The Covid-19 crisis has created multiple organizational challenges and severely affected healthcare institutions. The extant literature on crises and management is fragmented, primarily based on historical data, and disconnected from mainstream literature. Therefore, it is unclear how an organization configures resources to deal with a crisis that has caused panic and chaos. To understand this, we conducted a longitudinal case study in real-time at a health institution that dealt with the Covid-19 crisis. Our findings show that communicating and clarifying the purpose is critical in configuring resources when a crisis is looming. As a result, from an in-depth case study of a healthcare organization, including 47 interviews and a review of archival documents, we propose two mechanisms of resource configurations, i.e., a decentralized organizational structure and diversifying crisis experience. First, a decentralized structure facilitates discussion and debate, hence valuable for pragmatic decision-making. Second, diversifying crisis teams, combining knowledge from multiple experiences, leads to better crisis management. We further highlight the challenges and positive sides of re-configuring resources and then explain its impact on reverting a crisis (reducing the negative effects of a crisis). We organize these findings in an integrative model and explain the successful process of managing through a crisis.

SIM: **The Role Of Purpose In Sustainability-related Corporate Decision-making**

Author: **Tilmann Silber**, *Cambridge Institute for Sustainability Leadership*
Author: **Julia Grimm**, *Stockholm Business School*

Businesses are facing substantial sustainability challenges, with climate change among the most pressing ones. Corporate purpose has been proposed as an approach to strengthen companies' roles in tackling such challenges by re-considering their fundamental reason to exist. Moving beyond profit maximisation into an other-serving logic, corporate purpose sees the provision of prosocial impact as the ultimate end of business. Whereas purpose has been conceptually debated and practically applied to a significant extent, empirical research remains scarce. This study uses qualitative empirical data from the climate strategy-making process in B2C multinational companies in the food and beverage industry, to explore the potential role of purpose therein. Findings suggest that purpose influences strategy-making through four distinct pathways: agenda setting, leap of faith, extended analysis, and employee engagement. With this, the paper contributes to the literatures on corporate purpose and strategy-making.

Organization Structure and Design

Session Moderator: **Felipe Csaszar**, *U. of Michigan*

STR: **Individual to Organizational Utility Functions How Organizations Aggregate Heterogeneous Preferences**

Author: **Felipe Csaszar**, *U. of Michigan*
Author: **John Eklund**, *U. of Southern California*

A fundamental characteristic of organizations is that they aggregate the preferences of their members to make organization-level decisions. When examining how preferences are aggregated, prior work has tended to underplay the role of individual preference heterogeneity. We develop a novel approach to derive an organization's utility function from the heterogeneous utility functions of its members and the aggregation structure used. Our key insight to derive the organizational utility function is translating utility functions into choice probabilities and vice versa. We demonstrate that an organizational utility function is not just the sum of individual utility functions but a nuanced amalgamation of the preferences of its members. Our work contributes to a better understanding of the effect of organizational conflict and suggests ways of managing organizational decision-making.

STR: **Hierarchy. Screening, and Contribution Quality in User Communities: Evidence from Steam**

Author: **Simon (Seongbin) Yoon**, *U. of California, Irvine*
Author: **John Joseph**, *U. of California, Irvine*

Understanding whether and when centralized decision making in an online user community increases the quality of contributions is important to management research. However, prior studies have offered contrasting findings. To better understand how a vertical hierarchy's centralized decision making increases the number of high quality ideas, we examine the interaction between the decision-making structure and community characteristics. We suggest that the vertical decision-making structure conditions the relationship between the number of high-quality contributions and average community experience, expertise, and engagement. Our primary thesis is that because centralization influences information processing and motivations within the community, hierarchy prompts what we call screening adjustments which alters the number of award-winning contributions. We test our hypotheses in online workshop communities on a platform referred to as Steam, one of the largest digital distribution platforms for video games. Using a propensity score matching approach, we also compare communities with and without a game manufacturer to make the final decisions on what contributions or "mods" to accept for a game. Our study contributes to theories of organization design, screening, and the literature on user innovation.

STR: **Digital Technologies' Implementation in Circular Businesses: Evidence from SMEs' Going Circular Path**

Author: **Francesco Antonio Perotti**, *U. of Agder, Norway*
Author: **Christian Di Prima**, *U. degli Studi di Torino*
Author: **Alberto Ferraris**, *U. of Zilina*

The aim of this research is to unpack how digital technologies can facilitate the flourishing of circular business models in SMEs, by structuring a detailed "going circular" path that explains businesses' dynamic evolution toward circularity. In so doing, it outlines how the observed organizations addressed - or are addressing – circular economy thanks to business digitalization. Following a qualitative approach based on a multiple case study methodology, rigorously designed according to a positivist philosophical tradition, we involved 16 SMEs actively committed to Sustainable Development Goals. Our findings confirm how digital technologies play a fundamental role in shaping, enabling, enhancing, and refining the development of circular products and processes. Building on the results of our empirical analysis, we managed to outline a generalisable step-by-step process to pursue circular economy employing digital technologies. It represents a practical handout for guiding companies through their "going circular" path, so as to address the circularity gap.

STR: **Searching Complex Landscapes: How Dyads and Individuals Differ in Responding to Part-Whole Feedback**

Author: **Stephan Billinger**, *U. of Southern Denmark*
Author: **Stefano Benincasa**, *U. of Vienna*
Author: **Oliver Baumann**, *U. of Southern Denmark*

In organizations, feedback is often available in disaggregate form for the parts and in aggregate form for the whole. While much is known about how firms respond to aggregate feedback, for instance, by engaging in problemistic search, much less is known about the situation when decision makers simultaneously receive feedback about the parts as well as the whole. Using a laboratory experiment with 172 participants, we compare how individuals and dyads search a task that is decomposed into two subtasks characterized by low or high interdependence. Participants face identical incentives while being exposed to parts-whole feedback across all conditions. Our findings show that dyads are more likely to give up active search than individuals. But when they don't maintain the status quo, they tend to search more broadly. We identify two causal mechanisms for these behaviors. The first is a higher sensitivity of dyads to feedback about the whole: Dyads are more likely to reduce information processing and change in the face of negative aggregate performance feedback. The second is a higher sensitivity of individuals to feedback about the parts: Individuals pay more attention to performance differences between interdependent subtasks, leading them to search more narrowly. We discuss implications for strategy and organization design.

Alliance Disruption and Termination

Session Moderator: **Ann-Kathrin Herfeld**, *WU Vienna*

STR: **Re-evaluating a Potential Alliance after a Disruption: A Conjoint Study**

Author: **Ann-Kathrin Herfeld**, *WU Vienna*

A disruption can interrupt companies in their operations as well as the formation process of their strategic alliances. A company should thus assess the new conditions and adapt its processes and strategies accordingly. If a disruption suspends the alliance formation process, the potential alliance should be re-evaluated, as prior assumptions or decisions might be outdated. Prior research on alliance re-evaluation focuses on existing alliances. Yet, we lack a better understanding of how companies re-evaluate their potential alliances after the formation process has been disrupted. I advance the current alliance re-evaluation literature by studying the re-evaluation options available to a company after the formation process has been disrupted. To achieve this, I am employing a choice-based conjoint analysis study with alliance managers to investigate how an intended alliance is re-evaluated once the partner company is affected by a disruption. In my experimental approach, the managers have to re-evaluate the intended alliance, taking into account the strategic importance of the intended alliance, resource complementarity, and specific investments into the alliance. This experimental approach allows me to highlight the trade-offs that managers make when re-evaluating alliances that are in the process of being established, and thus contribute to the literature on alliance formation and alliance re-evaluation.

STR: **You, Me, Us? The Role of Collective Identity Contract Framing in the Face of Alliance Disruptions**

Author: **Martin Kleis Pit**, *Faculty of Economics and Business, U. of Groningen*
Author: **Floor Rink**, *U. of Groningen*
Author: **Dries Faems**, *WHU Otto Beisheim School of Management*
Author: **Isabel Estrada Vaquero**, *Groningen U. (RuG)*

The framing of contracts has been identified as an important dimension to better understand the relationship between contracts and trust in alliances. Framing refers to the use of language and phrasing in a contract, and whereas prior research has mainly considered the regulatory focus of contractual framing, we rely on social identity theory to highlight collective identity framing as an alternative framing dimension, which is likely to influence trust perceptions and behaviors in alliances. We hypothesize that the presence of a collective identity contract frame can help to maintain trust in the setting of an alliance disruption. We also expect that the strength of this relationship is contingent on the alliance actor’s propensity to trust. In a first vignette study, we show that, after an alliance disruption, the presence of a collective identity frame triggers higher trust perceptions only when the alliance actor has a low propensity to trust. A second behavioral experiment replicates these results. Jointly, these findings provide a richer understanding of how contractual framing, in combination with actors’ personality traits, shape trust in challenging alliance settings such as disruptions.

STR: **Flipping a Switch: The Effect of Partners’ Multimarket Contact on Strategic Alliance Termination**

Author: **Tadhg Ryan-Charleton**, *Queen's U. Belfast*
Author: **Robert Galavan**, *National U. of Ireland, Maynooth*

Recent research connecting the mutual forbearance and strategic alliance literatures suggests that multimarket contact (MMC) increases alliance formation because the same forbearance mechanism between multimarket rivals also promotes cooperation between alliance partners. However, it is not clear whether this mechanism persists after the alliance is formed, whether MMC might also create postformation challenges for partners, nor what boundary conditions govern the main effect. Our study examines 555 alliance-year observations from 164 strategic alliances in the semiconductor industry. We observe a negative effect of MMC between partners on the likelihood of alliance termination, however, this effect is stronger when (i) partners do not share overlapping technological components and (ii) the alliance does not involve R&D activities. Additionally, reciprocal multimarket contacts have a stronger negative effect than non-reciprocal contacts but only in the subsamples of alliances where partners do not share overlapping technological components and the alliance does not involve R&D. Together, these results suggest that the negative effect of MMC between partners on the likelihood of strategic alliance termination is most pronounced when the risks of technological resource appropriation are low. When the risks of technological appropriation are high, the effect of MMC on alliance termination disappears.

STR: **Conflict and Dispute Management in Interorganizational Relationships: A Review**

Author: **Valerie Duplat**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Brian Vincent Tjemkes**, *Vrije U. Amsterdam*
Author: **Hugo Leenders**, *U. of Colorado, Boulder*

While a vast body of research exists on interorganizational conflict and dispute management (CDM), it remains fragmented and has not been properly integrated to date. To address this gap, we conducted a systematic literature review which makes the following contributions. First, we propose a comprehensive taxonomy of conflict and dispute management (CDM) practices, which bridges conceptual foci (e.g., venues, instruments, and stances) across various research disciplines within which CDM has been studied. Second, our review underscores that to understand choices and effects of CDM practices throughout the lifespans of conflicts it is critical to engage in research that crosses legal, transactional, and organizational perspectives. Third, building on the taxonomy and perspectives, we offer an integrative framework aimed at understanding how various practices are chosen throughout the lifespans of conflicts and how they affect each other. Our cross-disciplinary review unveils trends and gaps in extant literature and provides an agenda to guide future research on this critical topic.

Strategic Decision-Making

Session Moderator: **Xiaoning Ma**, *U. of International Business and Economics*

STR: **Information Visualization in Strategic Decisions: Impact of Cognitive Integration and Overconfidence**

Author: **Karin Eberhard**, *Philipps-U. Marburg*
Author: **Torsten Wulf**, *Philipps-U. Marburg*

Information visualization generally improves information acquisition and processing in decision-making. However, empirical research fails to provide conclusive support for this effect in strategic decisions and points toward the need to include moderating effects. Building on extant visualization research in cognitive psychology, we introduce cognitive integration as a boundary condition for information visualization to support strategic decision-making. We argue that only managers with high cognitive integration benefit from complex visualized information. We further posit that a reduction in decision overconfidence mediates the positive effect of information visualization on decision quality for managers with high cognitive integration. A vignette-based decision experiment involving 65 managers supports our hypotheses. Our paper contributes to strategic decision-making research by clarifying the roles of information visualization and cognitive integration as antecedents of effective decision-making. It also specifies the suitability of information visualization for communicating complex information in practice.

STR: **Speed of Decision-Making Process: The Role of Inconsistent Feedback and Organization Inertia**

Author: **Xiaoning Ma**, *U. of International Business and Economics*
Author: **Yu Li**, *U. of International Business and Economics*

Performance feedback research has alluded that different feedback can lead to various strategic behaviors. We complement this research by conducting how performance feedback influences decision-making speed. To respond to recent calls for multiple reference points of performance feedback, we focus on the inconsistent situation between positive historical feedback and negative future prospects, which may cause important distortions in performance assessment, make decision makers particularly confronted with challenges and influence the decision-making processes. Using the Chinese list firms' outward FDI data, we test the relationship between this feedback inconsistent and decision-making speed to entering new countries. The result show that the inconsistent between positive historical feedback and negative future prospects prompt the decision speed because poor prospects urge decision makers to speed up the firm's pace to explore new opportunities to reverse poor future. Besides, good historical performance makes decision makers have capacity confidence to the firm and strategic confidence to themselves, which also support them to make more fast decision. From organization characteristics perspective, we further develop a more complete picture of the relationship between performance feedback and decision speed by revealing the moderating role of the organization inertia for this relationship.

STR: **Unconventional Strategies: The Interplay of Artificial Intelligence and Human Cognitive Capabilities**

Author: **Philipp Grünwald**, *WU Vienna*

AI is able to outperform human decision-making in various decision-making settings. Especially augmented decision-making has become a potential source of competitive advantage. Therefore, this study explores how MNEs can utilize human-AI interaction to gain competitive advantage and investigates the potential factors that drive performance in a competitive human-AI task environment. We analyze human-AI interaction in the competitive context of chess and find that the more human-AI augmented decision-makers are considered an underdog against machines the higher the likelihood of pursuing unconventional strategies to throw off opponents. Our results suggest that this in turn has a positive effect on performance. Moreover, we find support that the positive relationship between unconventionality and performance is stronger, if human and machine originate from the same country.

STR: **Bayesianism and Unforeseen Events: Empirical Evidence from Two Field Experiments**

Author: **Danilo Messinese**, *Bocconi U.*
Author: **Alfonso Gambardella**, *Bocconi U.*

A strong critique to the adoption of probabilistic, Bayesian, reasoning to strategize under uncertainty is that Bayesian learning fails at dealing with unknown unknowns. This article provides empirical evidence of the evolution of beliefs of entrepreneurs trained to reason in probabilistic terms, in a situation of growing awareness of unforeseen events. According to the Bayesian framework, the prior state space shrinks in a process of variance reduction. This process does not allow the expansion of the state space and the consequent updating of probabilities of a priori null events. Thus, what happens when decision-makers get aware of the potential existence of unforeseen events in the future? In a series of articles, Karni and Vierø (2015, 2015, 2017) answered this question by introducing the theoretical concept of reverse Bayesianism. In this paper, we provide first empirical evidence of this concept by leveraging data from two twin randomized control trials (RCTs), run in India and Italy, involving early-stage entrepreneurs trained to reason in a scientific manner, i.e. to adopt a decision-making approach based on Bayesian updating of beliefs.

Boards/TMTs in Family Firms

Session Moderator: **Renfei Gao**, *U. of Manchester*

STR: **Counting on Family? Leadership Team Composition of Firms with Rural-Origin Founders in China**

Author: **Renfei Gao**, *U. of Manchester*
Author: **Xiaowei Luo**, *INSEAD*
Author: **Xiaogang He**, *Shanghai U. of Finance and Economics*

This study explores how socially discriminated firm leaders use family to overcome their market disadvantages. In the context of China, we examine firm founding leaders with rural original family backgrounds—rural founders, who are socially discriminated against in the Chinese urban-rural chasm. Drawing on the family embeddedness perspective, we argue that rural founders are more likely to use family members in leadership teams because the social discrimination they face engenders greater difficulty in attracting or retaining professional executives. We further explore the moderating roles of achieved social prestige at founder or firm levels, which could alleviate the social discrimination and thus weaken the positive relationship between rural founders and family embeddedness. Subsequently, the use of family members is more likely to contribute to rural founder-led firms' performance. Using panel data on Chinese privately-founded listed firms, we find support for our arguments. Our study offers novel insights and evidence about how socially discriminated firm leaders address disadvantages and gain competitive performance.

STR: **Without Being a Threat: Independent Directors, Competitive Dynamics, and Family Firm Performance**

Author: **Jaeyoung Cho**, *U. of Wollongong in Dubai*
Author: **Sam Garg**, *ESSEC Business School*

Much research on boards of directors has examined within a corporation model in which there is a separation of ownership and control and rested on the assumption that independent boards enhance board effectiveness in monitoring and curbing managerial self-interested and risk-taking behaviors. In a study of family-controlled firms where controlling family owners exercise tight management control, however, we show that by provisioning crucial resources without a threat of monitoring, more independent directors on the board help family-controlled firms to shape competitive aggressiveness and complexity and, ultimately, superior performance. This positive resource provisioning effect becomes more significant when the board also has higher levels of external directorship ties and industry experiences of independent directors. Broadly, by integrating the literature on boards of directors with competitive dynamics study, we add to the emergent renaissance in family governance research and board scholarship that call for a broader focus—looking beyond the relationship between board independence and monitoring to the role of independent directors in stimulating firms' competitive initiatives for superior performance.

STR: **Board Gender Diversity and Workforce Reductions in Family Firms**

Author: **Jessenia Dávila Ruiz**, *U. Carlos III de Madrid*
Author: **Luis R. Gomez-Mejia**, *Arizona State U.*
Author: **Fernando Muñoz-Bullón**, *U. Carlos III de Madrid*
Author: **Maria J- Sanchez-Bueno**, *U. Carlos III de Madrid*

This study investigates the impact of board gender diversity on workforce reductions. The findings suggest that firms with gender-diverse boards undertake more job cuts, but this relationship is attenuated in family firms. We propose that female directors favor more job cuts in order to comply with their role on the board and deal with their greater scrutiny and expectations. Yet, in family businesses, female directors develop a heightened identification with the family firm's affective endowment, leading them to avoid job cuts (a practice that puts the family's socioemotional wealth (SEW) at risk). Based on a sample of publicly listed firms (including family and non-family firms) in the US from 2008 to 2017, our empirical evidence provides support for our hypotheses. These findings advance our knowledge of employment practices and the effects of gender diversity on boards and offer important implications for theory and practice.

STR: **Family-Induced Heterogeneity Among Female Directors and its Implications to Firm Performance**

Author: **Yuliya Ponomareva**, *U. Autonoma De Barcelona*
Author: **Domenico Cambrea Rocco**, *U. commerciale Luigi Bocconi*
Author: **Mariateresa Torchia**, *International U. of Monaco*
Author: **Andrea Calabrò**, *IPAG Business School*

Building on board governance and family business research, we theorize that female directors affiliated with the controlling family face more barriers to provide a meaningful contribution to family firm performance than their non-family counterparts. However, these barriers are not uniform but vary depending on the nature of their family relationships with male board members. The hypotheses are tested on a sample of Italian listed family firms. The results show no direct effect of family female directors' contribution to firm performance. Nevertheless, family-affiliated female directors provide a meaningful contribution to family firm performance when the presence of male family members into the board is low. The contributions to the debate on heterogeneity among female directors profiles and the importance of considering the impact of family relationship within the board are discussed.

Executive Personality

Session Moderator: **Andrew B. Blake**, *Texas Tech U.*

STR: **The Cost of CEO Conflict Orientation: Exploring the Ramifications of CEO Agreeableness**

Author: **Andrew B. Blake**, *Texas Tech U.*
Author: **Oleg V. Petrenko**, *U. of Arkansas*
Author: **Federico Aime**, *Oklahoma State U.*
Author: **Theodore Waldron**, *Texas Tech U.*
Author: **Johnny Blaine Smith**, *U. of Arkansas*

: This study builds on the upper echelons tradition to examine the effects of CEO conflict orientation on relevant organizational characteristics and outcomes, such as CEO compensation and strategic change behavior. This is examined by assessing levels of the personality trait "agreeableness". While high levels of trait agreeableness may seem like an ideal characteristic, especially in top management team settings, we argue that there is an optimal and moderate level of this trait when examining its effects on a firm's propensity to engage in strategic change and performance in technologically intensive industries (TII), as well as perceived CEO value as exhibited by CEO pay. We show curvlinear relationships between CEO agreeableness CEO pay, as well as levels of strategic change and performance. We gather CEO characteristics data utilizing a videometric approach.

STR: **Performance Feedback and Corporate Risk-Taking: The Moderating Effects of CEO Personality**

Author: **Cameron Jay Borgholthaus**, *Southern Illinois U., Edwardsville*
Author: **Troy Smith**, *U. of Nebraska, Lincoln*
Author: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*

Upper echelons theory suggests that managers' characteristics, including their personality traits, may influence the way they interpret strategic situations and, in turn, impact their decision making. While prior upper echelons research has explored the effects of personality traits on decision making, there is a need for greater understanding of their boundary conditions. Utilizing behavioral theory of the firm and trait activation theory, we examine how firms' underperformance relative to their aspiration levels may provide a strong and trait-relevant situational cue that strengthens the impact of CEO personality traits on risk-taking activities. We find that CEO conscientiousness has a negative effect on firm risk taking activities (i.e., acquisitions, capital expenditures and R&D) when the firm performs below its relative aspirations. In contrast, CEO extraversion, neuroticism, and openness all have positive effects on firm risk-taking activities when the firm performs below its relative aspirations.

STR: **Is More Better? The Impact of CEO Narcissism on Firm Innovation**

Author: **Liaodan Zhang**, *Zhejiang U.*
Author: **Hanru Zhang**, *Zhejiang U., China*

This research illustrates the impacts of CEO narcissism on firm innovation output and two vital innovation processes, namely innovation input transformation process through which innovation input is transformed into output, and innovation output commercialization process through which innovation output is commercialized to raise firm performance. Based on data of 831 observations collected from database such as China Stock Market Accounting Research (CSMAR) in China, we perform the generalized method of moments (GMM) estimation to verify the distinctive impacts of CEO narcissism on firm innovation. It is confirmed that although CEO narcissism has been found to exert a positive effect on innovation input (i.e., high level of resource allocation), it hampers innovation input transformation process (i.e., low level of resource utilization), leading to an inverted U-shaped relationship between CEO narcissism and innovation output. Meanwhile, CEO narcissism can differently facilitate the innovation output commercialization process. Our research primarily contributes to literatures integrating CEO personality to explore firm innovation by reconciling the complex impacts of CEO narcissism on innovation output and two different processes.

STR: **When Personality Backfires - CEO Personality and Dismissal-performance Sensitivity**

Author: **Sebastian Firk**, *U. of Groningen*
Author: **Jan Christoph Hennig**, *Groningen U. (RuG)*
Author: **Hauke Meyer**, *U. of Goettingen*
Author: **Michael Wolff**, *U. of Goettingen*

In this study, we explore whether and how CEOs' personality traits influence their dismissal-performance sensitivity. To do so we integrate attribution theory with literature on the well-established five-factor model of personality. We use a previously validated open-language tool and the Q&A section of quarterly earnings conference calls to measure the personality of over 3000 CEOs from the S&P 1500. We argue and find that the dismissal-performance sensitivity is stronger for CEOs with a high level of conscientiousness, neuroticism, and extraversion. In contrast, we do not find support for our arguments that the dismissal-performance sensitivity is weaker for CEOs with a high level of agreeableness and openness. We discuss the implications of our findings for research on the cognitive processes that precede CEO dismissal and the role of personality in strategic management.

Attracting and Managing Human Capital

Session Moderator: **Alexandru Roman**, *CSULA*

STR: **Reconfigurations of Human Resources Following Negative Performance Feedback**

Author: **Alexandru Roman**, *CSULA*
Author: **Aaron Hill**, *U. of Florida*
Author: **Jerayr M. Haleblian**, *U. of California, Riverside*

We draw on the behavioral theory of the firm and the cognitive bias literature on the fundamental attribution error to develop and test theorizing about the manner in which negative performance influences organizational decision makers to blame individuals rather than situations and thus, change human resource configurations in the subunit most proximally responsible. Specifically, we expect that in reaction to negative performance feedback organizational decision makers will (1) increase the rates of human resources turnover (2) reconfigure the human resources in the strategic core and (3) opt for an upside potential of human resources over experience. Empirical analyses based on football-unit level data from the English Premier League are consistent with our theoretical expectations. We find that following negative performance feedback, teams experience higher levels of departures and arrivals, shift the configuration of human resources core such that contribution opportunities become more unbalanced. Moreover, new players are increasingly incorporated into the strategic core, and human resources become significantly younger both in the strategic core and overall. Our work extends our theoretical understandings related to firm behavior post negative performance feedback, especially within the context of problem definition search, an otherwise undeveloped aspect of the behavioral theory of the firm.

STR: **Competitors' Responses to Employee-Related Antitrust Litigation**

Author: **Boshuo Li**, *U. of Miami*
Author: **Philipp Meyer-Doyle**, *INSEAD*
Author: **Wei Shi**, *U. of Miami*

Firms that engage in no-poaching or wage-fixing agreements to appropriate more value from their employees are increasingly being litigated. We explore the implications of such employee-related antitrust litigation on the direct competitors of the perpetrator firms. We find that the treatment of employees deteriorates at the competitors of litigated firms following such litigation. This suggests that these competitors behave opportunistically by reducing their employee-related expenses to appropriate more value from their employees, presumably since it is now easier for these firms to attract and retain employees. Our finding is robust to different ways of identifying competitors and different measures of employee treatment. We also highlight important boundary conditions of this effect. Our study advances strategic human capital literature by documenting an unintended spillover effect of employee-related antitrust litigation.

STR: **On a Professional High: How Critical 9-1-1 Calls Influence EMS Crew Subsequent Performance**

Author: **Alexandru Roman**, *CSULA*
Author: **Haibo Liu**, *U. of California, Riverside*
Author: **Timothy Gubler**, *Brigham Young U.*

Maintaining high levels of human capital in order to handle rare on-the-job critical events is important for organizations. However, the rare occurrence of critical events means employees usually work on boring and mundane daily tasks, leading to human capital underutilization. Using data from the Emergency Medical Services (EMS) in the United States and relying on the quasi-random assignment of 9-1-1 calls to EMS crews, we find significant performance improvement in the hours following the critical events. And the main effect is weaker when there are higher levels of human capital utilization and fatigue. Departing from studies that find critical events are potentially disruptive and stressful to employees, our findings and robustness tests point toward a motivational effect of the critical events. Our study draws attention to frontline first responders and provides insights into the utilization of human capital in organizations.

STR: **Location-Specificity and the Geographic Competition for Remote Workers**

Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*
Author: **Prithwiraj Choudhury**, *Harvard U.*
Author: **Evan Penniman Starr**, *U. of Maryland, College Park*

The precipitous growth of fully remote work has given rise to geographic competition among localities for the physical presence of remote workers. A strategy in this context is the provision of financial incentives for remote workers to relocate to specific regions. However, the extent to which localities can attract and effectively retain remote workers – individuals often referred to as "digital nomads" – is unclear. This study examines this question by reframing relocation incentive policies through the lens of the strategic human capital literature. We argue that the geographic competition for remote work has analogous dimensions to the competition to attract and retain workers with valuable general human capital. While firms can create and extract value from general human capital by creating and sharing firm-specific value with workers, localities can compete for remote workers by creating location-specific attributes which uniquely create value for individuals within that region. We examine these ideas in the context of the Tulsa Remote program, which pays remote workers $10,000 to relocate to Tulsa, Oklahoma. By adopting a multi-method abductive approach, we found that Tulsa Remote was able to achieve high retention rates due to its provision of an integrated system of activities that creates location-specific value to its participants. Such location-specificity emerged in the form of superior returns to their human capital and creation of locally bounded social capital. This work thus shows that location-specificity enables localities to both create and capture value from remote workers.

Behavior and Incentives in Corporate Strategy

Session Moderator: **Minjae Lee**, *Southern Connecticut State U.*

STR: **When Does an Increase in a Firm's Operational Effectiveness Reduce its Economic Performance?**

Author: **Minjae Lee**, *Southern Connecticut State U.*

Conventional wisdom suggests that an increase in a firm's operational effectiveness will increase its economic performance. However, we show that an increase in a firm's operational effectiveness can decrease its economic performance. Specifically, a firm's increase in operational effectiveness of its existing projects following a positive demand shock can limit its profitable growth as its strategic resources are not allocated to pursuing new projects, thereby incurring opportunity costs that can lower its economic performance. We corroborate this reasoning in the context of the liquefied natural gas industry, which experienced a positive demand shock in 2000 due to energy market liberalization. We find empirically that a firm's operational effectiveness increases its Tobin's Q in the pre-shock period and reduces it in the post-shock period.

STR: **Taper Integration & Risk-Taking: Evidence from the Mutual Funds Industry**

Author: **Kubilay Cirik**, *Louisiana State U.*
Author: **Zafer Yuksel**, *U. of Rhode Island*

Drawing from behavioral theory of the firm, we empirically examine the factors that affect the risk-taking behavior of a supplier in a taper integration mode for product development. We introduce a novel mechanism named outsourcing performance feedback that refers to the performance discrepancy between the supplier and the buyer in a given product category. Using a unique dataset from the mutual funds industry, we empirically examine the potential effect of outsourcing performance feedback as a driver of supplier risk-taking in a taper integration setting. Our results show that supplier risk-taking is negatively affected by outsourcing performance feedback. In addition, we also find that the link between outsourcing performance feedback and supplier risk-taking is positively moderated by the level of supplier dependence on the buyer.

STR: **The Impact of Asset Partitioning on the Use of Downsizing as a Reactive Strategy**

Author: **Pablo Doucet**, *U. of Salamanca*
Author: **Pedro Faria**, *U. of Groningen*
Author: **Ignacio Requejo**, *U. of Salamanca*
Author: **Isabel Suarez-Gonzalez**, *U. of Salamanca*

This paper investigates how the division of an economic organization into multiple legally independent entities—namely, asset partitioning—affects its propensity to downsize in response to negative demand shocks. We propose that asset partitioning increases the extent of employee downsizing since it compartmentalizes reputation and disincentivizes cross-subsidization among organizational partitions. Our analysis of 62,624 European organizations at the country-industry level between 2012 and 2019 (321,094 organization-year observations) supports our prediction and shows strong economic effects, which offers new important insights on why organizations differ in their downsizing behavior.

STR: **Overconfident Venture Capitalists**

Author: **Jun Xu**, *U. of California, Riverside*

Researchers in the area of entrepreneurship have explored how overconfidence influences the decision-making of entrepreneurs and the outcome of ventures. However, the overconfidence of venture capitalists, who are critical participants in the entrepreneurship, is rarely discussed. To fill in the gap, this study explores how overconfidence influences venture capitalists' investment decisions and their nurturing of portfolio companies. We argue and find that after experiencing success, venture capitalists tend to attribute the credits to their own abilities and foster overconfidence, which leads to inferior investment decisions and poor investment performances. To further identify the mechanisms behind these dynamics, we explore whether venture capitalists will change their investment strategies after experiencing success, and we find that after experiencing extraordinarily higher IPO performances in its previous funds, venture capitalists were more likely to invest in private companies beyond their own expertise in their current funds. Furthermore, we find that the level of overconfidence is stronger if a venture capitalist is just a free rider but succeeds, and is weaker if the venture capitalist has more investment experience. In the private company level analysis, we explore how the percentage of overconfident venture capitalists within lead VCs in a syndicate influences the fate of the private company. We defined a private company as a Missed target if the private company could have the chance of being acquired, but it forwent the acquisition, and failed to go IPO, either. We find that a private company backed by a syndicate with a higher percentage of overconfident lead venture capitalists is more likely to be a Missed target. This paper contributes to the area of entrepreneurship by extending the study of overconfidence from entrepreneurs to venture capitalists.

Government Contracting and Regulation

Session Moderator: **Klenio Barbosa**, *SKEMA Business School*

STR: **Shaking Things Up: Coercive Mandates and Voluntary CSR**

Author: **Siyu Liu**, *Erasmus U. Rotterdam*
Author: **Zhiyan Wu**, *Erasmus U. Rotterdam*

Researchers have long recognized that corporate social responsibility (CSR) mandates serve as coercive pressures, which will result in compliance behaviors of regulated firms. In contrast, the potential for CSR mandates to nudge firms' normative commitments beyond the mandates' designated jurisdiction receives less attention. Drawing on the culturalist perspective of regulatory environments that argues regulatory mandates could function as a system of legal symbols that enunciate normative values, we propose that firms subject to CSR mandates are likely to internalize the normative values of the mandates and apply them elsewhere beyond what mandates require. We test this relationship in the context of Paid Family Leave (PFL) mandates which were enacted in a staggered way across several states in the United States. Using a sample of 2,951 publicly traded firms between 1997 and 2018, we find that employee-friendly PFL mandates will nudge firms' CSR engagements with non-employee stakeholders, and this pattern appears to be strong in firms run by liberal CEOs but is less evident in firms with conservative CEOs. The self-regulatory responsiveness we document extends the literature on CSR mandates.

STR: **Competing for Public Procurement Contracts: When Do Firms Benefit from Campaign Contributions?**

Author: **Paulo Arvate**, *FGV-EAESP*
Author: **Klenio Barbosa**, *SKEMA Business School*
Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*

This paper examines whether establishing private-public ties via campaign contributions to elected candidates becomes a valuable strategy in the market for public procurement contracts. To identify the additional returns provided by elected politicians to contributing firms, we implement a regression discontinuity design in the context of close elections for state-level legislative seats across eight states in Brazil. Comparing marginally elected candidates to marginally non-elected candidates for legislative seats, we find that elected candidates provide between 2.2 to 13.1 times higher value in public contracts to their average contributing firm when compared to non-elected candidates. However, we find that only companies tied with politicians that have access to individuals with experience about the public bureaucracy enjoy those additional public contracts. This result unveils that a key boundary condition for elected candidates to help their donors to obtain public contracts is to have access to staff with large experience working inside the state-level bureaucracy. This suggests that access to bureaucratic expertise is a critical condition for private-public ties to become a source of competitive advantage in the market for public procurement contracts.

STR: **Do Laws and Contracts Economize on Same Costs? Trade-off Between Transparency and Flexibility in PPPs**

Author: **Seyed Mohammad Taghi Hosseini**, *HEC Paris*

Legal institutions and contractual governance matter for fruitful public-private partnerships (PPPs) as they can economize on transaction costs. Yet, extant theories assume that laws and contracts each cover all relevant costs. We revisit this assumption and suggest that they target different sets of PPP risks. There are two substantial hazards in PPPs: governmental opportunism and maladaptation. We find that introducing PPP-specific laws to improve transparency and mitigate governmental opportunism will conditionally increase contractual rigidity and inflexibility. Then, in response to rising adaptation costs, PPP contracts are less likely to be user-pay (vs. government-pay). Our findings also show that the relationship between PPP laws and PPP contracts is contingent on the partnership expertise of public sectors, political environments, and the capabilities of private investors.

STR: **On Regulating A While Expecting Voluntary Performance on B: Evidence from California's Cap-and-Trade**

Author: **Narae Lee**, *Singapore Management U.*
Author: **Aseem Kaul**, *U. of Minnesota*

We study the unintended consequences of regulation by examining how increasing regulatory requirements in one area impact firms' voluntary social investments in other areas. We argue that increasing regulation on one social objective will have a negative impact on voluntary action on other objectives, as firms have fewer resources left over to invest in voluntary actions (income effect), and as they reprioritize their efforts towards the regulated objective (substitution effect). We test our theory in the context of California's cap-and-trade program, using a difference-in-difference approach to show that while the program reduced greenhouse gas (GHG) emissions from California facilities, it also increased toxic chemical emissions as firms cut back on waste treatment to meet new GHG standards. Consistent with our theory, this effect was weaker for facilities in less competitive industries, facilities with substantive investments in toxic waste reduction, and facilities subject to stricter public or private monitoring.

Competition in Platforms

Session Moderator: **Jong Sig Chung**, *McCombs School of Business, U. of Texas at Austin*

STR: **Competition-Based Network Effect and Heterogeneity in Participation Channels within Platforms**

Author: **PuayKhoon Toh**, *U. of Texas at Austin*
Author: **Jong Sig Chung**, *McCombs School of Business, U. of Texas at Austin*

Participants in a platform-based ecosystem exert network effect drawing a firm to participate. Often, this firm can participate via different channels – low-tier or high-tier. Conventional view of network effect does not readily explain heterogeneity in channel-choice. We highlight a competition-based network effect instead to explain this heterogeneity – when current low-tier channel participants are competitors, they draw the firm to differentiate via the high-tier channel, especially when the former (latter) has strong (weak) abilities to reach the market. We demonstrate this using Instagram data, LDA topic modeling, and a natural experiment based on an Instagram policy change in July 2019. Findings stress that network effect's draw can be competition-based and suggest that the platform owner can benefit from intra-platform competition as a source of platform growth.

STR: **How Coopetition among Complementors Stimulates Innovation in Platform-based Ecosystems?**

Author: **Mengyuan Hu**, *Huazhong U. of Science and Technology*
Author: **Yuanqiong He**, *Huazhong U. of Science and Technology*
Author: **Luming Liu**, *School of Management, Huazhong U. of Science and Technology*
Author: **Yun Chen**, *Hubei U. of Economics*
Author: **Shuncai Li**, *Huazhong U. of Science and Technology*

The rise of platform-based ecosystems, facilitated by digital technologies, has drastically altered how participants coopete and innovate. This study aims to understand the heterogeneity of innovation performance among platform complementors. Based on coopetition theory, this study investigates the influence of complementors' perceived coopetition intensity on their innovation speed and quality. The findings indicate that complementors' perceived coopetition intensity on the platform positively affects both their innovation speed and quality. Furthermore, the contingent impacts of complementors' perceived delegation of decision rights on these relationships are investigated, with opposing results. From the standpoint of platform complementors, our research contributes to the expanding literature on coopetition in a platform-based ecosystem.

STR: **Competition and Value Capture in Platform Markets: Implications for Complementor Strategy**

Author: **Johannes Loh**, *BI Norwegian Business School*
Author: **Ambre Nicolle**, *LMU Munich*

We study how competition between platforms relates to the strategic choices of their complementors. In particular, we are interested in how an increase in competition due to the entry of a new player affects the cooperative value co-creation efforts of complementors on the incumbent platform. Drawing on value capture theory, we argue that this has ambiguous implications for their incentives to continue to cooperate. On the one hand, the entry threatens complementors' value creation and capture on the incumbent -- a demand-side effect that increases cooperation to protect their profitability there. On the other hand, the entrant may constitute an attractive alternative, leading to misaligned value capture expectations on the incumbent -- an outside-option effect that decreases their cooperation. We test predictions from a simple theoretical model in the context of the PC video game distribution market: Here, the dominant incumbent ``Steam'' faced competition with the launch of the ``Epic Games Store''. We study two types of (non-)cooperative strategic choices of game developers on Steam: Multihoming by joining the rival, and their tendency to participate in Steam sales -- the platform's most salient ecosystem orchestration efforts. Our empirical analysis provides broad support for our theoretical predictions: Complementors who are subject to a detrimental demand-side effect increased their cooperation with the incumbent, and those subject to an outside-option effect decreased their cooperation.

STR: **First-Party Complements in Platform Markets: The Role of Competition**

Author: **Alexey Rusakov**, *LMU Munich*
Author: **Tobias Kretschmer**, *LMU Munich*

In our study, we investigate the drivers of the introduction of first-party complements by concentrating on a platform's competitive position. Our key contribution is to disentangle two reasons platform owners are exposed for introducing first-party complements: Promoting the platform ecosystem and making profits on their own. Drawing on theoretical arguments, we develop hypotheses, which we then test empirically based on data from the fifth and sixth generation of stationary video game consoles between 1995 and 2009. We show that, relatively to third-party complementors, platform owners have higher incentives to introduce complements when they are in a strong competitive position, supporting the idea of a harvesting strategy, and into less developed, low-quality niches, especially when they are in a strong competitive position, supporting the idea of a market building strategy. Our study advances our understanding of platform strategic decisions by combining the theory of competitive behavior between platforms and the management of platform market segments.

Corporate Political Strategy

Session Moderator: **Daphné Baldassari**, *U. of Toronto, Rotman School of Management*

STR: **Hiding in Plain Sight: Firm Strategic Response to Diversity Disclosure Requirements**

Author: **Daphné Baldassari**, *U. of Toronto, Rotman School of Management*
Author: **Sarah Kaplan**, *U. of Toronto*
Author: **Aaron Dhir**, *U. of Connecticut*

Many environmental and social regulations emphasize disclosures as a means to hold organizations accountable. However, research shows that organizations are strategic in making disclosures, using strategies to hide a lack of effort and results. While prior work has focused on the effect of symbolic management strategies on external audiences, we consider whether these strategies are associated with outcomes targeted by the regulation in subsequent years for the organization itself. Drawing on research in symbolic management, we theorize that the strategic use of omission, obfuscation, and abstraction in disclosures may prevent organizations from making headway on the disclosure issue. We test our hypotheses using the texts of 3,005 diversity disclosures of organizations under a mandatory "comply-or-explain" regulation for women's representation on corporate boards by the Ontario Securities Commission in Canada (2015-2018). We find that firms with fewer women on their boards are more likely to use symbolic management strategies. However, we uncover divergent findings concerning the relationship between symbolic management strategies and the number of women on their boards in subsequent years (controlling for prior progress): obfuscation and abstraction are negatively associated and omission is positively associated with progress on diversity.

STR: **Extending the Scope of Strategy Inquiry: A Capital Strategy Perspective (WITHDRAWN)**

Author: **Cliff Bowman**, *Cranfield U.*

While strategic management scholarship has focused on firm strategy, the world has experienced an increasing concentration of wealth in fewer hands. This level of capital concentration – under 1% of the world's population controlling almost half of global wealth - has never existed before. We argue for extending the scope of strategic management to include a capital strategy perspective. When we take a capital perspective, we are exploring the prevailing conditions that underpin capital in general, and how these may be adjusted to benefit capital in the abstract, rather than advantage a specific corporation. Capital strategies impact a complex set of institutions that underpin the ability of one group, shareholders, to capture value created by firm employees. Capital strategies – both deliberate and emergent - can change the political, economic, and social institutions within which the capital accumulation processes are situated. This perspective can enable us to explore familiar issues like the climate crisis, ambidexterity and M&A through a new lens.

STR: **Power and the People: CEO Structural Power Predicts Indifference Towards Social Stakeholders**

Author: **James Garrett Matusik**, *U. of Georgia*
Author: **Daniel Gamache**, *U. of Georgia*
Author: **Radina R. Blagoeva**, *U. of Georgia*
Author: **Braydon Shanklin**, *U. of Georgia*

Conceptual refinements to upper echelons theory and corresponding empirical research operate under the implicit assumption that power has little effect on CEO cognition, generally relegating it to the role of a boundary condition of the relationships between other CEO attributes and firm conduct. However, abundant psychological research has illustrated that power affects the cognitive processes core to upper echelons theory. Repositioning CEO power as a predictor of CEO cognition, we demonstrate in an archival study that CEO power shares a positive relationship with social stakeholder-CSiR and that this relationship is mitigated by CEO agreeableness. In an experimental study we show that power begets mental abstraction of social stakeholders, which subsequently predicts less concern for (i.e., greater indifference towards) them when the powerholder is low in agreeableness.

STR: **The Impact of Firm-Government Relationships on Innovation: An Emerging Markets Perspective**

Author: **Juan Carlos Morales**, *West Texas A&M U.*

Corporate political activity has been studied in several disciplines with important findings. However, the benefits firms derive from establishing government relationships to increase innovation remains an important yet understudied area of research. In this paper, we aim to shed light on the effects of senior management political activity on the firms' propensity to initiate imitative or innovative new product development. Building on institutional theory and resource dependence, we also examine the contingency effects of political instability and the quality of governance in the context of emerging markets. We posit that as the institutional environment becomes politically uncertain, senior managers' efforts to engage with political actors may hurt the firm's ability to engage in new product development. Likewise, as the quality of governance increases, firms are less likely to derive benefits from their government affiliations. We also explore that corporate political activity is less effective in increasing the firms' likelihood to engage in innovative new product development. We test our hypotheses using a comprehensive sample of firms in emerging markets from 2011 to 2020. While our results support the notion that corporate political activity benefits firms, these effects will be contingent on the type of new product development and the institutional context facing the firms. We conclude by discussing the implications of this research for firms in lesser-developed institutional environments.

Leadership and Innovation

Session Moderator: **Nidthida Lin**, *Macquarie Business School, Macquarie U.*

STR: **Who Should I Listen to in Radical Innovation Project Choice? Investigating CEO Decision Making**

Author: **Nidthida Lin**, *Macquarie Business School, Macquarie U.*
Author: **Ralf Wilden**, *Macquarie Business School, Macquarie U.*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*
Author: **Saad Khan**, *Macquarie Business School, Macquarie U.*

Chief Executive Officer (CEO) advice seeking is of critical importance to access additional knowledge to inform their strategic decisions. Yet, little research has investigated how CEOs seek advice from other senior executives in radical innovation decision making. In this study, we use data from three studies—two experiments and a survey—to investigate how conflicting advice from Chief Marketing Officers (CMOs) and Chief Technology Officers (CTOs) affects CEOs' radical innovation project choices. We then assess whether seeking advice from CTOs and CMOs affects radical innovation performance under different levels of market and technological uncertainty. Our results indicate that CEOs are more likely to choose radical innovation projects that are supported by the CTO. Further, given differences in CMO vs. CTO advice, we find that when a radical innovation project is characterized by high technological uncertainty, CEOs are more likely to choose radical innovation projects that the CTO supports, even if the CMO does not. On the contrary, we do not find that CEOs' radical innovation decisions are affected by CMOs' supporting advice when an innovation project faces high market uncertainty. Finally, the positive effect of CEO external advice seeking on firms' radical innovation performance is strengthened if the CEO seeks advice from the CMO (CTO) under high market (technological) uncertainty. Important contributions emerge from our study as detailed in the concluding section.

STR: **Strategic Leaders' Journey of Informing Their Decision-making to Implementing a Radical Innovation**

Author: **Renate Kratochvil**, *BI Norwegian Business School*

Strategic leaders with an idea about radical innovation lacked the necessary technical information to inform their decision-making to move from idea generation to implementation. In this study, I examine how strategic leaders utilized knowledge from academic computer scientists to inform their decision-making on radical innovation. My research design is an in-depth, longitudinal case study of a group of strategic leaders at MasterBuilders, a Norwegian construction company, who had an idea about a fully digital construction process that could disrupt the industry. These leaders regularly met with academic computer scientists to elaborate on the idea, attempting to acquire the knowledge needed to make decisions for idea implementation. However, when these strategic leaders received new information but lacked the needed knowledge, abductive reasoning changed their beliefs about implementing the innovation. As a result, they moved from believing that they needed to implement the industry-disrupting idea themselves to preparing themselves for when the innovation became a reality in the industry. Therefore, the collaboration with academics led these strategic leaders to change their beliefs about implementing radical innovation.

STR: **Why CEO Education Impacts Radical Innovation: Mediating Roles of Perceived Environmental Uncertainty**

Author: **Renfei Gao**, *U. of Manchester*
Author: **Stephen Xu Zhang**, *U. of Adelaide*
Author: **Asghar Afshar Jahanshahi**, *Tec de Monterrey*

Strategic leadership research provides considerable evidence about how CEO characteristics influence firm strategy, yet less is known about the mechanism underlying such impacts—a critical black box in upper echelon theory. Incorporating the typology of perceived environmental uncertainty into upper echelon research, we investigate how the influence of CEO education level on firm radical innovation is mediated by three types of uncertainty (state, effect, and response uncertainty) perceived by CEOs. Using multiple-wave multiple-informant survey data on 154 firms in Malaysia, we find that CEO education level is positively associated with firm radical innovation, via different mediating effects of their perceived state uncertainty and response uncertainty. Our study advances upper echelon research by revealing CEOs' perception of uncertainty as a key mechanism underlying their influences on firm strategy. We also offer novel insights into the radical innovation literature by proposing a micro-foundational explanation that illuminates strategic leaders' impact through their perceptions.

STR: **The Imprinting Effects of Great Leap Forward and Great Famine on CEOs' Innovation Orientation**

Author: **Quinn Ye**, *Faculty of Business and Economics, U. of Melbourne*
Author: **Helen Wei Hu**, *U. of Melbourne*
Author: **Dean Xu**, *Monash U.*
Author: **Kwanghui Lim**, *U. of Melbourne*

Prior studies in imprinting theory have mostly examined the effects of an individual experiences in isolation and paid less attention to the interactive process of imprints. We investigate this process by examining how CEOs' earlier life exposures to the Great Leap Forward (GLF) and the Great Famine (GF) influence firm innovation input and efficiency. We found that CEOs more heavily influenced by the GLF tend to have higher innovation input in their firms, but with lower innovation efficiency; CEOs more heavily influenced by the GF tend to commit less innovation input, but have greater innovation efficiency. We then investigate the interaction of the GLF and GF experiences. We found that freshly required GLF imprints might remain intact when they were continuously brought into the GF imprinting process, and the intensity of the GLF imprinting may become moderators in the latter imprinting process. We find empirical support for our arguments with data on1038 CEOs of 911 listed firms during the period from 2000 to 2020.

Panelist: **Shaker A. Zahra**, *U. of Minnesota*

While there has been an explosion of research on business ecosystems of late, the implications for strategic leadership research is rarely investigated. We propose this symposium to address two core questions to advance theory and research on business ecosystems and strategic leadership. First, what role do strategic leaders play in ecosystems' design, development, and evolution, including value co-creation? Second, what are the implications of business ecosystems for the extant strategic leadership theory and research? We bring together a panel of leading scholars to discuss these questions from their own research perspectives and to stimulate a set of questions for future research. We aim to build a vibrant community of scholars interested in these questions.

Presenter: **Sali Li**, *U. of South Carolina*

Digital platforms such as TikTok, Uber and Amazon increasingly operate on a global scale. However, the literature has devoted surprisingly little attention to the role of location as a relevant factor in platform strategy. While it is true that digital infrastructures allow platforms to internationalize with much greater ease than 'traditional' firms, location still matters greatly when it comes to such issues as local regulation, fragmented network effects, the institutional environment and firms' liability of foreignness. Reliance on locally embedded complementors (e.g., content creators, drivers, sellers) adds an additional layer of complexity that platform-sponsoring firms need to consider in their foreign expansion strategies and their governance frameworks. To date, there has been limited research at the intersection of platform strategy and international business and these literatures stand to benefit from greater cross pollination. This symposium will therefore feature four research presentations from prominent scholars to deepen our understanding of platform strategy in a global context.

Recently, management researchers have called for more research on the relationship between strategic leadership and stakeholders, such as employees, customers, suppliers, communities, and shareholders. In this symposium, we aim to contribute to this growing body of research by focusing on the interaction between strategic leaders and employees. We have gathered four working papers from authors who are active in the fields of strategic leadership, governance, and stakeholder research and invited two renowned discussants, Donald Hambrick and Yan Anthea Zhang, who have made significant contributions to these fields. With four paper presentations and a panel discussion, we aim to advance the conversation on (1) how strategic leaders influence employees, such as employee well-being and commitment, and (2) how employee attitudes influence strategic leaders, such as CEO discretion. Overall, we believe the theme is important and timely given the recent focus of business leaders and management scholars on stakeholder governance and the significance of employees in firms' value creation.

Distinguished Speaker: **Tobias Kretschmer**, *LMU Munich*

Platform governance is essential to platform success – let alone a fair division of the surplus that platforms generate. Platforms compete both for final users, and for complementors, participants whose financial success depends on platform uptake. Motivating all sides of the platform to join – be they dependent on it or not – is important. As consequence, the question of platform governance, which defines how platforms shape and motivate interactions amongst users, is becoming increasingly critical. Recently, we have seen an upsurge of interest in new, alternative ways of governing platforms, such as by decentralizing decision making or creating completely new organizational forms. Our symposium aims to tack stock of these emerging conversations. In doing so, we hope to advance discussions on novel governance forms. Four distinguished platform scholars will present the state-of-the-art in regard to platform governance, critically reflect on the potential presented by new forms of governance and foreseen barriers, and engage with audience members.

Antitrust: Current Perspectives, Challenges, and Proposed Solutions

Organizer: **Valentina Fani**, *Vrije U. Amsterdam*
Panelist: **Joseph Clougherty**, *U. of Illinois at Urbana-Champaign*
Panelist: **Riitta Katila**, *Stanford U.*
Panelist: **David J. Teece**, *U. of California, Berkeley*
Panelist: **Marshall Van Alstyne**, *Boston U.*

This symposium aims to bring together leading scholars conducting research at the intersection of antitrust and management. In particular, we aim to provide an overview of ongoing work that looks at (1) the deterrence effect of antitrust policy, (2) the relationship between antitrust and innovation in digital ecosystems; (3) the unsuitability of traditional antitrust tools in handling platform business models; (4) the role of strategic management in informing antitrust policy. The structure of the symposium is as follows. In the first part, a panel of four scholars will present their own recent research related to antitrust from different perspectives. This will be followed by a panel discussion between the presenters, moderated by the organizer. We will conclude the symposium with a Q&A session involving the audience.

Reflection Room

This space is designated as a non-denominational room for attendees to use for prayer or quiet reflection amidst the busy backdrop of the meeting. Use of this space requires tolerance for all faiths, spiritual beliefs and practices. In order to make this space available to attendees, the following rules apply: Only registered Academy of Management attendees are permitted. No candles, incense burning or other smoke, fragrance or flame is allowed. The space is open to registrants at all scheduled times. Conversation and music are prohibited and noise is to be kept to the strictest minimum. Use is restricted to purposes of personal reflection, meditation or prayer. No sleeping is permitted.

People and Innovation Track: Exploring Human Capital in Innovation

Session Moderator: **Stefan Wagner**, *ESMT Berlin*

TIM: **Knowing Me, Knowing You - How Personality Traits Shape Invention Output**

Author: **Stefan Wagner**, *ESMT Berlin*
Author: **Karin Hoisl**, *U. of Mannheim*
Author: **Joseph Monroe**, *Stockholm School of Economics*

Literature on knowledge recombination has largely focused on inventors' access to knowledge components to be recombined as a key determinant of their inventive performance. Research from psychology has shown that openness and extraversion, two personality traits, increase performance in tasks akin to knowledge recombination. We investigate how personality traits shape invention outcomes conditional on organizational knowledge context. We derive personality measures from a survey of 1,327 inventors and combine them with patent-based indicators of inventive performance. Our findings reveal how the relationship between personality and inventive output is moderated by knowledge context: the positive relationship between openness and invention output is stronger if organizational knowledge diversity is low. In contrast, extraversion negatively relates to invention output, but its effect is positively moderated by knowledge diversity.

TIM: **"Rent or Buy or Both?" Exploring New Zealand Firms Innovation via Human Capital Approaches**

Author: **Jarrod Haar**, *Massey U. Business School*
Author: **Conor O'Kane**, *U. of Otago*
Author: **Jing A. Zhang**, *U. of Otago*
Author: **Urs S. Daellenbach**, *Te Herenga Waka - Victoria U. of Wellington*
Author: **David Brougham**, *Massey U. Palmerston North*
Author: **Paula Marie O'Kane**, *U. of Otago*

Despite New Zealand firms having structural issues of being a small-sized country and distance from markets, New Zealand still has standout innovators, such as RocketLab. Using human capital (HC) theory, we focus on internal HC (existing workforce) and external HC, represented by the number of R&D scientists engaged. We argue that each might contribute to innovation but also have a synergistic effect, whereby 'buying' and 'renting' HC leads to superior innovation. We test this approach using three samples including time-lagged innovation data in sample 3. In sample 1 (n=579 firms) we find both HC internal and HC external are directly related to product/service innovation, and a significant interaction effect. In study 2 (n=510 firms) again we both HC internal and HC external are directly related to product/service innovation, process innovation, and innovation speed. Towards patent success, only external HC is significant and there is no significant interaction effect. In study 3 (n=302 firms) we find both HC internal and HC external are directly related to product/service innovation, process innovation, patent success and patent success over applications. Towards patent success, only external HC is significant, but a significant interaction effect is found with internal HC. Overall, all significant interaction effects are similar, with greater innovation being achieved when both internal and external HC are high. We discuss the implications towards innovation in small economies and the contribution to human capital theory.

TIM: **Age, Death, and the Nucleus of Invention**

Author: **Christopher Esposito**, *U. Of Chicago*

This paper identifies the age at which inventors generate the greatest spillovers for their collaborators. Linking age and death information from over 78,000 inventors that died prematurely to their 180,000 collaborators, I show that junior inventors produce more spillovers for patent production than do older inventors. Inventors who lose a junior collaborator to a premature death produce one fewer patent over the following 10 years relative to inventors who lose mid-career collaborators. This effect is strongest when the surviving is also young, and appears to be driven by junior inventors' closer proximity to the knowledge frontier.

TIM: **How Do Inventors' Political Preferences Affect Innovation?**

Author: **John M. De Figueiredo**, *Duke U.*
Author: **Trijeet Sethi**, *Capital One*
Author: **Brian Silverman**, *U. of Toronto*

Team production in innovation has become increasingly important. Simultaneously, political polarization has been increasing over time. This paper examines how inventor political ideology affects innovation team formation and subsequent team innovative productivity. To examine these questions, we match North Carolina-resident inventors in the USPTO patent database to their voter registration records, which contain individuals' political affiliation and aspects of their voting behavior. We also geolocate each patent assignee to create a risk-set of potential co-inventors in each organization location and in each county. Using a variety of estimation techniques, we describe both the regularities in the data and results from econometric analysis. We estimate that 62 percent of NC inventors are U.S. citizens, the vast majority of whom are male, white, and middle-aged. Republican (Democratic) inventors are overrepresented (underrepresented) in NC relative to the underlying distribution of voters in the state. Citizen-inventors are highly politically engaged, more so on almost every dimension than a similar sample of citizens. Republican inventors pursue different technologies than Democratic inventors. In econometric estimations we show that there is political homophily within co-invention teams: Democrats (Republicans) tend to form teams with other Democrats (Republicans). We also assess the performance of innovative teams in terms of conversion of patent applications into granted patents. In both reduced-form estimation and estimation that instruments for endogenous team formation, ideologically homogenous teams tend to underperform ideologically heterogeneous teams, although this effect falls below conventional thresholds of statistical significance when firm fixed effects are included.

People and Innovation Track: Redefining Human-Technology Interactions

Session Moderator: **Sam Horner**, *U. of Liverpool*

TIM: **Theorizing Innovation in a 'Digital First' World: A Cognitive-ecological Approach**

Author: **Sam Horner**, *U. of Liverpool*
Author: **Paul Ellwood**, *U. of Liverpool*
Author: **Michael Zundel**, *U. of Liverpool Management School*

Digital technologies that operate autonomously, learn and perform 'cognitive' tasks pose significant challenges to theories of innovation management. It is no longer the case that innovation actors think with digital technologies, but rather they think through digital infrastructures that compute human experience and shape innovation trajectories. Existing research suggests that we can understand how digital technologies shape organizational innovation by examining the socio-cognitive processes through which they are interpreted, or by elaborating on the ways in which material agency intervenes to circumscribe human activity. This paper contends that, while offering important insights, the dominant socio-cognitive and materialist approaches to studying technology in digital innovation, fall short of capturing how digital objects do not just interact with humans, but how human experience itself is computed. This paper, therefore, advances a novel 'cognitive-ecological' approach to the study of digital innovation, that allows us to attend to the digital mediation of human experience and the non-materiality of digital objects. We draw on the work of Gregory Bateson, N. Katherine Hayles, and Edwin Hutchins, to conceptualize cognition as an ecological process of computation that unfolds through cognitive assemblages comprised of conscious (human) and non-conscious (technical) cognizers. We outline how this 'cognitive-ecological' approach might function generatively to reconcile socio-cognitive and materialist perspectives on digital innovation, and elaborate on how future research might employ the cognitive-ecological approach to unpack the cognitive dynamics of human-technology relations.

TIM: **I Had One Too Many: How Task Composition Affects the Response of Humans to Threats from Algorithms**

Author: **Sreevathsan Sridhar**, *London Business School*

Emerging works on automation posit that machines (algorithms) are likely to displace humans from tasks where they have a higher efficiency to a different set of tasks. However, when the tasks performed by humans are interrelated, there could be complementarities between tasks through the spillover of productivity. This paper investigates how the allocation of tasks between machines and humans changes when there are interdependencies between tasks performed by incumbent workers. I argue that human workers are likely to continue performing tasks that could get automated if those tasks act as a source of complementarities in the overall portfolio of tasks performed by the workers. I test my theory in the context of sell-side analysts in brokerage firms. I find that analysts are, on average, likely to drop coverage of stocks that are covered by Robo analysts. However, the probability that they drop coverage is lower when they cover a broader portfolio of stocks, measured by the number of industries covered by them. Further tests on the mechanism indicate that the coverage drop is driven largely by low-skill analysts.

TIM: **Searching a Joint Innovation Agency of Human and AI**

Author: **Soo Young Choi**, *Bayes Business School*

AI has become more than a strategic resource as its ability to act autonomously and to actively co-create innovation is transforming the organisation's innovation processes. The use of AI, and how humans engage with AI, challenge the notion of fundamental actors in innovation processes; generating new ideas is not only limited to human, but innovation emerges from networks of human and AI actors. Through a case study of an airline company, this paper reconstructs the concept of innovation agency such that innovation agency is jointly constituted by both human and AI as the technology actively takes part in organisational innovation. By taking a relational view, I suggest a new perspective of seeing machine agency in relation to human agency and argue the possibility of machine becoming part of a team. My findings show that joint innovation agency of human and AI emerges through steps of (S1) AI Development, (S2), AI Transition and (S3) AI Integration. I discuss implications for future research and management practice.

TIM: **Non-Human Agency in Organizations: Embedded Exchange with Augmenting Technologies**

Author: **Purushothaman Padmanabhan**, *U. of Oregon*
Author: **Ralph A. Heidl**, *U. of Oregon*

More and more processes in organizations involve the interaction and collaboration between human and non-human actors (i.e., human-technology ensembles). Often non-human actors are introduced as "augmenting technologies" for the purpose of aiding human employees to identify (but not select) suitable actions to achieve organizational goals (e.g., production of credit risk reports, interpretation of medical imagery). However, when human employees become 'disengaged' and relegate the subsequent choice of action (e.g., decision on loans for at risk individuals, referral of patient diagnoses and associated surgery recommendations) to an augmenting technology, non-human agency can unintentionally become embedded in organizational practices. While extant theorizing on human-technology ensembles has beneficially emphasized the material dimension (i.e., technology characteristics), we propose that an under-socialized perspective runs the risk of overlooking key mechanisms through which the locus of agency changes in the relationship between humans and augmenting technologies. We propose that human interaction with material dimensions of technology invoke social mechanisms in the relationship that human actors project on augmenting technologies causing shifts in the locus of agency. We derive propositions about the relationship between qualitative differences in human-technology exchanges and organization-level consequences related to the suppression or diffusion of non-human agency in organizations.

TIM: **Technology Affordances as Generative Processes**

Author: **Thomas Grisold**, *HSG U. of St. Gallen*
Author: **Nicholas Berente**, *U. of Notre Dame*
Author: **Stefan Seidel**, *U. of Cologne*

We draw on predictive mind theory—an emerging paradigm shift in the cognitive and computational neurosciences—to characterize affordance perception and enactment in the context of digital technologies as a generative process. Key to our argument is that affordance perception and enactment are characterized by a forward flow from the agent to the object. Human and autonomous agents continually generate and project affordance predictions about digital technologies that are rooted in their previous knowledge. They continuously adjust these affordance predictions as they are exposed to unexpected prediction errors. We identify two central mechanisms: reactive and proactive generative processes. Reactive generative processes describe situations where agents generate new affordances when they accidentally encounter prediction errors. Proactive generative processes describe situations where agents embrace prediction errors and explore new action opportunities. Our theorizing highlights how agents and digital technologies are continually changing in a dynamic learning process and provides a conceptual foundation for studying affordance innovation through human and autonomous agents.

Innovation and Entrepreneurship Track: Entrepreneurial Strategy

Session Moderator: **Stephen Michael Impink**, *HEC Paris*

TIM: **Outsourcing IT and Technological Differentiation: Evidence from Digital Startups**

Author: **Stephen Michael Impink**, *HEC Paris*

Does outsourcing IT impact a startup's ability to differentiate itself and grow? With the advent of cloud services, firms are licensing IT instead of developing IT in-house. Despite this growing trend, we know little about how early-stage resource acquisition decision affects technology adoption, product differentiation, and longer-term performance. When firms outsource their IT, they develop a supplier relationship with a cloud services provider and receive valuable resources related to their cloud provider's platform. However, cloud suppliers control which resources they create and share, which technologies they suggest, and how well technologies fit with their platform, potentially impacting product differentiation. Using panel data on app-developing startups, I find that startups outsourcing to cloud platforms adopt more technologies. When outsourcing, development tools that programmers use to code an app become more similar to other startups, saving time by avoiding compatibility issues. On the other hand, data analytics capabilities become more diverse, enabling startups to cultivate more robust data, which aids in product differentiation and startup growth.

TIM: **Great Ideas (Don't) Sell Themselves: The Disclosure Paradox in Digital Startups Auctions**

Author: **Luca Gius**, *MIT*

An inventor may be hesitant to reveal her idea to potential buyers because she fears it will be stolen. I show that this "disclosure paradox" can result in only the worst ideas being sold, leading to an ineffective commercialization of the best ideas. This "distortion at the top" is especially significant when gains from trade are concentrated among a few, high-quality ideas. Next, I investigate the "disclosure paradox" in an online marketplace for early-stage digital start-ups. Sellers can protect their unpatentable ideas through confidentiality agreements (NDAs), and they can have the exchange verify their advertising revenues. I provide evidence that these "disclosure technologies" are used by high-quality inventors to assuage information frictions, sell their ideas more easily and to capture more value. Surprisingly, confidentiality agreements discourage many potential buyers and are less effective than revenue verification. I estimate that the "disclosure paradox" leads to significant welfare losses: going from a scenario in which every seller has access to revenue verification to one where nobody has access to it destroys 63% of the potential gains from trade and reduces the number of sold start-ups by 17%. Through simulations, I show that the losses are magnified by the skewed distribution of ideas.

TIM: **Higher-Order Invention and New Venture Success**

Author: **Likun Cao**, *U. Of Chicago*
Author: **Ziwen Chen**, *Stanford Graduate School of Business*
Author: **James Evans**, *U. Of Chicago*

Entrepreneurial firms often hedge against uncertainty by building on prior scientific and technological knowledge. Such firms can usefully be represented as complex systems, which apply and combine technologies to solve business problems or create opportunities. In the emergence of complex systems, modularity is critical for the survival and evolution of systems robust to exploratory failure. Here we build a theory of entrepreneurship as one of second-order invention whereby the most successful new ventures assemble novel combinations of modular inventions, already successfully applied, rather than discovering novel technologies or applying them to solve novel problems. Such ventures limit their risk of failure to higher-order system assembly, rather than lower-order discovery and application. We evaluate this with new ventures documented in Crunchbase and VentureXpert over 45 years, classifying description words as techniques or business areas. We build a semantic space with dynamic neural word embedding models constructed from 108 business newspapers and magazines, which allow us to precisely measure what techniques and business areas are characterized as close or distant to the business press and public. Using event history models, we demonstrate that new ventures are much more likely to achieve successful IPOs and high-priced acquisitions if they combine diverse, applied innovations.

TIM: **Founding Process Pathways: The Contingent Fit Between Team Formation and Entrepreneurial Strategy**

Author: **David R. Clough**, *Sauder School of Business, U. of British Columbia*
Author: **Charles Eric Eesley**, *Stanford MS&E*
Author: **Seyedeh Zahra Hejrati**, *Stanford U.*
Author: **Balagopal Vissa**, *INSEAD*

Entrepreneurs often search for both business ideas and potential cofounders at the same time, and these two processes can influence each other. Founding teams can form through either a gradual process of cofounder additions—which we label a sequential team formation process—or cofounders can join forces in a single event, which we label a simultaneous team formation process. In this empirical study of entrepreneurial team formation and strategy formation, we propose a contingency theory that distinguishes between two pathways: an instrumental pathway, which includes a sequential team formation process, a high technology business idea, and a flexible approach to strategy formation, and a serendipitous pathway, which includes a simultaneous team formation process, a low technology business idea, and an inflexible approach to strategy formation. Using alumni survey data, we find that elements of the instrumental pathway are mutually complementary: compared with simultaneous team formation, sequential team formation is associated with a larger founding team size and better long-run venture outcomes for high-tech ventures with flexible strategies. The results suggest that the way in which a founding team is formed and the approach to strategy formation can have significant and interdependent implications for the success of a venture.

TIM: **Navigating the Crowdfunding Sea: How Different Strategic Orientations Determine Campaign Success**

Author: **Hanna Jäschke**, *Leibniz U. Hannover*
Author: **Thomas Schäper**, *Westfälische Wilhelms-U. Münster*
Author: **J. Nils Foege**, *Leibniz U. Hannover*

New ventures typically face the challenge to raise sufficient funds to pursue their business ideas. A remedy to this issue is crowdfunding, i.e., the funding of entrepreneurial projects through a large group of people in exchange for rewards or equity. While crowdfunding has become a frequently used source for entrepreneurial financing, we still know little about the characteristics of entrepreneurs and projects that make crowdfunding campaigns a financial success. In this study, we seek to identify these characteristics. Departing from the notion that signaling innovativeness in crowdfunding campaigns is key to their success, we examine how strategic orientations towards teamwork, digitization, and sustainability shape crowdfunding campaigns' project-level innovativeness, and ultimately their financial success. Analyzing quantitative data of 908 campaigns on Indiegogo, i.e., one of the largest crowdfunding platforms, our results suggest strategic orientations towards teamwork and digitization have a positive effect on financial success, whereas the effect of a strategic orientation towards sustainability is negative but not significant. Furthermore, we show that project-level innovativeness mediates these effects. Our study contributes to the literature about crowdfunding by identifying critical strategic orientations of projects and project owners and isolating their effect on the success of crowdfunding campaigns.

Innovation and Competitive Strategy Track: Unlocking the value of IPRs

Session Moderator: **Neil Thompson**, *Massachusetts Institute of Technology*

TIM: **Should Firms Hold More Patents? A Randomized Control Trial on the Commercial Value of Patents**

Author: **Neil Thompson**, *Massachusetts Institute of Technology*
Author: **Hyo Kang**, *U. of Southern California*
Author: **Albina Khairullina**, *Imperial College London*

Globally, firms spend approximately $1.7 trillion on R&D, much of which is aimed at producing patentable innovations. But using patents to cut off competitors' access to an innovation is expensive to get and to maintain, costing an average of $1–2 million for global protection. That expense is only worthwhile if the exclusivity generated by the patent provides enough commercial value for the firm, principally through higher sales or profitability in the product market. In practice, making decisions whether to get or maintain patents is difficult because firms often can't quantify the commercial value of a patent, even after the fact, because they never observe the performance of an equivalent innovation that is unpatented. Academics have been similarly stymied in quantifying the commercial value of patents because of (1) strong selection into which innovations are patented, (2) the difficulty in connecting patent protection to specific products, and (3) the commercial sensitivity of product-level financial data. This paper presents the first randomized control trial to evaluate the commercial value of maintaining patent protection. In collaboration with a large multinational company, patents covering products in the marketplace were either abandoned or maintained at random. We then traced the effects of patent protection on product-level commercial outcomes using confidential internal data. On the margin, products protected by patents generated 35% more revenue for the firm, primarily through higher unit sales. Maintaining these patents was highly cost effective, yielding $67 in additional benefits for each dollar spent. Insomuch as the patenting behavior of the firm in our study is representative, our results suggest that firms should be maintaining more patent protection on products.

TIM: **Stigmatization in Market for Technology: The Impact of Patent Invalidity on Subsequent Patent Sales**

Author: **Anthea (Yan) Zhang**, *Rice U.*
Author: **Haiyang Li**, *Rice U.*
Author: **Zhuo Chen**, *China Europe International Business School (CEIBS)*
Author: **Yuandi Wang**, *U. of Science and Technology of China*

Some granted patents later get invalidated. In this study, we propose that patent invalidation may hurt an inventing firm's reputation in the market for technology and accordingly reduce the chance that the firm sells its other (valid) patents. With a sample of matched patents, we find that compared to patents owned by a firm without patent invalidation, patents owned by a firm with patent invalidation are less likely to be sold. We also find that the harm caused by patent invalidation is stronger if a focal patent is in the same technological class as the invalidated patent and it is stronger when a focal patent is at the middle stage of its life cycle than when it is new or approaches expiration date.

TIM: **The Dynamics of Private Trademark Enforcement: The Case of Indian Pharmaceuticals**

Author: **SHREEKANTH MAHENDIRAN**, *HEC Lausanne - UNIL*
Author: **Anthony Dukes**, *U. of Southern California -Marshall School of Business*
Author: **Chirantan Chatterjee**, *U. of Sussex*
Author: **Daniel Sokol**, *USC*

This research explores the role of trademark litigation in protecting a brand against future trademark infringement in markets where government enforcement is weak. Litigation can convey to potential counterfeiters that a trademark-holding firm would sue upon entry. We explore this idea empirically in the context of pharmaceutical trademarks in India using the framework of a stylized theoretical model. We construct a database of trademarks and examine litigation activity by certain trademark-holders. Our findings indicate that litigation reduces subsequent infringement. Because litigation can be extremely costly for a trademark-holding firm, it is worthwhile only when it has legal advantages in pursuing cases. Not all trademark-holding firms have such legal advantages and are, therefore, better off surrendering to infringers and incurring a cycle of settlements with future infringement.

TIM: **Disclosure Environment, Intangibles, and Product Market: Evidence from Patent-product Linked Data**

Author: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*
Author: **Rohin N Vrajesh**, *Department of Management and Technology, Bocconi U.*

This paper studies the link between intangible resources and their application in the product market. The resource-based view posits that rarer and more difficult to imitate resources enable superior performance, but embedding such resources in commercialized products may be difficult due to the leap in technological application they require. We find that more incremental, less novel intangible resources (patents) are more likely to be embedded in products. We also show that an exogenous change in the disclosure environment, shifting incentives from "first to invent" to "first inventor to file" is associated with a reduction in the scope of patents, consistent with the interpretation that firms "rush to the patent office": following this environmental change, products contain less novel patents, on average. Thus, this paper provides rare evidence on the actual commercial use of patents in products and how patent and environmental characteristics translate into product market innovation.

Technological Change Track: The Future of Organizations

Session Moderator: **Abdul Hameed Pitafi**, *Sir Syed U. of Engineering and Technology Karachi*

TIM: **Investigating the Impact of Task Structure on Employee Agility: ESM as a Moderator**

Author: **Abdul Hameed Pitafi**, *Sir Syed U. of Engineering and Technology Karachi*
Author: **Shuhui Wu**, *School of Management, Hefei U. of Technology, Hefei, Anhui, China*
Author: **Minglun Ren**, *School of Management, Hefei U. of Technology China*

Drawing on communication visibility theory, current study analyzes the connections between task structure and employee agility through knowledge sharing and hiding. Given its considerable prevalence, the associated benefits of enterprise social media (ESM) with knowledge sharing and employee agility has not been well explored by previous studies. To bridge this research gap, this study examines the role of this digital technology that plays significant linkage between knowledge sharing, hiding, and employee agility. Using cross-sectional data collected from the Chinese employees, structural equation modeling (SEM) was used on 425 entries using AMOS version 24.0. The results of this analysis specify that task interdependence is significantly interconnected to knowledge sharing and knowledge hiding. Task complexity is observed to have a significant effect on knowledge sharing and a negative effect on knowledge hiding. This research results also specify that knowledge sharing is significantly connected with employee agility, whereas knowledge hiding is negatively associated with it. Knowledge sharing also mediates the connection between task interdependence, complexity and employee agility. Knowledge hiding also mediates the link between task interdependence, complexity, and employee agility. Furthermore, the use of ESM significantly strengthens the link between knowledge sharing and employee agility. However, ESM usage did not moderate the link between knowledge hiding and employee agility. The future directions and managerial implications of the study are discussed in the last section.

TIM: **How Things are Made Matters: The Effects of Technology on the Organization of Work**

Author: **Adrianto Adrianto**, *U. of Minnesota*
Author: **Avner Ben-Ner**, *U. of Minnesota*
Author: **Ainhoa Urtasun**, *U. of Navarra*

This paper examines the effect of production technologies, directly and indirectly through complexity and task interdependence, on outcomes important to the organization of work. Our study uses online job vacancy postings in the manufacturing sector during 2017-2021 to analyze technical occupations (i.e., engineers, technicians, and operators) in plants that implement one of six primary technologies: subtraction, forming, molding, additive manufacturing, chemical, and assembly. Controlling for different forms of automation, location, and other factors, we find that the differences in division of labor, specialization, and span of control among technologies are driven by differences in complexity. Additive manufacturing, chemical, and assembly are technologically more complex than forming, molding, and subtraction, and, as a result, they need more jobs to be designed, more tasks and skills to be bundled in a job, and fewer employees to be overseen by a manager. Moreover, each technology exhibits a distinct pattern of two forms of task interdependence—reciprocal and sequential, and therefore the effects on the three outcomes are more nuanced.

TIM: **Hybrid Innovation: Changes in Innovation Amid the Growth of New Work Concepts**

Author: **Katja Hutter**, *U. of Innsbruck School of Management*
Author: **Niclas Kröger**, *U. of Innsbruck School of Management*
Author: **Sebastian Peter Gauster**, *U. of Innsbruck School of Management*
Author: **Johann Fueller**, *U. of Innsbruck*

The global demand for new work concepts and the rapid expansion of collaborative information technology (CIT) have fundamentally changed how organizations collaborate and innovate. Based on the literature of innovation management, we aimed to elucidate the pervasiveness of CIT and the global demand for flexible means of innovation and their impacts on facets of innovation processes. Our action research revealed how hybrid work has changed an innovation agency's innovation process from running primarily in person to being almost fully remote and, in turn, following a hybrid approach. Our findings emphasize that the combination of certain tasks (e.g., novel innovation processes), human resource management (e.g., of team characteristics, leadership, and culture), and appropriate infrastructure (e.g., digital tools) has been essential for the agency to innovate in a hybrid setting. Moreover, rearranging its innovation processes for the new setting allowed the reconfiguration of people and innovation teams. Our results also indicate that building relationships, albeit crucial, presents significant challenges in hybrid settings and that though CIT tools have to be implemented, they do not necessarily foster innovation. Indeed, enhancing innovation capabilities requires understanding how to leverage those tools according to frequency, timing, and purpose. Meanwhile, in hybrid settings, offices can serve as a physical space for inspiration, personal interaction, and (tacit) knowledge exchange. Given those findings, the proper management of innovation tools and methods between remote and in-person work environments will be essential for future innovation managers.

TIM: **How do Organisations Experience and Use Algorithms to Transform Knowledge Work?**

Author: **Javier Ricardo Amaya Silva**, *Oxford U., Saïd Business School*
Author: **Matthias Holweg**, *U. of Oxford*

Recent advances in algorithmic technologies have led many to suggest that these could also be used to improve knowledge work, while others highlight the potential negative learning consequences in such contexts. In this paper, we study how algorithmic technologies are used to improve knowledge work in four areas of a multinational engineering firm. Our findings show that organisations engage in two fundamental pathways of transforming knowledge work: altering a specific task or reengineering an entire process. We also found that reengineering the process induces a necessary alteration of the knowledge regime in order to improve, or at least ensure, the quality of the constructed knowledge. In practice, this means that the ability to improve knowledge work with algorithmic technologies is primarily a function of the motivation, interpretations and means available, and not of the required skills to perform a task, as present studies commonly suggest. In the wider context of a digital transformation, it thus is possible to also automate tasks that require creativity and social interaction, provided the degree of novelty remains low.

Technology, Policy and Society Track: The Role of Government in Innovation

Session Moderator: **Songyang Wu**, *Queen Mary U. of London*

TIM: **How Can Governmental Venture Capital Improve Firm Innovation? The Role of Proactive R&D Management**

Author: **Songyang Wu**, *Queen Mary U. of London*
Author: **Lutao Ning**, *Queen Mary U. of London*
Author: **Shijun Mu**, *Queen Mary U. of London*
Author: **Shang Chen**, *Queen Mary U. of London*

Governmental venture capital (GVC) has emerged in recent years as a policy instrument for improving the survival and performance of firms. However, the extent of its effectiveness has been challenged in the recent literature. This paper, therefore, examines the effect of GVC on the technological innovation of firms with different R&D management patterns. Using an unbalanced panel of 4,999 firms listed on China's National Equities Exchange and Quotations from 2012 to 2019, our empirical results reveal that GVC funds can spur firm-level technological innovation. Furthermore, the positive impact of GVC funds is contingent on firms' implementation of high-level proactive R&D management. We contribute to the literature by underlining the role of GVC funds in augmenting firms' resources for innovation and the importance of proactive R&D management in resource utilization. Theoretical and managerial implications are discussed.

TIM: **The Role of Speedier Public Funding for Small High-Tech Firms**

Author: **Paige Clayton**, *Georgia Institute of Technology*
Author: **Evan Johnson**, *U. of North Carolina, Chapel Hill*

We exploit a unique programmatic shift in the U.S. Small Business Administration's small business technology seed funding programs to investigate whether shorter time periods between proof-of concept and seed stages in public venture capital (VC) allow firms to achieve greater technology and financial milestones. Our paper is motivated by an observation made by founders that federal funding is too slow. Through a series of two-way fixed effects regression models the sample of National Institutes of Health (NIH) recipient firms, we find that faster public VC leaders to greater technology outcomes on some metrics, but not all. Next, by exploiting exogenous variation in state match programs, we show that these results also are magnified by windfall state funding. Our findings have practical implications for policymakers and for entrepreneurial strategy. We contribute to the literatures on innovation policy, the federal SBIR/STTR programs, and provide new understanding of the role of timing in public venture finance and entrepreneurial strategy.

TIM: **Who is Swimming Naked When the Tide Goes Out? Governmental Pressures and Patent Inflation in China**

Author: **Qiu Shumin**, *East China U. of Science & Technology*
Author: **Guanchun Liu**, *Lingnan College/ Sun Yat-sen U.*

This paper explores corporate innovation distortion under governmental pressures on patent targets in China, revealing the cost of political legitimacy management. Utilizing the strengthened patent examination process that aims to prohibit inferior or dishonest patent applications in 2013 as a quasi-natural experiment, we observe a significant decline in the growth rate of utility model patent applications, and such a decline is more pronounced in government-reliant firms, such as state-owned firms, government-certified firms and public-funded firms. Given the purpose of patent regime improvement, we argue that the decline in utility model patent applications is an indicator of ex ante innovation distortions, i.e., to what extent firms' research investments are distorted away from novelty to strategic patenting to respond to government patent targets in exchange for political legitimacy. This research advances our understanding of corporate political strategy and institutional strategy by revealing the cost of managing political legitimacy, specifically how internal efficiency is lost and how long-term strategic focuses are distorted when firms comply with governments. In addition, it provides important implications for policy-makers in emerging countries regarding how to manipulate the strictness of the intellectual property rights (IPR) regime to facilitate the transition from technological catching up to the frontier.

TIM: **How Do State R&D Tax Incentives Affect Opportunity for Women and Minority-Owned Businesses?**

Author: **April Burrage**, *U. of Massachusetts Amherst*

This paper examines how state R&D policy affects underrepresented small business owners' participation in federal grant programs in high-tech sectors. I estimate the causal effect of state research and development (R&D) tax credits on funding to women and minority-owned businesses through the federal Small Business Innovation Research (SBIR) program, which explicitly is meant to foster participation of minority and disadvantaged persons in technological innovation. I use a doubly robust staggered difference in difference research design to account for variation in how and when states implement a R&D tax credit program. The results indicate that there are heterogeneous effects of R&D policies by state, with underrepresented business owners following similar trends post-adoption as non-underrepresented business owners. This suggests that while state R&D tax programs do seem to increase receipt of federal funding for small businesses, they are not differentially helping underrepresented small business owners receive federal funding.

TIM: **Understanding Innovation Management System in Law Enforcement Agencies**

Author: **Marina Carelli Reis**, *U. de São Paulo - USP*
Author: **Ana Paula Paes Leme Barbosa**, *U. of Sao Paulo*
Author: **Tiago Paz Lasmar**, *U. of Sao Paulo (USP)*
Author: **Mario Salerno**, *U. of Sao Paulo (FEA/USP)*

Even with the increased interest in innovation, research focused on the public sector is underdeveloped and scarce. Public organizations have opportunities and barriers to innovate that are different from those found in the private sector, in which innovation research usually focus. We know that public organizations embrace innovation to increase their performance, maintain their legitimacy and create public value. But to know how to organize to innovate in this sector more research is needed. In this context, this work will seek to examine the innovation management systems in law enforcement organizations. It relied on a multiple case analysis in five police agencies from different countries, through semi-structured interviews and document analysis. Overall, this study demonstrates an effort in systematizing innovation management in law enforcement organizations, but this is a very new endeavor for most agencies. We have identified that all the studied agencies have a dedicated structure for innovation, which varies in size and position in the agency's hierarchy. We described two types of innovation management systems: heavyweight and lightweight. They present different levels of breadth and depth of innovation activities and different strategic focuses. We also presented four propositions that help to better understand the roles and characteristics of innovation systems in these institutions. In brief, the different ways to organize offered interesting insights that we discuss through the Innovation management literature lens. It helped to better understand the roles and characteristics of innovation systems in one kind of public organization and the challenges they face to innovate systematically.

Learning and Innovation Track: Ambidextrous Learning

Session Moderator: **Lindsey Raymond**, *Massachusetts Institute of Technology*

TIM: **Hiring as Exploration**

Author: **Lindsey Raymond**, *Massachusetts Institute of Technology*
Author: **Danielle Li**, *MIT*
Author: **Peter Bergman**, *U. of Texas at Austin*

This paper views hiring as a contextual bandit problem: to find the best workers over time, firms must balance “exploitation" (selecting from groups with proven track records) with “exploration" (selecting from under-represented groups to learn about quality). Yet modern hiring algorithms, based on “supervised learning" approaches, are designed solely for exploitation. Instead, we build a resume screening algorithm that values exploration by evaluating candidates according to their statistical upside potential. Using data from professional services recruiting within a Fortune 500 firm, we show that this approach improves the quality (as measured by eventual hiring rates) of candidates selected for an interview, while also increasing demographic diversity, relative to the firm's existing practices. The same is not true for traditional supervised learning-based algorithms, which improve hiring rates but select far fewer Black and Hispanic applicants. In an extension, we show that exploration-based algorithms are also able to learn more effectively about simulated changes in applicant hiring potential over time. Together, our results highlight the importance of incorporating exploration in developing decision-making algorithms that are potentially both more efficient and equitable.

TIM: **Inventor Knowledge Network Structural Holes and Ambidexterity Innovation in High-tech SMEs**

Author: **Feng Guo**, *Tianjin U.*
Author: **Na Luo**, *Tianjin U.*
Author: **Binger Guo**, *Tianjin U.*
Author: **Hongjuan Zhang**, *Tianjin U.*
Author: **Shaolin Xiong**, *Inventor*

Ambidexterity is important for firms to keep advantage and remain successful. Based on a framework of ability-motivation-performance, this study aims to investigate the effect of inventor knowledge network structural holes on ambidexterity innovation in high-tech SMEs and considers the contingency of government subsidies and intellectual property protection. We suggest that inventors’ knowledge network structural holes are an important yet understudied ability factor to balance the trade-off between exploration and exploitation and this relationship is influenced by the institutional environment (government subsidies and intellectual property protection). We further argue that ambidexterity innovation has a positive impact on high-tech SMEs’ performance. Based on a longitudinal data set of 8,928 inventors in firms listed in the High-Tech Innovation Board supports our arguments, we find an inverted U-shaped relationship between knowledge network structural holes and ambidexterity innovation. Meanwhile, government subsidies flatten the inverted U-shaped relationship while intellectual property protection steepens the curvilinear relationship. In addition, inventors' ambidexterity innovation is beneficial to firm performance. Theoretical contributions, practical implications, limitations, and future research avenues are discussed.

TIM: **Within and Cross-boundary Ambidextrous Learning, Dynamic Capabilities and Market Value**

Author: **Chiung-Yi Hwang**, *National Yang Ming Chiao Tung U.*

Base on organizational learning (OL) theory and dynamic capability (DC) perspective and from the perspective of capital market, we consider the microfoundations of DC and examine how external investors evaluate firms’ learning and alliance strategies for building DC and how their evaluations change under different resource conditions (i.e. firm age) and development directions (i.e. different generic strategies). With the sample of 340 public firms in the ICT industries in the U.S., we propose that investors are more worried about the failure of developing dynamic capabilities than the risks brought by ambidextrous learning (AL). Cross-boundary AL (especially complementary cross-boundary AL) can enhance investors’ appreciation firms’ OL and their market value. Investors’ concern about younger firms’ abilities to afford OL to build all dimensions of DC due to their newness can be compensated by cross-boundary OL strategy. Firms’ generic strategies shift their learning emphasis and influence their prioritization of different dimensions of DC and trade-offs among alliance portfolios.

TIM: **Exploring the Capacity for Learning and Transformation Role for Innovation Ambidexterity**

Author: **Arash Sadeghi**, *U. of Leicester*
Author: **Mandana Farzaneh**, *Faculty of Information Technology, Iran Telecommunication Research Center*

This research sheds new light on how intellectual Capital (IC) affects exploratory and exploitative innovation in the context of the healthcare sector. The context is important in establishing guidelines for the theory and in providing managers with specific managerial insights. A sample of 321 firms operating in the healthcare industry demonstrates Capacity for learning and Transformation (CLT) mediates the relationship between IC and innovation ambidexterity. This finding highlights that IC does not directly promote innovation ambidexterity. As such, IC plays an integral role in enabling CLT to be implemented effectively, which then affects innovation ambidexterity. In other words, firms cannot fully realize the potential of their IC and leverage it for innovation ambidexterity without implementing CLT. A further distinction is made in this study between knowledge depth and knowledge breadth. According to this study, knowledge breadth influences the effect of CLT on exploratory innovation in the indirect IC-exploratory innovation relationship. As an alternative, knowledge depth moderates the indirect IC-exploitative innovation relationship by influencing how CLT affects exploitative innovation. In light of this finding, firms can benefit from their IC that enables them to engage in CLT, which in turn enables them to innovate.

Open Innovation Track: Open Data, Innovation & Science

Session Moderator: **Susanne Beck**, *LBG OIS Center & Copenhagen Business School*

TIM: **Increasing the Depth of Crowd Involvement: Decision Making and Co-creation Challenges in Science**

Author: **Julia Suess-Reyes**, *Ludwig Boltzmann Gesellschaft*
Author: **Susanne Beck**, *LBG OIS Center & Copenhagen Business School*
Author: **Robin Brehm**, *Ludwig Boltzmann Gesellschaft*
Author: **Marion Kristin Poetz**, *Copenhagen Business School*

A growing number of research projects involve both professional scientists and members of the general public ("crowds"). Although the contributions of crowds are often limited to narrow tasks such as data collection or data processing, policy makers and science advocates call for more extensive involvement, including highly collaborative "co-creation". However, co-creation can be defined in different ways, making it difficult to understand its potential benefits as well as challenges. To provide greater conceptual clarity, we propose a framework that distinguishes the breadth of crowd involvement across one versus multiple stages of a research project from the depth of crowd involvement at a given stage. We also argue that the key distinguishing feature of deep involvement and of co-creation is that crowd contributions go beyond effort and knowledge to include active participation in decision making. In the empirical part of the paper, we first apply this framework to characterize crowd involvement in ten co-created research projects across a range of fields. We then analyze qualitative data to explore challenges these projects faced, focusing on aspects that related specifically to crowd participation in decision making. Our findings contribute to ongoing debates around crowd involvement in science and suggest important avenues for future research on co-production in the context of science and innovation.

TIM: **To Share, Curate or Sell: Three Pathways of Using Data in Open Innovation**

Author: **Nikolai Kazantsev**, *Institute for Manufacturing, Engineering Department, U. of Cambridge*
Author: **Cristian Ghernes**, *Oxford Brookes U.*
Author: **Jeremy Zwiegelaar**, *Oxford Brookes U.*
Author: **Roger Maull**, *U. of Exeter*
Author: **Alan W. Brown**, -
Author: **Tim Vorley**, *Oxford Brookes Business School*

The open data market size is estimated at €184 billion and is forecast to reach between €199.51 and €334.21 billion in 2025. Although the data volumes are increasing, the literature is still far from understanding the role of data in open innovation. This study asks: how can companies use data in open innovation? We interviewed 25 professionals in business transformation, data science, and domain experts in animal health to answer this question. First, we provide evidence of the role of data in open innovation for extracting value. Second, we theorize how data in inbound and outbound open innovation can be shared, curated, or sold. The study is limited by the selection of a highly regulated animal health industry and welcomes further research to confirm or extend its findings.

TIM: **When Citizens Judge Science: Social Impact, Representativeness, and Personal Interest**

Author: **Chiara Franzoni**, *Politecnico di Milano*
Author: **Henry Sauermann**, *ESMT European School of Management and Technology*
Author: **DILETTA DI MARCO**, -

An increasing number of organizations crowdsource the evaluation of scientific research projects, hoping to democratize research agendas and steer science towards greater social impact. However, there are important concerns about asking "citizens" without a professional scientific background to judge science. These relate, among others, to the criteria that citizens use to evaluate research projects, to consequences of the self-selection of participants, and to potential biases due to evaluators' personal interest. To examine these concerns, we collected over 2,300 crowd evaluations of four real research proposals using an innovative methodology. We find that lay-evaluators focus, as expected, on projects' potential social impact but also place significant weight on scientific merit and team capabilities. Citizens with a personal interest in the research topic are more likely to support a project, but they do not seem to hold "biased" assessments of social impact. Using a quasi-experimental design, we also show that the crowdsourcing mechanism matters: Mechanisms that impose a personal cost on evaluators who wish to support a project give greater voice to citizens with higher income and education, potentially undermining the democratizing potential of crowdsourcing. Our results inform current debates on the involvement of the general public in funding decisions and contribute to research on the organization of science, crowdsourcing, as well as crowdfunding.

TIM: **Signaling in the Academic Job Market – The Case of Open Access Publishing Agreements**

Author: **Gernot Pruschak**, *Bern U. of Applied Sciences*

Open access publishing has become more and more popular in the last two decades. Only recently, open access deals, also called offsetting agreements, transformative agreements, or open access publishing agreements arose as incubators of open access publishing by waiving individual authors' article processing charges. We ask the research question whether such open access publishing agreements managed to increase the share of open access publications in business research. We generate our theoretical model by drawing from signaling theory. To test this model, we conduct a bibliometric study among research articles, reviews and conference papers published in FT-50 journals between 2010 and 2019. We find that none of the FT-50 journals constitutes a gold open access journal (i.e. providing free access to all articles). Furthermore, our results show that the share of open access publishing among FT-50 journals is substantially lower than those from other disciplines. While junior scholars do not differ in their open access publishing behavior, the number of affiliated institutions and the number of affiliated countries have positive effects on open access publishing. We therefore call upon business research publishers and societies to establish gold open access journals, universities to educate junior scholars on open access publishing opportunities and national and supra-national agencies to negotiate open access publishing agreements on behalf of their dedicated research institutions.

TIM: **The "Dark Side" of Open Innovation in Emerging Markets: An Integrated Framework**

Author: **Joni Riihimäki**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Khuram Shahzad**, *U. of Vaasa*

Prior literature on open innovation (OI) has mainly focused on identifying the benefits of OI and how it has become a crucial part of a firm's innovation and new product development (NPD) while neglecting its "dark side" which hinders firms to gain full value in this pathway. Particularly, emerging markets, that are well-recognized for innovation, remained unmapped in terms of the challenges that OI brings. Therefore, the purpose of this research is to identify the firm- and individual-level factors causing OI failure while moderated by OI mindset and culture. We also investigate the impact of OI failure on the NPD performance of the firms. Based on data collected from 161 SMEs and MNEs from Turkey and Russia, the results highlight the significant moderating role of OI mindset and culture which is decreasing the negative impact of individual-level challenges on OI failure. Furthermore, it was found that OI failure often results in decreased NPD performance which in turn points out that firms cannot turn these failures into new opportunities. In general, this research paper assists firms to have a better inclusive view of the concept of OI and further encourages more future research to be done in this field.

Innovation and Competitive Strategy Track: R&D Strategy for Competitive Advantage

Session Moderator: **Manish Kumar Srivastava**, *Michigan Tech U.*

TIM: **Firm Age and Optimal Level of R&D: Implications for Firm Failure Risk**

Author: **Manish Kumar Srivastava**, *Michigan Tech U.*
Author: **Smita Srivastava**, *Wichita State U.*

The impact of R&D intensity on a firm's success or failure has been the subject of conflicting research in the past. Given the diversity of technological opportunities across industries and how a firm's challenges in R&D change over its lifecycle, we first investigate how age affects a firm's failure risk over its lifecycle and then examine how the optimum level of R&D intensity relative to the industry changes with age. Our study demonstrates the liabilities of adolescence and obsolescence through a sigmoid-shaped relationship between firm age and failure risk and a U-shaped relationship between R&D intensity relative to the industry average and firm failure risks. Our study highlights how the alignment between firm age and R&D intensity can mitigate the liabilities of adolescence and obsolescence.

TIM: **R&D Outsourcing in the Biopharmaceutical Industry and its Effect on Firm Innovation**

Author: **Vaibhav Mishra**, *Fox School of Business, Temple U.*
Author: **Solon Moreira**, *Fox School of Business, Temple U.*
Author: **Arjan Markus**, *Eindhoven U. of Technology*

Open innovation literature shows that complementarity between external and internal technological components is crucial for firms to sustain innovation that deviates from existing technological trajectories. Most research considers that external technological assets and capabilities can be bought or accessed collaboratively. This paper introduces Contracting Development Manufacturing Organizations (CDMOs) as a distinctive form of outsourcing specialized R&D assets and capabilities on a per-use rental basis instead of collaborating or directly controlling them. Such outsourcing allows firms to control downstream development processes and retain control of the rents that accrue after successful commercialization. This division of labor allows firms to focus on their inventive internal process and simultaneously access diverse CDMO capabilities, enabling them to generate destabilizing innovations. However, excessive CDMO outsourcing will harm a firm's ability to develop path-breaking innovations. We theorize and find empirical support for the idea that the reliance on CDMOs has an inverted U-shaped relationship with a firm's ability to produce destabilizing innovation. We then examine three absorptive capacity-related contingencies, namely R&D centralization, intrafirm R&D collaboration, and the average R&D workforce experience as relevant moderators for this baseline relationship. We test our arguments in the context of the Biopharmaceutical industry and find overall support for our hypotheses.

TIM: **Innovation in Stigmatized Industries: Liability or Assets?**

Author: **Long Su**, *U. of Kansas*
Author: **Minyoung Kim**, *U. of Kansas*

We investigate how organizational stigma affects innovation performance. Drawing on technological innovation and organizational stigma literature, we develop a theoretical framework on the relationship between organizational stigma and social evaluation of firm innovation by two types of social audiences —inventors and stock market investors. We maintain that organizational stigma lowers innovation performance of the firms operating in stigmatized industries, because inventors and stock market investors would negatively evaluate the scientific and economic values of their innovation, respectively. Results of empirical analysis with patent- and firm-level data of U.S. public firms and propensity score matching techniques provide corroborating evidence in support of the negative scientific evaluation by inventors. However, we find contradictory results for the economic evaluation by stock market investors: unlike our theoretical prediction, organizational stigma, in fact, enhances innovation's economic value. Post-hoc mediating and moderating effect analyses to investigate the contradictory findings reveal more nuanced theoretical mechanisms underpinning the positive economic value of innovation in stigmatized industries: stigmatized industries tend to have lower product market competition, which, in turn, can bring higher rents for investors.

TIM: **R&D, Coopetition, Knowledge Spillovers and Implications for Innovation**

Author: **Farzana Chowdhury**, *Durham U. Business School*

Recent research on innovation management and strategy has demonstrated that coopetition and knowledge spillover matter for innovation, but so does a firm's own Research and Development (R&D). Conditional to a firm's own R&D investment, this study makes a theoretical investigation into the role of two knowledge sourcing strategies --- coopetition and intra-industry knowledge spillovers for a firm's innovation and imitation. Based on an analysis of a matched sample of 17,859 UK firms during 2002-2014, we demonstrated why and under what conditions firms will a) invest in internal R&D, b) engage in coopetition, and c) access knowledge spillovers.

TIM: **Shadow Options as an Engine of Innovation: Emergent Uses of Corning's Glass-based Innovations**

Author: **Pierpaolo Andriani**, *Kedge Business School*
Author: **Gino Cattani**, *New York U.*

Our goal in this paper is to study the process through which the shadow options embedded in existing and novel technologies emerge and are converted into real options. Despite recognizing the existence of shadow options, extant research has not yet offered a systematic analysis of what they are and how they manifest. By tracing the shadow options of Corning's specialty-glass technologies, we shed light on the main patterns that characterize shadow options and their emergence in a corporate setting. The study on Corning explicates how firms can pursue an innovation strategy by exploiting the shadow options embedded in their technologies.

People and Innovation Track: Can AI promote Creativity and Innovation?

Session Moderator: **Sebastian Gregor Bouschery**, *RWTH Aachen U.*

TIM: **AI-Augmented Creativity: Overcoming the Productivity Loss in Brainstorming Groups**

Author: **Sebastian Gregor Bouschery**, *RWTH Aachen U.*
Author: **Vera Blazevic**, *Radboud U. Nijmegen*
Author: **Frank T. Piller**, *RWTH Aachen U.*

This paper investigates how artificial intelligence, in particular transformer-based language models like GPT-3, provide a highly scalable solution for augmenting human creativity and overcoming the productivity loss in interactive brainstorming groups. We conduct a one-factorial between-subjects lab experiment, in which participants brainstorm ideas for a common question. Additionally, we complement results with qualitative insights. We compare nominal groups (humans brainstorming individually), interactive groups (humans brainstorming together as a team), hybrid groups (a human brainstorming together with an AI), and AI-only control groups. Our results indicate that hybrid groups outperform both interactive and nominal groups in terms of the number of generated ideas and perform on par in terms of brainstorming creativity while requiring only half the human resources. Furthermore, our study suggests that AI could even replace human ideation altogether. We discuss why such an interpretation of our findings might be too hasty and shortsighted, consider important implications, and derive avenues for future research.

TIM: **AI in Innovation: How Does AI Impact Recombinant Complexity?**

Author: **Yangyang Deng**, *U. of Melbourne*
Author: **Liang Chen**, *Singapore Management U.*
Author: **Kwanghui Lim**, *U. of Melbourne*

Artificial intelligence (AI) as a powerful emerging technology is deemed to impact a wide range of industries. Recent research focuses on AI's automation and efficiency improvement, but little do we know about AI's role in cognitively demanding tasks, such as innovation. This study explores this question by examining how AI can augment inventors in dealing with innovation complexity. While the increasing complexity in searching and combining technologies is a major challenge for current innovation, AI might be a possible solution since it is highly efficient in complex contexts. However, AI also reflects and even amplifies biases in historical data and may mislead humans. Therefore, this paper discusses whether and how AI can augment inventors in innovation. The results show that AI alone does not have positive effects on improving inventors' performance in dealing with innovation complexity, but it can augment inventors with high knowledge breadth and large networks. This study provides empirical evidence on AI's augmenting effects in cognitive tasks and identifies knowledge accumulation and network as two important complementary factors in working with AI. This study also provides insights for future discussions on AI's role in other cognitive tasks at higher levels (e.g., teams or organizations).

TIM: **Artificial Intelligence-Based Knowledge Management: 9-Square Grid AI-Based KM Model**

Author: **Mu-Yen Hsu**, *National Chengchi U.*
Author: **Michael Juin-Yi Han**, *National Chengchi U.*

Although artificial intelligence (AI) has been significantly developed, it is usually regarded as supporting tools for experts to combine the explicit information in the Knowledge Management (KM) literature. The implicit assumption is that knowledge creation still depends on the creativity of human being. In this paper, we falsify the assumption by a case study of the knowledge creation activities conducted by a Software as Medical Device R&D team in one teaching hospital. Then, besides the 4 traditional knowledge conversion modes (socialization, externalization, combination and internalization) in SECI Model, we add five knowledge conversion modes (modeling, encoding, machine learning, explaining and verifying) into the knowledge creation process, and extend 4-quadrant SECI Model to 9-square grid AI-based KM Model, which is expected to be appropriate Knowledge Management model for guiding the knowledge creating process in the AI age.

TIM: **AI-Made Art is Worth Less But Can Increase the Perception of Human Creativity**

Author: **Carl Blaine Horton**, *Columbia U.*
Author: **Sheena S. Iyengar**, *Columbia U.*

The rapid growth of AI programs capable of producing artwork on par with humans (dubbed "synthography") raises new questions and concerns for artists and scientists alike. Will the value of human labor decrease, as has occurred during industrial revolutions of the past? Will lay persons evaluate AI-made art and human-made art differently? And how will collaborations (e.g., when human artists use AI tools) impact the creative value of both humans and technology? Taking a psychological perspective, the current research examines the bias against AI-made art on multiple dimensions (e.g., perceptions of creativity and skill as well as estimates of monetary value and labor). Using different experimental designs, we find this bias can be strengthened or weakened depending upon the salience of comparisons being made. What is more, by labeling a single piece of art as either human-made, AI-made, or collaboratively made in different conditions, we explore how perceptions of human creativity and labor are both increasing or decreasing as a function of these new technologies. That is, beyond documenting a robust bias against AI-made art across multiple dimensions and examining which dimensions this bias is stronger on, we demonstrate that the comparison of human and AI-made art can increase the perception of human creativity under select conditions.

Innovation and Competitive Strategy Track: Driving Business Model Innovation

Session Moderator: **Angel Sharma**, *UNSW Sydney*

TIM: **Business Model Innovation Intensity: The Interplay of Emotional Ambivalence and Future Focus**

Author: **Angel Sharma**, *UNSW Sydney*
Author: **Josh Keller**, *UNSW Sydney*
Author: **George A. Shinkle**, *UNSW Sydney*

How do decision makers' mixed feelings about the firm's situation influence the propensity of firms to innovate their business model? We integrate theoretical logics from the social psychology literature on ambivalence and temporal focus to examine how emotional ambivalence affects business model innovation and how organizational future focus affects this relationship. We hypothesize the main effect of emotional ambivalence, and the moderating effect of temporal focus on business model innovation intensity. We test our hypotheses using a novel computer-aided text analysis of letters to shareholders and earnings call transcripts of S&P 500 firms between the years 2004 and 2020. We find a direct negative association of emotional ambivalence with business model innovation intensity and a moderating effect of organizational future focus which flips this negative relationship to positive. Our findings highlight the interplay between emotions and cognition in business model innovation. We discuss the implications of our findings for the literature on business model innovation and emotions in strategy.

TIM: **The Role of Digital Alignment and Strategic Flexibility in Shaping Business Model Efficiency**

Author: **Marco Balzano**, *Ca' Foscari U. of Venice*
Author: **Andrea Ciacci**, *U. of Genoa*
Author: **Giacomo Marzi**, *IMT School for Advanced Studies Lucca*

The purpose of this study is to explore the relationship between digital alignment and business model efficiency in small and medium-sized enterprises (SMEs) in the manufacturing industry in Italy. Digital alignment is operationalized as comprising both strategic decision support and operational support. The research employs a quantitative approach, using regression analysis and a necessary condition analysis on a sample of Italian SMEs. The results show that digital alignment, both in terms of strategic decision support and operational support, enhances business model efficiency. Additionally, the study finds that strategic flexibility strengthens the relationship between strategic decision support and business model efficiency. This study is among the first to operationalize digital alignment as comprising both strategic decision support and operational support, and it sheds light on the role of strategic flexibility in the relationship between digital alignment and business model efficiency.

TIM: **Low-Carbon Digital Business Model Innovation: A Renewable Energy Case Study from Thailand**

Author: **Apichai Riddiboot**, *Asian Institute of Technology*
Author: **Yuosre F. Badir**, *Asian Institute of Technology*

Global warming is the problem caused by excessive amount of greenhouse gases (GHG) in the earth's atmosphere. Reducing GHG emissions to counteract global warming is now everyone's mission on a global scale. Businesses are setting goals to lower their carbon footprint to demonstrate their social responsibility by taking part in variety of carbon reduction initiatives and incorporating them into their business models to meet the GHG reduction goals. Drawing on literatures on sustainable innovation and digital technologies, this article examines a business model innovation (BMI) that occurs in a Thai renewable energy production company, whose primary activity is wholesaling renewable electricity to the state-owned utilities under long-term power purchase agreements (PPA). The company's goal is to become a regional leader in clean energy. The case study shows that by altering its current business model with creative concepts and technologies, it will be able to adapt to the changing industry and able to create new values—aside from clean electricity —for a wider range of customers who can participate in decarbonization for global sustainability.

TIM: **Appropriability and Competition between Complementors: Copyright and Music Business Models** ☯ 💻

Author: **Charles Baden-Fuller**, *Bayes Business School*
Author: **Nicola Searle**, *Goldsmiths, U. of London*

Business model competition between downstream complementors can undermine the profits of innovators, even when appropriation conditions are strong. Analysing the relationship between music labels (innovators) and user-facing complementors in the music industry, we explore how competition between complementor business models can moderate innovator profits despite strong intellectual property rights (copyright). The pace of technological change in the digital economy has led to tumultuous years for music innovators, with a dramatic drop in music revenues accompanied by a diversification of complementor business models. Profiting from innovation in the digital economy has become increasingly difficult. Using a deep analysis of 25 years of music industry business models, and an analysis of 400 music industry publications, we construct a detailed picture of music innovators and their relationships with complementor business models. We draw important conclusions for refining our understanding of the profiting from innovation framework of David Teece, as it relates to the digital age, and for our understanding of ecosystem development and competition.

Participant: **Feng Zhu**, *Harvard U.*

Multi-sided platform marketplaces connect at least two groups of customers together, enabling complex value creation and capture systems. They have dominated entire industries over the last decade, attracting billions of users and dollars of capital. Platformization seemed like an unbeatable business strategy. Even during the pandemic, platforms thrived where "traditional" companies suffered. What a difference a year makes. The market valuations of platforms have crashed. Many are laying off significant numbers of employees. Some are enduring the departure of significant numbers of users. Are platforms dead? Is this a cyclical pause? Or is this the beginning of something else? Perhaps an evolution of the platform business model into something even more powerful and inclusive? This Symposium assembles the world's experts on platforms to debate where platforms are and where they are going. The session will conclude with a discussion among the panelists and audience for a research agenda to guide future efforts in this evolving field.

OB Division Making Connections Micro-Community Coffee Hours

Organizer: **Katelyn Zipay**, *Purdue U.*
Organizer: **Margaret M. Luciano**, *Penn State U.*

Micro-communities are an important part of the OB Division and provide the opportunity to connect with other scholars who share common interests. To support our micro-communities, a subset of communities with gather, each for an hour, throughout the day to connect, have a coffee and treats, and build community. Micro-communities hosting a coffee hour will communicate the time and location with its members via listservs and other community communications.

OB Division Spotlight: The Integration of Organizational Behavior & Artificial Intelligence (AI)

Organizer: **Ronald F. Piccolo**, *U. of Central Florida*

The integration of organizational behavior (OB) and artificial intelligence (AI) will be featured during the OB Division's Plenary session at the 2023 annual meeting of the Academy of Management. Expert panelists will present examples of how AI has influenced research designs, access to and analysis of data, and fundamental research questions in the OB domain. The session will also include small group discussions of how AI will affect scholarly research, journal publications, pedagogy, student assignments, teaching, and consulting. The session will conclude with a description of opportunities and risks associated with the integration of OB and AI.

Of Rollercoasters and Resilience: Drivers and Impacts of Extreme Change in Organizations

Session Moderator: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*

ODC: **Extremeness of Organizational Change: Individual and Institutional Effects**

Author: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*
Author: **Garima Garg**, *U. of Massachusetts, Amherst*
Author: **Radu Vlas**, *Central Connecticut State U.*
Author: **Mzamo P. Mangaliso**, *UMass Amherst*

Do CEOs enact or suppress their personalities depending on the institutional pressures they face? How does their perception affect their comfort with extreme change in organizations? We investigate how institutional discretion affects extremeness of change in organizations and focus on the mediating role that CEO self-monitoring may play. We claim that the institutional discretion allowed to managers has an indirect effect on the extremeness of strategic changes enacted in organizations through the manifestation of CEOs' self-monitoring. We find support for the mediating role of CEO self-monitoring such that in high discretion countries, CEOs tend to monitor their behaviors to a smaller degree and this further leads to more extreme changes enacted by their organizations. Our theorizing contributes to upper echelons theory by bridging most recent developments in national-level managerial discretion literature with CEOs' self-monitoring. Our study extends theory's applicability in the social psychology research.

ODC: **A Serendipitous View of Strategic Leadership in Corporate Radical Innovation**

Author: **Zhiyan Wu**, *Erasmus U. Rotterdam*
Author: **Weiru Chen**, *China Europe International Business School (CEIBS)*
Author: **Jiexiang Wang**, *School of Business Administration, Zhejiang Gongshang U.*
Author: **Yang Yang**, *School of Business Administration, Zhejiang Gongshang U.*

Much of the scholarship on strategic leadership and corporate innovation has traditionally adopted an omniscient view of CEOs, investigating how CEOs deliberately engineer opportunities to carry out radical innovation. This literature has abstracted away the serendipitous nature of innovation activity, and we advancing a serendipitous view of strategic leadership in incubating radical innovation. The research find that the altruistic disposition of the CEO exposed him to several serendipitous encounters, and that the alertness of the CEO nudged him to flexibly exploited those serendipitous opportunities which eventually led to the successful incubation of decentralized platforms that enable the entire industry. These findings plausiblize the serendipitous view of strategic leadership, and inform a nuanced understanding of intrapreneurial change pathways to radical innovation.

ODC: **Shades of Resilience and Differential Outcomes: Insights from Indian Corporates in Pandemic Lockdown**

Author: **Simy Joy**, *Independent Researcher*
Author: **Priya Rajeev**, *Indian Institute of Management, Kozhikode*
Author: **Sumelika Bhattacharyya**, *IESE Business School*

In the context where environmental disruptions are increasing in frequency, intensity and longevity (Covid-19 pandemic being a prime example), survival and business continuity often become greater strategic concerns for organizations than performance. Both scholars and practitioners consider resilience as a key organizational capability that ensures survival and business continuity. Much of the literature on resilience is conceptual, and defines resilience and its outcomes in a wide range of ways. What resilience looks like in practice and whether it generates outcomes as predicted are less known as empirical studies on the topic are scarce. In this paper, based on a qualitative study of 41 Indian companies that underwent severe disruptions during the Covid-triggered nationwide lockdown, we show that it is not just the presence (or absence) of resilience, but also the nature of resilience that is instrumental in shaping the organizational outcomes differently. Drawing on the findings, we call for de-obfuscating the concept of resilience and empirically grounded models for depicting its outcomes.

ODC: **The Emotional Rollercoaster of Change: Employees' Affective Trajectories During Radical Change**

Author: **Christina Hagl**, *LMU Munich School of Management*
Author: **Rouven Kanitz**, *Rotterdam School of Management, Erasmus U.*
Author: **Shaul Oreg**, *Hebrew U. of Jerusalem*

How employees respond affectively to radical organizational change has significant implications for the change's success and employees' well-being. Most empirical research has taken a static view of employees' affective responses, with little insight into their development overall, and during change in particular. To learn about the nature and consequences of employees' affective trajectories during change, we conducted a seven-wave study, over 13 months, in an HR service firm undergoing a radical organizational restructuring. Using latent growth curve modeling, we capture employees' high activation pleasant (HAPA) and unpleasant affective (HAUA) trajectories from the initiation to the complete implementation of the change. Our findings show that, on average, employees' HAPA (HAUA) trajectories take on a u-shaped (inverted u-shaped) form. Our results also show that organizational identification prior to the change is associated with inter-individual differences in HAPA (but not in HAUA) trajectories, such that the higher the employee's identification, the narrower the trajectories, involving stronger increases in HAPA as the change advances. In turn, HAPA (HAUA) trajectories predict employees' willingness to support the change and their turnover intentions at the end of the restructuring. Our findings advance knowledge on the nature of change recipients' affective trajectories, and on their antecedents and outcomes.

ODC: **How Changes in Work and Family Role Salience Following COVID19 Threat Affect Turnover Intention**

Author: **Jihyun Shin**, *Yonsei U.*
Author: **Jimin Kwon**, *Yonsei U.*
Author: **Boram Do**, *Yonsei U.*

Not only are we getting through a pandemic, but more recently, we are suffering from a "Quitting pandemic," which refers to the rush of resignations spanning across industries and generations. We note that the prevalence of actual and perceived threats of contagion will exert a substantial influence on behaviors in organizations. We further attempt to develop a theoretical model in which the perceived threat of COVID19 is proposed to predict employee turnover intention through its influence on work role and family role salience. Integrating terror management theory with life role salience constructs, we predict that the perceived severity of COVID19 will be negatively related to work role salience while being positively related to family role salience. The changes in each role salience will, in turn, increase turnover intention. In addition, we specify a boundary condition (work demand) that affects the aforementioned relationships. Based on the data collected at three-time points, we employed a structural equation modeling approach to empirically test the hypotheses. The results partially supported the hypothesized model. Theoretical and practical implications are discussed.

Gig Work, Labor Market Intermediaries, and I-Deals

Session Moderator: **Abisola Coretta Kusimo**, *Stanford School of Engineering*

CAR: **The Evolution of the Gig Economy in the Field of Management: A Systematic Review and Synthesis**

Author: **Qingyang Xu**, *Southampton Business School, U. of Southampton*
Author: **Mina Beigi**, *Southampton Business School, U. of Southampton*

Scholarly publications on the gig economy have had an exponential growth in recent years. In the management field, the proliferation of publications on the gig economy and a lack of a holistic overview of how this scholarship has evolved makes it very difficult for researchers to take solid steps towards advancing its theoretical groundings. To outline the life cycle of gig economy research and theorisation, we conduct a comprehensive systematic literature review that traces its evolution in the management field by uncovering evolving trajectories of this scholarship. Informed by the levers of theorising lens, we deconstruct the theorising process in the gig economy research into bite-sized components to identify the dominant approach in each component. Also, by providing a universal map of research topics in the gig economy, we illustrate the areas that deserve more scholarly attention and highlight how addressing such gaps can play a key role in our theoretical understanding of the gig economy.

CAR: **Gig Work as a Career**

Author: **Michael Koch**, *Brunel Business School, Brunel U. London*
Author: **Sarah J. Park**, *U. of Leicester*

Gig work is an increasingly commonplace type of work in the contemporary economy. Even though more and more people engage in gig work, little research has investigated gig work from a careers perspective. This qualitative, interview-based study examines the career-related scripts of 50 individuals active on platforms such as Fiverr, Upwork and PeoplePerHour. We find that the individual experience of gig work does not uniformly fit into a narrow, negative vision of a 'digital cage' which sees gig work as a dead end in an individual's career. Many individuals regard gig work as a vital building block of their future, and exercise considerable agency in the development of their careers in the gig economy. Our research elucidates why individuals choose gig work and how it fits into their career plans.

CAR: **The Miseducation of a Labor Market: When Labor Market Intermediaries Create Expectation Gaps**

Author: **Abisola Coretta Kusimo**, *Stanford School of Engineering*
Author: **Melissa Valentine**, *Stanford U.*

Prior studies examining the impact of labor market intermediaries (LMIs) on labor market outcomes focus on the LMI's services or the characteristics of employers or aspirants. In this paper, we draw on an 18-month ethnographic study of an LMI to focus instead on the "expectation gap" that LMIs can inadvertently create through their interactions with aspirants and employers, especially as they work to legitimate and develop a market for a newly upskilled workforce. We explore what happened as this LMI worked to establish legitimacy with both sides of the market. We found that they structured widely different expectations about the value each side would get from a market match - in this case, internships that converted to full-time jobs. Employers expected to hire skilled workers while offering low quality jobs, while aspirants came to value furthering their education hoping for higher quality jobs. The LMI got engagement from both sides, but this expectation gap meant few internships converted to employment. Nearly half of aspirants remained unemployed, despite many open jobs. LMIs can be promising vehicles for social mobility, but may need to address divergent market expectations, especially as they work to legitimize their approach and the market they help structure.

CAR: **Co-Workers' Fairness Perceptions of Other's Idiosyncratic Deals: A Conceputal Process Model**

Author: **Sona Gachayeva**, *U. of Edinburgh*
Author: **Maryam Aldossari**, *Royal Holloway School of Business and Management*
Author: **Sara Chaudhry**, *U. of Edinburgh*
Author: **Susan E. Murphy**, *U. of Edinburgh*

When some employees are granted idiosyncratic deals (i-deals) to satisfy their individual work needs, their co-workers might perceive unfair treatment and exhibit organizational behaviors that decrease the inteded benefit of these arrangements. The acceptance of i-deals, therefore, and their ultimate benefits largely depend on co-workers' fairness perceptions about i-deals. Yet our understanding of factors shaping co-workers' fairness perceptions of i-deals, is limited. This paper proposes a conceptual process model of co-workers' fairness perceptions of i-deals that they observe for others and captures the factors impacting those perceptions. Our central argument in developing this model is that co-workers' fairness perceptions are shaped throughout the i-deal implementation process that entails four phases: negotiation process, allocation of i-deals, communication of arrangements, and consequences of i-deals. The study has important implications for i-deals literature, as it shifts attention from predominant social comparison and equity dynamics and introduces a more comprehensive model of co-workers' fairness perceptions shaped throughout the i-deal implementation process.

Occupational and Organizational Commitment in Careers

Session Moderator: **Samantha D. Hansen**, *U. of Toronto Scarborough*

CAR: **Trajectories of Psychological Contract Breach, Organizational Commitment, and Behavior**

Author: **Samantha D. Hansen**, *U. of Toronto Scarborough*
Author: **Yannick Griep**, *Radboud U., Netherlands*

This study examined the dynamic nature of organizational commitment (OC) using latent class growth modeling to better understand the complex relations among psychological contract (PC) breach (its absence and accumulation), OC, and performance. We used time-sensitive methods and analyses to overcome limitations associated with traditional methods used in the PC literature. We surveyed 164 Belgian employees and their supervisors for 10 consecutive weeks, resulting in 1117 observations. We found five theoretically relevant OC trajectories for employees who experienced PC breach: Continuous Decline, Positive Accommodation, Re-Commitment, Sustained Commitment, and Continuous Elevation. In contrast, we found two for employees who did not experience PC breach: Sustained Commitment and Continuous Elevation. The highest levels of PC breach accumulation were characterized by Continuous Decline, whereas the lowest were characterized by Positive Accommodation or Re-Commitment. Moreover, employees who demonstrated Continuous Decline had the lowest supervisor-rated performance and OCB, and the highest CWB. In contrast, those who demonstrated Sustained OC or Continuous Elevation, regardless of PC breach accumulation, had the highest performance and OCB, and the lowest CWB. Our findings challenge implicit assumptions in the PC literature, underscoring the importance of temporal research.

CAR: **Commitment is Not Enough! How and When Occupational Commitment Influence Turnover Intention**

Author: **Hongsong Guo**, *Central U. of Finance and Economics*
Author: **Fei Zhu**, *Central U. of Finance and Economics*
Author: **Yanjun Guan**, *Chinese U. of Hong Kong*

Studies typically posit that employees with high occupational commitment are reluctant to leave the current organization. However, when it comes to the explaining mechanisms and boundary conditions between occupational commitment and organizational turnover intention, existing perspectives are no longer reasonable in the current era, ignoring the possibility of employees seeking career development across organizations in the context of protean career. Drawing on the theory of career motivation and the unfolding model, we argue that occupational commitment can promote employees' motivation for job crafting, thereby reducing organizational turnover intention. This dynamic will be restrained or even subverted when faultlines are strong. At this point, servant leadership can act as a “adhesive”, mitigating the negative shock of faultlines on organization's talent retention. Two studies—a survey and an experiment—provide support for our reasoning. Our results indicate that employees with high occupational commitment may exhibit more extreme attitudes and behavioral responses when faced with a terrible working environment. Theoretical and practical implications are discussed.

CAR: **Turnover Intentions in Mixed-Gender Combat Units: A Longitudinal Study of Commitment and Prestige**

Author: **Tal Harel**, *Faculty of Social Sciences and Department of Psychology, Ariel U.*
Author: **Abira Reizer**, *Abira Reizer, Associate Professor. Ariel U. Israel*
Author: **Uzi Ben-Shalom**, *the Dept. of Sociology and Anthropology, Ariel U., Israel*
Author: **Yaniv Kanat-Maymon**, *Interdisciplinary Center (IDC) Herzliya*
Author: **Meni Koslowsky**, *emeritus Ariel*

This study examines a longitudinal model in which organizational prestige is suggested as a potential mediator explaining the associations between type of unit (mixed gender versus non-mixed gender) and two important organizational outcomes: turnover intentions and affective organizational commitment. The sample consisted of male combat soldiers (N=280) in mixed-gender units (N=130) and non-mixed-gender units (N=150) serving in similar roles. The study was performed at three different points during the soldiers’ training period. We utilized a linear mixed-effects model to examine the long-term effects of turnover intentions, organizational commitment, and unit prestige. In addition, structural equation modeling was performed to test the longitudinal mediation model. The findings showed long-term effects and different patterns between the mixed-gender and non-mixed-gender units in turnover intentions, commitment and organizational prestige. In addition, the hypothesized model was supported, with prestige mediating the relationship between unit type and organizational commitment. The longitudinal design applied here was used to determine causal relationships and long-term effects of turnover intentions, organizational commitment, and prestige among mixed-gender and non-mixed-gender units in order to gain a deeper understanding of their dynamics. The research findings suggest organizational prestige can be applied to military organization research and advances our understanding of how mixed-gender units impact significant organizational outcomes.

CAR: **"I’m Stuck and it Sucks": A Study on Career Plateau, Negative Emotions, and CWB**

Author: **Kara Ng**, *Alliance Manchester Business School, U. of Manchester*
Author: **Wei-Ning Yang**, *King's College London*

Career plateauing has been described as an emotionally unpleasant stage associated with destructive work behaviors, yet there is little theoretical justification or robust evidence to support such claims. This study contributes a theoretical framework for the relationships between career plateauing, emotions, and counterproductive work behaviors (CWB). Building on the stressor-emotion model of CWB, we propose that when career plateauing is perceived as threatening, negative emotions result that then lead to CWB. We also predict that the strength of this process depends on individuals’ emotion regulation ability. Through regression analysis of data from 193 UK-based employees across three time points, our study finds that both hierarchical and job content plateauing are associated with negative emotions and indirectly related to CWB via negative emotions; neither plateau type is directly related to CWB. Moreover, lower emotion regulation ability strengthens the relationship between job content plateauing and negative emotions, leading to more CWB. This study offers a novel theoretical explanation of how plateauing affects employees’ emotions and deviant behaviors. It also provides important practical guidance for managers by showing that plateaued employees are not inherently problematic to the organization. By proactively understanding and managing plateaued individuals’ feelings, managers can more likely prevent negative emotions from triggering deviant behaviors.

Despite an increased societal focus on gender equity, gender disparities in career outcomes persist. The persistence of gender disparities in career outcomes despite heightened societal interest in gender equity may indicate that there is more to be learned about how the gendered nature of work and family systematically advantages men. In this proposed symposium, four papers will provide the audience with novel perspectives on gender and careers. The symposium will begin with a paper presenting a new approach to understanding gender differences in the work performed by men and women and associated gender differences in career advancement by focusing on the skill requirements of jobs. The second presentation will then demonstrate how gender differences in mentoring low-performing junior employees – which can be conceptualized as a type of non-promotable work – is a factor that contributes to gender disparities in career advancement. Then, the remaining two papers will focus on motherhood and work, as motherhood is a key factor associated with gender disparities in careers. Specifically, the third paper will present novel insights into whether and when mothers decide to seek to reenter the labor market after taking time out of the workforce. Finally, the fourth paper will present research on an accountability intervention demonstrated to be effective at reducing bias against mothers in hiring decisions. Overall, our session aims to contribute to the grand challenge of gender disparities in work-related outcomes by furthering our understanding of both challenges and potential solutions relevant to women's careers.

Future Directions in Identity Construction Research

Organizer: **Carolina Bysh**, *Durham U. Business School*
Organizer: **Olga Epitropaki**, *Durham U.*
Panelist: **Andrew D. Brown**, *U. of Bath*
Panelist: **Michelle Hammond**, *Oakland U.*
Panelist: **David Sluss**, *ESSEC Business School*
Panelist: **Heather Ciara Vough**, *George Mason U.*
Panelist: **Sarah Wittman**, *George Mason U.*

Identity construction has been widely studied, garnering scholarly attention from different epistemological and methodological traditions. Especially research on the identity construction process of identity work has prospered in recent years. Identity construction is a fascinating field of study for management scholars with important implications for the individual at work. Identity construction enables individual growth and empowerment, allowing the individual to take an agentic approach towards their own development. The aim of the panel is to integrate and review existing research on identity construction, address current debates, and offer research recommendations to advance the field. In addition to discussing fundamental assumptions within the identity construction field, the speakers will explore the role of multiple identities, context (work and non-work identities) and temporality (past, present and future identities). The symposium intends to highlight the valuable contribution of identity construction research to the management field, point to emerging trends and offer a springboard for future research in this domain.

Negotiating Processes

Session Moderator: **Katja Woelfl**, *WU Vienna U. of Economics and Business*

CM: **Changing Directions - Counterfactual Reflection in B2B Negotiations**

Author: **Katja Woelfl**, *WU Vienna U. of Economics and Business*
Author: **Lutz Kaufmann**, *WHU Otto Beisheim School of Management*
Author: **David Ketchen**, *Auburn U.*
Author: **Craig R. Carter**, *W. P. Carey School of Business, Arizona State U.*

To perform well in negotiations, preparation is vital. However, only focusing on the upcoming negotiations is not sufficient to become a great negotiator. Reflecting upon past negotiations and thinking about how the outcome could have been different through counterfactual reflection helps negotiators to improve their negotiation performance in future negotiations significantly. Yet not all counterfactual reflection is equally effective. In this research project, we depart from the dominant correlational approaches to employ a configurational approach. We draw on the functional theory of counterfactual thinking and previous research on negotiations to explore the effectiveness of counterfactual reflection for buyers and sales managers based on the complex interplay of sets of factors characterizing their concluded B2B negotiation – specifically negotiation setup factors (i.e., firms' power balance), process factors (i.e., tactics used), and outcome factors (i.e., economic success). We further examine if there are differences between buyers and sales managers. Based on our configurational approach consisting of 129 interviews (65 buyers and 64 sales managers) and a fuzzy-set qualitative comparative analysis, we find several different pathways to both effective and ineffective counterfactual reflection, some of which are common among both buyers and sales managers and some that are unique to the different roles. Our inductive analysis unpacks the underlying mechanisms behind the identified paths and configurations. On a high level, the uncovered mechanisms suggest that negotiators' counterfactual reflection is effective in situations the negotiator feels in control of and ineffective in situations where B2B negotiators are either too satisfied or unable to identify what went wrong. We draw from role identity theory to explain uncovered differences between buyers and sales managers. Changing the perspective on negotiations and using an innovative methodological approach allows us to challenge and expand theory and research on negotiations and counterfactual thinking and provide recommendations on how to avoid that practitioners fail to learn from their past negotiation experiences.

CM: **I'm Curious…Do Negotiators Have to Give Up Value When the Relationship Matters?**

Author: **Alexandra A. Mislin**, *American U.*
Author: **Ece Tuncel**, *Webster U.*
Author: **Robin L. Pinkley**, *Southern Methodist U.*

We examine the lay belief that negotiators must give up value to protect their relationship; then we consider the effects of strategically conveying curiosity on relationship and outcome satisfaction. In a series of experiments (N= 1004), we show that curiosity cues help build attraction with counterparts, which in turn enhances relationship and outcome perceptions, even when the outcome is disadvantageous for counterparts, or the negotiation ends in impasse. Thus, curiosity cues introduce an emotional-motivational dimension to tried and true negotiation tactics that allows negotiators to claim the deal terms they want without jeopardizing relational outcomes.

CM: **How Long Should We Dance? Longer Exchanges of Offers in Negotiations Harm Negotiators' Satisfaction**

Author: **Zhiying Ren**, *The Wharton School, U. of Pennsylvania*
Author: **Einav Hart**, *George Mason U.*
Author: **Maurice Schweitzer**, *U. of Pennsylvania*

We report results from four studies, including lab experiments and text analysis of negotiations (total N = 2,488), to study the influence of negotiation dances —the exchange of offers in a negotiation. We find that longer negotiation dances (longer exchanges of offers) harm process satisfaction, relationship satisfaction, and interest in interacting with a negotiation counterpart in the future. We show that the harmful effects of long dances are specific to the dance length, and not the overall length of the negotiation interaction. Our findings advance our understanding of the offer exchange process in negotiations and provide practical guidance for balancing economic outcomes (which may be advanced by long negotiation dances) and relational outcomes (which may be advanced by shorter negotiation dances).

CM: **Bank to the Future: Non-Specific Compensation as the Foundation for a Prosperous Negotiation**

Author: **McKenzie Rees**, *Brigham Young U.*
Author: **Brian Gunia**, *Johns Hopkins U.*
Author: **Michael Rosenblum**, *U. of Notre Dame, Mendoza College of Business*

Many interpersonal relationships are characterized by dependence, requiring most individuals, especially employees, to engage in negotiation on a regular basis. The current work views negotiations more broadly than most previous research, as processes unfolding in the context of extended relationships. This view produces new insights into the negotiation strategies available before bargaining, which are particularly important for dependent individuals, who may need to compensate for their lack of leverage at the bargaining table. Specifically, we integrate negotiation theory with social exchange theory to suggest that dependent individuals can productively deploy reciprocal forms of exchange during the planning phase of a negotiation, not just negotiated forms of exchange during the bargaining phase. Our theory focuses on one form of reciprocal exchange, non-specific compensation (NSC), in which individuals to seek to compensate each other at different times with different resources. Five studies (a field study at a major university, an archival study in the U.S. Senate, and three experiments) document two of NSC's foundational forms (purchase banking and favor banking), features (timing and explicitness), and effects on objective and subjective negotiation outcomes. Our theory helps to integrate two parallel literatures that have developed in isolation (on negotiation and social exchange), and our findings offer new insights into the important but understudied ways in which individuals without much bargaining leverage can nevertheless achieve their objectives.

Participant: **Julia Alexandra Minson**, *Harvard Kennedy School*

Fostering strong social connections between conversation partners is crucial to psychological well-being and productivity in the workplace (Olguin et al., 2008; Holt-Lunstad, 2018). However, people often struggle to effectively connect with their conversation partners (Mastroianni et al., 2021; Collins et al., 2022; Boothby et al., 2018), resulting in conflict escalation, lower task performance, and higher stress (Sarfati et al., 2020; Kluger & Itzchakov, 2022; Robinson et al., 1995). The current symposium delves into how to build social connections in work-related conversations. The five presentations in this symposium call attention to how people build interpersonal connections at work, provide guidance on how to better facilitate relationship satisfaction, and note potential caveats in developing strong social bonds. These presentations offer advice to researchers and practitioners on how to construct communication environment that better facilitate workplace efficiency and relationship satisfaction.

Exposing Racisms and Other Inequalities

Session Moderator: **Jared Mitchell Poole**, *U. of Massachusetts, Boston*

CMS: **Becoming an Anti-Racist Organization and the Politics of Being Woke**

Author: **Patricia Tiimah Naya**, *U. of Massachusetts, Boston*
Author: **Alessia Contu**, *U. of Massachusetts, Boston*
Author: **Jared Mitchell Poole**, *U. of Massachusetts, Boston*

The racialized events of 2020 offer a crucial historical context for racial equality movements. Many organizations faced public pressure to respond to this moment. Some leaders opted to issue anti-racism proclamations--statements that explicitly embrace the cause of racial justice by espousing a commitment to dismantle racial inequality through organizational action. However, the consequences of such pronouncements for members' every-day experiences remains unclear. In this qualitative study of an American university, we examine student and faculty response to top administrators' anti-racism proclamations. We find that the ambiguity of such statements contributed to pervasive fear of both appearing excessively and insufficiently "woke." Wokeness--a recognition of racial inequality that produces a posture of readiness to respond to its realities--thus emerges as a crucial domain of meaning making for determining the success or failure of anti-racism proclamations.

CMS: **When Feminisation Reaches the Platform Experiences of Men in Care Work**

Author: **Sai Amulya K**, *Assistant Professor Indian Institute of Management Ahmedabad*

While several studies examine platformisation and the future of work from a gendered perspective. However, media coverage and academic scholarship on the platform economy are divided in terms of their focus – (migrant) men involved in the supposedly "masculine" and visible work of construction, driving, and delivery, and the invisible care work performed by women workers and the challenges involved in both. Based on patchwork ethnography and interviews with male workers in two feminised care professions (cleaning and salon work), this paper makes a case for feminisation of platform work beyond the mere presence of women, and explores the material contexts within which male workers enter (platformised and not-platformised) feminised care work, their views on platformisation, their resistance to and co-optation of platform work.

CMS: **Narrative and Representational Ethics and Profit in the Marvel Cinematic Universe**

Author: **Nandita Roy**, *Indian Institute of Management, Calcutta*
Author: **Gaurav Gupta**, *NEOMA Business School*
Author: **Indranil Biswas**, *NEOMA Business School*

This paper contributes to Business Ethics literature by examining and unpacking the complexities of narrative ethics in shared universe franchises, a part of the ever-growing business of storytelling. Businesses in this space transform and improvise ethical positions to align with popular notions of ethical and popular sentiments. We use hermeneutic analysis to deep dive into Marvel's adoption of narrative ethics as a storytelling strategy while building its cinematic universe to repackage and re-represent its comic book properties across various mediums to cater to distinct but overlapping audience expectations. We problematize the question of whether storytelling businesses use narrative ethics for profit, or garner profit for ethics and find that narrative ethics in Marvel stories vary according to mediums. Finally, we propose a narrative ethics framework to understand the ethics of storytelling businesses.

CMS: **Human Resource Practices for Addressing Inequality**

Author: **Mohammad Jasim Uddin**, *Canterbury Christ Church U.*
Author: **Farhad Uddin Ahmed**, *Lecturer at Brunel Business School, Brunel U. London*
Author: **Pei-Lee Teh**, *Monash U., Malaysia*
Author: **Jashim Uddin Ahmed**, *North South U.*

Inequality has been a consistent problem in many contemporary organizations. However, little is known about how human resource practices are shaped by institutions to address inequality in the context of a complex institutional setting. To fill up this research gap, we collected rich qualitative data from Bangladeshi garment factories by employing interviews, artifact observation, and archives. Using institutional theory, our findings contribute to the extant literature by identifying three institutional mechanisms (i.e., capturing, controlling, and concealing) that shape HRM practices to persist inequality. Our findings indicate that the fair enforcement of institutional pressure is critical to enable human resource practices to reduce inequality. This study offers practical implications and suggestions for further research.

Commodified Migrant Labor and Supply Chain Socialization

Session Moderator: **Rashedur Chowdhury**, *U. of Essex*

CMS: **Fluid or Entrenched Inequalities? Dilemmas of Tackling Disadvantages in Migrant Support Work**

Author: **Laura Kangas-Müller**, *Aalto U., Department of Management Studies*

This paper explores the constructions and uses of varied forms of disadvantage in organizational discourse and practice of a non-profit organization supporting refugees and migrants. Drawing from ethnographic fieldwork, I examine how disadvantage is constructed through intersections of gender, ethnicity, and class, and show how the intersectional approach deployed by the organization manifests in the simultaneity of fluid and entrenched inequalities and interplay of three tensions: disadvantage as (1) individualized vs. categorical, (2) relative vs. cumulative, and (3) resolvable vs. ambiguous. Through connecting Crenshaw's notion of political intersectionality to Fraser's theorization of politics of recognition and redistribution, I discuss how through this interplay of varied constructions of disadvantage, the organization seeks to reconcile the objectives of recognition/redistribution. Finally, I reflect on the implications in terms of both disrupting and reproducing inequalities along the axes of gender, ethnicity and class.

CMS: **In the Name of the Law: A Study of Undocumented Immigrants' Experiences of Legal Violence**

Author: **Roya Derakhshan**, *Bocconi U.*
Author: **Rashedur Chowdhury**, *U. of Essex*

We study the lived experience of undocumented immigrants in Italy through the lenses of various immigration laws and associated legal frameworks. By doing so, we also examine the adequacy of current moral guidelines and principles that define the normative ground rules for protecting undocumented immigrants. We find that, despite their acquired social legitimacy, immigration laws and frameworks often generate legal violence. The multifaceted and complex nature of legal violence can undermine core moral values and manifest in three key mutually reinforcing forms: normative violence, symbolic violence, and identity violation. Our study reveals that undocumented immigrants' experience of legal violence is mainly due to moral precepts that fail to provide explicit moral clarities according to context-specific complexities. We find that moral issues embedded in convoluted forms of violence can be addressed through transformation processes such as reforming legal institutions and frameworks. More importantly, to counter legal violence in organizational and societal settings, we require an integrative moral and legal system. By this we mean that every single law and decree that is developed in this regard, as well as the way it is executed by powerful actors and institutions in the society, must conform to the micro moral principles of organizations. The aggregate of these reforms (through micro principles actions) has to be aligned with macro boundaries set by core human values that shape moralities in broader societies.

CMS: **The Precarity of the Kafala System: South Asian Blue-Collar Workers in the GCC**

Author: **Masud Chand**, *Wichita State U.*

About half the population and 70% of the workforce in the Gulf Cooperation Council (GCC) countries is made up of migrant workers. Around 60 % these are from South Asia, with most working in blue-collar professions. Workers in the GCC are usually brought in under the kafala system where the sponsor, usually the employer, is responsible for both the worker's employment and residence. This often leads to a situation where the worker cannot leave employment or even the country without the sponsor's permission and can facilitate the exploitation of workers. We employ three theoretical lenses at different analytical levels to study the kafala system. We briefly study the positioning of the GCC countries through the World System's Theory. We then examine the societal structures that underpin the kafala system and explore how individual migrant working conditions are affected through these, including intersections of gender, class, nationality, and race. We look at numerous cases of blue-collar migrant workers from South Asia and synthesize some themes that emerge, including workers bound to their employers in an asymmetrical relationship, the difficulties of protecting the most vulnerable workers, the importance of home country engagement, the need for recognition of racial hierarchies in non-white settings, and the importance of studying these issues from a south-south perspective. We conclude by discussing some potential steps that various stakeholders can take and point out directions for future research.

CMS: **Socializing Supply Chains Beyond Binary Views of Labour and Society**

Author: **Tommaso Pio Danese**, *U. of Genoa*

In a cascade system of causes, supply chains can be considered as the main locus of labour exploitation. Supply chains are the basis if we aim to understand exploitation. However, I argue that if we are to study how to achieve decent work, we need more research about the role of civil society organizations, given their proximity to workers and their needs. So, this paper aims to show the role of civil society in the promotion of decent work in supply chains. For this purpose, I investigated four civil society organizations drawn from field research conducted in Italy. These organizations are: Comunità Africana di Brindisi, Casa Sankara, NoCap and Fuorimercato. These cases were investigated by applying sensemaking theory and the concept of sensegiving, reviewed through Freire's thought to address this theory critically. As a result, I envision sensemaking as a reflection leading to actions and sensegiving as actions to be critically recalled. First, I investigated their sensemaking, namely how these cases frame working conditions in their organizational fields. Second, I studied their sensegiving, which is how they influence the main sensemaking processes in their environments. The findings reveal that these four organizations, through their institutional work, reorganize decent work deficits by framing labour-related issues together with different social problems (e.g., immigration, housing, health) and through the enactment of creative solutions that overcome the boundaries between labour and production, other than between natives and immigrants in a common labour fight. This proposed analysis is part of an ongoing doctoral research.

Scholars as Workers in the Leadership Industries: Performance Pressures and Professional Identities

Organizer: **Eric Guthey**, *Copenhagen Business School*
Session Chair: **Sverre Spoelstra**, *Copenhagen Business School*
Participant: **Laura Empson**, *Bayes Business School*
Participant: **Mary Uhl-Bien**, *Texas Christian U.*
Participant: **Kevin B. Lowe**, *U. Of Sydney*
Participant: **Dan Karreman**, *Copenhagen Business School Department of Management, Society and Communication*
Participant: **Nick Butler**, *Stockholm U.*

This panel symposium will assemble leadership scholars from several different countries and disciplinary contexts to discuss in a self-reflexive manner their own participation as front-line workers in the leadership industries. Questions to be addressed include: what do we see when we direct toward ourselves the types of conceptual frameworks and critical tools that we normally apply to the labor dynamics and working conditions that confront leaders, managers, and their employees? What are the terms of employment, financial incentives, professional aspirations, and intrinsic rewards that induce leadership scholars to engage in the leadership industries? What price of admission do academics pay for gold card membership in the corporate leadership development, consulting, and speaking club, with all of its perks and benefits, in terms of scholarly values, research ethics, and professional integrity? How do different scholars in diverse contexts negotiate this exchange and value their return on investment, not only in terms of financial gain, but also in terms of research access and revelance to practice? Conversely, what kinds of constructive influence can leadership scholars hope to exert over the leadership industries, and what might these industries look like without scholarly input or intervention? What important insights and non-transferable skills do scholars bring to the table, and how can we leverage our position as scholars to redress those shortcomings of the leadership industries that some colleagues have criticized, complained about, or outright derided in their research?

Technology, Occupations, & Identity

Session Moderator: **Abderrahim Nekkache**, *Alliance Manchester Business School, U. of Manchester*

CTO: **Examining the Reconstruction of Professional Identity Content in the Digitalisation of R&D.**

Author: **Abderrahim Nekkache**, *Alliance Manchester Business School, U. of Manchester*
Author: **Barbara Ribeiro**, *Alliance Manchester Business School, U. of Manchester*
Author: **Andrew James**, *Alliance Manchester Business School, U. of Manchester*

This paper investigates how industrial scientists reconstruct their professional identity content and the factors shaping this process in the context of the digitalisation of a large UK firm. Drawing on identity theory and social identity theory literature, a new conceptual model is built to shed light on how scientists who conducted their work manually (i.e. 'analogue' scientists) went on to construct two different social identities following the implementation of digital tools in their organisation. Through acquiring membership to new social groups and performing new roles, analogue scientists transitioned into 'hybrid' or 'digital' scientists. Our research contributes to the literature on identity construction by illustrating how new social identities are constructed and manifested through the enactment of multiple role identities in the context of digitalisation and identifying the factors that drive this process. Further, as opposed to previous studies, we argue that when dealing with digitalisation, workers do not freely exercise their agency for identity construction but the latter is restrained and shaped by organisational control and setting and the materiality of digital tools. Finally, we offer new empirical evidence of the mutual construction of professional identity and the materiality of digital technologies.

CTO: **Across the Board: AI in Chess Increases Occupational Complexity and Salience of Holistic Identities**

Author: **Johannes Dahlke**, *ETH Zürich*

The game of chess has long been used as a testbed for artificial intelligence (AI) research. At the same time, the diffusion of AI applications has also affected the knowledge work conducted by chess grandmasters. I investigate how the technological paradigm shift from rule-based systems towards connectionist AI (i.e., neural network models) has led this occupational community out of an era of creative depression and into an era of strategic innovation; and show that this development is driven by changes in human-AI interaction. Drawing on grounded theory, I conduct interviews with world-elite chess players and machine learning engineers developing chess programs. I find that the developments in AI have subjected chess grandmasters to increased occupational complexity stemming from analytical ambiguity, technological diversity, and game-theoretic uncertainty. Members of the occupation have responded by instantiating new occupational identities as machine-behavior specialists, meta-experts, and domain scientists that are interrelated in a holistic network of identities. Resolving dissonance between networked identities depends on the human's and the technology's characteristics, as well as second-order effects in the socio-economic environment. I theorize that identity work to achieve consonance between identities determines the degree of conjoined agency of human-AI ensembles and meaningfulness in knowledge work.

CTO: **The Future of the Professions Revisited: A Boundary Work Perspective on Digitalization in Dentistry**

Author: **Anne-Sophie Mayer**, *Vrije U. Amsterdam*
Author: **Anastasia Sergeeva**, *Vrije U. Amsterdam*
Author: **Fabian Hable**, *Vrije U. Amsterdam*

Existing research has recognized that the introduction of new technologies is not affecting individual occupational groups in isolation but is likely to trigger change in relationships and roles across multiple occupations. Less is known, however, about the process of boundary work that shapes the outcomes of new technology introduction for the professions. We explore this question in our process study of digital dentistry, tracing the emergence and development of teleorthodontics companies that use MedTech platforms to decouple teeth-straightening from the orthodontist's practice. Building on 27 interviews and unique archival data, we show how teleorthodontics companies first engaged in competitive boundary work, then shifted to collaborative and eventually ended up with blurring and embedding boundary work with the profession. We find that the process resulted in the shifting boundaries between the dentistry and orthodontics, where the lower-status profession of dentistry increasingly took over orthodontic tasks which was enabled by MedTech platforms. Our analysis explains that this outcome emerged as an unintentional and ironic consequence of the boundary work efforts by the orthodontics professional association to shut down teleorthodontics. We discuss implications for the literature on new technologies, professions and boundary work.

CTO: **Identity Fluidity**

Author: **Jaylon Sherrell**, *Harvard Business School*

An increase of remote work has in-turn spurred employee activity within virtual environments, leading to an even greater need to understand how employee behavior may be influenced from activities taking place within a digital domain. Nevertheless, due to improvements in technology, being within virtual environments allows for greater customization of users' avatars. I propose a new construct, termed identity fluidity, where individuals are able to modify multiple relatively inelastic aspects of themselves that constitute their identity, increasing their freedom to modify their most salient identities at-will. The construct of identity fluidity is further defined, coincided with a discourse regarding the potential impacts of practicing identity fluidity, requirements for it to be practiced, as well as potential constraints on the construct. Theoretical and practical implications are discussed accordingly.

Technology & Healthcare Work & Practice

Session Moderator: **Ninna Meier**, *Aalborg U.*

CTO: **Socio-Emotive Practices for Team Coordination Around Algorithmic Tools**

Author: **Zoe Jonassen**, *NYU Stern School of Business*
Author: **Batia Mishan Wiesenfeld**, *New York U.*

Algorithmic decision support tools can facilitate team coordination in fast response organizations characterized by uncertainty and high stake and fast decision making. However, for algorithmic tools to be useful, organization members must interpret and act upon the input, and members are often averse to doing so. In this 12-month ethnographic study of pediatric emergency teams using an algorithmic decision support tool to detect the risk of sepsis in children called sepsis alert, we examine how teams coordinated their work around the tool. In response to the sepsis alert firing, teams experienced uncertainty and feelings of frustration. In the cases of successful coordination, we observed teams using three proactive socio-emotive practices—contextualized anticipating, wherein detailed knowledge was shared early on, emotional signaling, in which emotive expressions were adapted to the severity of sickness of the child and enhancing others whereby team members are appreciated for their work. These practices allowed teams to overcome uncertainty and frustration in order to engage in collective tool-based reflection, while in the failed cases they did not. By reconceptualizing algorithmic decision-making as a team-level as well as an individual-level process, and as an emotional as well as a cognitive, social, and material process, this paper develops new theory on algorithmic decision making and informs practice on how to sustain wellbeing across staff members.

CTO: **Always Already Imperfect: Exploring Infrastructures of Expertise and Algorithmic EMS Work**

Author: **Ninna Meier**, *Aalborg U.*
Author: **Kasper Elmholdt**, *Aalborg U.*

Artificial intelligence (AI) is gaining traction within many areas of expertise. Drawing on fieldwork within an Emergency Medical Response (EMS) unit, we explore the ways in which AI become embedded within an infrastructure of expertise to detect cardiac arrest. We analyze how emergency medical response work is practiced through three distinct yet interwoven forms of expertise: clinical, relational, and technological. Together, these three forms of expertise are embedded in a larger infrastructure that reaches beyond the EMS unit and that must be configured locally, in each individual call, according to what the situation in the call requires. We show that expertise in this setting revolves around a doubt/trust nexus where algorithmic inputs are used and works in several ways, also when it is not responding to a call, depending on how doubt/trust is configured.

CTO: **Relational Factors of Documenting Practice in Patient Care**

Author: **Michael Richard Cauley**, *Vanderbilt U.*
Author: **Yunmei Wang**, *Case Western Reserve U.*

The author proposes a framework for understanding factors that lead to feelings and dispositions of health care practitioners and affinity for patients through documentation practices in electronic medical record (EMR) systems. A survey was conducted with 450 respondents of factors which theoretically contribute to a greater understanding of clinician feelings and dispositions of patient care: Care through Charting, clinician feelings and dispositions toward the patient through documenting in EMR systems, IT Support, EMR Feedback, and Commitment to Helping and their effects on Affinity for Patient. The author also considered Faith as a boundary of the whole system within which the clinician's use of EMR systems occurs. This research suggests affinity for patient is affected by feelings and dispositions from the practitioner toward the patient in EMR documentation practices. Care through Charting ($B = .438$, $p < .001$), IT Support ($B = .239$ $p < .001$), and Commitment to Helping ($B = .451$, $p < .001$) had a direct, positive relationship with Affinity for Patient. EMR Feedback ($B = -.303$, $p < .001$) had a direct, negative relationship with Affinity for Patient. The moderation of faith on the relationship between commitment to helping and affinity for patient suggests the practitioner becomes more reliant on the feelings and dispositions of affinity for patient when reliance on faith decreases.

CTO: **Decoupled Learning Among Medical Trainees and Artificial Intelligence**

Author: **Bryan Spencer**, *City U. of Hong Kong*

We know little about how artificial intelligence (AI) is reshaping work and professions. Organizational scholars studying how technologies change work and professions often focus on the use of technologies in the workplace. However, artificial intelligence's influence begins with development, prior to use. Existing research elides the complexities of how the development of AI is influencing work and professions, despite its importance in shaping outcomes. To address this, I conducted a 13-month ethnographic study of an elite teaching hospital, "Southern Eye Hospital," one of the first hospitals in China to establish an AI Department. This paper aims to contribute to an understanding of how the development of artificial intelligence is changing the way medical trainees work and learn in a divergence from "learning by doing" to "learning by data work." To accomplish this, I draw on scholarship from learning in communities of practice and routine dynamics. I illustrate how the development of AI has implications for learning with "decoupled learning," which emphasizes how certain forms of expertise achieved by trainees and artificial intelligence models may be too abstract to transfer into real world application.

