms with multicultural CEOs are associated with less likelihood of conflict engagement. Our argument is that multicultural CEOs are more willing to accept discrepancies and possess cognitive capabilities in problem-solving. Managerial discretion and the presence of multicultural coalition teams also are found to strengthen the effect of multicultural CEOs on firms' conflict engagement. This study contributes to research on multicultural experience by highlighting that conflict management can be driven by how firms interpret the interfirm relationship. We emphasize the importance of integrating the psychological comparative process into upper echelon research.

STR: **Entrepreneurial Orientation to Corporate Responsibility Actions: A Strategic Management Perspective**

Author: **Steven Kihm**, -
Author: **Rimi Zakaria**, *U. of Wisconsin, Whitewater*
Author: **K. Praveen Parboteeah**, *U. of Wisconsin, Whitewater*

Successful companies today consider the impact of their actions on society while exploring entrepreneurial options. Building on prior studies in strategic management and organization theory, this study examines links between entrepreneurial orientation (EO) in general, entrepreneurial proactiveness (EP) in particular, and their links to responsible corporate actions. Drawing on the attention-based view (ABV) and resource-based view (RBV) of the firm, we propose three strategic mechanisms, namely, technical, relational, and administrative proactiveness to explain CSR ratings. First, applying the Lumpkin-Dess multidimensional conceptualization, we examine the nuanced relationships between EP and the CSR dimensions of environmental, social, and governance actions. Second, observing the aggregated EO per Covin and Slevin we theorize on its relationships with environmental, social, and governance ratings. Using content analysis of corporate earnings calls, we examine 394 large U.S. firms to test our hypotheses. Results show both high EP and EO levels relate positively to environmental and governance ratings, but not to social ratings. Based on these findings highlighting temporally relevant factors and their strategic implications for corporate responsibility scholarship, we discuss important directions for future research.

Social Issues and Institutions

Session Moderator: **Ning Fang**, *Faculty of Economics and Business, U. of Groningen*

STR: **Dynamics of Pro-market Institutions in Emerging Economies and Firm Performance Dynamics of Pro-mark**

Author: **Ning Fang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Rian HJ Drogendijk**, *U. of Groningen*
Author: **Sathyajit Gubbi**, *BITS School of Management*

Most studies on the influence of pro-market reforms on firm performance in emerging countries look at the combined effects of the different dimensions included in the concept. We therefore know little about the heterogeneous influences of multiple dimensions of pro-market reforms and how their dynamic developments jointly influence firm performance. Integrating transaction costs, agency theory, and competition effects, we identify specific dimensions of pro-market reforms and propose that the multiple dimensions play their roles in three distinct pillars: economic, legal, and governance. We also argue that, in each pillar, multiple dimensions of pro-market reforms affect firm performance by changing different costs and the intensity of competition. They may perform at different speed to jointly affect firm performance. We tested these ideas on a sample of 427,688 Chinese manufacturing firms located in 31 provinces, using data from 1999 to 2011. Our findings show that firms benefit when the comparative speed of improvements reducing costs (on the dimensions 'intermediaries market', 'producer rights protection', and 'government incentives') is greater than improvements increasing competition in different pillars (on the dimensions 'product market', 'consumer rights protection', and 'privatization'). This nuanced understanding of how pro-market reforms influence firms provides better managerial and political guidance.

STR: **Adopt, Innovate or Both? Revisiting the Porter Hypothesis Amidst Decarbonization and Digitalization**

Author: **Jiexin Wang**, *Institute of Economics, Tsinghua U.*
Author: **Cheng Huang**, *Institute of Economics, Tsinghua U.*

The Porter Hypothesis (P.H.) argues that a well-designed environmental regulation can boost the productivity of firms by stimulating them to innovate. However, the P.H. neglects another technological response of firms confronted with environmental regulation—adopting existing technologies, which may also lead to productivity gains. This study investigates the impact of China's carbon emission trading scheme (ETS) pilots on firms' adoption of digital technologies (artificial intelligence, big data analytics, blockchain, cloud computing, etc.) and further on firm productivity. Exploiting a difference-in-differences design and the panel data of listed firms, we show that carbon ETS facilitates regulated firms to adopt digital technologies, especially big data analytics and cloud computing. Further, we find that carbon ETS has a positive impact on firm productivity. This positive impact attributes to both innovation and digital technology adoption induced by carbon ETS. We corroborate our main findings by executing several robustness checks. Overall, our study develops an extended version of the P.H. by incorporating technology adoption and provides empirical evidence for it. We also highlight the unexpected benefit of environmental regulation—promoting the adoption and diffusion of emerging general-purpose technologies.

STR: **Institutional Fragility, Institutional Development, and Relative Strategic Emphasis**

Author: **Yi Hao**, *School of Economics & Management, Tongji U.*
Author: **Jason Lu Jin**, *City U. of Hong Kong (Dongguan)*

This study investigates how institutional fragility and institutional development affect a firm's relative strategic emphasis on value appropriation relative to value creation. We introduce institutional factors as the antecedents of relative strategic emphasis, which presents a considerable strategic response. With a sample of 4809 firm-year observations of Chinese publicly listed firms between 2009 and 2015, we find empirical support that institutional fragility positively affects a firm's relative strategic emphasis toward value appropriation relative to value creation; institutional development negatively affects a firm's relative strategic emphasis. We examine the moderating roles of firm age and organizational slack. Firm age and organizational slack negatively moderate the relationship between institutional fragility and relative strategic emphasis, and the relationship between institutional development and relative strategic emphasis.

STR: **Corporate Social Performance in the Face of Institutional De-prioritization of Sustainability Policies**

Author: **Debtanu Lahiri**, *NOVA School of Business and Economics*

The study examines firms' response to sudden changes in the institutional environment, whereby the rules and regulations pertaining to the adoption of sustainability practices are considerably muted. Using Trump's victory in the 2016 US Presidential elections as an exogenous event that led to institutional de-prioritization of sustainability policies, the study reveals that US firms proactively improved corporate social performance (CSP) in response. I argue that such actions by firms are aimed at neutralizing the perceived legitimacy challenges imposed on them by the aforementioned changes in the institutional environment. The improvement in CSP is significantly lower for firms with no ideological predispositions, since they are less likely to be sympathetic to, and constrained by socio-normative expectations. Theoretically, this study uses the 'insurance-risk' view and 'corporate culture' perspective to arrive at a nuanced understanding of firms' motivations for adopting corporate social responsibility.

Network Brokerage and Structure

Session Moderator: **Gideon D. Markman**, *Colorado State U.*

STR: **Will the Friends of Your Foes Today Become Your Friends Tomorrow?**

Author: **Gideon D. Markman**, *Colorado State U.*
Author: **Marat Davletshin**, *Colorado State U.*
Author: **Stephen Thomas Downing**, *U. of Missouri*

Firms are embedded in networks of partners and rivals, so their operations and ultimate performance are influenced not only by their capabilities and strategies but also by the actions as well as interfirm ties among their direct and indirect partners and rivals. Despite this understanding, we still lack a theory to explain how collaborative relations among firms affect their competitive ties and vice versa. Moreover, under what conditions can firms foresee their future partners and rivals? Using temporal exponential random graph models (TERGM) fitted to a dataset including 4,679,697 dyad-year observations on 9,675 firms in 10 networks during a 13-year period, we identify several conditions under which firms develop collaborative and competitive ties. Together, these conditions guide scholars and managers which indirect partners and rivals today could become direct allies and competitors tomorrow.

STR: **Status Disparities as Signals and Powers: Performance Consequences Under Brokerage and Closure**

Author: **Rui Jiang**, *U. of Texas at Dallas*
Author: **Zhiang Lin**, *U. of Texas at Dallas*

Extending prior treatments of firm status as an independent and single dimensional construct, this study explores two types of status disparities—signal inconsistency within a firm (aka status inconsistency) and power imbalance with partners (aka status imbalance)—and their performance consequences. We further examine how firms' brokerage and closure positions within their ego networks may facilitate or constrain such effects. An analysis of four United States industries over a thirteen-year period reveals two contrasting patterns: a) firms suffer negative performance repercussions of status inconsistency under network closure but can gain performance benefit via brokerage positions; and b) firms face performance degradations from status imbalance under brokerage positions but can leverage it for performance advantages via network closure.

STR: **How Brokerage in Supply Networks Affects Incumbents' Adaptation to Technological Discontinuities**

Author: **Jongyoun Baek**, *INSEAD*
Author: **Andrew V. Shipilov**, *INSEAD*
Author: **Nathan Furr**, *INSEAD*

Incumbents often face technological discontinuities to which they struggle to adapt. During this adaptation process incumbents can become embedded in two buyer-supplier networks, one for the old and one for the new. While simple embeddedness in a technology buyer-supplier network may create inertia to adaptation, brokerage in these networks could lead to external integrative capabilities that facilitate adaptation. In a study of the U.S. automotive industry between 2013 and 2020 responding to a regulatory shock which accelerated the discontinuity, we find that brokerage in the old technology network predicts both half-steps into the new technology (i.e., number and performance of hybrid technology models) and adaptation to the new technology (i.e., number and performance of new technology models). Surprisingly, brokerage in the old technology network was more impactful than brokerage in the new technology network for the transition from internal combustion engine to electric vehicles.

STR: **CEO Advice Seeking and the Failure Escape: The Role of the CEO Entourage in Corporate Restructuring**

Author: **Rachid Achbah**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*

Advice seeking is one of the most fundamental practices in real-life decision-making and is a prevalent mode of knowledge acquisition at the upper echelons. Executives may seek advice from within and outside the organization's boundaries, which can affect the organization's overall direction. In this study, we examine the effect of the CEO's environment through advice seeking in managing the firm's financial difficulties. We use three advice-seeking modalities (source, intensity, and diversity) to theorize about the CEO's consciousness of insolvency risk and the restructuring decision. Our predictions are tested using a sample of 407 French SMEs in financial distress in the Rhône-Alpes region. The sample is drawn from the PLAN-PME database, constructed by the COACTIS research team from 2009 to 2013. The results indicate that the CEO's internal (TMT) and external advice-seeking intensity positively affect the CEO's consciousness of insolvency risk and the restructuring decision. The results also show that the functional diversity of TMT members positively moderates the relationship between the CEO's advice-seeking intensity and their consciousness of insolvency risk. In contrast, we found a negative moderating effect of diversity in external advice seeking. By examining the management of financial distress from the perspective of the manager's entourage via advice seeking, we take the first steps toward a more realistic and general understanding of this phenomenon.

Executive Compensation Design

Session Moderator: **Steffen Burkert**, *LMU Munich School of Management*

STR: **Running to Stay in Place: CEO Compensation, Gender, and Firm Strategy**

Author: **Christina Matz Carnes**, *Indiana U. - Kelley School of Business*
Author: **Jonathan O'Brien**, *U. of Nebraska*
Author: **Nithya Shankar**, *SUNY Plattsburgh*

A robust stream of research has focused on understanding drivers of firm competitive behavior. However, much less attention has been given to how CEOs impact firms' competitive repertoires, despite the CEO's role as the chief strategist in a firm. We examine how a previously overlooked aspect of executive compensation, inside debt (i.e., money owed to the CEO by the firm), induces strategic passivity in CEOs as a way to minimize future losses and protect their debt. By integrating competitive dynamics and agency theory, we develop theory to understand the nuances of how CEO inside debt drives conservative and aggressive competitive behavior depending on environment and expectations. Additionally, we build on prior work examining gender differences in compensation and loss aversion to argue that female CEOs are more likely to be proactive in minimizing losses due to their prior experiences, thus they are less impacted by the strategic passivity typically induced by inside debt. Our empirical analysis of 1,405 firms and 86,102 competitive actions over a 14-year time span produced strong support for our hypotheses.

STR: **Compensation Design Dispersion and Executive Turnover**

Author: **Steffen Burkert**, *LMU Munich School of Management*
Author: **Tobias Oberpaul**, *LMU Munich School of Management*
Author: **Ingo Weller**, *LMU Munich*

Executives care about their pay compared to their peers, e.g. their top management team colleagues. Dispersion in pay is associated with negative effects for both performance and turnover. While existing researched has focused on dispersion in pay levels and thus distributive fairness concerns, the differences in pay contract design have largely been overlooked. Building on procedural fairness we investigate how differences within the pay design – namely the share of pay for performance relative to a fixed salary, the number of performance grants, and the number of performance goals – influence individual executive turnover. Our results suggest that disparities in design lead to more executive turnover, especially for those with more pay at risk and fewer goals relative to their peers. We discuss implications for research and practice.

STR: **Corporate Information Dissemination and Executive Pay-for-performance Sensitivity**

Author: **Hyeun Lee**, *U. of Toronto, Rotman School of Management*
Author: **David Gaddis Ross**, *U. of Florida*

The sensitivity of the executive pay to firm performance (i.e. pay-for-performance) has been broadly accepted as an indicator of well-functioning governance mechanism. The level of sensitivity is determined internally by board members, but also can be shaped by expectations held by external stakeholders for better governance. We theorize timely access to corporate information as a structural condition that mitigates information asymmetry that external firm constituents face, thereby strengthening the relationship between executive pay and firm performance. Using the staggered adoption of the EDGAR online filing system as a change that facilitates public access to corporate information, we find that the sensitivity of the executive pay to firm performance strengthens afterwards.

STR: **Reaching for the Stars: Achieving Exploratory Innovation and Performance through CEO Stock Options**

Author: **Vyas Sreenivas**, *Fox School of Business, Temple U.*
Author: **Solon Moreira**, *Fox School of Business, Temple U.*
Author: **Monica Wadhwa**, *Fox School of Business, Temple U.*

We examine the role of executive compensation in encouraging the development of exploratory innovations that can transform the industry and the firm's fortunes. A firm's Chief Executive Officer (CEO) and the Top Management Team (TMT) take on entrepreneurial risks to invest their critical resources in creating such path-breaking innovations. We show that stock options, a long-term incentive component of executive compensation, positively motivate CEOs to pursue such innovations. Furthermore, a pay disparity between the CEO and the TMT negatively impacts this motivation to produce exploratory innovation. We also study how these innovations impact the firm scientifically and commercially. Lastly, our paper inspects the role of advertising in commercializing these innovations. Using data from multiple sources, we empirically show that different components of executive compensation individually and interactively affect the CEO's motivation to take on entrepreneurial risk to create exploratory innovation. While these innovations do not commercially benefit the firm in the short run, the CEO and TMT can leverage marketing as a tool to turn them around.

STR: **The Effect of Target CEO Equity Risk Bearing on Acquisition Premium Decisions**

Author: **Mirko Benischke**, *Erasmus U. Rotterdam*
Author: **Grigorij Ljubownikow**, *U. of Auckland*
Author: **Xena Welch Guerra**, *Erasmus U. Rotterdam*

Scholars have long argued that managerial self-interest is reflected in acquisition outcomes. Prior research typically focuses on how acquiring firm CEOs use acquisitions as a means to maximize their own personal wealth. We complement this research by drawing attention to the role of target CEO self-interest on acquisition outcomes. Specifically, we apply the behavioral agency's concept of agent risk bearing to theorize about the effect of the target CEO's equity wealth on acquisition premium decisions and examine the moderating effects of industry growth and industry volatility. Doing so, we refine knowledge about the antecedents of acquisition premiums by developing theory pertaining to the target CEO's incentive to negotiate for higher premiums depending on their equity risk bearing. Our findings demonstrate that target CEOs are willing to trade personal benefits for shareholder wealth, resulting in a wealth transfer from target to acquiring firm shareholders. We tested our theory using a sample of 446 US domestic acquisitions from 1994 to 2022.

Designing Purpose-Driven Organizations

Organizer: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*
Organizer: **Michael Yanche Lee**, *INSEAD*
Discussant: **Paul S. Adler**, *U. of Southern California*

This research symposium will present current empirical work examine how purpose driven organizations are structured. With growing interest in organizational purpose, defined as the pursuit of goals beyond short- term profit maximization, an important but understudied question concerns how organizational governance, authority structures, leadership roles, and other elements of organizational design shape the pursuit and content of organizational purpose. This panel will share four cutting edge empirical projects from leading scholars in the field, and discussion will be led by a leading organizational theorist who has written on the confluence of organization design and purpose.

STR: **The Boundaries of the Firm: Internal and External Contracting**

Author: **Catherine Magelssen**, *London Business School*
Author: **Beverly Rich**, *U. of Utah*
Author: **Kyle J. Mayer**, *U. of Southern California*

How do internal formal contracts differ from external formal contracts? We theorize that common ownership of assets allows for ambiguous property rights between transacting units, leading to transactional issues within firms, including coordination and incentive problems from weaker incentives for efficiency than external transactions, transactional liabilities, and centralized authority. We expect internal contracts to address such issues by focusing on allocating transactional property rights, assigning liabilities, and enforcement. We employ topic modeling on a proprietary dataset of internal and external contracts to systematically assess the content. This study demonstrates how the use of formal contracts in transactional governance differs within and between firms, an understanding of which is critical to managers given the ubiquity of internal transactions and the prevalence of internal formal contracts.

STR: **Foreign Takeover Protection and Corporate Environmental Performance**

Author: **Dennis Wajda**, *Coastal Carolina U.*
Author: **Wei Shi**, *U. of Miami*
Author: **Ruth V. Aguilera**, *Northeastern U.*

This study examines how country investment screening laws that protect domestic firms from foreign acquisition (i.e., foreign takeover protection) can impact their corporate environmental performance. Two competing hypotheses are investigated. The shareholder view predicts that stronger foreign takeover protection will lead to a decrease in corporate environmental performance because foreign takeover protection weakens the market for corporate control faced by managers and motivates managers to divert resources from both shareholders and stakeholders to pursue their own private interests. The stakeholder view, in contrast, predicts that stronger foreign takeover protection will lead to an improvement in corporate environmental performance. Because catering to stakeholders' concerns over corporate environmental performance contributes to the long-term value of the firm, managers will be more likely to attend to those stakeholders when relieved from short-termism triggered by the threat of foreign takeovers. Using a sample of 5,425 firms around the world, from 2001-2018, the study finds that an exogenous increase in foreign takeover protection triggered by the passage of country-level investment screening laws leads to higher corporate environmental performance. This study advances research on the relationship between market entry policies, corporate governance, and sustainability.

STR: **Advancing New Strategic Initiatives: The CEO and Middle Management Social Influence Process**

Author: **Maryam Ghasemaghaei**, *McMaster U.*
Author: **Francois Neville**, *McMaster U.*
Author: **Jeffrey Lovelace**, *UVA - McIntire*

While CEOs play a critical role in advancing new strategic initiatives, their efforts do not occur in a vacuum. Leveraging the social influence theory, we examine the interactive effects of three key factors that help explain whether middle managers will support the implementation of a new initiative: the CEO's framing of the initiative, the alignment of a CEO's reputation with the new initiative's theme, and middle manager predispositions toward the new initiative. Using a media-rich experimental design, we test our assertions with a sample of working middle managers. We identify a set of nuanced findings that highlight the interactive effects of our focal variables and stress the importance of considering each of these factors when attempting to understand the strategy implementation process.

STR: **Developing through Paradoxes: How Ways of Dealing with Paradoxes Influence the Open Strategy Process**

Author: **Frank Martela**, *Aalto U.*
Author: **Jan-Peter Gustafsson**, *U. of Jyväskylä*
Author: **Eero Vaara**, *U. of Oxford*

An increasing amount of companies tap into their employees as a source of strategic insights through Open Strategy initiatives involving employee participation. However, given the tensions in such processes, we still know too little about how this is successfully accomplished. Open strategy parallels the more general trend towards more decentralized and flat organizational structures. However, despite decentralization of power, most self-managing organizations still leave strategy to the top management. The present qualitative case study follows a self-managing ICT company with 600+ employees with no middle management or supervisors, and strong aversion towards top-down initiatives, when it built its first strategy. Utilizing a paradox lens, we identify a number of key paradoxes and tensions that the focal actors encountered. We identify six ways of dealing with paradoxes – making a choice, trying to bypass, making a compromise, seeking synthesis, living with the paradox – demonstrating how paradoxes were not problems to be solved and left behind but rather that it was through paradoxes and the emerging responses to them that the whole participatory strategy process moved forward. Thus a view of 'developing through paradoxes' emerges, where paradoxes represent culmination points that trigger the process to move to the next stage. We also discuss paradox maturity, noting how some ways of dealing with paradoxes tend to cause troubles downstream while others tend to leave to more fruitful future developments.

Technology and entrepreneurship play an essential role in the economy - with seven of the ten largest organizations rooted in technology, and venture investments totalling approximately $300B annually. Yet, despite progress, the gains from technology and entrepreneurship remain highly unequally distributed. The gender, racial and socio-economic gaps among venture capitalists and startup founders are well documented. Further, the consumers who benefit from new technologies, patents and scientific innovations are highly skewed. Finally, not only do less developed countries suffer from unequal access to new technologies, data and knowledge surrounding their use, but there is evidence of significant geographic inequality among technology adoption within developed countries. This symposium has two aims. The first is the investigation of existing inequalities in gains from technology and entrepreneurship across a wide range of stakeholders - with a special focus on employees and employee adjacent external stakeholders such as the open source community. The second is the examination of potential interventions that may aid in the democratization of technology and its benefits - both monetary and non-pecuniary.

Participant: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

Publicly listed companies in the US have faced increasing pressure from equity markets over the last few decades. Pressures in various forms involving different types of investors influence the existing and future strategies of public firms. The panelists in the symposium aim to engage the audience in an in-depth and productive discussion of the challenges and opportunities in this research and creative ways to pursue new research frontiers in this area. The panelists have published research on the type of pressures that publicly listed firms face, how equity markets shape strategy, and how firms proactively influence shareholder and market perceptions. Each panelist will offer a unique perspective on how their work informs this body of research but also differs in some respects.

Categories, Stigma, and Divisive Issues: The Role of Social Evaluations in a Dynamic World

Coordinator: **Anastasiya A. Zavyalova**, *Rice U.*
Coordinator: **Jeffrey Lovelace**, *UVA - McIntire*
Panelist: **Witold Jerzy Henisz**, *U. of Pennsylvania*
Panelist: **Kisha Lashley**, *U. of Virginia*
Panelist: **Joseph Porac**, *New York U.*
Panelist: **Violina Rindova**, *U. of Southern California*

Decades of research on social evaluations have resulted in a rich body of work that illustrates how perceptual constructs, such as reputation, categories, and stigma affect key stakeholders' willingness to support or disrupt organizations. Rapid developments in the way stakeholders consume information, form judgments, and express their views about organizations have led to questions about the changing role of business in society, shifting power dynamics between stakeholders and organizations, increasing diversity and polarization of social evaluations, and growing complexity of organization-stakeholder relationships. The goal of this symposium is to discuss these questions by bringing together prominent scholars to comment on the current state and future directions of research on categorization, stigmatization, and ESG issues in management.

Research on the strategies of innovation and transaction platforms has skyrocketed in recent years. However, most studies have examined the strategies of platforms where one side is populated by consumers or freelancers. Less is known about innovation and transaction platforms that connect larger businesses (B2B), as characteristic for billion-dollar industries such as manufacturing and telecommunication. To address this issue, our symposium assembles papers that discuss how B2B platforms compete and govern. Together, these papers advance our understanding of the distinctiveness of B2B platform strategies.

Panelist: **Gordon Phillips**, *Tuck School of Management at Dartmout*

The need to accurately measure firm rivalry, similarity, or differentiation is common across a wide variety of literatures in strategy and innovation. However, empirically measuring these constructs using traditional metrics is typically difficult and imprecise. In the last decade, many novel techniques have been proposed to capture these constructs more accurately, often using text data and machine learning approaches, allowing researchers to study novel and often foundational phenomena. This panel will discuss these frontier methodologies and provide example applications from recent research. The panelists will also consider the tradeoffs and potential future applications of each technique and engage in a discussion with the audience.