Digital Transformation 2

Session Moderator: **Marin Jovanovic**, *Copenhagen Business School*

CTO: **The Co-Evolution of Digital, Commercial, and Transformational Practices: Unfolding the Digital...**

Author: **Wiktoria Salwa**, *Copenhagen Business School*
Author: **Sof Thrane**, *Copenhagen Business School*

Incumbent firms increasingly develop adaptive digital services that allow a high degree of scaling and customization. However, the digital service commercialization process requires understanding digital practices and commercial practices as well as the role that digital infrastructure plays in these practices. More importantly, as social and material activities are inherently entangled, firms must understand transformational practices of problematizing, envisioning, and testing digital solutions. However, we know little about how the digital service commercialization process unfolds as an incumbent firm's digital maturity progresses through the co-evolution of digital, commercial, and transformational practices. To address this research gap, we examine a longitudinal single case study of a world-leading bank's effort to develop a digital infrastructure that would simultaneously allow adaptive digital service delivery at the corporate customer front-end and, at the same time, leverage scalability at the back-end. The study presents a process-based framework as Delta bank progresses from provisional digital services to more adaptive digital services. Each phase of the process is divided into digital, commercial, and transformational practices that co-evolve over time from initially diverging, then locally converging, and finally entangling in the last phase. The study contributes to the practice theory perspective on digital service, and the evolutionary perspective on digital transformation more broadly. Keywords: commercialization process, digital practices, practice theory, digital transformation

CTO: **Scaling Agility for Digital Transformation: How Organizations Manage Arising Tensions**

Author: **Julian Frey**, *U. of Bamberg*
Author: **Axel Hund**, *Neu-Ulm U. of Applied Sciences*
Author: **Daniel Beimborn**, *U. of Bamberg*

Scaling agility has emerged as a response by incumbent organizations to take on digital transformation efforts. However, scaling agility comes with organizational challenges, especially tensions that need to be addressed. Therefore, we employ an exploratory common process case study series design to answer the following research questions: Which tensions underlie scaling agility efforts, and how can they be resolved? We identify four tensions and demonstrate resolution strategies to manage these tensions. With this, we seek to uncover how scaling agility can be designed to minimize tensions and maximize the effectiveness of scaling agility. In doing so, we provide valuable insights for researchers and practitioners.

Author: **Joe Nandhakumar**, *U. of Warwick*

Digital transformation has been disrupting how business should be operated almost in all industries. There is a rich literature on how disruptions happen in organizations' structures, business models, and value proposition, however, limited insight into the role of knowledge in such disruptions has been provided. Organizations in digital transformation face a conundrum that they are likely to disrupt the foundational knowledge on which their organization structure and processes are built, because the digital transformation they are pursuing is also transforming knowledge profoundly. Thus, it is crucial to understand how digital transformation disrupts knowledge inside organizations and how organizations deal with this process. In an extensive single case study of the digital transformation process of a media company, we empirically explore the changing patterns of knowledge, namely the organizational epistemic stances, that were continuously disrupted by the development process of digital transformation. We identify four phases of epistemic stance that the organization went through in their digital transformation projects: inertial phase, digital-centric phase, retrospective phase, and integrated phase. This study contributes a process model illustrating the dynamic process of organizational epistemic stances during the whole digital transformation process. Through the knowledge-based perspective, this study also extends the understanding of how digital transformation changes organizations' knowledge-generating inherently underneath specific actions and practices.

CTO: **Making It Happen: Exploring Bottom-up and Top-down Digital Transformation Practices**

Author: **Mylène Struijk**, *Tilburg U.*
Author: **Tom Aben**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

The extant information systems literature has reported implications of both top-down and bottom-up approaches toward digital transformation, yet failed to reach consensus on when organizations use which approach. Such insights are becoming especially relevant now that organizations are increasingly engaged in large-scale, dynamic, and ongoing digital transformation endeavors while mainly reporting failures of such efforts due to inertia and resistance to change. To address that challenge, we explore bottom-up and top-down approaches to digital transformation from two case studies of public sector organizations (public infrastructure and military). Adopting a practice perspective, our findings elucidate two crucial categories of digital transformation practices, namely interchangeable and stationary practices. Stationary practices are enacted either top-down (enabling practices) or bottom-up (encouraging practices), while interchangeable practices move from bottom-up to top-down and vice versa (endorsing practices). We show that these practices are crucial for continuous digital transformation support. Importantly, we show that the identified practices are mutually reinforcing and represent a digital transformation continuum. Top-down or bottom-up approaches in isolation are, thus, insufficient for digital transformation endeavors.

Participant: **Danielle Elaine Bovenberg**, *Yale U.*
Participant: **Katherine C. Kellogg**, *MIT*

With the increasing development and adoption of artificial intelligence (AI) technologies, the nature of work across today's organizations has been fundamentally changing. One central area of concern has revolved around what the rationalization of work through AI technologies might portend for work's humanness: a conceptually vague, if evocative and deeply meaningful, dimension of our sense of distinctiveness as a species. To explore how AI will impact the "humanness of work," and given that so much of the existing discourse on AI has been "largely speculative", we gathered a set of empirical studies that have gone out into this new world of work and observed what has been happening across today's workplaces. The insights illustrate that on one hand, AI can threaten work's humanness, as embodied in workers' expertise, the "soulness" of their emotive expressive work, and the "human touch" that they add to how organizations select their human capital. On the other hand, automation and algorithms have the potential to enrich work's humanness. Through discussing these findings as part of the symposium, we aim to derive both theoretical and practical insights on how AI can be leveraged to put human needs at the center and contribute to creating both a sustainable and effective work environment.

Navigating the Ethical Terrain of AI Technologies: A Practice-Based View

Organizer: **Yiran Xu**, -
Organizer: **Sarah Lebovitz**, *U. of Virginia*
Organizer: **Emmanouil Gkeredakis**, *IESE Business School*
Discussant: **Michael Barrett**, *U. of Cambridge*
Presenter: **Elmira Van Den Broek**, *Stockholm School of Economics*
Presenter: **Samer Faraj**, *McGill U.*

Our symposium will explore the unique dynamics that give rise to and intensify ethical concerns with regards to AI technologies. The research presented will discuss topics such as how the design stage of an AI system cannot be isolated as an independent stage from the rest of the AI lifecycle. We will engage with the audience in meaningful discussion about the ethics of AI that is grounded both in the development stages as well as the use, implementation, and ongoing maintenance stages. The nascent field of AI ethics will greatly benefit from adopting a more processual and situated understanding of ethics with regards to AI tools and from empirically exploring the use of AI and its enacted ethical implications (Barley & Bailey, 2020). This symposium will provide a forum to explore current research in this area and foster discussions to enhance impact on both research and practice.

Identity and Privilege

Session Moderator: **Edith Pick**, *Queen Mary U. of London*

DEI: **A License to Obliviousness: Positive Stereotypes Reduce Acknowledgement of Racial Discrimination**

Author: **Danqiao Cheng**, *UCLA Anderson School of Management*

My dissertation investigates the role of a previously overlooked structural factor, positive stereotypes, in perpetuating racism. Despite salient social norms to appear egalitarian and unbiased, racial discrimination persists in society. I argue that the pressure to conform to egalitarian norms conflicts with the motive to justify the system and rationalize inequality, and hence people may rely on positive stereotypes to neglect egalitarian norms. Specifically, positive stereotypes of racial minorities are frequently seen as complimentary in nature, e.g., Asian people are good at math, Black people are good at sports, offering individuals a moral license to reduce acknowledgement of racial discrimination. Across four studies, I explore the effects of positive stereotypes of racial minorities, activated either when participants actively write about those stereotypes or are passively presented descriptions of racial minority targets with positive-stereotype-congruent information. I find that access to positive stereotypes licenses reduced acknowledgement of racial discrimination, which in turn reduces support for pro-equity practices such as allyship intentions. These findings reveal the systemic implications of positive stereotypes in obstructing equity and inclusion of racial minorities, and shed light on the importance of dismantling the often invisible harm done by positive stereotypes in perpetuating an unfair system.

DEI: **Does Workforce Representation Undermine the Treatment of Racial Minorities in Service Interactions?**

Author: **Jirs Meuris**, *U. of Wisconsin-Madison*
Author: **Alexis Avery**, *U. of Wisconsin, Madison*

Many organizations have sought to improve the treatment of racial minorities in service interactions by increasing the racial diversity of their workforce. However, emerging research suggests that increases in representation could exacerbate discrimination. We introduce a multi-level perspective incorporating the racial group of the individual, peers, and supervisors to provide insight into the relationship between workforce representation and racial bias in service interactions. Centering our paper on Black representation and treatment, we predicted that increases in Black representation will increase bias in service interactions with Black individuals among all employees despite Black employees behaving less biasedly in these interactions, particularly among employees with low tenures and within work units with limited Black representation amongst supervisors. Using unique longitudinal data from the Chicago Police Department tracking approximately 14,000 police officers from 2004-2017, we observed that a larger representation of Black front-line officers increased officers' propensity to use force towards Black citizens in a month—a pattern consistent across Black, White, and non-Black minority officers. A larger representation of Black supervisors weakened this relationship, but only among officers with low tenures. Overall, our research offers novel insight into a potential pitfall of insufficient attention to the management of diversification in organizations.

DEI: **Exploring the Challenge of Transnational Gender Diversity Management in MNEs**

Author: **Xiang Yao**, *Monash Business School*

The research explores the challenges of cross-national gender diversity management within multinational enterprises (MNEs). Implementing gender diversity agendas in a global context is a challenging process for MNEs. However, existing research has not sufficiently addressed how and why headquarters-mandated gender diversity management policies were challenged by overseas subsidiaries' employees. Drawing on theories of cultural difference, institutional distance, power relations, self-identity, and individual agency, I conceptualize the barriers of cross-national gender diversity management along a multi-level framework: macro-national level; meso-organizational level, and micro-individual level. Building on case studies of two US-based MNEs operating in China, I find that the interrelated nature of multilevel factors between home and host country affects the outcomes and acceptance of MNEs' global gender diversity management policy. The research contributes to the diversity management literature by critically demonstrating how power relations between different actors shape the international transfer of diversity policy and management practice. It also extends the micro diversity management literature by revealing the role of individual identity and agency in determining employees' perception of headquarters' gender diversity management policy.

Norms, Intersectionality, and Ideology

Session Moderator: **Fara Azmat**, *Deakin U.*

DEI: **Understanding Intersectionality Challenges and Agency of Migrant Women of Color**

Author: **Fara Azmat**, *Deakin U.*
Author: **Huong Le**, *Central Queensland U.*

The unique experiences and challenges of migrant women of color (MWC) from low socio-economic status regions of the Global South settling in advanced nations, and their agency seeking, have largely been overlooked in migration discourse, despite their growing numbers. MWCs reside at the intersection of three marginalized identities—gender, race and country of origin—which creates both challenges and opportunities for them. Using the combined lenses of intersectionality and help-seeking theory, we explore how MWCs from the Global South deal with these challenges and exercise their agency when settling in Australia. We develop a conceptual framework that explains how multiple intersecting subordinate identities of MWCs shape their agency for help-seeking over time. Our framework depicts MWCs' exercise of agency as being characterized by the four broad strategies of 'resilience', 'reworking', 'resistance', and 're-emergence' (the '4Rs') helping them to advance from 'hypervisibility yet invisibility' to 'full hypervisibility'. Our framework thus explains the paradoxical effects of challenges and opportunities arising from MWCs' intersectionality and connects them with the various agentic tactics applied by women to exercise their agency.

DEI: **Dehumanization and Plausible Deniability Bias: Sexism Under the Guise of Political Disagreement**

Author: **Brittany Solomon**, *U. of Notre Dame*
Author: **Matthew Hall**, *U. of Notre Dame*

Research has shown that political ideology impacts organizational decision-making. But little work has examined the divisive aspect of politics that, we theorize, manifests in ordinary work life by coinciding with more commonly studied demographic differences. Across four studies, we demonstrate that Republicans and Democrats appear to dehumanize their politically dissimilar coworkers, which then drives mistreatment and decreased helping. Importantly, we shed light on the use of political dissimilarity as a pretense for demographic-based prejudice that persists in the workplace. We introduce plausible deniability bias, which occurs when one appears to use political bias as a cover for more socially unacceptable biases. Through a series of experiments, we provide causal evidence for this effect with regard to coworkers of a different gender (but not race). Thus, politics does undermine social dynamics but seemingly because it provides an opportunity for gender-based prejudice to manifest under the guise of political disagreement. We discuss implications of plausible deniability bias and the value of studying less obvious ways that political polarization may operate at work. As such, this research lays the foundation for future studies to explore other socially acceptable means through which employees disguise their demographic-based biases—both to themselves and to others.

DEI: **Help to Harm: Gendered Helping, Hierarchy Maintenance, and Race**

Author: **Vivian Xiao**, *Vanderbilt U.*

Prior work suggests that negative outcomes women suffer for violating gender norms (i.e., backlash) is most pronounced among White people. I build on this work by examining the flip side of gender-norm enforcement—by focusing on the positive outcomes that women may accrue for conforming to gender norms. In three studies I find that when White, but not Black or Asian, women conform to gender-norms, they receive more resources such as help and mentorship from White perceivers, particularly among those highly motivated to uphold traditional gender relations—men who endorse benevolent sexism (Studies 1a-1b). Furthermore, I show that this help is dependency-oriented in nature—though it solves the immediate problem, it frames women's position to men as dependent and subordinate, reinforcing the gender hierarchy (Study 2). My work thus demonstrates that gendered concerns, such as gender-norm enforcement, may be particularly intense among Whites and has implications for both gender and racial inequality.

DEI: **Equality in the Eyes of Beholders: An Ideology-Based Perspective on Gender Gap in Entrepreneurship**

Author: **Shi Tang**, *City U. of Hong Kong*
Author: **Taiyuan Wang**, *China Europe International Business School (CEIBS)*

While the gender gap in entrepreneurship propensity has been widely acknowledged, evidence for why this gap exists is ambiguous. The dominant explanation has been grounded in a gender-role incongruity perspective, which assumes that women internalize stereotypes about the incongruity between women's attributes and those of entrepreneurs. We question this assumption and propose a markedly distinct account centering on the gender difference in gender egalitarian (GE) ideology. GE ideology refers to the belief and value systems that support equal rights, roles, and responsibilities for men and women, and oppose the notion that men and women have innately different roles. Our key contention is that women tend to hold higher GE ideology than men, which makes them more likely to reject entrepreneurship as they disapprove the gender inequality inherent in entrepreneurship. We further build on intersectionality research to theorize the boundary condition that the gender gap in entrepreneurship via GE ideology is contingent upon other social category attributes (e.g., social class, race). Two studies—Study 1 based on secondary data of 14,030 individuals from 25 provinces in China, and Study 2 based on primary data of 1,084 individuals from 16 countries—together support our theory and its generalizability.

DEI: **Who Are the Best Partners in the Workplace? Income Inequality Moderates Social Exchange Processes**

Author: **Yanzhao Su**, *Guanghua School of Management, Peking U.*
Author: **Yang Bai**, *Guanghua School of Management, Peking U.*

Although researchers are aware of the effects of social exchange relationships vary greatly among countries, understanding of how the country- and region-level income inequality and quality of social exchange relationships interactively influence employees' job satisfaction is still very limited. Building on social exchange theory (SET) and income inequality literature, this paper aims to address this issue by investigating the role of higher-level income inequality in social exchange processes in organizations. In pre-registered Study 1, consisting of 21,435 individuals nested in 37 countries, our results support the positive moderating effect of country-level income inequality on the relationship between individual-level leader-member exchange and job satisfaction, and the negative moderating effect on the relationship between individual-level team-member exchange and job satisfaction. Study 2 is pre-registered and selects data from 6,951 employees residing in 9 regions' and 5 years' surveys in the United States. Our findings show that region-level income inequality positively moderates the relationship between individual-level leader-member exchange and job satisfaction. Theoretical implications and future research directions are also discussed.

DEI: **Organizational Responses to Mega-Threats: The Role of Stakeholder Attributions**

Author: **Amy E. Colbert**, *U. of Iowa*
Author: **Ah Jung Kim**, *U. of Iowa*
Author: **Michael Durney**, *U. of Iowa*
Author: **Michele Williams**, *U. of Iowa*
Author: **Ion B. Vasi**, *U. of Iowa*

Organizations are increasingly speaking out in response to mega-threats, or negative identity-related events that receive extensive media attention. Initial research has shown that stakeholders have mixed reactions to organizational responses to mega-threats, with positive reactions more likely for stakeholders who are ideologically aligned with the response or who share an identity group with the target of the mega-threat. However, attribution theory suggests that variability in stakeholder reactions to organizational responses to mega-threats may also be explained by the reasons that stakeholders believe motivated organizational responses. In an experimental study, 152 participants who took the role of job applicants were more likely to see an organizational response to a race-related mega-threat as self-serving when the organization made a statement but had no history of support for diversity and inclusion. However, both the organizational response to the mega-threat and the organization's history of support for diversity and inclusion had independent effects on stakeholder beliefs that the response was genuine, with the highest level of genuine attributions occurring for organizations that responded to the mega-threat and had a history of support for diversity and inclusion. While genuine attributions were strongly associated with organizational attraction, the relationship between self-serving attributions and organizational attraction was moderated by pro-diversity beliefs such that self-serving attributions were negatively related to organizational attraction only for those with higher levels of pro-diversity beliefs. These results extend our understanding of stakeholder reactions to organizational responses to mega-threats and provide practical advice for organizations attempting to manage their responses.

DEI: **Antecedents of Gender Wage Gap: A Comprehensive Review and Future Agenda**

Author: **Xiaoyan Chen**, *Hong Kong Baptist U.*

Why gender wage gap exists is a question that has attracted long-standing interest of scholars, practitioners and politicians. Extant research from different disciplines, including economics, psychology, sociology and management, has gained fruitful knowledge on antecedents of gender wage gap. Yet, each subfield emphasizes determinants of gender wage gap from various foci. The lack of comprehensive review on gender wage gap antecedents impairs our holistic understanding and impedes future research development. To systematically illustrate the complex antecedents of gender wage gap, we propose a supply-demand-context framework and organize antecedents of gender wage gap into three perspectives, including the supply side, the demand side and the contextual side. Based on the review, we further outline an agenda that point out several potential research directions, thus stimulating studies on future research opportunities.

Presenter: **Christine Nittrouer**, *Texas Tech U.*
Presenter: **Mirit K. Grabarski**, *Lakehead U.*
Presenter: **Nancy Doyle**, *Birkbeck U. of London*

Neurodiversity inclusion is no longer a new topic in business, yet it continues to be understudied at macro, meso, and micro levels of the organization. This symposium consists of five short presentations, each investigating a different aspect of neurodiversity in organizations across these levels. Nittrouer, Blake, and Lux start at the macro level, looking at the relationship between DEI statements (as they relate to neurodiversity and multiculturalism), five organizational outcomes/traits, and the marginalized identities of DEI officers. Next, Cameron and Austin discuss the cross-level impact of diversity, employee support systems, and structured conflict management systems on the intragroup conflict process in organizations by drawing on data from neurodiversity employment initiatives. Third, Doyle investigates the cross-level impact of coaching on dimensions of executive functioning and self-efficacy in neurominority participants in the context of reasonable accommodations at work. Fourth, Grabarski and Baker present a primarily micro-level study on how perceptions of neurodiversity inclusion impact individuals in terms of affective commitment and turnover intention. Finally, Spoor and Jameson overview the implications of neuro-inclusion for business schools and discuss practical implications for teaching, research, and administration across the business school as a call to action. A group discussion will be led by Johnson, touching on research comments, theoretical and practical implications.

Over the next decade and beyond, hundreds of thousands of neurodivergent individuals (i.e., individuals on the autism spectrum, individuals with attention deficit and hyperactivity disorder, individuals with dyslexia) will be entering the workplace. Is the workplace and are managers ready for them? While several forward thinking organizations have implemented programs to include neurominorities in their workforce, most organizations are ill-equipped and ill-prepared to fully embrace this population within their ranks. The papers in this symposium will take a multifaceted perspective of neurodiversity, and underline important areas of current and future research. Specifically, the history of neurodevelopmental conditions (Doyle), issues related to identity and the intersectionality of gender and neurodiversity (Hayward et al.), decisions around self-disclosure and workplace norms (Giannantonio et al.), and the impact of technology on the inclusion of neurominorities (Spoor and Walkowiak) will be explored. Furthermore, while the business case for promoting inclusion for neurominorities is commonly made, the ethical and moral imperativeS will also be underlined (Comer). Our organizers/discussants (Patton and Santuzzi) will tie these issues together and suggest practical implications for managers and areas of future research.

Participant: **Claudia Cogliser**, *Texas Tech U.*

This presenter symposium features five research studies by well-known disability scholars, from North America and Europe, on the inclusion and workplace experiences of employees with disabilities. Together, these studies extend the boundaries of disability research by showcasing inadvertent ways in which new supposedly inclusive workplace designs (e.g., alternative/digitalized work/conference spaces) can become empty promises or perpetuate social inequality; how and why career advancement may be stalled for some employees with a disability; how an employee’s identity can be associated with their disability management strategy, and in turn their help-seeking preferences; and finally how even conventional large organizations may unintentionally exclude employees with a disability. Our discussants will synthesize the individual presentations to suggest future research directions as well as practical suggestions for promoting equity and inclusion within organizations as well as within important spaces of organizing such as this Academy of Management annual meeting.

Entrepreneurship and Identity Theory

Session Moderator: **Alisa Sydow**, *ESCP Business School*

ENT: **Introducing a Verification Process between Identity Reconstruction and Opportunity (Re)Evaluation**

Author: **Carina Bohlayer**, *Leuphana U. Lüneburg*
Author: **Alisa Sydow**, *ESCP Business School*

Research on opportunity formation has recently moved toward an evolving process perspective in which identities may play a critical role in understanding how entrepreneurs form, evaluate, and enact opportunity beliefs. Although current scholars argue for a dynamic perspective of identities, we lack in studies that connect both, an evolving perspective of opportunity formation as well as a changing identity. Therefore, we investigate how changes in identities, or more specifically identity reconstruction processes, influence opportunity belief formation. We conducted an explorative field study consisting of 100 interviews with 18 nascent entrepreneurs in South Africa during the COVID-pandemic. Our findings illustrate a three-step process in which the enactment of opportunity beliefs feeds both an identity verification and a resilience loop. Considering our findings, we advance research on entrepreneurial identities by taking a dynamic perspective on how individuals actively reconstruct and verify their identities, expanding our understanding of identity work beyond activities that ensure fit with pre-defined (role) identities. Furthermore, we contribute to research and practice on entrepreneurial opportunities.

ENT: **An Identity Approach on the Entrepreneurial Passion, Illusion of Control and Risk Propensity**

Author: **Daniela Alejandra Gimenez Jimenez**, *TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Marie Cecile Wilm**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Steffen Strese**, *TU Dortmund U.*

Passion energizes and motivates individuals to continue entrepreneurial activities. The consequences of entrepreneurial passion, however, remain inconclusive. Drawing on identity theory, we investigate the relationship between harmonious and obsessive entrepreneurial passion and risk propensity, moderated by illusion of control. We argue that illusion of control, as a cognitive bias, interacts in this relationship because it relates to entrepreneurs' decision-making in risky environments. We examine our model based on a sample of 445 German entrepreneurs. We find both harmonious and obsessive entrepreneurial passion positively relate to risk propensity. Illusion of control strengthens the relationship between obsessive passion and risk propensity, while it weakens the relationship between harmonious passion and risk propensity. We contribute to research by advancing theory on the outcomes of harmonious and obsessive entrepreneurial passion. Showing that illusion of control as a cognitive bias shapes salient identities and influences entrepreneurs' risk propensity, we also extend identity theory.

ENT: **The Role of Personal Identity in the Adoption of and Transition of a Role Identity**

Author: **Rama Krishna Reddy Kummitha**, *U. of Essex Business School*

Based on a longitudinal study conducted in the social entrepreneurship setting, this paper examines the micro-foundations that drive the interest of aspiring social entrepreneurs (ASEs) and their role adoption. We emphasise that personal identity not only influences their role salience but also seeks for role transition when actors perceive that such a transition allows them to achieve the goals associated with their personal identity—more so than their engagement with the initial chosen roles. This paper builds theory around the social entrepreneurial initialization process and shows how ASEs embrace and transform their roles. Early research has considered the entrepreneurial roles to be somewhat static, whereas our findings highlight that role selection and transition is determined by personal identity coupled with entrepreneurial attributes that are shaped and reshaped by the interactions between the self and actors in the environment, which enforces identity reflexivity on the focal actors. We make three theoretical contributions to the social and identity literature.

ENT: **Identity Multiplicity and Venture Adaptation: How Founders Manage Reputational Risks and Adversity**

Author: **Mallika Banerjee**, *Haskayne School of Business, U. of Calgary*

Organizational scholars have documented differences in founders' personal, work-role, and social identities as the significant source of heterogeneity in young firms' business models and adaptation strategies. While informative, the founder identity literature rarely examined how founders' multiple intersecting – at times conflicting - identities shape their responses to reputational risks and adversity beyond the founding stage. This study uses a longitudinal multi-case research design with six immigrant IT ventures within a U.S. community to examine how identity dynamics continue to inform entrepreneurs' actions as they grow their ventures. My core contribution is a unifying two-step process model in which personal identity serves as a critical link between the founder role and social identities, accounting for heterogeneity in initial business models and subsequent adaptation strategies. The emergent framework enriches founder identity perspectives by resolving the current debate concerning the significance of personal vis-a-vis work-role and social identities for entrepreneurship. It also extends social capital research by integrating ideas from identity work. In addition, my theorizing outlines a boundary condition to extant entrepreneurship research.

Entrepreneurship and Innovation 1

Session Moderator: **Mirian Wawrzyniak Chimirri**, *U. of Sao Paulo (FEA/USP)*

ENT: **Speed of Pro-Market Reforms and Entrepreneurial Innovation (WITHDRAWN)**

Author: **Lucio Fuentelsaz**, *U. of Zaragoza*
Author: **Consuelo González**, *U. of Zaragoza*
Author: **Minerva González**, *U. of Zaragoza*

This paper integrates the dynamic institution-based view of the firm in the analysis of entrepreneurial innovation. Given that pro-market reforms are important to understand entrepreneurial decisions and their subsequent effect on firm performance, we focus on the role that the speed at which the changes take place has on entrepreneurial innovation to fully understand the phenomenon. We also postulate that this relationship is contingent on entrepreneurial self-efficacy and on being a new entrepreneur. We use individual GEM data about the innovative behavior of entrepreneurs for the period 2009-2018 and our results mostly confirm our hypotheses: a high speed of pro-market reforms positively influences entrepreneurial innovation and this relationship is (partially) strengthened by entrepreneurial self-efficacy and is also stronger in the case of new (compared to established) entrepreneurs.

ENT: **Governing Innovation: How Board Quality Shapes Innovation?**

Author: **Mirian Wawrzyniak Chimirri**, *U. of Sao Paulo (FEA/USP)*
Author: **Luiz Ricardo Kabbach De Castro**, *U. de Navarra*

We examine the role of board quality on corporate innovation inputs (investment in R&D) and outputs (number of patents). Using a new sample on corporate innovation of 6,392 US publicly listed firms between 2000 to 2018, we extend prior literature on the relation between board of directors and corporate innovation to provide new evidence on how board's Managerial Quality and Innovative Quality jointly explain the level of firms' investment in R&D and their innovation productivity. We show that firms with higher board's Managerial Quality invest more in R&D, showing that they allocate higher amount of resources in innovation initiatives. Further, firms with higher board's Innovative Quality have a greater innovation output. These results are robust to empirical challenges including measuring board quality and potential endogeneity concerns.

ENT: **Once an Innovator, Always an Innovator? Founder-CEO Effects on Innovation Over Business Lifecycle**

Author: **Uisung David Park**, *Syracuse U.*
Author: **Seyed Hooman Seyed Abootorabi**, *U. of Louisville*
Author: **Alexander McKelvie**, *Syracuse U.*

In this paper, we examine whether and when having the entrepreneurs in firms as founder-CEOs affect firm innovations over time, and at different stages of development such as conception, commercialization, and growth stages, as compared to having professional CEOs. In doing so, we draw upon the upper echelons, organizational lifecycle, and corporate governance literatures and suggest that founder-CEOs produce more innovations than their professional counterparts in commercialization and growth stages, but not in the conception stage. Moreover, we theorize how the top management and board of directors are composed moderate these relationships differently through the venture's lifecycle. By examining 641 high-tech ventures, we find support for our theory. Our findings have implications for a number of streams of work including literatures on CEO succession, new venture innovation, upper echelons theory, and corporate governance.

ENT: **Founding Team Members' Procrastination and their Venture Innovation Intentions**

Author: **Lieke Steeghs**, *Technical U. of Munich*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*

Although it is not common to associate founders with a high tendency to procrastinate, several challenges in the new venture environment may stimulate this tendency. As the literature in other domains mostly speaks of negative consequences of procrastination on performance, it is important to understand how this may look like in the founding team context. Therefore, this study focuses on advancing our understanding of the relationship between founding team members' tendencies to procrastinate and an element fundamental to their work, i.e., their venture innovation intentions. We propose that the way in which founding teams manage their interactions inside of and across team boundaries may alter the negative consequences of procrastination. We test our model based on a sample of 233 founders nested in 111 founding teams. In line with our theorizing, we find that the relationship between procrastination and venture innovation intentions is negative; however, when founding team members perceive their team is interacting across team boundaries this reduces the negative consequences of procrastination. Ours study contributes to the entrepreneurship literature and research on the topic of procrastination.

Balancing Multiple Goals in Social Entrepreneurship

Session Moderator: **Magdalena Plesa**, *U. of Liverpool Management School*

ENT: **How Exogenous Shocks Affect the Management of Hybrid Tensions in Social Enterprises**

Author: **Magdalena Plesa**, *U. of Liverpool Management School*

Although organizations of all kinds have been affected by shocks such as the financial crisis, Brexit, and the Covid-19 pandemic, relatively little research has examined the transformative implications of these shocks for social enterprises. This paper addresses this gap by drawing on a longitudinal study of 42,131 Community Interest Companies in the United Kingdom from 2005 to 2021. Using quasi-experimental design, this paper addresses how the 2007-2008 Financial Crisis, the Brexit Referendum, and the Covid-19 lockdown affect the management of hybrid tensions in social enterprises. This paper finds evidence that Community Interest Companies (CICs) that did not dissolve were more likely to transform through dehybridizing after the Financial Crisis and Brexit Vote, and by pivoting after the Financial Crisis. This paper also finds that CICs that dehybridized following these shocks had higher turnover, net tangible assets, and/or profits in comparison to companies that pivoted, dissolved, or had no transformations. Finally, the paper shows that CICs that dehybridized or pivoted prior to an exogenous shock performed better financially than companies that dissolved or had no transformations. The insights from this study contribute to hybrid organizing research, business practice, and policymaking.

ENT: **Entrepreneurial Orientation and the Tension of Goal Orientation on Social Enterprise Scaling**

Author: **Filip De Beule**, *KU Leuven, Faculty of Economics and Business*

Social enterprises (SE) operate under a tension inherent in their organizational mode that involves addressing both social and economic goals. It has been suggested that this duality of objectives is fraught with conflict and that adherence to one has a deleterious effect on the other. This study argues that this tension inherent in SEs will have a direct effect on the scaling of the SE. However, the scaling can conceivably also be driven by the fact whether the SE is an integrated or differentiated enterprise, i.e., whether clients are beneficiaries or not. Furthermore, while commercial enterprises benefit from a positive entrepreneurial orientation (EO), the circumstances under which SEs benefit from this is unsure, particularly regarding scaling. This study argues that EO in social enterprises will have a positive effect on scaling although this might depend on the extent of the social versus the economic goals, as well as whether it is an integrated or a differentiated SE. Through quantitative analysis of 170 small and medium sized SEs operating at the base of the pyramid in India, we find that EO, in particular innovativeness, risk-taking, and proactiveness, is positively associated with SE scaling. However, the tension of allocation attention between social and economic goals does not show a significant direct effect on scaling, as this relationship is mediated by EO. Our study introduces insights from attention/cognition literature and EO in the context of SEs and scaling in order to elaborate upon EO and attention allocation.

ENT: **Social Enterpise in Contexts of Persistent and Overwhelming Need. An Approach to Avoid Impact Drift**

Author: **Alessia Argiolas**, *U. degli Studi di Bergamo*
Author: **Hans Nikolas Rawhouser**, *U. of Nevada, Las Vegas*
Author: **Alisa Sydow**, *ESCP Business School*

Stakeholders' expectations are relevant for balancing social and financial goals in social enterprises. Typically social entrepreneurs try to meet their stakeholder' expectations and avoid mission drift. This qualitative study involving 36 social entrepreneurs in Sub-Saharan Africa showed that the key concern for social entrepreneurs was impact drift (a deviation from a trajectory leading to long-term and systemic resolution of a social problem). Drawing on research in behavioral theory and mission drift, we elaborate a process model that shows how entrepreneurs frame an imbalance in social enterprise due to a local history of deprivation and dependence and inadequacy in existing approaches for helping, which leads to an impact-focused approach to social enterprise. This approach involves orchestrating coalitions of stakeholders in novel ways, which is supported by anchoring on necessary conditions for impact and human accounts of impact (from role models and stakeholders) to proceed with an approach to social enterprise that conflicts with the expectations of the immediate surrounding context.

ENT: **For the Love of the Game: Overcoming Competing Interests in Civic Wealth Creation**

Author: **Eduardo Meléndez**, *U. of Oklahoma*
Author: **G. T. Lumpkin**, *U. of Tennessee, Knoxville*

Civic wealth creation (CWC) denotes how multiple groups of stakeholders with joint interests engage in initiatives to generate and strengthen economic, social, and communal resources and endowments. Therefore, stakeholder groups with competing interests constitute a barrier for CWC because competing interests undermine cooperation and create collective action problems that prevent the CWC process from initiating. This study explores how stakeholder groups may overcome their competing interests and initiate the CWC process, specifically by attending urgent interests, defending core interests, and expressing collective identities. Furthermore, this study examines how two stakeholder governance forms—lead role governance and shared governance—results in different levels of civic wealth. We perform this study in the context of professional soccer, an appropriate illustrative setting given its extensive stakeholder map and the pervasive existence of competing interests among powerful stakeholder groups.

Critical perspectives on entrepreneurship

Session Moderator: **Louis Marino**, *U. of Alabama*

ENT: **Dynamic Capabilities in Entrepreneurship: A New Avenue of Research?**

Author: **Louis Marino**, *U. of Alabama*
Author: **Laura Castaldi**, *U. Luigi Vanvitelli*
Author: **Diego Matricano**, *U. degli Studi della Campania L. Vanvitelli*

Since 1997 both managers and organizational researchers have recognized dynamic capabilities as essential resources for firms success. Whether in good or bad times, managers are aware they need to constantly create, extend, or modify the (tangible and intangible) resource base of their companies in order to respond to increasing competition. However, relatively little is known about how these capabilities develop in general, and especially in the start-up context. Research in this area is in the nascent stage and the results are inconsistent. Some researchers question whether it is possible to discuss dynamic capabilities in entrepreneurial context – DyCE. However, inquiry is growing in this area with scholars advocating further research; results are not convincing and there is space for further research (the level of analysis is theoretical and no statistical elaborations have been carried out). In this paper we employ and exploratory methodology to better understand whether dynamic capabilities are applicable in the entrepreneurial context and if so, how these capabilities develop. In doing so, we build on institutional theory and leverage data from the GEM dataset to empirical examine these questions. Our results provide evidence that dynamic capabilities in entrepreneurship exist and additional research is needed to further understand the development and nature of these capabilities.

ENT: **Social Inclusion through Necessity Entrepreneurship: An Ethnographic Account from Kutupalong**

Author: **SM Musa**, *Erasmus U. Rotterdam*
Author: **Katrin M. Smolka**, *Warwick Business School*
Author: **Pursey Heugens**, *Rotterdam School of Management, Erasmus U.*

We develop an ethnographic theory of how necessity entrepreneurship (NE) shapes social structures, which in turn provide a context in which the basic human need of social inclusion can be met. We find that through their entrepreneurial activities, necessity entrepreneurs develop endemic institutions and structure of cooperation. These institutions and cooperative structures infuse their lives with values and meaning, and create opportunities for inclusion, not only for themselves, but also for many others. Yet such structures can also have a darker side. We therefore also show how and when such endemic institutions can become exclusionary and promote inequality. Our work adds to the discussion on the outcomes that NE creates over and above the mere fulfilment of basic physiological and security needs of the entrepreneurs involved.

ENT: **Top Entrepreneurship Research in the Past 20 years: Topics and Impacts**

Author: **Tang Wang**, *U. of Central Florida*
Author: **Dirk Libaers**, *U. of South Florida*
Author: **Xiaoming Yang**, *U. of Nebraska, Omaha*
Author: **Lingshu Hu**, *Washington and Lee U.*

Entrepreneurship has long represented an academic discipline whose consensual meaning has been fragile among many scholars in management, economics or other disciplines within business. That said, over the past two decades the discipline has come in its own, as there exists a critical mass of scholars who have developed a shared conception of its meaning (Astley, 1985). However, we have witnessed both shifts in the topics that entrepreneurship scholars study and the journal outlets they target. In addition, a review of entrepreneurship research also revealed new topics that have emerged and become prominent. Moreover, the best entrepreneurship research several decades ago was only published in specialized journals. However, here too, we have observed that some 'pure' entrepreneurship papers make their way into top management journals. To further gain deeper insight into these two trends this paper consists of two distinct studies. The first study makes use of topic modeling as a novel approach, to discern the topics studied in the entrepreneurship literature as well as how topics have evolved over time. The second study builds on the first study in that it identifies topics that can be found in entrepreneurship journals and others that are also to be found in management journals. In addition, we use both the topics and journals to predict article impact and expect that the topic is a more significant factor than journal. Our observation timespan covers the 2000-2020 period which captures the trends outlined above.

Entrepreneurial Cognition and Decision 1

Session Moderator: **Bach Nguyen**, *U. of Exeter Business School*

ENT: **Dehumanizing Childhood Experiences and Entrepreneurial Orientation: A Bad Transforms to a Good**

Author: **Bach Nguyen**, *U. of Exeter Business School*
Author: **Hai-Anh Tran**, *Alliance Manchester Business School, U. of Manchester*

Recognizing the humanity of others is a pillar of a moral society, and being dehumanized threatens the cognition, behavior, and well-being of individuals. In this paper, we examine whether and how exposure to dehumanizing childhood experiences (i.e., being neglected/abused) influences entrepreneurial orientation (EO). Examining two samples of small-business entrepreneurs in the UK, we find that (i) dehumanizing childhood experiences boost entrepreneurs' individual EO; (ii) this positive effect is the net result of a decrease in prevention focus and an increase in self-dehumanization. Moreover, the positive impact of dehumanizing childhood experiences on EO is stronger for entrepreneurs who uphold a good moral character.

ENT: **When Behaviors Shape Entrepreneurial Beliefs: An Experiment Applying Self-Perception Theory**

Author: **Richard Hunt**, *Virginia Tech*

This study is the first to apply Self Perception Theory (SPT) to an examination of the relationship between entrepreneurial behaviors and entrepreneurial beliefs. While incumbent theories of entrepreneurial action propound the notion that belief formation invariably precedes entrepreneurial behaviors, mounting empirical evidence concerning role and impact of alternative, non-rational drivers of business venturing suggest that the belief-behavior interplay is an open issue, and that the ambiguous conditions often characterizing entrepreneurial decision environments lend themselves to a less dogmatic conceptualization of the sequencing between beliefs and behaviors. SPT – which holds that individuals facing ambiguity tend to form beliefs by observing and interpreting their own behaviors – supports the assertion that behaviors can and sometimes do precede belief formation. Using an experimental design, we test SPT in the business venturing context, finding that SPT provides a robust explanatory basis for the assertion that behaviors may precede beliefs under ambiguous conditions. The results have important and exciting implications for scholars, entrepreneurs, investors, and policy-makers.

ENT: **New Venture Employee Accountability: An Analytic-Holistic Cognition Lens on Social Class Backgrounds**

Author: **Robert J. Pidduck**, *Old Dominion U.*

Accountability is of a longstanding interest in organizational research. Studies on employees' felt accountability about their job responsibilities continue to grow. Research in this domain has traditionally focused on individuals in large or established organizations. Moreover, focal agents in this literature consist of samples largely reflecting professionals from majority groups, further homogenizing and limiting understanding of this phenomenon. However, employment in new entrepreneurial ventures creates unique demands for employees grounded in highly ambiguous and fluid role expectations. Integrating research from social class psychology on Analytic-Holistic cognition profiles, we advance a theoretical model examining how the social class backgrounds employees are socialized into can cultivate accountability tensions differentially across employee backgrounds. These unique tensions generate paradoxes for new ventures with important consequences for performance and ultimately survival—the employment backbone of many economies. Specifically, new venture employees from working-class backgrounds tend to develop more holistic cognition tendencies, and those from middle-class backgrounds build analytic cognition tendencies. These orientations influence how employees navigate tacit workplace expectations and felt accountability in their work. Implications for theory and practice are discussed, outlining promising avenues for future empirical investigations in this domain.

ENT: **Leveraging Paradoxes for New Venture Ideation: A Cultural Tightness-Looseness Theory**

Author: **Robert J. Pidduck**, *Old Dominion U.*
Author: **Daniel Richard Clark**, *Ivey Business School*
Author: **Yejun Zhang**, *U. of Texas Rio Grande Valley*

Paradoxes are inherent to the fundamental tensions within the entrepreneurial journey. Thus, understanding how entrepreneurs habitually navigate the many seeming contradictions endemic to new venture development is critical. While extant studies have focused on the specifics of select (often dichotomous) paradoxical tensions in entrepreneurship, knowledge surrounding the cognitive aptitude, more broadly, for how and when entrepreneurs embrace paradoxes for constructive outcomes is surprisingly scant. We are the first to probe the role of a paradox mindset on practically important initiation-stage outcomes: new venture idea quantity and quality. Integrating insights from cross-cultural psychology, we adopt an international experimental priming design (n = 506) to test the distal and proximal effect of personal cross-cultural experience on new venture ideation through the mediating role of a paradox mindset. We provide some causal evidence that it is the generalized immersion and experience of interaction with foreign cultures that bolsters these important entrepreneurial dynamics. Drawing from cultural tightness-looseness theory, we investigate boundary conditions and find that the looseness of one's home country culture bolsters overall new venture idea quantity and feasibility of these ideas, but not the originality of their content (i.e., an aspect of quality). Implications for future research are discussed.

Entrepreneurial Digital Transformation 1

Session Moderator: **Yueqi Wang**, *Dalian U. of Technology*

ENT: **TMTs' Attentional Engagement Efforts in forming Opportunity Beliefs for Digital Transformation**

Author: **Yueqi Wang**, *Dalian U. of Technology*
Author: **Chenguang Hu**, *Beijing Normal U.-Hong Kong Baptist U. United International College*

Drawing on the attention-based view (ABV) and literature on digital transformation, this study examines how top managers utilize attentional engagement efforts to interpret noticed environmental changes that indicate potential opportunities, and thereby form opportunity beliefs for digital transformation. With a longitudinal single-case study within a platform enterprise in China, we identify four events of digital transformation embodying opportunity beliefs. Further, based on the events, we retrospect and scrutinize how opportunity beliefs for digital transformation are formed through different aggregates of top managers' attentional engagement efforts in evaluating potential opportunities. Through introducing top managers and theorizing the role of their attentional engagement efforts, this study contributes to integrating the ABV and the nascent literature of digital transformation. Informed by a focus going beyond the structural approach of the ABV, we also contribute to extending the attention model of opportunity belief formation via demonstrating the practices and contents of the efforts.

ENT: **Understanding the Challenges of Adaptation of Digital Platforms by SMEs**

Author: **Hannan Amoozad Mahdiraji**, *U. of Birmingham*
Author: **Fatemeh Yaftiyan**, *Uiversity of Tehran*
Author: **Aliasghar Abbasi-Kamardi**, *U. of Tehran*
Author: **Razieh Sadraei**, *Coventry U.*
Author: **Vahid Jafari Sadeghi**, *Aston Business School*

This research aims to investigate the main challenges of Digital Platforms (DPs) toward transformational entrepreneurship in emerging countries. Identifying the main challenges of DPs, screening the most prominent challenges toward transformational entrepreneurship, analysing the causal relationship of the challenges, and determining the importance and the role of the DP challenges for Small and Medium-sized Enterprises (SMEs) in emerging countries are revealed in this research. In this regard, a mixed-method approach has been employed while first extracting the list of DP challenges via a Systematic Literature Review (SLR). Then in the quantitative section, a multi-layer decision-making approach consisting of Delphi, and Interpretive Structural Modelling (ISM) are applied to screen the most important challenges toward transformational entrepreneurship, analyze the relationship amongst the challenges and determine the importance and the role of DP challenges, relatively. To consider the uncertainty of the environment in emerging countries and to include the intuition and hesitation of the entrepreneurs in the analytical section, intuitionistic fuzzy sets (IFS) are considered and a novel IF-Delphi-ISM approach is presented. Moreover, the results and findings are discussed in different scenarios including optimistic, possible, and pessimistic circumstances.

ENT: **Digital Entrepreneurship and Local Labor Market**

Author: **Sam Ruiqing Cao**, *Stockholm School of Economics*

This paper studies the variation in returns to digital retail entrepreneurship across locations in a large online marketplace. Digital platforms enable access to knowledge, resources, and customers across long geographic distances, rendering costs and barriers to business activities less constrained by the local environment. Digital entrepreneurs outperform in rural and low-wage urban areas with lower turnover rates. In slack labor markets, more unemployed individuals cannot find jobs in the wage sector due to job rationing. Digital platforms absorb this excess supply of high-quality labor, which results in a substantial premium in aggregate revenues across digital retailers in locations with slack labor markets. Consistent with this mechanism, the job turnover rate in the local labor market positively moderates local wage's impact on digital retailers' aggregate revenues. In tighter labor markets where workers move between the wage sector and self-employment more frequently, returns to different earnings options converge faster. Our results imply that digital platforms particularly benefit individuals in slack labor markets where local earnings opportunities are limited and workers change jobs less frequently. Our results suggest a close connection between the health of local labor markets and the aggregate returns to digital entrepreneurship in a given region.

ENT: **Designing the Happiness-Machine: Digital Entrepreneurs and Technologies for Grand Challenges**

Author: **Kseniya Navazhylava**, *Ecole de Management Léonard de Vinci*
Author: **Jean-Charles Pillet**, *TBS Business School*
Author: **Gazi Islam**, *Grenoble Ecole de Management*
Author: **Marcos Pereira Fernandes De Barros**, *Grenoble Ecole de Management*

Imagination is believed to enable entrepreneurship to emerge that produces bold answers to grand challenges. Many entrepreneurs are searching for such answers in digital technologies, producing new technologies that promise a response to grand challenges. Entrepreneurial attempts to imagine socially relevant technologies, however, reveal a dark side in the creation of technologies that project entrepreneurial expectations on users and shape expectations for user experience. Through a qualitative study of imagining a new technology that responds to a grand challenge of workplace wellbeing, we find that imagined technologies shape specific solutions relevant to company HR practices for responses to workplace wellbeing. This made possible by the elusiveness of wellbeing, as highly subjective, future oriented and not reliant on previous user experiences. Wellbeing's elusiveness allows entrepreneur-designers to align user beliefs to entrepreneur-designers' needs. We find that instead of imagining radically new affordances, entrepreneur designers rely on a mix of adapted real affordances of existing technologies and an affordance of educability that helps define elusive phenomena for technology users.

Entrepreneurial Finance: Early stage 1

Session Moderator: **Yifan Tian**, *Department of Management and Technology, Bocconi U.*

ENT: **Knowledge Combination in Startups and the Impacts on Venture Capital Financing**

Author: **Yifan Tian**, *Department of Management and Technology, Bocconi U.*
Author: **Stefano Breschi**, *Bocconi U.*

The paper empirically examines how combinations of knowledge in the startup team influence venture capital financing results. By adopting the financing data of startups and the skill data of founders, we measure the degrees of conventionality and novelty of skill combinations in startups. Results show that high novelty fosters the probability to receive VC funding but high conventionality does not, and high conventionality helps improve the amount while high-novelty startups have a lower amount of funding, which can be partly explained by the high risk brought by high novelty. We also find that startups with both high conventionality and novelty have the highest probability to receive funding and the amount is the largest. The paper contributes to research fields of knowledge combination and factors that influence external investments.

Author: **Wei Zhang**, *Tsinghua U.*

While entrepreneurial infrastructure (EI)—the resources and institutions supporting entrepreneurial activity—has received considerable attention by both scholars and policymakers, less attention has been paid to the systems that generate those resources. We argue that understanding and improving the performance of a region's entrepreneurial ecosystem requires insights into the "how" and "why" critical infrastructure resource inputs are generated. This, in turn, requires extending the analysis of entrepreneurial infrastructure to the system of actors and institutions that generate key resource inputs. We use China's venture financing system as a case to elucidate the process by which this very successful EI resource system emerged and developed over 30 years. We find that it was "built" through multiple agency-emergence cycles. Government and non-government actors undertook primary and participative institutional work, respectively, in response to emerging policy and their own evolving strategic objectives. They also responded to features of the venture financing system that emerged from the cumulative "practice work" of non-government actors (investors, VC firms, other firms, exchanges). The findings have implications for entrepreneurial ecosystem and infrastructure research, as well as for policymakers wishing to develop and improve the infrastructure supporting new venture creation.

ENT: **Board Composition and External Resources' Impact on Start-Up Fundraising Efficiency**

Author: **Yi-Chi Hsiao**, *Department of Business, National Central U.. Taiwan*
Author: **CHENG HSI LIU**, -
Author: **Chun-Ping Yeh**, *National Taiwan U. of Science and Technology*
Author: **Hsueh Liang Wu**, *National Taiwan U.*

The issue of how founders of start-ups seek a balance between value creation and power control in the process of seeking growth is an important issue in entrepreneurial management. Using the resource dependence view, this study investigates how founder control and board size affect the fundraising efficiency of start-up companies, and how external resource introduction and board structure design can be used to seek a balance between growth and power control for new start-up companies. This study tracked and collected data on 270 start-up companies from 2017 to 2021 and analyzed the data. The study found that the higher the founder's stake in the company, the less favorable the fundraising efficiency of the start-up company, and the introduction of foreign investors can positively moderate the negative relationship between the founder's stake and fundraising efficiency. The board size has a positive relationship with fundraising efficiency, but this positive relationship is negatively moderated by the number of legal entity directors of the start-up company. This study advances knowledge on the field of entrepreneurial management and provides practical suggestions for how start-ups can achieve balanced growth.

ENT: **Probabilistic Patents and Venture Capital Financing: Evidence from the Biopharmaceutical Industry**

Author: **Shivaram Devarakonda**, *Tilburg U.*
Author: **Vilma Chila**, *Amsterdam Business School, U. of Amsterdam*

Patents play an important part in startups' success. The rights associated with patents are often probabilistic because patents' can be challenged in courts for the validity of their scope. We study the effect of uncertainty about the scope of startups' patents on their ability to attract Venture Capital (VC) financing. This effect has been difficult to study because of the challenges in measuring scope. We overcome this challenge by exploiting the context of genomic sequences. Since 1980, the USPTO has allowed patents on nucleotide sequences — the building blocks of the genome. This practice was disturbed in 2010 when the court system intervened in The Association for Molecular Pathology v. Myriad Genetics. Between 2010 and 2013, the lower courts issued a series of contradictory rulings based on inconsistent legal reasoning, casting doubts on the scope of thousands of granted patents on nucleotide sequences. We exploit this intervention to investigate the effects of patent scope uncertainty on VC investments in new biotech ventures. We employ a dataset of new biotech ventures founded between 1995 and 2013. The court system's intervention motivates a quasi-experimental approach that allows us to show the negative impact of patent scope uncertainty on VC investments in startups owning affected patents.

Family Firm Long-term Orientation

Session Moderator: **Zhihao Ren**, *IE Business School*

ENT: **Does a Long-Term Orientation Fit Affect Family Firms' Target Selection in M&As? (WITHDRAWN)**

Author: **Michele Pinelli**, *U. Ca' Foscari of Venice - Dept. of Management*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

Family firms have been found to prefer other family businesses as acquisition targets because similarity in ownership structure facilitates common understanding, asset redeployment and the development of trusting relationships. Such alignment is supposed to smoothen targets' integration and improve acquisitions' outcomes. Yet, recent empirical findings show that family owners capture more value when they select nonfamily targets. Building on an institutional logics perspective, we contend that this may be due to the institutional complexity that arises when acquirers and targets follow different institutional logics. Since families have quite heterogeneous preferences and priorities, we argue that combinations of family businesses are likely to result in significant institutional complexity. Hence, family ownership per se may not be a sufficient criterion to drive family firms' target selection choices. Instead, we contend that family firms have incentives to undertake acquisitions in countries with a long-term oriented culture because targets in these countries are more aligned with family firms' long-term temporal perspective, which should facilitate their post-acquisition integration. Our empirical analysis on a global sample of 964 international M&As show that both family and nonfamily firms from countries with a long-term oriented culture undertake acquisitions in other long-term oriented countries but this effect is stronger for family firms, especially when market uncertainty is high. In so doing, this study advances our limited knowledge of family firms' acquisition behavior.

ENT: **Intergenerational Exchanges in Entrepreneurial Families and How They Shape Legacy Transmission**

Author: **Peter Trümmel**, *Free U. Bozen, Bolzano*
Author: **Rolf Wilmes**, *WHU Otto Beisheim School of Management*
Author: **Alfredo De Massis**, *Free U. of Bolzano, IMD Business School and Lancaster U.*

There is a widely accepted belief in academia that the continuance of an entrepreneurial family's legacy is vital for value creation across generations and that intergenerational exchange plays a key role in transmitting this legacy. However, the concept of Schumpeter's creative destruction, which suggests that value is created through the destruction of the old, conflicts with the idea of preserving a legacy. Additionally, intergenerational exchange is primarily viewed as a locus of conflict and resistance during succession rather than a means of transmitting the family's legacy. To address these contradictions between preserving a legacy and creative destruction, and between transmitive and resistive intergenerational exchange, we propose a model that combines life course theory and social exchange theory and distinguishes between two overlapping periods of life stages in which dyadic exchanges occur. Our model highlights the micro-mechanisms that shape the transmission of a legacy and the regulatory role of intergenerational reciprocity in influencing the legacy to become more creative or destructive. Our model offers a new perspective on how intergenerational exchange can allow a legacy to flow across multiple generations, and that such exchange can enable a family to engage in both creative and destructive behavior to foster their legacy's value.

ENT: **Transgenerational Intention and Long-term Investments in Family Firms**

Author: **Zhihao Ren**, *IE Business School*
Author: **Cristina Cruz**, *IE Business School*

We use the reform of one-child policy in China as an exogenous shock to explore how a change in family firm owner's transgenerational intention affects their long-term investment decisions. We propose that the reform of one-child policy lifts the family firm owner's transgenerational intention because it offers them the option to have more children, which makes them anticipate a smooth within-family succession in the future and a higher expectation to the continuity of family ownership and control. Specifically, we hypothesize that such change of their transgenerational intention will make them prefer more long-term investments (i.e., capital expenditure and R&D expenditure) at present. We obtained data from Chinese listed firms to test our hypothesis and found support for our predictions.

ENT: **Intergenerational Power Gap and R&D Investment: Evidence from China**

Author: **YONG ZHAO**, *Henan Normal U.*
Author: **Xi Yang**, *Beijing U. of Agriculture*
Author: **Daqi Xin**, *Nankai U.*
Author: **Wencang Zhou**, *Montclair State U.*

ABSTRACT Family firms are facing a dual challenge of succession and innovation. Based on the attention-based view, this paper empirically investigates the effect of intergenerational power gap on corporate R&D investment with a sample of Chinese listed family firms. We find that intergenerational power gap has a negative effect on corporate R&D investment. The negative relationship is amplified in firms with a low proportion of institutional ownership and in traditional industries. Our findings have theoretical and practical implications for R&D investment in family business succession process.

ENT: **Structuring Structures in an Entrepreneurial Habitus**

Author: **Steve Gaklis**, *Babson College*

This study goes beyond intuitive analysis of entrepreneurial orientation and entrepreneurial legacy at multi-generational family firms to propose that long-lasting, transposable, and entrepreneurial dispositions in an entrepreneurial habitus (EH) pre-suppose entrepreneurial attitudes, activities, and behaviors as the influence of the entrepreneurial founder dissipates over time. Data from seven multi-generational family firms with family and/or non-family ventures suggest family firms imbue only family ventures with an EH in that family firms inculcate trans-generational entrepreneurship by (1) instituting an entrepreneurial environment in which to venture, (2) preparing further generations to venture, (3) providing open forum support for their family venture(s), and (4) offering problem-solving resources to their family venture(s).

ENT: **Growing Pains: Legitimacy and Resource Dependence in Social Businesses in Latin America** ☯ ✈ 💻

Author: **Addisu A Lashitew**, *McMaster U.*
Author: **Eugenia Rosca**, *U. of Groningen*
Author: **Lydia Bals**, *Mainz U. of Applied Sciences*
Author: **Feigao Huang**, *Wright State U.*
Author: **Wendy Tate**, *U. of Tennessee*

A growing number of social businesses in developing countries provide market-based solutions to societal challenges, often with significant technical and financial backing from Western intermediary organizations. In this study, we use extensive interview data to investigate how Colombian social businesses translate and adapt novel social business practices in their ecosystem. Our analysis reveals how, in the face of local on-the-ground realities, reliance on imported practices and resources exposes Colombian social businesses to a legitimacy deficit and resource dependence. The intertwined challenges of building legitimacy and achieving resource autonomy lead to different scaling strategies that are contingent on the entrepreneur's social identity.

ENT: **From Heart to Heart? How Prosocial Motivation Affects Social Enterprises' Organizational Legitimacy**

Author: **Yingzhao Xiao**, *Tianjin U.*
Author: **Jui-chuan Hsu**, *Xi'an Jiaotong-Liverpool U.*
Author: **Kevin Au**, *Chinese U. of Hong Kong*
Author: **Zhen Liu**, *Shandong U.*

Gaining legitimacy from market is crucial for the survival and development of social enterprise (SE). Other than institutional determinants, prosocial motivation can gain legitimacy for social entrepreneurs but receive relatively less attention. Drawing on the prosocial motivation literature, we theorize and examine the underlying mechanism and boundary condition for SEs to gain external legitimacy by showcasing their prosocial motivation. A survey (210 SEs) and an experimental study (203 stakeholders in public sectors) were conducted to investigate the perspectives from SEs and external stakeholders respectively. The results reveal that social entrepreneurs' prosocial motivation has a significant positive impact on SE's legitimacy, and resource bricolage serves as a mediator. Intriguingly, the indirect effects of prosocial motivation on SEs' legitimacy through resource bricolage were stronger for social entrepreneurs with higher social class. These findings contribute to the literatures on SE legitimacy, resource bricolage in social entrepreneurship, and the implications of social entrepreneurs' social background.

ENT: **Of Causality and Comparability: Evaluating Hybrid Viability in Social Enterprise** 💻

Author: **Saurabh Lall**, *Adam Smith Business School, U. of Glasgow*

Social enterprises are increasingly studied as an idealized form of hybrid organising. combining a mission to create social value, while also generating sufficient revenue to ensure financial sustainability. Hybridity often leads to an inherent instability, and may only remain hybrid if they are successful in both social and financial domains, leading to the question - how do we determine hybrid viability? There is a long tradition of measuring social impact through evaluation and performance measurement in the public and nonprofit sectors, which has recently been adapted to hybrid organizations. Recent scholarship has examined these issues, but overlooks some key aspects. First, hybrid organizations risk both 'mission drift' (prioritizing commercial objectives over social objectives) and 'revenue drift' (neglecting commercial activities in favour of social objectives). Second, while there are many efforts to compare social performance, there is relatively less attention to answering underlying questions of cause-and-effect, when interrogating social enterprises. I propose a conceptual model that draws on foundational scholarship in evaluation studies on 'valuing', 'methods', and 'use' to illustrate how evaluation can inform hybrid organizational design by testing cause-and-effect assumptions along both social and financial dimensions.

ENT: **Legitimacy Spillover and Social Venture Creation: A Study Based on Spatial Durbin Model** 💻

Author: **Xing Li**, *Utrecht U. School of Economics*
Author: **Wanxiang Cai**, *Cardiff Business School*
Author: **Niels Bosma**, *Utrecht U.*

Legitimacy spillover refers to a phenomenon that that the strong legitimacy of a group of organizations can result in the legitimacy of similar organizations. While previous have verified legitimacy spillover from one organizational form to another, the spillover effect could be ambiguous in the context of hybrid organizations, which include elements from at least organizational forms. The legitimacy from different organization forms could be contradicting, resulting in the difficulties of hybrid organizations to obtain legitimacy. We test the legitimacy spillover effect from two distinctive organization forms (commercial ventures and charities) to social ventures. We use spatial durbin model to decompose the effect of commercial ventures and charities. The results suggest that social ventures can obtain legitimacy from both commercial ventures and charities in the same region, and from commercial ventures in neighbouring regions.

Neurodiversity in Entrepreneurship 1

Session Moderator: **Sebastian Peick**, *Chair of Innovation Management, TU Dortmund U.*

ENT: **Erratic Bosses or Inspiring Leaders? Entrepreneurs' ADHD-Like Symptoms and Employee Satisfaction**

Author: **Sebastian Peick**, *Chair of Innovation Management, TU Dortmund U.*

Research surrounding attention deficit hyperactivity disorder (ADHD)-like symptoms of entrepreneurs has been growing over the last years. However, prior research linked ADHD-like symptoms only to individual and venture-level entrepreneurship outcomes, lacking the team dimension of employees in ventures. Drawing on the recently developed Coping-Dueling-Fit theory, we develop a model to derive the influence of entrepreneurs' ADHD-like symptoms on employee satisfaction. Using a mixed-data approach combining survey data from entrepreneurs in Germany and corresponding secondary data from an employer review platform, we show that inattention is positively and hyperactivity/impulsivity is negatively related to employee satisfaction. Moreover, we find that constructive conflict in teams weakens the negative relationship between ADHD hyperactivity/impulsivity symptoms and employee satisfaction and reverses the relationship from negative to positive. Hence, we extend ADHD-entrepreneurship literature by examining the previously neglected employee dimension via employee satisfaction and advance the Coping-Dueling-Fit theory by operationalizing team environments as a coping strategy. Furthermore, we contribute to the societal debate on neurodiversity towards a more strength-based view on psychological disorders and suggest constructive conflict in teams as an effective means to channel entrepreneurs' neurodiverse minds for venture success.

ENT: **Neurodiverse Minds: Entrepreneurs' ADHD-like Symptoms and Venture Innovative Capability**

Author: **Sebastian Peick**, *Chair of Innovation Management, TU Dortmund U.*

Over the last years, there has been an increase in research on entrepreneurs exhibiting attention deficit hyperactivity disorder (ADHD)-like symptoms. Prior research on ADHD-like symptoms focuses on venture performance based on financial results, whereas we lack theory on venture-level innovation outcomes. Using the newly developed Coping-Dueling-Fit theory, we build a model to assess the influence of ADHD-like symptoms on venture innovative capability and the influence of founding team heterogeneity on this relationship. Using survey data from 768 entrepreneurs and 94 second informants in Germany, we find that hyperactivity/impulsivity is positively, and inattention is negatively related to venture innovative capability. Furthermore, we discover that founding team heterogeneity weakens the negative relationship between inattention symptoms and venture innovative capability and, surprisingly, weakens the positive relationship between hyperactivity symptoms and venture innovative capability. With this study, we extend Coping-Dueling-Fit theory and the literature on ADHD-entrepreneurship by proposing founding team heterogeneity as a team-level coping mechanism acting as a double-edged sword. In addition, we add to the public debate on neurodiversity and provide evidence for the contextual strengths of people with mental disorders.

ENT: **Entrepreneurs' ADHD Symptoms and Access to Financial Capital – The Moderating Role of Social Capital**

Author: **Sebastian Peick**, *Chair of Innovation Management, TU Dortmund U.*

Research on attention deficit hyperactivity disorder (ADHD)-like symptoms in entrepreneurship strongly increased in the past few years. Although studies indicate negative effects of ADHD-like symptoms on social behavior within ventures, current research misses an understanding of how entrepreneurs' ADHD-like symptoms affect external resource providers and, thus, the perceived access to financial capital. Employing Coping-Dueling-Fit theory, our research model investigates how entrepreneurs' ADHD-like symptoms relate to the perceived access to financial capital of a venture. Furthermore, we assess how social capital (i.e., support from entrepreneurs' social ties) affects this relationship. Utilizing a sample of 1,283 active entrepreneurs and 139 second informants, we find that ADHD inattention symptoms and ADHD hyperactivity/impulsivity symptoms are negatively related to the perceived access to financial capital. Moreover, we reveal that social capital weakens the negative relationship between ADHD hyperactivity/impulsivity symptoms and perceived access to financial capital. Surprisingly, we also find that social capital strengthens the negative relationship between ADHD inattention symptoms and perceived access to financial capital. Thus, we expand ADHD-entrepreneurship literature by adding access to financial capital as a venture-level outcome and social capital as a bidirectional coping mechanism to Coping-Dueling-Fit theory. Moreover, we contribute to the neurodiversity debate by identifying challenges for individuals with mental disorders in entrepreneurship.

ENT: **ADHD Symptoms of CEOs and Business Model Innovation in the SME Context**

Author: **Polina Artamoshina**, *HSE U. St. Petersburg, Russia*
Author: **Galina Shirokova**, *HSE U. St. Petersburg, Russia*
Author: **Oleksiy Osiyevskyy**, *U. of Calgary*
Author: **Virginia Bodolica**, *American U. of Sharjah*

In light of their typical resource constrains, limited internal capabilities, and heightened dynamism and adaptability, small and medium-sized enterprises (SMEs) are forced to be innovative to secure their competitive advantage. The decision to engage in business model innovation (BMI), especially in the context of SMEs operating in uncertain environments, is strongly dependent upon CEOs' predisposition and personality characteristics. Drawing upon the strategic leadership theory and trait activation theory, we hypothesize that Attention Deficit Hyperactivity Disorder (ADHD) symptoms of CEOs significantly influence BMI activities, particularly under specific conditions. Using a sample of 367 Russian SMEs, we find evidence that the perceived level of general uncertainty and CEO tenure intensify the effect of ADHD hyperactivity/impulsivity symptoms on BMI. A detailed discussion of our study's implications for theory and practice in SME settings concludes the article.

Entrepreneurial Networks

Session Moderator: **Jing Zhang**, *Old Dominion U.*

ENT: **Entrepreneurial Bricolage and Firm Growth: The Role of Structural Holes**

Author: **Chin-Hua Huang**, *Hungkuang U.*

Entrepreneurial bricolage is a critical factor for firm success in resource-constrained environments. Entrepreneurial bricolage is commonly assumed to not scale, as excessive use of entrepreneurial bricolage harms growth. This study explores how resource-constrained firms' increased use of entrepreneurial bricolage impacts firm growth in the context of bridging structural holes. Drawing from entrepreneurship and social network literature, this research proposes a contingency framework to clarify the relationship between entrepreneurial bricolage and firm growth. The study distinguishes market network structural holes (SHM) and technological network structural holes (SHT) and investigates their moderating effects on the relationship between entrepreneurial bricolage and firm growth. Hierarchical regression analysis was used with data from 184 CCI firms in Taiwan. Findings indicate bridging SHM facilitates the relationship between entrepreneurial bricolage and firm growth; however, bridging SHT harms the relationship between entrepreneurial bricolage and firm growth. Results demonstrate an inverted U-shaped relationship between entrepreneurial bricolage and firm growth.

ENT: **Will Networks in Military Life Influence Veteran's Entrepreneurial Intention?**

Author: **Jing Zhang**, *Old Dominion U.*
Author: **Jamil Kreugel**, *Old Dominion U.*
Author: **Run Tian**, *Old Dominion U.*
Author: **Nicklous Salzman**, *Old Dominion U.*

This research studies how military and civilian networks influence military veteran's perceived resource acquisition and consequently their entrepreneurial intention (EI). Building on social network literature, we argue that the effects of a network consisting of military ties may be more limited than its civilian counterpart in increasing veteran's EI. The institutional gap between military and civilian life increases the difficulty of making the transition and therefore disconnects the link between one's military network and their EI via resource acquisition. Using questionnaire survey data collected from 261 veteran students in a public university in the US, we found that the strength and the size of networks in both civilian and military life increased perceived resource acquisition in a startup. However, only the perceived resource acquisition from the civilian network, not from the military network, increased the veteran's EI. This study contributes to network-based entrepreneurship literature and the emerging studies on transitional entrepreneurship.

ENT: **I Can Do It on My Own! Birth Order, Networking, and Entrepreneurial Behavior**

Author: **Julia Kensbock**, *U. of Bremen, Germany*

Whether individuals grew up as a firstborn or laterborn sibling in their families influences their later social behavior long into adulthood. This study examines the impact of birth order on entrepreneurial behavior, combining birth order theory with entrepreneurial networking. It is suggested that firstborn vs. laterborn entrepreneurs show different networking and entrepreneurial behavior when faced with entrepreneurial obstacles. Laterborn entrepreneurs are expected to build, seek, and use external networks more strongly and consequently act more entrepreneurially than firstborn entrepreneurs. Three empirical studies are conducted with more than 900 entrepreneurs. Study 1 shows that laterborn (but not firstborn) entrepreneurs intensify their networking efforts and consequently their entrepreneurial behavior when facing entrepreneurial obstacles. Study 2 does not find an interaction effect, yet, reveals that being firstborn is directly linked with fewer networking and fewer entrepreneurial behavior. Study 3 extends these findings, showing that laterborn established entrepreneurs seek more emotional social support in the face of obstacles, while firstborns avoid doing so.

ENT: **Social Capital and Organizational Survival: A Multi-level Perspective**

Author: **Chris Boudreaux**, *Florida Atlantic U.*
Author: **Steven Walter Bradley**, *Baylor U.*
Author: **Anand Jha**, *Wayne State U.*
Author: **Joao Fernando Rossi Mazzoni**, *Baylor U.*

Social capital is increasingly seen as central to new firm survival. In contrast this study offers theory of social capital as more than the level of individual/firm-level social ties and structural networks, but also built from local geographic social patterns that foster firm-level social exchange. Combining Kauffman Firm Survey, Rupasingha and colleagues (2006) social capital measures and U.S. Census data at the county-level, we examine the survival rates for a diverse cohort of 3,324 U.S. firms founded in 2004 through 2009. Our study finds community-level social capital improves the chances of organizational survival, particularly for firm founders who use more weak-tie relationships in firm funding. In contrast, funding from strong ties are not associated with higher firm survival rates. Further, community-based social capital does not alter the effects of strong tie on firm survival. This study furthers understanding of social capital as a community-level phenomena translating to the firm and individual level with importance for entrepreneurial ecosystems and founding of new firms.

This Symposium aims to showcase and discuss theory about how macroenvironmental changes create positive potentials that organizational agents can leverage—or fail to leverage. Our vantage point is that such theory is important and timely yet insufficiently represented in our current library of management theories. To underscore our point of a current theoretical void, we focus in particular on how societal crises – that is, events that are by definition negative for the majority – create positive potentials for an important minority of business activities.

Entrepreneurial Opportunities 1

Session Moderator: **Jing A. Zhang**, *U. of Otago*

ENT: **How SMEs Explore International Opportunities: The Role of Learning From Failure**

Author: **Jing A. Zhang**, *U. of Otago*
Author: **Tao Bai**, *U. of Queensland*
Author: **Masoud Karami**, *U. of Otago*
Author: **Dana L. Ott**, *U. of Otago*

Despite the importance of SME internationalization, little is known about what drives SMEs to effectively explore international opportunities (IO). Combing organizational learning theory with the dynamic capability perspective, and drawing on the international entrepreneurship literature, we propose a conceptual framework to explore (1) how learning from failure affects IO exploration through entrepreneurial risk-taking, and (2) how home country normative institutions influence the relationship between learning from failure and entrepreneurial risk-taking in resource constrained SMEs. Using a sample of 146 Chinese SMEs, our analysis reveals that learning from failure enhances entrepreneurial risk-taking, which in turn, facilitates IO exploration. Our results also indicate when home country normative institutions are weak, the positive effects of learning from failure on entrepreneurial risk-taking are stronger. Our findings provide insightful theoretical and practical implications.

ENT: **A Process Model of Opportunity Actualization in Entrepreneurial Growth**

Author: **Zhikai Wang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Runtian Jing**, *Shanghai Jiao Tong U.*

Opportunity is central in entrepreneurship research. However, research has developed several approaches to explain entrepreneurial phenomena based on mutually exclusive ontological assumptions about entrepreneurial opportunities. Reconciling this tension, we develop a process view of opportunity actualization to examine how a firm proactively discovers and creates opportunities to enable rapid entrepreneurial growth. We draw on an inductive case study of an Internet-based technology entrepreneurial firm which rapidly grew by successively seizing opportunities in two different product markets. Our proposed theory emphasizes that entrepreneurship is a cyclical transformation process of multi-form opportunity. During this process, entrepreneurs with resourcefulness proactively transform discovered-form opportunities from a deeper unobservable level to a less conspicuous level, whereby external opportunities are internalized as tangible resources for growth. We contribute to the concepts in opportunity discovery, creation, and actualization approaches. Our most fundamental insight extends the resources-based firm growth theory: opportunity actualization has value in envisioning the business and exchanging resources for growth. We also identify momentum-driven entrepreneurial growth as an objective condition-centric process.

ENT: **Opportunity Actualization: From Unknowable Scaling Opportunities to Entrepreneurial Action** ✈ 💻

Author: **Somayeh Taghvaee**, *ISM International School of Management*
Author: **Ali Marjovi**, *U. of Tehran*
Author: **Stratos E. Ramoglou**, *U. of Southampton*

In this research, we adopt an opportunity actualization lens and apply its practical notion of opportunity ingredients (OIs) to examine whether and how top managers of new ventures attempt to actualize scaling opportunities in the absence of key OIs. To do so, we conduct a multiple-case study of successful and unsuccessful scaling efforts devoted by five nanotechnology-based new ventures in Iran's business setting, wherein the uncertainty is at its most extreme, and firms have to take action while multiple OIs do not exist. Our analysis reveals that top managers' approach to multi-agent OIs leads the firms to follow two different scaling paths: spiral and dynamic embedding. Spiral refers to a scaling trajectory in which the firm avoids opportunities that contain highly multi-agent OIs and chooses to switch between potential industry sectors to actualize opportunities with fewer multi-agent OIs. In contrast, dynamic embedding refers to a scaling path wherein the firm embraces multi-agent OIs and actualizes those scaling opportunities that need to shape highly multi-agent OIs, which enable them to embed their technology in specific industry sectors. Our findings contribute to the ongoing opportunity debates by examining scaling opportunities. More specifically, emergent scaling patterns affirm the possibility of actualizing unknowable opportunities and explain how a specific characteristic of OIs (i.e., multi-agent) drives new ventures to follow different scaling trajectories.

ENT: **A Temporal Typology of Entrepreneurial Opportunities** 💻

Author: **Jeffery S. McMullen**, *Indiana*
Author: **Jason Robert Fitzsimmons**, *Manipal International U.*
Author: **Khyati Shetty**, *U. of the Fraser Valley*
Author: **Stratos E. Ramoglou**, *U. of Southampton*

Entrepreneurial opportunities emerge and dissipate over time, yet little is known about how and why they vary in their temporality and what the implications of temporal variance are for the urgency and timing of entrepreneurial action. Building on the actualization theory of opportunity and signal processing theory, we propose that opportunities for entrepreneurial action can be understood as a convolution of consumer desire, production feasibility, and economic viability of an innovation. Conceiving consumer desire – the necessary ingredient of any profit opportunity – as either known or unknown and fleeting versus enduring, we identify four possible distributions of consumer desire over time. We then show how the interaction of these distributions with potential feasibility functions produce a temporal typology of entrepreneurial opportunities. Our analysis suggests that despite sharing conceptual similarities in structure, each type of opportunity emphasizes a different form of asymmetry across opportunity categories, which is likely to differentially affect the urgency and optimal timing of entrepreneurial action. We conclude by pointing out how considerations of time facilitate the move away from a highly acontextual and abstract understanding of entrepreneurial opportunity and toward a more theoretically nuanced and empirically informative view of the concept.

ENT: **The Origin of Entrepreneurial Opportunities in a Data-Driven Era**

Author: **Abhishek Bhatia**, *London Business School*
Author: **Gary Dushnitsky**, *London Business School*

The main theories about the origin of entrepreneurial opportunities were developed at a time when information was scarce. Nowadays, in contrast, we face an information-rich environment where data-driven analytics (e.g., Artificial Intelligence and Machine Learning) are common across many facets of business. To understand the impact of a data-driven approach to the discovery of entrepreneurial opportunities, we study venture capital investors. Traditionally, VCs relied on their business acumen and networks. Recently, some VC funds have adopted data-driven methods as means to discover (i.e., enhance sourcing or selection) entrepreneurial ventures. We document the characteristics of portfolio companies in which data-driven VCs were 'first money in'; and further compare to the portfolio characteristics of traditional VCs. We observe differences in geographical coverage (e.g., backing founders based in 'startup hubs'), CEO gender (e.g., a higher fraction of female founders), and educational background (e.g., backing graduates of 'elite' universities). Our findings inform the origin of entrepreneurial opportunities in an information-rich analytics-intense environment. It further alludes to the role of organizational norms in leading to notable differences in the ultimate application of AI.

Entrepreneurship in Different Environmental and Industry Contexts 1

Session Moderator: **Jeffrey Thomas Cavanaugh**, *U. of Nebraska*

ENT: **The Importance of Competitive Dynamics in Shaping Entrepreneurial Decisions**

Author: **Jeffrey Thomas Cavanaugh**, *U. of Nebraska*
Author: **Matthew Barlow**, *U. of Nebraska, Lincoln*

This paper offers a new understanding of entrepreneurship strategies by integrating competitive dynamics framework into small firms' responses to rivals' product introductions. While some competitive dynamics research has focused on relatively small firms (small airlines for example), we expand competitive dynamics research squarely into the field of entrepreneurship. In our sample of craft breweries, we find that entrepreneurs with smaller firms respond with more strategic aggression than their larger rivals. We also expand competitive dynamics beyond the attacker-responder dyadic interaction to a market-wide phenomenon of multiple attackers and responders. Furthermore, we use a continuous measure of rivals' new product introduction to demonstrate the strategic aggression of these firms. Our findings offer an important extension for both competitive dynamics and entrepreneurship by considering how awareness, motivation, and capability play into the entrepreneur's competitive response repertoire.

ENT: **Spatial Transformations in Entrepreneurship: A Study of the Liverpool 'Baltic Triangle'**

Author: **Thomas Davis**, *Manchester Metropolitan U.*
Author: **Michael Zundel**, *U. of Liverpool Management School*
Author: **Sam Horner**, *U. of Liverpool*

In our longitudinal empirical study, we answer calls to investigate the contexts of entrepreneurship and urban spaces. Bringing together Henri Lefebvre's 'spatial triad' and Spinosa, Flores and Dreyfus's theorizing of entrepreneurship as 'world-making,' we provide a new conceptualization and an empirical account of the recursive co-production of urban spaces and entrepreneurial action. Paying attention to the continuous interactions of entrepreneurship and changing urban spatial characteristics, we add insights regarding the transformational potential of entrepreneurship as a collective force for remaking the city.

ENT: **What Drives Deviant Behavior? Highlighting Factors that Drive Informal Entrepreneurship**

Author: **Mengli Zhao**, *Xi'an Jiaotong U.*
Author: **Chengli Shu**, *Xi'an Jiaotong U.*
Author: **Elizabeth Marie Moore**, *Northeastern U.*
Author: **Luis Alfonso Dau**, *Northeastern U.*
Author: **Jinxin Liu**, *Xi'an Jiaotong U.*

Although the informal economy captures a sizeable share in many countries, a marked gap remains in our understanding of why some entrepreneurs actively operate ventures informally. Informal entrepreneurship is a deviant behavior that departs from formal institutions particularly. Building on anomie theory, we investigate two sources that influence informal entrepreneurial engagement—individual- and country-level factors. Specifically, we delve into the impacts of entrepreneurial motivations and self-efficacy at the individual level and those of government changes at the country level. Given the multilevel nature of informal entrepreneurship, we also investigate their combined effects. We test our theoretical model using a multi-sourced dataset comprising 14,636 ventures in 44 countries and regions. Using multilevel methodology along with several sensitivity analyses, our rigorous findings offer several key insights

ENT: **Self-Employment as an Early-Career Option: A Longitudinal Study of Individual & Regional Conditions**

Author: **Maria Figueroa-Armijos**, *EDHEC Business School*
Author: **Serge P. Da Motta Veiga**, *EDHEC Business School*

Self-employment is typically studied as an isolated event rather than as an option in an individual's career continuum. This study explores self-employment as an early career option among young adults (ages 21-31) in and around the contextual economic circumstances levied by recessionary times (2005-2011). We unravel whether longitudinal individual and contextual conditions influence an individual's decision to pursue self-employment in a time of crisis. We use the U.S. National Longitudinal Survey of Youth, administered by the U.S. Bureau of Labor Statistics, which tracked individuals from adolescence to adulthood. Our data comprises of a nationally representative random sample of 9,022 individuals who were between 13 and 17 years old when they were first interviewed in 1997. They were interviewed every year since. We use a composite entrepreneurship-careers lens to offer a multidimensional examination of self-employment as a viable early-career option. This approach advances our current knowledge of contextual and temporal patterns affecting entrepreneurial behavior. Our results suggest that conditions imposed by the economic recession alter the decision to become self-employed as an alternative career path, with varying effects by gender and regional conditions during non-recessionary times.

Cognitive Diversity Within Entrepreneurial Teams: Contingencies of Their Cost and Benefit

Panelist: **Mari Sako**, *U. of Oxford*
Panelist: **Scott Page**, *U. of Michigan*
Panelist: **M. Diane Burton**, *Cornell U.*
Panelist: **David Hsu**, *The Wharton School, U. of Pennsylvania*
Panelist: **Anna D'Ambrosio**, *Politecnico di Torino*
Panelist: **Carrington Motley**, *Carnegie Mellon U. - Tepper School of Business*
Panelist: **Cyrine Ben-Hafaiedh**, *IESEG School of Management*
Participant: **Matthias Qian**, *U. of Oxford*

This AoM symposium advances the debate on whether cognitive diversity - differences in how people think, perceive, and process information - facilitates or impedes the performance of entrepreneurial teams. The formation of entrepreneurial teams involves the decision by the first founder(s) to recruit other cofounders and early joiners. Conventional wisdom in the business world is that teams perform best when bringing different perspectives and ideas to their collective decision making (Bunderson & van der Vegt 2018). Indeed, recent reports by McKinsey (Barta, Kleiner, & Neumann 2012) and Deloitte (Bourke & Dillon 2018) suggest that different cognitive perspectives among senior leaders create substantial value for firms. The symposium aims to add an understanding of the circumstances whereby cognitive diversity facilitates the performance of entrepreneurial teams. It builds on a growing literature that recognizes that cognitive diversity is not unconditionally better in all contexts (Eesley, Hsu, & Roberts 2013; Ter Wal et al. 2016). With the assembled thought leaders on cognitive diversity and entrepreneurial teams, the panel addresses what we know and the most pressing research directions ahead.

CDOs in Health Care Organizations: Advancing Workforce Diversity and Improving Health Equity

Moderator: **Geoffrey Silvera**, *U. of Alabama, Birmingham*
Panelist: **Tory H. Hogan**, *Ohio State U.*
Discussant: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*
Panelist: **André Lessears**, *U. of Alabama at Birmingham Medical Center*
Panelist: **Samuel Boadu**, *U. of Alabama, Birmingham*
Panelist: **Kemberly Blackledge**, *U. of Alabama, Birmingham*

As health care management and diversity management scholars continue to examine the effectiveness of DEI initiatives in HCOs, and the relationships to organizational performance therein— financial performance, patient care quality, health outcomes, and community benefit, it will be important to understand the executives who most directly influence these strategic initiatives, the CDO. The purpose of this panel symposium is to discuss the emergence of DEI leadership in Health Care Organizations (HCOs), most notably the proliferation of the CDO position. While similarities remain between the CDO position in other industries CDOs in health care need also be concerned about the impact of their efforts on population and community wide health equity initiatives. The panel consist of a group of studies who have each examined this emerging role and the individuals who occupy these positions. Notably, this panel will discuss how the role of health system CDOs is best understood via relevant theoretical frameworks, key performance outcomes, and strategic decision-making in HCOs.

A.I. Feel Fine: Disruptive Technologies in Healthcare Delivery

Session Moderator: **Joshua Ryan Vest**, *Indiana U., Indianapolis*

HCM: **Embedding Artificial Intelligence in Healthcare – The Case of AI-enabled Diagnostics**

Author: **Sandra Gillner**, *U. of Bern*

Despite high expectations, predictions about the spread of artificial intelligence (AI) in healthcare exceed reality to date, with reports of non-adoption, abandonment, or failure to implement AI. Our current models providing roadmaps to technology spread in healthcare seem to be inadequate to fully grasp the complexities of AI adoption. In this study, we present a complexity science approach to direct our inquiry at the dynamic, nonlinear, and context-dependent process of AI spread in healthcare which challenges prevailing mechanistic and unilinear models. We conduct a multiple case study of AI-enabled diagnostics to theorise about how AI is embedded in healthcare. The notion of embedding allows us to connect local implementation with systemic diffusion. We identify a sociocultural, governing, and technological subsystem in healthcare whose features result in tensions during the spread of AI. These tensions are internalised by the healthcare system through the emergence of stealth science, agility, and ambidexterity as properties of AI providers. Our theoretical model highlights emergence and nonlinearity in the dynamic process of embedding AI in healthcare. Our study contributes to the emerging body of literature on the spread of AI in healthcare by providing a new perspective through the lens of complexity science. Rather than shrinking away from the messy and ever-changing reality of technology adoption, our theoretical contribution embraces complex system processes while retaining generalisability.

HCM: **More is Not Always Better: Technology in the ICU** ☯ 🗨 💻

Author: **Esther Olsen**, *Stanford U.*
Author: **Zhanna Novikov**, *UTHealth School of Public Health*
Author: **Theadora Wu Sakata**, *Stanford U.*
Author: **Monique Hitomi Lambert**, *Stanford School of Medicine*
Author: **Javier Lorenzo**, *Stanford School of Medicine*
Author: **Roger Bohn**, -

Clinical care in modern ICUs combines multidisciplinary expertise and a complex array of equipment and technology. These technologies, which now generate over 1000 data points daily for each patient, have clearly advanced the ability of clinicians to do more for patients, yet so much equipment also presents the possibility for sensory and technological overload. This paper investigates clinicians' experiences with and perceptions of technology in ICUs through interviews with 30 ICU clinicians and leaders. Our interviews suggest three main challenges associated with technology in the ICU including (1) too many technologies and too much data; (2) inconsistent and inaccurate technologies and data; and (3) a lack of integration among the technologies and within the clinician workflow and identity. To address these challenges, interviewees provided mitigation strategies and solutions that revolved around addressing both the social and technical systems to achieve joint optimization. By following these suggestions to jointly optimize the social and technical systems, health systems can demonstrate their willingness to put their workers front and center, which will in turn improve patient care and outcomes.

HCM: **Adoption of Digital Health Solutions for Chronic Diseases: The Case of Cancer-Prophylaxis Mobile App**

Author: **Desislava Dikova**, *WU Vienna U. of Economics and Business*

mHealth applications have the potential to significantly improve overall health and healthcare systems around the world. While there has been prior research on the adoption criteria of mHealth apps, most of this research has focused on very basic mHealth solutions, such as digital consultation. This study examines the adoption criteria for more advanced and specialized mHealth apps, focused on cancer prophylaxis. The study applies the UTAUT model developed by Venkatesh et al. (2012) on a data sample of 415 respondents, using Structural Equation Modeling (SEM) analytics. We find a significant relationship between Performance Expectancy, Effort Expectancy, Social Influence, Price Value, Privacy & Security, and Habit and the Behavioral Intention of an individual to use a cancer prophylaxis mHealth app, gender, age, and nationality are significant moderators of an individual's behavioral intention. Furthermore, we find a strong and positive relationship between the behavioral intention and actual usage behavior of an individual. We extends the current body of literature on mHealth adoption by revealing new insight on the adoption criteria of more advanced and specialized mHealth solutions

HCM: **AI Implementation in Health Care: The Role of Trust, Managers' Commitment, and Training** 💻

Author: **Zhanna Novikov**, *UTHealth School of Public Health*
Author: **Tal Katz-Navon**, *Arison School of Business, Reichman U. (IDC), Israel*

To reduce care cost and improve care quality, healthcare organizations often implement novel artificial intelligence (AI) technologies. Healthcare providers play a critical role in supporting the process of adopting and implementing AI innovations. However, as AI technologies are relatively new and unfamiliar to healthcare providers, they may not perceive new technologies as valuable in their work, and their wariness can hinder technology implementation. Building on previous research, we hypothesized and tested the role of individual trust, managers' commitment to new technology implementation, and organizational training in providers' perceived value of AI technology. Based on survey data collected in an academic medical center from 298 healthcare providers, we show that individual trust in technology is positively associated with perceived value of AI technology, and this association is moderated by both manager's commitment and organizational training. Our results suggest that when individual's trust is low, commitment of the unit managers by itself will not suffice to increase employees' perceived value of technology if organizational training about these new technologies is low. But, when individual trust is low, and the organization offers training that provides transparent explanations about the new technology and how it may be used, managers' commitment contributes together with organizational training to providers' perceived value of technology. Our study contributes to theory and practice by identifying factors that support new technology implementation in health care organizations.

HRM Systems and Behavioral Responses

Session Moderator: **Mingyu Yan**, *School of Management, Shandong U.*

HR: **Socially Responsible Human Resource Management and Knowledge Hiding: A Moderated Mediation Model**

Author: **Mingyu Yan**, *School of Management, Shandong U.*
Author: **Chenghao Men**, *Shandong U.*
Author: **Sitong Liu**, *Shandong U.*
Author: **Sidi Sui**, *School of Management, Shandong U.*

Based on social information processing theory and signaling theory, we examined whether, how, and when socially responsible human resource management affected knowledge hiding. A field study of 249 employees revealed that the negative relation between socially responsible human resource management and knowledge hiding was mediated by duty orientation. Moreover, the results found that moral identity moderated the indirect effect of socially responsible human resource management on knowledge hiding through duty orientation. Our research contributes to the theoretical and practical implications for socially responsible human resource management and knowledge hiding literature, and we also discuss the limitations and future research directions.

HR: **A Moderated Dual-Mediation Model of Perceived HRM Practices on Employees' Behavioral Responses**

Author: **Merce Mach**, *U. of Barcelona*
Author: **António Cunha Meneses Abrantes**, *TBS Business School*
Author: **Juan Rodrigo Alvarado**, -

This study aims to explain the effects of perceived HRM practices on employees' attitudinal and behavioral responses, specifically, how perceived HRM practices influence OCB. It includes 339 employees working in healthcare centers in Chile. We use and test a cross-sectional research design with structural equation modelling (SEM) and path-modeling techniques, (PROCES macro). Our study extends the HRM domain by providing evidence of the mediating role of organizational trust and job satisfaction play in the relationship between HRM organizational practices and employees' OCB. Moreover, organizational justice level plays a conditional role in these indirect effects, enhancing the impact of perceived HRM practices. This study has important practical relevance for organizations and managers. When employees perceive organizational justice, the effect of perceived HRM practices enhances both organizational trust and OCB behaviors. If organizations want to increase their HRM practices' impact, they should invest in developing a sense of organizational justice among employees.

HR: **What Makes Employees Raise Voice? Examining the Impact of High-Involvement HRM and Ethical Climate**

Author: **Kadumbri Kriti Randev**, *T A Pai Management Institute, Manipal Academy of Higher Education, India*
Author: **Jatinder Kumar Jha**, *XLRI-Xavier School of Management*
Author: **Biju Varkkey**, *Indian Institute of Management, Ahmedabad*
Author: **Ravi Shekhar Kumar**, *XLRI-Xavier School of Management, Jamshedpur, India*

Employee voice behaviour is known to have numerous positive implications for both employees and organizations; however, organizations find it challenging to motivate employees towards willingly engaging in voice. Drawing upon Self-Determination and Social Information Processing Theories, this study proposes that organizations can facilitate promotive and prohibitive voice behaviours by implementing High-Involvement HRM (HIHRM) practices and cultivating favorable ethical climates. This study illustrates a hypothesized model that depicts HIHRM not only influences voice behaviours directly but also through indirect, contextual pathways of egoist, benevolent and principled ethical climates as underlying mediating mechanisms. To test the hypotheses, data is collected from a sample of 439 professionals employed full-time across different industries in India. Data is analyzed using Partial Least Squares Structural Equation Modelling (PLS-SEM), specifically by conducting a second-order analysis using the disjoint two-stage approach. Results indicate strong support for the hypothesized model and depict that HIHRM is positively associated with both types of voice behaviors; however, it has a stronger association with promotive voice. Further, benevolent and principled ethical climates significantly mediate the HIHRM-voice relationships. The unique findings of this study bridge the macro and micro perspectives in voice research along with reinforcing the need to place employees at pivotal roles while designing HRM policies in organizations. Furthermore, the directions for future research suggest practical advancements to the body of knowledge in this area.

HR: **The Role of HPWS on Reducing Uncertainty and Curbing Unethical Pro-organizational Behaviors**

Author: **Joana S. Story**, *Fundação Getulio Vargas - EAESP*
Author: **Pedro Neves**, *NOVA School of Business and Economics*

The interest in unethical behavior in organizations has grown over the past decades as ethical scandals have become mainstream. However, research on how organizational practices may prevent these behaviors is still scarce, particularly for those behaviors that are unethical but also benefit the organization. Across two studies and guided by Uncertainty Reduction Theory, we examine the relationship between high-performance work systems and unethical pro-organizational behavior via perceptions of politics. In study 1 (N=244), we found support for the indirect effect using a time-lagged design. In study 2 (N=809), we confirmed our mediation hypothesis using unethical pro-organizational behaviors rated by the supervisor and reiterated the particular role played by perceptions of politics, by ruling out job insecurity as a second potential uncertainty reduction mechanism. Taken together, these findings have important theoretical and practical implications regarding the internal functioning of the organization and how they may reduce unethical pro-organizational behavior.

Shaping New Talent: Socialization Strategies and Impact on Workplace Outcomes

Session Moderator: **Yezi Kang**, *Faculty of Economics and Business, U. of Groningen*

HR: **Mind Your Interview: How and When Lower-than-expected Newcomers Affect Leaders' Socialization Efforts**

Author: **Yezi Kang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Wen-xia Zhou**, -

Self-presentation tactics or faking strategies used in interviews largely increase the probability of candidates successfully being selected as organizational newcomers. The well-performed newcomers during recruiting correspondingly increase leaders' expectations but also increase their risk of not satisfying leaders' expectations. Despite the fact that impressions about newcomers before their formal entry has an influence on leaders' perception, newcomer socialization literature to date has not recognized the implications of pre-entry information perceived by leaders, and has not offered evidence that the inconsistent information newcomers displayed before- and after-entry affect leaders' judgment of newcomers. To account for this, we propose the negative performance discrepancies, namely, newcomers' lower-than-expected performance leads to decreased leaders' willingness of relational and work-based socialization efforts through leaders' cognition (trust) and affect (disappointment and anger), and leaders' attribution works in buffering their perceptions. Two scenario experiments were done to test hypotheses. Findings showed that newcomers' lower-than-expected performance lowered leaders' trust and highered their disappointment and anger. Compared with trust and disappointment, anger is the most stabilized mechanism in explaining reduced leaders' socialization efforts. We also found that under leaders' internal attributions (low performance caused by newcomer themselves), the moderate extent of discrepancies can trigger negative consequences while external attributions of leaders' (low performance caused not by newcomers) does not mean the discrepancies can be tolerated, the large gap still result in leaders' pessimistic perceptions. We contribute to socialization research by including the perception before newcomers' entry and suggest that the negative inconsistency originated from recruiting might hinder newcomer socialization process.

HR: **A Model of Creative Identity and Organizational Socialization: Effects on Newcomer Creativity**

Author: **Karyn Dossinger**, *Loyola U. Chicago*

As they enter new organizations, employees bring creative self-concepts formed from prior work roles, yet little is known about why or when established creative role identity is associated with newcomer creative performance. I propose and test a model that emphasizes established creative role identity and the organizational socialization context – conceptualized as the presence of creative insiders – as central to understanding newcomers' early-tenure creativity. In Study 1, a field study of newcomers from diverse organizations and industries revealed a positive relationship between established creative role identity and creative performance. This positive relationship was stronger when the presence of creative insiders was lower rather than higher, suggesting that newcomers' ability to translate their established creative identities into creative performance is enhanced when the socialization environment amplifies their self-views as rare and valuable. In Study 2, using a sample of newcomers and their direct supervisors from a single organization, I extended Study 1's findings by proposing and finding support for creative process engagement as a mediator of the relationship between established creative role identity and newcomer creative performance. This positive indirect effect was strengthened when the presence of creative insiders was low. Overall, this research offers a nuanced person-situation perspective on newcomer socialization and creativity, highlighting the surprising ways that the entry experience emphasizes newcomers' creative self-concepts and facilitates their creativity.

HR: **A Meta-Analysis to Compare the Effectiveness of Organizational Versus Newcomer Socialization Tactics**

Author: **Pang Xingyu**, *School of Economics & Management, Tongji U.*
Author: **Jian Liang**, *Tongji U.*
Author: **Yifan Song**, *Texas A&M U.*
Author: **Mingyun Huai**, *Tongji U.*

Both organizational socialization tactics and newcomer proactive tactics have been shown to benefit newcomer socialization outcomes. Yet, it is not well understood which type of strategies are more effective. In this research, we conducted a meta-analysis to compare the effectiveness of these two types of socialization strategies and proposed three contextual variables (i.e., cultural configuration, publication time, and newcomer types) as moderators. Based on 92 independent samples included in 89 studies, our results suggest that although both newcomer proactivity and organizational tactics were positively related to socialization outcomes, the effect of newcomer proactivity was weaker than that of organizational tactics. However, this difference was significantly smaller in HI (vs. VC) cultures, in more recent studies, and for neophyte newcomers. Theoretical and practical implications are discussed at the end.

HR: **Care to Dare: Cross-Lagged Effects of Mentor Secure-Base Support on Newcomers' Workplace Courage**

Author: **Yuge Dong**, *School of Management, Huazhong U. of Science and Technology*
Author: **Yujie Yang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Lu Zheng**, *Huazhong U. of Science and Technology*
Author: **Lirong Long**, *Huazhong U. of Science and Technology*

To adjust well in the frequently-changing and uncertain workplace, newcomers should build their workplace courage. Drawing on the attachment theory, the present research seeks to examine whether mentor secure-base support (support in the form of mentor availability, encouragement, and noninterference) is positively related to subsequent newcomers' workplace courage, including in-role courageous behavior and extra-role helping behavior. A cross-lagged panel study used a new police officers sample ($n = 124$) supported that mentor secure-based support is causally precedent to newcomers' in-role work courageous behavior and extra-role helping behavior, whereas the reverse relationship from workplace courage to mentor secure-base support was not held. We also discuss the theoretical and practical implications of the findings.

Unpacking the Selection Process: Emerging Trends and Accumulated Evidence

Session Moderator: **Timothy Wingate**, *Wilfrid Laurier U.*

HR: **Valid for What? A Meta-Analysis of Construct-Specific Interview Criterion-Related Validity**

Author: **Timothy Wingate**, *Wilfrid Laurier U.*
Author: **Joshua Steven Bourdage**, *U. of Calgary*
Author: **Piers Steel**, *U. of Calgary*

The employment interview is used to assess myriad constructs to inform personnel selection decisions. This article describes the first meta- analytic review of the criterion-related validity of interview-based assessments of specific constructs. As such, this study explores the suitability of the interview for assessing specific forms of performance, and furthermore, how interviews should be designed to inform the assessment of distinct forms of performance. A comprehensive search process identified k = 37 studies comprising N = 30,646 participants (N = 4,449 with the removal of one study). Results suggest that all forms of performance are assessed with similar levels of criterion-related validity (r = .26-.29) but that, with respect to construct validity, assessments of contextual and leadership performance are more precise than assessments of task and communication performance. We found no evidence that tailoring the design of the interview improved the assessment of any specific form of performance. However, we expect that future analyses may amend this finding and we point to critical gaps in our current body of literature on employment interviews. These results illustrate how a construct-specific approach to interview validity can spur new developments in the modeling, assessment, and selection of specific forms of work performance.

HR: **Using Valid Cues to Predict Narcissism and Intelligence From LinkedIn Profiles**

Author: **Tobias Marc Härtel**, *Osnabrück U.*
Author: **Benedikt Alexander Schuler**, *U. of St. Gallen*
Author: **Mitja D. Back**, *Westfälische Wilhelms-U. Münster*

Recruiters routinely use LinkedIn profiles to infer applicants' key personality traits like narcissism and intelligence. However, little is known about LinkedIn profiles' predictive potential to accurately infer personality. According to Brunswik's lens model, accurate personality inferences depend on (a) the presence of valid cues in LinkedIn profiles containing information about users' personality and (b) the consistent utilization of valid cues. We assessed narcissism (self-report) and intelligence (aptitude tests) in a mixed sample of 406 students/professionals along with 64 deductively derived LinkedIn cues coded by 3 trained coders. Applying nested cross-validated elastic nets, we demonstrate that (a) LinkedIn profiles contain valid information about users' narcissism (e.g., uploading a background picture) and intelligence (e.g., listing many accomplishments). Furthermore, (b) mechanical perceivers like machine learning algorithms use these valid cues consistently so that the elastic nets attained substantial prediction accuracy (r = .28/.32 for narcissism/intelligence). This way, we uncover LinkedIn profiles' potential to accurately infer personality: Personality can be inferred accurately if (a) the valid cues contained in LinkedIn profiles are (b) used consistently like a mechanical perceiver does. The results have practical implications for improving recruiters' accuracy and foreshadow potentials of automated LinkedIn based personality assessments for recruitment purposes.

HR: **The Call for Talent in Recruitment Attracts Narcissistic Job Seekers**

Author: **Sooyun Baik**, *London Business School*
Author: **Selin Selin Kesebir**, *London Business School*
Author: **Daniel M Cable**, *London Business School*

Being "talented" is one of the most frequently sought-after personal qualities in job applicants, appearing in more than 470,000 of 14,180,208 global job postings. We examine this focus on talent in recruitment, and theorize that it will disproportionately attract narcissistic job applicants. Extending fit theory, we hypothesize that people's self-perceptions may be distorted in ways that break down the matching process in the Attraction-Selection-Attrition cycle. Narcissistic applicants, by definition, see themselves as more talented than others, and therefore perceive greater fit between themselves and organizations that emphasize talent. This research contributes to our understanding of person-organization fit theory by introducing limits to self-knowledge as a factor in recruitment research.

HR: **Making the Grade? Academic Performance as a Predictor of Work Performance and Turnover**

Author: **Chad Van Iddekinge**, *U. of Iowa*
Author: **Philip L. Roth**, *Clemson U.*
Author: **John D. Arnold**, *U. of Missouri*
Author: **Sara Krivacek**, *Clemson U.*
Author: **Rachel Elizabeth Frieder**, *U. of North Florida*

Many organizations assess job applicants' academic performance (AP) when making selection decisions. However, researchers and practitioners have recently suggested that AP is not as relevant to work behavior as it used to be due to factors such as grade inflation and increased differences between the academic and work contexts. The present meta-analysis (total k = 114) examines whether, and under what conditions, AP is a useful predictor of future work behavior. Mean correlations (corrected for measurement error in both variables) between AP and outcomes were .23 for job performance, .37 for training performance, and .00 for turnover. Further, AP is a better predictor of job performance (a) for jobs that require attributes like those important to success in an academic context, (b) for graduate school AP than for undergraduate school and high school AP, (c) for professor ratings of AP than for grades and class rank, and (d) for samples that include applicants from the same university or from the same major. Finally, although the predictive validity of AP has decreased in more recent years, this decrease appears to be due to the use of less-optimal study designs. Overall, the present results suggest it is premature to abandon AP in research and practice. Instead, researchers and organizations should carefully consider whether and how AP is relevant to particular jobs and outcomes, as well as use research designs and measures that optimize the predictive value of AP.

HR: **How Does LinkedIn Profile Information Impact Evaluation of Job-Hoppers?**

Author: **Lesly R. Krome**, *St. Mary's U. (San Antonio)*
Author: **Alexander T. Jackson**, *Middle Tennessee State U.*

Many employers use the social-networking website LinkedIn to help them screen applicants, but potential biases exist. LinkedIn publishes lists and icons of the user's job history, which draws attention to workers with multiple short tenures, or job-hoppers. This quick access of information may lead recruiters to conclude that the individual is untrustworthy, disloyal, etc. for seeking frequent new job opportunities in short succession. This effect may be exacerbated if the candidate is a person of color or woman, as gender and racial biases in recruitment and selection are well established problems (Di Satsio & Larsen, 2020; Gebru, 2020). The current study sought to manipulate LinkedIn profile screenshots by displaying that the LinkedIn member is 1) a job-hopper or an individual with job longevity, 2) Black or White, and 3) seemingly a man or a woman. We recruited 200 hiring professionals. Participants rated the profiles and indicated the capability of the applicant, likelihood of hire, degree of perceived trustworthiness, and provided demographic information. A series of three-way ANCOVAs were used to evaluate applicant qualifications, trustworthiness, and commitment with applicant job-hopper status, race, and gender as IVs. Hiring choice was examined using a binomial logistic regression. The results revealed that job-hoppers were rated as less qualified, less committed, and were less likely to be hired. We found little evidence for bias based on gender, race, or their interactions with job-hopping. Implications and future directions are discussed.

CSR Impact: Attraction, Retention, and Employer Perception

Session Moderator: **Jasmin Afrahi**, *Philipps-U. Marburg*

HR: **How Internal CSR Leads to Employer Recommendation: A Mediation Analysis**

Author: **Jasmin Afrahi**, *Philipps-U. Marburg*
Author: **Anna Mutter**, *Philipps-U. Marburg*
Author: **Thomas Armbruester**, *U. Of Marburg*

The importance of word-of-mouth for employers (WOME), that is, employees recommending their company as an employer, is undisputed for the recruitment process. Prior studies have been conducted on the determinants and outcomes of WOME. However, little importance has been given to the employee who recommends their employer to others. What inner thought processes and emotions are triggered that cause the individual to speak positively about the employer? Based on social identity theory, and the stimulus-organism-response (S-O-R) model, we developed a model with internal corporate social responsibility (ICSR) as one of the strongest triggers of WOME and hypothesize that organizational identification and organizational pride mediate the relationship between ICSR and WOME. We test our hypothesis using a data set of 136,478 participants from different German industries. Results revealed a partial mediation, which highlights the importance of the S-O-R model as well as people's unconscious inner thought processes. It shows that for strategic management and human resources management, people, their emotions, and feelings should continue to come first. We discuss the results in light of the above-mentioned theories and point to directions for future research.

HR: **Experimental Studies on Employer's CSR & Job Seekers' Attraction Based on Language Perspective**

Author: **Suman Choudhary**, *Indian Institute of Management, Udaipur*
Author: **Kirti Mishra**, *Indian Institute of Management, Udaipur*

Employers are increasingly including information about their corporate social responsibility (CSR) effort (the CSR action) and its impact (results of the CSR action) in recruitment materials to attract more job applicants. However, current literature has overlooked how the language of CSR effort and CSR impact in recruitment materials can influence job seekers' perceptions. Drawing on language theories, we argue that different types of language used in representing CSR effort (personal-impersonal) and CSR impact (positive-negative) interact to influence job seekers' attractiveness towards the organization. More specifically, we examine two mechanisms through which this occurs: job seekers' anticipated warmth and meaningfulness from being affiliated with the employer. We test these hypotheses across two studies: a field study (study 1) and a computerized experiment via Prolific (study 2). Our hypotheses are supported across both studies. This research provides important theoretical and practical insights into how CSR should be communicated in recruitment materials from a language perspective.

HR: **Retention of Millennial and Gen Z Employees: Does CSR Matter?**

Author: **Rebecca Chunghee Kim**, *Ritsumeikan Asia Pacific U.*
Author: **Helal Uddin**, *Ritsumeikan Asia Pacific U.*

Employee retention is critical to a company's success, yet young people have shown an increasing tendency in recent years to leave their company jobs. The purpose of this paper is to investigate why "young" employees—defined as millennials (born between 1980 and the late 1990s) and Generation Z (the demographic cohort after them)—would leave a company job, and to explore the role that a company's commitment to CSR might play in the stay-or-leave decision. A qualitative survey was conducted of 906 undergraduate students from 27 countries during the years 2013–18, asking for the reasons they would leave a company. Their stated reasons for quitting were matched against three well-established definitions of CSR in order to gauge the degree to which CSR-related factors influence young people's stay-or-leave decisions. The results indicate that salary, work environment, and relations with bosses and co-workers are the factors that most strongly influence young employees' stay-or-leave decisions. The firm's CSR practices do not appear to be a significant factor. This paper is the first in our knowledge to explore the relationship between two dominant narratives in management today: declining rates of retention of young (millennial and Gen Z) employees and growing demand for CSR.

HR: **Influence of CSR on Job Seekers' Organizational Attractiveness: A System Dynamic Approach**

Author: **Esrafil Ali**, *Research Scholar, Department of Business Administration, Sambalpur U.*
Author: **Biswajit Satpathy**, *Professor, Department of Business Administration, Sambalpur U.*
Author: **Deepika R. Gupta**, *Indian Institute of Management Visakhapatnam*

Corporate Social Responsibility (CSR) has been a competitive advantage for attracting job seekers. Organizations have begun to strategize CSR in business operations to attract and retain more job seekers in recent years. This research is carried out to understand the dynamic association between CSR and Attractiveness of Organization to Job Seekers (AOJS). the study develops and validates a system dynamic (SD) model, considering the different variables and how these affect this relationship. Complexity theory is applied as a basic framework in the study. Further, this study adheres to the well-defined SD process to develop a model. To test the empirical usefulness of the developed model, the quantitative and qualitative data are combined with the SD approach, and the model is being validated with feedback from the respondents. The model is relevant to policymakers, decision-makers, managers, etc when strategizing the CSR plan to attract potential job seekers.

HR: **Fraught Expectations: How Corporate Social Responsibility can Backfire in Recruitment**

Author: **Adam Austen Kay**, *U. of Queensland*
Author: **Pavlos Vlachos**, *ALBA Graduate Business School*
Author: **Konstantinos Tasoulis**, *American College of Greece*
Author: **Elaine Farndale**, *Penn State U.*

CSR is an asset for recruitment: that is the dominant narrative among business practitioners and academics alike. However, nascent research has given reason to pause and question this assumption. Accordingly, we develop theory to explain how CSR can also backfire in recruitment. Responding to calls to integrate the CSR and HRM literatures and account for the dynamic role of CSR in recruitment, we present a process model that introduces three theoretical perspectives to the micro-CSR literature. First, drawing from dual-processing attribution theory, we assert that CSR can activate cognitive processes that enable job seekers to appraise CSR in more nuanced ways than previously considered. Second, invoking expectancy violation theory, we propose that the more job seekers attribute CSR to authentic motives, the higher their expectations of employers will be, and the more likely they will be disappointed. Third, leveraging work on the dynamic nature of organizational fairness perceptions, we argue that job seekers update their appraisals of employers in a recursive cycle that trends downward over time. In so doing, we shift the discussion about CSR in recruitment away from static fixed-in-time accounts, toward a more representative description of its dynamic nature over time.

Adapting to Change: Individual Reactions, Team Dynamics, and Organizational Resilience

Session Moderator: **Andrea Lanza**, *U. of Calabria*

HR: **Team Composition: The Effect of Temporary Change and the Moderating Role of Experience**

Author: **Andrea Lanza**, *U. of Calabria*
Author: **Giusy Simone**, *U. of Calabria*

In this study, we investigate the consequences of a temporary change in team composition (TCTC) as a phenomenon that is different from collective turnover. In particular, we examine the underlying characteristics of a TCTC, how such a change affects organizational performance, and which intervening resources moderate the relationship between a TCTC and team results. We conduct our study in the Italian "Serie A" top professional football/soccer league between the 1960-61 and 1991-92 seasons. Our findings suggest that TCTC negatively affects teams' results but that team experience positively moderates the relationship between TCTC and team performance.

HR: **Managerial Change and Unit Performance**

Author: **Hyesook Chung**, *U. of Texas at Dallas*

In the present study, I propose that disruption originating from managerial change can bring not just "liability" but also "advantage" to the unit. In particular, I predict that managerial change will lead to better outcomes if a focal unit has more modular work groups and a higher proportion of full-time workers because such contexts can facilitate the new manager's learning in the unit. Discontinuous growth modeling (DGM) using 22,798 unit-month observations from 860 managerial change episodes provides supportive evidence. This study highlights that successful managerial change hinges upon not merely minimizing disruption from the change but also effectively leveraging it.

HR: **Extreme Extra-Organizational Events and Employee Effectiveness: The Case of the COVID-19 Pandemic**

Author: **Ajay Rama Ponnapalli**, *Wayne State U.*
Author: **Ravi Shanker Gajendran**, *Florida International U.*
Author: **Deepa S**, *Indian Institute of Management, Kozhikode*

The prevalence and frequency of extreme extra-organizational events (e.g., wildfires, floods, hurricanes, pandemics, mass shootings, etc.) over the past two decades raises the concern of their spillover effects on organizations. Extant research suggests that the disruptive nature of these events has implications for employee well-being and work attitudes. However, it remains unclear as to how and why some employees remain effective during such events while others fail to do so. We explore these questions using the backdrop of full-time remote work during the COVID-19 global pandemic. Specifically, we argue that maintaining remote work self-efficacy or the confidence in personal capabilities to perform the job while working remotely can be critical if employees are to remain effective under circumstances relating to the pandemic. In addition, we make the case that two extra-organizational stressors associated with the pandemic—COVID-19 anxiety and employee isolation—can erode remote work self-efficacy. We argue that COVID-19 anxiety negatively influences remote work self-efficacy, and thereby adversely affecting remote work adaptation, task performance, and innovative performance. These effects, we propose, are exacerbated by the isolation that employees experience due to full-time remote work brought on due to pandemic. We found support for our theory across two studies: a field study involving executives and their managers during the nationwide lockdown in India and an experimental vignette study using working adults from a North American online panel during the COVID-19 pandemic.

HR: **Understanding the Job Performance Structure Over Time: A Multilevel Model**

Author: **Hanbo Shim**, *U. of Texas At Arlington*
Author: **Michael Sturman**, *Rutgers U.*
Author: **Andrea Kim**, *Sungkyunkwan U.*

In the present study, we propose a multilevel model of dynamic performance in which the short-term behaviors of performance dimensions emerge as mean, trend, and variation over the long-term and influence long-term ratings of the performance dimensions. Specifically, we examine (1) how one's self-control capacity state influences the behaviors of each dimension at the short-term within-individual level, (2) how performance-identity discrepancies influence the dynamic factors of performance dimensions over the subsequent long-term period, and (3) how the dynamic factors of performance dimensions relate to the long-term performance evaluations. To test the theoretical model, we collected longitudinal panel data from the 58 supervisors and their 733 product designers at a large auto-manufacturing firm in South Korea over 30 weeks. The main results of the study reveal different patterns of relationships between the dynamic factors of each performance dimension and its long-term rating. We discuss the implications for theory and practice on dynamic performance and offer future research directions.

HR: **The Nature of Perceived Person-environment Fit: A Neurological Examination**

Author: **Aichia Chuang**, *U. of North Carolina, Greensboro*
Author: **Yu-Ping Chen**, *National Taiwan U.*
Author: **Tsung-Ren Huang**, *National Taiwan U.*
Author: **Hsu-Min Lee**, *National Taiwan U.*

The current study advances person-environment fit research by exploring the nature of perceived fit via the neuroscientific method of functional magnetic resonance imaging (fMRI). Using brain images of state-like activities (triggered by experimental stimuli in relation to fit) of 62 participants in Taiwan, we found that the participants' engagement in relational-fit and rational-fit contexts corresponded to four brain regions: the posterior cingulate cortex, the precuneus, the medial prefrontal cortex, and the bilateral temporoparietal junction. We also found that the participants' active brain regions relating to perceiving fit and misfit scenarios included: posterior cingulate cortex, precuneus, medial prefrontal cortex, bilateral temporoparietal junction, bilateral superior temporal sulcus, and bilateral temporal poles. These regions involve social constructs (e.g., mentalizing, perspective-taking, empathy) and drive cognitive, emotional, and social processing. In our study, the activation of emotion processing was greater for participants perceiving relational fit than for those perceiving rational fit. Also, the activation of negative emotion processing was greater for participants perceiving misfit than for those perceiving fit. Finally, this differentiation of brain activation between misfit and fit was minimized for participants with higher cognitive intelligence. Our research advances the debate over the affective vs. cognitive roots of perceived fit, provides possible construct validation for perceived fit, paves the way for future neuroscientific investigations into fit, and presents implications for human resources management practices.

Executive Impact on HR Decisions and Organizational Outcomes

Session Moderator: **Yin Lee**, *Ajou U.*

HR: **Collective Turnover and Family Firm Performance: The Moderating Role of HR Executives**

Author: **Yin Lee**, *Ajou U.*

Collective turnover hurts firm performance. But do family firms also suffer performance loss from collective turnover? Drawing on the socioemotional wealth perspective, this study proposes competing hypotheses on the impact of collective turnover on family firm performance. On the one hand, collective turnover may be negatively associated with family firm performance as high performers would be more likely to leave family firms due to informality and nepotism. On the other hand, collective turnover may be insignificantly related to family firm performance. Moreover, this paper explores the contextual moderating effect of the presence of HR executives among family firms. HR executives may redirect family CEOs' attention to the strategic importance of collective turnover and formalizing HR practices, thereby mitigating the negative impact of collective turnover. I test the hypotheses using a longitudinal sample of Korean firms from 2007 to 2017. The findings suggest that collective turnover is negatively associated with family firm performance and the presence of HR executives mitigates such a relationship. I discuss implications on collective turnover and family firm research.

HR: **A Multilevel Study of CEO Health-Orientation, Employee Well-Being, and Organizational Performance**

Author: **Nils Fürstenberg**, *U. of St. Gallen*
Author: **Hendrik Huettermann**, *BWU Munich*
Author: **Heike Bruch**, *U. of St. Gallen*

With the rising number of work-related mental illnesses, a growing stream of research has examined the role of leaders in promoting employees' psychological well-being in the workplace. While this literature has accumulated valuable insights, the key role of the executive suite in promoting healthy working conditions has been largely neglected thus far. To fill this void, we develop a multilevel theoretical model on how CEOs' health-oriented self-care (i.e., their awareness of, value for, and behavior toward their mental health) is associated with psychological well-being and performance in organizations. Building on social learning and conservation of resources theory, we propose that CEOs' self-care serves as a role model for leaders at lower organizational levels to show health-oriented staff-care toward their followers, thereby negatively relating to employee emotional exhaustion. Due to this indirect link with employee well-being, we suggest that CEO self-care is also positively and indirectly associated with organizational performance. Our assumptions are supported by a multi-industry, multi-source, and multi-level dataset of 96 German organizations. Our findings provide support for a "mutual gains" perspective, suggesting that a strong orientation toward psychological health in an organization's executive suite is positively associated with both, employee well-being and corporate performance.

HR: **Female Top Managers and Employee Layoffs during the Covid-19 Pandemic**

Author: **Jae C. Jung**, *U. of Missouri, Kansas City*
Author: **Junyon Im**, *Asper School of business, U. of Manitoba*
Author: **Yang Yang**, *Rowan U.*

Employee layoffs are painful events for all parties closely involved. We find that past research posits equivocal predictions on the effect of top manager gender on layoffs. Some studies suggest that female leaders (relative to male leaders) are more empathetic toward employees and thus more likely to avoid layoffs. Yet, other studies contend that female leaders face more resource constraints that hinder their ability to avert layoffs. To reconcile these inconsistent predictions, we develop a contingency model that accounts for the influence of the Covid-19 pandemic on the employee layoff risk in female-led firms and the moderating effects of 1) country-level empathy, 2) country-level institutional quality, and 3) firm pre-crisis innovation. We test our theory with a sample of 1,268 firm observations across 10 countries drawn from the World Bank's Enterprise Survey and Covid-19 Pandemic Survey datasets. Our findings support our prediction that the Covid-19 pandemic intensifies female-led firms' layoff likelihood, but the effect is mitigated by country-level institutional quality and firm-level pre-pandemic innovation.

HR: **Influence From the Top: CEOs' Implicit Motives, High-investment HR Systems, and Firm Performance**

Author: **Xin Wen**, *The Ohio State U. Fisher College of Business*

We explore how CEOs' implicit motives impact the usage of high-investment human resource systems (HIHRS) and firm performance. We draw upon the strategic-choice perspective of strategic HRM to examine top leaders' motivation dispositions as antecedents of HIHRS. We propose that CEOs' implicit achievement and power motives are associated with decreased usage of HIHRS, while CEOs' implicit affiliation motives are associated with increased usage of HIHRS. In addition, we expect HIHRS can mediate the effects of CEOs' implicit motives on firm performance. We found general support for our hypotheses based on a sample of 4,251 firm-year observations of 873 companies listed in the U.S. stock market. This study contributes to strategic HRM research by highlighting the role of CEOs' implicit motives in influencing the use of HRM systems and the effect of HRM systems in mediating the relationship between top leaders' characteristics and firm performance.

HR: **The Rise of HR Executives: What Drives the Elevation of HR Functions?**

Author: **Suyeon Kang**, *U. of Illinois at Urbana-Champaign*
Author: **Andrew Weaver**, -
Author: **Jiwook Jung**, *U. of Illinois at Urbana-Champaign*

While the human resources (HR) function traditionally kept a low profile, recently many U.S. companies have been appointing HR executives within their top management team. What are the drivers of this new but so far unnoticed development? To identify potential drivers behind the recent rise of HR executives, this paper tests two competing sets of hypotheses based on strategic and problem-oriented perspectives of HR, respectively. The strategic HR argument suggests that the rise of HR executives to senior management positions can be attributed to the recognition of the strategic value of human resources to competitive advantage and long-term organizational perspective on HR functions. Instead, we argue that the rise is in line with reactive and problem-oriented HR functional roles. Our random effects logistic regression models using panel data of publicly traded U.S. firms show that the likelihood of the presence of chief human resources officers (CHROs) or HR executives in the top management team is positively related to the problem-oriented HR perspective such as workforce reduction and union density, rather than strategic HR perspectives. These findings suggest that the escalation of HR executives may be driven by the demand for HR expertise to alleviate labor issues, not the renewed recognition of the strategic value of HR functions.

Sustainable HRM Practices

Session Moderator: **Chidiebere Ogbonnaya**, *Kent Business School, U. of Kent*

HR: **How Socially Responsible Human Resource Management Facilitates Ethical Workplace Behavior**

Author: **Nhat Tan Pham**, *International U. - Vietnam National U. HCMC*
Author: **Chidiebere Ogbonnaya**, *Kent Business School, U. of Kent*
Author: **Tran Hoang Tuan**, *U. of Labour and Social Affairs (HCMC)*

The concept of socially responsible human resource management (SRHRM) continues to gain traction as integral part of an organization's corporate social responsibility strategy. However, important questions remain concerning how it enables employees to behave more ethically at work. Drawing on social learning theory, we advance current knowledge by reconciling distinct cognitive and moral pathways through which SRHRM influences ethical workplace behavior. We then investigate the role of supervisor ethical leadership as an important boundary condition for this relationship. Based on time-lagged data from 243 employees in 67 Taiwanese organizations, Study 1 shows that SRHRM promotes ethical workplace behavior both directly and indirectly via value commitment and moral ownership, respectively. Study 2 replicates these findings using time-lagged data from 302 employee–supervisor dyads in 81 Vietnamese organizations. The study also highlights the role of supervisor ethical leadership as a first-stage moderator, such that the positive indirect links between SRHRM and ethical workplace behavior are stronger when supervisors exhibit an ethical leadership style. We discuss the theoretical and practical implications of these findings.

HR: **Promoting Sustainability: A Conceptual Framework of 'Stakeholder Voice'**

Author: **Rea Prouska**, *London South Bank U.*
Author: **Kabiru Oyetunde**, *LSBU Business School, London / UK*
Author: **Ian Roper**, *U. of Essex Business School*

The role of HRM is built on the current market economic model and needs to change if HRM is to help businesses towards a new sustainability paradigm. It has been suggested that HRM institutional entrepreneurship (HIE-Sustain) is this new role for HRM, capable of promoting sustainability not only internally to the organisation, but also externally between and among organisations. We build on this perspective and argue that if HRM is to enact this new role, individual HR practices need to also be re-thought and re-designed towards sustainability objectives. We focus on employee voice practices because such practices are a promising vehicle through which HIE-Sustain may be able to initiate change. We offer a conceptualisation of 'stakeholder voice' for sustainability (SV-Sustain) based on a triple-bottom approach to performance which incorporates the voice of a range of external stakeholders. We expand the voice literature in this respect and offer a conceptual framework of the factors influencing the demand for and supply of SV-Sustain in organisations.

HR: **Practices of Sustainable Human Resource Management in Three Finnish Companies (WITHDRAWN)**

Author: **Maria Järlström**, *U. of Vaasa*
Author: **Essi Saru**, *U. of Turku, Finland*
Author: **Aino Pekkarinen**, *U. of Vaasa*

Despite an increase in research on sustainable human resource management (HRM) and its practice, this relatively new research approach still lacks unified concepts and practices. We argue that more qualitative research is needed to discover the practical relevance of sustainability thinking in HRM. In this comparative case study of three Finnish companies, we aim to increase the understanding of this phenomenon by using a practice-based model of sustainable HRM as a theoretical foundation. We investigate why and how the companies implement sustainable HRM and what kinds of results they have achieved. We identify not only similarities but also differences among the companies. Therefore, our study contributes to the practice-based model of sustainable HRM by presenting the outcomes of the implemented HRM practices, as well as the importance of contextual issues. Our study enriches the sustainable HRM discussion by stressing the organizational context, content and process elements, thereby indirectly lending support to the 'soft' HRM model, which is more developmental and employee oriented. The results support the idea that the employer, society and employees can benefit from sustainable HRM in the long term. The positive outcomes of sustainable HRM include employee wellbeing related issues, such as long careers, low turnover, low absence rate, and late retirements.

HR: **Toward the Common Good HRM**

Author: **Maria Järlström**, *U. of Vaasa*
Author: **Essi Saru**, *U. of Turku, Finland*
Author: **Maija Viitasaari**, *U. of Vaasa*
Author: **Kleio Akrivou**, *Professor of Business Ethics & Moral Development, Uni Reading,Henley Bus School*

This article examines companies' HRM practices to determine how well they incorporate the sustainable human resource management (S-HRM) and common good approaches. The empirical data comprise the sustainability reports of companies (N=40) with the best sustainability performance globally. The results indicate that the reported HRM practices target employee development, employee engagement, diversity and inclusion, and health and well-being. All the main goals include multiple practices and metrics, illustrating far more congruence with general sustainability considerations in HRM than a common good HRM (CG-HRM). We contribute to the discussion of sustainable HRM by examining how common good theory enriches S-HRM. We suggest integrating inside-out and outside-in perspectives in HRM policies and practices and a stronger humanistic purpose. Common good HRM relies on a humanistic approach to aspire to an orientation to the "good" in practices and for an organization to be valued as a crucial link to the wider sustainable system, which would help individuals and social communities flourish. We propose that organizational wisdom could explain how some organizations contribute to the common good and others do not.

HR: **Be Innovative or Ethical? Sustainable HRM, Trust in Organization, and (Un)Desired Employee Behaviors**

Author: **Ying Lu**, *Macquarie Business School, Macquarie U.*
Author: **Mingqiong Mike Zhang**, *Monash Business School*
Author: **Miles M. Yang**, *Macquarie U.*
Author: **Yue Wang**, *Macquarie Business School, Macquarie U.*

Amid growing interest in integrating sustainability and corporate social responsibility strategy into the design of human resource management (HRM) practices, sustainable HRM practices based on the common good values (SHRM-CGV) have gained prominence in private firms to support organizations in reaching their sustainability goals. However, research on the effect of SHRM-CGV on desired employee behaviors remains scant. In particular, we know very little about whether SHRM-CGV play a similar or different role in entrepreneurial firms compared to established firms. Drawing upon social exchange theory, we address whether and how SHRM-CGV influence employee innovative behavior and whether SHRM-CGV function more or less effectively in entrepreneurial firms compared to established firms. We also examined whether and how SHRM-CGV lead to employee unethical behavior in entrepreneurial firms. Our findings based on two multi-wave field studies support our theoretical hypotheses and significantly contribute to literature and implications for practice.

Understanding Individual Turnover

Session Moderator: **Jay Hardy**, *Oregon State U.*

HR: **Safe Inside: How Internal Sourcing Lowers Voluntary Turnover in Tight Labor Markets**

Author: **Jay Hardy**, *Oregon State U.*
Author: **Chase Thiel**, *U. of Wyoming*
Author: **Anthony Klotz**, *UCL School of Management*
Author: **Carter Gibson**, *Shaker Consulting Group*

The COVID-19 Pandemic introduced powerful exogenous shocks in the employee-employer relationship resulting in a precipitous uptick in voluntary turnover—a phenomenon labelled the "Great Resignation." Given that much of the empirical work on turnover is decontextualized, practitioners had little empirical guidance for this period to mitigate massive staffing shortages. To add understanding about how to retain employees in tight labor markets, we examined new-hire source (internal v. external) as a determinant of voluntary turnover amidst the great resignation. Applying an event-based framework and drawing upon social exchange theory, we hypothesize that internal sourcing "binds" employees to employers in tight labor markets because it provides desired social benefits such as employment security and organizational support—which outweigh the potential economic benefits of leaving. Across a field study involving thousands of hires of an international restaurant chain and an online experiment, we find evidence that internal sourcing leads to less voluntary turnover because it inhibits perceptions of employment threat. Thus, this research provides important theoretical and practical insights into how to retain employees when a company is most susceptible to losing them.

HR: **Training and Voluntary Turnover: Difference between White-and Blue-collar Jobs**

Author: **Minjong Jun**, *Binghamton U.-State U. of New York*
Author: **Jeong-Yeon Lee**, *Seoul National U.*

Many studies on the consequences of training have indicated that training tends to reduce turnover. However, some of the employees getting training are likely to leave their organizations, which leads to the outflows of valuable human capital. To achieve a better understanding of these risks of training, we hypothesize that the effects of training on turnover may differ depending on occupational types (i.e., white- and blue-collar jobs) by using the literature addressing (1) employee poaching and (2) employee mobility and career success. Furthermore, this study suggests that employee benefits could weaken this positive association between training and voluntary turnover of white-collar jobs. Our multilevel analyses using 229 South Korean firms from the Human Capital Corporate Panel (HCCP) during the period of 2009 to 2017 support our hypotheses. We discuss the implications of the different effects of training on voluntary turnover as a function of occupational types and the moderating effects between training and employee benefits.

HR: **Intend to Stay or Quit in Turbulent Times? Influence of Talent Retention Strategies**

Author: **Mir Dost**, *Al-Maktoum College of Higher Education, Dundee, Scotland*
Author: **Hussain Bakhsh Magsi**, *U. PUTRA MALAYSIA*
Author: **Muhammad Qureshi**, *Muhammad Ali Jinnah U.*

This study addresses two important research questions. 1) Why do talented employees intend to quit (IQ)? 2) What role firm's talent retention strategies can play? Drawing on the affect-creativity and contingency theories, we investigate the influence of employee creativity on IQ and the moderating role of talent retention strategies such as employee empowerment, participation, job security, and job satisfaction. To test the hypothesized assumptions, we nested the data from employees (n = 236) and their supervisors (n = 101) in emerging markets and analyzed the data by using descriptive and stepwise regression analysis techniques. The results revealed the significant influence of employee creativity on IQ. The contingency role of employee engagement, job security, and job satisfaction attenuated the influence of employee creativity on IQ. However, opposite to the hypothesis, employee empowerment did not significantly attenuate the influence of employee creativity on IQ. Furthermore, the article also discusses the theoretical and managerial implications.

HR: **Social Identity of Talent – What Really Matters to Make Them Stay**

Author: **Linda Baulecke**, *ESCP Business School*
Author: **Marion Festing**, *ESCP Business School*

In this paper ('work in progress'), we contribute a so far neglected social psychological perspec-tive to explain talent retention and examine how social identities influence talents' intention to stay in organizations. By using a multi-methodological and multi-source approach we examine our predictions in two studies of working adults, talents and HR managers in the technology in-dustry. First results of our factorial survey study support our hypotheses that a) organizational identification is an antecedent of talents' intention to stay; b) that the underlying mechanism of this effect can be explained by talent group identification; and c) that the prestige of the talent group moderates the relationship of organizational identification on talent group identification. However, we also find that organizational support does not moderate the relationship between talent group identification and talents' intention to stay. Our subsequent qualitative reveals that the TM practices we measured as organization support are perceived as hygiene factors and that responding to other demands of talents such as challenging tasks have gained importance with respect to talents' intention to stay. These insights will be further tested in a third survey targeting talents. We discuss the implications for future research on talent retention and for organizations.

Employer Branding and Employee Behaviors

Session Moderator: **Jiexuan Zhang**, *Central U. of Finance and Economics*

HR: **A Study on the Influence of Employer Branding Attributes Congruence on Employee Creativity**

Author: **Jiexuan Zhang**, *Central U. of Finance and Economics*
Author: **Fei Zhu**, *Central U. of Finance and Economics*
Author: **Hongsong Guo**, *Central U. of Finance and Economics*

Based on cue consistency theory and social information processing theory, this study explored the impact of the employer branding attributes congruence on employee creativity through career satisfaction, and further revealed the moderati ng role of proactive personality. This study employs polynomial regression model and response surface analysis using 397 paired questionnaires to test hypotheses. Results show that employer branding attributes congruence has an impact on employee creativity via career satisfaction. Congruent employer branding strategies are beneficial to the creativity of less proactive individuals, while high-level proactivity compensated the limitations of employer branding attributes incongruence. The empirical results complemented employer branding research from the perspective of the instrumental-symbolic attributes congruence, clarified the boundary condition of proactive personality.

HR: **Managing Online Employer Reviews: An Impression Management Perspective for Talent Recruitment**

Author: **Kang Yang Trevor Yu**, *Nanyang Technological U.*
Author: **Kim Huat Goh**, *Nanyang Technological U.*
Author: **Sitong YU**, *Nanyang Technological U.*
Author: **Clara Wen Lin Soo**, *Broad College of Business, Michigan State*

The powerful effects of electronic word-of-mouth on employer branding and prehire outcomes have made it incumbent on employers to formulate effective responses to employer reviews on social media. By integrating research on organizational impression management and online customer service recovery, our research adds insight into different types of responses and their effects on potential job seekers. We employed text mining techniques to first identify distinct types of employer responses to positive and negative reviews observed on a major social media platform. Findings from our experiment based on vignettes created from topic modeling suggest that responding to reviews had significant positive effects on organizational attraction, and responding to negative reviews specifically resulted in additional significant positive effects on intentions to apply and employer reputation. Drawing on signaling theory, we further uncover that such responses improved perceptions of organizational competence, warmth, and sincerity when potential applicants read reviews with an employer response (versus no response). Warmth, in particular, mediated the effect of responses on both attraction and application intentions. We also found apologies to be the most effective response to negative reviews and exemplification to be the most effective response to positive reviews. Taken as a whole, our study suggests that organizations should invest in responding strategically to online reviews by employees, past and present.

HR: **Impact of Employer Brand on Employee Retention: The Moderation of Agile Values**

Author: **Jin Feng Uen**, *National Yang Ming Chiao Tung U.*
Author: **CHUN-SHAN TAI**, *National Yang Ming Chiao Tung U.*
Author: **Szu-Hsien Lu**, *National Yang Ming Chiao Tung U.*

Purpose Building an employer brand can help attract and retain employees. However, most small and medium high-technology companies do not have enough resources compared with large-sized companies. Thus, it becomes imperative to determine how small and medium high-technology companies can build their employer brand and its effect on employee retention. Design/methodology/approach There are many small and medium high-technology companies in Taiwan, and the competition for acquiring talent is fierce. We use a multilevel approach (hierarchical linear modeling). Collecting data from 145 employees from 39 small and medium high-technology companies Finding As result among the five subcomponents of employer brand, only "compensation and benefits" significantly influences employee retention. In additional, Agile values positively influence employee retention. Final, Agile value positively moderate the relationship of Employer brand "healthy working atmosphere" and "training and development" with employee retention. Originality/value This result has contribution to the literature. This study fills a gap in the literature that researches agile value and employer brand for SMEs. Especially, for SMEs, it is difficult to take into account all the subcomponents of employer branding. Also, the past agile literature has focused on large corporations. In summary, in a rapidly changing environment, agile values are a crucial element of employee retention in culture. And the employer brand focus of SMEs should be different from that of large enterprises. So we investigate whether agile values strengthen the relationship between employer brand and employee retention in SMEs.

HR: **The Influences of Employer Brand Personality and Differentiation on Recruitment Outcomes**

Author: **Hsu-Chu Wu**, *National Sun Yat-Sen U.*
Author: **Wei-Chi Tsai**, *National Chengchi U.*
Author: **Tian-Jyun Gong**, *National Chung Cheng U.*

Employer branding has been recognized as an effective way to attract job applicants and create competitive advantages in the talent war. However, prior literature has neglected the competition or comparison of employer brand personality (EBP) among competitors. We incorporate strategic balance perspective and develop a theory of EBP positioning on recruitment outcomes. This study used content analysis to capture EBP and its positioning from real recruitment messages and examined the inversely U-shaped influence of EBP positioning on recruitment outcomes. By analyzing the data from six financial industries, the results show that EBP and its positioning have independent impacts, the identity effect and differentiation effect. This study also provides rare empirical evidence on the effectiveness of a firm's EBP practice- firm-delivered EBP. Practical implications are also discussed.

HR: **Priming the Pipeline: A Relational View of Attracting Career-ready Students**

Author: **Rhett Andrew Brymer**, *U. of Cincinnati*
Author: **Janice C. Molloy**, *str*

Despite extensive progress explaining how a broad range of factors influence attraction, the literature has not yet considered how interorganizational ties of varying intensity influence attraction. This paper addresses this gap by framing attraction from a relational perspective, focusing on interorganizational relationships and the discontinuous role transitions these relationships aim to facilitate. We develop hypotheses about how variations in these and related factors predict organizational attraction and test the hypotheses using a sample of students from a large U.S. university who face the discontinuous role transition from student to career employee. We find that, in some cases, interorganizational relationships can yield attraction advantages comparable to the attraction advantages prominent brands enjoy and provide nuanced guidance for when relational embedding is most (least) effective. The paper closes with the nuanced implications for research and practice and—to further the relational movement—a primer on how to shift from atomistic to relational perspectives of HRM phenomena.

Money Matters: Exploring Financial Concerns in the Workplace

Session Moderator: **Gavin Joseph Williamson**, *U. of Tennessee, Knoxville*

HR: **Having Enough Money Matters: Reviewing Financial Security at Work**

Author: **Gavin Joseph Williamson**, *U. of Tennessee, Knoxville*

The exchange of labor for pay is the defining feature of an employment relationship, and as such, compensation is one of the most important human resource management functions in an organization. Yet, a majority of compensation research neglects the core function of pay from a worker's perspective – to provide sufficient resources to live, or put differently, to confer financial security. This may be explained by the extreme fragmentation of existing research on the subject. In this comprehensive and comparative review, I seek to accomplish five objectives: 1) define the construct space of financial security and distinguish it from other evaluations of pay; 2) identify the proliferation of constructs that are, in essence, financial security by another name (e.g., financial strain, economic scarcity); 3) synthesize the existing research into a single nomological network and identifying key mechanisms; 4) comparing this nomological network to the closely related but distinct constructs of financial need and pay satisfaction to gain a more robust understanding of how pay influences worker outcomes; and 5) articulating directions for future research.

HR: **How and For Whom do Incentives Foster Workplace Presence? Adding the Role of Personal Indebtedness**

Author: **Pavel Kral**, *Prague U. of Economics and Business*
Author: **Adam Trcka**, *Prague U. of Economics and Business*

Financial incentives present a prevalent practice to influence employee behavior. Using financial incentives to promote presence at work is generally perceived as effective, but the real evidence is not convincing. In addition, employee personal financial conditions have been neglected in human resource literature despite their presumable effect on work behavior. The aim of this study is twofold. First, we test the short-term and long-term effects of monetary incentives on work presence. Second, we draw from the theory of indebtedness to reveal a moderating effect of employee indebtedness on incentivizing work presence. We test our hypotheses using longitudinal pay-related data from the automotive manufacturing industry. The results show that financial incentives increase employee work presence only in the short term, but they backfire in the long term. Personal indebtedness influence employee sensitivity to incentives, so employees in personal insolvency are more sensitive to incentives, while employees in personal bankruptcy lose the sensitivity to incentives. The theoretical insights bring further arguments into the debate about the incentive effect of financial rewards, and also integrate economic- and psychology-based explanations to understand how employees respond to monetary incentives. The research provides practical implications for human resources management and social implications for personal bankruptcy law.

HR: **Human Resource Management and Financial Problems in the Workplace: Systematic and Conceptual Review**

Author: **Vagner Fantinel De Rosso**, *U. de Salamanca*
Author: **Lucía Muñoz-Pascual**, *IME, U. de Salamanca*
Author: **Jesús Galende**, *IME, U. de Salamanca*

Personal financial problems are a growing concern for individuals and organizations. However, there is no consensus on the main constructs or measurement scales suitable to assess and measure these problems, nor a clear view of their consequences on workers' performance. This review aims to summarize the findings over the last 20 years of research on the organizational outcomes of financial problems of salaried workers and identify the main constructs and scales used. We reviewed 135 full-text articles published since 2002 in JCR- or SJR-ranked journals which used 16 selected constructs to study salaried workers' financial problems. The results show evidence that financial problems are related to individual outcomes, such as health and family relations, and organizational outcomes, such as job performance, motivation, commitment, workplace behaviours, and professional relationships. The results also show that academic research is concentrated on a few constructs, and there are misalignments in their definition and measurement. In conclusion, this review points out that personal financial problems are a potential source of workers' underperformance that could be dealt with through human resource management policies, but the development of interventions should be carefully designed to correctly assess the desired construct and avoid wasting resources.

HR: **Money on My Mind: The Fortnightly Dynamics between Financial Worries and Personal Well-being**

Author: **Imke Dirkx**, *Vrije U. Brussel*
Author: **Ruud Gerards**, *Maastricht U., School of Business & Economics*
Author: **Riccardo Welters**, *James Cook U.*

Financial uncertainty is becoming an increasingly important source of stress for a significant amount of people. In this study, a within-person design was adopted to examine the negative relationship between financial uncertainty and personal well-being and the buffering role of personality traits (i.e., self-esteem and risk aversion). Bi-weekly diary data gathered over the course of six months (14 wave times) from 123 employees, analyzed using multi-level analyses, showed that changes in financial uncertainty negatively predicted personal well-being. As predicted, self-esteem and risk aversion moderated the intra-individual relationship between financial uncertainty and personal well-being, in that employees with high levels of self-esteem and low levels of risk aversion suffered less from changes in financial uncertainty. This study contributes to the literature on financial uncertainty by using a within-person design, while the literature had so far only focused on between-person studies. Contributions to the literature and practical implications for Human Resource Management are discussed.

HR: **Payday as a Temporal Landmark**

Author: **Laurens Bujold Steed**, *U. of Cincinnati*
Author: **Brian W. Swider**, *U. of Florida*

Disciplines outside of the organizational literature have long established the concept of a "payday effect." Yet, the workplace effects of payday remain largely unknown. To remedy this, we utilize theory on temporal landmarks and the psychology of money to propose potential payday effects both in and outside of work. We also examine the moderating conditions under which the workplace event of payday might be most salient. In Study 1, we examine whether payday meaningfully stands out to individuals by using Google search data in Sweden. In Study 2, we investigate paydays in a six-week within-person study of 85 academic staff spanning three paydays and three non-paydays. Study 1 results indicate that payday functions as a temporal landmark for individuals. Study 2 results suggest that the temporal landmark of payday does not directly affect employee personal control, work-specific self-efficacy, or recovery. Yet, in our examination of moderators, employees who view money as symbolic of freedom do indeed experience fluctuations in personal control, work-specific self-efficacy, and recovery that co-occur with the arrival of their payday. We did not find evidence that employee pay satisfaction moderated payday's effects. Our findings offer insights for theory and practice as to payday's role as an important event in employees' lives, especially for those who view money as representative of freedom.

Leader Characteristics and Leadership Emergence

Session Moderator: **Anoop A. Javalagi**, *Northwestern U.*

HR: **Fueling Individual Leadership Emergence via Distributed Leadership: A Sequential Mediation Mechanism**

Author: **Shunhong Ji**, *Shanghai U. of Finance and Economics*
Author: **Ledi Lyu**, *School of Management, Shanghai U.*
Author: **Jiawen Chen**, *Shanghai U.*

Departing from past research on managers' influence on employees' informal leadership emergence, we explore the mechanism of how distributed leadership enhances individual leadership emergence from a cognitive perspective. Drawing upon the leadership identity construction theory and role identity theory, we theoretically developed and empirically tested a serial mediation model that how distributed leadership promotes employees' leadership emergence via individual empowerment role identity and enacted leader identity. Using a three-wave field survey from 496 subordinate-supervisor dyads (82 supervisors and 496 employees), we found that empowerment role identity and enacted leader identity serially mediate the association between distributed leadership and employees' leadership emergence. The results demonstrate the leadership identity construction process of employees' leadership emergence under distributed leadership. The theoretical and practical implications of our findings are then discussed.

HR: **Leaders Appear Agreeable, Extraverted, and Honest-Humble: Meta-Analysis and Reputational Trait Model**

Author: **Anoop A. Javalagi**, *Northwestern U.*
Author: **Daniel A. Newman**, *U. of Illinois at Urbana-Champaign*
Author: **Mengtong Li**, *U. of Illinois at Urbana-Champaign*

Extending Judge et al.'s (2002a) classic meta-analysis on personality and leadership, we emphasize interpersonal traits of Extraversion, Agreeableness, and Honesty-Humility. Leveraging Interpersonal Trait Theory and a much larger database than previously available, we propose and test a novel theoretical model in which the effects of leader personality identity (self-rated Honesty-Humility, Extraversion, and Agreeableness) on leader behavior and leader effectiveness are mediated by leader personality reputation (other-ratings of the same traits). Implications of person perception/reputational mediators of the trait approach to leadership are discussed.

HR: **Middle Managers' Competencies and Job Performance: A Configurational Approach**

Author: **Sateesh Shet**, *Northumbria U.*
Author: **Thomas Garavan**, *Garavan*
Author: **Dinesh Panchal**, *Nirma U., Institute of Management*
Author: **Colette Darcy**, *School of Business, National College of Ireland, Dublin, Republic of Ireland*
Author: **Fergal O'Brien**, *Kemmy Business School, U. of Limerick*

Investigations of the relationship between managerial competencies (MC) and job performance have typically utilized a variable-centered approach. However, this approach does not tell us whether job performance is the result of a single competency or multiple competencies, the different pathways to job performance or whether the competencies that explain high job performance also explain low job performance. In this study we adopt a people-centered approach to investigate configurations of MC that are sufficient to produce high performance, identify the different competency recipes that lead to high job performance and those that explain high and low performance. Using fuzzy-set qualitative comparative analysis (FsQCA), with a sample of 206 managers, we identify seven equifinal configurations sufficient for high job performance. We find evidence for both conjunction and causal asymmetry in that the explanations of high job performance are multi-dimensional and the configurations leading to low performance were not the same as those leading to high performance. We therefore generate theoretical insights into the MC-job performance relationship beyond that revealed through a variable-centered approach. The findings highlight theoretical, empirical, and practical implications for the use of MC in organizations.

HR: **The Psychological Value of Leadership Development: Longitudinal Quasi-Experimental Evidence**

Author: **Ayse YEMISCIGIL**, *Fordham U.*
Author: **Dana H. Born**, *Harvard Kennedy School; Center for Public Leadership*

Organizations spend billions of dollars in leadership development, yet, our understanding of what is gained as a result of leadership development remain limited. In this research, we argue that leadership development can be more than professional learning and can serve a critical function to improve the psychological well-being of employees and leaders, especially when it targets the whole identity of professionals. Studying a large sample of 1,341 leaders which include eleven cohorts of participants from an identity-based leadership development program and a matched control group, we found leadership development to have a positive impact on sense of purpose in life and personal growth and to reduce levels of stress about two weeks after the programs. At a six-month follow-up these changes largely reverted to baseline levels pointing to a 'eudaimonic treadmill'. We did not find significant differences in online and in-person programs before, during, and after the pandemic. The findings suggest that psychological well-being should be considered in understanding effectiveness, return on value, and the driving factors for leadership development, and that learning and development could be an overlooked source of mental health at work which can potentially deliver mutual gains in both professional and personal outcomes.

Participant: **Aaron CH Schat**, *McMaster U.*
Participant: **Joel Andrus**, *U. of Missouri*
Participant: **Yair Berson**, *McMaster U.*

This symposium showcases a collection of research on the breadth of the employee fit experience. Research in this session considers the role of fit as workers enter into, build successful work experiences within, and move between organizations. Specifically, we explore how demographic and psychological individual differences impact the ways employees assess and increase fit during job search; identify the various strategies employees adopt to manage misfit at work; and investigate the unique ways that employees experience fit with various aspects of their work across subjective time. We provide multiple perspectives on the fit and misfit experience, demonstrating how these experiences impact important individual and organizational outcomes, such as attraction, job acceptance, retention, and withdrawal. This session will help researchers and practitioners alike better understand how to effectively manage employee fit as a strategy to tackle the novel challenges associated with the modern labor market.

International Entrepreneurship

Session Moderator: **Tao Wang**, *U. of Bristol*

IM: **International VC Syndication Intensity and Diversity**

Author: **Tao Wang**, *U. of Bristol*

This study investigates how different dimensions of international syndication nurture portfolio companies' performance in the emerging market. I analyse a comprehensive data set of 4638 portfolio companies in China and find that the intensity, but not the diversity, of international VC syndication increases the performance of local VC-backed portfolio companies. In addition, the social hierarchy of local VC firms, namely status and reputation, moderates this relationship. More specifically, portfolio companies which are invested by high-status or highly reputable local VC firms are less likely to benefit from the high international syndication intensity of these VC firms. The underlying mechanism is explored, and I find that high-status VC firms are more likely to add value to portfolio companies, whereas highly reputable VC firms and VC firms with high international syndication intensity are more likely to select and add value to portfolio companies at the same time.

IM: **Do Displays of Entrepreneurial Traits Help Women Entrepreneurs? Evidence from Crowd-Financed Microle**

Author: **Jayaram Suryanarayana Uparna**, *IIM Udaipur*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

Prior research shows a strong association between entrepreneurship and agentic-masculine traits such as positivity, competence, and creativity, and practice focuses on sharpening pitches to emphasize these entrepreneurial traits, even in the context of small-scale entrepreneurship. But do such traits help women entrepreneurs? We rely on attribution, gender and role expectation, and expectancy violation theories to predict that women entrepreneurs, and especially women who display entrepreneurial traits in their pitches, fit the role expectations of entrepreneurs in the microlending context, and benefit from the fastest funding speeds. We find support for these predictions in a dataset involving 600,000 entrepreneurial pitches. Our research on gender and crowd-financed microlending shows how, unlike in the commercial entrepreneurship context, displays of entrepreneurial traits like positivity, provide women a funding advantage in microlending.

IM: **The Effect of Global City Founding Location on Crowdfunding Success and Internationalization.**

Author: **Dwarka Chakravarty**, *San Diego State U., Fowler College of Business*
Author: **Mujtaba Ahsan**, *San Diego State U.*

This study examines the effect of founder location on the success and internationalization of reward-based crowdfunding campaigns. We investigate whether campaigns based in global cities are more likely to attain their funding goals and attract backers from other countries and global cities. We analyze a large sample of reward-based crowdfunding campaigns from the Kickstarter platform. Our results show that campaigns founded in global cities are more likely to be successful than those based in other locations. We also find that global city campaigns have a higher number of backers from foreign countries and from other global cities. Additionally, these advantages of global city location are enhanced for technology-based campaigns, relative to other categories. Our theorizing draws upon international business and entrepreneurship literature, and our findings have theoretical and practical implications for these fields.

IM: **Walk the Talk: The Future-Time Reference of Users' Languages and Digital Product Innovation**

Author: **Pengxiang Zhang**, *Guanghua School of Management, Peking U.*
Author: **Chao Niu**, *Chinese U. of Hong Kong, Shenzhen*
Author: **Eric Y.-F. Zhao**, *U. of Oxford*

The role of language has become increasingly recognized in management research. While the extant literature has mostly focused on managers' language structures and their implications for firms' actions and outcomes, we take a framing perspective and propose that users' language can have an important influence on firms' decision making. Grounded in the context of the mobile game industry, we theorize that gamers speaking weak future-time reference languages employ proximate temporal framing and thus positively impact publishers' digital product innovation. We further argue that this baseline relationship depends on the effectiveness of the temporal framing, which is shaped by the negativity of gamers' feedback and publishers' linguistic incongruence with gamers. Based on a global sample of 1,183 mobile game publishers from 27 countries, we find strong evidence supporting our hypotheses, contributing to the integration of the organizational linguistics and user innovation literatures.

Emerging Market MNEs

Session Moderator: **Manish Popli**, *Indian Institute of Management, Indore*

IM: **Does Degree of Foreign Investments Spur-up the Market Reactions to Counter Responses by Incumbents?**

Author: **Manish Popli**, *Indian Institute of Management, Indore*
Author: **Sowmya Kannan**, *IIM Indore*
Author: **Mehul Raithatha**, *Indian Institute of Management, Indore*

In emerging economies, following the implementation of market-efficiency reforms, an influx of investments by resource-rich foreign firms prompts incumbent firms to engage in competitive response actions of cross-border acquisitions. In this study, we propose and find support for the idea that cross-border acquisition announcement returns will be greater for firms in industries that receive more foreign investments. Furthermore, we advance the impact of incumbent firms' vulnerability on the baseline relationship, as assessed through their domestic market dependence and performance attainment discrepancies. The empirical findings support our theoretical model and demonstrate the integrative role of the industry- and firm-level determinants in influencing market reactions to cross-border acquisitions by firms from emerging economies.

IM: **How Does Liability of Origin Impact the Performance of Post-merge Integration of EMNEs?**

Author: **Wenting Li**, *business school of Central South U.*
Author: **Ding Wang**, *Central South U.*

Recently, the emerging market multinational enterprises (EMNEs) adopt the cross-border M&A for technological catch-up and value creation. However, the EMNEs are faced the unique challenge of liability of origin, which challenges the cross-border M&A of EMNEs. We combine organizational identity and legitimacy perspective conceptualize the liability of origin as the institutional-related and product-related liability of origin and examined the impacts these two dimensions of liability of origin on the performance of post-merge integration of EMNEs respectively. Utilizing the sample of Chinese firms' cross-border M&A events, we found that the institutional-related and product-related liability of origin can negatively impact the performance of post-merge integration performance. Moreover, the organizational identity maintenance strategy positively moderates the relationship between product-related liability of origin and the organizational reconstruction strategy positively moderates the relationship between institutional-related and product-related liability of origin. Our findings extend the literatures on liability of origin and the literatures of post-merge integration of EMNEs.

IM: **Configuring Liability of Emergingness on Strategic Asset-Seeking Acquisitions**

Author: **Xinli Huang**, *WU Vienna U. of Economics and Business*
Author: **Yanze Liang**, *Faculty of Economics and Business, U. of Groningen*

We study the impact of liability of emeringness (LOE) on the innovation performance of emerging market multinationals' (EMNEs) strategic asset-seeking acquisitions. EMNEs adopt strategic asset-seeking acquisitions as a means of developing their competitive advantages and catching up. However, when EMNEs enter their target countries, they suffer from multiple liabilities (e.g., LOE), such that not all EMNEs are able to improve their innovation performance through acquisitions. In this study, we aim to disentangle the LOE into internal and external liabilities and test how these liabilities jointly affect EMNEs' post-acquisition innovation performance. Empirically, we utilize the fuzzy-set Qualitative Comparative Analysis (fsQCA) to analyze 162 acquisitions issued by Chinese multinationals between 2013 and 2017. The empirical results indicate four strategic scenarios with different innovation performance conditions for Chinese multinationals' strategic asset-seeking acquisitions. Our study contributes an extension of the concept of LOE and sheds light on the strategic configurations that allow for high innovation performance.

IM: **How do Latecomer Firms Upgrade their Activities in the Global Value Chain?**

Author: **Amir Chiti Zadeh**, *UNSW Sydney Business School, Australia*
Author: **Pradeep Kanta Ray**, -
Author: **Jimi Kim**, *U. of New South Wales*

Recently efforts have been made to understand latecomer firms' (LF) process of upgrading. To further our understanding of this process, this study investigates six Indian firms in the leather and skin industry using an interpretive research paradigm. The findings reveal that initially, firms face six difficulties: lack of skilled labor; lack of environmental and animal rights; lack of advanced technology; lack of brand reputation; low exposure to the international market; and slow production within their value chains. Drawing on the Global Value Chain (GVC) smiling curve model, we find that by industry support, government support and through partnerships, and joint ventures with other developed country firms (DCFs), LFs can reduce their initial deficiencies and upgrade themselves. And by drawing on smiling curve of GVC, LFs can be continually innovative, gain full control of their GVCs, flow of information within the company, provide in-house training, increase automation and making use of further industry and government supports, LFs can move up the smiling curve of GVC. The results suggest that LFs willing to step further onto the GVC by opening offices in developed countries.

Uncertainty, Disruptions and MNE Performance

Session Moderator: **Markus David Taussig**, *Rutgers Business School*

IM: **Corruption and Conglomerate Diversification in Acquisitions: Global Evidence**

Author: **Markus David Taussig**, *Rutgers Business School*
Author: **Man Dang**, *U. of Economics, Danang U.*
Author: **My Hanh Nguyen**, *U. of Economics, Danang U.*
Author: **Hoang Long Phan**, *U. of Economics, Danang U.*
Author: **Khue Huynh**, *U. of Economics, Danang U.*

This paper investigates how corruption influences acquirers' industrial diversification decision to engage in global acquisitions over the period 2000-2015. Controlling for firm-level, deal-specific and country-level characteristics, we find an inverted U-shaped relationship between the level of corruption in the host country and the acquirers' anti-conglomerate decision. Specifically, acquirers tend to prefer target firms within the same industry in host countries with weak institutional environments and less transparency, characterized by lower control of corruption and inferior corruption perceptions. Also, the bidders' industrial diversification strategy depends on corruption distance between target and bidder countries. The findings further show that the relationship between the level of corruption and anti-conglomerate choice is stronger for deals paid with cash. Our results provide better understanding of market imperfections and their effects on acquirers' takeover planning.

IM: **Geographic Diversification of Firms, Corporate Investment and Populism**

Author: **Alfonso Carballo-Perez**, *NEOMA Business School*
Author: **Margherita Corina**, *NEOMA Business School*

Abstract We investigate how multinational firms strategically respond to their corporate investments when faced with increased uncertainty in their home country. In particular, we investigate how multinationals react in their investment decisions when a populist ruler takes office. We show that the presence of a populist leader at the helm of the government undermines single-country firm's investment, given the uncertainty triggered by populist rhetoric. However, this negative effect is less detrimental for multinational firms that diversify geographically in a greater number of countries. Furthermore, we also find that at higher levels of geographic diversification, the reduction in the negative effect of populism on home investment is less pronounced: for each additional country that the multinational diversifies, the positive marginal effect of diversification will be smaller. We contribute to the literature on international business, by providing theory and empirically testing our hypotheses using a sample of multinational firms in 23 democratic countries from 1998 to 2020. Finally, we also contribute to the study of populism by proposing an empirical strategy based on instrumental variables, which addresses the problem of endogeneity that arises between populism and uncertainty.

IM: **How to Cope with the Unknown? A Dynamic Conceptualization Following the Covid-19 Outbreak**

Author: **Roman Barwinski**, *U. of Bristol*

Understanding and coping with the Unknown is becoming a challenge for many managers and the topic of an increasing number of discussions in board rooms. While an extensive body of literature in international business has addressed risk and uncertainty, research on the unknown is sparse and fragmented. Much of the work is focused on defining the phenomenon and coping mechanisms in a specific context. Based on the sociological idea that the unknown is dynamic and can transform into different types over time, we present a dynamic framework for coping with the unknown which we adapt to the challenges of international businesses during the covid-19 pandemic. We differentiate four basic processes for dealing with the different stages of the unknown and introduce concrete strategic tools managers can apply to identify unknowns and turn them into knowledge.

IM: **Surviving Pandemics: The Role of Spillovers**

Author: **Ariel Weinberger**, *George Washington U.*
Author: **Meghana Ayyagari**, -
Author: **Yuxi Cheng**, *U. of Liverpool Management School*

What role do spillover effects play in firm resilience during crises? Using high-frequency data on over 7 million import transactions, we ask this question in the context of the large trade disruption faced by US importers in the months immediately following the initial COVID-19 shock. While US firms saw a reduction in imports due to Covid-related trade disruptions to their suppliers, these effects were lower for importers in counties that received greater loans under the Paycheck Protection Program (PPP), a government stimulus program aimed at small businesses. While the importers are not direct recipients of PPP loans, a one standard deviation increase in indirect exposure to PPP reduces the effect of the supply shock faced by the firm by approximately one-fifth. The effects are largest in counties with larger number of small suppliers and higher input-output industry linkages, and those with greater share of small and medium enterprises (SMEs). We also see similar effects of PPP preserving job growth at the county level even as the trade shock takes a negative toll on local employment. Our results point to local spillovers between SMEs that were PPP recipients and large importers as being an important determinant of firm resiliency during the pandemic.

Foreignness and Location Choice of MNEs

Session Moderator: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*

IM: **Liability of Emergingness in Exporting: Transactional and Relational Dimensions**

Author: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*
Author: **Stephanie L. Wang**, *Indiana U., Bloomington*
Author: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Author: **Juan Bu**, *Indiana U., Bloomington*

We analyze the drivers of the liability of emergingness (LOE) in exporting, i.e., the additional disadvantages that emerging market firms suffer in their exports because they come from emerging markets. We propose that importer's negative perceptions of emerging market firms' home country institutions shape the type and degree of LOE. Specifically, we distinguish between formal and informal institutions to disaggregate the LOE into transactional and relational and propose that these dimensions constrain opportunities to engage in effective economic or relational exchange, stifling export performance. However, we also argue that information on the organizational capabilities or behavioral reliability of these firms helps counteract the negative effects. The analysis of a sample of 3,542 exporting firms from 25 emerging economies supports these arguments.

IM: **A Deep-Learning Analysis of Foreignness and Its Impacts on Cultural Goods' International Performance**

Author: **Qian Gu**, *Georgia State U.*
Author: **Yanqing Wabg**, *Georgia State U., J. Mack Robinson College of Business*
Author: **JiaMin Zhang**, *Fudan U. School of Management*

Globalization of cultural goods has gained substantive growth momentum in the past decade. Rooted in historical, social, legal, and political characteristics, cultural goods are inherently "foreign" when traded in a host country, presenting both opportunities and challenges for their international performance. Using the empirical context of 317 Hollywood movies in China from 2011 to 2018, we seek to understand whether and how foreignness affects the market performance of cultural goods in a host country. Given the sensory nature of Holly movies, we focus on semiotic foreignness — the differences in semiotic content of movie synopsis and posters between Hollywood and Chinese movies. Based on the deep learning and image processing approaches, we transformed textual data from movie synopsis and image data from movie posters into numerical representations of foreignness. We find an inverted-U shape relationship between semiotic foreignness and Hollywood movie's box office sales, such that optimal sales exist at the moderate levels of synopsis foreignness and poster foreignness. Our study has important theoretical and methodological implications for the research on foreignness and cultural goods.

IM: **Policy Support Schemes and MNE Investment Location Choice**

Author: **Pascal Simon Mayer**, *WWU Münster*
Author: **Christopher Albert Sabel**, *Rotterdam School of Management, Erasmus U.*

Studies confirm that policy support – operationalized as subsidies – drives foreign investment location choices (LC). However, prior work treats policy support as monolithic. This study investigates the effect of policy support on LC along two dimensions: Direct vs. indirect and firm-specific vs. non-firm-specific policy support. We argue that direct policy support (e.g., cash) has a greater positive effect on LC than indirect policy support (e.g., tax rebates). Further, we argue that non-firm-specific policy support (by application) has a greater positive impact on LC than firm-specific policy support (for single firm). We test our assertions on data of US firms and their LC in the EU and China. We find support for our hypotheses, contributing to the strategy literature by establishing a nuanced understanding of policy support.

IM: **The Price of Empire: Unrest Location and Sovereign Risk in Tsarist Russia**

Author: **Christopher Hartwell**, *ZHAW School of Management and Law*
Author: **Paul M. Vaaler**, *U. of Minnesota*

Research on politically motivated, often violent unrest (unrest) and sovereign risk (risk) overlooks how unrest location may matter for risk in geographically extensive states. We study Tsarist Russia to assess differences in risk effects when unrest occurs in Russian homeland versus more remote imperial territories. Analyses of 238 unrest events from 1820-1914 suggest that risk increases more for unrest in imperial territories. Echoing current events, we find that unrest in imperial Ukraine increases risk most. The price of empire included apparently higher costs in projecting force farther to repress unrest and retain the confidence of foreign investors financing that repression.

The Role of Managers on Global Business ✈💻

Session Moderator: **Vesa Peltokorpi**, *Hiroshima U.*

IM: **Foreign Language Proficiency, Language Discrimination, and Health Outcomes in Foreign Subsidiaries**

Author: **Vesa Peltokorpi**, *Hiroshima U.*

While language diversity is increasing in multinational corporations, relatively little is known about its aversive effects on employees. This paper draws on social identity theory to link low English proficiency to language discrimination and the accompanying stress and physical health-related outcomes. Data were collected from 330 local employees at four points in time over a 14-month period in a range of foreign subsidiaries in Japan. Findings suggest that foreign language anxiety moderates the positive relationship between local employees' low English proficiency and language discrimination, which in turn leads to increased emotional exhaustion and poor physical health symptoms.

IM: **A Laugh A Day Keeps The Failure Away: How Humor and Embeddedness Promote Expatriate Couples' Success**

Author: **Anh Ngoc Nguyen**, *U. of Bamberg*
Author: **Maike Andresen**, *U. of Bamberg*

Achieving career success is particularly challenging for expatriate couples as a result of the career transitions associated with relocation. Studies have addressed the obstacles to career success for dual-earner expatriate couples. What is missing, however, is an identification and empirical analysis of the resources that can contribute to the achievement of career goals. In this study, based on a sample of 109 dual-earner expatriate couples in Europe, we used the Actor-Partner Interdependence Model to identify the dyadic influences of self-enhancing humor and host community embeddedness on the subjective career success of partners in dual-earner expatriate couples. The data were collected at two points in time. Results reveal that a partner's community embeddedness mediated the positive relationship between self-enhancing humor and subjective career success. Moreover, the humor of men fostered the community embeddedness of their female partner, which in turn increased the women's subjective career success. At the same time, the humor of the partners was directly and positively related to subjective career success of both women and men. Based on the results, we provide recommendations for relevant stakeholders to facilitate the career of dual-earner expatriate couples.

IM: **Distributive Justice, Subsidiaries Executives' LMX with Headquarters, and Subsidiary Initiative**

Author: **Hsiang-Lin Cheng**, *National Chung Cheng U.*
Author: **Ching-fang Lee**, *Shih Chien U., Taiwan*
Author: **Hsien-Che Lai**, *National U. of Tainan*

This study examines how distributive justice perceived by subsidiary executives affects their tendencies to show initiative. Specifically, we suggest that when perceived distributive justice is at a low level, then an increase in distributive justice can help align an MNE's goals with those of subsidiaries. However, subsidiaries may emphasize in-role behaviors and consider initiative less imperative when perceived distributive justice continues to increase. Hence, we posit that distributive justice perceived by subsidiary executives will have an inverse U-shaped association with their tendencies to show initiative. Furthermore, we investigate how the subsidiary executives' leader-member-exchange (LMX) quality with headquarters managers may moderate this curvilinear effect of distributive justice on subsidiary initiative. Results based on a sample of MNEs based in Taiwan support our arguments.

IM: **Work Well-Being Profiles in Expatriates, Job Demands and Resources and Turnover Tendencies**

Author: **Tania Biswas**, *U. of Vaasa*
Author: **Liisa Mäkelä**, *U. of Vaasa*
Author: **Samu Kemppinen**, *U. of Vaasa*

Using three-wave longitudinal datasets from 416 Finnish expatriates, this study extends the work well-being research by examining whether discernable profiles can be identified based on development of vigor and exhaustion, and if so, whether such profiles differ in relation to meaning making (MM) through work and workplace ostracism. The study also explores if the vigor-exhaustion profiles differ in association with the different turnover tendencies of expatriates. Utilizing latent profile analysis, we identified the existence of three exhaustion-vigor profiles; profile 1, labeled "Stable" (n = 240, 58%), indicated stable low levels of exhaustion and stable high levels of vigor; profile 2, labeled "Unenergized" (n = 43, 10%), presented stable medium levels of exhaustion and vigor and finally, profile 3, labeled "Risky" (n = 133, 32%), indicated a stable high level of exhaustion and decreasing high level of vigor. Further we demonstrated that MM and workplace ostracism predicts the developmental profile membership in exhaustion-vigor continuum. Expatriates with higher levels of MM were more likely to belong to either stable or risky profile of exhaustion-vigor continua rather than the unenergized profile. Expatriates with higher levels of workplace ostracism are more likely to belong to risky or unenergized profile as compared to stable profile. The profiles are also seemed to be associated with turnover tendencies in expatriates, such that the expatriates belonging to unenergized group is likely to develop higher levels of both intention to quit the expatriation period and intention to leave the job. As for expatriates belonging to risky group, they might have higher intentions to leave their job but still show interest in working abroad. The findings from the study contributes to the expatriation literature by highlighting the existence of groups with different development patterns for exhaustion-vigor and identifying meaning making and workplace ostracism through work as an important predictor for the development profiles.

Informal Institutions vs Informal Networks: Construct Variety & Dynamics of Institutional Evolution

Panelist: **Sven Horak**, *St. John's U.*
Moderator: **Sheila M. Puffer**, *Northeastern U.*
Panelist: **Dana B. Minbaeva**, *King's College London*
Panelist: **Peter Ping Li**, *U. of Nottingham, China*
Panelist: **Yongsun Paik**, *Loyola Marymount U.*
Panelist: **Ibrahim Abosag**, *Alfaisal U.*

Now what precisely are informal institutions? Informal institutions have become an important research area in international management studies over the last decades. However, there are remarkable research gaps in the understanding of the characteristics of informal institutions and related constructs, as well as how they interact with the environment. Since informal institutions are regarded as an important contextual factor in management, the lack of clarity is a significant conceptual weakness for crafting theory and understanding the context of managing and organizing business activities. Despite the popularity of research on informal institutions, debates remain controversial regarding the relationship between informal institutions and informal networks and whether they constrain business transactions or enable and facilitate them. The symposium will address and discuss fundamental questions, such as: What exactly are informal institutions? Will they persist or recede during institutional transitions? Can informal networks be regarded as an informal institution as often done in the literature, or is it a distinct category on its own? Where is the difference between both, how do they relate to each other? What implications have institutional dynamics for businesses and policymakers?

IM Division HKUST Best Paper in Global Strategy Award Finalists

Session Moderator: **Klaus Meyer**, *Ivey Business School*

IM: **Selling on Digital Platforms Abroad: Modes of Control and Dual Liabilities**

Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*
Author: **Ziyi Chen**, *HKUST*
Author: **Ohchan Kwon**, *Hong Kong U. of Science and Technology*

Digital commerce platforms have created a new channel for multinational enterprises (MNEs) to sell in foreign markets. They can sell on such platforms as a third-party seller (also called a complementor) or as a supplier to the platform owner. The first approach gives better control of the marketing mix but it entails two challenges. The first is the liability of foreignness, and the second is the disadvantage of being a complementor on the platform, termed in this study as the liability of complementorship. The latter challenge arises from the competitive pressure from the platform owner who sets the rules of the platform and has data and algorithmic advantages. Data from Amazon are analyzed to show that maintaining control by selling as a third-party seller tends to predict lower sales compared to serving as a supplier to the platform owner. Yet the penalty associated with retaining control will be smaller for firms with more host-country experience and a stronger brand. In addition, an experimental study shows that consumers' brand loyalty and readiness for digital commerce influence the chances of success using the two modes of control. These findings provide new insight into how MNEs leverage digital platforms to expand global reach.

IM: **Can Multinational Enterprises Attain Competitive Advantages Through Hiring Offshore Experts?**

Author: **Yongjian Bao**, *U. of Lethbridge*
Author: **Wenlong Yuan**, *Asper School of business, U. of Manitoba*
Author: **Zhenyu Wu**, -

A popular argument about Huawei's human capital strategy is that offshore experts generate competitive advantage for telecommunication manufacturer Huawei by providing innovative output, but without integrating their knowledge with the activities of other key staff members at Huawei's home base (Schaefer, 2020). The contrast between Schaefer (2020) and mainstream international business theories led us to conduct further empirical analyses of Huawei. We find that there was extensive integration between offshore experts and Huawei's home base, and that dynamic matching led to catch-up and competitive advantage for Huawei. In analyzing the contributions of offshore experts, Schaefer (2020) overlooks the inherent uncertainty of R&D projects and the embedded nature of offshore experts' functioning.

IM: **Home Favors and Distant Troubles: The Impact of Home Bias on Global Litigation**

Author: **Byung Uk (Charlie) An**, *Washington U. in St. Louis, Olin Business School*
Author: **Shixiang Wang**, *Shanghai U. of Finance and Economics*
Author: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*

For firms engaging in global IP disputes, taking advantage of favorable treatment in the home country is a double-edged sword. While the chance of winning may be higher on the home turf, the foreign opponents may attribute the result to home bias (instead of true merit of the case) and seek revenge elsewhere. Using a sample of global infringement cases from 2005 to 2017, we first construct a home bias index for each country, and then analyze its effect on the response of global litigants. The results show that home bias is associated with a lower likelihood of appeal in the same court but a higher likelihood of countersuits, especially in foreign countries. Moreover, the foreign countries chosen for the countersuits tend to have a larger administrative distance from the focal country.

IM: **Subsidiary Grouping and Performance: The Role of Upper-echelon Size and Firm Age under Uncertainty**

Author: **Afshin Hamrabadi**, *U. of Trento*
Author: **Fabio Zona**, *U. of Trento*

New research on MNC subsidiaries has recently begun to examine the performance-enhancing effects of subsidiary grouping, i.e., the co-location of multiple subsidiaries in the same nation. While previously-published studies have shown that subsidiary grouping fosters the performance of the focal firm, this study draws from the upper echelon and liability of newness perspectives to reveal the inner mechanisms by which such a phenomenon occurs. It thus suggests that subsidiary grouping is not equally beneficial for all the subsidiaries; rather, its effects are magnified in those subsidiaries that have smaller upper-echelon managerial architectures and younger ages. Moreover, this study further examines the inner functioning of these two mechanisms, explaining why their effect changes under uncertainty. An analysis of a large sample of foreign subsidiaries in Italy provides support for the hypotheses. This study extends the theory of subsidiary grouping in that it illuminates the mechanisms linking grouping to performance. New promising perspectives for scholars and practitioners are offered and discussed.

Integrating Different Perspectives on Microfoundations Across the Management Field

Organizer: **Anupama Phene**, *George Washington U.*
Organizer: **Grazia D. Santangelo**, *Copenhagen Business School*
Panelist: **Nicole Coviello**, *Wilfrid Laurier U.*
Panelist: **Teppo Felin**, *Utah State U.*
Panelist: **Rosalie L. Tung**, *Simon Fraser U.*

The microfoundations perspective in strategy has advocated bringing the individual to the forefront in order to better understand firm heterogeneity. Research on microfoundations is surprisingly more recent in other management fields that study multilevel phenomena and where the ultimate outcome relies on cross-level mechanisms. The symposium seeks to stimulate a conversation across different management fields to integrate different developments on microfoundations. Aligned with this goal, the symposium gathers scholars who have contributed to microfoundations research to advance the microfoundations agenda in different directions.

Factors Affecting Firm Performance: A Diverse Consulting Perspectives

Session Moderator: **Najoie Nasr**, *Haigazian U.*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **What Motivates Participation in Corruption and How Does Such Participation Affect Firm Performance?**

Author: **Carl Greppin**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Kalle Lyytinen**, *Case Western Reserve U.*
Author: **Yunmei Wang**, *Case Western Reserve U.*
Author: **NNaoke Ufere**, *Case Western Reserve U.*

ABSTRACT What motivates local executives to participate in corrupt behaviors, to what extent do external factors such bureaucratic constraints affect bribing, and does bribing affect firm performance? To answer this question, we conduct a mixed methods study where we interview 21 executives in Kyrgyzstan and Georgia and quantitatively analyze World Bank Enterprise Surveys survey data for triangulation and complementary findings. Generally, the findings shed light on what motivates local executives in corrupt environments to decide to participate in bribing – it pays off and it is commonly viewed as acceptable. Interestingly, many qualitative findings differ from quantitative findings. Interviews suggest that informal competition has no effect on bribing or firm performance, whereas quantitative analysis indicates that informal competition has a small but statistically meaningful effect. Findings from the interviews complement the past research suggesting that bribing improves firm performance supporting a "grease the wheels" theory. Overall, the study adds insights into the nascent literature on corruption- especially in former Soviet Republics – and can inform policy makers and practitioners on means for reducing corruption.

MC: **Hidden Performance of Social Associations - Case of the Association 60000 Rebonds**

Author: **Thibaut .. Duboisy**, *CORHIS & U. Paul Valery, Montpellier*
Author: **Gérard Desmaison**, *ISEOR International Research Center, Écully, France*

Performance is a difficult concept to master and has been the subject of various interpretations in the academic field. Applied to the non-profit organizations, its common sense must be adapted to take in the social and societal matter. This paper's aim, based on the hidden costs and performance theory, is to propose a first evaluation of the hidden performance of an association. The data on which the evaluations are built comes from a survey put up by the Observatoire du Rebond, the scientific committee of the association 60000 Rebonds, an association which vocation is to accompany entrepreneurs who have experienced a judicial liquidation.

MC: **The Relationship Between Corporate Social Responsibility and the Social Impact: A Case Study**

Author: **Edmundo Lizarzaburu**, *U. ESAN*
Author: **Conrado Garcia**, *U. de Valladolid*

The purpose of this paper is to analyze the connection between corporate social responsibility (CSR) and social impact within the oil industry in an emerging market. Also, this paper introduces a comparative case study evaluation of three oil operations in Peru. This analysis is qualitative in nature and is complemented by secondary sources of information and the emerging literature on social impact, which gives high relevance to this study. The findings show that there are different stages of this relationship. Oil companies should focus on community responsibility, environmental responsibility and stakeholder engagement to get social impact, otherwise, if they fail in one or two conditions, Social Impact is partially accepted or withdrawn.

MC: **Implementing ESG in Organizations: Factors Affecting The Adoption**

Author: **Oluseyi Ajayi**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Timothy Fogarty**, *Weatherhead School of Management, Case Western Reserve U.*

There is emerging evidence in literature showing the importance of embracing the environment, social and governance (ESG) principles as resulting in positive accretive value to an enterprise. The increasing impact of stakeholder theory has driven many organizations around the globe towards embracing ESG principles and there has been increased attention paid to this phenomenon in recent years with many engaging consultants in policy work and providing advisory services at execution phase. This was not always so. ESG principles dates back many decades but few organizations embraced these principles. Few empirical studies have provided a link between embracing of ESG principles and organizational behaviors. There is limited available literature about empirical studies that investigated how decision making about adopting ESG principles is influenced by the organization behaviors and what these factors might be. In this study, we addressed this gap by conducting a qualitative inquiry using semi-structured interviews of thirty respondents consisting of board directors and corporate management in variety of settings in Nigeria, USA and the UK. The research focused on the personal lived experiences of this select thirty leaders - highlighting the roles they play, the difficulties they encounter and the contributions they make in decision making related to embracing ESG principles in their organization. Informed by the upper echelons theory and resource-based view of the firm, we found that leadership authority is the dominant factor driving the embrace and implementation of ESG principles as leaders are able to exert influence in the process of allocation of organizational resources to achieve desired outcome. Additionally, we identified other factors such as costs, regulation, reputation etc. that the consulting community could include as part of their toolkit as they seek to aid their clients desire to embed ESG related policy actions in their organizations. Lastly the study found ESG perceptions varies by country indicating that one hat may not fit all in the conduct of their engagement. ESG topic is too broad in general, so we focused mostly on the social aspect. Key Words: ESG, stakeholder theory, corporate governance, change, organizational behaviors, decision making, upper echelons theory, resource-based view .

Consultant Identity, Roles, Ethics, and Values in Management

Session Moderator: **Rida Elias**, *American U. of Beirut*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **Professional Identity Formation: Exploring the Effects of Covid-19 on Management Consulting Firms**

Author: **Svjetlana Pantic Dragisic**, *Linkoping U.*
Author: **Frida Pemer**, *Stockholm School of Economics*

Since the outbreak of the Covid-19 pandemic, organizations have been facing a worldwide anomaly, in which taken-for-granted work practices, norms, and identities are challenged. Building on a literature review and qualitative interview study, the current paper explores how consultants in management consultancies form and reform their identities as they adjust to working remotely via digital tools. We find that working virtually negatively influences both socialization and belonging in the consulting project teams. This, in turn, leads to unintended consequences, such as cultural changes, a loss of uniqueness, and increased risk of commodification. Thus, the anomaly that Covid-19 has presented us with, seems to normalize the hitherto "unique" management consultancies, thereby decreasing their status and competitiveness.

MC: **The Concept of Ego-altruism: A Contribution to the Analysis of Organizational Behavior in SEAM**

Author: **Henri Savall**, *ISEOR, U. of Lyon*
Author: **Veronique Zardet**, *U. of Lyon, IAE Lyon , MAGELLAN, ISEOR, FRANCE*

The concept of ego altruism has emerged progressively from multiple intervention-researches carried out by ISEOR center according to the SEAM methodology. A dynamic temporal analysis is necessary to better account for the fluctuations in the behaviors of all actors around the two poles of egocentrism and altruism. The originality of the concept comes from its dialectic character: each actor adopts a behavior partly guided by his/her personal interest, partly guided by the interest shown to others: colleagues, managers and companies. This concept sheds light on individual and collective behavior. The major managerial implications of the concept concern the need for management actions to act in concert with the actors, on their ego-altruism cursor. Specific applications in human resources management are also presented: recruitment, integration, and competencies and skills development.

MC: **New Practices in Professional Public Bureaucracies through the Discourses of Management Consultants**

Author: **Alicia Buyse**, *Business administration faculty, Laval U. (Québec, Canada)*
Author: **Carole Lalonde**, *Vice-dean Faculty of graduate and postdoctoral studies*

This research presents discursive practices of external management consultants regarding managerial innovations in professional public bureaucracies. The objective is to describe and interpret what consultants say about new practices in the public sector, using critical discourse analysis. We conducted semi-structured interviews with 25 consultants from the province of Quebec who worked mainly with public managers. Participants perpetuated three rhetorics. First, the public sector does not innovate because the culture does not allow it as several actors (top management, union, etc.) control and influence actions. Second, some public sub-sectors innovate but imitate other sectors where innovations improve incrementally existing routines and services. Third, consultants highlighted their crucial role and influence in innovation, as they help their clients to adapt new practices to the context and be more reflexive. They considered themselves to be promotors/pathfinders. In terms of practical implications, it is necessary to take into account public values and ethos and try to overcome prejudices to preserve and valorize public characteristics. Therefore, we recommend tailoring managerial interventions to the public sector culture. Theoretically, this paper contributes to management consulting and public sector fields by offering new critical insights on consultants' discursive practices of public innovation.

MC: **Using AI for Drug Development: Role of Management Consulting in Addressing the Question of Ethics**

Author: **Magdalena Schoeneich**, *Cambridge Judge Business School*

This paper explores the puzzle of the ethical adoption of AI in the context of drug development and the opportunities for management consulting professionals (often already participating in the process) to address some of the limiting dynamics impacting the successful execution of digital strategies. The mixed-methods design used in the study includes a scenario-based experiment (in which participants decide 'for' or 'against' the adoption of a fictional AI) and a multimedia intervention exposure (to assess its impact on the way 'ethics' are included in decision-making). The study findings set the ground for new approaches toward engaging with multilayered organizations (facing the strategy vs. execution discord). The study findings also challenge the consequential construct of the I-EDM models (Schwartz, 2015) by introducing the concept of a pre-mortem feedback loop (also positioned as a potential tool for management consulting practice).

Empowering the Worker in Law Enforcement: Efforts in Leadership and Change Consulting

Session Chair: **Therese F. Yaeger**, *Benedictine U.*
Panelist: **David Anderson**, *Benedictine U.*
Panelist: **Peter Sorensen**, *Benedictine U.*
Panelist: **David Jamieson**, *Jamieson Consulting Group, Inc*
Panelist: **Eric Sanders**, *Elmhurst U.*

Policing in the USA is currently at a crossroads and facing intense community and political pressure to reform. The social unrest from the murder of George Floyd and Breonna Taylor, among others, and the proposed legislative changes at the state and federal level to de-fund the police, has caused additional scrutiny for police departments. Today, police reform is a major social issue of national importance. Furthermore, intentional planned change in policing is widely viewed by scholars as difficult, if not impossible. This symposium will present on one such police department undergoing leadership and cultural changes. A newly hired Police Chief, initially acting as an internal consultant, will present the multiple change efforts undertaken at the police department. But through collaboration and empowerment, the Chief intentionally put the workers front and center during and after the leadership transition. Early results indicate that because workers felt empowered, critical changes were realized resulting in needed cultural changes which provided further momentum. After the Chief's presentation, four panelists will analyze the success (or lack) of the leader's change efforts through his multiple, contemporary change approaches; namely, a) appreciative inquiry; b) measurement of culture change; c) action research; and d) the leader's use of self. Management consulting issues, organization change struggles, and social issues (at both public sector and community stakeholder levels) are at the crux of this symposium. Participation by audience will provide further discussion, integrating participants' questions and comments.

Realigning Teaching To Cultivate Emotional Intelligence in Students

Panelist: **Payal Kumar**, *Indian school of hospitality*
Discussant: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*
Discussant: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*
Discussant: **Richard Peregoy**, *U. of Dallas, Satish & Yasmin Gupta College of Business*

Building on research that focused on the 'what' and 'why' of emotional intelligence, this symposium presents four papers from authors representing five countries, that provide empirical evidence on the 'how' of enhancing emotional intelligence amongst students. Only then will students be able to successfully navigate geo-political shifts in workers' identity including unrest at the workplace, mass resignations and intensified labor activism. Through this symposium we hope to encourage teachers to draw on constructivist strategies to create experiential, multi-disciplinary and transformational pedagogies, in which the teacher is both co-learner and role model, while the student is an active and fairly autonomous learner.

An International Perspective on the History of Management

Session Moderator: **Leslie A. DeChurch**, *Northwestern U.*

One of the criticisms of management history is that too much focus has been on the United States thinkers and corporations. This set of articles addresses this criticism and points out that management is the product of various places across time.

MH: **Courcelle-Seneuil: An Unknown Pioneer of Scientific Management**

Author: **Fabio Barbieri**, *U. of São Paulo (FEA-RP/USP)*
Author: **Joao Fernando Rossi Mazzoni**, *Baylor U.*

This paper discusses the pioneering work of the 19th-century French author Jean-Gustave Courcelle-Seneuil, in developing a scientific perspective on management, whose origin is commonly associated with the contributions of Frederick Taylor and Henri Fayol. Through a historical analytical approach and doing a parallel analysis with the origins of the economic theory, fragments of two works by Jean-Gustave Courcelle-Seneuil (1813-1892) are analyzed: The Theoretical and Practical Treatise on Industrial, Commercial and Agricultural Enterprises: A Business Manual (1855) and Ergonomics, the second part of the book Theoretical and Practical Treatise on Political Economy (1858), in which the author devotes a chapter to relevant aspects of management, such as entrepreneurship, production, human resources, finance, and accounting. In addition to noting the recurring and pioneering character of these contributions, Seneuil´s argument is in favor of a management science standing out, contradicting the belief of businesspeople of the time, according to whom management was something practical, impossible to be studied analytically. The paper seeks to contribute to the analysis of the origin of the division of the fields of administrative science, its origins, and its intersection with the economic science practiced in the nineteenth century.

MH: **Leadership and the Italian Renaissance (1360-1503)**

Author: **Leslie A. DeChurch**, *Northwestern U.*
Author: **Anoop A. Javalagi**, *Northwestern U.*
Author: **Kim Nguyen**, *Northwestern U.*
Author: **Karly Murphy**, *Northwestern U.*

The Italian Renaissance was a transformative period marked by extraordinary advances in art, architecture, literature, and science. Using historiometric methods, we explore the question: Which aspects of leadership may have fueled the Italian Renaissance, and in what ways do the unique theoretical lenses through which leadership scholars have peered best enable an appreciation of the leadership outcomes of the Italian Renaissance? We analyze the early Medici leaders in Florence through the lens of 16 modern areas of leadership theory, and classify their outcomes in terms of leader effectiveness, attitudes, behaviors, and cognition. Giovanni's leadership effectiveness is best explained by an information processing lens, and Cosimo's by social exchange theories. Piero di Cosimo and Lorenzo the Magnificent's leadership effectiveness is best explained through power theories, while Piero di Lorenzo's is best viewed through ethical theories. Comparing the Medici shows the amount of effective leadership incidents and outcomes declined with each successive generation, yet Lorenzo followed by Cosimo, fare best in exhibiting the lowest leadership ineffectiveness. This work provides a portrait of the leadership behind the Italian Renaissance, and it underscores the value of taking a multi-theoretical and equifinal view of leadership.

MH: **The Road Not Taken: Can Samsung become Wallenberg?**

Author: **Ji-Won Song**, *U. of Edinburgh business school*

Samsung Group's corporate governance has been controversial, despite its leading role in the international market. As the group faces an ownership succession issue, Samsung's corporate governance has become as important as their new products and services. While Samsung has been criticized by the public and shareholders for its corporate governance structure, the largest Swedish business group, the Wallenberg group, has earned praise for its transparent corporate governance system. Samsung has been investigating the Wallenberg group's corporate governance structure and corporate social responsibility practices since 2003. And since then, media and academics have been interested in looking at similarities and differences of both groups' corporate governance systems. However, Samsung made no observable change to its corporate governance until a recent announcement of corporate governance reform. This announcement, which hinted at a potential change of Samsung's no-union policy and family control structure, appears to echo Wallenberg's corporate governance system; a system that cares about labor participation and socially responsible corporate citizenship. Hence, this paper compares both groups' corporate governance systems and analyses how Sweden and Korea's national institutional environments have engaged with both groups' corporate governance systems. Borrowing from actor-centered comparative institutionalism, we highlight the important role of actors embedded in national institutional environments in shaping the groups' corporate governance and argue that Samsung will not follow in Wallenberg group's footsteps due to institutional constraints and management inertia.

MH: **The Past as a Symbolic Resource. The Case of Christian Dior**

Author: **María Fernández-Moya**, *CUNEF U.*
Author: **Caterina Moschieri**, *IE Business School*

This study examines how an "old" craft constructs its professional identity; and how later a formal organizational archive can help develop and preserve the legitimation of this professional identity. We analyze the designer Christian Dior and his fashion house, Maison Dior, over the 20th century, and the historical, organizational and societal factors in the process of transforming the craft of "couturier" into a new profession. We uncover the mechanisms through which Monsieur Dior received the endorsement that allowed him to become a "cultural creator" and developed a new identity for the profession, and how Maison Dior used the historical organizational archive as a source of symbolic resources to legitimize the profession. We propose a theoretical model of how the social and cultural historical context influences the legitimation of a profession and the institutionalization of organizational memory. Thus, the study reveals the recursive relationship and mutual constitution between the study of professions and organizational memory.

Managing Crisis and Vulnerability

Session Moderator: **Sargam Garg**, *California State U. Sacramento*

MOC: **Opening the Black Box of Employee Vulnerability to Cyberattacks**

Author: **Sargam Garg**, *California State U. Sacramento*

Organizations implement human resource management (HRM) practices to meet strategic goals by means of influencing employee behavior. In today's digital age, employee cybersecurity behaviors have become critical. Cybercrimes are on the rise, creating organizational liabilities, eroding credibility, and tarnishing the corporate image. Organizational insiders or employees are vulnerable to malicious actors such as hackers (or actors who are not authorized yet desire to access an organization's information system). How employees become vulnerable is a burgeoning area of scholarship across multiple disciplines. In cybersecurity research, there have been calls to study how best to manage employee cybersecurity behaviors. Despite research on employee deviance, currently little research exists on how employee (unintentional) deviations from organization expected cybersecurity behaviors arise or what makes employees vulnerable to novel cyberattacks. To address this issue, this inter-disciplinary and conceptual work draws from research in cybersecurity, strategic Human Resource Management (HRM), and social cognition. I develop a theoretical model that unravels the role of HRM practices in impacting employee vulnerability to cyberattacks. The model proposes different mechanisms (depleting attentional resources and incentivizing attention allocation) through which the content and process of HRM practices impact employee cognitive load and employee vigilance. The theorizing also disentangles how employee vigilance relates to employee vulnerability to cyberattacks. The theory developed in this paper has implications for research on cybersecurity and strategic HRM. This work also generates insights for managers.

MOC: **An Attention-Based View of Crisis**

Author: **Ravi S. Kudesia**, *Fox School of Business, Temple U.*
Author: **Tingting Lang**, *School of Business, Renmin U. of China*

The present study develops the attention-based view of crises. Drawing on extensive case studies of crises and developing novel theory on the distributed nature of attention, it provides a unifying framework. This framework spans across the many activities and actors involved in generating and responding to crises. The attention-based view of crises identifies how structural mechanisms—such as those related to frames, identities, emotions, routines, rules, roles, and resources—shape the quality of attention in ways that affect the likelihood of crisis. It then shows how when crises occur, they assemble actors throughout the system—including frontline, media, industry, and government actors—who engage in activities that may transform those structural mechanisms. In so doing, this study provides a comprehensive map of the literature and suggests how further insight into the quality of distributed attention might advance our capacity to face the crises of tomorrow.

MOC: **No Worker is an Island: The Importance of Community Support in Mitigating the Effects of COVID-19**

Author: **Marilla Kingsley**, *U. of Arkansas*
Author: **Kathryn Ostermeier**, *Bryant U.*
Author: **Danielle Cooper**, *U. of North Texas*
Author: **Miguel Caldas**, *U. of Texas at Tyler*
Author: **Adam C. Stoverink**, *U. of Arkansas*

In this study (n = 194), we sought to (a) extend previous work on healthcare workers on the frontlines of the COVID-19 pandemic to explore how critical incidents might be linked to negative work outcomes through affective identification and (b) investigate the potential moderating effects of empathic concern and perceived community support on these relationships. Using data collected from doctors and nurses during the COVID-19 pandemic and drawing from both trait empathy theory and social identity theory, we examine the relationship between intensity of involvement in the COVID-19 pandemic response, affective identification, and job outcomes such as psychological withdrawal and job engagement, as well as the moderating effects of empathic concern and perceived community support. Data was collected at two time points, with independent variables and moderators collected at T1 and the mediator and dependent variables collected at T2. We find that intensity of involvement is negatively associated with affective identification but only for those high in empathic concern. This reduced affective identification is then related to both increased psychological withdrawal and reduced job engagement. We also find support for the mitigating effect of community support indicating that while there is a cost to caring, support from others can reduce this negative effect.

MOC: **Cognitive Responses to a Shock-induced Organizational Crisis: Exploring Inertia and Changes**

Author: **Ian Combe**, *Aston Business School*
Author: **David John Carrington**, *Aston Business School*

We explore persistent and malleable beliefs within the mental models of decision makers when responding to a shock-induced organizational crisis. The empirical research was conducted with individuals at multiple levels within a single health service organization over a four-year period. The contested nature of defining customers in terms of either clients/patients or fundholders in the hybrid organization linked to normative-utilitarian dimensions of identity was found to be important to both persistent and malleable beliefs. The findings highlight considerable persistence in beliefs over time linked to normative factors associated with organizational identity or helping clients/patients with health recovery. This dimension of identity is part of the core driving philosophy of this health service organization. However, the findings also report malleable beliefs linked to factors associated with utilitarian (financial) dimensions of identity, as well as changes to objectives based on strategic options considered to resolve the crisis. The findings contribute to resolving prior contradictory empirical findings, within the domain of managerial and organizational cognition, when responding to external change. The findings also highlight fluctuations in consensus within decision makers when resolving an organizational crisis over time. Thus, the findings provide a counter-intuitive contrast to prior longitudinal studies which report unidirectional moves to consensus.

Organizer: **Maya Rossignac-Milon**, *IESE Business School*
Organizer: **Federica Pinelli**, *Columbia Business School*

Understanding the effects of experiencing a shared reality—or lack thereof—is more pressing than ever in an increasingly remote and fragmented workplace. From teammates laughing at an inside joke to coworkers sharing the same reaction to a new company policy, everyday organizational life is replete with instances of shared reality—i.e., the perception of sharing thoughts, feelings, and beliefs in common with other people about the world (Hardin & Higgins, 1996; Higgins, Rossignac-Milon, & Echterhoff, 2021). Yet, shared reality as a construct has not been directly examined in organizational contexts. We assemble leading shared reality scholars to examine questions like: What are the benefits of experiencing a shared reality in one's workplace relationships? What are the effects of being surrounded by coworkers who do not share one's opinions, and how can workers reconcile a lack of shared reality? Finally, how can diverse teams leverage shared reality to unlock their potential? Four empirical papers provide converging evidence that experiencing a sense of shared reality with one's coworkers plays a key role in social connection, prosocial behavior, trust, work meaningfulness, and the performance of individuals and teams.

Intuition in Organizations: Empirical Research with Training Implications

Organizer: **Marta Sinclair**, *Griffith U.*
Participant: **Alina Bas**, *U. of Strathclyde Business School*
Participant: **Viktor Dorfler**, *U. of Strathclyde Business School*
Participant: **Nicole Yeung**, *Griffith Business School, Griffith U.*
Participant: **Marta Sinclair**, *Griffith U.*
Participant: **Sagrie (Chantelle) Govender**, *U. of South Africa*
Participant: **Charmaine Williamson**, *U. of South Africa*
Participant: **Annemarie DAvis**, *U. of South Africa*
Participant: **Katharina Fellnhofer**, *ETH Zurich, Harvard U.*
Participant: **Vinod U. Vincent**, *Clayton State U.*
Participant: **Nishani Edirisinghe Vincent**, *U. of Tennessee, Chattanooga*

This stream of the 14th annual intuition symposium at AoM showcases new empirical research into the use of intuition in decision making and problem solving. All five contributions are based on findings from recent studies and draw conclusions relevant for intuition training. Bas and Dörfler explore whether knowledge workers in a crisis situation resort to intuition, how it is manifested when they do, and what kind of support they need to improve their performance in this respect. Yeung and Sinclair report a piloted training program for entrepreneurs, applying the body-based focusing method to help them surface intuitive insights and boost their confidence in intuition when making difficult decisions. Govender et al. outline how the reflective practice of pausing can influence strategy making through generation of intuitive metaphors and stimulation of other intuition-related processes. Fellnhofer examines in a study of risky decision making whether intuition can be triggered and measured by visual means, through the use of hidden images. Finally, Vincent and Vincent investigate conditions under which decision makers have the tendency to rely on their intuition or be swayed by data provided by artificial intelligence when dealing with an ill-structured problem.

Exploring Paradigms, Ethics and Leadership in Research

Session Moderator: **Ganapati Sinnoor**, *Central U. of Karnataka, India*

This session will cover various research papers related to the intersection of ethics, spirituality, and leadership. It will include a multilevel investigation of the dark side of leaders' ethics and spirituality, a study on reigniting leadership through VACHANA philosophy, an analysis of the link between spiritual capital and ethical leadership in family businesses, and a systematic review of research paradigms in the Journal of Management Spirituality and Religion. Attendees will gain insight into the complexities of ethical and spiritual leadership in various contexts and the different approaches taken in research on this topic.

MSR: **Work is Worship and Worker is the Leader: Reigniting Leadership through VACHANA Philosophy**

Author: **Ganapati Sinnoor**, *Central U. of Karnataka, India*
Author: **RANJITHA GP**, *Assistant Professor, Indian Institute of management Nagpur*

Pandemic 2019 has taught the world to prioritize humanity over capitalism. Ancient Indian philosophies and scriptures have pioneered the essence of management centuries ago. In this study we attempt to explore one of many such philosophies called "Vachana Philosophy" by Basavanna of the 12th century. Employee wellbeing and engagement is a competitive advantage in the VUCA world. Leadership theories have time and again reinforced the thought in organizations. In this paper we attempt to explore the vachana philosophy and its leadership theories. Through hermeneutics, grounded theory approach and case based analysis we empirically study selective Indian organizations and employees who follow vachana philosophy. The findings reflect and reiterate the "Employee first" philosophy and provide a parallel and contrasting view of the vachana philosophy and the dominant leadership theories.

MSR: **A Systematic Review of Research Paradigms in the Journal of Management Spirituality and Religion**

Author: **Tianyuan Yu**, *Mount Saint Vincent U.*
Author: **Benito Teehankee**, *De La Salle U., Manila, Philippines*
Author: **Raysa Geaquinto Rocha**, *NECE - Research Center in Business Sciences, U. of Beira Interior*

This study provides a systematic review of methodologies and research paradigms in the Journal of Management Spirituality and Religion (JMSR) in order to stimulate further development in spiritual research paradigms. To this end, we carry out a bibliometric analysis followed by a methodological analysis of JMSR articles over an 18-year period (2004-2021). Our bibliometric analysis finds that the main networks of JMSR authors form around editors and that international collaborations are predominated by Anglophone countries. Moreover, the most cited articles are either conceptual or quantitative studies restricted to positivist paradigms. Our methodological analysis discovers an "empirical turn" and a "qualitative gain" that reflect significant development of MSR research. Yet we find persistent dominance of positivism in the MSR domain and a lack of variety of non-positivist paradigms. We stress the need to create non-positivist evaluation criteria to support the quality of spiritual research paradigms. Lastly, we identify two promising spiritual research paradigms with philosophical and methodological implications.

MSR: **A Multilevel Investigation of the Dark Side of Leaders' Ethics and Spirituality**

Author: **Seerat Fatima**, *institute of management sciences bahauddin zakariya U.*
Author: **Muhammad Abbas**, *National U. of Computer and Emerging Sciences*
Author: **Muhammad Mubbashar Hassan**, *Capital U. of Science and Technology*

This study examined the relationship of servant leadership with followers' work meaningfulness. The study also examined the moderating roles of leaders' ethical sensitivity and spiritual wisdom in this relationship. A time-lagged design was used to collect data from employees (N = 397) and their direct supervisors (N = 110) across many organizations. A multilevel structural equation modeling was used to test the study's hypotheses. The findings revealed that servant leadership was positively related to work meaningfulness. Moreover, leaders' spiritual wisdom antagonistically moderated the relationship between servant leadership and meaningfulness such that servant leadership had inverse effect on the followers' meaningfulness when spiritual wisdom was high. However, servant leadership was positively related to meaningfulness in case of low spiritual wisdom. Further, leaders' ethical sensitivity did not moderate the relationship between servant leadership and meaningfulness. Finally, theoretical implications, practical implications and future research directions are discussed.

MSR: **Deciphering the Link Between Spiritual Capital and Ethical Leadership in Family Businesses**

Author: **Luciana Lucena De Lima**, *U. Ramon Llull, ESADE Business School*
Author: **Maria Jose Parada**, *U. Ramon Llull, ESADE Business School*
Author: **Allan Fernando Discua Cruz**, *Lancaster U. Management School*

Research indicates that spiritual values are related to ethical behavior; yet, what makes this association occur is still poorly understood. Family firms are known to strive for ethical behavior. It is also known that families play an important role in transmitting values across successive generations, including the family's spiritual belief system. Our study engages in an interpretative, qualitative analysis of the experience of Magazine Luiza S.A., a publicly traded multigenerational family business in Brazil that has integrated spiritual values in its organization. Drawing upon spiritual capital and ethical leadership literature, our findings suggest that an owning family's spiritual capital influences a leader's expressions of ethical orientations, which, in turn, lead to more favorable business practices towards employees, such as equal working opportunities, inclusion of less privileged groups in the workplace, and an enhanced welfare scheme to employees. Our findings highlight antecedents that facilitate the occurrence of spiritual capital in the context of family firms and offer insights into the role of spiritual values in ethical leadership.

Spiritual Care, Ethics, and Well-being in Diverse Organizational Contexts

Session Moderator: **Sharda Nandram**, *Vrije U. Amsterdam*

This session brings together papers that explore the intersection of spirituality, ethics, and well-being in diverse organizational contexts. The session will cover topics such as spiritual care from a Hindu perspective in the Dutch context, the ethics of Adab and Islamic welfare organizations through dialogue with food, a preliminary and comparative assessment of archdiocesan codes of conduct for working with youth, the ties that bind Benedictines and the effectiveness of ethics codes for family businesses, and the impact of organizations' faith dispositions on employee health and well-being during COVID-19. Attendees will gain insights into the role of spirituality and ethics in organizational contexts, as well as how they can support employee well-being during crises. Overall, this session aims to provide a thought-provoking discussion on the importance of spiritual care, ethics, and well-being in diverse organizational contexts.

MSR: **Defining Spiritual Care From A Hindu Perspective: Lessons From The Dutch Context**

Author: **Sharda Nandram**, *Vrije U. Amsterdam*
Author: **Puneet Bindlish**, *Vrije U. Amsterdam*
Author: **Gunjan Joshi**, *Nyenrode Business U.*

Spiritual care holds a special promise towards the "worker at the center" vision for "future of work". However, it lacks a workable ontological foundation in management context due to high heterogeneity. We attempt to define spiritual care from a perspective that emphasizes the interconnectedness of mind, body, and spirit. The definition of spiritual care is derived through a novel integrative approach adapted from the Tarka method of the Hindu philosophical system. Past spiritual care definitions were systematically reviewed to identify the gaps in current literature and a consensus on the proposed definition was reached after extensive validation with spiritual care providers in the field. The study also highlights the role of spiritual care at workplaces which is considered an effective intervention to improve workers health. However, a limited number of studies in this regard limits the development of the ontological foundation. Increasing the scope of spiritual care to domains like business will help in recognising the positive outcomes of spiritual based interventions. The proposed definition is flexible and allows scholars to develop their own thick definitions for practice and contribution to the field, while maintaining interoperability among diverse traditions within Hindu spiritual care.

MSR: **Organizations' Faith Dispositions and Support for Employees' Health and Well-being during COVID-19**

Author: **Stuart A. Allen**, *Robert Morris U.*
Author: **Erin Whitney G. Moore**, *Wayne State U.*

Organizations' actions and attitudes toward workplace spirituality and religion (faith dispositions), captured in Miller and Ewest's (2015) Faith and Work Organizational Framework, have been noted to correlate with employees' perceptions of organizational support. The COVID-19 pandemic provided an opportunity to examine how employees felt supported, not only in terms of broader perceived organizational support (POS), but more specifically in terms of how they felt their organizations supported or cared for their health and well-being. We proposed a narrower subtype of POS called POS for health and wellness (POSHW). Miller and Ewest's framework, which measures four organizational faith dispositions (faith-avoiding, faith-based, faith-safe, faith-friendly) has also only been applied in research within qualitative or subjective coding-based studies. We, therefore, developed a new quantitative measure of this framework, POSHW, and POS during COVID-19 (POSCOVID) to support this study. Using two pilots and a final U.S. sample, we demonstrated that POS, POSHW, and POSCOVID were – as expected – correlated, but that the new constructs measured additional unique variance. Additional validity checks, including use of multigroup confirmatory factor analysis, confirmed the measures' validity. Significant positive correlations were found between the faith-friendly disposition and the three support constructs for organizations with and without health and wellness programs. In addition, significant negative correlations were found for faith-based organizations without health and wellness programs. This study's contributions include the new constructs and validated measures, and evidence of faith dispositions impacting employees' POS, POSHW, and POSCOVID. Practical and theoretical implications for research and organizational policy are discussed.

MSR: **Dialogue through Food: The Ethics of Adab and Islamic Welfare Organization**

Author: **Gregory Jackson**, *Freie U. Berlin*
Author: **Sumrin Kalia**, *U. College London*

Previous literature suggests that faith-based organizations (FBOs) use religious ideas to strengthen civic engagement, but these strong religious ideas may sometimes prevent FBOs from building bridges across existing social divides. We present a case study of an Islamic charity in Pakistan, the Saylani Welfare Trust, which orientates its civic engagement around the ideas of 'Adab': a central code of behaviour within Sufism that stresses correct attitude and courtesy toward others. Using the concept of dialogic organizing and insights from practice theory, we explore the question: how do FBOs use religious ideas to increase dialogic forms of civic engagement? The empirical material draws on ethnographic research of Saylani's food spreads [Dastarkhwan], as well as interviews with staff, patrons, and other donors. Our findings show how Saylani's organizational practices based on Adab ethics of self-restraint and civility are embodied in the use of food as a socio-material boundary object. Our study highlights the ethical pre-conditions for dialogic organizing, which are visible in extremely divided contexts such as Pakistan.

MSR: **A Preliminary and Comparative Assessment of Archdiocesan Codes of Conduct for Working with Youth**

Author: **Cathy Driscoll**, *Saint Mary's U., Canada*
Author: **Chiedza Chigumba**, *Saint Mary's U., Canada*
Author: **Robert Murray**, *St. Francis Xavier U.*

Codes of conduct for working with youth, like corporate codes of conduct, have increasingly become institutionalized organizational structures that extend some degree of legitimacy in response to organizational misconduct and crises. We focus on codes of conduct in the Canadian Roman Catholic Church developed in response to the clergy sexual abuse crisis and other misconduct in the institutional church. We carried out content analysis of safeguarding codes of conduct in archdioceses across Canada. This analysis was then used to compare the Canadian archdiocesan codes of conduct with the findings of Dallam and colleague's 2020 study of US archdiocesan safeguarding practices (Dallam, Hamilton, & Glocker, 2021). We provide evidence of gaps and inconsistencies with regards to codes within the Canadian Catholic church, as well as evidence of some notable differences between archdiocesan codes of conduct in the two countries. We also review the literature on organizational legitimacy and do a preliminary exploration of the basis of legitimacy behind these archdiocesan codes of conduct. We discuss some implications for future research and practice.

MSR: **The Ties that Bind Benedictines: Are Ethics Codes Good for Family Businesses?**

Author: **Sheila Hanson**, *U. of North Dakota*
Author: **Ksenia Keplinger**, *Max Planck Institute for Intelligent Systems*

Values are fundamental to family business. In this conceptual paper, we draw upon the context of Benedictine organizations to consider how both organizational commitment and family functioning may influence family businesses. The monastic family, established by a transactional view of family, demonstrates nearly 1,500 years of shared organizational and family business history. Specifically, we propose that the communication of virtues and values in ethical guidelines first presented in an ancient ethics code that is still followed today, worldwide, in economically self-sustaining Benedictine organizations results in value-driven guidelines that contributes to individual organizational commitment and family functioning. The bonds of individuals within organizations are strengthened via individual lifetime organizational commitment, while family business longevity is fostered by communication of values-driven guidelines that nurture healthy family functioning. Together, these antecedents lead to overall family business resilience, which contributes to the health and longevity of family businesses.

Management and World Peace

Session Chair: **Anil K. Maheshwari**, *Maharishi International U.*
Session Chair: **Satinder Dhiman**, *Woodbury U.*
Presenter: **Judith A. Neal**, *Edgewalkers International*
Presenter: **Yochanan H. Altman**, *WirtschaftsU. Wien*
Presenter: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*
Presenter: **Nisha Pandey**, *Vivekanand Education Society's Business School, Mumbai, India*
Presenter: **Kathryn Goldman Schuyler**, *Alliant Intl U. / Coherent Change*

In a world increasingly threatened by conflict, the majority of workers cannot be expected to do their jobs let alone flourish. World peace is both a lofty principle and a frontline concern for employees living and working in conditions of war. It is incumbent on management scholars to address such a reality. Can business management be a source of world peace? If yes, how may it help the workers become agents for world peace and flourishing? Businesses can use their corporate social responsibility as well as philanthropic resources, in addition to sustainable business practices, to bring flourishing to the community and the world. Traditionally, the focus of business is on communication, culture, conflict resolution, education, diversity, inclusion, sustainability, work-life-balance, stress management, active listening, etc. However, there is little emphasis on more holistic concepts such as development of consciousness, spirituality, wisdom, inner peace, mental health, well-being, etc. This is the question that this symposium seeks to address. We bring to bear a wide range of wisdom traditions and perspectives to help the workforce become more attuned with their own purpose and experience peace and flourishing. Individual workers can also utilize many spiritual practices to bring their whole selves into a healthy workplace and experience a more fulfilling life. Seven seasoned management researchers who have honed the art of asking big questions and thinking differently. will present their top ideas, whereafter there will be a debate and discussion to bring out at least one or two big takeaway action ideas to get us all started towards a more direct and faster path to peace and prosperity for all the workers of the world.

Work Engagement and Performance

Session Moderator: **Joohyung Kim**, *City U. of Hong Kong*

NEU: **Chronotype And Work Engagement: The Influence Of Work Fatigue And Time Management Planning**

Author: **Yan Pan**, *Xi'an Jiaotong U. School of Management*
Author: **Stefan Volk**, *U. Of Sydney*
Author: **Herman Tse**, *Monash U.*

The present study examined the relationship between individual differences in chronotypes along the morningness-eveningness continuum and work engagement. Building on the job demands-resources model we hypothesized that work fatigue mediates the relationship between eveningness and work engagement. Furthermore, we hypothesized that time management planning buffers the negative indirect effect of eveningness on work engagement via work fatigue. Our moderated-mediation model was tested in a field study of 252 employees working normal day shifts. Findings demonstrated an indirect negative relationship between eveningness and work engagement via work fatigue which was weaker at higher levels of TMP and stronger at lower levels. We discuss implications of our findings for work fatigue and work engagement of younger employees in which eveningness is most prevalent.

NEU: **Exploring Trait-like Neurophysiological Predictors of Shared Mental Model and Task Performance**

Author: **Imogen Weigall**, *U. of South Australia*
Author: **Ruchi Sinha**, *U. of South Australia*
Author: **Zachariah Cross**, *Dynamic Brain Lab, Northwestern Feinberg School of Medicine*
Author: **Ina Bornkessel-Schlesewsky**, *U. of South Australia*
Author: **Matthias Schlesewsky**, *U. of South Australia*

In the field of management research, the endeavour to understand team cognition has primarily relied upon self-reported or observed proxies of cognitive capabilities, with limited work on the effects of more nuanced measures of cognition. Recent research from the field of cognitive neuroscience demonstrates that individual differences in electrophysiological (brain) activity recorded while at rest (‘resting-state’ brain activity) can predict cognitive and task performance. In this study, we integrate cognitive neuroscience work with the management literature on team cognition to explore how the composition of dyads’ resting-state neural metrics, alongside standard psychometric measures of personality and cognitive ability, predicts shared mental model (SMM) and dyadic task performance. Resting-state brain activity was recorded from sixty-two participants (31 dyads) using electroencephalography (EEG). Participants engaged in a cooperative, online kitchen management task requiring them to play the role of chefs in a simulated restaurant. Preliminary analyses reveal resting-state EEG aggregated to a dyadic level predicts SMM and task performance. A number of Big Five personality traits also indirectly predicted performance through SMM. The neurophysiological measures of cognition provide significantly more incremental predictive value for SMM and dyadic task performance. This study highlights the importance of exploring the simultaneous predictive validity of neurophysiological and psychological antecedents of SMM among dyads. Such work has practical implications for the selection and recruitment of working dyads/teams.

NEU: **How can Organisations Support and Maximise the Contributions of Neurodiverse Employees?**

Author: **Lilian Otaye-Ebede**, *U. of Liverpool Management School*
Author: **Mark Loon**, *Griffith U., Australia*
Author: **James Stewart**, *Liverpool John Moores U.*
Author: **Stefanos Nachmias**, *NTU*

Neurodiversity is envisaged to benefit organizations by contributing to outcomes such as quality and innovation. However, existing organisational efforts to manage diversity, otherwise successful, may not be fungible within the context of neurodiversity. Drawing on climate theory for inclusion, this conceptual paper aims to develop a dynamic, multilevel model that enables organizations to effectively manage and optimize the performance of both neurodiverse and neurotypical employees using more discerning practices. In doing so, we unpack and finesse the implications of neurodiversity at micro, dyadic, meso and macro levels. We further provide new insights and create a new trajectory of research in organisational justice literature by exploring and integrating the perception of fairness by neurodiverse and neurotypical employees, and how these have affective and cognitive consequences. Our conceptual model serves as an initial framework to inform and guide future research.

NEU: **Physiological Measures of Emotional Arousal and Regulation Predict Positive Reciprocity**

Author: **Nir Milstein**, *HEC Lausanne - UNIL*
Author: **Marina Marina Rosenblatt**, *Bar Ilan U.*
Author: **Maayan Katzir**, *Bar Ilan U.*
Author: **Eliran Halali**, *Bar Ilan U., Department of Psychology, Israel*

Previous research has shown that emotional arousal predicts negative reciprocity, whereas emotion regulation is related to self-interested behavior. However, research on positive reciprocity is scarce. To overcome biases related to self-reports, we took a biological approach to study relationships between emotional arousal, emotion regulation, and positive reciprocity. We employed the trust game, a well-known paradigm to study the often-existing tension between self-interested behavior and positive reciprocity. Fifty-nine participants played the role of receivers and chose how much money (if any) to send back to an anonymous investor who trusted them. Before and during the game, we measured participants' electrodermal activity – a marker of emotional arousal, and heart-rate variability – a marker of emotion regulation. Findings showed that electrodermal activity during the game positively predicted reciprocity, whereas heart-rate variability before the game predicted a preference for self-interest. These findings suggest that situational emotional arousal and dispositional individual differences in emotion regulation are also involved in positive reciprocity.

Mindfulness Leadership and Organizational Interventions

Session Moderator: **Qurat Ul Ain Talpur**, *ESSCA School of Management*

OB: **The Curvilinear Linkage between Workplace Interruptions and Task Performance: The Role of Mindfulness**

Author: **Qurat Ul Ain Talpur**, *ESSCA School of Management*
Author: **Ghulam Murtaza**, *Kedge Business School*
Author: **Rahman Khan**, *NEOMA Business School*
Author: **Stevan Hobfoll**, *STAR Consultants-STress, Anxiety-Resilience*

This study tests the interactive model of workplace interruptions such as intrusions, distractions, discrepancy detections, and breaks with task performance. Specifically, we suggest the curvilinear role of workplace interruptions in predicting task performance. In addition, we explore how mindfulness moderates these nonlinear relationships. Using time-lagged multi-sourced survey data from 323 supervisor-subordinates working in manufacturing, retail, and service industries, our results show significant inverted U-shaped relationships of intrusions and breaks with employee task performance. Furthermore, these relationships are significantly moderated by employees' mindfulness. We confirmed that workplace interruptions might not necessarily be wrong, but the level of occurrence coupled with an individual's psychological resource, i.e., mindfulness, predicts employees' task performance. Based on these findings, we discuss the importance of workplace interruptions and mindfulness resources for effective performance. Keywords. Workplace interruptions, task performance, mindfulness, nonlinearity

OB: **How Leaders and Their Teams Jointly Shape Leadership Behaviors When Being Congruent in Mindfulness**

Author: **Julia Katharina de Groote**, *WHU Otto Beisheim School of Management*
Author: **Stefan Razinskas**, *Freie U. Berlin*
Author: **Andreas Hack**, *U. of Bern*
Author: **Jessica Niedermair**, *U. of Bern*

Leading transformational by attuning to individuals' needs is crucial to help teams collectively perform. Being mindful matters in this regard because it allows both leaders and their teams to be more receptive to each other and better change perspectives to come up with non-intuitive solutions. Although the bright side of regularly pausing and making sense of current experiences is well-established, recent findings call into question whether a more in mindfulness available to leaders and their teams really benefits their performance. Knowledge about the true value of mindfulness in teams is yet critical because today's tasks are seldom solved individually. Based on supplementary fit logic, we theorize that whether the mindfulness of leaders and their teams becomes an asset is by no means guaranteed but depends on how well both fit together to co-create leaders' individualized consideration and intellectual stimulation. We suggest that mindful leaders require mindful teams for leveraging better collective performances through leadership behaviors. We test this theory based on multi-respondent data from 98 work teams and find that teams ultimately perform more effectively and innovatively the more congruent leader and team mindfulness are. We discuss the implications of this co-creation of leadership due to leader–team mindfulness congruence.

OB: **Follower Creativity and the Mixed Blessing of Mindful Leadership**

Author: **Beini Liu**, *Beijing Technology and Business U.*
Author: **Scott Dust**, *U. of Cincinnati*
Author: **Minya Xu**, *Guanghua School of Management, Peking U.*

Workplace mindfulness research recognizes that although mindfulness can be of benefit in organizational settings, it also has its drawbacks. Interestingly, social scientists and practitioners alike, so far, assume that mindful leadership is inherently beneficial. We portend that although mindful leadership helps with socio-emotional relations (i.e., affect conflict), it might hurt with respect to socio-cognitive relations (i.e., cognitive conflict). Along those lines, drawing on social information processing theory, we propose that mindful leadership is a mixed blessing as it relates to follower creativity. Using a multi-wave, multi-source field study, our results revealed that mindful leader was negatively associated with affective conflict, which in turn increased follower creativity. However, mindful leadership was negatively associated with cognitive conflict, which in turn decreased follower creativity. Further, leader's organizational embodiment strengthened the positive indirect effect of leader mindfulness on follower creativity through affective conflict whereas leader's organizational embodiment did not moderate the indirect effect through cognitive conflict. Theoretical and practical implication specific to mindful leadership, mindfulness, and creativity are discussed.

OB: **An RCT Evaluation of the Effectiveness of a Mindfulness and Positive Psychology Intervention**

Author: **Anya Madeleine Johnson**, *U. Of Sydney*
Author: **Felicia Huppert**, *U. of Cambridge*
Author: **Shanta Dey**, *U. Of Sydney*
Author: **Greg Fairbrother**, *U. Of Sydney*
Author: **Nickolas Yu**, *Sydney Local Health District*

Nurses are the engine room of our hospitals, providing continuity of care for patients often putting the patients' needs above their own. Yet the nursing workforce is in crisis, with significant burnout and exhaustion and record numbers leaving the profession. As a result, there is an urgent need to identify evidence-based ways of supporting nurse wellbeing. In this research, we use a randomised-controlled trial (RCT) design to evaluate the effectiveness of a mindfulness-based and a positive psychology-based wellbeing intervention with nurses in a hospital context, compared to a waitlist control. We used a multi-source, multi-method approach with repeated measures to provide a comprehensive evaluation of both interventions. Our research found statistically significant sustained improvements in hedonic wellbeing for both interventions. In addition, both interventions demonstrated sustained improvements in self-compassion with the Mindfulness intervention reducing avoidance of uncomfortable experiences. We also found some evidence for practice effects, with significant associations between practice of the techniques and ideas during the intervention and outcomes. Importantly we also found significant improvements in patients' experience of care with patients of nurses who participated in the mindfulness and positive psychology interventions reporting significantly greater compassionate care and confidence in the care they received, respectively. Finally interviews with participants also revealed how nurses reflected on their experiences in the interventions. In conclusion, there is evidence to support both interventions, and integrating the two may be an effective way forward.

Leadership and Follower Deviance and Undermining

Session Moderator: **Benjamin Korman**, *U. of Konstanz*

OB: **Biting the Hand that Feeds You: When Better Leader Treatment Motivates Supervisor-Directed Deviance**

Author: **Benjamin Korman**, *U. of Konstanz*

Recent work has shown that perceiving oneself as being treated better by a leader compared to one's coworkers' treatment by the same leader (i.e., leader-member exchange social comparison or LMXSC; Vidyarthi et al., 2010) motivates aggressive behavior towards one's colleagues (i.e., social undermining) (Korman et al., 2020). Extending these findings by incorporating prior research on parental overindulgence into the LMXSC literature, I propose that favorable downward social comparisons of LMX (high LMXSC) can also motivate aggressive behavior towards one's leader (i.e., supervisor-directed deviance). Specifically, I contend that LMXSC elicits hubristic pride which, in turn, motivates supervisor-directed deviance in employees who were overindulged by their parents/guardians as children. A vignette experiment and a time-lagged field study provide support for my theory. This work reveals when and why employees who perceive themselves as receiving better leader-treatment than their coworkers can demonstrate aggressive behavior towards their supervisors.

OB: **The Ache of Being a Leader: Followers' Deviance and Leader Identity Threat**

Author: **Yuyan Zheng**, *Surrey Business School*
Author: **Olga Epitropaki**, *Durham U.*
Author: **Long Zhang**, *Hunan U.*

Drawing from leader identity construction theory, we explore the role of follower deviant behaviors as triggers of leader identity threat and implications for follower task performance. We further examined the role of GLMX as a boundary condition in the relationship between follower deviance and leader identity threat and abusive leadership as a mediating mechanism in the relation between leader identity threat and follower task performance. Results from three studies (a cross-sectional pilot study, a multilevel, multi-sourced and time-lagged study, and a daily within-person study) show that follower deviance positively relates to leader identity threat, which consequently leads to higher levels of abusive supervision and lower levels of task performance. In addition, we show that the harmful effects of follower deviance on leader identity threat are stronger when GLMX is high. Our results provide novel insights on the relational nature of leader identity threat experiences and their important implications for the enactment of leadership and follower performance.

OB: **Shedding Light on Why Leaders Might Desire Dark Personality Employees**

Author: **Eric Mercadante**, *NYU Stern School of Business*
Author: **Steve Heine**, *U. of British Columbia*
Author: **Karl Aquino**, *U. of British Columbia*
Author: **Daniel Skarlicki**, *U. of British Columbia*

Although individuals with dark personality traits (e.g., Machiavellianism, psychopathy, narcissism) have been shown to impact organizations and their members negatively, they are routinely found across levels of organizations and are often considered effective in their roles (Pfeffer, 2021). In the present paper, we explore how leaders' motivation to achieve agentic goals might lead them to favor employees high in dark personality traits, whereas the motivation to achieve communal goals might lead to the opposite preference. We test our predictions in the context of two leadership strategies, dominance and prestige, because these strategies are associated with different prioritization of agentic and communal goals. We test our hypotheses across six studies (including two supplemental studies; N = 1564 managers), and find evidence that dominance-oriented leaders show an elevated desire to hire and favor dark personality employees, whereas prestige-oriented leaders show the opposite pattern. We further find that these attitudes emerge, in part, from leaders' motivation for agentic or communal goals. The findings provide insight into why leaders can deliberately favor employees with dark personality traits and which leaders are most likely to do this.

OB: **When and Why the Use of Electronic Performance Monitoring Leads to Supervisor Undermining?**

Author: **Qi Zhang**, *Nanjing U.*
Author: **Peipei Shu**, *Zhongnan U. of Economics and Law*
Author: **Dongmei Zhao**, *Zhongnan U. of Economics and Law*
Author: **Siyuan Chen**, *Zhongnan U. of Economics and Law*

Drawing from approach/inhibition theory of power and self-identity orientation theory, we develop a conceptual model that examines the influence of supervisor electronic performance monitoring (EPM) use on supervisor undermining through the mediating role of sense of power. We collected multi-wave data from 225 supervisors to test the conceptual model. The results showed that supervisor EPM use has a positive relationship with the sense of power, which in turn positively relates to supervisor undermining. Furthermore, individual identity orientation was found to moderate the relationship between supervisor EPM use and sense of power, and the indirect relationship between supervisor EPM use and supervisor undermining via the sense of power. Specifically, supervisors with high levels of individual identity orientation are more likely to generate a sense of power and exhibit undermining behaviors toward subordinates associated with EPM use. We discuss the theoretical and practical implications of these findings.

Artificial Intelligence: Using Robots and Voice Assistants in Organizations

Session Moderator: **Qi Fang**, *Zhejiang U.*

OB: **The Robot with the Lamp? The Disruption and Reconstruction of Service Workers' Meaning of Work**

Author: **Qi Fang**, *Zhejiang U.*
Author: **Yukun Liu**, *Zhejiang U., China*
Author: **Huafang Zhang**, *The Fourth Affiliated Hospital Zhejiang U. School of Medicine*
Author: **Li Yang**, *The Fourth Affiliated Hospital Zhejiang U. School of Medicine*

With the rapid development of digital technologies, more and more service robots are entering the workplace, freeing service workers from undertaking routine tasks and improving work efficiency. Meanwhile, the adoption of service robots at work may also bring about unintended consequences to service workers, with a crucial one being that the replacement of human tasks by service robots is changing the nature and content of service work and disrupting how human service workers derive meanings from the work they do. Using data from an ethnographic study, which enables us to immersively observe and conceptualize service workers' meaning–related reactions and actions after using service robots, we develop a process model for meaning disruption and reconstruction based on the job impact framework. Our analysis suggests that the use of service robots disrupts service workers' meaning of work by affecting their contact with beneficiaries, including the depth, duration, frequency, breadth, and physical proximity of contact. In addition, we also identify the coping strategies of service workers who reconstruct their meaning of work through job crafting, including behavioral approach crafting, cognitive approach crafting, behavioral avoidance crafting and cognitive avoidance crafting. This model adds fresh and valuable insights to the emerging literature on service robots at work and provides new knowledge regarding the impact of service robots on service workers' meaning of work.

OB: **Robots as Leaders And Followers: A Systematic Review**

Author: **Christoph Daldrop**, *Christian-Albrechts-U. of Kiel*
Author: **Annabelle Ludwig**, *Christian-Albrechts-U. of Kiel*

Robots increasingly permeate workplaces in the roles of coworkers, subordinates, and increasingly also of leaders. Being perceived as warm and competent are important evaluative outcomes based on which organizational members determine their willingness to collaborate. Hence, the question arises of how robots are evaluated regarding warmth and competence and what role their appearance plays in these evaluations. To systematize so far scattered research findings, we conducted a systematic literature review to provide a comprehensive overview of the current state of research on human's perception of warmth and competence of various types of robots as leaders, followers, and peers and account for the role of appearance. Results show that people perceive robots as less warm but equally competent than human coworkers. Anthropomorphism, the tendency for robots to imbue human-like characteristics, positively affected perceived warmth and competence, yet only under certain circumstances. Finally, people perceived robots differently according to the robot's status (coworker, subordinate, leader). The results highlight the importance of understanding the impact of anthropomorphism and hierarchical status on the perceptions and evaluations of robots and point to various aspects that need to be considered for successful human-robot collaboration.

OB: **Social Responses to Help from AI-enabled Voice Assistants and Their Effects on Job Satisfaction**

Author: **Jonas Ossadnik**, *U. of Trier*
Author: **Katrin Susanne Muehlfeld**, *U. of Trier*
Author: **Laszlo Goerke**, *U. of Trier*

Increasing adoption of AI-enabled technology, such as digital voice assistants (VA), in the workplace raises questions about the consequences for employees of collaborating with such new technology. This study thus theorizes about employees' perceptions of autonomy, organizational support, and psychological costs when receiving help from VA, a co-worker, or a conventional computer (technology); and analyzes the implications of these perceptions on job satisfaction. In a between-subject online vignette experiment, 225 participants assessed a workplace situation where they received help from one of the three sources. Participants collaborating with the VA or the co-worker perceived less autonomy and more psychological costs than those who collaborated with conventional technology. In contrast, regarding perceived organizational support, receiving help from the VA or the computer led to less perceived organizational support than receiving help from a co-worker. Further, autonomy and organizational support were significantly related to job satisfaction. Results show that the indirect effect on job satisfaction of receiving help from a VA differs from the indirect effects of receiving help from a human co-worker or conventional technology. These findings have important implications for organizations' understanding of how the introduction of new technologies may influence the perceived job satisfaction of employees.

OB: **On Respectful Inquiry and Seeing Human: The Case of Technology-mediated Developmental Conversation**

Author: **Irina Cojuharenco**, *Surrey Business School*
Author: **Natalia Karelaia**, *INSEAD*
Author: **Olivier Malafronte**, -
Author: **Delphine Potdevin**, -

As a uniquely human manifestation of curiosity and engagement, the asking of questions for which the asker does not know the answers (definitional of respectful inquiry as opposed to testing or, speaking in the affirmative) has the potential to humanize conversation partners. Respectful inquiry on the part of non-human agents in developmental conversations can thus lead to more favorable perceptions of the interaction, including trust in technology, as well as a higher need for further problem-focused self-reflection, learning, and readiness to act on self-development. We theorize about the role of psychological needs satisfaction in this process and test the theoretical predictions empirically using two experiments with embodied conversational agents. The implications of our findings are discussed with reference to organizational science, technology use in leadership and human resource development, as well as fundamental psychological processes of humanizing and de-humanizing.

Fake It Until You Make It: New Directions of Emotional Labor Research

Session Moderator: **Chen Ding**, *Nanjing U.*

OB: **How do Employees Perform Emotional Labor on Coworkers? Emotional Labor from a Harmonious Perspective**

Author: **Ziteng Zhang**, *Nanjing U.*
Author: **Chen Ding**, *Nanjing U.*
Author: **Shuming Zhao**, *Nanjing U.*

Despite the fact that the importance of emotional labor in coworker exchanges has been acknowledged, current research has focused on emotional labor strategies (i.e., surface acting and deep acting) while ignoring their emotional rules. Going back to Hochschild's original concept of emotional labor, we take "harmony" as the core interpersonal norm in the Chinese context, develop "harmony feeling rules", and explore employees' strategic emotion regulation toward coworkers. Using a variable-centered approach, Study 1 confirms that harmony feeling rules promote emotional labor toward coworkers via harmony motives. Through latent profile analysis, Study 2 (a) constructs a dualistic model of emotional labor based on harmonious perspective, namely, sincerity, circle, stability, and ego; and (b) verifies that harmony feeling rules are more likely to encourage employees to adopt two approaches (i.e., sincerity and, to a lesser extent, the circle) to regulate coworker exchanges. Therefore, we (a) refine the core structure of emotional labor toward coworkers; (b) explore the motivational mechanism between emotional rules and emotional labor strategies; and (c) widen the application of Chinese indigenous theory.

OB: **An Empirical Test of an Integrative Model of Emotional Labor Process**

Author: **Jaeyun Jeong**, *Hanyang U.*
Author: **Kyunguk Yang**, *Soonchunhyang U.*
Author: **Yeon Joo Chae**, *Chonbuk National U.*
Author: **Kyoung Won Park**, *Hanyang U.*

Emotional dissonance has been conceptualized as two separate constructs, emotion-rule dissonance (ERD) and emotion-display dissonance (EDD). The purpose of this paper is to examine an integrative model of emotional labor process with ERD as an antecedent of surface and deep acting and EDD as a consequence of surface and deep acting. In Study 1, analyzing a cross-sectional dataset with a sample of 949 employees in the service industry, we assessed construct validity of ERD and EDD. The results from a series of analyses evidenced construct validity of ERD and EDD against surface and deep acting, showing acceptable or good fits of the model over the cutoff criteria. In addition to confirming nomological validity in the multivariate analyses, the results from the path analysis showed that the significant indirect effect of surface acting on employees' wellbeing was through EDD. In Study 2, using a daily diary approach to a sample of 92 employees (1,288 daily observations over a two-week period) in the public service organizations, we assessed a causal relationship of the integrative model with negative affect (NA) and ego-depletion as dependent variables. The results from a multilevel path analysis modeling show that ERD had a positive effect on surface acting and negative affect (NA), and surface acting on EDD, and finally, EDD on NA and ego-depletion. Also, the three-path mediation is supported in that ERD had a positive effect on both NA and ego-depletion via surface acting and EDD. In short, this paper presents evidence that as the integrated model suggests, ERD and EDD are two separate constructs, and causally related via emotional labor.

OB: **Work-related Trauma: Ordinary Work, Extraordinary Stress, and Emotional Labor Climate** ☯

Author: **Andrea Fischbach**, *German Police U.*

Work-related trauma is part of many jobs, including firefighters, ambulance workers, police officers, psychotherapists, social workers, to name a few. Despite considerable knowledge that posttraumatic stress disorders (PTSD) and other mental health problems following work-related trauma are common in such "high-risk" occupations, a complete understanding of the processes underlying work-related trauma on workers' health and well-being is still lacking. Our goal here is to develop a process model of work-related trauma exposure that explains when, how, and why PTSD and other trauma sequelae follow from work-related trauma confrontation, and what must be done to protect, recover, and enhance workers' health and well-being in work that confronts. We argue that work-related trauma impairs workers' health and well-being via three interrelated mechanisms: a) autonomous processes, b) controlled processes, and c) depletion processes. We differentiate task-related trauma confrontation in ordinary work from other forms of work-related trauma and extraordinary stress, and propose outcomes following work-related trauma depend on personal resources, trauma doses, and interpersonal relationships at work. We extend emotional labor theory and research to trauma work and argue the climate for emotional labor is all-important about whether trauma work is tolerable. We review empirical evidence for these assertions and discuss implications to alleviate trauma threat at work. We argue occupational health and safety policies and practices must have top priority in this effort.

OB: **Acting Professional with Coworkers: An Exploration of Naturally Felt Emotions among Coworkers**

Author: **Faiza Asif**, *Macquarie Business School, Macquarie U.*
Author: **Senia Kalfa**, *Macquarie U.*
Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*

Emotional labour (EL), the display of appropriate emotions following an organisation's display rules, has extensively focused on the interactions between employees and customers. While recent evidence indicates that EL takes place in coworkers' interactions, only a few studies have investigated EL between coworkers focusing only on surface and deep acting. In doing so, scholars have so far overlooked the third EL strategy, namely the expression of naturally felt emotions (ENFE). Although research indicates that performing EL through ENFE yields predominantly positive outcomes (e.g., performance and well-being), scholars are yet to investigate this strategy in intra-organisational relationships. Through 40 in-depth, semi-structured interviews with service workers and drawing on EL scholarship, this study investigates how employees come to know what constitutes the appropriate expression of emotions in the workplace and the consequences of ENFE in coworkers' exchanges. The findings indicate that service employees draw on boundary conditions to determine what constitutes appropriate emotional expression in coworkers' interactions. Furthermore, this study finds the tensions influencing employees to engage in ENFE towards their colleagues. Finally, the study findings reveal the perceived consequences of ENFE towards coworkers.

OB: **Understanding the Healthcare Context: A Review of Management and Organization Studies in Healthcare**

Author: **Barbara Schmidt**, *U. of St. Gallen*

Healthcare as a management practice has received increased scholarly attention over the past three decades but remains fragmented as a field and not adequately contextualized in management and organization studies (MOS). The failure to embed the literature in its contextual setting risks limiting the potential for advances in MOS. Drawing on 166 articles published in high-impact journals between 1990 and 2022, the review at hand addresses this fragmentation by providing a structured and up-to-date overview of MOS conducted in healthcare, specifying its unique characteristics and underlying dynamics. This will increase the cumulative potential of MOS literature in healthcare to cross disciplinary boundaries between scholars and provide a basis for the appropriate contextualization of theoretical contributions.

OB: **Under Controlled: Perceived Social Undermining and Knowledge-sharing Behavior of Nursing Community**

Author: **MUHAMMAD ALI**, *a: SEM, Dongguan U. of Tech., Dongguan; b: School of Mgt, USTC, Hefei, China*
Author: **Mubbsher Munawar Khan**, *Hailey College of Commerce, U. of the Punjab. Lahore. Pakistan*
Author: **Kamran Sultan**, *U. of Bradford, England*
Author: **Kashif Imran**, *Lahore Development Authority, Pakistan*

Nurses work in a high-risk and uncertain environment, which may lead to harmful social interactions resulting in self-regulation impairment. The aim of this study was to examine the effects of perceived social undermining and how and when this perception affects nurses' knowledge-sharing behavior. We developed a conceptual framework of self-regulation impairment in which nurses' perceived social undermining (from supervisors and coworkers) depletes self-control resources, dampening their knowledge-sharing behavior. We hypothesized social adaptability and resource management ability as self-regulating capacities that mitigate the impairment process. The results from a moderated mediation framework, three waves, and multisource supervisor-subordinate dyad studies in public hospitals support our proposed hypothesis. This study yielded significant findings and practical and management implications that provide leads for future investigations in the field of healthcare research.

OB: **It’s Not Only About the Self. Healthcare Workers’ Motivation for Feedback-seeking Behavior**

Author: **Oleksandr Tkachenko**, *U. of New Mexico*
Author: **Abigail Ortiz**, *U. of New Mexico*
Author: **Yan Chen**, *U. of Nevada Las Vegas*

Answering a growing call from scholars to explore and conceptualize the employees’ motives for feedback-seeking behavior, we conducted a qualitative study and interviewed 26 healthcare workers who provided both direct patient care and non-medical services to patients. We find that, in addition to self-directed motives recognized in the literature, other-directed motivation is integral to our understanding of why healthcare workers seek feedback from their co-workers and supervisors. Regarding the “other” component (the who?), three sub-themes were evident: the patient, the co-worker, and the supervisor. We explain the observed phenomenon – the influence of other-directed motivation in feedback-seeking behavior – through the lenses of self-determination theory and prosocial motivation By adding other-oriented forms of motivation to the discourse on feedback-seeking behavior, we advance the previous conceptualization of feedback-seeking motives and underscore the less recognized yet important area of research that is promising to help managers and educators to foster employees’ feedback-seeking behavior in the workplace.

OB: **Managing Workplace Emotions of Self and Others in Service Relationships: Evidence from Aged Care**

Author: **Bichen Guan**, *U. of Queensland*
Author: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*

Managing emotions at work can be challenging for employees in service roles. Most emotional labor research has been conducted in brief service interactions with strangers. Yet, many traditional family roles such as aged and child care are now outsourced to personal service roles that have ongoing relationships with clients. The continuing nature of those relationships may result in employees using previously unknown strategies to regulate emotions. To develop an understanding of intrinsic and extrinsic emotion regulation (ER) strategies in service relationships, we interviewed 42 aged care employees in China. Using template analysis, we found three new employee-client relationship-based intrinsic ER strategies (i.e., family appreciation, filial reappraisal, and deliberate distancing), a self-based strategy (i.e., self deterioration anticipation), and three client-based strategies (i.e., client deterioration anticipation, vulnerability justification, and meaning identification) in managing one’s own emotions in service relationships. When managing others’ emotions in ongoing service settings, a new relationship-based extrinsic ER strategy (i.e., communal bonding) along with situation-based and client-based extrinsic ER strategies were identified. Employees can regulate their own and others’ emotions by crafting their relationships with clients. This study suggests that service relationship is a critical dimension of client interactions and should be considered in workplace ER research.

The Role of Emotions in Leadership Processes

Session Moderator: **SinHui Chong**, *Nanyang Technological U.*

OB: **Leader Emotional Complexity and Employee Creativity: An Emotions-as-Social-Information Perspective**

Author: **SinHui Chong**, *Nanyang Technological U.*
Author: **Tong Wu**, *Nanyang Business School, NTU Singapore*
Author: **Shamira Banu**, *Nanyang Technological U.*
Author: **Riguang Gao**, *Jiangxi U. of Finance and Economics*

Much research has examined how one's emotions shapes one's creative work behavior, but we propose the equal importance of studying how leaders' emotions relates to one's creative work behavior because interactive contemporary workplaces pervasively expose employees to others' emotions. The emotions-as-social-information theory posits that others' emotions serve as social information that primes one to adopt certain cognitive processing styles. We contend that leaders' expression of emotional complexity (a mix of positive and negative emotions) exposes followers to contradictions and positively predicts followers' dialectical thinking, especially in followers who have higher other emotional awareness that enhances their adeptness at processing others' emotions. We also expect dialectical thinking to predict creative work behavior, more positively when followers perceive a stronger error management climate that offers them greater psychological safety to experiment with creative ideas. Data from a lab experiment (n = 109) and a lagged-wave multisource field study (n = 392 followers; 132 leaders) supported most of the hypotheses, except error management climate was a substitution instead of an intensification moderator, such that follower dialectical thinking positively predicted their creative work behavior only when error management climate was weaker. We discuss the implications, alternative explanations, limitations, and future directions.

OB: **Coping Employee Workplace Anxiety: The Role of Leader Interpersonal Emotion Management**

Author: **Diwan LI**, *Hong Kong Polytechnic U.*

Less is known about how the alternative mechanism, except cognitive interference, links employee workplace anxiety and their job-related outcomes, and what strategies leaders may enact to regulate employees' anxiety from the interpersonal perspective. Drawing on the social functional view of emotion theory, this research investigates that attentiveness serves as the underlying mechanism that can translate the effects of workplace anxiety into employee job performance and job satisfaction. Besides, it unveils how four different leader interpersonal emotion management strategies can play moderating roles in this process. Results from an experience sampling methodology study of 2777 responses from 285 employee-leader dyads support the theoretical model—attentiveness mediates the effect of workplace anxiety on employee job performance and job satisfaction; most leader interpersonal emotion management strategies can mitigate the detrimental implications of workplace anxiety. The findings contribute to both theory and practice.

OB: **The Differential Temporal Effects of Leader Emotion Display on Follower Engagement**

Author: **Anthony Silard**, *LUISS Business School*
Author: **Yih-teen Lee**, *IESE Business School*

We present a theoretical analysis of the differential effects of leader emotion expression on follower short-term and long-term engagement. Specifically, we present general propositions of leader emotion management across the emotion dimensions of valence and arousal. We propose a process model explaining how leaders can strategically express their emotions characterized by distinct valence/arousal combinations to produce either short-term or long-term follower engagement. We conclude by sharing theoretical and practical implications of our propositions and suggesting opportunities for future research.

OB: **Emotional Tone Embedded in Leadership Items and Memory Processing**

Author: **Mengying Li**, *Binghamton U.-State U. of New York*
Author: **Bryan Acton**, *Binghamton U.-State U. of New York*

Leadership research has predominantly relied on recollective self-report questionnaires to collect leadership ratings. Understanding respondents' memory processing plays an important role in enhancing response process validity and facilitating better alignment between theory and measurement in leadership research. However, we have limited understanding in terms of leadership item-level factors that may influence respondents' memory processing. Moreover, extant research has largely focused on the impact of the cognitive (vs. affective) aspect of memory processing on leadership measurement. This study fills the void by elucidating the effect of emotional tone embedded in leadership items on memory processing as well as how the permutation of leadership items and their response scale format (i.e., Likert versus binary) may moderate this relationship. The episodic versus semantic memory paradigm and the parallel remember versus know judgment are employed to capture memory processing. The counterintuitive findings from the mixed-effects model shed light on alternative mechanisms that may be at play in memory processing and bear important implications for future research.

Understanding Employee Job Stress and Exhaustion

Session Moderator: **Yi Su**, *Zhejiang U.*

OB: **Does Monitoring Promote or Impair Employee Job Performance and Wellbeing: A Motivational Perspective**

Author: **Yi Su**, *Zhejiang U.*
Author: **Yanran Fang**, *Zhejiang U.*
Author: **Shenjiang Mo**, *Zhejiang U.*
Author: **Wenqing Yu**, *Zhejiang U.*

Using monitoring to improve employees' job performance is increasingly common in current management practices. Yet, whether monitoring can play an effective role in enhancing employees' performance is inconclusive in the literature. Meanwhile, researchers are increasingly discovering that monitoring has detrimental impacts on employees' well-being, such as increasing their emotional exhaustion. To help reconcile mixed findings about monitoring's influences on employees' job performance (i.e., task performance and OCB) and well-being (i.e., emotional exhaustion), we adopt self-determination theory to elucidate the motivational mechanism linking monitoring to task performance, OCB and emotional exhaustion. Specifically, this study suggests that monitoring activates employees' impression motivation and constrains their intrinsic motivation. Both motivations subsequently promote employees' task performance and OCB. Meanwhile, impression motivation also increases employees' emotional exhaustion, whereas intrinsic motivation reduces employees' emotional exhaustion. Additionally, employees' prior task performance moderates the relationship between monitoring and two motivations, such that the positive relationship between monitoring and impression motivation becomes weaker, and the negative relationship between monitoring and intrinsic motivation becomes stronger when employees' prior task performance is high. We collected three-wave data from 504 participants and their direct supervisors at a large retail company, and the results confirmed our hypothesized relationships. Theoretical and practical implications of these findings were discussed.

OB: **Linking Work-related Rumination to Employee Performance: A Resource-based Perspective**

Author: **Xiaoyu Li**, *Renmin U. of China*
Author: **Lifeng Zhong**, *School of Business, Renmin U. of China*

In today's stressful and demanding working environment, work-related rumination has become a common phenomenon and is increasingly receiving attention from academic research. Although much research has focused on the effects of the two types of work-related rumination (i.e., affective rumination and problem-solving pondering), there has been very little examination of the mechanisms and boundary conditions of the effects. Drawing on the conservation of resources theory, we developed an integrated theoretical model. We assume that (1) emotional exhaustion mediates the negative relationship between affective rumination and employee performance; (2) psychological availability mediates the positive relationship between problem-solving pondering and employee performance; (3) employee resilience plays a moderating role in the effects. Most hypotheses were supported by collecting and analyzing data from 305 employees working in China.

OB: **The Lonely Work: Linking Workplace Loneliness, Work Frustration, Engagement, and Task Performance**

Author: **Guoyang Zheng**, *Peking U.*
Author: **Guiquan Li**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Li Guo**, *U. of International Business and Economics*
Author: **Min Cui**, *U. of International Business and Economics*

Although recent empirical evidence has witnessed the interpersonal consequences of employee workplace loneliness, the extant literature is silent on how it may impact employees' work outcomes such as task performance. Drawing from the cognitive-affective processing system framework, we develop an integrative model to capture the mechanisms through which workplace loneliness exerts influence on employee daily task performance. Employing an experience sampling method involving 84 full-time employees, we find that daily workplace loneliness negatively impacts daily task performance through an affective path (i.e., work frustration) and a cognitive path (i.e., work engagement). Moreover, employees' individual identity moderates the indirect effect of daily workplace loneliness with task performance via work engagement. We discuss the implications for both theory and practice.

OB: **Effects of Ad-hoc After-action Reviews on Emotional Exhaustion and Performance**

Author: **Jan B. Schmutz**, *U. of Zurich*
Author: **Mirko Antino**, *Instituto U. de Lisboa (ISCTE-IUL)*
Author: **Zhike Lei**, *IMD Business School*
Author: **Walter Eppich**, *Northwestern U.*

After-Action Reviews (AAR) have gained scholarly attention in recent years across many disciplines. Researchers argue that AAR is one of the most effective training methods to increase performance in organizations. However, the literature primarily focuses on performance and overlooks three important aspects. First, the impact of AARs on individual well-being is not well understood. Second, the mechanisms and factors that affect the relationship between AARs and outcomes are largely unknown. Third, the current research mainly examines highly structured AARs in simulated and laboratory environments. Using a sample of 203 healthcare workers, we conducted a longitudinal survey study. Our results indicate that AAR frequency is beneficial for both performance and reducing emotional exhaustion. Additionally, our data suggest that voice behavior plays a crucial role in mediating these relationships. Further, we investigated AAR valence, defined as the degree the AAR focuses on failure vs. success, and job stressors as moderators. AAR valence did not moderate the relationship, but job stressors seem to be an important moderator with voice behavior being more effective in high-stress environments. Additional analysis revealed further interesting insight into the interplay of AAR frequency, AAR valence, and event performance. Our study shifts focus from traditional team-level perspectives about AARs to an individual-level perspective, revealing that AARs can be seen as a social space where individuals can exchange and increase performance and well-being. AAR effects go beyond team performance boundaries and can be seen as a source of cognitive and emotional resources that help increase well-being.

OB: **Equifinality of Workplace Stressors: A Broaden-and-Build Model**

Author: **Chia-Jung Chang**, *National Ilan U.*
Author: **Yuan-Ling Chen**, *National Ilan U., Taiwan*
Author: **Pei-Hsuan Wu**, *National Ilan U., Taiwan*

Drawing on broaden-and-build theory, this study examines how and why workplace stressors (challenge stressors and hindrance stressors) foster employees' overall performance through task interdependence and innovative behavior. To be specific, the broadening stage elucidates how two stressors drive task interdependence and further open up innovative behavior. The building stage illustrates how task interdependence energies innovative behavior and furthers builds up overall performance. Altogether, the broaden-and-build stages explain the reason why overall performance can be reached. This study incorporates self-concepts to portray the equifinality of challenge and hindrance stressors in achieving overall performance with broadening and building paths. A time-lagged, two-source data from 233 employees and 76 supervisors used to test proposed hypotheses by adopting Mplus 7.4. Our findings show that stressors predict employees' overall performance through task interdependence and innovative behavior: (1) task interdependence mediates the relationship between stressors (challenge stressors and hindrance stressors); and (2) innovative behavior mediates the relationship between task interdependence and overall performance. Last, theoretical and practical implications as well as research limitation and future research directions and discussed

Unethical Pro-Organizational Behavior

Session Moderator: **Haiping Liu**, *Business School of Hunan U., China*

OB: **How the Praise of Creativity Acting as a Sweet Burden Induces Unethical Pro-organizational Behavior**

Author: **Haiping Liu**, *Business School of Hunan U., China*
Author: **Chuang Zhang**, -
Author: **Ting Liu**, *Kyoto U.*
Author: **Ya Xi Shen**, *Hunan U.*
Author: **Wenqian Xiang**, -
Author: **Long Zhang**, *Hunan U.*

The dark consequences of employee creativity have been vigorously discussed to correct its positive cognitive biases. Research deems creativity as objective behaviors or employees' evaluation of themselves to explore behavior outcomes. However, creativity in the eyes of others is valuable for employees as well, especially when it is difficult to make accurate judgments. Grounded in social information processing theory, we clarify whether, when, and how being labeled as "creative stars" leads employees to behave paradoxically unethical from the recipient's perspective. We suppose that the interactive effect of Machiavellianism and felt obligation for constructive change arising from being perceived as creative is a potential antecedence of unethical pro-organizational behavior. We found support for our hypotheses across a three-wave survey study of 206 employees with paired coworkers. Overall, this study enriches the morally paradoxical consequence of being perceived as creative, which is influenced by the interactive effect of Machiavellianism and felt obligation for constructive change. Theoretical contributions, managerial implications, and future directions are discussed.

OB: **How Job-insecure Employees Engage in Unethical Pro-Organizational Behavior?**

Author: **Dan Wang**, *Xihua U.*
Author: **Ataullah Kiani**, *Tsinghua U.*
Author: **Ahmed Ali**, *IRC for Finance and Digital Economy, KFUPM Business School, King Fahd U.*

Although prior research has indicated employees' involvement in unethical pro-organizational behaviors (UPB) as a response to job insecurity, there still exists a lesser understanding of the intermediate processes. On the basis of self-regulation theory, this study helps address this need by examining the mediating effect of ego-depletion and moral disengagement and the moderating effect of moral identity on the relationship between job insecurity and UPB. By using two-wave data from employees in various industries (N = 452), our results suggest that ego-depletion and moral disengagement partially mediated the relationship between job insecurity and UPB. Moreover, direct and indirect effects of job insecurity on UPB were moderated by moral identity, with the indirect effects being weaker for individuals with high moral identity. The indirect effect of job insecurity on UPB via ego-depletion was significantly greater than that via moral disengagement at high moral identity. These results indicate that moral disengagement and ego-depletion play important roles in the self-regulation process of translating job insecurity into UPB, with the individual differences in these processes contingent on moral identity. Our findings provide meaningful insights into preventing UPB by job-insecure employees.

OB: **Linking Leader Pro-organizational Unethical Behavior with Employee Ethical Behavior**

Author: **Jingjing Ma**, *Hong Kong U. of Science and Technology*
Author: **Baihe Song**, *Hong Kong U. of Science and Technology*

The majority of research on leadership to date has focused on followers' learning and imitation of leader behaviors, suggesting that observing certain behaviors exhibited by the leader will motivate followers to engage in similar behaviors themselves. The current paper departs from this predominant consensus and presents a model describing that followers may behave ethically following leader unethical behavior. Based on the overarching framework of moral cleansing, we investigate the indirect effect that leader unethical pro-organizational behavior (UPB) has on followers' subsequent ethical behavior. Using an online panel of 490 working adults, we found a positive relationship between leader UPB and followers' perceived immorality of leader behavior, which was further related to followers' feelings of guilt. The experiences of guilt, in turn, had a positive relation with followers' subsequent engagement in both compensatory ethical behavior at work and non-compensatory ethical behavior in the non-work domain. This indirect effect was moderated by followers' identification with the organization and identification with the leader. Theoretical and practical implications are also discussed.

OB: **Ramifications of Leaders' UPB on Employees: Dual-stage Moderation of Moral Thinking Orientation**

Author: **Yahua Cai**, *Shanghai U. of Finance and Economics*
Author: **Weili Zheng**, *Shanghai U. of Finance and Economics*
Author: **Sebastian C. Schuh**, *China Europe International Business School (CEIBS)*
Author: **Xiaowan Lin**, *U. of Macau*

Although leaders' unethical pro-organizational behaviors (UPB) have been identified as one of the key drivers of employees' unethical actions in organizations, our understanding of when and why leader UPB unfolds these adverse effects is still at an early stage. By integrating social cognitive theory with the literature on moral thinking orientation, the present research sheds light on the cognitive processes and boundary conditions that underpin the effects of leader UPB on followers. We argue that leader UPB may undermine followers' moral efficacy, which in turn translates into heightened follower UPB and general unethical behaviors (UB). More importantly, we propose that moral thinking orientation moderates the two stages of the processes, such that followers' rule-based moral thinking orientation strengthens the effects of leader UPB on follower moral efficacy but weakens the link between follower moral efficacy and their UPB and UB. The results of two field studies and one experiment provide consistent support for the hypothesized model. Theoretical and practical implications as well as avenues for future research are discussed.

Power and Status Effects in Teams

Session Moderator: **Roberta Laurita**, *Catholic U. of Rome*

OB: **Team Performance and Team Members' Status: The Motives Underlying Boundary-Spanning Search Processes**

Author: **Roberta Laurita**, *Catholic U. of Rome*
Author: **Federica Angeli**, *U. of York, School for Business and Society*
Author: **Tina Kowalski**, *U. of York Management School*

Organizations are widely using teams as a way to successfully solve urgent and complex problems maximizing the value of their human capital. Teams engage in boundary-spanning strategies to seek information from outside experts to improve their performance, epitomizing a process of search. Scholars have linked search processes to two motives: problemistic search and slack search which are both dependent on team goals and performance-aspiration levels. Reaching beyond previous studies, this article focuses on team members' social status – as related to their embeddedness in a social network of external ties - and on their perception of team performance. We also argue that the two factors interact at individual level to determine search strategies, so that social status moderates the relationship between individual perception of team performance and boundary-spanning search. Our research relies on a sample of 174 professionals working within 23 multidisciplinary teams in the healthcare context. The study provides novel insights to team and performance feedback literature contributing to this stream of research in three ways: firstly, we found that when performance is below the aspirational level of team members, they engage in boundary spanning ties as a strategy to search for knowledge to meet team objectives; secondly, based on the social exchange theory we theorized and we found evidence on the impact that status has on boundary spanning activities. Finally, we reveal that the status moderates the relationship between performance and boundary spanning activities.

OB: **Sizing Up Social Harmony: How Height is Valued for Power-Equal Teams**

Author: **Kevin M. Kniffin**, *Cornell SC Johnson College of Business*
Author: **John Doris**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

The positive association between height and power has been well-studied with respect to individuals, but height's implications for groups has been understudied. In a set of three preregistered studies replicated in two cultural contexts, we examine how power-equal social units might be preferred when they are height-equal. Focusing on start-up co-founders as a model domain for power-equal social units, Study 1 shows that people exhibit more investment interest in height-equal pairings of startup co-founders when compared with height-unequal pairings. Study 2 focuses on triads and replicates the finding that people prefer height-equal co-founder teams. Study 3 considers pairs of co-founders that are both tall, both short, or mixed-height and finds a preference for overall height, suggesting that a preference for height equality may be overridden by a preference for greater aggregate group height. These findings contribute to research on group dynamics and the relevance of body morphology in contemporary settings.

OB: **Does Power Imbalance Lead to Competition or Cooperation? A Middle Power Imbalance Perspective**

Author: **Qin Su**, *Xi'an Jiaotong-Liverpool U.*
Author: **Erzhuo Wang**, *U. at Buffalo School of Management*
Author: **Dora C. LAU**, *Chinese U. of Hong Kong*
Author: **Julie Zhu**, *Fuzhou U.*

Team power structure has significant impacts on team processes and outcomes. However, most studies assume members with different levels of power will act similarly under the same team power structure. In this study, we draw on power dependence theory to propose that dyadic power imbalance between team members will motivate their strategic power use, including cooperative and competitive behaviors, which work through two mechanisms—perceived opportunity to increase power and perceived threat to power. Furthermore, we propose the middle power imbalance theory to explain the relationship between power imbalance and perceived power opportunity and threat, which states that a middle level of power imbalance is more likely to activate instrumental perceptions of opportunity to increase power or threat to power, and evoke cooperative or competitive behaviors, respectively. We tested the hypothesized relationships with 415 employees from 56 teams using the social relations model and received support for most of the hypotheses. We discuss the theoretical and practical implications of our findings to team power structure and dynamic management.

OB: **Banding Together to Avoid Exploitation**

Author: **Richard Ronay**, *Amsterdam Business School, U. of Amsterdam*
Author: **Janneke Oostrom**, *Vrije U. Amsterdam*
Author: **Minnie She**, *U. of Amsterdam*
Author: **Jon Maner**, *Florida State U.*

Although dominance is a common strategy for attaining high social rank, it often entails exploitative behavior, bringing leaders into conflict with followers. Anthropological work suggests that a long evolutionary history of such conflict has set the stage for moral systems designed to reduce exploitation from powerful people. Here we establish links between dominance (and prestige) and moral leadership, reporting three studies (total N = 1246) demonstrating that, in response to dominant leaders, followers band together in collective opposition aimed at resisting, and even toppling incumbent leaders. These studies also identify specific social psychological pathways through which dominant leaders elicit moral opposition – low levels of trust and gossip both mediated effects of leader dominance on collective opposition by followers. While dominance may allow people to rise through the ranks of a social hierarchy, the long-term durability of dominance as a leadership strategy may be undermined by collective moral opposition from followers.

Personality Effects in Organizations

Session Moderator: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*

OB: **From Proactive Personality to Ambidexterity and Creativity**

Author: **Jie Wang**, *U. of Nottingham Ningbo China*
Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*
Author: **Thomas S Bateman**, *U. of Virginia*
Author: **Yuan Jiang**, *China Europe International Business School (CEIBS)*
Author: **Guiyao Tang**, *Shandong U.*

Employee ambidexterity—simultaneous engagement in both exploration and exploitation activities—is critical to the success of employees and organizations. However, we know little about how personal dispositions affect independently, or interact with situational factors to influence employee ambidexterity. Based on a time-lagged survey of 364 employee–supervisor pairs from 74 R&D teams, we found that proactive personality was positively related to employee creativity through employee ambidexterity. Guided by trait activation theory, we further found that both paradoxical supervision and job autonomy enhanced the relationship between proactive personality and employee ambidexterity, and the indirect effect of proactive personality on employee creativity via employee ambidexterity. We discuss the theoretical and practical implications of these findings to extend the literature on proactive personality and ambidexterity.

OB: **Why We Think Introverts Can't Lead: A Review of Extravert Idealism and a Call for Reconsideration**

Author: **Kathleen Isleib**, *UNCG*

Extraversion is often considered to be an essential trait for leadership emergence and leadership effectiveness. However, the universality of the "extravert ideal" in leadership may be flawed for a number of reasons which gives rise to research on how individuals who are introverted can be successful as leaders. This systematic review not only seeks to summarize the theoretical rationale and empirical findings regarding the importance of extraversion for leadership, it also explores research which poses a counter-argument, in which introverts, or individuals with low levels of extraversion, are able to successfully lead organizations. This counter-argument is reinforced by a number of apparent problems with the measurement of extraversion, introversion, and leadership outcomes. In conclusion, this paper will propose future considerations and research directions related to when and how introverts can be successful in leadership.

OB: **Differential Impacts of Behavioral Pathways Linking Personality to Leadership Outcomes**

Author: **Tobias Marc Härtel**, *Osnabrück U.*
Author: **Felix Hoch**, *U. of Münster*
Author: **Mitja D. Back**, *Westfälische Wilhelms-U. Münster*

This study uses process models of personality to examine the behavioral pathways that explain personality traits' divergent relation to leadership outcomes in social groups. We applied data from an online group interaction study (N = 364) alternately assigning participants as leaders conducting brief group tasks. We used four types of variables to build the behavioral pathways in multiple mediator models: (a) Self-reported personality traits (extraversion, agreeableness, emotional stability), (b) video and audio recordings of expressed behaviors coded by 6 trained raters (task-focus, member-focus, resilient), (c) mutual interpersonal impressions (assertive, trustworthy, calm), and (d) mutual evaluations of leadership emergence and leadership effectiveness. We find that the examined personality traits differently relate to the two leadership outcomes via the behavioral pathways: Extraversion was more important to leadership emergence due to impressions of assertiveness evoked by task-focused behavior being stronger valued. Agreeableness/emotional stability were more important to leadership effectiveness due to impressions of trustworthiness/calmness evoked by member-focused/resilient behavior being stronger valued. The findings highlight the benefits of a behavioral pathway approach to comprehend the effects of personality traits on distinct leadership outcomes so that leaders are not selected based on who takes the lead, but who leads effectively.

OB: **Cognitive Empathy Predicts Individuals' Conflict Resolution Behavior and Success**

Author: **Valentina Sara Schneider**, *London Business School*
Author: **Randall S Peterson**, *London Business School*

Empathy is the ability to understand others. Cognitive empathy is understanding the emotions of others through ways of perspective-taking and more intuitive processes. This is distinct from affective empathy that is about feeling what others feel. We hypothesize that cognitive empathy encourages individuals to attempt to resolve conflict in their work environment earlier and more often, reducing conflict around them, resulting in more favorable performance evaluations by their supervisors, while affective empathy reduces such outcomes. We test and find broad support for our hypotheses regarding cognitive empathy's positive effects on conflict resolution attempts on 624 managers enrolled in a graduate business school with a multi-national and multi-rater dataset. These effects go beyond the effects of perspective-taking, which is shown to support success, but not attempts of conflict resolution.

Perspectives on Putting the Worker Front and Center

Session Moderator: **Derrick P. Bransby**, *Harvard Business School*

OB: **Psychological Safety: Lost and Regained Over Time**

Author: **Derrick P. Bransby**, *Harvard Business School*
Author: **Michaela Kerrissey**, *Harvard U.*
Author: **Amy C. Edmondson**, *Harvard U.*

For employees to contribute to interdependent work in today's organizations, they must be able to speak up, share knowledge, and ask questions. Creating an environment where candor is possible and expected—one characterized by psychological safety—is thus vital for effective collaboration. Yet little is known about how psychological safety emerges, evolves, or erodes over time. In this study, we explore the dynamics of psychological safety in longitudinal data on more than 45,000 health care workers. We discover that recently hired employees experience significantly higher psychological safety than their veteran colleagues and that these perceptions decline sharply before being slowly restored. This decline is partially mitigated by joining a department with a strong psychological safety climate. Our findings suggest an underlying interaction among individual factors (e.g., competence, experience, and expectations that influence the assessment of interpersonal risk) and climate factors (e.g., situational assessment of group norms) that together shape psychological safety. For scholars, our findings inform the still nascent understanding of how psychological safety evolves over time and motivate future inquiry about these dynamics. For practitioners, our findings suggest there may be a protracted period in which new employees are vulnerable to losing psychological safety, such that investments in reinforcing psychological safety for newcomers might generate substantial benefits.

OB: **Role of Work Ethic in the Work-life Satisfaction Relationship: A Longitudinal Moderation Model**

Author: **Emma (Lei) Jing**, *NEOMA Business School*
Author: **NANXI Yan**, *U. of Groningen*

We examine the longitudinal relationship between work satisfaction and life satisfaction, and the moderating role of work ethic. Using a nationally representative sample of Dutch working adults (N = 1020; three waves over five years) and taking a model comparison approach, we find more evidence as to the nature and direction of the work-life relationship—they are positively and reciprocally linked, but the reciprocal effect is not as long-lasting as previously thought. Additionally, work ethic strengthens the positive effect of work satisfaction on life satisfaction, but no such moderating role is observed as to the effect of life satisfaction on work satisfaction. Our findings regarding the role of work ethic show that the conservation of resources theory (COR; Hobfoll, 1989) can be an informative lens to understand the work-life satisfaction relationship. For individuals with strong work ethic, work satisfaction constitutes a more salient form of psychological resources benefiting their overall life satisfaction. Overall, the findings in this study also speak to the theme of "Putting the worker front and center."

OB: **Is Enough Actually Enough? An Inductive Study of Strategic Underperformance at Work**

Author: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*
Author: **Emily Hsu**, *Washington U. in St. Louis, Olin Business School*
Author: **Elizabeth Margaret Campbell**, *U. of Minnesota*
Author: **Kristie Rogers**, *Marquette U.*

Individual strategic underperformance (i.e., individual performance actions that intentionally contribute to a strategy of performing below an individual's own standards during a task) occurs in myriad daily contexts and has important implications for the strategic underperformers and their work organizations. Yet, we know little about this phenomenon. Through an inductive set of qualitative studies, we develop a model of motives, implications, and boundary conditions of strategic underperformance. Specifically, across four groups of individuals within two phases, we gained insights from 411 self- and observer-accounts of strategic underperformance and 36 semi-structured interviews to identify (1) why and when individuals strategically underperform, and (2) what consequences result for these individuals. We identify two primary motives and strategies of strategic underperformance: conserving resources due to feeling depleted/burnt out and correcting injustices due to feeling violation of justice. Importantly, one's performance standards (e.g., being a high performer) and status characteristics (e.g., seniority, gender, race) shape the latitude with which one can strategically underperform. Our analysis further surfaces how strategic underperformance can operate as a double-edged sword—yielding both positive and negative implications for strategic underperformers. Themes further highlight how implications can hinge on task interdependence and task visibility. These findings sharpen our understanding of strategic underperformance, expand our understanding of performance inequities, and illuminate the complexities at play.

OB: **Putting the Worker's Safety Front and Center: Employee-Organization Exchange and Safety Performance**

Author: **Huixia Kuang**, *Zhuhai City Polytechnic, Zhuhai, Guangdong, China*
Author: **Wen Pan**, *Macau U. of Science and Technology*
Author: **Li-Yun Sun**, *Macau U. of Science and Technology*

ABSTRACT The global occupational safety situation remains severe. As enhancing employee safety performance constitutes a crucial part of safety management, the purpose of the study is to examine, from a social exchange theory perspective, the cognitive, motivational and behavioral mechanisms through which employee-organizational exchange (EOX) influences employee safety performance. Data were collected from 672 subordinates and their immediate 100 supervisors in three large manufacturing firms in Guangdong province, China. We find that (1) EOX has positive effect on safety risk perception, psychological ownership of safety promotion, and safety communication, (2) safety risk perception, psychological ownership of safety promotion and safety communication (as cognitive, motivational and behavioral mechanisms) mediate the relationship between EOX and safety performance (both safety compliance and safety participation), and (3) management commitment to safety moderates the direct effect of EOX on safety risk perception, psychological ownership of safety promotion, and safety communication, and its indirect effect on two forms of safety performance via the three mediating mechanisms. The moderating effect and moderated indirect effect are stronger when management commits more to safety. The study contributes to employee safety performance literature.

Breaking Bad: Understanding Workplace Deviance and Cheating

Session Moderator: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*

OB: **A Covert-overt Approach-avoidance Model of Deviant Innovation**

Author: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*
Author: **Xuhong Zhao**, *Huazhong U. of Science and Technology*
Author: **Mingwei Liu**, *School of Management, Huazhong U. of Science and Technology*

Deviant innovation is becoming a common phenomenon in organizations. It may include covert and overt (i.e., bootlegging and creative deviance) forms, but the impact on innovation performance is controversial. Thus, in this paper, we create an expanded view of deviant innovation that extends beyond existing research framework, identifying the unique effects of deviant innovation on innovation performance across different dimensions. First, we construct a framework based on overt-covert and approach-avoidance. The four types of deviant innovations contain six dimensions, namely building alliance, integrating resource, secret elaboration, breaking system, deviating plans, and ignoring leadership. Study 2 uses survey data to support the dimensional structure and develop a 27-item measurement scale of deviant innovation based on qualitative research. Study 3 verifies that specific types of deviant innovation had unique patterns of relationships with innovation performance. Specifically, approach-covert deviant innovation, approach-overt deviant innovation and avoidance-covert deviant innovation positively impact on innovation performance through increasing innovation job engagement and weakening innovation job withdrawal. Avoidance-overt deviant innovation negatively impact on innovation performance through weakening innovation job engagement and increasing innovation job withdrawal. Implications of our findings are discussed.

OB: **Investigating When and Why Customer-expressed Gratitude Leads to Employees' Deviance**

Author: **LIMEI CAO**, *School of Business, Sun Yat-sen U.*
Author: **Hansen Zhou**, *School of Business, Sun Yat-sen U.*
Author: **Chen Chen**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Kaidi Bi**, *School of Business, Sun Yat-sen U.*
Author: **Yujing Lei**, *School of Business, Sun Yat-sen U.*
Author: **Xin Qin**, *Sun Yat-sen Business School, Sun Yat-sen U.*

Although extant literature has primarily concluded that gratitude expression has positive effects on the recipient for attitudes and outcomes in the workplace, knowledge on whether this assumption remains valid when considering the impact of gratitude expression on employees during the customer-employee interaction is limited. Drawing upon social information processing theory, we challenge the above prevailing assumption by developing a theoretical model of when and how customer-expressed gratitude promotes employees' workplace deviance. Through a field survey and an experimental study, we found empirical evidence supporting that when customer status is high, customer-express gratitude is positively related to employee psychological entitlement, which induces workplace deviance. By uncovering the hidden cost of customer-expressed gratitude, our findings can revolutionize the consensus of scholars and practitioners on the understanding of gratitude expression.

OB: **When and Why Does Workplace Deviance Lead to Reparative Behaviors? A Moral Cleansing Perspective**

Author: **Yanfei Wang**, *South China U. of Technology*
Author: **Yu Zhu**, *Jinan U.*
Author: **Fan Luo**, *Jinan U.*

Research has mainly illustrated that workplace deviance leads to deleterious outcomes for the organization and its members. However, it is not clear what drives employees to engage in workplace deviance and if this drive lets workplace deviance have the same negative effects as an ordinary one. In this research, we draw upon the moral cleansing theory to posit that employees may engage in workplace deviance due to the critical contextual factor of deviant peer pressure and reveal the results of such a case. We propose that when deviant peer pressure is low, employees will experience a sense of guilt after perpetrating workplace deviance, thereby inducing their helping behaviors. Simultaneously, employees who conduct workplace deviance would also perceive the loss of moral credits, motivating them to decrease their prior workplace deviance. The results of an experiment and a multi-source field study support our hypotheses. Our research findings provide a novel insight into why employees conduct workplace deviance and uncover the critical role of deviant peer pressure plays in the employees' responses to their workplace deviance. Finally, we discuss the implications for theory and practice.

OB: **Competitive Climate to Workplace Cheating Behaviors: A Moderated Dual-path Model**

Author: **Arpana Rai**, *Indian Institute of Management, Udaipur*
Author: **Minseo Kim**, *Hankyong National U.*

The present study aims to examine why employees engage in cheating behaviors at work. It is well known that organizations with a high emphasis on competition (i.e., competitive climate) may promote cheating behaviors among employees. However, we have limited knowledge of why competitive environments lead to cheating behaviors and what factors can amplify and mitigate these effects. Drawing on social comparison theory and ego-depletion theory, we propose that a competitive climate can foster feelings of envy and ego depletion, which in turn, predicts cheating behaviors. We further propose that the strength of indirect effects of competitive climate on cheating behaviors is contingent upon employees' work-contingent self-esteem (WCSE) and job-based self-efficacy (JBSE). Specifically, we propose the amplifying effects of WCSE and weakening effects of JBSE in the competitive climate-cheating relationship. Across two studies based on three-wave data collected at a two-week lag from Indian managerial employees (Study 1: n = 196; Study 2: n = 246), we found support for our moderated mediation model. Theoretical and practical implications are discussed.

OB: **Can Perfectionists Be Cheaters? The Roles of Fear and Supervisor Bottom-line Mentality**

Author: **Li Guo**, *U. of International Business and Economics*
Author: **Jih-Yu Mao**, *U. of Nottingham Ningbo China*
Author: **Xinyan Mu**, *NingboTech U.*
Author: **Yamei Cai**, *Macquarie Business School, Macquarie U.*

The relentless pursuit of perfection is increasingly prevalent in modern workplaces. By integrating literature on fear and supervisor bottom-line mentality, this research investigates an overlooked question–Why and when employees high on perfectionism engage in cheating behavior in the workplace. Across two multi-wave field studies, our results consistently show that the relationship between employees' perfectionism and workplace cheating depends on the type of perfectionism. In particular, employees high on perfectionistic concerns rather than perfectionistic strivings are related to cheating. Fear of performance failure serves as an underlying mechanism, which is especially likely to arise when employees' supervisors have a high bottom-line mentality. We discuss the theoretical and practical implications of our findings and directions for future research.

Presenter: **Jennifer Ho**, *DeGroote School of Business, McMaster U.*
Discussant: **Vanessa Bohns**, *Cornell U.*
Participant: **Catherine Connelly**, *McMaster U.*

Research has long been suggesting that people's perceptions of others are influenced by their expectations. This symposium adds on to this line of work by deepening our understanding of the role-incongruity effect. A curated collection of four interrelated papers examines the impact of misaligned expectations on observers' evaluations of targets, encompassing perspectives of both employees and management, utilizing both quantitative and qualitative data, and embracing a variety of methodological approaches. Two presenters address managers' perceptions of employees, exploring how winthin-role incongruence on motivation and moral courage can lead to important organizational outcomes (task assignment, career prospects and rewards). The other two presenters address employees' perceptions of management (i.e., behavioral integrity) and managerial policies (i.e., gender inclusive pronoun policy) impacting consequential downstream attitudes and behaviors. The discussion at the end of the symposium highlights opportunities for future research and stimulates conversations among the presenters and the audience. This symposium will illustrate how we can focus on workers by showcasing cases where incongruity between employees and management brings unforeseen consequences to workers.

Participant: **Kara Anne Arnold**, *Memorial U. of Newfoundland*
Participant: **Ivy Bourgeault**, *U. of Ottawa*

Poor mental health, such as depression, anxiety disorder, and substance abuse disorder, is a common health impairment across the world. For example, since 2019, 50 million adults in the U.S. have experienced poor mental health, and in Canada, approximately 500,000 working adults are unfit to work each week due to poor mental health. Given the prevalence and costs associated with mental health conditions, there is an increasing need to better understand the work experiences of employees experiencing poor mental health. The papers in our symposium join the bourgeoning body of research studying mental health, with an emphasis on the interpersonal dynamics that surround mental health at work. Each considers various forms of interpersonal or subtle discrimination employees might encounter at work as a result of stigma towards mental health. Together the papers represent different lens, including how leaders respond to their employees' disclosure of a mental health identity, how employees respond to their leaders' poor mental health, and how employees' respond to coworkers' mental health accommodations. The symposium will conclude on a more positive note with a discussion around what organizations can do to help alleviate some of these detrimental interpersonal dynamics.

Participant: **Sejin Keem**, *Portland State U.*

Over the years, the topic of creativity – the development of novel and useful ideas (Amabile, 1988; Shalley, 1991) – has generated considerable interest from management scholars. This work has produced important insights into the antecedents and consequences of creativity, both at the individual and team levels. For example, scholars have identified factors such as positive emotional experiences (Amabile et al., 2005), perspective-taking (Hoever et al., 2012), a willingness to share and exchange ideas (Perry-Smith & Shalley, 2003), team composition (Somech & Drach-Zahavy, 2013), team diversity (Perry-Smith & Shalley, 2014), role identity (Farmer & Tierney, 2003), prior experience (Miron-Spektor & Beenen, 2015), and leadership (Carnevale et al., 2017; Shin et al., 2012; Zhang & Bartol, 2010) as important predictors of creativity. In addition, recent work has turned to understanding the potential outcomes of creativity (Carnevale et al., 2021; Kaufman, 2017; Meyer et al., 2019), including its potential to produce harmful consequences for organizations and its members (Gino & Ariely, 2012; Harrison & Wagner, 2016; Mai et al., 2015; Ng & Yam, 2019; Vincent & Kouchaki, 2016). Despite these important discussions, there are still notable gaps in our understanding of creativity, particularly across levels of analysis. For example, at the individual level, beyond creative role-identity (Farmer & Tierney, 2003; Vincent & Kouchaki, 2016), little is known about how creatives express aspects of their identity at work and whether such identity expressions influence work-related outcomes. Moreover, at the team-level, there are new and interesting pathways for research that, to date, are almost exclusively considered at the individual level. For instance, understanding the impressions of creative individuals is an emerging area in the creativity literature (Carnevale et al., 2021; Katz et al., 2022; Ng & Yam, 2019), one that could open exciting avenues for research on creative teams. Another important limitation in creativity research is scholars' tendency to focus on the antecedents and outcomes of creativity at either the individual (e.g., Liu et al., 2016) or team level (e.g., Farh et al., 2020; Hoever et al., 2012 Jia et al., 2014). Comparatively fewer studies have taken a cross-level approach to understanding creativity, such as how lone employees can impact group creative processes. In addition to these specific areas of inquiry, there are more general ways to broaden our sights and open new opportunities for creativity research, such as shifting focus from the causes of creativity across levels to its consequences, an area of research that has received far less attention from creativity scholars (Khessina et al., 2018). Thus, it appears we have neither a complete understanding of the forest or the trees, and that more work is needed to fully understand creativity across levels. To address this issue, our symposium aims to simultaneously sharpen and broaden our sights by honing in on specific areas of inquiry that can generate new avenues of research as well as providing a "bird's eye view" of creativity across levels. Utilizing various methodologies and contexts, the papers included in this symposium will explore new and exciting avenues on the antecedents of creativity at the individual, team, and cross-levels of analysis, while also offering a review of the consequences of creativity across levels.

Organizations increasingly rely on artificial intelligence (AI) in their business decisions or processes. Despite commonly observed performance advantages, humans often treat such devices and recommendation systems in an irrational manner. For example, humans may overly trust or distrust an AI even in situations when they should not. Moreover, AI used in settings such as personnel selection is often viewed with skepticism – and past research on why, how, and when such perceptions towards AI in personnel selection emerge is ill-developed. This symposium will showcase several contexts in which humans show different types of reactions and (dis)trust towards algorithms to shed light on the fragmented and heterogeneous literature on human-AI interaction in personnel selection and workplaces in general. We will introduce new and critical theoretical lenses to better understand how humans treat and react towards AI in workplaces with main focus on (dis)trust towards AI and reactions towards AI in personnel selection. The studies and papers included in this symposium will focus on different types of AI and algorithms, including machine- or deep-learning-based algorithms and AI as well as AI-powered chatbots and humanoid robots. In sum, we will provide a broader, theory-driven and more holistic understanding of human-AI interaction at work that puts both parties of this equation front and center.

This symposium presents recent research that advances our understanding of migration and migrant employees. The five studies included in the symposium will offer many insights migrant employees, including their experience, the role of organizations and institutions, and a new approach to capture the complicated nature of migrant studies. Importantly, the symposium covers multiple perspectives and levels of theory ranging from individual characteristics and processes such as identity threats and identity work of high-skilled migrants and the intersectionality of language and nationality on low-skilled migrant employees' workplace experience, to rethinking the contextual effects of cultural and institutional distances, and finally to interventions such as reducing institutional barriers that global migrants encounter in the labor market through entrepreneurship training, and role firms play in leveraging migrants' skills and talents. Together, the presentations address critical issues in migration and migrant worker research, advancing our theoretical understanding of migrant research in management and providing practical implications for institutions and organizations. Importantly, the research offers new insights to existing theories and literatures by examining migrant employees and highlights the benefits and perspectives migrant employees can offer.

Research on mindsets (a.k.a. implicit theories, or lay beliefs) about the fixedness or malleability of human attributes has proliferated in various fields of applied psychology—e.g., educational, social, organizational. Particularly in organizations, mindsets have increasingly been identified as a critical topic of research because not only of the possibility of shifting mindsets through experimental manipulation, but also the long-term and impactful consequences that mindsets can shape. Indeed, mindset manipulations and interventions have been developed, tested, and implemented—albeit mostly in non-organizational contexts—with successful outcomes in terms of reducing stress and conflict, enhancing self-efficacy and employee happiness—among others. The purpose of this symposium is to present new research that builds on and extends the mindsets literature by examining the effects of both established and previously unresearched mindsets in the modern workplace. Inspired by the Academy of Management 2023 theme, "Putting the Worker Front and Center," these projects extend research and theory on how mindsets help individuals to manage and overcome challenges in times of uncertainty. Specifically, the research featured in the symposium highlights how mindsets can support individuals to yield more positive attitudinal and behavioral outcomes during stressful situations at work, shape more positive job search outlook and better mental health during employment uncertainty, as well as managers to support employees' work efforts and performance in the workplace. In an era of unprecedented uncertainty and changing nature of work, we believe that researchers in organizational behavior must seize upon this moment of opportunity to accelerate the development of a substantial body of rigorous research on mindsets in organizational contexts. By elucidating the processes through which mindsets shape core aspects of outcomes in people's careers and in the workplace (e.g., job search, well-being, performance), we contribute to a fascinating new area of mindsets research that promotes human flourishing in organizations.

Workers Front and Center: Voice, Agency, and Resistance in Contemporary Workplaces

Session Moderator: **Lokesh Malviya**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

ODC: **The Clash of Titans: Work Play as Covert Resistance to Bureaucratization in a Rapidly Growing Firm**

Author: **Ivana Milosevic**, *College of Charleston*
Author: **Djordje Milosevic**, *Southern Illinois U. Carbondale*

Play – a collective activity engaged in for the pursuit of amusement and fun – has recently sparked interest from organizational scholars. Traditionally considered a distraction from work, play has been studied as a conduit to creativity and job enrichment. Despite novel insights, the dynamics of play at work and its role in organizationally relevant outcomes remain underexplored. To contribute to this line of research, we conducted an ethnography of a rapidly growing firm that has nourished a culture of play from its origins. Our findings suggest that organizational members engage play as a cultural toolkit to covertly resist growing bureaucratization, thereby creating spaces for novelty. We contribute to culturally informed organizational research by illustrating how organizational members introduce play as a central element of their cultural repertoires and leverage those repertoires to engage opposing pulls of novelty and bureaucratization necessary for growth.

ODC: **Organizational Culture and Employee Voice in Different Types of Organizations**

Author: **Lokesh Malviya**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Employee voice has been a topic of extensive research since it was conceptualized as an alternative to exit by A.O.Hirschman in 1970, especially if one observes the trend between 2010 and 2022. However, the focus has been, mainly, on a generic type of organization. Using the lens of the theory of planned behaviour, this paper tries to review the literature around employee voice keeping in mind the different organizational cultures prevalent in different types of organizations (here, startups, public sector organizations, multinational organizations, and domestic organizations). Subsequently, I propose a set of motivators and inhibitors of employee voice which are contingent upon the organizational culture prevalent in these types of organizations. The study provides a more nuanced view of the construct of employee voice and may have several theoretical and practical implications.

ODC: **I Speak Up Because You Care: A Meta-Analytic Review of Safety Voice as a Social Exchange**

Author: **Archana Manapragada Tedone**, *U. of Baltimore*
Author: **Jessica R. Mesmer-Magnus**, *U. of North Carolina, Wilmington*
Author: **Erin Newkirk**, *Florida Int'l U.*
Author: **Chockalingam Viswesvaran**, *Florida International U.*
Author: **Leonel Horta**, *Florida International U.*

Safety voice is a proactive social exchange in which an employee speaks up about workplace safety-related issues with constructive intentions. Proactive safety models rely upon the “voice” of workers at all levels to convey safety-related ideas, opinions, and concerns in order to prevent incidents, reduce hazards, and improve overall safety in the work environment. Through the lens of social exchange theory, this study reports the results of a meta-analytic compilation of 50 independent studies consisting of 50,956 participants across the safety voice literature. Utilizing meta-analyses, meta-regressions, and meta-analytic path analyses, we test a series of hypotheses exploring the safety and non-safety factors associated with safety voice, and investigate how safety voice relates to workplace safety behaviors and outcomes. Most notably, findings suggest that safety voice 1) is significantly more prevalent when work environments, organizational leaders, and workers at all levels are safety- supportive, 2) is positively associated with safety compliance behavior, and 3) can help to explain employees’ engagement in safety compliance behavior, beyond safety knowledge and safety motivation alone. These findings make an important contribution to our knowledge about workplace safety by identifying the nature of relationships among commonly studied correlates of safety voice and laying a foundation for future investigation into the role of safety voice in workplace safety processes. Specifically targeting the promotion of safety voice among the workforce enables organizations to take proactive and preventative measures to ensure that hazards and issues are addressed before they result in adverse safety outcomes such as accidents and injuries, making safety voice the cornerstone of sustainable safe workplaces.

ODC: **Should I Help the Colleague Who Has a Side Hustle? The Moderated Mediation Mechanism of Dual Envy**

Author: **Li Lin**, *Nanjing Agricultural U.*
Author: **Mengyu He**, *Nanjing Agricultural U.*

With an increasing amount of part-time working opportunities in the gig economy, more employees are performing extra work alongside full-time jobs. They are known as side-hustlers. As noted in the recent Special Issue Call by Journal of Organizational Behavior in 2022, recent studies start examining how participation in this new form of employment relationship affect side-hustlers’ attitudes, perceptions, and behavior. Our study approaches this phenomenon from a coworker point of view. Drawing from attribution theory and social comparison theory, we propose a moderated mediation model where (1) envious emotions (malicious envy and benign envy) function as a pathway between employees’ perceived side hustle motives and helping behavior, and (2) the mediation paths are moderated by two type of relationship, i.e., workplace friendship and task interdependence. Data from two studies provide supports to our hypotheses. Specifically, Study 1 used vignette approach and found that employees categorize coworkers’ side-hustle behavior into altruistically or egoistically motivated. Employees experienced envious emotions from observing coworkers’ side hustle behavior. While malicious envy mediates the relationship between perceived side-hustle motives and helping behavior, benign envy was not empirically significant as a mediator for the relationship. Similar results were found in Study 2 which used critical incident technique. Study 2 further found that workplace friendship moderated the mediation process of malicious envy while task interdependence did not play a moderating role for the mediation of both envious emotions. This study advances understanding of the phenomenon of side-hustles and provides implications for managerial practice.

Research in Organizational Change and Development: Reflexive Conversations of ROCD 30 Authors

Organizer: **Debra A. Noumair**, *Teachers College, Columbia U.*
Organizer: **A.B. Rami Shani**, *California Polytechnic State U.*
Organizer: **Danielle Zandee**, *Nyenrode Business U.*
Organizer: **David Coghlan**, *U. of Dublin, Trinity College*

For the past 36 years, ROCD has provided the organization development and change community with a platform to share new empirical research, insights about change and organization development, and learnings relevant to scholar-practitioners. Most of the contributors to ROCD 30 (six out of seven chapters) have been in the field for 30 years or longer. As a component of celebrating the publication of ROCD Volume 30, we invited the authors to reflect on their contributions and participate in a facilitated reflexive conversation about the development of their individual and shared scholarship, on the state of the field, and on "Putting the Worker Front and Center". Following the success in previous years, the interactive design of the session will maximize continuous conversations in small groups and in the larger community.

Digitalization and AI: Possibilities and Challenges for Leaders, Professionals, and Change Agents

Session Moderator: **Jim Hazy**, *Adelphi U.*

ODC: **How Technology-Augmented Leadership Can Enable Workers to Increase the Value of Their Social Capital**

Author: **Jim Hazy**, *Adelphi U.*

Recent research has made considerable progress toward understanding the dynamics of work-related human interactions in teams, multi-team systems, and organizations when predicting organizational outcomes. Until recently, however, it has been difficult for individual contributors, managers, leaders, and consultants to use this knowledge in real-time to become more valued individual contributors. This is because detailed data about the dynamics of interpersonal interactions and information flows across an organization remain hidden from observers. Complex network theory researchers call this, "missing information". This paper contributes by introducing the APPRECIATOR Algorithm as a mechanism that, supported by secure AI digital information and communications technology, enables individuals to build their own human and social capital. It does this by enabling them to observe, gather, and use information about cooperative interactions, including those with AI and robotic systems as well as other humans. Such a system places each worker, as an individual contributor, at the center of their own personal value creation process. Importantly, each individual's personal privacy is also secure and protected because each user's data can only be accessed by that precise user to support that individual's purposeful professional development.

ODC: **When Virtual Spaces Permeate Adaptive Spaces: The Impacts of Virtuality on Leadership Roles**

Author: **Alice Erthal**, *FDC - Fundação Dom Cabral*
Author: **Flavia Neves**, *FDC - Fundacao Dom Cabral*
Author: **Professor Paulo Almeida**, *FDC - Fundacao Dom Cabral*

Long before the global striking of COVID-19, virtual spaces have been used as spaces for interaction, for both social and work purposes. Organizational leaders face numerous challenges in dealing with unexpected outcomes of enabling work to be developed through interactions mediated by information and communication technology tools. To manage these challenges, this study investigates the impacts of virtuality within adaptive spaces used to foster innovation and organizational adaptability. The findings of this qualitative research, developed in three organizations settled in Brazil, suggest positive impacts on tasks developed within virtual adaptive spaces, and provide a model to help implement remote work through adequate leaders' actions. This study shows significant contributions to different areas of research and literature, such as leadership and leadership development, and remote working teams.

ODC: **Ethical Responsibility and Professional Judgment in the Use of Artificial Intelligence**

Author: **Regina F. Bento**, *U. of Baltimore*
Author: **Lourdes White**, *The U. of Baltimore*

This paper presents two studies that explore how the emerging adoption of artificial intelligence (AI) by small CPA firms may impact professionalism and ethical decision-making in auditing. Study 1 involved a qualitative investigation of a small CPA firm's adoption of the world's first off-the-self, affordable AI-powered auditing platform. Insights from this case were then used to develop a two-part scenario in Study 2, a broader quantitative investigation which surveyed 244 business professionals and students to examine possible AI impacts on the commitment to professional responsibility during the risk assessment and audit planning phases. The two studies revealed that off-the-shelf AI is a disruptive innovation which may help small CPA firms address tensions and ethical issues that had been described in the pre-AI literature as the professionalism/ commercialism shift in auditing.

ODC: **Digitally Enabled Change Management – An Exploratory Investigation by Human and Artificial Agents**

Author: **Saskia Hasreiter**, *LMU Munich School of Management*

Digitally enabled change management (DCM) describes the targeted use of digital technologies to facilitate and optimize change management processes. Even though many organizations have started to experiment with DCM, we still know relatively little about how digital technologies shape change management in practice. To address this limitation, we performed a two-stage research approach. First, we conducted an interdisciplinary Delphi study with 70 experts in four consecutive online survey rounds. Second, we used the chatbot OpenAI ChatGPT-3—an autoregressive language model building on 175 billion parameters to per-form new tasks—to compare and enrich our results of the Delphi study. Our integrated results from both sources reveal (1) use cases of digital technologies in change management which are perceived to provide medium to high realizability and value by experts, (2) a rank list of potential benefits and risks of different DCM applications, and (3) unique insights into the imagined future of change management in the year 2040. Our study advances research on the digital future of managing change in organizations and aims to accelerate research in this nascent field.

There has been ongoing dialogue in our field regarding the value of examining extreme, unconventional, or unsettling contexts in management research. To further add to, and extend, such discussions, we have put together a panel of scholars who have conducted studies examining the unusual in organizations, succeeded in publishing it in top journals, and crafted their research identities in different ways. In doing so, we aim to provide a forum for scholars to reflect on the 'dos and do nots' for data collection and paper writing, plus tips on how to theorize when conducting research that many others may perceive as different, odd, unconventional, or even taboo. We hope to offer guidance to doctoral students, junior faculty and/or those who may be new to working with such populations on how they can best navigate the challenge of theorizing, and increase the likelihood of their efforts being favorably received by top management journals.

Networks, Network Positions, and Organizational Performance

Session Moderator: **Ronald S. Burt**, *U. Of Chicago*

OMT: **Guanxi and Structural Holes**

Author: **Ronald S. Burt**, *U. Of Chicago*
Author: **Sonja Opper**, *Department of Management and Technology, Bocconi U.*

We treat guanxi as an example of what Merton and Barber (2004:256) term a niche-word, a word that expresses "with unique precision, a familiar kind of human experience that transcends national and other cultural and linguistic boundaries." We argue that guanxi distinguishes a kind of relationship that is familiar, consequential for network predictions of performance, yet not distinguished in contemporary network theory. We use interviews with a stratified probability sample of Chinese entrepreneurs to look for pattern in the ways they use the term guanxi, and the performance relevance of relations they designate guanxi. Phrased in terms of network theory, our conclusion is that guanxi ties are relationships in which obligation and trust have become strong to the point of context independence. As such, guanxi ties can provide performance-relevant trust across structural holes. The discussion positions guanxi within network theory to improve predictions from the theory, and facilitate unambiguous use of guanxi as an element in the theory.

OMT: **Honor Among Thieves: Vulnerable Network Positions, Norms of Reciprocity, and IPO Rates**

Author: **Andrew Joseph Foley**, *Cornell SC Johnson College of Business*
Author: **Gautam Ahuja**, *Cornell U.*

This paper sheds light on the conditions under which being tied to a powerful intermediary – such as a Venture Capitalist (VC)– represents a "vulnerable structural position" for startups. Taking a social structural view of markets, I analyze VC deals in the biotechnology sector from 2002-2021. Overall, my findings show that being tied to a powerful intermediary is beneficial for high-performing firms but detrimental to low-performing firms. Though patterns of reciprocity among venture capitalists appear to attenuate this effect, they do not appear to be strong enough to overcome the motive of self-interest in pursuing individual profits. These findings are consistent with the view that powerful intermediaries may be tempted to leak resources from some of their ties and into others. This paper contributes to the literature on the potential risks of network ties for startups in two ways. First, it draws attention to the fact that resource outflows from one firm are often resources inflows for another. Second, it highlights the need to consider the broader social structure within which startups and their intermediaries interact when determining whether a given structural position is, in fact, vulnerable.

OMT: **Building New Relationships in Embedded Networks: The Problem of Relational Equivalence**

Author: **Jian Bai Li**, *National U. of Singapore*

Embedded networks in organizations benefit from adding newcomers. Yet, it is unclear how established members of such networks and a newcomer they do add should go about building cooperative relationships. We address this gap via an inductive, multiple-case study. While prior research has linked interaction frequency with relational strength, we find that effecting high frequency of interactions between the newcomer and the established members derailed their cooperation. This is due fundamentally to the near impossibility for the newcomer's relationships with the established members to become characterized by the same personal loyalty and mutual understanding as the ones that they shared amongst themselves. Absent the potential to attain such equivalence in relationship quality, the newcomer's frequent interactions with the established members came to be perceived by them as intrusive—even when a tertius iungens was present to help promote cooperation. In contrast, we find that separating the newcomer from the established members in their interactions aided relationship-building efforts. This was because separation enabled the newcomer and the established members to slowly build their understanding and cooperation at a distance that they were comfortable with—without requiring that they build quality-equivalent relationships. Overall, we contribute the insight that, for network growth in embedded networks, separation may help build cooperation.

OMT: **Effects of Firm Centrality on the Wellbeing of its Alliance Officers: A Multi-level Investigation**

Author: **Carolyn Yesse Ngowi**, *U. of New South Wales*
Author: **Salih Zeki Ozdemir**, *UNSW Sydney*
Author: **Steven Siu-Yun Lui**, *U. of New South Wales*

Firms that occupy central positions in interorganizational alliance networks often benefit from access to valuable resources, leading to improved performance and competitiveness. However, little is known about the costs of maintaining such a position, particularly from the perspective of employees within the firm. This study aims to investigate the potentially negative effects of a central network position on the wellbeing of alliance officers who are responsible for managing those network relationships. Specifically, we propose that, despite being beneficial for the firm, centrality places higher job demands on the firm's alliance officers, leading to increased job stress and hence negative impacts on these officers' wellbeing. We further examine two levers firms can use to mitigate these effects: i) having knowledge management processes, and ii) developing mutual understanding among firms and their partners. Employing a multi-level analysis, we test our hypotheses through a primary data collected from all licensed petroleum wholesalers in Tanzania. This study advances social network theory by examining the mechanisms and contingent conditions under which beneficial-to-the-firm network positions can potentially lead to negative individual outcomes and harm the firm's managers' wellbeing.

Family and Family Businesses in Today's World

Session Moderator: **Xinrui Zhang**, *Zhejiang U., China*

OMT: **Order, Love, and Achievement: The Influence of Values on Family Logic and Entrepreneurship in Rwanda**

Author: **Bruno Noisette**, *Burgundy School of Business*

In sub-Saharan Africa, the interplay of family and business is often problematic, causing conflict in extended families and leading many businesses to failure. Extant literature on institutional logics is of little help to understand these intricate issues. The variability of the family institution across time and space seems to indicate that it is necessary refine our understanding of its underlying logic(s) in non-Western contexts. To do so, I study the family institution and its interplay with business in Rwanda, East-Africa. Based on interview data, I am able to identify the key features of the family institution and its logic. I further find that the interpretation and enactment of institutionalized family practices depends on the value that people associate to family: order, unconditional sharing, or paternalistic love. In addition to extending the validity of the institutional logic perspective to a non-Western context, this study highlights the link between values, logics, and institutional dynamics.

OMT: **Family Business and Corporate Fraud in a Transitional Economy**

Author: **Xinrui Zhang**, *Zhejiang U., China*
Author: **Xiaowei Luo**, *INSEAD*

Research on family firms often assumes them to be long-term oriented and care about their reputation, but this assumption is not investigated in transitional economies. We propose that family firms in transitional economies may commit more corporate fraud compared to other privately-controlled firms. Due to the lack of legitimacy, family firms face more resource limitations and thus have a lower possibility of survival, which leads them to risk committing fraud in order to survive. To verify our logic, we explore the tendency of family firms to engage in fraud when they are subject to greater survival pressures, when they have social-political sources of support, and when the intensity of external monitoring changes. Our argument is supported by examining publicly listed private firms in China from 2003 to 2015. Our research contributes to the literature on family businesses by showing how institutional contexts impact family business attributes, and to research on corporate fraud by understanding the influence of organizational legitimacy and family governance.

OMT: **Do In-laws Really in? Conflicts and Agency Problems within Family Members**

Author: **Xiaogang He**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*
Author: **Xin Shu**, *Shanghai U. of Finance and Economics*
Author: **Danyang Chen**, *Shanghai U. of Finance and Economics*

Our study extends the emerging stream of research of kinship involvement in business by examining how the involvement of in-laws in firms affects their agency issue and performance. Drawing on social embeddedness theory and the agency perspective, we argue that in-laws of the firm owner exhibit different degree of embeddedness in a family from his/her blood-relatives, reducing their attachment and communication within the firm. Using a large sample of publicly listed firms in China, we find that family firms with a greater percentage of the owner's in-laws in the top position have lower returns on assets and market values compared to other family firms. While the negative effect on firm performance will be strengthened when the spouse of the firm owner is in the top position, the cost of in-laws' involvement will be alleviated when the parents of the firm owner are in the top position and in-laws have increasing ownership. We also find the inferior performance of in-laws is mediated by the excess managerial perquisites and the increasing risk aversion on strategy. We discuss the implications of our paper for the family firm studies, research of firm embeddedness of kinship, and literature of corporate governance.

OMT: **Legacy for Organizations—Celebrating the Past and Preparing for the Future**

Author: **Yi Zhang**, *Oklahoma State U.*

The concept of legacy has attracted considerable interest in family business research yet is underrepresented and underrecognized in management and organizational research. This article emphasizes the ubiquitous existence of legacy among various forms of organizations and offers a mechanism of how legacy transmits across stakeholders. We start with a definition that captures the general features of legacy and then illustrate the role of stakeholders in the legacy building and transferring. With the theoretical lens of symbolic interactionism, we develop an enactment legacy transmission mechanism with five distinct paths. We conclude with a clarification concerning whether legacy has the differentiation of positive and negative. This theory of legacy provides a distinct lens for organizational research that strengthens processes and stakeholders.

Gender Diversity at the Top: Antecedents and Consequences

Session Moderator: **Taekjin Shin**, *San Diego State U.*

OMT: **[The Genesis of Gender Diversity at the Top: The Imprinting Effect of Graduate Business Education]**

Author: **Taekjin Shin**, *San Diego State U.*
Author: **Jiwook Jung**, *U. of Illinois at Urbana-Champaign*

Although diversity at the corporate upper echelons has attracted much attention, the origin of women's underrepresentation at the top has not been well understood. Drawing on perspectives from imprinting theory, intergroup contact theory, and relative demography, we argue that gender diversity at the upper echelons has its root in the CEO's past that goes back to the CEO's educational experience—particularly, graduate business education. Frequent contact, interaction, and collaboration with female students in the MBA program had a strong imprinting effect on the male students' beliefs about gender roles and women's competence, which later influenced the MBA graduates' decision to promote women to the top management teams (TMTs). Using data from CEOs who attended U.S. MBA programs between 1975 and 2009, we found that the CEOs who attended MBA programs that had a high proportion of female students were more likely to promote female managers to the TMT in the current firm. We also test the hypotheses about imprinting decay over time and the interaction among multiple layers of imprints. Our findings advance the literature about imprinting, diversity at the upper echelons, and the linkage between business education and corporate organizations.

OMT: **[Rising from the Ashes: Analyzing the Impact of Glass-Cliff Appointments on Structural Equality]**

Author: **Moksh Garg**, *Indian School of Business*

The paper explains how the inclusion of women on corporate boards during precarious circumstances positively affects structural equality and firm value using a combination of social network, critical event, and resource dependency perspectives. While I find supporting evidence for firms exhibiting a greater propensity to appoint female directors when faced with declining profits, instantiating the glass cliff phenomenon, the inclusion of high-status women directors improves women's overall status on corporate boards by subsiding the inter-gender status differential in the long run. These appointments strengthen and consolidate women's position on boards by dismantling structural inertia and creating favorable path dependencies through sheer connectedness and exercise of informational value. In contrast to the previous literature, I also report a positive association between the status accretion of women on boards and the firm value, implying inclusion of high-status women on boards does not elicit gender penalties.

OMT: **[The Role of Gender in Social Movement Engagement and Field Development]**

Author: **Eun Young Song**, *Australian National U.*

Prior studies have widely recognized the ability of social movement organizations (SMOs) to develop new institutional fields, assuming that they sustain their members' engagement. In this research, I examine how efforts by female SMO members to facilitate fellow movement participants' continuous engagement can ironically discourage such engagement. I introduce the concept of a gender offset, in which participants avoid further engagement in the movement to compensate for perceived deviation from gender expectations. Empirically, I study the case of the first national movement association for bird conservation in the US between 1889 and 1920. I test and find quantitative support for gender offset using an event count analysis of individual contributions, by article count, to the movement's bimonthly magazine, which shared the movement's issues and vision with the public. I find that the more women used new technology to disseminate the SMO's views and took on leadership roles within the organization, the fewer contributions their fellow members made to the magazine. Visual cues linked to masculine qualities of women's strategic action were especially likely to discourage contributions from fellow female participants, which I suggest is a response to the potential costs of being associated with a movement that allows such deviance from gender expectations. The results of this study advance our understanding of the role that gender plays in social movement engagement and field development.

OMT: **['Not My CEO': Employee Reactions to the Threat of Female Leadership]**

Author: **Steffen Brenner**, *Copenhagen Business School*
Author: **Isabelle Solal**, *ESSEC Business School*
Author: **Georg Wernicke**, *HEC Paris*

We explore the impact of gender on a CEO's ability to garner the support of their employees. Employing the lens of group competition theory to understand the female leadership penalty, we theorize that negative reactions toward women in senior positions are motivated in part by the perceived threat these women pose to the existing gender hierarchy. As women increasingly move into positions previously held by men, and as diversity programs lead to shifts in the balance of power, gender is likely to become more salient and trigger negative reactions. Exploiting data from close to a million employee reviews of U.S. listed firms from Glassdoor.com, we show that female CEOs receive lower employee approval ratings compared to male CEOs, and that this is driven primarily by male employees. Our results are robust to controls for firm performance, reviewer ratings of employment conditions, as well as indicators of managerial quality as measured by educational credentials, board memberships, and other achievements. We further find that the organization's diversity ratings moderate the relationship between CEO gender and employee approval, such that female CEOs are especially penalized among firms that have made substantial progress in promoting women and minorities. Implications for female leadership are discussed.

Time Will Tell: Temporality in Organizational Life

Session Moderator: **Tor Hernes**, *Copenhagen Business School*

OMT: **Toward an Organization-ecological View of Temporal Practices**

Author: **Tor Hernes**, *Copenhagen Business School*
Author: **Sven Kunisch**, *Aarhus U.*
Author: **Majken Schultz**, *Copenhagen Business School*

Although recent works underline the importance of developing sustainable practices, the specific temporal practices that organizations can employ to address climate change remain undertheorized. In this paper, we advance an organizational-ecological view of temporal practices and discuss how organizations' temporal practices can afford more adequate responses to the unpredictable, yet often sweeping dynamics of nature's time. In a first step, we draw on climate studies to conceptualize three manifestations of time that we ascribe to nature: stochastic events, probabilistic change, and tipping points. In a second step, we develop a framework for temporal practices by drawing upon existing literature. We investigate specifically how temporal practices enable organizations to develop resilience to stochastic events, how they enable organizations to enact probabilistic change, and how they enable organizations to navigate tipping points. We then develop propositions for how each manifestation of nature's time requires different combinations of temporal practices. The propositions reveal how specific dimensions of events influence temporal practices, more specifically event salience, event span and event regularity. The proposed organizational-ecological view of temporal practices suggests how organizations may cope with more complex temporal phenomena in their environment than assumed in extant theorizing and has implications beyond climate change.