Technology, Policy and Society Track: The Future of Green Technologies

Session Moderator: **Xiaoli Tang**, *Bocconi U.*

TIM: **Green Innovation and Heavily Polluting Firms' Stock Market Value**

Author: **Jinhuan Tian**, *Southwest U. of Finance and Economics*
Author: **Yan Dong**, *Southwestern U. of Finance and Economics*
Author: **Peizhong Liu**, *Southwestern U. of Finance and Economics*
Author: **Gianluca Vagnani**, *Sapienza U. Di Roma Rome, Italy*

This paper introduces a moderated-mediated model to investigate the relationship between green innovation, as measured by green patent stocks, and firms' stock market value, as measured by Tobin's Q. Using longitudinal data drawn from 351 heavily polluting firms in China's A-share market from 2007 to 2018, we find that green innovation is likely to affect firms' stock market value positively. A 1% increase in the green innovation over assets index will enhance by 0.18% Tobin's Q at the firm level. Environmental compliance costs significantly mediate the green innovation-firms' stock market value association. We also emphasize the role of technological collaboration with public research organizations which will have a significant positive moderating effect on green innovation-environmental compliance costs linkage. Our results suggest that the recurrent question in the extant literature, "does it pay to be green?" should be substituted by "how and under what conditions does it pay to be green for firms?" Implications for firms and policymakers are also proposed.

TIM: **Environmental Transparency and Value Appropriation from Innovation: Evidence from US Fracking**

Author: **Xiaoli Tang**, *Bocconi U.*

Firms are under greater pressure to be transparent about the negative externalities they impose on society. In some cases, these externalities are caused by proprietary technology on which they rely for competitive advantage. This creates a "transparency dilemma"; more transparency relieves public pressure but increases the risk of imitation. I argue that firms under greater public pressure can rely on complementary assets to strategically choose which technologies to disclose and which to keep secret. Using data on over five million chemical ingredients reported at more than 170,000 hydraulically fractured wells across the US, I find that trade secret rates in chemical reporting decrease by 10% with one standard deviation increase in the support for environmental regulation at the congressional district level. In addition, I find that this negative effect is stronger for firms possessing more complementary assets—geological resources specific for the chemical recipes, suggesting that such assets can substitute for secrecy in sustaining competitive advantage as firms disclose the technologies from which competitors cannot profit to appease stakeholders who expect minimum secrecy. Using a difference-in-differences design, I find that post-chemical disclosure regulations, firms in states with greater public pressure are more likely to hoard drilling permits. Greater public pressure is also associated with faster drilling, indicating the use of lead time as an additional value appropriation mechanism. Implications for competition and environmental policy are discussed.

TIM: **Does Regional Digital Capability Matter for Green Technology Diversification?**

Author: **Ou Bai**, *Zhejiang A&F U.*

Although prior research has discussed green innovation in the digital era, the role of regional digital capability endowment has received less attention. The present paper extends the literature on the geography of innovation by showing that regional digital capability plays a prominent role for green technology diversification across provinces in China. Further, this study explores the moderating effect of intellectual property rights (IPRs) protection. Our empirical study focuses on these causalities by econometric analysis using a panel dataset of 31 provinces in China, for the period of 2012 to 2020. The result presents the spatial distribution patterns of the green technology diversification and regional digital capability. Regional digital capability is a positive predictor of green technology diversification and IPRs protection positively moderates the main effect. This study speaks to the intersection of evolutionary economic geography and green innovation studies. It highlights the general-purpose nature of regional digital capabilities and their roles in facilitating the transition of Chinese provinces towards low-carbon societies.

TIM: **Can Something Good Come From Being Bad? Green Innovation and Environmental Regulatory Sanctions**

Author: **Mirjam Brandl**, *Johannes Gutenberg U. Mainz*
Author: **Bjoern C. Mitzinneck**, *Groningen U. (RuG)*
Author: **Holmer Kok**, *Stockholm School of Economics*
Author: **Jana Oehmichen**, *Johannes Gutenberg U. Mainz*

Green innovation is needed to find solutions to the accelerating climate crisis. However, developing such green innovation is costly for firms in the short term and has uncertain and delayed pay-offs in the long run, leading many firms to limit their engagement. What triggers firms to step-up green innovation efforts remains ill-explored. Drawing on the behavioral theory of the firm, we suggest that if a firm receives more regulatory sanctions for environmental violations than its competitors (failing to meet social aspirations) or than it has in the past (failing to meet historical aspirations), this can trigger problemistic search behavior and, in turn, increase the firm's green innovation propensity. Examining RnD-active S&P 500 firms between 2004 and 2014, we find that failing to meet social aspirations does trigger increased green innovation while failing to meet historical aspirations does not. Rather, meeting historical aspirations are associated with reduced green innovation propensity, suggesting that firms may need negative feedback to engage in green innovation. These findings identify an important antecedent of green innovation and highlight the role of regulatory enforcement of environmental violations.

TIM: **Technology Transitions in the Presence of Uncertain Learning Curves: The Case of Green Tech**

Author: **John S. Chen**, *Baylor U.*
Author: **Michael J. Leiblein**, *Ohio State U.*
Author: **Michael Lenox**, *U. of Virginia*
Author: **Hart E. Posen**, *Dartmouth College, Tuck School of Business*

An important challenge facing contemporary society is whether and how firms will transition from established, fossil fuel-based technologies to green technologies such as electric vehicles, solar cells, and wind turbines. Prior research and policy discussions have recognized that these choices are based not on a comparison of the current state of these technologies but rather an assessment of technologies with varying trajectories of improvement. An environmentally friendly technology may initially be inferior (e.g., cost more) but become superior as the technology evolves. We argue that recognition of these trajectories is a necessary but not sufficient condition for understanding and guiding firms' technological choices. These technological trajectories are often clouded by substantial uncertainty. While uncertainty is often seen as a barrier to change, in this paper, we highlight how uncertainty in these technological trajectories may, in fact, stimulate technological change. We model competition between two technologies – an older established technology and a new, presumed environmentally desirable technology. We find that the impacts of uncertainty are not uniform and that different levels and forms of uncertainty may encourage or discourage investment. Our core insight is that when uncertainty is large relative to the expected rate of technology improvement, it is uncertainty, rather than expectations about this rate of improvement, that determines the likelihood of choosing an environmentally friendly technology.

Technology, Policy and Society Track: Role of Politics and Policy for Enhancing Innovation

Session Moderator: **Sobia Khurram**, *U. of the Punjab*

TIM: **E-Tax Filing in Pakistan: Extending TAM with Trust in Government and Perceived Public Value**

Author: **Sobia Khurram**, *U. of the Punjab*
Author: **Saman Arshad**, *U. of the Punjab*
Author: **Mumtaz Anwar**, *U. of the Punjab*

This paper investigates the lesser-studied personal-level factors influencing citizens' continuance intention to use tax e-filing service (CI) in a developing country (Pakistan). The empirical analysis of data from 401 users of tax e-filing service revealed that citizens' attitude towards tax e-filing (ATT) was a positive predictor of CI. Moreover, citizens' trust in government (TG) and perceived public value of tax e-filing service (PPV) significantly predicted ATT. The study provides valuable contributions to the literature as the research regarding e-government in general and tax e-filing in particular is scarce in the context of developing countries like Pakistan. Also, the study validates and extends technology acceptance model (TAM) to investigate factors influencing tax e-filing continuance intention. Further, the theoretical and practical implications of the findings in the context of developing countries are discussed.

TIM: **Understanding How Political Discourse Shapes Technology Legitimacy Consensus**

Author: **Stephen Knox**, *U. of Stirling*
Author: **Niall MacKenzie**, *Adam Smith Business School, U. of Glasgow*
Author: **Matthew Hannon**, *U. of Strathclyde, Strathclyde Business School*

Legitimacy has long been understood as critical to the development of technological innovation, but there is a lacuna in our understanding of how consensus on a technology's credibility is achieved within specific discursive arenas. To address this, we focus on the lifetime of nuclear fast breeder reactor (FBR) technology in the UK; a government funded, developed, and operated energy project covering the period 1953-2000. We analyse 47 years of public debates and announcements in the House of Commons Hansard database on FBR using a discursive institutional lens. Specifically, we focus on the interplay between political actors' social judgements, their discursive work, and how this shapes the meso-level consensus around the development, deployment, and subsequent demise of FBR legitimacy. We present a framework to better understand and capture technology legitimacy dynamics at play and show how political actors' discursive work can legitimise or delegitimise technology in discursive arenas.

TIM: **Impact of Privacy Regulation on Experimentation and Innovation**

Author: **Michail Batikas**, *Rennes School of Business*
Author: **Yi Liu**, *Rennes School of Business*
Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*
Author: **Milan Miric**, *U. of Southern California -Marshall School of Business*

Experimentation, mainly through A/B Testing, is an increasingly common practice for many digital companies. Privacy regulations, such as the General Data Protection Regulation (GDPR), limit personal data collection and processing, making it more costly to perform experimentation for digital firms operating in the EU or firms with EU-based customers. Therefore, stricter privacy regulation may make it more costly for firms to perform A/B Testing. This might lead to a reduction in the innovative output of these companies as a consequence of being unable to perform this form of experimentation. Using a monthly dataset of mobile apps available on the Google Play Store from June 2017 to May 2019, we examine how the introduction of GDPR in May 2018 affected the use of A/B Testing tools and the frequency of product updates. We find that the introduction of GDPR reduced the usage of third-party A/B Testing SDKs by 17%. Yet, we find that following GDPR, the apps that keep using third-party A/B Testing SDKs were 0.3% more likely to make major updates per month compared to the apps that do not use A/B Testing in the post-GDPR period. As a placebo check, we validated that there were no effects for mobile apps operating outside the GDPR regime, and using other SDKs does not drive that effect. These results have implications for policymakers, platforms, and software developers since they highlight the potential unintended impact and trade-offs associated with privacy regulations.

TIM: **Potential Policy Enhancement through Deep Structural Understanding of Triple Helix Transitions**

Author: **Nirosha Liyanarathnage**, *Australian National U.*
Author: **Anton Kriz**, *Australian National U.*
Author: **Alexandra Kriz**, *U. of Queensland*
Author: **Courtney Molloy**, *U. of Newcastle*

The paper investigates how Triple Helix interactions and dynamics impact on the Sri Lankan pharmaceutical sector's innovation from a prior, present, and future path perspective. Through a single embedded sector-based case study we processually identify how Sri Lanka traversed the tensions of serving both the cost of healthcare as well as social impacts through innovative reforms. This stemmed from a vision and strategy supported by structural advances and reinforced by serendipitous happenings. This has resulted in sectoral system changes and combinatory shifts in the helix culminating in sectoral-level pharmaceutical dynamic capabilities. Going forward, there is a need for further development toward people-centric Industry 5.0 sustainability as a conduit to the more traditional technology-centric approach. Our paper boldly pushes Sri Lanka policy-makers to be proactive and offers key helix structural changes to assist in making a move from what currently is a pharmaceutical sector toward a more concentrated collaborative cluster. Concomitantly it means encouraging Sri Lanka to move pharmaceuticals from its predominance of doing, using and interacting (DUI) and lower-level research and development (R&D) to new horizons encouraging higher-order advances in science, technology and innovation (STI). The Triple Helix sphere of university is seen as a potential catalyst in such change.

TIM: **High-Tech Clusters and Public R&D**

Author: **Aurelien Quignon**, *Centre for Research in Economics and Management, U. of Luxembourg*

This paper seeks to estimate the effect of a cluster policy on local innovation. Using data from a national cluster program in France, and relying on a novel control group-clusters that applied for the program, but with a rejected proposal-I show that local innovation in accepted clusters increased by 16-21 percent, compared to clusters with rejected proposals. The cluster policy also fosters the number of collaborations among inventors localized within clusters and collaborated patents between private firms and public research institutions.

Underrepresented Minorities in Entrepreneurship and Innovation

Organizer: **Christopher Law**, *Texas A&M U.*
Organizer: **Mauricio Mercado**, *Iowa State U.*

Participation in entrepreneurship is highly skewed by race and gender. In 2021, Black founders received 1.4% of venture capital funds in the US. Women, regardless of race or ethnicity, received 2%. These statistics stand in stark contrast to the country's demographics where 14% and 51% identify as Black and female respectively. Despite biases and barriers, founders from underrepresented groups do create successful ventures. What can we learn from these highly innovative and strategic entrepreneurs? How can members of underrepresented groups achieve greater representation as startup founders, investors, and employees? This symposium showcases innovative research that advances the field's knowledge about how entrepreneurship can be emancipatory and attainable for members of underrepresented groups.

AI and Emerging Technologies Track: Automation, Robots & Productivity

Session Moderator: **Fabian Gaessler**, *U. Pompeu Fabra*

TIM: **Labor Supply and Automation Innovation: Evidence from an Immigration Policy**

Author: **Alexander Danzer**, *Catholic U. of Eichstaett-Ingolstadt*
Author: **Carsten Feuerbaum**, *Catholic U. of Eichstaett-Ingolstadt*
Author: **Fabian Gaessler**, *U. Pompeu Fabra*

While economic theory suggests substitutability between labor and capital, little evidence exists regarding the causal effect of labor supply on firm investments in labor-saving technologies. We analyze the impact of exogenous changes in regional labor supply on automation innovation by exploiting an immigrant placement policy in Germany during the 1990s and 2000s. We find that an increase in the low-skilled workforce reduces automation innovation. The effect is strongest in regions with a low unemployment rate. Moreover, the effect is confined to large firms in manufacturing industries, suggesting internal demand for automation innovation as the main mechanism.

TIM: **Robot Adoption, Organizational Capital, and the Productivity Paradox**

Author: **Rodimiro Rodrigo**, *George Washington U.*

Major technological changes have come with an adjustment period of stagnant productivity before the economy operates at its full potential. The mechanism of this adoption process is still not well understood. Using event studies, I document that productivity increases with a five-year lag after the adoption of industrial robots in Brazilian local labor markets. Combining employer-employee matched data with a novel measure of robot adoption, I provide first evidence of establishment-level labor reorganization and organizational capital depreciation induced by the automation process. During the five years after adoption, labor switching across occupations increases within firms, moving from production to support activities. I show that firms' organizational capital measured by workers' firm-occupation-specific experience depreciates and then slowly re-accumulates. When these processes stop, the productivity gains reach their maximum. I use these results to estimate a general equilibrium model with heterogeneous firms, endogenous robot adoption, and organizational capital accumulation. The model accounts for the productivity paradox, the diffusion of industrial robots, and the change in the aggregate skill demand. The model highlights the role of organizational costs accompanying the adoption of new technologies. I illustrate its usefulness by using it to characterize the implications of the "innovator's dilemma."

TIM: **Assessing the Technological Traectory of 5G-V2X Autonomous Driving Invention: Using Patent Analysis**

Author: **Yu-Shan Su**, *National Taiwan Normal U.*
Author: **Hsini Huang**, *National Taiwan U.*
Author: **Tugrul Daim**, *Portland State U.*
Author: **Pan-wei Chien**, *National Taiwan Normal U.*
Author: **Ru-Ling Peng**, *National Taiwan Normal U.*
Author: **Arzu Karaman Akgul**, *Yildiz Technical U.*

Cars and the transportation industry are undergoing a radical transformation. In the past, cars were independent means of transportation, and motor vehicles could not communicate with each other or the nearby environment. Nowadays, the Internet of Vehicles (IoV) technology and autonomous driving vehicles are gradually becoming a reality. Thanks to its high data throughput, fast data transmission rate, and low latency, 5G mobile communication technology lies at the heart of this technological transformation. The Internet of Vehicles service promoted by the 5G Automotive Association (5GAA) is recognized as a market-leading technological development strategy. In this service, which integrates 5G mobile data with the Internet of Vehicles, Connected Autonomous Vehicles (CAV) will play a key role in the next generation of Cooperative Intelligent Transport Systems (C-ITS). In this paper, we use patent analysis to investigate patent distribution, compare technology holders, and assess technology growth trends for applications of 5G-V2X (vehicle-to-everything) in the field of autonomous driving. The results of this study indicate that R&D on 5G-V2X and autonomous driving applications and technologies began growing in 2018, and development has remained at a high level, with the United States, Korea, and China as the three leading patented technology-holders. Analysis of the patent holding share of patent right-holding companies reveals that Qualcomm, LG, and Ericsson have relatively large shares of patented technology in the field of autonomous driving applications. The network analysis of IPC 3-digit symbols indicates that H04W, H04B, G08G, and H04L are important relevant technology areas. Our findings can contribute valuable information concerning 5G-V2X autonomous driving applications to government, industry, and academia.

Ecosystems and Platforms Track: Platform Governance and Complementors Outcomes

Session Moderator: **Ahmadreza Mostajabi**, *London Business School*

TIM: **The Double-Edged Sword of Market Segmentation: The Search-Quality Tradeoff**

Author: **Ahmadreza Mostajabi**, *London Business School*

I study how platforms' adjustment of market segments by creating new and more homogenous ones can influence market demand- and supply-side dynamics. Platforms distribute their products into different segments, classifying them around similar topics. These product classifications can facilitate user search, thus improving matchmaking in platforms as one of their primary functions. I argue that while market segmentation can empower matchmaking on the demand-side, it can have more nuanced effects on the supply-side in terms of complementors' incentive to innovate: while it disincentivizes innovation in the existing segments from which the new segments emerge (source segments), it promotes innovation in the newly created segments. I test my arguments in the context of the Google Play Store mobile application platform. Using the introduction of 8 new segments in the market in 2016, I find that the number of new downloads increased for applications in both the source and new segments. However, while applications in source segments received fewer updates, those in the new segments received more updates. I discuss contributions to the literature on platform governance and market competition.

TIM: **Disintermediation Governance and Complementor Innovation: An Empirical Look at Amazon.com**

Author: **Gaoyang Cai**, *Northwestern Kellogg School of Management*
Author: **Xia Han**, *Business School, Soochow U., China*
Author: **Grace Gu**, *USC Marshall School of Business*

This study investigates how the governance policy of disintermediation, i.e., restricting communication channels through which complementors can persuade buyers to circumvent the platform and transact directly, affects complementors' innovation behaviors. We leverage a governance policy change on Amazon.com (the focal platform) to examine complementors' responses in adjusting innovation behaviors and product portfolios. Based on a coarsened exact matching (CEM) with the difference-in-differences (DID) empirical approach, we find that complementors who are affected by the disintermediation governance policy (treated complementors) significantly decrease the number of new products launched on the focal platform compared to the matched complementors who are not directly exposed to the policy (controlled complementors). Such an effect is mitigated by a complementor's reputation and strengthened by a complementor's capacity constraints. Supplemental analyses of the mechanisms show that treated complementors first significantly reduce the total number of new product developments, i.e., the income effect, and then increase the number of new products launched off the focal platform after the policy change, i.e., the switching effect. Moreover, treated complementors strategically switch the high-end products away while leaving low-end products on the focal platform, i.e., the bait effect. Our analysis of complementors' strategic responses to the platform governance policy against disintermediation sheds light on platform governance in balancing complementors' extensive-margin and intensive-margin innovative activities and in directing complementors' innovation and product portfolio strategies.

TIM: **Platform Governance Through Pricing: Evidence from Apple's App Store Small Business Program**

Author: **Zhengyao Kang**, *U. of Bristol*

This paper studies how pricing governance mechanisms in platforms affect the complementors. Based on the shift of pricing mechanisms introduced by Apple's App Store Small Business Program starting from 2021, this study adopts a regression discontinuity design (RDD) and looks at how this shift affect the innovation and performance of complementors. Using a sample of app developers in Apple's iOS, we find that developers who enjoyed the preferential pricing show more innovation activities such as app updates and new app releases and have better performance in attracting active users and earning revenue. By providing empirical evidence of the benefit of platforms sharing more revenue to complementors, our findings enrich the understanding of platform governance and platform power in the digital era.

TIM: **Complementor Reactions to Platform Control --Evidence from the YouTube "Adpocalypse"**

Author: **Lena Abou El-Komboz**, *ifo Institute*
Author: **Anna Kerkhof**, *ifo Institute*
Author: **Johannes Loh**, *BI Norwegian Business School*

Effective governance in an important determinant of a platform's ability to ensure the provision of high-quality complements and -- by extension -- its performance in the market. A key aspect is to prevent the presence of low-quality or "bad-faith" actors who can otherwise harm the health of the ecosystem. However, platforms' attempts at exerting control over complementors' activities is subject to trade-offs and may entail unintended consequences and reactions. We therefore investigate how complementors react to an increase in platform control over their activities. We study a rule change on Youtube that removed a subset of complementors from its partner program and made it impossible for them to monetize their videos on the platform. Using a regression discontinuity design we provide causal evidence that they subsequently left the platform at higher rates. In addition, those who did not leave still reduced the frequency of their uploads and provided content of lower quality and diversity. We also investigate and discuss effect heterogeneity between mainstream and niche Youtubers to learn about the underlying financial and non-pecuniary incentives.

TIM: **Understanding Platform Owner Assortment Strategy to Foster Customer Activity Metrics**

Author: **Jan Niklas Gremmel**, *Technische U. Braunschweig*
Author: **David Woisetschläger**, *Technische U. Braunschweig*
Author: **Barbara Seegebarth**, *Wiesbaden Business School*
Author: **Tobias Heussler**, *Wiesbaden Business School, UAS Wiesbaden*

This study aims to understand the impact of the platform owner's assortment and customer activity metrics in the context of a mobility-as-a-service platform. The results based on an analysis of transaction data from 50 different cities show that city-specific differences in the platform's total assortment and customer's cross-category and cross-provider buying have positive impacts on customer activity metrics. However, we also find that this impact is attenuated in cities with a larger platform assortment. These findings have important implications for platform owners, as increasing customer activity is key to the long-term success of the platform.

Digitization Track: The human (down)Side of Digitization

Session Moderator: **Jesús García-Romanos**, *U. Carlos III de Madrid*

TIM: **Does Firms' Digital Transformation Lead to Mass Layoffs?**

Author: **Jesús García-Romanos**, *U. Carlos III de Madrid*
Author: **Ester Martinez-Ros**, *U. Carlos III de Madrid*
Author: **Eduardo Melero**, *U. Carlos III de Madrid*

This paper studies the relationship between firms' digitalization focus and workforce restructuring decisions. Digital transformation overhauls employees' tasks, often automating them and making some jobs redundant. Simultaneously, digitalization may require the creation of new jobs for workers with the appropriate digital skills. Companies can react to these challenges by relocating and reskilling the personnel made redundant by automation, or by firing them and replacing them with new employees with the required skills. We analyze the response of innovative companies to these alternatives. Our study is based on a curated database of layoff announcements and a novel text-analysis digitalization measure of US innovative companies listed in the S&P and Russel indices between 2002 and 2016. Our results indicate that firms embarking on a digital transformation carry out fewer mass layoffs. This outcome suggests that a digital competitive advantage favors reskilling against replacing workers. These findings are particularly intense in geographical areas with a less educated labor force, where hiring workers with the appropriate digital skills may be particularly difficult.

TIM: **Information Technology and Firm Employment**

Author: **James Bessen**, *Boston U.*
Author: **Cesare Righi**, *U. Pompeu Fabra*

Do firms displace labor with new information technologies such as "artificial intelligence"? It is challenging to distinguish the effects of technology adoption from unobserved productivity and demand shocks. We take a first look at the economic impacts of large custom software investment —"IT spikes"—using a novel methodology to obtain consistent estimates. Following these events, firm employment increases by about 7% and revenues by about 11%. Rather than displace labor, IT spikes increase revenues and markups, implying decreased labor share of output. Moreover, growth is greater for firms that use AI, IT-producing firms, newer firms, and those in the trade, service, and financial sectors.

TIM: **Digitalization Makes Me Emotional – How Employees Perceive and Respond to Digital Technologies**

Author: **Sonja Kristin Franzke**, *U. of Bayreuth*

As a result of digitalization, new digital technologies are emerging that organiza-tions may leverage to stay inventive and competitive. This especially affects the employees within such organizations, who can use these new technologies to actively grow the business and innovate. While digitalization has been found to be important for innovative and intra-preneurial behavior, there is still a lack of research on the specific mechanisms through which digital technologies affect employee behavior. Drawing on 27 interviews with the members of teams from three different companies faced with the introduction of a new digi-tal technology, we build theory to disentangle employees' perceptions and emotions when engaging with digital technologies. We base our study on work on affective and cognitive responses and find that emotions and perceptions can considerably influence the intrapre-neurial behavior within the teams.