OMT: **Temporal Legitimacy: Playing with the Past and Future in the Present Through Rhetorical Strategies (WITHDRAWN)**

Author: **Mac Nguyen**, *Gustavson School of Business, U. of Victoria*

Legitimacy—the conformity to social norms, values, beliefs, and definitions—has gained substantial attention in institutional research. Yet, prior studies have neglected how actors engage in agentic processes and enact temporal dynamics to establish legitimacy. This conceptual piece re-examines the legitimacy concept from the temporal work perspective—constructing and reconstructing the relationship of the past, present, and future. In this view, temporal legitimacy is defined as an iterative process of interpreting and negotiating tensions among understandings of the past and future to legitimize innovations or emerging practices at the present. I argue that temporality encodes criteria for legitimacy that urge organizations to enact temporality to configure and reconfigure legitimacy in the creation of innovation or institutional change. Based on a configurational approach, I further propose a layered model to explain temporal legitimacy with rhetorical strategies as the key mechanism. By drawing a theoretical connection between temporality and legitimacy as a social symbolic resource, this paper embraces temporality as a necessary feature of the institutional theory while involving double regard for the past and future. Keywords: temporal legitimacy; temporality; temporal work, rhetorical strategies; past; present; future

OMT: **The Temporal Micro-foundations of the Capacity to Integrate and Create Resources**

Author: **Jane Bjørn Vedel**, *Copenhagen Business School Department of Organization*

Theory on dynamic capabilities (DCs) has long assumed that DCs evolve over time, that managers play a key role in their development, and that DCs enable firms to reconfigure resources to accomplish change. Yet the capacity to integrate and create resources in a continuous process is an understudied part of DCs – we do not sufficiently understand how and why nonmanagerial individuals turn resources that they bring into their organizations into DCs. Based on an extensive qualitative study of how researchers in universities reflected on the significance of their grants for themselves and their organizations, we found that researchers' mobilization of temporal structures shaped their capacity to integrate and secure resources. Especially researchers' future orientation was important for their extension of their resources into their organizations. Our findings advance theory on DCs by providing a process-based explanation for individuals' contribution to development of DCs related particularly to integrating and sustaining resources.

OMT: **Path Enactment: How Actors Move Towards Distant-future Goals** ☯ 💻

Author: **Miriam Feuls**, *Copenhagen Business School*
Author: **Tor Hernes**, *Copenhagen Business School*
Author: **Majken Schultz**, *Copenhagen Business School*

Research on distant futures tends to apply oppositional thinking, such as between short- and long-term orientations. However, such thinking overlooks the ongoing processes by which actors move iteratively through time to address distant future goals as an ongoing process. Through a real-time study of a sustainability workstream, we investigated how actors engaged in what we call path enactment to stretch and configure paths of solutions towards distant-future goals. We show how the team under study enacted paths by moving between different combinations of ongoing and imagined solutions and how this enabled them to develop a feasible yet far-reaching sustainability strategy. We followed the team through three phases of path enactment, which consisted of identifying, elaborating, and consolidating paths. Path enactments were connected iteratively both between and within phases. In each phase three different mechanisms, inductively labelled bracketing, narrating, and calculating were at play. The mechanisms enabled the team to maintain focus on distant-future goals while connecting emerging paths forward and backward in time. Based on our findings, we develop a process model of path enactment towards distant-future goals that contributes to theories on organizational future-making in general and on future-making in the context of climate change in particular.

OMT: **Removing the Blinkers to Heed Temporal Complexity: Rhythmic Interrelations and Temporal Work**

Author: **Omid Omidvar**, *Warwick Business School*
Author: **Gary Thomas Burke**, *U. of Bristol Business School*

Although interest in temporal complexity has grown recently, the concept has been rather narrowly conceived as scholars have focused on past, present, and future relations. We introduce the concept of temporal breadth as a necessary and complementary correction that better accounts for the diverse array of temporalities people and organizations encounter. Drawing together insights from rhythmanalysis and phenomenology, we argue that temporal complexity is best understood through a rhythm lens that involves bodily and placial engagement with time and temporality. We develop a framework that unpacks how actors can cultivate heedfulness to conduct temporal work and show how through transposing, syncopating, and harmonizing practices they can manipulate temporal complexity advantageously. Our framework thus provides new pathways to explain pathologies in organizations and society, including ecological challenges.

Author: **Ante Glavas**, *U. of Vermont*
Author: **Olivia Jung**, *UCLA*
Author: **Sara Singer**, *Stanford U.*
Author: **Patricia Satterstrom**, *New York U.*

This symposium examines the organizing processes that occur across stages of time and levels of authority in organizations undergoing change initiatives. Papers in the symposium address research questions related to how employee involvement, long reorganization periods, and contradictory change goals influence work relationships and employee attitudes. By focusing on how workers in organizations experience and react to organizational change, especially the relational aspect of these experiences and reactions that evolve over the course of the change period, the four papers in this proposed symposium highlight a dynamism of change processes that is often overlooked in studies of organizational change. These include considerations of how organizational leaders design change to enable participation from frontline team members; why such design efforts for employee involvement in continuous improvement can fail; and how long-lasting and overlapping changes can complicate simultaneous interventions aimed at increasing diversity, equity, and inclusion in the organization.

Organizer: **Dennis Clemens Jancsary**, *WU Vienna*
Organizer: **Stephan Leixnering**, *WU Vienna*
Panelist: **Joel Gehman**, *George Washington U.*
Panelist: **Barbara Gray**, *Pennsylvania State U.*
Panelist: **Martina K. Linnenluecke**, *U. of Technology, Sydney*
Panelist: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*
Panelist: **Ignacio Pavez**, *Pontificia U. Católica de Chile*

Inequality, health and well-being, energy decarbonization, sustainability, digitalization – the 17 Sustainable Development Goals (SDGs) encompass the most pressing societal challenges we are currently facing. Such grand challenges are wicked in the sense that addressing them requires collaboration across sets of diverse and interdependent actors rather than isolated individual (e.g., politicians, activists) or collective actors (e.g., governments, business firms). The final SDG, goal number 17, therefore stresses the crucial character of partnerships for the goals. By bringing together scholars representing different perspectives on collaboration and cooperation with respect to SDG 17, our panel symposium sheds further light on the varied relational aspects of solutions to current societal challenges, addressing both opportunities and pitfalls. It seeks to deepen the conversation between scholars with shared interests but distinct approaches and foci, highlighting both similarities and differences. Embracing new and meaningful relationships, both in research and practice, it is our goal to explore potential avenues for mutual inspiration, learning, and future collaboration.

Top Management Teams, Emotional Dynamics and Organizational Change: New Avenues for Research

Organizer: **Emily Truelove**, *Harvard Business School*
Discussant: **Donald C. Hambrick**, *Pennsylvania State U.*
Presenter: **Jennifer Petriglieri**, *INSEAD*
Presenter: **Timo Olavi Vuori**, *Aalto U.*
Presenter: **Saouré Kouamé**, *HEC Montreal & U. of Ottawa*
Presenter: **Emily Truelove**, *Harvard Business School*

The purpose of this symposium is to explore the emotional experience of top management teams (TMTs) in times of change, and to understand how this experience influences TMTs' strategic actions and the organizations they lead. The symposium brings together four empirical papers that draw on rich, longitudinally collected qualitative data coming from rare, real-time access to the inner thoughts and workings of TMTs. These papers demonstrate that the emotional life of TMTs is emotionally complex and even fraught—both when we might expect it to be so, and when we might not. Our symposium goals are threefold. First, we seek to better document and understand the emotional experience of TMTs as they engage in strategic activities. Second, we seek to better understand how TMT emotions shape TMT actions that in turn affect organizations. Third, through our presentations, the introductory and closing remarks, as well as a Q&A session and audience discussion, we hope to jointly develop new insights into this theoretically and practically important space.

The emotional-temporal process of TMT strategic decision-making during industry transitions

Author: **Timo Olavi Vuori**, *Aalto U.*

Business Models for Sustainability and Society

Session Moderator: **Maria Schmidt**, *Institute for Technology and Innovation Management at RWTH Aachen*

ONE: **Business Model Innovation for Scalable Sustainable Development – The Case of the Last Mile**

Author: **Maria Schmidt**, *Institute for Technology and Innovation Management at RWTH Aachen*
Author: **Philipp Trotter**, *U. of Oxford*
Author: **Aoife Marie Brophy**, *U. of Oxford*
Author: **David Antons**, *RWTH Aachen U.*

Targeted solutions for the last mile are fundamental to achieving sustainable development progress in low-income countries (LICs). As the impact of traditional aid-based programmes on sustainable development remains insufficient, scholarly attention has shifted towards the role of private actors. While Business Model Innovation (BMI) is recognised as an important tool for accelerating the sustainability transition, insight into the precise link between BMI and its sustainability impact at the last mile in LICs is scant. Against this background, we conduct a systematic review of the last mile literature with a focus on BMI. We create a structured overview of challenges and enablers at the last mile to support the design of holistic interventions for this segment. Further, we show how and why the mechanisms of addressing a sustainable development need, bridging the supply-demand gap self-sufficiently, and bridging systemic disconnects along the value proposition, value capture and value network dimensions respectively, can shape business models for scalable sustainable development impact. Finally, we illustrate how insight into BMI at the last mile can advance research domains in the shared value, embeddedness and wicked problems literature.

ONE: **Business Model Innovation for Society: Putting the Community first in the Off-grid Energy Sector**

Author: **Tonny Kukeera**, *Smith School of Enterprise and the Environment, U. of Oxford*
Author: **Aoife Marie Brophy**, *U. of Oxford*
Author: **Philipp Trotter**, *U. of Oxford*

We study the setting of the off-grid renewable energy sector pre-pandemic, during and post-pandemic to understand how business model innovation changes over time to meet society needs. We investigate thirteen organisations providing energy services and products to the communities. When the pandemic hit, most of companies struggled to innovate their business models to manoeuvre the tough times. We find that most of the innovation happened in the value network dimension of the business model. While the majority of the companies changed their business models, one company did not change its approach through the phases of the study (pre, during and post-pandemic). We argue that the organisation's focus on community needs right from its inception was key. We develop a model that explains how business model innovation can emerge in ways that benefit society. We provide two critical contributions to the literature on business model innovation. First, we bring attention to the need to consider the sequencing of different dimensions of a business model. Second, we identify the importance of whether companies should focus on the system or their own needs when translating any change that might require business model innovation.

ONE: **Inherently Instable? An Analysis of the Organizational Diversity of the Sharing Economy.**

Author: **Jozef Cossey**, *KU Leuven & UCLouvain*
Author: **Tom Dedeurwaerdere**, *UCLouvain*
Author: **Anaïs Périlleux**, *UCLouvain*

The rise of sharing economy platforms initially raised high hopes as it promised collaborative and democratized action, at a large scale, capable of addressing a variety of societal and environmental concerns. However, this early optimism seems misguided as increasingly commercial sharing economy platforms have become contested for their negative societal consequences and the ambiguity of their environmental impact. This shift towards commercial orientations has been argued to spring from the inherently instable nature of community-based platforms making up the early sharing economy. Using a comprehensive geographic mapping, this paper empirically analyzes and nuances these claims. In doing so, our mixed-methods research identifies community-based platforms as a stable subsection rather than a transient phase of the sharing economy and suggests that the increasing commercial orientation might be due to 'perceived' rather than 'actual' mission drift. We conclude by formulating implications for the sharing economy's conceptualization and discuss pathways to address its contested nature.

Managing for Sustainability

Session Moderator: **Frank Figge**, *ESCP Business School*

ONE: **The Collective Business Case of Sustainability. When Does it Pay to be Sustainable?**

Author: **Frank Figge**, *ESCP Business School*
Author: **Andrea Stevenson Thorpe**, *Kedge Business School*
Author: **Melissa Gutberlet**, *Kedge Business School*
Author: **Siarhei Manzhynski**, *Umea U.*

The business case of sustainability is a popular explanation for the motivation of companies to contribute to sustainability. From this perspective companies will contribute to sustainability if it is directly advantageous to them. Unfortunately, many sustainability problems we face are 'common goods'; solving these problems would benefit all, while the costs are incurred by individual companies. Consequently, the business case as it is known today does not incentivize companies to address these problems. Using a lens of evolution theory, we develop the collective business case and show, counter-intuitively, that it can be economically rational for companies to contribute to common good sustainability problems even at a net cost to the company.

ONE: **Go Green with Knowledge: Green Competencies and Corporate Sustainability Performance**

Author: **Murad Ali**, *Newcastle Business School, Northumbria U., UK*
Author: **Mehwish Malik**, *Griffith U., Australia*
Author: **Hengky Latan**, *HLC Consulting, Jl. Kertanegara Selatan V No 5B Semarang 50241, Indonesia*
Author: **Charbel Jose Chiappetta Jabbour**, *NEOMA Business School, Department of Information Systems, Supply Chain Managemen*
Author: **Mohammad Asif Salam**, *Faculty of Economics and Administration, King Abdulaziz U., Jeddah, KSA*

Drawing on ability, motivation, opportunity (AMO) theory, this study contributes to the growing literature on green competencies and corporate sustainability performance. The purpose of this study is to propose an integrated research model to investigate the combined effects of green competencies on corporate sustainability performance moderated mediating through green organizational culture and top management support. Using time-lagged and multisource data is used to test the research model. This study finds support for hypotheses. The moderated mediation analyses indicate that mediated moderation that top management support mediates the relationship between green competencies and corporate sustainability performance. Green organizational culture moderates the relationship between green competencies and top management support such that green competencies is positively related to top management support when green organizational culture is high. Furthermore, conditional indirect effects show that top management support mediates the relationship between green competencies and corporate sustainability performance only when green organizational culture is high. The study suggests new mechanisms and boundary conditions through which green competencies triggers corporate sustainability performance. Finally, the study discusses the managerial and practical implications of the study's findings and suggest possible directions for future research.

ONE: **Intrinsic or Normative Pressure and Green Management: The Role of Internal and External Bricolage**

Author: **Jingshu Du**, *EMLV Paris*
Author: **Liang Wu**, *Guangdong U. of Foreign Studies*
Author: **Heng Liu**, *Sun Yat-Sen U.*

Green management (GM) is not only crucial to firms' (long-term) competitiveness but also challenging as it usually requires a large amount of upfront investment, but the benefits can only be harvested in the long run. Yet, the existing literature sheds little light on understanding how emerging market firms in high-polluting manufacturing (HPM) industries deal with GM challenges by making do with internal and external resources. To address this research gap, we differentiate firms' motivation to implement GM into intrinsic motivation and normative pressure, and firms' bricolage activities into internal bricolage (exploiting internal resources and expertise) and external bricolage (leveraging external resources and expertise). We find that firms can benefit more from external bricolage when their intrinsic motivation to implement GM is high, while profit more from internal bricolage when they're faced with higher normative pressure. Proposing bricolage as a vital capability to successfully implement GM, this study highlights the important link between both willingness and capability in achieving satisfactory GM performance, offers actionable suggestions for the appropriate interactions between two sources of willingness and two types of bricolage capacity, and provides novel explanations and policy implications for understanding this emerging phenomenon.

ONE: **Institutional Ownership and CSR Performance – A Meta-Analysis**

Author: **Henrik Scherer**, *Heinrich-Heine U. of Dusseldorf*
Author: **Rüdiger Hahn**, *Heinrich-Heine U. of Dusseldorf*
Author: **Jan Endrikat**, *U. of Applied Sciences Dresden*

Institutional investors can have significant influence on the strategy and processes of companies. Next to financial performance, institutional owners increasingly take corporate social responsibility (CSR) of companies into account when making investment decisions. Prior literature investigating the relationship between corporate social responsibility and institutional investors found conflicting empirical results. This study aims to consolidate the mixed empirical evidence by meta-analyzing 77 quantitative empirical studies. The results suggest that institutional ownership is positively related to a subsequent increase of CSR performance and that a high CSR performance is related to a subsequent increased share of institutional ownership. Due to the heterogeneity of the meta-analytic results, we tested both directions of the focal relationship for potential moderating effects. We found moderating effects of the environmental and social dimension of CSR, of country-level institutional factors such as a strict regulation and shareholder rights, and of a long-term horizon of institutional investors and of the timing of the study data.

ONE: **When the Institutional Theory Lens Meets Sustainability: Bridging the Gaps**

Author: **Barbara Galleli**, *Federal U. of Parana*
Author: **Lucas Amaral Lauriano**, *IESEG School of Management, LEM-CNRS 9221*
Author: **Noah Emanuel Brito Teles**, *UFPR*
Author: **Mateus Santos Freitas-Martins**, *Federal U. of Paraná*

This article reviews scholarship working at the intersection of institutional theory (IT) and organizational sustainability. From a systematic literature review, we comprised more than three decades of research, and analyzed 274 papers. We identified the most frequent concepts explored by scholars and, from that, structured five streams of literature: IT as a foundation for organizational sustainability; IT moderating organizational sustainability; IT influencing organizational sustainability; IT influencing individual-level sustainability; Organizational sustainability influencing IT. Our research contributes to the literature by aggregating theories from management and organization studies that are conjointly applied, culminating in streams of literature that capturing the organic development of institutional theory and organizational sustainability scholarships. This allows us to visualize the main foci and limitations of past and current studies, presenting fruitful avenues for future research.

Green HRM and Organizational Sustainability Performance

Session Moderator: **Olatunji David Adekoya**, *Sheffield Hallam U.*

ONE: **The Role of Green HRM in Promoting Occupational Health and Environmental Sustainability in Nigeria**

Author: **Olatunji David Adekoya**, *Sheffield Hallam U.*
Author: **Hakeem Ajonbadi**, *Birmingham City Business School, Birmingham City U., Birmingham, UK*
Author: **Chima Mordi**, *Brunel Business School*

This study explored the potential of green human resource management (green HRM) in promoting occupational health and environmental sustainability among academics, particularly in the Nigerian higher education sector. We adopted the interpretive qualitative research method and 43 semi-structured interviews to understand the work-life stressors affecting Nigerian academics and the role of green HRM in alleviating work-life stress and promoting occupational health and environmental sustainability. Our findings highlight key factors that promote and hinder the impact of green HRM on occupational health and environmental sustainability. We discuss the theoretical and practical implications of these findings by arguing that green HRM could enhance organisational climate by serving as an essential component in occupational stress management and environmental management, whereby green HRM practices could act as an intervention for supporting employees in enhancing their health and wellbeing, achieving work-life balance (WLB), and promoting a green environment.

ONE: **How does Leadership Transform Saudi SMEs Into Green Firms? The Role of Ethical Leadership, Green HRM**

Author: **Zahid Hameed**, *Prince Mohammad Bin Fahd U.*
Author: **Rana Muhammad Naeem**, *The Islamia U. of Bahawalpur, Pakistan*
Author: **Muhammad Imran Rasheed**, *Uni of Sci and Technology of China and Islamia U. of Bahawalpur Pak*
Author: **Farrukh Moin**, *Rabat Business School, International U. of Rabat, Morocco*

In the aftermath of global warming, companies are facing huge pressure to minimize waste, reduction in carbon emissions, and generally become more responsible in their operations. To this backdrop, researchers argue that organizational leadership have significant potential in shaping firm's environmentally friendly practices. The aim of this research is to investigate the impact of CEO ethical leadership style on Saudi firms' environmental performance in the presence of green human resource management (HRM) as a mediator and stakeholder pressure as a moderator. We utilize resource-based theory and stakeholder theory to develop hypotheses on these relationships. A three-wave time-lagged data collected from 278 employees from 34 small and medium sized manufacturing enterprises (SMEs) located in Saudi Arabia. The results reveal stakeholder pressure moderates the relationship CEO ethical leadership and GHRM, which in turn mediates the effect of CEO ethical leadership on firm's environmental performance. Our research highlights important theoretical and empirical contributions and provides insights for HR practitioners about why and under what conditions small and medium sized enterprises engage in environmentally friendly practices.

ONE: **Greening Workforce to Achieve Corporate Sustainability Performance through a Moderated Mediation**

Author: **Murad Ali**, *Newcastle Business School, Northumbria U., UK*
Author: **Noureen Fatima**, *Capital U. of Science & Technology, Islamabad Expressway, Pakistan*
Author: **Hengky Latan**, *HLC Consulting, Jl. Kertanegara Selatan V No 5B Semarang 50241, Indonesia*
Author: **Charbel Jose Chiappetta Jabbour**, *NEOMA Business School, Department of Information Systems, Supply Chain Managemen*
Author: **Mohammad Asif Salam**, *Faculty of Economics and Administration, King Abdulaziz U., Jeddah, KSA*
Author: **Muhammad Shujahat**, *U. of Essex Business School*

Inspired by ability, motivation, opportunity, and social identity theories, this research adds to the growing research on green human resource management (GHRM) and corporate sustainability performance. The purpose of this study is to build and test an integrated research framework to investigate the influence of GHRM practices on corporate sustainability performance, through the individual and combined mediating effects of green organizational culture and employee green behavior. This study employs a linear structural relationship via LISREL 11.0 with data collected from 311 ISO 14001-certified firms in the Kingdom of Saudi Arabia. The results confirm the existence of a direct and positive relationship between GHRM practices and corporate sustainability performance. In addition, the study confirms an indirect effect of GHRM practices on corporate sustainability performance through the sequential mediation of green organizational culture and employee green behavior. The results of this study make several contributions to the GHRM and environmental performance literature, as well as practical contributions for society, managers, policy makers and practitioners.

Buyer-Supplier Relationship I

Session Moderator: **Brian Squire**, *U. of Bath*

OSCM: **Conflict and Contract Use in Cross-Cultural Buyer-Supplier Relationships**

Author: **Brian Squire**, *U. of Bath*
Author: **Benn Lawson**, *U. of Oxford*
Author: **Mehrnoush Sarafan**, *U. of Bath and Cambridge U.*
Author: **Meriem Bouazzaoui**, *School of Management, U. of Bath*

Conflicts are common within global supply chains, especially where the buyer and supplier span different cultures. The use of formal contracts is intended to provide a common language that defines the roles, responsibilities, and liabilities of each party. However, the legitimacy, application, and primacy of contracts are also subject to cultural norms. Our paper explores how buyers and suppliers from different cultural contexts react to different contract functions (control vs. coordination) in the event of conflict. A multi-method research design was adopted. Study 1 involved multiple, in-depth case studies of three Indian suppliers and six of their international buyers. Qualitative findings indicate that in the event of conflict, a buyer's cultural context influences their choice of contractual control or coordination and that the supplier interprets this choice differently depending on their own culture. A mismatch in cultural contexts between the parties can lead to strong negative emotions and damage to the relationship. We explore supplier reactions further in study 2 through a scenario-based field experiment. Our results showed that the use of contractual control on suppliers from high-context cultures to address conflict has a significant negative, indirect effect on relationship commitment, operating via the emotion of anger.

OSCM: **Why Do Firms Reshore? A Framework for The Motivations Behind Shoring Decisions** ✈

Author: **Spencer James Fraseur**, *U. of Texas At Arlington*

With growing interest from firms to reshore parts of their manufacturing to the United States, researchers have been paying increasing attention to the motivation driving this phenomenon. Extant literature suggests a multitude of motivations, but a unifying framework to determine firm drivers in the reshoring process is still missing. By approaching manufacturing as a subdivided process, many firms may find that some of their manufacturing should remain offshore while simultaneously choosing to reshore others. In this study, we propose a theoretical model involving four levels of drivers regarding a firm's reshoring decision: firm-level, activity-level, country-level, and industry-level, and provide propositions on potential drivers of reshoring.

OSCM: **How Plural Sourcing can Help Achieve Corporate Social Responsibility in Outsourcing Relationships**

Author: **Xun Tong**, *U. of Groningen*
Author: **Miriam Michiko Wilhelm**, *WU Vienna U. of Economics and Business*
Author: **Shuo Wang**, *U. of Edinburgh*

Outsourcing promises economic benefits but creates corporate social responsibility (CSR) risks: as activities are placed outside of a firm's boundary, firms struggle to adequately measure the performance of their suppliers, particularly with regards to their environmental and social issues. This can lead to increased agency risks due to a supplier's hidden actions, such as covering up non-compliance. In this paper, we investigate how a buying firm's sourcing strategy could alleviate some of the CSR-related agency risks of outsourcing. A plural sourcing strategy builds on the simultaneous pursuit of distinct governance forms (such as make and buy, or make and ally, or all three forms combined). We use an extended agency theory framework to argue that a buyer's actual manufacturing experience that is part of plural sourcing can help the buyer to build evaluative capabilities regarding suppliers' internal CSR, and thereby overcome agency-related performance measurement problems. The effectiveness of plural sourcing to overcome agency problems in the outsourcing relationship is further contingent on two conditions: 1) the specific business segment (primary vs. secondary) where plural sourcing takes place; and 2) the buying firm's presence (i.e., owning facilities) in the sourcing countries. To test our hypotheses, we consolidate a panel data set consisting of 9,057 firm-year observations based on U.S. publicly traded manufacturing firms. This study combines hitherto unconnected strands of literature on plural sourcing strategies and outsourcing-related CSR risks to offer novel insights for improving CSR in global supply chains. It also offers an extension of agency theory to incorporate CSR-specific monitoring problems.

OSCM: **The Implementation Of Back-Shoring By SMEs: An Entrepreneurial Perspective** ✈

Author: **Alessandro Ancarani**, *U. of Catania*
Author: **Carmela Di Mauro**, *DICAR, U. of Catania, Catania, Italy*

The study investigates the implementation of back-shoring initiatives by small and medium entrepreneurial firms. The study focuses on how the logics of effectuation or causation inform back-shoring implementation strategies according to the entrepreneur's perception of uncertainty in the home-country environment. Using a multiple qualitative case studies approach involving six SMEs that have relocated from China back to the home-country, we obtain information on perceived uncertainty, implementation strategies and back-shoring performance at different temporal stages of the initiative. Results suggest that successful back-shoring combines causation and effectuation while failure of the relocation initiative is associated to an initial underestimation of the entrepreneur's liability of outsidership in the home country.

Navigating Censorship: Workers At The Front Line

Program Chair: **Elizabeth Searing**, *U. of Texas at Dallas*
Organizer: **Amy E. Smith**, *U. of Massachusetts, Boston*
Organizer: **Deneen Hatmaker**, *U. of Connecticut*
Organizer: **Shahidul Hassan**, *Ohio State U.*

Frontline workers increasingly find themselves embroiled in very public debates and controversies focused on censorship. In recent years challenges to intellectual freedom, speech censorship, calls to ban books, constraints on academic curricula, and the regulation of social media participation have intensified. These demands originate from a multitude of sources, including citizens, elected officials and government agencies. While these restrictions are hotly contested in the policy arena, it is those on the frontlines - librarians, teachers, health care providers, social workers and many other public and nonprofit, and even for-profit, employees – that must navigate this censorship in their day-to-day work. For workers at the frontlines – where values and motivation emphasize equity, inclusion, access, information, and participation – these restrictions fly in the face of their training, professional identity, and organizational missions. Placing employees front and center requires attention to the impact of such constraints on frontline workers. How do these essential workers navigate this quagmire while serving constituents, maintaining their professional values and working towards their organizational mission? The aim of this session is to bring broad and multi-disciplinary perspectives to this topic. A group of academic researchers and practitioners working in the field will explore how censorship and restrictions on intellectual freedom manifest in organizations and what this means for public and nonprofit workers. Questions and audience discussion to follow. This session is open to all AOM conference attendees.

New Methods for Studying Time-Related Issues

Session Moderator: **Minjae Lee**, *Southern Connecticut State U.*

RM: **Developing the Construct of Speed Ceteris Paribus**

Author: **Minjae Lee**, *Southern Connecticut State U.*

Firm speed has long been a construct of interest among managers and researchers. Despite its importance, making a ceteris paribus comparison of speed can be challenging. In the current paper, we suggest an alternative to the conventional way of capturing the speed ceteris paribus. First, we illustrate the concept of faster speed in strategic management research. Second, we use numerical simulation data to illustrate the challenges of the conventional methodology, known as the nonlinear transformation of variables. We show that this method is difficult to apply and may produce an inaccurate measurement of the concept unless the exact functional form is chosen. Third, we suggest an alternative methodology, known as data envelopment analysis. This accounts for the challenges of the conventional methodology when we do not know the accurate functional form for nonlinear transformation, while performing as well as the best of the conventional approach. Finally, by using actual firm data, we show that our suggested methodology can be an effective alternative to the conventional approach of capturing a firm's speed.

RM: **Time Dependence in Cox Proportional Hazard Models as a Theory Development Opportunity**

Author: **Hyun-Soo Woo**, *U. of Mississippi*
Author: **Jisun Kim**, *U. of Mississippi*
Author: **Albert Cannella**, *Texas A&M U., College Station*

The Cox proportional hazard model has often been used for survival analysis in organizational research. The Cox model needs to satisfy one critical assumption – time independence – that the effects of independent variables do not change over survival time (i.e., the proportional hazard assumption). However, organizational research often encounters time dependence in the Cox model. Although time dependence is not just an empirical threat but also a theory-driven issue in the Cox model, organizational studies have traditionally seemed to view time dependence as an empirical nuisance. Indeed, from our review of AMJ and SMJ papers published in a recent 10-year period, we found that researchers rarely considered time dependence as a theory development opportunity and worse, many of them did not test for or reported tests for time dependence. The purpose of our study is to change this pattern and provide a step-by-step guide for using time dependence as a theory development opportunity with a methodological technique (the extended Cox model). We also demonstrate a step-by-step guide with an empirical example.

RM: **Pitfalls of Discrepancy in a Time-to-Event Analysis and the Value of TTT Tests for Model Selection**

Author: **Oleksandr Tsaruk**, *West Virginia U.*
Author: **Abhishek Srivastava**, *West Virginia U.*

In this study, we use simulations to examine how varying hazard rates affect discrepancy in time-to-event analysis, which may result in model selection bias. The Cox proportional hazards model, which is semi-parametric, and the parametric survival regressions, are the main methodological tools used for time-to-event analysis in our field. However, they require careful statistical testing on the main assumption of proportionality of hazard or distribution shape. We show via simulation of firm survival data how varying hazard rates increase discrepancy between parametric and semi-parametric models leading to potentially biased interpretations of the model's fit, effect size of predictors, and their significance level. We illustrate the advantages of TTT (total time on test) statistics in detecting the correct shape of the hazard function and the model selection based on it. We show how using TTT statistics ex-ante reduces the risk of model selection bias in a time-to-event analysis. Based on our results, we provide recommendations for scholars using time-to-event analysis.

We Need to Chat: Discussing the Ramifications of ChatGPT for Methodological Research

Organizer: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*
Moderator: **Larry J. Williams**, *Texas Tech U.*
Panelist: **Paul Bliese**, *Darla Moore School of Business, U. of South Carolina*
Panelist: **Lisa Schurer Lambert**, *Oklahoma State U.*
Panelist: **Robert J. Vandenberg**, *U. of Georgia*
Panelist: **Justin A. DeSimone**, *U. of Alabama*
Panelist: **Betsy Albritton**, *UNC-Charlotte*

With the creation of OpenAI's Generative Pre-Trained Transformer (ChatGPT) in November 2022, discussions have begun regarding the impact of this technology across contexts. Described by some as “the best artificial intelligence chatbot ever released to the general public” (Roose, 2022), this language and dialogue AI model can interact with and generate unique information using prompts from users. One such context gaining increasing attention is the potential for utilizing ChatGPT for research purposes. While the use of innovative new approaches such as utilizing natural language processing has begun to attract attention in organizational research (e.g., Lê & Schmid, 2022; Pandey & Pandey, 2019; Speer, 2021), the potential of these technologies is yet to be determined. Most relevant to the aim of this symposium are early discussions surrounding its use in the methodological steps of the research process, as well as in conceptual-operational alignment. The opportunities for technologies like ChatGPT to reshape the research landscape abound, particularly as a tool to influence methodological and analytical decision-making. Exploratory tests confirm that ChatGPT is able to debug syntax, generate new syntax and instructions for analyzing data in various analytical software languages (e.g., STATA, SPSS, R, Python, MPLUS, SAS), mine text (Hickman et al., 2022), aid in qualitative analyses and reviews (Antons, Breidbach, Joshi, & Salge, 2023), and apply learned concepts in unique ways (Pavlik, 2023). While its potential is becoming increasingly documented, so too are the concerns surrounding its unchecked usage (Stokel-Walker, 2022; Zhang, Ding, & Jing, 2022). How might blind usage of such a resource present ethical concerns for the research process? Will outsourcing the work of making thoughtful decisions about how to analyze data unintentionally hinder the average researcher's understanding? Should researchers be quick to adopt resources like ChatGPT while they are still being developed? What exciting opportunities do ChatGPT and similar technologies present for researchers and methodologies? These and other intriguing questions will be discussed by our panel of experts including Drs. Larry Williams, Paul Bliese, Lisa Schurer Lambert, Bob Vandenberg, Justin DeSimone, and Betsy Albritton.

Strategic Innovation: Temporality, Translation, and Knowing Practices

Session Moderator: **A. Paul Spee**, *U. of Queensland*

SAP: **Implementing Social Innovations through Collective Reinvention**

Author: **Damla Diriker**, *Vrije U. Amsterdam*
Author: **Amanda Porter**, *Vrije U. Amsterdam*
Author: **Philipp Tuertscher**, *Vrije U. Amsterdam*
Author: **Mark Boons**, *Vrije U. Amsterdam*

Generating long-lasting impact through social innovation requires that solutions are implemented in the social setting and ingrained in the routines, relationships, and beliefs of local actors. This may be accomplished by involving local actors in reinventing the solution during implementation to ensure their needs and demands are adequately addressed. However, such involvement may necessitate new relationships, which, in turn, may surface tensions that need to be reconciled. Using translation theory as an analytical lens, we study the micro-practices of local actors to open the 'black box' of implementation in the context of social innovations. Through a longitudinal field study of a large academic institution implementing social innovations for higher education, we show that isolated implementations of a few local actors evolved into a collective reinvention process through which various actors could jointly translate solutions fitting their contexts. We theorize that trading zones can be enacted as an organizing device for the reinvention of social innovations by using common artifacts to generate conditions for exchange and by perspective-taking to negotiate and balance different materializations of the social innovation.

SAP: **A Penny for Your Thoughts - Knowledge Processes and Practices in Corporate-Startup Collaborations**

Author: **Juliane Moellmann**, *MGMT, BSS, Aarhus U.*
Author: **Pernille Smith**, *Aarhus U., Department of Management*

Corporations struggle to constantly innovate and to establish structured programs to manage their collaborations with external startups. Such collaborations aim at getting access to external knowledge to solve internal business challenges. Consequently, the program processes concerned with knowledge transfer or knowledge sharing are vital to a program's success. Based on a knowledge-as-practice perspective, this paper analyzes how single actors in a startup innovation contest enacted the program structure over time. We identify three different strategies of enactment: (1) following the given structure, (2) deviating at a specific structural element, or (3) adding elements to the structure. Actors deviated from the given structure because certain knowledge transfer needs were not addressed in the formal structure. These deviations, in most cases, led to new additions to the formal structure to fill the actors' unmet needs. These new additions affected knowledge transfer processes in both positive and negative ways. The study thus provides new insights into the workings of corporation-startup collaboration programs, showing how such structures are interpreted and how these interpretations may be seen as sources of refinement of the organization of corporation-startup collaborations.

SAP: **When the Time is Made Right: Constructing Windows of Opportunity for Innovation in Practice**

Author: **Yanis Hamdali**, *European Uni Viadrina, Frankfurt (Oder)*
Author: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

Previous work on innovation and time has provided invaluable insights into the time structures of innovation. However, while this work has stressed the inherently temporal nature of innovation, and how it needs to meet the right timing, it has not explicitly addressed how timing is made right, i.e., how actors produce the right timing for innovation. In our empirical study of a German mobility firm, we investigate why some innovations as strategic initiatives are successful while others are not. We identify windows of opportunity that govern the temporal success of innovations to be right in time. These temporal structures are opened and upheld by four strategic practices, activating, advocating, attaining, and attaching. Our findings have important implications for research on temporality and innovation and foreground agency in timing.

SAP: **Truly, Madly, Deeply: Aesthetic Experience and Embodied Knowledge as Strategic Entrepreneuring**

Author: **Sara R. S. T. A. Elias**, *U. of Victoria*
Author: **Amanda Peticca-Harris**, *Grenoble Ecole de Management*
Author: **Nadia C. DeGama**, *AFG College with the U. of Aberdeen*

Deep engagement with materials, along with sensory, tacit, and embodied experience, are key to how entrepreneurs create unique offerings and strengthen competitive advantage. However, strategic entrepreneurship research has largely overlooked craft ventures, which prioritize skill, materiality, and immersive action in creating unique value and, thus, are well suited to investigate linkages between strategic entrepreneuring and aesthetic practices. Drawing on ethnographic and case study data from two craft ventures, we abductively generated three dimensions by which strategic entrepreneuring is practiced: materializing, empathizing, and enchanting. Our key contribution is to unpack the embodied—and very human—processes that are vital to the everyday practices of strategic entrepreneuring, including intimate interactions with other-than-human elements and considerations of imagined offerings that are unique and meaningful to both entrepreneurs and their audiences.

Open Strategy: Roles, Trust, and Emotions

Session Moderator: **David Oliver**, *U. Of Sydney*

SAP: **Open Strategy in Inter-organizational Settings: Managing Risks from Trust-building**

Author: **Madalina Pop**, *Aarhus BSS, Aarhus U.*
Author: **Ingo Kleindienst**, *Aarhus BSS, Aarhus U.*

To solve complex problems, organizations increasingly engage in inter-organizational strategizing with actors coming from different institutional contexts. However, drawing on open strategy to achieve its goals comes with risk for the opening organization. Traditional market or hierarchical control and organizing mechanisms are not available in inter-organizational collaborations. Rather, trust takes over the role of the main organizing mechanism. In this study, we draw on a longitudinal ethnographic case study to investigate how openness and trust interact in open strategy processes. Our findings reveal five main practices – strategic sharing, reciprocal sharing, input sharing and benevolence building – that structure the open strategy processes. Of particular importance is the practice of reciprocal sharing which ensures that all participants to the open strategy process disclose their strategy, therefore, becoming vulnerable themselves, ultimately increasing the trust between participants. Based on our findings, we develop a model showing how openness and trust practices interweave to support and deal with the challenges in inherent in the open strategy processes

SAP: **Diamonds in the Rough: Co-strategizing with Grassroots-Level Employees**

Author: **Chun-Fang Yang**, *Warwick Business School*
Author: **Sotirios Paroutis**, *Warwick Business School*
Author: **Loizos Th. Heracleous**, *Warwick Business School*

In this paper, we examine grassroots-level employees' (hereafter grassroots) co-strategizing practices in the context of a business crisis—the U.S.–China trade war in 2019. Based on an in-depth case study of ITCorp's grassroots undertaking open strategy practices, we show how they co-strategized with multiple stakeholders and helped the company bypass the 25% high tariffs imposed on Chinese-made products by the U.S. government. Our findings uncover five open strategy practices, including (a) scrabbling strategy directions with the management team, (b) setting boundaries for idea development, (d) developing choice points through a disproval approach, (d) noise reduction, and (e) simultaneously formulating and implementing a strategy. We also develop a conceptual process model that foregrounds the open strategy practices of how grassroots co-strategize with multiple stakeholders in the face of a crisis. With these findings, we contribute to open strategy and strategy-as-practice literature by advancing our understanding of grassroots' strategizing practices and their multifaceted roles throughout the co-strategizing process, from advice-seekers to strategists and strategy implementation facilitators. We also contribute to the strategy-implementation literature by revealing the dynamic and iterative strategy formulation and implementation process for a more granular and actionable strategy.

SAP: **Conceptualizing the Recursive Relationship between Open Strategy and Digital Transformation**

Author: **Thomas Ortner**, *U. of Innsbruck School of Management*

Digital transformation impacts organizational boundaries by not only changing ways how value is created but also by transforming organizational processes. Strategizing processes have been opened up – often enabled by digital technologies – resulting in increased transparency and inclusion of a larger number and variety of actors. This, again, has not only transformed the strategy process itself but also allows to rely on a combination of perspectives and insights from diverse knowledge fields to develop strategies that address complexities brought by digital transformation. This review aims on further conceptualizing this recursive relationship between open strategy and digital transformation and how specifically open strategizing practices are driven and enabled by digital transformation while addressing its complexities at the same time. I review the emerging research field of open strategy by applying organizational boundary theory, to provide more nuanced insights. I distinguish between the four boundary conceptions efficiency, power, competence, and identity, identify practices that are either content-related or process-related in the context of digital transformation and show different associated outcomes. Consequently, I uncover gaps in the research landscape of open strategy and propose opportunities for future research in an emerging and relevant field of study.

SAP: **How Stakeholders' Emotions Can Shape Open Strategy Formulation**

Author: **Christopher Golding**, *U. of Manchester*
Author: **Josh Morton**, *U. of Leeds*
Author: **Aljona Zorina**, *IESEG School of Management (LEM-CNRS 9221)*

Whilst strategy-making is increasingly understood as emotionally-laden, open strategy research has failed to fully consider how the emotions of the diverse stakeholders involved might shape the formulation of new strategies. We studied how a large professional association used open strategy to generate a new strategic direction, by following the emotions of the two key groups involved: the association's professional community and their top managers who were leading the open strategy initiative. Our findings revealed how the adoption of open strategy was driven by a combination of stakeholder negative emotions, and top managers' positive emotions towards open strategy. Additionally, we discovered that stakeholder participation in open strategy was initially motivated by negative emotions they felt towards the organization, and later sustained by the emerging positive emotions they experienced through contributing to the open strategy process. These emotions were expressed and understood through digital and analogue strategy tools, which permitted the development of an emotionally resonant strategy that could be implemented. Our study has theoretical implications for the literature on open strategy, emotion in strategy-making, and the use of strategy tools.

Practices of Resourcing and Its Implications

Organizer: **Rangapriya Kannan-Narasimhan**, *Lucas College & Graduate School of Business, San Jose State U.*
Discussant: **Martha S. Feldman**, *U. of California, Irvine*
Participant: **Hooria Jazaieri**, *Leavey School of Business, Santa Clara U.*
Panelist: **Samantha Keppler**, *U. of Michigan*
Panelist: **Ravi S. Kudesia**, *Fox School of Business, Temple U.*
Panelist: **Paul Leonardi**, *U. of California Santa Barbara*
Panelist: **Reut Livne-Tarandach**, *Manhattan College*
Panelist: **Rene Wiedner**, *Warwick Business School*

Resourcing defined as “the creation in practice of assets such as people, time, money, knowledge, or skill; and qualities of relationships such as trust, authority, or complementarity such that they enable actors to enact schemas” (Feldman, 2004, p. 296), is an important concept in organization studies and is relevant to a range of fields including strategy, entrepreneurship, and organization theory. The concept of resourcing suggests that assets are potential resources that become actual resources through actions. This panel symposium brings together a panel of experts in the field of management who will address the importance of resourcing and its relevance to their respective fields. They will delve into various aspects of resourcing, such as how actors define and redefine resources, the role of material objects in the resourcing process, and the impact of social constraints on resourcing. The panelists will also discuss the potential effects of resourcing on agency, power and conflict, and the emergence of a new social order. Through their insights and experiences, the panelists will shed light on how the practices of resourcing have broader organizational and societal implications.

Social Media, Artificial Intelligence and Technology Development: A Social Justice Perspective

Panelist: **Pratyush Bharati**, *U. of Massachusetts, Boston*
Panelist: **Ram Mahalingam**, *U. of Michigan, Ann Arbor*
Panelist: **Carol Lee**, *Northeastern U.*
Panelist: **Azhagu Meena**, *U. of Toronto*
Panelist: **Vinodkumar Prabhakaran**, *Google*

Our panel symposium focuses on the scholarly challenges of studying social media analytics, artificial intelligence (AI), and technology development using a social justice perspective. Employing an interdisciplinary perspective, our panelists will foreground the complex ways technological development, social media, and AI can disempower people, in turn, perpetuating social injustice. Social media platforms are becoming spaces where socially dominant behavior is becoming more and more prevalent. Trolls take advantage of social media platforms to post offensive material to disrupt online discourse and mislead or influence social movement participants (Bharati et al, 2019). While there is growing scholarly interest (e.g., Heukamp, 2020; Sloane, 2019; Zajko, 2021) in how technology, AI and social media can accentuate social marginality and inequality and thwart social justice concerns, yet sufficient scholarly attention from a global perspective is deficient. Our panel symposium examines these concerns using an intersectional lens with a focus on the global south. Specifically, we critically look at the proliferation of technological growth and AI while considering the embodied experience of marginalized and invisible people. While social movements share common concerns and can be mobilized into action (Carberry et al, 2019), social media spaces are also exacerbating social injustice for movements. Our symposium raises scholarly concerns from ethical to social justice considerations, such as equity, diversity, and inclusivity. Our panel brings experts from diverse backgrounds to stimulate a critical discussion on these crucial concerns. Our panelists will delineate a social justice framework from a global perspective, which appeals to both scholars interested in digital technology in management and social justice in organizations. Our panelists will discuss scholarly challenges in developing a framework to examine the complex realities of technology development, social media, and AI so that the egalitarian potentials maybe explored. We argue that it is critical to developing a social justice-focused research program to explore how technology development, AI and social media impact social marginality and inequality with specific attention to the realities of the global south. Social media and AI are touted to promote greater good and more prosperity to all sections of society. Paradoxically, such technological developments have augmented disparities and the chasm between the rich and poor. The proliferation of precarious working conditions and the gig economy on a global scale is a case in point (e.g., Mahalingam, in press). Sloane (2019) argues that we need a social justice framework in all aspects of technology development with a specific focus on the social impact of technology that goes beyond ethical concerns of technology (e.g., Algorithmic justice). While digital disinformation is affecting social justice seekers, the mechanisms of disinformation and their impact amongst movement participants are not fully understood. This verifiably false information being deliberately propagated has the potential to cause serious public harm. In the work context, Mahalingam and Selvaraj (2022) found that in the shopping malls, janitors experienced various kinds of dignity injuries due to their precarious working conditions. In the digital domain, algorithms are increasing societal disparities that have grave justice implications of AI technologies. The panel symposium will focus on scholarly challenges of social media analytics, AI and technology development. Panelists will engage the audience in an interactive discussion on: How do machine-learned models reflect, propagate, and amplify social stereotypes about people? How does technology development reproduce social inequalities when caste, social capital, and dignity injuries are not taken into consideration? How does digital disinformation impact social and economic justice seekers? What are the algorithmic fairness failures of AI technologies? How can AI technologies exacerbate societal disparities in the absence of cross-cultural considerations? How have technologies that are intended to support socially marginalized communities exacerbated inequalities?

Innovation and Inclusion at the Base of the Pyramid

Session Moderator: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

SIM: **When We All Come Together: Determinants of Community-based Organizing for Financial Inclusion**

Author: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*
Author: **Aparajita Agarwal**, *The Wharton School, U. of Pennsylvania*

Collective action lies at the heart of organizations aimed at improving social welfare – community-based organizations. But what mechanisms enable socially marginalized members of a community to become members of community-based organizations, and thereby benefit from these organizations? We posit that the likelihood that an individual becomes a member of a community-based organization increases with (i) the proportion of socially similar contacts that this individual has who also participate in the organization, enabling social inclusion, and (ii) the strength of the individual's social ties to these participating contacts, facilitating trust among members of this organization once they join. We posit that socially marginalized (vs. non-marginalized) members of a community will be more likely to become members of community-based organizations when others like themselves participate as well and when they have strong social ties to other participants. We also test an important moderator of these effects. We posit that community heterogeneity will negatively moderate this effect and decrease the likelihood that an individual becomes a member of a community-based organization. We test the predictions of our theory in the context of community self-help groups in rural India – groups that enable individuals from the same village to save and borrow collectively when they lack access to formal banking – and find support for these mechanisms.

SIM: **Adopting Innovations At The Bottom Of The Pyramid: The Case Of Mobile Money**

Author: **Lite Nartey**, *INSEAD*

Mobile money, a low-value, low-tech innovation facilitating financial inclusion for low-income actors, has the potential to secure significant financial, social and economic gains. Yet its tremendous adoption success in some developing countries contrasts with slow adoption in others. I argue that studying innovation adoption in developing countries requires a nuanced understanding of context. I explore contextual factors that impact the choice of low-income actors to adopt mobile money, including, the sources of information for mobile money, including relational sources; the presence of alternative informal institutions, and their risks and benefits; and trust in supporting formal institutions. I use a novel hand-collected dataset on mobile money use by 2,141 low-income actors in Ghana. The results underscore the importance of context for innovation adoption in developing countries.

SIM: **Scaling Social Innovation Impact in the Amazon Region**

Author: **Ana Luíza Rossato Facco**, *Unisinos Business School (Unisinos U.)*
Author: **Claudia Bitencourt**, *PUCRS - Business School*
Author: **Gabriela Zanandrea**, *Unisinos Business School (Unisinos U.)*

The social innovations' difficulties of expansion, systematization, and longevity have been questioned, especially in Brazilian social innovation initiatives, which frequently is based on short-term projects, limiting social innovation impact. This paper aims to understand how to scale social innovation impact based on the so-called Community Protocol originally implemented in the Bailique territory and further replicated in Beira Amazonas territory, both located in the Amazon Region, characterized by remotes and vulnerable communities. In this paper, the Community Protocol is considered a social innovation initiative. Its replication has changed the reality of Amazon territories and helped the communities to overcome vulnerability and social inequalities. We developed a case study using a qualitative approach that involved 22 in-depth semi-structured online interviews with key actors of the two Amazon territories. The main results point out the context-dependence and three key elements that explain how the Community Protocol was replicated, scaling social innovation impact: (i) previous community experience, (ii) strategic relationships among partners, and (iii) governance practices. Moreover, scaling social impact is not simply replicating an initiative or a methodology but developing the territory based on an integrated SI ecosystem.

SIM: **Developing Inclusive Innovations for the Base of the Pyramid: The Role of Cultural Brokers**

Author: **Andrea Maria Prado**, *INCAE Business School*
Author: **Andy Pearson**, *INCAE Business School*

ABSTRACT Inclusive innovations seek to create or enhance opportunities to improve the well-being of those at the base of the pyramid (BoP). This paper explores how innovators (i.e., designers and developers) from high-income countries (HIC) can better understand their base of the pyramid end users' context and needs, despite the broad socioeconomic and cultural gap between them. Our empirical setting focuses on professionals from Silicon Valley engaged in developing mobile healthcare technologies that can support the performance of community health promoters (CHP) in rural Guatemala. These CHP are indigenous people with limited or no formal education, who live in rural communities that have limited access to public services and infrastructure. Through a comparative study of three professional teams from HIC that participated in this project, we identify the cultural brokers that bridge innovators from HIC with end users from BoP and analyze the role they play during the inclusive innovation development stages. We argue that by relying on these cultural brokers, teams of innovators from HIC are able to increase their understanding of the context and needs of their end users at the BoP.

Employees and CSR

Session Moderator: **Julian Krauskopf**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

SIM: **The Role of Perceived Corporate Social Responsibility in Workaholism**

Author: **Julian Krauskopf**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

Based on social exchange theory, recent research emphasizes the positive impact of perceived corporate social responsibility (CSR) on employees. We argue that the current debate neglects the potential downsides of CSR which are based on reciprocal social exchange in the workplace. With our study, we investigate one of these negative effects by examining the risk of workaholism. In general, we hypothesize that perceived CSR is associated with positive outcomes for employees. However, we assume that there are underlying social exchange mechanisms that negatively influence this effect. Our research is based on a single-firm study. The online survey was conducted in the offices of our research partner in Germany, Great Britain, and the Netherlands in the first half of 2022 and resulted in a total of 193 responses. Our results uncover a negative effect caused by perceived CSR. It turns out that a high level of perceived CSR relates to a felt obligation among employees that is positively associated with the risk of workaholism. The hypothesized total effect that perceived CSR is negatively related to the risk of workaholism is attenuated by felt obligations, resulting in a nonsignificant correlation. Thus, our research offers an interesting contribution to the debate on the potential downsides of CSR.

SIM: **CSR Perceptions and Employee Responses: The Moderating Role of Substantive and Symbolic Attributions**

Author: **Sven Engelhardt**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

In recent years research on corporate social responsibility (CSR) has gained immense prominence, as it incorporates the views and expectations of various stakeholders in a company. With this study, we explore the perceived CSR performance as an antecedent to organizational citizenship behavior (OCB) on an individual employee level. In a time when some companies are trying to create a more responsible picture towards outside stakeholder groups, it is crucial for scholars to understand the boundary conditions of the direct effect of perceived CSR on OCB. Therefore, we hypothesize that the CSR attributions (i.e., symbolic and substantive) are an important moderating factor, as employees will value the CSR initiatives that feel genuine to them more than those they attribute to being symbolic. Employing a sample of 850 German middle managers working full-time in various industries and functions, we contribute to the upcoming stream of micro-level CSR research. Our analyzes were executed via structural equation modeling and extend previous findings by explaining how and why symbolic CSR attributions moderate the direct effect of CSR on OCB.

SIM: **The Role of Employees' Perceived Inconsistent CSR Performance on Corporate Hypocrisy and AOC**

Author: **Sven Engelhardt**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

A large body of research on individual-level Corporate Social Responsibility (CSR) focuses on the positive results of CSR. However, companies must consider multiple stakeholders' needs when making strategic decisions. Since not all stakeholder groups can be served equally, this leads to necessary trade-offs. Corporate hypocrisy, understood as a lack of integrity, is defined as a negative evaluation that is caused by a perceived distance between the claimed standards and observed actions of an organization. With this study, we try to shed more light on the question of when employees evaluate the actions of their employers as hypocritical and how they react to this. Drawing from social identity theory and social exchange theory, we postulate that once employees perceive their employers' CSR efforts as inconsistent between different stakeholder groups, they will evaluate this as corporate hypocrisy, and their affective organizational commitment (AOC) will decrease. To test our hypotheses, we based our research model on survey responses from 901 German middle managers. Our analyses were executed via structural equation modeling due to the nature of the mediation model. Our research contributes to the micro-CSR realm, giving novel empirical evidence on potential negative outcomes of CSR and a more in-depth view of the interplay of different CSR stakeholder groups.

SIM: **Being Cautious about Irresponsible Employer: How Job Seekers Infer Genuine CSR Motives**

Author: **Kihyon Kim**, *Korea U. Business School*

Research on recruitment shows that jobseekers display positive attitudinal and behavioral responses to potential employers' corporate social responsibility (CSR), while corporate social irresponsibility (CSI) works in the opposite direction. However, research on how jobseekers react to companies that actively engage in CSR but show irresponsible behaviors is scant. This study addresses how jobseekers infer the company's CSR motive from the current CSR/CSI, which aligns with or contradicts previous CSR history. Moreover, it examines how jobseekers' moral characteristics moderate the effect of CSR motive attribution on job pursuit intention. The results show that jobseekers perceive a company with a strong CSR history as warmer and infer that its CSR motive is genuine. However, when a company's irresponsible behavior is revealed, this effect is no longer viable, reducing organizational attraction and job pursuit intention. This negative effect of CSI is amplified as jobseekers' propensity to belong to ethical organizations is stronger.

CEO Greed, Misconduct, and Stigma

Session Moderator: **Le Xu**, *Hofstra U.*

SIM: **CEO Greed and Corporate Tax Avoidance**

Author: **Le Xu**, *Hofstra U.*

Extant research on the organizational ramifications of CEO greed remains scarce. This study intends to fill this gap by examining the impact of CEO greed on an important yet risky corporate strategy, corporate tax avoidance. Drawing on upper echelons theory, we argue that greedier CEOs tend to engage in more corporate tax avoidance. The relationship is weaker when CEOs experienced economic recessions in their early career and stronger when CEOs are endowed with equity ownership of their respective firms. We test the hypotheses with data from US public firms from 1997 to 2008 and find broad support for all the hypotheses. This paper contributes to the nascent research on individual greed by investigating the negative impact of CEO greed on another important organizational outcome. This paper also contributes to the growing tax research that recognizes the important role executives play in shaping corporate tax strategies.

SIM: **Examining the Joint Effects of Stigma and Status on Successor CEO Recruitment**

Author: **Abhijith Acharya**, *Wilfrid Laurier U.*
Author: **David M. Gomulya**, *Singapore Management U.*
Author: **Uisung David Park**, *Syracuse U.*

Research on social evaluations has largely focused on examining the effects of any one type of social evaluation in a given study. Yet, firms often face both positive and negative social evaluations, and external evaluators must assess firms by considering their joint effects. We examine this issue in the context of CEO dismissal by investigating how successor CEOs assess the favorability of joining restating firms by evaluating the joint effects of positive and negative social evaluation of such firms. Using a sample of S&P 1500 firms from 2003 to 2019 that dismissed their CEOs, we find support for our predictions that while the dismissal of high-status CEO discourages incoming high-status CEOs to join the company, the restatement can mitigate this relationship.

SIM: **Searching for Cues: How Financial Analysts Attend to CEO Negative Affect Following Misconduct**

Author: **Guido Berends**, *U. of Groningen*
Author: **Alan Muller**, *U. of Groningen*
Author: **Jordi Surroca**, *U. of Liverpool Management School*

Drawing upon research on the role of affect and emotions in social interactions, we theorize about the influence of CEOs' affective displays in the aftermath of their firm's misconduct on financial analysts' stock recommendations. Specifically, we hypothesize that financial analysts tend to respond favorably to post-misconduct CEOs' negative affect as it may be viewed as a manifestation of CEO concern for the issue and commitment to preventing misconduct re-occurrence. Analysis of 36,348 quarterly CEO-analyst interactions on earnings conference calls of 919 publicly traded US firms in 2007–2019 supports our theorizing. In particular, we find that analysts' assessments are shaped by CEO expressions of sadness and anger. Moreover, we find that this positive interpretation of CEO negative affect post misconduct is amplified by CEO status and power. Our findings contribute to research on the CEO's role in responding to organizational misconduct and deepen our understanding of how CEO affect influences the external audiences of a firm.

SIM: **CEO Greed and Prosocial Behavior**

Author: **Aten Zaandam**, *Duke U.*
Author: **Timothy David Hubbard**, *U. of Notre Dame*

In the field of strategic management, CEO greed has been conceptualized as a universally negative individual difference. Much theory and managerial guidance focuses on how to reduce the potentially negative effects of greed on corporations and society. However, research from psychology and sociology has begun to show positive effects of greed, specifically during times of crises. Indeed, here we show that during crises, greedy CEOs increase their pro-social resource allocation. We demonstrate these conclusions across three studies: an archival study of CEOs, a laboratory experiment, and a sociological study. These results demonstrate that instead of only considering the negative effects of greed, we need to consider the context of an executive's environment to understand their potentially positive behaviors.

Managing Scandals and Crises

Session Moderator: **Lailani Laynesa Alcantara**, *Ritsumeikan Asia Pacific U.*

SIM: **Falling from Grace: Slow-fast Stereotyping and Ethical Scandals in the Fashion Industry**

Author: **Lailani Laynesa Alcantara**, *Ritsumeikan Asia Pacific U.*
Author: **Jareef Martuza**, *NHH Norwegian School of Economics*

What stereotypes do people have of slow and fast fashion brands? Does having an ethical certification, such as the B Corp certification, enhance favorable stereotypes? And how do slow-fast stereotypes affect penalties in ethical scandals? Scholarly work on these questions is critical to understanding the present and predicting the future of fashion ethics. In the current research, five studies (combined N = 3105) investigated the effect of slow-fast fashion categories on (1) ethical stereotypes, (2) warmth-competence perceptions, and (2) penalties for scandals. Study 1 shows that slow fashion brands have more positive ethical stereotypes than fast fashion brands. Study 2's Implicit Association Test (IAT) further suggests that people also have implicit ethical stereotypes of slow-fast fashion. Studies 3-5 use experiments to extend ethical stereotypes to warmth-competence perceptions and penalties from ethical scandals; the results suggest that although a slow fashion (vs. fast) brand is more favorably stereotyped, people also penalize it more for scandals. Overall, we find support for a slow glow effect among fashion brands, advancing the debate on category stereotypes and their outcomes.

SIM: **The Best of Firms, the Worst of Firms: Ethical Bifurcation in Family Businesses During Crises**

Author: **Danny Miller**, *HEC Montreal*
Author: **Isabelle Le Breton-Miller**, *HEC Montreal*

Despite the ample progress being made in the study of family business ethicality, there remains a lack of consensus in the findings and some ambiguity concerning the concept. Building on a modified socioemotional wealth perspective, we theorize why family firms are likely to manifest both exceptionally ethical and equally unethical behavior during crises. We argue this to be caused by the close socioemotional connection between family owners and their firms, the decision-making discretion afforded these owners, and the secrecy and privacy with which they can act. We extend our framework to multiple stakeholders – employees, customers, and local, national, and global communities, and provide positive and negative examples as firms confront specific economic, human, and natural crises – demanding situations that reveal authentic ethicality when the pressure is on. We also introduce the notions of ethical heterogeneity, focus and coverage, and their moderators, arguing that the same family and firm may exhibit both ethical and unethical behavior depending on the crisis and stakeholders concerned. Propositions are provided throughout, and research implications are drawn.

SIM: **Buffer or Burden? The Effect of Family and Political Identity on Firm Value Loss after a Scandal**

Author: **Danyang Chen**, *Shanghai U. of Finance and Economics*

This study calls into question how corporate identities mold their values, beginning with the argument that identity as the lens used by stakeholders to evaluate the focal firm's potentials. Specifically, this study discusses how two important non-market forces, family capital and political capital, shape stakeholders' perception of the firm identity and then influence firm value post financial scandal. Analyzing 465 corporate financial scandals of publicly listed firms in China from 2009 to 2017, I find that family identity, often linked with the family's pursuit of sustainability, can help firms buffer from the negative impact of a scandal; while for politically connected firms, the exposure of scandal indicates their loss of government supports and thus becomes an amplifier of firm scandal. I also find that the buffering effect and the amplifying effect on firm value loss are conditioned on the focal firm's previous reputation.

SIM: **Mobilization and Reputation Effects of Disclosing Socially Irresponsible Performance**

Author: **Lambert Zixin Li**, *Stanford U.*
Author: **Sarah A. Soule**, *Stanford U.*

A core assumption in the impression management literature is that organizations voluntarily disclose information about their positive social and environmental activities, policies, and performance in order to improve or maintain their reputation as socially responsible actors and to garner stakeholder support. This assumption is at odds with an emerging and less well understood communication strategy of proactively disclosing socially irresponsible performance, a phenomenon which we call public confession. Combining a national survey of 525 corporate Black Lives Matter statements, a qualitative study of a business school's Diversity, Equity, and Inclusion communications, and an experiment on labor and environmental issues, we investigate how audiences evaluate public confession. We examine whether, when, and why public confession mobilizes public support for a social issue and whether, when, and why it improves an organization's reputation for being socially responsible. We find that public confession mobilizes public support for a social cause and improves an organization's reputation for being socially responsible when the public believes that socially irresponsible business practices are pervasive. In this case, public confession does not violate expectations, but signals organizational authenticity. Our paper defines a boundary condition for studies of impression management and explicates a novel non-market strategy in the context of rising corporate activism.

The Impacts of COVID

Session Moderator: **Wang Juan**, *Northwestern Polytechnical U.*

SIM: **How and When Well-being-oriented HRM Influences Employee Insomnia after COVID-19 Outbreak**

Author: **Wang Juan**, *Northwestern Polytechnical U.*
Author: **Junjiang Li**, *Northwestern Polytechnical U.*
Author: **Zhang Zhe**, *Xi'an Jiaotong U.*
Author: **Yaxin Song**, *Northwestern Polytechnical U.*

Although existing studies show that well-being-oriented human resource management (well-being-oriented HRM) practices positively influence employee performance at work domain, it remains unclear whether and how well-being-oriented HRM practices influence employee insomnia. Drawing on the conservation of resources theory, we explore whether, how and when well-being-oriented HRM practices reduce employee insomnia. Using multi-phase data from 259 employees, we find that well-being-oriented HRM practices reduce employee insomnia. Well-being-oriented HRM reduce employee insomnia by increasing their positive rumination and reducing their negative rumination. Furthermore, respectful leadership strengthens the positive relationship between well-being-oriented HRM and employee positive rumination, whereas reinforce the negative relationship between well-being-oriented HRM and employee negative rumination. We also find that respectful leadership influences the indirect effect of well-being- oriented HRM on employee insomnia via their negative rumination. Our study contributes to understanding the impacts of well-being-oriented HRM practices on employee insomnia at the non-work domain, especially after the COVID-19 outbreak.

SIM: **COVID-19's Effect on Citizens' Legitimacy Perceptions of Business Regulation**

Author: **Anna Jasinenko**, *U. of Lausanne, HEC Lausanne*
Author: **Patrick Haack**, *U. of Lausanne, HEC Lausanne*
Author: **Derek Harmon**, *U. of Michigan*

Stricter business regulation regarding human rights and environmental misbehavior is a promising approach for a transition to a more just and sustainable economy. A major crisis, such as the COVID-19 pandemic, can strongly affect how individuals form their legitimacy beliefs about this kind of regulation. However, the current literature proposes two opposing effects of crises on the legitimacy beliefs about business regulation. The system justification theory suggests that the pandemic will lead to a decline in the legitimacy perceptions because individuals are highly risk averse and status-quo supporting, when they feel threatened. Conversely, the moral identification theory implies a positive effect of COVID-19 on regulatory legitimacy beliefs because a global problem, such as the COVID-19 pandemic, increases the identification with global humanity and thereby the motivation to help people in distant countries for which stricter business regulation would be most helpful. We conducted four studies to test the effects of the COVID-19 pandemic on citizens' legitimacy perceptions of stricter business regulation. We differentiate between propriety and validity beliefs based on multilevel legitimacy theory to understand the full spectrum of legitimacy beliefs. Consistent with the system justification theory, we find that the propriety beliefs declined during the pandemic. However, the pandemic had a positive effect on validity beliefs. The bias blind spot effect explains the divergence of the validity beliefs from propriety beliefs. Our findings contribute to a better understanding of the change of legitimacy beliefs, which consist of propriety and validity beliefs, during a crisis. We contribute to the theory of legitimacy as perception, system justification, and citizens' support for a more sustainable future.

SIM: **Tourism Immunity in Happier Regions: The Impact of COVID**

Author: **Yomna Sameer**, *Abu Dhabi U.*
Author: **Ilias KAMPOURIS**, *Abu Dhabi U.*

The COVID-19 crisis impacted tourism and leisure sectors around the globe. The contribution of this paper is twofold. We first estimate the extent to which COVID-19 impacted the tourism industry. Furthermore, we analyse the mental cost of the coronavirus on happier countries and how well the last protect their tourism industry. Using, a Vector Autoregressive model we analysed the Impulse Response Functions within the tourism industry and found significant increase in correlations for all sectors of tourism during the pandemic. Additionally, considering whether happier regions are more protective about their tourism, the evidence are mix. That is, there is no clear evidence if the happier regions tend to be more protective about their tourism sector. One possible reason for that might be that the happiness indexes are based on factors that they are not strictly related to COVID-19, like well-being, life quality, expectancy, and work.

Toward The Future Of Stakeholder Theory: The Dynamics Of Stakeholder Participation In Firm Outcomes

Organizer: **Erin Bass**, *U. of Nebraska, Omaha*
Organizer: **Ivana Milosevic**, *College of Charleston*
Discussant: **Matthias Wenzel**, *Leuphana U. Lüneburg*

The extant literature assumes that stakeholders actively participate in firm activities by either hindering (i.e., staging boycotts or protests, involving regulatory agencies, etc.) or advancing them (i.e., collaborating on planning initiatives, involving community organizations, etc.). In this way, a firm's ability to engage stakeholders in cooperative participation to advance, rather than hinder, firm activities is a critical task. However, not all stakeholders may be willing or able to participate in firm activities cooperatively, giving rise to a void between them and the firm. This is of concern because cooperative stakeholder participation is often necessary for a firm's strategy formulation and success, resource access, and operational improvements. Through a series of presentations and critical discussions by leading scholars in the field, we will bring to the forefront the relational dynamics of stakeholder participation as an important yet underexplored space for the future of the stakeholder theory of the firm.

Participant: **Mona Zanhour**, *California State U., Long Beach*

In the present symposium, we advance the role of how workplace experiences, namely emotional experiences and work expectations, affect employees' relational and home outcomes, in hopes to further develop academics' and practitioners' understanding of the spillover effects of work that may influence healthier and happier home outcomes. In doing so, we integrate the work-life interface and the emotions literatures for a better understanding of employees' experiences in the post-pandemic world. The four presentations focus on different emotional experiences at work that affect individuals' home outcomes: observing gratitude expressions at work (Kane et al.), experiencing workplace bullying (Javadizadeh & Lamm), being envied at work (Kong et al.), and expectations and needs of working mothers (Sumpter & Zanhour). It is our hope that practitioners and scholars will recognize the importance of and take action to create a healthier balance between emotions and expectations that may carry over from work to home.

Workers and Social Challenges

Session Moderator: **Reed Keller Eaglesham**, *ILR at Cornell*

SIM: **When Firm Policies Are Not Enough: The Effects of Public Health Policy on Worker Turnover**

Author: **Reed Keller Eaglesham**, *ILR at Cornell*

While management policies are in place to protect workers in many instances, there are some working environments in which organizations are either unincentivized or unable to protect workers. This is particularly true for frontline workers and their interactions with the public. I draw on cross-sectional time series data across 2,609 counties and 44 states to investigate the effects of public health policies on worker turnover in low, medium, and high-risk industry contexts. Specifically, I take advantage of state policy variation during the COVID-19 pandemic to study the effects of strict and non-strict mask mandates on county-level worker turnover, prior to the widespread introduction of vaccines. Using CBPS matching paired with differences-in-differences estimation, I find that mask mandates result in large reductions in county-level turnover rates in high-risk working environments. This negative effect is found to be even stronger when policies are announced with specific consequences for non-compliance. These results highlight the importance of government policy for frontline worker safety and its impact on meaningful workplace outcomes. Future research would benefit from further examination of the relationship between public health policies and worker behavior.

SIM: **How are Today's Workers Mobilizing to Address Social and Environmental Challenges?**

Author: **Hadi Shaheen**, *Queen's School of Business, Canada*
Author: **Jean-Baptiste Litrico**, *Smith School of Business, Queen's U.*

This study takes the context of bottom-up activism and explores the ways that today's workers are mobilizing to address societal challenges. It comprises a qualitative comparative research design using process study to identify the practices through which internal activists attempt to influence their firms. Drawing from social movement literature, the work explores recent employee activists' campaigns' use of tactics, informational content in their claims, and tools to drive two organizations to address societal challenges. We identify two new insider activism tactics: shareholder resolutions and resignations. Findings also suggest that tactics change over time. Facing unmet demands, activists shift from institutionalized mechanisms of change to confrontational and disruptive tactics. Informational content in their confrontational claims reveals that workers expose internal knowledge about their firm's market and non-market activities. We also identify two demand escalation strategies: horizontal and vertical, that can explain outcome variations. Theoretically, this suggests that employee activists today have more complex repertoires than initially thought. The deployment of these repertoires changes over time as activists are met with resistance from the firm. We also find that organizations may offer concessions but still sanction employees, suggesting a more nuanced view of organizational response to internal activism.

SIM: **Singing in the Train: Aligning Efficiency with Core Values through Embodied Occupational Practices**

Author: **Daniel Fisher**, *U. of Sussex Business School*
Author: **Daisy Eusun Chung**, *City, U. of London*

This paper examines how an occupational community manages demands for efficiency in relation to embodied practices. Through observations and by conducting semi-structured interviews with train drivers working in the UK rail industry we observe embodied practices are accomplished both internally and relationally to serve the core value of safety. To better understand this, we draw on recent work on embodiment and organizational body work to explain how drivers' bodies interacts with organizational design and technology, but also how certain efficiency demands met or disregarded. We do this by considering the demands and agency of both the body and the mind of train drivers: from sleep, physical health (the body) to mental health, fatigue and attention (the mind). The interplay of these occupational features offers insights into how value can be understood as a way of being. This analysis more clearly illustrates how values are not just beholden to the mind but are also realized through the body enabling workers to assert their autonomy.

SIM: **Impact of the Spillover of Social Responsibility Activities in the Sustainable Behaviour**

Author: **Alan Kleiton Cardoso Feitosa**, *Federal U. of Ceara, Brazil*
Author: **José Carlos Lázaro**, *Federal U. of Ceara, Brazil*
Author: **Mônica Cavalcanti Sá De Abreu**, *Federal U. of Ceará*

According to Carroll (2021), Corporate Social Responsibility (CSR) goes much further beyond economic and legal obligations in a company, it should offer a positive social impact. This study aims to analyse the mechanisms capable of causing the spillover effect of environmentally sustainable behaviour in construction employees by understanding the predecessors that made the company take CSR activities and identifying the social impacts brought on by this effect by explaining the trajectory and the utilised mechanisms. An exploratory qualitative approach was taken, by having five focus groups (two of managerial staff, the headquarters, and the construction site, and three with workers from two distinct construction works), direct (non-participative) observation in the homes of employees that had shown a more significant number of categories in their talks, semi-structured interviews, and utilising documental research. A content analysis inspired by Bardin (2011) was carried out with the transcribed material. In conclusion, well-conducted CSR activities at companies allow the spillover effect to act on its employees' lives, thus resulting in social impact, especially in the working class.

Human Rights in Organizations: The Role of Gender

Session Moderator: **Paula Ann Kincaid**, *U. of Texas at Tyler*

SIM: **Gaslighting: The Dark Side of Trust in Organizations**

Author: **Paula Ann Kincaid**, *U. of Texas at Tyler*
Author: **Rhonda K. Reger**, *U. of North Texas*
Author: **Virginie Lopez Kidwell**, *U. of North Texas*
Author: **Craig Neumann**, *U. of North Texas*

Interpersonal trust benefits organizations because trust is essential for human cooperation, but sometimes trust is given to individuals who appear trustworthy but are not. Placing trust in these individuals can lead to immeasurable harm to organizations and their stakeholders. Understanding the risks of interpersonal trust is the focus of our work. We identify the process one dark personality – a person who should never have been trusted – gained and sustained undeserving trust. Specifically, we qualitatively analyze thousands of texts to understand how Larry Nassar, a disgraced medical professional, was able to sexually abuse over 300 children and young adults over a 30-year period, across five organizations. Based on findings, we introduce a concept to the management literature, gaslighting – a set of attempts to create a surreal social environment, making the other person in a social exchange relationship feel crazy or appear crazy to other people – to explain the processes Nassar used to gain and maintain trust with his victims while undermining victims' trust-in-self and others' perceptions about the victim's accusations of misconduct. We advance research by explaining how dark personalities can manipulate trust to such an extent that they can go undetected and unpunished for years despite engaging in serious misconduct.

SIM: **Restoring Human Rights: Dialogical Stakeholder Engagement for Marginalized Women**

Author: **Robert Caruana**, *The U. of Nottingham / ICCSR*
Author: **Lara Bianchi**, *The U. of Nottingham / ICCSR*
Author: **Alysha Shivji**, *The U. of Nottingham / ICCSR*

Women experience multiple and intersecting forms of discrimination, vulnerability and marginalization and they are often unequal victims of unethical and illicit 'business' practices. Systematic exploitation of structural, social, physical and other gender-related inequalities dangerously combines to normalize the experience of rights abuse, constraining their voice and agency. This presents a unique problem for marginalized women who endure human rights abuse and those organisations who seek to engage with them in the process of restoring rights. Mobilizing the theoretical lens of dialogue, our starting point is that effective stakeholder engagement with marginalized women– i.e. one culminating in the restoration of their rights – requires power-cognizant communication modes that enable stakeholder voice, participation and agency. In this paper, stakeholder engagement is organised into three general communications approaches – essentially monological, seemingly dialogic, and authentically dialogic- whose forms and consequences for effective engagement are interpretively developed. Keywords: stakeholder engagement; marginalised stakeholders; dialogism; women's rights abuse

SIM: **The Power Dynamics of Institutional Resistance: Class and Gender Discrimination in SW Cameroon**

Author: **Luca Castellanza**, *National U. of Ireland, Maynooth*
Author: **Michael Woywode**, *U. of Mannheim*

Why do oppressed individuals resist some institutional constraints but not others? Building upon notions of power and resistance, we develop new theory about how oppressed individuals overcome the constraints stemming from different institutions. Through grounded-theoretical phenomenological interviews with 76 women farmers working in South-West Cameroon, we investigate how participating in farming cooperatives affects individuals' actions against class and gender discrimination. We found that, by joining cooperatives, our study participants built enough confidence and economic prowess to overcome class discrimination but became exposed to patriarchal and collectivistic traditions reinforcing gender discrimination. We advance that features of episodic and systemic power help explain how easily individuals become aware of discrimination and can carry out activities that are contrary to the dominant norms. This study contributes to institutional theory by linking exercises of oppressive institutional power to oppressed individuals' decisions and possibilities to initiate institutional change.

Impression Management Tactics

Session Moderator: **Lu Ye**, *U. of Melbourne*

STR: **Earnings Conference: Anticipatory Impression Management Motivation, Casting, and Market Reactions (WITHDRAWN)**

Author: **Lu Ye**, *U. of Melbourne*
Author: **Helen Wei Hu**, *U. of Melbourne*
Author: **Daejeong Choi**, *U. of Melbourne*
Author: **Donald A. Lange**, *Arizona State U.*

This study sheds light on how publicly listed firms in China might use earnings conferences as an anticipatory impression management (AIM) tactic¬. After committing financial misconduct but prior to regulators' misconduct announcement, we predict firms will use earnings conferences to influence responses to the forthcoming misconduct announcement, and that the number of earnings conferences will increase with the severity of the misconduct. Moreover, we investigate the mechanism that shapes the casting (i.e., the attendance of independent directors) of AIM conference. Considering both the focal firm's AIM logic and independent directors' monitoring capabilities, we hypothesize that financial misconduct negatively relates to the attendance of independent directors with accounting/finance expertise but positively relates to the attendance of those with academic backgrounds. We also posit that AIM conferences will buffer investors' perceptions of negative events, positively influencing market reactions to misconduct announcements. Based on data from Chinese-listed firms that committed financial misconduct, we find evidence for our hypotheses.

STR: **CEO Labor Market and Corporate Information Disclosure: The Case of IDD Rejection and Adoption**

Author: **Yilin Liu**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Pavithra Balaji**, *Texas Christian U.*
Author: **Cuili Qian**, *UT Dallas*

This study examines the relationship between the CEO labor market and corporate information disclosure. Based on agency theory and strategic leadership literature, we argue that firms that have CEOs with abundant labor market opportunities have higher information disclosure frequency while firms that have CEOs with greater labor market concerns have lower information disclosure frequency. We articulate the mechanisms underlying these relationships by suggesting that frequent disclosure is driven by CEOs' motivation to increase the disclosure of good information, and the reduction of information disclosure is driven by CEOs' withholding bad information when faced with higher and lower labor market opportunities, respectively. Further, we suggest that CEO power can strengthen the effect of CEO labor market prospect on corporate disclosure strategies. We use the staggered adoptions and rejections of the inevitable disclosure doctrine (IDD) by U.S. state courts as exogenous events to capture changes in CEO labor market opportunities and concerns. Results based on a sample of U.S. firms from 2003 to 2014 provide support for our predictions. The study contributes to the literature by illustrating the nuanced impact of CEO career prospects on corporate information disclosure.

STR: **Intra-organizational Threat Contagion: Shareholder Dissent and CEO's Impression Management**

Author: **Xinhao QIAO**, *Hong Kong U. of Science and Technology*
Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Rather than focusing on the direct effect of shareholder activism on the target firm's behavior or the indirect effect on peer firms, we theorize that threats from shareholder activism with explicit targets also affect non-targets' behaviors in the same organization. By integrating social contagion theory with impression management literature, our theoretical perspective suggests that the threat of shareholder activism is contagious and CEOs are likely to engage in impression management to deal with the potential threats. We find that CEOs are more likely to engage in earnings management when the firm's directors receive a high level of shareholder discontent. The positive effect is more pronounced when CEOs are excessively paid, female, and in firms with poor prior financial performance.

STR: **Does Earnings Management Matter for Strategy Research?**

Author: **Ralph Anthony Gibbs**, *Purdue U., West Lafayette*
Author: **Tim Simcoe**, *Boston U.*
Author: **David Waguespack**, *U. of Maryland*

Strategic management research often uses accounting data to measure organizational performance, despite well known concerns that earnings management could obscure the link between managerial actions and true performance. We apply new methods from the econometric literature on bunching to estimate that around 15 percent of all firm-year observations in Compustat manipulate earnings to achieve positive profitability. Using the same methods, we show that cash-based performance measures are less susceptible to manipulation. Finally, we demonstrate that the choice of accrual versus cash-based performance measures "matters" for two classic strategy research questions: a profitability variance decomposition, and an analysis of persistence in firm performance. These findings highlight the potential importance of exploring robustness to alternative performance measures, and thereby contribute to an emerging literature that reconsiders the link between theoretical constructs and the various performance metrics available to empirical researchers.

Corporate Adaptation

Session Moderator: **Joachim Stonig**, *U. of St. Gallen*

STR: **Help – I need somebody? Comparing Groups' and Individuals' Search Behavior Across Problem Complexity**

Author: **Mads Kock Pedersen**, *Aarhus U.*
Author: **Oana Vuculescu**, *Aarhus U.*
Author: **Jacob Sherson**, *Aarhus U.*
Author: **Carsten Bergenholtz**, *Aarhus BSS, Aarhus U.*

Comparing the search behavior of individuals and groups has so far yielded conflicting results, both finding that groups are more exploitative as well as more explorative than individuals. Such divergent findings could be related to the search processes of groups, both entailing the opportunity to imitate the behavior of others yet also allowing a diversity of approaches to unfold since particular designs of group interaction could shape the dynamics of search in groups. In order to further investigate this organizational search design challenge, we set out to compare the search dynamics of individuals compared to groups that were driven by a common incentive-based goal. In an online experiment, we compared the search behavior and performance of 253 individuals and 253 groups (N = 1265) across simple and complex landscapes. We find that groups in both kinds of landscapes initially explore more than individuals and then exploit more than individuals at the end of the search process. Groups outperform individuals on both simple and complex landscapes as a switch from exploration to exploitation is a favorable strategy. We contribute to the organizational search literature by highlighting how the difference in search behavior and performance of individuals vs. groups is driven by the role of heterogeneous search behaviors in groups driven by a common goal.

STR: **A Process Model of Incumbents' Initiatives to Build New Complementary Assets**

Author: **Joachim Stonig**, *U. of St. Gallen*
Author: **Heinrich-Jakob Wild**, *U. of St. Gallen (HSG)*
Author: **Karolin Frankenberger**, *U. of St. Gallen*

Many incumbent firms are confronted with technological changes that threaten their complementary assets. Alas, there is scant research about the intra-organizational processes that enable effective responses to this type of discontinuity. Our multiple case study in the European chemical industry illustrates how incumbents manage strategic initiatives that develop new complementary assets, namely digital platforms for selling and distributing chemicals. Drawing on research of strategy processes and complementary-asset discontinuities, we develop a multi-level process model of gradual uncoupling: to build novel complementary assets, initiatives must first uncouple from horizontal relationships with line and functional middle managers, and subsequently uncouple from top management control. We show that alternative incumbent outcomes, such as knowledge transfer and/or modifications of existing complementary assets, result from processes that fail to engage in uncoupling. Our main contributions are to (1) provide a process perspective on incumbent adaptation to complementary-asset discontinuities, (2) contextualize extant literature on strategy processes for this type of change, and (3) detail how incumbents can leverage their core business to build digital platform businesses.

STR: **Capacity Constraints of Complementary Assets and Incumbent Response to Technological Changes**

Author: **Shaohua Lu**, *Santa Clara U.*
Author: **Coauthor Coauthor**, *Santa Clara U.*

Discontinuous technological change threatens the value of incumbents' core knowledge and/or complementary assets by offering pronounced price-performance advancements relative to established technology. Drawing on the S-curve characterization of technology evolution, we illustrate how the difficult imitate and non-scale free properties of incumbent firms' physical complementary assets and entrants' degree of dependence on these assets influences the performance trajectory of the new technology relative to that of the established technology and, ultimately the likelihood that incumbent firms will invest in the new technology. Evidence from incumbent electric utilities coping with solar energy generation technology and the emergence of an alternative model, distributed energy generation, support our arguments. Specifically, in the context of a core knowledge discontinuity, we find that incumbent firms' non-scale free and difficult to copy complementary assets coupled with entrants' dependence on these assets lowers the likelihood that incumbents will invest in the new technology. In contrast, when facing dual threats, incumbent firms are more likely to invest in the alternative technology even though entrants remain residually dependent on the incumbent firms' complementary assets. The results highlight effects overlooked by prior work yet critical to understanding technology transitions: the properties of incumbent firms' complementary assets and the extent of entrants' dependence on incumbent firms' complementary assets.

STR: **Resource Mobility on a Rugged Landscape**

Author: **Stefano Benigni**, *Imperial College Business School*
Author: **Gianluigi Giustiziero**, *IE Business School*
Author: **Dirk Martignoni**, *U. of Lugano*

In this study, we combine insights from the resource-based view (RBV) and organizational adaptation literature to examine under what conditions resource turnover is costly or beneficial to organizations. We employ a standard NK model in which firms develop, adapt, and exchange resources. We demonstrate that for different levels of resource complexity and resource interdependence, firms may benefit or suffer from resource turnover. In particular, we show that there are conditions under which industry leaders may benefit from losing resources to their followers and conditions under which both industry leaders and followers benefit from turnover, creating win-win situations with strong incentives to encourage resource mobility across firms. The theory and findings of our paper thus provide a synthesis of the RBV and organizational adaptation literature on the topic of resource mobility. Whereas the RBV has often provided a static characterization of resources by assuming heterogeneity a priori, we demonstrate that in settings where resource heterogeneity is driven by experimentation and search, losing a valuable resource does not necessarily give away a firm's competitive advantage. More broadly, our study contributes to the literature on resource mobility by taking seriously the notion that organizations are more than the sum of their parts, potentially explaining why firms often have an ambivalent approach to resource turnover and losses.

STR: **Contextual Strategic Responses of the Corporate Headquarters to Achieve Superior Performance**

Author: **Pascal Engelmann**, *EBS U. of Business and Law*

This research explores the relationship between strategic responses by the corporate headquarters (CHQ) and performance in a given corporate context through a combination of resources and capa-bilities. We identify these strategic responses using Fuzzy Set Qualitative Comparative Analysis (fsQCA) based on cases from large corporations across different industries. Specifically, we study combinations of environmental and structural contexts and their interaction with CHQ strategic re-sponses as paths to high and low performance. We aggregate these paths into a 'solution space' of environmental difficulty and organizational complexity by proposing an extended analysis to QCA. Findings imply that either responding with corporate entrepreneurial capability or financial re-sources is necessary for high performance under stable market conditions; however when markets are uncertain and concentrated, their combination is essential to achieve superior performance. We also find that lacking capabilities and resources in uncertain markets leads to low firm performance. Accordingly, we redirect theoretical debates on the value-adding role of the headquarters and the links between corporate strategic responses and firm performance. Additionally, we add theoretical insight to debates on the interaction and substitutability of resources and capabilities to achieve su-perior performance. Ultimately, we formulate implications for managerial practice by providing in-sights regarding contingency planning when pairing context with strategy and highlighting the im-portance of considering contextual attributes at multiple levels of the organization when analyzing firm behavior.

Organizational Search

Session Moderator: **Sukhun Kang**, *U. of California Santa Barbara*

STR: **Performance Feedback, Direction of Technology Search and National Innovation Policies**

Author: **Lakshmi Goyal**, *Indian Institute of Management, Calcutta*

The predominant focus of the problemistic search literature has been on articulating 'if' and 'when' performance below aspiration triggers technology search. As underperforming firms operate under resource and time constraints, 'why' they prefer one form of technology search over the other is equally important to understand. Advancing scholarship on the firm's technology search behavior following performance shortfall, this study examines the relationship between the intensity of performance shortfall and the direction of technology search (technology development versus technology sourcing) and further examines how these relationships vary based on the policy instruments outlined in the national innovation policies. By empirically examining our predictions on a sample of Indian manufacturing firms, this research finds that the effect of the intensity of performance below aspirations on technology sourcing is stronger compared to technology development and finds support for the guiding influence of innovation policy instruments of intellectual property rights regime and R&D tax rebates. This study contributes to the literature on problemistic search by dwelling on the firm's direction of technology search and highlighting the role of institutions.

STR: **Objects May Be Closer Than They Appear: The Impact of Public Scientific Map on Organizational Search**

Author: **Sukhun Kang**, *U. of California Santa Barbara*

Research on firms' external search depicts firms as innovators who can discern distant knowledge domains. However, firms' mental representations—their perception of which domains are appropriate for their capabilities—can be incomplete. I examine a scenario where firms receive an external representation of knowledge landscape by a public scientific map. I propose that the external representation reveals cross-domain similarities based on a new dimension, informing firms that some unexplored domains previously deemed distant may, in fact, be local to their existing domains. I hypothesize that firms will enter these new local domains because transferring existing technologies is less costly than developing new technologies to enter distant domains where other firms may be advantageous. Using the Cancer Genome Atlas (TCGA), a public initiative that comprehensively mapped genomes of 32 cancers, I find that likelihood of entering a domain ex-post TCGA increases for firms whose existing domains are revealed local to that domain due to genetic similarities. I also find that this increase varies by the number of new local domains and potential entrants. This work extends our understanding of search by showing how distant search in one representation may be local search in another, informing how firms' mental representations shape search.

STR: **Does Slack Impact Innovation Productivity? A Longitudinal Examination**

Author: **Scott W. Geiger**, *U. of South Florida*
Author: **Daniel R. Marlin**, *U. of South Florida*

Moving beyond traditional measures of innovation such as the use of R&D expense or patent related data, we exam the relationship between slack resources and the efficiency of innovation outcomes. Using a sample of 455 manufacturing firms across 6 years, we utilize fixed effects panel analysis to examine how available, recoverable, and potential slack impact innovation productivity. The results from our study both support and conflict with prior slack and innovation research utilizing other innovation measures. Specifically, our analyses support the argument that an inverted U-shaped relationship exists between available slack and innovation productivity. However, our results failed to support a similar relationship between recoverable slack and innovation productivity, a departure from prior literature examining more traditional measures of innovation. Finally, consistent with prior research using traditional innovation measures, our results support the notion that potential slack is a benefit to innovation productivity. Overall, the results support the notion that organization slack is a complex multidimensional resource that is important to firm outcomes such as innovation. Both practical and theoretical implications are discussed.

STR: **Potential vs Realized Organizational Option Value and the Flexibility Paradox**

Author: **Lenos Trigeorgis**, *Durham U.*

We address the gap between potential and realized organizational real option value under informational, managerial, and organizational limitations. We model how managers make decisions based on subjective beliefs, how personality traits further bias project value estimates and how organizations adjust suboptimally to new market cues under conditions of imprecise information. We thereby quantify how flexibility value erodes as a result of decision errors and interactive effects arising from (1) information imprecision, (2) behavioral biases, (3) learning feedback errors, (4) path-dependent and asymmetric adjustment effects, and (5) having to make multiple judgmental decisions. We highlight two abnormal results associated with the "flexibility paradox." First, while flexibility adds to the potential value created by real options, it threatens the value realized by managers in that decision mistakes erode flexibility value, potentially resulting in negative option value. Second, additional errors from the misestimation of continuation value might make options with more decision-timing flexibility worth less. We discuss antecedent conditions, interaction effects and how our framework leads to important revisions in the predictions of real options theory for real organizations.

Value Capture in Platforms

Session Moderator: **Dovev Lavie**, *Bocconi U.*

STR: **The Dominance of Big Tech Platforms: Should We Revisit the Principles of Strategy?**

Author: **Dovev Lavie**, *Bocconi U.*

The field of strategy advocates the notion of competitive advantage despite some conceptual and empirical challenges. In practice, the Big Tech firms have leveraged digital platforms to obtain superior performance and capture market positions which are not easily contested. Although they have served their shareholders well, other stakeholders, such as competitors, consumers, vendors, and employees, have been disadvantaged. This study suggests that remedies such as antitrust regulation and legislation are ill equipped to cope with the ramifications. It identifies the core problem in the prioritization of economic value creation and capture over the pursuit and protection of societal values. Accordingly, it calls for revisiting some fundamental principles in strategy research. Departing from core assumptions, it directs attention to the fair distribution of value, notions of prosocial behavior and resource sharing, and the role of communities as an alternative form of organization.

STR: **First-Party Complement Provision: Effects of Genre Development and Complementor Multihoming**

Author: **Xiaowei Zhang**, *Tilburg U.*
Author: **Niels G. Noorderhaven**, *Tilburg U.*
Author: **Xavier Martin**, *Tilburg U.*

First-party complements (complements introduced by the platform owner) have mainly been discussed in the literature as distortions of within-platform competition. We argue that a platform owner will not only introduce first-party complements to highly popular or highly profitable genres with a motivation of maximizing short-term interests, but also to other genres, with the purpose of growing its platform in the competition with other platforms. We propose two mechanisms through which a platform owner may leverage first-party complements to grow its platform. Specifically, we argue that a platform owner may (1) leverage the first-party complements to showcase complement development knowledge with the expectation of facilitating potential complementors' introduction of complements, and (2) leverage the first-party complements to influence users' perception about the platform distinctiveness. Using data from the US console-video game industry from 1995 to 2005 we find broad support for our hypotheses.

STR: **The Effects of Value Creation and Value Capture on Transaction Platform Startup Performance**

Author: **Minsun Lee**, *Korea U. Business School*
Author: **Daeil Nam**, *Korea U. Business School*

Platform business models have been widely discussed in the literature and applied within the last decade. Nevertheless, a clear understanding of the value creation and value capture of e-commerce transaction platform startups does not yet exist. Based on the notion that platform governance is one of the sources of value creation, the current research suggests quality-based value creation with the platform owner's control. Moreover, with value capture types as moderating variables, this research shows the effects of value creation and value capture on startup performance. The data used in this research consists of 200 early-stage transaction platform startups founded from 2015 to 2019. This study can be used to improve the understanding of mechanisms of e-commerce transaction platform business success from the business model perspective.

STR: **Performance Implications of Platform Stratification: Evidence from the Launch of Airbnb Plus**

Author: **Heeyon Kim**, *Cornell U.*
Author: **Qian Wang**, *Cornell SC Johnson College of Business*
Author: **Martina Montauti**, *U. of St. Gallen*

Online platforms often stratify the sellers and their offerings in an attempt to send better quality signals to the buyers. While prior research has shown the positive outcomes of such stratification in terms of attracting more buyers, we know less about the performance implications for sellers within the platform: How does stratification affect the sellers that are not categorized as higher quality, and subsequently the overall platform performance? In this study, we exploit a unique empirical opportunity from Airbnb Plus, a service launched by Airbnb in a subset of cities, to examine the impact of stratification on the overall performance of the platform. Our results show that following the launch of the Plus service which designated a select number of high-quality listings which were directly verified by Airbnb, the Airbnb listings that were not designated as Plus experienced a decline in their revenue and their occupancy rate. Given that the majority of listings were not designated as Plus, the performance decline in non-Plus listings translates to an overall performance decline in Airbnb's performance in the city where Plus launched. Our study contributes to research on within-platform competition by showing how stratification can have negative performance implications, especially when the supply of offerings in the high-quality category is limited and offline competitors can provide alternative offerings.

Managing Strategic Change

Session Moderator: **Simone Maria Eulitz**, *LMU Munich*

STR: **Preventing Corporate Misconduct in an Unstable Environment – The Case of Strategic Change**

Author: **Simone Maria Eulitz**, *LMU Munich*
Author: **Max Braun**, *Freie U. Berlin*
Author: **Constantin Cornelius Meyer**, *LMU Munich*
Author: **Anja Christine Tuschke**, *LMU Munich School of Management*

In this paper we argue that firms encounter a higher risk of corporate misconduct in times of strategic change. Building on the fraud triangle, we analyze how the risk of corporate misconduct rises as strategic change within a firm increases. We further argue that under such conditions, certain governance mechanisms matter more and are more effective in preventing misconduct. We use the comparative corporate governance framework to analyze how the breadth and depth of oversight capability on the board both help to mitigate the risk of misconduct. We study how two common and contested aspects of boards, board size and the presence of CEOs of other firms as outside directors, unfold their effectiveness in preventing corporate misconduct during times of profound strategic change. Testing our hypotheses in a matched-pairs design of 217 security class action lawsuit cases, we find support for our assumptions. Our study contributes to the literature on the relationship between strategy and corporate misconduct and improves our understanding of how organizational environments shape the effectiveness of corporate governance.

STR: **Paying for Change and Performance? Government Subsidies, Strategic Change, and Firm Performance**

Author: **Jialin Song**, *School of Economics & Management, Tongji U.*
Author: **Sihong Lu**, *School of Management, RMIT U.*

Faced with the challenges and problems in economic operations, strategic change has been regarded as key to promoting economic transformation in a down-to-earth manner. However, existing literature pays little attention to how the inflow of resources affects strategic change, and how different types of strategic change may dynamically affect performance across different lengths of the period. We study how strategic change mediated the relationship between government subsidy and different types of strategic change in the short run and long run. Using an emerging methodology, we investigate 2,135 Chinese A-share manufacturing listed firms and quantify the framework of "resource-action-performance" by studying how government subsidy inflows affect the level and direction of strategic change and exploring the mediation role of strategic change across different time horizons. Evidence showed that resource inflows will facilitate firm-level strategy revolution by both increasing the level and direction of strategic change. However, different types of strategic change have a diverse dynamic effect on financial and strategic performance across different periods. This article gives local government and firms a perspective to understand how government subsidies influence firms' choices on strategic change and discuss the real effect of different types of strategic change.

STR: **A Longitudinal Process Perspective On Strategic Renewals: Three Decades Of Braithwaite**

Author: **Swapnil Garg**, *Indian Institute of Management, Indore*

Organizational renewals, the processes, and outcomes of changes in the scope and resource deployments of a firm's business have long been of interest to management scholars. However, the long-term sustainability of organizational turnaround, renewal, or transformation is seldom studied, though these are considered primarily strategic, i.e., long-term in nature. This leads to a gap in our understanding of what works and what does in the long run and how to understand strategic renewals over long periods of time. Leveraging access to a centurion organization, which underwent three renewal cycles, this research aims to first explore what makes renewals strategic – what works and what does not, deepening our insights on how to understand strategic renewals. The studied organization is a public sector organization in India that had undergone three renewals, with two of them unable to survive the test of time. Studying the processes and content of the three renewals, we find renewals to consist of a myriad of activities varying in scope and commitment, with numerous reversals and backtracking, emphasizing the nonlinear and complex dynamics at play in organizational renewals.

STR: **The Network Dynamics of Capabilities Adaptation: The Case of Big Oil Going Green**

Author: **Gal Blatman**, *U. of Pittsburgh*

The pivot of the oil industry towards green energy is commonly viewed as necessary to preventing catastrophic climate change, challenging a whole network of organizations to adapt their capabilities. Yet, much remains unknown about how the patterns of the alliance network in the industry promote or prevent this change. I suggest that organizations are affected by the dual forces of network dynamism and structural autonomy and that both forces promote the innovation and freedom to act required for effective capability change. I further suggest that both these forces are moderated by disembedding from legacy ties. I hope to contribute to the understanding of the intersection of network and capability theories in a more holistic multi-level manner.

Scholars spanning different fields within the social sciences have long recognized that communication is a key element of leadership. While early research on leader communication focused largely on how communication revealed leader characteristics, researchers in later decades have expanded their focus to how leader communication affects followers, stakeholders, and organizations. In addition, thanks to advancing analytical technologies such as NLP- and AI-based tools, scholars can now assess leader communication at greater scale (e.g., big data) and in more diverse forms (e.g., text, vocal tone, facial expressions, body gestures). This series of papers speak to these research trends, and document several key ways in which leaders' verbal and nonverbal communication affects consequential outcomes, from leaders' own career outcomes to stakeholders' reactions to that communication. The five studies take place in diverse empirical contexts and feature diverse methods in studying leaders' communication data. The symposium will offer valuable insights into leaders' influence processes through their communication, and showcase various ways scholars can study them.

While scholars who study strategy, organizations, and international business have long noted nationalism as an important force in organizations' institutional environment, there has been little research on (1) what impact that nationalism has on organizational performance and strategy, (2) how organizations strategically deploy nationalism to manage their internal and external stakeholders, and (3) what kind of organizations are more likely to demonstrate a high level of nationalism. To address these questions, we propose this symposium composed of four paper presentations and a featured discussion on the topic of nationalism and organizational strategy. Theoretically, these papers argue that nationalism can create both uncertainties for organizations and opportunities for managers to bolster the meaning of their products and the purpose of their organizations. Empirically, these papers adopt a variety of methodology, including the difference-in-difference analysis, the in-depth case analysis, and the machine-learning based text analysis. Finally, these papers are also featured by the diversity of national contexts and study how nationalism affects organizations in the world's major economic powerhouses, including US, China, Japan, and Europe. We expect this symposium to significantly advance the scholarly research on nationalism in organizational strategy.

Scientific Decision-Making in Large Organizations: Challenges, Opportunities, and Questions

Organizer: **Sebastian Niederberger**, *ETH Zürich*
Panelist: **John S. Chen**, *Baylor U.*
Panelist: **Elena Novelli**, *Bayes Business School*
Panelist: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*
Panelist: **Thomas Markus Zellweger**, *U. of St. Gallen*

Although the effectiveness of the scientific decision-making approach has been demonstrated, most studies have focused on individual entrepreneurs. This panel symposium aims to expand the scope of this research by examining the implications of the scientific approach within large organizations. Our distinguished panelists will present their research, including insights on the challenges and opportunities, decision-making biases, measurement of the approach at scale, and how it differs in application between individual entrepreneurs and large organizations. The panelists will also talk about the topic from a cognitive neuroscience perspective and discuss ways to deal with the problems in current research that focuses on studying the approach and its effects. This panel will provide insights into the effective implementation and navigation of the scientific approach within large organizations while also addressing the unique challenges faced in this context.

People and Innovation Track: Leadership in Innovative Firms

Session Moderator: **Ali Radfard**, *Aston Business School*

TIM: **Role of LMX in Managing Cyberloafing: Leaders, You Better Listen!**

Author: **Megha Gupta**, *National Institute of Industrial Engineering (NITIE), Mumbai, India*
Author: **Nikhil Kewalkrishna Mehta**, *National Institute of Industrial Engineering (NITIE), Mumbai, India*
Author: **Upasna A. Agarwal**, *NITIE*
Author: **I. M. Jawahar**, *Illinois State U.*

The purpose of this paper is to investigate the direct impact of leader member exchange (LMX) quality on cyberloafing as well as its indirect impact through psychological capital. In addition, we also examine if perceived psychological contract fulfilment moderates the LMX quality and cyberloafing relationship. Using a two wave time-lagged design, data were collected from 417 employees from Mumbai, India. Results indicate that LMX quality is negatively related to cyberloafing and psychological capital partially mediates this association. As expected, perceived contract fulfilment moderated the LMX quality - cyberloafing linkage, such that the negative relationship intensified when perceived contract fulfilment was high. Even though data were collected at two points in time, the self-report nature of the data is a limitation. Results of the study have practical implications. Designing interventions to help managers enhance the quality of their relationship with their followers will directly as well as, indirectly, by enhancing psychological capital, reduce cyberloafing. Results also highlight the role of psychological contract fulfilment in curbing cyberloafing. This study is among the first to examine the impact of LMX quality on cyberloafing. In addition, the reliance on psychological capital theory to predict cyberloafing is a novel contribution.

TIM: **How Top Management Team Social Status Impacts Innovation**

Author: **Ali Radfard**, *Aston Business School*
Author: **Luca Pistilli**, *U. College Dublin*
Author: **Alessia Paccagnini**, *U. College Dublin*

Scholars have investigated the effect that Top Management Team (TMT) status has on several organizational dimensions, including strategic decision, risk propensity, and, ultimately, performance. However, the existing literature is relatively silent on the effect of TMT status on innovation. Our scope is to cover that research gap. Grounding our reasoning on two different yet intertwined literature streams – one on the TMT status and the other on innovation – we predict that TMT status should be positively correlated with innovation and its market value, but not with its scientific value. Relying on a unique, hand-crafted dataset composed of 833 firm-years' observations for the period 2005-2010, we can validate our hypotheses. Our study contributes to a better understanding of the relationship between TMT status and innovation generated by the respective firm.

TIM: **Top Management Team Faultlines and Firm Innovation: The Moderating Role of CEO Power**

Author: **Yusen Dong**, *China Europe International Business School (CEIBS)*
Author: **Meitong Dong**, *U. of Hong Kong*
Author: **Pengcheng Ma**, *Australian National U.*
Author: **Han Ming Daniel Chng**, *China Europe International Business School (CEIBS)*

Studies on the relationship between the top management team's (TMT) task-related faultlines and firm innovation have yielded equivocal results. Drawing on the knowledge, skills, and abilities framework and social categorization theory, we consider the effect of TMT task-related faultlines on incremental and radical innovations and argue that CEO power (including ownership and prestige power) moderates this relationship. Using Chinese listed firms as the research sample, we find that TMT task-related faultlines are positively related to firms' incremental innovation but negatively related to radical innovation. In addition, CEO ownership power weakens the positive relationship between TMT task-related faultlines and firms' incremental innovation but strengthens the negative relationship between TMT task-related faultlines and firms' radical innovation. However, CEO prestige power weakens the negative relationship between TMT task-related faultlines and firms' radical innovation. Our research contributes to the literature both on strategic leadership and firm innovation.

TIM: **The Counterintuitive Effects of CEO Closeness on Exploratory Innovation**

Author: **Jinxin Yang**, *U. of Houston Downtown*
Author: **Sergio Grove**, *U. of Texas at El Paso*
Author: **Mengge Li**, *U. of Texas at El Paso*

CEOs and the influence of their social networks have been considered as important drivers for firm innovation. Yet, both theories and empirical evidence are lacking. To advance this stream of research, we study the effects of CEO network closeness and structural holes on exploratory innovation. Drawing from both structural embeddedness theory and structural holes theory, we argue that CEOs who are deeply embedded in executives' networks (higher network closeness) evaluate exploratory initiatives from a narrower perspective which makes them more selective in pursuing exploratory innovation. Further, we argue that structural holes propel CEOs to pursue more exploratory innovation, yet such effect of structural holes is attenuated by structural embeddedness. We test our hypotheses with a sample of 7,543 firm-year observations with 1,101 public U.S. firms from 2000 to 2014. The results show that CEO network closeness has a predominantly negative relationship with exploratory innovation. Further, the degree of structural holes has a positive relationship with exploratory innovation, but the relationship turns negative at high degrees of closeness. Our study contributes to research on strategic leadership, interfirm networks, and technological innovation.

Connecting Creativity and Innovation

Organizer: **Goran Calic**, *McMaster U.*
Organizer: **Pedro Faria**, *U. of Groningen*
Organizer: **Christoph Grimpe**, *Copenhagen Business School*
Organizer: **Olli-Pekka Kauppila**, *NEOMA Business School*
Organizer: **Bernard A. Nijstad**, *U. of Groningen*
Panelist: **Pino G. Audia**, *Dartmouth College, Tuck School of Business*
Panelist: **Markus Baer**, *Washington U. in St. Louis*
Panelist: **Paola Criscuolo**, *Imperial College London*
Panelist: **Riitta Katila**, *Stanford U.*

Creativity and innovation are interrelated and mutually reinforcing. Yet, despite their relatedness, micro-level creativity research and organizational-level innovation research have evolved largely independently, resulting in distinct approaches to the understanding of creativity and innovation. Over the years, this has led to the development of parallel streams of research with too little cross- talk. Therefore, the purpose of this panel symposium is to engage a group of panelists in a formal, moderated, interactive discussion about the (1) nature of practical, theoretical, and methodological differences between creativity and innovation as fields of research; (2) the fault-lines these differences have created between creativity and innovation research; (3) the similarities between creativity and innovation research that can bridge existing fault-lines (4) specific practical, theoretical, and methodological ideas for building bridges between creativity and innovation; and (5) new research possibilities opened by more closely connecting creativity and innovation research.

People and Innovation Track: AI and Human Decision-Making

Session Moderator: **Henry Sauermann**, *ESMT European School of Management and Technology*

TIM: **Crowds and Machines: AI as a Manager in Large-scale Science and Innovation Projects**

Author: **Maximilian Koehler**, *ESMT Berlin*
Author: **Henry Sauermann**, *ESMT European School of Management and Technology*

Artificial intelligence (AI) can make important contributions to scientific research by performing functional tasks such as reviewing prior literature, classifying digital data, or developing new drug compounds. There is less evidence, however, on the potential of AI as a mechanism to manage human workers who perform such research tasks. We explore algorithmic management in the context of projects that push the limits of human managers' capabilities: Crowd science projects that involve large numbers of individuals that vary greatly with respect to factors such as their skills, interests, as well as geographic location. Our analysis of archival data as well as interviews with project organizers and crowd members demonstrates the use of AI for five management functions: task division and task allocation, direction, coordination, motivation, and supporting learning. We also provide a deeper understanding of the underlying capabilities that enable AI to perform these functions, of challenges when using algorithmic management in science, and of contingency factors that may shape the effectiveness of AI. We conclude with a discussion of opportunities for future research on the organization of science and on algorithmic management, and we highlight potential implications for scientists as well as policy makers.

TIM: **Standing on the Shoulders of AI: Pushing the Knowledge Frontier by Learning from AI**

Author: **Sukwoong Choi**, *MIT Sloan School of Management*
Author: **Hyo Kang**, *U. of Southern California*
Author: **Namil Kim**, *School of Management, Harbin Institute of Technology*
Author: **Junsik Kim**, *Harvard U.*

Knowledge is a crucial source of competitive advantage, innovation, and economic growth, but creating new knowledge can be difficult. We study whether and how the interaction between human professionals and artificial intelligence (AI) pushes the knowledge frontier. Studying this question is challenging because of the difficulty in measuring new knowledge and quantifying AI's impact. We circumvent these issues by studying professional Go matches from 2003 through 2021. In 2017, the AI-powered Go program (APG) far surpassed the best human player, and professional players began learning from AI. Such human-AI interaction paved a new way to reassess historical Go knowledge and create new knowledge. We analyze every move in 69,974 games and find that, after APG, professional players significantly changed how they play (1) the first move and (2) the first invasion move in each quadrant. In addition, they adopted different sets of "standard patterns" (defined as a sequence of the first eight alternating moves) that set up the game in the early stage. However, new knowledge catalyzed by AI comes at the expense of higher concentration and reduced diversity of moves. Further, AI's impact on knowledge creation is greater for highly skilled players; since AI does not explain, learning from AI requires the absorptive capacity of professionals. AI helps humans push the knowledge frontier, but its consequences for knowledge concentration and for differential learning by skill levels provide important implications for how best to seize the opportunities opened up by AI.

TIM: **Putting a Human in the Loop: Increasing Uptake, but Decreasing Accuracy of Automated Decision-Making**

Author: **Marina Chugunova**, *Max Planck Institute for Innovation and Competition*
Author: **Daniela Sele**, *ETH*

Are people algorithm averse, as some previous literature indicates? If so, can the retention of human oversight increase the uptake of algorithmic recommendations, and does keeping a human in the loop improve accuracy? Answers to these questions are of utmost importance given the fast-growing availability of algorithmic recommendations and current intense discussions about regulation of automated decision-making. In an online experiment, we find that 66% of participants prefer algorithmic to equally accurate human recommendations if the decision is delegated fully. This preference for algorithms increases by further 7 percentage points if participants are able to monitor and adjust the recommendations before the decision is made. In line with automation bias, participants adjust the recommendations that stem from an algorithm by less than those from another human. Importantly, participants are less likely to intervene with the least accurate recommendations and adjust them by less, raising concerns about the monitoring ability of a human in a Human-in-the-Loop system. Our results document a trade-off: while allowing people to adjust algorithmic recommendations increases their uptake, the adjustments made by the human monitors reduce the quality of final decisions.

TIM: **A Strategic Framework of Artificial Intelligence in Integrated Decision Making: A Systematic Review** ✈

Author: **SIVARANJAN MURUGESAN**, *Student*
Author: **AjithKumar Kadalmani**, *Student*

There is no doubt that making sound decisions is a challenging skill to acquire. A look at how leaders and organisations can acknowledge the uncertainties and roadblocks of attempting to launch successful initiatives. Taking any decision is a reasonable response to being confronted with intriguing situations, and organisations are traditionally expected to make reasonable judgements to confirm the efficacy of their management practices, particularly to accommodate key stakeholders and integrate workers' decisions at all levels of management into the aggregate organization-wide decision to realise the organization's mission and objectives. However, extenuating circumstances recurrently preclude prompt, accurate, and incisive decision-making, leaving organisations floundering in the business wilderness. In this paper, we propose a strategic framework for organisational decision-making that, when taken in conjunction with multiple artificial intelligence support, enables complex data processing on a larger scale than has ever been possible. This has had a substantial influence on the decision-making process in organisations. Decision-making methods have been switching away from traditional methods and toward data-driven methods. The integration of machine learning-driven insights is set to enhance decision-making processes to the point where human intervention will become outmoded. In order to achieve the organisational efficiency, we created an AI-driven decision-making model to assist organisations in integrating workers into decision-making processes and making inclusive decisions.

TIM: **When Machine Comes to Town: Fund Analysts' Performance with Artificial Intelligence**

Author: **Xi Kang**, *Vanderbilt U.*
Author: **Grace Fan**, *Singapore Management U.*

How does the introduction of artificial intelligence (AI) technology affect the performance of mutual fund analysts? Using a unique setting in which AI was introduced to generate ratings for previously uncovered mutual funds in a large financial research company, we find that the analyst ratings' predictive power for future fund performance increases, suggesting higher rating quality. Further difference-in-differences analyses suggest two possible mechanisms through which AI adoption involving a separate set of funds affects the quality of human ratings: the reduction of analyst favoritism towards socially connected fund managers, and the availability of ratings for a large set of previously uncovered benchmark funds. The effects of AI adoption on fund analysts are more pronounced for analysts with stronger social ties with fund managers and higher past performance. This paper contributes to the growing literature on the interaction between AI and humans and provides unique insights on the mechanisms through which AI affects human performance.

Innovation and Entrepreneurship Track: CVC & Innovative Startups

Session Moderator: **Haemin Dennis Park**, *U. of Texas at Dallas*

TIM: **Social and Knowledge Brokerage of Venture Capitalists and Co-patenting by Portflio Startups**

Author: **Haemin Dennis Park**, *U. of Texas at Dallas*
Author: **Kaushik Gala**, *Iowa State U.*
Author: **Michael Deane Howard**, *Iowa State U.*

Venture capitalists (VCs) can act as brokers for their portfolio startups to collaborate with each other for co-inventive activities. However, we know little about how different types of VCs affect the frequency and impact of collaborative activities by startups. We suggest that independent venture capitalists (IVCs) act as social brokers to increase the frequency of co-inventing activities by their portfolio startups. However, the impact of inventions brokered by collaborative activities through IVCs tend to be less impactful on average. In contrast, corporate venture capitalists (CVCs) act as knowledge brokers who may selectively connect their portfolio startups into collaborative co-inventing activities, but when they do, inventive outcomes of the brokerage activities by CVCs tend to be highly impactful. We corroborate these findings using a sample of 677 startups in the semiconductor sector in the U.S. that received funding from 570 IVCs and/or 90 CVCs between 2000 and 2014. These results provide nuanced insights on the role of different type of VCs in facilitating or inhibiting startups' collaborative inventive activities.

TIM: **Boosting New Ventures' Innovation Performance - An Analysis of CVCs' Entrepreneurial Orientation**

Author: **Ivan Reh Tretiakov**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Alexander Ewertz**, *Chair for Technology & Management, TU Dortmund U.*

New ventures need to be innovative to win against competition. Research shows that cooperation with corporate venture capital (CVC) investors increases new ventures' innovation outcomes. However, it remains unclear how CVC-investor's strategic orientation impacts this beneficial relationship. To advance the debate how CVC-investors influence new ventures innovation performance we analyze a panel dataset of 288 new ventures (1990-2019) and find a positive relationship between CVC-investor's EO and new venture's innovation performance. This positive association is stronger for new ventures with a high importance and for CVC-investors with a low level of unused capital.

TIM: **Corporate VC Investments in General Purpose Technology: The Case of Artificial Intelligence**

Author: **Francesco Di Lorenzo**, *Copenhagen Business School - Department of Strategy and Innovation*
Author: **Ali Mohammadi**, *Copenhagen Business School*
Author: **Benedetta Montanaro**, *Politecnico di Milano School of Management*

This paper investigates the role of generic vs. specific complementary assets in corporate venture capital (CVC). Looking at investments in general purpose technology (GPT) startups, as per the case of artificial intelligence (AI), we unfold a more complex and nuanced relationship between firm's generic vs. AI-specific complementary assets and CVC activities in GPT startups, as well as performance implications for firm's AI innovation productivity and firm profitability. We analyze CVC investments of 384 corporations in 2010-2021 period; our findings reveal new insights that contribute to the CVC literature and extent the emerging AI research in the realm of corporate entrepreneurship.

TIM: **Psychological Underpinnings of Internal Corporate Venturing: Collective Hedonic Restructuring**

Author: **Natalia Vuori**, *Aalto U.*
Author: **Marina Biniari**, *U. of Sussex Business School*
Author: **Quy Nguyen Huy**, *INSEAD*

Scholars have proposed that to organize and accelerate internal corporate venturing (ICV) and intraorganizational innovation, leaders need to establish the appropriate level of control while continuing to promote autonomy. To do so, leaders could employ structural solutions, set a clear innovation goal, and trigger positive emotions among venturing employees. Our longitudinal study reveals the limitations of this top-down perspective. We found that the implementation of ICV and innovative activities under the control of top managers, and interim ICV and innovation outcomes triggered both positive and negative emotions among venturing employees. However, venturing employees wanted to experience only positive emotions. To achieve this goal, venturing employees engaged in collective bottom-up hedonic restructuring — behaviors that change organizational controls in a way that increases experiences of positive emotions and decreases experiences of negative emotions. Our study enriches scholarly understanding of the underresearched processes associated with organizing ICV and innovation by identifying the dynamic emotional forces that drive ICV and innovation. We explain why, how, and under what conditions venturing employees can collectively change organizational controls to increase their experience of positive emotions. Moreover, we expose certain potentially maladaptive effects of positive emotions and positive framing in contexts related to ICV and intraorganizational innovation.

Innovation and Competitive Strategy Track: Leveraging IPRs

Session Moderator: **Josh Feng**, *U. of Utah, David Eccles School of Business*

TIM: **Alice v. CLS Bank: Patent Assertion Entities, Litigation, and Startups**

Author: **Josh Feng**, *U. of Utah, David Eccles School of Business*
Author: **Peyton Williams**, *Yale Law School*

We study how the Alice v. CLS Bank decision ("Alice") affected software patents and innovation. Alice created new guidelines for patent examiners and judges, and we find that examiners significantly increased their scrutiny of software patent applications claiming abstract ideas. Next, we exploit differential exposure to Alice across technology areas to show that patents granted after Alice are 1pp less likely to be purchased by patent assertion entities, on a baseline of 1.6pp. However, we find little difference in other outcomes. We also show that patents granted pre-Alice are relatively unaffected by the decision, including PAE purchase probability. Finally, we show that there is a weakly positive impact on venture capital funding in Alice-affected industries, despite a large decrease in first-time patent grantees. The evidence highlights the differential usefulness of abstract patents to PAEs versus other entities in the innovation system

---

TIM: **IP Protection and Innovative Entrepreneurship: The Case of the Mountain Bike Industry** ☯ ✈ 💻

Author: **Kenny Ching**, *Worcester Polytechnic Institute*

This work employs a novel empirical approach in revisiting a core question in innovative entrepreneurship studies: what is the impact of formal intellectual property protection on stimulating entrepreneurship and industry development? In 1996, the inventor of the Horst Link suspension system failed to secure patent protection in Germany through accidental conditions. This technology, however, was fully patented in the US. We leverage this natural experiment to explore the complete innovative and product histories of all entrants to the multibillion-dollar mountain bicycle industry from 1981 to 2014. We find that German mountain bike firms may have benefited from this historical "accident". Our regression estimates suggest that German firms relative to their US counterparts are associated with a 5 to 10\%\ boost in innovation rate post 1996. Failure rates of German firms were also less than that of US firms. As a result, we propose that selective relaxation of formal intellectual property protection has the potential to provide stimulatory effects in promoting innovative entrepreneurship.

TIM: **The Changing Work of IPR Attorneys: 30 Years of Institutional Transitions (WITHDRAWN)** ✈ 💻

Author: **Jussi Heikkilä**, *U. of Jyväskylä School of Business*
Author: **Mirva Peltoniemi**, *U. of Jyväskylä School of Business*

Patents and other intellectual property rights (IPR) are at the core of innovation studies. Patent attorneys and other IPR experts play an important role in drafting and filing processes yet are usually overlooked in analyses on filing activity. We conduct an exploratory case study to shed light on how IPR service firms adapt to changes in the institutions and competitive environment that overturn the fundamentals of their business. We focus on the sector's evolution in Finland from 1990 to 2020, and analyse the impacts of globalization, European integration, and digitalization. Accession to the European Patent Convention, introduction of EU trademarks and Registered Community Designs and the London Agreement are identified as significant institutional changes for the industry. IPR register data and expert interviews show that the business has shifted from serving foreign clients filing in Finland to serving Finnish clients filing internationally, increasing the knowledge requirements of local experts. Concurrently, the filing volume has increased due to globalization partially offsetting the disappearance of some sources of revenue following from digitalization and institutional changes aimed at reducing transaction costs for innovators. This has also triggered the development of consulting services relating to technology strategy. We contribute by analysing the sector's evolution in a small open economy where start-ups typically aim at the global market from the start. Our study also highlights the need to integrate IPR attorneys into the literatures on appropriability and propensity to file IPRs.

TIM: **Evaluation of Design Non-obviousness**

Author: **Egbert Amoncio**, *Goethe U.*

In this paper, I show that dual examiners — design patent examiners who evaluate both design and utility patents — perform worse in their core role when forced to deviate from their core occupational identity. I take advantage of a 2007 US Supreme Court decision that altered the rule for nonobviousness utility patents, forcing dual examiners to deviate even further from their primary role of evaluating design nonobviousness. To assess the nonobviousness of granted designs, I use image distinctiveness AI. Results show that dual examiners grant less nonobvious designs by up to 16.95 percent. The effects are especially strong for lenient and assistant examiners. Taken together, this paper illustrates that patent policy change could have unintended consequences when disregarding the psychological well-being of examiners.

Technology, Policy and Society Track: Innovation at the University-Industry Interface

Session Moderator: **Muthu De Silva**, *Birkbeck, U. of London*

TIM: **Proximity and Impact of University-industry Collaborations**

Author: **Federica Rossi**, *Birkbeck, U. of London*
Author: **Muthu De Silva**, *Birkbeck, U. of London*
Author: **Pasquale Pavone**, *Scuola U.ria Superiore S.Anna di Pisa*
Author: **Ainurul Afizah Rosli**, *Brunel Business School*
Author: **Nick K. T. Yip**, *U. of East Anglia*

Literature has shown that proximity between university and industry partners affects the probability to initiate, the intensity and the quality of university-industry collaborations (UICs). Instead, limited attention has been paid to the relationships between proximity and the types of impacts of UICs. In this study, we analyse the association between collaborators' proximity and the extent to which UICs generate economic, social and knowledge impacts. We build on an evidence base combining: (i) reports describing the impacts of 415 UICs funded by the United Kingdom's innovation agency, (ii) data on UIC partners, and (iii) in-depth interviews. In doing so, we showcase an original approach to capturing the types of impact of each UIC by means of topic detection. Our analysis suggests that cognitive and institutional proximity are substitutes in relation to knowledge impact, geographical and institutional proximity are substitutes in relation to economic impact, and social impact is associated with cognitive and institutional distance. We derive implications for universities, businesses and policymakers on how best to exploit proximity between university and industry to generate valuable impacts on society, the economy and the knowledge base.

TIM: **Drifting on the Academic Highway: Experimental Evidence from a Transition to University**

Author: **Yotam Sofer**, *Copenhagen Business School - Department of Strategy and Innovation*
Author: **Olof Ejermo**, *Lund U. School of Economics and Management*

We examine the effects of the 1999 transition to full university of three former Swedish university colleges: Karlstad, Örebro, and Växjö on scientific output. This change was accompanied by a substantial increase in research funding. Scrutiny of the process reveals that the transition was far from obvious, allowing us to analyze the impact of increased research resources in a quasi-experimental setting. We examine how publications responded when research resources were raised from low levels. We then probe into the consequences on the individual level to understand the difference in gains between staff groups. This work differs from earlier research which has mostly looked at the effects of increases in research funding on established universities or individuals who win research grants. To understand how the transition impacted publication, we use an individual-level publication activity dataset, linked to Swedish register data and university staff registers. We contrast the three treated institutions against a similar group of university colleges that did not become universities in a difference-in-differences analysis combined with matching. We find that treated individual increased their publication rates by 89% per year following the transition. However, we cannot discern any changes in the rate at which publications were cited. On the field level, we show that this effect was mostly explained by increased funding. Additionally, we explore the heterogeneity of treatment effects, potential mechanisms (collaboration, workforce dynamics), and management strategies (using a survey).

TIM: **Universities as Knowledge Buffers of Cyclical Industries: Evidence from Pulp and Paper Firms**

Author: **Julio A. Pertuze**, *Pontificia U. Católica de Chile*
Author: **Rosario Vinagre**, *Pontificia U. Catolica de Chile*
Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*
Author: **Roberto Vassolo**, *IAE Business School, Argentina AND Pontificia U. Católica de Chile, Ingeniería Industrial*

We analyze the effects of demand contractions on industry-university relationships. We track the patenting, scientific publication, and R&D worker mobility data of the thirteen largest pulp and paper firms over twenty years. We show that hiring researchers and inventors from academia positively impacts the annual number of patents and papers published by these firms. Furthermore, firms that allow employees to keep or create academic links further increase these innovation outcomes. The level of patenting and scientific publications directly oscillate with the pulp price cycle. When firms face lower prices, R&D personnel leave pulp and paper firms for academic institutions either to work or study. Academic institutions benefit from recruiting the most productive R&D personnel from pulp and paper firms. These findings imply a symbiotic relationship between cyclical industries and academia. Universities can act as "knowledge buffers," preserving industry knowledge in periods of downturn, allowing corporate technologies time to mature despite changes in industry cycles, and helping firms to build new—or regain lost—capabilities in periods of industry recovery. Policy and managerial implications are discussed.

TIM: **Enabling Tensions: A Paradox Typology and Appreciation Strategies for the U-I Collaboration**

Author: **Selina Cao**, *U. of Queensland*
Author: **Martie-Louise Verreynne**, *U. of Queensland*
Author: **Rui Torres de Oliveira**, *Queensland U. of Technology*
Author: **Marta Indulska**, *U. of Queensland*

University and industry project collaborations are central to addressing society's wicked problems. Yet, both universities and industries struggle to establish and sustain collaborations due to tensions that arise from their competing institutional logics, including workplace norms, culture and motivations, to name a few. Motivated by the need to understand these tensions, and using a paradox lens, we synthesize literature on university and industries collaboration and identify three main paradoxes, viz. identity, performance, and organizing, and three stages of collaboration development: initiation, formation, and operation, which correspond with these paradoxes. We argue that at these stages, there are key synthesis strategies across levels, which we term closing cognitive distance, transcending goal differences, and expanding solution reservoir. Our work bridges the disparate literature on and contributes to the paradox literature through a paradox typology and identification of synthesis strategies. Our investigation of university-industry collaboration highlights three key points: 1) collaborations should not be viewed as either conflict-mitigation or synergy-generation vehicles, 2) nor should they be viewed within one level or dimension, such as organization-level identity tensions, 3) nor should they be viewed as a series of one-off transactions. Collaborations are awash with paradoxes across levels, dimensions, and time. In contrast to the much-discussed liability of unmitigated-conflict logic, we suggest that there is a liability of the unsynthesized-paradox hypothesis in university-industry collaborations. When faced with these, collaborators should learn to embrace, not deny them, using multi-dimension and multi-level synthesis strategies while considering the virtuous cycles embedded in path dependency.

Learning and Innovation Track: Brokers & Intermediaries

Session Moderator: **Laura Doriane Baumgaertner**, *WHU Otto Beisheim School of Management*

TIM: **Trust and Information Asymmetry: How Intermediaries Affect Asymmetric Innovation Collaborations**

Author: **Laura Doriane Baumgaertner**, *WHU Otto Beisheim School of Management*
Author: **Jonas Soluk**, *Stockholm School of Economics*

Trust plays a crucial role in interorganizational collaborations. However, barriers such as information asymmetry between prospective partners impede trust building, especially in asymmetric collaborations. Although trust and information asymmetry have been extensively studied, previous research has failed to provide insight into the mechanisms of trust transference and the circumstances under which information asymmetry is accepted and considered legitimate. This paper addresses these research gaps by drawing on data from 113 semi-structured interviews in a multiple-case study of eight intermediary-mediated innovation collaborations between incumbent firms and start-ups. Based on the results of an inductive cross-case analysis, we propose that intermediaries orchestrate the trust transference by building trust with the prospective parties and mitigating information asymmetry. Furthermore, the involvement of intermediaries leads to the acceptance of information asymmetry through its legitimation. Finally, we shed light on trust nurturing and trust repairing practices developed by intermediaries during innovation collaborations.

TIM: **Network Positions, Institutional Polycentrism, Firm Innovation: Evidence from Co-Patenting Activity**

Author: **Qinjie YANG**, *U. of Nottingham Ningbo China*
Author: **Cong Cao**, *U. of Nottingham Ningbo China*
Author: **Jiaoe WANG**, *Institute of Geographic Sciences and Natural Resources Research*
Author: **Zhijing Zhu**, *U. of Nottingham, China*

The disparity of sub-national institutions in transitional economies gradually comes into the spotlight, while less attention has been paid to the coexistence and interaction of different institutional arrangements. Combining the social network theory and the institutional polycentrism perspective, this paper examines that the separate and co-moderating effects of different institutions – government intervention and intellectual property right (IPR) enforcement – on the association between structure holes and exploratory and exploitative innovations. The listed companies' co-patenting network of Chinese patent-intensive industry during 2010-2019 provides empirical evidence to support our study. Specifically, structural holes are beneficial for both types of innovations. In addition, the higher government intervention, the more exploitative and exploratory innovations produced by enterprises occupying more structural holes. The stronger IPR enforcement is, the more exploratory innovation by bridge enterprises. The combination of heavy government intervention and strong IPR enforcement is best for exploratory innovation.

TIM: **Mors Tua, Vita Mea? The Effect of Broker Death on Firm Innovation**

Author: **A-Sung Hong**, *Aarhus BSS, Aarhus U.*
Author: **Giovanni Valentini**, *Luiss U.*

Although prior empirical studies have consistently shown brokerage benefits for the broker herself, recent evidence suggests there exists a negative effect of a broker on the performance of her direct collaborators. These opposite findings lead us to study the overall effect of a broker on firm innovation performance. To identify a broker's net effect on her firm, we exploit unique data of broker inventors' death and compare firms with a deceased broker to a control group of matched firms. We find that a broker's death leads to an increase in firm innovation performance. To explain this finding, we show that, upon a broker's death, a broker's direct collaborators are more likely to initiate high-quality innovation projects and rewire the intrafirm collaborative networks around themselves, becoming the core of the churned intrafirm networks. As an effect of the rewired intrafirm networks, we also observe a positive spillover effect to indirect intrafirm collaborative ties. Our finding suggests that, if a brokerage network persists, it might only nurture the broker herself.

TIM: **The Emergence of Innovation Intermediaries**

Author: **Jihye Yeo**, *EMLYON Business School*
Author: **Alexander Eapen**, *Australian National U.*
Author: **Rekha Krishnan**, *Simon Fraser U.*
Author: **Ian Elsum**, *Australian National U.*

Innovation intermediaries play a crucial role in stimulating firms' innovation, mainly by acting as a bridge between firms and resources that the firms would not otherwise have access to. However, little is known about where the intermediaries come from, how their role evolve over time, and how they shape their specific function as innovation catalysts, all of which are important elements of understanding the roles of innovation intermediaries. This study focuses on the emergence of innovation intermediaries in order to provide a richer explanation of their emergence, roles and performance. Through case studies of three innovation intermediaries with different origins in Australian advanced manufacturing from 2012 to 2019, this study highlights the viewpoint that intermediaries should be treated as endogenous actors of an industry, which has been largely disregarded by prior research that has examined intermediaries only after their inception.

Open Innovation Track: Implications for Strategy & Entrepreneurship

Session Moderator: **Ferran Vendrell-Herrero**, *U. of Edinburgh business school*

TIM: **Two Routes to Treble Innovation: Focused Open innovation or Emergent Differentiation Strategy**

Author: **Gonçalo Cordeiro De Sousa**, *NOVA School of Business and Economics*
Author: **Emanuel Gomez**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **Ferran Vendrell-Herrero**, *U. of Edinburgh business school*

Service innovation is gaining traction and combined with more traditional product and process innovation is forming a triad of technological innovations. Firms that possess this triad simultaneously are known as treble innovation firms. Our study aims to analyse the antecedents of treble innovation. We draw on the complementary perspective and emergent strategy theoretical realms to propose two routes towards treble innovation. We argue that both open innovation and differentiation focus will increase the likelihood of becoming treble innovation in a subsequent period, but the effect of open innovation will be stronger for dual innovation firms, whereas the effect of differentiation focus will be stronger for non-innovators. We test our conceptual model using data from repeated Community Innovation Surveys administered to 1,081 Portuguese manufacturing SMEs in 2016 and 2018. We constraint our analysis to firms that were not treble innovators in 2016, so we could infer causal relationships between independent variables measured in 2016 and the probability to adopt treble innovation in 2018. The results advance our understanding on how technological innovation develops in manufacturing industry, including the relative importance of open innovation and differentiation strategies to complete a treble innovation portfolio in the future depending on their current innovation portfolio.

TIM: **Not-invented-here or Belonging to the World: Identifying with and Giving Sense to Open Innovation**

Author: **Lukas Falcke**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Ann-Kristin Zobel**, *U. of St. Gallen*
Author: **Stephen Comello**, *Stanford Graduate School of Business*

As firms increasingly engage in open innovation (OI) activities, the permeability of firm boundaries extends from competence (i.e. which kinds of resources to coordinate) and efficiency considerations (i.e. how to govern resource transfer) to affecting the entire identity of the organization and its individual members. In this study, we set out to better understand identification and action tendencies in an OI context – i.e. we want to shed light on how identification shapes the degree to which individuals withdraw from or approach OI collectives. Against this background, we investigate an OI collective in the energy sector, consisting of 10 large energy utilities collaborating with 15 clean-tech ventures. We conduct a longitudinal study to investigate 74 individuals participating in the collective, their dynamic identification perceptions, their action tendencies and their exposure to different forms of sensegiving. We applied panel data analysis on a novel data set combined from a four-wave survey and observational data about the participation of individuals in different sensegiving sessions. We complement this quantitative approach with the qualitative analysis of 19 interviews and 120 hours of observations. First, we show that individuals' current and remembered past identification - but not their anticipated future identification - shapes their action tendency towards the OI collective. Second, we theorize and show that remembered past identification and current levels of identification have a complementary relationship in shaping action tendencies toward OI collectives. Third, we theorize and show that memory work shapes individual's remembered past identification and prospective identity work shapes current levels of identification. Jointly, our findings illuminate the human side of OI by theorizing and empirically investigating a dynamic identification perspective of OI collectives.

TIM: **Mitigating the Bullwhip Effect by an Open Business Model Innovation**

Author: **Hsin-Min Hung**, *National Dong Hwa U.*

The bullwhip effect occurs in about two-thirds of firms and impacts profitability by 10%-30%. Previous bullwhip mitigation efforts emphasize processes such as information sharing, collaboration, and coordination between operating activities inwards and outwards of a firm along an industry supply chain (Liu et al. 2020; Moritz et al. 2021; Wang et al. 2021). The bullwhip effect is caused by time, product (variety), and process (in the supply chain). This study argues that a dominant manufacturer together with various designers (AMVD) decrease the bullwhip effect through resolving the dilemma between discovery of feature and divergence of goals (Almirall, Casadesus-Masanell 2010). This study elucidates a revelatory case that in a various and volatile market, a pure-play manufacturer service provider (MSP) creates a new open business model (OBMI): AMVD. Compared with traditional vertically integrated (VI) industry (all firms are integrated device manufacturers), AMVD decreases not only search, transaction, coordination, and production costs but also the bullwhip effect in a vertically disintegrated industry. AMVD discovers more feature combinations, decreases divergence of goals, and creates more value for customers. The product modularization with interface (PMID) method (Chen, Liu 2005) facilitates not only division of activity labor between manufacturing and design (AMVD) but also a separate evolution of product and process technological trajectories (Hung 2010). The former accelerates a VI industry to a VD one; the later enable a leading process innovation to generate various features (accelerating new product developments (NPDs)). PMID (using common parts and accelerating NPDs) mitigates the bullwhip effect. Additionally, by developing a leading-edge manufacturing process and offering valuable, unique, and complementary (VUC) services, tools, and kits (STKs) during the stages of the process, the MSP lock in designers, erects a barrier for entrants, increases the bargain power (Porter, 1985), and appropriates high profit; the bargain power generated from VUC STKs further mitigate the bullwhip effect. Furthermore, creating and appropriating value make AMVD a sustainable business model (Bocken 2021).

TIM: **A Conceptual Framework for Describing the Phenomenon of Hackathons for Entrepreneurial Behavior**

Author: **Marieke Funck**, *Paderborn U.*

The effectiveness of the crowd in solving problems and generating useful and novel solutions strongly depends on the performance of the nascent entrepreneurs. Nascent entrepreneurs' tasks and actions manifest over time in entrepreneurial behavior The social cognitive theory explains that entrepreneurial behavior is the action developing through the interaction with the environment and personal variables. Hackathons create a new and challenging environment through time pressure, a collaborative-competitive setting, and temporal ambiguity. In this article, we examine the effect of hackathons on the development of the entrepreneurial behavior of nascent entrepreneurs. We elaborate on the hackathon phenomenon through a theory-driven conceptualization to provide a comprehensive understanding of how hackathons foster entrepreneurial self-efficacy and thus drive nascent entrepreneurs' development of entrepreneurial behavior. Important implications regarding a more comprehensive view of how hackathons contribute to entrepreneurship are outlined.

TIM: **Open Innovation: Opening Ways for Startups to Grow in Developing Economies** 💻

Author: **Muhammad Usman**, *Bahria U. , Islamabad Pakistan*

This paper examines the impact of open innovation (OI) in startups and investigates how OI-related processes and frameworks can be further comprehended by employing them in developing countries. Specifically, we analyse how Vietnamese startups are organizing and managing OI practices, and how OI can help them overcome their unique business challenges. This is an exploratory paper built on four in-depth case studies. The primary data was collected through detailed interviews. The cases illustrate OI practices implemented by the Vietnamese startups and how such practices are improving their innovation performance. This study also examines the mechanisms driving the success of strategic collaborations among startups and their partners. We also emphasize the essential role of the entrepreneur in managing OI activities. The case studies illustrate that startups have an inclined preference for the inbound OI. The discussion explains the reasons for this preference and details mechanisms of such practices. This papers follows a cross-case analysis methodology to point out the commonalities and differences across the cases to come to a more robust finding. The cross-case analysis deliberates on the OI practices, reasons, challenges, and benefits that OI practices entail for these startups. The paper concludes with several theoretical and practical implications.

Innovation and Competitive Strategy Track: Radical & Disruptive Innovation

Session Moderator: **Feng Li**, *Bayes Business School (formerly Cass), City, U. of London*

TIM: **Radical Change Cumulatively: How Product Innovation & Competition Lead to Continuous Radical Change**

Author: **Feng Li**, *Bayes Business School (formerly Cass), City, U. of London*

The organizational change literature is dominated by the punctuated equilibrium model and the continuous morphing model. However, digital transformation is leading to new patterns of organizational change that are diverging from the two prevailing models. Based on empirical evidence from three longitudinal case studies, this paper identifies the drivers, mechanisms, and trajectories of digital transformation in these organizations; and develops a new spiral model of continuous radical change where continuous change accumulates into distinctive episodes. Each episode often does not have a definitive beginning or end, but the strategic orientations and operational priorities differ significantly between episodes. The new model is more consistent with the observed patterns of organizational change than the two prevailing models in the digital transformation journey in the case studies. It can be used to guide future research and practice in organizational change through digital transformation. The limitations of the study and new themes for future research are highlighted.

TIM: **Funding Breakthrough Innovation: The Theory of Value Translation**

Author: **Elisa Alvarez-Garrido**, *U. of South Carolina*

Breakthrough (high-impact) innovation often happens at startups, which need to attract funding in the early stages of these high-risk/high-reward projects. Extant research argues that investors lack appetite for the high risk; I argue that assessing the high reward is also challenging, since the invention could develop into innovation along multiple technological trajectories of different value. I develop the theory of value translation, a theoretical framework to analyze how the knowledge of investor and startup and the characteristics of the innovation affect the decision to fund the project. The investor and startup need to map and evaluate all possible trajectories to understand which has maximum value—loosely defined as financial, strategic, scientific, or societal. Mapping the technological trajectories, however, requires that one organization possess both knowledge about the science and technology, in order to understand which trajectories are feasible, and knowledge about the commercialization, in order to understand which trajectories are valuable. Startups tend to have more scientific/technological knowledge, and investors more commercialization knowledge. With incomplete knowledge, there is a dual bounded rationality problem: fewer trajectories are mapped, leading to a gap in valuation. This gap, or the value translation problem, is exacerbated for novel or complex innovations, which have greater knowledge requirements. Breakthrough innovation may indeed be underfunded and the theory points to a potential solution: organizations armed with knowledge of business and science can bridge the gap. This theory is inspired by fifteen interviews with life sciences investors and startups.

TIM: **How Markets Respond to Novel Inventions; Unpacking Dissimilarity and Disruptiveness Effects**

Author: **Jia Zhang**, *Leiden U., The Netherlands*
Author: **Jian Wang**, *Leiden U., The Netherlands*
Author: **Simcha Jong**, *UCL Global Business School for Health*

We study how the investors respond to technological novelty of patented inventions, differentiating between two dimensions of novelty: dissimilarity and disruptiveness. Building on a view of investors as market-makers when evaluating innovative firms, we show that stock returns are higher for inventions that are more dissimilar to the pre-existing patented knowledge base. We also show that this positive effect does not extend to patented inventions that are disruptive, i.e., inventions that destabilize existing technology streams and reshape networks of interlinked technologies. In fact, we demonstrate that stock markets respond negatively to disruptive inventions. Finally, we find that invention dissimilarity acts as a moderator of the latter negative effect of disruptiveness. Our contributions are developed using a patent-level analysis of 1,066,637 USPTO granted patents.

TIM: **Jack of All Trades or Master of One: The Development of Breakthrough Inventions**

Author: **Anna Fung**, *American U., Kogod School of Business*
Author: **H Kevin Steensma**, *U. of Washington*
Author: **Charles Connaughton**, *Tulane U.*

Research on knowledge creation produces conflicting conclusions about who creates breakthroughs: are they broadly knowledgeable dabblers, or are they highly specialized experts? We resolve this tension by applying natural language processing to identify and classify breakthrough technologies, parsing the abstracts of 5.5 million U.S. patents between 1969-2017. We make two main contributions. First, we explore the experience of inventors to determine whether broad or focused experience is more conducive to creating breakthroughs. Second, we use topic modeling to isolate these breakthroughs that shift the technological paradigms and establish new trajectories.

Innovation and Competitive Strategy Track: Business Models and Innovation

Session Moderator: **Christian Bruck**, *WU Vienna U. of Economics and Business*

TIM: **Business Model Valuation Methods in Uncertain Environments: A Systematic Review**

Author: **Christian Bruck**, *WU Vienna U. of Economics and Business*
Author: **Melanie Wiener**, *WU Vienna U. of Economics and Business*

Uncertain environments force companies to continuously innovate and/or adapt the prevalent business model to the new circumstances. This continuous change of how companies generate value adds another challenge: it makes it more difficult to validate the business model with suitable valuation methods. Common validation tools assume rather stable environmental conditions. Companies are increasingly confronted with uncertain environments and thus additional methods/tools are needed for a reliable assessment of business model innovation for strategic decision-making. This conceptual paper compares various qualitative, quantitative, and hybrid valuation methods and approaches from different business valuation disciplines and argues about their applicability for the strategic and financial assessment of business models. A systematic literature review has been conducted to identify suitable valuation methods that have been classified into a novel classification scheme: 1) The identified methods were transferred from business valuation to business model valuation level and 2) suitable valuation methods were categorized by different degrees of uncertainty. Finally, recommendations for managerial decision-making are provided, as well as promising realms for future research. We suggest that estimations and more qualitative or hybrid methods are most suitable for higher degrees of uncertainty, and more quantitative methods becoming best for lower degrees of uncertainty, and that additional hybrid and quantitative valuation methods are relevant in-between, while strategic analyses support the decision-making at every stage of the business model innovation.

TIM: **Why Do We Fight? Internal Conflict and Incumbent Business Model Innovation** ☯ ✈ 💻

Author: **Kristian Johan Sund**, *Roskilde U.*
Author: **Nicolai J. Foss**, *Copenhagen Business School*
Author: **Robert A Burgelman**, *Stanford U.*

Research on business model innovation (BMI) in incumbent firms has suggested that such innovation is often accompanied by tensions or even conflict, for example, between business units or other organizational subgroups. Such conflicts may slow or even hinder BMI. However, little systematic theorizing exists on this issue. We argue that the tensions and conflict surrounding a particular BMI depend on (1) how it relates to the existing business models of the incumbent; (2) the type of business model innovation; and (3) the stage in the process of business model innovation. We develop a framework that outlines a total of 18 specific contexts for tensions related to BMI and link each to their potential for creating internal conflicts rooted in cognitive differentiation and power issues. We theorize how management can best address and handle these different kinds of conflict associated with BMI and suggest opportunities for systematic research on the phenomenon.

TIM: **Working Through Frame Incongruence: A Process Perspective on Reframing for Digital Servitization** 💻

Author: **Jawwad Z. Raja**, *Copenhagen Business School*
Author: **Isabelle Fabienne Neufang**, *Copenhagen Business School*
Author: **Thomas Frandsen**, *Copenhagen Business School*

Industrial firms are increasingly seeking new means of competitiveness by innovating their business models. One such change involves incorporating digital services and, in some instances, developing digital platforms. Although this change is receiving increasing attention, we are yet to understand how such changes are being framed and unfold in industrial firms. To address this gap, we undertake an in-depth exploratory case study of an industrial firm over an extended period to understand the framing and reframing activities. Our findings identify how motivational, diagnostic, and prognostic framing unfolds over distinct phases. Specifically, we find frame incongruence occurs amongst different groups of actors, requiring the firm to engage in strategies and tactics of frame alignment. We identify that management engages in the frame alignment processes of frame extension, frame clarification, and frame translation, which creates a space of 'workable certainty.' Although temporary, it helps propel the firm forward concerning its digital servitization strategy. Our study contributes by understanding the reframing process firms engage in to realize their digital servitization business model change. Our study raises important managerial implications for firms embarking on digital servitization, arguing the need for greater attention to how such changes are continually framed and reframed.

TIM: **Barriers of the Business Model Innovation Process of Incumbents** 💻

Author: **Sophie Kutzsch**, *TU Dresden*
Author: **Sarah Mueller-Saegebrecht**, *Dresden U. of Technology*

In a highly dynamic environment, business model innovation (BMI) is a promising approach to remain competitive. In practice, however, adapting an existing business model and developing a new one remains a difficult task for managers of established firms. Therefore, scholars call for a comprehensive framework to guide managers through the BMI process. The purpose of our conceptual paper is to highlight when and at what organizational level critical internal BMI barriers occur in order to highlight the various leadership challenges during the BMI process at incumbent firms. We conduct an analysis including analyzing and categorizing critical BMI barriers identified from the literature based on the 4-I framework of Frankenberger et al. (2013). We derive an integrative framework that provides managers and researchers with a comprehensive overview of the internal barriers in the BMI process. We contribute to the current debate on the role of leadership, organizational structure, and organizational culture in BMI development. This paper provides an important foundation for two groups of readers: 1) academics who can establish theory-based relationships between the individual and organizational level, and 2) incumbent managers who can use the framework developed to derive company-specific policies to overcome their internal BMI obstacles.

Publishing Impactful Research in AMJ

Presenter: **Marc Gruber**, *Ecole Polytechnique Fédérale de Lausanne*

All scholars set out to publish high-quality and important research. The attributes of high quality research have been discussed at length in past commentaries (e.g., the "Publishing in AMJ" series of FTEs). What does it mean, though, for research to be important? One factor in evaluating importance is making a significant theoretical contribution--enriching, extending, and elaborating upon previous theoretical understandings of a phenomenon. A significant theoretical contribution is necessary for a high-quality paper. Indeed, we note psychologist Lewin's (1952) adage that "there is nothing so practical as a good theory." However, the consensus may be shifting away from a sole focus on theoretical contributions such that research is also viewed as important when it yields insights that have the potential to significantly change management practice in ways that better organizations and society (Tihanyi, 2020). Attend this session to meet with the award winners from the papers that have received AMJ's Impact Award.

Sustainability Inside the Organization: Micro-Perspectives on Organizational Sustainability

Organizer: **Jeffrey Martin Lees**, *Princeton U.*
Organizer: **Jordana Composto**, *Princeton U.*
Discussant: **Krishna Savani**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Presenter: **Jennifer Cole**, *See Change Institute*
Presenter: **Kimin Eom**, *Singapore Management U.*
Presenter: **Andrew Marcinko**, *Durham U.*

This symposium brings together a diversity of perspectives on individuals' sustainable behaviors and their support for sustainability policies, and applies that knowledge to the organizational context. Organizational scholarship on sustainability is growing rapidly, but remains largely the domain of macro-scholar. Yet individual and group dynamics directly influence how workers and managers perceive and behaviorally respond to organizational sustainability initiatives. Leveraging micro-level insights is critical if organizational scholars are to understand the success or failure of organizational sustainability initiatives, and help organizations move closer to their sustainability goals.

Reviewing as Craft in and For AMLE

Presenter: **Dirk Lindebaum**, *Grenoble Ecole de Management*
Presenter: **Bill Harley**, *U. of Melbourne*

The goal of this proposed session is to engage current and potential AMLE reviewers in dialogue about the craft of reviewing, how and why to review and to discuss what is distinctive about AMLE and what this means for reviewing for the journal. The session is likely to be relevant to many scholars, particularly those at earlier career stages, who may not appreciate the importance of reviewing for their own skill development as well as the benefit of the broader academic community. The intended outcome of the session is to increase the pool of reviewers for AMLE and to develop the skills of potential and current reviewers so that they can contribute to the development of impactful papers in the journal.

Job Loss, Job Search, and Job Changes

Session Moderator: **Jolien Stremersch**, *Ghent U.*

CAR: **The Role of Psychological Contract Violation from Former Employer in Job Search among Job Losers**

Author: **Eric Adom Asante**, *Hong Kong Metropolitan U.*
Author: **Emmanuel Affum-Osei**, *Kwame Nkrumah U. of Science & Technology, Kumasi*
Author: **Michael Gyensare**, *Edith Cowan U.*
Author: **Collins Opoku Antwi**, *Zhejiang Normal U.*

Job loss is an unpleasant situation for employees to experience. Research shows that job loss is a form of psychological contract violation. However, how such violations affect the job search processes following job loss is not understood. Drawing on the transactional model of stress and coping, we hypothesized a serial mediation model in which psychological contract violation is negatively related to the number of job interviews through job search resources (i.e., job search self-efficacy and perceived employability) and job search behaviors (i.e., preparatory job search and active job search). This serial mediation effect is proposed to be weaker for job losers possessing higher trait emotional control. Using a sample of 298 recent job losers, we found strong support for our model in which the negative effect of psychological contract violation on the number of interviews was serially mediated by job search resources and job search behaviors and moderated by trait emotional control. The current study contributes to our understanding of why and when psychological contracts may be important for job losers in their search for reemployment success.

CAR: **New Labour Market Entrants' Job Satisfaction Trajectories During a Series of Job Changes**

Author: **Ying Zhou**, *U. of Surrey*
Author: **Min Zou**, *Henley Business School, U. of Reading*
Author: **Chiahuei Wu**, *King's College London*
Author: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*
Author: **Mark Griffin**, *Curtin U.*

Previous research on the psychological effect of job change has revealed a honeymoon-hangover pattern during the turnover process. However, there is a dearth of evidence on how individuals react and adapt to multiple job changes over their working lives. This study distinguished adaptation to a single job change in the short term from adaptation to the process of job change in the long term. Drawing on two large-scale longitudinal datasets from Britain and Australia, it examined how job satisfaction trajectory evolved as individuals made a series of consecutive job changes since they first entered the labour market. Our fixed effect analyses showed that in both countries, individuals experienced a greater honeymoon effect with each successive job change, before gradually reverting to their baseline well-being. In short, the amplitude of the honeymoon-hangover effect increased across multiple job changes. By distinguishing 'adaptation to change' from 'change in adaption', this study generated original insights into the role of job mobility in facilitating career development and extended set point theory from understanding the impact of single life events to recurring life events.

CAR: **We are Not all the Same: Job Seeker Profiles Based on Agentic and Contextual Features**

Author: **Jolien Stremersch**, *Ghent U.*
Author: **Dave Bouckenooghe**, *Brock U.*
Author: **Adam Michael Kanar**, *Cornell U.*

Studies on job search typically use a variable-centered approach, which assumes job seekers come from one homogeneous population in terms of their job search activities, antecedents, and outcomes. Complementing this research approach, the current study used a person-centered approach to identify subgroups of job seekers with distinct profiles varying in attitudinal, individual, behavioral, and contextual factors (i.e., job search quality, job search intensity, conscientiousness, job search self-efficacy, social pressure, job search volition, and financial need). Further, we investigated whether these profiles help predict differences in job search outcomes. Utilizing latent profile analysis, we identified four qualitatively distinct profiles among employed and unemployed job seekers: the job search laggard, the financially burdened job seeker, the financially secured job seeker, and the job search champion. As predicted, these profiles differed in their relationships with job search outcomes (i.e., rumination, number of job interviews, and job offers). The results suggest that the person-centered approach is a useful, complementary method for identifying and analyzing subgroups of job seekers within larger populations.

CAR: **Does Economic Hardship Influence the Job Search Quality and Reemployment Outcomes?**

Author: **Zia Ul Islam**, *U. of Science and Technology of China*
Author: **Zahid Hameed**, *Prince Mohammad Bin Fahd U.*
Author: **Rana Muhammad Naeem**, *The Islamia U. of Bahawalpur, Pakistan*

The objective of this study is to unearth the association among economic hardship, job search quality (i.e. the use of more or less quality job search strategies) and reemployment outcomes (i.e. status and quality). We utilized the conservation of resource (COR) framework and integrated the stress and self-regulation discourse with additional support from the perceived fit literature. In a longitudinal study (four-waves), using self-report measures, we collected data from recently unemployed individuals (N=413) actively looking for a new job. The hypotheses were tested in structural equation modeling (SEM).Our findings revealed that economic hardship is negatively related to focused job search strategy and positively related to haphazard job search strategy. The association between focused strategy and reemployment outcomes was positive whereas the relationship of haphazard strategy and reemployment outcomes was negative. Further, the job strategies mediated the relationship between economic hardship and reemployment outcomes. Theoretical and practical implications were discussed in detail.

Promotability, High Potential, and Star Employees

Session Moderator: **Kylie Hershey**, *U. of Kansas*

CAR: **When to Identify and Grow High Potential: A Life Stage Perspective**

Author: **Kylie Hershey**, *U. of Kansas*
Author: **Jill Ellingson**, *U. of Kansas*

The concept of high potential has been discussed in reference to individuals entering the workforce, employees at mid-levels in their careers, and those being considered for executive roles. Despite its relevance across employees' careers, it is unclear when high potential should be assessed. Further complicating the timing of high potential measurement is that it is a multi-faceted construct comprised of dimensions that vary in their degree of malleability. That is, more inherent dimensions may be observable early in an employee's career while others naturally or intentionally mature over time. In this paper we offer a life-stage model of high potential to address the question of when to assess high potential. Using Levinson et al.'s (1978) life stage model of adult development and the lifespan perspective, we argue that at any given time an employee is pursuing broader developmental goals that activate the relevance of corresponding high potential dimensions. Developmental goals trigger the observability of more inherent dimensions; for more malleable dimensions, developmental goals activate a natural maturation or developmental readiness for more active growth. The final model suggests that high potential is not at a static construct easily observable in junior-level employees but a dynamic construct that shifts in its manifestation over time. More practically the model guides the timing of high potential assessment and development.

CAR: **Do Employees Who Conduct Unethical Pro-Organizational Behavior Have Higher Promotability?**

Author: **Angela Jie Xu**, *Jinan U.*

Employees might conduct unethical behavior to benefit the organization (i.e., unethical pro-organizational behavior [UPB]). Such a complex form of unethical behavior has received increasing media and scholarly attention in the past decade. Despite the accumulated knowledge about what promotes employees to engage in UPB, we know little about how leaders would assess the career potential of employees who engage in UPB. Drawing on affective events theory (AET), we contend that working with employees who conduct UPB would make leaders feel anxious, which in turn leads to their lower ratings on these employees' promotability. Through a vignette-based experiment among 79 MBA students (Study 1) and a two-wave questionnaire survey among 425 working dyads (Study 2), we found support for our speculation. Moreover, we found that leaders are less likely to experience anxiety and assign lower promotability ratings to employees who conduct UPB when they have good leader-member exchange (LMX) relationships with these employees. Our findings advance extant UPB literature, and offer critical implications for practitioners regarding when they can(not) rely on their leaders to manage employee unethical behaviors and career development.

CAR: **The Influences of Enriching Learning Resources in Adolescence on the Formation of Star Employees**

Author: **Chengxi Ren**, *Renmin U. of China*
Author: **Jinyi Zhou**, *U. of Science and Technology Beijing*
Author: **Shiyong Xu**, *Renmin U. of China*

Although previous studies have investigated multiple social influences of star employees, the antecedents of star formation were generally overlooked by these studies. Drawing upon the imprinting theory, we develop a model describing the formation process of stars from the perspective of individuals' early experiences. Specifically, we hypothesize that enriching learning resources in adolescence will enhance individuals' educational status and extraversion but undermine their conscientiousness, and the relationships will be moderated by household poverty status. Moreover, we suggest that these three characteristics will predict individual's future stardom. Using the data from two cultural backgrounds: the China Family Panel Studies in Mainland China and the National Longitudinal Study of Youth (1997) in United States, we found that enriching learning resources in adolescence will facilitate the formation of star employees through improving their educational status and extraversion, but not conscientiousness. Household poverty will weaken the positive effect of enriching learning resources on educational status, and the indirect effect on star formation. Theoretical and practical implications of our study are discussed.

CAR: **Careers in Self-Managed Organizations: Who Gets Ahead When Personnel Management is Decentralized**

Author: **Aino Tenhiälä**, *IE Business School*
Author: **Rocio Bonet**, *IE U.*
Author: **Niina Nurmi**, *Aalto U. School of Science*
Author: **Ivana Radivojevic**, *IE Business School*

Self-managed organizations (SMOs), characterized by decentralization of key organizing processes have been gaining prominence in the last decades, but research on decentralized personnel/performance management remains limited. This is important to study because as decision making about what is valuable in the organization moves from the manager to the peers, employees' priorities regarding where to invest in the organization might shift, with important consequences for their careers. The present research explores what kinds of behaviors are rewarded when important performance management functions, i.e., employee development and compensation, are largely decentralized. We use data from a SMO (SelfCo) where employees worked in customer-facing projects teams and conduct a mixed-methods study to explore how employee development decisions affect their career success in the organization. At SelfCo, employee development was decentralized through an internal digital platform, whereby employees could offer and consume human and social capital-oriented services. We analyze company records over a three-year period to study whether activity on the platform is related to three career-related markers: peer-based salary increases and manager allocation to projects (their quantity and status). Our qualitative data contextualizes our findings. With this research, we hope to expand our understanding of who "gets ahead" when performance management is decentralized.

Business & Management (B&M) schools and the wider academic context have been characterized as based on a traditional, linear male model according to which academics focus on their career only, work full- time, and have no family responsibilities In line with the current AOM theme "Putting the Worker Front and Center", this symposium brings together four papers that showcase theoretical and practical insights to achieve gender equality in higher education institutions. The symposium starts by providing a scoping review of gender bias in academia and goes beyond shedding light on barriers, to focus on showcasing effective actions taken to reach gender equality in academic institutions in Lebanon, and across a variety of European countries including Greece, Sweden, the UK, Netherlands, Spain, Slovakia, Slovenia, Germany, France, and Belgium. The takeaways of this symposium provide culturally diversified insights into the progress made towards achieving gender equality in academia, with reflections on both theoretical and practical implications on gender equality in academia.

Participant: **Kimberly Rocheville**, *Creighton U.*

This symposium brings together ongoing research projects on work, occupations, and inequality. Inequality is one of the grand challenges of our time. This symposium seeks to create new knowledge about how work and occupations contribute to patterns of inequality. The projects adopt qualitative and mixed methods and explore different "stages" of work and occupations, covering occupational emergence, access to established occupations, work allocation on the job, and how day-to-day work can unintentionally recreate patterns of inequality. Specifically, these projects discuss how pressures for occupational closure and inclusion can be managed during the professionalization process to maintain openness for different perspectives and practices; how class signals enable and constrain access to established occupations based on intersecting social group memberships; how the racialization of work affects task distribution within the workplace; and how managing tensions between competing imperatives can help individuals cope in their day-to-day work but unintentionally recreate inequality. This symposium, which is both relevant and topical, will yield interesting insights for researchers and practitioners looking to address patterns of social inequality. We hope that this symposium will provide a forum for discussion about what we can learn from these projects and provoke insights into future directions for research.

Ethics and Workplace Deviance

Session Moderator: **Liat Eldor**, *UPenn*

CM: **Workplace Insult: A Slight Event with Important Consequences**

Author: **Liat Eldor**, *UPenn*
Author: **Michal Hodor Star**, *Coller School of Management, Tel Aviv U.*
Author: **Peter Cappelli**, *U. of Pennsylvania*

We study how manager-to-employee insults affects employees' subsequent work efforts as measured by sickness absence, working hours, and appraisal awards. We use a unique individual-level monthly data over two years from a large chain of retail stores that has a longstanding practice in which store managers personally hand a birthday gift card to an employee on his or her birthday. Using a quasi-experimental design that exploits an unexpected insult shock of receiving a late birthday gift card, we identify a causal effect of the insulting event by implementing dynamic and static difference-in-difference models. We find that receiving a late birthday gift is associated with a detrimental effect on employees' work effort while waiting for the gifts, as represented by an increase of 38% in sickness absences, a reduction of more than two hours a month in working hours, and a decrease of 44% in employees' appraisal awards. Moreover, we find that the duration of waiting for the birthday gift card influences the insult strength and intensity. Our findings provide the first causal evidence of the impact of workplace insults, and expand our understanding of the various factors that shape the employee-manager relationship.

CM: **The Plurality Effect: People Behave More Unethically Toward Group Than Individual Targets**

Author: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*
Author: **Ruodan Shao**, *York U.-SSB*
Author: **Ann Tenbrunsel**, *U. of Notre Dame*
Author: **Daniel Skarlicki**, *U. of British Columbia*

Research on unethical behavior has tended to focus on the attributes of the actor who engages in organizational misconduct rather than on characteristics of the target. To extend knowledge of when and why unethical behavior (in particular, deception) might occur in organizations, we examine whether target plurality (i.e., whether the target is an individual or a group of individuals) influences deception directed toward the target and whether the target's group status and the actor's cultural values moderate this effect; further, we investigate moral concern as a unique explanatory mechanism for these findings. Across three pre-registered experiments and two supplemental studies, we find that individuals engage in more deception when interacting with groups as opposed to individual targets, which we label the plurality effect. Mediation and moderation results reveal that (a) the actor's moral concern toward the target explains the plurality effect, (b) when the target is outgroup, the plurality effect is stronger among actors with high (versus low) collectivistic values, and (c) moral concern explains the interaction between plurality, group status, and actor's collectivism. Practically, these findings can help organizational actors guard against an increased likelihood of behaving unethically and help potential victims in organizations avoid the costs associated with deceptive practices targeted at them.

CM: **The Devaluation of Honest Leaders: Causes and Solutions**

Author: **Elizabeth Huppert**, *Northwestern Kellogg School of Management*

Honesty is a fundamental human value. Yet, the world has witnessed increasing indifference and disdain towards honesty over the past several years. This article provides novel theorizing to explain this lack of regard for truth. We theorize that intergroup conflict elicits a zero-sum mindset, leading people to focus on the short-term success of their in-group (often at the cost of an out-group), which influences leader preferences. People care more about social values that are linked with short-term in-group success – parochial benevolence, competence, and authenticity – and will prioritize these values over honesty, which is often perceived to be less beneficial in the short-run. This devaluation of honesty is exacerbated when people perceive a leader's dishonesty as signaling these social values. We begin by explaining how honesty and dishonesty relate to these social values. We integrate recent findings in organizational behavior, moral psychology, political science, and sociology to explain how intergroup conflict leads people to prioritize them over honesty. We conclude by discussing new strategies that individuals and organizations can implement to promote honesty. Ultimately, this research deepens our understanding of honesty and the forces that promote and impede its development in leaders and their followers.

CM: **Intergenerational Abusive Leadership: How Attributions Perpetuate the Cycle of Abuse**

Author: **Danbee Chon**, *Stanford U.*
Author: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*

Abusive supervision is associated with a number of adverse individual and institutional outcomes—for the abuser, the abused, and their organization. Yet, abusive leadership seems to persist from one generation of leaders to another. In this work, we offer an intergenerational account of abusive supervision by proposing that the attributions subordinates grant to their leaders' abusive behaviors—whether they ascribe these behaviors to self- or other-oriented intentions—further maintain the cycle of abusive leadership. Across three studies including two multiphase field studies and one experimental (pre-registered), we find that subordinates who perceive the leader's abusive behavior to genuinely benefit the subordinate (performance promotion) rather than to enact harm (injury initiation) not only morally license their leaders' abuse, but also endorse similar leadership style for themselves. By recognizing the ramifications of reframing actions of abusive leaders as benevolent, our work explains how the cycle of abusive leadership perpetuates over time.

Novel Insights into Who, Where, and Why We Trust

Session Chair: **Einav Hart**, *George Mason U.*
Session Chair: **Thomas Bradford Bitterly**, *HKUST Business School*
Presenter: **Julian Jake Zlatev**, *Harvard Business School*
Presenter: **Cecily Cooper**, *U. of Miami*

Trust is a psychological state that reflects the beliefs and expectations one person has toward another regarding the positive nature of their behavior and intentions in situations entailing risk and vulnerability. Trust is essential for effective interpersonal and professional relationships. In this symposium, we present novel research on the psychological, interpersonal, and contextual factors underlying the decision to trust another person. In doing so, we present important contributions to the literature on both establishing and repairing trust. We highlight the importance of observing people's (consistent or inconsistent) decisions over time, and show how people interpret others' trust in them. In particular, the papers presented will show that (1) individuals distrust others who switch political parties, even when they switch into the evaluator's own political party; (2) the relationship between deception and trust differs when being deceptive once versus being completely deceptive; (3) across different trust-violations, temporal distance increases apology effectiveness for trust repair; and (4) employees can appraise and react to felt trust differently, depending on their organization-based self-esteem and how consistent this trust is with their own self-view. This set of papers discusses novel theories and findings, integrating results from the lab and from the field. We highlight the importance of investigating trust using a broader lens, reflecting multiple timepoints and different interpersonal and organizational contexts.

Sensemaking From the Top

Session Moderator: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*

CMS: **Elitization, Sensemaking Narratives, and Conspiracy Theories**

Author: **Israel Fortin**, *Goa Institute of Management*
Author: **Nitesh Bhat**, *Indian Institute of Management, Bangalore*

In this article, we elaborate on the connection between organizational elites and conspiracy theories by uncovering a continuum of elitization. This continuum of elitization starts with aspiring elites, progressively moves to more exclusive elites, and dives deeper into opaque and invisible elites that might not even exist. Approaching organizational elites at different stages of a continuum of elitization allows clearer definitions of the term 'elite' and helps to explain why conspiracy theories about elites are naturally produced and disseminated. This article elaborates on the connection between conspiracy theories about elites and the concept of elite and why studies of self-identified, visible, or legitimate elites remain incomplete. Using the notion of sensemaking narrative, we offer an explanation for the association between the concept of elite, the absence of sensemaking cues, and conspiracy theories. Investigating how elitization generates conspiracy theories appears especially relevant today considering recent claims that we might be entering a post-truth era.

CMS: **737 Max and New Technology Adoption: Entanglement in Risky Contexts**

Author: **Amy L. Fraher**, *Independent Scholar / Researcher*

This paper investigates how temporal rhythms and sociomaterial processes entangled to compromise safety during development of the Boeing 737 Max airliner resulting in two airline crashes within a five-month period and the death of 346 people. The analysis demonstrates that Boeing adopted a flawed flight control system designed for a different aircraft and the FAA certified the system, thereby passing known controllability problems on to the airline customer, leaving pilots to sort out the automation's shortcomings in real time. By theorizing how shortsighted, overly optimistic, recycled solution-making during adoption of new technologies can detrimentally impact performance in real-time, this paper makes a problem-driven theoretical contribution. Findings paradoxically signal ways that heightened trust between regulators and manufacturers during development of advanced technologies—particularly when involving the expanded use of automation—do not always enhance safety or improve performance, and can instead negatively impact frontline practice.

CMS: **Video Analysis of the Boeing 737 Max: A Contribution to Apology Theory**

Author: **Amy L. Fraher**, *Independent Scholar / Researcher*
Author: **Gina Martfeld**, *US Coast Guard Academy*
Author: **Theresa McBride**, *US Coast Guard Academy*

This article analyzes The Boeing Company's response to the crash of two 737 Max airliners and the death of 346 people. Considerable management research documents what should be said and when after crisis, yet few studies examine how spokespeople behave when making an apology and how emotions impact the post-crisis message. In this study, we draw on Tavuchis' (1993) sociology of apology theory, using video to evaluate the verbal, nonverbal and emotional responses of families, reporters and politicians to Boeing's apology. The emotional dynamics among these interlocutors vary. However, we found Boeing's evasion of accountability, obfuscation of facts, culture of concealment, and lack of remorse, revealed a disingenuousness that invalidated the sincerity of Boeing's apology. Not only did Boeing's post-crash response fail to facilitate closure and restore confidence in ways management theory dictates, Boeing's narrative increased people's anger, stoking resentment and a sense of retaliation. The result was the most extensive government investigation in transportation history, longest airliner grounding ever, significant fines, and criminal charges against Boeing. Our findings suggest that society may be embarking on a 'new normal' in crisis management in which Kabuki-like performances by corporate executives fail to convince interlocutors, make victims unwilling to settle for fiscal remuneration, and workers unwilling to coverup their employers' misdeeds.

CMS: **Managing and Accounting as Usual? Major Bank Supportive Narrative on Brazilian Labor Reform**

Author: **Luciana Holtz**, *Uffj*
Author: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*
Author: **João Paulo Resende Lima**, *U. of Glasgow*

The paper analyses the development of a supportive narrative, in corporate reports, from one of the Brazilian major banks regarding Brazil's labor reform of 2017. Embracing the potential of the political economy of accounting and narrative analysis, we consider corporate reports as means to understand interests, events, and actions adopted by powerful banking corporations. We collected corporate reports from 2014 to 2017, contrasting the workers union's perspective and the country's political scenario. The analysis reveals how the bank reports established and controlled reality in agreeance with its dominant interests; presented a limited and unilateral standpoint omitting contradictions; smoothed the bank financing of electoral campaigns and its impartial interest in the proper functioning of the country's democratic institutions. Different narrative angles over the same events account for specific interests that were unilateral and constrained. Hence, Labor reform was accounted as necessary and beneficial by a major banking corporation, while an increase in precarious labor relations imposed by the reform of bankers' unions. Finally, the inquiry uncovers novel dynamics of corporate influence and workers' resistance; in terms of the political economy of accounting, it reinforces the role of management and accounting in the margins of financial capitalism.

Constructing Solidarities Across Difference

Session Moderator: **Ozan Nadir Alakavuklar**, *Utrecht U., School of Governance*

CMS: **Organizing for Collective Action: Female Activists Fighting Marginalization**

Author: **Lucia Garcia-Lorenzo**, *London School of Economics and Political Science*
Author: **Lucia Sell-Trujillo**, *U. of Sevilla*
Author: **Paul Donnelly**, *Technological U. Dublin*

Activism entails provoking, opening and/or maintaining ongoing dialogues to enable those in unstable, unequal or precarious conditions to become visible and have a voice. A generative engagement with activism, however, requires not only the ability to speak, occupy, and perform in public spaces but also to open them up to allow for alternative perspectives and conditions to emerge. Drawing on Goffman's work, we look at female activism through the lens of performance to understand how a group of Spanish female activists develop spaces for dialogue when fighting against precarity. We use a qualitative study, conducted over nine years, focusing on the experiences of participants of two activist collectives in Seville, southern Spain, that emerged in consequence of the Great Recession. Our analysis illustrates how the activists crafted 'backstage', 'frontstage' and 'offstage' spaces during their fight against precarity to engage different audiences in dialogue. On the one hand, activists built safe spaces in which they could (re)imagine their subjectivities and develop resistances to hegemonic voices. On the other hand, they staged and enacted contestation scripts by appropriating and opening up private, public, and institutional spaces. Our results expand current understanding of dialogical organising, especially among female activists, by looking at the spatial and dialogical practices whereby precarious actors, who do not have a 'place' within the symbolic distribution of places, create spaces for themselves and for the possible through ongoing dialogue.

CMS: **Mobilizing Solidarity Across Difference: The Radical Politics of a Dialogized Corporeal Ethics (WITHDRAWN)**

Author: **Alison Pullen**, *Macquarie Business School, Macquarie U.*
Author: **Carl Rhodes**, *U. of Technology, Sydney*

This paper builds on discussions of corporeal ethics in organisations, focusing on the relations between situated bodies. We attend to how this ethics, while arising in each body, gains effect when it is mobilized collectively as a response to the injustice of inequality. Corporeal ethics is reimagined as form of embodied dialogue, where the social and material intertwine across a multitude of unequal differences. Drawing the Bakhtinian distinction between monologue and dialogue, we show that corporeal ethics serves as a decentralising force that disturbs systems of oppressive power without seeking to instantiate a new form of domination. We consider a dialogized corporeal ethics in relation to Judith Butler's work on recognition and assembly, avowing that bodies (workers) can work together to disrupt the prevailing power of monological accounts that shut down difference, opposing them with more plural, democratic and tolerant alternatives. Working together, assembled bodies become a site of collective corporeal ethics, perpetuated by political dialogue, grounded in situatedness, and enacting an ethical sensibility between bodies in relation to each other. In sum, the paper avers a political project where assembly can be understood a dialogical practice of radical democracy where solidarity is mobilized across difference.

CMS: **Daily Concerns**

Author: **Alexandre Faria**, *EBAPE/FGV*
Author: **Sadhvi Dar**, *Queen Mary U. of London*

In this paper, the authors mobilize an intentionally fragmented dual-ethnographic method to provide and share a thick description of their daily concerns with doing critical academic work during the dual-pandemics of Covid and white supremacist violence. This method harnesses works by and about the decolonial Caribbean feminist, Sylvia Wynter, to show how academic work can make space for acts of re-humanization in daily, often hidden, forms of orality that mediate experienced fragmentation under racial oppression. The daily concerns described in this paper engage directly with recent calls to address epistemic/epistemicidal injustices that structure racist knowledge production in Management and Organisation Studies. Extending recent calls from Black and Brown scholars for 'collective intellectual activism' to disrupt and transform racist knowledge structures, this dual-ethnographic method highlights the importance of making space for personal accountability and deep reflection alongside coalitional and solidary movements that build community. The paper contributes a method for making such spaces in our academic work as well as setting out findings from this engagement in the form of three sites for interventions that this engagement identified: critique(s); white de/colonization; and border situations and mestiza consciousness.

CMS: **"We All Stand Together" (Or Do We?): Understanding the Emergence of Solidarity at Work**

Author: **Anne Antoni**, *Grenoble Ecole de Management*
Author: **Heather Connolly**, *Grenoble Ecole de Management*

Why and when do we feel the impetus to act in solidarity with others? This question has long been tackled by labour scholars to understand the rise and fall of trade unionism and by social movement theorists trying to illuminate the ability of activists to mobilize for collective action. On the contrary, management and organization scholars have only recently started to study solidarity as an organizational phenomenon. In this article, we build on moral and organizational psychology to refine our understanding of the contingency of the emergence of solidarity at work. We distinguish conceptually solidaristic feelings and solidaristic actions and theorize that solidarity is contingent on the interactive construction of collective identity and perception of injustice. Based on this theorization, we unpack why new forms of management are so efficient to prevent the emergence of solidarity in organizations.

Panelist: **Bobby Banerjee**, *Bayes Business School (formerly Cass), City, U. of London*
Panelist: **Steffen Boehm**, *U. of Exeter Business School*
Panelist: **Marta B. Calas**, *U. of Massachusetts, Amherst*
Panelist: **Alec Foster**, *Illinois State U.*
Panelist: **Maria Ehrnström-Fuentes**, *Hanken School of Economics*
Panelist: **David Levy**, *U. of Massachusetts, Boston*
Panelist: **Gail Whiteman**, *U. of Exeter Business School*

This panel symposium is an opportunity to discuss the neglected area of grand challenges-- the intersection of social equity, justice, and climate change. The unprecedented disasters from climate change disproportionately affect marginalized communities, people of color, women, indigenous communities, the disabled, and those socioeconomically disadvantaged, particularly the global south. Further, those who contributed the least to carbon emissions will be the most affected. With the critical need to address the climate crisis and intersecting inequalities, in this symposium, we ask, how can organization and management scholars engage with climate justice? The panelists and audience will explore ideas around climate justice, engage interdisciplinary perspectives and ontological and epistemological approaches, and discuss implications for stakeholders and paths for future research and engaged scholarship. The symposium aims to deepen engagement with climate (in)justice in MOS scholarship and forge new routes for equity and climate change engagement.

Executive Management Communication

Session Moderator: **Shijun Xia**, -

CTO: **Vulnerability to Investment Risk: How CEOs Seek to Repair Trust in Communication with Investors**

Author: **Terhi Chakhovich**, *LUT U., School of Business and Management*
Author: **Johanna K. Moisander**, *Aalto U.*
Author: **Marja-Liisa Kuronen**, *Independent Researcher*

Perceptions risk, trust, and vulnerability play complex roles in investor relations. In this paper, we set out to examine how companies seek to manage investor trust and perceptions of investor vulnerability to risk in CEO letters of annual reports. While much of the existing research has examined how investors perceive and make sense of their vulnerability to risk as trustors, we draw analytical attention to how companies seek to manage these perceptions and about the complex roles that CEOs play as trustees in the communicative processes involved. Based on an empirical study of 69 CEO letters, in which CEOs attempted to repair trust during and after the financial crisis of 2008–09, we identify two main strategies with which executives discursively manage risk to repair trust in themselves and their companies: destruction of investor vulnerability and managed CEO vulnerability. While the purpose of the first strategy is to decrease apparent investor vulnerability, the purpose of the second is to make vulnerability that cannot be decreased feel more bearable to investors by connecting this vulnerability to CEOs rather than investors. We thus show how vulnerability to risk is decreased but also purposefully and strategically celebrated. Trust is valorized as a construct that connects investors and CEOs as human beings, marketing a hubris of "companionship" in financial markets. This works towards discursively constructing financial markets as non-vulnerable.

CTO: **Roles of CEO Twitter Post and Corporate Press Release in Predicting Acquisition Outcomes** ☯ 💻

Author: **Xinran Joyce Wang**, *Zicklin School of Business, Baruch College, City U. of New York*
Author: **Jiyu WANG**, *U. of Texas at Dallas*
Author: **Jun Xia**, *U. of Texas at Dallas*
Author: **Rui Yang**, *Tongji U.*

While management research has given attention to public communications, we know little about how personalized and depersonalized communications affect strategic outcomes differently. Drawing from communication research, we theorize that CEO tweets and firm press releases represent personalized and depersonalized communication modes, respectively. We argue that acquirer CEOs' tweets with increased sentiments after deal announcement demonstrate intimacy at a distance, thereby increasing acquisition completion and reducing acquisition duration. In contrast, acquirer press releases with increased sentiment exhibit unilateral acquirer power to bargain, adversely impacting acquisition outcomes. Moreover, both main effects are attenuated by acquirers' corporate social responsibility. Using a sample of acquisition deals announced by S&P 500 firms during 2009–2019, we find support for our theoretical predictions.

CTO: **A Blessing and a Burden! The U-Shaped Relationship Between Managerial Tone and Corporate Risk Taking**

Author: **Hanqing Zhao**, *Sun Yat-Sen U.*
Author: **Heng Liu**, *Sun Yat-Sen U.*
Author: **Man Yang**, *Hanken School of Economics, Finland*
Author: **Huiyang Li**, *Lingnan College*

Although current research has demonstrated that linguistic communication of top managers could shape stakeholder expectancy and evaluations, these studies have largely neglected the potential hazards of executive communication and firms' follow-up responses. Integrating expectancy violation theory with prospect theory, we explore how different levels of managerial tone influence corporate risk-taking by shaping different stakeholder expectancy violation scenarios, thus presenting an overall U-shaped relationship between managerial tone and corporate risk-taking. Using a computer-aided approach to identify managerial tones, our empirical study among 2007-2019 panel data of Chinese listed firms indicates that managers tend to take more risks (illustrated by high earnings volatility and acquisition spending) after delivering high-level (optimistic) or low-level (pessimistic) linguistic tones at an earnings communication conference. The study also finds firm prominence as a key moderator, that is, the managerial tone has a more significant effect on the risk-taking of prominent firms than obscure firms. The results are robust by employing alternative measures, a random-effect model, 2SLS, and GPSM. These findings contribute to the tone literature and expectancy violation theory by suggesting that managerial tone is a double-edged sword, which strongly influences firms' following-up decisions on risk-taking.

CTO: **Executive Tenure and the use of Social Media**

Author: **Jule Klass**, *U. of Goettingen*
Author: **Yannik Gehrke**, *U. of Goettingen*

This study finds that executives' use of social media increases over their tenure. We explain this by executives' increased career concerns in early tenure that decrease with time spent in their role. We examine executives' use of social media as a function of tenure using a sample of 2,459 quarter-year observations of 122 executives listed in Execucomp between 2008 and 2021. Additional tests reveal that the positive relationship between tenure and the use of social media is more pronounced for executives that are less busy and have a high reputation. We contribute to research on factors determining executives' use of social media.

Platform Ecosystem Strategy

Session Moderator: **Laurin Arnold**, *U. of Bayreuth, Fraunhofer FIT, Germany*

CTO: **The Varying Effects of Standardization on Digital Platform Innovation: Evidence from OpenStreetMap**

Author: **Laurin Arnold**, *U. of Bayreuth, Fraunhofer FIT, Germany*
Author: **Philipp Hukal**, *Copenhagen Business School*

We investigate the effects of standardization as a measure of direct control on digital platform innovation. Specifically, we study the standardization of parameters and procedures implemented in the web editing API on the popular geo-data platform, OpenStreetMap. Using a regression based approach to interrupted time series analysis, we assess the quantity and quality of new output generated on the platform before and after the standardization. We find that the intervention had varying effects on the innovations generated on OpenStreetMap: While the output in total number of affected data objects as well as the rate with which they were added decreased with the intervention, the level of detail with which data objects are described increased -- but only for those objects that were not in the immediate focus of the standardization. We frame these findings through the rich body of work on standardization and innovation in the technology management literature and engage a long standing tension in research on digital platforms -- the balance between control and innovation on platforms. We discuss the prospect of standardization as one way to directly control the balance between desirable and undesirable variation necessary for platforms to innovate as standardization restricts some activity, while enabling others.

CTO: **Disentangling Trust in Voice Assistants - A Configurational View on Conversational AI Ecosystems**

Author: **Andreas Janson**, *U. of St. Gallen*
Author: **Anuschka Schmitt**, *U. of St. Gallen, Institute of Information Management*
Author: **Tatjana Bevilacqua**, *U. of St. Gallen*

Voice assistants' (VAs) increasingly nuanced and natural communication via artificial intelligence (AI) opens up new opportunities for the experience of users, providing task assistance and automation possibilities, and also offer an easy interface to digital services and ecosystems. However, VAs and according ecosystems face various problems, such as low adoption and satisfaction rates as well as other negative reactions from users. Companies, therefore, need to consider what contributes to user satisfaction of VAs and related conversational AI ecosystems. Key for conversational AI ecosystems is the consideration of trust due to their agentic and pervasive nature. Nonetheless, due to the complexity of conversational AI ecosystems and different trust sources involved, we argue that we need a more detailed understanding about trust. Thus, we propose a configurational view on conversational AI ecosystems that allows us to disentangle the complex and interrelated factors that contribute to trust in VAs. We examine with a configurational approach and a survey study, how different trust sources contribute to the outcomes of conversational AI ecosystems, i.e., in our case user satisfaction. The results of our study show four distinct patterns of trust source configurations. Vice versa, we show how trust sources contribute to the absence of the outcome, i.e., user satisfaction. The derived implications provide a configurative theoretical understanding for the role of trust sources for user satisfaction that provides practitioners useful guidance for more trustworthy conversational AI ecosystems.

CTO: **Empirical Analysis of Interdependence Between Same and Cross-Sided Network Effects**

Author: **Lijun Wang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Tammo Bijmolt**, *U. of Groningen*
Author: **John Dong**, *Trinity Business School, Trinity College Dublin*

Online labor platforms have become an essential channel for freelancers to find short-term contracts and for employers to find high-quality labor forces. This is especially true during the pandemic as more people prefer less physical connections with others or even work online. However, given that platforms mainly profit by charging employer users, most research about online labor platforms has focused on improving matching efficiency or employers' hiring experience rather than from the perspective of freelancers' utility. Moreover, as a typical two-sided platform, the existence and influence of same- and cross-sided network effects in online labor platforms still need to be clarified. Using transaction data from a Dutch healthcare online labor platform, we empirically quantify the same-sided network effect, cross-sided network effect, and their interaction effects from freelancers' perspectives. Specifically, our results show that the same-sided freelancer size negatively impacts a freelancer's income. By contrast, cross-sided employer size can significantly increase freelancers' income. More importantly, our paper first attempts to demonstrate a positive interaction effect of same-sided freelancer size and cross-sided employer size on freelancers' income. The reason is that cross-sided employers provide more job opportunities and thus ease the intense competition among freelancers. Overall, this research suggests that platform owners should increase the user size of both sides to maintain network effects and ensure freelancers benefit from the platform.

CTO: **A Turning Point Perspective on Orchestrating a Nascent Hi-Tech Innovation Ecosystem**

Author: **Valerie Rashanthi Handunge**, *Warwick Business School*
Author: **Eivor Oborn**, *U. of Warwick*
Author: **Michael Barrett**, *U. of Cambridge*

Amidst our increasingly dynamic world, new innovation ecosystems are being assembled, often by imaginative start-ups, in the hopes of incentivising heterogeneous participants to collectively cocreate coherent service offerings for unresolved social problems. This nascent phase of ecosystem emergence can be characterised by dramatic upheaval, with rearranging of collaborative relations which can shape the course of the future innovation trajectory. This ongoing dramatic change in the nascent stage of ecosystem formation is characterised by points in time where fundamental and irreversible changes occur, what has been termed turning points – abrupt moments of change that give rise to a new reality which is irrevocable. Through a qualitative case study involving semi-structured interviews and observations at field configuring events, we show that orchestrating a nascent innovation ecosystem develops through turning points as it emerges and is constituted by its innovation trajectory, and the wider entrepreneurial landscape. We inductively identify three types of turning points, namely focalizing, prognostic, and inertial turning points, whose patterning are consequential to our understanding of orchestrating nascent innovation ecosystems. We conclude with practical implications for the orchestration of nascent innovation ecosystems.

Digital Innovation & Organizations

Session Moderator: **Cristina Simon**, *IE U.*

CTO: **How to Manage Human-AI Complementarities: Developing Teaming Capabilities at Santander Bank**

Author: **Cristina Simon**, *IE U.*
Author: **Elena Revilla**, *IE U. - IE Business School Madrid, Spain*
Author: **Maria Jesus Saenz**, *Massachusetts Institute of Technology*

The potential of artificial intelligence (AI) to support knowledge-based tasks requires to consider it as an active agent that learns by interacting effectively with humans. This raises questions on how to build human-AI teaming capabilities to leverage their complementarities. Relying on the dynamic capabilities view, we report a case study of the implementation of an algorithm at a national subsidiary of Santander bank. We discuss how human-AI teaming as a DC was created through the management of tensions that emerge as both agents collaborate at three levels: at the structural level to attain interoperability (to create a smooth and effective co-operation), at the cognitive level to produce mutual knowledge (to capitalise on the complementarities of both agents) and at the relational level to build trust (to maximise the augmentation of human capabilities through AI). The development of human-AI teaming reveals as a path-dependent learning process based on cycles of sensing-seizing-transforming of internal resources, for mutual understanding and ultimately organisational performance improvement.

CTO: **The Social Construction of Equity in Global Offshoring Arrangements**

Author: **Jennifer Gibbs**, *U. of California, Santa Barbara*
Author: **Julia Eisenberg**, *Pace U.*
Author: **Dina Nekrassova**, *Independent Scholar*

This study examines the differing ways in which perceptions of equity and justice are constructed among global contractors involved in global outsourcing arrangements. A comparative case study of two global software organizations involved in offshore outsourcing reveals that global contractors across sites constructed different equity perceptions of similar foreign assignments. Drawing on theory on equity and organizational justice, we find that moving onsite activated the role of temporary contractor, but that this took on different meanings as global contractors from one site felt stigmatized as "second-class citizens" while those at the other site felt empowered as "free agents". Our emergent model suggests that the construction of different equity perceptions can be explained by an interplay of social and structural factors arising from both the outsourcing model and social interactions onsite. The findings have implications for global work design more broadly.

CTO: **Leveraging Dynamic Sourcing in Digital Innovation: Collaborative Innovation and Efficient Scaling**

Author: **Mathias Larsson Carlander**, *Stockholm School of Economics*
Author: **Magnus Mahring**, *Stockholm School of Economics*
Author: **Martin Sköld**, *Stockholm School of Economics*

Digital innovation work is typically driven by short, rapid, and iterative development cycles involving flexible recombination of digital assets. While digital innovation often involves drawing on external assets, the literature is surprisingly silent on the role of sourcing relationships in this context. Interestingly, the IT outsourcing (ITO) literature, including recent work on strategic innovation and sourcing, predominantly understands sourcing relationships as evolving from transaction-based towards collaborative and innovation-oriented, with long-term relationship development a prerequisite for collaborative innovation between providers and their customers. This apparent temporality mismatch leads to the question of whether and how firms pursuing digital innovation through flexibility, speed, and scaling can innovatively leverage more dynamic sourcing relationships. We pursue this topic through an in-depth case study of an incumbent firm integrating dynamic and flexible sourcing practices into its digital innovation work. We identify a set of dynamic sourcing activities that allow onboarding sourcing partners directly into collaborative innovation work and then transitioning the collaboration to efficiency-focused deployment and contract-based scaling. Our study thus articulates the role of dynamic sourcing in digital innovation and disconfirms core assumptions about ITO relationship evolution.

CTO: **The Algorithmic Infrastructure of the API Economy: The Case of Online Booking Services**

Author: **Roser Pujadas**, *U. College London*
Author: **Erika Valderrama**, *Department of informatics Umea U.*
Author: **Will Venters**, *London School of Economics and Political Science*

Digital infrastructures underly most social and economic practices today and play an increasingly important role within service provision. This study uncovers the important role of web Application Programming Interfaces (APIs) in reconfiguring digital infrastructures, and thus service provision, in the context of the so-called API economy. Employing digital research methods, we show empirically how web APIs have resulted in significant changes in the infrastructure of online hotel booking, resulting in new dynamics of service provision. Our research reveals that web APIs not only help constitute a de-centralized infrastructure that blurs organizational boundaries, but also involve the automation of processes and interactions, generating strong interdependencies between the processes and services of multiple organizations. Thus, we conceptualize the digital infrastructure underlying service provision in the so-called API economy as an algorithmic infrastructure, which executes distributed automated decision-making.

Computational Approaches

Session Moderator: **Sunniva Hermann**, *NOVA School of Business and Economics*

CTO: **Estimating Global Bilateral Music Flows in the Streaming Age: The Role of Distance Measures**

Author: **Sunniva Hermann**, *NOVA School of Business and Economics*
Author: **Qiwei Han**, *Nova School of Business and Economics, U. Nova de Lisboa*

This study explores the relationship between bilateral music flows and consumer preferences in the streaming music era. A set of distance measures between countries to account for their connection in various dimensions is proposed and evaluated on the Spotify charts data during 2017-2021, considering the impact of digitization. The analysis shows that while traditional distance measures such as geographical proximity remain essential, cultural, economic and social distances are also significant factors. A composite measure is suggested to be more appropriate for accounting for consumer preferences in music streaming. The study provides insights into how the rise of music streaming has changed the pattern of international music demand.

CTO: **Ranking Pull Requests in Open Source Software**

Author: **John Patrick Lalor**, *U. of Notre Dame, Mendoza College of Business*

Issue tracking is an important part of the open source software (OSS) development process. Users submit bugs, new features, and other requests to OSS maintainers as issues, and new code to address these issues can be submitted by the OSS community as pull requests. It is up to a maintainer to prioritize these pull requests for review and inclusion into the code base. Estimating the importance of a pull request before reviewing it, however, is a difficult task. We propose and evaluate a new framework for classifying pull requests that incorporates community, contributor, and content features. These features take into account three important aspects of the OSS ecosystem: (1) Community consent as measured by the sentiment analysis of issue comments, (2) Contributor competence as determined by the frequency a contributor commits to the OSS code base, and (3) Content importance as determined by the number of times a particular file has been changed. Our evaluation on over 4000 closed issues across 54 popular GitHub repositories shows that the proposed features significantly contribute to the prediction of an issue's time to close. With Area Under the ROC Curve (AUC) scores up to 0.75, the results further show that these features are suitable predictors for classifying pull requests by importance and that repository-specific classifiers perform well with only a few hundred training examples.

CTO: **A Mimetic Theory of User Behaviors in Online Communities: A Computational Study of GitHub**

Author: **Thomas Grisold**, *HSG U. of St. Gallen*
Author: **Michael Gau**, *U. of Liechtenstein*
Author: **Youngjin Yoo**, *Case Western Reserve U.*

Online communities are virtual communities where users exchange knowledge, organize tasks, and accomplish work. We focus on how individual users influence the ways others behave. We draw from mimetic theory and leverage computationally intensive theorizing to examine the influence of popular developers on other developers in GitHub, the largest and most popular open source software development community. Analyzing a subsample of 324 projects, we find that the behavior of rockstars –i.e. exceptionally popular developers– is imitated by other developers, and thus strongly influences overall work patterns in projects. We further find that this effect is stronger when a rockstar is more active in a project. Our findings offer important contributions for research on online communities, specifically by shedding light on the significant role that individual actors can have in such communities. Crucially, to our knowledge, our study offers the first empirical evidence that online communities actually change user behaviors through memetic processes.

CTO: **Validity of Computationally Derived Patterns: An Algorithmic Inference Quality Framework**

Author: **Malmi Amadoru**, *HEC Montreal*

Computational algorithms are increasingly being adopted to construct theory within information systems and management disciplines. Computationally derived patterns are core to this type of research. Although there is adequate guidance on validating quantitative, qualitative, and mixed methods research, there is little guidance to assess the validity of computationally derived patterns in the process of theory construction. Therefore, drawing on the mixed method inference quality framework, we devised an algorithmic inference quality framework to assess the inference quality of computationally derived patterns. The algorithmic inference quality assesses how plausible computationally derived patterns are and the interpretations of these patterns by the researcher. Our framework consists of one design quality criteria – algorithmic performance and two explanation quality criteria – algorithmic interpretability and human interpretability. We demonstrated the utility of our framework by applying it to a topic modeling algorithm. We also offer guidance in applying our quality framework.

2023 marks our 50th anniversary! Way back in 1973 we began as the Status of Women Interest Group and Minorities Interest Group, and ten years later, in 1983, we became an official Division of AOM--Gender and Diversity in Organizations. 2023 marks 50 years, and also the start of our new name for a new era: Diversity, Equity, and Inclusion (DEI)! So we have lots to celebrate. We hope you will join us for a special Monday Social and Celebration where we will honor some long- standing members and celebrate each other, what we do, and what we stand for.

Entrepreneurship in times of crisis

Session Moderator: **Elie Abi Saad**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*

ENT: **Supporting Entrepreneurship in Times of Crisis: The Role of Intermediaries in Fostering Resilience**

Author: **Elie Abi Saad**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*
Author: **Marine Agogue**, *HEC Montreal*

Supporting entrepreneurship has become an explicit priority during a crisis. The challenge, however, is to understand why and how some entrepreneurial support initiatives can be more successful than others at responding to emerging business development challenges in such context. In this paper, we blend organizational sponsorship and resilience theories to explore the adaptive behaviors of entrepreneurial support organizations—intermediaries that manage and monitor the development of new ventures—during a crisis. We show that the resilience of both local businesses and that of the broader ecosystem can be reinforced through ensuring a dynamic "fit" between entrepreneurial support activities and evolving needs and priorities. Our analysis is grounded in observations, interviews, discussions, and archived data gathered during an in-depth case study investigating the impact of the Lebanese crisis on the state of the country's entrepreneurial ecosystem. We discuss the implications of this research on theories and practice of resilience and entrepreneurship in times of crisis.

ENT: **Business Model Innovation in a Crisis: A Longitudinal Qualitative Analysis**

Author: **Ben Spigel**, *Babson College*
Author: **Kautsar Ramli**, *Newcastle U.*
Author: **Fumi Kitagawa**, *U. of Edinburgh*
Author: **Giovanna Campopiano**, *U. degli Studi di Bergamo*
Author: **Daniel Prokop**, *Cardiff U.*
Author: **Tim Vorley**, *Oxford Brookes Business School*

The Covid pandemic highlighted the speed and intensity with which an external shock can impact the ability of firms to continue to create and capture value using their existing business model. The business models of entrepreneurial firms are particularly malleable as founders test the market and adapt their offerings, networks, and activities. This makes studying how entrepreneurial firms engage in business model innovation (BMI) in the face of external crises critical, which helps to better understand how firms grow and innovate in a dynamic environment. This paper explores how entrepreneurial firms engage in BMI during crises through three research questions: (1) What drives firm to engage in BMI during a crisis, (2) what types of firms engage in BMI during a crisis, and (3) what activities did crisis-exposed firms undertake and what types of resources did they use to transform their business models? The paper draws on 238 interviews with 85 high-growth UK entrepreneurs conducted over the course of the pandemic. We develop a novel methodology for multiple readers to review each transcript to identify changes in firms' business models. Through thematic coding we identify the underlying drivers that trigger BMI during the crisis and the organizational processes that are used to change firms' business models.

ENT: **Navigating Crisis Through Polymathy: The Impact on Self-Efficacy for Entrepreneurs and Employees**

Author: **Michael Araki**, *U. of Louisville*
Author: **Carl P. Maertz**, *U. of Louisville*
Author: **Roberto Falcão**, *Unigranrio - U. do Grande Rio*
Author: **Eduardo Cruz**, *U. Federal Fluminense*
Author: **Renata Casado**, *U. of Western Australia*

Past literature has explored how maintaining high self-efficacy is vital for workplace outcomes across occupational choices. We build on theories regarding the acquisition and the mobilization of cognitive resources to investigate the relationship between the novel construct of polymathy—active engagement in multiple interests or endeavors that draw upon or synthesize vocations or avocations—and the self-efficacy of entrepreneurs and non-entrepreneurs during and after a crisis event. We develop a contingency approach hypothesizing that the effect of polymathy on the capacity to maintain self-efficacy is contingent on the presence of strong stressors and varies according to occupational choice. Using a sample of 533 respondents, we find support for our contingency approach suggesting differential effects based on occupational choice (entrepreneurs or non-entrepreneurs) and the level of exigencies (strong or weak) faced during a crisis event. For entrepreneurs, polymathy is shown be a key asset, predicting post-shock self-efficacy above and beyond traditional personality constructs, especially for those facing strong exigencies. For non-entrepreneurs, the effects of polymathy on post-shock self-efficacy are less pronounced or non-significant. Additional post estimates offer a nuanced analysis of the extent and the conditions whereby polymathy matters. Implications for theory and practice are discussed.

ENT: **Entrepreneurial Resilience: Experimenting to Pivot Business Models During External Crises**

Author: **Xueqi Yuan**, *Imperial College Business School*
Author: **Erkko Autio**, *Imperial College Business School*

The Covid-19 pandemic presented an unprecedented external shock in which both challenges and opportunities arose. Entrepreneurial firms and communities needed to develop resilience to bounce back from the crisis and be ready to exploit emerging opportunities. Extant literature on organisational resilience offers limited insights on how resilience manifests itself in entrepreneurial businesses and how the process unfolds during an external crisis. To address this knowledge gap, we conducted a longitudinal inductive study of 15 entrepreneurial firms in China over a period of 12 months. We present two process models developed through a four-stage grounded theory approach. Our findings suggest that entrepreneurial firms engage in mission sustaining and mission reorientation activities in response to the firm-level shock and benefit from support enabled by the community-level shock, which jointly support two resilience outcomes. We also illustrate how entrepreneurial firms combined three distinct experimentation logics – causal, scientific, and effectual logics – to conduct business model experimentation when seeking to proactively adjust and upgrade their business models to pursue opportunities that arose during the external shock.

Entrepreneurship in Different Environmental and Industry Contexts 2

Session Moderator: **Michael Stuetzer**, *Ilmenau U. of Technology*

ENT: **A Golden Opportunity: The Gold Rush, Entrepreneurship and Culture**

Author: **Michael Stuetzer**, *Ilmenau U. of Technology*
Author: **Abel Brodeur**, *U. of Ottawa*
Author: **Martin Obschonka**, *U. of Amsterdam*
Author: **David Audretsch**, *Indiana U., Bloomington*
Author: **Jason Rentfrow**, *U. of Cambridge*
Author: **Jeff Potter**, *Atof Inc*
Author: **Samuel Gosling**, *U. of Texas at Austin*

We study some origins of entrepreneurship clusters in the United States. For the analysis we make use of a natural experiment – the gold rush in the second part of the 19th century. We argue that the presence of gold attracted individuals with entrepreneurial personality traits. The analysis shows that gold rush counties have higher entrepreneurship rates from 1910 until the present and a more entrepreneurial personality profile compared to control groups. We find empirical evidence that a genetic founder effect, continued selective migration and an entrepreneurship culture were mechanisms explaining the link between the gold rush and entrepreneurship.

ENT: **How Entrepreneurial Support Organizations Navigate Constraints In Nascent Ecosystems** ✈

Author: **Giovanni Negri**, *U. Cattolica del Sacro Cuore*
Author: **Giacomo Ciambotti**, *U. Cattolica del Sacro Cuore*
Author: **Christina Theodoraki**, *Toulouse Business School*
Author: **David Littlewood**, *U. of Sheffield Management School*

Current research on nascent entrepreneurial ecosystem is focusing on support organizations which should enable productive and sustainable entrepreneurship. However, not all the contexts offer an umbrella of resources and skills to activate such support, as in resource-constrained nascent ecosystems. The present research aims to contribute to the extant understanding on how organizations overcome resource-constraints of a nascent ecosystems, such as the African context of Uganda. We conducted inductive qualitative research on 27 entrepreneurial support organizations (ESOs) in Uganda. We built a conceptual model which depicts how ESOs face challenges in resource-constrained ecosystem (1), engaged with strategies to navigate the constrained ecosystem (2), and implement diverse approaches to entrepreneurial support (3). We uncover how some ESOs engage in adaptation strategies to navigate the contextual challenges, or with collaboration and transformation, as more agentic strategies to navigate the ecosystem's constraints. Thus, we define such two practices as 'Ecosystem Works' as efforts implemented to create, maintain, and disrupt the nascent ecosystem. Finally, the model documents how the navigating practices shape the ESOs' approach to entrepreneurial support: while adaptation brings about stagnating entrepreneurial support, the ecosystem works generate sustainable entrepreneurial support. We offer contributions to research on nascent ecosystems and entrepreneurial support organizations in resource-constrained contexts, as well as practical implications.

ENT: **Unpacking the Emergence of Digital Entrepreneurship Ecosystems: Qualitative Evidence from Malanshan**

Author: **Ya Su**, *Central South U.*
Author: **Jin Han**, *Hunan U. of Technology*

Digital entrepreneurial ecosystems (DEE) command increasing attention from policy makers and scholars, yet DEE in peripheral area is underdeveloped and extant studies about the emergence of DEE is insufficient. We adopt the actor–network theory as our theoretical lens and conduct an in-depth case study at Malanshan, China. Case analysis reveals that the quadruple-E framework is formulated to demonstrate the Malanshan DEE emergence, in each mechanism digital elements and space providing different degrees of affordances with different contents and completing translation process by resolving controversies. Our study contributes to the DEE literature by splitting digital elements from organizations and providing a temporal perspective for the emergence of DEEs. It also contributes to the digital transformation on the ecosystem level, which has mainly focused on the individual firm, network, and business ecosystem levels. Regarding practical implications, policymakers can use our findings to develop their local DEEs.

ENT: **Entrepreneurship of College Students: An English / Chinese Literature Review & Research Agenda**

Author: **Yancheng Fan**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*
Author: **Dimitris G. Assimakopoulos**, *CEREN, EA 7477, Burgundy School of Business - U. Bourgogne Franche-Comté*
Author: **Liting Liang**, *U. of Vaasa*
Author: **Martin Meyer**, *U. of Vaasa*

College student entrepreneurship (CSE) research is a growing field fostering both economic growth and social development in East and West. Scholars have examined CSE literature in its distinct linguistic sources, yet different language, cultural and political barriers have lessened the exchange of ideas between the relevant scientific and policy making communities. To increase mutual understanding, theory development and offer suggestions for a forward-looking research agenda, we provide a systematic comparative literature review of western (Web of Science, WoS / Social Science Citation Index, SSCI) and Chinese (Chinese Social Science Citation Index, CSSCI) literature. We use bibliographic coupling and content analysis to discover and compare the main themes in this field of English and Chinese scientific literature. Based on a carefully selected sample of 1457 SSCI (WoS) papers and 1346 CSSCI papers, we identify and discuss four (SSCI) and five (CSSCI) main thematic clusters. The WOS research areas are entrepreneurial a) learning, b) intentions, c) self-efficacy, and d) education. The CSSCI areas are entrepreneurial a) intentions, b) education, c) ability, d) ecosystem, and e) policy. CSSCI is more oriented to macro-issues and development suggestions. It also highlights Chinese features, such as mass entrepreneurship, college student village officer, Internet plus, and others. Furthermore, we identify future common research themes such as entrepreneurial ecosystems and the role of human biology in CSE.

Developing Entrepreneurial Intentions

Session Moderator: **Erika Lisboa**, *FGV-EAESP / UnB*

ENT: **Entrepreneurial Intention in Biotechnology Bachelor Courses**

Author: **Erika Lisboa**, *FGV-EAESP / UnB*
Author: **Cristina C. L. Souza**, *UnB*

This investigation aims to depict the factors likely to explain the entrepreneurial intention of Biotechnology undergraduate students. It is based on a survey conducted with Brazilian undergraduate students. Data collection instrument aimed to collect students' perceptions (Likert scale) in four blocks of variables: attitude toward planned behavior, social norms, perceived controlled behavior, and entrepreneurial education. Data are analyzed using OLS, factor, and structural equation modeling regression analysis. The study has innovation as it deals with a new research locus (a field of knowledge without regard to managerial and business paradigms). As a result, there is evidence that entrepreneurial education will likely make a difference in undergraduate Biotechnology students' entrepreneurial intentions. However, the curricular structure needs to be designed to provide information and experiences during the course in a systematic way.

ENT: **Exploring the Influence and Inspiration of Role Models in the Context of Entrepreneurship**

Author: **Martin Stockhaus**, *Chalmers U. of Technology*
Author: **Jeffrey M. Pollack**, *NC State U.*

Data collected from interviews with Master's level students engaged in a venture creation program (N=33) enabled us to elaborate on the academic construct of role models in the context of entrepreneurship. Qualitative analysis of interview transcripts revealed two main themes: knowledge and actions alongside moral and values, and three sub-themes: legacy and impact, advice on life, gratification, and embracing failure. Exploring these themes further, we highlight how the role models can be entrepreneurs or, importantly, non-entrepreneurs—this is consistent with our framework derived from social cognitive theory, and we discuss multiple theory-focused as well as practical implications that emerge from our work.

ENT: **Curiosity and Curious Search, in Entrepreneurship**

Author: **Chih-mao Hsieh**, *SUNY Korea*
Author: **Luke A. Pittaway**, *Ohio U.*

Entrepreneurship research rarely explores and explains how people approach ambiguity differently during the earliest stages of the startup process or considers the endogenous search behavior of entrepreneurs. In this paper we introduce curiosity as a key concept that simultaneously addresses these shortcomings. While curiosity can help to address these concerns, however, the range of entrepreneurial behavior is not well-described by terminology found within the curiosity literature because types of curiosity are characterized with excessively 'configurational' mixes of features. By focusing on three dimensions—the approach towards ambiguity, emotional valence, and experimentation versus theorization—we develop a unique 3x2 typology of 'curious search'. The six forms of curious search— tweaking and contemplating (what we call 'clarifying' types of curious search), spelunking and stargazing ('adventuresome' types), and fiddling and woolgathering ('bored' types)—are described and illustrated in a variety of entrepreneurship situations, and also shown to apply to a variety of existing entrepreneurship research topics.

ENT: **A Model for Predicting Entrepreneurial Intentions Based on the Theory of Planned Behavior**

Author: **Muhammad Salman Shabbir**, *UBD School of Business and Economics*
Author: **Rabia Salman**, *U. Sains Malaysia, Malaysia*

The primary goal of this research study was to inspect the role of entrepreneurial skills in influencing entrepreneurial intentions as well as the mediating role of attitude towards behavior (ATB) on the relation between entrepreneurial skills and intentions. The analysis shows that although some work has been done on intentions, attitude, and behavior in general, but a very limited work has been done on the association of these constructs with entrepreneurship. This presents a gap in literature, and this research article effectively grasps this opportunity to address this gap. A cross-sectional study design was used to collect data from employees of registered IT firms in Punjab province of Pakistan. The responses of 387 Pakistani information technology professionals were gathered through a self-administrative survey utilizing a simple random sampling technique. PLS-SEM was used for the study of measurement and structural model. According to the findings of PLS-SEM, a high perceived feasibility to start a venture mediates the association between entrepreneurship competencies and entrepreneurial intentions. The results of this paper have important implications for government and higher education institutions in terms of enhancing entrepreneurial capacity. This is one of the pioneer studies that examines the relationship of entrepreneurial skills and intentions as well as the arbitrating role of attitude towards behavior, as there exists a gap in literature. This research sheds light on the Theory of Planned Behavior in a novel way as the exogenous and mediating variables adopted in this research have not been tested before in the same theoretical model.

Entrepreneurial Exit or Failure 1

Session Moderator: **Naryoung Yu**, *Ivey Business School*

ENT: **When Do Entrepreneurs Exit Failing Ventures?**

Author: **Naryoung Yu**, *Ivey Business School*
Author: **Simon Parker**, *Ivey Business School*

Determining the timing of exit is an important but complicated decision for entrepreneurs which is often predicated on expectations about the uncertain future value of a business. We explore the effects of risk and uncertainty on entrepreneurs' decision about when to exit from a failing venture – specifically, whether entrepreneurs choose their exit date optimally, or whether they are optimistic and delay exit. Comparing theoretically derived optimal exit timings with outcomes from a lab experiment, we find that participants' exit decisions are inconsistent with optimal exit behavior under both risk and uncertainty; excessively delayed exit is the norm.

ENT: **Exhausted Entrepreneurs' Exit Behavior**

Author: **Naryoung Yu**, *Ivey Business School*

The unique nature of entrepreneurship exposes entrepreneurs to a greater risk of experiencing mental health issues. I conceptualize entrepreneurs' mental health as human capital that influences entrepreneurial exit decisions and examine how emotional exhaustion, combined with other factors, determines exit behaviors and routes. More specifically, I hypothesize that social support and risk attitude moderate the effects of emotional exhaustion on entrepreneurial exit, and that exhaustion affects the likelihood of exit through business closure. Using panel data covering 1,871 exit cases in the United States from 2006 to 2020, I find that both social support and risk attitude reinforce the negative influences of exhaustion on entrepreneurial exit, and emotional exhaustion is positively related to exit by business closure.

ENT: **A Subjectivist Approach to Theorizing Entrepreneurial Failure**

Author: **Marcus Crews**, *Loyola Marymount U.*

Recent decades have witnessed a growing body of literature on entrepreneurial failure (EF). Yet, a single, integrated approach to conceptualizing entrepreneurial failure is yet to be articulated, which ultimately hampers scientific progress due to an absent foundation upon which to accumulate the body of knowledge. The present research addresses this gap by leveraging insights from subjectivism to introduce a theory of entrepreneurial failure. In so doing, we introduce an approach to defining EF that accounts for its multi-level and multi-dimensional nature and develop an expanded typology to represent the many forms EF may assume. The study concludes with a discussion of implications for management, policy, and pedagogy and suggests avenues for future research.

ENT: **Identity Transitions Following Business Failure: A Dual Process of Recovery**

Author: **Anna Saies Jenkins**, *U. of Queensland*
Author: **Orla Byrne**, *U. College Dublin*
Author: **Marina Biniari**, *U. of Sussex Business School*
Author: **Karin Maria Kristina Hellerstedt**, *Jonkoping International Business School*

Business failure is likely to threaten entrepreneurs' work-related identity. However, while existing studies have focused on how and when entrepreneurs learn from and cope with business failure, studies on whether and how entrepreneurs reconstruct their work-related identities as part of their recovery process remain rare. We draw on identity theory and work-related identity literature to address this underexplored aspect of recovery from business failure. The analysis of narrative interviews with sixteen entrepreneurs whose businesses failed reveals two distinct patterns of identity reconstruction following business failure. With the first pattern, entrepreneurs looked backward to move forward by drawing on previous work-related identities to solidify their new work-related identities as they progressed and recovered relatively fast after business failure. The second pattern presents a more complex process of identity reconstruction whereby the entrepreneurs attempt to create a new work-related identity while struggling to let go of who they were to become someone new. Our study contributes to the entrepreneurship literature on business failure and recovery by illuminating the significance of identity reconstruction mechanisms.

Entrepreneurial Teams

Session Moderator: **Carmen Anna Elisa Baur**, *Technical U. of Munich*

ENT: **How Founding Teams Process and Respond to Feedback on Their Opportunities**

Author: **Carmen Anna Elisa Baur**, *Technical U. of Munich*
Author: **Rebecca Preller**, *U. of Bayreuth*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*

Gathering feedback is key for founding teams to develop their opportunities to market. However, while feedback may help to develop business ideas, it may often be contradictory (i.e., feedback from different sources leading to different opportunity development directions), thus increasing founding teams' uncertainty about potential future opportunity development paths. To develop theory about how founding teams deal with contradictory feedback for opportunity development, we draw on a social information processing perspective and an inductive study following up on seven founding teams that received contradictory feedback. Our model shows how founding teams differ in social processing of contradictory feedback and how this processing influences opportunity development. Specifically, we show that teams facing similar contradictory feedback situations, enter either a "team-oriented processing path" (leading to making decisions for quickly developing their opportunities to market) or "specialist-oriented processing path" (leading to making decisions only under external pressure) depending on how they share responsibilities within their teams. Our findings have implications for the literatures on opportunity development, decision-making in founding teams, and more broadly for the literatures on social information and feedback processing as well as important practical implications.

ENT: **Founding Team Formation Process and its effect on Firm Performance - Evidence from India**

Author: **Willy Das**, *college of business, Lehigh U.*
Author: **Andreea Noemi Kiss**, *Lehigh U.*
Author: **Satyasiba Das**, *Indian Institute of Management Raipur*

We address gaps in the entrepreneurial team formation (ETF) literature by employing a longitudinal perspective to investigate ETF processes in 13 new ventures in India over a period of three years. We find that dual formation strategies based on resource dependency and interpersonal attraction attributes extend beyond the selection of initial co-founders and that the primacy of these attributes varies over time, with interpersonal attraction playing an important role in the context studied. Oscillations in the primacy of attributes employed in EFT formation are associated with differences in firm performance and national cultural attributes further influence the observed patterns.

ENT: **How Entrepreneurial Team Informational and Social Category Faultlines Affect New Venture Performance**

Author: **Yongjun Mo**, *School of Economics & Management, Tongji U.*
Author: **Yi Yang**, *School of Economics & Management, Tongji U.*
Author: **Hongmi Jiang**, *Shanghai Pinghe School*

The topic of entrepreneurial team faultlines has been gaining ground in entrepreneurship research, as it provides novel insights into entrepreneurial team composition. However, extant research on how entrepreneurial team faultlines affect new venture performance is underdeveloped, especially the different effects of informational and social category faultlines. Drawing on the challenge–hindrance stress framework and conservation of resources theory, we develop and test a model to explore the mechanisms between the two types of faultlines and new venture performance. On the one hand, informational faultlines, serving as initial resource gains, are positively associated with team-shared challenge stress, which, in turn, increases new venture performance (i.e., a gain spiral). On the other hand, social category faultlines, serving as initial resource losses, are positively associated with team-shared hindrance stress, which, in turn, decreases new venture performance (i.e., a loss spiral). The results from 104 entrepreneurial teams that included 406 members support our hypotheses. By clarifying the impacts of entrepreneurial team informational and social category faultlines and revealing the mediating effects of team-shared stress, this study contributes to a better understanding of entrepreneurial team composition and stress.

ENT: **Do I Like You or Do I Need You - Understanding the Co-Founder Selection Process**

Author: **Willy Das**, *college of business, Lehigh U.*
Author: **Satyasiba Das**, *iim Raipur*

Unlike other teams, entrepreneurial teams are endogenously formed i.e. rather than being exogenously assigned, entrepreneurs, select the partners with whom to work. So it is important to understand what criteria founders prefer while choosing their co-founders and how this decision impacts the firm's performance. We use conjoint analysis to capture 5160 real time decisions made by 172 nascent entrepreneurs and the impact of these choices on the firms performance. We find that competing motivation coexists in selecting a co-founder. This study provides an understanding of how they coexist and their hierarchical order in terms of the preference of the lead entrepreneur. Thus justifying the selection of a specific set of individuals as the co-founders. We also find that Internal state similarity overrides the ascribed state similarity in the choice for a cofounder. Finally, using dual formation strategy from the start increases the chances of firm's success as opposed to shifting between strategy with each member addition. Additionally we provide justification of why common prior work affiliations are a significant source of cofounders. This study provides an integrated understanding of entrepreneurial founding team formation.

Entrepreneurial Finance; Venture Capital 1

Session Moderator: **Thomas Schmitz**, *U. of Duesseldorf*

ENT: **VC Investor Types and the Professionalization of Marketing Organizations and Activities**

Author: **Thomas Schmitz**, *U. of Duesseldorf*
Author: **Andreas Engelen**, *Heinrich-Heine U. of Dusseldorf*

Financial intermediation theory suggests that the role of traditional financial intermediaries (e.g., banks) is to cost efficiently select and monitor the entities they finance. Hellmann and Puri (2002) expand this view towards venture capitalists (VCs) as the major investor type for new ventures and show that VCs go beyond their initial role, by adding value through the professionalization of their investees. Little however is known about the effect of corporate venture capitalists (CVC) as the second major and increasingly relevant investor type for new ventures. This is particularly the case regarding both investor types' relative effects on marketing, as one of the most crucial functions for new ventures' survival. We therefore address this research gap by determining VCs' and CVCs' relative association with the development of new ventures' marketing organizations as well as their active marketing of products and services. We base our research on a panel of 2,254 technology based new ventures, their respective trademarks, and profiles of well over 200,000 former and current employees including their functional and hierarchical positions. Our findings suggest that both investor types are positively related to the growth of new ventures marketing departments but that the association of VCs is stronger than of CVCs. Furthermore, the association of VCs maintains longer. Additionally, only in the case of VCs' a positive relation with new ventures' active marketing activities can be identified.

ENT: **Paving The Way: The Impact of Investor Portfolio Composition on New Ventures' Exit Likelihood**

Author: **Lisa Tatjana Fischer**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

Acquisitions and IPOs reflect desired exit outcomes for new ventures and ultimate opportunities for capital gain for entrepreneurs and investors. In this paper, we investigate the composition of new ventures' investor portfolios and its impact on the likelihood to exit via acquisition or initial public offering (IPO). We include a broad range of 22 investor types covering even emerging forms such as venture debt or micro venture capital. Applying cluster analysis to a sample of 57.242 ventures, we identify seven distinct types of investor portfolios, each combining a set of different investor types. Drawing on signaling theory, our findings show that portfolios with a strong signaling effect and a high exit likelihood differ: For acquisition, ventures that combine venture capital and corporate venture capital as dominant investor types in their portfolio have the highest exit likelihood. For IPO, this applies to ventures with a dominant combination of private equity, investment banks & funds as well as venture capital. For both exit outcomes, ventures with dominant informal or niche investor types have the lowest likelihood to exit. Our findings contribute to the debate on the interplay and interconnectedness between investor types and accounts for the emergence of new funding sources.

ENT: **The Role of Fear of Missing Out on VC Investment Decisions**

Author: **Eduardo Andres Boada**, *IE Business School*
Author: **Daniel Lerner**, *IE Business School*

Traditionally, research in the field of VC decision making has focused on the objective criteria that VCs use to screen new investment opportunities. However, the impact of behavioral factors on VC decision making remains largely unstudied. This work introduces the fear of missing out (FoMO), an emotion argued to feature both individual and social antecedents, as a construct related to counterfactual thinking that can also have an effect on decision makers, specifically VCs in the context of the evaluation of an investment opportunity. Although FoMO and its effects have not been studied in the VC setting, evidence of their relevance can be found in the industry itself. Literatures from the fields of behavioral economics and sociology are used to define FoMO in this context as an inducible state that is hypothesized to affect the likelihood that VCs will invest in an opportunity. We present a theoretical model that accounts for both individual and social considerations that may antecede FoMO and argue for the relevance of studying this phenomenon in the context of new venture funding. Our framework offers theoretical contributions to the literature of VC decision making, as well as to the growing body of work that explores FoMO and its consequences.

ENT: **Impact of Government Sponsorship on Social Capital and Economic Performance of Venture Capital Firms**

Author: **Xiaoteng WU**, *NUS Business School*
Author: **Arzi Adbi**, *National U. of Singapore (NUS)*
Author: **Ishtiaq Pasha Mahmood**, *NUS Business School*

Prior research suggests that government policies can augment factor markets that fuel entrepreneurship. However, the impact of the transition from governments' preferential policies for businesses to their sponsorship of firms is underexamined. We use an unanticipated policy transition in China in 2014 to shed light on this question. We examine how the consequences of the policy transition may vary between venture capital firms that receive government sponsorship (GVCs) and those that do not (IVCs). We use the novel synthetic difference-in-differences method to overcome the fundamental identification challenge that arises from the difficulty of constructing the appropriate counterfactual for GVCs. Our analysis reveals that, compared to the synthetic control, GVCs are associated with greater expansion of their inter-organizational networks manifested not only in direct connections but also in network communities (membership in cohesive network structure). Intriguingly, however, the policy transition does not lead to the superior economic performance of GVCs relative to synthetic control. We test possible mechanisms to uncover this puzzle and find that GVCs tend to make more geographically distant investments, which usually entail syndication partnerships but do not outperform proximate investments. We discuss the implications for the growing literature at the intersection of public-private partnership and entrepreneurship.

Entrepreneurs Affect and Emotions

Session Moderator: **Lauren Atkinson Zettel**, *Central Michigan U.*

ENT: **Feeling Flexible: Emotion and Adaptation in Motivated Goal Pursuit**

Author: **Lauren Atkinson Zettel**, *Central Michigan U.*
Author: **Robert P. Garrett**, *U. of Louisville*

Existing scholarship on motivation has focused on the propensity for positive emotions to bolster the amount of effort an entrepreneur devotes to pursuing their venture goals. However, motivation is reflected not only in the amount, but also the direction of effort, which is the strategy used to achieve a goal. The strategy may be equally important to goal attainment, particularly when challenges arise that make past tactics less effective. In this research, the authors draw on the broaden-and-build theory of positive emotions and the affect-as-information perspective to examine the effect of emotions on entrepreneurs' propensity to adapt their strategy when encountering a challenge. Drawing on a sample of nascent technology entrepreneurs, the researchers find that both positive and negative emotions may instigate strategic adaptation. This research highlights the often-overlooked role of negative emotion in motivation, and offers a path for reconciling the seemingly contradictory implications of the broaden-and-build theory and affect-as-information perspective for entrepreneurs' motivated goal pursuit.

ENT: **Emotional Arcs of Entrepreneurial Narratives as Emotion-Symbolic Work: Evidence from Ted Talks**

Author: **Bogdan Prokopovych**, *U. of Massachusetts, Amherst*

The existing literature has shown that the emotion-symbolic work of entrepreneurs involves the use of emotions to attract attention to a cause of interest and appeal to stakeholders. This paper examines a linguistic mechanism of how this happens. By drawing on a construct of emotional arc, it uses the texts of Ted Talks of entrepreneurs and social entrepreneurs to compare their sentiment and its trajectory throughout the narratives. It shows that social entrepreneurs, on average, use more negative language. The emotional arcs of both entrepreneurs and social entrepreneurs are of a similar shape but with a larger negative dip in the middle of the story. The emotional arcs of both groups overall differ from the existing typical arcs shown in the literature. However, there is a partial semblance to the "Man in a Hole" and "Cinderella" emotional arcs types.

ENT: **The Role of Entrepreneurs' Affect in their Opportunity Assessment: Accuracy or Overconfidence**

Author: **Celia Díaz-Portugal**, *U. of Burgos, Spain*
Author: **Juan Bautista Delgado-Garcia**, *U. de Burgos*
Author: **Virginia Blanco-Mazagatos**, *U. de Burgos*

This paper studies the influence of negative and positive affect in opportunity evaluation and how this influence may lead to accurate/inaccurate assessments and so to overconfident perceptions. Based on the informational effects of affect—affective congruence—and on the processing effects—affect influences how information is processed via assimilation or accommodation, this chapter explores how negative affect may lead entrepreneurs to accurate while positive affect may lead leads to inaccurate assessments. In addition, this chapter analyses how positive affect also leads to an overconfident image of the opportunity and to a higher willingness to act entrepreneurially.

ENT: **The Microfoundations of Stakeholder Strategy: Entrepreneurs' Dispositional Affects and Intentional Behaviors**

Author: **Ileana Maldonado-Bautista**, *Iowa State U.*
Author: **Huiqing Ju**, *Iowa State U.*
Author: **Peter G. Klein**, *Baylor U.*

There is growing interest in the crossroad of stakeholder theory and entrepreneurship research. Studies have largely focused on understanding the role of stakeholders—including financiers, employees, customers, suppliers, and communities—in the process of new venture formation. Seldom studies, however, have focused on the decisions of entrepreneurs to engage in specific stakeholder strategies: narrowly-oriented vs. broadly-oriented. In this article, we suggest that entrepreneurs' dispositional characteristics influence the nature of a firm's stakeholder strategy. Specifically, we hypothesize that entrepreneurs with high positive affect—who emphasize "diverse" and "novel" decisions—will be associated with engagement in broadly-oriented stakeholder strategies that promote social and environmental wellness. By contrast, entrepreneurs with high negative affect—who emphasize "conservative" and "narrow" decisions—will be associated with engagement in narrowly-oriented strategies that promote governance and shareholder initiatives. We further unpack the effects of positive and negative affects on stakeholder strategies by exploring diverse intentional behaviors of entrepreneurs: stock ownership and prosociality, which moderate in countervailing ways the effects of affects. We find strong support for our hypotheses in a sample of 306 entrepreneur-led firms.

Family Firm and Professionalization

Session Moderator: **Matthias Waldkirch**, *EBS Business School*

ENT: **"For the Benefit of the Whole". A Multi Case Study on the Sensemaking of Dismissals in Family Firms**

Author: **Reimar Belschner**, *WHU Otto Beisheim School of Management*
Author: **Nadine Kammerlander**, *WHU Otto Beisheim School of Management*

We conduct an inductive multi case study of six family firms to investigate how family firms dismiss long-term employees. To date, research on family firms in general and employment practices in particular has largely ignored this topic. Extant theory suggests that family firms do not to exhibit such practices, as they are guided by non-financial considerations and value relationships with their employees. However, we can show how family CEOs overcome family firm related constraints and ultimately decide to dismiss long-term employees. Building primarily on 62 interviews collected over 15 months, we map their sensemaking. First, we determine two sensemaking paths that differ in their underlying mechanisms and result. While one path is governed by an emotional mechanism leading to a fast and clear decision to dismiss, the other relies mainly on cognitive mechanisms causing a delayed and difficult dismissal decision through adaptive sensemaking. Second, we identify the four cognitive mechanisms that drive the adaptive sensemaking of family CEOs and let them overcome the constraints. These mechanisms are: exaggerate, redefine, rationalize and separate. We contribute to a better understanding of how family firm CEOs dismiss long-term employees, and also make transparent how the process of updating in adaptive sensemaking works.

ENT: **Too Much of a Good Thing? Professionalization as a Multiple Practice Adoption in a Family Firm**

Author: **Matthias Waldkirch**, *EBS Business School*
Author: **Leif Melin**, *Jonkoping International Business School*
Author: **Mattias Nordqvist**, *Stockholm School of Economics*

Professionalization has become ubiquitous among a broad range of organizations, promising increased efficiency and legitimacy. However, extant research depicts professionalization mostly as a binary change and largely ignores its temporal and processual nature, resulting in a lack of insights into how professionalization unfolds and how organizations deal with its inherent tensions. Therefore, we take a processual perspective on professionalization, studying it as a transformation toward a more rationalized, managerialized, and formalized organization through multiple practice adoption. Relying on a longitudinal single case study of a Swedish family firm that professionalized its business and family ownership domains, our processual analysis reveals unique types of professionalization and four practice interaction mechanisms through which organizations deal with tensions in the professionalization process. We contribute by conceptualizing a process model of professionalization, casting light on practice interaction mechanisms, and outlining implications of professionalization for organizational goals.

ENT: **All that Glitters is not Gold—Reconceptualizing Family Firm Professionalization**

Author: **Jana Hermle-Boersig**, *WHU Otto Beisheim School of Management*
Author: **Matthias Waldkirch**, *EBS Business School*
Author: **Nadine Kammerlander**, *WHU Otto Beisheim School of Management*

Theory and practice depict professionalization as a key challenge for family firms. Despite the importance of this concept, it is surprising that findings surrounding family firm professionalization are scattered and contradictory. We argue that these pitfalls stem from the lack of theoretical foundation of the concept and from the implicit assumption of professionalization as a natural transformation. Our manuscript builds on institutional theory and research on institutional pressures to reconceptualize the process of professionalization in family firms and provide a cohesive theoretical framework. We theorize four types of professionalization and argue under which conditions (non-)professionalization is beneficial for family firms. Consequently, our theorizing contributes to family firm professionalization research by drawing attention to the concepts of legitimacy and decoupling, thus highlighting that family firms, under certain conditions, might profit from non-professionalization and suffer from professionalization. Moreover, we contribute to institutional discourse by introducing the concept of reference dimensions, thereby shedding light on how family firms discretionarily—instead of isomorphically—react to institutional pressures as well as on a novel explanation of why means-ends-decoupling unfolds in organizations.

ENT: **Who Versus What You Know: Managerial Social and Human Capital's Impact on Family Firm Exit Success**

Author: **Tim Maximilian Vollmer**, *WIN Lehrstuhl RWTH Aachen*

What is the most critical CEO capability to succeed when exiting a family firm? From 2012 to 2022, family firm exits increased by 72%. Following this trend, ~95.000 German family firms are expected to be sold, acquired, or liquidated in the next five years. Therefore, particularly family firm CEOs need to be aware of the impact of their CEO capabilities on exit outcomes. Although first studies investigated corresponding relationships empirically, how managerial social and human capital influence family firm exit success remains unclear and contradictory. To address these current research gaps, we build on upper echelons theory and investigate how managerial social and human capital relate to the four dimensions of exit success (i.e., personal financial benefits, personal reputation, employee benefits, and firm mission persistence). Leveraging data from 113 responses from former family firm CEOs who exited their firm within the last 15 years, we contribute to family firm literature by clarifying the impact of the CEO's managerial social and human capital on exit success and explaining underlying mechanisms. We add to the ongoing discussion on contradictory findings and reveal insights on the impact of managerial social and human capital towards a successful exit.

Psychology in Entrepreneurship 1

Session Moderator: **Samuel Aryee**, *U. of Surrey*

ENT: **Fostering Entrepreneurial Behavior in Organizations: The Role of Entrepreneurial Leadership**

Author: **Samuel Aryee**, *U. of Surrey*
Author: **Li-Yun Sun**, *Macau U. of Science and Technology*
Author: **Hsin-Hua Hsiung**, *National Taiwan U.*

Although the success of corporate entrepreneurship is dependent upon managers fostering the entrepreneurial behavior of others, the process through which this can be done is not well understood. Drawing on social cognitive and broaden-and-build theories, we used multi-wave and multi-source data to examine why and when entrepreneurial leadership relates to individual entrepreneurial behavior. Results of multilevel structural equation modeling (MSEM) reveal three core findings. First, entrepreneurial leadership positively relates to leader encouragement of entrepreneurial behavior. Second, leader encouragement of entrepreneurial behavior indirectly relates to individual entrepreneurial behavior through entrepreneurial self-efficacy but not through activated positive affect. Lastly, the indirect influence of leader encouragement of entrepreneurial behavior through entrepreneurial self-efficacy is conditional upon job autonomy such that this relationship is stronger when job autonomy is high but not low. We discuss these findings in terms of the ecosystem needed to enact individual entrepreneurial behavior and ultimately, corporate entrepreneurship strategy.

ENT: **A Daily Diary Study of Appraisal, Entrepreneurial Hustle, and Eudaimonic Well-Being**

Author: **Michael Lerman**, *Iowa State U.*
Author: **David W. Williams**, *U. of Tennessee*
Author: **Timothy P. Munyon**, *U. of Tennessee, Knoxville*
Author: **Tim Michaelis**, *Northern Illinois U.*
Author: **David James Scheaf**, *Baylor U.*

Stress management is critical for entrepreneurs' well-being, yet our understanding of entrepreneurs' day-to-day appraisal of stressors, coping, and well-being processes remains limited. Drawing from the Lazarus' Transactional Model of Stress and adapting it to entrepreneurship, we develop a day-level model of entrepreneur stress. Using a combination of experience sampling and day reconstruction methods, in which entrepreneurs self-identify the most significant stressor they expect to encounter each day, we find that morning challenge appraisals promote entrepreneurial hustle during the workday, which in turn facilitates evening eudaimonic well-being. Further, we find that hustle most benefits eudaimonic well-being when entrepreneurs also make progress in overcoming stress, and when they engage in low amounts of recovery behavior. Our findings offer fresh insights for research on entrepreneur well-being and coping in entrepreneurship.

ENT: **Considering Time: A Conceptual Model of Team Influences on Entrepreneurial Self-Efficacy Over Time**

Author: **Juliane Friedrichs**, *U. of Kassel*
Author: **Sandra Ohly**, *U. of Kassel*

Entrepreneurial self-efficacy (ESE) is a key driver for entrepreneurial actions. However, a significant proportion of new ventures are team-based and previous research has neglected to address the extend to which the team affects ESE. In our study, we unveil three ways the team, in particular team processes and collective efficacy, affects ESE. We do so by connecting team process taxonomy with social cognitive theory and considering the dynamic nature of self-efficacy. We argue that team transition-, action-, and interpersonal team processes trigger specific sources of self-efficacy. Furthermore, our model outlines how the proposed team influences might change over time. The model adds to the rapidly expanding field of ESE by focussing on social influences and simultaneously taking the dynamic nature of ESE into account. In doing so, our model opens a new perspective to understand the emergence of ESE during the new venture creation process and the interrelations associated with ESE. Additionally, we add to recent calls for more theories addressing dynamics in entrepreneurship.

ENT: **Entrepreneurial Orientation Training Made My Career Successful! Multi-Wave Experimental Insights**

Author: **Ahmad Raza Bilal**, *Lahore Business School, The U. of Lahore*
Author: **Tehreem Fatima**, *Lahore Business School, The U. of Lahore*
Author: **Muhammad Kashif Imran**, *The Islamia U. of Bahawalpur, Pakistan*
Author: **Sobia Shabeer**, *U. of Gujrat, Pakistan*

The rising importance of entrepreneurial psychological training is witnessed in the current era. This study aims to test the impact of individual entrepreneurial orientation (IEO) training on small business owners' IEO behaviour, career resilience, and career success (financial attainment, satisfaction, and achievement) via a 4-wave randomized controlled field experiment (T0= at the time of training, T1: 6 months after training, T2:1 year after training, and T3: 2 years after training); of 527 small business owners (training group=256, control group=271) in Pakistan. In addition, this study has evaluated the outcomes of IEO training via a serial mediation model including IEO behaviour and career resilience. The findings have unpacked that IEO training enhances small business owners' career success through the development of IEO behaviour and career reliance.

Gender Diversity and Entrepreneurial Outcomes

Session Moderator: **Jannis Von Nitzsch**, *TUM School of Management, Technical U. of Munich*

ENT: **The Yin and Yang in the Angel Market: Angel Group Gender Diversity and Investment Performance (WITHDRAWN)**

Author: **Jianhong Chen**, *U. of New Hampshire*
Author: **Wan-Chien Lien**, *National Yunlin U. of Science and Technology*
Author: **Jeffrey Edward Sohl**, *U. of New Hampshire*

In this study, we examine whether and when angel group gender diversity influences investment return. Drawing on the information processing perspective and social role theory, we argue that gender diversity will provide information and social benefits for angel groups, facilitating superior return. We further examine two sets of contingencies in this relationship: task contexts (angel group structure and geographic scope) and social contexts (overlapped co-working experience and male vs female dominated industries). Using a longitudinal sample of 201 angel groups over 11 years from 2010 to 2020, we find that angel group gender diversity is positively related to investment performance. Moreover, this relationship is stronger when angel group structure is loosely structured, angel groups have a broad geographic scope of investments, and angel groups have a higher percentage of portfolio ventures in men-dominated industries. Our study makes contribution to the angel research and the broad field of entrepreneurship by being one of the first studies to link angel group gender diversity to investment return.

ENT: **Owners' Gender Composition and Firm Growth in Small and Medium-Sized Enterprises**

Author: **Jannis Von Nitzsch**, *TUM School of Management, Technical U. of Munich*

While the controversially discussed female underperformance hypothesis posits lower performance of female entrepreneurs, management scholars identified business teams characterized by a gender mix to often exhibit superior performance. Thus, the relation between the gender composition of private firm owners (or entrepreneurial teams) and their firm's performance is far from clear. However, surprisingly, entrepreneurship scholars rarely focused on the group level when studying the effect of female involvement on firm performance. To fill this void, we study how the gender composition of the owners of private, entrepreneurial firms influences firm growth—the most important organizational indicator of performance for such firms. Employing a sample of 22,008 Italian, French and Spanish private firms, we provide evidence that an increase in shares held by female owners is associated with decreased growth rates, and that this effect is mitigated with an increasing number of owners. Importantly, we show evidence that this effect is idiosyncratic to firm growth as opposed to performance in general. Our findings make important contributions to the literature on entrepreneurship, and emerging literature on the strategic role of owners in a firm's performance and value creation.

ENT: **Gender, Entrepreneurship and the Structuring of Employee Compensation**

Author: **Jeroen Neckebrouck**, *IESE Business School*
Author: **Kimberly A. Eddleston**, *Northeastern U.*

Taking a social constructivist view of gender, we propose that how founders structure employee compensation in their ventures and how their employees respond to changes in compensation are expressions of gender that reflect their view of the employer-employee relationship. Using a matched, longitudinal dataset of 1,367 male- and female-founded ventures, we find substantial support for our theorizing. Male founders structure employee compensation to vary with firm performance and, in turn, their employees respond to increases in compensation with greater labor productivity, particularly as their workforce is comprised of more men. In contrast, employee compensation varies less with firm performance and employees' productivity is less dependent on employee compensation in female-founded ventures. Thus, we demonstrate a 'female-style' of management that is reflected in the employer-employee relationship.

ENT: **Private Firm Responses to Changing Public Investor Sentiment: Gender Diversity on Boards**

Author: **Martin Kenney**, *U. of California, Davis*
Author: **Melissa Mongan**, *U. of California, Davis*
Author: **Don Patton**, *U. of California, Davis*
Author: **Siri Ann Terjesen**, *Florida Atlantic U.*

In the last decade, the lack of gender diversity in entrepreneurship has received enormous popular press and academic research attention. Remarkably little is known about the changes in gender diversity in entrepreneurship. The IPO is a particularly interesting moment in an entrepreneurial firm's evolution, as its governance changes from a private one within which a small group of venture capitalists (VCs) with their beliefs about what a good management team is provide capital and vet, monitor, and guide the firm's growth to a public firm with institutional investors. We suggest that the VCs through decades of enormous financial success developed a mental model of a "good investment" that, particularly, in the information and communication technologies (ICT) values "tech bro". In this mental model, there is little "space" for women. We suggest that this model continues to dominate in ICT investing. While the tech bro model was highly celebrated in the 1990s, recently, the lack of diversity in ICT startup leadership is increasingly criticized by politicians and become a signal of inadequate governance. We use a database of entire population of 4,872 entrepreneurial firm IPOs from 1990-2020 to explore the changes in the gender composition of the ICT "tech bro" firms. To capture the clash between VC and institutional investor mental models, we compare the gender of individuals that were added to the firm immediately prior to the IPO to those with longer tenure in the firm. Our expectation is that the changes in the public investors' view of proper governance will show that personnel added immediately prior to the IPO will be more diverse than those with a longer tenure. Finally, to corroborate that this change is particularly salient in the ICT industry, we will contrast it with the university research-based biotechnology industry, which has not been the recipient of such criticisms.

Entrepreneurship Across Social Categories

Session Moderator: **Tenzin Yeshi**, *U. Bremen*

ENT: **"Systematic Literature Review on Refugee Entrepreneurship: A Context on the Current Research Status.**

Author: **Tenzin Yeshi**, *U. Bremen*

The refugee entrepreneurship study has piqued the attention of academicians and policymakers worldwide in recent years. Particularly, since 2015, the rate of research publications on the issue has increased dramatically due to the global refugee crisis. According to UNHCR global appeal figures for 2023, there are over 29.3 million refugees worldwide. Refugee entrepreneurship research is emerging, and many studies have been published in the last few years addressing relevant issues such as characteristics, intentions, motivations, networks, barriers, potentials, etc., but overarching literature reviews, particularly papers published in ranked journals, are not sufficiently considered. Thus, there is a pressing need for a comprehensive overview of refugee entrepreneurship studies. To fill these gaps, this study aims to conduct a systematic literature review to examine and classify the main contributions published on the refugee entrepreneurship research covering academic journal guide (AJG) ranked journals published until October 2022. Therefore, this study addresses two main research questions: What are the research studies carried out under refugee entrepreneurship studies? How do the studies on refugee entrepreneurship evolve? Building on the 40 academic journal guide (AJG) entrepreneurship-ranked journals, this study acknowledges that there has been a significant increase in publications on refugee entrepreneurship studies in top-tier entrepreneurship journals in recent years. Moreover, the initial finding identifies that the literature on refugee entrepreneurship studies now proceeds toward the potential and embeddedness, particularly through increased local collaboration and incubation programs that enhance refugees' entrepreneurial performance in the host country. It further lays a roadmap for future research direction on refugee entrepreneurship.

ENT: **Are Underdog Entrepreneurs Less Generous? The Role of Social Trust and Gender**

Author: **Juelin Yin**, *Sun Yat-Sen U.*
Author: **Jiaxin Zhao**, *School of Business,Sun Yat-sen U.*

Entrepreneurs' status is increasingly recognized as an important factor in entrepreneurial decision-making. Different with prior studies focus on entrepreneurs with high-social-status, recently, we focus on underdog entrepreneurs and investigate how low social status resultant from entrepreneurs' prior occupation affects their social decision-making. Building on insights from social role theory and social trust literature, this study enriches this line of research by investigating the influence of regional social trust on underdog entrepreneurs' philanthropic engagement. Using data from Chinese privately owned firms, we find a curvilinear relationship (U-shaped) between regional social trust and their philanthropic engagement among underdog entrepreneurs. In addition, considering gender role incongruity, we find that male role strengthens the curvilinear relationship (U-shaped) between social trust and underdog entrepreneurs' philanthropic engagement. The above results not only highlight the important role of social trust as a critical component of informal institutions in underdog entrepreneurs' philanthropic decisions but also reveal the boundary conditions of the social trust—underdog entrepreneurs' philanthropic behavior linkage from the combined effects of entrepreneurs' social and gender roles.

ENT: **What is Good Enough For me is Nor Good Enough for you: Life Course and Refugee Entrepreneurship**

Author: **Ali E. Ahmed**, *Warwick Business School*
Author: **Deniz Ucbasaran**, *U. of Warwick*
Author: **Gabriella Cacciotti**, *Baylor U.*

Although research has shown that entrepreneurship can build psychological resilience in the aftermath of adversities, this emerging work is still to account for the differences in adversity experiences between individuals. This study examines how these differences can shape the extent to which entrepreneurship can build resilience in the aftermath of adversity through a qualitive investigation of the life stories of 51 refugee entrepreneurs in Egypt. We found that different trajectories of adjustment unfold in light of engaging in entrepreneurship, not all of which indicate resilience. These trajectories are shaped by the pre-migration life of the entrepreneurs in conjunction with their adversity appraisal. The study reveals key boundary conditions of studying resilience in management studies, and it shows how entrepreneurial activity can emerge after multiple adverse events. It also responds to calls for elaborating the dark side of resilience.

ENT: **Social Class Origins and Entrepreneurship**

Author: **Anna-Lena Rönnert**, *U. of Hohenheim*
Author: **Leif Brändle**, *U. of Hohenheim*

There is a renewed interest in social class research among management scholars. Yet, the emerging research on social class origins in entrepreneurship is fragmented across layers of abstraction and disciplines. To synthesize existing literature, we develop a systematic integrative review and explore how different dimensions of social class origins interplay in forming entrepreneurial outcomes. Based on 159 articles, we identify four mechanisms in the current literature (i.e., Role Modeling, Social Support, Resource Mobilizing, and Skill Transformation) that explain how social class origins translate into entrepreneurial outcomes. Additionally, our framework yields two pathways of Imprinting and Emancipation, which indicate how family backgrounds translate into social closure or social mobility. Our framework contributes to an integrative perspective of social class origins in entrepreneurship and shows opportunities for future contributions.

Strategic Behaviour in Family Firms

Session Moderator: **Chengcheng Xia**, *Shanghai Jiao Tong U.*

ENT: **Congruence Effect of Family Member Ratios of the Board and Management on R&D**

Author: **Hengyuan Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Chengcheng Xia**, *Shanghai Jiao Tong U.*
Author: **Lina Zhu**, *East China U. of Science and Technology*
Author: **Hanqing Chevy Fang**, *U. of Missouri / Rolla*

Given the ubiquity of family members in family firms' governance structures, this study articulates how the idiosyncratic interplay between family and nonfamily members within the board and management affect the presence of agency issues and further research and development (R&D) investments. Invoking the congruence framework, the authors elucidate that the congruence between family director ratio (FDR) and family executive ratio (FER) at high and low levels, indicating consistent family power in supervision and management, mitigates asymmetric altruism and principal–agent issues. By contrast, high-FDR low-FER incongruence leads to high principal–agent issues, whereas low-FDR high-FER incongruence arouses asymmetric altruism issues. Furthermore, the ownership structure that complements the governance mechanism induces principal–principal issues. Using Chinese listed family firms as an empirical background, the authors find that the congruence of FDR and FER can mitigate agency issues and thereby facilitate R&D investment. Moreover, high family ownership increases the positive effect of FDR–FER congruence. Explicating the interconnectedness of the three agency issues, the findings bring in-depth insights into family agency problems and contribute to family R&D investments.

ENT: **Values and Internationalization of Family Firms: Insights From the Wine Industry**

Author: **Barbara Maggi**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Francesco Debellis**, *U. of Vienna*
Author: **Salvatore Sciascia**, *LIUC U. Cattaneo, Castellanza (VA), Italy*

This study investigates how values affect family firm internationalization. Coherently with the exploratory nature of this study, we adopt a qualitative research design based on a comparative analysis of two case studies. In particular, we focus on two Italian family firms both founded in 1880 and operating in the wine industry, a sector where values such as the connection with the original terroir have a fundamental relevance. Our findings thus show how firm strategic choices related to internationalization can be traced back not only to different values, but also to a different interpretation and implementation of the same values by the owning family. By identifying four types of values (i.e., product quality, legacy with the territory, family harmony and time orientation), our study advances current understanding of the link between values and family firm internationalization.

ENT: **The Influence of Digitalization on The Family Firm Business Model**

Author: **Donella Caspersz**, *U. of Western Australia, UWA Business School*
Author: **Pi-Shen Seet**, *Edith Cowan U.*
Author: **Mare Stevanovski**, *U. of Western Australia*

How will the family business model continue given the disruptions that using digitalization may have on their business model? This paper discusses this question by exploring the influence of digitalization drawing on a fifth-generation family business. We found that while digitalization shifts the processes of value creation and value capture in the business, paralleling these were shifts in the family's affective wealth. These shifts guided the decisions they made about the business transitions as a result of digitalization. We subsequently develop a process model and highlight a feedback loop between the family's affective wealth changes and business transitions as a result of the influence of digitalization of the business. The paper contributes to knowledge about changes in family business models given the future of work.

ENT: **Dominant Strategy in Related Diversification and Family Business**

Author: **Hanqing Chevy Fang**, *U. of Missouri / Rolla*
Author: **James J Chrisman**, *Mississippi State U.*
Author: **Esra Memili**, *U. of North Carolina, Greensboro*
Author: **Zhiyong Yang**, *Miami U. Ohio*

Drawing upon the behavioral theory of the firm with a focus on family firms' propensities (i.e., personalism, particularism, and parsimony) (Carney, 2005), we compare publicly-traded family and non-family firms in terms of applying a dominant strategy across related multiple business units, also the reinforcing effects of family management on the link between the dominant strategy and firm performance among family firms. By analyzing S&P 1500 firms between 1996 and 2013, we find that family firms, especially those with substantial family ownership also managed by family members, are more likely to use a dominant strategy and also benefit from doing so across related multiple business units. We also discuss the theoretical implications and future research directions.

ENT: **Fooling Investors by Paying them More? The Role of Proxy Advisors in Listed Family Firms**

Author: **Laura Jimenez**, *IE U. - IE Business School Madrid, Spain*
Author: **Cristina Cruz**, *IE Business School*
Author: **Claudia Imperatore**, *Bocconi U.*

We counter previous speculations suggesting that Proxy Advisors (PAs), information intermediaries that enable shareholders to exercise their voting rights, play a limited role as external monitors in listed family firms as these firms have strong internal monitoring capabilities. To do so, we look at dividend payout, a mechanism implemented by firms to reduce investor´s dissent. We theorize that family firms that pay high dividends have lower investor´s dissent compared to nonfamily firms. Nevertheless, we hypothesize that when the PA suggests voting against the Board recommendation (what we call PA-Board conflict), the effectiveness of dividend payout in reducing investor´s dissent would be reduced in the case of family firms, as the "PA-Board conflict" raises investors suspicion about the potential risk of expropriation they may be facing. Using Fortune 1000 firms between 2011-2017, our hypotheses are supported, and we conclude that investors in listed family firms trust PAs as external monitors.

Social Identity in Entrepreneurship

Session Moderator: **Tatiana Zabara**, *U. of Fribourg, Switzerland*

ENT: **Founder Social Identity Formation: An Empirical Study into the Role of Values and Prior Experience**

Author: **Tatiana Zabara**, *U. of Fribourg, Switzerland*
Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*
Author: **Ganqi Tang**, *U. of Fribourg*

Despite the growing interest in social entrepreneurs, we still know very little about who these individuals are and what drives them in pursuit of their social goals. This may be attributed to the fact that there is no agreed definition or scope of what constitutes a social entrepreneur. Building on the social identity framework, we (1) distinguish between entrepreneurs who act out of consideration for others (pro-others) vis-à-vis those whose primary concern is economic self-interest (pro-self) based on their identity type, and (2) examine how these identity types emerge, i.e., how they are influenced by the founders' prior experience and personal identity, defined as their personal values. We argue that due to the greater prototype clarity of the profit-driven entrepreneurs' identity that is engrained in the traditional view of an entrepreneur, the pro-self archetype is best predicted by the founders' prior experience, but not by values. In contrast, due to the high prototype ambiguity, the socially driven identity archetype is best explained by the founders' personal values, but not by prior experience. We test our hypotheses on a sample of 110 early-stage entrepreneurs founded in Switzerland after 2017 and find general support for our hypotheses suggesting that prior experience and personal identity infuse founder identity differently depending on the clarity of the corresponding identity prototype.

ENT: **Tackling Community Resistance to Entrepreneurial Identities**

Author: **Stella Seyb**, *Neeley School of Business - Texas Christian U.*
Author: **Trang Dinh**, *Hanken School of Economics, Finland*
Author: **Dean Shepherd**, *mendoza*
Author: **Joakim Wincent**, *Luleå U. of Technology*

Despite entrepreneurs' desire for social identities that both feel and appear authentic, and substantial between-actor disagreement about what it means to be authentic, there has been little research on the role of authenticity in social identity development. We address this gap in the context of individuals with rural backgrounds who faced significant community opposition when they returned home to develop a new entrepreneurial social identity. We develop an authenticity-based framework of identity development using interview data from 70 entrepreneurs and community members in rural Vietnam. Our findings illuminate discrepancies between entrepreneurs' and community members' views of authenticity and provide insights into how entrepreneurs might resolve these tensions. We extend previous work integrating authenticity-as-consistency and authenticity-as-conformity (e.g., O'Neil et al., 2020). Specifically, we find evidence of authenticity-as-connection and theorize on its importance as a bridging mechanism for stepwise alignment of authenticity assessments of entrepreneurs and their communities. Further, we demonstrate how conformity- and consistency-based authenticity each have both positive and negative effects on social identity development and entrepreneurs' ability to overcome community resistance. While much of the literature assumes actors' assessments of authenticity are reasonably uniform and stable over time, our authenticity-driven framework illustrates the benefits of relaxing these assumptions, advancing understanding of the role of authenticity assessments in both causing community resistance and helping entrepreneurs overcome it.

ENT: **Race, Status, and Entrepreneurial Intentions**

Author: **Ambra Mazzelli**, *SKEMA Business School*
Author: **Robert Nason**, *McGill U. - Desautels Faculty of Management*

Drawing on social identity theory, we examine the role of race in entrepreneurial entry intentions. We argue that the appeal of entrepreneurship for a specific racialized group is likely to be conditional upon the perceptions of "entrepreneur" as a status-enhancing social identity, which, in turn, is affected by racial participation in the entrepreneur social category. We undertake three experimental studies to examine how these mechanisms play out in US racialized groups' entrepreneurial entry intentions. We find that the likelihood to consider entrepreneurial entry differs between US Black and Latinx individuals as the portrayal of the racial composition of entrepreneurship is manipulated (i.e. exclusively White vs. involving in-group race members). Latin-American participants' entrepreneurial intentions are stronger when entrepreneurship is portrayed as associated with White individuals. In contrast, we find that African-American participants' entrepreneurial intentions are stronger when entrepreneurship is associated with ingroup peers, the type of entrepreneurship is associated with high socioeconomic status, and the structural barriers between racial groups are permeable. Overall, our theory draws attention to the importance of racial stratification to explain the varying appeal of entrepreneurship.

ENT: **Inclusion or Exclusion?: An Intersectional Analysis of the Cannabis Industry**

Author: **Heather-Jean MacNeil**, *Northeastern U., D'Amore-McKim School of Business*

Through an investigation of the emerging Massachusetts cannabis industry, this study examines how social identity shapes entrepreneurship in a new industry context. By applying an intersectional framework, this work shares insights into how both systems-level power structures and identity influence venture development, ultimately identifying factors that contribute to, and detract from, entrepreneurial inclusion. This work directly builds on the intersectionality scholarship by illustrating how new majority entrepreneurs are challenged by interlocking and nested systems of power across the interpersonal, structural, disciplinary, and hegemonic domains. Through this multi-level analysis, this study raises awareness to the impact of race and gender on the interwoven requirements of early-stage entrepreneurship, including priority and social status, the acquisition of real estate, knowledge, and financial and cultural capital. Despite these challenges, study participants are driven by an activist identity and a desire to build this growth industry into a diverse and equitable playing field.

Multi-Level Theory and Practice on Institutions and Entrepreneurial Ecosystems

Organizer: **Fei Qin**, *School of Management, U. of Bath*
Organizer: **Tomasz Marek Mickiewicz**, *Aston Business School*
Panelist: **Per Davidsson**, *Jönköping International Business School*
Panelist: **Victor Martin-Sanchez**, *U. of Southern Denmark*

Multi-level analysis enables us to avoid both the ecological fallacy (drawing conclusions about individuals based on macro level data) and compositional fallacy (drawing conclusions at macro level from individual data). Multi-level modelling, connecting macro- meso- and micro-levels, is particularly useful when applied to entrepreneurship ecosystems and institutions seen in a comparative or international perspective. The purpose of this panel symposium is to engage a group of panelists in a timely, interactive discussion on multi-level theories and practice on institutions and entrepreneurship ecosystems. Centering around a coherent, common theme of multi-level theorization and analysis of institutions and entrepreneurship ecosystems, the panelists will draw from each of their own work and speak on a number of interrelated and complementary topics, including theorization and operationalization of institutional context in entrepreneurship and IB research, institutions and agency in entrepreneurship, the role of meso-level in multilayered structures of entrepreneurship ecosystems, institutional configurations that promote or damper internationalization patterns of start-ups, and country-level institutional conditions and individual-level entrepreneurship dynamics.

Corporate, Industrial And Wicked Acceleration: Tackling Grand Challenges Through Novel Approaches ☯ ✈

Moderator: **Cristobal Garcia Herrera**, *Imperial College Business School*
Panelist: **Sheryl Winston Smith**, *BI Norwegian Business School*
Panelist: **Jana Thiel**, *ETH Zürich*
Panelist: **Markus Perkmann**, *Imperial College London*
Panelist: **Ferran Giones**, *U. of Stuttgart*
Organizer: **Andreas Leubner**, *TUM School of Management, Technical U. of Munich*

Entrepreneurial ventures drive disruptive innovation and industrial change in many industries, requiring deft responses and anticipatory innovation from corporates. A burgeoning approach by which incumbent firms can react to or potentially tap into entrepreneurial ventures' innovative potential is through Corporate Accelerator Programs (CAP). Yet, many CAPs fail, and extant research provides limited understanding of how incumbents can effectively harness innovation through these novel corporate-start-up engagements that go beyond traditional approaches like acquisitions and alliances. This panel symposium will highlight the ongoing state of research on distinct types of accelerators (with a focus on corporate-backed ones), the current tools deployed for experimentation and scaling as well as their shortcomings to address disruption and wicked problems across industries. We will extend our understanding of different acceleration modalities, including corporate accelerators, industrial consortia, moonshot, and wicked acceleration, and suggest ways for developing new and existing theories using the CAP context. Our panel of leading scholars and practitioners will share their views on how innovation and entrepreneurship theory relate to CAPs, how CAPs are distinct from conventional approaches to firm innovation and industrial change, and how academic research can contribute to a better design, management, and impact of CAPs in the face of disruption and grand challenges. This panel symposium builds on the prior successful AoM Annual Meeting Symposium, with new and returning panelists, industry practitioners, and cutting-edge research. This distinctive panel symposium will be of great interest to the STR, TIM and ENT Divisions.

Panelist: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Panelist: **Siobhan O'Mahony**, *Boston U.*
Panelist: **Tiona Zuzul**, *Harvard Business School*

This Symposium sheds new light on entrepreneurial pivoting from key theoretical and methodological perspectives. Pivoting is a critical activity that many emerging organizations undertake but often ends in failure. Bringing together leading scholars, this Symposium explores (1) the triggers of pivoting, (2) core organizational pivoting processes that span levels of analysis (identity, legitimacy, and ecosystem management), and (3) the process methods that enable scholars to study pivoting in a fine-grained, longitudinal manner. The session will start with an introduction to the frontiers of pivoting research, and then feature insights from each of the panelists, followed by an integrative Q&A discussion session with the audience. The Symposium intends to inspire lively intellectual discussion and equip scholars to advance the nascent research on the important but understudied phenomenon of entrepreneurial pivoting. By advancing scholarship on the process of pivoting, we also hope to inspire further research on the processes by which new ventures become fully- fledged organizations that contribute to resilient societies.

HCM: **The Harmony of Creativity and Standardization in High-Stakes Work: Lessons from the Bedside in ICUs**

Author: **Yuna Lee**, *Columbia U.*
Author: **Robert Litchfield**, *Washington and Jefferson College*
Author: **Lucy L. Gilson**, *U. of New Hampshire*

Resolving how to be creative amid standardization is frequently part of the professional work experience. Yet, few studies have examined how workers harmonize the relationship between creativity and standardization, and the individual, team, and organizational factors that facilitate this balance. Nowhere is the pressure between creativity and standardization more consequential than in hospital intensive care units, where decisions can have life-or-death outcomes. In this study, we conduct 60 in-depth interviews with intensive care unit professionals of differing roles, tenures, and specializations, in six intensive care units in a large hospital system. This hospital system explicitly aims to simultaneously lead in both standardization and innovation. Our inductive, grounded theory approach identified three types of harmony between creativity and standardization: a system-driven type we label agitated jazz, a phenomena-driven type we term revise and remix, and a theory-driven type we call compositional mastery. While professionals mix these types differently as they gain latitude at work and based on the culture created by leadership, all types continue to be utilized to some extent at all levels of experience. A repertoire of different ways to manage creativity and standardization offers a variety of pathways for units to achieve innovations resulting in patents, grants, and new definitions of best practices while maintaining a high quality of care, but did result in tradeoffs that likely led to higher costs of care. This work provides a new way of understanding creativity and standardization as complementary, with implications for how managers and organizations can foster harmony between the two to foster innovation, well-being, and social impact.

HCM: **A Mixed-Methods Study of Patient and Care Provider Expectations for Health Care Relationships**

Author: **Cheryl Rathert**, *Saint Louis U.*
Author: **Jessica N. Mittler**, *Virginia Commonwealth U.*
Author: **Timothy J. Vogus**, *Vanderbilt U.*
Author: **Yuna Lee**, *Columbia U.*

Therapeutic connections (TC) between patients and providers are foundational to patient-centered care co-produced between patients and care providers. This necessitates that we understand what patients expect from TCs, the extent to which providers know what patients expect, and what providers expect. The purpose of this study was to examine nine TC dimensions and determine which are most important to patients, which dimensions providers believe are most important to patients, and which are most important to providers. An online survey of patients (n=388) and care providers (n=433) was conducted in the USA. Respondents rated the extent to which the nine TC dimensions were important to them, followed by open-ended questions to expand upon what matters. The quantitative responses were rank-ordered and rankings were compared across groups. All groups ranked “doing what is best for the patient no matter what” as the top expectation. Patients also ranked caring commitment and being “on the same page” as highly important. Providers were relatively accurate in ranking what they believed was most important to patients. Respondents affirmed the TC elements in the qualitative results, adding nuance and context, such as feeling “heard” and providers that go “above and beyond.” Providers ranked dimensions differently for themselves, prioritizing full presence and emotional support. This study is among the first to examine expectations for TC. TC could play an explanatory role in understanding variation in patient experience ratings and other outcomes.

HCM: **Using Innovation Contests to Increase Employee Voice: A Field Experiment in Community Health Centers**

Author: **Olivia Jung**, *UCLA*

By definition, employee voice is informal, discretionary, and status-quo challenging; speaking up entails sharing unsolicited improvement-oriented suggestions face-to-face or using direct communication mechanisms, rather than formal ones. Because of this definition, the attention given to studying social antecedents and consequences of voice has far outweighed the attention given to studying the role of formal, structured channels on voice behavior. This begs the question: Can formal structures and processes that invite employee input cultivate informal voice behaviors? Addressing this question is important as employees likely use both formal and informal channels to voice ideas. This study presents findings from a field experiment which examined the causal effect of implementing innovation contests, a formal channel and opportunity for employees to voice ideas, on employees’ informal voice behavior. For this experiment, I recruited 54 community health centers (CHCs), which are primary care clinics that serve an underserved area in the United States. Half of the randomly assigned CHCs implemented innovation contests as an organizational intervention. Based on my analytic sample of 3,343 employees, I find that innovation contests increased informal voice behaviors (reported by supervisors) by 9%. This effect was more pronounced among support staff (e.g., medical assistants, nurses, receptionists), as they may find speaking up to be especially difficult and risky. These findings advance new perspectives on voice that simultaneously examine formal and informal mechanisms for soliciting employee input and also on open innovation that considers downstream, spillover effects of opening up the innovation process on employee behaviors in organizations.

HCM: **Workload and Errors: Utilizing Data Collected Through Sensors in an Outpatient Cancer Facility**

Author: **Eitan Naveh**, *Technion Israel Institute of Technology*
Author: **Noa Nissinboim**, *Technion - Israel Institute of Technology*
Author: **Ryan Leib**, *Fred Hutch Cancer Center*
Author: **Jessica Cleveland**, *Dana-Farber Cancer Institute*
Author: **Partha Das**, *DaVita International*
Author: **David Frank**, *Winship Cancer Institute*
Author: **Craig Bunnell**, *Dana-Farber Cancer Institute*
Author: **Sara Singer**, *Stanford U.*

Errors, an everyday concern in virtually all organizations, are occasionally attributed to heavy workload. In this paper we re-examined the relationship between workload and errors. While it is usually assumed that heavy workloads lead to increased frequency of errors, we explore the counterintuitive experience of diminished error rates in such work conditions. In the absence of an acceptable theoretical explanation, this is commonly attributed to a measurement flaw in the form of incomplete or diminished error reporting. We draw on a new and advanced sensor-based data collection method, usually employed for inventory purposes, to locate individuals in order to test an alternative explanation. The results are based on real-time location data of 53 staff members and a daily average of 321 cancer patients, collected by 1,000 sensors every three seconds throughout a two-year period in six infusion units in one outpatient cancer facility. The resulting data are integrated with a second data set of patients' scheduled appointments and a third data set of error reports for the same period of time. This allows us to show that the nurses' positive adaptive behavior during periods of heavy workloads leads to a valid process improvement that diminishes the error rate in such situations. In addition to contributing to our understanding of the workload-error relationship, this paper demonstrates an empirical example, so far rare, of the use of powerful new data collection technologies in operations management.

HCM: **Speaking up in Healthcare: Collective Ethos and Voice Politics**

Author: **Senia Kalfa**, *Macquarie U.*
Author: **Amrita Gautam**, *Macquarie U.*
Author: **Lucy Taksa**, *Deakin U.*

In this paper we examine employee voice in a private healthcare setting. Through 28 in-depth interviews with perioperative nurses, accredited practitioners (surgeons and anaesthetists), and hospital administrators we explore the drivers of speaking up in healthcare and the tactics that healthcare workers use to get their voices heard. We find that a collective ethos drives speaking up in hospitals, one that is largely informed by a duty of care to the patient, workers' professional identities as craftspeople or patient advocates, and long-term, close working relationships. Our evidence suggests that voice is inherently a political move, one that entails the mobilisation of power and resources. In contrast to research that views politics in a negative light, we argue that engaging in politics enhances the likelihood that one's voice will be heard. Sources of power in our data include the freedom to exit the organization and relational sources, such as using more powerful actors to act as one's voice advocate. Finally, we draw attention to the tactics used when speaking up and highlight the issue of timing which is somewhat neglected in existing research. Overall, our findings illustrate that a political lens to voice is a fruitful avenue for further research.

HCM: **Cultural Diversity in Healthcare Teams: Review and Research Agenda**

Author: **Manuela Schmidt**, *Kristianstad U.*
Author: **Magnus Berndtzon**, *Jönköping Region*
Author: **Timur Uman**, *Jönköping International Business School*

Team-based work is considered key to improving the quality of national health systems, yet adverse events in relation to teamwork account for up to a third of all incidents. Teams in healthcare are typically multi-professional and diverse in many dimensions, with cultural diversity being one of the biggest challenges. The objective of this systematic integrative literature review is to analyse the literature to better understand the impact of cultural diversity in healthcare teams on team processes and team and patient outcomes. The study also explores the conditions that enable or hinder team functioning. The results of the review based on 43 articles suggest that cultural diversity threatens to have a negative effect on team processes, team performance, team climate, and patient safety, both directly and indirectly. Culturally sensitive leadership, cultural training, open and transparent procedures appear to mitigate issues associated with cultural differences in healthcare teams. Based on these findings and utilizing SWOT, we identify strengths and weaknesses as well as future research opportunities and threats to the field's future development.

HCM: **Relationships Between Patient Safety Culture and Performance on CMS Value-Based Purchasing Metrics**

Author: **Pejmon Noghrehchi**, *The Ohio State U. College of Public Health*
Author: **Jennifer Hefner**, *Ohio State U.*
Author: **Daniel M. Walker**, *Ohio State U.*

As patient harm persists within the U.S. healthcare system, it remains critical to evaluate the effectiveness of patient safety efforts and related health policy initiatives. The purpose of this study was to explore the relationship between hospital perceptions of patient safety culture and performance on CMS Hospital Value-Based Purchasing (HVBP) metrics. Our work is guided by an adapted logic model mapping the impact of public policy changes on the relationship between patient safety culture and hospital performance. The cross-sectional study design used three secondary datasets: the Hospital Survey on Patient Safety Culture, the American Hospital Association annual survey, and the Hospital Compare data from CMS. We used two multivariable linear regression models to examine the relationship between organizational perceptions of patient safety culture and hospital performance. We found a positive association between overall perceptions of patient safety and a hospital's total performance score (TPS) ($b = 15.78$, $r < 0.1$), and a positive and significant association between patient safety grade and TPS ($b = 16.66$, $r < 0.05$). We additionally found a positive association between both overall perceptions of patient safety and patient safety grade with the patient and community engagement TPS domain. Our findings suggest that higher performance on CMS quality metrics is contingent on healthcare managers' ability to foster a culture of patient safety within their organization. Our findings offer additional insights to help guide the future of the CMS HVBP program as motivators of patient safety.

HCM: **Organizational Routines in Healthcare: A Systematic Scoping Review**

Author: **Nadine Boesten**, *PhD candidate Vrije U. Brussel*
Author: **Leen Ackaert**, *U. Ghent*
Author: **Sem Van Belleghem**, *Sem Vanbelleghem*
Author: **Selien Vancaillie**, *Ghent U.*
Author: **Melissa De Regge**, *Ghent U.*
Author: **Vincent Peters**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

This paper provides a systematic scoping review to map existing literature on organizational routines in healthcare and discover knowledge gaps and opportunities for further research. We identified 43 studies, proving that organizational routines as theoretical framework in healthcare has gained interest over the years. The data extracted from the studies differ in terms of which aspect of organizational routines is investigated, the setting, the type of intervention or subject and the research design. Further research on organizational routines studying the interactions between different organizational routines or networks of organizational routines is recommended.

HCM: **Birds of a Feather, Not Always Better: Heterogeneity in Organizational Culture as a Resource**

Author: **Maike Vanessa Tietschert**, *Vrije U. Amsterdam*
Author: **Hassina Bahadurzada**, *Harvard Business School*
Author: **Michaela Kerrissey**, *Harvard U.*

In health care, aligning organizational culture is considered vital, yet empirical evidence of this strategy's effectiveness remains limited. Given the multidisciplinary context of healthcare, the value of cultural alignment may be limited if perceptions of culture vary across organizational members for good reasons. However, past research has focused on describing culture as the average set of values and norms (i.e., cultural content) and has not deeply explored the (dis)advantages of (dis)agreement on values and norms among organizational members (i.e. cultural structure). This study measured both cultural content and structure (conceptualized as heterogeneity in culture perceptions) in a large healthcare system across 26,314 workers and associated cultural measures with outcome measures of perceived care quality, intent to stay and manageable job stress. We found substantial heterogeneity in perceptions for multiple culture types. Cultural heterogeneity measures were highly significant predictors of all outcomes, but not in uniform ways. Heterogeneity in culture types emphasizing core organizational values associated negatively with outcomes, while heterogeneity in culture types relating to organizational practices associated positively with outcomes. Cultural content also associated significantly with outcomes, though less consistently. Our findings have implications for studying and leveraging culture in health care, particularly highlighting the importance of addressing heterogeneity.

HR Strength and HR Implementation

Session Moderator: **Evelina Gillard**, *Vrije U. Amsterdam*

HR: **Human Resource Management Strength: Its Sources, Processes, and Outcomes**

Author: **Evelina Gillard**, *Vrije U. Amsterdam*
Author: **Susanne Beijer**, *Vrije U. Amsterdam*

The concept of human resource management strength has attracted considerable interest in recent years due to its promise to facilitate organizational performance. However, mixed results from empirical studies point to the need for a deeper conceptual clarification. This paper presents a systematic review of the human resource management strength that covers its sources, processes, and outcomes. It synthesizes existing literature to identify the literature streams on this construct, offer a crisper definition, and develops a conceptual integrative model of human resource management strength as organizational property. To conclude, this review proposes future research avenues and managerial implications.

HR: **Cultural Values as Predictors of Congruence between Employee and Supervisor HR Strength Perceptions**

Author: **Rakoon Piyanontalee**, *Penn State U.*
Author: **Elaine Farndale**, *Penn State U.*
Author: **Dorothea Roumpi**, *Pennsylvania State U.*
Author: **Gaye Özçelik**, *Istanbul Bilgi U.*
Author: **Dorra Yahiaoui**, *Kedge Business School*

Since employee perceptions of human resource management (HRM) can differ from their manager's perception, it is important to study both sources of perceptions along with their degree of congruency. While countless studies exist on the role of congruency as predictors of employee attitudes and behaviors, few have been conducted on congruence as outcomes in general. Furthermore, none has examined the antecedents of congruency in the context of HRM. We overcame fundamental limitations of congruence research by using a novel methodological approach – the Directional and Nondirectional Differences (DNDD) framework. The current study contributes to the HRM process literature by exploring the antecedents of congruence between employee and supervisor perceptions of "strength" in the HRM system. Incorporating data from 782 employees and 244 supervisors across six countries, our results provide nuanced insight into the nature of congruency between employee and supervisor perceptions of HR strength. Specifically, we showed how the level of agreement between these two perceptions as well as their shared and unique variations can be predicted based on the cultural values of employees.

HR: **Managing the Tension Between Intended and Implemented HRM Practices: Line Managers' Job Crafting**

Author: **Ai Yu**, *U. of Southampton*
Author: **Qi Wei**, *Kingston U.*

Line managers have been acknowledged as key actors who implement human resource (HR)-related initiatives designed by organizational directives in the devolvement of human resource management (HRM) duties to the line. While existing literature explains 'why' the tension between intended and implemented HR practices exists, and even persists, little is known about 'how' line managers make changes to their HRM responsibilities and roles to handle this tension. Using a job crafting lens, we conducted 43 interviews with line managers in two pharmaceutical multinational corporations (MNCs) in China, complemented by secondary data, to demonstrate the different patterns of their job crafting practices, which made their HRM responsibilities and roles more bearable. Our study contributes to the HR devolution literature by emphasizing the 'how' questions of HR implementation without assuming tension resolution is necessary, let alone positive. Instead, we argue that line managers' HR implementation should be understood as job crafting shaped by the dynamic interplay between agentic capacity and contextual configurations.

HR: **Employees' Perception of HRM Systems and Turnover Intention**

Author: **SANG HOON HAN**, *The Ohio State U. Fisher College of Business*
Author: **Howard Klein**, *The Ohio State U. Fisher College of Business*

This study investigates how personal and environmental factors interact with human resource management (HRM) systems to affect employees' turnover intentions. A negative relationship between HIWSs and employees' turnover intentions is proposed based on the likely effects of HIWSs on turnover. Further, the moderating effects of age, gender, educational level, managerial status, and labor market conditions on the relationship between HIWSs and turnover intentions are suggested. These hypotheses were tested using a sample of employees of the U.S. Federal government agencies that participated in the Federal Employee Viewpoint Survey from 2006 to 2019. The results, based on mixed effect logit regressions, indicated that employees' experience of HIWSs had a negative relationship with their turnover intention, and the negative relationship was stronger for younger employees than for older employees and for those without managerial status than for those with managerial status. Moreover, the results showed that the negative HIWSs-turnover intentions relationship is potentially stronger when the labor market condition is unfavorable. The theoretical and practical implications were discussed based on the results, where the roles of HRM systems and their interaction with personal and environmental factors were emphasized. Keywords: High-involvement work practices; turnover intention; individual characteristics

Spotlight on Star Employees

Session Moderator: **Michelle C. Hong**, *North Dakota State U.*

HR: **Star Employees: Conceptualization, Scale Development, and Measurement Validation**

Author: **Michelle C. Hong**, *North Dakota State U.*
Author: **Elham Asgari**, *Michigan Technological U.*

The growth in sectors demanding highly productive individuals shows no signs of abating. Extant scholarship exploring the nexus between market dynamism and human capital almost unanimously propounds the importance of attracting and retaining star performers. Yet, a growing body of research suggests that the roles and impacts of stars are quite complex and that any meaningful assessment of the influence exerted by star performers requires deeper theorization and more sophisticated measurement tools. Stars have been defined, conceptualized, and measured inconsistently across literature, resulting in difficulties in identifying and interpreting their impact on organization-level outcomes. To address these maladies and enhance the intelligibility of the star construct, we develop and validate a parsimonious instrument to capture the multi-dimensionality of the construct. Our study indicates that the proper measurement of stars incorporates performance, status, visibility, and social capital. We discuss the implications and guidelines for using our scales in future scholarship.

HR: **Breaking from Orbit: Star Identification Drift Following Perceived Status Gain**

Author: **Matthew CB Lyle**, *U. of Colorado, Colorado Springs*
Author: **Rory Eckardt**, *Binghamton U.-State U. of New York*

While we understand how employees with and without professional status (i.e., profession-wide recognition as high performers) might behave and be retained, we have yet to theorize the near-term cognitive and behavioral changes associated with perceived professional status gain (PPSG). We thus develop a conceptual model of star identification drift, theorizing how PPSG – founded in the accrual of visible general human capital – increases professional identification while decreasing organizational identification, thus creating a desire to revise one's psychological contract in ways likely to spark exploratory job search. We then theorize a series of anchoring and unfastening effects whereby leaders and colleagues might revise, or perhaps further violate, the employee's psychological contract to increase / further diminish their chances of retaining them. We root this model in our development of the Affirmation and Reduction as Perspective (ARP) model, which holds that opportunities to affirm one source of identification will likely decrease others and provides several theoretical implications for strategic human capital and organizational behavioral scholars alike.

HR: **Clutch Performers**

Author: **Seth Carnahan**, *Washington U. in St. Louis, Olin Business School*
Author: **Lamar Pierce**, *Washington U. in St. Louis*
Author: **Xiaoli Tang**, *Bocconi U.*

There is a widespread belief that some employees exhibit the attribute of "clutch" or "anti-clutch" performance, consistently raising or lowering their performance in pressure-filled periods. We subject this lay theory to the first empirical test in typical firms, using over one million new automobile sales by 21,896 salespeople at 1,034 franchised dealerships. Salespeople in these dealerships regularly face high month-end performance pressure due to lucrative manufacturer sales targets. We first establish common belief in a lay theory of clutch performers using an online study, then employ multiple analytical techniques to show clutch and anti-clutch performers to be rare and of limited economic importance in our setting. Employees' average performance under pressure closely mirrors their low-pressure performance, with the few clutch performers that do exist having little economic importance to the firm and are unlikely to be identifiable to management. We conclude that the ability to respond to pressure is not a meaningful source of employee heterogeneity in our setting. Star salespeople are consistently stars, while average employees are consistently average. We caution researchers and managers against categorizing employees as "clutch performers" or "anti-clutch" performers, given the risk that anecdotal or small-sample performance differences under pressure might reflect random chance and not underlying employee value.

HR: **The Shades of Stardom: Stars in the Organizational Nexus of Practices**

Author: **Verena Timmer**, *Witten/Herdecke U.*
Author: **Erik Robert Strauss**, *U. of Witten/Herdecke*
Author: **Nadine Gerhardt**, *Witten/Herdecke U.*

Stars are extraordinary, highly performing actors who add tremendous value to an organization. However, managing stars is complex, creates dependencies, and challenges organizational routines because stars usually fall out of normal patterns of behavior. Based on a longitudinal case study in a growing IT consultancy, we explored how the consultancy restructured its organizational practices to utilize a star employee. Our results show how the organization restructured its routines by (i) deploying supportive actors and (ii) using supportive artifacts to promote the relational interaction of the star and provide better guidance for non-stars. Drawing on these findings, this study introduces a relational perspective on stars and the nexus of practices they are entangled in to emphasize the reciprocal influence on star performance. In a dynamic nexus of practices, to maintain performance is a result of the interplay between star and organization, the change in the star's tasks — e.g., from technical to managerial tasks — must be supported by organizational developments — e.g., when interaction with other actors becomes more important than the purely technical tasks. The findings also offer three practical insights: Managers (i) are encouraged to question whether the stars' extraordinary performance in some tasks outshines other tasks in which star employees struggle, (ii) need to question whether stars need (more) supportive actors and artifacts, and (iii) should reflect if non-stars can work with artifacts a star has developed.

Workforce Planning and Job Design

Session Moderator: **Dayoung Kim**, *Fox School of Business, Temple U.*

HR: **Work Schedule Unpredictability: How Last-Minute Schedule Changes Impact Workplace Behaviors**

Author: **Dayoung Kim**, *Fox School of Business, Temple U.*

In this paper, I explore the effects of an unpredictable work scheduling practice: last-minute schedule changes. Drawing upon psychological contract theory, I contextualize last-minute schedule changes as a psychological contract breach and identify two forms of last-minute schedule changes: hour additions and hour reductions. I argue that experiencing more last-minute schedule changes precipitates employees' feelings of psychological contract violation, and in turn, influences engagement in counterproductive work behaviors and that these two forms of last-minute schedule changes provoke employees' reactions differently. Further, I argue that schedule input functions as a moderator that weakens this effect. Results of a three-wave online survey suggest that experiencing more last-minute hour additions and reductions to one's work hours incites feelings of violation, which increases the likelihood of employees' engagement in counterproductive work behaviors. However, the conditional indirect effect was significant only for last-minute hour additions. Theoretical and practical implications are also discussed.

HR: **We're All in this Together! Job Crafting and Prosocial Behaviours Among Low-skilled Workers**

Author: **Sara Dotto**, *IAE Paris - Sorbonne Business School*

In today's world of work the awareness is increasing as for the importance of achieving well-being, to find meaning in one's job, and to cope with high workloads in an effective way. While this seems to be more easily achievable for highly skilled employees, it looks more difficult for low-skilled workers. Low-skilled workers are mostly employed in simple, routinary jobs, which don't offer much room for career progression, nor for finding motivation and realisation. Indeed, low-skilled workers face the risk of demotivation, stress, alienation (Bakker and Demerouti, 2017): consequently, the turnover is high. This can lead to an increased instability in job and precarity in life. In this paper, we focus on how low-skilled workers manage to engage in job crafting activities to cope with stress and to boost their motivation both at the individual and team level. We carried out our qualitative study conducting a participant observation (Spradley, 1980) among the warehouse workers in a manufacturing firm in France. Our observation was carried out in two periods: a calm and a more stressful one, to assess the differences between the two. In our study, we show how job crafting is largely present among low-skilled workers, with very constraining jobs, and we underline how helpful it is to reduce stress and cope with challenging moments. Indeed, job crafting is used to optimize the job demands and increase efficiency. Moreover, we notice that individuals engage in job crafting with prosocial intentions too, especially in tough times: this helps them reinforce the union of the team and maintain the flow. Job crafting also promotes innovation, as the practices spontaneously created by individuals can then be integrated into unwritten but shared rules. Thanks to our study we can contribute to the literature in various ways. First, adopting the point of view of the social regulation theory (Reynaud, 1979; 1988; 2002), we show how job crafting can be approached to an autonomous, bottom-up way for workers to generate new rules that suit better to them. Second, we aim at contributing to the unification perspective in the literature on job crafting: while this argument has been proposed theoretically (Zhang and Parker, 2019), we propose an empirical proof. Moreover, we show how the process of regulation of job demands and job resources consists in a process of optimization of job demands (Zhang and Parker, 2022), trying to maximise their outcome without the risk of burnout due to high levels of stress (Bakker and Demerouti, 2007).

HR: **Empirically-Based Organizational Layoff Taxonomies: Alternatives, Supplements, and Explanations**

Author: **Nita Chhinzer**, *U. of Guelph*

Corporate layoffs are a prolific management-initiated activity aimed at changing the quantity and quality of an organization's workforce. Yet, our understanding of the layoff phenomenon remains focused on layoff causes and consequences. This study evaluates 646 internal mass layoff announcements in Ontario from March 2013 until December 2019 to explore how layoffs are part of a broader management strategy, differentiating between layoff explanations, alternatives, and supplements used. Data analysis includes usage rate calculation, correlation analysis, as well as dimension reduction and factor analysis using principal component analysis with varimax rotation. The most prolific layoff explanations are plant closing, restructuring, and slump in demand. The most used layoff alternatives are location transfers and bumping. The most common layoff supplements are job search assistance and EAP support. bundles of explanations are structural, financially motivated, market economics, and competitive advantage-based reasons; of alternatives are labour utility focused, internal mobility, unpaid leave, talent retention, and early retirement; and of supplements are total rewards/compensation, reemployment support, exceeding legal requirements). Furthermore, regression analysis of all of the bundles of layoff explanations, alternatives, and supplements demonstrates which bundles are used in isolation and which are part of a broader management strategy.

HR: **The Influence of Transformational Leadership on Job Design in Blue-and White-collar Jobs**

Author: **Danina Mainka**, -
Author: **Annika Pestotnik**, *Heinrich-Heine U. of Dusseldorf*
Author: **Sarah Altmann**, *Hochschule Niederrhein U. of Applied Science*

This study investigates the influence of transformational leadership on job design. Whereas job crafting and idiosyncratic deals (i-deals) have primarily been studied in white-collar jobs, there is a lack of research on job design in the area of less skilled and highly structured work. Our study addresses this gap by analyzing the effects of transformational leadership on job crafting and i-deals in both blue- and white-collar jobs. To test our hypotheses, we surveyed 285 employees in the German craft industry, using structural equation modeling for data analysis. Our results show that transformational leadership is a strong predictor of job crafting and i-deals but that its influence depends on the occupational context. More specifically, the moderating role of the occupational group in the relationship between transformational leadership and job crafting differs with respect to job crafting's dimensions. With regard to i-deals, transformational leadership's influence on both development i-deals and task i-deals is stronger in white-collar jobs than it is in blue-collar jobs. The study extends research on the role of leadership in job design based on the occupational context.

HR: **Mapping Human Resources Outsourcing Research. A Systematic Review and Bibliometric Analysis**

Author: **Debora Gottardello**, *Edinburgh Business School - School of Social Sciences*
Author: **Josep Ubalde Buenafuente**, *U. de Lleida*
Author: **Akanksha Jaiswal**, *Loyola Institute of Business Administration*
Author: **Ji-Won Song**, *U. of Edinburgh business school*

Human Resource Outsourcing (HRO) has increased in all dimensions of the HR functions. However its nature and scope has developed and adjusted thanks to technological development, and global institutional changes. With increased interest, this study offers the first systematic, bibliometric review of 165 articles on HRO from 1993 to 2020 to provide a comprehensive overview of the topic. Our findings present theoretical foundations, major topics in the field, the antecedents of HRO decisions, and the impact of HRO on firm performance while identifying research gaps. We therefore provide several theoretical, methodological, and context considerations for future research.

Digitalization's Influence on Employees and Firm Performance

Session Moderator: **Caroline Rothert-Schnell**, *U. of Hannover*

HR: **Investigating Employee Digital Stress**

Author: **Christopher Funke**, *U. of Hannover*
Author: **Caroline Rothert-Schnell**, *U. of Hannover*
Author: **Federico Mangiò**, *U. of Bergamo*
Author: **Giuseppe Pedeliento**, *U. of Bergamo*
Author: **Gianfranco Walsh**, *U. of Hannover*
Author: **Ikuo Takahashi**, *Keio U.*

The continually soaring mobile and social media use worldwide, across private and work lives, causes users to feel digitally stressed, which might undermine important behavioral outcomes. Hall et al. (2021) have established a digital stress scale (DSS), developed among U.S. adolescents and young adults; the current study offers a cross-cultural test of the scale and proposes a shortened version, by almost 60%. Social media use tends to blur work and nonwork spheres, and psychometric scales need to be cross-culturally valid, so the present study tests perceived digital stress among employees from three countries. The well-established validation procedures and samples from Germany, Italy, and Japan affirm the reliability, validity, and cross-national applicability of a 10-item short DSS. The extended application also reveals the impact of perceived digital stress on three sets of employee outcomes. In turn, this research offers implications for both research and practice.

HR: **Why Employees Support or Resist Enterprise Digital Transformation? Transactional Theory of Stress** ☯ 🗨 💻

Author: **Xin Liu**, *Renmin U. of China*
Author: **Bo Lv**, *School of Management, Shandong U.*
Author: **Qiwei Zhou**, *Ocean U. of china*

Employee digital transformation support is a vital component of enterprise digital transformation, and a clearer understanding of its mechanism is crucial to succeed in this transformation. Drawing upon transactional theory of stress, we examine when and how employees support or resist enterprise digital transformation. A field study of 121 employees in a company undergoing digital transformation demonstrates that challenge appraisal and hindrance appraisal are two countervailing mechanisms that mediate the relationship between enterprise digital transformation and employee digital transformation support. The results also show that employees' regulatory focus moderates the indirect effect of enterprise digital transformation on employee digital transformation support through their challenge or hindrance appraisal of the digital transformation. Specifically, employees with higher promotion (prevention) focus are more likely to make challenge (hindrance) appraisal and further support (resist) enterprise digital transformation. Theoretical and managerial implications are provided for employee management during enterprise digital transformation.

HR: **Digital Productisation of HRM and Delivery of Human Resource Services: A Case of Tencent** 💻

Author: **Xiaolan Fu**, *U. of Oxford*
Author: **Wei Wei**, *U. of Oxford*

The application of digital technologies and products not only creates innovations in business operations and services provision, but also enables management innovation. There has been increasing scholarly attention on management innovation on one hand and on the application of digital technologies/products in management practices on the other hand, leaving significant gaps in terms of the role of digital technologies/products in management innovation. Through integrating perspectives of management innovation, product development and human resource management (HRM), this paper explores how digital products play out in management innovation as a form of digital productisation of HRM and the mechanisms through which such management innovation is achieved. Drawing on an inductive single case study in a leading IT company – Tencent that designs and develops various digital HRM products for different HR functions and for different actors, the findings suggest that HRM teams deliver HR services to multiple actors in (and even beyond) the organisation, through the productisation of HRM; and these products not only enhance efficiency, support organisation policies, but also improve employees' experience. In addition, this paper examines the mechanism of digital productisation of HRM and highlights the main features in the process. Managerial implications and future research directions are also discussed.

HR: **Digital Workforce: From the Generational to the Strategic Approach in HRM Research and Practice**

Author: **Edvalter Holz**, *Insper Institute of Education and Research*
Author: **Luciana Cardia-da-Silva**, *Insper Institute of Education and Research*
Author: **Renzzo Portes**, *Insper Institute of Education and Research*

An emerging body of research has assumed digital workforce (DW) as a set of competences developed by individuals in their everyday non-work-related use of digital technologies, and that can be leveraged at work. We call such body of research a generational approach of DW, and we claim that these studies have neglected DW as a discipline within strategic human resources management (SHRM). In the present study, we aimed to analyze how organizations operating in the digital landscape align digital strategy and human capital. We adopted the perspective of digital strategy regarding digital transformation (DT) and the perspective of SHRM regarding workforce to conduct an inductive qualitative study of the alignment between digital strategy and human capital in both the financial services sector and the agri-food sector. We applied the principles and techniques of the grounded theory to analyze secondary data describing DT processes in 82 organizations. We formulated a typology of digital workforce strategies, i.e., different types of alignment between digital strategy and human capital in organizations operating in the digital landscape. Based on this typology, we propose a strategic approach of DW and discuss its critical aspects in comparison to those of the generational approach.

Advancing HR: Exploring Functions and Competencies of Professionals

Session Moderator: **Alexandra Ballnat**, *ESCP Business School*

HR: **Dynamic Capabilities of HRM in a Crisis – A Qualitative Study on PSFs**

Author: **Surabhi Singh**, *Doctoral Scholar, Indian Institute of Management, Indore, India*

The role of HRM during a crisis has been a crucial area of investigation for the scholars and the practitioners. The present study addresses the evolving role of HRM in Professional Services Firms (PSFs) during a crisis. We conducted a multi-phase, qualitative study spanning over ten weeks and collected data from 50 PSF employees (knowledge workers) and 10 HR practitioners. The findings reveal the dynamism with which HRM shifted its focus i.e., from enabler to facilitator and facilitator to therapist. The study informs the dynamic capabilities framework by exploring how swiftly HRM evolved with each passing phase of the crisis. The paper contributes to the academic literature on the dynamic role of HRM in PSFs, an under-researched area so far. The findings provide insights on the strategic role of HRM in crisis, which will inform the practitioners.

HR: **Moving Beyond Mode-2: Knowledge-Production in Scholar-HRM Practitioner Collaborations**

Author: **Martina Kohlberger**, *U. of Innsbruck*
Author: **Julia Brandl**, *U. of Innsbruck*

HRM literature is full of suggestions about how scholar-practitioner collaborations should be conducted but has remained silent about how they actually are conducted. We therefore do not know what collaborative research participants really do in such collaborations and what helps and hinders their producing knowledge. To discover how scholars and HRM practitioners generate knowledge in practice, this paper combines field data from a collaborative project with insights from institutional theory. We found three modes of knowledge-production that practitioners use in collaborative research: Mode-1 (pursuing theoretical gaps), Garbage-can (developing a laundry list of potential solutions to unspecified problems) and Mock-mode-2 (granting concessions to pursue individual knowledge production interests). Garbage-can and Mock-mode-2 are new and have not been established in the literature on knowledge-production, thus offering new insights into how scholar-practitioner collaborations are carried out in practice. Our study uses participants' perspectives and insights about their efforts to carry out such collaborations and pursues to better understand the value of such collaborative projects from the participants' point of view.

HR: **The HR Function and Mandatory Non-Financial Reporting: On the Road to Enhanced Sustainability?**

Author: **Alexandra Ballnat**, *ESCP Business School*
Author: **Marion Festing**, *ESCP Business School*
Author: **Ihar Sahakiants**, *CBS International Business School*
Author: **Thomas Steger**, *U. of Regensburg*

Organizations are becoming increasingly more involved in non-financial reporting (NFR) due to legal obligations and stakeholder pressure. Although NFR is not a primary human resource management (HRM) activity, its involvement is in line with current research emphasizing the potential contribution of HRM to enhancing corporate sustainability. In the context of the European Non-Financial Reporting Directive (NFRD), this qualitative study investigates the impact of mandatory NFR regulations on organizational practices in relation to sustainable HRM. When analyzing interview data on NFR practices from large German companies, we recognized that applying arguments from a resource dependence perspective to explain changes in the role of HRM and its practices related to sustainability is a fruitful—but so far overlooked—avenue of enquiry. In this vein, we suggest a theoretical framework outlining how organizational resource dependencies are managed by HR and sustainability departments through NFR, and how these dependencies lead to the enhanced strategic relevance of HRM in terms of contributing to corporate sustainability. Our major contributions consist of a rich primary empirical dataset, which draws our attention to a new explanation of the role of HRM in the context of NFR applied in the suggested framework and includes theoretical advancement that can enrich future research.

HR: **HR Analytics and the Decision-Making Process: An Evidence-Based Management Approach**

Author: **Amanda Scaf**, *Faculty of Economics, Administration and Accounting - U. of São Paulo*
Author: **Liliana Vasconcellos**, *Faculty of Economics, Administration and Accounting of the U. of Sao Paulo*

HR Analytics (HRA) has gained attention of practitioners and scholars under the promise of providing basis for better decision-making. However, the question about how HRA can be effectively used to support decisions in organizations remains unanswered. Although some scholars suggest Evidence-Based Management (EBM) as a theoretical approach through which HRA would effectively contribute to decisions, the idea has not been empirically tested. Therefore, this study's objective is to analyze how HRA leads to talent decision-making through the EBM approach. The analysis of how HRA leads to decisions was grounded in the interaction between HR Analytics and EBM along the decision-making process (DMP). A qualitative research approach was employed to assess HR Analytics decision processes performed in organizations located in Brazil. The study relied on 8 semi-structured interviews with professionals who have led or played an important role in a HR Analytics decision process. Content and template analyses were employed as data analysis methods. It was found the Evidence-Based Management approach seemed relevant to (a) provide evidence needed to the conduction of a quantitative analysis and (b) to intermediate HRA's inputs to decisions. The results also shed light on the nature and different roles of these inputs.

Green HRM Practices

Session Moderator: **Farooq Ahmad**, *Fatima Jinnah Women U., Rawalpindi, Pakistan*

HR: **Green HRM Practices, Government Interventions, and Employee Behavior Tie with SME Sustainability**

Author: **Farooq Ahmad**, *Fatima Jinnah Women U., Rawalpindi, Pakistan*
Author: **Khurram Mustafa**, *U. of Okara*
Author: **Muhammad Nawaz Qaisar**, *National Accountability Bureau, Islamabad, Pakistan*

This study looked at the link between green HRM practices and organizational sustainability through green employee behaviors and the moderating influence of green government initiatives. A cross-sectional online survey was used to gather data from 200 professionals from Pakistan's small and medium businesses (SMEs) in the manufacturing sector for this study. According to the findings, green HRM practices are positively associated with organizational sustainability. Green employee behavior mediated this association to some extent, while green government actions moderated it by enhancing the link between green HRM practices and green employee behavior. The findings indicated that green HRM practices and government initiatives are required to instill the green employee behaviors required for the long-term sustainability of SMEs. The ramifications of these discoveries for theory and practice have been discussed.

HR: **Green Human Resource Management, Work Group Green Advocacy, and Employees' Environmental Behavior**

Author: **Qi Lei**, *Shandong U. of Finance and Economics*
Author: **Zhiqiang Pang**, *Shandong U. of Finance and Economics*
Author: **Song Chang**, *Hong Kong Baptist U.*

Although accumulated evidence has shown that Green human resource management (HRM) has crucial effects on employees' environmental behavior, there is limited research on the underlying mechanisms of the link. Drawing on social information processing theory, we develop and test a multilevel model that specifies how and when Green HRM has benefits for employees' environmental behavior. Based on a sample of hotels collected from three data sources, we show that Green HRM is positively related to work group green advocacy, which in turn is positively related to employees' environmental behavior. Moreover, managers' interpretations of environmental issues strengthen the effects of work group green advocacy on employees' environmental behavior. We discuss the theoretical and practical implications of these findings and propose future research directions.

HR: **Green HRM and Employee Green Activism: Roles of Meaningful Work and Harmonious Environmental Passion**

Author: **Muhammad Aamir Shafique Khan**, *Jiangsu U.*
Author: **Jianguo Du**, *School of Management, Jiangsu U.*
Author: **Shakir Hafeez**, *COMSATS U. Islamabad, Abbottabad Campus*
Author: **Shuai Jin**, *Jiangsu U., China*
Author: **Farooq Anwar**, *The U. of Lahore. Pakistan*

In the present study, we aim to examine the direct and indirect (via meaningful work) relationships between green human resource management (GHRM) and employees' beyond-work green activism. We also test the moderating role of harmonious environmental passion in the relationship between perceived GHRM and beyond-work green activism. Survey data were collected using a time-lagged design from 304 supervisor-employee dyads in different manufacturing and service sector organizations in China. Data were analyzed using structural equation modeling in Mplus (8.6). The results revealed that GHRM is positively associated with green activism, both directly and indirectly, via meaningful work. Moreover, harmonious environmental passion strengthens the direct relationship between GHRM and meaningful work, as well as the indirect relationships between GHRM and green activism. The findings offer important recommendations for managers concerned about environmental sustainability that can help them signify the role of business organizations and HR practices in protecting the natural environment. Several scholars have shown that GHRM is positively associated with employees' voluntary green behaviors at work. However, previous studies have largely overlooked the influence of GHRM on employees' voluntary green behaviors beyond the workplace such as employees' participation in and promotion of different types of pro-environmental initiatives, policies, and campaigns outside the organizational boundaries. This study foregrounds an important yet largely ignored role of GHRM in shaping employees' engagement in green initiatives beyond organizational boundaries.

HR: **Investigating the Impact of GHRM Practices on Employee's Green Outcomes through the Lens of AET**

Author: **Rimsha Iqbal**, *Riphah International U., Islamabad*
Author: **Khurram Shahzad**, *Riphah International U.*
Author: **Richa Chaudhary**, *Indian Institute of Technology Patna*

This paper examines the link between green human resource management (GHRM) practices and green employee outcomes through an unattended affective process. Based on affective events theory (AET), we study how GHRM practices influence employees' environmental commitment (EEC) and organizational citizenship behavior for the environment (OCBE) through mediating role of harmonious environmental passion (HEP). Three-wave data were collected from subordinate-supervisor dyads (n = 231) working in manufacturing companies. Results revealed that GHRM practices triggered HEP, which, in turn, led to high EEC and OCBE. Further, HEP partially mediated the relationship between GHRM practices, EEC and OCBE. Findings suggest that HR managers should ensure sufficient resources for earnestly implementing GHRM practices that help evoke HEP amongst employees, which is an essential determinant of employees' eco-friendly attitudes and behaviors.

HR: **Green HRM and Green Innovation: The Roles of Manager Improvisation and Learning Orientation**

Author: **Thomas Garavan**, *Garavan*
Author: **Muhammad Waheed Akhtar**, *Rabat Business School, International U. of Rabat, Morocco*
Author: **Chunhui Huo**, *Liaoning U. Business School*
Author: **Fergal O'Brien**, *Kemmy Business School, U. of Limerick*

Green human resource management (GHRM) has emerged as an important topic within HRM with research focusing on its impact on a variety of employee outcomes. Less research has focused on understanding its impacts on green organizational outcomes such as green innovation (GI). We utilize signaling theory to examine whether, when, and how GHRM impacts GI. We collected data from 263 hospitality firm managers located in Pakistan to investigate the direct relationship between GHRM and GI, the mediating role of manager improvisation (MI), and the moderating role of learning orientation (LO). Our findings based on time-lagged field data reveal that GHRM enhances MI and in turn, GI. The positive relationship between GHRM and MI is stronger when individuals are high on LO. We also found support for the moderating effect of LO on the indirect model via MI. We highlight important theoretical, empirical, and practical contributions.

Systematic Reviews on HR Topics

Session Moderator: **Christina L. Stamper**, *Western Michigan U.*

HR: **Perform Well, but not Feel Good: A Meta-analytic Investigation of the Consequences of Failure at Work**

Author: **Yibing Zhou**, *Tsinghua U.*
Author: **Lei Wang**, *Tsinghua U.*

Research on the benefits and costs of workplace failure has undergone a continuing debate over the past few decades. Integrating extant findings, we meta-analytically cumulated 116 independent samples for failure and examined failure's relationships with work-related outcomes. Our findings revealed an overall positive relationship (rho-hat = .057), which was strongest at the team level (rho-hat = .164) whereas weaker at the individual (rho-hat = .042) and firm (rho-hat = .031) levels. This relationship varied with different types of outcomes, such that failure showed a significantly positive relationship with effectiveness-related outcomes (rho-hat = .077), contrary to insignificant positive psychological processes (rho-hat = .039) or proactive behaviors (rho-hat = -.015). It is also notable that unpacking different psychological processes appear to matter regarding this relationship at the individual and team levels: the negative effect of failure was mainly demonstrated in its significant damage on affective reactions (rho-hat = -.227). Moderator analyses were performed regarding conceptual (operationalizations of failure) and contextual (measurement, industry, and culture) factors to resolve heterogeneity. Noteworthy, we also found a more negative impact when discussing the effects of failure in labor-intensive industries and for East Asians. We discussed our theoretical and practical implications and offered guidance for future research efforts.

HR: **In Search of Clarity: Examining the Workplace Exclusion Literature**

Author: **Christina L. Stamper**, *Western Michigan U.*
Author: **Lynn Shore**, *Colorado State U.*
Author: **Isabel Metz**, *Melbourne Business School, U. of Melbourne*

While there seems to be general agreement that workplace exclusion is a worthwhile and important concept to study, there is substantial inconsistency across research in definitions and explanations of this construct. To 'put the worker front and center', researchers and managers need to understand exactly what workplace exclusion is, what it is not, and its contributing factors, to facilitate prediction of any potentially positive or, especially, negative results associated with exclusion in the workplace. We utilize Suddaby's (2010) criteria for construct clarity to provide a detailed analysis of existing definitions of workplace exclusion, highlighting points of concern and confusion. Based on our findings, we delve more deeply into the concept of workplace exclusion, creating an updated definition with corresponding theoretical bases which we believe meets the requirements for construct clarity.

HR: **A Systematic Literature Review on the current state of research on virtual feedback**

Author: **Luisa Koloch**, *WFI - Ingolstadt School of Management*
Author: **Paul Goldmann**, *Zwickau U. of Applied Science*
Author: **Björn Schäfer**, *Free U. of Bozen-Bolzano*

Virtual collaboration has become more widespread in recent years, making virtual feedback an indispensable means for individual and team success. Throughout the last decades, researchers have examined how virtual feedback is received and processed and whether it leads to desired effects, e.g., considering distortions in electronic communication. Unfortunately, there is no comprehensive review that structures and summarizes the disparate literature on virtual feedback. We undertake a systematic review of 88 articles on virtual feedback published between 1986 and 2022 in peer-reviewed academic journals in Business, Management, and Psychology. By drawing on Ilgen et al.'s (1979) feedback process model as a theoretical framework, we analyze the articles and address the process by which virtual feedback influences behavior. This work has three major contributions. First, we identify the aspects of virtual feedback from the literature that influence (a) the way it is perceived, (b) its acceptance by the recipient, (c) the willingness of the recipient to respond to the feedback, and (d) the recipients' behavior. This shows the applicability of the feedback process model of Illgen et al. (1979) in this contemporary context. Second, this systematic organizing of existent literature allows us to identify blind spots that have not received sufficient scholarly attention. Thus, we can propose related future research directions. Third, our implications at the individual and the team level demonstrate guidelines for communicating feedback virtually to reduce misunderstandings, promote feedback acceptance, and foster desired effects of virtual feedback.

HR: **Meta-Analytic Criterion Profile Analyses of Big Five Personality Traits and Life Success**

Author: **Michael P. Wilmot**, *U. of Arkansas Sam M. Walton College of Business*
Author: **Brenton M. Wiernik**, *U. of South Florida*
Author: **Deniz S Ones**, *U. of Minnesota*

Experiencing success in life has been a central human preoccupation for millennia. Accordingly, we quantitatively review and synthesize meta-analyses reporting effects of Big Five personality traits for variables associated with success in life. We summarize findings of 111 meta-analyses reporting effects for 210 variables, which represent $N > 2.2$ million participants across $k > 3{,}200$ studies. The Big Five traits jointly display an overall effect of $R = .24$, indicative of a beneficial effect that is moderate-to-large. By organizing variables into a framework of nine categories of life success, we also offer a more detailed account of traits' effects. Next, we use meta-analytic criterion profile analysis (Wiernik et al., 2021) to identify the trait profile that optimally relates to each variable, and disentangle the predictive contributions of profile means (i.e., level effects) and profile configurations (i.e., pattern effects). Overall, level effects contribute more predictive variance than pattern effects (59% vs 41%), but relative contributions differ by category. Finally, we use clustering algorithms to examine similarities of trait profiles across life success variables. Using these results, in conjunction with existing theory, we synthesize 10 clusters that are nested under three broad meta-clusters. Specifically, contentment (gratification, balance, deference), agentic engagement (accomplishment, high performance, good citizenship, ingenuity/leadership, influence), and self-transcendence (support, inclusion). These "clusters and profiles of success" represent a distillation and theoretical integration of the potent role of Big Five traits in success across the lifespan. We conclude by discussing contributions, limitations, and future directions.

HR: **Leadership Behavior and Employee's Recovery: A Review and Meta-Analysis**

Author: **Lydia Bendixen**, *Europa-U. Flensburg*
Author: **Tabea Eleonore Scheel**, *Europa-U. Flensburg*

Leader behavior is known to affect employees' recovery processes. However, a systematic review and meta-analysis which examined the effect sizes are missing. Further, most research on this topic has not considered the type of leadership behavior (constructive vs. destructive). A search of leadership and recovery studies yielded 42 papers that were systematically reviewed. 23 papers (k = 24) with 12,860 observations were included in a meta-analysis. The review indicates that leader behavior is relevant to employees' recovery experiences (i.e., psychological detachment, relaxation, mastery, and control). The meta-analysis reveals that constructive leadership (supervisor support and justice behavior) relates positively, and destructive leadership behavior adversely, to employee recovery experiences (psychological detachment and relaxation). Employees' age attenuates the relationship between supervisor support and psychological detachment; no further moderation was found. Understanding which and how leadership behaviors relate to employee recovery experiences can help promote recovery in demanding workplaces.