TIM: **Does Digital Policy Promotion Affect Firm Innovation Strategies? Evidence from China**

Author: **Zhe Sun**, *Jilin U.*
Author: **Liang Zhao**, *U. of Leicester, Leicester, UK*
Author: **Arvids A. Ziedonis**, *KU Leuven*

Although developing country governments have recently advocated interventionist digital policies, there is still a scarcity of literature on whether and how the promotion of digital policies facilitates high-quality economic development and firm innovation activities. By performing a quasi-natural experiment on Chinese A-share listed firms from 2012 to 2018, this study investigates the effect of digital policy promotion on shaping firm innovation strategies. We find that digital policy promotion stimulates both substantive innovation that explores novel technologies and the strategic exploitation of patents. We further explore two mechanisms underpinning the changes in firm innovation strategies, i.e. through encouraging digitalization effort and intensifying financing constraints, to enhance the substantive innovation and trigger strategic patenting, respectively. We also identify two boundary conditions, i.e. regional marketization and state ownership, which regulate the influence of digital policy promotion on firm innovation output. This study contributes to the research on the impact of digital policy promotion on innovation, as well as the research on firm innovation strategies by establishing linkages to the promotion of digital policies, and it broadens our understanding of the diverse paths digital policies take in firm innovation strategies.

TIM: **Digital Transformation and Operational Efficiency in Healthcare Business: The Role of AI**

Author: **Wenjing Lyu**, *Massachusetts Institute of Technology*
Author: **Jin Liu**, *Beijing Institute of Technology*

Digital technologies are enormously transforming the healthcare business across omnichannel operations. However, few empirical studies have investigated the forms of digital transformation and its effect on healthcare organizations' operational efficiency. To fill this gap, using secondary longitudinal data collected from multiple sources, we analyze the impact of two forms of digital transformation: robotic process automation and data-driven analytics on the firm operational efficiency of 176 publicly listed firms in the omnichannel healthcare business in the United States from 2010 to 2018. Our results indicate that robotic process automation and data-driven analytics improve efficiency in operations. We further examine the complementary role of AI in the above relationships and reveal that firms adopting a higher degree of AI benefit more from robotic process automation and data-driven analytics.

TIM: **Fuzzy Front-end of Market Innovation: Lessons from a Study of Gamification in Healthcare**

Author: **Hannu Makkonen**, *U. of Vaasa*
Author: **Daniel Kindström**, *Linköping U.*
Author: **Valtteri Kaartemo**, *Turku School of Economics, U. of Turku*

The purpose of this article is to further understanding of market innovation as a multi-actor process with a particular focus to explicate its early phase that we call the fuzzy front-end (FFE) of market innovation. The empirical study is based on a longitudinal qualitative case research that focuses on a multi-actor and multi-disciplinary research project that was launched to scrutinize opportunities of games in traumatic brain injury (TBI) rehabilitation. The study shows that the FFE of market innovation comprises less-controlled and less-purposive activities of various market actors. The FFE phase awakens the concentrated agency that comprises coordinated actions to develop the articulated market image further into a market innovation. The study puts forward a market innovation canvas, describing market innovation as an emergent, non-linear phenomenon, articulates a set of propositions and potential research questions, that altogether comprise a future research agenda. For the managers the study illustrates how to facilitate markets in their early phases and how digitalization could support the development of the healthcare sector.

TIM: **The Importance of (Exponentially More) Computing Power**

Author: **Neil Thompson**, *Massachusetts Institute of Technology*
Author: **Gabriel Manso**, *MIT*
Author: **Shuning Ge**, *MIT*

Denizens of Silicon Valley have called Moore's Law "the most important graph in human history," and economists describe the Moore's Law-powered I.T. revolution as one of the most important sources of national productivity. But data substantiating these claims tend to either be abstracted – for example by examining spending on I.T., rather than I.T. itself – or anecdotal. In this paper, we assemble direct evidence of the impact that computing power has had on five domains: two computing bellwethers (Chess and Go), and three economically important applications (weather prediction, protein folding, and oil exploration). Computing power explains 48%-94% of the performance improvements in these domains. Moreover, in line with economic theory, we find that exponential increases in computing power are needed to get linear improvements in outcomes, which helps clarify why Moore's Law has been so important. We also discuss how this dependence on computation means that performance improvements in these domains (and presumably many others) are becoming economically tenuous as Moore's Law breaks down.

Innovation Processes Track: Green and Social Innovation

Session Moderator: **Amyn Vogel**, *Ludwig Maximilian U. of Munich (LMU)*

TIM: **Exploring the Role of Individual Beliefs and Social Factors in Adopting Social Innovations**

Author: **Amyn Vogel**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Friedrich Borchers**, *Charité - U.smedizin Berlin*
Author: **Felix Balzer**, *Charité U.smedizin Berlin*
Author: **Claudia Spies**, *Charité U.smedizin Berlin*
Author: **Martin Gersch**, *Freie U. Berlin*
Author: **Daniel Fuerstenau**, *IT U. of Copenhagen*

Social innovation research has largely focused on individuals' values, beliefs, and perceptions of usefulness as they relate to the acceptance of social innovations. However, this research often lacks a sociological perspective, especially when it comes to social innovations that involve new behaviors and collective interactions. Additionally, the methods employed in social innovation research are often fragmented and deductive, leading to a lack of a common understanding of the methodological framework and a tendency to reproduce established characteristics. To address these issues, we propose the use of frame theory as a sociological approach to conceptualizing individuals' characteristics as socially conditioned and employing an inductive methodological approach. This approach is demonstrated through the case study of shared decision-making (SDM) in perioperative care, a social innovation aimed at promoting patient-centric treatment through the sharing of information and decision-making in surgical contexts. In our study, we employed frame theory to identify six frames that influence the acceptance of SDM in perioperative care. These frames pertain to issues such as role models, power asymmetry, and the scope of action that is structurally constrained. Through the use of an inductive approach, we were able to determine individuals' characteristics and examine issues that are particularly relevant for social innovations, such as role perceptions, conceptions of the innovation, trust and power relations, and organizational structures and routines. Our findings suggest that assumed role ascriptions, trust, and dependency within social relations play a significant role in shaping the acceptance of social innovations. Keywords: Innovation acceptance, social innovation, healthcare innovation, frame analysis, shared decision-making

TIM: **Research on the Heterogeneity of Executives' Non-salary Incentives on Corporate Green Innovation**

Author: **Ning XU**, *School of Management, Shandong U.*
Author: **Di Zhang**, *School of Management, Shandong U.*
Author: **Yutong Li**, *School of Management, Shandong U.*

Green technology innovation is an organic combination of green development and innovation drive. To explore what kind of executive incentive contracts can truly stimulate green innovation, this study draws upon the comparison of equity incentive and reputation incentive, to distinguish their contractual elements characteristics and green governance effects. Concretely, using data from A-share listed manufacturing companies for the period from 2007 to 2020, we compare and analyze the impact of equity and reputation incentive on green innovation. We find that: (1) long-term and non-utilitarian reputation incentives can promote green technology innovation, while equity incentives linked to performance indicators inhibit it; (2) internal management behaviors in line with the concept of green development, such as adopting energy conservation measures and "three waste" management system, can weaken the inhibiting effect of equity incentives and strengthen the promoting effect of reputation incentives; and (3) External institutional factors such as environmental recognition can strengthen the promotion effect of reputation incentive. Those findings validate and expand the efficient contracting hypothesis and the rent extraction hypothesis from the perspective of green innovation, and provide useful implications for the design of green governance system in manufacturing enterprises.

TIM: **A Behavioral Perspective on Environmental Technology Search: Evidence from ICT Industry**

Author: **Hyun-Soo Kim**, *KAIST*
Author: **Hyun Ju Jung**, *KAIST*
Author: **Chul Ho Lee**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

The literature in sustainability has emphasized external pressures as a main driver of firms' environmental responsibility. However, under similar external pressures, some firms search for environmental technology, while others do not. By focusing on information and communication technology (ICT) firms, we try to answer the question of when firms are motivated to search for renewable energy technology. Drawing on the framework of the behavioral theory of the firm, we propose that a mismatch between ICT firms' CO_2 emissions and their aspiration to a certain level of emissions induces firms to evaluate their compliance status—whether they comply well with environmental requirements—and their technology status—whether they possess sufficient technologies to reduce emissions—which in turn affects their search for renewable energy technology. We corroborate our hypotheses using data on CO_2 emissions and renewable energy patents of U.S. ICT firms from 2010 to 2018. When we compare two groups of firms—one group whose emissions are above aspiration or demonstrate poor environmental performance, and the other group whose emissions are below aspiration or demonstrate good environmental performance—we find that the former is more likely to search for renewable energy technology compared to the latter. When we focus on each of two groups, we find that firms decrease their search for renewable energy technology as emissions increase above (decrease below) aspiration for firms whose emissions are above (below) aspiration.

TIM: **A Compassion-Driven Approach to Responsibility in Innovation Organizations**

Author: **Somendra Narayan**, *Amsterdam Business School, U. of Amsterdam*
Author: **Subhadeep Datta**, *NEOMA Business School*

Compassionate innovation has the potential to play a significant role in addressing the changing needs and values of stakeholders in modern organizations. By considering the well-being and interdependence of all stakeholders in decision-making processes, organizations can create innovations that are more inclusive and equitable, and better able to anticipate and address the potential impacts of their actions on different groups and the environment. Additionally, engaging in open and transparent communication with stakeholders, fostering a culture of compassion within the organization, and incorporating ethical considerations into the design process can all contribute to the creation of more just and sustainable outcomes. This conceptual paper explores the ways in which compassionate innovation can support the creation of more equitable and sustainable outcomes, and the potential benefits for organizations in adopting this approach.

Putting the Scientist Front and Center

Presenter: **Larisa Cristina Cioaca**, *Fuqua School of Business, Duke U.*
Presenter: **Lia Sheer**, *Coller School of Management, Tel Aviv U.*
Presenter: **Nur Ahmed**, *MIT Sloan School of Management*
Presenter: **Amir Sariri**, *Purdue U.*

Research is typically thought of as being performed in universities and funded by the government, but many significant scientific breakthroughs have come from scientists working in the laboratories of companies. Throughout most of the 20th century, such corporations as Bell Labs and Xerox attracted talented researchers who produced Nobel Prize-winning research. However, over the last three decades, corporations have reduced their engagement in scientific research. Yet, while large firms' support for science is declining, some observers stress that smaller startup firms might be the engine of scientific and technological progress today. In this symposium, we revisit the importance of scientists in firms, including large corporate firms and smaller startups, and how their role has evolved over time.

Understanding the Qualitative Content of Relational Strategies

Organizer: **Amrita Saha**, *U. of Toronto, Rotman School of Management*
Presenter: **Shahzad Ansari**, *U. of Cambridge*
Presenter: **Rodrigo Canales**, *Boston U.*
Presenter: **Amrita Saha**, *U. of Toronto, Rotman School of Management*
Presenter: **Tieying Yu**, *Boston College*
Discussant: **Julia DiBenigno**, *Yale School of Management*

Scholarship in strategic management, organization theory, and social issues in management has aimed to understand the ways in which relationships affect and are affected by organizational performance. Research on relational strategies has taken multiple perspectives. These include examining how organizations and their stakeholders engage with one another and how prior histories with exchange partners impact the outcomes of transactions. A critical part of investigating relational strategies is understanding the qualitative substance of relationships which have commonly been evaluated through quantitative indicators such as tie strength, interaction frequency, or hierarchical differences. In this Symposium, we propose the presentation of four scholarly papers, each of which examines the qualitative content of modes of relating among organizational and market actors. We envision that this dialogue will advance scholarship about how relational strategies and relationships are assessed in the organizational literature.

Digital Mindset

Session Moderator: **Antonia Schwaiger**, *Hirsch Porocell GmbH*

CTO: **Seeing the Forest for the Trees: How Abstract Thinking Fosters Digitalization**

Author: **Antonia Schwaiger**, *Hirsch Porocell GmbH*
Author: **Yevgen Bogodistov**, *MCI Management Center Innsbruck*
Author: **Daniel Beimborn**, *U. of Bamberg*

A digital transformation is always a process that also causes indirect, social costs, such as additional learning costs or internal discussions by business partners. These costs are a matter of perception, though. In our study, we run a combination of a randomized two-group experiment and a discrete choice experiment to investigate whether an individual's social distance and the related level of mental construal have an impact on her perception of digitalization. Analyzing 1,940 decisions, we, first, replicate results from previous studies and, second, add new psychological aspects shaping digitalization. We show that the "framing" of a digitalization project has an impact on the perception of the social costs associated. Despite the established link between the level of mental construal and willingness to pay, we show that when seeing the "forest behind the trees", i.e. when being in a high construal way of thinking, developers are more willing to trade efficiency gains against other social costs of digitalization and, thus, make it succeed.

CTO: **Diving Deeper into Digital Mindset – Development and Validation of a Scale**

Author: **Paul Goldmann**, *Zwickau U. of Applied Science*
Author: **Christina Altendorfer**, *Catholic U. Eichstätt-Ingolstadt*
Author: **Björn Schäfer**, *Free U. of Bozen-Bolzano*

An individual's digital mindset has become essential for successfully coping with digital trans-formation. Despite growing interest in digital mindset, research has lagged due to a lack of con-ceptual clarity of digital mindset and a measure of the construct. To address these issues, we provide an overview of previous digital mindset definitions, conceptualizations, and literature and conclude with a valid and suitable definition. Building on this definition, we develop the digital-mindset-scale and validate it through five phases across four samples. First, we generat-ed items for the digital mindset dimensions. Second, exploratory and confirmatory factor anal-yses supported a three-dimensional structure of digital mindset (digital consciousness, digital expertise, and digital entrepreneurship). Third, based on the results of confirmatory factor anal-yses in the second phase, we generated additional items and assessed the psychometric proper-ties and factor structure. Fourth, we established convergent and discriminant validity of the digi-tal-mindset-scale with relevant related constructs. Finally, in phase 5, we examined relations with well-established outcomes (resistance to change, innovative behavior, digital strategy per-formance, and entrepreneurial behavior). The digital-mindset-scale initiates empirical studies on the construct in research and contributes to a more nuanced approach to research and practice relating to digital mindset.

CTO: **Digital Mindset Profiles for Innovating: The Relationship Between Digital Mindset and IT Reinvention**

Author: **Yannick Hildebrandt**, *Otto-Friedrich U. Bamberg*
Author: **Daniel Beimborn**, *U. of Bamberg*

Employees' reinventive usage of IT is crucial for companies to leverage IT investments and gain competitive advantages, making it necessary to understand what drives such behavior. We hypothesize that IT reinvention is affected by the digital mindset, as this dynamic IT-specific trait unconsciously alters how individuals act in the context of digitalization through malleable thinking patterns. Building on the dual processing theory of human cognition, we investigated the relationship by conducting an online survey with 154 full-time employees that use Microsoft Powerpoint for work purposes. Our analysis using a structual equation model (SEM) and fuzzy-set comparative analysis (fsQCA) revealed that the digital mindset substantially affects IT reinvention, and three combinations of thinking patterns, respectively digital mindset profiles, exist that lead to IT reinvention. We contribute to the theory of post-adoption innovative IT use behaviors and the digital mindset by proving the effects of un-conscious dynamic IT-specific traits on rather conscious system usages. For practitioners, we provide digital mindset profiles that can be used when composing teams to increase the alignment to project goals and team effectiveness.

CTO: **Employee Identification with Digital Workplace Platforms and Employee Engagement**

Author: **Anaya Kumar**, *U. Paris-Saclay, U. Evry, IMT-BS, LITEM, Evry-Courcouronnes, France*
Author: **Anuragini Shirish**, *U. Paris-Saclay, U. Evry, IMT-BS, LITEM, Evry-Courcouronnes, France*
Author: **Imed Boughzala**, *Institut Mines-Telecom*

As companies increasingly move towards remote workplaces for both sustenance and growth motives, they face other people-centric problems such as quiet quitting and organizational (dis)identification. As a way to mitigate these situations, they heavily invest in people-centric digital workplace platforms such as employee advocacy (EA) platforms that promise both instrumental and humanistic outcomes. EA platforms aim to positively influence digital employee engagement by fostering connectedness and citizenship behavior. Past literature does not offer validity to such claims nor does it offer a way to conceptualize digital employee engagement. Leveraging the Needs-Affordances-Features perspective from the IS literature, we first conceptualize digital employee engagement to include two contextual and actualized affordances of EA platforms namely, digital employee advocacy and digital employee connectedness. We then, use the IT identity theory to offer a theoretical framework linking IT identity and the two dimensions of digital employee engagement. Using verified reviews obtained from users of several EA platforms, we test our model. We conduct lexical intensity analysis and multiple regression, the results of which support the theorized model. The study offers theoretical contributions to IT identity, digital workplace, and employee advocacy literature. We also discuss the practical implications of our work.

Sharing Economy

Session Moderator: **Matthias Weber**, *U. of Innsbruck*

CTO: **Opaque Overwatch: How Food-Delivery Workers Make Sense of Algorithmic Management in the Gig Economy**

Author: **Matthias Weber**, *U. of Innsbruck*
Author: **Alexander De Jong**, *U. of Innsbruck*
Author: **Ulrich Remus**, *U. of Innsbruck*

The growth of the gig economy around the globe is making the platform business model one of the most dynamic features of the global economy. To achieve this, platforms in the gig economy use algorithmic management to control and manage their workforce. With removing the human manager, the controller-controlee relation has fundamentally changed, leading to difficulties in understanding the complexity of algorithmic decision-making and control, which in turn results in technical opacity and power asymmetry, leading workers to increasingly engage in sensemaking to understand algorithmic management practices and break down the algorithmic "black boxes." Based on critical sensemaking theory and over 3 million text documents extracted from Reddit forums of different food-delivery platforms, we uncover 13 sensemaking behaviors that capture how food-delivery workers make sense of algorithmic management practices. We further theorize and divide the found sensemaking behaviors into micro- and macro sensemaking and discuss them in regards to the organizational contexts Power, Opacity, and Isolation. We provide theoretical implications for sensemaking theory by examining how technology affects sensemaking, and contribute to a better understanding of workers' responses to AM exposure by examining how gig workers make sense of the new controller-controlee relation.

CTO: **Algorithmic Management in the Gig Economy: A Quantitative Review and Research Integration**

Author: **Imran Kadolkar**, *Virginia Commonwealth U.*
Author: **Mahesh Vaidyanathan Subramony**, *Northern Illinois U.*
Author: **Sven Kepes**, *Virginia Commonwealth U.*

Rapid growth in the gig economy (GE) has been facilitated by the increased use of algorithmic management (AM) of workers on online platforms (OPs). We quantitatively reviewed the academic literature across scientific disciplines (e.g., computer science and engineering, management, sociology, law) related to AM in the GE using a combination of bibliometric techniques and natural language processing. Our quantitative review revealed 12 topics in the extant research: (1) the effect of AM on the employment relationship, (2) issues related to inequalities and discrimination, (3) occupational health and safety concerns, (4) collective organizing by gig workers, (5) algorithmic regulation, (6) evaluation and feedback mechanisms in OPs, (7) different OP forms and their influences on workers, (8) worker-platform negotiations over boundaries of control, (9) gamification as an incentive mechanism, (10) effects of AM on gig workers, (11) the role of pricing and matching strategies, and (12) AM effects on autonomy, attitudes, and behaviors. We describe these topics, noting the diversity of research areas while also integrating them using an input-process-output (IPO) framework, and highlight areas for future research.

CTO: **Algorithmic Control Configurations in Food Delivery Platforms: A Cross-National Comparative Study**

Author: **Armin Alizadeh**, *Technische U., Darmstadt*
Author: **Richard Zhi-You Schulz**, *Technische U., Darmstadt*
Author: **Kevin Gerhard Armbruster**, *Technische U. Darmstadt*
Author: **Benlian Alexander**, *Technische U., Darmstadt*
Author: **Martin Wiener**, *TU Dresden*

Millions of workers today do not have direct human supervisors but are controlled through IT systems, commonly referred to as algorithmic control (AC) systems. Due to such systems' high degree of automation, previous research often implicitly assumes that worker control through AC is applied uniformly across organizations. This study challenges this assumption by showing that, in reality, the supposedly similar control operations turn out to be very diverse across organizations, especially across organizations of different countries. Using food delivery services as a prime example of AC, this study explores similarities and differences across seven platforms in four countries. Building on organizational control theory and in-depth interviews with food delivery workers in China, India, the United States, and Germany, we found that although operations look similar from the outside, the AC systems of the platforms are configured fundamentally differently. We describe two archetypes of AC systems with loose and tight control of workers, thereby illustrating the range of possible AC configurations. The study contributes to control research by presenting and systematizing algorithmic-based control practices in food delivery platforms, enabling researchers to classify such organizations and their use of AC.

CTO: **Navigating Complexity and Uncertainty in the Gig Economy: Online Job Crafting and Resilience**

Author: **Luca Antonazzo**, *U. of Salento*
Author: **Marko Orel**, *Prague U. of Economics and Business*

The paper investigates crowdworkers' engagement with their online communities and parallel collaborative job crafting. It does so by examining the data from selected Reddit forums that connect knowledge workers who are actively engaged and connected via the four largest crowdworking platforms. To overview commonalities and differences in the online interaction of crowdworking communities, the study expands on theoretical foundations related to crowdworkers' resilience, active community engagement, collaborative job crafting, joint learning processes, and synergic skills development. Findings suggest that community engagement and collective job crafting, on the one hand, and continuous learning and skills development, on the other, can enhance crowdworkers' resilience. Despite the differences in the type of work conducted on the various platforms, sharing general and more specific business and task advice appears to be recurring. The effect of such collaborative job crafting is exhibited in the collective capacity to build and consolidate shared knowledge, institutionalised within the virtual domain of the sampled Reddit forums, which is readily available for fellow crowdworkers to solve individual problems. Accordingly, the type of concerns workers express changes depending on the platform they engage with one another. Forum-based communities prove helpful in pointing to possible courses of action to overcome or recover from. The study contributes to understanding crowdworkers' resilience in job insecurity, career fragmentation, and demand fluctuation.

Digital Strategy 2

Session Moderator: **Yichen Sun**, *National U. of Singapore*

CTO: **Use of Externally-Sourced Digital Components and Start-ups' Time to Product Market Fit**

Author: **Yichen Sun**, *National U. of Singapore*
Author: **Shi Ying Lim**, *National U. of Singapore*
Author: **Khim Yong Goh**, *National U. of Singapore*

Increasingly, entrepreneurs integrate digital technology (DT) into their start-ups by developing them internally and/or using externally-sourced digital components (EDC). The latter enables resource-constrained entrepreneurs to reduce initial investment of resources to develop the DT when pursuing product-market-fit (PMF). However, using generic EDCs may reduce a start-up's ability to differentiate itself. In this paper, we take a real options perspective and examine the effect of the number and type of EDCs (core vs. peripheral) used on the time taken for start-ups to achieve PMF (proxied by receipt of Series A funding). We further hypothesize that the level of DT integration moderates the relationship between EDC use and the time to PMF due to the different complexities of DT development. We use data on start-ups, their funding, and the extent of EDC use from Crunchbase. To account for the endogeneity associated with entrepreneurs' self-selection in using EDCs, we employ propensity score matching in combination with the survival analysis. Our results suggest that start-ups that use more EDCs and with a higher Core-to-Peripheral EDC use ratio take longer to achieve PMF. We further find that a higher level of integration of the DT with the business weakens this relationship. Our findings contribute to the literature on digital entrepreneurship and real options and offer suggestions for how entrepreneurs should develop their DT amidst uncertainty and resource constraints in their nascent years.

CTO: **Information Technology Capability, Open Technological Innovation and Firm Growth**

Author: **Weizhi Yao**, *Southeast U.*
Author: **Liang Liu**, *Southeast U.*
Author: **Lianshui Li**, *Southeast U.*

Purpose – The flexibility and integration of information technology provide an important support platform for open technological innovation, and gradually become the core factors to promote firm growth. The purpose of this study is to analyze the effects of IT capability, including flexibility and integration of information technology, on firm growth. Then the paper examines the mediating role of the open technological innovation on IT capability and firm growth. Design/methodology/approach – According to this study, the authors chose to use the logical deductive approach for their hypotheses and analytical frameworks. And then, based on empirical data from 256 Chinese new ventures, this paper uses regression analysis and structure equation models (SPSS and AMOS) for data analysis and hypotheses testing. Findings – This study points to the effects that IT capability have on firm growth based on the mediation of the open technological innovation in China. The results first show that IT capability, including flexibility and integration of information technology, play a key role in firm growth; second, that the open technological innovation partly mediates between in IT flexibility and firm growth; third, the open technological innovation plays a significant mediating role between IT integration and firm growth. Research limitations/implications – First, the study adopted cross-sectional design to study the correlation among the constructs. In the long term, this causal relationship may change. Second, the study only investigated 256 employees in new ventures located in East and North China. It is limited by interviewees' cognition. Finally, there may be some other variables such as the organizational learning that mediate the relationship between IT capability and firm growth. Originality/value – It is the first attempt in China to systematically investigate the effects of IT capability on firm growth based on the mediation of the open technological innovation. The results provide a theoretical and methodological contribution to the study of IT capability and can thus improve managerial practice in an era of sharing economies.

CTO: **There Can be Only One: The Impact of Digital and Customer Orientation on Performance**

Author: **Thomas Reibel**, *RWTH Aachen U.*
Author: **Susan Stead**, *Institute for Technology and Innovation Management at RWTH Aachen*

Digital technologies have become increasingly important to, organizations such that digital orientation becomes a top priority of an organization's strategic orientation. Therefore, organizations adopt values that prioritize leveraging new technologies with the goal to enhance performance. While digital orientation constitutes a new element on management agendas, it is important to understand, what role this new emerging orientation plays with regards to other well-established strategic orientations such as customer orientation. To address this research gap, we perform a longitudinal study on a panel dataset of 112 hospital organizations in the English National Health Service (NHS) over a seven-year period. We utilized computer-aided text analysis to identify digital orientation from annual reports and measure customer orientation based on employee questionnaires. Interestingly, our results suggest that combining customer and digital orientation leads to reduced performance. The highest performance is achieved when the focus is solely on either digital or customer orientation. Additionally, we find that the relationship between digital orientation and organizational performance is positively moderated by employee involvement. Our findings contribute to academic discourse and practice: 1) a general direct effect of digital orientation on organizational performance does not exist, 2) digital and customer orientation are substitutional, 3) the relationship between employees and digital orientation is reciprocal. Managers should improve either digital or customer orientation and increase employee involvement to leverage the potential of digital orientation.

CTO: **Strategic Downsizing after M&A: what role for Digital Technology?**

Author: **Jasper Van Boven**, *Wageningen U.*
Author: **Hendrik Leeendert Aalbers**, *Radboud U. Nijmegen*
Author: **Wilfred Dolfsma**, *Wageningen U. & Research Center*

This study examines whether digital technologies stemming from a digital merger target influence the associations between downsizing after M&A and market reactions. Grounded in signaling theory and drawing on a sample of 201 M&A deals that took place between 2001 and 2017, we find that downsizing after a merger with a digital target can have a positive effect on the market reaction. Specifically, we find a three-way interaction between the merger target being digital, time between merger and downsizing, and magnitude of downsizing which suggests that the positive relationship between downsizing after a merger with a digital target is the most positive when downsizing takes place after more than two years while being major in magnitude. Our core contribution is to the literature on M&A related downsizing, by providing new insights into the signals stemming from downsizing in the wake of a merger and how they interact and influence market reaction. In addition, we contribute to the literature on digital M&A, by connecting digital technologies to workforce downsizing after M&A.

Adoption of Artificial Intelligence (AI) and the Internet of Things (IoT)

Session Moderator: **Marlen Rimbeck**, *Technische U. Bergakademie Freiberg*

CTO: **Collective or Personal Self: Artificial Intelligence Adoption in Public Versus Private Contexts (WITHDRAWN)**

Author: **Justin Tan**, *York U.*
Author: **Yan Wang**, *Tianjin U.*
Author: **SHUXIN ZHONG**, *Tianjin U.*

Even as artificial intelligence (AI) revolutionizes society in various contexts, the ways in which contextual differences, such as public versus private contexts that offer varying openness, might define AI technology adoption remain unclear. With a conceptual framework based on multiple selves, this study addresses whether and how the influence of self-related factors on technology adoption varies across contexts. Collectivism (collective self) and privacy concerns (personal self) both should inform AI adoption, because consumer behavioral decisions reflect motivations derived from multiple selves. Collectivism has a stronger effect in public spheres while privacy concerns take a more imperative role in private settings. Perceived regulatory effectiveness moderate the impact of collectivism in both contexts, and perceived personalization heightens the negative effects of privacy concerns, consistent with the personalization-privacy paradox. A counterintuitive result also indicates that peers' negative experiences do not affect collectivists' technology adoption, potentially due to alternative behavioral references for collectivists or the type of peer influence. These findings help explain technology adoption in the digital era and suggest some contextual interventions that can increase customer AI adoption.

CTO: **Unfolding IoT Adoption Using A Status Quo Bias Perspective**

Author: **Marlen Rimbeck**, *Technische U. Bergakademie Freiberg*
Author: **Jutta Stumpf-Wollersheim**, *Technische U. Bergakademie Freiberg*
Author: **Alexander Richter**, *Victoria U. of Wellington*

Over the last years, the interconnecting of multiple devices based on sensors has increasingly made inroads in industry. Nevertheless, IoT solutions are still far from using their enormous potential, as misconceptions let employees face the IoT reluctantly. Consequently, employees avoid using IoT solutions and stick to established working routines, leading to an increased consumption of resources. To achieve progressive IoT adoption at the individual level, this paper analyzed 555 respondents' perceptions of benefits and costs of IoT solutions. Using the perspective of "status quo bias", the qualitative analysis reveals that the perceptions of experienced and inexperienced users partly overlap on benefits such as the reduction of errors and relief of personnel. Conversely, the perceptions diverge, as inexperienced users consider the IoT to be gimmicky, fostering mistrust. In addition, inexperienced users overestimate learning phases for interacting with IoT, leading to loss aversion and consequently to cognitive misperceptions. With the results, the study contributes to examining the gap between experienced and inexperienced user as a neglected aspect in IoT adoption. Further, identifying relevant drivers for the implementation of IoT solutions at individual level helps to extend the hitherto technical view of IoT towards known multi-layer approach that includes a holistic, human-centric perspective.

CTO: **The Health Policy Implications of Social Representations of the Internet of Things in Kenya**

Author: **Anthony Maina**, *Dedan Kimathi U. of Technology*
Author: **David Murungi**, *Bentley U.*

The Internet of Things (IoT) paradigm that is represented by health wearables, embedded devices, medical drones, and smart gadgets has emerged as the next frontier for cutting edge medical innovations. But as IoT-health has flourished, lagging policy and regulatory reforms in many low- and middle-income countries has left them exposed to imminent ethical, privacy and security risks that threaten the progress of advanced digital health services. To address this problem, we use the theoretical lens of social representations to investigate IoT's beliefs and practices from the viewpoint of Kenyan stakeholders with the aim of contributing insights for policy engagement and future research. Evaluating how different stakeholder groups represent IoT can manifest discrepancies in these representations and shed light on the impact that these discrepancies may have on development of public policy to address the concerns of this emerging digital health environment. To extend IoT-enabled health beyond the piloting and experimental stages, we argue the case for policy and regulatory reform in the environment in which the innovations are to function. Specifically, Kenya requires new guidelines on data protection laws, approval of medical devices, new data governance structures, communication guidelines, among others. Study results are relevant to policymakers and leaders working on strategies to promote the integration of IoT-health innovations in resource-constrained settings.

CTO: **Artificial Intelligence Adoption: a Pluralistic Process of Knowledge Accumulation**

Author: **Korinzia Toniolo**, *Alma Mater Studiorum U. di Bologna*

Organizations increasingly adopt Artificial Intelligence (AI) technologies to optimize their processes and augment work. This has provided opportunities for studies about the antecedents of AI adoption, in terms of organizational readiness factors, and its consequences, in terms of the impacts on work and organizing. Yet, the process unfolding between antecedents and consequences of AI adoption has been overlooked. This research paper explores how the technology and innovation adoption process changes when organizations decide to embrace AI. This multiple case study of eight AI projects reveals that AI adoption can be described as a pluralistic and knowledge accumulation process, characterized by two main dynamics: (1) a shifting locus of control between AI project's stakeholders over strategic and technological activities, and (2) in parallel, the progressive building of AI awareness at different levels of understanding (know-what, know-how, know-why) through algorithmic brokerage actions. These findings advance the technology and innovation literature, by answering to recent calls for deepening the empirical investigation of the AI technology trajectory. The study also contributes to the literature on algorithmic brokerage by extending the concept of explainable AI across the entire adoption process.

Autonomy, Augmentation, and Privacy

Session Moderator: **Panos Constantinides**, *Alliance Manchester Business School, U. of Manchester*

CTO: **Augmenting Human-Machine Learning**

Author: **Panos Constantinides**, *Alliance Manchester Business School, U. of Manchester*
Author: **Arun Rai**, *Georgia State U.*

Deep machine learning agents (ML agents hereafter), a major class of Artificial Intelligence (AI) technology, are receiving increasing attention in information systems and other disciplines because of their unprecedented opportunities to replace tasks previously performed by human agents alone. However, there is a risk of setting a ceiling of what ML agents can accomplish according to human-level performance, while also inheriting human-associated biases, errors and power-infused interests. In this paper, we advance a novel theoretical perspective on how human-machine learning can be augmented. When we refer to augmentation, we are referring to augmentation of the learning for a task, where human and ML agents work together with their respective capabilities and vulnerabilities to create complementarities for amplifying benefits and reducing risks for the learning. We explicate the distinctive capabilities and vulnerabilities of human and ML agents with respect to three learning mechanisms: experience accumulation, knowledge articulation, and knowledge codification. We then propose three organizing mechanisms: supervision, coordination, and value exchange, to mitigate the distinct knowledge hazards in conjoined learning between human and ML agents. Guided by the role of the organizing mechanisms to achieve effective conjoined learning, we identify key avenues for future research.

CTO: **Putting the Software Developer Front and Center: How is Privacy by Design Implemented in Practice?**

Author: **Tae Gyun Kim**, *U. of Queensland*
Author: **Saeed Akhlaghpour**, *U. of Queensland*

Advancements in digital technologies give rise to new ways of using data. While being an opportunity for firms to develop systems that can promote new (or better) ways of conducting business, recent incidents suggest that such data usage can pose a greater risk of privacy breaches. Privacy by Design (PbD) is a set of principles to enforce data privacy throughout the lifecycle of information systems. For a successful PbD implementation, it is crucial to understand software developers' practices when dealing with PbD requirements. To this end, we conducted in-depth interviews with experienced software engineers from a leading multinational IT service company. Building on Cybernetic Theory, we analyzed the process in which software engineers perceive PbD-related changes, assess their status in achieving privacy and project goals, and adapt their actions to achieve the goal(s). Our findings illustrate how Cybernetic Theory can help explain the rationale behind software engineers' practices under PbD implementation. Further, we classify and explain three emergent patterns of software engineers' PbD-related practices, namely, compromise, break rules to achieve goals, and sacrifice a goal.

CTO: **Social Audio: Conceptualizing Voice-Based Online Social Networks and their Privacy Implications**

Author: **Anuschka Schmitt**, *U. of St. Gallen, Institute of Information Management*
Author: **Stefanie Rentsch**, *U. of St. Gallen (HSG)*
Author: **Andreas Janson**, *U. of St. Gallen*

This paper explores the nature and implications of social audio: online social networks (OSNs) that enable users to interact via voice. The paper contributes to basic science by offering a precise conceptualization of voice-based OSNs and their design features. We posit that the defining characteristics of traditional OSNs also hold for social audio, yet that novel features (i.e., creating rooms) and modifications of traditional features (i.e., like) through voice idiosyncrasies can be found. This work also shows how social audio introduces novel privacy implications, particularly driven by the richness and risks of voice as an interaction modality. Using three illustrative cases, we demonstrate applications of social audio and how privacy implications remain largely unaddressed. Specifically, we find that the networks considered show very few specific features addressing the risks of voice-based interaction and that current privacy policies do not reflect these risks nor offer mitigation measures. We bridge our findings and extensions for future research by discussing potential approaches in terms of network architecture features for social audio providers to pursue in order to ensure user privacy.

CTO: **Freedom, Constraint, Freedom-Constraint: Making Sense of Autonomy in the Platform Economy**

Author: **Dan O'Sullivan**, *UCL School of Management*

A growing body of literature exhibits conflicting views on whether online labour platforms facilitate autonomous work experiences. Typically, this literature treats autonomy as a black box. In a qualitative, theory-building study, making use of data from 41 semi-structured interviews, we found that platform workers made sense of their autonomy at two distinct levels, enabling them to conceptualize their autonomy within platform work simultaneously as both contradictory and non-contradictory. Workers acknowledged a common set of inherent autonomy-based contradictions in platform work but differentially interpreted these contradictions depending on their expectations of work autonomy and their feelings of reliance upon platforms. These differential interpretations facilitated vastly different experiences and perceptions of overall autonomy at work, partly explaining the conflicting results of prior studies on platform autonomy. Our theoretical insights have significant implications not only for research concerning online labour platforms but also for research on work autonomy more broadly.

New Approaches to Studying Virtuality at Work

Organizer: **N. Sharon Hill**, *George Washington U.*
Panelist: **Bradford S. Bell**, *Cornell U.*
Panelist: **Leslie A. DeChurch**, *Northwestern U.*
Panelist: **N. Sharon Hill**, *George Washington U.*
Panelist: **Barbara Zepp Larson**, *Northeastern U.*
Panelist: **Anu Sivunen**, *U. of Jyväskylä*
Moderator: **Sumita Raghuram**, *San Jose State U.*

Virtual work, which involves interactions between employees who are not in person and occur using electronic rather than face-to-face communication, has burgeoned in recent years to encompass a broad range of employees in different types of work arrangements across varied work contexts. Yet, existing approaches to studying virtuality have primarily focused on professional knowledge work contexts, involving a high degree of virtuality, and using more traditional communication media such as email to facilitate virtual interactions. Thus, there is a need to extend the dominant lenses used in past research on virtuality to better reflect the realities of the contemporary and future workplace. This requires research to understand virtuality in previously underexamined contexts, such as those with varying degrees of virtuality (e.g., hybrid work), more complex work configurations at different levels (e.g., multiteam systems), and those involving the use of newer and emerging communication technologies (e.g., social media, virtual reality). These extensions to virtual work research may also require new approaches to conceptualizing and measuring virtuality. This panel symposium will shed light on these new approaches to studying virtuality, with the goal of developing a more nuanced understanding of how a broader range of employees in more varied contexts experience virtual work. Our panel of virtual work scholars will discuss their research that is breaking new ground in this area. We will draw on these insights to engage symposium participants in an interactive discussion to identify important future directions for advancing the study of virtuality at work.

Participant: **Jung Min Choi**, *Hong Kong U. of Science and Technology*
Participant: **Melody M. Chao**, *Hong Kong U. of Science and Technology*
Presenter: **Zhu Feng**, *HEC Paris*

In light of Maddux and colleagues' (2021) award-winning Annals review of research related to multicultural experiences, it is evident that there are several interpersonal topics that remain unstudied or underexamined, including: (1) how multicultural experiences affect leadership competencies; (2) the impact of multicultural experiences on conflict resolution practices; and (3) how multicultural experiences influence others' perceptions of individuals who have lived or worked abroad. The proposed symposium advances scholarship by bringing together multimethod research that collectively identifies multicultural experiences' influence on interpersonal perceptions and interactions. Specifically, these four papers reveal that multicultural experiences can have both positive an negative effects on leadership, conflict resolution, and others' perceptions of individuals who live or work abroad, offering exciting new avenues for research that are particularly relevant as organizations increasingly prioritize cross-cultural collaboration and globalize their workforces. Strongly aligning with the Academy of Management 2023 theme, "Putting the Worker Front and Center," papers in this symposium offer a deeper and more nuanced understanding of the expanding population of workers with multicultural experience that have several theoretical and practical implications for managers and organizations.

The growing attention to social injustices, discrimination, and other challenges faced by marginalized communities highlights the deep-seated and complex nature of these issues. The ongoing crises, including war in Ukraine, the challenges to democratic systems, the climate crisis, and the lingering effects of the Covid-19 pandemic, exacerbate the vulnerabilities and exclusions experienced by these groups. As organizational scholars, it is our moral responsibility to study these processes so that they can be better addressed and ultimately eradicated. This symposium builds upon the growing body of organizational scholarship on marginalized communities to explore the various challenges they face and the strategies that can alleviate or challenge marginalization. In a time of increased hostility towards marginalized communities and the organizations that support them, it is crucial to gain a deeper understanding of the diverse injustices and exclusions faced by these groups, how these challenges manifest in different contexts, how they can be addressed, and what might be the unintended (harmful) consequences of such efforts. Organization studies as a multi-disciplinary field is particularly well-suited to examine how institutional and organizational efforts, as well as individual responses, can help disrupt and overcome marginalization.

Presenter: **Adam M. Kleinbaum**, *Dartmouth College, Tuck School of Business*

This symposium showcases a set of papers that deepen our understanding of the dynamic relationship between intra-organizational networks and race, ethnicity, and gender-based inequalities in workplace experiences and attainment. It brings together leading scholars to shed light on novel theoretical mechanisms, processes, and frameworks of interest to inequality, social networks, and DEI scholars. The first two papers focus on intra-organizational network inequalities, unpacking the conditions under which race, ethnicity, and gender differences in social networks emerge and persist. The latter two papers focus on unpacking the construct of inclusion by offering novel theoretical frameworks of inclusion and re-conceptualizing it as a structural, network-based phenomenon. Collectively, the four papers presented in this symposium offer novel empirical and theoretical mechanisms to explain differences in intra-organizational network characteristics, attainment, and perceptions and behaviors of inclusion. These papers employ a variety of research methods, ranging from qualitative interviews, observational data, surveys, to field interventions. In line with the AOM 2023 theme, Putting the Worker Front and Center, the four papers in this symposium unilaterally zoom in on the workers, especially workers who are members of disadvantaged groups in organizations and society, and seek to identify new ways in which social networks can be used to mitigate race and gender-based inequalities in work experience and attainment.

Participant: **Elizabeth Pontikes**, *UC Davis*

Multiple lines of inquiry within organization theory and strategic management turn on identifying a firm's relevant peers, competitors, and/or reference groups and a common way of identifying those firms relies on common membership in an industry. Yet, the categories and tools we use to understand the organization of the economy reflect the dominant understandings of their time and our common conceptualization of "industry." For example, the Standard Industrial Classification (SIC) system was developed in the 1930s and is perhaps the most ubiquitous way organizational scholars capture a firm's focal industry, and thus who are its peers and competitors. In this symposium, we bring together a diverse array of scholars who have approached the challenges with categorizing firms in the present period, offering new theoretical insights and novel empirical approaches to the problem. Our hope is to encourage organizational scholars to begin/continue thinking about the contemporary (and future) world of organizations and how our existing schemas to categorize them likely need updating and amending.

Discussant: **Stephen Barley**, *U. of California, Santa Barbara*

While many organizational phenomena may be largely contained within the boundaries of a program, organization, or industry, many more overflow those boundaries and spill substantially across diverse groups, organizations, communities, forums, and initiatives whose activities interact collectively. It has become almost inevitable today that organizational actors, including workers, must align their local activities to conditions produced elsewhere, and researchers interested in studying these boundary-traversing activities in a grounded way must contend conceptually and practically with a considerable degree of sprawl across multiple geographic, temporal, material, cultural, and conceptual boundaries. In these conditions, researchers need to engage in sprawling fieldwork--interviewing, observing, and engaging within and across many bounded spaces. To address the opportunities and challenges of this approach to organizational research, this symposium will include four empirical presentations that explore and extend our understanding of what it means to study sprawling phenomena with sprawling fieldwork.

Participant: **Kathleen L. McGinn**, *Harvard U.*

In this symposium, we follow calls for research that acknowledges the interplay between supply-side and demand-side contributors to gender inequality (Fernandez Mateo & Kaplan, 2018) and bring together papers that are 'at risk' of building greater understanding of how supply-side (worker) factors that have been dominant in past explanations of gender inequality are also influenced by demand-side (employer) factors in important ways. The papers in our symposium draw upon several contexts in which gender differences were mainly thought to be due to supply side gender factors, but that in fact also reflect demand side factors. These contexts include applications at lower and higher levels of organizations (Nimczik et al. on job entry and job ladders; Chan Ahuja and Fernandez Mateo on applications to boards); within jobs (Gounden Rock on task allocations) and in the blending of tasks between work and home (Feldberg, Harrington & McGinn).¶

Discussant: **Beth Bechky**, *UC Davis*

With the increased prevalence of work from home arrangements, and the decline of long-term stable employment, collective norms and conventions that once provided guidance and structure for how work should be structured and who workers should strive to become are weakening. People increasingly expect and are expected to craft their own work selves and career paths, individually and authentically. Simultaneously, ubiquitous digital technology and social media platforms enable and encourage workers to make themselves and their trajectories more visible and knowable to others (i.e., employers, peers, clients). These conditions, together with a broader cultural shift towards individuation, have led to the increased significance of authenticity and individuation in contemporary work, giving rise to new occupational groups, and putting the workers front and center (AOM 2023 theme). However, it is not clear how workers experience and navigate these new expectations in the wake of digital technologies and social media platforms, and how they take on the responsibility of crafting their day-to-day work selves and lives (almost) from scratch, while keeping the results acceptable and desirable to the occupational and organizational communities that they depend on. The papers presented in this symposium and the following discussion aim to spark scholarly conversation about the implications of contemporary occupational dynamics characterized by individuation and technologically enabled visibility and offer actionable insights for workers and managers.

When one thinks of a network tie, a certain prototypical image comes to mind: a relationship where interaction is fairly frequent, active, positive, and largely routine. Most social network research examines such ties. Yet the literature has increasingly identified certain types of ties that do not necessarily fit this standard mold, such as dormant ties or negative ties, which may actually have an outsized influence beyond their numbers. Sometimes these overlooked ties are neglected and/or taken for granted but are actually much more common than can be explained by existing network theories or studies. Sometimes they are rare but provide insights into helping us to understand organizational relationships more generally. And sometimes they are special in terms of providing instrumental value or enhancing well-being beyond what is typical for most ties. This symposium is designed to bring to light these new and interesting types of relationships, with an eye towards integrating them conceptually into the field's broader understanding of how social networks operate in practice.

The interconnection between time and control has long been a subject of research for management scholarship (e.g., Fredrick Taylor's Time and Motion studies). In this symposium, we bring together a series of papers that theorize regarding the relationship between these two important concepts. First, the symposium considers differences between individual and manager perceptions of controlling the boundaries between work and non-work. Then, we examine the organizational conditions that may support (or undermine) this individual-level autonomy, including how organizational controls over time are leveraged by managers, as well as how employees might resist these controls. Finally, the symposium examines concerns regarding how time affect workers' approaches to their day-to-day work, including individual (versus organizational) goals. The discussants highlight key themes and consider future research on the intersection of time and control. Ultimately, this symposium aims to further management scholars' understanding of how these key concepts interweave, interlock, and interrelate, in order to further management theory.

Panelist: **Philip L. Roth**, *Clemson U.*
Panelist: **Mary-Hunter McDonnell**, *The Wharton School, U. of Pennsylvania*
Participant: **Aparna Joshi**, *The Pennsylvania State U.*

Recent years have seen a rapid growth in both micro and macro research examining the role of political ideology and partisanship in shaping organizational outcomes. At the same time, the work in these two streams have developed largely independently. The purpose of this panel symposium is to bring together micro and macro scholars to explore promising directions for future research.

How Bureaucracies Address Complex Social Issues

Organizer: **Pedro Monteiro**, *Copenhagen Business School*
Organizer: **Akshay Mangla**, *Saïd Business School U. of Oxford*
Panelist: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*
Panelist: **Marya Besharov**, *Oxford U., Saïd Business School*
Panelist: **Sanjay K Pandey**, *George Washington U.*
Panelist: **Leisha DeHart-Davis**, *U. of North Carolina, Chapel Hill*
Panelist: **Aroon Manoharan**, *U. of Massachusetts*

Organizations—including bureaucratic ones—are increasingly confronted with complex social issues for which there are no clear solutions. Public bureaucracies are called upon for multiple tasks, including the framing of social problems, the deployment of public resources, and the collective mobilization of non-state actors, all the way down to the delivery of essential public services. Similarly, large, private, bureaucratic organizations' operations often span the globe and are enmeshed in the perpetuation of issues—from environmental degradation to modern-day slavery—while also holding the potential for catalyzing change given their resources and reach. While these issues fueled research in organization theory and public administration, there has been relatively little theoretical engagement across fields. We believe this is a missed opportunity. Understanding how bureaucracies can address complex social problems requires more systematic interdisciplinary conversations. This panel symposium will engage a group of scholars working across organizational theory and public administration in interactive discussions around the following topics: (1) the variety of organizational forms and practices of bureaucracy that facilitate or constrain its ability to address complex social issues; (2) how bureaucratic organizations interact with their wider contexts to build and sustain collective action for tackling complex social problems; (3) how concepts and findings in organizational theory and public administration research can better inform one another to generate a more robust understanding of bureaucracy and its relationship with social issues. By bringing together scholars across fields, we hope the symposium will stimulate synergies and enhance the impact of the scholarship on emerging challenges for organizations, management, and society.