Unlocking Leadership Potential ☯ 💻

Session Moderator: **Beatrice Schuldt**, *WWU Münster*

HR: **Creating Sense of Belonging: The Roles of Leadership and Social Capital**

Author: **Beatrice Schuldt**, *WWU Münster*
Author: **Marie Gabel**, *WWU Münster*

Employees' sense of belonging is essential to improving their mental health and lever-aging their performance. Thus, it is relevant for companies trying to support their own human capital and corporate success. Nevertheless, employees' sense of belonging in business set-tings has rarely been considered in the literature. To further advance the sparse research, I examined the influence of leadership behaviour on employees in an environment with and without social capital. An experimental design that yielded 391 responses was analysed using a multiple linear and multi-level mixed linear regressions. The results show a significant posi-tive influence of transformational leadership on employees' sense of belonging. Introducing social capital as a potential moderator, the findings show that social capital and leadership style jointly shape an employees' sense of belonging. These findings support the relevance of leadership and social capital on sense of belonging at work. Contrary to the primary literature on transformational leadership, this study supports the possibility that contextual factors di-minish the positive effects of such leaders. Therefore, future research should focus not only on leaderships' behaviours but also on the contextual factors to paint a more holistic picture.

HR: **No One is an Island: Managerial Success as a Personal Resource**

Author: **Gerard Beenen**, *California State U., Fullerton*
Author: **Shaun Michael Pichler**, *California State U., Fullerton*
Author: **Wangxi Xu**, *U. of Melbourne*
Author: **Andrew Yu**, *U. of Melbourne*

Based on conservation of resources (COR) theory, we propose that managerial success constitutes a personal resource that managers can sustain and extend by facilitating a work unit environment that encourages employee feedback seeking, which then predicts employees' motivation to improve. We further posit procedural justice climate as a cross-level moderator of the relationship between feedback seeking environment and employee motivation to improve. We test and find support for our model with a multi-level sample and analysis of 657 employees nested within 85 work units in a large healthcare organization.

HR: **Effective Coaching for Adaptive Selling: The Role of Leader-Member Exchange and Gender Matching**

Author: **Michele Rigolizzo**, *Montclair State U.*
Author: **Robert Moulder**, *U. of Colorado*
Author: **Jean-François Harvey**, *HEC Montréal*

This study focuses on the role of gender in coaching relationships in the sales context, and extends theory by integrating work on leader-member exchange (LMX) and social role theory (SRT). Specifically, we propose that LMX mediates the relationship between coaching and adaptive selling, but only when the gender of the coach matches that of the employee because men and women enact different role behavior when selling. We test our theory using multiple group moderated mediation in a structural equation model of 564 salespeople and their 69 managers. Results show that, although coaching consistently improves the LMX between managers and employees, it only stimulates adaptive selling when genders match. This study highlights the challenges organizations face when they expect managers to engage in behaviors that are not socially congruent with the expectations of their role. In addition, when the occupation itself is gendered, as is the case in sales, societal norms and beliefs play a large role because coaches may not consider the full variety of strategies that lead to better performance for the opposite gender, and employees of the opposite gender may be less receptive to the coaching. As such, the range of employees who benefit from coaching narrows.

HR: **Empowering Leadership and Work Identity in Times of Crisis**

Author: **Barbara Schmidt**, *U. of St. Gallen*
Author: **Charlotta Agneta Siren**, *U. of St. Gallen*
Author: **Dietmar Grichnik**, *U. of St. Gallen*
Author: **Joakim Wincent**, *Luleå U. of Technology*

The role of empowering leadership in the process of managing change during times of large-scale systemic stress is ambiguous and insufficiently investigated. We develop an intraindividual change model of coping through empowerment that proposes that increasing empowering leadership is necessary to strengthen employees' individual psychological capital over time in order to manage organizational change during crisis. By distinguishing between individual strategies for retaining existing resources and acquiring new ones when exposed to systemic stress, we further develop and test a moderated mediation model that empowering leadership increases coping with change though psychological capital only when work identity as a resource is weak. A strong work identity serves as a source of empowerment, thus providing a competing strategy for resource conservation and a limitation to the impact of empowering leadership on psychological capital. We base our study on longitudinal survey data from nursing staff during the peak wave of the COVID-19 pandemic and integrate the theory of resource conservation and work identity to make these claims. Our findings bring novel insights to our understanding of empowering leadership and the management of employees during high-impact systemic crises.

HR: **Organizational politics and physical health: Do political skill and LMX guard against hypertension?**

Author: **Kunal Kamal Kumar**, *Indian Institute of Management, Udaipur*
Author: **Daniel C. Ganster**, *Colorado State U.*
Author: **Sushanta Kumar Mishra**, *Indian Institute of Management, Bangalore*

Employees' physical health is critical for organizations as it might cause productivity losses leading to severe financial implications. The recent pandemic reinforced the criticality of human resources and the urgency of its actions on employees' physical health. However, scholarly work has not adequately progressed to explain organizational factors affecting employees' physical health. We assessed resting blood pressure as a critical marker of physical health. Based on a multi-method approach, we suggest that work contexts with high perceived politics may constitute a significant health risk for vulnerable employees. Our findings indicate that employees low in political skill have a 22 percent higher risk of prehypertension and a 100 percent higher risk of stage 2 hypertension compared to their counterparts high in political skill. Further, in an environment of high perceived politics, employees with low political skills are likely to have higher systolic blood pressure than those with high political skills. We examined the impact of leader-member exchange relationship on the linkage between perceived politics and employee health. We have discussed the implications of our findings for human resource practitioners.

Empowering Voices: HR Practices, Learning, and Team Dynamics

Session Moderator: **JUNSU PARK**, *Sungkyunkwan U.*

HR: **Team-oriented Human Resource Management Practices and Team Voice: A Social Construction Process View**

Author: **Jeeyoon Jeong**, *Korea U. Business School*

Team-oriented human resource management (HRM) practices (T-HRM) designed to promote teams' abilities, motivations, and opportunities are gaining attention in HRM literature. We investigated whether and how T-HRM affects team voice. From a social construction perspective, we focused on the mediating role of the following social construction mechanisms in the relationship between T-HRM and team innovation: 1) team cognitive integration, 2) team emotional resources, and 3) team leaders' transformational behavior. We found support for the positive relationship between T-HRM and team voice in a sample of 40 work teams in four different organizations. In addition, the three social construction mechanisms mediated the positive relationship between T-HRM and team voice. This study contributes to HRM research by focusing on the mediating social construction mechanisms that link T-HRM and team voice.

HR: **When Job Reflective Learning Promotes Employees' Voice: The Roles of Risk-taking Climate and Age**

Author: **JUNSU PARK**, *Sungkyunkwan U.*
Author: **Tae Seok Yang**, *Associate Professor of Management (OB/HR), Western Illinois U.*
Author: **SuJin Son**, *Chosun U.*

This study attempts to explore the effects of different types of different types of job reflective learning, namely, job reflective learning from successes (JRLS) and from failures (JRLF) on employee voice and the potential moderating effects of risk-taking climate and age on these relationships. We examined the main and moderating effects using two-wave time-lagged data collected from a sample of 251 working adults in Korea. The results indicated three-way interactions between reflective learning (both JRLS and JRLF), risk-taking climate, and age in predicting promotive voice. For younger employees, job reflective learning from successes and failures predicted promotive voice only under a high risk-taking climate, while for older employees, job reflective learning from successes and failures predicted voice under a low risk-taking climate. The implications of these findings for researchers and practitioners are discussed.

HR: **Platforms for Expression: Enterprise Social Media and its Role in Employee Voicing Behaviors**

Author: **Pam Estell**, *Chaminade U. of Honolulu*
Author: **Elizabeth Davidson**, *Shidler College of Business, the U. of Hawaii at Manoa*
Author: **Kaveh Abhari**, *San Diego State U., Fowler College of Business*

In contemporary business environments, firms frequently look for ways to increase their competitive advantage. Over time, as societal values have shifted, firms have recognized that to sustain continued success they must focus not only on customers, but also employees. Employee engagement is a construct often noted for its positive relationships to improved performance, productivity, and job satisfaction. Due to its perceived value, organizations regularly explore ways to improve employee engagement. When organizations allow for a two-way flow of communication between employees and management, this is referred to as providing opportunities for direct employee voice; an important type of engagement behavior. Creating opportunities for employee voice allows organizations to foster participation between employees and management, and leverage multiple ideas and experiences. With the widespread success of social technologies for personal use, employers have been eager to leverage these technologies by implementing enterprise social media (ESM) to help encourage knowledge sharing and communication. How workplace social media affects employee voicing behaviors and engagement has yet to be fully studied. Drawing on Self-Determination (SDT) and Social Cognitive Theories (SCT), this study develops and tests a theoretical model examining the role of ESM in supporting employee voicing and its outcomes. We assess the impact of psychological motivations, perceived ESM voicing affordances, and organizational voice climate on employee voicing behavior, engagement, and job satisfaction. We validate the model using a field survey of regular ESM users in North America. This research provides important insights on employee technology-enabled voicing behaviors for theory and for practice.

HR: **Employee Voice in Times of Crisis and the Role of HR Practices**

Author: **Margarita Nyfoudi**, *U. of Birmingham*
Author: **Bora Kwon**, *Sacred Heart U.*
Author: **Adrian John Wilkinson**, *Griffith U.*

Drawing on signaling theory, we theorize whether and if so, how organizational voice climate is shaped at times of extreme macro- and organizational instability. In particular, we distinguish between solidary and utilitarian crisis-related HR practices and propose that they send different signals to employees, thus influencing HR system strength and the subsequent (re)formulation of employee perceptions. We also suggest potential interactions between macro- and meso-turbulence and discuss how these situational contexts influence the investigation of employee voice and voice climate during crises.

Pay Dispersion and Employee Ownership

Session Moderator: **Kyoung Yong Kim**, *Villanova U.*

HR: **Employee Ownership and Credible Capitalism: Does Employee Ownership Decrease Financial Misdeeds?**

Author: **Kyoung Yong Kim**, *Villanova U.*
Author: **Pankaj C. Patel**, *Villanova U.*
Author: **Emily Jo**, *Villanova U.*

Drawing from threshold theory, we examine the association between employee ownership and financial misdeeds. We theorized that incentive and monitoring benefits of employee ownership are two primary theoretical drivers for lowering the possibility of financial misdeeds in employee-owned firms. Based on a sample of 3,421 firm-year observations between 2000 and 2015, we found that employee ownership was negatively associated with organizational financial misdeeds in a curvilinear manner such that the curbing effect of employee ownership was significant only at medium-to-high levels (i.e., an inverted-J-shaped relationship). We also found that organizational size and short-term incentives moderated the inverted-J-shaped relationship. Specifically, the curvilinear relationship was stronger when an organization was smaller or practiced giving short-term incentives. We discuss the theoretical and practical implications of these findings.

HR: **Big Pond and Small Pond: The Effects of Global and Local Pay Standing on Organizational Performance**

Author: **Helen Hailin Zhao**, *U. of Hong Kong*
Author: **Shuning Liu**, *U. of Hong Kong*
Author: **Yue Yuan**, *School of Economics and Management Tsinghua U.*
Author: **Shanshi Liu**, *South China U. of Technology*

Market pricing refers to the process of determining pay levels based on the “market price” of the job. The leading market strategy is found to result in better organizational and individual outcomes. However, the prior research either did not define the market pay at all or operationalized it using arbitrary measures. This omission is critical because pay standing is a relative concept—whether a given organization leads, matches, or lags the market depends on the scope of market referents used. In this paper, we construct a local market and a global market for each organization. The local market is the city in which the focal organization is located, whereas the global market includes all cities in a relatively autonomous economic system. With a representative sample of 1,785 manufacturing firms, we tested the differential effects of local standing and global standing of frontline worker pay on organizational performance. We found support for the positive effect of local pay standing (i.e., being a big fish in a small pond) and further show that the effect is stronger when human capital has lower strategic importance, as indicated by low skill intensity and low pay-for-performance intensity. Additionally, the positive effect of global pay standing is stronger when human capital has higher strategic importance. The paper offers a strategic view to understanding pay levels: Organizations only need to lead in the market that matters more.

HR: **Organization-driven (Versus Market-driven) Pay Dispersion Effects**

Author: **Joonyoung Kim**, *Cornell U.*
Author: **Tae-Youn Park**, *Sungkyunkwan (SKK) U.*

To reconcile the theoretical dilemma regarding pay dispersion (i.e., pay-level differences between employees), researchers have proposed that pay dispersion has positive effects when based on normatively acceptable or legitimate factors such as individual productivity differences. However, the prevailing focus on the sources of pay dispersion has left the strategic part of pay dispersion behind. By deviating from the degree of pay dispersion that is socially and normatively justifiable, a focal organization may practice pay dispersion to communicate its own strategic and cultural values. In this research, we argue that such deviation from the labor market, which we call organization-driven (versus market-driven) pay dispersion, can have positive effects when aligned with other management policies and practices. Drawing on the idea that pay dispersion effects occur through incentive (i.e., motivation enhancing) and sorting (i.e., re-composition of workforce) processes, we hypothesize that organization-driven pay dispersion effects become positive when the organization’s pay-for-performance (PFP) proportion is high and when average employee tenure is low. We further suggest that such benefits are realized when the organization’s capital intensity is low. We find support for our hypotheses using a 5-year (2015–2019) panel dataset of 130,010 employee-year observations in 799 organization-year observations from South Korean companies.

HR: **CEO Compensation and Say on Pay: Does CEO-to-Employee Pay Ratio Matters?**

Author: **Muhammad Arslan**, *Open Polytechnic New Zealand*

In recent years, pay gaps between top management and employees have received significant attention. Therefore, it has provoked political and social tensions among investors. This study explores the magnitude of shareholders’ say on pay votes and its impact on future CEO compensation. This study draws its sample from US Russell 3000 companies, consisting largest US companies, for the period of 2011 to 2019. We further divided our sample into Russell 3000 and S&P 500 for peer comparison by creating a dummy variable. The study employs descriptive statistics, correlation analysis, and pooled OLS regression and finds that future CEO compensation is significantly negatively associated with pay gap opposition. The coefficient and t-stat were higher for S&P 500 as compared to Russell group. The study also finds that CEO-to-Employee pay ratio has significant positive association with shareholder dissent votes. The coefficient and t-stat were higher for Russell group as compared to S&P 500. The study has important implications for corporate directors, investors, and policymakers. The study contributes to the existing corporate governance literature particularly on executive compensation. Our findings support the view of social comparison theory and contented that shareholders view CEO compensation as a biased evaluation of his contribution to the firm.

Industrial Relations and International HRM ☯ ✈ 💻

Session Moderator: **Alison Glaister**, *U. of York*

HR: **The Effect of Growth Rates on Human Resource Investments: Evidence from Franchise Chains**

Author: **Can Ouyang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Rosemary Batt**, *Cornell U.*

A central premise of the strategic human resource management (HRM) literature is that better organizational performance depends on whether firms invest in HRM systems that support their choice of business strategies. The logic is that HRM is an important corporate tool for creating the necessary skills, motivation, and opportunities for employees to perform effectively and execute the business strategy. Yet empirical evidence linking firm business strategies to their investments in HRM systems is largely lacking. In this paper, we focus on an important business strategy – how fast to grow or expand the business – and whether it is linked to firm investments in HRM systems. We focus specifically on the context of business format franchising because it is an increasingly important strategy that corporations use to grow – especially when they aspire to grow rapidly. Drawing on agency theory, we argue that fast-growing franchise chains will seek to address agency problems by increasing their investments in the HRM systems of franchisees; but consistent with Penrose theory of growth, it is relatively larger chains that have the sufficient slack resources and managerial knowhow to do so. Based on archival data on chain characteristics linked to a national survey of 936 franchisees in the quick service restaurant sector, our findings support these propositions.

HR: **Shaping Workplace Experiences of Saudi Women: Evidence from the Banking and Insurance Sectors**

Author: **Alison Glaister**, *U. of York*
Author: **Majedah Al Harthi**, *U. of York*
Author: **Abdullah Alharbi**, *Taif U., Saudi Arabia*

This paper examines the impact of culture in shaping the workplace experiences of Saudi women in both segregated and non-segregated organisations. Through interviews with forty-four female customer service employees in the banking and insurance sectors, the findings suggest that despite recent initiatives to open opportunities to women, ingrained cultural attitudes and expectations still constrain women's opportunities and behaviours in the workplace. Thus, at a time of progressive social and economic change, entrenched cultural norms continue to constrain and reinforce gender dynamics through government policy and regulations and their subsequent enactment within organisations, thus limiting the overall progress of women in the workplace.

HR: **How to Get Rid of Informal Networks at Work? HR Leadership and the Ambivalent Role of Wasta**

Author: **Fadi Alsarhan**, *ISC Paris Business School*
Author: **Sven Horak**, *St. John's U.*

The influence of the local network context on HR leadership has been rarely explored yet. By drawing on in-depth interviews to understand the mutual dependencies between wasta, the informal network context in the Arab Middle East, and HR leadership, we investigate the role of HR managers' leadership styles in shaping, promoting, or impeding the spread of wasta in organizations. The results indicate interdependence between the centralization of power, autocracy, and, consequently, the flourishing of wasta in the workplace. Conversely, the delegation of power and opportunities for group decision making may contribute to the decline of wasta in the workplace.

HR: **Taming the Dragon: Works Councils' Strategies in German Subsidiaries Acquired by Chinese MNEs**

Author: **Tina Miedtank**, *Nijmegen School of Management*
Author: **Johann Fortwengel**, *King's College London*

We study two cases of German companies being acquired by Chinese multinational enterprises (MNEs) to advance our understanding of the micro-level mechanisms producing negotiation outcomes in the employment relations sphere. Using qualitative data, we unpack how similar 'best owner' agreements in our two case studies have remarkably different microfoundational underpinnings: in one case, the agreement was reached despite conflictual relationships, and in the other case the agreement is the outcome of cooperative relationships. Our study complements existing research at the intersection of employment relations and international business research by illustrating how similar outcomes can still exhibit markedly different micro-level mechanisms. We contribute to comparative institutional theory by unpacking how exactly micro-level actors leverage institutional resources to arrive at negotiated outcomes.

HR: **How HR from Multinationals Assist in Creating Shared Values in Emerging Economies: A Case Study**

Author: **Maria Teresa Beamond**, *RMIT U., Australia*
Author: **Carol J. Bond**, *School of Management, RMIT U.*
Author: **Matthew Ripley**, *International Labour Organisation*

This study proposes a framework for the integration of sustainable and community relations within human resources (HR) practices when multinational organisation (MNOs) operating in emerging economies, to achieve economic and social value creation. We develop an in-depth literature review and an empirical case study of a MNO operating in Laos. Findings reveal that when this integration occur, new salient forces are relevant to achieve value creation (innovative leadership, the role of MNOs in emerging economies, and the importance of integrating corporate strategy and corporate governance). Also, highlights how the organisation found new opportunities by targeting the community needs (jobs, training, infrastructure). This study contributes to the limited research on HR and the creation of shared values (CSV) to society increasing our knowledge on the way MNOs use HRM-CSV when operating in emerging economies.

Institutions and MNEs

Session Moderator: **Matthew Allen**, *Manchester Metropolitan U. Business School*

IM: **A Tale of Two MNEs: How Institutions Shape Two Pharma Firms' Interactions with Local Organizations**

Author: **Matthew Allen**, *Manchester Metropolitan U. Business School*
Author: **Mohammad Rana**, *Aalborg U. Business School*
Author: **Jiajia Liu**, *Huddersfield Business School, U. of Huddersfield, UK*

Much research focuses on the determinants of foreign direct investment (FDI) into least developed economies, typically comparing macro-level factors. However, despite a desire among least developed economies to attract 'quality inward FDI' (iFDI), only a relatively limited number of studies have focused on the links between quality iFDI and the socio-economic benefits to the host country. Those studies that do exist tend to adopt a quantitative approach, comparing macro and/or sectoral level factors, and downplaying how individual firms interact with local organizations in the host economy. We draw on the comparative capitalisms literature to examine how country-of-origin macro-level institutions that influence the purpose of two pharmaceutical companies shape how those firms engage with host-country organizations. We find that the country-of-origin institutions help to inform the density of the ties that the two MNEs forge with local organizations, and, correspondingly, the level of benefits that the MNEs bring to the host economy.

IM: **The Impact of Institutional Voids on Government Ownership in the MENA**

Author: **Julia Barbar**, *Doha institute for graduate studies*
Author: **Hiba Khodr**, *Doha institute for graduate studies*

The Impact of Institutional Voids on Government Ownership in the MENA Region Governance Reforms and Policy Implications This paper is an exploratory study investigating the impact of institutions on government ownership and its different structures in publicly listed firms in eleven MENA countries. Our findings served to illustrate the theoretical perspectives in the relevant prevailing literature on linking institutional voids to government ownership and various ownership structures, namely in emerging markets. This paper finds that government ownership is higher amid weak institutional settings in which weak financial markets, governance structure, economic freedom, property rights and strong political constraints are manifest. These similar institutional voids pave the way to more block and pyramid ownership structures through which governments strengthen their control and involvement in firms and are more likely to prioritize their goals above those of the firm. The impact of institutional weaknesses on the prevalence and nature of government ownership requires an urgent governance and institutional reforms which this paper aims to address by providing policy recommendations.

IM: **Who Captures the State in China? Evidence from Irregular Awards in a Public Innovation Grant Program**

Author: **Yanbo Wang**, *HKU*
Author: **Jizhen Li**, *Tsinghua U.*

Access to state-controlled resources can be a major source of firm-level competitive advantage. However, we know little regarding which firms are most likely positioned to capture the state and access resources beyond what their rule-complying merits command. This is partially due to the challenge in identifying irregular state funding that violates official resource-allocation rules. We study a leading innovation grant program in China, and we leverage unique access to the focal grant agency's administrative data to trace its grant allocation process. We observe occurrences of rule-violating funding and show that firms vary in capability to influence the agency's funding decision, depending on geographic proximity, as well as other institutional variables. The observed irregular awards are most likely associated with crony capitalism rather than bureaucratic heroism.

IM: **Institutional Rigidity and Cultural Flexibility: Internationalization of a State Owned Enterprise (WITHDRAWN)**

Author: **Hitoshi Iwashita**, *vietnamese german U.*

This paper examines the internationalization of a state-owned enterprise (SOE) through cross-border acquisitions over time. In the current literature, the understanding of the process of how SOEs internationalize while dealing with state influence remains inconsistent and underdeveloped since analyses are biased by adherence to single theory explanations and overly dependent on quantitative analyses. In order to capture a more nuanced picture of SOE internationalization, this paper leverages the concepts of rigidity and flexibility to illuminate a process of how an SOE can overcome rigidities associated with state interventions and market conditions in its home country. It adopts a process study of Japan Tobacco (JT), which internationalized solely via cross-border acquisitions over past few decades. In doing so, the paper develops new constructs of institutional rigidity, such as market rigidity and state rigidity, and cultural flexibility, to illustrate a nuanced process of how an SOE overcomes institutional rigidity by dealing with each market and state rigidity differently and by introducing cultural flexibility.

Presenter: **Nimisha Singh**, *Symbiosis centre for management and HRD*

Given the culture, economic means, national resources and goals of the countries, their business and social institutions, in some cases, governments, set the environment, social, and governance that may seem unsuitable to many other countries when it works well in others. Take, for example, India that has CSR by mandate. To work on studying such differences among countires, we had about fifteen faculty members and scholars join our group that worked during a good part of the last year. Their results are organized into five papers by ten scholars, managers, and government experts that make this symposium. It puts together what has been studies by them on Germany, India, the UK, and the USA. To discuss the findings and comparisons in how these countires engage in governance that can help other nations is what these papers are all about. We provide some applications, cases, occurrences, and some comparative results with their interpretations and implications for different populations. Each expert, given their country, goals and targets, discusses the positives of how they are succeeding and how they are handling the challenges they are facing and how they could be avoided or remedied by others within the bounds imposed by their county situations. They answer what could be done to achieve the success. There are some transferable findings that could benefit other countries. Directions for further research are also provided.

MNE Activity in India and Myanmar

Session Moderator: **Ankit Surana**, *Macquarie Business School, Macquarie U.*

IM: **Going Global - iBusiness Firms from India**

Author: **Ankit Surana**, *Macquarie Business School, Macquarie U.*
Author: **Meena Chavan**, *Macquarie U.*
Author: **Vikas Kumar**, *U. of Sydney Business School*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

The dynamic world we live in requires that traditional international business (IB) theories be revisited to obtain insights into the internationalization of emerging market ibusiness firms (EMIFs). Although scholars widely agree that ibusiness firms' internationalization process is distinct from traditional brick and mortar firms, yet research on ibusiness firms from emerging markets is rare. Further, it is unclear how EMIFs internationalize and become dominant global players within a short period despite being late arrivals in the market and having fewer resources. Drawing on insights from the linkage, leverage, and learning (LLL) framework, we adopt a multiple case study–based approach whereby we conducted multiple in-depth interviews with 14 Indian ibusiness firms. This study contributes to the extant literature on ibusiness internationalization by developing a framework for advancing our understanding of the internationalization process for EMIFs. Moreover, we contribute to the LLL framework by extending it to the ibusiness firms and providing insights to all the three dimensions of linkage, leverage, and learning.

IM: **Local Listing of MNE Subsidiary and its Impact on Subsidiary R&D: Evidence from India**

Author: **Mayank Sewak**, *Newcastle U. Business School*
Author: **Garima Garg**, *U. of Massachusetts, Amherst*
Author: **Anurag Sharma**, *U. of Massachusetts, Amherst*

Researchers have long noted that MNE (multinational enterprises) subsidiaries face challenges while investing in R&D in host countries. We propose that listing on the local stock exchange allows the subsidiary to gain the required knowledge and networks for initiating R&D. However, listed subsidiary, with multiple equity holders, would have lower investments in R&D, compared to wholly owned subsidiary, especially in the context of weak and inconsistent intellectual property rights protection such as that of emerging markets. We add that having a common parent owned subsidiary in the same city, should allow the subsidiary to engage in greater amounts of R&D. The co-located sister subsidiary allows not only access to local knowledge and resources but also allow for superior appropriation of R&D investments. However, in the presence of a co-located subsidiary the R&D investments would not be made in the listed subsidiary. We find support for our assertions in a sample of manufacturing MNE subsidiaries operating in India in the period of 2000-2013.

IM: **Lean Logics versus Cultural Logics: Case Study of a Japanese Automobile Company in India**

Author: **Sagi Kunju Kunju Mathew**, *Curtin Business School*

This paper attempts to interpret resistance to lean discourse from an institutional logics perspective. A case study approach is followed by longitudinally analysing the clash of logics between lean institution and Indian cultural logics at Toyota Kirloskar Motors (TKM) in India. The significance of this case organisation draws strength from its decade long employee unrest which prima facie appears as an industrial relations conflict, but the undercurrent was the discomfort experienced by local employees due to the forceful implementation of lean production tools that challenged embedded local cultural discourse. The findings points to a series of misunderstandings and the unilateral persuasion of lean transplantation met with protests, often violent, inside the plant affecting the growth trajectory of this multinational enterprise (MNE). The reason for the unrest is explored in this paper. The importance of core cultural logics in the lean transplantation context is under researched in comparison to other factors and is especially significant to MNEs that ignore the cultural logics and proceed with setting up operations in India.

IM: **Responsible Exit Dilemmas under Sanctions: Multinationals' Divestment Complexities in Myanmar**

Author: **Htwe Htwe Thein**, *Curtin U.*
Author: **Anton Klarin**, *Curtin U.*
Author: **Sergey Sosnovskikh**, *U. of Salford*
Author: **Anna Grosman**, *Loughborough U.*

This study is centered around the context of current sanctions against the Myanmar military junta in response to the human rights abuses and the resulting implications of the coup for multinational enterprises (MNEs). We provide a rich qualitative analysis of MNEs' strategic choices under sanctions and institutional pressures in Myanmar, a context that received sparse consideration in international management studies. We contribute to institutional theory by introducing a nuanced taxonomy of strategic choices for MNEs operations under sanctions in response to formal and informal institutional pressures. Specifically, we draw attention to the ethical dilemma faced by MNEs and whether their exits are done responsibly or irresponsibly. We also provide evidence that MNEs can succumb to informal stakeholder pressures by exiting voluntarily, even in the absence of regulatory enforcement. We find that the exits are not always 'clear-cut' and even when MNEs exit voluntarily, they can do it irresponsibly, harming human rights and leaving the assets in the hands of unethical buyers or the military. Our study has significant implications for policy and human rights activism.

International Human Resource Management

Session Moderator: **Amy Randel**, *San Diego State U.*

IM: **Toward Inclusion via Cultural Intelligence, Synchrony Preference, and Perceived Workgroup Similarity**

Author: **Amy Randel**, *San Diego State U.*
Author: **Valerie Alexandra**, *San Diego State U.*

Inclusion is an important consideration for international firms to fully realize their strategic human resources, yet there is limited research on how firms can leverage international business competencies to grow capacity for inclusion. This study builds and tests theory about how cultural intelligence relates to workgroup inclusion through the mediating effects of synchrony preference (a temporal-related variable) and perceived workgroup similarity (in work styles and cultures/ethnicities). Support was found for this model based on longitudinal data from working professionals. These findings offer theoretical contributions to several literatures and provide international organizations with practical knowledge about how to encourage inclusion.

We assess the direct effect of organizational culture and the mediating effect of trust-in-top-management on employees' psychological safety perceptions using 2,451 observations from 18 global societies. Our hierarchical linear modeling analyses suggest that clan and adhocracy cultures levy a significantly stronger effect on psychological safety than market and hierarchy cultures, and trust-in-top-management mediates this effect. Further, we examine how macro-environment factors, namely individualism, and governance quality, condition the impact of trust-in-top-management on psychological safety. We found a significant cross-level moderating effect of individualism and governance quality on psychological safety. Our fine-grained analysis of individualism indicates that its effect stems mainly from the achievement values sub-dimension of individualism but not from its power and innovation values sub-dimension. These findings contribute significantly to the psychological safety and international management research domains. We discuss implications and advance directions for future research.

IM: **Cross-border Knowledge Transfer via International Assignees: A Meta-Analysis**

Author: **Anne Burmeister**, *U. of Cologne*
Author: **Daniela Noethen**, *U. Ramon Llull, ESADE Business School*
Author: **Julius Schildbach**, *ESADE Business School*
Author: **Jana Bucher**, *Hochschule Bremen*
Author: **Mila Borislavova Lazarova**, *Simon Fraser U.*

Research on cross-border knowledge transfer (CBKT) via international assignees has been growing. The field has reached a point where a synthesis of the quantitative literature is necessary so that we gain an integrated perspective on major research insights. Thus, we meta-analytically analyzed 41 quantitative articles. Our findings established the relative importance of individual, relational, knowledge, and contextual antecedents, and show mixed results for antecedents that are specific to the cross-border context. In addition, we identified relationships between CBKT and performance-related outcomes. We discuss our meta-analytic findings and derive promising directions for future research

IM: **The Impact of the Exchange Relationship Quality between SIEs and HCNs on Knowledge Sharing in China**

Author: **Milad Jannesari**, *UNSW Sydney Business School, Australia*
Author: **Alfred Presbitero**, *Deakin U.*
Author: **Michael J. Morley**, *U. of Limerick*

Self-initiated expatriates (SIEs) have received a considerable amount of attention within the international management literature. However, there are ongoing gaps in our understanding of the role of the host country nationals (HCNs) in the expatriation process and the factors that influence their exchange relationship quality with SIEs. In this study, we focus on the knowledge sharing that occurs between SIEs and HCN compatriots with whom they collaborate. Drawing on ideas from both social exchange and self-categorization theories, we examine the interplay among exchange relationship quality (cognition-based trust and affect-based trust), intercultural group climate, and assess whether differences in their assessments impact the outcomes of their knowledge sharing. Our findings derived from a dyadic study involving 101 SIEs and 101 HCNs in China, indicate that affect-based trust fully mediates the association between cognition-based trust and knowledge sharing between SIEs and HCNs. Furthermore, intercultural group climate moderates the mediated effects of cognition-based trust on knowledge sharing via affect-based trust, although not in the hypothesized direction. Overall, we contribute to the literature by deepening insights on exchange relationship quality to knowledge sharing between SIEs and HCNs and we answer calls for a more nuanced understanding of knowledge sharing among such dyads in non-Western contexts.

EMNE Internationalization

Session Moderator: **Dimitry Jacob**, *Newcastle U. Business School*

IM: **MNEs Managing Uncertainty in EMs: Role of Organizational Field Positions in Agentic Possibilities**

Author: **Dimitry Jacob**, *Newcastle U. Business School*
Author: **Harsh Kumar Jha**, *Cardiff Business School, Cardiff U.*
Author: **Mark Palmer**, *Queens U. Belfast*

Although the relationship between field position and agency has been established in institutional research, until recently this debate mostly concerned central and peripheral actors. Using a qualitative study of the multinational corporations (MNCs) in the pharmaceutical industry in Russia, we find that intermediate companies, positioned in between the center and periphery of the field, were more successful in managing the shifting conditions within the institutional context. This agency was manifested through discursive, performative and identity strategies, which enabled such firms to maintain their intermediate position and subtly introduce institutional change. We extend the emergent research on middle-status actors in neo- institutional theory. Our findings also provide novel insights into the international business and management debate on MNCs and organizational fields.

IM: **Bridging the Service-Quality Gap in International Hospitality Business in Emerging Markets**

Author: **Chidozie Umeh**, *U. of York*
Author: **Mathias Ndoma-Egba**, *teesside U.*

This study explores how the elements of internal service quality recognised in developed markets can be implemented in a culturally diverse emerging market by using a context-sensitive approach linked to the material experiences of employees and customers who deliver and consume services, respectively. We draw on the service profit chain model (S-PCM) and semi-structured interviews with 35 employees of two subsidiaries of a multinational hotel in a global south country, Nigeria. Our findings extend the existing five elements of the service profit chain model, focusing on the 'business case' to reveal the 'stakeholder case' for internal service quality. By using the S-PCM, the study develops an empirically grounded framework which demonstrates that to be adaptive, responsive, dynamic, and locally meaningful, the transfer of service quality in a culturally diverse emerging market involves much more than standard-guarding and standard-setting by the parent company. A focus on relational/interpersonal and informal institutional drivers remain fundamental for profitability and fairness. These insights, however, cannot be generalised to all emerging markets. This study responds to calls in the broader management literature for studies that explain how context impacts management practices more nuancedly.

IM: **Enhancement of Advanced Market Firms' Entrepreneurial Orientation Under Emerging Market Ownership**

Author: **Geer He**, *Hitotsubashi U.*

Previous literature on mergers and acquisitions (M&As) of advanced market firms (AMFs) by emerging market firms (EMFs) has suggested how such M&As enable EMFs to strengthen their organizations. By contrast, scant attention has been paid to the organizational changes of the acquired AMFs, and the idea that AMFs acquired by EMFs tend not to change organization-wise prevails. Addressing this research void, this study challenges the mainstream idea of "little or no change" when examining AMFs' post-acquisition organizational dynamics under emerging market ownership. Qualitatively theorizing from four Japanese firms' evolutions under Chinese ownership from 2009 to 2022, I found three acquirees experienced a significant enhancement of entrepreneurial orientation (EO), manifested in organizational behaviors. I then comparatively analyzed the changed and unchanged acquirees and proposed that given the pre-acquisition EO gap between the EMF acquirer and the AMF acquiree, such EO enhancement results from an inter-organizational EO matching between the two sides and is reinforced by the acquirer-acquiree power imbalance. Finally, I discussed the implications for scholarly research on EMFs, EO, and relevant management practices.

IM: **Strategic Imports, Multiple Principal Problem and International Performance of Emerging Market Firms**

Author: **Shubhabrata Basu**, *IIM Indore*
Author: **Surender Munjal**, *U. of Leeds*

This paper investigates the effect of multiple principal problem (MPP) on internationalization strategies of Emerging Market Firms (EMFs). EMFs, often resort to import of critical components from offshore markets to overcome inherent shortcomings in producing or procuring them from within or that of the home market. Such imports to boost export performances, lie at the core of their internationalization strategy. However, these strategic import-based performances receive dissimilar favor from different types of owners/investors. Specifically, we highlight the dichotomy between foreign versus domestic owners, and active versus passive investors. Empirically modelling a panel dataset of 872 Indian firms, from 1988 to 2019, we find that active domestic investors promote strategic imports-based internationalization to boost the firm's export centric competitive advantages. But other investors oppose this medium of internationalization due to their specific interests thus triggering MPP for EMFs. MPP complements agency perspective and calls for further investigation into specific governance mechanisms.

Corporate Governance in MNEs

Session Moderator: **Faisal Mohammad Ahsan**, *XLRI Xavier School of Management*

IM: **The Choice Between Cross-border Acquisitions and Greenfield Ventures: The Role of Board Interlocks**

Author: **Faisal Mohammad Ahsan**, *XLRI Xavier School of Management*
Author: **Subhasree Mukherjee**, *Kingston U.*
Author: **Pallav Bose**, *Indian Institute of Management, Ranchi*
Author: **Manish Popli**, *Indian Institute of Management, Indore*
Author: **Sathyajit Gubbi**, *BITS School of Management*

Drawing on an integrated agency-resource dependence perspective, we study the role of board interlocks in shaping the entry mode decision of emerging market firms from knowledge-intensive industries. We distinguish between board interlocks formed by a firm's inside and independent directors. Using a propriety dataset of 450 foreign market entries by Indian firms belonging to knowledge-intensive industries, we find that firms are more likely to choose cross-border acquisitions over Greenfield ventures when connected to other cross-border acquirers through both inside and independent director interlocks, however the effect of inside director interlocks is stronger. Foreign institutional investors' shareholding weakens the effect of inside director interlocks but strengthens the effect of independent director interlocks. Firm's own international experience negatively impacts the effect of independent director interlocks on the entry mode decision.

IM: **Technological Solutions to Governance Problems in International Business - A Blockchain Perspective**

Author: **Shubham Singh**, *Rutgers Business School*
Author: **Ajai Singh Gaur**, *Rutgers U.*

The complexity of business relationships has made governance issues critical for their success. Governance issues have become especially critical for Multinational Corporations (MNCs) as they navigate the complex landscape of different cultures, laws, and regulations in the countries in which they operate. Further, technologies like blockchain have disrupted traditional models of business, creating new challenges and opportunities for governance. This paper presents a technological solution to the governance challenges faced by MNCs from a blockchain technology perspective. We highlight the way blockchain technology can help in overcoming different inter and intra-organization governance costs and thus offer itself as an alternate mechanism for the governance of international business relations. Specifically, blockchain features like immutability and peer-to-peer sharing offer the mechanism to bypass the need for trust in international business relations, thus the opportunity to overcome different governance costs. Taking this further, this paper presents a blockchain-business governance framework, which organizations can use to navigate different governance challenges in the international business context.

IM: **Dimensions of Stakeholders' Influence in Strategy Implementation in Multilatina Subsidiaries**

Author: **CAROLINA MARIN-CADAVID**, *U. of Strathclyde*
Author: **Peter McKiernan**, *U. of St. Andrews*

Current literature on strategy implementation predominately focuses on the relationships between subsidiaries and headquarters, which neglects the influence of subsidiary stakeholders. Drawing on an in-depth case study of a Multilatina company, I aim to address this gap by exploring how stakeholders influence strategy implementation at the subsidiary level. The results show that internal (managers, employees, partners/shareholders, owner), external stakeholders (suppliers and contractors, clients and users, government and regulator, competitors, and community and environment), and the parent office impose various types of influence on the subsidiary. Overall, I identify seven categories of influence and their subsequent associations with different stakeholders. This research contributes to current debate in the strategy implementation field by extending stakeholder theory into the international business context. Overall, this paper attempts to provide applied contributions for practitioners and policy makers that operates state-owned MNCs in Latin America.

IM: **FDI Motive and Business Relatedness as Drivers Affecting Foreign Subsidiary Goveranance**

Author: **Yuxue Luo**, *U. of Nottingham Ningbo China*
Author: **Lei Li**, *U. of Nottingham Ningbo China*
Author: **Young Un Kim**, *U. of Nottingham, China*
Author: **Xiaojun Tang**, *Ningbo Jiangong Engineering Group Co., Ltd*

The institutional environments for international business have become increasingly more complex and uncertain, which engenders disproportionately more challenges to emerging market multinational enterprises (EMNEs). Foreign subsidiaries of EMNEs may consequently be expected to establish well-functioning governance structure and play crucial roles in managing the global strategy journey of the parent companies. Extant literature indicates a lack of research on what affect foreign subsidiary governance. This study examines foreign subsidiaries of EMNEs and investigates how the unique foreign direct investment motives and business relatedness influence the subsidiary board composition and CEO appointment: two essential attributes of subsidiary-level governance. We find that strategic-assets seeking motive is positively associated with the subsidiary board's external role gearing toward the host country environment and the tendency to appoint non-expatriate CEOs. In contrast, escape investment is positively associated with the subsidiary board's internal role well aligned with the parent company's strategy intent and implementation. In addition, for foreign subsidiaries focusing on the business closely related to that of the parent company, the board's internal role is more important than the external role and the CEO is more likely to be an expatriate. The current study contributes to the international corporate governance research by systhesizing the mainstream corporate governance theories with the geographic relational perspective.

Dynamic Capabilities in Emerging Market Firms

Session Chair: **Mohan Song**, *Central Michigan U.*
Panelist: **William Newburry**, *Florida International U.*
Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Panelist: **Olga Petricevic**, *U. of Calgary*
Panelist: **Ravi Ramamurti**, *Northeastern U.*

The panel proposes to raise the importance of dynamic capabilities in emerging markets by analyzing the impact that dynamic capabilities bring to emerging market firms and how do firms react to the dynamism, particularly during the pandemic. We invite prominent scholars in both dynamic capabilities and emerging markets fields as panelists to discuss the biggest challenge that hinders the theory development of dynamic capabilities in emerging markets and how we can advance theory in this area. The panel expects to give practical advice to both senior and junior scholars and encourage them to dive deeper into this research area. The panel will be run in a roundtable format. Panel chairs and panelists will discuss specific questions in each presentation, and a question and answer-based discussion will follow the panelist presentations.

IM Division Best Paper in CSR and Sustainability Finalists

Session Moderator: **Charles Edward Stevens**, *Rutgers U.*

IM: **How do MNEs and non-MNEs Influence their Supplier Chain Partners' CSR?**

Author: **Nan Zhou**, *Tongji U.*
Author: **Yuan Li**, *Shanghai Jiao Tong U.*
Author: **Hao Yu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

This study explores why and how multinational enterprises (MNEs) and non-MNEs influence the corporate social responsibility (CSR) of their suppliers and buyers along the supply chain and the contingent effects of the diversity of institutional environments. We find that MNEs are more likely than non-MNEs to influence the CSR practices of their suppliers because doing so confers higher legitimacy benefits for MNEs, whereas non-MNEs are more likely than MNEs to influence the CSR practices of their buyers because of their lower costs of doing so. Further, high diversity of institutional environments increases a focal firm's costs of influencing its partner's CSR, thereby reducing the positive relationship between a focal firm's CSR and its partner's CSR; in contrast, high diversity of institutional environments of a partner increases the legitimacy benefits and lowers the economic costs of altering its CSR activities, thereby enhancing the positive relationship between a focal firm's CSR and its partner's CSR.

IM: **The Role of Environmental Capabilities and Corporate Visibility in Manufacturing Location Choices**

Author: **Michael Millan**, *RWTH Aachen U.*
Author: **Dirk Luettgens**, *RWTH Aachen U.*

Companies face both increasing demands for more environmental sustainability in their business decisions and stakeholder expectations for more profits. This trade off can be well examined by looking at location decisions of companies. Our paper addresses the question of the influence of countries' environmental regulations on company's manufacturing location decisions. We investigate whether production decisions are cost-oriented or made according to ecological considerations. Consistent with the institutional theory we argue that firms select countries with weak environmental regulations for their manufacturing location. In addition, we ask what differences there are between companies. By considering firm heterogeneity, we expect that environmental capabilities and firm visibility weaken the negative effect of environmental regulation on manufacturing location decisions. An analysis of 779 location decisions made by 343 firms from 30 industrialized countries between 2007 and 2019 confirm our hypotheses. Our results provide empirical evidence for the Pollution Haven Hypothesis (PHH) and suggest that manufacturing location decisions are still made based on costs rather than environmental considerations. We contribute to the institutional theory and the PHH literature by focusing our analysis on manufacturing investments and by accounting for firm heterogeneity. Further, our empirical findings provide valuable insights for practice and policy maker.

IM: **Global Supply Chain Management in the Aftermath of Anthropogenic Disasters**

Author: **Yejee Lee**, *Indiana U., Bloomington*
Author: **Stephanie L. Wang**, *Indiana U., Bloomington*

Anthropogenic disasters are those caused by human actions and negligence. In this paper, we examine how experiencing industrial shocks caused by anthropogenic disasters triggers multinational companies' structural and non-structural mitigation phases to reduce the impact of future disasters. Focusing on the global supply chain context, we test hypotheses using a difference-in-differences approach in the 2013 Rana Plaza incident setting. We found that multinational companies respond to industrial shock by increasing the global supply chain geographical dispersion (i.e., structural) and simultaneously enhancing organizational sustainability commitment across the supply chain (i.e., non-structural). We explain the mechanism with firms' multidimensional? technological and social-political?perspectives on disasters. Furthermore, we focus on MNCs' reliance on outsourcing and social reputation as moderators to examine whether such responses are affected by the firms' perceived level of future operational and reputational loss.

IM: **International Business Diplomacy and Violent Conflicts**

Author: **Ishva Minefee**, *U. of Illinois at Urbana-Champaign*
Author: **Daniela Rivera Piedra**, *Georgia State U.*
Author: **Marcelo Bucheli**, *U. of Illinois at Urbana-Champaign*
Author: **Laszlo Tihanyi**, *Rice U.*

Research on multinational corporations' (MNCs') responses to violent conflicts largely emphasizes MNCs' decisions to completely divest from host countries affected by the conflict. Yet, many MNCs temporarily suspend their operations in hopes of restarting operations in the near future. Through a historical case study of Firestone Tire and Rubber Company's attempts to restart operations in Liberia during the country's first civil war, we develop a process model of how MNCs navigate complex relationships with warring factions in a host country, local employees in a host country, and the MNC's home country government. Our analysis of U.S. Department of State cables and letters sent by Firestone's executives to relevant stakeholders in the U.S. and Liberia reveals that a MNC's ability to restart operations is influenced by the MNC's diplomatic savviness while navigating changes in its bargaining power, political ties between the home and host countries, and the strength or fragility of peace processes in a host country. In addition to offering theoretical insight into the 'suspension-restart' option that MNCs take when confronting violent conflicts, this study contributes to research on the micro-foundations of international business strategy.

The New GLOBE Leadership Model and Measures: Cross-Culturally Validated in 134 Countries/Societies

Session Chair: **Mansour Javidan**, *Thunderbird School of Global Management at ASU*
Panelist: **Carolyn Egri**, *Simon Fraser U.*
Panelist: **Peter W. Dorfman**, *New Mexico State U.*
Panelist: **Richard Cotton**, *U. of Victoria*
Panelist: **Medha Satish Kumar**, *Simon Fraser U.*
Panelist: **Anirban Kar**, *York U., Canada*
Panelist: **Amanda Bullough**, *U. of Delaware*

Globalization in a pandemic/post-pandemic world presents continuing social, political, and cultural challenges and opportunities in terms of how people relate to one another. Effective leadership of individuals and groups from diverse cultures is influenced by the leaders' level of cross-cultural understanding and their ability to adapt their leadership style according to local cultural underpinnings and the situation on the ground. The panel symposium proposed here will present a new GLOBE Leadership Model based on a large-scale survey of over 44000 managers and professionals in 134 countries/societies. Through this panel, we aim to expand our awareness of the theoretical boundaries of the extant literature on leadership across societies. We also seek to gain feedback from the audience on the early findings of this study that will help with its interpretation and dissemination techniques.

Consulting in Leadership and Power Dynamic Environment

Session Moderator: **Rida Elias**, *American U. of Beirut*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **“Seeing” Potentially Toxic Organizational Relationships: Applying the Bowen Family System Theory**

Author: **Judith Gebhardt**, *St. Louis U.*

While organizations are noting “a dramatic shift in workplace power dynamics” perspectives from the micro-level family can offer significant insights into macro-level organization behaviors. In putting “the worker front and center” a framework for recognizing and untangling organizational relationships becomes a tool for the organizational consultant and addressing dynamics which impacts all levels of employees. Using Bowen’s Family Theory (BST), a theoretical foundation for assessing familial relationships, coupled with Bowen’s genogram, or ‘map’ which mimics the organizational chart, one can gain awareness into work relationships which may create “’toxic’ work environments”. The purpose of this paper is three-fold: To review the underpinnings of the Bowen Systems Theory (BST) framework, which is grounded in systems theory and emotion; introduce the well-studied and validated Bowen Systems Theory (BST) framework; review Bowen’s eight concepts which include definitions and examples of dysfunctional work-related behaviors; and introduce Bowen’s family genogram, a graphical illustration of the family (or organizational) structure and relationships, akin to the formal organization chart. These three areas offer organizational consultants, and subsequently leaders, managers, and employees, a better understanding of an organization’s interrelatedness of components, including people, functions, tasks, and structure, as well as organizations, resulting in a front and center worker.

MC: **Would You Play Dove When Appointed to be the Hawk? A Game Theory Perspective to Power Acquisition**

Author: **Rida Elias**, *American U. of Beirut*
Author: **Bassam Farah**, *Loyola Marymount U.*

Power comes with the position, an understanding usually agreed upon not only in strategy and organizational behavior literatures but also in all forms of communities of practice including but not limited to organizations, for and not-for-profit, management consulting within their firm and while consulting for others, and board of directors. What happens when an executive is elected to become the most powerful in the organization and has to work with the most powerful in the organization during transition? i.e., how would a CEO-Elect maneuver the power dynamics with the incumbent CEO during the CEO transition period? Using game theory and in-depth interviews with executives about their transition period, we show that CEOs-elect choose their strategy based on their perception of the strategy adopted by the incumbent CEOs. CEOs-elect play DOVE (or cooperate) when they perceive the incumbent to play DOVE. CEOs-elect play HAWK (or defect) when they perceive the incumbent to play HAWK while being aware of the cost being incurred. Most interesting as well as confusing, is when the CEOs-elect cannot predict the incumbent CEOs’ strategy or even believe that the incumbents, for better or for worse, do not want to play the game. Some consultants advise the boards to be active during CEO transition while others advise the board to let the executives handle the transition. Our results highlight to boards that their oversight is definitely advised in a HAWK-HAWK game and during no game. Board of directors may need to develop some governance codes to be applied during CEO transition period.

MC: **Understanding Relational Feedback as a Dynamic Practice of Leadership**

Author: **Alexandros Psychogios**, *Birmingham City U. Business School*
Author: **Feim Blakçori**, *AFG College with the U. of Aberdeen*

Despite extensive research on the leader-follower relationship, we have nevertheless limited knowledge regarding relational leadership practices like feedback. Following a qualitative research approach and based on 24 semi-structured interviews organised in six groups composed of one manager and three of his/her direct subordinates, the paper explores relational feedback as a dynamic practice of leadership- attempting to understand the impact that feedback has as an embedded and ever living practice of the relationship between the leader and the follower. The research findings suggest that relational feedback can be understood and actively practiced as a process a) contextualizing aspects like culture, processes, and systems; b) dynamically changing employee performance; c) enhancing leader-follower relationship structures that moves beyond the professional level into a personal dimension and encourages employees’ positive behaviours such as creative exploration, skill acquisition and self-development. Since this is pioneering research regarding the relational feedback as a dynamic practice on leader-follower relationship, our study provides specific practical implications for consultants and practitioners.

MC: **The Role of POS and LMX in Developing the Intention to Engage in Scholarly Activities**

Author: **Shelly Groves Brandon**, *U. of Dallas*

Academic medical centers maintain their competitive advantage by offering innovative clinical treatments to patients and by sustaining a high level of scientific productivity from faculty members at their affiliated medical schools. In such centers, scientific productivity is measured by the number and quality of scientific articles published, conference presentations given, research grants awarded, and patents granted. These contributions are important not only to the institution but also to the individual faculty members for career advancement and progression of the field of study in which they specialize. Given the importance of faculty members' scholarly contributions, it is imperative to better understand what factors influence their scientific productivity. One such factor is the social exchange between employee, leadership, and the organization at large; therefore, this study reviewed how faculty members' perception of organizational support (POS) and leader-member exchange (LMX) would influence their attitude about scientific productivity through the lens of the theory of planned behavior (TPB). I also examined perceived organizational support and leader-member exchange influence on the relationship between perceived behavioral control (PBC) and behavioral intention by surveying faculty members from academic medical centers across the US that host NCI-designated cancer centers The results indicated that the perception of high-quality LMX was positively related to greater PBC and stronger intention to engage in scholarly activities. On the other hand, POS did not influence faculty members' attitudes or intent to engage in scholarly activities. Lastly, neither POS nor LMX enhanced or diminished faculty members' intention to engage in scholarly activities once their attitude had been formed. This research contributes to the expansion of the application of theory of planned behavior and to the POS and LMX literature by demonstrating that among faculty members at academic medical centers, the relationship with their leader is more influential to their productivity than organizational support. For managers, these results suggest that the quality of the relationship with the department chair is an important variable in the development of faculty members' attitude toward and intent to engage in scholarly activities; therefore, department chairs should develop an environment of mutual trust, respect, and loyalty.

Consulting Dynamics in SMEs, Social Enterprises, and Family Businesses

Session Moderator: **Carole Bousquet**, *IDRAC Business School & ISEOR*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **Ethnographical Management Consulting within Small and Medium Size Enterprises**

Author: **Laurent Cappelletti**, *LIRSA-Cnam Paris*
Author: **Jean-Michel Plane**, *U. Paul Valery, Montpellier*
Author: **Florence Noguera**, *U. Paul Valery, Montpellier*

This article is dedicated to the discussion of epistemological and methodological problems brought forth by the observation of the management practices within Small and Medium Size Enterprises (SME). From this point of view, questions about the specific context concerning interventions in the SME, the management consultant's neutrality and the inevitable dialectical "immersion-distanciation" with regards to the objects examined are discussed. This article aims to demonstrate the theoretical and above all methodological interest of an ethnomethodological approach in management consulting to Small and Medium Size Enterprises.

MC: **Exploratory Research on Management Consulting Needs and Adaptations in Very Small Companies**

Author: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*
Author: **Maite Rateau**, *ISEOR*
Author: **Amandine Savall**, *ISEOR*

This exploratory research is aimed at identifying the specific needs of very small companies (VSCs) on Management Consulting (MC) and sketching MC services and processes adapted to VSCs. By using SEAM action-research, we have analyzed a sample of 4 management consulting projects conducted in VSCs located in France and in Spain. This paper contributes to enriching the very scarce literature on MC in VSCs. Drawing on these 4 case-based exploratory analysis, the proposed conceptual framework in this study offers a basis for future studies to extend the analysis to broader recognition of the distinctive characteristics, more countries, more MC methods, and to compare VSC with other larger enterprises. The implications for practitioners are important; by exploring the adaptation of consultation methods, we offer some insights into the roles, skills and strategies available to the consultant in order to be successful in VSCs.

MC: **Exploratory Study for the Development of Happiness Management in Spanish SME by External Consultant**

Author: **Jesus Molina-Gomez**, *U. de Malaga*
Author: **José Manuel Núñez-Sánchez**, -
Author: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*
Author: **Pere Mercadé Melé**, -

This exploratory study is based on a consultancy research project which arises as a response to the current trend, still incipient in the Spanish market, to implement well-being and happiness programs in companies. The main objective of the research is to define a proposal for a certificate of happiness management in Spanish SMEs, with the help of external consultants. In order to achieve this objective, a mixed method, quantitative and qualitative, has been used to triangulate the results, thus enriching the research. It has also been divided into sequential phases, beginning with a thorough literature review, followed by the analysis of the quantitative study to determine the level of happiness of workers in the country. Semi-structured in-depth interviews with expert practitioners were also conducted, which have helped to improve the proposal, highlighting, among other issues, the importance of being a socially responsible company, promoting internal and external happiness. The result has been a proposal for a consulting process to obtain a Quality Management Certificate. in SMEs. This reinforces the contribution of management consulting in the generation of useful and innovative knowledge for SMEs, which could allow them, not only to improve the happiness of their employees, with all the advantages that this entails, but also to enhance their competitive position. This will also help to bridge the gap detected between large companies and SMEs when it comes to being able to access a certified happiness management, without the need for a heavy and costly structure, but with the help of expert consultants.

MC: **Managing Conflict: How Egyptian Social Enterprises Navigate Multiple Institutional Logics**

Author: **Aya Yasser Hanafy**, *Cambridge Judge Business School*
Author: **Anna Aranda Jan**, *Cambridge Judge Business School*

This paper examines how social enterprises manage the conflicting institutional demands prescribed by the divergent institutional logics of commercial business and social/environmental purpose they combine. Focused on social enterprises in Egypt, a context with a nascent, thriving yet unregulated social enterprise ecosystem. The paper examines the relationship between the compatibility of institutional logics and the centrality of those logics to the functioning of the social enterprise with strategies they adopt to navigate conflict in their institutional environments. Thus proposing a framework that predicts the strategy to be used by each social enterprise in response to conflicting institutional demands, and identifies the organizational aspects that social enterprises manipulate in this context to operationalize their conflict management strategies. Namely, institutional, and organizational identities, stakeholder management strategy, organizational structure and internal representation of institutional logics.

Participant: **Eugene Sadler-Smith**, *U. of Surrey*

This stream of the 14th annual intuition symposium at AoM showcases new theoretical and methodological developments in the discipline. The first four contributions expand the boundaries of current intuition theory, yet to be tested fully empirically. The last two contributions explore the perils and possibilities of certain research methods. Specifically, Bakken and Haerem propose a mechanism for switching between intuition and analysis when making decisions in long-term crises, and theorize which type of intuition is needed at specific points of the process. Fuller et al. discuss how intuition is likely formed in virtual teams, impacted by the use of technology, and explore the distinction between actor-driven and team-driven intuition. Dias et al. investigate the integration of Garbage Can model and dual-process theories with the aim to gain a deeper understanding of intuitive decision making and how it draws on accumulated expertise. Grant and Nilsson explore intuitive expertise further by questioning how expertise is developed, characterized and evaluated in different domains. Hodgkinson outlines some common fallacies in intuition research and cautions about over-reliance on self-report techniques. Finally, Akinci et al. demonstrate the use of Computerized Text Analysis as a novel way to study intuition.

Participant: **Francesca Bacco**, *Vrije U. Amsterdam, School of Business and Economics*

This proposed symposium aims to facilitate a discussion on emergent research in entrepreneurial communication and generate insights about promising areas of future research. The core motivation is that rather than being peripheral to strategy, communication fundamentally shapes new ventures – as well as their interactions with entrepreneurial ecosystem participants. Communication is the process of creating and changing meanings; it is instrumental in helping entrepreneurs motivate key actions and decisions of not only themselves, but also how entrepreneurs and ecosystem participants such as investors, employees, or customers exert mutual influence through socially situated, dialogic processes. Rather than merely being a device for disseminating information, entrepreneurial communication forms the bedrock of wide-ranging aspects of entrepreneurship, ranging from identity and agency to subjective construction of uncertainty, to norms of interaction, discourse, and language. Through this symposium, we aim to bring together leading scholars in this field to discuss emerging research in this domain, as well have their insights into the most pressing (and promising) avenues for future scholarship. The above conceptualization of communication goes beyond being mere vector of information, opening the possibility of rich exchange of ideas outside traditional domains. Examples of potential topics of interest include, but are not limited to: - Social media as a conduit of mutual influence among entrepreneurs and stakeholders - Communication in social innovation/ social entrepreneurship contexts - Communicating to an ecosystem rather than a single audience - Sensemaking and responding to uncertain or disruptive times - Constructing the meaning of adversity, failures, or low status - and highlighting entrepreneurial agency and resilience in their wake - Use of rhetorical devices such as metaphor and analogies - Research based on non-traditional data sources, methods, or measures

Research on connections in the workplace has investigated many different types of relationships. However, less attention has been paid to one type of relationship that is a vital component of many workplaces: the relationship between the worker and the people they provide goods or services to (e.g., clients, patients, or audience members). Importantly, insights from broader social science scholarship suggest that the process of forging connections with clients is likely different from forging relationships with coworkers or mentors. In an effort to gain greater insight into worker-client connections, we invited a set of scholars studying this phenomenon within organizations. We have deliberately assembled a collection of qualitative studies that draw on findings from interviews, participant observation, and ethnographic techniques to develop rich, deeply descriptive, and contextual insights from a variety of workplace contexts, investigating how, why, and with what consequences people work with the clients of their organizations.

This symposium explores the social barriers to creating inclusive neurodiverse workplaces and the challenge of overcoming them. Neurodiversity refers to the inclusion of neurodivergent people, those with autism spectrum disorder (ASD), attention deficit hyperactivity disorder (ADHD), and other related neurodevelopmental conditions, in neurotypical spaces. Although neurodivergent employees offer many desirable skills and abilities, the social difficulties associated with these conditions often stand between neurodivergent applicants and long-term employment. We argue that resolvable misunderstandings drive these social difficulties and that knowledge of the origins of these misunderstandings is essential to creating inclusive neurodiverse workplaces. The papers in this symposium explore these misunderstandings in two theoretical and three empirical papers, which draw on qualitative and quantitative data collected using open-ended surveys, experiments, and a case study conducted in the field.

Examining Mindfulness, Presenteeism, and Self-Leadership in Work Contexts

Session Moderator: **Joseph S. Leah**, *Florida Gulf Coast U.*

This session will feature research papers that examine the impact of mindfulness-type practices, the dark side of mobile work, and self-leadership theory in the Chinese-culture contexts. Attendees will gain insight into the potential benefits of mindfulness practices at work, the negative effects of mobile work on presenteeism, and the renewed understanding of self-leadership theory in different cultural contexts. The session will explore the complexities of work-related issues and offer valuable perspectives on improving individual and organizational outcomes in these areas.

MSR: **Putting the Worker Front and Center: The Potential Impact of Mindfulness-Type Practices at Work**

Author: **Joseph S. Leah**, *Florida Gulf Coast U.*
Author: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Kathryn Pavlovich**, *U. of Waikato Management School*

This developmental paper explores the potential impact of mindfulness-type practices in a workplace context. We approach our exploration through the lens of prior research suggesting that such practices correlate with expressions of greater purpose by business leaders, and mounting evidence that businesses guided by greater purpose achieve stronger social, environmental and economic outcomes. Mindfulness-type practices, defined here as practices of connectedness to encompass both eastern and western forms, quiet the mind and expand our consciousness so that we are more aware of the truth about our experiences. Evidence from our data suggests that while personal (i.e. outside of work) practices of connectedness are growing in acceptance as part of leader behavior, workplace practices of connectedness are less widely applied. As a result, we propose that an opportunity exists for business leaders to positively affect the social/environmental outcomes of their organizations by providing increased opportunities for practices of connectedness at work.

MSR: **The Dark Side of Mobile Work: Examining Moderated Mediation Model to Predict Presenteeism**

Author: **Woo-Sung Choi**, *Gachon U.*
Author: **Seung-Wan Kang**, *Gachon U.*
Author: **Suk Bong Choi**, *Korea U.*

Owing to the development of Information and Communication Technology (ICT) and the inevitability of telecommuting in the COVID-19 environment, the boundary between working and non-working hours has become blurred. mWork, that is, ICT-based off-hour work, which has increased through the pandemic, affects employees' work attitudes, such as presenteeism. Hence, we designed a study to investigate the antecedents and mechanisms of employee presenteeism from the perspective of the conservation of resources theory. We supported our hypothesis using a sample of 672 Korean office workers obtained through three rounds of time-delay surveys. The results show that presenteeism is higher among employees with high mWork. In addition, employees' mWork increases sleep deprivation and presenteeism, and the exchange ideology of employees reinforces the positive effect of sleep deprivation on presenteeism. Additionally, the higher the level of exchange ideology, the stronger the mediating effect of mWork on presenteeism through sleep deprivation. This study verified the conservation of resources theory by identifying the mechanism by which mWork affects an employee's life, which in turn affects their work, and provides practical implications for managing productivity loss due to presenteeism.

MSR: **A Renewal of Self-leadership Theory in the Chinese-Culture Contexts**

Author: **Chan Hsiao**, *National Yang Ming Chiao Tung U.*
Author: **Le Mei Lo**, *National Yang Ming Chiao Tung U.*
Author: **Hsin-Jung Tseng**, *National Yang Ming Chiao Tung U.*
Author: **Shu Chen Li**, *National Yang Ming Chiao Tung U.*
Author: **Wan Jhen Chen**, *National Yang Ming Chiao Tung U.*

Self-leadership refers to individual's own control on their behaviors and cognitions, which comprises different strategies to exert influence on individual oneself. However, self-leadership concept was developed under the Western cultural background, the generalization power in Chinese cultural context has been questioned. This study aims to examine the self-leadership theory in Chinese context with two distinctive workplace scenarios: failure handling and promotion. The qualitative interviews were conducted with 36 Taiwanese middle and senior executives. Based on the original self -leadership strategies, two emerging themes have been discovered – Spiritual-self recuperation strategy and Relational insight strategy. This study contributed to the self-leadership field by enrichment and extension of theory with 2 emerging strategies in Chinese context, and a Confucian explanation has been supplemented.

This symposium examines the current state of the field of Management, Spirituality and Religion (MSR), along with a discussion on likely future trajectories. As an ‘emergent’ field, MSR is yet to establish firm consensual conceptual and theoretical foundations, while acknowledging that with time these will change and always be challenged – such as the notion of ‘opportunities’ in entrepreneurship or the ‘boundaries’ of diversity in diversity management. To probe into these conceptual and theoretical foundations and as a springboard to exploring future directions, we present a selection of Best Papers from the 20-year-old Journal of Management, Spiritualty and Religion (JMSR) considered the lead journal in this field of scholarship (Singh & Singh, 2022).

Biological Foundations of Synchrony: Implications for Team Outcomes

Participant: **Adam M. Kleinbaum**, *Dartmouth College, Tuck School of Business*
Organizer: **Nir Milstein**, *HEC Lausanne - UNIL*
Organizer: **Alon Burns**, *Bar Ilan U., Department of Psychology, Israel*
Participant: **Stefan Volk**, *U. Of Sydney*
Discussant: **Yair Berson**, *McMaster U.*

This symposium will focus on Interpersonal synchrony, which refers to the coordination of neurological, physiological, and behavioral states between individuals. Extant research, across disciplines, has demonstrated the effects of these forms of synchrony on fostering positive affect, relationship-building, and other important aspects of communication that can impact work outcomes such as job satisfaction, group cohesion, and performance. In this symposium, we focus on the contribution of research on synchrony to management theory and research. We highlight how neural and physiological forms of synchrony capture deep-seated, instantaneous dynamics in work teams. Presenters will demonstrate the role of individual and group-related processes in facilitating synchrony and examine its role on individual and team outcomes. This symposium will advance the field by offering new directions for theorizing and guidelines for future research on team processes and outcomes.

In Pursuit of Meaningfulness: The Job and Career Choices of Management Academics

Organizer: **Debra R. Comer**, *Hofstra U.*
Organizer: **Jennifer Lynn Schultz**, *Saint Mary's U. of Minnesota*
Panelist: **Dolly Chugh**, *New York U.*
Panelist: **Kathy Lund Dean**, *Gustavus Adolphus College*
Panelist: **Jean M. Forray**, *Seneca Consortium*
Panelist: **Jeffrey A. Mello**, *Hofstra U.*

Work is an important component of many people's lives. Meaningful work "is personally significant and worthwhile" (Lysova, Allan, Dik, Duffy, & Steger, 2019: 375; see also Martela, Gómez, Unanue, Araya, Bravo, & Espejo, 2021, para 2). Individuals experience their work as meaningful when it is intrinsically enriching and enjoyable and enables them to connect with or serve others (Bailey, Madden, Alfes, Shantz, & Soane, 2017; Lepisto & Pratt, 2017). The roles people play, the tasks they perform, their interactions with internal or external stakeholders, and the organizations that employ them can contribute to their perception of work as meaningful (Bailey et al., 2017). Meaningful work is associated with higher job satisfaction and engagement, organizational commitment, and performance, and with lower rates of absenteeism and turnover (Bailey, Yeoman, Madden, Thompson, & Kerridge, 2019). Academics expect and seek meaningful work (Dunn & Halonen, 2018; McDaniel, 2019). This proposed panel symposium considers how management academics can realize more meaningful work by proactively crafting their jobs and careers (Tims & Akkermans, 2020), as well as by taking advantage of fortuitous opportunities (Kindsiko & Baruch, 2019). The symposium is designed to elicit and integrate the experiences and perspectives of four seasoned faculty members in a moderated discussion that would generate insights as to how management academics can make choices that enhance their experience of meaningful research, teaching, and service.

Why Should I Speak Up? Antecedents to Employee Voice

Session Moderator: **Li-Yun Sun**, *Macau U. of Science and Technology*

OB: **Employees Speak Up Because of Who They Are? A Multilevel Investigation of Voice Role Identity**

Author: **Li-Yun Sun**, *Macau U. of Science and Technology*
Author: **Yan Ni Zhu**, *Macau U. of Science and Technology*
Author: **Chenwei Li**, *San Francisco State U.*
Author: **Wen Pan**, *Macau U. of Science and Technology*

ABSTRACT Drawing on role identity theory, we theorize voice role identity (how employees identify themselves with the role of voice engagement and view such engagement as a meaningful part of oneself) and examine its antecedents, outcomes, and boundary conditions. We developed the scale of voice role identity through two independent samples in Study 1 and tested a multi-level moderated mediation model in Study 2. Using data collected from 262 subordinates and their 69 supervisors (in 69 groups) in China, we find that (a) voice role identity mediates the effects of group-level inclusive leadership and individual-level task significance on employee promotive voice, (b) inclusive leadership predicts leader inclusion engagement at the group level, and leader inclusion engagement further moderates the relationship between voice role identity and promotive voice, and (c) leader inclusion engagement moderates the indirect effects of inclusive leadership and task significance on promotive voice via voice role identity. The moderating and moderated indirect effects are stronger when leaders have a higher level of inclusion engagement. To avoid missing variable bias and demonstrate the incremental validity of the study, we control for organization-based self-esteem, another self-views-related variable, as a parallel mediator. The study contributes to employee voice behavior and leadership literatures.

OB: **Employees' Self-perceived aAtractiveness and Voice Behavior**

Author: **Hyunjeong Lee**, *Seoul National U.*
Author: **Jeeyoon Park**, *Seoul National U.*
Author: **MINJU OH**, *Seoul National U.*

While many scholars have demonstrated the advantages of being perceived as attractive by others, little is known about how individuals' self-perceived attractiveness (SPA) influences their own work-related behaviors. Drawing on social learning theory and expectancy theory, this study investigated whether and how employees' SPA affects their voice behavior. Using two-wave survey data from 153 employees in South Korea, we revealed that employees with higher SPA engage in voice behavior more actively. Moreover, employees' self-efficacy and perceived impact mediate the effects of SPA on voice behavior. We also found that the mediation linkages were strengthened for employees whose belief in the instrumentality of physical attractiveness (i.e., the belief that being physically attractive is important to success) is stronger. Implications of these findings, limitations, and directions for future research are discussed.

OB: **The Effect of Spouse Secure-base Support on Employee Voice: A Perspective from Attachment Theory**

Author: **NianNian Dong**, *U. of Science and Technology Beijing*
Author: **Xiyue Ma**, *School of Economics and Management Tsinghua U.*
Author: **Xiangyu Gao**, *School of Economics and Management Tsinghua U.*
Author: **Mian Zhang**, *Tsinghua U.*

Previous studies have overwhelmingly focused on work-related factors that may influence employee voice, while little attention has been given to non-work factors. Drawing on attachment theory, we develop a spillover model to illustrate how spouse secure-base support encourages employee voice at work. Based on the analyses of a sample of 364 participants recruited from educational institutions in China, we found that role breadth self-efficacy and positive affect mediate the relationship between spouse secure-base support and two types of employee voice (i.e., promotive and prohibitive voice). We also found that leader secure-base support moderates the indirect effect of spouse secure-base support on employee promotive and prohibitive voice through positive affect. Theoretical contributions and practical implications are discussed.

OB: **Construal Level and Employee Voice: A Future Temporal Focus Perspective**

Author: **Chenwei Li**, *San Francisco State U.*
Author: **Priyanka D. Joshi**, *San Francisco State U.*

Drawing on Construal Level Theory, we argue that when employees adopt high-level construals they engage in greater promotive and prohibitive voice via inducing their future temporal focus. A two-wave field study with 826 employees and their 166 supervisors supports this argument. Our study makes several contributions to the construal level and voice literature. Our findings should encourage scholars to utilize the construal level theory more in the context of voice behavior.

What If I Don't Want to Lead? Leadership Identity and Understanding Fearful and Reluctant Leaders

Session Moderator: **Nicole Morales**, *U.S. Army Research Institute for the Behavioral and Social Sciences*

OB: **A Taxonomy of Leader Identities in the United States Army**

Author: **Nicole Morales**, *U.S. Army Research Institute for the Behavioral and Social Sciences*
Author: **Tanner Newbold**, *U. of Oklahoma*
Author: **Justine Rockwood**, *U. of Oklahoma*

The term "identity" is used to describe an aspect of one's self-concept consisting of salient features of individuals that shape goals, behaviors, and cognitions (Chan & Drasgow, 2001; Lord & Hall, 2005). Leader identity is a facet of an individual's identity that relates to being a leader. Identifying as a leader is viewed as one of the strongest predictors of effective leadership and career development (Day & Harrison, 2007; Hall, 2004). However, it is not clear how one identifies as a leader, or the identity they adopt once they are in the leader role. A qualitative study of U.S. Army officers and non-commissioned officers led to the development of a leader identity taxonomy, summarizing the behaviors, cognitions, and motivations of leader identities that emerged when leaders were asked to describe who they are as leaders. The current research goes a step further to finalize a leader identity taxonomy, applying a mixed-method approach of content validation. The resulting taxonomy illustrates leader identities in the U.S. Army, addressing the question of how leaders self-identify by detailing the ways that identities shape approaches to the role and interactions with subordinates.

OB: **When Leaders Fear Leading: A Qualitative Study**

Author: **Elizabeth Weglarz**, *Baruch College & The Graduate Center, CUNY*
Author: **Yochi Cohen-Charash**, *Baruch College & The Graduate Center, CUNY*

Though understudied in the leadership context, we suggest that fear, the emotion that alerts humans to threat, is prevalent in it and shapes leadership behavior. We suggest the term fear of leading to delineate leaders' fear of leading. We report on a grounded theory study of the phenomena examining when a leader may fear leadership and what they do in response to such fear. The study involved 50 interviews with leaders and found that leaders recognize the experience. We identified predictors of and responses to leaders' fear leading. Our findings contribute to existing emotions and leadership theory and offer opportunities for future research.

OB: **(Un-)Willing and Able? Trajectories of Reluctant Leadership in the Swiss Armed Forces**

Author: **Eliane Bucher**, *BI Norwegian Business School*
Author: **Nicole Gottschalck**, *WHU Otto Beisheim School of Management*
Author: **Matthias Waldkirch**, *EBS Business School*
Author: **Hubert Annen**, *Swiss Military Academy at ETH Zurich*

The aim of our study is to explore the phenomenon of reluctant leadership with an inductive longitudinal study. Based on interview data with members of the Swiss Armed Forces, we disentangle motivational states of willingness and reluctance to lead and illustrate trajectories of leadership motivation. Our findings show that initially reluctant leaders may become willing leaders over time and vice versa. We spotlight the individual, social, and contextual factors underlying such turnarounds and underline the theoretical and practical relevance of a better understanding of reluctant leadership and its underlying mechanisms in management research in general and the literature on leadership motivation in particular.

OB: **Leadership and Identity at Work: A Study in Photo-Elicitation**

Author: **Chidozie Umeh**, *U. of York*
Author: **Nelarine Cornelius**, *QMUL*
Author: **James Wallace**, *U. of Hertfordshire*
Author: **Mathias Ndoma-Egba**, *teesside U.*

Leadership has often been explored as a shared, contextually embedded process contingent on group trust in a leader who embodies a shared group identity. Still, very little is known about the diversifying potential of leadership, specifically what and how new relational formations emerge within existing leadership arrangements and are experienced and reported by interactants (leaders and followers) in specific settings. In this study, we draw on the Social Identity Theory of Leadership and evidence from participant-led photos and interview data (photo-elicitation) to explore employee accounts of their lived experiences of leadership, followership, and identity in two organizations in a Global South context. We find that a focus on hierarchical distinctions between leaders and followers and the ingroup-outgroup dichotomy frequently masks the emergence of new relational leadership configurations and identities, which change the rules, roles, and expectations among interactants. We conclude this article by discussing the implications of findings for leadership theory and methods used to investigate lived experiences of leadership.

"I'll Be Back": Negative Effects of Artificial Intelligence in the Workplace

Session Moderator: **Yuan LIANG**, *Harbin Institute of Technology*

OB: **The Effects of Tech-learning Anxiety: A Multiple Interaction Analysis Under Human-AI Collaboration**

Author: **Yuan LIANG**, *Harbin Institute of Technology*
Author: **Tung-Ju WU**, *Harbin Institute of Technology*
Author: **Wen-Yan DUAN**, *Harbin Institute of Technology*

Employees do collaborate with AI (HAI-C) and face more anxiety about learning advanced skills about HAI-C. Drawing on the conservation of resources (COR) theory and self-determination theory (SDT), we examine a moderated mediation model focusing on how and when HAI-C Tech-learning anxiety influences informal field-based learning (IFBL) via work engagement. To find the way to alleviate the negative effect, we also tested the role of supervisor emotional support (SES) as well as work motivations. We collected data from employees who daily work with AI in China from July-August 2022 through three times. Results showed that HAI-C Tech-learning anxiety was negatively related to work engagement and in turn reduce IFBL. The mitigating role of SES was significant when SES was high, but the protective effect was diminished with high intrinsic motivation. Our findings provide valuable and timely implications for HAI-C management.

OB: **Engineers Show More Algorithm Aversion: A Longitudinal Study**

Author: **Alvaro Chacon**, *U. Técnica federico santa maría*
Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*
Author: **Edgar E. Kausel**, *Pontificia U. Católica de Chile*

For more than 70 years, research has consistently shown that algorithms predict better than humans in various circumstances. Nevertheless, people have been reluctant to use algorithms when they see them err (a phenomenon termed algorithm aversion). Studies have explored the algorithm aversion phenomenon, trying to understand it better and finding ways to overcome it. Still, we do not understand how different people use and adopt algorithms well. Considering the vital role of engineers in organizations and society, we conducted two longitudinal studies outside the lab on the differences that engineers and non-engineers present when interacting with inaccurate algorithms. We conducted two ecological momentary assessment studies where 427 participants predicted currency exchange rates or maximum weather temperatures based on advice (human or algorithm). Relying on the judge-advisor system framework, we measure advice taking on daily predictions for nine days. Our results showed, in both studies, a significant three-way interaction between the effects of advice source, if participants were engineers or non-engineers, and time on algorithm use. Specifically, the trend of algorithm use over time was significantly decreasing for engineers, and it was not for non-engineers who received inaccurate algorithm advice. Considering our findings, when implementing algorithms in organizations, we suggest that managers have in mind who will use the algorithms. If mainly engineers will, special consideration of algorithm accuracy must be kept in mind because engineers will probably be harsh in their evaluation and neglect algorithm use rapidly if algorithms err.

OB: **How and When Job Insecurity of Human-AI Collaboration Impacts Employees' Work-Life-Related Outcomes**

Author: **Yuan LIANG**, *Harbin Institute of Technology*
Author: **Tung-Ju WU**, *Harbin Institute of Technology*
Author: **Wen-Yan DUAN**, *Harbin Institute of Technology*

No matter willing or unwilling to collaborate with artificial Intelligence (AI), employees are facing increasing pressures whether they can appropriately master and adapt skills. Drawing on the job demands-resources model (JD-R), we construct and test a moderated mediation model that explains how and why job insecurity of human-artificial intelligence collaboration (JI-HAI-C) influences employees' psychological resilience and its subsequent work-life-related outcomes. Moreover, we explore whether workplace mindfulness can mitigate the negative effect caused by JI-HAI-C. We conducted an online experiment (Study 1) and a three-wave lagged survey (Study 2) using employees from China who daily work with AI. The results showed that JI-HAI-C is negatively correlated with psychological resilience and in turn impacts following consequences (i.e., team creative performance of HAI-C, informal field-based learning of HAI-C, wellbeing, and psychological health). Additionally, workplace mindfulness (i.e., workplace mindfulness training and trait workplace mindfulness) plays a key role in buffering the negative effect that JI-HAI-C has on psychological resilience. Specifically, the conditional indirect effects of JI-HAI-C on work-life-related outcomes via psychological resilience were weaker when workplace mindfulness was higher. Our findings offer timely and useful implications for theory and practice around HAI-C systems.

OB: **Hold on to your Day Job: Employee Preparations for Automation at Work**

Author: **Anna Godollei**, *Baruch College & The Graduate Center, CUNY*

Due to ever increasing automation, it is becoming imperative that employees at risk prepare for the future of work, such as by identifying new career opportunities or developing new skills. To this end, automation-related job insecurity may be a useful emotion to guide people towards preparatory behaviors. Nonetheless, research so far has found that, despite their objective risks, people may not feel threatened by automation. Further, job insecurity in general, has mixed impacts of preparatory behaviors. Thus, in the present study we week to identify for whom objective automatability is more likely to lead to automation-related job insecurity, and under what conditions automation-related job insecurity may be expected to lead to preparatory behaviors. In a survey of 244 US employees, we found that people who perceived a large skills-gap, compared to people who perceived a small skills-gap, demonstrated a stronger positive relationship between objective automatability and automation-related job insecurity. Downstream, automation-related job insecurity was positively related to preparatory behaviors (developmental activities and career exploration) for people who reported receiving low organizational support. Nonetheless, organizational support also had a positive main effect on developmental activities. These results suggest that people who are unprepared for automation are most likely to respond to the threat with appropriate fear. Further, job insecurity drives preparatory behaviors when people feel they must take matters into their own hands due to limited external support. We discuss the theoretical and important practical implications of these results for organizations seeking to retain and retrain their workforce.

I'm Over It: Emotional Exhaustion and Job Stress

Session Moderator: **Dennis Helding Jacobsen**, *Yale School of Management*

OB: **Does Emotion Regulation in Work-to-Family Role Transition Buffer the Negative Impact of Job Stress?**

Author: **Mahbubul Alam**, *Algoma U.*

Stress generated from today's intensified work makes it challenging for employees to meet family demands, causing a lack of balance between work and family roles. Drawing on work–family and emotional labor literature, this research explores the beneficial impact of emotion management in work-to-family role transitions. I ask whether employees' emotion regulation through surface acting and deep acting ameliorates the negative impact of job stress on their work–family balance. The hypotheses were tested with data collected from 175 employees of a Bangladeshi financial company. The findings provide evidence that job stress serves as an antecedent of work-to-family emotion regulation when employees interact with family members after work. The results further suggest that employees' deep acting during their work-to-family transition buffers the negative impact of job stress on their satisfaction with work–family balance. This research underscores the importance of employees' emotion work in work-to-family transitions and offers avenues of future research to study emotion regulation as a strategy to cope with job stress.

OB: **The Dynamic Interplay Between Friendship Ties and Emotional Exhaustion: A Longitudinal Investigation**

Author: **Dennis Helding Jacobsen**, *Yale School of Management*
Author: **Diego Stea**, *Copenhagen Business School*
Author: **Vojkan Nedkovski**, *non affiliated*

Research has shown that employees tend to exhibit similar levels of emotional exhaustion as their social ties. As a result, scholars commonly contend that emotional exhaustion is contagious. Drawing on conservation of resources theory, we propose an alternative perspective, asserting that emotional exhaustion and friendship ties are interdependent and reciprocally influence each other. To test our coevolutionary theory, we conducted a three-year longitudinal study with psychometric and network data collected at annual observation waves from all employees of an award-winning, high-end Italian architecture studio. We employ a stochastic actor-orientated model that allows us to estimate the interdependent contributions of friendship ties and emotional exhaustion, while at the same time accounting for the complex dependencies inherent in social network data. Consistent with widespread beliefs, we find a contagion effect. Friendship ties work as conduits of emotional exhaustion, where employees assimilate to the average level of emotional exhaustion of their friends. At the same time, emotional exhaustion also predicts friendship dynamics. Elevated levels of emotional exhaustion lead to higher likelihood of friendship retention and lower activity in friendship formation. These effects are stronger for individuals high in neuroticism, but do not depend on the emotional exhaustion of the alter. We discuss implications of these findings for burnout and network dynamics in organizations.

OB: **Frontline Employees' Pathogen Sensitivity on Emotional Exhaustion: Moderating Role of Mindfulness**

Author: **Collins Opoku Antwi**, *Zhejiang Normal U.*
Author: **Eric Adom Asante**, *Hong Kong Metropolitan U.*
Author: **Michelle Belle**, *Zhejiang Normal U.*
Author: **Peter Darko**, *Zhejiang Normal U.*

Frontline employees (FLEs) have faced double exposure during the COVID-19 pandemic – exposure to infection contagion and to potential job loss. As many workers worked remotely to facilitate social distancing, most FLEs were faced with the choice of either quitting or risk getting infected on duty. Responding to the heightened service employees' burnout, we integrated the motivational psychologies of disease avoidance and conservation of resource theory to develop and empirically test a theoretical model that advances that FLEs' pathogen sensitivity undermines their emotional self-regulation, which then impoverishes emotional vitality. Using a three-wave survey panel (N = 454) with a month interval at each wave, we found some evidence for our model. Specifically, we found that FLEs' perceived COVID-19 infectability relates positively to surface acting and emotional exhaustion but negatively to deep acting. That surface and deep acting transmit the effect of perceived COVID-19 infectability on emotional exhaustion. That the direct and indirect effect of perceived COVID-19 infectability on emotional exhaustion via surface acting is buffered by FLEs' dispositional mindfulness. Discussion of the results' implications concludes the paper.

OB: **Traumatic Experiences in a Dying Organisation: Causes and Coping**

Author: **Sandra Krisberga-Sinigoi**, *Cranfield School of Management*
Author: **Patrick Reinmoeller**, *IMD*
Author: **David Denyer**, *Cranfield U.*
Author: **Jutta Tobias**, *City U. London*

Organisational death, not a rare event, may not matter for outsiders, yet employees concerned can be experienced as a traumatic event similar to losing someone close in the family (Shepherd, 2003; Sutton, 1987). In recent years, there has been growing interest in extreme events that trigger traumatic experiences (Hällgren, Rouleau and De Rond, 2018) and recovery from trauma in the workplace, but there has been very little research on this area in ordinary work settings (Maitlis, 2020). This empirical study analyses causes and the process of coping with traumatic experiences in a dying organisation. It is based on a dataset of retrospective, semi-structured interviews with 44 former employees across a European financial services firm. This study has hence provided a unique opportunity to investigate traumatic experiences and coping with them in an ordinary work-setting of employees still working for the dying organisation over the time period of more than two years. This study makes three contributions. It extends knowledge about rare organisational context factors that cause traumatic experiences. It explains the important, yet dual nature of peer support in recovering from traumatic experiences. It also provides a new perspective on how employees – together with others –cope with failure of their organisation, which offers a different, yet complementary explanation to the currently predominantly used Kubler-Ross (1969) five stage mourning model focused on individual coping.

Need Help? Understanding Helping Behavior in Organizations

Session Moderator: **Edward Tang**, *Zhongnan U. of Economics and Law*

OB: **When Helping Behaviors Induce Hostile Reactions? A Perspective of Competitive Altruism**

Author: **Edward Tang**, *Zhongnan U. of Economics and Law*
Author: **Kan Ouyang**, *Shanghai U. of Finance and Economics*
Author: **Hanhua Xu**, *Hong Kong Baptist U.*

Helping behavior serves a critical function of facilitating cooperation. In this research, however, we caution that such a behavior might elicit competition under certain conditions. Drawing on competitive altruism theory, we argue that two employees' helping behaviors to each other interactively induce the feeling of rivalry between them——the perception of a unique competitive relationship with a specific opponent in which heightened psychological stakes promote a desire to win beyond the motivation induced by tangible stakes——and thus hostile reactions targeted at the rivals. Results of two round-robin survey studies showed that, when two employees engage in a high level of helping behavior to each other, one may indeed perceive the other as a rival, which leads to hostile behaviors such as social undermining, favor rejection, and social exclusion. And, we further explore the boundary condition and found that the feeling of rivalry arises in those employees with high levels, but not low levels, of psychological reactance. The research made important contributions to the literature of helping behavior and rivalry.

OB: **How Autonomy-oriented Help Stimulates Recipients' Online Helping Behavior**

Author: **Shuwen Li**, *Dalian U. of Technology*
Author: **Wenan Hu**, *Shandong U.*
Author: **Ruiqian Jia**, *Fudan U.*
Author: **Zhifei Zhang**, *Tongji U., Shanghai, PR. China*

Recent trends in the academic literature indicate growing interest in passing on help to others after receiving help ("helping forward"). Existing research, however, has not fully examined the psychological process of how the helping recipients become the providers. Using three-wave data from 457 employees in mainland China, we found that: receiving autonomy-oriented help can strengthen other-praising moral emotion and moral ownership or felt obligation, and thereby promote employees' online helping behavior. Recipients with high moral courage are more inclined to convert other-praising moral emotion and felt obligation into online helping behavior. Moreover, the results showed that moral ownership and felt obligation are the necessary paths in the conversion from the recipients to the provider while other-praising moral emotion is an optional one. This study not only tested and enriched the generalized exchange theory, but also provided new insights into how to enhance online helping behavior.

OB: **The More, the Better? How and When Perceived Relative Help Influenced Employees' Job Performance**

Author: **Yuan-Fang Zhan**, *Central China Normal U.*

In this research, we developed and tested a comprehensive model of how and when perceived relative help influenced the recipient's job performance by introducing a social comparison perspective. Unlike previous studies that have focused on the consequences of the absolute value of receiving help, this study seeks to investigate the potential effects of relative received help. In study 1, a scenario experiment with 205 employees was conducted and demonstrated the positive relationship between perceived relative help and recipients' feelings of gratitude, as well as the U-shaped curve relationship between perceived relative help and self-esteem threat. Using data collected in three waves from 345 employees in study 2, our results suggested that perceived relative help increase recipients' feelings of gratitude and subsequent ICB, and core self-evaluation strengthened this positive relationship. Besides, our findings indicated there is a U-shaped curve relationship between perceived relative help and self-esteem threat, which further indirectly influences employees' task performance. Overall, these findings had the potential to extend our knowledge of received help literature by incorporating a social comparison perspective.

OB: **Offering or Seeking Help? Exploring the Effect of Harmony Motives on Social Integration**

Author: **Yuanyuan (Yoyo) Huo**, *U. of Surrey*
Author: **Junbang Lan**, *Hong Kong Baptist U.*

This paper examines the mediating role of anticipatory helping in the relationship between harmony enhancement motive and social integration, as well as the mediating role of help seeking in the relationship between disintegration avoidance motive and social integration. We also investigate the moderating effect of initiative climate on our mediation model. We test our hypotheses using a three-wave data from 76 supervisors and 232 subordinates in China. The results show that our proposed moderated mediation model is supported. The implications of our findings for research, method, and practice are discussed.

I Think, Therefore...New Perspectives on Cognition Research

Session Moderator: **Yaxian Zhou**, *U. of Hong Kong*

OB: **Intuition Boosts Women's Risk-Taking Performance And Men's Risk-Taking Propensity**

Author: **Katharina Fellnhofer**, *ETH Zurich, Harvard U.*
Author: **Yu Deng**, *ETH Zürich*
Author: **Didier Sornette**, *Southern U. of Science and Technology, China*
Author: **Ursula Renold**, *ETH Zürich, D-MTEC*

How important is skill at using intuition when facing risks? Using the theoretical framework of pattern recognition, we investigate intuition, the skill of using nonconscious information, through two complementary behavioral measures: a traditional one with fast decisions and a new one with hidden images. A fully online experimental design is used to explain how triggering intuition varies in influence on men's and women's investment decisions. We collected 62,721 investment decisions made by 657 subjects from 33 nationalities (USA and across Europe) in September 2021 to use our Bayesian model to test the effect of skill at using intuition on prediction accuracy by gender. Our endeavor clarifies intuition's value for women's performance when facing risks and its booster effect for men's risk taking propensity (but without any performance effects). Using investment decisions as real world based examples and a new intuition measurement with hidden emotional images, this work illuminates how women's skill at using intuition facilitates their performance to be as good as men when taking risks, while men's skill at using intuition stimulates their risk taking propensity without affecting performance.

OB: **The Power of Acceptance: Improving Daily Work Outcomes with Acceptance Through Metacognition**

Author: **Yaxian Zhou**, *U. of Hong Kong*
Author: **Bonnie Cheng**, *HKU Business School, The U. of Hong Kong*

Although research on acceptance has provided insights into benefits of acceptance in the clinical context, limited research has considered the role of daily acceptance in the workplace. Building on previous acceptance research and taking a resource perspective, we propose that resources supplied by daily acceptance promote employees' psychological flexibility (manifested in metacognition), which in turn lessens daily work-related anxiety and improves daily work performance. Across three studies (Study 1: one-day between-person time-lagged study; Study 2: five-day time-lagged experience-sampling study; Study 3: 10-day field intervention experience-sampling study), we tested the hypothesized model. Results indicated that daily acceptance, both naturally-occurring and experimentally-incurred, fostered metacognition, which subsequently decreased work-related anxiety and increased work performance. Theoretical and practical implications are discussed.

OB: **The Positive and Negative Effects of Self-initiated WorkPlace Play on Colleague Evaluations**

Author: **Suman Choudhary**, *Indian Institute of Management, Udaipur*
Author: **Kirti Mishra**, *Indian Institute of Management, Udaipur*

An emerging stream of research demonstrates the growing recognition of workplace play (WPP) as an element to foster creativity and enhance employee performance. However, what is unclear is how self-initiated WPP is perceived and evaluated by others in the organization: whether it is evaluated favorably or unfavorably. Drawing on attribution theories, we develop a process model to explain why self-initiated WPP activities may be attributed with distinct motives by other colleagues and how does this interpretation affect perceptions of the authenticity of the person initiating the WPP. In addition to how of the process, we also focus on two important dimensions of self-initiated WPP- content and intensity and explain how they moderate the relationship between WPP and their attributions. Further, we also present a typology of how two contextual variables in the organization: job demands and work design, influence the classification of self-initiated WPP into favorable vs. unfavorable. The proposed model suggests that the key characteristics of the self-initiated WPP activities and of the person initiating these activities will shape the evaluation of them by colleagues. Further, we explain the implications of the theoretical model and the typology for WPP management research and practice. Lastly, we discuss future research directions of this research.

OB: **Escalation of Commitment: Conceptual Clarity and Directions for Future Research**

Author: **Dimitar Krastev**, *U. College Dublin*
Author: **Antonio Garzon-Vico**, *U. College Dublin*
Author: **Jan A. Rosier**, *U. College Dublin*

Escalation of commitment has received considerable attention in scholarly literature ever since its appearance over four decades ago. Despite sustained research efforts, the diverse and inconsistent ways in which escalation of commitment has been defined and operationalized present a challenge for understanding past research and informing future efforts. By reviewing 217 escalation of commitment studies published in journals from the fields of business, management, organizational study, and psychology, I found two main issues related to the conceptual clarity of the term. First, there has not been a consistent definition of escalation of commitment, and past research has employed various definitions that differ in key elements. Second, escalation of commitment has often been conflated and confused with other, similar terms in the literature, including sunk costs, persistence, strategic inertia, lock-in, and others. Based on my reading of the literature, I argue that the inclusion of two key elements—negative feedback and repeated decisions—can address the issue of inconsistent definitions and also help to distinguish escalation of commitment from similar terms. I finish by summarizing recent findings and insights on negative feedback and repeated decisions, and by offering an agenda for future research.

Promises, Promises: New Advances in Psychological Contract Research

Session Moderator: **Aurelie Cnop**, *LSE*

OB: **Night Never has the Last Word**

Author: **Aurelie Cnop**, *LSE*

As recent organisational research suggests that employees are increasingly expecting more from their work than financial rewards and promotion. This qualitative study proposes to better understand people working for the pursuit of a highly valued mission through the lens of their psychological contract. A better understanding of this type of contract is important as research suggests that the ideological dimension of the psychological contract may be able to explain fundamental employee behaviours at work, such as why employees may stay loyal to their organisations even when they perceive a breach of transactional or relational obligations, or why employees sometimes perceive a violation even in the absence of direct personal maltreatment by their organisation. This study investigates this construct in a sample of a team of employees working for the children's oncology department of a public hospital.It revealed the importance of ideological obligations for medical employees and how their fulfilment help them to overcome minor causes of breach in the purse of a mission that transcends them. It also highlights the importance of the meaning of work in explaining the strong relationship built through this type of contract.

OB: **Psychological Contracts in the Context of Organizational Change: A Systematic Review (WITHDRAWN)**

Author: **Sabine Raeder**, *U. of Oslo*
Author: **Sandra L. Gabrielsen**, *U. of Oslo*

Organizational change is expected to undermine the quality of psychological contracts. A large part of research has shown detrimental effects of change on employment relationships, especially when major restructuring and downsizing of staff produced a negative assessment of the change and its consequences. However, in a smaller number of studies, types of change and change management practices were presented that foster psychological contracts. In this systematic review of existing research, we promote a differentiated view on the effect of organizational change on psychological contracts. We distinguish the use of the organizational change context in study designs as well as the types of organizational change and practices of change management. The review results show that the effect of organizational change on psychological contracts varies with the type of change (i.e., downsizing, merger, major or minor change) and the practices implemented for managing change. Studies with a high degree of contextualization through a focus on one organizational change provide more detailed and elaborate information on the relationship between change and psychological contracts. This systematic review contributes to guiding future research in identifying factors that explain the relationship between organizational change and psychological contracts. It helps to discover lacunae of current research and finally to support organizational practice to plan changes in a sustainable way.

OB: **Psychological Contract Fulfillment and Employee Creativity in a Chinese Context**

Author: **Qinxuan Gu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Han Gao**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Utilizing two studies, we explore the construct of new generation employee perceived employer psychological contract fulfilment and examine its impact on creativity in the Chinese context. In Study 1, using qualitative and quantitative methods, we develop a new perceived employer psychological contract fulfilment scale and test its reliability and validity. We find that Chinese new generation employee perceived employer obligations include empowering employees, employee caring, salary and benefit satisfied, growth and development, positive culture and climate. In Study 2, drawing on social exchange theory, we propose a mediation model in which perceived employer psychological contract fulfilment affects new generation employees' creativity through workplace wellbeing (emotional state) and work absorption (cognitive state). Using the data sample from the Chinese new generation employees, we examine our hypotheses. Finally, general implications are discussed.

OB: **The Role of Emotions in the Breach of the Ideological Psychological Contract**

Author: **Anna Kevätsalo**, *Aalto U. School of Business*

It is widely established in the rich literature on psychological contract (PC) breach that perceived breach is associated with negative emotions, often referred to as psychological contract violation. However, scholars are yet to systematically theorize on the nature of discrete emotions following PC breach and consider how these emotions may trigger specific behavioral outcomes. Focusing specifically on the ideological psychological contract (I-PC) and drawing on the affect theory of social exchange, I illustrate how I-PC breach can trigger specific emotions. I propose that the degree of organizational identification and the salience of ideological currency – the commitment to a cause – shape employees' emotional reactions to breach with distinct behavioral outcomes. Furthermore, I suggest that the employees with strong organizational identification and especially those who anthropomorphize their employer organization are particularly susceptible to personal strain in the case of ideological contract breach. The paper contributes to a more nuanced understanding of psychological contract breach by integrating emotional responses. Implications to theory and avenues for further research are discussed.

New Directions in Employee Voice Research

Session Moderator: **Shu- Ching Chang**, -

OB: **Why Didn't You Tell Me the Truth? Employee Voice Behavior About "Report Nothing but Good News"**

Author: **Shu- Ching Chang**, -
Author: **Yu Ha Cheung**, *Hong Kong Baptist U.*
Author: **Hung-Chieh Yen**, *Job uncertainty*
Author: **Jen-Wei Cheng**, *National Taiwan U. of Science and Technology*
Author: **Shih-Hao Lu**, *Department of Business Administration, National Taiwan U. of Science and Tech*

In organizations, some employees would ingratiate superiors rather than to speak out a truth so as to maintain the harmonious interpersonal relationships, and avoiding discomfort in communication. With such motives, employees tend to report good news and refrain bad news in their voice behavior. Yet, there is very little research explanatorily studying why employees perform voice behavior specifically on "Report Nothing but Good News". Study 1 used a qualitative approach to explore constructs of employee voice behavior about "Report Nothing but Good News". Three concepts emerged from our analysis, including the dimensions of selective expression, downplaying and ostensible expression. Based on the three concepts we found in Study 1, a nine-item scale was developed and validated by exploratory factor analysis and confirmatory factor analysis in Study 2. Finally, practical and theoretical implications were discussed.

OB: **Supervisor Consultation: Reciprocating Voice-Seeking Behavior by Speaking Up**

Author: **Xianhui Ning**, *Southwestern U. of Finance and Economics*
Author: **Liting Wang**, *Southwestern U. of Finance and Economics*

Employees tend to consult those who have power or expertise. Whereas much attention has been paid to employees seeking advice from their supervisors and coworkers, little focus has been placed on supervisor consultation of employee opinions and its potential benefits for organizational functioning. This research addresses this underexplored research avenue. Results from two-wave survey data demonstrate that supervisor consultation behavior has a positive relationship with employee voice. Employee felt obligation for constructive change (FOCC) serves as a mediating mechanism underlying this relationship. Supervisor consultation behavior is more positively related to employee FOCC when managerial openness is higher than lower, which in turn, leads to more employee voice. Contributions to the literature and managerial practice, limitation, and insights for future studies are discussed.

OB: **How Daily Affective Shift can Shape Employees' Constructive and Destructive Voice Behaviors**

Author: **Changjun Li**, *School of Economics and Management of Wuhan U.*
Author: **Hua Li**, *Xi'an Jiaotong U.*
Author: **Jingyu Dong**, *Xi'an Jiaotong U.*

Voice literature has long acknowledged that employees are more likely to speak out immediately after experiencing intense emotions. However, employees' momentary emotions often fluctuate over time; that is, the intensity of a certain experienced affect can increase (upshift) or decrease (downshift) over a given period of time. Unfortunately, voice scholars know little about if and how changes in affect between two time points can influence an employee's voice behavior. In this paper, we adopt an affective shift perspective to examine how upshifts in activated (or deactivated) positive (or negative) affect and their interactions predict employees' daily constructive (or destructive) voice behavior. With an experience sampling method, we conducted a daily study over eight consecutive workdays. Results from our multilevel analyses reveal that, on a daily basis, both upshift in activated positive affect and upshift in activated negative affect promoted daily constructive voice, and their simultaneous upshifts led to more constructive voice. In addition, upshift in deactivated negative affect stimulated daily destructive voice and upshift in deactivated positive affect exacerbated this effect. Our research advances voice literature by providing a novel but important theoretical perspective—the affective shift perspective—to understand the dynamic affective drivers and within-person variation of individual voice.

OB: **Craft of Voicing to Power: How Employees with Upward Social Class Transitions Gain Voice Endorsement**

Author: **Yasha Spriha**, *U. of Maryland R.H. Smith School of Business*
Author: **Subrahmaniam Tangirala**, *U. of Maryland*
Author: **Rui Shu**, *Shanghai U. of Finance and Economics*
Author: **E. S. Srinivas**, *Indian Institute of Management, Bangalore*

Drawing on theories of social class transitions and communication, we argue that employees who have reached positions of higher Socio-Economic Status (SES) from lower SES backgrounds develop unique capabilities to tactfully express their viewpoints. Such employees, during their social class transition, often need to carefully navigate interactions with gatekeepers of relatively higher power in the social hierarchy; in that process, they get opportunities to hone voice crafting, which involves delivering the challenge-oriented content of their ideas and concerns in a palatable and non-threatening manner to others. Such ability to voice craft can especially help them deal better with managers who hold power in the organizational hierarchy and, thereby, gain greater voice endorsement than their peers from more privileged SES backgrounds. We establish support for our theory through a multisource field survey study in a multi-national firm in India and a set of two studies using a quasi-experimental causal-chain design using online samples of working adults based in the United States and the United Kingdom. In the process, we challenge the dominant view in the literature that the disadvantages that employees with lower SES backgrounds face in elite work settings can overshadow any advantages they develop as they come out of their hardscrabble upbringing, especially when it comes to getting heard.

Advancements in Motivation Research in Organizations

Session Moderator: **Zheni Wang**, *School of business, Southern Connecticut State U.*

OB: **Understand the Changes in Motivation: Comparative Studies Using Theory-Based Interventions**

Author: **Zheni Wang**, *School of business, Southern Connecticut State U.*
Author: **Melanie Briand**, *John Molson School of Business, Concordia U.*

Managers often need to stay motivated and effectively motivate others. Therefore, they should rely on evidence-based interventions to manage the daily routine of motivational dynamics at work. This research answered how self-determination-theory-based interventions change employees' motivation and motivational consequences during short time frames (i.e., within an hour, within a few weeks/months). Field study one focused on assessing the effectiveness of a one-day training workshop in helping improve managers' work motivation, basic psychological needs satisfaction/frustration, and changing managers' needs-supportive/thwarting behaviors within a few weeks. Results supported the training effectiveness as managers were rated less needs-thwarting by their direct subordinates and self-reported improvement in needs satisfaction/frustration six weeks after completing the training program. Online study two used the mean and covariance structure analysis and tested the three types of basic psychological needs supportive/thwarting and control conditions (3x2x1 factorial design) on the situational motivation, vitality, and general self-efficacy for playing online word games within 30 minutes. Multi-group confirmatory factor analysis (CFA) confirmed the scalar measurement invariance, then latent group means comparison results showed consistently lower controlled motivation across the needs-supportive and thwarting experimental conditions. During a quick online working scenario, the theory-based momentary intervention effectively changed situational extrinsic self-regulation in Amazon MTurk participants. Supplementary structural equation modeling (SEM) analyses using experience samples supported the indirect dual-path model from basic needs satisfaction to vitality and general efficacy via situational motivation. We discussed the theoretical implications of the temporal properties of work motivation, the practical implications on employee training and organizational change programs, and the limitations.

OB: **Salespeople Motivation: A Systematic Review and Nomological Network**

Author: **Abhishek Vilas Sonavane**, *IIM Lucknow*

This article systematically reviews empirical work on the antecedents and outcomes of salespeople motivation. Based on a review of the 43 articles on salespeople motivation spanning the last four decades (1977–2022), a framework that integrates findings from empirical work is developed, and a future research agenda is presented. We highlight opportunities for empirical and theoretical advancement of the field, calling on researchers to draw on theories such as the job-demand resource theory, social identity theory, social exchange theory, social network theory to understand how salespeople motivation; develops and influences individuals' performance, attitudes and behaviors, impacts on organization and shapes consumer behavior. Further, we call on researchers to improve the research designs they adopt, adopt multi-level approaches to understand how salespeople motivation develops, undertake more work on the effects of well-being interventions and burnout on salespeoples' attitudes and behaviour, and examine the effects of culture.

OB: **The Joint Influence of Individual and Collective Psychological Ownership and its Social Consequences**

Author: **Ruixue Zhang**, *U. of Nottingham Ningbo China*
Author: **Melody J. Zhang**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Current research on psychological ownership mostly focuses on its effects on employee work-related outcomes, whereas its impact on social outcomes has yet to be examined. Drawing on the promotion-prevention framework, we investigate its impact on two social outcomes—received help and experienced ostracism—through dual mechanisms, i.e., proactive behaviors and territorial behaviors. We also tested collective psychological ownership as a moderator in the foregoing relationships. We tested our hypotheses progressively through two time-lagged survey studies from different fields, beauty salons teams (Study 1) and nursing teams (Study 2). Study 1 results supported the main and mediating relationships. The results largely support our theorizing. Our research offers several theoretical and practical implications for cross-level psychological ownership and its dual side social influences.

OB: **Share or Not to Share? The Dual Effect of Sharing Goals on Performance**

Author: **Qinglin Zhao**, *Texas A&M U.*
Author: **Huiwen Lian**, *Texas A&M U.*
Author: **Jie Li**, *Wilfrid Laurier U.*
Author: **Chenduo Du**, *U. of Kentucky*

Sharing goals with others is ubiquitous in life and the workplace. However, the influence of sharing goals with others on performance is still under debate. According to the evaluation apprehension theory, individuals become concerned about being evaluated after sharing goals with others. Current research has shown conflicting findings about whether the evaluation apprehension will lead to better or worse performance. To address this question, this paper integrates evaluation apprehension theory and approach/avoidance framework and proposes that sharing goals will result in both positive and negative influences when anticipating the evaluation from others. In addition, this effect will be moderated by individuals' approach and avoidance temperament (i.e., the sensitivity to positive and negative stimuli). To test these hypotheses, we first developed the excitement of positive evaluation and fear of negative evaluation scale based on the data collected from 186 full-time employees (Pilot study). Then we tested the causal relationship between sharing goals with others and excitement of positive evaluation and fear of negative evaluation in two experiments (Study 1 and Study 2). Then we tested all hypotheses in the 3-wave field survey data from 249 employee-supervisor dyads (Study 3). Most of our hypotheses got support. Finally, we discussed the implications.

Not Going to Brag: New Perspectives on Leader Humility

Session Moderator: **Goh E-yang**, *National U. of Singapore*

OB: **A Social-oil Perspective of the Relation Between Humility, Incivility, and Leadership Appraisal**

Author: **Goh E-yang**, *National U. of Singapore*
Author: **Sandy Lim**, *National U. of Singapore*
Author: **Eugene Yong Jun Tay**, *National U. of Singapore*

While academic and practitioner discourse is rife with allusions to servant or humble leaders, there has been little attention examining its founding construct – humility. Such leaders appear to be a fait accompli, and seldom do people question the obvious: does humility help individuals become formal leaders? Drawing upon leader categorization theories and the emerging social-oil hypothesis of humility, we suggest that humility both directly and indirectly improves an individual's likelihood of becoming a leader. Specifically, we suggest that humility directly helps by signaling qualities which are typically expected of leaders, and indirectly helps by minimizing the amount of uncivil social interactions that individual has with others. We tested our proposed model across five studies (field and laboratory) and from multiple perspectives (self-report, colleague-report, evaluator-report). First, we conducted a large-scale field study (n=5,230) using multisource data to examine humility's effects on leadership appraisals and incivility in a natural setting (Study 1). Next, we conducted a series of online experiments which separately examined humility's impact on leadership appraisals (Study 2), humility's impact on incivility (Study 3a-b), incivility impact on leadership appraisals (Study 4), and our full proposed model (Study 5a-b). Results across all studies were supportive of our postulations. Taken together, our findings advance the emergent social-oil hypothesis of humility and enriches understanding of whether and how humble individuals become leaders.

OB: **Too Humble To Thriving? The Mixed Blessing of Leader Humility for Leaders Themselves**

Author: **Yu Zhu**, *Jinan U.*
Author: **Meilan Nong**, *Jinan U.*
Author: **Linglin Zhuo**, *Jinan U.*
Author: **Yanfei Wang**, *South China U. of Technology*

Much theory and research on leader humility has mainly focused on how observers or recipients perceive and respond to leader humility. We pivot from this predominant focus to the influence of leader humility on leaders themselves. Drawing upon social comparison theory, we develop a model to explore how and when leader humility can be a mixed blessing for leaders themselves. Across two experiments and a three-wave field study, we found that leader humility fosters self-improvement motivation, thus increasing leaders' sense of learning; however, leader humility also elicits self-rumination, decreasing leaders' sense of vitality. Self-esteem was found to be an essential boundary condition of the effect of leader humility on themselves. Specifically, the positive relationship between leader humility and self-improvement motivation and the indirect effect of leader humility on sense of learning via self-improvement motivation will be stronger when self-esteem is high. When self-esteem is low, the positive relationship between leader humility and self-rumination and the indirect effect of leader humility on sense of vitality via self-rumination will be stronger. Overall, our research answers how and under what conditions the mixed blessing effect of leader humility on leaders themselves may occur.

OB: **Leader Humility and Employee Destructive Voice: A Resource-Protection Mechanism**

Author: **Ying Liao**, *School of Management, Xi'an Jiaotong U.*
Author: **Jie Li**, *School of Management, Xi'an Jiaotong U.*
Author: **Ting Wang**, *Xi'an U. of Technology*

Research on voice behavior focused exclusively on the proactive and constructive one, ignoring the prohibitive and harm-oriented voice behavior that potentially deteriorates organizational climate. Drawing upon the conversion theory of resource, we investigate the role of leader humility in prohibiting destructive voice, the underlying psychological process, and the moderating effect of the impression management attribution of subordinates to leaders' expressed humility. With a sample of 583 nested employees and their supervisors, we uncover that leader humility inhibits destructive voice through elevating supervisor-subordinate guanxi (SSG) and remedying ego depletion. In addition, we find that the negative indirect relationship is weakened when subordinates attribute leaders' expressed humility to impression management motive. In other words, when subordinates interpret leaders' humble expressions as impression management tactics, they are less likely to build high-quality SSG and hardly to retrieve ego depletion, thereby more likely to speak up destructively. Theoretical and practical implications are discussed.

OB: **A Dual-Status Perspective to Understand Why and When We Follow Humble Leaders**

Author: **Yang Bai**, *Guanghua School of Management, Peking U.*
Author: **Wenxing Liu**, *ZUEL*

Is humility an effective leadership style? While some argue that humility can positively impact followers' growth and performance, teamwork effectiveness, and overall organizational productivity, others consider it as a soft personality and find its negative influence on workplace deviance. In the present investigation, we aim to reconcile the competing streams of humility research by incorporating both the negative and positive aspects into one theoretical model. Drawing on the evolutionary theory of dominance and prestige as two alternate forms of status within social hierarchies, we suggest that humble leaders will be perceived with higher prestige status but lower dominance status, which in turn will impact passive (viz. compliance) and proactive (viz. leader-directed OCB) followership behaviors. Across multiple studies employing controlled lab experiments and multi-stage field surveys among participants from both the United States and China, we consistently demonstrated that leaders' expressions of humility could promote their subordinates to be "proactive" followers by elevating prestige perceptions while lowering dominance perceptions. Furthermore, we found that followers' power distance orientation moderates the impact of humble leadership on status perception: these effects become more salient among subordinates who hold low rather than high power distance orientation. We discussed theoretical implications for research on humility, prestige and dominance status, and followership, as well as practical implications for leaders and their followers.

My Leader Made Me Do It: Exploring Relationships between Leadership and Employee Unethical Behavior

Session Moderator: **Xiangmin Liu**, *Rutgers U., New Brunswick*

OB: **How Supervisor Perspective Taking Shapes Employees' Repeated Unethical Behaviors**

Author: **Bulin Zhang**, *Rutgers U., School of Management and Labor Relations*
Author: **Xiangmin Liu**, *Rutgers U., New Brunswick*
Author: **Zhengtang Zhang**, *Nanjing U.*

Prior behavioral ethics research suggests that supervisors may influence employees' ethical decision-making. Yet, their role in shaping whether employees who have had ethical lapses repeatedly engage in or avoid subsequent unethical behaviors has not been fully explored. Drawing upon cognitive dissonance theory, we hypothesize that when supervisors exhibit a high level of perspective taking, employees are less likely to perceive organizational intolerance of unethical behaviors and, in turn, are more likely to repeat these behaviors in the future. To test our hypotheses, we conducted a field investigation using objective data from organizational archives and survey data collected from 276 sales professionals and 108 supervisors in a large firm over a 9-month period. Our results support our predictions. We discuss theoretical and practical implications, limitations, as well as future directions.

OB: **Why I Don't Feel Unethical to Hide Knowledge? A Cognitive Exchange-based Model of Cronyism Outcomes**

Author: **Ahmad Raza Bilal**, *Lahore Business School, The U. of Lahore*
Author: **Tehreem Fatima**, *U. of Lahore Sargoha Campus Pakistan*
Author: **Farooq Anwar**, *The U. of Lahore. Pakistan*
Author: **Muhammad Waqas**, *Lahore Business School, The U. of Lahore*

Why some employees do not share knowledge remains a dilemma in management studies. This study sheds light on why certain employees hide knowledge when they face organizational cronyism through a moderated mediation model that includes moral disengagement and an egoistic climate. The foundation of this hypothesized relationship is based on social exchange and the social cognitive theory. The data were gathered from 378 employees working in the service sector in Pakistan, that is, education, banking, hospitality, and telecommunication in three waves (each wave three months apart). The data were analyzed via M-plus using path analysis for longitudinal moderated mediation. The results affirmed the proposed relationships, thus highlighting a cognitive and exchange-based black box underlying organizational cronyism and knowledge hiding.

OB: **A Compensatory Ethics Perspective on Status-claiming and Unethical Behaviors**

Author: **Rui Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xingshan Zheng**, *Shanghai Jiao Tong U.*
Author: **Xinxin Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

The majority of workplace status research has focused on the sources of status and the consequences of possessing high or low status, as well as the effectiveness of status claiming for status obtainment. Scholars, however, have remained silent about actors' psychological and behavioral reactions to their own status-claiming behaviors. Integrating the dominance-prestige model of status with moral licensing and moral cleansing theories, we posit that dominance-oriented and prestige-oriented status behaviors have contrasting effects on unethical behaviors via moral credits and moral credentials. Across two multi-wave studies, we found that prestige (dominance) status behaviors promote (prevent) subsequent unethical behaviors in the short run, due to increased (decreased) moral credits and credentials. Moreover, instrumental climate enhances the moral licensing effects, but weakens the moral cleansing effects. This study breaks new ground in status research by revealing the unintended dark side of prestige status behaviors and the unexpected bright side of dominance status behaviors. Theoretical and practical implications are discussed.

OB: **The Unintended Bright Side: Why and When Follower Unethical Behavior Incite Ethical Leader Behavior**

Author: **Mayowa Babalola**, *Royal Melbourne Institute of Technology U.*
Author: **Chandra Shekhar Rao Pathki**, *Graduate School of Business, Nazarbayev U.*
Author: **Shuang Ren**, *Queen's U. Belfast*
Author: **Moazzam Ali**, *COMSATS U., Islamabad, Lahore Campus*
Author: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

Extant research on ethical leadership has mainly focused on how leaders' ethical leadership behavior influences their followers. However, it is unclear whether and how the behaviors of followers affect leaders and their subsequent ethical leader behavior. Drawing from the theory on moral self-regulation (viz. vicarious moral cleansing), we posit that follower unethical behavior elicits ethical leader behavior as a result of the leader's perceived loss of moral credits. Results from a field study involving leaders and their followers reveal that when followers engage in unethical behaviors, leaders are likely to perceive a loss of moral credits, which, in turn, motivates them to engage in ethical leadership. Furthermore, we find that leaders with a higher sense of moral ownership are more likely to perceive a loss in their moral credits following their followers' unethical behavior and, in turn, are more likely to engage in ethical leader behavior. Taken together, our study contributes to the theoretical understanding of followers' role in the ethical leadership process by providing novel insights into how and when unethical followers may, paradoxically, contribute to the development of ethical leadership in organizations.

New Directions in Empowering Leadership Research

Session Moderator: **Yunyue Yang**, *Yokohama National U.*

OB: **How Does Employee Voice Influence Empowering Leadership? The Roles of Voice Tactics and Gender**

Author: **Yunyue Yang**, *Yokohama National U.*
Author: **Sen Zhang**, *Graduate School of Commerce, Waseda U.*

Evidence suggests that empowering leadership is effective and brings the importance of understanding what its determinants are into focus. Contrary to many existing studies, this research discusses the predictors of empowering leadership in terms of subordinate behaviors and traits. Based on the signaling theory and the expectation violation theory, we argue that an employee's voice behavior and gender influence supervisors' empowering leadership. In particular, we predict that voice expressed in rational appeals is more likely to enhance managerial attributions of employee proactivity compared to emotional appeals, which leads to increased empowering leadership. Furthermore, we propose that this is especially true when the subordinate is female rather than male. To test these hypotheses, we conducted a scenario-based experiment in Japan and the United Kingdom. The results from both countries support all of our hypotheses; our findings not only provide theoretical implications for research on empowering leadership, voice behavior, and gender, but also several practical implications for subordinates and supervisors.

OB: **Forgotten Supervisors When Empowering: Role of Task Dependence in Supervisor's Gratitude and LMX**

Author: **Ruowen Shen**, *Renmin U. of China*
Author: **Yao Wang**, *Renmin U. of China*
Author: **Feng Gao**, *School of Business, Renmin U. of China*

Leader-member exchange (LMX) has witnessed growing interest of scholars. Despite the considerable focus surrounding the subordinate-related antecedents of LMX in primary studies, there remains an obvious absence in research investigating when and how supervisors' behavior and emotion impact themselves and their LMX relationships with subordinates, which has been called for attention by scholars. Given the potent role of a supervisor's affective characteristics, to address the important yet unanswered question, we drew on affect theory of social exchange and explored the effect of empowering behavior on supervisors by a diary study. Results indicated that only when supervisor had high task dependence on the subordinate, empowering behavior could increase the supervisor's gratitude, leading to higher LMX-affect. Transforming the primary focus of "subordinates' perceptions" to "supervisors' psychological activities", we provided a supervisor perspective for better understanding both empowering behavior and the development of LMX.

OB: **My Lips Are Sealed! The Relationship Between Empowering Leadership and Error Reporting**

Author: **Miguel Pedro Moreira Almeida Fernandes**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **Aníbal López**, *Instituto Português de Administração de Marketing*

Employees more often cover up their errors rather than report them. As a result, organizations may lack important information that otherwise could reduce the negative consequences of errors and lead to increased performance and innovation. In this study, we propose that leaders can tackle this problem through empowering leadership. Building on social information processing theory, we propose that empowering leadership affects employees' error reporting either directly or through its impact on one's paradox mindset, such that empowering leadership increases employees' acceptance and comfort in the presence of tensions, increasing their willingness to report their errors. Based on social-role theory, we further theorize that persisting gender stereotypes influence the effectiveness of empowering leadership for men and women, such that men benefit more from this leadership style. The results from a three-wave field study in a variety of industries (i.e., Study 1) and an experimental vignette study (i.e., Study 2) generally support our hypotheses. Implications for theory and practice are discussed.

OB: **Energizing Yourself by Empowering Others: The Effect of Empowering Leadership on Leaders' Themselves**

Author: **Lin Wang**, *School of Business, Sun Yat-sen U.*
Author: **Junchao Li**, *Rutgers Business School*
Author: **Feiyue Chen**, *School of Business,Sun Yat-sen U.*
Author: **Chengquan Huang**, *U. of Florida*

While accumulated literature has long established the positive impact of empowering leadership on employees and unit performance, much less is known about how exercising empowering leadership may benefit the leaders themselves. Integrating self-perception theory with the empowering leadership literature, we shed light on how exercising empowering leadership can help increase leaders' self-concordance at work, which in turn increases their experienced work meaningfulness and reduces their burnout. We further propose that these impacts of empowering leadership on leaders tend to be stronger when the leader has higher self-reflection. We conducted two studies to examine this model. A field experiment with 65 leaders (Study 1) provided causal evidence on how empowering leadership manipulation influenced leaders' experienced meaningfulness and burnout through leaders' self-concordance. A three-wave field survey (Study 2) with 79 leaders and their 518 subordinates not only replicated the findings in Study 1, but also corroborated the moderating role of leaders' self-reflection. Implications for the theory, practice, and future research directions of empowering leadership are discussed.

Participant: **Clarissa Cortland**, *UCL School of Management*
Participant: **Sarah Harvey**, *UCL School of Management*

Despite the current and past health and financial crises and the slower global trading system (World Trade, 2021), the number of migrant workers and employees with multicultural backgrounds has continued to increase over the past years (International Labour Organization, 2021). Organizational scholars have not been absent from discussing such a phenomenon, investigating different facets of migration and multiculturalism in organizations. One substantial stream of research has focused on the training and selection of expatriates (e.g., Newman, Bhatt, & Gutteridge, 1978) and their adjustment in foreign organizations (e.g., Caligiuri, Hyland, Joshi, & Bross, 1998; Kraimer, Wayne, & Jaworski, 2001; Mendenhall & Oddou, 1985), providing important insights for those businesses expanding and relocating their workforce abroad. More recently, a related line of research has also paid close attention to those individuals initiating their own migration, that is self-initiated expatriates (Harrison, Shaffer, & Bhaskar-Shrinivas, 2004; Tharenou & Caulfield, 2017). Finally, another stream of organizational research has recently started to analyze the interactions of individuals with elements and/or members of divergent cultures, commonly referred to as multicultural experiences (Maddux, Lu, Affinito, & Galinsky, 2021). Researchers investigating such a phenomenon have especially focused on understanding the positive outcomes of multicultural experiences, including higher creativity (Maddux & Galinsky, 2009) and communication competence (Lu, Swaab, & Galinsky, 2021). However, despite these insightful conversations on migration and multiculturalism, scholars have pointed out both a lack of management research addressing the experiences of migrant employees (Harrison, Harrison, & Shaffer, 2019) and a focus only on a particular set of positive outcomes (Maddux et al., 2021). Moreover, these different research streams have rarely spoken to each other, mostly treating migration and multiculturalism as two separate fields. Nonetheless, considering how globalized businesses are, both migrant workers and employees with multicultural experiences represent an important and connected form of diversity in organizations that scholars need to investigate by addressing its complexity and fluidity (Nkomo, Bell, Roberts, Joshi & Thatcher, 2019). Thus, it is fundamental to understand how both migrant workers and multicultural employees can foster diversity in organizations and what are the challenges and opportunities at work for such individuals. Furthermore, it is also essential to grasp how organizations can benefit from their employees' unique diversity and multiplicity of cultures. This symposium includes five papers that introduce new perspectives on migration and multiculturalism in organizations. In particular, by putting workers front and center, it presents understudied and novel challenges and opportunities that migrants and multicultural employees go through in the workplace, both at the individual and group level of analysis. Presenting and understanding how these globalization-related challenges and opportunities (e.g., multiple functions of language, status disagreement, identity formation, stigma) impact workers is essential to better understand migration and multiculturalism in organizations and move forward our discussions on different forms of diversity in organizations.

Though past research suggests that individuals grapple with negative emotions when dealing with their own and others' bad (dishonest) behaviors, this symposium explores a different proposition, one where actors feel good for bad deeds in ways that explain why actors and their dishonest collaborators might find extensive support in organizational context. Across a series of studies, the papers in our symposium show that individuals feel pride and gratitude for dishonesty, explaining their motivation to engage in and support dishonesty. Additionally, we find that they are able to reconcile such feelings if they embrace the paradox of feeling bad and good at the same time. Together this research explores the emotional antecedents, consequences, and moderators of positive reactions to dishonesty, providing a more nuanced view as to why dishonesty persists in many organizational contexts.

Creativity, the generation of novel and useful ideas, drives organizational innovation and competitiveness (Amabile, 1988). However, the recognition of creativity is difficult, and individuals often possess their own evaluation criteria and heuristics that influence their judgements of creativity (Berg, 2019; Zhou et al., 2019). This has important implications for managers and organizations as successful creativity evaluation is required for efficient resource allocation and collaboration to drive organizational innovation. In recent years, scholars have begun examining the factors that facilitate or hinder the creative evaluation process (e.g., Berg, 2019; Proudfoot & Fath, 2021). Individuals often have their own criteria on what is considered creative. These criteria are influenced by a variety of factors ranging from the individual's momentary state to more enduring personal characteristics. Papers in this symposium explore a wide range of factors such as entrepreneurs' gender and entrepreneurial framing, evaluators' political ideologies, and affective states that influence how individuals perceive and recognize creativity. They not only broaden the horizon of creativity evaluation literature but also bridge the literature with other important research topics such as entrepreneurship, social politics, gender, and affect. Furthermore, studies included in this submission leveraged diverse methods and data sources such as machine learning, secondary data, and experiments. They thus illuminate novel approaches to study creativity evaluation and show great potential in this research area. In its third year running since the 81st Academy of Management Annual Meeting in 2021, this symposium facilitates advancement of future directions in this nascent research stream and provide important managerial insights on ways to manage biases in evaluating employee creativity.

In this symposium, we seek to shed light on factors that influence the extent to which employee voice is endorsed and implemented by managers. Although ideas and suggestions from lower-level ranks are considered critical to driving workplace improvement, employees face considerable challenges in having their input taken seriously by higher-ups. For instance, managers can be threatened by new ideas that challenge the status quo, and employees can fail to communicate their ideas in ways that are persuasive and effective. As such, understanding how voice can translate into meaningful action is relevant from a both theoretical and practical standpoint. This symposium brings together five empirical papers that together outline: (1) How employees can better frame their ideas to increase the likelihood of managerial voice endorsement, (2) The channels of employee voice that are most effective, and (3) The role of peers in helping employees receive favorable evaluations of their voice by managers. The papers in this symposium collectively span a diverse set of methodologies and samples. Dr. James (Jim) Detert, an expert in the area of employee voice, will serve as the Discussant, leading an interactive group discussion, providing feedback, and outlining future directions from the works presented.

Panelist: **Constantinos V. Coutifaris**, *McCombs School of Business, U. of Texas at Austin*

Pursuing a dissertation is an important endeavor in every doctoral student's career. After their initial years of classes and training, doctoral students commence their dissertation journey to apply what they have learned to becoming independent scholars. However, embarking on dissertation journey can come with many challenges. In this moderated panel symposium, we seek to engage in such meaningful conversation on how to approach dissertations in management scholarship. Our symposium consists of a panel of newly appointed assistant professors, who all have rich, diverse, and recent experiences with the dissertation process. Our panel symposium discussion will be structured to explore four overarching points: (1) how do you come up with a novel and interesting dissertation topic, (2) how do you go about studying your research topic (e.g., how did you choose your research methodologies), (3) what were the writing and review stages like, and (4) what challenges did you face and what strategies did you employ to overcome roadblocks? Overall, we expect a rich and engaging discussion that should illuminate paths for scholars embarking on their dissertation journey.

Presenter: **Debra L. Shapiro**, *U. of Maryland*
Presenter: **Troy Smith**, *U. of Nebraska, Lincoln*
Presenter: **Amy Bartels**, *U. of Nebraska, Lincoln*

This symposium sheds light on key developments in empowering leadership research as reflected in the following questions: Does the effectiveness of empowering leadership depend on other leader characteristics? How does empowering leadership moderate the effect of followers' pro-social motivation on their volunteering behavior? What is empowering leadership? When and why is empowering leadership likely to promote undesired outcomes? How does empowering leadership affect leaders themselves? Specifically, the presentations included in this symposium address how leader credit taking moderates the relationship between empowering leadership and employee engagement and voice (Buss, Kearney, Metzger, & Scholz), how empowering leadership moderates the effect of employee pro-social motivation on prosocial empowerment, volunteer prioritization, and time spent on volunteering (Hartnell, Lemoine, Hora, & Watts), how to better define empowering leadership and when and why it is likely to promote undesired outcomes (Dennerlein and Shapiro), and how empowering leadership and team competence (in)congruence affect leader psychological empowerment and outcomes (Smith and Bartels). The discussant, Dr. Andrew Carton, will summarize themes across presentations, highlight future research directions, and lead an interactive discussion between presenters and audience.

Presenter: **Sandra Matz**, *Columbia Business School*
Participant: **Anil R. Doshi**, *UCL School of Management*
Presenter: **Oliver Hauser**, *U. of Exeter Business School*

This symposium brings together an interdisciplinary group of scholars to examine ethical challenges and opportunities presented by the increasing use of artificial intelligence (AI) in the workplace. The first two presentations will discuss ethical challenges in algorithm development, including responsible data collection and equitable algorithm design (Bai, Griffiths, & Fiske; Cratsley, Fast, & Boykin). The following two presentations will consider the potential for AI to reduce discrimination, and how people's biases and resistance to imperfect algorithms prevent us from fully utilizing this capability (Helgason & Effron; Cowgill, dell'Acqua, & Matz). The final presentation will consider issues of ownership and accountability for AI's creations (Doshi & Hauser). Through these presentations, this symposium aims to stimulate research and dialogue on the responsible use of AI in organizations.

Panelist: **Angelina Zubac**, *AIM Business School, Australian Institute of Management*
Discussant: **Steven R. Cofrancesco**, *None*

Although managerial discretion has been studied extensively, scholars have had little to say about how workers more generally use discretion, what might inhibit its use or discretion's effects. The small amount of research that was identified mostly considers how frontline workers use discretion in certain settings, such as in a hospital or social work setting. In the change management and sensing literatures, discretion does not stand out as a distinct area of study. Critically, no studies were identified that consider how different workers' discretionary schemas emerge at organizations or their effects. However, all kinds of recursive practices and cognitive responses are likely to surface when workers with different backgrounds, training and propensities to address strategic problems as they see fit interact. These practices and cognitive responses could explain why some organizations are consistently high performing while others are not. High performing organizations could be far better at creating the conditions that allow workers to develop the organization's dynamic capabilities and culture. We just do not know what could be involved at this point. This multidiscipline panel symposium and the insights of the panel members will be a first step for unravelling what could be involved when implementing strategies.

Messaging Change: Discursive Legitimization, Metaphors, and Conversations Enabling Change

Session Moderator: **Makoto Nagaishi**, *Chukyo U.*

ODC: **Metaphors of Change and Metaphoric Interventions as Change Leadership Action** ✈

Author: **Makoto Nagaishi**, *Chukyo U.*

Leaders' metaphoric communication can change members' meaning-making systems by controlling organizational symbolism. This article explores how and why leaders figuratively communicate in organizations, using a Japanese multinational corporation (MNC) as an example. In particular, it examines previous literature's seminal proposition that paying attention to managing metaphors during change processes becomes a critical competency for leaders and change agents. The study then advances it by determining the conditions under which generative change metaphors emerge. The author's action research contributes to building grounded explanations of the research question and draws the following conclusions. First, the root metaphors of top management, such as the "leader as an authentic self and an adaptive risk-taker," may create a framing effect on organizational members' generative way of understanding change processes. Second, the metaphor of the "leader as a victim of change ambivalence" does not necessarily evoke members' sympathy in the early stage of change. Third, change leaders can effectively use metaphors by aligning them with congruent organizational discourses.

ODC: **Enabling Change through Appreciating Oscillations between Cynical and Uplifting Conversations**

Author: **Danny Van Montfort**, *Nyenrode Business U.*
Author: **David Coghlan**, *U. of Dublin, Trinity College*
Author: **Danielle Zandee**, *Nyenrode Business U.*

This study introduces the concept of insider appreciative inquiry (IAI) in a Dutch center for unaccompanied refugee children. It focuses on how a team of mentors (workers) and their managers/staff members, facilitated by the first author as an insider action researcher, engaged in an ongoing team development effort to advance internal cooperation. One of the intended contributions of the study is a better understanding of discursive change dynamics. The primary contribution, however, lies in its illumination of opportunities and challenges for insider action researchers when striving to change the internal dialogue in which they are themselves immersed.

ODC: **"Weeding Out the Stolons": How Managers and the Media Discursively Legitimize Management Fashions**

Author: **Riku Reunamäki**, *Aalto U. School of Business*
Author: **Hannakaisa Länsisalmi**, -

Research on management fashions has established that fashion suppliers such as management consultants and gurus play key roles in the creation and spread of fashionable management ideas. However, top managers of companies are less researched and often portrayed merely as passive consumers of ideas sold to them by fashion suppliers. In contrast, we explore in this article the active roles of senior executives in the organizational adoption and legitimation of a fashionable management idea, undertaking a case study of the adoption of the "agile" management fashion in a financial organization. Led by the new CEO, the adoption of agile was a radical change in strategy only two years after the grand unveiling of the previous strategy. We show how the top management discursively legitimized agile and the concomitant organizational change through humorous anecdotes and an overall narrative that presented "the new organization" and its agile culture as superior to "the old organization" and its hierarchical culture. We also critically analyze the role of the media in publicizing, dramatizing, and personifying the change as "the old CEO vs. the new CEO," which complemented the top management's strategies of legitimation. We contribute to the management fashion literature by arguing that top managers are not passive consumers of fashions and illuminating the discursive strategies managers and the popular press utilize in their legitimation.

ODC: **The Vision of Divergent Change: How Entrepreneurs Justify Commitment in Sustainable Fashion**

Author: **Alina Kozarkiewicz**, *AGH U. of Krakow*
Author: **Monika Lada**, *SGH Warsaw School of Economics*
Author: **Agnieszka Kabalska**, *AGH U. of Krakow*

In our article, we examine the institutional dimension of fashion entrepreneurs' public accounts, paying particular attention to their participation in the implementation of divergent change. We study 'born sustainable' fashion entities trying to gain legitimacy for innovative practices and the changing social perception of sustainable fashion. Thus, the primary theoretical construct used in our study is institutional entrepreneurship, focusing on the maneuvers used when constructing the vision of divergent change. Our empirical investigations employ a qualitative approach—content analysis of public accounts. According to the theoretical framework, we highlight three categories of justifications: the negative impact of current practices (diagnostic frame), positive aspects of new sustainable patterns (prognostic frame), and individual reasons for creating a start-up (motivational frame). Among the most visible pro-legitimacy maneuvers, we recognize the deliberate exaggeration of reality, e.g. the positive idealization of a sustainable approach, the deliberate minimization of the scale of necessary changes, and their presentation as a natural return to past practices. The conclusions of our research demonstrate the important social role of 'born sustainable' ventures as institutional entrepreneurs locally translating sustainable fashion patterns at the early stage of divergent change.

The State of Change: Political-Administrative Actors Impacting Organizational and Social Change

Session Moderator: **Synnove Nesse**, *Centre for Applied Research, Norwegian School of Economics NHH*

ODC: **Political-administrative Leadership and Collective Emotion Trajectories During the Pandemic**

Author: **Synnove Nesse**, *Centre for Applied Research, Norwegian School of Economics NHH*
Author: **Sara Costa**, *Roma Tre U.*
Author: **Tove Frykmer**, *Lund U.*
Author: **Stian Antonsen**, *NTNU Social Research*
Author: **Elisabeth Norman**, *U. of Bergen*
Author: **Giuseppe Carrus**, *Roma Tre U.*

The first phase of the Covid-19-pandemic was an extreme event context with tremendous consequences that triggered collective emotions, posing a tremendous call for effective political-administrative (P-A) crisis leadership. While the horrific fear, despair, and trauma Italy experienced during the pandemic never reached Norway and Sweden in the same way, the pandemic spread to these nations too. However, in all these countries, while collective emotional reactions of the public (such as anxiety, fear, and grief) have been researched, we would also expect political-administrative (P-A) leaders to experience and act upon collective emotions, which remains under-researched. Based on unique access to P-A leaders in the three countries, we contribute to the literature on extreme context leadership by qualitatively exploring differences in collective emotions among leaders. We show how this influences adaptive capacity across agencies, often regarded as crucial to responding effectively to societal crises such as the pandemic.

ODC: **A Peaceful Retirement: Officials' Political Incentives and SOE Transformation**

Author: **Liang Zhang**, *Business School, Central South U.*
Author: **Yeyao Ren**, *Xi'an Jiaotong U. & City U. of Hong Kong*

Although scholars have generated thought-provoking insights about how the state shapes the transformation of state-owned enterprises (SOEs), individual officials as the agents of the state have not become central to the analysis. This study examines how government officials' political incentives shape their choices between corporatization and privatization of SOEs. Drawing on the literature on political incentives in political economy, we first argue that as privatization likely creates greater socio-economic turbulence than corporatization, officials close to retirement are more (less) likely to corporatize (privatize) SOEs to ensure a peaceful transition to retirement than younger officials. We also employ imprinting research to identify the boundary conditions for officials' incentives. The retirement effect becomes weaker for officials imprinted with a strong communist ideology and for military-experienced ones. Using a competing-risks model, we find empirical support for our arguments based on a sample of 20,258 SOEs from the Annual Census of Chinese Industrial Enterprises Dataset from 1998 to 2007. This study contributes to the literature on SOE transformation and political incentives.

ODC: **Adaptive Political-administrative Leadership During the Pandemic: A Comparative Case Analysis**

Author: **Synnove Nesse**, *Centre for Applied Research, Norwegian School of Economics NHH*
Author: **Sara Costa**, *Roma Tre U.*
Author: **Tove Frykmer**, *Lund U.*
Author: **Stian Antonsen**, *NTNU Social Research*
Author: **Giuseppe Carrus**, *Roma Tre U.*

Political-administrative (P-A) leadership in Italy, Norway, and Sweden unfolded very differently during the early response to the coronavirus pandemic, despite all three countries being democracies in Europe. Italy early on became the "epicenter" of the pandemic in Europe and enforced intrusive countermeasures, followed by Norway only a few days later. Sweden, to a larger extent, used voluntary measures during the first months. However, while Norway quickly gained "control" over the pandemic, the death toll in Italy and Sweden escalated to the highest in Europe. In this "extreme case study," we compare leadership trajectories in the three countries during the first phase based on a rich data set consisting of interviews with P-A leaders, official evaluation reports, and media coverage. Particularly, we examine differences in the two adaptive crisis leadership functions, proactive situational awareness and coordination of response, their interplay with critical framing conditions, and how this influenced crisis response in this first critical phase of the pandemic. We found that framing conditions such as capacity and legitimacy influence leadership greatly; however, the execution of critical leadership functions may be important to evaluations of succeeding with responding in the first phase and in the aftermath of such crises.

ODC: **Brexit and Covid-19 Shocks: Investment and Growth among UK SMEs**

Author: **Karolis Matikonis**, *U. College Dublin*
Author: **Byron Graham**, *Queen's U. Belfast*

Although economies experienced substantial turbulence from Covid-19, the United Kingdom Government rejected the possibility of a transitional period extension after the withdrawal from the European Union. This study uses microdata to unpack the impact of reduced investment due to the increased uncertainty attributable to Brexit and Covid-19 on SME growth.

Social Networks and Innovation in Organizations

Session Moderator: **Francesca Nannetti**, *NEOMA Business School*

OMT: **How Professional and Family Ties Affect Idea Elaboration for Men and Women**

Author: **Francesca Nannetti**, *NEOMA Business School*
Author: **Elisa Operti**, *ESSEC Business School*

The process of elaborating creative ideas often involves seeking support and feedback from others. We posit that men and women may require different types of network ties to elaborate creative ideas successfully. We derive predictions concerning the extent to which men and women may benefit from family and professional ties in the idea elaboration phase. We also explore the mechanisms behind the expected gender differences. Based on a sample of French entrepreneurs, we show that women reap more benefits from family ties than men. In contrast, men have higher returns in creativity by elaborating ideas with professional ties. An experimental study indicates that women's disadvantage in elaborating ideas with professional contacts stems from stereotype threat and lower expected support in the interactions with ties related to the professional domain, considered gender incongruent domain. We provide additional support from qualitative interviews conducted with entrepreneurs.

OMT: **Power and Individual Innovation: When do Brokers Act on Their Structural Advantage?**

Author: **Martha Topete**, *Amsterdam Business School, U. of Amsterdam*
Author: **Flore Bridoux**, *Erasmus U.*
Author: **Nathan Betancourt**, *Amsterdam Business School, U. of Amsterdam*
Author: **Zuzana Sasovova**, *Vrije U. Amsterdam*

Brokers are posited to have a privileged position in terms of access to non-redundant information that is conducive to higher innovation. However, brokers do not always exploit such structural opportunity since occupying open positions does not systematically translate into higher innovation. We adopt a contingency approach and theorize that the relationship between brokerage and individual innovation is contingent on individuals' perception of power over alters, an important aspect of individuals' representation of the situation they are in. Using a social network analysis at a consulting and training organization in The Netherlands, we found support for our theory: employees perceiving higher power over alters achieved higher innovation in brokering network positions than employees in these positions who perceived lower power over alters. For closed networks, while we expected employees perceiving lower power over alters to be more innovative, we did not find individual innovation to differ according to employees' power perceptions.

OMT: **Political Support Networks, Relational Energy, and Employee Innovation Implementation**

Author: **Travis Grosser**, *U. of Connecticut*
Author: **Christopher Sterling**, *California State U., Fresno*
Author: **Rohit Subhash Piplani**, *U. of Connecticut*

Although affect has been identified as a factor likely to impact the success of innovation, little research has been done on the relationship between affect and employee innovation implementation performance. We address this oversight by adopting a social network approach to examine relational energy (i.e., how energized one person is when interacting with another) as a form of high activation positive affect likely to influence innovation implementation. We test our hypotheses using a sample of researchers in a large pharmaceutical research firm (Study 1). Our results indicate that the number of people an employee goes to for political support who report being energized by that employee is positively related to innovation implementation performance. In contrast, the number of people an employee seeks out for political support who are not energized by that employee has negative implications for innovation implementation. The network prominence of an individual's energized network contacts also relates to implementation performance, with this effect being stronger for employees not in a managerial position. A scenario-based experiment (Study 2) provides support for the causal linkage between feeling energized by a co-worker and one's willingness to provide instrumental help to the co-worker. Implications for theory and future research are discussed.

OMT: **Tell Me Something New: The Impact of Novelty Surfacing, a Networking Behavior, on Performance**

Author: **Anastasia Veronica Graham Bailey**, *Rutgers Business School*
Author: **Daniel Z. Levin**, *Rutgers U.*

Prior research on networks has emphasized the role of who is connected to whom, i.e., network structure. Increasingly, though, research has begun to focus on networking behaviors as well. We uncover one such behavior, novelty surfacing, which is the act of getting other people to tell you things that you do not already know. Many scholars and practitioners assume that this is unnecessary or happens automatically, but we argue that this is not the case. Accordingly, we predict that entrepreneurs who engage in more novelty surfacing will achieve higher performance for their firms. We further predict that novelty surfacing will be especially valuable when these entrepreneurs have wider and deeper access to knowledge, thereby providing them with more opportunities to extract useful knowledge from their network. In a survey of 329 entrepreneurs, we find support for these predictions on the benefits of novelty surfacing.

Paradox Theory and Research in Organizations and Management

Session Moderator: **Iris Seidemann**, *U. of Hamburg*

OMT: **System Level Dynamics in the Emergence and Navigation of Multi-Actor Paradoxes**

Author: **Iris Seidemann**, *U. of Hamburg*
Author: **Daniel Geiger**, *U. of Hamburg*
Author: **Lisa Harborth**, *U. of Hamburg*

In this paper, we bridge the gap between paradox theory and a system level perspective to study how system level dynamics initiate and drive multi actor paradoxes in the response to the grand challenge of climate-induced disasters. We show how multiple actors engage in contradictory yet interrelated practices that fuel paradoxical dynamics and finally create a non-optimal but stable equilibrium that inhibits system change. We explore this process through a longitudinal ethnography study on the implementation of the "Forecast-based-Financing" approach in Uganda; an approach that shall initiate early action in anticipation of disasters. Our findings reveal how stakeholders' implementation practices drive paradoxical dynamics that constitute self-reinforcing dynamics. Drawing on these insights, we develop a process model that explains how paradoxical dynamics not only hinder the tackling of the grand challenge but stabilize each other, contributing to a path dependent development. We contribute to theory in at least two ways: first, we theorize how addressing grand challenges instigates an interplay of paradoxical dynamics which create non-optimal but stable, path dependent equilibria on a system level which are difficult to change. Second, we introduce a dynamic perspective on paradoxes, thereby moving beyond the perspective of stable paradox poles that can be embraced.

OMT: **Paradox Theory: Proposing a Conceptual Framework for Theory Testing**

Author: **Arjun Odedra**, *U. of Manitoba*
Author: **Parshotam Dass**, *U. of Manitoba*

Researchers are increasingly using paradox theory. Most research on paradox theory so far has been qualitative in nature, generating novel theoretical insights and making a major contribution to the development of paradox theory. As a result, paradox theory has moved from a label and a lens to a theory and a meta-theory (Sparr, Miron-Spektor, Lewis, & Smith, 2023). However, there is a conspicuous lack of research testing the novel theoretical insights generated through qualitative research. In this paper, we critically evaluate qualitative research on paradox theory and propose a framework to accumulate and integrate some of the theoretical insights into a conceptual framework that may facilitate their testing in the future. We review the current state of testing paradox theory in quantitative studies and propose a way forward to advance it to generate a rigorous and relevant theory and practice.

OMT: **Paradoxical By Vocation: How Hybrid Organizations Embed A Paradoxical Cognitive Frame**

Author: **Giacomo Ciambotti**, *U. Cattolica del Sacro Cuore*
Author: **Simone Carmine**, *IESEG School of Management*

Paradox research on hybrid organizations has highlighted the key role that a paradoxical cognitive frame has in order to support the effective management and integration of their inherent multiple logics and goals. Paradoxical frame has been observed, in empirical studies so far, as an individual capability that characterize managers of these organizations. However, how can hybrid organizations develop and embed such a cognitive frame as a shared frame of the organization to manage the inherent tensions of hybrids? We answered by qualitatively investigating hybrid organizations in which the paradoxical frame is, primarily, the cognitive frame of the organization rather than the personal approach owned by their members. The Benedictine monasteries are characterized by an organizational cognitive frame – which is imposed to their members and leads all their daily activities - that is inherently paradoxical, summarized in the motto "Ora et Labora". Thus, paradox can be considered as their organizational cognitive frame by vocation. Our findings reveal two enablers (the Rule as primary reference and the role of the leader) and three navigating mechanisms (organizational guardrails, a paradoxical temporal mindset, and faith) that allow to embed the paradoxical cognitive frame in the organization as a shared collective frame. We advance the literature on management of hybrid organizations and paradox by proposing a theoretical model that describes the mechanisms through which hybrid organizations can consciously develop and embed paradox as a collective cognitive frame.

Categories and Category Emergence

Session Moderator: **MATILDE Dorothée Catarina GUILHON**, *ESCP Business School*

OMT: **Category Reappropriation: Incumbents' Response to Category Emergence in the Retail Banking Industry**

Author: **MATILDE Dorothée Catarina GUILHON**, *ESCP Business School*

Category emergence promoted by new entrants is mainly perceived as a threat for incumbents and the categories they affiliate to. While adopting the status quo signals an altered future state for incumbents, diversifying into emergent categories might be perceived as a deviance and sanctioned by audiences. In this paper, we explore an alternative response by investigating how incumbents may respond to category emergence by using category creation, that is, the redefinition of existing or emergent categories' features and boundaries by incumbents. We respond to the call by Durand and Khaire to study how category emergence and category creation could be sequentially coupled. Through an inductive case study of the European retail banking industry, we develop a process model of categorization practices that may enable incumbents to counterbalance category emergence. The mechanism at play is category reappropriation – the process whereby incumbents combine emergent category's features with novel extraneous attributes to create a new category. Specifically, we show that category reappropriation is an opportunity window for incumbents to simultaneously resist category emergence and differentiate from their initial category. Our findings contribute to research on category formation and to optimal distinctiveness literature, and lead to a deeper understanding of incumbents' agency in the evolutions of categorical systems.

OMT: **Too Legit To Quit: Discursive Strategies in Cryptocurrency's Categorical Emergence**

Author: **Jack Sadek**, *McGill U. - Desautels Faculty of Management*
Author: **Robert Nason**, *McGill U. - Desautels Faculty of Management*

Category literature has described how members of an emergent category work together to form a collective identity in order to achieve legitimacy. However, the emergence of cryptocurrency challenges this model as it represents a category plagued by infighting among members since its inception that nevertheless has garnered widespread adoption by individuals, financial institutions, and even governments. In order to build theory from this theoretical anomaly, we take a discursive perspective on category emergence and explore power dynamics amongst category members. Drawing on an archival qualitative approach, we identify a novel set of subject positions that materialize with the category and become the voice of the narrative for either the category beacon (Bitcoin) or its challengers (XRP and Ethereum). While both the category beacon and challengers advance a Discourse of Improvement regarding the inefficiencies in current financial systems, they differ vociferously in how to define and structure the emergent category. The category beacon leverages its power to advance a Discourse of Protection in an attempt to mold the category discourse to its image and thereby exclude other members. In contrast, challengers use a Discourse of Inclusion to order to combat the category beacon's narrative and expand the scope of the category's boundaries. As a whole, we identify a battle over whether cryptocurrency should be established as a prototypical or goal-based category which reveals important insights into the emergence of a non-cooperative category.

OMT: **Category Emergence and Viability through Optimal Distinctiveness Work**

Author: **Chenjian Zhang**, *U. of Bath*
Author: **Mia Raynard**, *U. of British Columbia*
Author: **Eric Y.-F. Zhao**, *U. of Oxford*

Organizational categories are socially constructed systems of classification that group organizations perceived by external audiences as similar. Most early studies have focused on stable and institutionalized categorization systems and examined their constraining and disciplinary functions. Despite recent effort in understanding category dynamics, we know little about how an organizational category emergences and achieves viability. Our research is contextualized in the emergence and growth of social enterprises in China. Employing a qualitative and longitudinal research method, our research shows how intermediary organizations played an essential role in defining and championing the emerging social enterprise category, the process we label as optimal distinctiveness work. Specifically, we show that intermediary organizations attend to and address the shifting tension between coherence and distinctiveness to facilitate category emergence and achieve viability in an institutional environment that is unfavorable due to the government's ambivalent attitude and other audience's skepticism toward this new organizational category. We advance our understanding of how a variety of exemplars can be constructed and leveraged for category emergence and development. Our paper further sheds light on how social enterprises emerge and develop at a categorical level, the phenomenon that has been less explored in literature.

OMT: **Moral Escalation: Contested Category Emergence and its Consequences in the Toy Industry**

Author: **Ryann Noe**, *Harvard Business School*

Preexisting research has outlined the cognitive, competitive, and economic barriers to market category emergence. Yet scholars have paid scant attention to the processes and consequences of moral resistance to nascent categories. Through a longitudinal, qualitative study of the emergence of the e-toy category in the U.S. (1998-2022), I develop theory on the within-category and industry-wide consequences of moral contestation. During this 25-year period, e-toys – physical toys that interact with digital devices – were persistently criticized by educators, child-development experts, and many parents for allegedly threatening children's safety and development. By analyzing the framing contest of e-toys over time, I identify a process of "moral escalation" – a shift from cognitive to moral claim-making – which both advocates and adversaries adopted in order to advance or avert the category, respectively. I further demonstrate how this within-category escalation had spillover consequences for the industry at-large, facilitating the moralization of mature categories and enacting the entrepreneurial opportunity for novel counter-categories to emerge. Together, this study reveals how moral debate operates as a category-level mechanism of industry-level change, driving the segmentation of industries into moral hierarchies.

Author: **Sofia Villo**, *Aalto U. School of Business*

While previous studies explored how conventional producers can unscrupulously gain membership in existing pro-sustainability market categories, less is known about whether and how conventional producers can create a new category under the guise of pro-sustainability markets while keeping their practices unchanged. This study fills this gap by drawing on a case of “green aluminium” market category creation that was led by the Russian-based aluminium producer RUSAL and supported by global market players, despite the de-facto adverse social and environmental implications of this category. The findings advance the knowledge of strategic categorization on pro-sustainability markets by exposing strategies of deceptive categorization as well as institutional circumstances, due to which deceptive category creators are unlikely to face any noticeable challenges or opposition.

New Research on Corporate Social Responsibility

Session Moderator: **Dorothee Maria Winkler**, *U. of Zurich*

OMT: **Responsible for What? Theorizing Corporate Social Responsibility in a Semideveloped Field**

Author: **Molly L. Weinstein**, *Northwestern U.*
Author: **Brayden G. King**, *Northwestern U.*

This paper explores how embedded actors conceive of and enact their work within the ambiguity and uncertainty characteristic of a chronically semideveloped field. We focus on CSR, a field that has remained in a state of unfinished institutionalization. Our interviews with CSR officers reveal that in the absence of a communal meaning system and model of practice, practitioners come to operate within theorized accounts of practice. We find that officers rely on one of four distinct theoretical models to understand and actualize CSR: values-based CSR; risk management CSR; siloed CSR; and idiosyncratic CSR. These models are not simply versions of the same institution enacted to varying degrees of fidelity. Rather, they constitute fundamentally different understandings of why and how CSR is conducted. Our finding that these models coexist within the field challenges prior scholars' suggestion that one theoretical paradigm (i.e., business ethics, reputation theory, neoinstitutionalism) can be used to explain CSR behaviors across all actors and firms.

OMT: **Bringing Counterclaimants in: Corporate Social Responsibility and Media Coverage of Firms**

Author: **Yasir Dewan**, *HEC Paris*
Author: **Tal Simons**, *Erasmus U. Rotterdam*
Author: **Georg Wernicke**, *HEC Paris*

Previous research implicitly assumes problems (e.g., social and environmental problems) as conditions that are self-evidently harmful and suggests that firms addressing these problems through their corporate social responsibility (CSR) activities are likely to be perceived positively. However, this research overlooks a central property of problems: a self-evidently harmful condition does not necessarily constitute a problem, instead, a condition becomes a problem only when it is labeled as such. We therefore shift attention to the labeling of conditions as problems or non-problems, wherein claimants label a focal condition (e.g., climate change) as a problem, and counterclaimants contest the label and seek to establish the focal condition as a non-problem (e.g., climate change denial). By contesting the labeling of a condition as a problem, counterclaimants are less likely to positively view firms that address the focal conditions through their CSR activities. Focusing on conservative newspapers in the US as counterclaimants of the conditions addressed through CSR activities, we found support for our hypothesis that conservative newspapers, relative to other newspapers, report less positively about firms that engage in CSR. Overall, our study emphasizes the labeling of problems and their contestations as a central yet typically overlooked aspect of what CSR is and how audiences evaluate firms that engage in CSR.

OMT: **A Review and Theory of Firms´Political Activity-Social Responsibility Relationship**

Author: **Dorothee Maria Winkler**, *U. of Zurich*
Author: **Anna Krzeminska**, *Macquarie Business School, Macquarie U.*

Managing the nexus of societal and political demands in different contexts represents a big organizational challenge. While extant nonmarket strategy research actively debates the relationship of corporate social responsibility (CSR) and corporate political activity (CPA), the relevance of context remains unclear because it is undertheorized. To address this, we develop a multi-contextual perspectivized framework of CSR-CPA relationships that explains the conditions of the occurrence of different CSR-CPA relationships based on different contexts and stakeholder perspectives based on a literature review. We inductively identify a range of single and transitional contexts covering both country and industry environments, as well as cross-context settings and the relevant CSR-CPA relationship types. Furthermore, we identify that the CSR conceptualization is context dependent and develop a future research agenda.

OMT: **Deviation from Who? Differentiating the Performance Effect of CSR Deviation from Multiple Peers**

Author: **Lizhen Wang**, *Guanghua School of Management, Peking U.*
Author: **Weiguo Zhong**, *Peking U.*
Author: **Anni Chen**, *Peking U.*

Optimal distinctiveness (OD) studies increasingly perceive OD strategy as multidimensional, contextualized, and dynamic, yet research has largely explored intra-category heterogeneity. Incorporating insights from institutional complexity and social embeddedness, this study proposes that firms are simultaneously embedded in multiple distinctive categories (i.e., geographical community and industry) in which the relative strength of legitimacy and competitiveness pressures vary substantially. Based on a matched sample of 3,970 public firms in the U.S. and their CSR activities over a 24-year period, we find that firm CSR deviation from community peers decreases market value, and CSR deviation from industry peers increases market value. Furthermore, we develop a multilevel moderating framework in which the above effects are amplified or attenuated by community liberalism, industry regulation, and firm visibility. We contribute by unveiling significant inter-category heterogeneity in imposing pressures on firms and introducing a novel approach to achieve OD.

OMT: **How Does Failing To Meet Financial Aspirations Influence Compliance To Mandatory CSR?**

Author: **Nishant Kathuria**, *Towson U.*

Leveraging the global trend of soft CSR policy implementation that forces firms to perform CSR activities, this study uses the behavioral theory of the firm (BTOF) lenses to understand some factors that motivate firms to comply or disobey with such CSR policy. I examine how dissatisfactory financial performance feedback influence a firm's decision to embrace CSR goals set by the government. I pay attention to the effects of multiple performance aspirations and develop a more holistic view about how performance feedback influence firms' CSR behavior. Using data for 1544 firms in India, I find that failure to meet both historical aspiration level and social aspiration level leads firms to exhibit threat rigidity by embracing CSR goal set by the government. The analysis also shows that firms spend lesser proportion of their profits on CSR activities when they: (1) meet historical aspiration level but fail to meet social aspiration level, and (2) meet social aspiration level but fail to meet historical aspiration level.

Organizational Identity and Identification in Organizational Life

Session Moderator: **Isabelle Amann**, *FIF@Zeppelin U.*

OMT: **Identity Splinting as Core Mechanism for Organizational Identity Construction in Radical Transitions**

Author: **Isabelle Amann**, *FIF@Zeppelin U.*

We advance the emerging discussion of organizational identity construction in radical change contexts by observing Pratt and colleagues' micro-level identity work mechanisms at the organizational level. Using a qualitative, cross-case study of seven cases in a context where an entire organization ceases to exist, while the core members of the old organization jointly establish an entirely new organization in a new industry, we show that the organizational identity construction process begins with the mechanism of "identity splinting". While we used a multi-faceted view of pre-existing organizational identity, focusing on domain identity and role identity simultaneously, we extend the literature in demonstrating that members prioritize pre-existing identities differently resulting in different types of identity splinting activity. Depending on whether the dominant facet of the pre-existing identity can be partially easily adopted to the new industry or not, organizational members are able to use the pre-existing identity directly as a splint or need to engage in a process of abstraction first in order to discover a usable splint. In addition, our findings offer new insights into temporal aspects of a "splinting-patching-enriching pattern" and extend the literature by arguing that the initial type of identity splinting can lead to relatively stable or temporary identities that are extended by patching or refined by enriching.

OMT: **Organizational Identity Work for Optimal Distinction**

Author: **Lærke Højgaard Christiansen**, *Technical U. of Denmark (DTU)*
Author: **Eva Boxenbaum**, *Copenhagen Business School*

Organizations pursue optimal distinctiveness to satisfy divergent expectations of different audiences and to demarcate their distinctiveness relative to other organizations in the same industry. In pursuit of optimal distinctiveness, they engage in organizational identity work, that is, deliberate efforts to form, repair and strengthen their distinctiveness. In this paper, we investigate how organizational actors develop identity claims aimed at achieving optimal distinctiveness. We collected real time data in the form of observations, interviews and archival material from the Carlsberg Group, a global beer producer, at the time when they engaged in organizational identity work to face the issue of 'alcohol-related harm'. The findings consist in three related processes of organizational identity work, which organizational actors engaged in internally to gain optimal distinction from other beer producers: (1) authenticating key identity resources; (2) aligning them with the issue and established practices; and (3) enrolling organizational actors with ties to different audience groups. We also identified the externally oriented process of (4) communicating externally their new identity claims to different audiences. Based on our findings, we offer a process model of organizational identity work that outlines how organizational actors develop new organizational identity claims for optimal distinctiveness. Our research theoretically connects the literatures of organizational identity work and optimal distinctiveness.

OMT: **Dream Big: A New Actor's Organizational Identity Work in an Established Field**

Author: **Chenjian Zhang**, *U. of Bath*
Author: **Juelin Yin**, *Sun Yat-Sen U.*
Author: **Tao Wang**, *Kyoto U.*

A new actor's entry into an established field and implementation of its project could bring changes to the field. However, a critical challenge for the new entrant is to navigate the existing configurations of existing actors and established power structures and relationships. Building on the literature on identity work, our study examines how a new entrant navigates an entrenched power structure to conduct organizational identity work to facilitate change in an established field. We conducted an in-depth case study of the Adream Foundation, a public foundation established to provide competency-based education and promote educational equity in China. Our study theorizes the process that new actors engage in organizational identity work and manage underlying power relationships to facilitate positive changes in the established field. This process includes projecting a professional supplementer image, fostering identification from local stakeholders, and escalating identification with the polity. We contribute to the literature by illuminating the relationship between organizational identity work and power relationship. In doing so, we provide important implications for understanding how a new actor could address societal grand challenges to facilitate change in authoritarian context.

OMT: **Identification as a Dialogic Process: The Construction of Significant Others in Organizational Life**

Author: **Krystal Laryea**, *Stanford U.*

Both longstanding and recent scholarship on identification highlights the fact that identification is a dynamic, ongoing process given the ambivalence that is inherent to most identity-shaping relationships. However, we still know little about why member identification waxes and wanes over time and through day-to-day organizational interactions. I argue that identification is a dialogic process that involves co-constructing the "significant others" of groups and their members. Drawing on two ethnographic cases, I develop a processual model of how identification depends on resonance with conversational threads between groups and their significant others and changes in the face of dissonance regarding focal groups or significant others. This model contributes to theorizing on identification as a relational process and ambivalence as a fundamental quality of organizational attachments in contemporary times.

OMT: **It's All Relative: Towards a Relational Perspective on Identity Leadership**

Author: **Anna Zentgraf**, *Leibniz U. Hannover*

The world we work in is rapidly evolving, and so is our understanding of what leadership is. Although it is commonly suggested that we need fewer leaders these days, it is leadership that can provide us with an anchor and social glue in times of uncertainty and instability. In this paper, we take a relational perspective and assess the conditions under which different relationships can lead to relational identification with leaders in the new world of work and the extent to which this can provide a sense of organizational identity for organizations. Drawing on arguments from the literature on social identity, identity leadership, and leader-member exchange (LMX), we show how dyadic influences interact to enhance or diminish the potential influence of leadership on identity processes that emerge from relational identification. We examine the dimensions that affect how the relative relational qualities in individual dyads of leaders and team members determine different degrees of relational identification with leaders and thus their influence on social and organizational identity processes, particularly with respect to new work environments. In this way, we provide a relational, less hierarchical and leader-centric perspective on the identity leadership approach, contributing to a more comprehensive understanding of how social interactions and relationships influence and help shape understandings of social and organizational identity.

The Worker Perspective on AI Across Occupational, Organizational, and Geographic Boundaries

Organizer: **Elisabeth Yang**, *Yale School of Management*
Organizer: **Julia DiBenigno**, *Yale School of Management*
Organizer: **Batia Mishan Wiesenfeld**, *New York U.*
Discussant: **Katherine C. Kellogg**, *MIT*
Presenter: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*
Participant: **Nicholas Occhiuto**, *EMLYON Business School*
Participant: **Bobbi Thomason**, *Pepperdine Graziadio Business School*
Participant: **Marjolaine Monique Rostain**, *Warwick Business School*
Presenter: **Hila Lifshitz-Assaf**, *Warwick Business School*
Presenter: **Matt Beane**, *U. of California, Santa Barbara*
Participant: **Dan Sholler**, *U. of California, Santa Barbara*
Participant: **Erik Brynjolfsson**, *Stanford U.*

This symposium aims to explore how advanced technologies using artificial intelligence (AI) are experienced and utilized by frontline workers across a range of organizational contexts, occupational groups, and geographical locations. Specifically, we examine how gig workers, blue collar workers, and professional workers in the U.S., Europe, and the Global South respond to and shape the deployment of AI technologies impacting their daily work experience in the fields of ride-hailing, factory work, nursing, and medicine, respectively. With our combined focus on understanding the workers' experience of AI technologies, we shed light on the practices in which these workers engage and the tensions they face, and examine the downstream effect of AI use on their agency, skills, knowledge, and other important individual and organizational outcomes. Using new field and ethnographic research conducted in a range of different organizational, occupational, and geographic contexts, this symposium will: 1) elaborate a set of practices which explicate how workers from across organizational contexts, occupations, and geographies utilize AI technologies in their work, and 2) demonstrate how these practices shape important outcomes for organizations and individuals. Together, the introductory remarks to the symposium, the empirical papers, the discussion of these papers, and the question and answer session are designed to develop new theoretical insights by elaborating the commonalities and differences in how AI usage at work unfolds across occupations and contexts.

Institutional Entrepreneurship in the Public Sector

Organizer: **Chelsea Lei**, *Boston College*
Discussant: **Mary Ann Glynn**, *Research Associate, Harvard U. Sociology*
Panelist: **Thomas D'Aunno**, *New York U.*
Panelist: **Richard DeJordy**, *Rochester Institute of Technology*
Panelist: **Elliot Stoller**, -

Organizations in the public sector were historically prominent in management and organization studies. Yet, our field has largely moved away from studying organizations in the public sector, due in part to the institutional embeddedness of most management and organization scholars in business schools. The aspiration of this panel symposium is to bring our field back to its roots and, from that vantage, explore avenues for conducting important, interesting, and generative management research going forward. To accomplish this goal, we bring together perspectives from institutional theory, culture, public management, and entrepreneurship to engage in a conversation around the central question: How do public-sector organizations and institutions change through institutional entrepreneurship?

Panelist: **Eric Arthur Von Hippel**, -
Panelist: **Saras Sarasvathy**, *U. of Virginia*
Panelist: **Gino Cattani**, *New York U.*
Panelist: **Karim R. Lakhani**, *Harvard U.*

This symposium will focus on the role of serendipity in the management and strategy context. Leading management scholars will discuss serendipity (and related concepts) from the perspectives of organizational learning, strategy, and innovation. The focus of the short "panel sparks" is to highlight current state-of-the-art research and relevant future research opportunities. We will conclude the symposium with reflections by an eminent management scholar (Henry Mintzberg), who will "connect the dots" between the emerging themes.

Panelist: **William Ocasio**, *U. of Illinois at Urbana-Champaign*
Moderator: **Michael Lounsbury**, *U. of Alberta*

Although the Carnegie perspective on organizations helped lay the theoretical foundation of the growing and influential literature on institutional logics, the dialogue between researchers contributing to these two important lines of organizational research remains limited. This is unfortunate because these bodies of work are among the most vibrant in contemporary organizational research and stand to benefit from closer integration. For example, research on logics could take a more micro-to-macro approach to the study of institutional pluralism by drawing on a view of the organization that gives greater centrality to mechanisms underlying the decision-making process. On the other hand, Carnegie research that seeks to explain outcomes such change and search and views goals as a key concept guiding interpretation and action could draw on research on logics to advance understanding of the external processes that influence the selection of goals. Although small steps have been taken in these directions, this symposium aims to create additional opportunities for integration by strengthening dialogue among key contributors to these two influential lines of work.

How to Identify and Test Causal Mechanisms of the Decision-Making Process in Corporate Governance

Organizer: **Ilaria Orlandi**, *Copenhagen Business School*
Organizer: **Radina R. Blagoeva**, *U. of Georgia*
Panelist: **Donald D Bergh**, *U. of Denver*
Panelist: **Amanda Cowen**, *U. of Virginia*
Panelist: **Ryan Adam Krause**, *Texas Christian U.*
Panelist: **Kang Bok Lee**, -
Panelist: **Ithai Stern**, *INSEAD*

The purpose of this panel symposium is to engage scholars interested in causal mechanisms and methodological rigor via gathering a group of expert panelists to foster links, experiences, and best practices. The panelists are: Donald D. Bergh, Amanda Cowen, Ryan A. Krause, Kang-Bok Lee, and Ithai Stern. In a moderated and interactive discussion, the panelists will elaborate on: (1) how to navigate matching the methodology with the mechanisms they theorize about; (2) which steps to follow when designing a study (having in mind the review process); and (3) what the major opportunities and challenges of using a specific method in the corporate governance field are.

Sustainability Innovation: Foundations to Performance

Session Moderator: **Daniela Ortiz**, *FHWien der WKW U. of Applied Sciences for Management and Communication*

ONE: **Micro-foundations of a Collaborative Sustainability-oriented Innovation Capability**

Author: **Daniela Ortiz**, *FHWien der WKW U. of Applied Sciences for Management and Communication*
Author: **Martine Andraos**, *FHWien der WKW U. of Applied Sciences for Management and Communication*
Author: **Katharina Salomon**, *FHWien der WKW U. of Applied Sciences for Management and Communication*

In their quest to advance the sustainability agenda, some firms pursue the development of sustainability-oriented innovations (SOI) in collaboration with both internal and external stakeholders. To be able to develop SOI, these firms must build up a specific collaborative SOI capability. The goal of our study is to understand, from a micro-foundational perspective, how this capability emerges. Based on a process-oriented multiple-case study analysis of two SOI projects in two large incumbent companies in the European manufacturing sector, we present a grounded model of how a collaborative SOI capability emerges. We identified four main interdependent micro-foundations: (1) interactions that trigger innovation projects, i.e., dialogues with downstream members of the supply chain and multi-stakeholder dialogues; (2) individuals' behavior and cognition, i.e., their mental models, behavior, and human and social capital; (3) interactions that lead to the alignment of resources, i.e., inter-firm dialogues that focus on joint innovation and collaboration, and intra-firm dialogues that integrate sustainability across the firm; and (4) structure, i.e. strategy and goal setting, resource allocation, and support of top management.

ONE: **Innovation Performance of Incumbent Automotive Firms in Climate Change Mitigation** ☯ ✈ 💻

Author: **Arijit Paul**, *U. of Graz*
Author: **Jyoti Prajapati**, -
Author: **Jonas W. B. Lang**, *U. of Exeter*
Author: **Rupert J. Baumgartner**, *U. of Graz*

A complete transition to zero tailpipe emissions vehicles (ZEV) can significantly contribute towards achieving net zero CO2 emissions by 2050, which is essential for keeping the hope of avoiding a dangerous climate change alive. This transition is an enormous task considering the current negligible share of ZEVs in the entire fleet of on-road vehicles. To understand the potential for a zero-emissions transportation future for incumbent automotive original equipment manufacturers (OEM), we investigate their innovation performance in the successful commercialization of their ZEVs. We hypothesize that open innovation will be beneficial for commercializing product-level ZEV inventions. We also hypothesize that complex reconfiguration requirements of the existing innovation ecosystem will hinder ZEV commercialization efforts through inventions in specialized complementary assets for ZEVs. We test our hypotheses using a panel of data of 23 years for listed automotive OEMs in Asia, Europe, and the USA, and the results broadly support our hypotheses.

ONE: **A Configurational Analysis of Inventor Teams Creating Radical Clean Energy Innovations**

Author: **Niklas Christoffer Hagenow**, *Technische U. München, TUM School of Management*
Author: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Author: **Claudia Doblinger**, *Technical U. of Munich*

Clean energy technologies play a crucial role in the reduction of greenhouse gas emissions and thus the mitigation of climate change. Boundary-shifting advancements through radical innovations in clean energy technologies are urgently needed to meet global emission reduction goals. With growing technological complexity, technological innovations are increasingly the result of collaborations among multiple inventors. However, while past research has examined various individual antecedents of team-based innovation with ambiguous results, the complex and context-contingent interplay of team-level factors is unclear. In this study, based on the concept of innovation as a recombination and integration of diverse inputs, we compile a set of central team-level antecedents by reviewing the literature on innovation, organizational, and scientific teams. We perform multiple fuzzy-set qualitative comparative analyses (fsQCA) for different clean energy domains to explore patterns and domain-specific idiosyncrasies in configurations of inventor teams associate with radical innovations. Our findings highlight the causal complexity behind favorable team compositions and emphasize the need for more elaborate theory explaining why certain team compositions lead to more radical innovation outcomes in one technological domain, and to less radical outcomes in others.

ONE: **Innovative Services For Zero-Deforestation Supply Chains: A Performance Management Approach**

Author: **Anthony Alexander**, *U. of Sussex Business School*
Author: **Helen Walker**, *Cardiff U.*
Author: **Maneesh Kumar**, *Cardiff U.*
Author: **Jon Gosling**, *Cardiff Business School, Cardiff U.*

Unsustainable levels of tropical deforestation driven by expanding export markets for timber and food commodities such as soy, palm and coffee, have prompted various novel initiatives to monitor these international supply chains. Firms importing to the USA, EU, UK, Japan and elsewhere, face new due diligence regulations regarding 'forest risk commodities'. New services seek to meet this need, including from law firms, satellite imaging specialists, NGOs, and management consultancies. This paper details a participatory case study into the creation of such a service where we observed a consortium of technical experts, supply chain actors and associated stakeholders developing a novel supply chain transparency data platform measuring deforestation risk for food sector clients. A complex food supply chain for blended soy is contrasted with a simple and transparent food supply chain for a single origin coffee producer with direct links with farmers. The theoretical framing of performance measurement and management (PMM) and decision theory conceptualises challenges of structured (simple) and unstructured (complex) contexts in food sector supply chains. The findings are relevant to wider sustainability topics, such as the Sustainable Development Goals, and other policies with similar characteristics affecting business operations.

Supply Chain Sustainability

Session Moderator: **Celile Itir Gogus**, *Bilkent U.*

OSCM: **What Drives Sustainable Operations Decisions? The Role of Goal Setting and Sustainability Logic**

Author: **Ayse Kocabiyikoglu**, *Sabanci U.*
Author: **Celile Itir Gogus**, *Bilkent U.*
Author: **Ozan Duygulu**, *Sabanci U.*
Author: **Kemal Berkay Tuzun**, *Sabanci U.*

The tensions among the three building blocks of sustainability, that is, the environmental, economic, and social dimensions, have been widely recognized in both theory and practice and affect sustainability related decision making processes in organizations. We investigate the impact of two organizational level contextual factors, goal setting and organizational sustainability logic, on operations decisions and firm sustainability performance amid such tensions, using a multi-method research design, comprised of semi-structured interviews and vignette-based experiments. We find a significant effect for goal setting; in decision making situations that have conflicting environmental and economic outcomes for the firm, providing operations managers with goals explicitly related to environmental performance, alongside the traditional financial objective, leads to better environmental outcomes. Organizational sustainability logic, on the other hand, is not observed to be as effective as goal setting in improving sustainability performance; operations managers in organizational contexts with a sustainability logic that does not prioritize the economic dimension over the environmental do not favor decision choices with better environmental outcomes compared to those in contexts with a logic that emphasizes only economic gains. Collectively, our results highlight the importance of the configuration of organizational level contextual factors to influence sustainability related operations decisions.

OSCM: **The Role of Public and Buyer-driven Governance for Supplier Sustainability Capability Development**

Author: **Chengyong Xiao**, *U. of Groningen*
Author: **Miriam Michiko Wilhelm**, *WU Vienna U. of Economics and Business*
Author: **Mark Pagell**, *U. College Dublin*
Author: **Taco Van Der Vaart**, *Groningen U. (RuG)*

Growing evidences show that governmental and regulatory agencies in emerging countries play an increasingly active role in enforcing labor and environmental protection laws. Against this backdrop, we conducted a longitudinal case study of nine Chinese suppliers of COSMOS in the consumer electronics industry, to explore how growing public governance interacts with buyer-driven governance in shaping supplier sustainability capability development in emerging countries. We did two rounds of data collection in 2014 and 2019, during which we conducted more than 100 semi-structured interviews and also collected extensive secondary materials including third-party audit reports. We identified four different mechanisms through which public governance and buyer-driven governance jointly influence the supplier's willingness and ability to transition from first-order to second-order sustainability learning. These four mechanisms are of substantially different nature, ranging from complementary, synergistic reinforcing, substitutive, to even overshadowing. As such, our findings provide a nuanced picture on the interactions between public governance and buyer-driven governance for supplier sustainability development in emerging countries. Moreover, our findings provide in-depth insights into the trajectories through which suppliers can improve sustainability performance in institutional environments characterized by different configurations of public and buyer-driven governance.

OSCM: **Responsible Service Processes: A Triadic View**

Author: **Kai Storm**, *Copenhagen Business School*

Abstract Purpose – A central concern for service triads is coordination and control, which has so far emphasized outcome-based approaches, in particular on behalf of service buyers. Such outcomes, however, can be very difficult to judge, not at least because they require varied input along tripartite relationships. We therefore argue that the processes with which such outcomes are inherently intertwined merit greater attention. Such processes, however, largely eschew external control. We therefore re-consider coordination and control in service triads by using the notion of responsibility in order to interrogate suppliers' practices. The purpose of this paper is then to investigate how services are delivered responsibly in triadic relationships, where providers must liaise with and satisfy differing demands from buyers and receivers. Design/methodology/approach – An in-depth, single case study approach is adopted to investigate responsible service processes in triads within the executive search industry. Executive search firms are hired by client organizations in order to find, qualify and help recruit candidates into high-level corporate positions, such as CEOs and board members. Data collection includes a total of 33 interviews with members of search firms, client organizations as well as candidates as well as observations and notes from industry meetings, networking events and publicly accessible material. Findings – Findings show a different way to conceptualize and investigate coordination and control in service triads. Attending to service providers' responsibility means uncovering in what way they express care and manage responses of those they interact with. We identify and classify a number of responsible practices and show how they aim both at achieving outcomes and influencing processes. Furthermore, findings highlight how these practices differ depending on the specific relationship within the triad as well as in terms of what time horizon is being considered. Altogether, this shows a different, more relational way to exercise coordination and control in service triads. Relevance/contribution – This study contributes to the literature on service triads by reconceptualizing issues around coordination and control in terms of responsibility. So doing highlights service suppliers' responsible practices in terms of their care and management of buyer's and receiver's responses, which is expressed both in service outcomes and processes.

OSCM: **Supply Chain Sustainability and Resilience Under Uncertainty: Paradoxes and Responses**

Author: **Piotr Warmbier**, *U. of Bremen, Germany*
Author: **Aseem Kinra**, *Copenhagen Business School*
Author: **Dmitry Ivanov**, *Berlin School of Economics and Law*

Under conditions of uncertainty, operations and supply chain management decision-makers face the problem of balancing economic vs. social-ecological performance of the supply chain. The aim of this study is to explore how competing demands for supply chain sustainability and resilience can be accommodated by investigating the underlying paradoxes, responses and examining required congruent supply chain capabilities. To this end, we conducted a Delphi study within the automotive industry from the perspective of the Covid 19 pandemic, including a systematic review of supply chain sustainability and resilience literature. The study identified several paradoxical tensions, such as operational versus dynamic capabilities, change versus stability and economic vs. social-ecological goals, with different underlying reasons and which can become even more evident under uncertain conditions. The context in which an organisation operates, e.g. in global supply chains, can influence the paradoxes which can occur on intra and inter-organisational level. Following the synthesis approach by considering new perspectives on social-ecological supply chain systems, we also found that dynamic capabilities can facilitate the resolution of these paradoxes. This study contributes to sustainable supply chain performance research by providing a deeper understanding of sustainability vs. resilience paradoxes in uncertain situations. Our model shows how cyclical responses to paradoxical tensions enable sustainable performance of global supply chains that ensures success in the future.

Gender and Advocacy

Session Moderator: **Jo Crotty**, *Edge Hill U.*

PNP: **"What's in a Label?": Feminism and Women's Rights Activism in Ukraine**

Author: **Jo Crotty**, *Edge Hill U.*
Author: **Sergej Ljubownikow**, *U. of Sheffield*
Author: **Svitlana Krasynska**, *U. of San Diego*

Why would an NGO adopt a label that is viewed as contentious or contraversal in their operating environment – and does this matter? In this paper we operationalise theory around social movements and 'categorization' to examine the labels adopted by groups in the Ukrainian women's movement; and the impact on activity therein. We find that while groups do adopt differing labels, this appeared to have limited impact on their activity. Regardless of categorisiation, all engaged in similar activity – with similar effect. However the need to navigate institutional and cultural 'hostility' to feminist concepts meant that those with an overt feminist label compromised their rhetoric to engage women directly. As such groups made an impact at the practical/governance level but less so at the societal/cultural regards changing perceptions of gender equality and/or feminism as a concept. Thus labels do matter for wider cultural change – but less so with regards to constituency engagement.

PNP: **Navigating the Incongruity: The Benefits of Communal and Participative Leadership for Women Mayors**

Author: **Paulo Arvate**, *FGV-EAESP*
Author: **Sandro Cabral**, *Insper Institute of Education and Research*
Author: **Trang Hoang**, *U. of Nebraska, Omaha*
Author: **Meghna Sabharwal**, *U. of Texas at Dallas*

While the existing literature recognizes that the incongruity between expected social roles and expected leadership styles poses several challenges to women in leadership positions, little is known about the relationship between women leadership in elected roles, communal and participative leadership styles, and public service performance. By using municipality-level data in Brazilian close elections and employing a Regression Discontinuity (RD) design, this study provides causal evidence that women in elected roles implement, communal and participative leadership styles and obtain superior performance when compared to men in elected roles. Specifically, women mayors reduce lethal violence by creating and maintaining municipal community-oriented police forces along with participative councils and socially oriented infrastructure. This study shows that communal and participative leadership styles bode well for women in elected roles

PNP: **Preference for Group-based Social Hierarchy and the Exclusion of Women in Policing**

Author: **Jill Davis**, *Ohio State U.*
Author: **Shahidul Hassan**, *Ohio State U.*

Research captures the persistent, vast underrepresentation of women in law enforcement and the finding that male officers consistently report low acceptance of women among their ranks. We examine potential sources of the reluctance to accept women as equals in law enforcement. Specifically, guided by social dominance theory and employing two-waive survey data collected from all officers working in a state law enforcement organization, we examine the role of social dominance orientation (SDO) and officer diversity values on their assessment of women's suitability for law enforcement. Aligned with extant research, we find that male officers report lower acceptance of women in law enforcement. We also find that officers with a higher SDO compared to lower SDO provide more negative assessments, and this relationship is partially mediated by officers' diversity values. We conclude that officers who prefer to protect existing social power dynamics are more likely to resist organizational diversity efforts, causing more negative beliefs about women's suitability for law enforcement. Keywords: Gender equity, diversity value, social dominance orientation, law enforcement.

PNP: **Is Bias with "Justifications" Acceptable? Citizens' Perceptions of Gendered Recruitment in Government**

Author: **Yao WANG**, *City U. of Hong Kong*
Author: **Ning Liu**, *City U. of Hong Kong*
Author: **Richard Mark Walker**, *City U. of Hong Kong*

Gender bias in recruitment continues to be a concern in many work settings, including the public sector. This study explores the perceptions of citizens on gender-targeted government recruitment, with a particular focus on the effect of justifying gender preferences in job advertisements. Findings from a preregistered online survey experiment suggest a negative impact of gender bias on citizens' perceptions of fairness and reasonableness on government recruitment, while additional justifications explaining the expected occupational expertise for the hiring position make gender bias appear more acceptable. Mediation analysis and qualitative interviews further pointed out the complex nature of citizens' attitudes.

The Impacts of Hybridization

Session Moderator: **Sanjib Sherpa**, *U. of Central Lancashire*

PNP: **Impact of the Increasing Adoption of a Commercial Approach on Microfinance Institutions (MFIs)**

Author: **Sanjib Sherpa**, *U. of Central Lancashire*
Author: **Tolu Olarewaju**, *Keele Business School, Keele U., U.K*
Author: **Inya Egbe**, *U. of Birmingham, UK*

The purpose of this study is to examine the impact on the performance of Microfinance Institutions (MFIs) by their increasing adoption of a commercial approach. The generalised method of moments (GMM) has been applied to analyse data from 2,102 MFIs in 114 countries. The results show that adopting the commercial approach has no significant association with the financial performance of MFIs but has a significant positive association with the breadth and depth of MFIs' outreach. However, the positive association with the depth of outreach represents a negative impact in the context of microfinance, as it indicates that the adoption of commercial approach by MFIs leads to providing larger loans, which is an indication of mission drift.

PNP: **Hybridization Capabilities: Explaining Hybridization Differences within Nonprofit Organizations**

Author: **Anja Belte**, *Leibniz U. Hannover*

Hybridiziation can increase the capacity of NPOs to act in dynamic and complex task environments. However, the nonprofit and hybrid literature emphasize tensions of hybridization that emerge from hybridization differences concerning the combination of institutional logics within the organization. In this regard, previous research has focused primarily on the relationship between different logic combinations and the emergence of tensions paying little attention to influences on the logic combination itself. Studying three units within a German nonprofit organization that undergoes hybridization this study addresses this gap. Adopting a dynamic capabilities perspective, this study contributes to theory building in the field of nonprofit hybridization in developing a capabilities based framework. Specifically, the findings suggest that how profit and social welfare logics are combined is influenced by hybridization capabilities, referred as the capabilities to explore, to assess and to align new forms of logic combination. The findings show that due to differences in the manifestation of these hybridization capabilities in the embedded units, differences occurred in the way logics were combined explaining intraorganizational hybridization differences. The insights gained from this study thus extend our understanding about the complexity of logic combination and provide approaches for further theory development on nonprofit hybridization.

PNP: **Does Trade Dependency Lead Social Enterprises to Achieve Better Performance?**

Author: **Charan Bhattarai**, *U. of Essex*
Author: **Misagh Tasavori**, *U. of Essex*
Author: **Min Bhandari**, *Teeside U.*

The effects of current socio-economic and political challenges pursuing a social mission while relying on trade dependency strategy (i.e., depending more on market-based income than non-market-based income) have created tensions for social enterprises about which they should choose between trade vs. grant dependency strategy to achieve the dual objectives. Building on a sample of 164 UK social enterprises, this study demonstrates that relative to grant dependency, trade dependency has a more substantial positive effect, direct and indirect through learning orientation, on social performance, and only indirect through learning orientation on economic performance. However, this study also shows that as social enterprises strengthen the market share growth strategy relative to grant dependency, trade dependency has a stronger positive effect on economic performance but, surprisingly, no significant impact on social performance. These findings contribute to our understanding of the role of trade dependency in the context of social enterprises and provide guidance to social enterprise managers on whether they should focus on creating a learning environment in their enterprises, and growing market share while depending more on income obtained from the trade of goods and services than from grant, donations, and funding.

PNP: **Do Social Enterprises Fulfil their Social Promise? Quality of Social Care CICs and Other Legal Forms**

Author: **Janelle Kerlin**, *Georgia State U.*
Author: **Meng Ye**, *Georgia State U.*
Author: **Kelly Hall**, *The U. of Birmingham*

This study seeks to address a foundational question around the operation of social enterprises, namely, does the redirection of profit towards social goals result in expected social outcomes even though profit motives may still be at play? The social enterprise literature has danced around this question in its discussion on the tension between mission and market goals, concerns about mission drift, and whether nonprofits and government entities are better at meeting social goals than social enterprises. However, with little, large dataset empirical analysis directed at this issue, researchers, policymakers, and practitioners have had difficulty understanding the broad social implications of blending mission and market casting a shadow on the validity of social enterprise. To address this question, we use ordered logit regression analysis to compare service quality data from Community Interest Companies (CICs), charities, for- profits, and government- and independently-run organizations operating in the social care sector in England. We find that social care CICs consistently outperformed for-profits and independently-run organizations on all social care quality measures and did as well as or better than nonprofits and government-run social care organizations across the same measures.

AMD Shark Tank PDW

Presenter: **C. Chet Miller**, *U. of Houston*
Panelist: **Jean M. Bartunek**, *Boston College*
Panelist: **John R. Hollenbeck**, *Michigan State U.*
Panelist: **Gerardo Okhuysen**, *U. of California, Irvine*
Panelist: **Denise M. Rousseau**, *Carnegie Mellon U.*
Panelist: **Christopher L. Tucci**, *Imperial College Business School*
Panelist: **Sim B. Sitkin**, *Duke U.*

Participate in the highly regarded "AMD Shark Tank." Like the reality TV show, scholars will "pitch" their paper ideas to a panel of leading management scholars who will then, along with the audience, be asked to vote for the most promising papers. Candidates will pre-submit extended abstracts of their papers. From this pool, the incoming AMD editor team will select the finalists to serve as contestants. Each contestant will be given 4 to 5 minutes (no more than 3 power point slides) to summarize the study during the live session (i.e., make the pitch). Esteemed panelists will then be given a few minutes to give quick, constructive, and perhaps humorous feedback for each paper. The first part of the event will take about 1 hour. Following this part, AMD editors will provide an additional 30 minutes of feedback to the authors of the two papers scoring the most votes. All are welcome to participate in both parts of the session. Candidates submit your extended abstracts via
https://form.jotform.com/AOMForms/amd-paper-workshop-at-aom
DEADLINE for extended abstracts: July 19

Robustness and Replicability: Limitations and Recommendations

Session Moderator: **Jesper Wulff**, *Aarhus BSS, Aarhus U.*

RM: **How and Why Alpha Should Depend on Sample Size: A Bayesian-frequentist Compromise**

Author: **Jesper Wulff**, *Aarhus BSS, Aarhus U.*
Author: **Luke Taylor**, *Aarhus BSS, Aarhus U.*

The use of fixed alpha levels in statistical testing is prevalent in management research, but can lead to Lindley's paradox in highly powered studies. In this article, we propose a sample size-adjusted alpha level approach that combines the benefits of both frequentist and Bayesian statistics, enabling strict hypothesis testing with known error rates while also quantifying the evidence for a hypothesis. We present an R-package that can be used to set the sample size-adjusted alpha level for generalized linear models, including linear regression, logistic regression, and Poisson regression. This approach can help researchers stop relying on mindless defaults and avoid situations where they reject the null hypothesis when the evidence in the test actually favors the null hypothesis, improving the accuracy and robustness of statistical analysis in management research.

RM: **A Critical Evaluation Of The Impact Threshold Of A Confounding Variable In Management Research**

Author: **Sirio Lonati**, *NEOMA Business School*
Author: **Jesper Wulff**, *Aarhus BSS, Aarhus U.*

The use of sensitivity analyses, such as the Impact Threshold of a Confounding Variable (ITCV), has become increasingly common in management research as a means of assessing the robustness of results to omitted variable bias. A common practice is to benchmark the ITCV against the correlations between control variables and both predictor and outcome variables, with the assumption that these correlations serve as proxies for the effect size of unobservable confounders. However, this practice can be misleading, because benchmarks based either on control variable correlations or on effect sizes reported by other studies may be quantitatively incorrect, leading to erroneous assessments of the robustness of an estimate to omitted variables. In this paper, we thus argue for a more careful and critical interpretation of the ITCV and other recently proposed sensitivity analyses in management research.

RM: **Finding Your Match: A Review and Recommendations for Matched Sample Methodologies**

Author: **Donald D Bergh**, *U. of Denver*
Author: **José Luis Gallegos-Quezada**, *Rotterdam School of Management, Erasmus U.*
Author: **Rowan Moelijker**, *Rotterdam School of Management, Erasmus U.*
Author: **Ying Tang**, *Rotterdam School of Management, Erasmus U.*
Author: **Max Welz**, *Erasmus School of Economics, Rotterdam*

The authors examine the use of matched sampling techniques in strategic management research. They first report a content analysis of 121 empirical studies appearing in the SMJ that reported a matched sample methodology, finding that propensity score and coarsened exact matching were used in 108 of the studies. Further, most of those studies do not report the variables that served as the basis for matching, disclose pre- and post-sample sizes, or recognize the assumptions underlying the techniques, but just over half do provide diagnosis and assessment tests to justify the validity of their matched sample. The authors provide recommendations to strengthen current practices and guide strategists on matching sample methodologies.

RM: **A Confidence Interval-Based Replication Methodology: An Introduction and Illustration**

Author: **Donald D Bergh**, *U. of Denver*
Author: **Ronan Powell**, *U. College Dublin*
Author: **Yang Zhao**, *Michael Smurfit Graduate School of Business, Ireland*

The authors introduce and empirically demonstrate a confidence interval-based replication methodology. This approach extends the current focus on the statistical significance of replication studies to include (1) assessing whether results include the null effect; (2) more precisely estimating effect sizes; (3) reflecting more realistic estimates; (4) evaluating the (in)consistency of findings across studies; and (5) refining outcomes into replication, non-replication, and inconclusive conclusions. A replication of Humphery-Jenner's (2014) 'beneficial' managerial entrenchment hypothesis is used as an illustration. Overall, the confidence interval-based replication methodology provides for more robust testing and an expanded understanding of replicability. Additionally, implications for the managerial entrenchment hypothesis of acquisition performance are provided.

What Are We Talking About? Natural Language Processing in Organisations

Participant: **Michael Yeomans**, *Imperial College Business School*
Participant: **Madison Singell**, *Stanford Graduate School of Business*
Participant: **Matthew Rocklage**, *Northeastern U.*
Participant: **Tessa Charlesworth**, *Northwestern Kellogg School of Management*

This symposium is designed to advance research on organizational communication by bringing together leading scholars examining state- of-the-art applications of natural language processing. Language is endemic to almost every aspect of an organization - we talk and write to each other all the time. However, the dominant paradigms for studying social interactions involves indirect measures of communication - for example, by manipulating language in a lab experiment, or by surveying people about their previous interactions. These methods allow researchers to structure their data in advance. But naturally occurring data from communication - the text and speech itself - is unstructured, and presents many common analytical challenges for those who care about the consequences of that communication. The presentations in this symposium demonstrate how that communication can be measured directly. Each presenter considers natural language data from common and difficult conversations throughout an organization. And in each case, natural language processing is used to show that the content of the communication has direct consequences for organizational outcomes. Across different field settings, we show how our analyses can also provide evidence for biases and information gaps that can inform behavioral models of decision-making in an organization.

Celebrating the Scholarly Life and Contributions of Steven Floyd

Organizer: **Yoojung Ahn**, *Korea U. Business School*
Organizer: **Emmanuelle Reuter**, *U. of Neuchatel*
Organizer: **Carola Wolf**, *U. of Liverpool*
Panelist: **Julia Balogun**, *U. of Liverpool*
Panelist: **Joep Cornelissen**, *Erasmus U. Rotterdam*
Panelist: **Tomi MM Laamanen**, *U. of St. Gallen*
Panelist: **Richard Whittington**, *U. of Oxford*
Panelist: **William Wooldridge**, *U. of Massachusetts, Amherst*

In October 2022, we unexpectedly lost our dear colleague, mentor, and friend, Steven W. Floyd. This Symposium looks back on his life as an academic. His contributions have proved to be constitutional in developing several management research fields, e.g. around strategy-as-practice, middle managers, strategic initiatives and change, and corporate entrepreneurship among others. In addition, Steve provided generous efforts in the scholarly communities by serving in numerous professional roles within the strategy and wider management community, as editor, and in executive leadership teams of professional communities. This Symposium provides an opportunity and space for members across different (strategy) communities to come together and celebrate the life and work of Steve. It includes a keynote providing an overview of Steve's life and scholarly work, panel presentations discussing (1) Steve's influence on various sub-fields within strategy and management research; (2) Steve's professional service in editorial roles and as bridge-builder between communities; (3) Steve's work as a supervisor and mentor developing academic talent. It will be closed by a Q&A and an informal networking session.

Leading at the Frontline: What Business Can Learn from How Big City Mayors Engage the Grassroots

Panelist: **Michelle Wu**, *Mayor, City of Boston*
Panelist: **Madeline Rogero**, *City of Knoxville*
Panelist: **Luke Bronin**, *City of Hartford*
Panelist: **Greg Fischer**, *City of Louisville*
Moderator: **Jeffrey Sonnenfeld**, *Yale U.*
Moderator: **Arvind Bhambri**, *U. of Southern California*

Four current and recent mayors from iconic urban cities, namely, Boston, Hartford, Louisville, and Knoxville, discuss how they empowered frontline constituencies to lead change in politicized multi-stakeholder environments with competing claims and power structures. Michelle Wu was the first woman and Asian American to be elected Mayor of Boston. Since taking office in 2022, she has worked with diverse constituencies and stakeholders to address significant disparities in housing needs, replacing segregated living patterns with integrated and balanced living patterns, transforming racially and ethnically concentrated areas of poverty into areas of opportunity. Madeline Rogero was the first woman to be elected Mayor of Knoxville and served two terms from 2011-2019 dedicating her efforts to promote the local economy, build a thriving downtown, and a greener Knoxville. She also served on a task force to advise President Obama on climate preparedness and resilience building. Luke Bronin, currently in his second term as Mayor of Hartford, led the city through the biggest fiscal crisis in the city's history. Mayor Bronin worked to position Hartford as a center of innovation and establish Hartford a leader in environmental stewardship. One of his earliest initiatives was the Youth Service Corps launched to address the city's youth unemployment crisis. Greg Fischer has just completed his third 4-year term as Mayor of Louisville. In his tenure, Louisville experienced an economic renaissance, adding 83,000 jobs and 3,000 new businesses, with unprecedented investments in affordable housing. Louisville was named an International Model City of Compassion four times. Mayor Fischer was elected by the mayors of America to be president of the U.S. Conference of Mayors in 2020 and named as the most innovative mayor in America by Politico in 2016. These four proven public leaders will share personal reflections on what it means to be a courageous strategic leader when every action is subject to public scrutiny and even good deeds have staunch critics.

Social and Environmental Disclosure and Reporting

Session Moderator: **Christian Hüning**, *Goethe U.*

SIM: **How Do Soft Law Mechanisms and Threats to Organizational Legitimacy Affect Companies' Tax Strategies**

Author: **Christian Hüning**, *Goethe U.*
Author: **Eva Maria Katharina Koscher**, *Goethe U.*

Purpose – This paper addresses the question of how CSR soft law mechanisms and Big 4 audit company or NGO monitoring affect companies' tax strategies. We argue from a neo-institutional perspective that CSR soft law mechanisms like CSR reporting standards and stock index requirements reduce companies' absolute tax avoidance. Furthermore, the monitoring of a Big 4 audit company or a NGO has a moderating effect on the relationship. Design/methodology/approach – We test three hypotheses with linear panel-regressions and conduct different causality analyses. Therefore, we use a dataset derived from the eight largest European economies for the timespan from 2010 to 2020. Our total dataset consists of 3,619 firm-year observations. Findings – The findings indicate that soft law mechanisms like the GRI G4 reporting standards and the requirements of the Dow Jones Sustainability Indices reduce companies' absolute tax avoidance. Furthermore, being monitored by a Big 4 audit company has a moderating effect. In contrast to that, NGO auditors have no clear effect. Originality/value – First, this study provides insights on the effects of soft law mechanisms on companies' CSR and tax strategies. Second, it does so from an interdisciplinary perspective. Third, the paper sheds light into the question of how companies implement new institutional rules. Fourth, we provide a potential explanation for the decline of absolute tax avoidance in recent years.

SIM: **Dancing on a Razor's Edge between Greenwashing and Brownwashing: CED and Innovation in China**

Author: **Jintao Lu**, *Taiyuan U. of Science and Technology*
Author: **Punit Arora**, *City U. of New York*
Author: **Dan Rong**, *Taiyuan U. of Science and Technology*
Author: **Jiaojiao Qu**, *College of Business Administration, Huaqiao U.*
Author: **Yangyang Gao**, *Taiyuan U. of Science and Technology*
Author: **Mengshang Liang**, *Taiyuan U. of Science and Technology*

This study develops a mediator-moderator model to examine the relationship between corporate environmental disclosures (CED) and innovation. Specifically, in the context of China, we integrate behavioral and institutional theories to theorize and test a curvilinear relationship between CED and Innovation such that both greenwashing and Brownwashing are associated with lower innovation than green-highlighting strategies. We further argue that this relationship is mediated by the underperformance duration and moderated by firm visibility and regulatory effectiveness. Using a sample of 3,914 observations for 624 A-share listed firms in China's heavy-pollution industries for a period of 2013 to 2019, with fixed effects and dynamic panel regression modeling, we find robust support for all our predicted hypotheses. Our results showed a significant inverted U-shaped relationship between CED and innovation, which is mediated by the by the underperformance duration and moderated by firm visibility and regulatory effectiveness. We discuss the implication of these findings.

SIM: **SEA as Prefigurative Politics Towards Concrete Utopia: A Baradian Performativity Perspective**

Author: **Othmar Manfred Lehner**, *Hanken School of Economics*

The global sustainability turn has been largely driven by social movements, and while there is some success in influencing consumers and policymakers, less is known regarding their influence on organizations and systemic change. Policymakers have established various frameworks of social and environmental accounting (SEA) to guide this behavioral and systemic change, yet the political theory performativity of SEA remains unclear. This paper proposes to move away from understanding SEA in the traditional light of financial accounting theory with its measurement focus, and concentrate instead on SEA as political theory that drives a future-oriented, systematic performativity towards what Bloch calls 'concrete utopia'. Karen Barad's agential realism (AR) allows for a deeper understanding of SEA as form of prefigurative politics, emphasizing the entanglement of actors in the SEA apparatus and how a deeper, performative meaning can be created through agential cuts and intra-action. Utilizing Bloch's (1986) concept of a 'concrete' utopia, which is realistic, achievable, and emphasizes debate and collaboration between different stakeholders, this paper will discuss four AR perspectives on SEA as a form of prefigurative politics: materialization, evolution of practices, anticipatory governance, and political legitimization.

SIM: **The Quest for Organizational Change: Materiality and Drivers of Performativity in SEA**

Author: **Sarah Beatrice Kapplmüller**, *Johannes Kepler U. Linz*
Author: **Othmar Manfred Lehner**, *Hanken School of Economics*
Author: **Dorothea Greiling**, *Johannes Kepler U. Linz*

A materiality assessment is the process of identifying those environmental, social and governance (ESG) topics that are most relevant for organizations and their stakeholders from an inside-out as well as from an outside-in perspective. The results of a materiality assessment allow organizations to align their sustainability strategy and vision with their management and operations and provide the foundation for actions driving organizational change. Research increasingly realizes that a technical-rational approach in a materiality assessment process in social and environmental accounting (SEA) leads to – at best – varying success regarding its performativity towards a true organizational sustainability transformation. Combining accounting and organization theory on performativity, we examine materiality assessment as process that might moderate existing socio-political boundaries in SEA. Empirically, we make use of a salient, longitudinal single case study in which a materiality assessment process is firmly institutionalized, yet the performativity regarding the environmental versus the social sphere seems to be inconsistent. In our dynamic approach to materiality as 'becoming' rather than 'being' we identify four drivers of performativity: attitude, engagement, accountability and progression. Building upon this analysis, we contribute to the epistemological nature of materiality and a dynamic understanding of boundary conditions for performativity.

Stakeholder Engagement and Dialogue

Session Moderator: **Tiziana Gaito**, *U. of Applied Sciences in Business and Administration, Zurich*

SIM: **Stakeholder Engagement and Risk-Willingness of Private Family Firms**

Author: **Yoo Na Youm**, *Loyola U. Chicago*
Author: **Jennifer Griffin**, *Loyola U. Chicago*
Author: **Andrew Paul Bryant**, *U. of north carolina at wilmington*

Taking a responsible engagement approach to family firms, we extend an instrumental view of familiness outwards towards nonfamily stakeholders to examine a family firm's risk-willingness in operational complexity. In the context of an inherently risk adverse group of private family firms, we find that building and reinforcing connectedness through cooperative engagement with employees, consumers, and communities has risk-willingness payoffs. More specifically, private family firms displaying processes and behaviors of long-term family influence such as sharing of information, which also cooperatively engages with stakeholders, are associated with increased risk-willingness, a necessary condition for ongoing growth. Using an in-depth, proprietary survey of multigenerational, private family firms we find that extending familiness through responsible, cooperative stakeholder engagement to multiple stakeholders positively moderates the risk-willingness of family firms in terms of increased operational complexity. Implications for scholars and family firms exploring cooperative, responsible stakeholder engagement are discussed.

SIM: **Rising from the Darkness: Transforming Intractable Conflicts through Stakeholder Engagement**

Author: **Tiziana Gaito**, *U. of Applied Sciences in Business and Administration, Zurich*

Stakeholder engagement scholars are paying increasing attention to the dark side of stakeholder engagement, where stakeholders tend to destroy rather than create value due to their negative engagement. Thereby, they quickly get trapped in intractable conflicts with stakeholder relationships based on the relational state of (dysfunctional) distrust. The transformation of these value-destroying conflicts is critical for stakeholders to return to value creation—the key purpose of stakeholder engagement. However, how intractable conflicts are transformed has received little attention in the stakeholder engagement literature. Drawing from intractable conflicts and organizational behavior research, I build a theoretical process model that describes the transformation of intractable conflicts along Lewin's change model by allocating different relational states and engagement practices in his three steps. I extend stakeholder engagement theory by adding knowledge about (1) the relational state of distrust, in which constructive engagement is impaired, and suspicion, which is needed for facilitated engagement to transform stakeholder relationships into a desired direction; (2) the relational state of calculative trust that describes functional stakeholder relationships as a potentially desired relational state and precondition for building more communal relationships; (3) novel stakeholder engagement practices suitable for the three steps involved in the transformation process of intractable conflicts.

SIM: **Deliberative Corporate Governance: Integrating Stakeholder Deliberation and Stakeholder Democracy**

Author: **Simon Pek**, *U. of Victoria*
Author: **Adrien Billiet**, *KU Leuven*

We are seeing a growing interest in deliberative conceptions of corporate governance that have the potential to significantly improve corporations' relationships with their stakeholders to address societal challenges. However, we are left without a strong theoretical framework for how to make sense of and practice deliberative corporate governance, particularly when it comes to the relationship between stakeholder deliberation and stakeholder democracy. In light of these gaps, we advance a comprehensive deliberative systems conception of deliberative corporate governance. In developing this framework, we identify four variants that diverge based on a given corporation's level of stakeholder deliberation and its governance arrangement (shareholder democracy or stakeholder democracy). Our paper advances our understanding of how to foster deliberative corporate governance and the complex relationship between stakeholder democracy and stakeholder deliberation.

SIM: **Firm-stakeholder Engagement under Crisis: Communication of Firms' Social Activities and Emotions**

Author: **Yoo Na Youm**, *Loyola U. Chicago*
Author: **Eunhee Ko**, *Northwestern U.*

The COVID-19 global pandemic has highlighted the importance of environment, social, and governance (ESG) factors for businesses, and has elevated social issues as critical factors. Against the backdrop of the crisis, we examine how firms' communications of their social activities relate to the effectiveness of firm-stakeholder engagement through trust-building mechanisms and explore boundary conditions in terms of emotional elements (e.g., the extent of emotional expression, negative emotions, and empathy). We start from the argument that a firm's communication of social activities will be received favorably by stakeholders. Further, we argue that a firm's communication strategies in a crisis should be different from normal situations, and based on emotion regulation strategies, posit that communications requiring less emotional consumption will better resonate with stakeholders. We find support for the arguments in the context of firm-stakeholder communication on Twitter for firms on the S&P 500 list during December 2019 to July 2021. Through a detailed examination of firms' communications of their social activities during the COVID-19 pandemic, we contribute to the stakeholder engagement literature by incorporating emotions in understanding effective firm-stakeholder engagement and address the call for a deeper understanding of firms' strategic choices under a crisis.

Hybrid Organizations and Social Entrepreneurs

Session Moderator: **Hyeonjin Cha**, *U. of Oregon*

SIM: **Hybrid Companies and Communication of Organizational Identity**

Author: **Hyeonjin Cha**, *U. of Oregon*

Communicating an organization's identity to members is crucial to organizational performance and survival. However, little is known about how hybrid companies—organizations pursuing prosocial missions while also engaging in commercial activities—convey their identity to internal stakeholders effectively. Drawing on key insights from organizational identity, prosocial certifications, and strategic legitimation literatures, I posit that organizational leaders of hybrid companies act as identity custodians and may use prosocial certifications as schema, i.e., a set of interrelated categories that give meaning and authority to the otherwise conflicting values of hybrid companies. Incorporating qualitative approaches to theory building with inductive case studies, I develop a theoretical framework to describe how hybrid company leaders and members engage with prosocial certifications throughout the process of identity communication.

SIM: **The Paradoxical Relationships of Performance in Hybrid Organizations**

Author: **Chansoo Park**, *Memorial U. of Newfoundland*
Author: **Yang Pok Rhee**, *Dong-A U.*
Author: **Alex Nicholls**, *Said Business School*

The ethicality of social enterprises is often taken for granted; this paper fills this gap by examining the interrelationships between ethical behaviour and the economic and social performance of 198 Korean social enterprises. Utilizing a multiple regression analysis of key measures, we found interesting results. First, the ethical behaviour of these social enterprises negatively impacted both social and economic performance. While economic performance can be expected to decrease due to social costs inherent to the social enterprise model, social performance was expected to increase due to isomorphic pressures on the legitimacy of social enterprises. Second, economic performance exhibited a negative relationship with social performance, reflecting tensions that are often present in hybrid organizational models. This relationship was contingent on the nature of social enterprise organizations. Social enterprise start-ups revealed a strongly negative relationship between economic and social performance, while social enterprises that emerged from commercial organizations did not show the same negative relationship. The research results suggest that there are complex and, at times, paradoxical relationships between ethical behaviour and the social and economic performance of Korean social enterprises.

SIM: **How do Mission-driven Organizations Become Hybrid?**

Author: **Gaëlle Cotterlaz-Rannard**, *U. of Sussex Business School*
Author: **Andrew Crane**, *U. of Bath*
Author: **Stefan Hielscher**, *School of Management, U. of Bath*

Increased competition and scarce public funds have led non-profit organizations to include commercial revenue streams, changing their donation-based models toward more enterprising ones. While research has extensively studied business models in the context of social enterprises, business model changes for traditional non-profit organizations such as non-governmental organizations are not as well understood. The purpose of this paper is to provide novel insights into the adoption of enterprising business models by non-profit organizations. Using an original database of non-governmental organizations, we conclude that, contrary to expectations, mission-oriented organizations are less likely to develop strongly enterprising business models when the dominant logic of the organization's existing donors is commercial. However, when strongly enterprising business models are adopted, NPOs tend to create separate organizational structures to manage the new commercial logic. Drawing on the business model and hybrid literatures, this research identifies how transitions in business models for the non-profit sector are influenced by dominant logics.

SIM: **Types of Hybridity - How Social Enterprises Differ in Their Value Creation (WITHDRAWN)**

Author: **Janina Sundermeier**, *Free U. Berlin*

Social enterprises are hybrid organizations that combine different institutional logics. While adhering to several logics can produce diverse challenges to an organization, social enterprises use the combination of logics to provide innovative solutions. To advance our understanding of hybridity, we examine how social enterprises differ in the way they combine institutional logics. Developing a taxonomy based on 213 social enterprises, we identify three overarching types of value creation that differ systematically in how they integrate social and commercial actors in their value creation: (a) value suppliers— social actors (i.e., those that adhere to a social welfare logic) create, receive, and pay for value while economic actors only take one of the roles; (b) value manufacturers— economic actors (i.e., those that adhere to an economic logic) create, receive, and pay for value while social actors only take one of the roles; (c) value exchangers—social and commercial actors both take several roles in the value creation. The proposed taxonomy offers new conceptualizations of hybridity for theorizing on tensions, hiring, and problem-solution-fit of social enterprises.

Responsibility in the Textiles and Apparel Industry

Session Moderator: **Zara Berberyan**, *Leuphana U. Lüneburg*

SIM: **Attitude Without Action - What Really Hinders Ethical Consumption**

Author: **Zara Berberyan**, *Leuphana U. Lüneburg*
Author: **Sarah Jastram**, *Hamburg School of Business Administration*
Author: **Alkis Otto**, *Hamburg School of Business Administration*
Author: **Mark A Heuer**, *Susquehanna U.*
Author: **Joachim Rosenkranz**, *HSBA*

This study investigates the attitude-behavior gap in the context of ethical fashion consumption. Based on the Theory of Planned Behavior we conduct a comparative analysis of N=1000 German consumers differentiated into two groups: 1) consumers who despite having ethical attitudes do not consume ethically and 2) ethical shoppers. A survey is employed including a best-worst scaling experimental methodology and a logistic regression analysis is conducted to reassess the relevance of previously identified ethical consumption barriers. Our findings reveal that the majority of the hitherto attested barriers do not increase the likelihood of the attitude-behavior gap and, thus, cannot be classified as purchasing barriers. Specifically, we highlight the relevance of overt behavioral controls for the explanatory power of the Theory of Planned Behavior in the context of ethical fashion consumption. Our findings contribute to the ethical consumption discourse and general consumer research by differentiating the attitude-behavior gap both theoretically and empirically.

SIM: **What do First-tier Suppliers do for Labor Compliance in Global Value Chains?**

Author: **Jinsun Bae**, *Sprott School of Business, Carleton U.*
Author: **Joonkoo Lee**, *Hanyang U.*
Author: **Sun Wook Chung**, *Sogang U.*
Author: **Hyunji Kwon**, *Seoul National U.*

Global value chains have become increasingly complex, involving multiple tiers of suppliers. This makes it difficult for the lead firm alone to regulate labor practices in the chains. Recognizing that first-tier suppliers have become progressively more capable of sharing value chain orchestration with lead firms, we examine what these suppliers do to support the lead firm's labor regulation. Our case study focuses on two Korean MNCs that are major first-tier suppliers in the apparel and electronics industries. We find that to comply with the lead firm's labor standard (primary agency role), these suppliers ran self-audit programs and fostered cross-functional coordination. To cascade the lead firm's regulation to sub-suppliers (secondary agency role), these suppliers employed coercive and consultative strategies. In exercising these double agency roles, they exhibited competence as regulatory intermediaries—specifically, compliance expertise, operational capacity, and enforcement legitimacy vis-à-vis sub-suppliers. While navigating challenging lead firm and host country contexts, the first-tier suppliers supported the lead firm's labor regulation through the strategy of good enough compliance: a level of compliance that posed minimal risk to the lead firms and permitted the suppliers not to sacrifice production goals when they collide with those of compliance.

SIM: **When a Business Case puts a Sustainability Case at Risk: Capacity Building in Garment Value Chains (WITHDRAWN)**

Author: **Chikako Oka**, *UPEC, IRG*
Author: **Rachel Alexander**, *Copenhagen Business School*
Author: **Niklas Egels-Zandén**, *U. of Gothenburg*
Author: **Shahidur Rahman**, *BRAC U., Bangladesh*

How does a business case affect sustainability outcomes? What sustainability outcomes do the so-called business cases offer? This is a clear blind spot in the CSR literature that focused on proving the business case of CSR or critiquing the business case perspective. This paper seeks to answer the question by examining capacity building initiatives proposing a win-win solution to supplier garment factories in terms of sustainability and returns. The research draws on extensive interviews with global brands and retailers, capacity building initiatives as well as Bangladeshi factories and other stakeholders. In so doing, it also seeks to bridge the polarized perspectives and challenge the assumption in the tension literature that the tension approach is superior to the business case approach in helping achieve corporate sustainability. Indeed, these perspectives can intertwine and intersect while tensions can arise between a business case made and sustainability outcomes. The paper also makes empirical contributions by unpacking different types of business cases and exploring how they lead to different perceptions and sustainability outcomes.

SIM: **Governance Choices in Multi-Stakeholder Initiatives: Disentangling Dynamics in the Textile Industry**

Author: **Marit Grewe-Salfeld**, -
Author: **Golo Roevekamp**, *Leibniz U. Hannover*
Author: **Deniz Philipp Kruse**, -
Author: **Christiana Weber**, *Leibniz U. Hannover*

Multi-stakeholder initiatives (MSIs) are hailed as an essential remedy to social and ecological issues through combining resources and capabilities from diverse organizations. Such initiatives represent a superior solution only if they effectively strengthen and govern the partnership's capacity to create joint value. In this paper, we adopt a governance perspective to understand how and why different governance choices of MSIs are adjusted to create partnership capacity. Our longitudinal study of three different MSIs in the textile industry offers unique insights into governance choices, the resulting partnership capacity, and internal and external drivers for governance adjustment. Drawing on the rich case narratives, we develop a framework that theorizes the influence of governance choices on MSI partnership capacity via three factors, transparency, neutrality, and interaction. The contextualization of our analysis further reveals the recursive relation of the broader context, the issue at stake, the composition of organizations, and the industry's history.

Worker Wellbeing

Session Moderator: **Divya Tyagi**, *O.P. Jindal Global U., Sonepat, Haryana, India*

SIM: **The Caste-Dirt Conundrum: Decoding Caste's Impact on Dirty Workers' Experiences & Response to Stigma**

Author: **Divya Tyagi**, *O.P. Jindal Global U., Sonepat, Haryana, India*
Author: **Sushanta Kumar Mishra**, *Indian Institute of Management, Bangalore*

The term dirty work was pioneered by the American sociologist Everett Hughes to describe roles, tasks, or occupations that are seen as disgusting, demeaning, or distasteful due to their association with physical, moral, or social taints. Society views the individuals who perform this work as if they personify their work's negative qualities and stigmatize them as dirty workers. Over the years, the scholarly interest in understanding different facets of dirty work has increased. Scholars have tried to uncover the features of dirty occupations, the challenges faced by dirty workers, and the strategies they utilize to manage the taint. These studies assume that dirty work is an occupational-level threat. Consequently, dirty workers collectively perceive, experience, and respond to this threat. As a result, dirty work's embodied aspects, including how the differences in the meanings ascribed to the dirty workers' bodies influence how they encounter their work, have been overlooked. In our qualitative study, we attempt to fill this void by exploring the influence of caste dynamics on dirty workers' perceptions and work experiences. Based on the grounded theory approach, we interviewed 55 dirty workers. The findings from our study reveal that workers have distinct beliefs regarding the extent to which they consider a dirty occupation to be "theirs" versus "others," and these beliefs, in turn, guide their choice of strategy for navigating the stigmatization surrounding them and their work.

SIM: **The Missing Voice of Adolescent Service Workers: A Qualitative Study**

Author: **Maria Golubovskaya**, *Griffith U., Australia*
Author: **David Solnet**, *U. of Queensland*
Author: **Richard Robinson**, *U. of Queensland Business School*

Adolescent workers (under 20 years of age) fill the ranks of many service organizations, yet little is known about how they interpret their own work experiences. In response, this study places the adolescent worker's voice front and center, and gives voice to their interpretations of working in frontline service jobs. Using a multi-stage qualitative design, 60 in-depth interviews were conducted revolving around a sample of 17 adolescent worker 'triads'. Critical nuances about adolescent worker experiences are uncovered, with the onus on managerial practices rather than the type of job itself, and organizational capabilities to support adolescents' basic psychological needs are questioned. The paper questions the applicability of generic adult motivational theories (ie self-determination theory, SDT) to the adolescent work context. This study challenges the universally accepted need for autonomy for young workers, and identifies a dualistic nature of social bonds at work among adolescents. A pertinent need for dignity, a dimension not adequately accommodated in SDT is also uncovered. This work also contributes methodologically and demonstrates the value of multi-participant data triangulation.

SIM: **What Happens When Companies do not Fulfil Their Responsibilities Towards Their Employees?**

Author: **Oluseyi Aju**, *U. of Huddersfield*
Author: **Eshani Samanthi Beddewela**, *U. of Huddersfield*

While there are indications that organisations can act 'irresponsibly' by not upholding their responsibilities towards their employees, there appears to be a dearth of research on how individual employees perceive organisational support and how they react to the absence of (or inadequate) organisational support. Notably, the neoliberal policies in the Nigerian oil sector appear to be overshadowing socially responsible employee relations practices, as incidences of precarious work arrangements and marginalisation of skilled indigenous workers have spiralled over the years. Yet conventional literature has provided limited insight into issues relating to workplace deprivation in the African context. Consequently, our paper adopts a qualitative approach involving semi-structured interviews with 25 indigenous skilled workers across four public and private sector organisations in the Nigerian oil industry to understand how employees experience, perceive and react to inadequate EC-CSR in organisations. Our findings suggest that there was pronounced inadequacy in the public organisation's training and employability development, employee engagement, conducive work environment, and employee health insurance. These trends engendered demotivation and chronophobia, which has implications for employee cynicism. In line with the rational norm of reciprocity, inadequate organisational support elicited passive withdrawal behaviour. Nevertheless, our paper showcases how employees who subscribe to Afrocentric indigenous values and denominational orientation exercise positive attributes of tolerance, diligence, and patience in the face of inadequate organisational support. Insights from this study could help managers in the African context understand indigenous psychology when creating strategic interventions aimed at changing dysfunctional organisational aspects that can strain effective employee-organisation relations.

SIM: **Familiar Othering at Work: A Study of Exploitation of Internal Migrant Workers in India**

Author: **Pankhuri Agarwal**, *School of Management, U. of Bath*
Author: **Vivek Soundararajan**, *U. of Bath*

Current research on identities and othering focus on the binary of self and other. This offers limited understanding of the lived experience of individuals that disturb such binaries and lie in an in-between position, such as internal migrants, biracial people, and others. Using data from a qualitative study of 25 internal migrant workers and ten key informants in the garment industry in Tirupur, India, this article is centred on their lived experience of being both included and excluded as citizens and migrants. Based on the study, we develop the theory of familiar othering. The theory postulates a combination of structures, processes and practices of inclusion and exclusion through which the in-between social identities of individuals can be comprehended. The article shows that this familiar othering is enacted in the nexus of state, employer, and workers across overlapping dimensions: space, culture, relations and procedures. Through this theory, we make three contributions. First, we develop a theory of familiar othering to understand the othering experiences of individuals who are unclassifiable or cannot be categorised through a dualistic lens of self and other. Second, we contribute to the migration literature by arguing for a focus on internal migration that challenges dominant binaries in the study of citizens and migrants. Third, we extend the emerging literature on agency within oppressive conditions by showing how workers themselves take actions to remain in a familiar other position and are not passive receivers of familiar othering practices.

Theorizing About Human Rights

Session Moderator: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*

SIM: **Stakeholder Theory and Human Rights**

Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*
Author: **Robert A. Phillips**, *Schulich School of Business, York U.*
Author: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*

Stakeholder theory has been advanced as an alternative to more individualistic forms of capitalism. Yet, criticism remains regarding the consequences of even this variant of capitalism on marginalized, vulnerable, poor, and exploited involuntary stakeholders. These distal stakeholders are powerless individuals or groups whose remoteness from core firm operations generates blind spots in managers' limited attention. We argue there are three stakeholder theory issues that contribute to these blind spots: stakeholder status, graphical firm-centrism, and considerations of stakeholder theory's normative core. In addressing these issues, we conceptualize a human rights approach that better accounts for the prerequisite step of respecting rights in firm decision making. Because respect for human rights is both morally and temporally prior to other stakeholder obligations, we elaborate a two-step process in which opportunities are first evaluated through a human rights filter before proceeding to an analysis of the sort of voluntary, reciprocal relationships more typical of contemporary stakeholder theory.

SIM: **The Importance of Human Rights for Management and Organization Studies**

Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*
Author: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*

Business and human rights (BHR) scholarship examines the role of business in human rights violations as well as business responsibilities to respect human rights and provide remedy where needed. BHR scholarship has been thriving over the last several decades, but it has yet not entered management and organisation studies scholarship to the extent that is merited given the importance of the topic. The purpose of the paper is to present BHR as a relevant topic in management and organisation studies with three objectives: (1) to introduce general management and organisation studies scholars to the foundations of BHR, (2) to advance a future research agenda for BHR in management and organisation studies and (3) to provide BHR scholars an entry point for their work into management and organisation studies. In so doing, we advance a macro-level conceptualisation (Organising for BHR) and a meso/micro-level conceptualisation of BHR (BHR Organising). This paper expands existing management and organisation studies constructs, inviting management and organisation studies scholars to provide their insights and discuss the implications of human rights for the firm.

SIM: **MNC-CSO Engagement to Prevent & Remedy Human Rights Violations in GVCs– A Collective Action Problem**

Author: **Myriam Celine Rapior**, *U. of Hamburg*
Author: **Marc Oberhauser**, *ESCP Business School*

Multinational Corporations (MNCs) are faced with the grand challenge of human rights violations occurring along their Global Value Chains (GVCs) and often struggle to provide remedy. The voices of right holders, who are affected negatively by human rights standards at MNCs' suppliers, oftentimes remain unheard. Theorizing grand challenges as a result of collective action problems, this study shows how civil society organization (CSOs) can play an important role within the remedy of human rights violations along GVCs. Based on 54 interviews with CSOs representatives from emerging and developed economies we conduct method triangulation by combining qualitative analysis with social network analysis. We find that CSOs from emerging and developed economies build transnational networks in order to bridge the geographical and psychic distance between right holders, MNCs and suppliers. CSOs engage in a set of different activities, i.e. forwarding complaints, entering into negotiations and conducting collaborative monitoring and auditing with MNCs. Taking in the CSO perspective it this study, allows us to identify MNC-CSO engagement as a potential solution to achieve a transnational governance form for MNCs human rights due diligence.

Strategic Implications of Attention

Session Moderator: **Ningzi Li**, *U. Of Chicago*

STR: **Strategic Ambiguity Aligns Stakeholder Attention**

Author: **Ningzi Li**, *U. Of Chicago*
Author: **Mukund Chari**, *U. of Colorado, Boulder*
Author: **James Evans**, *U. Of Chicago*

Although precise communication has aided the rise of modern organizations and markets, managers may choose to communicate ambiguously to address strategic issues. Drawing insight from strategic ambiguity, sense-making, and collective cognition, we investigate the impact of ambiguous language on stakeholder attention, particularly when the firm's resource environment is constrained. By analyzing transcripts of NASDAQ-listed companies' earnings calls from 2006 to 2010, we find that top managers who communicate ambiguously are better able to align financial analysts' attention with their own priorities. We also find that ambiguous language is particularly effective in aligning attention for firms that operate in resource-constrained environments.

STR: **CEO Attentional Vigilance and the Pursuit of Exploration: Theory and Evidence**

Author: **Luke Rhee**, *U. of California, Irvine*

This study proposes that CEO attentional vigilance, defined as maintaining a constant level of attention over time, can contribute to a firm's pursuit of exploration. Using data from new product introductions in the prepackaged software industry and a text-based measure of attentional vigilance, we find that the vigilance of CEO attention is positively associated with the firm's rate of exploration. We also observe that the vigilance of CEO attention to exploration mitigates a firm's propensity to decrease that rate in response to its financial performance below aspiration levels. Lastly, we show that the level of satisfaction among employees in explorative units partially mediates the relationship between CEO attentional vigilance and the firm's pursuit of exploration. The findings hold significant implications for research in the attention-based view, performance feedback, and microfoundations of strategy.

STR: **Organizational Culture, Vocabularies, and Attention: An Experimental Approach**

Author: **Laura Fritsch**, *U. of Oxford*
Author: **Alan D. Morrison**, *Oxford U., Saïd Business School*

We study the relationship between an organization's vocabularies, the cultural foundations of organizational categories, and the way that attention is directed within organizations. We present a process model within which organizations converge on specific vocabularies that enable them to perform tasks efficiently and, in turn, those vocabularies support commonly understood categories that enable organizational members to make sense of the world; those categories then focus attention on specific features of the world. We study these phenomena in an experimental setting within which participants communicate orally to perform an image recognition task. We perform Natural Language Processing (NLP) on transcripts of the subjects' speech in order to quantify the formation, evolution, and transmission of organizational vocabularies. When subjects leave the experiment, they perform a basic memory task that measures the way that their attention was directed during the experiment. Our set-up therefore facilitates an analysis of the relationship between strategic vocabularies and attention. Our work yields four results. First, vocabularies cause attention direction. Second, vocabularies outlast their progenitors and they exhibit strong founder effects. Third, organizational vocabularies change in response to conscious choices. And, finally, when personnel, processes, categories, and goals are held fixed, organizational identity affects the vocabularies used within organizations.

STR: **The Performance and Competitive Implications of Attention Conformity to Exemplars**

Author: **Lingling Pan**, *U. of Pittsburgh*
Author: **Lihong Qian**, *Portland State U.*
Author: **Tianxu Chen**, *West Virginia U.*
Author: **Eric Y.-F. Zhao**, *U. of Oxford*

Despite its strategic significance, a theory of attention conformity has yet to be developed in the literature. In view of this omission, we propose a conceptual framework that theorizes the strategic implications when a nonexemplar firm strives for attention conformity to exemplars. Our core contention is that attention conformity impacts a nonexemplar firm's performance through two countervailing mechanisms. On the one hand, it allows the nonexemplar firm to take advantage of the "path to success" identified by exemplars. On the other hand, attention conformity can lead to important strategic similarities between the nonexemplar firm and the exemplars, thereby evoking a racing mechanism that motivates the exemplars into intensified competitive actions, which in turn detriment the nonexemplar firm's performance. Furthermore, we identify four firm- and industry-level contingencies pertaining to the learning and racing mechanisms associated with attention conformity. Regarding to the learning mechanism, we propose that a nonexemplar firm's size will negatively moderate the learning effect while its slack resources will positively moderate this effect. With regard to the racing mechanism, we propose that industrial concentration and exemplars' market dependence will positively moderate the racing effect. We test our hypotheses using a large, longitudinal dataset of publicly traded US firms. We find strong support for our predictions.

Diversification, and Positioning

Session Moderator: **Gong Min**, *Xi'an Jiaotong U.*

STR: **Constraint or Incentive? Performance Shortfalls and New Industry Entry of State-owned Enterprises**

Author: **Gong Min**, *Xi'an Jiaotong U.*
Author: **Xu Jiang**, *Xi'an Jiaotong U.*
Author: **Lawrence Loh**, -
Author: **Jiang Xiaoxian**, *Xi'an Jiaotong U.*

We draw on the dynamic capabilities view and the behavioral theory of the firm to examine the impact of performance shortfalls on the decisions state-owned enterprises (SOEs) make regarding new industry entry and how this relationship changes with SOE prominence. We find a U-shaped relationship between performance shortfalls and new industry entry using a sample of municipal SOEs publicly listed in China from 2003 through 2019. This nonlinear effect is moderated by SOE prominence, such that the slope of the U-shaped curve flattens as SOE prominence rises, thus decreasing the impact of performance shortfalls on SOEs' new industry entry. The findings contribute significant value to the literature on performance feedback and new industry entry.

STR: **Diversify or Doubling Down: Choosing a Digital Growth Strategy**

Author: **Lars Arvei Moen**, *NHH Norwegian School of Economics*

Digital transformation has led to several improvements in performance and efficiency, but its impact on growth patterns is less clear. Two schools of thought dominate the literature on digital growth strategies. One stream advocates that digital firms should focus only on scaling their core position, while the other contends that firms should envelop into multiple complimentary markets. This paper synthesizes both views and argues that the distinct growth strategies are in fact contextual, and that their optimal strategy is influenced by a new catalyst, the relative level of digital transformation of firms in each market. We offer a new conceptual model that illustrates how digital firms may move between different strategies depending on their perceived market opportunities, competitive advantages, and the relative level of digital transformation of their competitors. Hereby, this paper contributes to a better understanding of the growth strategies of digital businesses.

STR: **When is Less than More? Reductions in Firm Scale and Scope during Economic Downturns**

Author: **Rahul Anand**, *Aarhus BSS, Aarhus U.*
Author: **Jaideep Anand**, *Ohio State U.*
Author: **Pierre Dussauge**, *HEC Paris*

Past research has paid little attention to why and how firms choose to reduce their size. Size reductions can come about either by a reduction in the scale of operations or a reduction in the scope of activities undertaken by the firm. We argue and show that firms are more likely to reduce the scale of their operations but less likely to reduce the scope of their activities in the event of an economic crisis. We also show that reducing scale during a crisis results in better performance than reducing it before a crisis, while reducing scope during a crisis results in worse performance than reducing it before a crisis. Furthermore, asset characteristics and industry growth trends moderate these relationships. We test our arguments on a sample of publicly listed European firms from 2003-2014. This paper provides a boundary condition to the argument that firms primarily sell assets to reduce diversification and highlights the role played by reducing the scale of operations in a firm's corporate strategy.

STR: **No Half Measures: Optimal Distinctiveness Positioning in Multiple Strategic Dimensions**

Author: **Sebastian Von Beck**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Marco Tonellato**, *U. of Trento*

The question to which extent companies should differentiate themselves relative to their competitors has attracted the attention of countless researchers. The recommendation derived from this work is that companies should strive for optimal distinctiveness, or being the same and different at the same time. Most theorizing and empirical analysis in the field focuses on a single strategic dimension, neglecting strategic multidimensionality. In recent years we observed an increasing shift to contextualize the implications of being optimally distinct, however, little is known about the implications of different strategic dimensions and the interplay of strategic conformity dimensions for firm success. In this paper, we conceptually and empirically examine how conformity in core strategy dimensions differs from peripheral strategy dimensions, and how these dimensions together influence firm performance. We find that extreme positioning in strategic conformity is important for firm success. Our results do not support our thesis of firm performance benefitting from gaining legitimacy through conforming in a core dimension, while differentiating in a peripheral dimension, but suggest that congruence in terms of conformity is important for firm success.

Adaptation in Platform Industries

Session Moderator: **Paolo Aversa**, *City U. London*

STR: **Intermediaries and Technological Disruptions: Responding to Physical and Digital Disintermediation**

Author: **Paolo Aversa**, *City U. London*
Author: **Ludovica Caccaro**, *U. degli Studi di Padova*
Author: **Andrea Vinelli**, *U. degli Studi di Padova*

Research has mostly focused on producers, leaving intermediaries (e.g., distributors, wholesalers) poorly understood. We thus investigate how incumbent intermediaries respond to digital technological disruption that disintermediate their distribution and sales. We conduct an inductive study of Sonepar, a major distributor of electrical parts, and its adaptation to digital technologies (2012–2022). Our contribution advances a two-phase process model made of (1) Systems Adaptation and Business Model Change, and (2) High-End Servitization – underpinning the transition from a traditional 'Offline Strategy' to a new 'Hybrid Digital-Driven Strategy.' We also advance a dynamic approach of the classic dichotomy of 'core knowledge' vs. 'complementary assets' by showing how underlying activities vary with the type of actor and the phase of its evolution. Theoretical and practical implications are discussed.

STR: **Choosing the Right Lane: Sustainability Framing and Platform Growth Models in Carsharing**

Author: **David Oliver**, *U. Of Sydney*

This study compares the growth paths and challenges of Australia's two primary carsharing platforms with a particular attention to the sustainability frames they used to attract different stakeholders. The two focal platforms that competed in the same environment differed in their business model; one started out as a peer-to-peer (P2P) platform while the other had a business-to-customer (B2C) model, which involved the platform using its 'own fleet' of cars. The findings address the varying growth challenges of these platforms that stem from their business model as well as the relevance of the sustainability frame for attracting platform members and gaining approval from institutional stakeholders. The study also documents the consequences of a business model switch for one of these platforms. Its findings contribute to extant theory on platform growth in relation to business model design, sustainability framing, and ties to institutional stakeholders.

STR: **Flying in Flocks? How Platform Entry Influences Firm Strategies in Traditional Industries?** ☯ 💻

Author: **Senem Aydin Ozden**, *Bayes Business School*
Author: **Fernando Suarez**, *Northeastern U.*

This study examines how the emergence of platforms transforms traditional product industries and impacts firm strategies. Transformations in traditional industries are often triggered by new technologies developed and exploited through new business models. We focus on the strategic decisions of the traditional industry players regarding whether to join one of the new platforms as a complementor or fight them by platformizing their own offerings. Our empirical results show that firms that attract an ecosystem of supporting apps for their products enjoy positive network effects in growing their businesses and are less likely to join a newcomer platform, while firms that hold strong intellectual property (IP) rights are more likely to join as a complementor (patents might act as a shield against platform owner value expropriation). An increase in the popularity of emerging platforms also bolsters the firms' likelihood of joining the platform space as a complementor. We discuss the managerial implications of our findings for the traditional industry players.

STR: **Benefiting From a Shock: Innovation in Connectedness in Platform-based Ecosystems** ☯ 💻

Author: **Francesca Hueller**, *Bayes Business School*
Author: **Elena Novelli**, *Bayes Business School*
Author: **Paolo Aversa**, *City U. London*

Prior literature has widely explored how platform owners expand their functionalities and growth by attracting complementary innovation. Yet, app developers' innovation generated when ecosystem participants connect their complementary offers remain relatively unexplored. The paper focuses on a specific type of app developers' innovation, "innovation in connectedness," which refers to innovation in providing a more interconnected offer to the final users. Our theory identifies three structural features—connectedness scope, generality, and flexibility—and underpinning mechanisms—that provide some app developers with an "architectural advantage" in introducing new connections or improving the existing ones in the face of a shock that increases the need for a more integrated consumption. Exploiting Covid-19 as an exogenous shock to demand for an integrated consumption, our quantitative longitudinal (2019-2021) analysis of Apple's iOS and Google's Android ecosystems supports our predictions.

Strategies under Uncertainty and Change

Session Moderator: **Phebo Derk Wibbens**, *INSEAD*

STR: **Dynamic Rents: Defining Firm Performance in an Era of Rapid Change**

Author: **Phebo Derk Wibbens**, *INSEAD*

Rents are foundational in strategic theory as a measure firm performance. Intrinsically connected to a firm's control of resources, rents are particularly central to the resource-based view (RBV). However, having been established for industries with stable boundaries and staying in or close to competitive equilibrium, it is unclear how to apply traditional rent concepts to highly dynamic business environments facing rapid change and high uncertainty. This paper introduces the concept of dynamic rents with the goal of providing a definition of firm performance that also applies in an era of rapid change. Dynamic rents are defined as the net present value generated for investors over a given period, estimated with uncertainty. A formal analysis indicates that dynamic rents arise from a gain in information about an uncertain competitive environment. The analysis moreover indicates that dynamic rents can only be meaningfully defined over periods of a few years up to a few decades, depending on the specific business environment. Hence, scholars and practitioners need to more carefully consider the period over which to measure firm performance. The analysis of dynamic rents yields several implications for the RBV, value-based strategy (VBS) and stakeholder theory.

STR: **The Strategic Value of Recessions: An Integrated Real Option and Strategic Factor Market Approach**

Author: **Roberto Vassolo**, *IAE Business School, Argentina AND Pontificia U. Católica de Chile, Ingeniería Industrial*
Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*
Author: **Alejandra Parrao**, *Pontificia U. Católica de Chile*

This paper advances the strategic analysis of recessions as a source of competitive advantage by drawing from insights from real options theory and strategic factor market theory. We propose the core organizational problem is determining the adequate level of commitment to build advantages in periods of economic expansion but keep financial flexibility to exercise growth options during recessions. Namely, firms with greater financial flexibility have a distinct option to expand by acquiring potentially undervalued strategic resources during recessions via corporate mergers and acquisitions. Using a sample of 2,166 firms from various US industries between 2005-2013, we performed a Discontinuous Growth Model (DGM) to test our theory and found support for our proposed theoretical channel.

STR: **Adapting versus Shaping: Competition in the Face of Uncertainty**

Author: **Nety Wu**, *INSEAD*

This study examines the competitive dynamics between firms that adopt a proactive shaping strategy and those that take a reactive adaptation approach when faced with uncertainty. By combining the multi-armed bandit framework and Cournot competition, a simulation model is used to analyze the performance implications of these strategies. Results show that when the shaper's shaping capability is weak, the adapter's flexibility to switch to a more lucrative alternative benefits it in competition. As the first stage becomes longer and the shaper's shaping capability increases, the shaper tends to see an accumulative advantage. Findings also suggest a U-shape relationship between the shaper's shaping capability and the adapter's profit. When the shaper's shaping capability is strong enough, the adapter can earn a higher profit by following the shaper's lead. Implications for capability development, imitation, and the broader ecosystem are discussed.

STR: **Formulating Strategic Problems: A Reflection-In-Action Perspective**

Author: **Guilherme Fowler A. Monteiro**, *Insper Institute of Education and Research*
Author: **Bruno Varella Miranda**, *Insper Institute of Education and Research*

Drawing inspiration from the design literature, we argue that problem formulation can be articulated from a reflection-in-action perspective, thus challenging the idea of a pre-existing problem landscape. In doing so, we develop a different rationale compared to the problem-finding and problem-solving (PFPS) approach. We propose that firms perform four cognitive acts when faced with a highly uncertain problematic situation. The cognitive acts are: (i) naming the relevant issues of the problematic situation, (ii) framing the situation in a certain way, (iii) making moves, and (iv) reflecting on those moves and the framing. From the characterization of these cognitive acts, we expand our framework to consider not only the dynamics of reflection-in-action, but also the governance of the firm that performs reflection-in-action.

Platform Strategies

Session Moderator: **Timo Olavi Vuori**, *Aalto U.*

STR: **Strategic Decision-Making at Platform Transitions and Senior Team Emotional Dynamics**

Author: **Timo Olavi Vuori**, *Aalto U.*
Author: **Michael L. Tushman**, *Harvard U.*

Based on an inductive case study, we develop a process model of top management team emotional dynamics and strategic decision-making at platform transitions. Accordingly, novel platform companies generate stress and ambiguity for incumbent leaders. When incumbent leaders realize that their company's internal solutions are no longer competitive, they experience emotional shock and exhaustion. This increases their vulnerability to the emotional appeal of some of their external platform options. Contextual factors can further reduce their ability to regulate their emotions at the group level. Consequently, top managers' emotions cause them to evaluate and refine their options in an unbalanced way, which shapes their ultimate strategic platform choice. Our findings contribute to theory on the intersection of platform strategy and emotions.

STR: **Organizing for Generativity: From Platforms to Ecosystems**

Author: **Anoop Madhok**, *Schulich School of Business*
Author: **Nudrat Mahmood**, *Schulich School of Business*
Author: **Rishiraj Kashyap**, *Ivey Business School*

Generativity is increasingly being recognized as a critical attribute of digital platform ecosystems (DPEs). We examine how platform firms invoke generativity to evolve into ecosystems and how this ability to harness generativity sets them apart from other organizing forms. We specifically explain (1) how the platform firm orchestrates disciplined generativity through choices regarding architecture, governance and scope, (2) how power asymmetry permits the platform firm to induce ecosystem-wide adaptation to temporal changes with the goal of optimizing for generativity and (3) how efficiency benefits of DPEs complement the pursuit of generativity, reinforcing one another in a virtuous cycle. Our argument advances a more organizing-oriented perspective of DPEs, one that provides novel insight into the recent ascendance – and in some cases dominance – of DPEs.

STR: **Corporate Strategy in Platform Ecosystems: Competitive Dynamics & Diversification among the Big Five**

Author: **Erik Liesola**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Jens Schmidt**, *Aalto U., Department of Industrial Engineering and Management*

In this paper, we apply a corporate strategy lens to the analysis of platform industries, examining the diversification strategies and competitive dynamics among the Big Five platform firms (Amazon, Apple, Facebook, Google and Microsoft) in the time frame 2001-2021. We use the concept of a layer map to identify the distinct segments in the industry and use it to map the firms' products and services. For each firm, we identify their "core" and trace its evolution over time, and we examine the increasing overlap and competitive dynamics among the five firms. We find that each of the firms' core has been remarkably stable over time, and conclude that much of the competitive dynamics, including entry into new segments, has served to maintain, protect and enhance that core through the strategic exploitation of interfaces. A key insight that emerges from our analysis is how the firms use interfaces strategically, especially by setting defaults, to protect and strengthen their core. We also identify five strategic ploys firms use to strengthen and protect their core. Our analysis also shows the usefulness of the concept of a layer map to identify and map the different segments in platform industries.

STR: **Monetary Incentives and Financial Professionals' Contribution: Evidence from Medium**

Author: **Ting Yao**, *U. of Wisconsin, Milwaukee*
Author: **Cheng Chen**, *U. of Wisconsin-milwaukee*

The rise of the creator economy stimulates more online platforms to offer users opportunities to monetize their content. The impact of monetary incentives is unclear, especially on good-income users. We examine how financial professionals on Medium respond to the introduction of the Partner Program. Monetary incentives motivate participants to improve article quantity, quality, and diversity more than nonparticipants, contributing to a better-perceived quality. The program's introduction reduces nonparticipants' article quantity and diversity but increases quality and perceived quality. More participants in the financial professionals' following network do not influence their article quantity but have a different moderating impact on participants' and nonparticipants' article quality, diversity, and perceived quality. The findings help online platforms evaluate the pros and cons of adding monetary incentives.

Innovation Ecosystems Research

Session Moderator: **Nasrin Sultana**, *HEC Montreal*

STR: **Diffusion Of Innovation Through Collaboration Across Ecosystems: The Role of Intermediaries**

Author: **Nasrin Sultana**, *HEC Montreal*

The purpose of this study is to move toward a nuanced understanding of the role of intermediaries in supporting the diffusion of innovation across ecosystems. Intermediaries create necessary links and opportunities for the development of relations and cooperation between different actors in an ecosystem. Yet, how intermediaries facilitate the diffusion of digital technologies and innovation across different ecosystems has remained relatively understudied. In this study, we used a multiple-case design approach to obtain a deeper understanding of the phenomenon. We find that innovation intermediaries, being connected to different actors, facilitate the diffusion of innovation by connecting actors in different ecosystems. Our findings contribute to the literature on innovation intermediaries and ecosystems by elucidating the role of intermediaries in the diffusion of innovation as well as providing an empirical foundation for the roles of intermediaries in relational developments across ecosystems.

STR: **A Configurational Approach Towards Achieving Competitive Advantage in Innovation Ecosystems (WITHDRAWN)**

Author: **Thomas Draschbacher**, *Graz U. of Technology*
Author: **Thomas Bohnstingl**, *Graz U. of Technology*

Bottlenecks serve as important sources of competitive advantage in innovation ecosystems. Two different approaches have been described to unlock this competitive advantage: First, in traditional strategies, actors try to ensure the availability of and access to bottleneck resources for themselves to improve their own value proposition through exclusivity. Second, in ecosystem strategies, actors foster the overall ecosystem's progress in bottleneck areas to improve the ecosystem's value proposition and benefit from complementarity. Until now, most scholars have only investigated these strategies separately, without considering the fact that ecosystem actors may apply multiple strategies simultaneously. We fill this gap by conducting an exploratory fuzzy set qualitative comparative analysis of original equipment manufacturers' (OEMs) configurations of traditional and ecosystem strategies to address upstream and downstream bottlenecks in the ecosystem around battery electric vehicles (BEVs). We identify successful combinations of these strategies that remain stable over multiple years, show how these configurations change over the course of an innovation ecosystem's evolution, and illustrate the different strategic implications of upstream and downstream bottlenecks.

STR: **Ecosystem-specific Advantages of Digital Platform and Emerging Market Firms' International Outcomes**

Author: **Yihui Liu**, *School of management, Zhejiang U.*
Author: **Yi Li**, *U. of Sydney Business School*
Author: **Aiqi Wu**, *Zhejiang U.*

How digital platforms transform emerging market firms' international advantage leveraging has attracted scholarly attentions in both platform strategy and international business fields. Drawing upon the perspective of ecosystem-specific advantages, we argue that interactions with foreign customers through digital platforms facilitate emerging market firms' international performance with a mediating role of their product innovation, and the benefits of ecosystem-specific advantages on innovation outcomes would be contingent on the level of foreign firms' presence in an industry. With a sample of 3,816 Chinese manufacturing firms adapting digital platforms to internationalize, we find the empirical support that cross-side network interaction on digital platform foster emerging market firm's international performance through improving innovation speed rather than enhancing innovation intensity; and the relationship between cross-side network interaction and innovation speed is negatively moderated by the foreign firms' presence in an industry. We discuss theoretical contributions on digital platform strategy and international business research.

STR: **Orchestrating Innovation Ecosystems**

Author: **Karolin Frankenberger**, *U. of St. Gallen*
Author: **Joachim Stonig**, *U. of St. Gallen*

Orchestrating innovation ecosystems has become a critical capability for many firms, but little is known about which governance mechanisms effectively influence ecosystem performance. Therefore, this study examines the relationship between three dimensions of ecosystem governance mechanisms – relational, cognitive, and positional – and the performance of innovation ecosystems. We suggest that the strength of these relationships is contingent upon the degree of novelty of the innovation ecosystem. A network analysis of 72 ecosystems launched by 20 different orchestrators in the software industry supports the positive effects of all three governance mechanisms on ecosystem performance, as well as the moderating role of ecosystem novelty. Results show that relational and positional governance are more important for the performance of highly novel ecosystems, whereas cognitive governance is less important for this type of ecosystem. Our study contributes both to ecosystem and network theory, and we discuss research opportunities at the intersection of these streams.

Managing Different Stakeholders

Session Moderator: **Pushpika Vishwanathan**, *U. of Amsterdam*

STR: **Cheers for Initial Public Offerings? Unpacking Employee Satisfaction Decrease in Newly Public Firms**

Author: **You Wu**, *Chinese U. of Hong Kong*
Author: **Seyedeh Zahra Hejrati**, *Stanford U.*

While going public is a key milestone of success, adding public shareholders may introduce challenges to stakeholder management. In response to a recent call for research on how shareholders impact stakeholders, our study investigates how introducing public shareholders influences employees in newly public firms. We propose that employee satisfaction declines after a company completes an initial public offering (IPO) because employees perceive lower levels of organizational justice. Applying sentiment analysis methods to text data from Glassdoor and a matched difference-in-differences design, we find that an IPO is associated with a decline in employee satisfaction, perceived procedural justice, and perceived interactional justice. Our study contributes to a more comprehensive understanding of transactional shareholders' impact on relational stakeholders by identifying a negative effect of introducing public shareholders on employee satisfaction in newly public firms and examining declines in organizational justice perceptions decrease as potential reasons for employee satisfaction decrease.

STR: **Bringing Managers Back into Stakeholder Theory: The Role of Practical Wisdom and Moral Agency**

Author: **Pushpika Vishwanathan**, *U. of Amsterdam*
Author: **Siri Nordland Boe-Lillegraven**, *Amsterdam Business School, U. of Amsterdam*

Extant literature presents two perspectives on how managers balance competing stakeholder interests. One points to norm-based and organization-specific general approaches, another to managers' own perceptions and motives. We utilize a strategy-as-practice (SAP) lens and rely on mixed-methods to inductively investigate the interplay between organizations' general approaches to stakeholder management and managers' situation-specific balancing behaviors. Based on data from Dutch nonprofit organizations, we flesh out established practices and moral logics associated with organizations and show how managers deviate from them in situations involving competing stakeholder interests. We develop a theoretical model highlighting practical wisdom and moral agency as central for explaining the relation between general approaches to stakeholder management and managers' situation-specific balancing behavior. We contribute to the stakeholder literature by challenging the view of managers as mere conduits of organizational approaches and by revealing new mechanisms of variation and change in stakeholder management practice. Our work also informs SAP scholarship on the micro-macro dynamics pertaining to tackling complex societal challenges. We conclude by identifying opportunities for further cross-fertilization of stakeholder theory and SAP.

STR: **Supplier Collaboration for Firm's Decarbonization Strategy: A Field Experiment in India**

Author: **Sukti Ghosh**, *INSEAD*
Author: **Jasjit Singh**, *INSEAD*

In light of the climate crisis, firms are increasingly committing to decarbonization targets not just within their own operations but also for their overall supply chain. Achieving these targets, however, requires eliciting collaboration of suppliers in the decarbonization effort, yet prior research offers limited empirical evidence related to this issue. We theorize that this problem can be viewed from the lens of joint value creation under exchange uncertainty, one solution of which is providing suppliers with value inducement. To empirically test this, we collaborated with a Fortune 500 firm rolling out such a decarbonization program for their agricultural supply chain in India. The program provides customized support in the form of personalized advisory services intended to help the supplier farmers become more productive and climate resilient, and to hence serve as an inducement for them to adopt the climate-friendly agricultural practices recommended by the firm. We describe findings from our qualitative field interviews as well as the design of an ongoing field experiment examining the effectiveness of the program in ensuring farmer adoption of climate-friendly agricultural practices and their retention in the program. Our study contributes to the broader literature on stakeholder theory by drawing attention to the issue of achieving collaboration across stakeholders in order to make faster progress towards addressing the climate crisis.

STR: **Supporting Platform Complementors From Disadvantaged Communities in Times of Crisis**

Author: **Leandro Nardi**, *HEC Paris*

This phenomenological study investigates the effectiveness of a training initiative aimed at supporting platform complementors (i.e., fintech agents) based in disadvantaged communities. A field experiment involving 293 agents of a Brazilian fintech company that serves poor communities shows that training has an average positive but highly nuanced effect on agents' sales. While gains from training are stronger for agents operating in communities with more limited access to regular banking services, I also find that local economic conditions and the pre-existing size of the local customer base also shape these effects. Accordingly, I show that the intervention reduced the sales of agents with larger existing customer bases who operated in communities subject to stronger Covid-19 restrictions. All the other groups—agents with smaller customer bases or operating in communities where Covid-19 restrictions were weaker or nonexistent—derived positive gains from the training. I then examine a potential mechanism underlying these results—namely, the entry of new agents in communities where at least one incumbent agent participated in the intervention. Lastly, I discuss several theoretical and practical contributions of these findings, including implications for research on strategy in contexts of disenfranchisement, stakeholder theory, and platforms.

Studying the Fashion Industry: Opportunities and Challenges

Host: **Daniel Sands**, *UCL School of Management*
Host: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*
Panelist: **Frederic Clement Godart**, *INSEAD*
Panelist: **Mukti Khaire**, *Cornell SC Johnson College of Business*
Panelist: **Alexander Hoppe**, *Max Planck Institute for the Study of Societies*
Panelist: **Heeyon Kim**, *Cornell U.*
Panelist: **Paola Cillo**, *Bocconi U.*

The use of the fashion industry in management research has provided insights on issues that range from institutional transformation to strategic positioning to the entry of entrepreneurial ventures. The size and scope of this industry makes it both economically and culturally important for academic research. Indeed, the phenomenological richness and pragmatic significance of the fashion industry highlights that there is an abundance of empirical material that can help us to address core research questions from across diverse areas of management. Provided the opportunities for future work in this space, this panel symposium brings together leading scholars who have engaged in this setting to share their perspectives for working on research about the fashion industry and to discuss new ideas that will appeal to scholars who may be interested in this domain. Provided the broad scope of the fashion industry and the diverse expertise of our panelists, this symposium expects to engender a rich intellectual experience for all AOM members, and for those members of the STR, OMT, and ENT divisions, in particular. We also anticipate this to be among the best dressed panel symposiums in academia.

Alliance Formation, Growth, and Stability

Session Moderator: **Mark Tavani**, *Virginia Tech*

STR: **Unraveling the Gordian Knot of Dyadic Alliance Stability**

Author: **Mark Tavani**, *Virginia Tech*
Author: **Richard Hunt**, *Virginia Tech*
Author: **Pankaj Kumar**, *Virginia Tech*

Throughout the strategic alliance literature, successful strategic alliances include a multitude of factors promoting various facets of mutual benefit. There is convergence, however, on the notion that longer-lived, more stable alliances signal success. Thus, duration is consequential as a metric and measure of success. Dyadic alliance stability is conceptualized as the duration of the entity or initial agreement and presumes stability is a desirable aim. This research challenges the assumption that duration is an accurate and effective measure of dyadic alliance stability and success. We contribute to the alliance literature by providing much-needed construct clarity regarding the concept of dyadic alliance stability and a framework for the effects of stability on innovation performance. We conceptualize dyadic alliance stability as the alliance's duration, resilience, and robustness over time. Counterintuitively we posit that high levels of duration and low levels of resilience result in a "stability trap" attenuating performance. We also argue that low duration and high resilience levels result in an "opportunity zone" for break-out results, leading to superior performance levels. This novel concept and framework clarify the concept of dyadic alliance stability, overturning prior assumptions regarding the effects of alliance stability and its role in value creation.

STR: **Alliance Formation with New Partners as a Reaction to Acquisitions by Current Alliance Partners**

Author: **JIAWEN MA**, *Lee Kong Chian School of Business, Singapore Management U.*
Author: **Gokhan Ertug**, *Singapore Management U.*
Author: **Ilya Cuypers**, *Singapore Management U.*
Author: **Cyndi Man Zhang**, *Singapore Management U.*

Firms can access tangible and intangible resources from both acquisitions and alliances. Drawing insights from the literature on the interplay between acquisitions and alliances, we examine how acquisition activities of a firm’s partners influence this firm’s subsequent alliance formation. We suggest that partners’ acquisitions of targets that are in the same industry as the focal firm may reduce these partners’ commitment to the focal firm and trigger opportunistic behaviors because of potential competition. We predict that, in reaction to these, the focal firm’s subsequent alliance formation with new partners will increase. We also theorize how the focal firm’s network status compared to its partners can mitigate its resource dependence on these partners and how the focal firm’s ego network density could alleviate the incidence of its partners’ practices that go against its benefits. Accordingly, we hypothesize that these two factors will weaken the relationship in our main prediction. Our analysis of US listed firms from 2000 to 2020 largely supports our framework. We emphasize the role of third parties (i.e. partners’ acquisition targets) to research on the interplay between acquisitions and alliances, and expand our knowledge of the antecedents of alliance formation.

STR: **How Do Firms React to Their Partners’ Acquisitions?**

Author: **Binh Minh Truong**, *BI Norwegian Business School*
Author: **Linda Rademaker**, *BI Norwegian Business School*
Author: **Randi Lunnan**, *BI Norwegian Business School*

Drawing insights from resource dependence theory, this study looks into power and dependence dynamics and examines how an alliance partner’s acquisition triggers responses from the firm that allies with that partner. An acquisition is a critical event that may not only bring changes to the acquiring partner and its target, but also restructure the partner’s relation with the focal firm. We argue that when the partner’s acquisition causes a shift in power-dependence in the alliance that is less favorable for the firm, the firm may react by developing new alternatives such as allying with or acquiring other organizations in the partner’s industry. We also examine the moderating role of relational embeddedness between the firm and the partner. The empirical analysis shows support for the predicted direct effects and mixed support for the moderating effects.

STR: **“In-Crowds”: Entrance Waves and Performance Implications in Multipartner Alliance Growth**

Author: **Joshua Austin Downs**, *Western Carolina U.*

The growth of multipartner alliances over time, determined by the sequence of new member firm entry, has been shown to affect the performance of the alliance and its partners. However, when sequence of entry is considered absent absolute temporal measures, it implies uniform, homogeneous time intervals between entrance events, which does not reflect reality and ignores possible implications related to varied entrance timing. Through the lens of divisive faultlines in inter-organizational conflict, I introduce the concept of entrance waves as clusters of firms entering a multipartner alliance within an abbreviated, absolute time period. I propose that, when divisive faultlines within intermediate entrance waves are activated by perceived inequities of value distribution related to sequential entry positions, this will have consequences for the collective creation and individual appropriation of value by firms in the alliance.

Executive Experience and Background

Session Moderator: **Seok-Hyun (Stephen) Hwang**, *Hong Kong Baptist U.*

STR: **A Study on Inventor CEO Experience, Governance Mechanisms, and Earnings Management**

Author: **Seok-Hyun (Stephen) Hwang**, *Hong Kong Baptist U.*
Author: **Yungu Kang**, *UNIST*
Author: **Taejin Jung**, *IE Business School*

The present study investigates the relationship between CEO inventor experience and earnings management. By drawing on research on individual motivations, our study first establishes that a CEO's inventor experience is a reflection of his or her intrinsic motivation. We then propose that, given the intrinsic nature of the inventor CEO's motivation orientations, he or she will be less likely to engage in earnings management, which is a commonly used form of impression management. We propose that intrinsically motivated CEOs put less value on external rewards such as getting recognition and obtaining a bonus and, as a result, will be less likely to engage in earnings management. Moreover, we focus on the moderating roles of two prominent controlling governance mechanisms—board independence and institutional ownership. By relying on research on motivational crowding-out and cognitive evaluation theory, we suggest a positive interaction effect on the relationship between CEO inventor experience and earnings management such that the stronger the monitoring mechanisms, the relationship between CEO inventor experience and earnings management will become positive. We test our hypotheses using a panel of US firms between 1996-2017 and find strong support for all our hypotheses. The implications of these findings are discussed.

STR: **How CEOs' Pre-career Exposure to Religion Affects Corporate Tax Avoidance**

Author: **Yu Chen**, *Shanghai Jiao Tong U.*
Author: **Ruchunyi Fu**, *Shanghai U. of Finance and Economics*
Author: **Xiaoping Zhao**, *Shanghai Jiao Tong U.*

Resonating with the burgeoning interest in CEOs' pre-career experience, this study focuses on a CEO's pre-career exposure to religion and extends its strategic implications to corporate tax avoidance. We propose that a CEO's exposure to religion before starting a professional career shapes his/her cognitive aspects of moral decision-making. Because an emphasis on their social obligation is imprinted, CEOs with such experience are less likely to engage in aggressive tax avoidance. This effect is stronger when natural disasters occur and when the local community has fewer social capital resources. An analysis of a sample of U.S. listed firms from 2000 to 2019 provides strong support for our predictions. Our results are robust to various model specifications, including an entropy balancing approach and a difference-in-differences (DID) analysis. Implications for ethical leadership and tax avoidance literature are discussed.

STR: **GRATA DOMUM: Executives' Early-Life Exposure to Clan Culture and Firm Innovation**

Author: **Zhengyu Li**, *The U. of Melbourne*
Author: **Danyang Chen**, *Shanghai U. of Finance and Economics*
Author: **Congshan Li**, *Xiamen U.*

Recent research has shown that the personal experiences of firms' top executives in their early life influence their decision-making—especially risk-taking decisions, such as innovation—when they take over the roles of executives later. Our study extends this burgeoning stream of research by examining how executives' early-life exposures to the clan culture—featured with strong lineage-based kinship networks—affect firm innovation. Drawing upon the imprinting theory and the upper echelons research, we argue that executives who have been exposed to stronger clan culture in their early life tend to emphasize more on reputation and long-termism when making decisions. This carries over to their professional life when they are in top management positions, and it leads to a higher level of firm innovation. Using novel databases of Chinese publicly listed firms' patenting behaviors and the genealogies of clans in China, we find strong support for our hypotheses: Firms managed by executives who had a higher level of exposure to clan culture in their early life exhibit better innovation performance; this imprinting effect is stronger when these executives have higher equity ownership; when the firm possesses higher reputation; and when the firm is family-controlled. We discuss the implications of our study in strategic leadership and innovation research.

STR: **Social Frictions, Strategic Leadership, and International Business Strategy**

Author: **Suyash Garg**, *U. of Texas at Dallas*

Recent research has highlighted that the role of informal institutions in international business has been underexplored. Thus, we examine how CEOs' exposure to an important informal institution, namely ethnic violence, shapes their firms' internationalization strategy in specific geographies. Drawing upon categorical social cognition theory and upper echelons theory, we inquire into how Hindu CEOs' exposure to Hindu-Muslim communal violence informs two components of their firms' internationalization strategy in Muslim-majority countries: (1) likelihood of FDI in Muslim-majority countries, and (2) the choice of FDI mode of operations (partnering v non-partnering) in them. Based on data from three large datasets, our analyses of Indian firms' FDI between 2010-2018, using an instrument variable, reveal that such riot-exposed CEOs are less likely a) to undertake FDI in Muslim-majority countries and b) to choose a partnering-mode in Muslim-majority countries. However, these effects are mitigated when riot-exposed CEOs have greater experience with Muslim directors on other firms' boards. In this way, our research highlights how CEOs' implicit biases regarding specific social groups, stemming from their personal history, inform their perceptions of the geographies in which individuals from these social groups form the preponderant demography.

Knowledge and Entrepreneurship

Session Moderator: **Sandra Baumbach**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

STR: **Watching You-How Financial Setup and Monitoring Impact Exploration and Exploitation in New Ventures**

Author: **Sandra Baumbach**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Organizational ambidexterity is a successful strategy for organizations to survive and succeed in a competitive business environment. While prior work has extensively analyzed benefits and antecedents of ambidexterity for incumbent firms, we lack equivalent understanding of potential drivers for exploration and exploitation in a new venture context. Hence, the purpose of this study is to provide first insights into the emergence of organizational ambidexterity by analyzing new venture-specific antecedents, such as the new venture's financial setup and investor or mentor monitoring. By leveraging a dataset of 190 entrepreneurs, we show that investor or mentor monitoring positively relates to exploration and exploitation. We also confirm the positive, indirect impact of the number of funding rounds on exploration and exploitation mediated through monitoring. However, the corresponding mediation hypothesis for the number of investors, predicting a negative impact, is not supported. Our findings contribute to extant ambidexterity literature by adding new ventures as additional research object and, thereby, extending current antecedent research. We also add to entrepreneurship research by transferring the well-established Stakeholder and Agency Theory into the entrepreneurial context. Practically, we provide valuable insights for new venture leaders on potential consequences of their funding decisions as well as investor or mentor involvement.

STR: **Reconciling Conflicting Evidence on Why Employees from Smaller Firms Become Entrepreneurs**

Author: **Benjamin King**, *Tulane U.*
Author: **Evan Penniman Starr**, *U. of Maryland, College Park*
Author: **Martin Ganco**, *Wisconsin School of Business*

Heterogeneity in entrepreneurial entry has often been examined through the lens of the differences in founders' prior knowledge, especially prior work experience. In the context of this literature, scholars have argued that small firms (relative to large firms) facilitate the acquisition of knowledge relevant for entrepreneurship which, in turn, facilitates transitions to entrepreneurship (i.e., the "small firm effect"). An alternative explanation has emerged, arguing that the small firm effect is an artifact of large firms being better at intrapreneurship. To inform this debate, we utilize unique, nationally representative survey data providing rich details about the emergence of entrepreneurial ideas and their potential implementation inside vs. outside of incumbent firms. Consistent with the traditional explanation of the small firm effect, for the average worker, we find strong evidence that small firms (relative to large firms) are better at providing an environment that facilitates transitions to entrepreneurship. Technical workers, however, are more likely to attempt to implement ideas in larger firms relative to non-technical workers. This finding helps to reconcile contradicting evidence in prior studies. In addition to unpacking the black box of the drivers of the small firm effect, our study has broader implications for the recent discussion on the drivers of entrepreneurial dynamism

STR: **How do New Ventures Scale Up in the Ecosystem of Electric Vehicle Industry in the Emerging Economy?**

Author: **Shengce Ren**, *Tongji U.*
Author: **Luning Shao**, *Tongji U.*
Author: **Jinmin Wang**, *U. of Nottingham*
Author: **Jianxin You**, *Tongji U.*

Abstract: This paper examines how new ventures scale up in the ecosystem of electric vehicle industry in the emerging economy. Based on an in-depth longitudinal case study of electric vehicle charging service provider in China, a scaling process model is developed to explain the dynamics of entrepreneurial new venture growth in the ecosystem of nascent industries. The scaling of new ventures is significantly affected by the entrepreneur's effectual cognition about the evolution of focal nascent industry ecosystem. It is highly important for entrepreneurs to keep sensing the dynamic changes of emerging industry and making continuous business model innovation to grasp the new business opportunities. The study contributes to the new venture growth theory by integrating the effectuation theory and the cognitive approach to business model innovation literature with special focus on the role of effectual cognition of entrepreneurs in the scaling process of new ventures.

STR: **Technology vs Market Knowledge: How can Public Funding Aid Commercialization and Industry Emergence?**

Author: **I-Chen Wang**, *Suffolk U.*
Author: **Lihong Qian**, *Portland State U.*

Public funding plays an important role in promoting technology commercialization and industry emergence, its effectiveness is an important issue for policy making. Existing literature on public funding or industry emergence lacks finer-grained empirical evidences about the effectiveness of public funding in this regard. Our study addresses this research gap and examines the effect of public funding on the commercialization of private innovation by considering compositions of different partners in publicly-funded innovation projects. Empirical results from the Department of Energy's hydrogen and fuel cell commercialization program corroborate our predictions, showing that if a public-funded innovation project has non-profit partners like National Research Labs or Universities, its commercialization likelihood is reduced, but for-profit partners like upstream firms or downstream firms can increase the likelihood of commercialization. Our study offers theoretical contributions to the industry emergence literature and the public funding literature. Empirical evidence from this study further provides policy implications on administering public funding, which is considered to be better used if it enables more private effort in commercialization and cultivates a diverse body of knowledge that consists of business acumen needed for the commercialization process.

The Government as a Stakeholder

Session Moderator: **BIBEK BHATTACHARYA**, *Indian Institute of Management, Bangalore*

STR: **Firm Board Status and Compliance with the Indian CSR Mandate**

Author: **BIBEK BHATTACHARYA**, *Indian Institute of Management, Bangalore*

Faced with the same regulatory mandates, some firms comply while others do not. Prior research offers status heterogeneity as a leading explanation of this variation. The middle-status conformity perspective is the dominant theoretical narrative in this stream of research and predicts a non-monotonic inverted U-shaped status-compliance relationship. Moreover, this perspective as well as traditional status theory posits that higher status bestows more security on firms. However, recently scholars have challenged the universality of these arguments and encouraged further investigation of this relationship in different contexts and situations. Accordingly, in this paper, I theorize and formulate hypotheses about how firms' status in the board interlock network shapes compliance with a mandatory CSR law in India. In contrast to the dominant narrative, I predict a positive monotonic relationship between a firm's status in the board network and its likelihood of compliance with the CSR law. Further, I also posit that this association would be strengthened when there is greater compliance amongst a focal firm's industry peers. I test these hypotheses using a panel dataset of listed Indian firms.

STR: **CEOs and Political Donations: Are They Just Like Regular People?**

Author: **Benjamin Barber Iv**, *IE Business School*
Author: **Daniel Blake**, *IE Business School*

Why do CEOs make political donations? The literature offers two competing explanations: a) CEOs make donations as "investments" in order to gain access to politicians for the benefit of their firms; b) CEOs view donations as "consumption" and make donations to support the candidates whose ideological positions reflect their own. We provide a more nuanced treatment of CEOs' motives with respect to donations that adjudicates between these perspectives. We argue that CEOs value access more than the average donor, and therefore they are more likely to make donations for access. However, the extent to which CEOs value access varies as a function of regulatory intensity, equity share of CEO compensation, and firm performance, causing CEOs to vary from one another in their donations. We test our arguments using a dataset on the donations of CEOs of S&P 1500 firms from 1990 to 2014. We find strong evidence that CEOs are much more likely to donate for access than the average donor, and that CEOs' prioritization of investment over consumption varies systematically.

STR: **Chinese Corporate Leaders' Early-life Exposure to Confucianism and Political Compliance Strategy**

Author: **Linhao Han**, *Wuhan U.*
Author: **Yi Tang**, *U. of Hong Kong*
Author: **Tao Wang**, *Wuhan U.*

Political compliance strategy (PCS) refers to a firm's stance on implementing business activities centered around government policies. While existing research has examined the antecedents of PCS from the perspective of institutional pressures and resource dependence, little is known about how PCS can be affected by corporate leaders' personally held values. Resonating with the recent development of upper echelons theory on corporate executives' values, this study examines how Chinese corporate leaders' personal value shaped by their early-life exposure to strong Confucian cultures may carry a persistent influence on their firms' PCS. Analyzing two samples of Chinese non-state-owned (non-SOE) listed firms for 2013-2020 and 2011-2019 respectively, we find that board chairs with early-life exposure to a strong Confucian culture are more likely to engage in PCS, reflected by voluntary participation in the Belt and Road Initiative (BRI) and active engagement in green innovation. These relationships weaken if a board chair has overseas experiences, when a firm has a higher level of foreign ownership, and when a firm is headquartered in a region with better market development. Implications to upper echelons research and political strategy literatures are discussed.

STR: **When Trump Said Jump: Political Directors and the Recruitment of Foreign Workers**

Author: **Steve Sauerwald**, *U. of Houston*
Author: **Peter Norlander**, *Loyola U. Chicago*

Companies build and secure their competitive advantage by recruiting highly qualified employees. Recruiting foreign workers, often on H-1B visas, may be a promising way to accomplish this goal. However, immigration has become a highly contentious political issue in the United States, making it increasingly difficult to recruit foreign workers. We examine how politicians on the board influence recruitment strategies to attract foreign workers. Empirically, we utilize former President Donald Trump's election and "Buy American, Hire American" rhetoric to estimate the effect of political directors on firms' recruitment strategies. Using the near-universe of job advertisements in the U.S., we create novel firm-level measures of barriers to employment for foreign workers and find that political directors affect a firm's recruitment efforts toward U.S. workers and workers on visas. We then argue that other directors on the board—in particular ethnic minorities and foreign directors—as well as governance structures—such as HR committees and the timing of the shareholder meeting—moderate political influences on firms' recruitment strategies.

Board Influence

Session Moderator: **Koen Van Den Oever**, *Radboud U. Nijmegen*

STR: **Do Board Topics Change as the Board Nears the End of Their Term?**

Author: **Koen Van Den Oever**, *Radboud U. Nijmegen*
Author: **Stephanie Koornneef**, *Radboud U.*

Although boards are an important echelon of the organization, research is increasingly questioning what their roles are. In this paper, we develop a temporal perspective that shows that boards focus on different topics depending on the time until their term ends. We argue that boards will behave more opportunistically as their end term draws near. Specifically, boards will discuss fewer long-term topics, but based on a renomination incentive, will simultaneously discuss more stakeholder-related topics. We test our predictions in the Dutch water management context, where board members' collective end term is predefined, and the nature of opportunistic behavior is complex as board members are elected and nominated by stakeholder groups. Indeed, we find that boards discuss fewer long-term topics and more stakeholder-related topics as their end term becomes imminent. This has important implications for the literature on corporate governance and decision making as we show that opportunistic behavior can materialize in different forms concurrently.

STR: **Towards a Configural Theory of Influence within the Boardroom**

Author: **Michelle Weck**, *Johannes Gutenberg U. Mainz*
Author: **Dennis Veltrop**, *U. of Groningen*
Author: **Jana Oehmichen**, *Johannes Gutenberg U. Mainz*
Author: **Floor Rink**, *U. of Groningen*
Author: **Ryan Adam Krause**, *Texas Christian U.*

Much research has focused on understanding the functioning/ misfunctioning of boards of directors. However, a simple yet relevant question pertaining to who has the most and least to say within the board has remained largely unanswered. We draw on classical group and team research to better understand this phenomenon. Specifically, previous group research has highlighted the importance of the formal role, social dominance, prototypicality, and social and intellectual competence to become influential within groups. We integrate these topics and explore the complex interdependencies in boardrooms. We use fuzzy set qualitative comparative analysis (fsQCA) on a sample of 299 Dutch supervisory directors in 60 boards to elaborate theory on how directors become influential within the board. Specifically, our findings highlight that directors can improve their influence level within the board via their behavioral cues; however, the options for non-prototypical directors are much narrower. Overall, our configurations support our theoretical arguments and provide evidence for the presence of equifinality of influence patterns within the boardroom because of interconnected and hard-to-isolate dynamics at play within the boardroom. As such, our study offers novel theoretical and empirical insights to academics and practitioners alike.

STR: **Is it Me or is it You? CEO-Director Forename Commonality, Implicit Egotism, and CEO Compensation (WITHDRAWN)**

Author: **Sebastian Firk**, *U. of Groningen*
Author: **Hauke Meyer**, *U. of Goettingen*

This study finds that CEOs sharing a forename with a non-executive director receive significantly higher compensation. We explain this striking bias with implicit egotism – people's tendency to transfer their positive self-image onto others with whom they share an incidental similarity. While implicit egotism is well grounded in the psychology literature, its role in major professional decisions is controversial. We contribute to this debate by analyzing CEO-firm fixed effects regressions in a sample of more than 38.000 firm-year observations of S&P 1500 firms between 1995 and 2019. The results are robust to the inclusion of demographic similarities (e.g., ethnicity, age, gender) as well as the exogenous likelihood that a CEO and director share their forename. Additional tests reveal that the relationship is more pronounced for directors with a higher structural influence in the compensation-setting process. Interestingly, we do not find evidence that a higher degree of oversight within the board, through analysts or institutional investors weakens this relationship. Overall, the results suggest that boards and the wider governance environment struggle to contain the biases of individual directors, especially when these directors are in influential positions.

STR: **Norms of Deference and the Impact of Military Background on Monitoring Firm Regulatory Misconduct**

Author: **Christina Walker Robichaud**, *U. of Montana*
Author: **Juan Carlos Morales**, *West Texas A&M U.*

Understanding the barriers to board oversight has become increasingly important as corporate scandals fill the news. The norm of deference is an under-examined attribute, which is considered under a demography-based perspective of governance to influence effective monitoring. However, we think the relationship is more nuanced than prior research has acknowledged and suggest that the target of a director's deference is relevant—when the deference is directed towards the CEO rather than the principal, a barrier for monitoring might exist. Further, group factors that perpetuate (or mitigate) dysfunction and information asymmetry can amplify (reduce) these norms of deference. Interestingly, this norm is a key aspect of military training, and it is common for a US board seat to be filled with a director possessing a military background ("military board"). Using a 14-year panel of US manufacturing firms comparing firms with and without military boards, we find evidence for higher levels of regulatory misconduct when a firm has a military board or a military board together with a larger board size or a higher level of board independence.

Board Gender Dynamics

Session Moderator: **Y.Anthony Kim**, *Western Kentucky U.*

STR: **The Female Board Representation and Group Decision-Making Under High Uncertainty**

Author: **Y.Anthony Kim**, *Western Kentucky U.*
Author: **Eugene See**, *Coastal Carolina U.*

Prior studies have found that threat factors could lead female directors to become more actively engaged in group decisions. However, there is also the possibility that threat factors, such as uncertainty and complexity, can streamline the group's decision-making process. Unfortunately, to date, this possibility has not been theoretically or empirically examined. In the present paper, we examine the impact of female board representation on corporate strategic decision-making—specifically, greenfield investment, which is commonly perceived to be particularly high in uncertainty and complexity. Building upon the threat-rigidity theory, we empirically examine the association between female board representation and the firm's propensity toward greenfield investment. We also predict a moderating effect from outside directorships. Using a sample of the top 500 firms in the U.S., we find a positive association between a firm's female board representation and greenfield investment. Additionally, we find that such a relationship is strengthened when there are more outside directors on the board. In addition to employing an econometric approach, we also used an experimental approach to investigate impact of gender diversity on a board's decision-making process regarding various internationalization strategies.

STR: **The Added Value of Women in the Board: Evidence From Two-sided Matching Under Gender Quota Policies**

Author: **Elena Lizunova**, *Brigham Young U.*
Author: **Denisa Mindruta**, *HEC Paris*

To remedy the gender gap problem makeup of corporate upper echelons, a number of countries have resorted to legislative measures to improve gender representation in corporate boards. While these policies are usually heralded as solutions to labor market biases, they have also been criticized as being hard to implement due to firms' difficulties to attract scarce talent. Critics point to possible unintended consequences of these regulations, such as a small number of women holding multiple appointments and further closing down opportunities for other candidates, or firms stumbling on "unqualified" candidates. We join the debate on the impact of gender policies by focusing on the structural features of the director labor market. We build on the idea that appointment of women directors is a manifestation of a matching process where firms have preferences over candidates and candidates have preferences over which firms to join. Therefore, the observed appointments are the outcome of mutual preferences, ability to attract qualified candidates, and opportunities to cherry-pick among options. This matching process is endogenous and cannot be captured by studies that are correlational in nature or those that report average tendencies and thus obscure important variation across firms and candidates. Empirically, we focus on the French context and the passing of Copé - Zimmerman Law in 2011, which has instituted a two steps quota policy of gender representation in the boards. We ask three related questions: 1) what factors (preferences) drive the matching of firms and candidates, before and after the quota policy? 2) do the matching factors (preferences) change or are they stable? 3) at the time of hiring, who, among women, is perceived as bringing higher "added value" for the governance of the firm? Preliminary results indicate that preferences have largely remained stable, with notable differences concerning public firms and better governed firms, who post-reform are better matched with qualified women candidates (both those with and without prior board experience). More strikingly, homophily in the elite status of existing board members and the women who join the boards has increased in importance after the reform. Our analysis indicates that the perceived "added value" of qualified but less experienced women (i.e. those with less or no prior board experience) increases dramatically after the reform, while the perceived "added value" of more experienced women and those with elite status remains stable. This result indicates that qualified women who were not entrenched in the existing network of board directors had most to gain due to the reform.

STR: **Board Gender Dynamics and CEO Compensation**

Author: **SU CHEN**, *Rutgers U., School of Management and Labor Relations*
Author: **Jie Feng**, *Rutgers U.*

We theorize and examine the conditions when increased representation of female interlocking directors may change the pay-setting processes within boards of directors and the subsequent CEO pay raises. Integrating research on board gender diversity and minority influence, we particularly focus on corporate governance, firm diversity strength, and changes of male interlocking directors to explore how these factors moderate the relationship between female interlocking director increase and CEO pay raises. Using 3,363 firm-year observations from 440 S&P firms in 9 years (2010-2018), we find support for our hypotheses that in firms of stronger corporate governance and diversity strength and in boards with substantial changes of male interlocking directors, increased representation of female interlocking directors significantly lowers CEO pay raises. Taken together, by investigating the impact of enhanced women representation in the "inner circle", the corporate elite, we extend the important, ongoing conversations of how gender diversity changes workplace at the upper echelon level and how firms curb the rise of pay inequity and regulate excessive CEO pay raises. We encourage future research to adequately investigate the dynamics of gender diversity and simultaneously consider the minority influence exerted by female directors at both the board and the firm level.

STR: **"Sisters Before Misters?" How Board Gender Diversity Affects CEO Compensation (WITHDRAWN)**

Author: **Kristen Faile**, *Belmont U.*

In this study we explore differences in chief executive officer compensation as influenced by the number of females on the Board of Directors at the firm and the interaction of CEO personality and the number of female directors at the firm. We predict that the number of female directors will affect the compensation of female CEOs in either a positive or negative direction based on competing sociological theories and that the effects of these theories will extend not only to female CEOs but also to CEOs who display stereotypically female personality traits, specifically neuroticism and agreeableness. We find that a larger sample size of female CEO's is most likely needed to examine the effects of increased quantity of female directors on female CEO compensation. We also find that neuroticism in CEO's does not seem to interact with the quantity of female directors to affect CEO compensation, however, we find strong evidence that agreeable CEO's are compensated more based on the quantity of female directors present on their boards. Lastly, we find in a supplementary analysis that the trait of openness to experience in CEO's also interacts with the number of female directors on a CEO's board to increase CEO compensation significantly. Our study aims to contribute to the literature on gender differences in executive compensation, gender dynamics in the upper echelons, CEO personality, and outcomes of Board member characteristics, specifically gender on CEO compensation.

STR: **Role of Women Directors in Strengthening Board Committees: Cross National Evidence**

Author: **Anish Purkayastha**, *U. of Sydney Business School*
Author: **Chinmay Pattnaik**, *U. Of Sydney*

Studies on the role of women directors focus on gender representation in corporate boards and its impact on strategic and performance outcomes. Focusing on how the female directors strengthen board governance quality, this study examines the role of women director's voice in improving the monitoring role of the board. We find that the tenure of women directors which provides them voice in the board has a positive impact on the managerial capital of the monitoring committees (i.e., audit, nomination and compensation) as opposed to other advisory committees. This relationship is contingent upon the presence of Women CEO in the firm and the status of women in the society such that women CEO positively moderates this relationship and societal gender equality weakens it. We test our hypotheses based on a multi-country sample of emerging markets which are underrepresented in current literature spanning eleven years (2010-2020) over half of the world population.

Panelist: **Ying-Ying Hsieh**, *Imperial College Business School*
Panelist: **Alex Michael Murray**, *U. of Oregon*
Panelist: **Joana Pereira**, *Leeds U. Business School*
Panelist: **Jean-philippe Vergne**, *UCL School of Management*

This panel symposium aims to explore the opportunities for understanding Web3 decentralization in blockchain-based organizations that arise from management theories' competing arguments. Blockchain technology, based on distributed ledger technology, is a disruptive technology that provides a decentralized database of immutable transactions maintained across peer-to-peer networks. Theoretical lenses like transaction cost economics, agency theory, mechanism design theory, institutional theory, and organization design are frequently used to examine blockchain-based organizational governance. However, these theories present competing arguments and inconsistencies regarding the effectiveness of blockchain-based organizational governance. The symposium will provide a platform for discussing the need for more theoretical clarity and for examining the impact of decentralized blockchain-based governance models on organizational processes and performance. The symposium will bring together established blockchain scholars and members of the technology and innovation management, strategic management, and organization and management theory interest groups to discuss new insights into classic managerial issues.

Capability Management

Session Moderator: **Minh Hoang Vo**, *INSEAD*

STR: **Emergence of Knowledge Capability from External Mobility of Human Capital: A Resourcing Perspective**

Author: **Minh Hoang Vo**, *INSEAD*
Author: **Daniel Z. Mack**, *Singapore Management U.*
Author: **Quy Nguyen Huy**, *INSEAD*

For decades, research on strategic human capital emphasizes the importance of attracting, motivating, and retaining human capital for developing the firm's knowledge-based capabilities. However, the literature largely focuses on human capital strategies that rely on firm's reputation and resource endowment and under theorizes the strategy that can be used by firms in low-resource contexts. Based on a qualitative, longitudinal study of a machine-repair shop evolving into a prominent firm in defense R&D, we induct theory that explains how low-resource firms develop and evolve knowledge-based capability by using its scarce resource to upskill its employees to gain human-capital mobility to reputable firms in the industry. Our data shows how managerial enactment of an interfirm-career cognition motivates changes to employees' boundary conceptions (knowledge boundary, time boundary, and valuation boundary). These changes underpin organizational capability in conducting knowledge work in complex, specialized, and distant domains and thereby enable firm-level evolution from low-cost imitator of existing products to creative designer of novel products. Using the perspective of resourcing theory, our theory nuances the resource-based view underlying the strategic human capital literature's emphasis on isolating human capital within the firm. Our theory also addresses the strategic human capital literature's call for a multi-level, dynamic empirical examination of how firms develop capability from human capital as well as advances the emerging conversation of why firms should invest in general human capital.

STR: **Unconventional Times: Competition, Capability, and Innovation in the Oil and Gas Industry**

Author: **Weikun YANG**, *Ross School of Business, U. of Michigan*
Author: **Yue Maggie Zhou**, *U. of Michigan*
Author: **Sendil Ethiraj**, *London Business School*

We develop a formal model to analyze innovation as a firm choice affected by market competition and firms' technological capabilities. Our model accounts for a short-term selection effect, that an increase in market competition will increase the threshold of firm capability for staying in the industry and slow competition growth for surviving firms, thereby reducing firms' survival-based incentive for innovation. With lower survival pressure, firms focus more on short-term profit than long-term survival and decrease innovation efforts as competition intensifies. In addition, high capability firms, because they are less vulnerable to survival threats but more sensitive to price levels for total profits, their innovation efforts will be more negatively affected by competition than those of low capability firms. We test these predictions by examining firm investments in unconventional wells in the United States between 2010 and 2018.

STR: **Timeliness and Accuracy in Retrieving Firm Competencies: An Indexing Capability Perspective**

Author: **Mengyue Su**, *Peking U.*
Author: **Hao Ma**, *National School of Development at Peking U.*

A firm constantly orchestrates and redeploys its competencies to maintain a dynamic fit with its competitive environment. Timely and accurate retrieval of its competencies is essential for subsequent orchestration and redeployment. This article advances a theory of a firm's indexing capability consisting of architecting capability, stocking capability, and retrieving capability and examines its impacts on the retrieval of firm competencies. The architecting capability helps provide a comprehensive architectural system based on which a firm's competencies are to be stocked and retrieved. The stocking capability helps the firm track the content and location of the competencies during their acquisition and accumulation. The retrieving capability allows the firm to access and assess the needed competencies for their orchestration and deployment. The impact of indexing capability will be moderated by the attributes of firm competencies and the attributes of the contexts in which the competencies are called for.

STR: **Why do Some Firms Struggle to Reactivate Idled Resources?**

Author: **Toby Li**, *Texas A&M U.*
Author: **Jan-Michael Ross**, *Imperial College London*

Why do some firms struggle to reactivate idled resources, while others do not? While prior theoretical work has pointed out that the cost of restarting operations rises with the duration of a temporary suspension, we build on the resource-based perspective to explore firm-specific sources of such time-dependent cost. Specifically, we posit that the duration of resource idling increases the intangible cost of restarting operations due to capability erosion. We argue that the negative effect of a firm's idling duration on its capabilities is alleviated for firms with more homogenous assets relative to the focal asset being idled (i.e., resource fungibility), with greater non-idleness of similar resources, and with greater previous idling-reactivation experience. We empirically test and find support for our arguments using data of the full population of oil-gas wells drilled in Texas between 2010 and 2022. Our findings contribute to the strategic management literature by linking operational decisions to reactivate idled resources to firm-specific sources of performance heterogeneity and by shedding light on sources of capability erosion when adapting to changing environments.

Employees have been resigning at higher rates in recent years, particularly since the start of the pandemic. This resignation is true at all wage levels within organizations, from low wage to more senior, mid-career employees with higher wages. This resignation is purported to be due to existing dissatisfaction with the workplace and, consequently, increased expectations around work, including but not limited to wages as well as non-wage benefits and workplace culture (e.g., Sull, Sull, and Zweig, 2022). Furthermore, firms face stakeholder and public pressure to become more inclusive across ethnic and racial groups, and better represent society at large. Many firms in the United States have struggled to both recruit and retain employees from underrepresented groups, highlighting managers' need for best practices to retain this talent. Employee resignations are not only disruptive for employees, but also for the firms that employ them. Such turnover costs are often a significant component of human resource expenses that ultimately affect firm financial performance. Further, turnover can be an indicator of ineffective or even toxic workplace culture, which affects not only job tenure, but the ability of firms to be selective in hiring and the ultimate productivity of those they do hire. What are some of the factors that lead to higher turnover or reduce it? How do firms build a more effective workplace culture that attracts and retains talented employees? This symposium examines these questions from both a large-scale empirical and qualitative research perspective. Three presentations, including two quantitative studies examining wages, workplace culture and turnover, and a qualitative analysis of Walmart's changes to wages and working conditions, bring forth timely and important research to understand how firms can respond to workplace challenges. Specific areas addressed in this symposium include: - how firms can increase diversity among employees, develop more equitable pay practices and create inclusive workplace cultures; - the impact of pay practices on employee turnover and firm performance; and - the impact of increased wages and benefits on workplace culture and performance within a specific firm. A full discussion is planned, one that encompasses academic commentary as well as translation to how this appears in the workplace with an ultimate objective to inform business practices.

Panelist: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*

This symposium aims to shed light on the challenges of managing the pursuit of multiple organizational goals. In addition to traditional financial and innovation goals, organizations face growing pressure to meet environmental, social, and corporate governance (ESG) goals. The pressure comes not only from shareholders but by an increasingly diverse set of stakeholders, including employees, board members, rating agencies, media, and CEOs themselves who are demanded and emboldened to express their political and social values. This symposium aspires to go beyond recognizing the presence of multiple organizational goals and make advances on the following two questions: (1) The varied and nuanced nature of conflicts between different goals (2) The organizational tools employed by managers to facilitate resolving such conflicts.

When Stakeholder Engagement and Governance is Front and Center

Organizer: **Sinziana Dorobantu**, *NYU Stern School of Business*
Organizer: **Sergio Giovanetti Lazzarini**, *Ivey Business School*
Session Chair: **Sergio Giovanetti Lazzarini**, *Ivey Business School*
Presenter: **Jan-Willem Stoelhorst**, *U. of Amsterdam*
Presenter: **Sergio Giovanetti Lazzarini**, *Ivey Business School*
Presenter: **Christoph Grimpe**, *Copenhagen Business School*
Presenter: **Leandro S. Pongeluppe**, *The Wharton School, U. of Pennsylvania*

Strategy research is increasingly moving beyond shareholder-centric theoretical models to emphasize the participation of a wide range of stakeholders in the process of value creation. The acknowledgement of the importance of various stakeholders in the process of value creation calls for new thinking on (i) the role of different stakeholders in a firm's fundamental function of creation and distribution of economic value and, implicitly, in the firm's strategic behavior, and (ii) the role of stakeholder engagement and governance processes that underpin the identification of stakeholder interests and their enfranchisement. In this symposium, we propose to engage in con-versations that cut across work in strategic management, stakeholder theory, corporate govern-ance, and social issues in management to advance further research on these important topics. The symposium will consist of four paper presentations and a question-and-answer session with the audience. The ensuing discussion is envisioned to help advance both conceptual and empirical work on stakeholder engagement and governance. We hope to also highlight promising areas for further research that leverages both novel approaches to theory and explores new empirical set-tings.

Academic Research is Dead. The Robots Won

Organizer: **David Maslach**, *Florida State U.*
Organizer: **ChatGPT Robot**, *Internet*
Panelist: **Anil R. Doshi**, *UCL School of Management*
Panelist: **Marie Louise Mors**, *Copenhagen Business School*
Panelist: **Phanish Puranam**, *INSEAD*
Panelist: **Robert Channing Seamans**, *NYU Stern*

This symposium will examine the potential impacts of chatbot technology on the academic research process for organizational scholars. It will draw on the expertise of scholars from a variety of disciplines, including computer science, information technology, organizational behavior, and strategy to provide a comprehensive understanding of the opportunities and challenges associated with chatbot technology for organizational research. The symposium will focus on the implications for research, teaching, and academic productivity, as well as the ethical and privacy issues that arise in the use of chatbot technology. Case studies and strategies for addressing these concerns will also be discussed.

Insights on the Determinants of Scientific Knowledge Production

Organizer: **Gabriel Cavalli**, *U. of Toronto, Rotman School of Management*
Organizer: **Anita McGahan**, *U. of Toronto*
Presenter: **Michael Blomfield**, *U. of Massachusetts, Amherst*
Presenter: **Caroline Fry**, *Massachusetts Institute of Technology*
Presenter: **Matteo Tranchero**, *Haas School of Business, UC Berkeley*
Presenter: **Keyvan Vakili**, *London Business School*
Discussant: **Soomi Kim**, *MIT Sloan School of Management*

Scholars of Strategic Management, Technology and Innovation Management, and Research Methods have recently sought to integrate theories that investigate the determinants of scientific knowledge production. In this Symposium, we propose to advance research on these determinants through the presentation of scholarly papers by four authors, each of whom will present recent findings developed with co-authors on this topic. The papers will be discussed formally by an emerging scholar in this domain. The purpose of the symposium is to support scholarly dialogue among participants, with the discussant, and in a question-and-answer session with attendees. We envision that this dialogue will advance frontier approaches to understanding how scientific knowledge production can be fostered institutionally, organizationally, and methodologically.

Stimulating Innovation on Neglected Diseases: Institutional Development and Knowledge Production

Participant: **Tommasso Valletti**, *Imperial College Business School*
Presenter: **Angela Soomin Ryu**, *Columbia Business School*

In recent years, the unique opportunities and challenges the firms face in the digital context and how the existing strategy concerns could be applied and expanded to accommodate such challenges have started to receive closer attention from scholars. More broadly, digitization calls for a more nuanced understanding of its implications on competitive and nonmarket strategies, but the conversation between the two sides has remained less integrated. This symposium attempts to bridge the dialogue between the market and nonmarket strategies, focusing on the digitally-mediated and enhanced interactions within firms (e.g., algorithmic decision-making, platform discoverability) and the political strategies of firms to navigate the heightened societal/regulatory pressures arising from such interactions.

Learning from Automobiles and Mobility Services: Modularity, Ecosystem Structure & Value Migration

Organizer: **Michael G Jacobides**, *London Business School*
Organizer: **John Paul MacDuffie**, *U. of Pennsylvania*
Participant: **Marc Alochet**, *CRG Ecole Polytechnique*
Participant: **Marvin B Lieberman**, *UCLA Anderson School of Management*
Participant: **Johann Peter Murmann**, *U. of St. Gallen*
Participant: **C. Jennifer Tae**, *Temple U.*
Discussant: **Carliss Baldwin**, *Harvard Business School*
Discussant: **Aakash Arora**, *Boston Consulting Group*

From the automotive sector – long fertile ground for management research – we have the opportunity to observe and to learn how the gradual transition from internal combustion engine vehicles (ICEV) to battery electric vehicles (BEV) and associated changes in related technologies plus the expansion to mobility services is shaping the sector's evolution. Recent evidence challenges early predictions that BEVs would be much more modular than ICEVs, whether in product, process, or industry architecture. If the physical vehicle remains somewhat persistently integral, what does that mean when vehicle-as-platform strategies bring modular and digital innovations from the tech sector – along with the active interest and investment of tech giants in the mobility sector? This morphing of a product grounded in physical realities into a platform for all-digital services provides us with lessons that extend well beyond automotive. Scholars whose recent research raises these questions will debate what the early tea leaves show and project the future trajectory of mobility ecosystems along with implications for relevant theory.

People and Innovation Track: The Role of Leaders in Innovation

Session Moderator: **Jung-Ching Lin**, *Southern Taiwan U. of Science and Technology*

TIM: **How Should Family Firms Bring the Next Generation into the Company?**

Author: **Dung Thi Phuong Nguyen**, *Southern Taiwan U. of Science and Technology*
Author: **Cheng-Yu Lee**, *Southern Taiwan U. of Science and Technology*
Author: **Jung-Ching Lin**, *Southern Taiwan U. of Science and Technology*

Many business owners want their offspring to continue the family business after they have retired. However, some family firms (FFs) hire non-family CEOs, expecting that they introduce superior managerial skills and tacit knowledge accumulated through their outside work experience, which may not be available in the limited pool of family members. This study incorporates upper echelons theory and imprinting theory to propose the boomerang succession planning in which future heirs are encouraged to boomerang back FFs only after obtaining professional experience outside FFs. We theorize and find that family CEOs' prior work experience at outside firms has a positive effect on technological exploration. Moreover, family successors spending more time working at their firms are less favorable to technological exploration opportunities. As a by-product, this succession planning sheds light on how FFs should promote future heirs' readiness to bring them into firms to enhance the attractiveness of continuation by offspring.

TIM: **The Influence of CEO and Board Information Technology Expertise on Large Firms' Risk of Cyberattack**

Author: **Chi Hon Li**, *Tilburg U.*
Author: **Ryan Adam Krause**, *Texas Christian U.*
Author: **Michael C. Withers**, *Texas A&M U.*

Cybersecurity is an increasing concern for executives and boards of directors. Cyberattacks represent breaches of information security systems leading to the exposure, damage, or loss of vital organizational data. The risk of such attacks is especially high for large corporations, as they are attractive targets for hackers. In this study, we examine the role of CEOs and boards in the context of information technology (IT) governance. In particular, we integrate research on managerial expertise and board IT governance to theoretically expand the roles of CEOs and boards as cybersecurity safeguards. We focus on firm size as a risk factor associated with the likelihood of experiencing a cyberattack and then examine the moderating roles of CEOs with IT functional experience and interlock ties to firms from technology-based industries. Testing our hypotheses on a sample of Fortune 500 firms from 2010 to 2019, we find that large firms are more likely to experience cyberattacks, but this likelihood is reduced when the CEO has IT experience and the board is interlocked with firms from IT-based industries.

TIM: **Parental Creativity Imprinting on CEO and Corporate Renewal Strategies**

Author: **Puya Kahhali**, *U. of California, Riverside - Anderson Graduate School of Management*
Author: **Alexandru Roman**, *CSULA*
Author: **Haibo Liu**, *U. of California, Riverside*

Firms renew their capabilities internally by investing in research and development and externally by acquiring other firms. We theorize that a firm's corporate renewal strategies can be shaped by its CEO's early-life experiences. Specifically, CEOs whose parents engaged in highly creative occupations will bear a creativity imprint via parent-child interactions during their formative years that lasts into adulthood. CEOs with creativity imprints are more likely to engage in corporate renewal compared to other CEOs. We also expect this main effect to strengthen following better firm performance and to weaken with CEO age. Interestingly, the differences are mainly driven by a CEO's pursuit of familiar instead of radical renewal strategies. We find support within a proprietary dataset of Fortune 100 firms between 2000 and 2016.

TIM: **The Effects of CEO-TMT Shared Cognition on Radical Technological Innovation**

Author: **David Lohmar**, *Westfälische Wilhelms-U. Münster*
Author: **Christopher Albert Sabel**, *Rotterdam School of Management, Erasmus U.*
Author: **Stephan Nüesch**, *Westfälische Wilhelms-U. Münster*

Incumbent firms' approaches towards radical innovation are important for their sustained competitive advantage. Recently, studies focused on the cognition of chief executive officers (CEOs) and top management team (TMT) members to explain incumbents' innovativeness. However, less attention has been paid to the shared cognition at the CEO-TMT interface, even though, the entire top management is essential in implementing radical strategic initiatives. Relying on a social-interactionism view of the CEO-TMT interface, we study the effects of CEO-TMT shared cognition on incumbents' attainment of radical technological innovation. We test our hypothesis on 411 S&P500 firms between 2006 and 2017. We hypothesize and find that CEO-TMT shared cognition positively affects incumbents' pursuit of radical innovation, up to a certain point, at which shared cognition negatively affects incumbents' pursuit of radical innovation. We posit that the positive effect persists due to increasing CEO-TMT cohesion and concomitant confidence in pursuing high-risk business endeavors such as radical innovation. After a certain point, these positive effects become outweighed by the negative effect of groupthink, which limits divergent thinking and creativity, which are paramount for radical innovation. Our study develops the understanding of radical innovation within incumbent firms and contributes to the literature on shared leadership at the CEO-TMT interface.

People and Innovation Track: Building an Innovative Workforce

Session Moderator: **Ning Xu**, *Zhejiang U., China*

TIM: **Retrospection, Revival, Rebirth: Conceptualizing Human Resource Management in Gig Work**

Author: **Vaishnavi Gautam**, *Indian Institute of Management, Kashipur*
Author: **Abhyudaya Anand Mishra**, *Doctoral student at Indian Institute of Management Kashipur*
Author: **Mridul Maheshwari**, *Faculty Indian Institute of Management Kashipur*

The purpose of this research is to systematically synthesize the extant literature available at the interface of gig work and HRM and thereby advance knowledge while evaluating the relevance of HRM in this new but important work context. The study undertakes a systematic review of literature (SLR) to integrate the scattered literature while considering papers published at any time. To appraise contemporary studies, source data and synthesize findings for conceptualizing HRM in gig work. A total of 42 studies were considered, based on the inclusion/exclusion criteria. The research enabled the identification and classification of prior research at the Gig-HRM interface. Three major themes (i.e. Emanant, Refurbished, and Obsolete relevance) emerge when the relevance of HRM is evaluated in gig work. The need for a rethink in the current understanding of HRM in the context of gig work is felt. To the best of author's knowledge, this study is the first to systematize and review the relevance of HRM in gig work. In an effort to examine the relevance of HRM in gig work, it uncovers the underlying issues and emerging trends along with suggestions for future research

---

TIM: **Personnel Turnover and Organizational Adaptation: The Role of Member Connectivity and Influence**

Author: **Ning Xu**, *Zhejiang U., China*
Author: **Amit Jain**, *National U. of Singapore*

Mobility research has typically associated turnover with negative effects on organization performance, such as a decrease in manufacturing productivity. It suggests that turnover leads to forgetting and the loss of human capital, while hiring leads to learning and the acquisition of it. We extend this literature drawing from mutual learning and adaptation theory and a consideration to social capital. Connectivity (ties to other people) and influence (ability to affect other people's behavior) are manifestations of an individual's social capital within an organization. We establish the beneficial effects of influence and connectivity on organizational learning and find that they have decreasing returns. We investigate the effect of connectivity and influence of member's turning over on organization performance using an extension of the multi-armed bandit model in mutual learning may take place through socialization. We find that while turnover may disrupt organizational performance in the short-term, it may also result in adaptation and better long-term performance. This effect of turnover on learning and performance in the longer term depends on the connectivity and influence of an individual turning over, and her or his replacement through hiring.

TIM: **The Effect of Job Security on Inventor Behavior** 💻

Author: **David Wehrheim**, *IESE Business School*
Author: **Eduardo Melero**, *U. Carlos III de Madrid*
Author: **Neus Palomeras**, *U. Carlos III de Madrid*

This paper investigates the effect of job security on inventor behavior. We hypothesize that higher job security of employee inventors leads them to exploit more intensively firm-specific technologies and thus to produce less novel innovations. We use employer-employee data derived from patent records to address this research question. In particular, we analyze the effects of the progressive implementation of Wrongful Discharge Laws, which introduced limitations to the employers' ability to fire employees, in U.S. states from the 1970s to the 1990s. The results of the Differences-in-Differences analysis support our predictions.

Innovation and Entrepreneurship Track: Startup Growth & Learning

Session Moderator: **Matthias Troebinger**, *ESSEC Business School*

TIM: **Harnessing the Crowd: How Ventures Learn to "Bounce Back" from Failure**

Author: **Matthias Troebinger**, *ESSEC Business School*
Author: **Sen Chai**, *McGill U. - Desautels Faculty of Management*

We examine how ventures interpret and integrate crowd feedback to "bounce back" from failure. Using archival data from 23 cases of entrepreneurial reentry, we take advantage of the crowd feedback the ventures received during and after their first failed attempts and observe how they receive and react to this feedback and subsequently adapt for and during reentry. In our study, the ventures were pitched in the same entrepreneurial space with similar project quality and the same prior experience, but only some of them succeeded in their second attempt while others failed again. Our analysis revealed three salient stages, finding that "bouncing back" requires anticipating, bridging, and stabilizing in a fluid bi-directional exchange with the crowd. We show how failure is not a discrete event but a process that can be anticipated - "bouncing back" is already nurtured before the dichotomous failure event. We also illustrate how - contingent on managing the process throughout the three stages - granular crowd feedback can be a source of learning for ventures persisting on their journey. By providing a processual understanding of how ventures manage crowd feedback, we contribute to the literature on learning from failure and crowdfunding, which tended towards static explanations.

TIM: **Swimming with Sharks: Collaborating with Corporates from a Start-up's Perspective**

Author: **Wolfgang Hora**, *U. of Liechtenstein*

Due to the constantly changing market conditions and increased competitive pressure, a growing number of firms are entering inter-organizational partnerships. In this regard, it has been observed that particularly established, large firms, i.e. corporates, engage in collaboration with young, innovative firms, i.e. start-ups, whereby these relationships often take place within the same industry, i.e. among competitors. Although this special relationship can be beneficial for both parties since the respective counterpart possesses something that the other lacks, there are major risks – particularly for start-ups – existing which mainly occur due to the imbalance in power and size. Nevertheless, previous studies have examined this issue primarily through the lens of corporate venturing, i.e. the corporate's view. Thus, this study explores critical success factors from a start-up's perspective, whereas primary data of 608 start-ups from four Central European countries build the basis to test our hypotheses. Results show that a trusting environment, measures for conflict management, and the absorptive capacity of start-ups have a significant impact. Besides the theoretical contribution to the coopetition literature, this paper also provides numerous practical implications to guide start-ups when partnering with corporates.

TIM: **Story Fracture: The Evolution and Disintegration of Innovation Narratives in Science-based Ventures**

Author: **Peter Kalum Schou**, *BI Norwegian Business School*

Science-based ventures are crucial vehicles that bring new technologies from the lab and to the mainstream market. During this journey, innovation narratives play a crucial role in coordinating innovation. However, little is known about how innovation narratives and coordination evolve during this journey. To improve knowledge on this matter, I conducted a 24-month study of a science-based venture crossing over to a commercial market. I find that during this transition, innovation narratives shift from being shaped by progressive storytelling, where the benefits of becoming commercial and hiring non-academics is highlighted, to being shaped by retrogressive storytelling, where incumbents and newcomers use their respective pasts to develop divergent narratives, and finally to appearing as disintegrated storytelling that hinder innovation coordination. Building on these findings, I constructed a process model of how innovation narratives evolve and disintegrate as science-based ventures scale. The paper contributes to knowledge on the nature of innovation narratives and how they influence innovation processes during venture scaling.