The Punishment Ends & the Consequences Persist: Employment Challenges for The Formerly Incarcerated

Organizer: **Taryn D. Williams**, *UC Irvine*
Discussant: **Damon J. Phillips**, *The Wharton School, U. of Pennsylvania*
Presenter: **Taryn D. Williams**, *UC Irvine*
Presenter: **Jan Stephen Lodge**, *Rotterdam School of Management, Erasmus U.*
Presenter: **Audrey Holm**, *HEC Paris*
Presenter: **Kylie Jiwon Hwang**, *Northwestern Kellogg School of Management*

Organizational scholars have shown interest in understanding how individuals with stigmatized identities navigate the labor market, in addition to the ways that organizations generate, perpetuate, and normalize inequalities in labor market opportunities. Nevertheless, such studies have predominantly focused on inequalities across race and gender. Nearly 600,000 adults reenter society from incarceration annually, yet 67 percent will be unable to secure employment in their first year at home. However, management journals have not adequately addressed the formerly incarcerated population's interaction with organizations, as well as their marginalization in the labor market. In the spirit of "Putting the Worker Front and Center," we draw attention to formerly incarcerated workers and their ever-widening inequalities. We share research highlighting some of the difficulties this population faces: balancing the demands of post-incarceration community supervision, stigmatized identity disclosure at work, labor market socialization and sense-making, and barriers to entrepreneurship. This symposium has three goals: offer theoretical and practical implications about the work-related challenges faced by a marginalized and disadvantaged group of individuals, expand the current understanding of formerly incarcerated individuals' challenges as they seek, gain, and persist in employment, and contribute to the literature on institutions' and organizations' roles and responsibilities in reducing inequality.

Moving Forward by Looking Back: Reexamining the Role of Dependence in Board of Directors Literature

Panelist: **David G. Sirmon**, *U. of Washington*
Panelist: **Steven Boivie**, *Texas A&M U.*
Panelist: **Christine Shropshire**, *Arizona State U.*
Panelist: **Christina Matz Carnes**, *Indiana U. - Kelley School of Business*
Moderator: **Brit McClellan**, *Foster School of Business*

Director independence has been one of the most studied factors across the related literature on organization governance, including strategy, organizational theory, and in practitioner settings. The empirical research regarding independence is not consistent. The previous literature has taken a rather blunt conceptualization of independence. To further explore this conversation, this panel symposium aims to invite panelists to have recently discussed the independence construct to identify the underlying implications for corporate governance. The purpose of the symposium is to aid in scholars reigniting and further refining the understanding and exploration of (in)dependence into more nuanced and less blunt recommendations for best practices in corporate governance. More specifically, this symposium aims to 1) identify the pre-agency theory arguments and find a more refined treatment of dependence, 2) evaluate the potential different types of dependence: financial and social, 3) extend past the common sample of large firms and explore how dependence manifests itself in smaller firms making impactful strategic decisions, and 4) re-anchoring logics that have been lying dormant. Attendants will leave the symposium with a renewed sense of excitement and curiosity about the role of dependence on Board of Directors' and the impact that has on corporate governance.

Hierarchy and the Changing Nature of Organizations

Organizer: **Luke Rhee**, *U. of California, Irvine*
Organizer: **John Joseph**, *U. of California, Irvine*
Panelist: **Nicolai J. Foss**, *Copenhagen Business School*
Panelist: **Samina Karim**, *Northeastern U.*
Panelist: **William Ocasio**, *U. of Illinois at Urbana-Champaign*
Panelist: **Phanish Puranam**, *INSEAD*

Building on recent work on organization design and renewed interest in the role of a hierarchy, this symposium offers a new look at hierarchies and their place in the changing nature of the modern organization. Hierarchies are a pervasive organizational structure in our society. But we have ostensibly seen a rise in alternative forms of "flat" organizing given the growing prevalence of knowledge-intensive work and the diffusion of new technologies. At the same time, many flat organizations – whether loosely coupled, networked, or federalized – still seem to be hierarchical in their structure to some extent. As a new research program, this symposium augments current research, by considering how specifically hierarchies operate in the modern economy, to understand their role alongside forms of flatter organizing. Is their role in creative, high-tech industries different from that in traditional ones? In knowledge-intensive industries, how do hierarchical organizations survive and even thrive? Given the increasing adoption of algorithmic and automation technologies, will those technologies diminish the role of hierarchies? Or will hierarchies evolve? We feature four panelists, Nicolai Foss, Samina Karim, William Ocasio and Phanish Puranam, who have taken different approaches in their examinations of this topic. They will provide their own insight into existing work and discuss new questions for future research in this area.

Beyond Information Disclosure: A Communication Perspective on Corporate Sustainability

Organizer: **Wei Wang**, *Northwestern Kellogg School of Management*
Organizer: **Klaus Weber**, *Northwestern U.*
Panelist: **Joep Cornelissen**, *Erasmus U. Rotterdam*
Panelist: **Dror Etzion**, *U. of Vermont, Grossman School of Business, US*
Panelist: **Eun-Hee Kim**, *Fordham U.*
Panelist: **Michael Pfarrer**, *U. of Georgia*

With increased external pressure on firms to behave sustainably, disclosure of sustainability efforts and performance has become a central concern. Academic research to date, too, has focused on the notion of disclosure as accountability and reporting, studying when firms disclose what information to stakeholders, and whether the information is accurate, giving rise to questions of greenwashing and brownwashing. However, this notion of disclosure as information dissemination is arguably narrow in that it draws attention to communication formats associated with formal reporting. From a communication perspective, firms' engagement with stakeholders is more comprehensive and includes many additional dimensions. For example, how do firms frame their sustainability actions and how do stakeholders interpret corporate communications? How do different forms of communication about sustainability, for example, dialogical modes or targeted messaging to particular groups, interact with more scripted disclosures? How does communication about sustainability relate to corporate and stakeholder action? Considering sustainability information within a broader communication framework invites such a broader set of questions. In this symposium, we aim to understand firms' sustainability communications from this broader perspective. To do so, the panel brings together experts engaged in different literatures for an exchange about sustainability communication as a broader organizational practice. Panelists include scholars of corporate communication (to discuss the possible uniqueness of communication about sustainability), scholars specializing in reporting and disclosure (to address the information demanded and received by stakeholders), and scholars studying corporate sustainability practices (to address the relationship of communication with corporate strategy and action). By fostering discussion across areas of research, the symposium hopes to serve as a platform to take stock of different literatures and sketch out an agenda for more integrated research on sustainability communication.

Temporality and Technology: Temporal Dynamics of Technology Emergence and Development

Organizer: **Nina Granqvist**, *Aalto U.*
Organizer: **Stine Grodal**, *Northeastern U.*
Participant: **Miyoung Chang**, *Boston U. Questrom School of Business*
Panelist: **Grace Augustine**, *School of Management, U. of Bath*
Panelist: **Raghu Garud**, *Pennsylvania State U.*
Panelist: **Violina Rindova**, *U. of Southern California*
Panelist: **Blagoy Blagoev**, *Technische U. Dresden*

This panel symposium brings together a set of prominent scholars to discuss recent and future research with regards to developing a temporality lens to study technology emergence and development. Traditionally, the literature on technology emergence and development has tended to treat time as a continuous and unidimensional construct – as a backdrop or a timeline. Lately, scholars have begun to challenge these assumptions and explore the multiple ways in which temporality – as culturally founded and socially construed understandings of time – shape technologies. The focus then moves to temporal perceptions, meanings and practices and even systemic and institutionalized features, and how these impact various aspects of technology emergence and development. The panelists present complementary perspectives to understand and explore such phenomena.

Presenter: **Isabelle Solal**, *ESSEC Business School*
Participant: **Raffaele Conti**, *ESSEC Business School*
Participant: **Francesco Castellaneta**, *SKEMA Business School*

The world of work is changing. While COVID-19 has accelerated existing trends (e.g., in remote work, e-commerce, and automation), cutting- edge technologies (e.g., artificial intelligence) are fundamentally transforming the nature of work and the workplace itself. We ask in this symposium, does the changing nature of work and workplaces influence men's and women's career outlooks, outcomes, and overall satisfaction differently, and if so, how and why? To this end, we assemble and synthesize research that deepens our understanding of the potential intersections between gender and the future of work. We bring together a set of papers that applies a gendered lens to the future of work by focusing on changes in the material and non-material aspects of work, including how work is done, when work gets done, and norms and beliefs about who does what, and how changes may influence men's and women's labor market outcomes differently.

Corporate Political Activity and Stakeholders

Session Moderator: **Colby Dwight Green**, *Southern Utah U.*

SIM: **Vertical and Horizontal Coalition Composition as a Nonmarket Strategy**

Author: **Colby Dwight Green**, *Southern Utah U.*
Author: **Douglas A. Schuler**, *Rice U.*

Scholars have devoted considerable effort to understanding firms' efforts to collaborate in achieving favorable policy. Recent work in the corporate political activity literature has begun to theorize on the composition of coalitions that firms form to affect policy change. In this paper, I develop a novel empirical approach to identify the membership of two types of coalitions: vertical, comprised of the focal firm's supply chain, and horizontal, which include ideological interest groups, local governments, and individuals not affiliated with the focal firm's industry. My approach infers a coalition from the set of organizations which publicly support a bill in a legislative committee hearing. I argue that these two coalitions produce different types of information for lawmakers: vertical coalitions tend to provide more technical information, whereas horizontal coalitions tend to provide more political information. Using data from state legislative committee hearing testimonies by hospitals and their coalitions on Medicaid expansion following the Affordable Care Act, I show that coalition support by both vertical and horizontal coalitions increases the likelihood of favorable policy adoption. Horizontal coalition support has the strongest effect in citizen legislatures, where demand for political information is highest.

SIM: **From Political Ties To NGO Donations: The Strategic Reconfiguration Of Cross-Sector Interactions**

Author: **Marina Gama**, *Fundação Getulio Vargas - EAESP*
Author: **Aline Gatignon**, *The Wharton School, U. of Pennsylvania*

We study under what conditions firms and non-governmental organizations (NGOs) collaborate after an institutional shift decreases the value of corporate political ties. While such shifts should increase the likelihood of firm-NGO donations, firms' or NGOs' direct political engagement should dampen this effect. Conversely, indirect political influence via NGOs should enhance this effect except when it could compromise their independence and mission. We test our hypotheses on publicly traded firms in Brazil from 2010-2017, when the 2014 "Operation Carwash" probe altered social norms around corruption. Results reveal a rift between politically connected firms determined to donate and NGOs reticent to broker corporate political influence. We contribute to nonmarket strategy by showing how firms and NGOs react when institutional shifts alter the opportunities for synergies between them.

SIM: **Organizational Stigma, Corporate Lobbying, and the Nonmarket Boundaries of the Firm**

Author: **Mohamad Hasan Sadri Karami**, *ESSEC Business School*

Firms for which government actors and regulators are important constituencies typically engage in lobbying activities to manage nonmarket risk. This study examines whether and how firms in contested industries characterized by pervasive stakeholder disapproval respond to stigmatization by adjusting their choices pertaining to nonmarket strategy. Using a novel, hand-collected dataset that tracks criticism of arms manufacturers within the U.S. context between 1998 and 2017, we found that firms respond to being stigmatized by increasing their expenditures on outsourced lobbying; by contrast, firms respond to the stigmatization of their industry peers by increasing spending on in-house lobbying. Further analyses of the boundary conditions of the above findings reveal that their extent is contingent on the content of stigma, as well as the characteristics of the stigmatizing audience. In particular, we find stronger results when stigma is harm-based, rather than illegality-based, and when the stigma is expressed by political actors, relative to other actors. We conclude by discussing the implications of our findings for the literatures on social evaluations and nonmarket strategies.

CSR Evolution and Distinctiveness

Session Moderator: **Limin Fu**, *Monash U.*

SIM: **Past as the Present, Present as the Future: The Time Dynamics of CSR**

Author: **Limin Fu**, *Monash U.*
Author: **Dirk Boehe**, *Africa Business School*

In light of prevalent greenwashing and window dressing of corporate social responsibility (CSR), stakeholders tend to rely on firms' past CSR to predict their future CSR. However, extant literature only focuses on CSR at a point in time, rendering the understanding of CSR signals incomplete and misleading. In contrast to the existing literature that adopts a clock view of time (time measured as units of resources), this conceptual article employs a process view of time whereby CSR is seen with a dynamic perspective from which we can develop a more comprehensive understanding of CSR. Drawing on signaling theory, we theorize the time dynamic of CSR connecting the past, the present, and the future, and we develop a range of propositions predicting firms' CSR. This conceptual article extends signaling theory by complementing mechanisms that generate or strengthen a separating equilibrium. We also contribute to an embryonic stream on "dynamic CSR" literature by advancing the understanding of the time dynamic of CSR.

SIM: **Different Ways of Being Different: An Exploration of Two Forms of Distinctiveness in CSR Strategy**

Author: **Eunyoung Park**, *HKUST*

How do firms differentiate themselves from others, and how do audiences respond to their distinctiveness? Optimal distinctiveness theory suggests that an intermediate level of distinctiveness is most beneficial to a firm as it addresses both competition and conformity pressures. However, empirical studies have found positive, inverted U-shaped, and U-shaped relationships between distinctiveness and audience evaluation. Using CSR strategy as a research context, I develop a theory of two forms of distinctiveness—positioning distinctiveness and topic distinctiveness—and explore each form's unique and interactive effect on audience evaluation. Building on cognitive categorization research, Specifically, I argue that a high positioning distinctiveness or a moderate level of topic distinctiveness will lead to more favorable analyst recommendations. I also predict that analysts will more positively assess a firm's topic distinctiveness when a firm has a high level of positioning distinctiveness. Utilizing the sample of S&P 500 firms from 2001 to 2018, I empirically examine the hypothesized relationships. By analyzing annual CSR reports using natural language programming and topic modeling techniques, I develop a novel measure of topic distinctiveness in CSR strategy. This paper contributes to the literature by simultaneously examining multiple forms of CSR distinctiveness and unpacking conditions under which demands for conformity and differentiation may vary.

SIM: **Being Alike or Different: Observations of Optimally Distinctive Pathways in CSR Strategies**

Author: **Xue Pang**, *Chinese U. of Hong Kong*
Author: **Carlos Wing-Hung Lo**, *Chinese U. of Hong Kong*

It is well established that firms achieve competitiveness among peers by building differentiated CSR profiles. By extending the theory of optimal distinctiveness, this study supplements this literature and explores the competitive pathways of CSR engagement separately for firms that only stick with regulatory baseline and for firms that build differentiated CSR profiles. The study conducts an exploratory fsQCA analysis in a semi-experimental research setting that firms simultaneously perceive regulatory (i.e., stock exchange regulations) and voluntary standards (i.e., CSR award schemes) to promote CSR practices in Hong Kong. We found that, instead of a single convergent optimal point for all, competitive firms have variations in their demands of being optimal. In addition, their optimal points are not static. They adapt their CSR practices when perceive the changes in social expectations. The study demonstrates that firms tend to have multiple and non-static optimal points over time. Competitive firms tend to make adaptation against the new benchmark that is compatible to their strategic positions.

SIM: **Untangling Corporate Sustainability and Corporate Social Responsibility: An Evolutionary Analysis**

Author: **Ignacio Pavez**, *Pontificia U. Católica de Chile*
Author: **Angel Sevil**, *U. del Desarrollo*
Author: **Alim J. Beveridge**, *U. of Nottingham, China*

Corporate social responsibility (CSR) and corporate sustainability (CS) are constructs that have gained traction both in academic and practitioner literature. Still, they often need clarification and are used interchangeably. This situation is problematic because it prevents knowledge creation and hampers the ability to compare and integrate findings across research streams. To address this problem, this paper traces the historical evolution of each construct through the action-network theory lens. In doing so, we pursue two goals: first, to understand the roots of constructs' evolution, and second, to shed light on the commonalities and differences between CSR and CS. Our research provides an evolutionary concept analysis that identifies CS as the dominant construct in the near future and uncovers eight dimensions that have characterized research across the two fields: legitimacy, voluntarism, driving forces, purpose, origin, stakeholders, time frame, and impact. Our analysis will help scholars identify opportunities for future research and practitioners to acknowledge the role of businesses in making our world a more sustainable place.

The Role of Media and other Gatekeepers on CSR and Legitimacy

Session Moderator: **Anja Nadja Fessmann**, *West Virginia U.*

SIM: **Does Strategic CSR Pay Off? A Study of CSR Events, CSR Portfolio and Media Favorability**

Author: **Anja Nadja Fessmann**, *West Virginia U.*
Author: **Olga Bruyaka**, *West Virginia U.*
Author: **Alanna Hirshman**, *Texas Tech U.*
Author: **David Dawley**, *West Virginia U.*

Drawing from signaling theory we investigate how the media as a signal receiver interprets firms' CSR signals with varying degrees of strategic orientation. Strategic orientation (SO) of firms' CSR initiatives (i.e., strategic CSR) characterizes socially beneficial activities that can also be strategically justified as contributing to firm performance. We argue that strategic CSR is a multifaceted signal including centrality, specificity, and visibility dimensions. The SO of a firm's CSR initiative is conceptualized as a point signal, while the average SO of individual CSR initiatives in a firm's CSR portfolio is a flow signal. We argue that the media interprets CSR point signals relative to the flow signals – both historical (average SO of a firm's CSR portfolio) and comparative (average SO of rival firms' CSR portfolios). Our key premise is that a high degree of SO in general and relative to both historical and comparative SO will be associated with increased media favorability. We tested our predictions on a sample of the 12 biggest oil and gas multinationals that announced 511 CSR initiatives in 2015-2018. While we confirm that strategic CSR signals are favorably perceived by the media, increasing SO of CSR initiatives relative to firms' historical CSR portfolio decreases media favorability.

SIM: **From Start-up to Market Leader: Google's, Facebook's and Twitter's Legitimacy Discourse in the Media**

Author: **Julia Roloff**, *Rennes School of Business*
Author: **Anke Piepenbrink**, *Rennes School of Business*

How does media report on the actions of Google, Facebook and Twitter and how these reports signal with a more or less emotional delivery that these corporations and their acts are or fail to be legitimate? We are analysing articles published between 2000 and 2021 with a mixed-method design based on topic modelling, emotion and sentiment analysis and qualitative, comparative analysis. We observe a turning point in the reporting around 2017 moving from supporting descriptions of rule-breaking innovativeness to critical reporting as the firms become instrumental in creating polarized societies and furthering populism. Other serious problems linked to the corporations such as unfair competition and negative impact on user mental health were less relevant in the legitimacy discourse. We conclude that legitimacy loss is mainly driven by expectations of political responsibilities as these firms contribute to public governance, the provision of public goods and the restriction of public bads.

SIM: **Gatekeepers: What They Are, What They Do, and What They Ought to Do**

Author: **Miguel Angel Alzola**, *Fordham U.*

The role of intermediaries as gatekeepers has become increasingly popular in the last three decades. This paper aims to bridge the gap between descriptive and normative research on gatekeepers as a way to contribute to an understanding of gatekeepers, what they are, and what they do. Through an examination of the uses of the term gatekeeper in the sociological and the philosophical literature, this paper provides a taxonomy of gatekeepers, which can be categorized on a spectrum according to their agency, the gate they keep, the way they gatekeep, and the nature and durability of their ties with clients and third parties. This classification helps understand what gatekeepers do as a matter of fact and what they ought to do as a matter of ethics, which offers a comparative framework to assess gatekeeper performance.

Social Entrepreneurship: Emergence, Effectiveness, and Survival

Session Moderator: **Jennifer Brenton**, *U. of Michigan*

SIM: **Leveraging Place in Community-based Enterprises to Create Long-Term Impact**

Author: **Jennifer Brenton**, *U. of Michigan*

Community-based enterprises (CBEs) are organizations embedded in communities that aim to address local challenges and contribute to community development. Within research on CBEs, it is often assumed that these organizations typically emerge in contexts of high community support. This paper challenges this core assumption through a case study of the Bonne Bay Cottage Hospital Heritage Corporation (BBCHHC), a CBE that launched with limited initial community support and yet contributed to local development for twenty years. This study shows how the BBCHHC was able to increase community support for their organization by leveraging their embeddedness in the community to foster a sense of place among community members for a local heritage building. As more community members developed a deeper connection and attachment to this building, they began to value the work of the BBCHHC, and local support for the organization slowly grew. This increasing community support enabled the organization to become more financially sustainable, pursue new local initiatives, and create long-term impact in the community.

SIM: **Walking a Middle Road: The Relative Survival of Social Enterprises**

Author: **John Callaghan**, *Imperial College Business School*

While social entrepreneurship has gained considerable interest, the survival of social enterprises has received little attention. To improve understanding, I take an abductive approach, comparing the social enterprise with its two hybrid organisation antecedents, the commercial enterprise and the charity. Using data on UK organisations spanning 15 years, I generate Kaplan-Meier survival curves for complete organisation populations and analyse matched samples with Cox proportional hazards regression models. I find that the survival rates of social enterprises are higher than those of commercial enterprises but lower than those of charities, which suggests that in terms of survival, social enterprises 'walk a middle road' between charities and commercial enterprises. I reason that the survival rate differences are due to variations among the organisation types along two dimensions, concern for beneficiaries and insulation from commercial markets, and support this argument with additional empirical evidence.

SIM: **Organizing Hybrid Circularity: Understanding Logics of Complex Social and Environmental Problems**

Author: **Chia-Hao Ho**, *Brunel Business School*
Author: **Steffen Boehm**, *U. of Exeter Business School*
Author: **David Monciardini**, *U. of Exeter Business School*

To tackle complex social and environmental problems, this article goes beyond existing hybridity scholarship, which is mostly focused on managing hybrid tensions at organizational and intra-organizational levels. Instead, we outline the inter-organizational and systemic dynamics of hybrid organizing to unveil how different logics integrate across scales, i.e., social, ecological, and eco-efficiency logics. Bringing together the social entrepreneur approach in the hybridity literature and the circular economy approach in the socio-ecological systems perspective, we develop a theoretical framework of four logics of hybrid circularity at systems level. We discuss the trade-offs and synergies between these logics, illustrating our argument with brief case studies from the circular economy domain. Our framework suggests that effective processes of hybrid circularity depend on the scope and boundary setting of the social and environmental problems faced.

Identifying, Commodifying, and Forgiving Stakeholders

Session Moderator: **Samuel Mortimer**, *Saïd Business School U. of Oxford*

SIM: **On Commodifying What Is Irreplaceable**

Author: **Samuel Mortimer**, *Saïd Business School U. of Oxford*

This essay has two objectives. The first is to describe and differentiate two distinct ways of valuing things: as exchangeable and as irreplaceable. We value something as exchangeable when we are prepared in principle to relinquish it for something else of sufficient value. By contrast, we value something as irreplaceable when we do not recognize relinquishing it as an option. The second is to provide a normative critique of business practices that commodify entities valued as irreplaceable by stakeholders. In particular, I argue that when a company's stakeholders value something as irreplaceable, the company has a duty to avoid violating it (such as by destroying or damaging it, otherwise altering it, or withholding it from stakeholders, depending on what it is about the entity that the stakeholders value as irreplaceable).

SIM: **Knowing through Artist-led Practices for the Inclusion of Nature as a Stakeholder**

Author: **Nil Gulari**, *Assistant Professor, Audencia Business School*
Author: **Anna Dziuba**, *Hanken School of Economics*
Author: **Anna Heikkinen**, *Tampere U.*
Author: **Johanna Kujala**, *Tampere U.*

Stakeholder theory has become an influential framework for addressing current managerial and organizational challenges, including issues related to sustainability. Stakeholder research has suggested that nonhuman nature can be included as an organizational stakeholder in addition to the human stakeholders. This article answers recent calls to identify alternative ways of knowing and examine how they can advance the (non-anthropocentric) inclusion of nonhuman stakeholders in organizational activities. We turn to art and examine artist-led practices by focusing on the projects of two pioneering eco-artists, Helen Mayer Harrison and Newton Harrison. We suggest that artist-led practices, firstly, expose the temporal, spatial, and transformative aspects of the human-nonhuman distinction that hinder nonhuman stakeholder inclusion, and secondly, provide propositional, emotional, and imaginative ways of knowing that are necessary for challenging and overcoming the distinction. The article contributes to stakeholder theory by providing a non-anthropocentric way of knowing and including nature as a stakeholder. This advances the practical applicability of stakeholder theory to respond to urgent environmental challenges.

SIM: **A Typology of Nonhuman Stakeholders**

Author: **Anna Heikkinen**, *Tampere U.*
Author: **Johanna Kujala**, *Tampere U.*
Author: **Sybille Sachs**, *U. of Applied Sciences in Business Administration Zurich*

Stakeholder theory has considerably discussed the acknowledgement of nonhuman nature as a stakeholder. However, it has not yet been able to fully explain how firms identify nonhuman nature in business activities. Thus, stakeholder theory is limited in providing managers with tools for identifying benefits and risks in relation to nonhuman stakeholders. Our aim in this article is to examine what types of nonhuman stakeholders firms can identify when they consider nonhuman nature as a stakeholder in their activities. Building on previous research, we propose a typology with two dimensions: an intrinsic vs. instrumental view of nonhuman value and a primary vs. secondary classification of nonhuman relevance. Based on this typology, we discuss four types of nonhuman stakeholders: setting, resource, protected, and partner. We contribute to stakeholder theory by complementing the current human-focused stakeholder approach with a particularized view of the different types of nonhuman nature stakeholders.

SIM: **Forgiving Stakeholders**

Author: **Jeffrey S. Harrison**, *U. of Richmond*
Author: **Violet Ho**, *U. of Richmond*
Author: **Robert A. Phillips**, *Schulich School of Business, York U.*

Trust is a central concept in stakeholder theory, and understanding firm responses to breaches of trust is critical to understanding relationships between firms and stakeholders, and how those relationships evolve over time. While forgiveness is a critical link in the trust-repair process, stakeholder theory has yet to comprehensively examine or integrate the concept of forgiveness. This paper fills that void by building on the trust restoration, forgiveness, and stakeholder culture literatures to develop theory that predicts the level of forgiveness a firm is likely to extend to a stakeholder after a breach of trust. We first examine stakeholder culture and forgiveness climate, and how they provide a complementary understanding of the propensity of a firm to forgive. We then develop and explain a model that can help predict the level of forgiveness a stakeholder can expect to receive from a firm following an actual transgression. In addressing the topic of stakeholder forgiveness, this study contributes to the stakeholder literature by adding forgiveness as another ethical value that influences relationships between firms and their stakeholders, and extends the trust restoration and forgiveness literatures to the firm-to-firm level.

Trust and Authenticity versus Fraud and Corruption

Session Moderator: **Wim Vandekerckhove**, *EDHEC Business School*

SIM: **Trustworthiness in Handling Whistleblowing** ☯

Author: **Wim Vandekerckhove**, *EDHEC Business School*
Author: **Marianna Fotaki**, *Warwick Business School*
Author: **Kate Kenny**, *Queen's U. Belfast*
Author: **Derya Ozdemir-Kaya**, *U. of Sussex Business School*
Author: **Ide Humantito**, *Warwick Business School*

The increase of whistleblowing to a regulator or media have sparked organizational efforts to keep whistleblowing internal. However, there is scant research on what such internal speaking up arrangements look like or which organizational dynamics make them credible and effective. This article is focused on how organizational actors attempt to make internal whistleblowing arrangements trustworthy. Research on trust in organizations has mainly focused on dimensions of trust and trustworthiness in single trustor settings. Little is known about the dynamic relation between different trust dimensions including individual, organizational and systemic trust. We propose that whistleblowing represents an ideal case-in-point for examining interactions between dimensions of trustworthiness in multi-trustor and multi-level trust settings. We argue first, that an absence of trust at the individual level towards the line manager that whistleblowers often report does not always translate into the lack of trust at the organizational level, in fact this is what makes reporting wrongdoing possible. Second, internal whistleblowing recipient as the trust referent needs to signal trustworthiness to different internal stakeholders and they do so in different and often contradicting ways vis-a-vis different potential trustors. Our research is based on interviews with 30 operators of internal whistleblowing channels and consultants from four organizations across different sectors involving engineering, banking, health care and public administration. Our findings lead us to theorize that temporality in trustworthiness is more complex than has been theorized to date, specifically that signaling trustworthiness comprises both synchronic and diachronic tensions.

SIM: **What Does it Take to Be Authentic?**

Author: **Christina Lara Kannegiesser**, *U. of Mannheim*
Author: **Lukas Krenz**, *U. of Mannheim*
Author: **Laura Marie Edinger-Schons**, *U. of Hamburg*

Individuals have become critical evaluators of companies' sustainability activities, and research on the conditions under which these activities are well received by external stakeholders is still inconclusive. One concept that has gained increasing attention among scholars to explain external stakeholders' reactions to sustainability activities is authenticity. However, previous research has argued that authenticity judgments in the sustainability context are undertheorized and lack a clear conceptualization. Thus, in this paper we develop a conceptual framework of how external stakeholders form an authenticity judgment about a company's sustainability activities. We do so based on comprehensive qualitative data stemming from focus group discussions (10 focus groups comprising 46 participants). In this framework we argue that external stakeholders attribute a sustainability character to companies. This character encompasses the perceived sustainability-orientation of the company's purpose and its system of values, beliefs, and principles, as well as the firm's attributed intrinsic motives for sustainability. We further propose that external stakeholders only judge a company's sustainability activities as authentic if they perceive that it has such a sustainability character, and postulate that external stakeholders form this character using observations and interpretations of a company's characteristics (e.g., firm size) and actions (e.g., public statements). Our findings have implications for research on authenticity, sustainability perceptions, and social evaluations.

SIM: **Firm Visibility as a Liability After Financial Fraud: The Case of South Korean Business Groups** ✈ 💻

Author: **Dong Shin Kim**, *U. of North Georgia*

While firms often maintain political connections to benefit firm performance, do firms keep the same level of political connections after committing financial fraud? In this paper, we argue that political connection can be a doubled-edged sword and might backfire in the case of fraud, as it could increase firm visibility and in turn close scrutiny from external stakeholders. Examining South Korean business groups, so-called chaebols in our research context, we find that chaebol firms are less likely to be politically connected through board members with political connections after committing financial frauds We further find that such a relationship is weakened when the incumbent government is conservative, which is generally business group friendly, but strengthened when the focal firm is a holding company of the chaebol.

SIM: **Code of Ethics and the Anticorruption Fight in the Construction Industry**

Author: **Tristano Sainati**, *U. of Leeds*
Author: **Giacomo Dei**, *Politecnico di Milano*
Author: **Armando Castro**, *UCL*
Author: **Giorgio Locatelli**, *Politecnico di Milano School of Management*

This study investigates how construction companies' Codes of Ethics (CoEs) address anti-corruption. This is the first research of its kind to leverage a thematic analysis of the CoEs of the world's largest construction companies. Our findings indicate there are still controversial areas in construction companies' CoEs related to anti-corruption, specifically facilitation payments and whistleblowing processes. We explore how CoEs of Construction companies are not aligned in terms of the harmful effects of facilitation payments, providing contrasting guidelines. We also emphasize the importance of internal whistleblowing processes in CoEs, including anti-retaliation measures and increased whistleblowing opportunities through multiple and anonymous reporting channels. Our findings contribute to the discussion by highlighting some of the main limitations affecting CoEs in the construction sector. We emphasize the missed opportunity of construction companies in increasing anti-corruption standards compared with the existing law. CoEs may provide partial value in specifying bespoke legal provisions in more detail, though many CoEs still lack sufficient details concerning areas such as managerial accountability and whistleblowing.

STR: **Evaluating Innovation Strategies: The Influence of Linguistic Framing**

Author: **Shinhye Gloria Ahn**, *Seoul National U.*
Author: **Cecile K. Cho**, *Korea U.*
Author: **Theresa Cho**, *Seoul National U.*

This study investigates the influence of the innovation strategies and impression-management tactics of technology firms on security analysts' judgments. We theorize that security analysts' interpretations of innovation strategies are significantly influenced by the linguistic framings firms employ. Specifically, we predict that while novelty in firms' new research and development (R&D) projects in general negatively affects security analysts' investment recommendations, these evaluative judgments are significantly moderated by the firms' linguistic framing strategies. More specifically, the framing of communication targets analysts' cognitive tendencies related to loss aversion (promotion and prevention framings), uncertainty aversion (certainty and tentative framings), and path dependency (ambidexterity framing of construal levels). An empirical analysis of the global biopharmaceutical industry over 18 years offers general support for our predictions. The results have rich implications for managers in technology firms and their strategic communication with stakeholders.

STR: **Structural Causal Models in Strategy: Opportunities and Boundaries**

Author: **Carla Schmitt**, *Maastricht U., School of Business & Economics*
Author: **Jermain Christopher Kaminski**, *Maastricht U., School of Business & Economics*
Author: **Paul Huenermund**, *Copenhagen Business School*

Causality is at the center of all scientific endeavors. From prior research, we know that just like scientists, business leaders, too, make causal assumptions about their environment to guide strategic choices. Causal machine learning has consequently been subject to growing attention in strategic management research and practice. While causal AI promises significant opportunities for improved data-driven decisions about strategy and strategic action, its successful application to strategy seems far from trivial. In this text, we explore how causal AI can be incorporate into firms' strategizing and analyze opportunities and boundaries of such application. We submit Structural Causal Models as a framework for managerial theorizing and find that careful application can address strategic challenges of fairness, explainable and robustness in AI which present an important obstacle to data-driven decisions. We conclude with a discussion of the boundaries of causal analysis in strategy.

STR: **Causation, Effectuation and Bricolage: Making Sense of Decision-making Recipes Under Uncertainty**

Author: **Gaurav Gupta**, *NEOMA Business School*
Author: **Marc Lenglet**, *NEOMA Business School*
Author: **Laurence Gialdini**, *Aix-Marseille U.*

This article draws on an extended ethnographic study of European financial markets to examine how organizations deal with the conjugated effects of successive crises. While the literature on organization and management theory has predominantly used causation and effectuation logics to make sense of strategic decision making under uncertainty, there is still limited knowledge on how businesses traverse from one crisis to another with little congruence in their nature and scale, despite the fact that such situations appear frequently, and that they threaten their very existence. Our article aims to bridge this gap by shedding light into whether, which and how one or more of these decision-making logics align better with businesses facing such consequent crises.

STR: **Make No Mistake – Performance of Extreme Precision Tasks under Pressure and the Role of Gender**

Author: **Leo Schmallenbach**, *U. of Mannheim*

This study investigates the relationship between pressure and performance in extreme precision tasks, which are cognitively demanding tasks performed under high levels of physical activation. Contrary to the dominant view that individuals "choke" under pressure, It is suggested that pressure can be beneficial for the performance of these tasks. This is because pressure can potentially help individuals to shift attention towards cognitive processes and consciously adaptat their behavior. The study also considers gender as a contingency factor, examining whether performance of extreme precision tasks under pressure differs between men and women. The empirical context of this study is professional biathlon, an Olympic Winter sport that combines cross-country skiing with rifle shooting. Results from a longitudinal study of 391 professional biathlon athletes and over 50,000 shooting rounds support the hypothesis that women perform better under pressure in extreme precision tasks, as they miss fewer shots at the Olympics compared to non-Olympic races, while men do not show this difference.

Resource Acquisition and Redeployment

Session Moderator: **Joon Mahn Lee**, *Seoul National U.*

STR: **Does Anticipated Employee Adverse Behavior Affect the Likelihood of Acquisition?**

Author: **Joon Mahn Lee**, *Seoul National U.*
Author: **Jingoo Kang**, *Nanyang Technological U.*
Author: **Jaemin Lee**, *Korea U.*

We draw on prior studies on acquisitions and employee adverse behavior to examine how anticipated post-acquisition employee adverse behavior in a firm affects the likelihood of the firm becoming an acquisition target. We argue that the potential for adverse employee behavior from a public firm will be reflected in the potential acquirers' evaluations of the firm's future value and shape their acquisition decision. We exploit plausibly exogenous changes in state unemployment insurance (UI) benefits and empirically test how they affect a firm's likelihood of being an acquisition target from 1999 to 2017. Overall, the results strongly support our theory and are robust against potential alternative mechanisms and endogeneity concerns.

STR: **Flexible Resource Allocation Strategies: Resource Redeployment and Resource Idling**

Author: **Toby Li**, *Texas A&M U.*
Author: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*
Author: **Arkadiy V. Sakhartov**, *U. of Illinois at Urbana-Champaign*

Resource redeployment and resource idling are two important resource allocation strategies that have always been considered separately from each other. This study develops a formal model that demonstrates that resource idling is an important precursor to resource redeployment. Not only does idling directly increase the use of redeployment but it also significantly enhances the effects of the inducement and cost to redeploy, which are two key determinants of redeployment. These theoretical predictions are tested with data on oil wells drilled in Texas over 25 years. The resource that can be idled and redeployed in this context is the rig owned by an oil-drilling contractor. Empirical analyses corroborate the theoretical predictions and demonstrate that the results are economically meaningful. In addition, the study demonstrates the biases that exist when redeployment is considered separately from idling.

STR: **Behavioral Biases In Resource Redeployment: The Role of Upfront Investments in Flexibility**

Author: **Harald Puhr**, *U. of Innsbruck*
Author: **Bjoern Schmeisser**, *NHH Norwegian School of Economics*

Corporate advantage of diversified firms is underpinned by the opportunity to redeploy resources between related but separable businesses in response to changes in these businesses' market prospects. We recognize that resource redeployment hinges on ex-ante investments in flexibility for transferring resources dynamically across businesses in response to market developments. We propose a decision-making framework for resource redeployment as a switching option that stretches over multiple periods. The model acknowledges that the initial decision for investing in flexibility and the decision to exploit this flexibility are taken in different decision-making environments characterized by distinct types of uncertainties over the future vs. current states of market demands. We argue and show by means of computational simulations that when mapping these interrelated decisions over multiple periods, two distinct types of behavioral biases may occur that individually and, in their combination, impair attainable performance outcomes of resource redeployment.

STR: **Kodak's Surprisingly Long Journey Towards Strategic Renewal**

Author: **Natalya Vinokurova**, *Lehigh U.*
Author: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

Kodak's failure to transition from film to digital technology has become a canonical example of a dominant incumbent failing in the face of an industry transition. In this paper, we undertake a systematic study of Kodak's decision-making from its earliest efforts in digital technology in the 1960s and 1970s through its bankruptcy in 2012. We draw on a comprehensive combination of primary and secondary sources that include the company's internal documents such as organizational charts, speeches by the company executives, employee newspaper, and technical reports on individual technologies as well as letters to the shareholders, annual reports, and SEC filings. Our analysis of Kodak's decision-making over the half-century leading up to its bankruptcy finds limited evidence of inertia and extensive evidence of strategic renewal efforts which included sustained substantial R&D investment, commercialization of multiple digital products, as well as acquisitions of firms with promising imaging technologies. From 1980s onwards, Kodak dedicated standalone business units to developing and commercializing digital technology, incubated start-ups, and diversified by leveraging its competencies in adjacent fields. In understanding why these efforts fell short of staving off Kodak's demise, we consider how high aspirations and uncertainty with respect to emerging technology shaped Kodak's exploratory search. Our findings point to the need to consider incumbent aspirations and technology substitution dynamics in understanding incumbent performance in industry transitions.

Dynamics in Corporate Strategy

Session Moderator: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*

STR: **Exploring Acquisition Clusters: Antecedents and Consequences**

Author: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*
Author: **Kalin D. Kolev**, *Marquette U.*
Author: **Jerayr M. Haleblian**, *U. of California, Riverside*

Prior work suggests superior acquisition outcomes result from following a symmetric pattern of experience accumulation in which acquisitions do not cluster but rather are equally spaced in time. In practice, though, firms generally accumulate acquisition experience in asymmetric patterns, which include acquisition clusters. Yet, little is known about the existence and impact of such patterns. Accordingly, we examine why firms are inclined to cluster acquisitions closely in time, whether they are inclined to expand time between acquisitions after clustering, and why these different patterns matter. Overall, our findings extend organizational learning research to reveal the antecedents and consequences of asymmetric experience accumulation. Moreover, we contribute to the strategic management literature as we add new insight into the relationship between speed and performance.

STR: **Horizontal Acquisitions and Rival Stock Reactions: A Competitive Dynamics Perspective**

Author: **Dimitrija Kalanoski**, *Alliance Manchester Business School, U. of Manchester*
Author: **Goce Andrevski**, *Queen's School of Business, Canada*
Author: **Kamyar Goudarzi**, *Smith School of Business, Queen's U.*

We explore the impact of horizontal acquisitions on rivals' stock performance. Prior research proposes conflicting explanations about why investors might expect rivals to benefit or lose market value upon an acquisition announcement, predicting both positive and negative effects. Unfortunately, this research fails to explain why these expectations diverge. We adopt a competitive dynamics perspective to argue that past competitive behavior signals acquirer intentions, motivations, and capabilities, which shape investor expectations. Specifically, we find that horizontal acquisitions erode rival returns when investors perceive acquirers to be competitively aggressive, but benefit returns when acquirers are seen to be either passive or excessively aggressive. These effects are moderated by both acquirer competence and rival aggressiveness and competence. We find that horizontal acquisitions hurt rival stock performance when investors perceive aggressive acquirers to be competitively competent, but benefit rival performance otherwise. Rivals benefit also when their level of competitive aggressiveness has kept pace with that of acquirers.

STR: **Does Corporate Creditors Delay the Timing of Entry into Merger and Acquisition Waves?**

Author: **Zhengyi Zhang**, *Capital U. of Economics and Business*
Author: **Zhihan Shen**, *Capital U. of Economics and Business*

Motivated by the tremendous financial and strategic advantages of participating in M&A waves early, we investigate the causes of the timing of firm entry into an M&A wave from a corporate governance perspective. Drawing on agency theory, we argue that creditors are risk-averse and limit risky strategic moves of borrowing firms. Based on a large sample of industry M&A waves worldwide, we provide compelling evidence that the higher the proportion of bank loans a firm owns, the later the firm enters an M&A wave, and this delaying effect is more pronounced for firms conducting industry-unrelated or cross-border M&As than conducting industry-related or domestic M&As. In addition, CEO tenure amplifies while institutional ownership attenuates the delaying effect of debt on the timing of firm action within M&A waves. The present study offers agency-grounded theoretical and empirical insights into the role of creditors in the timing of firm action within M&A waves, thereby contributing to the M&A and corporate governance literature.

STR: **What Drives Cross-border M&As?: How Current Market Dynamics Influence its Landscape**

Author: **Jeonghwan Lee**, *Myongji U.*
Author: **Jung Hyun Kim**, *Myongji U.*

This study aims how the soft power affects cross-border M&As in three aspects, economic, social, and political dimensions. We investigated the effect of Soft power and cross-border M&As by sing the data of all 472 firms' M&A transactions within 172 countries in 2017. We forecasted that acquire home states' higher degree in soft power would finalize more M&As deal completion. Also, when the gap increases positively between acquire and target states' soft power, it will play an important role as increasing the M&As deal completion between acquire and target. Consequently, there were meaningful outcomes showing the relationships between economic, social soft power and cross-border M&A events. nevertheless, there was an insignificant results showing the correlations between political soft power and cross-border M&As.

Advancing our Understanding of Organizational Culture's Relationship to Strategy and Innovation

Organizer: **Christopher Law**, *Texas A&M U.*
Discussant: **Jordan Siegel**, *U. of Michigan, Ross School of Business*

Organizational culture and strategy have long been studied independently. Recently, scholars have given more attention to the interdependent relationship between organizational culture and strategy. How can culture be a strategic resource in innovation and entrepreneurship? Can we leverage new methods to advance our theoretical understanding of culture? While scholars and practitioners acknowledge the importance of culture, efforts to define and strategically utilize culture often prove frustrating and dissatisfying. This symposium showcases research that can expand our understanding organizational culture's relationship to innovation and strategy.

Social Issues and Resource Allocation

Session Moderator: **Yoo Jung Ha**, *U. of York*

STR: **Resource Redeployment and the Pursuit of Multiple Categories in a Stigmatized Industry**

Author: **Yoo Jung Ha**, *U. of York*

This paper explores factors that determine a firm's use of category dilution strategy in the stigmatized sector. We found that in the nuclear sector key human capital has been redeployed from stigmatized to stigma-free technologies, confirming evidence of category dilution at the resource level. Category dilution strategy is slowed down during a trauma event. The negative effect on category dilution strategy however will be decreased by spatial proximity from the trauma event and stigma spillovers from the general public to national policy-making. we offer a theoretical explanation about reasons of oscillation in a firm's category dilution strategy by building on category theory and multiple-goal theory.

STR: **Synergy or Redeployment? Examining Environmental Pollution Spillovers in Multi-Unit Firms**

Author: **Teresa Antonia Dickler**, *Philipps-U. Marburg*
Author: **Juan Santalo**, *IE Business School*

We study how environmental regulation affecting one unit of a firm impacts sibling units belonging to the same firm. A resource redeployment perspective would suggest shifting pollution activities from regulatory constrained units to sibling units. On the contrary, the forced adoption of pro-environmental practices in the regulated units may have positive spillovers on sibling units if cleaner operating practices are adopted all across the firm. Examining this theoretical tension, we do not only find evidence of both logics, but more importantly, demonstrate that multi-unit firms face a trade-off between pollution redeployment and knowledge sharing about pro-environmental practices. Consistent with this trade-off, we report how firms that redeploy pollution are less likely to share best environmental practices. Overall, our findings indicate that multi-plant firms have weaker environmental performance than single-plant firms especially those that opt for a pollution redeployment strategy.

STR: **A Resource Allocation Perspective of Corporate Social Responsibility**

Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*
Author: **Amit Karna**, *Indian Institute of Management, Ahmedabad*
Author: **Anish Sugathan**, *Indian Institute of Management, Bangalore*
Author: **Rakesh Basant**, -
Author: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*

Firms realize benefits from resource allocation for CSR, a complementary nonmarket strategy, in their resource and product markets. In this study we adopt a resource allocation perspective and analyze data from 9148 Indian firms between 2004-2012 to study the relationship between firm level and business level characteristics that influence the strategic decision of resource allocation for CSR. First, we find an inverted U-shaped relationship between firm size and resource allocation for CSR. Second, in contrast with existing literature we find that for firms of similar size business group affiliates allocate lesser resources for CSR. Third, we find that business group structure and the focal affiliate's relative position within the business group influence the resource allocation decision of business group affiliate firms.

STR: **Corporate Social Intangible Resource Sharing Across Common Group Identity**

Author: **Anish Sugathan**, *Indian Institute of Management, Bangalore*
Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*
Author: **Rama Mohana Turaga**, *Indian Institute of Management, Ahmedabad*

This paper investigates the sharing and spillover of social intangible resources among affiliates of a business group with a common group identity. We posit that the extent of spillover is affected by the transferability of the social intangibles, the within group strategic centrality of the affiliate firm, and the dominant owner's proclivity to tunnel away the benefits. We empirically test our predictions using a decade-long panel with firm-level micro-data on different types of corporate social expenditures. We trace the intra-group propagation of exogenous industry-level social spending shocks and analyze the sharing of social intangibles among affiliates of a business group. Our empirical findings suggest that the sharing of social intangibles is an important mechanism of social expenditure allocation and intangible value distribution within business groups.

Environmental Strategies and Sustainability

Session Moderator: **Kendall Cox Park**, *Vanderbilt U.*

STR: **Firms' Partisan Positionings and Responses to the US's Decision to Withdraw From the Paris Agreement**

Author: **Chang Liu**, *Chinese U. of Hong Kong*
Author: **Stephanie L. Wang**, *Indiana U., Bloomington*
Author: **Dan Li**, *Indiana U.*

This paper examines how firms' partisan positionings influence their responses to the shock of the United States exiting from the Paris Agreement (hereafter, Paris Exit). Drawing on the literature on corporate political activity, we propose that stakeholders perceive Republican-leaning firms as advocating the Republican Party's stance on Paris Exit and subsequently view Republican-leaning firms as lacking environmental responsibility. We argue that such negative perceptions and suddenly heightened scrutiny of stakeholders motivate Republican-leaning firms to avoid environmental misconduct in response, at least temporarily. Moreover, we propose that Republican-leaning firms that have adopted comprehensive climate actions are even more motivated to self-regulate their environmental misconduct after Paris Exit to safeguard their existing green images. A difference-in-differences analysis using S&P 1500 firms around Paris Exit supports our hypotheses.

STR: **Do Female Directors Promote Environmental Innovation? The Roles of Flexibility and Diversity Policy**

Author: **Huafang Liu**, *Zicklin School of Business, Baruch College, City U. of New York*
Author: **Kendall Cox Park**, *Vanderbilt U.*
Author: **Mary Triana**, *Owen Graduate School of Management Vanderbilt U.*

In this study, we investigate both why and in what contexts female directors affect environmental innovation. Drawing from social role theory and stakeholder engagement theory, we develop mediating-moderating hypotheses that examine the roles of flexible working arrangements and diversity and inclusion policies to explain the relationship between female directors and environmental innovation. We argue that more women's representation on boards of directors are associated with increased environmental innovation because female directors prioritize addressing environmental issues as predicted by social role theory; and they also foster innovation and an entrepreneurial spirit in organizations by engaging all levels of stakeholders and cultivating mutual trust and collaboration among them. We tested these hypotheses using a large panel dataset with S&P 1500 firms over the period of 2002-2020 and found supportive evidence for them. Our results suggest the provision of flexible working arrangements is the key mechanism through which female directors shape environmental innovation and there is a synergistic interaction effect between diversity and inclusion policies and female directors and their impact on flexible working arrangements and environmental innovation.

STR: **Reinforcing ESG Performance and Investors' Commitment in Times of Corporate Financial Crisis**

Author: **Elena Mellado García**, *U. de Granada*
Author: **Natalia Ortiz-de-Mandojana**, *U. of Granada*
Author: **Juan-Alberto Aragon-Correa**, *U. of Granada*

Reinforcing ESG performance and preserving legitimacy during a corporate financial crisis lead to relevant advantages for the in-crisis firm. Drawing on legitimacy theory, this paper studies how ESG initiatives and legitimate behaviors increase the main investors' commitment and reduce the period of recovery after a corporate financial crisis. We also highlight that some institutional dimensions moderate these relationships. We analyze 182 in-crisis firms from 2015 to 2021 and our findings show that ESG-performance both decreases the time to recover and increases main investors' commitment. This investors' commitment mediates the relationship between ESG-performing firms and recovery period. Moreover, the analysis also shows that economic conditions moderate the relationship between main investors' commitment and period to recover, by reducing it when firm is located in a country with an advanced economic context. This study contributes to both legitimacy and resiliency theories, and it mitigates the existing academic debate of the impact of legitimacy coming with ESG performance on investor's commitment in a period of corporate financial crisis.

STR: **Does Competition Increase pollution? Evidence from the US Hydraulic Fracturing Industry**

Author: **Divya Saxena**, *London Business School*

I examine the effect of competition on the usage of toxic chemicals by firms in shale oil and gas wells in the US oil and gas hydraulic fracking industry between 2011 and 2017 in the states which require the disclosure of fracking chemicals by firms. Since the relationship between competition and pollution is endogenous, in this study, I utilize the negative oil price shock of 2014 as a source of exogenous variation to competition in the oil and gas industry. Using a novel, fine-grained dataset, I show that competition is positively associated with toxic chemical usage by firms because competition dilutes the likelihood of detection. I also show that the relationship is stronger when the competitors also use toxic chemicals indicating that firms free-ride on their competitors who use toxic chemicals. I highlight the conditions under which competition can be detrimental to public and environmental health.

Nascent Industries and Markets

Session Moderator: **Francesca Bacco**, *Vrije U. Amsterdam, School of Business and Economics*

STR: **Entrepreneurship Training and Founders' Perceptions of Ability: A RCT with Entrepreneurs in Tanzania**

Author: **Francesca Bacco**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Andrea Coali**, *Bocconi U.*
Author: **Audra Wormald**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

This paper studies the effects of training entrepreneurs in low-income countries to apply different approaches to strategic decision-making under uncertainty on their subjective perceptions of ability to cope with different challenges that can affect the development of new ventures. While entrepreneurs in these settings operate under extreme uncertainty and resource constraints, interventions to help them cope with those challenges are largely limited to short courses on basic business skills. Conversely, we use a field experiment with entrepreneurs in three regions of Tanzania to show that strategy-based training has important effects on their perceived ability to cope with different sources of uncertainty that can hinder the development of new ventures. Our findings suggest that training entrepreneurs in low-income countries to apply a theory-based approach to strategic decision-making increases their perceived ability to deal with uncertainty stemming from the development of a viable business model, and that this can have positive implications for business outcomes. We elaborate on the mechanisms behind these results and discuss the implications for current and future research.

STR: **A Configuration Perspective to Predicting High Growth and Its Persistence**

Author: **Yassine Lamrani**, *Erasmus U. Rotterdam*
Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*
Author: **Reddi R. Kotha**, *Singapore Management U.*

A Firm's high growth remains a largely unpredictable phenomenon despite its significant implications for economic development, productivity, and firm performance. Previous research has found that the explanatory power of high growth predictors is low and that out-of-sample prediction accuracy is poor (i.e. R2 ~10%), leading some scholars to conclude that high growth is a random event and not relevant as a performance measure. This study challenges this conclusion by demonstrating that high growth can be predicted with higher accuracy (i.e. R2 ~31%) using a theoretically grounded machine learning (ML) approach. We propose that high growth may be influenced by unique configurations of managerial actions, and present a novel method to unpack the "black box" predictions of ML techniques that is likely more potent to generate configuration-based theories. We find that managerial growth-related actions and executive change are important predictors and that specific configurations of managerial actions play the largest role in predicting high growth but differ depending on the firm's past growth (i.e. R2 ~25%). Based on these findings, we advance a new theory for high growth and its persistence and make several contributions to the fields of high growth, growth strategy, and resource configuration.

STR: **Framing Firms' Technological Investment Strategy in Nascent Industries and a Research Agenda**

Author: **Fabio Busicchia**, *Politecnico di Milano School of Management*
Author: **Cristina Rossi Lamastra**, *Politecnico di Milano School of Management*

Although a pre-commercialization period of nascent industries is not new in industry evolution literature, recent studies properly defined it as the incubation stage of a nascent industry. The incubation stage is a vibrant period of experimentation, firms' technological investments, and the development of industry knowledge bases even before a product-market had existed. Given the presence of investing firms in the industry before industry inception, explaining the entry of market pioneers in nascent industries as a result of a single concept, such as "dominance by birthright", seems to undermine the variety of decisions undertaken by managers and entrepreneurs. Based on 45 selected papers mentioning firms' strategic decisions during the pre-commercialization period of industries, we developed a conceptual framework for firms' technological investment strategy in the incubation stage of nascent industries. We conceptualized technological investment strategy (1) as a sequence of events, distinguishing the technological entry from (subsequent) technological investments; and (2) influenced by interdependent decisions over and across five dimensions: whether/who?, when?, where?, what?, how?. After we described each dimension, we linked firms' decisions and underlying antecedents to firm- and industry-level outcomes. Mechanisms and contingencies enabling market entry and industry emergence arose. Against this background, we highlighted important avenues in a research agenda.

STR: **Responding to Innovation Shocks in the Pre-commercialization Phase of an Industry**

Author: **Lyda S. Bigelow**, *U. of Utah*
Author: **Won Kyung Min**, *Fordham U.*

Recent research has renewed attention as to how firms respond to innovation shocks using the theory of comparative adjustment, transaction, and opportunity costs. This work hypothesizes when and to where firms chose to reposition in response to an innovation shock is a function of these costs. However, this new approach has not considered how firms might reposition in response to a shock in the incubation or pre-commercialization period of an industry. Using insights from a new set of research studies on this very early period of industry evolution, we develop propositions about firm response in this highly uncertain phase, with an appreciation for the enduring impact such decisions have on future positioning in the industry. We develop our ideas in the context of the innovation shock of blue LED technology in the solid-state lighting industry.

Network, Platform, and Ecosystem

Session Moderator: **Kijong Kim**, *Darla Moore School of Business, U. of South Carolina*

STR: **Ecosystem Structure and Institutional Restrictions: A Study of Zero Waste Certificate Adoption**

Author: **Kijong Kim**, *Darla Moore School of Business, U. of South Carolina*
Author: **Sali Li**, *U. of South Carolina*

Ecosystem governance of activities has gained extensive attention in scholarly research. Contrary to the prevailing focus on the coordination of downstream actor's activities, we examine how the ecosystem leader may promote specific practices to upstream actors such as suppliers. Expanding upon the traditional network relationships, we address the multilateral interdependencies within an ecosystem and how the ecosystem leader can motivate the suppliers to adopt best practices. Based on a sample of 201 Apple's suppliers between 2015 and 2020, we find that the suppliers with industrial proximity to the ecosystem leader is more likely to adopt the zero-waste certification. Moreover, the suppliers with higher levels of relative centrality to the adopter has a higher likelihood of certification adoption. However, this effect diminishes when the suppliers are located in institutionally restricted countries, entailing alignment challenges by the ecosystem leader. This article contributes to research on networks, ecosystem structure, and promotion of best practices in an ecosystem perspective.

STR: **Going Beyond "Winner-take-all": A Closer Look at Digital Platform Strategies**

Author: **Meaghan Jean Girard**, *HEC Montreal*

Although digital platforms are often associated with the Big Five and winner-takes-all-or-most outcomes, more recent literature on network effects, ecosystems and complementors have raised doubts on the ubiquity of this scenario. In light of this need for more nuance as it relates to platform strategy, this paper proposes a new integrative typology of digital platform strategic stances that is a function of firm boundaries and various network characteristics, which can in turn be used to classify a greater variety of platform scenarios that can allow platform firms to scale, as well as the associated risks and opportunities. In addition to proposing a certain equifinality for scaling, this typology makes several theoretical contributions, including stances in which platform firms can replace indirect network effects with data network effects, the trade-offs between ecosystem control, platform specialization and platform generativity, and a stronger theoretical integration of the platform, innovation ecosystem and network literatures.

STR: **"In Medio Stat Virtus": Targeted Ad in Social Media Platforms with Heterogeneous Participants**

Author: **Pietro Morino**, *Department of Management and Technology, Bocconi U.*
Author: **Claudio Panico**, *Bocconi U.*
Author: **Carmelo Cennamo**, *Copenhagen Business School*

Social media platforms face a strategic trade-off when addressing the needs of different user groups: while content providers would like to reach many users with their ads, users are not always interested in the advertised content and may suffer a disutility from advertising. How to create value for and thus attract participants from both sides? Using a formal model, we examine how the platform manages this positive-negative externalities trade-off by resorting to targeted advertising to minimize users' disutility from advertising. We find that contrary to mainstream theory's prediction of positive, self-reinforcing indirect network effects, platform configurations can have an unbalanced number of participants on the two sides. We show that "in medio stat virtus" principle applies indeed to this governance trade-off: the optimal governance strategy for the platform lies in-between the pricing level maximizing user benefits and that maximizing provider benefits.

STR: **Integrating Research on Alliances and Ecosystems**

Author: **Nudrat Mahmood**, *Schulich School of Business*
Author: **Anoop Madhok**, *Schulich School of Business*

In this paper we draw together the alliance and ecosystem literatures. We start by noting that alliances and ecosystems share in common the objective of value co-creation through bringing together resources of a modular and complementary nature, the main distinction being the number of actors who participate in the value creation process. We refer to this as differences in degree. In contrast, whereas the value creation process in alliances entails the bringing together of known resources belonging to known actors, in the case of ecosystems neither the actors nor the resources they possess are necessarily known ex ante. The notion of generativity captures this idea and results in differences between the two organizational forms with respect to processes of governance and outcomes of interest. We refer to these as differences in kind. Because generativity leads to differences in kind, we contend that generativity is a key distinctive feature that uniquely characterizes ecosystems and distinguishes them from other interorganizational forms of organizing, even more so than modularity and complementarity, which are largely present in alliances to varying degrees. We also extend our analysis to alliance portfolios and find that while they are similar to ecosystems in that they both require the focal firm to manage external actors as a whole, the means of doing so differs between the two, as alliance portfolios entail managing many different objectives while ecosystems entail orchestrating one system-level goal. Taken together we suggest that a partial integration between alliance and ecosystem literatures has the potential to generate fresh insights and spark new and potentially fruitful research directions in both streams.

Managing Various Resources

Session Moderator: **Mohammad Afif Sallatu**, *Department of Business Administration, National Chengchi U.*

STR: **The Substitute Role of Reputation on Firm Survivability: The Resource-Based View Perspective**

Author: **Mohammad Afif Sallatu**, *Department of Business Administration, National Chengchi U.*
Author: **Kuo-Feng Huang**, *National Chengchi U.*

This study examines the substitute role of a firm's reputation for other intangible resources (i.e., human capital, social network) in affecting its survivability. The discourses are based on the resource-based view (RBV) perspective, which further emphasizes the other form of interactions between intangible resources that are not solely enhancing each other. This is based on 111 survey data from university-based firms in Indonesia as it is perceived to be relevant in the reputation discourses. In sum, this study found that although human capital, social network, and reputation all individually positively affect survivability, when they are put in interaction terms, reputation reduces the importance of the social network in affecting survivability. On the other hand, no evidence is found for the substitute effect between human capital and reputation. Such findings offer several insights and recommendations elaborated more in the paper to contribute to the ongoing discussion on the substitute effect of intangible resources in the RBV theory. Notably in the topic of a firm's reputation.

STR: **Concrete versus Abstract: How Innovators' Language of Framing Impacts Public Resource Acquisition?**

Author: **Lun Li**, *Business School, Beijing Normal U.*
Author: **Jizhen Li**, *Tsinghua U.*
Author: **Hao Jiao**, *Beijing Normal U.*

Innovators have been found to use distinct framing strategies to acquire the financial resources needed to sustain and grow their ideas. Using unique video-recorded transcripts of an Innofund presentation, we explore how innovators' framing language attribute influences their access to public resources. Building on the framing and linguistics literature, we hypothesize that innovators' framing language concreteness associates with positive public fund reviewers' evaluation of the innovation project. We further posit that this relationship is weaker for the focal project receiving external investment previously while stronger for the focal project with a high ratio of female presenters. Our results support the hypotheses and, thus, offer important insights into the framing, uncertainty regulation, and funding decision literature.

STR: **Labor Union Power and Long-term Hiring Management**

Author: **Ying Li**, *U. of Washington, Bothell*
Author: **Kiyoung Chang**, *U. of South Florida*

We hypothesize that the long-term employment characteristic of union workers would encourage (enhanced) long-term hiring management at union firms and that long-term hiring management therein is likely to be value-creating due to its complementarity. We present empirical evidence for long-term hiring management at U.S. union firms: 1. Employment growth is less sensitive to industry growth shocks and 2. Higher-than-expected hiring is associated with improved future firm value. We show that both relationships are causal, by using the adoption of right-to-work laws in different states at different times as a source of exogenous variation in union power. Whereas complementarity encourages long-term hiring management at union firms, we show that managerial ability is critical for it to be value-creating. Further exploration suggests that labor adjustment cost is likely the reason for long-term hiring management at union firms as we observe similar positive relation between future firm value and unexpected hiring at firms which face high labor adjustment cost, for example, those located in states with wrongful discharge laws and those relying heavily on skilled and non-routine labor.

STR: **Killing the Golden Goose: A Resource-Based Theory Perspective on Hedge Fund Activism**

Author: **Adam Clark**, *Chapman U.*

Under resource-based theory's model of profit generation, stakeholders who contribute profit-generating resources to a firm act as residual claimants on the economic profits their contributions helped generate. Accordingly, firms pursuing successful stakeholder management strategies may allocate economic profits to non-shareholder stakeholders in order to maintain the profit-generating potential of their bundle of resources. When such firms are targeted by activist hedge funds, managers may respond by shifting the economic profits being allocated to those stakeholders to shareholders instead, resulting in a decline in the firm's total economic profits. Using the context of hedge fund activism, this paper analyzes 540 instances of shareholders attempting to assert control over management between 2000 and 2018. This analysis offers support for the theory developed in this paper. This paper concludes by discussing the implications for stakeholder theory, agency theory, and the literature on hedge fund activism.

CEO Behaviors and Other Top Executives

Session Moderator: **Toru Yoshikawa**, *Lee Kong Chian School of Business, Singapore Management U.*

STR: **Female CHRO Appointments: A Crack in the Glass Ceiling?**

Author: **Toru Yoshikawa**, *Lee Kong Chian School of Business, Singapore Management U.*
Author: **Daisuke Uchida**, *Kyushu U.*
Author: **Richard R. Smith**, *Johns Hopkins Carey Business School*

The ongoing underrepresentation of women in the top management positions is well noted. Despite this underrepresentation, we observe an increase in the number of women appointed to the Chief Human Resource Officer (CHRO). While this potentially holds promise for top management gender diversity, we do not know much about how women have been appointed to this position especially after a male predecessor. We thus examine the competing forces of social role perception and social categorization on a gender shift in the CHRO position. Social role theory predicts that the appointment of a female CHRO would be promoted due to gender stereotypes, while social categorization theory predicts that the appointment of a female executive including the CHRO would be avoided due to the outsider status of women. We find that the firm is less likely to appoint a female CHRO following a male predecessor, consistent with social categorization theory. However, our results further show that CEOs' board position in a firm with a female CHRO and the industry-level diffusion of a female CHRO facilitate a change from a male CHRO to a female CHRO. These results suggest that the effect of social role perception is triggered under some circumstances.

STR: **Overconfident CEOs Reluctance to Delegate**

Author: **Matthew Josefy**, *Indiana U. - Kelley School of Business*
Author: **Jared Smith**, *North Carolina State U.*
Author: **Daniel Greene**, *College of Business, Clemson U.*

This research considers delegation as a key mechanism by which CEOs can affect firm outcomes and examines how one particular attribute, overconfidence, can alter delegation tendencies. We develop theory to explain how overconfident CEOs approach the cost-benefit assessment of delegation differently and that these tendencies lead to a sub-optimal approach to involving other executives. We test our predictions using a large sample of mergers and acquisitions, finding that overconfident CEOs delegate less frequently than other CEOs and that this is particularly discernable for less strategic deals. The sub-optimal delegation of overconfident CEOs is associated with a higher likelihood of subsequent firm exit via acquisition.

STR: **CEO Advice-seeking Differentiation, TMT Relationship Conflict, and Firm Ambidextrous Strategic Orie**

Author: **Xue Wan**, *Tongji U.*
Author: **Stephen Xu Zhang**, *U. of Adelaide*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Yang Lyu**, *NU SKIN CHINA DAILY USE PRODUCTS CORPORATION LTD*

Studies call into question of TMT collective model of strategic decision-making. One of the next research frontiers for upper echelons scholars is suggested to study the varying involvement of executives in strategic decision-making. We integrate CEO advice-seeking and upper echelons research to study the varying interaction of CEO advice-seeking from TMT members in strategic decision-making. We also distinguish the overall level of CEO advice-seeking from TMT and the differentiated interaction of CEO advice-seeking from TMT. Using three-wave survey data from the 154 SMEs, we find that CEO advice-seeking differentiation is significantly related to TMT and organizational effectiveness while CEO advice-seeking level is not. And the cost of CEO advice-seeking differentiation is only for male CEOs. The new conceptualization of CEO advice-seeking (i.e., CEO advice-seeking differentiation) charts a new direction to advance research on strategic decision-making.

STR: **CFO Turnover Frequency and Post-succession Performance**

Author: **Dasol Sim**, *Florida International U.*
Author: **Hami Usta**, -
Author: **Martyna Aleksandra Jacenko**, *Florida International U.*

Prior research has shown that the CFO is a key executive influencing firm strategy and performance. However, even if the importance of the CFO position, less research has been done on how CFO turnover affects firm performance. Thus, this study examines the relationship between the CFO turnover frequency and post-succession performance based on executive succession and human capital literature. Emphasizing the adaptation and the disruption views, we hypothesize CFO turnover frequency has an inverted U-shaped relationship with post-succession performance. Empirical tests based on a sample of S&P 1500 firms support our argument, and this relationship is moderated by other TMT members' tenure.

Executive Succession

Session Moderator: **Kexin Wang**, *Guanghua School of Management, Peking U.*

STR: **Interim CEO Successions: CEO Transition Disruption versus Improved Candidate Selection**

Author: **Rob Langan**, *U. of Geneva*
Author: **TIll Nicolas Deuschel**, *U. Carlos III de Madrid*

This paper compares the performance associated with CEOs appointed following an interim period with the performance of CEOs appointed in a direct succession. We posit that both succession types result in different performance outcomes as each uniquely affects the two main components of CEO succession: the candidate selection process and the CEO transition process. We argue that post-succession firm performance following an interim period is, on average, poorer than following direct CEO succession because it disrupts the transition process. However, we argue that this effect diminishes in challenging selection contexts, as the interim period enables boards to avoid the pitfalls of escalating their commitment to existing succession practices and instead allows them to adapt their selection processes to the firm's present needs. We focus on three aspects that may drive difficulty in CEO selection: the firm's environment, the firm itself, and the desired candidate. Using a sample of CEO successions that occurred in S&P 1,500 firms between the years 2002 and 2016, we find support for our hypotheses. This paper thus extends theory on CEO successions by elucidating the implications of the two succession components and their effect on firm performance. The paper also contributes to theory building on interim CEO successions by looking past the immediate, short-term effects of interim CEO appointments and instead examining the performance consequences associated with the permanent CEO ultimately hired.

STR: **Structural Power Equality Between New and Retained TMT Members and New CEOs' Early Survival Prospect**

Author: **Kexin Wang**, *Guanghua School of Management, Peking U.*
Author: **Xiwei Yi**, *Peking U.*

Establishing top management teams is one of the most important tasks for new CEOs in the leadership transition period. This study examines how power dynamics during the TMT change process affect new CEOs' early survival prospects. We define structural power equality as the relative power distribution between newly appointed TMT members (i.e., those who are appointed during CEO succession) and retained TMT members (i.e., those who have worked with the predecessor CEO and remained TMT when the new CEO succeed) in terms of titles, compensation, and representation on the board of directors. Drawing on dominant coalition theory, we propose that greater equality in structural power increases new CEOs' early dismissal rate, as it intensifies the political struggles across newly appointed and retained TMT members. Moreover, we propose that this relationship is weakened by TMT reward interdependence and CEO charismatic leadership. Using a sample of CEO succession in S&P 1500 firms between 2002-2012, we find strong support for our theoretical predictions.

STR: **You Are the One: Nomination Committees and the Market Reaction to CEO Succession**

Author: **Michelle Lang**, *U. of Goettingen*
Author: **Katharina Kemmerich**, *U. of Goettingen*

In this study, we empirically examine the role of nomination committees (NCs) for the se-lection of new CEOs from a resource provision perspective. We conceptualize the new CEO se-lection process from the NC's perspective along three main pillars: demand, supply, and process. We hypothesize that NC competency as the sum of the individual pillar competencies generally leads to higher quality CEO selection decisions, reflected in positive capital market reactions to new CEO announcements. Yet, we propose that industry complexity, the unavailability of an heir apparent, and forced CEO turnover represent unpredictable and challenging succession environ-ments that accentuate the need for individual NC competencies. Using 2,278 CEO succession announcement in S&P1500 firms between 2004-2019, we find NC competency to positively af-fect the market reaction to new CEO announcements. We further find that industry complexity strengthens the relation between NC demand competency and announcement CARs, and forced CEO turnover situations strengthen the relationship between NC process competency and an-nouncement CARs. Our findings underline the need for analyzing critical leadership transition as a committee-level determinant from a resource perspective. Accordingly, we make important con-tributions to both the CEO succession literature and the board committee literature.

STR: **Why do Firms Hire Experienced CEOs? Succession Circumstances, Board Characteristics and CEO Power**

Author: **Juan Carlos Morales**, *West Texas A&M U.*
Author: **Vincent L. Barker**, *U. of Kansas*
Author: **Donald Joseph Schepker**, *U. of South Carolina*

While boards put significant effort into appointing the most suitable CEOs to address their firm's circumstances, the reasons firms hire experienced CEOs (i.e., executives who were formerly CEOs of other firms) have not been substantially examined. Building on resource dependence theory, we posit that boards of directors reach out to experienced CEOs when their firms have substantial uncertainty in their succession situations, coming from the existing CEO being dismissed for corporate misconduct or poor firm performance. Such dismissals may create a chaotic situation within the firm's top executive ranks, and an experienced former CEO may be seen as a steadying force, which may be a highly needed top executive resource in a tumultuous strategic leadership situation. Further, we examine the effects of (1) powerful departing CEOs and (2) board and ownership characteristics on the likelihood of hiring an experienced CEO. We test our hypotheses using a propensity-score matched sample of S&P 1500 firms that hired experienced CEOs with those that did not hire such CEOs when having a succession between 1999 and 2020. We find that firms hiring experienced CEOs were more likely to have dismissed their previous CEO for performance problems, have more independent directors, and have a former CEO who had less power.

Succession in Family Firms

Session Moderator: **Yijie Min**, *Guanghua School of Management, Peking U.*

STR: **Estranged Bedfellows: Familiar Appointment and Non-family TMT Turnover in Lone-founder Firms**

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*
Author: **Xiangru Zhou**, *Peking U.*
Author: **Yufeng Xia**, *Peking U.*
Author: **Junyan Lu**, *Guanghua School of Management, Peking U.*
Author: **Wanfang Hou**, *School of Information Management, Nanjing U.*

Recent studies indicate some founders can be retained as firms mature. This study thus extends the temporal scope of founder-TMT interface discussion to late entrepreneurial phases, in which exit and succession replace survival and growth as core issues for founders. Our findings indicate that founder's first-time familial appointment, as an indication of exit and succession route, is positively related with non-family TMT members' voluntary turnover rate. Further, this main effect is two-way moderated by founder-side factors including celebrity status and entrepreneurial narrative and three-way moderated by TMT-side factor of non-family TMT ownership. These findings show the uniqueness of founder-TMT interface in late entrepreneurial phases and contribute to TMT role structure literature.

STR: **CEOs' Regulatory Focus and Successor Choice in Family Firms: A Holistic Picture of Financial and Non**

Author: **YuRu Zhou**, *School of Business and Management, Shanghai International Studies U.*
Author: **Feifei Lu**, *Shanghai U.*
Author: **Fulin Hao**, *School of Business and Management, Shanghai International Studies U.*

By integrating upper echelon theory, socioemotional wealth (SEW) and regulatory fit perspective, this paper examines how CEO promotion and prevention focus affect successor choice in family firms and theorizes how the relationships are moderated by financial and SEW performance feedback. Using a sample of 442 Chinese family business CEOs, we found that CEO prevention focus is positively related to the probability of selecting a family member to succeed and this relationship is accentuated by both performance loss and SEW loss. However, CEO promotion focus is negatively related to the probability of selecting a family member to succeed and this relationship is accentuated by performance loss but attenuated by SEW loss. This paper enhances research on CEO regulatory focus by spotlighting the boundary conditions of its effects on family business succession.

STR: **The Influence of CEO Possession Attachment on Successor Choice in Family Business**

Author: **YuRu Zhou**, *School of Business and Management, Shanghai International Studies U.*
Author: **Hao Gao**, *Tsinghua U.*
Author: **YanLing Lian**, *Faculty of Economics and Management, East China Normal U.*

Based on attachment theory, this paper investigates why and when incumbent CEO possession attachment to the family business has an impact on their successor choice. The hypotheses are tested based on the experimental manipulation of 280 MBA students and the questionnaire survey of 112 incumbent CEOs in family business. The results showed that the higher CEO possession attachment to the family business, the more likely they tend to choose offspring as the successor. Furthermore, we found that the positive effect of CEO possession attachment on succession choice (offspring) preference is magnified by CEO past focus. Results also indicated a three-way interaction effect in which CEOs with high possession attachment conducted the highest levels of succession choice (offspring) preference when both pre-succession firm performance and CEO present focus were high. By exploring a new antecedent and expanding the boundary conditions of family business successor selection from the micro lens, this paper contributes to the research on family business succession and provides enlightenment for the management practice.

STR: **Succession Processes in Family Firms: A New Perspective**

Author: **Christine Scheef**, *U. of St. Gallen*
Author: **Thomas Markus Zellweger**, *U. of St. Gallen*

Succession is the most prominent topic in family business research and the succession path that a family chooses will likely impact the future performance of the business. Yet surprisingly little is known about succession paths: The sequence, pace, and rhythm with which the CEO, board chair, director, and owner roles are transitioned from one generation to the next. Using an inductive, theory-building approach based on sequence analysis and evidence from succession paths in 142 public family firms in the US, we address this gap. Our study reveals five distinct sequences of how the CEO, board chair, director, and owner roles are transitioned over time. These sequences not only vary in their pace and rhythm, but also in their performance consequences. Specifically, we find that family firms with fast-paced succession paths and those with slow-paced, rhythmic succession paths outperform those with irregular rhythms. Further, early-ownership transitions benefit firm performance. Establishing succession paths as a meaningful new concept in family business research, this study not only advances our understanding of the succession phenomenon but also extends our theoretical insights into temporal processes in family firm successions.

CEO Values and Ideology

Session Moderator: **Weiguo Zhong**, *Peking U.*

STR: **CEO Ideology and Firm Performance**

Author: **Weiguo Zhong**, *Peking U.*
Author: **Ya Lin**, *Chinese U. of Hong Kong*
Author: **Haiyin Tu**, *Nanjing U.*
Author: **Huaxi Gao**, *Guanghua School of Management, Peking U.*

Whether CEOs assume human nature to be inherently good or evil ("CEO humanity ideology") fundamentally influences the ways that CEOs view their employees and organizations. Drawing on upper echelon theory, we contend that CEO humanity ideology impacts firm performance via distinct strategic leadership behaviors. Specifically, we argue that an evil assumption about human nature promotes directive leadership while constraining empowering leadership. Such leadership styles mediate the relationship between CEO humanity ideology and firm performance. In addition, organizational human capital further moderates the relationship between directive (or empowering) leadership and firm performance. Analyses of a two-year matched survey sample of CEOs largely confirm our hypotheses. By examining CEO humanity ideology, our study investigates a core component of CEO ideology that focuses on human nature and explores its rippling effects on leadership behaviors and firm outcomes, advancing upper echelons research.

STR: **CEO Rationalization and Corporate Misconduct: A Meta-Analytic Structural Equation Model**

Author: **Max Braun**, *Freie U. Berlin*
Author: **Karen Schnatterly**, *Virginia Tech*

The rationalization of unethical behaviors is key to understanding why corporate leaders engage in corporate misconduct. The ability to rationalize misconduct is determined by personal disposition as well as situationally induced by organizational environments such as incentives and monitoring structures in corporations. We differentiate the dispositional and situational facets of rationalization, by using a meta-analytical structural equation modeling approach to analyze the data of 224 primary studies covering samples from 19 countries for a period between 1970 and 2019. The results suggest that among all factors in our study, a CEO's disposition to rationalize is most strongly related to corporate misconduct. Our results also show that situational rationalization is selective. While organizational incentives situationally increase a CEO's ability to rationalize, monitoring does not reduce it. We supplement these results with an alternative way of social-psychological rationalization on the board level. The results of rationalization by board homophily emphasize the central role CEOs and their rationalization take in the commission of corporate misconduct. Our results reveal the role of dispositional, environmentally induced, and social-psychological aspects of rationalization and inform the behavioral aspects involved in corporate misconduct and corporate governance.

STR: **A Moral Foundations Perspective on CEO Political Ideology and Moral Behavior**

Author: **Marc Kowalzick**, *U. of Mannheim*
Author: **Moritz Appels**, *Rotterdam School of Management, Erasmus U.*
Author: **Michael Woywode**, *U. of Mannheim*

As an integral component of their value system, CEOs' political ideology has come to be regarded a major determinant for (ir)responsible behaviors. Yet, prior work remains inconclusive on whether it is a more liberal or a more conservative ideological leaning that leads CEOs to engage in more or less (ir)responsible behavior. We argue that this is, at least partly, due to a reliance on the theory of political ideology as motivated cognition rather than the consideration of ideological differences from the perspective of moral psychology. Integrating moral foundations theory into the upper echelons perspective, we theorize that what distinguishes the (ir)responsibility of liberal versus conservative-leaning CEOs may at times be its nature rather than its degree and depend on individual and contextual characteristics. Correspondingly, we show that higher degrees of liberalism and conservatism induce CEOs to increasingly engage in higher degrees of responsible behavior (CSR). In the domain of irresponsible behavior, we likewise observe comparability in CEOs' degree of earnings management and demonstrate that liberal and conservative-leaning CEOs' ways of managing earnings follow their ideological reliance on differential moral foundations. As such, we offer a new vantage on CEOs' political ideologies and their organizational ramifications in (ir)responsibly laden contexts.

STR: **Shareholder Activists' Reaction to CEO Sociopolitical Activism**

Author: **Yuting Yang**, *Iowa State U.*
Author: **Elle Hyunjung Yoon**, *Iowa State U.*

CEOs are increasingly expressing their stance on social or political issues in public, and this phenomenon, referred to as CEO sociopolitical activism, has received recent attention from scholars. This study attempts to further scholarly discussion on this topic and examines how shareholder activists react to CEO sociopolitical activism. Drawing on expectancy violation theory, we first theorize that CEO sociopolitical activism falls below governance-focused shareholder activists' expectations of CEO actions (i.e., negative violation), prompting greater activism behavior among governance-focused shareholder activists. We also theorize that CEO sociopolitical activism exceeds socially focused shareholder activists' expectations of CEO behavior (i.e., positive violation), giving rise to more active responses from socially focused shareholder activists. We argue that the political ideology alignment between CEOs and shareholder activists attenuates the positive relationship between CEO sociopolitical activism and governance-focused shareholder activists but strengthens the positive relationship between CEO sociopolitical activism and socially focused shareholder activists. Using a sample of CEOs of S&P 500 firms from 2011 to 2018, we found evidence supporting the positive effect of CEO sociopolitical activism on governance-focused shareholder activism.

Knowledge Management

Session Moderator: **Jarrod Haar**, *Massey U. Business School*

STR: **Knowledge Hiding Climate & Firm Performance: Mediating Effects of Entrepreneurial Orientation**

Author: **Jarrod Haar**, *Massey U. Business School*
Author: **Conor O'Kane**, *U. of Otago*
Author: **Urs S. Daellenbach**, *Te Herenga Waka - Victoria U. of Wellington*
Author: **David Brougham**, *Massey U. Palmerston North*
Author: **Paula Marie O'Kane**, *U. of Otago*

Knowledge hiding climate (KHC) is a climate of knowledge hiding within teams, departments, organizations, and their workforces. Emerging evidence suggests it is detrimental to firm performance. However, how KHC detrimentally influences firm performance remains untested. The present study explores KHC to financial and development performance and then tests the effects of entrepreneurial orientation (EO). Here, we expect KHC to undermine EO but for EO to mediate the direct effects of KHC on firm performance. Hence, the study adds to the knowledge hiding literature by attempting to show that KHC undermines the entrepreneurial process (innovation, risk-taking, and proactiveness), which is how firm performance is ultimately affected. To improve methodological confidence, we conducted three studies on New Zealand private sector firms: (1) 402 firms (single-sourced), (2) 300 firms (time-lagged performance data) and (3) 217 firms (time-lagged performance data and EO). Overall, KHC is negatively related to EO and firm performance outcomes across all studies. However, while EO significantly predicts firm performance and fully mediates the effects of KHC, significant indirect effects remain, highlighting the detrimental and lasting effects of KHC. Overall, the study confirms the detrimental influence of KHC on firms' ability to perform by undermining the entrepreneurial process.

STR: **The Interplay Between its Destabilizing Attributes and the Inventing Firm's Existing IP**

Author: **H Kevin Steensma**, *U. of Washington*
Author: **Jiyao Chen**, *Oregon State U.*
Author: **Shaokun Fan**, *Oregon State U.*

Understanding conditions that enable firms to appropriate greater value from their inventions has been a long-standing pursuit. We explore how the value of a newly patented invention to the inventing firm is contingent on the composition of the firm's existing intellectual property holdings. We find that the inventing firm appropriates greater economic and generative value from its trajectory-destabilizing inventions when its existing portfolio of intellectual property is technologically diverse. In such cases, the inventing firm has the diverse knowledge components that enable it to develop particularly valuable complementary intellectual property specific to the trajectory-destabilizing invention. Moreover, having invented the trajectory-destabilizing invention, the firm has unique insights vis-à-vis others into how to recombine the invention with such diverse components.

STR: **Knowledge Governance in Open Source Contributions: The Role of Gatekeepers**

Author: **Shaoqin Tang**, *U. of Colorado, Boulder*
Author: **Zhiyi Wang**, *U. of Colorado, Boulder*
Author: **Tony Tong**, *U. of Colorado, Boulder*

Firms increasingly engage in online communities to source external knowledge from voluntary contributors. Although prior literature examines how to incentivize contributors' continued knowledge contribution, scant research has studied how to balance between continued participation and high-quality contribution. We aim to fill this gap by examining how organizational gatekeepers' interactions with contributors affect the latter's continued participation and the quality of contribution. Predictions are formalized in an analytical model that analyzes how contributors' belief updating process is affected by gatekeepers' input acceptance and knowledge sharing activities. Utilizing data on 115,948 new contributors' participation in firm-owned OSS projects on GitHub, we find that gatekeepers' knowledge sharing and input acceptance in initial interactions with newcomers have positive effects on the latter's continued participation. In addition, sharing specific knowledge related to the contributors' performance is positively associated with newcomers' work quality in their subsequent participation, while input acceptance and sharing general knowledge decrease the quality of subsequent contributions.

STR: **Is knowledge the Most Important Strategic Resource? A Meta-analytic Investigation**

Author: **Laura D'Oria**, *Iowa State U.*
Author: **Thomas R. Crook**, *U. of Tennessee, Knoxville*

The knowledge-based view of the firm holds that knowledge is the most important strategic resource. We test this assertion using a meta-analysis of the accumulated empirical evidence from 1991 through 2021 on the relationship between strategic resources, firm growth, and performance. Findings from 307 samples reporting 170,359 firm-level observations show that knowledge resources have the highest positive association with growth while intangible resources have the highest positive association with financial performance. In addition, when averaged across both growth and performance, knowledge has the highest overall positive associations. Overall, the evidence suggests that knowledge meets its designation as the most important strategic resource. A key implication is that the knowledge-based view of the firm has broader applications than its depiction as a "special case of resource-based thinking."

Behavioral Approaches to Exploration and Exploitation

Session Moderator: **Addis Gedefaw Birhanu**, *EMLYON Business School*

STR: **Behavioral Considerations in Patent Exploitation by Family Firms**

Author: **Addis Gedefaw Birhanu**, *EMLYON Business School*
Author: **Alfonso Gambardella**, *Bocconi U.*

This paper examines the relationship between family ownership and patent use strategy using primary data from a patent survey, and patent and firm-level data from secondary sources. We find that family firms are less likely than non-family firms to license and more than non-family firms to internally commercialize their patents. Family firms' decision to license less is not driven by their lower patent quality or inefficient use of patents. Instead, it is due to their preference for patent uses that give them more control over values they can appropriate from their innovations. To this end, family firms leverage their managerial discretion to explore and seize internal patent commercialization opportunities by deviating from intended patent uses.

STR: **Balancing Exploration and Exploitation in an Industry in Transition**

Author: **Julia Hartmann**, *EBS U. of Business and Law*
Author: **Andrew Inkpen**, *Thunderbird School of Global Management at ASU*
Author: **Kannan Ramaswamy**, *Thunderbird School of Global Management at ASU*

Every firm is faced with the reality that over time, industry competitive dynamics will shift. As competitive dynamics shift, firms must make strategic choices in response to the evolving competitive environment. As the world shifts from oil and gas to new sources of energy, questions about the strategies of oil and gas firms can be viewed as attempts to establish a balance between exploitation and exploration. Our longitudinal empirical study spanning ten years shows that although incumbent firms that are richly endowed with accumulated assets tend to favor exploitation initiatives, markets reward those firms that embrace more exploration intensive behaviors. Firms that exhibit ambidexterity are the ones most favored by investors. Further, organizational slack has a curvilinear impact on the exploitation versus exploration balance with firms adopting more exploitation behaviors at lower levels of slack until a point of inflection, beyond which higher levels of slack are associated with a greater propensity towards exploration.

STR: **Go with the Flow: Competitive Dynamics and Firms' Exploration**

Author: **Prakash Raj Paudel**, *BI Norwegian Business School*
Author: **Pengfei Wang**, *BI Norwegian Business School*

How do firms react to competitors' exploration? Prior literature has emphasized vicarious learning and postulated that firms will follow their competitors to explore. However, such perspective overlooks the direction of competitors' exploration. Specifically, because exploration is defined from the viewpoint of a given firm, competitors' exploration is not necessarily considered exploratory by the focal firm. Building on the spatial competition perspective, we emphasize that competitors may explore either away from or closer towards a firm's position, which will have very different implications for its exploration tendencies. Specifically, we argue that a firm will make more exploratory efforts if competitors explore towards its market positions, which escalates competitive pressure. However, if competitors explore to positions that are distant from the firm, it may exhibit less exploratory (more exploitative) tendencies. By analyzing product market repositioning of public firms in the U.S. from 1997 to 2017, we find general support to our conjectures. The findings extend our understanding about market competition and firm exploration.

STR: **Mesa Landscapes: An Ethnographic View of Exploration and Performance Landscapes**

Author: **Thomas Steinberger**, *Korea Advanced Institute of Science and Technology (KAIST)*
Author: **Ju Yeon Jung**, *U. of Michigan, Ann Arbor*

How do firms explore performance landscapes? Research in strategy has mostly studied this question using simulations or lab experiments that assume relatively simple actions to explore rugged, but mostly given landscapes. This paper presents an ethnographic case study of a problem-solving process to study exploration where feedback is sparse. Sparse feedback means that the landscape has only low and high areas, such that the landscape topology is more like a mesa than a set of rugged local peaks and reaching high areas require richer exploratory actions. To set up our case study, we first lay out a conceptual framework that connects ethnographic views of action with research from the AI field on exploring with sparse feedback. Drawing on a case of the repair of an integrated circuit board, we then identify actions for exploring 'mesa landscapes' of representation and reasoning about constraints. By providing ethnographic insight into exploring a mesa landscape, this paper extends our understanding of how firms explore novel solutions to problems as well as the methodological toolbox in the landscape literature.

Measuring Corporate Environmental Sustainability Performance: Current Approaches & the Path Forward

Organizer: **Narae Lee**, *Singapore Management U.*
Organizer: **Franziska Hittmair**, *NOVA School of Business and Economics*
Participant: **Florian Berg**, *Massachusetts Institute of Technology*
Participant: **Michael L. Barnett**, *Rutgers U.*
Participant: **Nilanjana Dutt**, *Bocconi U.*
Participant: **Andrew King**, *Boston U. Questrom School of Business*
Participant: **Ethan Rouen**, *Harvard Business School*
Participant: **Jasjit Singh**, *INSEAD*

In this panel symposium, we seek to discuss current approaches on measuring corporate environmental performance, their advantages and drawbacks, and promising paths for moving forward not only for management scholars but also for practitioners. To that end, we structure the symposium along three core topics; 1) context specific advantages and disadvantages of using different measures and the possible ways to overcome identified disadvantages; 2) reflection on the recent efforts in standardizing and mandating the reporting of sustainability performance; and 3) broader societal implications of using the advanced measurement. We conclude the symposium by inviting the audience to Q&A and discussion.

Discussant: **Jiao Luo**, *U. of Minnesota*
Discussant: **Francisco Polidoro**, *U. of Texas at Austin*

This symposium introduces a series of studies exploring the intersection of innovation and non-market strategy literature. It examines the private incentives and performance implications for firms that utilize their corporate scientific research to influence policy outcomes. The evidence from the studies indicates that firms may choose to utilize scientific information in order to sway policymakers based on the belief that such information is perceived as objective and unbiased. However, the effectiveness of this strategy varies depending on the specific actors targeted and the nature of the scientific information employed. The research also finds that the use of scientific information can help counter the perception that firms provide biased information to policymakers, however. We also highlight the fundamental tension while disclosing scientific information that this is not always effective and can potentially also lead to knowledge leakage to competitors. This work contributes to the innovation literature by focusing on "integrated strategy" which combines both nonmarket and market strategy, and to the nonmarket strategy literature by examining the relationship between scientific publications, lobbying, and influence on policy.

Not All Black-Boxes Are the Same: Unpacking and Theorizing Different Algorithmic Technologies

Organizer: **Sung Ho Park**, *U. of Washington, Seattle*
Panelist: **Callen Anthony**, *New York U.*
Panelist: **Sarah Lebovitz**, *U. of Virginia*
Panelist: **Alex Michael Murray**, *U. of Oregon*
Panelist: **Stella Pachidi**, *U. of Cambridge*

Algorithmic technologies such as data analytics, a/b testing kits, blockchain applications, and other machine-learning tools are becoming more widely adopted among both entrepreneurial ventures and established organizations. However, despite the wide variety of algorithmic technologies being scrutinized, our current understanding of the typology of algorithmic technologies is in its infancy due to the lack of granularized theorization of the heterogeneities among these technologies. Specifically, we currently lack a concrete understanding of the differences in why/how/when/for whom each type of algorithmic technology induces or deters effective learning, decision- making, and action. In light of this gap, scholars have initiated a dialogue by unpacking the insides/components of these technologies that highlight the differences. To further the conversation, this panel symposium aims to invite scholars who have expertise in algorithmic technologies used in various contexts in the broader management literature to 1) clearly define the boundaries and categories of algorithmic technologies, 2) outline the unique properties of algorithmic technologies compared to prior assisting technologies and share how the differences affect organizations/organizational constituents, 3) outline the differences among a variety of algorithmic technologies and discuss how the differences influence/relate to existing theories often employed in management literatures, and 4) introduce empirical contexts and sources of data that can be used to study algorithmic technologies.

This workshop offers practical advice to doctoral students on completing their dissertations and transitioning to their first academic positions. It is anticipated that the workshop will be held in live on-site format. The workshop is open to all doctoral students. Pre-registration will be required. The workshop will be conducted in an informal setting where students will be able to interact with faculty and other students in small groups. The finalists for last year's STR Outstanding Dissertation Award share the coordination of the workshop. The format of the PDW will include presentations and perspectives from last year's finalists and a panel of senior faculty. Attendees will break out into groups to meet with faculty and Q&A will be held after all sessions.

Gathering of POS Scholars at AOM: Putting Workers' (And Our Own) Untold Stories Front and Center

Organizer: **Gabriella Ring**, *Center for Positive Organizations, Ross School of Business, U. of Michigan*

Join us for this year's gathering where we lean into the AOM theme of putting the worker front and center to consider how we as POS scholars can put the untold stories of ourselves and others into research and practice. More specifically, the goal of this year's gathering is to practice how to cultivate and share untold stories that have historically been overlooked or viewed as taboo within the Academy, be they stories of marginalized or overlooked research populations, our own stories as we conduct research that challenges our minds or spirits, personal stories about navigating the Academy, and more. We will engage in interactive activities that will facilitate the surfacing and sharing of these stories, in order to inform more positive, holistic, and connected scholarship that can also be generative for teaching and community outreach. In doing so, this session aims to raise awareness about narratives that may be forgotten or buried under more 'mainstream' narratives and topics that exist within the literature. Ultimately, we aim to unlock positive resources within our community that may otherwise remain out of sight, allowing us to use those resources to encourage ourselves and others to put these important stories at the heart of the work we do.

This breakfast experience organized by the Center for Positive Organizations gathers together the community of scholars applying the concepts and theories in the field of Positive Organizational Scholarship in their research.

Problematizing the Classroom

Three key trends underscore the need for professors to consider the use of problem-based learning (PBL) in their teaching. One involves the changing demographic profile of students. Generation Y and Z students prefer to learn via active learning techniques and the principles of andragogy. The second entails the infusion of technology into teaching and students' preferences for digital learning. Finally, employers believe that college graduates are not career ready, which reinforces the need to develop students' critical thinking and problem-solving skills. The overall purpose of this workshop is to stimulate discussion and application of PBL within our teaching. Participants will leave the session with two key outcomes. First, participants will understand the characteristics of PBL and how they can be implemented in both face-to-face and online venues. Second, participants will understand how to use a video case and a simulation to foster PBL in their classes.