Innovation and Competitive Strategy Track: The Role IPRs in Firms' Strategy

Session Moderator: **Chen Zhang**, *Dalian U. of Technology*

TIM: **Procrastination or Incomplete Data? An Analysis of USPTO Examiner Search Activity (WITHDRAWN)**

Author: **Charles DeGrazia**, *EMLV*
Author: **Nicholas Pairolero**, *USPTO*
Author: **Alexander Giczy**, *U.S. Patent and Trademark Office*

Frakes and Wasserman (2020) finds evidence that United States Patent and Trademark Office (USPTO) patent examiners disproportionately receive credit for examination activities at the end of production periods and interprets this behavior as systemic examiner procrastination. Using newly assembled micro data on the timing of USPTO examiner activities, our results show examiner work effort more closely resembles a uniform distribution, indicating consistent workflow and not procrastination. These data better track the precise timing of examiner work activities than the data used in Frakes and Wasserman (2020), explaining the differences in our results.

TIM: **Patent Reassignments, R&D Collaborations and Firms' Innovation: A Relational Pluralism View**

Author: **Chen Zhang**, *Dalian U. of Technology*
Author: **Yutao Sun**, *Dalian U. of Technology*

Based on the relational pluralism view, this study aims to examine and explain the impacts of patent reassignment (buying and selling patent), and the interplay between patent reassignment and R&D collaboration on firms' technological innovation. Employing a panel dataset consisting of 1707 firms in the autonomous vehicles industry from 2008 to 2017, this study empirically tests the research hypotheses. The results indicate that, first, buying patents can strengthen the focal firm's technological innovation, while selling patents can induce lower technological innovation though it is not statistically significant. Second, buying and selling patent simultaneously, namely that firm has the dual identity deriving from patent reassignment, can improve the firm's subsequent technological innovation performance. Third, when a firm simultaneously conducts patent reassignment and R&D collaboration, the positive effects of buying patent on firm technological innovation will be strengthened, while the negative effects of selling patent on firm technological innovation will be weakened. Finally, when a firm simultaneously conducts patent reassignment and R&D collaboration, the positive effects of the dual identity on firm technological innovation will be weakened. The study sheds light on how a firm can achieve superior innovation by managing patent reassignment and R&D collaboration.

TIM: **Terms and Conditions: An Exploration of IP Contract Patterns in the German Biotechnology Industry**

Author: **Steffen Grebe**, *TUM School of Management, Technical U. of Munich*
Author: **Svenja Jarchow**, *TUM School of Management, Technische U. München*

Policy-makers emphasize the commercialization of scientific findings generated in public research institutions. Among various technology transfer mechanisms, the exploitation of intellectual property (IP) through spin-off creation is particularly important in research- intensive industries, such as biotechnology. The IP contract between the research institution and the spin-off stipulates the transfer terms and conditions. Besides prior literature on designing optimal contracts, recent findings indicate that the choice of payment types is further influenced by the risks and rewards perceived by the negotiating partners. Whereas these findings relate variations in IP contract design to resource-based differences across licensees, we examine the research institution's perspective. Our exploratory study encompasses survey and interview data with spin-offs and technology transfer experts. Survey data indicates that a variety of IP contract design patterns formalize technology transfer. Besides licensing, we observe a transfer of IP ownership. The interviews further indicate variations regarding equity compensation among the research institutions. We conclude that the research institution's objectives and characteristics, as well as perceived investor preferences for IP ownership, influence their risk and reward assessment. We contribute to the literature on payment schemes and our findings further indicate that the institutions' risk and reward assessment justifies consideration when designing technology transfer policies.

Open Innovation Track: Exploring Open Source Innovation

Session Moderator: **Nianchen Han**, *Nanyang Business School, NTU Singapore*

TIM: **Value Appropriation and Knowledge Development in Open Source Innovations: The Role of OSS License**

Author: **Nianchen Han**, *Nanyang Business School, NTU Singapore*
Author: **Shaoqin Tang**, *U. of Colorado, Boulder*

While previous studies focus on how firms may appropriate value from open source software (OSS) through complementary resources, the role of OSS licenses in value appropriation remains underexplored given the difficulty in specifying the legal enforceability of these licenses. Addressing this gap, this study exploits an exogenous shock that ascertains the legal specification of a type of open source license to examine how enhanced formal protection for OSS license may affect the knowledge development decisions made by OSS participants. Utilizing the litigation over Ghostscript in 2017 as an exogenous shock to GPL licenses' legal status as contract and GNU GPL licensed projects as the treatment group, this paper explores how participants of GPL licensed projects may change their knowledge development decisions. We find that in response to the strengthened formal protection, both internal and external knowledge development increase in GPL projects relative to knowledge development made to other projects.

TIM: **Government IT Procurement Policy & Firm Behavior: Evidence from a French Open Source Software Policy**

Author: **Frank Nagle**, *Harvard Business School*

Open source software (OSS) is critical to the modern economy, especially in cutting-edge fields like artificial intelligence and big data analytics where nations actively battle for technological superiority. Although firms are increasingly willing to use OSS, traditional resource ownership arguments often make them hesitant to contribute to the development of OSS. This is despite evidence that contributing benefits firms more than simply free-riding. Therefore, governments may want to encourage firms to contribute to OSS to promote national competitiveness and economic growth. Directly sponsoring such contributions can be costly, but altering procurement regulations may present a cost-effective mechanism. In 2012, a new French regulation required government agencies to favor OSS over proprietary software. While an increase in OSS usage would be expected, a difference-in-differences analysis using the rest of the EU/OECD countries as controls shows that this policy change also led to an increase of over 1.1 million OSS contributions per year from France and thousands of new French OSS contributors. Qualitative and quantitative evidence indicates that the increased contributions are due to a change in firm behavior rather than an increase in general awareness of OSS. Furthermore, additional spillovers related to IT startups, IT labor, and software patents led to positive economic outcomes for France. Underscoring the importance of intangible IT assets, this research quantifies the influence of government procurement on firm innovation activities. Furthermore, it offers new insights into how firms can collaborate on shared (core) technologies while competing in other areas (edges) that build on the shared core.

TIM: **Contributions of Commercial Developers in Open-Source Software – A Study of the Linux Kernel**

Author: **Fabian Fleischmann**, *U. of Passau*
Author: **Sven Apel**, *Saarland U.*
Author: **Carolin Haeussler**, *U. of Passau*
Author: **Patrick Figge**, *U. of Passau*
Author: **Thomas Bock**, *Saarland U.*

Since commercial companies are increasingly using and contributing to open-source software projects, understanding the role of commercial companies in these projects becomes critical. Despite some research showing increasing participation of commercial companies in open source software projects, the contribution behavior of commercial developers and the impact of this behavior on open source communities is still largely unknown. By studying the Linux Kernel, we document that commercial participation outweighs volunteer participation substantially and that commercial and volunteer development efforts are intertwined due to co-development of most Linux Kernel functionalities by both groups. We identify nine patterns of interaction between commercial and volunteer developers that show how volunteer developers respond to increases and decreases in commercial participation. We find that the occurrence of the different interaction patterns is highly dependent on the general development activity during the pattern occurrence, as well as on the activity of popular companies. In a detailed analysis of one pattern, we show that the inflow of highly experienced commercial developers can lead to a crowding out of highly experienced volunteer developers within the Linux Kernel.

TIM: **Open Source Hardware: Commercialisation Strategies**

Author: **Thierry Rayna**, *École Polytechnique / CNRS*
Author: **Ludmila Striukova**, *SKEMA Business School*

The ability to commercialise products based on distributed innovation is one of the critical challenges of large-scale open innovation. While this issue has been largely investigated in relation to open-source software (OSS), the literature on strategies of commercialisation of open-source hardware (OSHW) is comparatively scarce, despite OSHW commercialisation being more complex. Based on a multi-method exploratory study, combining interviews and a netnography within the RepRap project, this research shows that in the case of OSHW firms may strategically leverage a 'grey area' between closeness and openness to take advantage of OSWH community innovations.

Participant: **Salome Opoku**, *Arizona State U.*

Academic entrepreneurship is an important part of the U.S. entrepreneurship and innovation ecosystem, with the NSF I-Corps program playing a pivotal role. How best to evaluate the effectiveness of the I- Corps program is critical to its future success, since NSF is looking to expand the program. There is a need for alternative evaluation and assessment data that could be used to better understand the effects of regional programs, as well as how those programs might be improved. The overarching goal of this symposium is to discuss several important topics in entrepreneurship research including feedback, experimentation, pivoting, and knowledge spillovers, and to show how such research can be used to enhance assessment of the effectiveness of the I-Corps program.

New Directions in the Evaluation of NSF I-Corps: The Multilevel Effects of Knowledge Spillovers

Innovation and Competitive Strategy Track: Creation & Disruption of Radical Innovations

Session Moderator: **Frank Ilg**, *FIF@Zeppelin U.*

TIM: **How and Why do Family Firms Successfully Deal with Disruptive Innovation?**

Author: **Frank Ilg**, *FIF@Zeppelin U.*

Disruptive innovations are a challenge for every organization. For Family firms it might be particularly difficult to successfully handle disruptive innovation projects, for example due to tensions between tradition and innovation or between ownership and management roles. Many studies in the context of innovation in family firms find that it is not easy to constantly find a balance between tradition and innovation. Nevertheless, those studies remain silent about the interplay between ownership and management roles in this balancing act. Collecting data from an extreme case in a unique setup, a single case study of a German family company that recently has successfully implemented a highly disruptive technology, the study explores the entire process of creating this innovation from the first idea to the realization in the marketplace. Heterogeneity derived from different roles is not always hindering but contrary to the expectations seems to be beneficial if not necessary in the decision-making process for the successful implementation of disruptive innovations in family firms. The study shows that the interaction and the different perspectives of family owners and family-external management is necessary for a successful proceeding in different phases of the implementation process of a disruptive innovation and provides insights into why and how disruptive innovations can be successfully implemented in family firms.

TIM: **Breakthrough Invention through Knowledge Recombination: The Impact of Bridging Structural Holes**

Author: **Hongjuan Zhang**, *Tianjin U.*
Author: **Qiqi Xie**, *Nankai U.*
Author: **Liang Wang**, *U. of San Francisco*
Author: **Runhui Lin**, *Nankai U.*

This study examines how bridging structural holes in a knowledge network affects a researcher's performance in breakthrough invention through affecting the researcher's capability of deploying two types of knowledge recombination (i.e., formula creation and element introduction). Data from Huawei's 3063 researchers (2004-2013) shows that: (1) researchers bridging structural holes in the knowledge network are more likely to generate breakthrough inventions; (2) formula creation mediates the relationship between structural hole and breakthrough invention; (3) element introduction only indirectly contributes to breakthrough invention by encouraging formula creation. The study from a knowledge network perspective provides an answer to the question why some researchers are more capable of generating technological breakthroughs, and fine-tunes the concept of knowledge recombination.

TIM: **How Digital Capabilities and Knowledge Inertia Jointly Affect Radical and Incremental Innovation**

Author: **Ao Zan**, *Changsha U. of Science & Technology*
Author: **Yanhong Yao**, *Hunan U.*

The purpose of this study is to investigate how digital capabilities and knowledge inertia jointly affect both radical and incremental innovation. The empirical study finds that, while there is a U-shaped effect of digital technological capability (DTC) on radical innovation performance (RIP) and incremental innovation performance (IIP), digital cognitive capability (DCC) can both enhance RIP and IIP based on data from 304 Chinese firms obtained by the scenario separation method and the inter-temporal method. Additionally, learning inertia amplifies the positive effect of DCC on RIP while weakening the U-shaped link between DTC and RIP. In the meantime, the positive effect of DCC on IIP is strengthened by experience inertia. The research on digital capabilities and their application to innovation is expanded by the findings, which also give firms a theoretical foundation and methodological direction for overcoming the digital dilemma.

Innovation and Competitive Strategy Track: Catch-up & Latecomers: Innovation or Imitation?

Session Moderator: **Qingwei Li**, *Nanyang Technological U.*

TIM: **Going Aboard or Bringing In? The Knowledge-based View on Innovation Catch-up in Emerging Markets**

Author: **Qingwei Li**, *Nanyang Technological U.*
Author: **Seung Ho Park**, *Nanyang Technological U.*

Emerging market firms (EMFs) are catching up with advanced market firms (AMFs) in innovations, but how they can overcome the knowledge deficit in innovation catch-up still needs to be explored. We study EMFs' two strategies that help them acquire lacking knowledge, i.e., establishing foreign R&D subsidiaries and bringing in TMTs with foreign experience, and discuss their effects on two dimensions of innovation catch-up, i.e., innovation output and authenticity. We hypothesize that these strategies help EMFs improve innovation catch-up and overall performance when both strategies are implemented simultaneously. Our analysis compares the innovation performance quantified by patent and publication data of 80 Chinese-listed firms with the US firms in pharmaceutical and biotechnological sectors from 2015 to 2021 to track the innovation catch-up. The results confirm the proposed hypotheses, contributing to innovation catch-up and international business studies by illustrating the role of foreign R&D subsidiaries and TMTs with foreign experience in EMFs' R&D activities.

TIM: **Economic Sanction and Technological Catch-up**

Author: **Jang Woo Kim**, *National Taiwan U.*

Economic sanction is an attempt of the sanctioning country to reorient the target country's political and diplomatic behaviors by suppressing cross-border trades and investments related to the target; and, technological catch-up often is a derivative of international trade and cross-border investments between latecomers and forerunners. However, the literature had not addressed the impacts of economic sanction on technological catch-up, particularly when the sanction was imposed by technological forerunners like the United States against technological latecomers. To estimate the effect with lesser endogeneity, this paper instrumented the difference-in-differences with coarsened exact matching. The findings show that, for the treated, the number of patents applied is increased and the quality of patents is decreased, while search for new knowledge becomes more explorative.

TIM: **The Follower's Curse?: The Paradoxical Impact of Creative Imitation on Innovation of Latecomer Firms**

Author: **Byungjun Min**, *Seoul National U.*
Author: **Yu Jin Kim**, *Sogang U.*
Author: **Jaeyong Song**, *Seoul National U.*

Drawing on the technological learning model of latecomer firm (LCFs) and the literature on LCFs' catch-up, this paper examines how accumulated internal R&D investment, foreign technology in-licensing experience, and creative imitation experience independently and interactively affect innovation by LCFs. We showed that LCFs' accumulated internal R&D investment and creative imitation experience have a positive impact on their innovation, respectively. However, we found that LCFs' creative imitation experience weakens the positive relationship between accumulated internal R&D investment and innovation, implying the paradoxical effect of LCFs' creative imitation strategy on their innovation. Using the GEE (Generalized Estimating Equation) population averaged regression model and the unique panel dataset on drugs developed by Korean pharmaceutical firms between 1999 and 2019, we find evidence that generally supports our hypotheses.

TIM: **Knowledge-Sharing Processes for Reverse Innovation**

Author: **Linus Roth**, *Loughborough U., School of Business and Economics*
Author: **Simone Corsi**, *Loughborough U., School of Business and Economics*
Author: **Mathew Hughes**, *U. of Leicester*

R&D is increasingly globalised and recent research attributes a growing global innovative power to R&D activities in developing economies. Innovations from developing markets that find application in advanced markets are defined as Reverse Innovations (RIs) as they flow against the direction assumed in traditional innovation theory. In the meantime, researchers have awarded important benefits to the pursuit of RI. Namely, from the commercialisation of RIs in advanced markets and the innovative contributions that developing economy-based R&D activities can hold for MNEs. Despite the increasing theoretical and practical relevance of RI, academic literature has failed to provide systematic approaches that MNEs can adopt to effectively manage the inversion of the flow of innovative knowledge. This paper fills that gap by adopting a knowledge-based view of the firm. Specifically, we investigate how MNEs manage their knowledge-sharing across developing and advanced economies to strategically enable explorative and exploitative RI. We do so through an abductive research approach based on interview data collected from thirty R&D executives of MNEs that operate in both developing and advanced economies. In correspondence to each phase of the RI process (von Zedtwitz et al., 2015), our study contributes to the RI literature by identifying the processes that are crucial for the systematic execution of RI. It also extends our understanding of the KBV to the context of cross-border knowledge flows from emerging to advanced economies.

Managing the Metaverse: The Implications of Augmented and Virtual Reality for Management

Organizer: **Abhishek Nagaraj**, *UC Berkeley & NBER*
Panelist: **Phanish Puranam**, *INSEAD*
Organizer: **Fang He**, *U. of St. Gallen*
Panelist: **Tianyu He**, *National U. of Singapore*
Panelist: **Christopher L. Tucci**, *Imperial College Business School*
Panelist: **Prithwiraj Choudhury**, *Harvard U.*

The metaverse is a proposed concept that involves digitally-enhanced immersive worlds facilitated by the use of virtual and augmented reality headsets. While the metaverse and supporting technologies are predicted to have a meaningful impact, important questions remain about their viability, technological feasibility, and ethical, legal, and moral implications. For management scholars, these trends foreshadow conceptual and methodological opportunities. What are the business implications of a successful metaverse? What new research questions do they pose? And what are its implications for the research process itself? This panel symposium aims to promote conversations across different sub-fields of the Academy to identify emerging opportunities and challenges in this area. We bring together a group of leading scholars to exchange their insights on topics such as (i) the economics of the metaverse, (ii) organizations in the metaverse, (iii) VR and group creativity, and (iv) VR-mediated remote work. We hope to set a theoretical foundation to understand changes wrought by newly emerging immersive technologies so that business and government leaders can best steer its development and end users and managers can best harness its capabilities. The symposium consists of two parts: first, five leading scholars (Abhishek Nagaraj, Vivianna Fang He, Raj Choudhury, Tianyu He, and Phanish Puranam) will share their insights and then, Christopher Tucci with lead a panel with the panelists with audience questions.

Revitalizing Work: Taking the Mindful Path Toward Greater Collective Fulfillment

Coordinator: **Joan F. Marques**, *Woodbury U.*
Panelist: **Ian Mitroff**, *U. of California, Berkeley*
Panelist: **Tim Ewest**, *Houston Baptist U.*
Panelist: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*
Panelist: **Sandra A. Waddock**, *Boston College*

Today's work environments are far more complex than they were a few decades ago. There are several factors that have contributed to this trend, some of which are foundationally constructive, such as increased diversity in the workplace, rapid change, massive innovation, and globally dispersed teams. At the same time, these developments require increased mindfulness. This symposium aims to underscore the importance of mindfulness practices amongst stakeholders in a work setting. Mindfulness is a universal human ability and does not require any particular religious or cultural belief system. Mindfulness has the ability to ignite positive changes within the practitioner through increased self-transcendence (Kumar et. al., 2021). This means, that mindfulness is beneficial to its practitioners in multiple settings. Gupta and Singh (2019) underscore a strong connection between workplace mindfulness, life satisfaction and individual performance, and subsequently encourage those making decisions in work environments to cultivate a tradition of mindfulness practices to enhance general employee and organizational wellness. Utilizing a variety of proposed strategies, the panelists in this symposium will combine their common advocacy for revitalizing work environments toward greater collective fulfillment. More specifically, the panel of seasoned scholars will present reflections on Buddhist psychology, systems thinking, prosocial leadership, quantum science, mindfulness and action-taking capacity.

Although the topic of social networks has received substantial attention from researchers in the field of management, most work on networks at the individual level of analysis has focused on examining specific characteristics of employee networks (e.g., network structure, network centrality, etc.), often from a static perspective. In contrast, relatively little work has directly focused on the behaviors employees engage in to build and manage their social networks. As a result, there is still much to be learned about when and why employees enact networking behavior. The papers in this symposium aim to address this imbalance by directly examining the antecedents and outcomes of professional networking behavior. While the research designs and theoretical lenses of the papers in this symposium vary, the papers are united in their shared focus on various aspects of networking behavior. Two papers focus directly on factors that impact the extent to which employees engage in network building, one takes a temporal approach by examining the factors that influence the speed by which network relationships are formed, and one paper examines how daily fluctuations in networking behavior influence performance outcomes. The end result is a collection of papers that provide a comprehensive look at a complex and multifaceted phenomenon that has begun to attract an increasing amount of research attention among management scholars.

Technological Change Track: Navigating the Technology Adoption Journey

Session Moderator: **Fariborz Damanpour**, *TIM, OMT*

TIM: **Network Effects by Choice: Evidence from the Board Games Industry**

Author: **Joe N. Ploog**, *UCL School of Management*
Author: **Joost Rietveld**, *UCL School of Management*

It is a long-lasting assumption that network effects are predetermined by market features. However, firms can choose to design for network effects, for example, by implementing social features into their products. Social features enable consumers to create value from social interactions, making consumers a valuable resource outside the boundaries of the firm. On the one hand, social interactions can create a self-perpetuating network effect that causes products to diffuse widely. On the other hand, products that do not succeed in attaining adequate adoption numbers early on in their life cycle will fail to generate network effects and will find themselves locked out of the market. Consequently, designing for network effects raises the stakes, and firms must strategize to maximize their chances for widespread diffusion. When is it beneficial for firms to design for network effects? To answer this question, we develop a demand-side theory on how consumers' adoption decision differs across products with vs. products without network value. We test our predictions on a sample of more than 19,000 products in the board games industry. We contribute by illustrating how successful product, launch, and competitive strategies for firms trying to induce network effects differ from those that do not.

TIM: **Sources of Discontinuance of Managerial Innovations in Service Organizations**

Author: **Fariborz Damanpour**, *TIM, OMT*
Author: **Catherine Magelssen**, *London Business School*
Author: **Richard Mark Walker**, *City U. of Hong Kong*
Author: **Wenna Chen**, *Sun Yat-Sen U.*
Author: **Binzizi DONG**, *City univercity of Hongkong*

We extend the innovation adoption process of initiation, adoption decision, and implementation to the post-implementation decisions of discontinuance, theorizing that discontinuance can occur through replacement (substitution with a new practice) and retraction (return to the original practice). We investigate the role of rational and institutional factors in the decision to discontinue managerial innovations. Our theory suggests that from a rational perspective, environmental factors will influence organizations' decisions to discontinue innovations while from an institutional perspective will reduce the likelihood of discontinuance. Moreover, we argue that organizations learn from adopting innovation, and this learning alters the effects of rational factors on discontinuance over time. For the empirical analyses, we constructed an eight-panel dataset (1982-2017) consisting of 2,228 public service organizations and tracked their managerial innovation over time. The findings indicate that the supplier market, innovation costs, and lack of social approval for an innovation significantly influence the decision to discontinue an innovation. The results also provide evidence that the influence of rational factors on discontinuance declines over time. We contribute to the literature by developing a theory of discontinuance after the innovation is fully implemented and put into use and exploring the modes of discontinuance of replacement and retraction.

TIM: **Drivers and Frictions in Accelerating the Adoption of Digital Healthcare Services**

Author: **Asta Pundziene**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Rima Sermontyte-Baniule**, *Kaunas U. of Technology, Lithuania*
Author: **Jurate Macijauskiene**, *Proffesor*
Author: **Isabel Narbón-Perpiñá**, *U. Autònoma de Barcelona*

Objective: The study aims to identify and compare drivers and frictions in three healthcare ecosystems to adopt and scale digital healthcare services. Methods: An explorative multiple-case study with an embedded unit of analysis was conducted following Yin's (1989) methodology. In doing so, we have performed 63 interviews of 30-90 min each with managers, medical doctors, patients, R&D staff, and start-up representatives. Besides, we have collected and analyzed secondary data, such as LinkedIn profiles, webpages, and press releases, to triangulate interview data and ensure internal and external validity. We have deployed MAXQDA software for data coding and analysis. Results: Based on the case study analysis, we have classified drivers and frictions into 1) individual level; 2) organizational level; 3) technological level; and 4) policy level based on the four identified groups of healthcare ecosystem stakeholders. Further, we have analyzed collaborative interactions between the four identified groups of stakeholders and propose unique healthcare business ecosystem drivers: Patient empowerment, Advanced functionality, and Value-based healthcare; and business ecosystem frictions: Feedback, Capabilities, and Embeddedness. The results spotlight the need for a tailor-made approach to each type of ecosystem stakeholder and country healthcare ecosystem as well as co-creation efforts between them to mitigate those frictions. Conclusions: The findings can be used to advance policy legislation and healthcare providers' strategy in adopting and scaling digital healthcare services while heading towards value-based healthcare.

TIM: **The Effects of Technology Adoption on Firms, Supply Chains, and Rivals**

Author: **Kristina Steffenson McElheran**, *U. of Toronto*
Author: **Jianqiu Bai**, *northeastern*
Author: **Wang Jin**, *MIT Sloan School of Management*
Author: **Ryan Williams**, *U. of Arizona*

We study the effects of technological change and adoption timing on firms' liquidity management practices and subsequent product market outcomes. We first posit that investment in Enterprise Resource Planning (ERP) software improves trade credit and inventory efficiencies between supply chain partners. We identify exogenous variation in the timing of a firm's incentives to implement ERP by using a firm's ex-ante exposure to the Year 2000 bug (Y2K). Our results show that a firm's average accounts receivable collection period and inventory turnover improve following ERP implementation in the supply chain. Interestingly, this is due to adoption by either the focal firm or its key customer. ERP adoption also increases a firm's subsequent market share, but only for non-early adopters. This pattern suggests that early adopters of transformational technologies bear higher implementation costs that spill over to the advantage of both trading partners and competitors. Documenting these mechanisms yields insight into the boundary conditions of first-mover advantage, particularly in the early years of a significant technological advance.

Embracing Complexity and Systems to Bridge the Corporate-Society Divide

Moderator: **Wendy Chapple**, *WU Vienna U. of Economics and Business*
Organizer: **Christof Miska**, *WU Vienna U. of Economics and Business*
Participant: **Michael L. Barnett**, *Rutgers U.*
Participant: **Thomas J. Roulet**, *U. of Cambridge*
Participant: **Sylvia Grewatsch**, *Brock U.*
Participant: **Mary Uhl-Bien**, *Texas Christian U.*

The purpose of this symposium is to generate a discussion across business sub-disciplinary fields on how to embrace complexity and systems approaches in management research. This involves understanding the impacts of business on societal and environmental systems, but also how businesses are actors, leaders and decision-makers within complex systems. Whilst there is a strong rationale for WHY this kind of research is needed, the HOW question is still relatively underdeveloped. The panel consists of leading scholars, from a range of sub-disciplines, who are addressing the HOW question. The panel discussion will explore emerging theoretical, methodological, and empirical approaches to understanding the interaction between business and system-level outcomes, and the challenges of doing so. By creating a space for discussion between sub-disciplinary boundaries, we hope to develop new research directions on how complexity theory and systems- oriented approaches can enhance our understanding of business within societal systems.

Scholar-Stakeholder Collaborative HRM Research – Taking Stock and Moving Forward

Panelist: **Marco Guerci**, *U. degli Studi di Milano*
Panelist: **Dimitrios Spyridonidis**, *Warwick Business School*
Panelist: **Anastasia Kulichyova**, *Manchester Metropolitan U.*
Panelist: **Aravind Chandrasekaran**, *Ohio State U.*
Panelist: **Gavin M. Schwarz**, *UNSW Sydney*

Management research is more and more required to develop rigorous and actionable knowledge, relevant to today's social and environmental global challenges. Engaging in collaborative knowledge creation processes - through which academics embed themselves in contexts of application, develop transdisciplinary collaborations, and involve stakeholders throughout the research process – has been considered for years a possible way to reach that objective, and it becomes even more important today for exploring the so called 'messes' or 'wicked problems'. Even if HR research is potentially well equipped for providing actionable knowledge on global social and environmental challenges, several influential commentaries highlight that currently HR scholars tend to engage in more traditional knowledge creation processes, in which research is mostly performed and 'consumed' by academics, and is mostly driven by disciplinary and theoretical concerns rather than practical ones. Consistent with the conference theme, our panel symposium has the objective to collectively reflect on what has been done until now for developing relevant HR research via researchers-stakeholders collaborations (i.e., the 'taking stock'), and what could be future initiatives (i.e., the 'moving forward') for improving collaborative HR (relevant) research. The symposium involves a group of panellists in a formal, moderated, interactive discussion. The panellists are of two types: (i) authors of two empirical collaborative HR papers, included in a recent special issue of Human Resource Management Journal on collaborative research in the HR field; (ii) journal editors interested in collaborative research. The symposium has been intentionally designed in a multi- disciplinary way, so that voices from the HR research community are together with voices from other management research communities facing the same rigor/relevance challenge (i.e., Organizational Change, Operations Management). Overall, we hope our symposium will serve as a catalyst for increasing the relevance of HR research via collaboration with relevant stakeholders.

CAR: **Multi-Level Paradoxes of Professional Artists**

Author: **Deirdre McQuillan**, *Technological U. Dublin*
Author: **Elizabeth Keating**, *U. of Texas at Austin*

The aim of this paper is to explore the multi-level interrelated paradoxes in the working lives of professional artists that influences the variability and dynamism of their careers. The focus is on Ordinary Artists, bound by the common thread that they are neither rich nor famous, yet this is where most artists exist. Findings are presented according to five sets of interrelated paradoxes involving the conventional life and the artist life; the daily life and daily art; work and art work; growing art income; and connecting. Contributions are made in this paper to organisational paradox theory and the career management literature.

CAR: **A Voluntary Reinvention of One's Work: The Case of French Anesthesiologists Using Hypnosis**

Author: **Nishani Bourmault**, *NEOMA Business School*

Individuals deeply socialized into professional cultures tend to strongly resist any attempts to break with their professions' core cultural tenets. Apart when facing external pressures (such as new technology or regulation) and typically turning to peers for guidance in such involuntary reinventions, it is unclear how some professionals may voluntarily break with such deeply ingrained views. Our study of French anesthesiologists who practice hypnosis aims to better understand this little explored phenomenon. Adopting hypnosis, a practice considered "subjective" and even "magical," went against one of anesthesiologists' core tenets: only using techniques validated by evidence-based medicine. Drawing on interviews and observations, we analyze how anesthesiologists using hypnosis reinvented their work. We detail how turning inward to oneself (focusing on one's own direct experiences of clients, here patients) and turning outward to clients (relying on relations with clients) played critical roles in this process. In doing so, these anesthesiologists embarked on a voluntary internal transformation where they profoundly reassessed their work, onboarded adjacent professions in their own reinvention, and countered peer isolation. Overall, we show that a pathway to such a reinvention entails both turning inward and outward (rather than to professional peers), thus diverging significantly from past understandings of professionals' transformations.

CAR: **From Disoriented to Focused: Career Decidedness Profiles From a Grounded Theory Study**

Author: **Livia Kuga**, *FGV - EAESP*
Author: **Miguel Caldas**, *U. of Texas at Tyler*

Even when career indecision is a common thread among working professionals, the concept of career decidedness has been a disputed one among career scholars. Drawing from a life-designing-informed (Savickas & Savickas, 2019) revisit of Holland's (1997) theory, this study seeks to understand how and why individuals vary in how decided or undecided they are facing similar emerging life-designing transformational events. Through a grounded theory approach, 2 time-lagged interviews were conducted with each of 24 working professionals. Two primary categories emerged from the data, career decidedness (the level of certainty about a career decision orientation) and vocational identity (i.e., career interest stability), which taken as dimensions (varying from low to high) generated 4 career decidedness base profile for the individuals in the sample: Focused, Adaptable, Insecure, and Disoriented. Moreover, a third adjacent dimension also emerged – locus of control (the degree of agency one believes to have over one's life): thereby, 2 subtypes for each of these 4 base profiles, internal and external, accruing a total of 8 profiles in a 3-axis theoretical scheme. Our results expand our knowledge on career decidedness through a qualitative approach and offer avenues for future research.

CAR: **Finding the Beauty in Your Career Missteps: Exploring how Individuals Deal with Career Missteps**

Author: **Claire Schulze Schleithoff**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Evgenia Lysova**, *Vrije U. Amsterdam*
Author: **Svetlana Khapova**, *Vrije U. Amsterdam*
Author: **Konstantin Korotov**, *ESMT Berlin*

IIn light of the multitude of decisions and actions throughout one's career path, there is a high possibility that some of them do not turn out the way we expect. Consequently, we need a more sophisticated understanding of how individuals deal with their career missteps, which are career-related decisions and actions that do not lead to the expected results for the individual and are thus perceived as not optimal. To date, the topic of career missteps is still nascent and knowledge about individuals dealing with their career missteps remains to be limited. Drawing on qualitative data collected from a sample of N=72 participants we found that individuals engage in career repair to fix their career missteps and eventually experience career recovery or career growth. Therewith, we introduce career repair as a new term in the career literature. Our findings show that when people engage in career repair, they view their career missteps with gratefulness and rationalization later as they provide them with valuable learning opportunities. We further saw that career repair inhibits career regret. Our research provides important theoretical and practical implications since we extended the limited knowledge about career missteps and career regret development.

Successful Aging and Retirement

Session Moderator: **Guodong Cui**, *Shandong U.*

CAR: **How and Why Age-Inclusive HR Practices Boost Successful Aging at Work: A Dual-path Mediation Model**

Author: **Guodong Cui**, *Shandong U.*
Author: **Dorien Kooij**, *Tilburg U.*

With an increasing number of older workers in the workplace, it is critical for organizations to help older workers age successfully. However, current research on successful aging at work primarily emphasizes the active role of individuals, and little is known about how organizational HR practices contribute to the success of older workers. Drawing on the process model of successful aging at work proposed by Kooij et al. (2020), we propose that age-inclusive HR practices positively contribute to successful aging at work by promoting older workers' demands-abilities fit and relatedness needs-supplies fit. Furthermore, given that the efficiency of age-inclusive HR practices may be contingent on individual differences in work orientations, we further extend this theoretical model by hypothesizing intrinsic goals as a moderator. A multi-sourced and multi-wave survey was conducted and a matching sample of 261 older workers (aged 45–60) and their supervisors was used to test the hypotheses. The results showed that age-inclusive HR practices had a positive indirect relationship with successful aging at work through increased relatedness needs satisfaction. Moreover, the indirect effect of age-inclusive HR practices on successful aging at work through relatedness needs-supplies fit was stronger for those with higher intrinsic work goals. The theoretical and practical implications of these results are also discussed.

CAR: **Crafting Successful Aging at Work: Employees' Agency in Regulating Their Work Uncertainty**

Author: **Stanimira Koleva Taneva**, *U. of Birmingham*
Author: **Yisheng Peng**, *George Washington U.*

This research emphasizes the proactive role of employees in managing their experiences of successful aging at work. Following a lifespan developmental framework, we propose a new model in which employees, who proactively engage in cognitive job crafting and work uncertainty regulation, are more effective in altering their occupational future time perspective (perceptions of the remaining time at work). This, in turn, enhances their experiences of successful aging in the workplace (i.e., the likelihood to sustain longer, healthier, and more productive working lives). We test the conceptual model in two consecutive studies with workers from the United States of America (Study 1) and China (Study 2). The results replicate across the two studies, confirming the indirect positive effect of cognitive job crafting on successful aging at work through occupational future time perspective. In addition, in Study 2, we find that the effect of cognitive crafting on occupational future time perspective is stronger for employees experiencing higher levels of work certainty than employees experiencing lower levels of work certainty. Finally, work predictability indirectly moderates the relationship between cognitive crafting and OFTP via work certainty. These findings offer important theoretical insights into the fields of work and aging, job design, and uncertainty regulation and provide the evidence base for building capacity, improving managerial practice, and organizational policymaking on active aging at work.

CAR: **Career Adaptivity, Adaptability and Retirement Intentions as Adapting Results**

Author: **Khaled LAHLOUH**, *U. Internationale de Rabat*
Author: **Delphine Lacaze**, *Aix-Marseille Graduate School of Management – IAE, France*
Author: **Aicha Oumessaoud**, *ICN Business School, CEREFIGE, U. de Lorraine, Nancy, France*

Economic conditions as well as older employees' desires and possibilities have induced dramatic changes in ending careers, bridge employment emerging as an alternative to full retirement. As more needs to be known about the psychological antecedents of retirement decisions, this research proposes a time-lag quantitative study of how career adaptivity i.e., proactive personality (T1) and Occupational Future Time Perspective (T2), and career adaptability (T2) i.e., attitudinal resources for change, influence sequentially late career decisions (T3) i.e., bridge employment and full retirement. A total of 235 employees of a French insurance company participated in the 3-wave longitudinal investigation. The results indicate that career adaptivity variables are positively related to career bridge employment and negatively to full retirement intention both independently and sequentially, proactive personality influencing positively Occupational Future Time Perspective. Proactive personality positively influences bridge employment though the sequential mediation of Occupational Future Time Perspective and career adaptability. The research provides an empirical validation of the career construction theory.

CAR: **Staying Employable When Being Close(r) to Retirement: The Role of Job Autonomy**

Author: **Lena Schneider**, *ETH Zürich*
Author: **Julian Pfrombeck**, *Columbia Business School*
Author: **Gudela Grote**, *ETH Zürich*

Due to longer life expectancies and prolonging careers with higher retirement ages in many countries, staying employable becomes increasingly important. However, prior research shows a drastic decline of employees' perceived chances of finding an employment in the labor market with increasing age. The present study investigates how job autonomy can promote older employees' perceived employability. Drawing on the theory of selection, optimization, and compensation, we hypothesize that job autonomy is positively related to older employees' perceived employability as it allows for the orchestrated use of personal and external resources to set priorities promoting the achievement of desired outcomes. Further, we assume that this effect becomes weaker as employees approach retirement due to older employees' shift in focus away from their professional life towards life after retirement. Based on a time-lagged sample of 182 employees at age 50 and above, we found that employees' job autonomy is positively related to their engagement in selection, optimization, and compensation strategies, which in turn has a positive effect on their perceived employability. Further, we found that the effect is attenuated when employees' age gets closer to the official retirement age. Our findings demonstrate the importance of older employees' job autonomy for staying employable and highlight the role of boundaries set by retirement regulations. We discuss implications for organizations and policy makers.

Work-Home and Work-Family Interface in Careers

Session Moderator: **Claudia Rossetti**, *U. of Mannheim*

CAR: **How Working Long Hours Before Personal Losses Affects Changes in Employee Well-Being via Emotions**

Author: **Claudia Rossetti**, *U. of Mannheim*

Personal grief-inducing events, which refer to the losses of significant and loved ones due, for example, to divorces and bereavements, represent negative career shocks. This paper explores how the number of hours worked by individuals before these events affects subsequent changes in employee psychological and physical well-being. Based on arguments from the broaden-and-build theory, we expect working longer hours before personal grief-inducing events to be associated with larger decreases in employee psychological and physical well-being through a reduction of positive relative to negative emotions available to individuals in the aftermath of the events. The results of mediation analyses using longitudinal data regarding the careers of 2,578 individuals experiencing the loss of a family member confirm our expectations. Our findings, which suggest that more time spent at work before personal grief-inducing events is linked to larger declines in employee well-being through an influence on the emotional resources available to grievers, contribute to existing work-family research and the literature on career shocks and individual resilience.

CAR: **Work-Home Need Satisfaction Congruence, Work-Family Enrichment, and Well-Being**

Author: **Heidi Marie Baumann**, *Illinois State U.*

This paper integrates the work-family enrichment literature with research on psychological need satisfaction from self-determination theory in order to uncover complexities in the relationships between need satisfaction, work-family enrichment, and well-being (in terms of positive affect). When employees experience need satisfaction at work, they feel a sense of choice and volition in their work role. While this has considerable value for employees and organizations, our research proposes that exclusively focusing on employees' need satisfaction at work, while ignoring their need satisfaction at home, is problematic when considering outcomes related to the work-family interface, including work-family enrichment. The current research presents a work-family model that includes both need satisfaction at work and need satisfaction at home and examines congruence between these two constructs (i.e., work-home need satisfaction congruence). In a field study of full-time employees and their significant others, we use polynomial regression and response surface methodology to investigate the benefits of congruent need satisfaction across work and home for work-family enrichment and downstream well-being outcomes. Given organizations' increased attention to supporting employee well-being, our research holds important implications for how managers and organizations can foster enrichment and well-being (i.e., positive affect) across employees' work and family roles.

CAR: **The Workforce Experience of People who Provide Unpaid Family Eldercare: A Review and Research Agenda**

Author: **Hugh Bainbridge**, *U. of New South Wales*
Author: **Keith Townsend**, *Griffith Business School, Griffith U.*
Author: **Xi Wen Chan**, *Griffith U.*

We systematically reviewed quantitative studies of employees with non-work responsibilities for elderly family members and friends. We report on the overall prevalence and trends in research approaches relating to the examination of key facets of eldercare, employment, and the interface between the two roles. The findings draw attention to areas of emphasis in relation to the prevalence of a wide range of design choices relevant to examining how unpaid eldercare shapes an employee's career (and vice versa). Research design choices and the degree to which certain choices are being emphasised or de-emphasised over time inform assessments of the maturity of the literature on employment and unpaid eldercare. Based upon the findings of the review, we elucidate specific future directions for studying each of the six phases of eldercare and employment. We conclude by outlining approaches to studying employment and eldercare that better account for the temporal considerations that are central to both employee careers and the unfolding eldercare role.

CAR: **The Influence of Parental Leave on Career Advancement: Promotions, Lateral Moves, and Velocity**

Author: **Almasa Sarabi**, *Amsterdam Business School, U. of Amsterdam*
Author: **Monika D. Hamori**, *IE U. - IE Business School Madrid, Spain*

We examine the effects of parental leave on employees' intra-organizational career trajectories, that is, their likelihood of making a promotion or a lateral move as well as the velocity with which they do so. Research on the career trajectories following parental leaves has focused on vertical movement within organizations, such as promotions. However, contemporary careers evolve in many other ways and include lateral moves to hierarchically equivalent positions within different contexts in the same organization, such as moves across different jobs, job functions or different business units. Drawing on a dataset comprising the intra-organizational careers of 1,266 employees over 11 years, we find that employees who take parental leave are penalized in terms of the likelihood and velocity of receiving a promotion and making a lateral move. We discuss possible implications for different employee groups, male and female employees as well as high potentials.

Presenter: **Adriana Germano**, *Yale School of Management*
Participant: **Kristina Olson**, *Princeton U.*

Organizations spend annually billons of dollars on DEI-efforts. These efforts, however, are not always effective. Showcasing cutting-edge research, this symposium seeks to answer a critical question for management scholars: Why do many of these costly and often well-intentioned DEI-efforts fail to deliver and what can organizations do about it? The presentations seek to answer this question by illuminating key factors and mechanisms with regards to the (in)effectiveness of DEI-efforts. The presentations are followed by an integrative moderated discussion with a focus on what future research is needed and how the insights from the presentations can be used to better shape DEI-efforts.

What's New on Calling: Multi-Method Insights on its Predictors and Outcomes

Organizer: **Anna Dalla Rosa**, *U. of Padova*
Organizer: **Michelangelo Vianello**, *U. of Padova*
Discussant: **Evgenia Lysova**, *Vrije U. Amsterdam*

People increasingly seek meaning and purpose in their job and careers, and eventually quit their job if they experience a lack of meaning and purpose (Allan et al., 2019; De Smet et al., 2021). Extreme experience of meaning and purpose in one's job or career is captured by the concept of calling. While scientists keep debating on its conceptualization (Dik & Shimizu, 2019), the experience of work as a calling can be broadly understand as as a purposeful, meaningful, and passion-driven engagement in a career that one feels drawn to pursue, that contributes to a greater good and for which people are willing to make sacrifices (Vianello et al., 2018). The past two decades has shown a growing scholarly interest in the topic (Dik & Duffy, 2013; Dobrow et al., 2019; Thompson & Bunderson, 2019; Shabram et al., 2022), showing that perceiving a calling is a positive resource and is related to well-being, higher life satisfaction, commitment, and better work performance (Dobrow et al., 2019; Vianello et al., 2022). Yet many questions concerning how people can develop a calling for their career as well as which are its behavioral and non-attitudinal outcomes remain unanswered (Lysova et al., 2019; Thompson & Bunderson, 2019). In line with the 2023 call theme of "putting the worker front and center", this symposium brings together an internationally-diverse group of scholars (Italy, Switzerland, the Netherlands, and USA) to offer five original contributions of exceptional quality on both the nature of work as a calling and on its correlates. The symposium will begin with two qualitative studies followed by three quantitative studies that address knowledge gaps on the predictors, outcomes and relevance of calling that have been previously identified in reviews of the literature (Dobrow et al., 2019; Thompson & Bunderson, 2019) and in a special issue of the Journal of Vocational Behavior (Lysova et al., 2019). All questions that are addressed by these contributions are extremely timely and relevant for the theoretical development of the field, and help to understand the role of work as a calling in the current economy, which is characterized by an increase of flexible work arrangements and more frequent voluntary and involuntary job loss (Gulati, 2022; Spreitzer et al., 2017).

Negotiation Outcomes

Session Moderator: **Greetje Frankje Corporaal**, *U. of Oxford*

CM: **Resolving Disputes in Mediated Gig Work: Evidence from Online & Offline Labor Market Intermediaries**

Author: **Greetje Frankje Corporaal**, *U. of Oxford*
Author: **Vili Lehdonvirta**, *U. of Oxford*

Scholars of workplace disputes have mostly focused on alternative dispute resolution (ADR) in standard employment. With the context of work changing, disputes in mediated "gig" work should be subject to scholarly analysis as well. To examine factors influencing the dynamics of ADR in mediated labor markets, we focus on intermediary dispute handlers and the relationships these private regulators have with dispute parties. Building on the ethnography of disputing literature, we uncover how, depending on the structure of intermediaries' marketplaces, dispute handlers may frame their third-party role differently and influencing the impartiality of their ADR processes. The paper illustrates this point, drawing on fieldwork inside a digital labor platform and a temporary staffing agency. Existing explanations focus on the promise of impartiality of ADR by an external third party. Using interview, observational, and archival data, we analyze third-party roles in mediated labor markets and posit that impartiality is linked to marketplace structure.

CM: **Foreign Language Effect in Negotiations: Negotiation Language and Framing Effect on Outcomes**

Author: **Jung Hyun Lee**, *Washington U. in St. Louis, Olin Business School*

Research on the foreign language effect (Keysar, Hayakawa, & An, 2012) suggests that bilingual individuals may be less susceptible to framing bias when using a foreign vs. native language because bilinguals make less emotional and intuitive decisions in a foreign language condition. Despite increasing international business activities and language diversity (Lauring & Selmer, 2012), there is no research on bilingual negotiators and the effect of negotiation language. We hypothesized different negotiation outcomes when people negotiate in their foreign language rather than in their native language. Testing a 2 (Task Frame: gain vs. loss) × 2 (Language: foreign vs. native) model with 250 Korean-English bilinguals, we found partial support for a difference in objective outcomes (offers made). Also, the interaction between framing and language conditions significantly affected negotiators' positive emotions and satisfaction with the negotiation.

CM: **What Makes a Negotiation Team Successful? Linking Political Skill to Behaviors and Outcomes**

Author: **Kevin Tasa**, *Schulich School of Business*
Author: **Mehran Bahmani**, *Schulich School of Business, York U.*

This study investigates how political skill relates to member effectiveness, processes, and outcomes in negotiation teams. 263 MBA students were members of 84 teams negotiating a complex union-management simulation. At the individual level, counterparts rated each of their opponents on cooperative and competitive behaviors and results show that political skill predicted cooperative behavior. At the team level, aggregate political skill predicted both subjective and objective negotiation outcomes, including the likelihood that negotiated deals would be ratified by an audience of stakeholders. Contrary to the perception that political skill represents a dark side of human behavior, our results show that political skill is a positive and critical resource in team on team, mixed-motive negotiations.

CM: **A Qualitative Study Exploring A Diplomatic Leader's Conflict Management Style**

Author: **Marcus McChristian**, *Indiana Institute of Technology (Indiana Tech)*

Diplomacy, the art of getting along with other people in a sensitive, tactful, and effective manner (Longley, 2021), requires the ability to manage conflict. U.S. diplomatic leaders are key in using diplomacy to provide a sense of direction for action, mobilizing fellowship, and managing tensions (Bjola, 2015). This qualitative study explored and described how U.S. diplomatic leaders' level of perceived importance influences their chosen style of conflict management. Diplomatic leaders often deal with cultural complexities that can lead to misunderstandings and conflict (Bolewski, 2008; Goncalves et al., 2016) and there is no place in the world that magnifies these cultural complexities more than Africa. U.S. diplomats working in African cultures face enormous adjustments since Africa is the most diverse continent in the world (Innis, 2017). The U.S. government relies heavily on diplomatic leadership to help build critical relationships and promote important interests on the continent of Africa. Placing the U.S. diplomat's needs front and center plays a significant role in establishing foreign policy agenda. Keywords: Accommodation, avoidance, collaboration, competition, compromising, conflict management styles, diplomacy, diplomat, Thomas-Kilmann

CM: **Transparency Increases Negotiation Initiation Likelihood When it is Fair**

Author: **Tamara Montag-Smit**, *UMass Lowell Manning School of Business*
Author: **Cassondra Batz**, -
Author: **Karoline Evans**, *U. of Massachusetts, Lowell*
Author: **Ursula Sanborn-Overby**, *SUNY Oneonta*

The willingness to initiate negotiation – asking for what one deserves – has great potential reward for the initiator, including higher wages and benefits. Yet, the majority of people, especially women, are hesitant to initiate a negotiation. The current research tests transparency as a potential mechanism for increasing negotiation initiation when deserved, especially for women who have historically been less likely to initiate negotiation compared to men. Across two complementary studies (lab-based experiment with students, online scenario-based experiment with a general population of adults), results support the expectation that transparency increases the desire to negotiate when a negotiation is warranted because the amount offered is lower than the amount deserved (i.e., perceived negative discrepancy). In addition, this leads to greater likelihood of negotiation initiation. Transparency was equally beneficial for women and men and no sex differences were found across the conditions of secrecy and transparency. Thus, the results support the benefits of transparency, but transparency was not particularly beneficial for women, because women and men were equally likely to negotiate across conditions. While transparency may not "level the playing field" for women specifically, it does create a fair playing field for everyone where those that were most deserving (high negative discrepancy) negotiated for it.

Presenter: **Isaac Smith**, *Brigham Young U.*
Presenter: **Erin Frey**, *U. of Southern California -Marshall School of Business*

Despite great efforts and desires to become their best selves, people may fall short along the way. However, personal growth and failures come in a wide variety of forms that demand closer scientific examination. How and when do people pursue growth and come back from failures? What is the nature of people's beliefs (and features of those beliefs) about their own and others' growth processes? How can people support others' growth? In this symposium, we showcase cutting-edge theoretical and empirical research on growth and failure from the workers' perspective. Our papers offer important insights into the psychological underpinnings of how we leverage our own and others' potential. Our papers also provide future directions for understanding the workplace as a laboratory for personal development.

Our keynote speaker is Dr Jo Grady, an employment relations academic who, in 2019, was elected General Secretary of the University and College Union (a British trade union representing over 120,000 academics and support staff). She has led the union through an unprecedented period of industrial action which seems likely to be ongoing at the time of the Annual Meeting. Jo Grady occupies a unique position from which to speak with academic expertise and practitioner experience. We hope this session will extend beyond the conventional keynote format so we can hear from voices across the division and around the globe as we try to make good on the theme of the Annual Meeting – to put the worker front and centre.

Virtual Work

Session Moderator: **Isabel Villamor**, *IESE Business School*

CTO: **How Virtual Work Changes Implicit Leadership Theories**

Author: **Isabel Villamor**, *IESE Business School*
Author: **N. Sharon Hill**, *George Washington U.*

Virtual work has drastically increased in the last decades. It became "the new normal" during the pandemic and will likely have a lasting impact in the workplace of the future. The goal of this manuscript was to understand how this new context changes people's commonly shared beliefs about the qualities that leaders should possess (i.e., implicit leadership theories, ILTs). To address this question, we used a multimethod design. Study 1 used an inductive approach to understand the characteristics people associate with virtual leaders (i.e., implicit virtual leadership theories, IVLTs) and test whether IVLTs are different from ILTs. Study 2 replicates these results across samples using an experimental approach. Based on data from more than 1,400 U.S. participants, we uncovered the new construct of IVLTs. These IVLTs were composed of three new characteristics that were not present in ILTs (i.e., Trustworthiness, Adaptiveness, and Inspiring) and five characteristics shared across ILTs and IVLTs (i.e., Sensitivity, Dedication, Strength, Creativity, and Intelligence). Four characteristics from ILTs were no longer present in IVLTs (i.e., Charisma, Tyranny, Well-Groomed, and Masculinity). These results not only uncovered the new construct of IVLTs but also showed how it differs from ILTs.

CTO: **Virtual Communication and Professional Isolation in Hybrid Work**

Author: **Andrea Lenzner**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Patrick Tinguely**, *ETH Zürich*
Author: **Georg von Krogh**, *ETH Zürich*

This study investigates the relationship between virtual organizational communication and professional isolation during the change to hybrid work after enforced remote work in a professional services firm. Based on 10 weekly surveys with 1,178 employees, we find that professional isolation increases during the initial stages of the transition to hybrid work. Furthermore, drawing on the technology affordance view, we hypothesize on the impact of virtual interactions with organizational members on professional isolation. We find that employees exposed to virtual senior leadership communication experience a decrease in professional isolation. However, this effect does not hold for virtual team meetings and virtual informal interactions, potentially because these interactions require higher media richness, such as face-to-face contact, to be effective in providing connectedness that reduces professional isolation. Last, we demonstrate that professional isolation impacts hybrid workers' job performance and life satisfaction. Overall, this study contributes to the isolation literature by revealing the challenge hybrid workers face in the transition to hybrid work; being virtually highly connected yet still experiencing professional isolation. We further discuss practical and theoretical implications.

CTO: **Lost and Found: Academics' Spatial Practices Across Multiple Workspaces**

Author: **Alessandra Migliore**, *Politecnico di Milano*
Author: **Alfons Van Marrewijk**, *BI Norwegian Business School*

In this paper, we explore spatial practices of academic work within and beyond the organizational workspace. While a lot is known about how academics – and knowledge workers in general – experience spatial mobility at a large scale, there is still scarce theoretical and empirical discussion on how academics produce space when working across multiple workspaces during their daily working lives. Academics work within their university workspaces, at home, or in third workspaces beyond these locations on a temporary basis. We thereby focus on the experience of multi-location of work during the Covid-19 pandemic of 22 Italian academics working in the three public universities of Milan. Applying insights from Lefebvre's work, we disclose that a trade-off relationship between the practices of the domination of space and of the appropriation of space occurs in the everyday working life of academics, not only within the boundaries of the campus workspace but also in off-campus workspaces. The research adds to research on organizational space and multi-location work as it shows how academics navigate on- and off-campus spaces, configuring and reframing new meanings to those spaces.

CTO: **American and Chinese Facework on tCMC in Organizational Contexts**

Author: **Suraj Sharma**, *California State U., Northridge*
Author: **Zhaleh Semnani-Azad**, *California State U., Northridge*

US-China relations are at all time levels of fragility. While cross-cultural communication is already a delicate process, text-based computer mediated communication (tCMC) mediums are becoming more popular for mediums of communication, heightening the chance of miscommunication and conflict. We offer a framework using a Culture x Person x Situation x Context (CuPSC) approach to predict what facework strategies might be deployed by people from US and China, on tCMC mediums in an organizational context. We offer insights from individualism/collectivism and high and low context theories from cultural psychology literature and synthesize with research on Politeness Theory, Protestant Relational Ideology, Guanxi, Media Synchronicity Theory (MST) and tCMC to offer a framework to guide facework strategies for effective, clear, and polite communication. We conclude by applying our framework to the specific act of requesting to demonstrate the use of the framework.

Blockchains, Tokens, & Distributed, Autonomous Organizations (DAOs)

Session Moderator: **Darius Abel**, *Chair of Innovation Management, TU Dortmund U.*

CTO: **Cryptocurrency Project Fraud and Funding Success: An Information Disclosure Quality Framework**

Author: **Yujie Zheng**, *School of Business and Management, Shanghai International Studies U.*
Author: **Wai Fong Boh**, *Nanyang Technological U.*

With the popularity of blockchain technology, the potential of cryptocurrency projects to mislead or deceive investors has increased considerably. We present a study that provides a framework for detecting scam cryptocurrency projects (crypto projects for short) based on information disclosure theory, and we also illustrate how the differences in information disclosure quality will impact crypto projects' fundraising success. Within this study, we examine whether the disclosure width and depth in whitepaper would be valuable for fraud detection and prediction of crypto projects' fundraising success. The framework can be used to increase investors' awareness of deception in crypto projects and help investors to discriminate between crypto projects with low vs high information disclosure quality based on crypto projects' whitepapers. Moreover, a better understanding of the impact of information disclosure quality on deception detection can also help government agencies design more effective solutions to fight cryptocurrency fraud.

CTO: **Code is Law: The Influence of On-Chain DAO Governance on Token Performance**

Author: **Darius Abel**, *Chair of Innovation Management, TU Dortmund U.*

Decentralized autonomous organizations (DAOs) are challenging long-held assumptions in the field of corporate governance theory. While they share fundamental governance mechanism such as contractual (on-chain) and relational (off-chain) governance with regular companies, DAOs are unique due to the fact that ownership and management is combined through the use of governance tokens. Furthermore, by leveraging blockchain technology they are able to use democratic processes to make decision on a day-to-day basis. Even though they became more and more popular in the last years we still do not have a good empirical understanding of their governance choices' impact on token performance leaving both DAO founders and potential token holders in the dark. We leverage signaling theory combined with a unique dataset of 210 DAOs to enhance our understanding of the impact of on-chain governance. We discover that having a minimum token quorum relates positively to token performance. While having voting incentives ingrained in the code relates negatively to token performance, however retaining a large founders' stake can weaken the negative relation. Through this we help to advance both the information system and governance literature by shedding light on DAOs' governance choices signaling effects.

CTO: **Signals for Governance Token Performance: Role of DAOs' Governance Token Design and Distribution**

Author: **Darius Abel**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

Decentralized autonomous organizations (DAOs) are a new blockchain-enabled organization form. DAOs give out governance tokens to jointly (with their token holders) shape the DAO's course. Governance tokens represent the venture's value and a way for token holders to participate in the venture's governance. They are unique compared to utility tokens due to their associated governance rights. We can use signaling theory to enhance our understanding of governance tokens. DAOs disclose signals regarding technical token design, allocation to investors, and distribution mechanism. Analyzing a unique dataset of 218 DAOs, we observe the importance of the tokenomics' underlying influence on DAO's governance. We find that having a token cap ingrained in the token's code relates positively to token performance. Furthermore, we challenge established theory by revealing that having a larger share of governance tokens allocated to institutional investors is negatively related to token performance

---

CTO: **Impact of User-Platform Ideology Mismatch: A Natural Experiment in Blockchain Platforms**

Author: **Sen Li**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **T Ravichandran**, *Rensselaer Polytechnic Institute*

Online platform user participation is an essential research topic in IS and management. One critical factor that drives users' behavior is ideology, which defines the community's beliefs, values, and norms. The match between the platforms' and users' ideologies satisfy users' intrinsic needs, which establishes a strong user commitment to the platform. In this paper, we examine the role of ideology in forming the User-Platform (U-P) mismatch and investigate the role of financial incentives in this process. We synthesize the P-E fit theory with motivation theory to investigate if and how the U-P ideology match and mismatch influence user behaviors in blockchain social media (BSM) platforms. Through difference-in-differences (DiD) analyses, we find that the mismatch changes the participants' nature, and financial rewards may not improve the participation quality of the mismatched users. The mismatched user will switch their attention from other platform-beneficial behaviors to focus on the low-effort and incentivized actions. Additionally, we find mismatched user experience the "sugar high" effect from monetary rewards and temporally increase their incentivized participation.

Political Polarization & Emotion Online

Session Moderator: **Chandrasekar Krishnamoorthy**, *Warwick Business School*

CTO: **A Natural Experiment Investigating The Impact Of Nudging On Filter Bubbles and Information Diversity**

Author: **Chandrasekar Krishnamoorthy**, *Warwick Business School*
Author: **Mareike Mohlmann**, *Bentley U.*
Author: **Ola Henfridsson**, *U. of Miami*
Author: **Niam Yaraghi**, -

While the amount of information available has exponentially increased, our cognitive abilities to process information have not improved. Hence, social media platforms employ algorithmic filtering to keep information load at manageable levels. Algorithmic filtering leads to algorithmic distortion, creating phenomena such as filter bubbles and echo chambers resulting in information blindness. In this paper, we investigate whether nudging presents a valuable approach to tackle this problem. Through a natural experiment and a quantitative study on clickstream data, we investigate the impact of nudging on information diversity. We also answer a secondary question on how to design nudges to enhance their effectiveness.

CTO: **Away from Office, Away from Politics? Organizational Politics and Well-Being in the Hybrid Workplace**

Author: **Abdul Fattah Salleh**, *National U. of Singapore*
Author: **Rashimah Rajah**, *National U. of Singapore*

Putting the worker at the forefront, there are increasing investigations on the topic of employee well-being. During the global pandemic, there is an emphasis placed not only on taking care of workers' physical well-being, but also on the front of social and psychological well-being. Existing studies on employee well-being have investigated this construct within different contexts and with a plethora of factors, including perceived organizational politics. However, these established studies predominantly discuss employee well-being in a traditional face-to-face workplace setting. Grounded in media richness theory and examining inter-personal communication using ICT devices, this paper seeks to examine the effects that perceived organizational politics has on employee well-being when digital technology is in play i.e., in a hybrid work arrangement. Based on a sample of 126 full-time working adults who engaged in a hybrid work arrangement since the onset of the global pandemic, we found that while "traditional" relationships between antecedents and outcomes of perceived organizational politics hold, the context of a hybrid work arrangement does not affect – or may cancel out – individuals' levels of perceived organizational politics. Implications are discussed and practical propositions are put forward on how workers can protect their well-being in the midst of organizational politics faced in a hybrid work setting.

CTO: **Fueling Polarization in Connective and Counterconnective Movements**

Author: **Romilla Syed**, *U. of Massachusetts, Boston*
Author: **Oyebisi Oladeji**, *U. of Houston*
Author: **Leiser Silva**, *U. of Houston*

Contemporary social movements are often challenged by opposing movements that make competing claims to support or oppose a cause or change. Conceptualized as connective and counterconnective movements (C-CCMs) that view the role of social media as central to movement organizing, we examine how C-CCM interactions manifest ideological polarization, which presents a serious threat to societies. Furthermore, ideologically polarized interactions could influence the public by forming and affecting their opinions and emotions. Thus, we examine how the ideological polarization in C-CCMs leads to affective polarization of social media users. The empirical context of this study is the COVID-19 vaccination mandate in the US which led to two factions – those who support the mandate (pro-mandates) and those who oppose it (anti-mandates). Our analysis of the Facebook posts of the two groups suggests that while both framed polarizing posts, anti-mandates' posts have stronger ideological polarization. Further, pro-mandates posts negatively affected social media users, whereas anti-mandates posts had a relatively positive affect. Informed by our findings and theoretical predisposition, we develop propositions to explain the phenomenon. This study extends the research by examining the unintended effects of social movements. The findings might help social media sites and policymakers devise strategies to reduce polarization.

CTO: **Dynamics of Emotions Towards AI-Powered Technologies: A Study of GitHub Copilot**

Author: **Najmeh Hafezieh**, *Royal Holloway, U. of London*
Author: **Farjam Eshraghian**, *U. of Westminster*
Author: **Farveh Farivar**, *U. of Tasmania*
Author: **Sergio De Cesare**, *U. of Westminster*

The advances in Artificial Intelligence (AI) have enhanced its applications in different areas of professional and knowledge work, triggering a range of mixed emotions. Emotions play a key role in how users adopt and continue using technologies. In this paper, drawing on the discussions on the role of AI-powered technologies, future of work, and emotions, we aim to examine the emotions expressed by users engaged a new AI technology, the drivers of those emotions, and their dynamics. Adopting topic modelling, we first studied emotions that the initial launch of Github Copilot evoked by analysing 16,130 tweets shared by 10,301 software programmers on Twitter. Then, we analysed the tweets qualitatively to understand the stimulus characteristics driving those emotions. Finally, focusing on tweets by a sample of software programmers, we explored the changes of their emotions over time. The analysis showed that emotions expressed were mixed driven by four stimulus characteristics: AI development, AI functionality, identity work, and AI engagement. Our findings revealed that when software programmers focus on the capabilities of AI tool and link them to their identity work, their negative emotions change to more positive ones. Our paper contributes to the to the growing body of literature on the role of AI technology and the future of work by showing that emotions are dynamic and knowledge workers might express more positive emotions when they relate it to their identity work and engage more with the AI technology over time. This could lead to perceiving AI less as a threat to their professional identity but viewing it as contributing to their identity expansion.

Presenter: **Nina-Birte Schirrmacher**, *Vrije U. Amsterdam*
Presenter: **Daniel Fürstenau**, *IT U. of Copenhagen*
Organizer: **Fatemeh Saadatmand**, *IT U. of Copenhagen*

The purpose of this symposium is to bring together scholars to discuss governance models and design of data ecosystems in a decentered way from different societal and scholarly perspectives. We will focus on the specific opportunities and challenges involved in data governance in the absence of a solo (or dominant) owner of a data ecosystem exercising power by prioritizing its own interests over other actors through proprietary technological architecture, and threatening social welfare. However, the complexity of organizing an array of heterogeneous actors with a variety of expectations and motives threatens the sustainability of ecosystems. This symposium aims at providing a deeper understanding of design and governance tradeoffs in developing decentered data ecosystems from strategic, organizational, innovation, infrastructural, ethical and regulatory perspectives. Building on presented papers, this symposium serves as a platform to discuss decentered bottom-up data governance challenges and issues.

Resistance to DEI Work

Session Moderator: **Joseph Vitriol**, *College of Business Lehigh U.*

DEI: **When and Why Does Bias Feedback Translate into Egalitarian Action?**

Author: **Joseph Vitriol**, *College of Business Lehigh U.*
Author: **Gordon Moskowitz**, *Lehigh U.*

Awareness is often necessary for the self-regulation of bias in social behavior. Successful anti-bias interventions in organizational settings commonly provide accurate information about psychological sources of error in one's judgment. However, raising awareness like this sometimes triggers backlash instead of efforts to control bias. When and why might feedback about bias in organizational setting create defensiveness and rationalization as opposed to correction and control? We explored the underlying psychological responses to different forms of implicit bias feedback and how these reactions interact with individual differences. Three experiments (N > 1300), a mini-meta-analysis, and a longitudinal study indicate that implicit bias feedback causes an increase in both guilt (among people low but not high in explicit prejudice) and defensiveness (among people internally but not externally motivated to be egalitarian). Guilt increased and defensiveness decreased awareness, which facilitated prejudice-regulation and egalitarianism 8-months after feedback. These findings elucidate the psychological mechanisms that enable individuals, organizations, and interventions to help translate egalitarian goals into action, which is needed to promote more objective decision-making and equitable workplaces and communities.

DEI: **How Much Inequity Do You See? Structural Power and Support for Diversity Initiatives**

Author: **Christopher To**, *Rutgers U.*
Author: **Elad Netanel Sherf**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Maryam Kouchaki**, *Northwestern Kellogg School of Management*

The success of diversity initiatives depends on the support of those in positions of structural power, that is, managers. However, managers often resist such initiatives. Existing academic and practitioner conversations point to managers' self-interests, arising from demographics or ideology, as the source of resistance to diversity initiatives. We propose that such resistance may originate in the managerial position itself. We argue that positions of structural power induce organizational identification, which motivates a view of one's workplace as equitable, blinding one to inequities in one's organization. We posit that lower perceptions of inequity by those in positions of structural power explain their lower support for diversity initiatives. Seven archival surveys of government employees (Studies 1a-1g) and three surveys of working adults (Studies 2a-2c) suggest those higher in structural power perceive less inequity in their workplace due to higher organizational identification, resulting in lower support for diversity initiatives. Two interventions, enhancing the salience of inequities, allow those with structural power to overcome the identification barrier (Studies 3a-3b). We discuss conceptual and practical implications for support for diversity initiatives and structural power.

DEI: **Managing Resistance to EDI Work From Clients: Strategies of EDI Consultants in Denmark**

Author: **Caroline Julie Demeyere**, *Copenhagen Business School*
Author: **Marie Northeved**, *mnortheved@yahoo.dk*
Author: **Emily Louise Thorsson Schöller**, *Copenhagen Business School*

Resistance to equality, diversity and inclusion (EDI) work is widespread and threats the EDI work's outcomes, the changes in actual practices. Previous research has overlooked how this resistance to EDI work unfold in the more and more common client to providers relationships, i.e. when organizations hire external consultants to develop, implement or improve their EDI initiatives. Indeed, most research focuses on internal diversity workers engaged in issue-selling and the resistance they face to legitimize their work inside organizations. Consequently, this paper aims to understand how resistance towards EDI work manifests in the client-consultant relationship and how EDI consultants acknowledge and engage in managing such resistance. We thus take a relational, processual approach on resistance, focusing on the perceptions of resistance by EDI consultants and their strategies to overcome it. Our qualitative methodology is based on semi-directive interviews with EDI consultants in Denmark. The thematic analysis sheds insights on the various and dynamic strategies used by EDI consultants to handle resistance from clients. We conceptualize the strategies for EDI consultants to manage client resistance within a 3-stage cyclical process: 1) managing resistance before consultants meet it, in a preventive perspective, 2) managing resistance in the moment as a response to resistance, and 3) managing resistance after having met it to process and learn from resistance. The findings suggest that consultants learn within the process, i.e. that they utilize and view client resistance as an opportunity for feedback and adaptation of their work. Peer sharing and networking between EDI consultants can expand their repertoire of strategies to address client resistance.

DEI: **Diversity Resistance in Organizations: An Integrative Literature Review**

Author: **Carolina Gomes Araújo**, *FGV EAESP Sao Paulo School of Business Administration*

Diversity resistance is manifested through overt and covert attitudes and behaviors that hinder diversity initiatives and present several challenges for contemporary organizations. Research on diversity and inclusion in organizations is extensive, but fewer studies focus on diversity resistance. As a relatively new concept, it lacks evidence integration to promote new conceptual insights. To fill this gap, we conducted an integrative review of the literature on diversity resistance in organizations. The 80 studies identified in Web of Science and EBSCO categorized concepts, antecedents, and consequences. Our review provides an integrated summary of diversity resistance in organizations and imagines future research avenues for addressing inequalities in gender, diversity, and intersectionality (GDI).

Teams and Practices in the Upper Echelons

Session Moderator: **Claude Francoeur**, *HEC Montreal*

DEI: **Does Female Representation Improve Board Processes? It Depends on Director Perceptions of The Chair**

Author: **Claude Francoeur**, *HEC Montreal*
Author: **Corinne A. Post**, *Villanova U.*
Author: **Samuel Sponem**, *HEC Montreal*
Author: **Caroline Aubé**, *HEC Montreal*

Board processes are considered crucial to board effectiveness, yet research on female board representation (FBR) rarely evaluates its effect on board processes. Research suggests that as FBR increases, it has countervailing effects on board processes: improvements as a function of interpersonal qualities women are presumed to bring to the board, and deterioration as a function of increasing diversity resistance from male directors. Because of board chairs' sizable influence on board processes, we consider how directors' perceptions of their chair moderates the FBR – board processes relationship. Analyzing survey data from 826 directors, representing 111 boards, we find an inverted-U relationship between FBR and five key board processes. When FBR is relatively low, it is associated with more effective board processes, but as FBR approach 40% it becomes associated with deteriorating board processes. However, when directors perceive their chairperson as exhibiting transparency, seeking complete information, behaving consistently, and being self-aware (e.g., when they perceive their chair as exhibiting 'authentic leadership' behaviors), not only are board processes superior at all FBR levels, but the positive effects of FBR persist beyond the turning points.

DEI: **How Gender Diversity At Top Management Team Level Drives Firms' Effectual Orientation**

Author: **Patricia Cristiana Guragata**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*
Author: **Andrea Greven**, *WHU Otto Beisheim School of Management*

While breaking the glass ceiling in large organizations is proving to be a lengthy and intricate process, the question of gender diversity in upper echelons has been taking center stage in strategic management scholarship. Despite recent proliferation, research on gender diversity in top management teams (TMT) still exhibits multiple unsolved points of inquiry. Drawing on social role, upper echelons, and corporate effectuation perspectives, we argue that TMT gender diversity promotes firms' effectual orientation. In addition, we suggest that this influence will be stronger if firms' CEOs find themselves at a later career stage. We test and find evidence for both hypothesized relationships using a secondary longitudinal data set comprising 2,920 firm-year observations for 365 firms listed in the S&P 500 index between 2006 and 2018. Our research highlights the important interplay of gender-specific social-role proclivities at TMT level in fostering effectual strategy setting. We pioneer the investigation of gender effects on effectuation as a firm-level strategic orientation in the context of corporate executive teams, illuminating a pathway between gender, TMT, and corporate effectuation research.

DEI: **Identity, Trust, and Over-Monitoring: Evidence from Dyadic Gender Differences (WITHDRAWN)**

Author: **Musaib Ashraf**, *Michigan State U.*
Author: **Aishwarrya Deore**, *Georgetown U., McDonough School of Business*
Author: **Ranjani Krishnan**, *MSU*

Motivated by the economics of identity, we examine the role of gender identity on corporate governance decisions within a crucial governance dyad: the audit committee chair (ACC) and the chief financial officer (CFO). Drawing on the theory of particularized trust, which shows that people have lower trust in those they perceive to be different from themselves, we posit that the ACC's trust in the CFO is lower when there is an ACC-CFO gender difference, leading to the ACC over-monitoring the CFO. We find results consistent with our expectations: ACC-CFO gender difference is associated with greater audit committee (AC) meetings, both in a levels analysis and in a changes analysis. We also find that firms with ACC-CFO gender differences have no statistically different financial reporting reliability than other firms, and greater AC meetings for these firms does not improve financial reporting reliability. Further, for these firms, greater AC meetings are associated with worse financial reporting timeliness and lower CFO performance. These results, taken together, suggest ACCs over-monitor CFOs when there are dyadic gender differences. Finally, we find that over-monitoring is attenuated when a firm has a culture of diversity tolerance. Overall, our results suggest that identity differences influence monitoring decisions in trust-relevant corporate governance interactions – but also that there is a path forward for firms that desire to increase gender diversity and want to avoid the downsides from dyadic gender differences.

DEI: **The Impact of Leadership Diversity on Private Equity Fund Performance**

Author: **Yilmaz Bekyol**, *HHL Leipzig Graduate School of Management*
Author: **Bernhard Schwetzler**, *HHL Leipzig Graduate School of Management*

The aim of this study is to explore the relationship between the benefits of having a diverse top management team (TMT) with complementary perspectives, and the potential drawbacks of increased conflicts between team members. Using data of 1,071 fund partners involved in 1,295 buyout deals by 117 funds we find that TMTs with greater diversity in socio-demographic characteristics tend to achieve higher money multiples or internal rate of return (IRR). However, we also observe that greater occupational diversity has a negative net effect on performance. These results suggest that diversity arising from demographic characteristics is generally beneficial, while voluntarily acquired attributes may require additional coordination efforts. Additionally, our study finds that the distribution of team members and the associated diversity levels on individual deals within a fund can impact fund performance. We find an even distribution to be positively related to fund performance for occupational diversity and negatively for socio-demographic diversity. However, for funds with high levels of socio-demographic diversity, even distribution across deals is also positively associated with fund performance. Lastly our findings indicate that CEO involvement positively moderates fund performance, while industry specialization has a negative moderating effect. Overall, our findings could be useful for limited partners and fund-of-funds in investment processes and provide guidance for general partners when making staffing decisions.

Network Perspectives on DEI

Session Moderator: **XIN GAO**, *U. Of Chicago*

DEI: **How Can We Improve Team Innovativeness in Times of Organizational Change?**

Author: **XIN GAO**, *U. Of Chicago*
Author: **Jarder Luo**, *Tsinghua U.*

This paper investigates the relationships between knowledge diversity and teams' innovativeness before and after a period of organizational dramatic change. Knowledge diversity can be traced to two sources, i.e. hiring new team members with diversified knowledge and providing training programs for pre-existing members. What are the most important factors for enhancing team innovativeness, especially during the period of exploring new products and services? We address these questions by modeling the various effects of knowledge diversification strategies on team innovativeness and find that there are two strategies, inter-team and intra-team knowledge diversity. A total of 3,152 teams in three normal years and one changing year are analyzed. The two types of diversification strategies are quantified by analyzing over 200,000 recruiting assessments with the help of computational linguistics. The analytical results show that inter-team diversification, i.e, hiring new members with different knowledge structure from the whole company, indeed helps facilitate the disrupted innovation in organizational change. Intra-team strategy, i.e. hiring new members with different knowledge from the other team members, is more effective on incremental innovation during normal periods. We further examine the moderating effect of teams' interaction intensity on these two diversification strategies in both "normal" and changing organizational periods. When team members have a high intensity of interactions, an inter-team diversification strategy has a greater positive impact on team creativity. These findings help us greater understand the emergence of collective innovativeness under different organizational contexts, especially in a disruptive period of change.

DEI: **Public Discourse on SDG7: Hashtag Co-Occurrence Networks and Social Justice Messaging on Twitter**

Author: **Yutong Si**, *Northeastern U.*

The United Nation's Sustainable Development Goal 7 (SDG7) calls for "affordable, reliable, sustainable and modern energy for all" by 2030. To date, little is known about public discourse on SDG7. This study is the first research utilizing social network analysis (SNA) and computational methods to identify central topics associated with SDG7 and examine social justice messaging related to SDG7 on Twitter. The data used include 6,059 tweets containing #sdg7 from Jan. 1 to June 30, 2022, resulting in a hashtag co-occurrence network with 2,769 nodes and 22,667 edges. Based on centrality measures, this study shows that: 1) SDG13 (Climate action), SDG5 (Gender inequality), and SDG3 (Good health and well-being) are the most central SDGs related to SDG7, 2) Solar energy appears to be the most important renewable energy technology which received much public attention in the discourse, and 3) Africa is the only geographic area that has been hotly discussed among the top 30 hashtags with high eigenvector centrality. To examine social justice messaging related to SDG7, ego networks of 40 justice-related hashtags (i.e., egos, such as #justice, #equity, #inclusion, #leavenoonbehind, #forall, etc.) have been constructed, showing that despite some social justice messaging such as the discussion on gender inequity, a variety of other justice issues such as racial justice haven't received much public attention. A further comparison between 40 justice-related egos and top 40 central nodes identified in ego networks reveals that 1) justice considerations are not prioritized and 2) important transition perspectives (e.g., energy justice or just transition) have not been incorporated in public discussion on SDG7 on Twitter. This paper sheds light on essential topics around SDG7 and calls for more justice considerations to arrive at more holistic formulation and implementation of policies that advance SDG7.

DEI: **Who Am I at Work? An Examination of Employee Caste Status, Network Centrality, and Work Performance**

Author: **Prajya Rakshit Vidyarthi**, *U. of Texas at El Paso*
Author: **Farid Jahantab**, *Sam Houston State Uni*
Author: **Smriti Anand**, *Illinois Institute of Technology Stuart School of Business*

Diversity research is yet to examine how certain important non-western identities affect employees' work outcomes. Employees of Indian origin (over 15% of the world population) are custodians of and burdened by a unique social hierarchy of caste. We develop a theory on caste as an important facet of employee diversity in organizational scholarship. Drawing upon social identity and self-categorization theories and integrating with social exchange theory we propose a process and context model linking employee caste status to work performance. Specifically, we assert that employee caste identity provides valued resources enabling job performance and citizenship behaviors. We contend that this positive relationship is conferred through employees' central position in the peer influence network. Finally, we reason that the quality of employees' relationships with leaders and coworkers further shapes the effects of employee caste status on centrality in the network and work performance. Multi-level modeling using time-lagged, three-source data from 352 employees, 321 peers, and 31 managers showed support for our hypotheses. Our research reveals the mechanism of caste-based advantages in the workplace and suggests directions for future research.

DEI: **Executive Women's Networks: the Affinity Bias of Social Capital**

Author: **Martha Gabriela Contreras**, *Radboud U. Nijmegen*
Author: **Ruth Mateos De Cabo**, *U. San Pablo-CEU*
Author: **Ricardo Gimeno**, *Banco de España*

In this paper, we create a unique database obtained from LinkedIn profiles of Executives, to understands the main drivers of who their contact with, since networks are a key tool for them to leverage their options of career promotion. Constructing from the preferential attachment theory (i.e., the tendency to connect to other people that are popular), we explore the role of potential affinity bias (i.e., homophily) that could influence their network connections, such as gender, the university or company they have worked in, or similar age. Finally, we explore if there are differences in the way Female and Male executives weight different factors in their decision to connect with other people. We show that women are less likely to connect to other people in LinkedIn, and they tend to do it with less popular people, and with a strong affinity bias that produce a network e argue is less strategic and useful for their professional career.

Diversity Climate, Inclusion, and Agency

Session Moderator: **Jana Christina Falk**, *Diversity, Equity and Inclusion*

DEI: **Cause We are Happy – The Mediating Role of Diversity Climate on Employee Satisfaction**

Author: **Jana Christina Falk**, *Diversity, Equity and Inclusion*
Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

Given the fact that the work environment is continuously transforming and becoming more diverse due to demographic change and altered workplace circumstances (e.g., new work), this study sets out to establish a better understanding of managing diversity in a purposeful way. Using a combined data set of primary data from 222 R&D, product, and innovation managers paired with secondary data from Germany's largest employer review platform (kununu.com), we assess the relationship of team diversity and employee satisfaction mediated by two forms of diversity climate, namely fairness and synergy diversity climate. We find a significant direct effect of team diversity on a) fairness diversity climate and b) synergy diversity climate and show that team diversity can be understood as a workplace constituent influencing the respective climate. Furthermore, we show that the effect of team diversity on employee satisfaction is fully mediated by fairness diversity climate, while team diversity's indirect effect via synergy diversity climate is negative and insignificant.

DEI: **Caste and Class: Outgroup Favoritism and Inequality Reproduction in the Workplace**

Author: **Anurag Gupta**, *London Business School*
Author: **Marko Pitesa**, *Singapore Management U.*

Given their economic value generating function, organizations are important venues within which social group inequality is shaped. Our research complements the dominant perspective of social group inequality, which focuses on discrimination against members of low-status groups, to suggest that, in some cases, outgroup favoritism among low-status group members acts as a pathway of inequality reproduction. Our research focuses on India as a context marked by stark historical status differences among different caste groups along with formal equality in opportunity, creating mixed-caste workplaces today. We integrate Social Dominance and System Justification theories to predict that the level of endorsement of societal inequality will be higher among low (vs. high) caste members, leading them to preferentially allocate help to high caste coworkers. We further argue that this pattern of helping results in higher performance and in turn promotability of high caste workers. We find support for these predictions in a large multi-source field study among members of 100 work teams and their supervisors. We also compare the effects of caste with social class background both theoretically and empirically, suggesting that the issue is specific to caste. We discuss implications for context-specific theorizing of inequality endorsement among members of low-status groups, the role of helping in social group inequality, and the need to expand theoretical and empirical focus to the important context of caste, impacting a fifth of the world's population.

DEI: **How Does Legal Status Determine Immigrant Agency During Encounters of Workplace Incivility?**

Author: **Amal Abdellatif**, *Newcastle Business School, Northumbria U.*
Author: **Ajnesh Prasad**, *CMS*

Workplace incivility is ubiquitously experienced by immigrants. While a growing body of literature has sought to identify the causes and the outcomes of this phenomenon, what remains largely unexplored is the role of legal status in configuring how workplace incivility manifests in the immigrant experience. To fill the gap in the existing literature, in this article we answer the question: How does legal status inform the ways in which immigrants exercise agency in response to workplace incivility? In addressing this question, we juxtapose autoethnographic vignettes focusing on experiences with workplace incivility that we have individually encountered in academe. The juxtaposition of these vignettes illuminate how legal status is a pivotal factor in determining the forms and the depth of agency available to immigrants to respond to incidents of workplace incivility. In light of our findings, we consider the implications posed by the nexus between an immigrant's agency and workplace incivility to debates on business ethics.

DEI: **What makes Global South scholars underrepresented in Academic Society Awards?**

Author: **Poonam Singh**, *Maynooth U., Ireland*
Author: **Olga Igorevna Ryazanova**, *Maynooth U.*
Author: **Peter McNamara**, *Maynooth U.*

Academic landscapes are increasingly expected to demonstrate diversity and inclusiveness. Yet Global South scholars are disproportionately under-represented in reputed academic society awards. Underrepresentation points to a need for more resources and unique structural barriers many underrepresented groups face. Our study explores the causes of the under-representation of Global South scholars among academic society award winners by adopting an inductive approach. We conducted semi-structured interviews with the award gatekeepers to explore the underlying causes for the under-representations. The findings of our study suggest that structural and organizational barriers are causing this under-representation. Under-representation of Global South scholars in academic societies' award committees and their perceived incapability in academia contribute to this under-representation. We call for academic leaders to proactively address this under-representation that fails to acknowledge the excellence of Global South scholars' contribution.

Voice and Privilege

Session Moderator: **Alexandra Noel Figueroa**, *U. of Utah, David Eccles School of Business*

DEI: **Safe to Speak? Witnessing Racial Microaggressions Decreases Employee Voice**

Author: **Alexandra Noel Figueroa**, *U. of Utah, David Eccles School of Business*
Author: **Amelia Stillwell**, *U. of Utah*
Author: **Elizabeth R. Tenney**, *U. of Utah, David Eccles School of Business*
Author: **Barbara Blair**, *U. of Utah, David Eccles School of Business*
Author: **Tamara Calzado Real**, *U. of Utah*

Racial microaggressions —interactions that send denigrating messages to individuals because of their (racial) group membership — are unfortunately common in the workplace, harming the target's work satisfaction, psychological safety, self-esteem, and health. Microaggression research has focused on effects to the direct target, but related literature on workplace incivility suggests that racial microaggressions harm not only the targeted individual, but witnesses as well. Integrating the literatures on microaggressions and incivility, we show that witnessing uncivil racial microaggressions (i.e., racial incivility) is a common workplace experience, with disproportionate harmful effects on witnesses' willingness to voice. First, in two qualitative pilot studies (N=402), we collect worker's narrative experiences of witnessed racial incivility. We develop these narratives into experimental paradigms for a large, preregistered experiment (N=4,449) with a racially stratified sample of White, Asian, Latine, and Black Americans. We find that Anti-Asian racial incivility reduces psychological safety and perceived impact among witnesses, chilling willingness to voice even among witnesses who are not from the targeted group (i.e. non-Asians). Racial incivility was most detrimental to willingness to voice among racial minoritized participants, and those who identify more strongly with the targeted group, even individuals who are not themselves members. For leaders hoping to harness the innovative potential of diverse groups, this underscores the importance of fostering a racially inclusive group climate — one that does not tolerate racial microaggressions.

DEI: **Bullshit Empowerment: Why Black and Brown Scholars Fail to Effect Change in Business Schools**

Author: **Penelope Muzanenhamo**, *U. College Dublin, Smurfit*
Author: **Rashedur Chowdhury**, *U. of Essex*
Author: **Amal Abdellatif**, *Newcastle Business School, Northumbria U.*

Weaving in our experiences with bullshit empowerment as Black and Brown scholars, and drawing on autoethnographies, we assert that some powerful (predominantly White male) Business School academics mobilize 'the Hobson's Choice' to maintain a socially unjust status quo. A Hobson's Choice reflects a myriad of options that such powerful actors seemingly allow to emerge from 'specialist' team deliberations on what we aggregately term as 'Grand Social Justice Projects'. Notwithstanding, the powerful agents often kill those choices in favor of their already pre-determined decisions reflecting their (dominant White male) ideological stances. As—albeit theoretically—a dimension of noncooperative spaces, a Hobson's Choice can ultimately induce the resignation of the Other formally attached to the 'specialist' teams. Resignation in this context means that the Other relinquishes their agency in giving (own) voice, and merely maintains a bodily presence within such teams. Our study seeks to debate social justice in its broad sense and the Business School.

DEI: **Racial Inequalities in Decision-Making in Profession and Career Choice: College Students' Narratives**

Author: **CLAUDIA Avelar FERREIRA**, *Pontifical Catholic U. of Minas Gerais*
Author: **Simone Nunes**, *Pontifical Catholic U. of Minas Gerais*

Social inequality is a problem in Brazil because it involves several stages of life to the point of influencing the choice and expectation in the profession, entering university, and developing strategies to overcome barriers and challenges in the career. The objective is to identify how social inequality influences decision-making in the choice of profession and career by Black and white women. The qualitative method and polar case studies was used and the interactionist discourse analysis technique was applied. The theoretical contribution is multiply the Social Exclusion Theory, Critical Racial Theory and intersectional Black Feminism. The influence of social inequality in the choice of profession and career, impacts the students to get the social, cultural and economic capital. The choice of course is influenced by family, friends, and access to scholarships. The barriers were sexism, racism, and social class, and the challenges and strategies were faith, perseverance, creativity, and qualification.

DEI: **Authentic Allyship? Feeling Authentic Increases Allyship Behavior via Greater Psychological Standing**

Author: **Olivia Foster-Gimbel**, *NYU Stern School of Business*
Author: **Julianna Pillemer**, *New York U.*

Despite concerns about inauthentic allyship, research has yet to examine allies' own feelings of authenticity. We suggest a lack of felt authenticity (or subjective alignment between internal and external states) as an ally can be a barrier to allyship and propose that affirming allies' authenticity may increase allyship via increased psychological standing. We test our hypotheses across 4 studies (N=2286). First, we find that felt authenticity was associated with greater engagement in allyship after the murder of George Floyd. Next, we present two experiments which provide causal evidence that increased feelings of authenticity as an ally can lead to greater allyship. Finally, we use a pre-registered experiment to show when felt authenticity is first bolstered, individuals report greater psychological standing and are more likely to support and enact allyship in the workplace. We discuss important implications for efforts to cultivate allies, introducing a simple intervention to affirm allies' authenticity.

Practices for Voice and Silence

Session Moderator: **Anna Gorska**, *Kozminski U.*

DEI: **The Other in Academia: The Mental Health of Women in Masculinized Institutions**

Author: **Anna Gorska**, *Kozminski U.*

Abstract Mental health in academic has been studied extensively, but not from the perspective of gender. Although some researchers have studied the topic, there is no consensus on whether or not stress and burnout affect male and female academics differently. Most of the literature is based on quantitative and "objective" criteria, without input from academics themselves. This study highlights the views of 53 female academics at various stages of their careers. Their testimonials depict academia as a gendered and gendering organization, where females still remain the "other" and males the norm.

DEI: **Navigating Legalized (In)Visibility: The Experience of French Female Academics in STEM Fields**

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*
Author: **Diana Santistevan**, *EM Normandie*
Author: **Anne-Sophie Thelisson**, *UCLy - ESDES - Lyon Catholic U.*

(In)visibility in the work place is an important stream of research. Studies have discussed different types of (in)visibility and responses of working individuals. However, there is one special type of (in)visibility that has not received adequate attention: in the context, where gender quotas have been widely put in place in administrative bodies of the government, corporations, and academic institutions, women entitled to benefit from these measures experience legalized (in)visibility. This paper attempts to fill in this gap by examining how women experience legalized (in)visibility and respond accordingly. We do so by relying on a qualitative study of 40 French female academics in STEM field. Our results show that our study participants experience and respond to legalized (in)visibility can be characterized as fighters or flight-takers. Our contribution to the literature is three-fold: a) we introduce the notion of legalized (in)visibility, which involves a particular process of response by the individual; b) we reveal that in addition to power and full recognition, the two main drivers of responses to (in)visibility, there are also other factors related to personal life of the individual, such as mental and physical well-being, and balance between work and family; c) we show that the power dynamics related to legalized (in)visibility is more complex than simply being between the dominant and the minority groups.

DEI: **Confronters Can Cause Harm by Soliciting Marginalized Employees' Voice When Confronting Prejudice**

Author: **Merrick Osborne**, *Haas School of Business, UC Berkeley*
Author: **Andrea Villafuerte**, *Hypothesis*
Author: **Eric Anicich**, *U. of Southern California*
Author: **Cydney Dupree**, *UCL School of Management*

When confronting acts of prejudice in the workplace, advantaged group confronters may solicit input—or voice—from employees who belong to disadvantaged groups, thereby involving them (potentially against their will) in the confrontation. Across three pre-registered studies (N=1448) —using multiple prejudice confrontation and voice solicitation situations and different disadvantaged groups (i.e., women and racially marginalized individuals)—we find that doing so has negative affective consequences for the disadvantaged group member and negative evaluative consequences for the ally. Specifically, members of disadvantaged groups whose voices are directly solicited by an ally during a prejudice confrontation experience greater emotional burden; in turn, they view the ally as less deserving of status and seek to minimize their future exposure to the ally. We also demonstrate that this effect is contingent on two factors: whether the perpetrator of prejudice is present (or absent) when the confronter solicits voice, and how directly they solicit voice from the disadvantaged group member. Together, our findings highlight the theoretical value and practical importance of examining prejudice confrontations from the disadvantaged group member's perspective.

DEI: **Managing Dominant Group Defensiveness in Response to DEI-Related Challenging Feedback**

Author: **Anusuya Banerjee**, *U. of Washington*
Author: **Andrew Hafenbrack**, *U. of Washington*

A hallmark of privilege (whether along the lines of race, class, gender, sexuality, ability or otherwise) is living in a world where the status quo is built to privilege one's social group. This experience creates blindspots such that those who may not even identity strongly with their dominant social group do not see how current practices, systems and structures that they routinely engage in, and depend on, privilege them while disadvantaging others. In this context, being open and receptive to the feedback of members of underprivileged groups is important. However, a wealth of existing theory and evidence suggests that challenging DEI-related feedback may instigate defensiveness in feedback recipients. While organizations have increasingly recognized the importance of privilege awareness raising to combat inequities, the implications of these efforts on subsequent response to DEI-related feedback from underprivileged group members in the workplace is unclear. In this paper, we conduct two online studies and one field study to investigate the impact of varied approaches to privilege awareness raising (emphasizing blame for privilege and control over it's impacts) have on defensiveness, accountability and engagement in response to DEI-related challenging feedback. We also explore recipient driven factors which influence this relationship (moral growth mindset and growth self-concept). Initial results indicate that benign privilege awareness raising interventions may reduce outwardly defensive behaviors without increasing accountability.

Presenter: **Patricia Tabarani**, *U. of Illinois at Urbana-Champaign*
Participant: **J. Ryan Lamare**, *U. of Illinois at Urbana-Champaign*

The work experience of the vulnerable workforce is a relevant yet generally understudied phenomena in the management literature. Global development agencies such as the United Nations (UN) and the International Labour Organization (ILO) consistently emphasize the importance of decent work not only as a human rights issue but also as an essential component of a sustainable society. Thus, it is undeniable that academic scholarship involving vulnerable workers is necessary and timely. Advocating theory-driven scholarship, this symposium offers compelling studies that applied a variety of theoretical perspectives to examine the plight of vulnerable workers (e.g., people living with HIV, victims of intimate partner aggression, mental illness, ethnic minorities). We offer four papers anchored on strong theoretical foundations (e.g., self-determination theory, identity formation theory, stereotype-content model, etc.) that enrich our understanding of the vocational experiences of vulnerable workers. These studies also consist of a diverse range of research designs (e.g., experiment, mixed-methods, archival, longitudinal/time-lagged). Moreover, with studies completed from different countries (e.g., USA, Philippines, GLOBE), this symposium offers an opportunity for discussion about cross-national differences and perspectives. This symposium sets the stage for more theory-driven scholarship, thereby contributing to building a stronger body of work on the vulnerable workforce.

Many Western societies have become more politically polarized over the past few years (Swigart, Anantharaman, Williamson, & Grandey, 2020). Political scientists, as observers of the rising polarization between the two major parties (Democrats and Republicans), note that "the absence of any correction has forced acknowledgment that we have shifted from a system marked by low polarization to one of high polarization" (Pierson & Schickler, 2020: 38). Research suggests that individuals navigate this polarization and try to avoid confrontation in the private domain by avoiding intense contact with individuals from their opposing political camp. In a survey by the Pew Research Center (2017a), participants tended to report having "just a few" or "no" close friends from their opposing political party. Even individuals who stay in contact with people from opposing camps exhibit less intense contact; for example, Thanksgiving dinners (in which opposing political party members may be present) are up to 50 minutes shorter than same-party dinners (Chen & Rohla, 2018). While individuals seem to reduce contact with people from their opposing political camp in the private domain, the workplace constitutes a context that requires individuals with diverse ideological views to regularly interact and collaborate (Mutz & Mondak, 2006; Swigart et al., 2020). However, the consequences of differences in political ideology at work for collaboration and individual outcomes are only partly understood, as researchers have only just begun to consider the role of political ideology in organizations. Most of the work in this area thus far has focused on the effects of executives' political ideology on firm outcomes (e.g., Chin, Hambrick, & Treviño, 2013; Semadeni, Chin, & Krause, 2022). What is far less understood are the consequences of political dissimilarity in work teams and how and when it affects thought processes, affective processes, and, ultimately, social interactions. We contend that when such effects are not understood they might be misattributed to other factors, like demographic dissimilarity (with demographic attributes often correlated with political ideology), and thus cannot be effectively addressed. The presentations in this symposium address the reality of political dissimilarity among team members and between followers and supervisors, and they extend the growing line of research on political dissimilarity in organizations (e.g., He, Costa, Walker, Miner, & Wooderson, 2019; Roth, Arnold, Walker, Zhang, & Iddekinge, 2022; Solomon & Hall, In Press) in meaningful ways. Each focuses on political dissimilarity as an independent variable, and, as a collective, the presentations address a range of cognitive, attitudinal, and behavioral outcomes using a mix of research designs and analytical procedures.

Understanding Inclusive Leadership through a Global Lens: Putting the Worker Front and Center

Moderator: **Adriana Clomax**, *U. of Southern California*
Discussant: **Quinetta M. Roberson**, *Michigan State U.*

This symposium provides a diverse international perspective (The United States, Australia, Israel, and France) to examine the connections between inclusive leadership and workers' experiences at different levels of the organization – from co-workers, through work groups, to organizational levels. The diversity of the papers is represented through the various methodologies used (qualitative, mixed methods, and quantitative), the level of investigation (worker, group, and organizational), and the reported results. More specifically, the first presenters, Chung, Shore, and Wiegand, used quontitative data and found that the inclusive climate to trust relationship has both direct and indirect trickling down effects through leader inclusion and workgroup inclusion. In the second paper, Bourke, Ozbilgin, and Samdanis report the results of a mixed methods study that peer-to-peer inclusionary practices are a precursor to group-level inclusion. In the third paper, Luria, Atias, and Mor Barak used qualitative data to identify the significant themes explaining the decoupling between inclusive policies and behavioral implementation. Finally, Barzantny and Thomas reported from qualitative data on inclusive leadership's role in integrating workers with disabilities in France. Quinetta Roberson will bring everything together as an expert on this subject in her role as a discussant.

Participant: **Jill Yavorsky**, *U. of North Carolina, Charlotte*

Despite substantial progress, the grand challenge of and solutions to gender inequality demands critical updates in the post-pandemic world. In this symposium, we assemble five presentations to offer a contemporary and multifaceted understanding of gender inequity. Specifically, we study women's leadership challenges in new contexts by examining how women leaders manage crises during the Covid-19 pandemic, how working mothers organize their lunch breaks in the post-pandemic hybrid working mode, and when women can use charismatic signaling to elicit prosocial follower behaviors. We address the understudied intersection between gender and marriage structure and explore the unique challenges and responses of single childless women in the workplace. We deepen the understanding of unintended consequences of institutional and personal initiatives for gender inequality by studying the spill-over effects of family-friendly policies on single women and identity management tactics at work on performance at home. We hope that informing women's present-day challenges can inspire academics and practitioners to develop new solutions to the previously neglected challenges and adjust existing solutions to reduce their unintended negative consequences in the post-pandemic world.

The Impact of New Ways of Working for Moms: Profiling Lunch Breaks and Outcomes

Presenter: **Preeti Vani**, *Stanford Graduate School of Business*
Participant: **Benoit Monin**, *Stanford Graduate School of Business*

The purpose of this symposium is to connect two previously disconnected literatures— voice and allyship. Allyship while it encompasses an array of behaviors, includes speaking up with the purpose of ending oppression faced by disadvantaged people and voice, when intended to support or advocate for minority groups, fits the definition of allyship. Yet, voice scholars have only recently acknowledged voice from an allyship lens and the allyship literature has yet to directly acknowledge voice as a form of allyship. Therefore, in this symposium, our goal is to illuminate the connection between these two literatures by examining the antecedents and consequences of voice as allyship. Our hope is to build on each respective body of work and create synergy that enhances and benefits our understanding of both voice and allyship.

Entrepreneurial Platforms 1

Session Moderator: **Jacob Waddingham**, *Texas State U.*

ENT: **The Effect of Entrepreneurs' Virtue Language on Airbnb Price Premiums**

Author: **Jeffrey Chandler**, *U. of North Texas*
Author: **Jacob Waddingham**, *Texas State U.*
Author: **Marcus Wolfe**, *U. of North Texas*

Drawing from signaling theory, we examine the role of virtue language in Airbnb listings. We propose that virtue language espoused by Airbnb entrepreneurs serves as a signal of quality to consumers that helps the price premiums of their listings – but only to a certain extent. Specifically, we argue that virtue language espoused by Airbnb entrepreneurs has a curvilinear (inverted-U) relationship with the price premium of their listings, suggesting that excessive use of virtue language in Airbnb listings is seen as false signaling and becomes detrimental to their performance. We also suggest that this relationship is more pronounced when the Airbnb entrepreneur is perceived to be more credible and when the Airbnb entrepreneur is venturing in more conservative consumer markets. Our study of 81,799 Airbnb listings strongly supports our hypotheses. We specifically find that moderate amounts of virtue language in Airbnb descriptions improves Airbnb price premiums (between .33 percent and 3.88 percent) but begins to hurt price premiums as such language exceeds 6.55 percent of the listing's overall description.

ENT: **Reaching for the Stars? Entrepreneurial Aspirations and Optimal Distinctiveness on YouTube**

Author: **Stephanie Weiss**, *U. of Siegen*
Author: **Alexander Vossen**, *Tilburg U.*

Optimal distinctiveness postulates that entrepreneurs need to position themselves as distinct as legitimately possible. Extending this view on strategic positioning as a one-time decision, we examine how the most successful entrepreneurial content creators on YouTube repeatedly change their narrative in new video releases. Relying on organizational learning and performance feedback literature, we find content creators are likely to change if prior performance was below aspirations–expectations founded both on own and competitors' past performance. This response, however, is non-homogeneous, suggesting that narrowly failing aspirations induces problemistic search that leads to increased change, while missing aspirations by a wide margin induces rigidity, self-enhancement, and less change. Content creators that clearly fail their aspirations therefore change very little in their next video's narrative, while those that narrowly fail respond by releasing a video whose narrative is more distinct from their last own release as well as the market average but is simultaneously less distinct to the exemplar–the most successful content creator "star" in the category. Our work has important implications on how aspirations affect entrepreneurial strategy decisions and adds organizational learning to the contextual factors that shape optimal distinctiveness. Extending the role of competitors from actors to either conform to or differentiate from to a source of learning adds to our understanding of institutional pressures and competitive dynamics in entrepreneurial markets.

ENT: **Disclose or Disguise? Identities of Individual Entrepreneurs on Digital Platforms**

Author: **Hoik Kim**, *U. of South Carolina*
Author: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*
Author: **Sali Li**, *U. of South Carolina*

We study the role of individual entrepreneurs' digital identities in determining their success on digital platforms. We decompose digital identities into social and virtual dimensions, through which individual entrepreneurs represent themselves to stakeholders. We argue that both social and virtual dimensions contribute to individual entrepreneurs' success, but their effectiveness varies across institutional environments. By tracking 405 YouTube Channels, we find that social dimension is more effective in target countries with low network readiness whereas virtual dimension is more effective in target countries with high network readiness. These findings deepen entrepreneurship research by offering a more nuanced understanding of digital identities.

ENT: **The Value of Exposure in Crowdsourcing: How Solver Participation Leads to Post-Contest Retributions**

Author: **Horacio Enrique Rousseau**, *Florida State U.*
Author: **Guangzhi Shang**, *Florida State U.*
Author: **Hao Wang**, *Chinese U. of Hong Kong, Shenzhen*
Author: **Shan Liu**, *Xi'an Jiaotong U.*
Author: **Baojun Gao**, *School of Economics and Management of Wuhan U.*

Solver participation is crucial for the success of crowdsourcing contests. However, what happens to active participants after the contest ends? Drawing upon research on stimulus recognition and the mere exposure effect, we theorize that solver participation heightens exposure, which in turn generates post-contest retributions. We also analyze how the solver strategy and professional status influence this effect. To conduct the empirical analysis, we draw upon over 20,000 contests from a healthcare crowdsourcing platform. Using linear and nonlinear estimators, we consistently find that solvers' participation results in post-contest paid retributions. Furthermore, solvers can enhance this effect by submitting a considerable number of solutions over multiple periods and distributing them over several days. Surprisingly, status factors, such as doctors' professional prestige, have only a weak moderating effect. The findings of this study have significant implications for research on crowdsourcing contest platforms because they reveal the hidden effect of solver participation and demonstrate the importance of submission strategies over professional status in determining post-contest rewards.

Entrepreneurial Processes

Session Moderator: **Russell E. Browder**, *U. of Oklahoma*

ENT: **Crafting Community: Reflexive Imprinting at the Community-Entrepreneur Nexus**

Author: **Russell E. Browder**, *U. of Oklahoma*
Author: **Eduardo Meléndez**, *U. of Oklahoma*

To update scholarly conceptualizations of entrepreneurship stemming from craft communities, we adopt a practice-based research design and a theoretical lens of imprinting. We study how craft communities can imprint upon entrepreneurs and how entrepreneurs can, in turn, imprint upon the communities in which they work on craft projects. Through two research stages, we explore craft entrepreneurship in the context of makerspaces from the perspectives of entrepreneurs and community leaders. We introduce the concept of reflexive imprinting as a reciprocal process whereby multiple entities sharing a resource environment mutually shape one another through repeated interactions during joint sensitive periods. We explain the resource, practice, and identity mechanisms of reflexive imprinting. Our findings contribute to the imprinting, community-based entrepreneurship, and craft literatures.

ENT: **Are Entrepreneurs More Upwardly Mobile?**

Author: **Matthew Lindquist**, *Stockholm U.*
Author: **Theodor Lucian Vladasel**, *U. Pompeu Fabra and Barcelona School of Economics*

Entrepreneurship is often hailed as a path to upward intergenerational mobility, but few studies have explicitly tested this belief. We study intergenerational income rank mobility among entrepreneurs and employees in Sweden using high-quality measures of lifetime income for 215,000 father-son pairs. Incorporated entrepreneurs are more upwardly mobile than wage earners; this result is driven by high ability individuals' selection into incorporation. Unincorporated entrepreneurs are more downwardly mobile, which can be explained by negative selection, income underreporting, and lower returns to skills and education.

ENT: **Going From Entrepreneur Back To Employee: Employer Type, Task Variety, And Job Satisfaction**

Author: **Humberto BREA-SOLIS**, *U. DE LILLE*
Author: **Marianna Marino**, *SKEMA Business School - U. Côte d'Azur*
Author: **Francesca Melillo**, *SKEMA Business School, U. Côte d'Azur, GREDEG*

While the literature documents a wage loss for entrepreneurs that return to paid employment, we examine how these entrepreneurs are re-integrated into the labor market. We consider which type of employers hire entrepreneurs and their satisfaction with the new corporate job. Using matched employer-employee data from Belgium combined with an ad-hoc survey, we find that entrepreneurs are hired by smaller employers that offer fewer employee benefits and pay less, contributing to explaining the wage loss. We also find that entrepreneurs are more satisfied than observationally equivalent employees when they are assigned to jobs that involve higher task variety. This effect is more pronounced for entrepreneurs who sort into better employers. Our findings highlight the importance for managers to assign entrepreneurs to the “right” job tasks.

ENT: **Entrepreneurship for All? The Rise of a Global "Entrepreneurship for Development" Agenda, 1950-2021**

Author: **Seungah Lee**, *New York U. Abu Dhabi*

This article provides a macro-sociological analysis of the rise and transformation of entrepreneurship as an ideology in international development discourse over time. Drawing upon over 5,000 documents produced by UNESCO and the World Bank from 1950 to 2021, this article examines how dominant ideas around applications and purposes of entrepreneurship, as well as the role of the entrepreneur, in international development discourse evolved over time. The article illustrates that entrepreneurship in international development discourse underwent a shift from the 1950s to the 2010s, with a marked change occurring around the turn of the twenty-first century. It argues that the role and purposes of entrepreneurship become increasingly expanded over time to be viewed as a solution that can address the world's social, economic, cultural, and environmental challenges. It further asserts that entrepreneurship, influenced by world cultural norms of empowered individualism and agency, becomes perceived as something that any individual can engage in as long as they have the motivation, drive, and vision to do so. The idealized image and purpose of the entrepreneur by the twenty-first century is no longer someone motivated by economic gain; instead, the ideal entrepreneur is inspired by a desire to influence change in the world toward development and progress.

Crowdfunding 2

Session Moderator: **Anna Lukkarinen**, *Stanford U.*

ENT: **Does Sustainability Attract Crowdinvestors? Evidence from a Randomized Field Experiment**

Author: **Anna Lukkarinen**, *Stanford U.*

Humanity is facing a pressing need for sustainable development, a challenge that can be opportunely addressed by entrepreneurial ventures. To realize their aims, these ventures need funding. But how does sustainability orientation affect ventures' ability to raise funds? On the one hand, investors may wish to do good by supporting sustainable companies. On the other hand, investors may be deterred by the concessionary return prospects of sustainable investments. We investigate investors' reactions to sustainability signals using a randomized field experiment with 31,802 equity crowdfunding investors. We find that the higher the stakes involved in an investor's reaction to sustainability, the more negative the reaction. Specifically, we find that sustainability signals deter investments (a high-stakes reaction). While we find evidence of certain investor segments expressing interest in sustainability (a low-stakes reaction), their interest does not convert to investments. We conjecture that these reactions arise from investors' differential motivations. We contribute to the debate, oft set between stakeholder theory and agency theory, about the relationship between the responsible behaviors of companies and their performance.

ENT: **How Platform Governance Affects Entrepreneurs' Capacity to Attract Funding**

Author: **Julia Toroi**, *Copenhagen Business School - Department of Strategy and Innovation*
Author: **Carmelo Cennamo**, *Copenhagen Business School*
Author: **Ali Mohammadi**, *Copenhagen Business School*

This study focuses on how platform governance in a crowdfunding setting influences the performance of campaigns, and how this effect varies among different user groups. Specifically, we investigate whether giving entrepreneurs discretion over the choice of funding model for their crowdfunding campaign improves the performance of their campaigns, and whether it has different performance implications for male and female entrepreneurs. We find that being able to choose a funding model that reveals an entrepreneur's preference for risk taking, in contrast to one that reveals risk aversion, has a positive effect on performance. Additionally, we find that female entrepreneurs can benefit more than male entrepreneurs from being able to reveal their risk preferences. We attribute the effects to signaling arguments. However, we also find that female entrepreneurs are in general less likely to choose the riskier funding model, likely due to higher risk aversion of women.

ENT: **How Air Pollution Affects Crowdfunding Investor Behavior**

Author: **Hui-Ching Hsieh**, *National Cheng Kung U.*
Author: **Thijs Brejaart**, *National Cheng Kung U., Taiwan*
Author: **Thien Le-Hoang Nguyen**, *National Cheng Kung U.*

Equity crowdfunding has become an emergent form of early-stage entrepreneurial finance. As equity crowdfunding is turning into a global phenomenon, it has been recognized as one of the top alternative funding sources for entrepreneurial firms. Are investors' moods affected by air pollution, inducing less risky investments in equity crowdfunding? This research will provide a quantitative analysis of the effect of air-pollution-induced moods on equity crowdfunding investments. We find that air-pollution-induced negative moods have a negative influence on crowdfunding investments. This is the first research that examines the correlation between negative air-pollution-induced moods and crowdfunding investor behavior. In addition, applying the Emotion-Imbued Choice (EIC) model, we find that characteristics of investors and of campaigns, such as type of investor, the dominant colors of a campaign's webpage, and the green attributes of a campaign, have moderating effects on the relationship between air pollutants and investment amount.

ENT: **What Influences Crowdfunding Success? A Perspective of Entrepreneurial Narrative** ☯

Author: **Feng Guo**, *Tianjin U.*
Author: **Qingyuan Tan**, *College of Management and Economics, Tianjin U.*
Author: **Qing Li**, *Tianjin U.*
Author: **Qiyun Zheng**, *Tianjin U.*
Author: **Huijuan He**, *Tianjin U.*

Crowdfunding allows founders to raise supplementary financial support, which is important to entrepreneurship. What influences crowdfunding success? Based on the perspective of entrepreneurial narrative, this study integrates narrative content and narrative subjects into a framework to explore the effect innovation and sustainability orientation of crowdfunding narrative on crowdfunding performance and considers the contingency of female entrepreneurship and multiple founders. Drawing on a database of 6,869 crowdfunding projects from 2014 to 2022 on Modian, we find that the relationship between innovation orientation and crowdfunding performance is curvilinear, while sustainability orientation enhances crowdfunding performance. Meanwhile, female entrepreneur enhances the positive effect of sustainability orientation on crowdfunding performance. In addition, multiple founders steepen the inverted U-shape relationship between innovation orientation and crowdfunding performance, but hinder the positive relationship between sustainability orientation and crowdfunding performance. This study adds new insights into the literature of crowdfunding narrative and female entrepreneurship, and provides implications for practice.

ENT: **The Road to Success for Digital Entrepreneurship: Evidence from Online Crowdfunding Market**

Author: **Xiaochen Liu**, *Beijing Jiaotong U.*
Author: **Yu Jin**, *Nanjing U.*
Author: **Yulin Fang**, *The U. of Hongkong*
Author: **Qiang Ye**, -

The fierce competition in the crowdfunding market has resulted in a high failure rate. Due to their devoted dedication and efforts, many founders relaunch failed campaigns for a second attempt. Despite a great need for better understanding, campaign relaunch success is not well researched. To fill the research gap, this study theorizes and empirically documents how founders' strategic changes may enhance campaign relaunch performance by influencing the probability of finding optimal solutions. The study examined 5,798 Kickstarter relaunched campaigns. Founders' salient strategic changes are empirically captured as how their campaign design deviates from past business practices. We found that the revision of the product/service prototype, the adjustment of fundraising targets, and the change in the project category have positive impacts on campaign relaunch performance. Yet, when the revision distance exceeds a certain threshold, the positive impact may be weakened or even lead to negative impacts. The findings further suggest that the above effects may be heterogeneous as the severity of prior failures varies.

Disruptive Trends in Entrepreneurial Finance Research

Organizer: **Katja Bringmann**, *U. Ghent*
Organizer: **Jeroen Verbouw**, *Ghent U. and Tilburg U.*
Panelist: **Brian S. Anderson**, *U. of Kansas*
Panelist: **Cristiano Bellavitis**, *Syracuse U. Whitman School of Management*
Panelist: **Douglas Cumming**, *Florida Atlantic U.*
Panelist: **Will Drover**, *Texas Christian U.*
Panelist: **Sofia A. Johan**, *Florida Atlantic U.*
Panelist: **Sophie Manigart**, *Ghent U. and Vlerick Business School*
Panelist: **Ramana Nanda**, *Imperial College London*

Entrepreneurial finance scholars address the questions and themes related to which, how, when, and why ventures attract external funding and how it affects their future development (Bellavitis et al., 2017b; Block et al., 2018; Cumming et al., 2019a; Cumming & Groh, 2018; Cumming et al., 2022a). Most attention has been devoted to equity capital because of its pivotal role in the financing of high-growth entrepreneurship (Drover et al., 2017) and significant firm-level implications (Bonini et al., 2019; Eldridge et al., 2021; Manigart et al., 2002). While the entrepreneurial finance field is well-established, recent disruptive trends have attracted substantial scholarly attention. Specifically, radical financial market innovations such as digitization, invigorated research opportunities in traditional topics such as VC research, and novel statistical approaches and data sources have created a promising and exciting space to study entrepreneurial finance. This panel aims to inform researchers by discussing these disruptive trends and their implications for future research with prominent entrepreneurial finance scholars.

Drivers and Outcomes of Social Entrepreneurship

Session Moderator: **Nele Terveen**, *TUM School of Management, Technical U. of Munich*

ENT: **Don't Let Sleeping Dogs Lie - Exploring Sustainable Entrepreneurs' New Venture Idea Generation**

Author: **Nele Terveen**, *TUM School of Management, Technical U. of Munich*
Author: **Frank-Martin Belz**, *Technical U. of Munich*

New venture ideas give birth to emerging nascent ventures. Our study discusses social and environmental problems as important stimuli to new venture ideas. We conducted a multiple case study with aspiring and nascent sustainable entrepreneurs who enact new venture ideas. We develop grounded theory and a process model of new venture ideation in the context of sustainable entrepreneurship, and theorize three pathways: Evolving, Procrastinating, and Discarding. Along the pathways, we discuss time frames, pace and sequencing through four stages. We believe that our research offers three important contributions: Frist, we enhance research on antecedents to venture creation by triggers to recognize social and environmental problems. Second, we add process-knowledge along three pathways of new sustainable venture idea generation. Third, we accumulate knowledge to the focal construct of new venture ideas, and add important time elements. We thereby contribute to literature on venture creation in entrepreneurship research and connect to its neighboring domain sustainable entrepreneurship.

ENT: **Macro-level Factors Influence on Social Enterprises' Operations: Social Enterprises Perspective**

Author: **Stefan Chichevaliev**, *Postdoctoral Research Fellow - Vrije U. Brussel*
Author: **Georgios Outsios**, *Postdoctoral Research Fellow - Vrije U. Brussel*
Author: **Thomas Crispeels**, *Associate Professor at the Vrije U. Brussel*

The recognition and expansion of social entrepreneurship as an approach to address social and environmental issues has increased the research efforts on various topics to complement the field but has not extensively investigated the level of influence of the macro-level factors on social enterprises' operations. To address this gap, we used quantitative methods, particularly partial least squares structural equation modelling based on institutional theory, to help us explain a) the relationship between the factors, b) the macro-level factors development accelerators and c) the macro-level factors' influence on social enterprises' operations. We respond to the calls from academics to examine the interaction between social enterprises' operations and their environment for more quantitative research and the use of novel approaches with empirical data. Our findings suggest that institutional support and funding are accelerators for macro factors development and mostly influence social enterprises' operations.

ENT: **The Client Knows Best: Unpacking Social Enterprise Beneficiaries' Preference for Restorative Work**

Author: **Liang Shang**, *Lingnan U.*
Author: **Yanto Chandra**, *City U. of Hong Kong*

Social entrepreneurship is an entrepreneurial process in restoring, emancipating and caring for at-risk groups to reintegrate them into the society. Although there has been some initial conceptualization on social enterprises as a conduit of restorative work for at-risk individuals, a systematic investigation on the preference structure of such individuals as users of restorative work practices remains scarce. Studies on preference structure is important because it captures what is valuable to individuals and can prevent beneficiary dissatisfaction. Drawing upon the emerging 'restorative entrepreneuring' perspective and using a discrete choice experimental method, we probed how people with disability who were beneficiaries of work-integration social enterprises (n=208) evaluated and made trade-offs amongst five job-related restorative practices: positive identity, positive social relations, accommodating environment, caring culture, and career advancement and one monetary attribute. While most restorative work practices were significant, career advancement support had the greatest importance of all. We advance social entrepreneurship by shifting the scholarship's focus to the demand side of restorative work and shedding light on restorative work practices which are important to beneficiaries. We also demonstrate a relatively novel method in evaluating multi-attribute restorative work practices where individuals assess competing attributes holistically, rather than viewing each practice as isolated from one another.

ENT: **Impact Measurement as Agentic Activity toward Sustainable Development**

Author: **Jan Moellmann**, *TUM School of Management, Technical U. of Munich*
Author: **Esther Salvi**, *LMU Munich School of Management*
Author: **Frank-Martin Belz**, *Technical U. of Munich*

Despite the promise entrepreneurship holds to foster sustainable development, surprisingly little is known about the actual outcomes and impacts of sustainable ventures. Through an explorative case study design conducted in Germany, we shed light on how different impact measurement (hereafter: IM) activities are characterized, and what kind of outcomes they have on organizational and societal levels. From our inductive coding a novel typology of IM activities emerged based on their level of agency and formaliy, including IM as fragmented frame, IM as aggregation and IM as bridge. Drawing on this typology, we propose a new theoretical framework of IM as agentic activity toward sustainable development. This framework highlights how distinct IM activities lead to different consequences in terms of legitimacy, impact monetization and exploitation of sustainability potential. Taking these outcomes together, we characterize three distinct sustainable venture types based on the role impact plays in their context and business model as the result of the different IM activities: impact as bonus, impact as added value, impact as a service. Our findings entail important theoretical contributions at the juncture of IM, sustainable entrepreneurship, and agency, as well as guidelines for practitioners.

ENT: **The Rise of Hybrid Entrepreneurs: A Cross-Country Empirical Analysis**

Author: **Marc Duhamel**, *U. du Québec à Trois-Rivières*
Author: **Etienne St-Jean**, *UQTR*

Recent work on hybrid entrepreneurship is shattering the myth that entrepreneurship is an "all or nothing" career. However, the factors explaining this phenomenon remain ambiguous, and the theories that could explain it are embryonic. We offer a preliminary analysis in testing the concurrent effect between the individual-level explanations as well as the macroeconomic factors. We used the Global Entrepreneurship Monitor Adult Population Survey to calculate rates of hybrid entrepreneurs in all of the 103 participating countries from 2011 to 2020. We found a steady rise in hybrid entrepreneurship in this period, suggesting that this phenomenon is growing all over the world. However, we showed that the level of economic development is the main explanatory factor of the phenomenon, illustrating a probable capital-deepening effect with the rise in employment wages.

Entrepeneurship and Human Capital

Session Moderator: **Sanggeun Lee**, *Syracuse U.*

ENT: **Performance Feedback and Obsessive Passion: The Moderating Effect of Human Capital**

Author: **Sanggeun Lee**, *Syracuse U.*
Author: **Younggeun Lee**, *California State U., Los Angles*

Based on the behavioral theory of the firm, we research how performance feedback influences the formation of CEOs' passion. We articulate that previous performance directly increases CEOs' passion. Specifically, positive affective outcomes (performance above aspiration-level) advance CEOs' positive feelings and motivation toward the domains of success (obsessive passion). For instance, when a firm accomplishes performance objectives, such as reaching sales goals, CEOs' positive feelings toward developing current products would be boosted. Performance below aspiration-level would also positively impact CEOs' passion since the CEOs would endeavor to reduce the difference between performance and their aspiration-level. As such, performance feedback is a critical antecedent of CEOs' obsessive passion. In addition, we apply human capital as a moderator between performance feedback and CEOs' obsessive passion. Results based on multiphase survey data from 189 CEOs of Korean small- and medium-sized enterprises indicate that both positive and negative performance feedback positively increase CEOs' obsessive passion. Moreover, human capital negatively moderates the relationship between positive performance feedback and CEOs' obsessive passion and positively moderates the relationship between negative performance feedback and CEOs' obsessive passion.

ENT: **Does Acqui-Hiring Really Pay Offs? An Empirical Investigation of Founders´ Retention**

Author: **Nikolaus Seitz**, *U. of Augsburg*
Author: **Jasmin Kopp**, *U. of Augsburg*

Acqui-hiring – a new human capital strategy chosen by Big Tech Silicon-Valley-based companies nowadays, as it is getting more difficult to acquire and remain high-skilled employees. In these acquisitions, focus lies not on technologies, but on people and teams. Founders play an important role, as their creativity and entrepreneurial spirit are crucial for the transfer of knowledge and the creation of value. This study empirically investigates factors that influence their retention in such acqui-hires. The dataset used in this paper is a unique and novel hand-collected full sample dataset of acquisitions conducted by Facebook and Google. Based on 454 founders from 241 companies, we analyze which factors influence the likelihood that founders stay after an acqui-hire and how their retention period can be enlarged. Our findings indicate that it is not only predetermined factors that are of relevance but also the integration choices of the acquirer – however on varying degrees, depending on the entrepreneurial personality of the founders.

ENT: **Exploring Knowledge Work in Entrepreneurial Firms within Sportstech**

Author: **Marouane Bousfiha**, *U. of Gothenburg*
Author: **Maureen McKelvey**, *U. of Gothenburg*

In this research, we explore how knowledge work at knowledge-intensive entrepreneurial (KIE) firms can be closely connected and reliant on interactions with other actors in their ecosystem, specifically in the context of combining different types of knowledge within the entrepreneurial venture. We particularly focus on the combination of technological and athletic knowledge in the offerings of these firms. Our findings are based on in-depth interviews with key employees at three Swedish KIE firms in the sportstech industry. Our analysis reveals how these companies leverage their interactions with athletes and coaches to convert embodied athletic knowledge into knowledge that is represented in algorithms, metrics, and data-based representations of athletes. Our results show that these firms use two main approaches for acquiring and combining relevant knowledge, and we observed how they use prototypes to co-generate knowledge with their intended users.

ENT: **Mentors Selecting Mentees: The Effects of Founder Characteristics and Startup Mentor Motivations**

Author: **Kai Becker**, *Vrije U. Amsterdam*
Author: **Joris Ebbers**, *LUISS Business School*
Author: **Yuval Engel**, *U. of Amsterdam*

Startup mentoring is widely recognized as a crucial service for founders in accelerators. However, mentors are a scarce resource and only support a small proportion of the startups that solicit their services. In this paper, we propose that startup mentors select potential mentees based on indicators of competence and relationship quality. Using a conjoint experiment, we examine the extent to which startups' external recognition and founders' entrepreneurial experience serve as indicators of competence, and coachability and gender concordance serve as indicators of relationship quality, and how these factors influence mentors' willingness to mentor. Additionally, based on self-determination theory, we test hypotheses about how mentors' motivational dispositions shape their responses to founders' attributes. In line with our hypotheses, we find that intrinsic mentoring motivations buffers against lower relationship quality indicators whereas prosocial mentoring motivation buffers against lower competence indicators.

Entrepreneurial Ecosystems 1

Session Moderator: **Jonah Zankl**, *Cambridge Judge Business School*

ENT: **This Place is a Jungle: A Process of Maintaining Entrepreneurial Ecosystems**

Author: **Jonah Zankl**, *Cambridge Judge Business School*
Author: **Matthew Grimes**, *Cambridge Judge Business School*

Entrepreneurial ecosystems are regions with complex networks of support and resources crucial to the successful creation of new ventures. And yet, this complexity is increasingly questioned by government and policymakers alike: with significant investment of financial, social, and political capital underpinning the growth of these ecosystems, ensuring the efficient distribution of resources within ecosystems is important to this success. How then, do organizational sponsors balance these demands for efficiency and centralization with the importance of diverse, and at times complex, support needed to spur innovative entrepreneurial activity? In this study we draw on our observations from a 30-month case study of a new entrepreneurial support organization in the UK and investigate how organizational sponsors maintain requisite variety amid pressures for greater centralization and efficiencies within an entrepreneurial ecosystem. We theorize a process model of how organizational sponsors first seek to resolve complexity, negotiate its accommodation, and instead ultimately perpetuate complexity. Moreover, we highlight the role of unresolved complexity and sustained requisite variety has important catalysts for the ongoing maintenance of entrepreneurial ecosystems. We contribute to literature on organizational responses to complexity and more broadly to the emergent conversation focusing on entrepreneurial ecosystems.

ENT: **Measuring Entrepreneurial Ecosystems: A District Approach**

Author: **Sophia Hess**, *U. of Stuttgart*
Author: **Andreas Wahl**, *U. of Stuttgart*
Author: **Alan Johnson**, *U. of Stuttgart*

Entrepreneurial Ecosystems (EEs) offer researchers and policymakers an important lens to understand new venture creation and growth. However, existing measures condition EE research because of 1) the absence of systematic scale development procedures and latent factor structure evaluation, and 2) limited data sources beyond the macro- or region-level. We focus on scale development and confirmatory factor analyses to select and evaluate measures that can zoom in and amplify our understanding of EE elements by combining survey data from founders at the firm-level with archival data sources at the city and rural district-level. The paper draws on a pilot study of 257 high-technology startups from Baden-Württemberg, Germany. Findings suggest that: 1) some measures can be trimmed where a subset of the items capture the focal construct well, and 2) other measures need to be improved where items do not load together as expected. The paper builds on previous research to find that 1) a first-order measurement model including ten EE elements has 'acceptable' model fit and 2) the measurement model at the district-level offers insights not observed on the region- or state-level. To advance the EE research program, validated measures are needed to refine predictions, test hypotheses, and monitor policy interventions.

ENT: **National Entrepreneurship Ecosystem: A Necessary Condition Analysis of Inputs and Outputs.**

Author: **Eduardo Avancci Dionisio**, *U. Estadual de Campinas - UNICAMP*
Author: **Edmundo Inacio Junior**, *U. Estadual de Campinas - UNICAMP*
Author: **Jose Ernesto Amoros**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Liliane Oliveira Guimarães**, *Pontifícia U. Católica de Minas Gerais*
Author: **Cristiano Morini**, *U. Estadual de Campinas - UNICAMP*

The objective of this article is to link inputs and outputs of the elements of the entrepreneurial ecosystems to elucidate priorities to policy making action. Our assessment is based on two novel aspects. The first one, is methodological approach known as Necessary Condition Analysis (NCA). The second is the combined of three different data source - Global Entrepreneurship Monitor (GEM), CrunchBase and CB Insights - for a sample of 60 countries measuring key inputs and outputs of an entrepreneurial ecosystem. Besides providing information on whether an entrepreneurial ecosystem input is a necessary condition for an entrepreneurship output, the NCA approach allowed the identification of the level of necessity of a condition to achieve a certain output level. Finding offer guidance for improving productive entrepreneurship policies, consider those elements of entrepreneurial ecosystems that do not have the same level of relevance, and the necessity for a condition does not mean that its highest level of performance is required. Our results showed that high-quality entrepreneurship measures such as VC and unicorns should be considered as an outlet to measure the performance of entrepreneurial ecosystems rather than traditional measures such as the prevalence of new and young companies. For policymakers and researchers, these findings can be used to develop more in-depth knowledge about the process of resource allocation in entrepreneurial ecosystems. Allocating political efforts to ensure that all entrepreneurial ecosystems elements are at the same level of performance is not necessary and does not ensure further entrepreneurial outputs. Therefore, policymakers should consider allocating policy efforts to improve those elements of the entrepreneurial ecosystems that are considered bottlenecks.

ENT: **Entrepreneurial Ecosystem Typologies for Entrepreneurial Dynamism: A Set Theoretic Method Analysis**

Author: **Ravi Roshan**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Krishna Chandra Balodi**, *Indian Institute of Management Lucknow*
Author: **Christina Theodoraki**, *Toulouse Business School*

The entrepreneurial dynamism of an ecosystem influences economic progress, regional development, and overall societal well-being through its three key dimensions: enterprise birth, growth, and death. We advance a configurational perspective by studying the entrepreneurial dynamism (ED) facets through the entrepreneurial ecosystem (EE) lens using a set-theoretic approach. Recent advances in the EE literature acknowledge the simultaneous causality among multiple EE constituents: formal institutions, entrepreneurial culture, financial infrastructure, human capital, innovation, and support services. The interdependencies among EE elements indicate the possibility of multiple conjectural causations and equifinality of outcomes: enterprise birth, growth, and death. We use the fuzzy set qualitative comparative analysis (fsQCA), an established approach to studying multiple conjectural causations and equifinality. We used fsQCA to obtain configurations for high enterprise birth, growth, and death rate on a panel dataset of 23 countries from 2010 to 2019. We obtained six configurations for a high birth rate and seven for a high growth rate, thus providing empirical evidence of equifinality. Our results reveal that certain EE elements take a primary role and certain EE elements take a supportive role in driving high enterprise birth rates and growth rates. Our configurational transition path analysis reveals the transition among the configurations of high birth, growth, and death rates by including or excluding certain critical EE elements. We obtain the 'configuration of productive entrepreneurship,' a common configuration between high birth and high growth rate, and the 'configuration of non-productive entrepreneurship, ' a common configuration between high birth and high death rate.

Psychology in Entrepreneurship 2

Session Moderator: **Maud Van Merrienboer**, *Vrije U. Amsterdam, School of Business and Economics*

ENT: **Dedicated Founder or Obsessed Workaholic? The Role of Grit in Entrepreneurial Workaholism**

Author: **Marvin Kaes**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

Workaholism is a common phenomenon in entrepreneurship with detrimental effects for entrepreneurs. Yet, research on antecedents of workaholism in entrepreneurship is fragmentary and more research is needed. In this study, we empirically examine the interplay of entrepreneurial grit, defined as passion and perseverance for long-term goals, and workaholism. Additionally, we integrate the individual level of mindfulness as a coping mechanism. For our research, we gathered a comprehensive sample of 1,398 entrepreneurs from all industries. Our results show that entrepreneurial grit predicts workaholism in entrepreneurship. Further, mindfulness acts as a relevant boundary condition of this relationship. With our study, we contribute to a better understanding and handling of workaholism in entrepreneurship and reveal a novel dark side of entrepreneurial grit.

ENT: **Systematic Literature Review on Psychological Detachment and Implications for Entrepreneurship (WITHDRAWN)**

Author: **Carolin Feldmeier**, *TUM School of Management, Technical U. of Munich*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*

Entrepreneurs are known to be highly dedicated to their work. They even have a reputation for not switching off from their work at all. The literature on organizational behavior has defined mentally switching off from work as psychological detachment. Despite its potential relevance for entrepreneurship research, knowledge on psychological detachment is limited in the field in contrast to the literature on organizational behavior. By conducting a systematic literature review, we identify antecedents, which particularly highlight the role of work stressors as impeding psychological detachment, and outcomes, which emphasize the importance of psychological detachment for well-being. We further identify gaps in the literature, which give rise to future research opportunities for both organizational behavior and entrepreneurship literature.

ENT: **'Be Yourself, But': Ethnic Minority Entrepreneurship and Existential Authenticity**

Author: **Maud Van Merrienboer**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Michiel Verver**, *Vrije U. Amsterdam*
Author: **Miruna Radu-Lefebvre**, *Audencia*

Entrepreneurs balance different micro-identities to construct an optimally distinct entrepreneurial identity and be deemed legitimate. This process is especially difficult for ethnic minority entrepreneurs who do not fit the hegemonic white and masculine entrepreneurial identity. An overly instrumentalist approach to the identity construction process, however, overlooks the emotional aspects of constructing an entrepreneurial identity whilst being 'othered' in the entrepreneurial space. In this paper, we take a qualitative and intersectional approach to move beyond the dominant strategic and instrumentalist perspective on the identity construction of ethnic minority entrepreneurs. To do so, we employ the notion of existential authenticity and discuss two distinct coping mechanisms six ethnic minority entrepreneurs in the Dutch technology sector employ as they navigate their authenticity, namely 'negotiating (over)compensation' and 'postponing authenticity'. We contribute to the literature on ethnic minority entrepreneurship by highlighting the emotional and complex aspect of identity construction for intersectional ethnic minority entrepreneurs. We also contribute to the small body of literature on the role of authenticity in entrepreneurship by identifying two distinct coping mechanisms pertaining to existential authenticity navigation in entrepreneurship.

ENT: **How Entrepreneurs Respond to Uncertainty: Psychological Mechanisms Driving Entrepreneurial Action**

Author: **Nima Esmaili-Konari**, *U. of Bayreuth*
Author: **Sylvia Hubner-Benz**, *Paderborn U.*
Author: **Matthias Baum**, *U. of Bayreuth*

Although entrepreneurs proactively choose – rather than avoid – uncertain environments, uncertainty is generally viewed as an undesirable barrier to entrepreneurial opportunity creation in the literature. Acknowledging that entrepreneurs are not necessarily negatively attuned towards uncertain environments, we suggest a new perspective on entrepreneurial action under uncertainty. Drawing on entrepreneurial action strategies and uncertainty regulation theory, we illuminate that entrepreneurs' responses to uncertainty are characterized by action strategies differing in proactive action and analytical thinking (ignoring the uncertainty, analysing the uncertainty, experimenting in uncertainty), and the choice of an appropriate action strategy is determined by an interplay of their uncertainty preferences with their cognitive and affective responses to uncertainty. To do so, we conducted two empirical studies, a field study (n= 118 entrepreneurs) showing which action strategies entrepreneurs choose under perceived uncertainty, and a scenario-based experiment (n= 102 entrepreneurs) showing how their cognitive and affective responses, in interaction with uncertainty preferences, predict their action strategies. Our research provides a comprehensive understanding of how entrepreneurs respond to uncertainty by illuminating the variety in entrepreneurial action strategies under uncertainty and the role of entrepreneurs' uncertainty preferences – considering that entrepreneurs likely embrace uncertainty.

ENT: **The Development of Psychological Capital as a Metacognitive Skill: An Entrepreneurship Perspective**

Author: **Aviel Cogan**, *U. of Strathclyde*
Author: **Tobias Pret**, *Illinois State U.*

While the importance of households to entrepreneurship has long been acknowledged, little is known about how household members support the cognitive development of entrepreneurs. Based on a longitudinal, qualitative study, we find that household members help entrepreneurs challenge unproductive thought processes and instead develop psychological capital by practicing self-efficacious, optimistic, hopeful and resilient ways of thinking. In contrast to the prevailing view that these psychological assets are 'state-like', we reveal them to be higher-level cognitive capabilities. In focusing on the antecedents of psychological capital as a set of metacognitive skills, we demonstrate that its development is an agentic, interactive process, rather than a passively experienced condition. Our study also highlights the everyday and affective nature of this process by demonstrating that the cultivation of psychological capital relies upon daily interaction and emotional co-regulation within emotionally intimate relationships. Thus, our findings help articulate the socio-emotional foundations of entrepreneurial cognition and portray these as positive and stabilising, rather than encumbering. Furthermore, our study highlights how household members are uniquely positioned to help develop the cognitive capabilities of entrepreneurs.

Process in Family Firms

Session Moderator: **Marco Mismetti**, *Free U. of Bozen-Bolzano*

ENT: **Conflict Origin and Management Mechanisms in Family Business Organizations**

Author: **Marco Mismetti**, *Free U. of Bozen-Bolzano*
Author: **Cristina Bettinelli**, *U. of Bergamo*
Author: **Alfredo De Massis**, *Free U. of Bolzano, IMD Business School and Lancaster U.*

In spite of an increasing interest in conflict in family firms, our knowledge of how interpersonal conflict dynamics unfold is still in its infancy. By using an interpretive grounded theory approach to in-depth study the “Cake Boss” reality television series, we theoretically, empirically and practically contribute to the origin of conflicts and their management in complex interpersonal dynamics in family firms. In so doing, based on a qualitative analysis of 85 episodes of family business representation plus archival data, we identify four sub-mechanisms - appealing to family unity, imposing organizational goals, engaging in informal and open discussions, commanding communication - assorted in two distinct conflict management mechanisms (cohesion and communication) that can be used by members of family business organizations, mediators and advisors. Then, we offer avenues for future research. The study contributes by advancing knowledge on how conflicts arise and are managed at different levels of analysis, based on the nature (type) of conflict and actors involved; it highlights key conflict management mechanisms specific to conflict types and actors; it advances the understanding of the coexistence of conflict and cohesion, and not inevitably, one the opposite of the other. Finally, our analysis contributes methodologically to the family business and organization fields, by extending research on the use of reality television series and audiovisual data analysis as a visual organizational representation of organizational phenomena.

ENT: **Hidden Faces of Hidden Champions: Communication Strategies of Niche Market Leaders**

Author: **Simone Schmid**, *U. of Siegen*
Author: **Alexander Schmid**, *Regensburg U.*

Understanding how firms portray themselves to customers and talent by communicating their image is of great interest in increasingly dynamic and global business environments. As public image transmitted via media is considered a valuable intangible asset this study investigates niche market leader firms’ external communication strategies for valorizing their public image to appeal stakeholders. The content analysis of textual and visual elements of a sample of 158 corporate websites identified four distinct communication strategies: (1) customer and product strategy, (2) success and economic independence strategy, (3) tradition and family strategy, and (4) globality and regionality strategy. Our results show that firms primarily communicate their competencies of technological supremacy, accentuating their high-quality products and services to customers. Potential talent is addressed by highlighting employability with passionate sentiments using external awards and certifications to highlight the employer attractiveness. Surprisingly, firm owners are rarely in focus and barely visible. Instead, firms are personalized through textual characteristics promoting the firms’ uniqueness via slogans, sentiments, and metaphors and visual elements of impersonal product objects and buildings underpinned with references and awards as sources of legitimation.

ENT: **Family Firms Investments in Corporate Heritage: Preliminary Results**

Author: **Giorgia Maria D'Allura**, *U. of Catania*
Author: **Fabio Quarato**, *Bocconi U.*
Author: **Giovanni Battista Dagnino**, *U. of Rome Lumsa*
Author: **Elisabetta Merlo**, *Bocconi U.*

This paper looks at two literatures (i.e., the one on corporate heritage (CH) and the other one on socioemotional wealth (SEW) priorities) to reveal how family firms use the past and history to create brand identity and enhance their legitimacy with customers and partners. Built on the SEW framework, we find a direct relationship between the presence of a family CEO and the investment in CH, that is moderated by the level of family involvement in the firm. Our empirical analysis is based on a quantitative approach applied on a sample of medium- and large-sized firms examined in the period spanning from 2000 to 2016.

ENT: **Name-Familiness, Narcissistic Communication and Cognitive Legitimacy**

Author: **Duygu Phillips**, *U. of Delaware*
Author: **Matthew W. Rutherford**, *Oklahoma State U.*
Author: **Kristen Madison**, *Oklahoma State U.*
Author: **Jorge Luis Arteaga**, *Oklahoma State U.*
Author: **Kipp Krukowski**, *Colorado State U.*

Family firm branding, specifically name choice, can be critical for firm performance. Research on this topic has provided mixed results. Drawing upon cultural entrepreneurship theory and integrating a microfoundational perspective, we theorize and empirically test the effect of name-familiness on firm performance through the influential mechanisms of cognitive legitimacy and narcissistic communication. We find support for the negative relationship between name-familiness and firm performance through the mediating role of cognitive legitimacy. This negative effect is further amplified by the level of narcissistic communication of the firm.

Institutional Entrepreneurship

Session Moderator: **Paul Steffens**, *U. of Adelaide*

ENT: **Asymmetric Impact of Business Cycles on High- and Low-End Entrepreneurship Across National Contexts**

Author: **Paul Steffens**, *U. of Adelaide*
Author: **Kim Klyver**, *U. of Southern Denmark*

Policy makers often look towards entrepreneurship during economic recovery following a downturn, yet entrepreneurship operates differently across national contexts. We examine how the business cycle ? entrepreneurial entry relationship varies across different national contexts. Specifically we investigate how this relationship changes with varying levels of economic development and government social expenditure. We theorize that context variations apply differently to "high-end" entrepreneurial entry (high-growth aspirations and opportunity-motivated) compared to "low-end" entrepreneurial entry (low-growth aspirations and necessity-motivated). We test our ideas by studying the impact of economic downturn and recovery on entrepreneurial entry across 66 countries between 2000 and 2016 – evaluating both the dot.com crash and Global Financial Crisis. Using data from the Global Entrepreneurship Monitor and World Bank, we find high-end entrepreneurial entry is pro-cyclic in developed economies, but counter-cyclic in less-developed contexts. Low-end entrepreneurial entry is consistently counter-cyclic, but government social expenditure weakens the effect. These findings suggest ways in which policies should be tailored to different economic and institutional contexts.

ENT: **When Profit is Not the Motivator: Churches as Intermediaries for Entrepreneurs in Africa**

Author: **Juliet Oriaifo**, *North Carolina A&T State U.*
Author: **Garry D. Bruton**, *Texas Christian U.*

There have been studies in the literature on the different resources that intermediaries provide to entrepreneurs in emerging markets. Despite the breadth of knowledge, there is no explanation of why intermediaries engage in such actions. This research investigates why intermediaries engage in such actions, especially those that are not financially motivated to provide firm resources to entrepreneurs (i.e., make profits). We tap into the literature on institutional biography to explain why non-financially motivated intermediaries provide resources to entrepreneurs. Using qualitative data (i.e., interviews and archival data), and a focus on African churches as intermediaries, we find that these intermediaries embody five unique institutional biographies from five sources: formal, informal, religious, organizational, and individual institutions. Furthermore, and more importantly, we find that these intermediaries' institutional biographies an be best described as communal institutions. Our findings contribute to institutional theory by integrating this theory with institutional biography for a more comprehensive explanation of the role that agents play in institutional theory, and it brings to focus the context of Africa to develop management theories.

ENT: **Decoding Relational Contracting in The Informal Economy: A Second-Best Institutions Framework**

Author: **Judy Rady**, *Virginia Tech*
Author: **Richard Hunt**, *Virginia Tech*

Until quite recently, scholarly treatments of the informal economy tended to cast a jaundiced eye upon the prospects of developing economies, especially those where massive swaths of the nation's aggregate business activity are transacted by small, unregistered, and often illegal entities in markets characterized by weak formal institutions. Revisionist approaches to study base-of-the-pyramid (BOP) populations and organizations have led to more enlightened descriptive frameworks of the informal economy, yet little progress has been made in theorizing how and why informality persists and, in many instances, functions remarkably well, despite the relative paucity of formal contracting and property protections. In this study, we develop a "second-best institutions" (SBI) framework to explain how and why some nations may be better off – perhaps permanently so – by not taking steps to eliminate the informal economy activity and by not adopting what are generally considered the "best" formal institutional arrangements to support market-based capitalism. When the cost of instituting "first-best" institutions is exorbitantly high, populations may be better served by long-lived SBIs through a reliance upon relational contracting and enacted through the intermediating activities of wholesaler-entrepreneurs, who provide the "mortar" that binds together the complex array of informal arrangements that characterize second-best institutions. Our novel development of the SBI argument contributes to the burgeoning literature in strategic management scholarship that is trying to grapple with how best to describe, predict, and assess BOP organizations, activities, and outcomes.

ENT: **Institutional Change: The Power of Collective Action**

Author: **Seham Ghalwash**, *The Technical U. of Denmark - DTU Entrepreneurship*
Author: **Francesco Rosati**, *Technical U. of Denmark*
Author: **Argyro Nikiforou**, *DTU Danish Technical U.*
Author: **Ismail Ayman**, *American U. in Cairo*

Institutional entrepreneurship is central to institutional change. We argue the unfolding institutional change process arises from collaborative practices involving institutional entrepreneurs and other organizations in the field. In that, we examine how institutional entrepreneurs, collectively with other actors, change their embedded institutions. To do so, we draw on an in-depth qualitative study of efforts to change the traditional payment institution in Egypt from cash to digital. We present a model of the institutional change process that highlights the multilevel nature of the entrepreneurial and organizational practices that enable and foster this change, showing that it entails institutional practices at the micro-,meso, and macrolevels. This research contributes to the literature by examining how institutional entrepreneurs change their institutions over time, highlighting the embeddedness of agency in the change they create; The power of collaborations, collective action, and relations; and the resulting institutional change for the society at large.

Entrepreneurial Finance: Early Stage 2

Session Moderator: **Christin Eckerle**, *Karlsruhe Institute of Technology*

ENT: **New Venture Sustainability: Signaling Effects on Business Angels' Willingness to Invest**

Author: **Subhan Shahid**, *Grenoble Ecole de Management*
Author: **Ioanna Liouka**, *EU Business School, Switzerland*
Author: **Ioanna Deligianni**, *Athens U. of Economics and Business*

This paper examines third-party sustainability certification and the self-proclaimed label of sustainable entrepreneurship as congruent reputational signals for enticing angel investors' willingness to invest. Through conducting three experimental studies samples from MTurk and angel investors in the U.S. and using 2 x 2 between-subject experimental design, we show that early-stage ventures may use such signals in their sustainability exemplification strategy in order to convey quality and prestige and eventually improve their chances of raising business angel funding. We contribute towards understanding how two congruent signals (third-party certification as a formal endorsement and self-proclaiming sustainable label as an informal reputational signal) can reinforce each other and lead to higher prestige for a new venture.

ENT: **Patterns in Preferences? Key Impact Categories in Investors' Valuation of Startups**

Author: **Christin Eckerle**, *Karlsruhe Institute of Technology*
Author: **Ann-Sophie Finner**, *Karlsruhe Institute of Technology*
Author: **Orestis Terzidis**, *Karlsruhe Institute of Technology*

This paper provides a more detailed picture of the assessment process of mission-driven startups by impact investors. It investigates how impact investors, depending on their target market and startup stage focus, value different impact categories as relevant to an investment decision. The contribution to the literature is made by reducing the complexity of the impact category system as well as by shedding some light on the impact decision criteria of European-based impact investors. For this purpose, a systematic literature review has been conducted to determine overarching impact categories. These are then applied in a survey with 69 impact investors from Europe. The results provide novel insights into the impact assessment process in early-stage startup investment, highlighting how the quantification of impact plays a major role in the investment process. Supported by the findings, this research suggests strategic implications for mission-driven startups that want to receive impact investment.

ENT: **Only Pros Can Curse?! Expressing Anger Leads to Being Perceived as Passionate and Increases Funding**

Author: **Niklas Frederik Kuehsel**, *KLU Hamburg*
Author: **Prisca Brosi**, *Kühne Logistics U.*
Author: **Jonah Rösemeier**, *London School of Economics and Political Science*

This paper investigates the impact of entrepreneurial anger expressions on investor support behaviour. The entrepreneurship literature predominantly applied a positivistic lens to emotions research in pitches focusing on consequences of positive emotional facial expressions. We complement this by examining entrepreneurial anger language as a more salient and potentially ambiguous emotional signal. Relying on emotions as social information theory and functional theories of emotions, we suggest that verbal anger expressions indirectly support the entrepreneurs' mission via perceptions of passion in quality affirming environments. A field study relying on 362 start-up pitches delivered during TechCrunch Battlefield, pooled with data from TechCrunch, Crunchbase, and LinkedIn, and an experimental design with 239 experienced crowdfunders deliver support for our hypothesized relationships. Study 1 shows verbal anger expressions to have a positive effect on pitch outcomes, while Study 2 delivers insights on the mechanism of anger positively influencing pitch outcomes via perceptions of passion contingent on quality affirming competition features. Our findings complement extant work by highlighting the importance of verbal cues and emphasizes competition related boundary conditions.

ENT: **Do "Angels" Like to Partner with "Devilish" but Successful Entrepreneurs?**

Author: **Alexander Narh Tetteh**, *school of management, USTC*
Author: **Qingxiong Derek Weng**, *school of management, USTC*
Author: **LIUDMYLA KLYMCHUK**, *school of management, USTC*
Author: **Magdalene Zeinab Ak Adams**, *school of management, USTC*
Author: **Habib Tayyab**, *Univevrsity of Science and Technology of China*

Through the lens of sensemaking theory, we investigate how angel investors (or angels) may react to entrepreneurs' prior venture success and past conflicts (i.e., task and relationship conflicts) at the initial stage of funding consideration. Drawing on a conjoint experiment methodology with 472 decisions nested within 59 participants, we found that the prominence of entrepreneurs' prior successful reputations in ventures was sharply mitigated when angels had explicit knowledge of the entrepreneurs' past conflict behaviors. However, further analyses reveal that angels were more willing to invest when entrepreneurs' past conflicts were low. Their willingness to partner was even higher when the entrepreneurs' prior venture success was proven. We discuss these findings' theoretical and practical implications to conclude this paper.

Entrepreneurial Finance: Informal Investments

Session Moderator: **Vera Rocha**, *Copenhagen Business School*

ENT: **Step by Step: The Pre-Entry Process of Informal Entrepreneurs**

Author: **SHELTER SELORM TEYI**, *Copenhagen Business School*
Author: **Marcus Møller Larsen**, *Copenhagen Business School*
Author: **Vera Rocha**, *Copenhagen Business School*

Entrepreneurship rates are relatively high in the informal economy, yet informal entrepreneurs are generally considered illegitimate by formal institutional standards, underwhelming in performance, and imitative rather than innovative. To understand the antecedents of venture creation in the informal economy, we develop a theory that explains why some prospective entrepreneurs engage in a more extensive pre-entry search for information than others. We argue that prospective entrepreneurs' human capital endowments are positively associated with the extent of search they engage in when assessing new business ideas and even more so when they are broadly embedded in informal institutional domains. However, social embeddedness can be seen as a double-edged sword because the depth of informal institutional embeddedness can erode the gains that would otherwise accrue from individuals' human capital endowments. We test our hypotheses with unique survey data from a sizeable informal cluster in Ghana – a country where over 80% of the economic activity is estimated to be informal. We find broad support for our theory and contribute with important theoretical and empirical insights on the antecedents of new venture creation.

ENT: **Investors' Evaluations of Unproven Ventures: A Configurational Perspective**

Author: **Kanwal Bokhari**, *Haskayne School of Business, U. of Calgary*

In a field study, I examine how investors analyzed signals from 50 promising, yet unproven ventures in a mentorship program in North America in 2019–2020. These signals—proof of customer interest, expert opinions, partners' presence, and mentors' testimonies—convey information about ventures' products, markets, partnerships, and entrepreneurs, respectively. Whereas studies have unambiguously demonstrated the relationship between favorable signals and outcomes, they offer a less clear picture of when signals are likely to complement or contradict each other, which is the focus of this research. In contrast with econometric studies that examine the effectiveness of specific signals in isolation, I employ qualitative comparative analysis to reveal how investors combine several signals to evaluate and select ventures. I show that signals about markets and partnerships are keys to unlocking the potential of signals about products or entrepreneurs. Investors anchor their evaluations of ventures in signals such as expert opinions on markets and the presence of partners outside an entrepreneur's family and friends. By showing how investors evaluate ventures as configurations of multiple signals, my findings refine our understanding of investor judgment and may help entrepreneurs position their ventures for favorable evaluations.

ENT: **The Venture Builder As Organizational Cofounder**

Author: **Constanze Coelsch**, *ETH Zürich*
Author: **Bart Clarysse**, *ETH Zürich*

While the entrepreneurship literature has focused mostly on the role of the individual entrepreneur in the venture creation process, the role of organizational cofounders is not yet well understood. In this paper, we aim to inductively examine this role by studying 20 venture builders worldwide. Our study reveals that venture builders are actively involved in the founding process and significantly change the mechanisms of new venture creation. In addition to professionalizing the founding process, we find that the core task of venture initiation is transferred from the entrepreneur to the venture builder. This change in dynamics can result in power imbalances. In our model, we demonstrate how organizational cofounders navigate the founding process and mitigate these imbalances through strategic mechanisms, such as labelling and becoming a part of the team. In addition to proposing a shift in the venture creation process from the individual to the organization, we shed light on the practices of venture builders, who have been previously neglected in academic studies.

ENT: **Evidence and Identity in Entrepreneurial Finance**

Author: **Michael P. Ciuchta**, *U. of Massachusetts, Lowell*
Author: **Chaim Rossm Letwin**, *Suffolk U.*
Author: **Regan M. Stevenson**, *Indiana U.*

In this conceptual paper, we develop a novel framework to account for funder judgments in entrepreneurial finance. In doing so, we challenge the assumptions inherent in the signaling approach which has been the dominant perspective in entrepreneurial finance. Our framework builds on some of these recent approaches which emphasize the importance of signal sets or clusters. We also rely on recent work on founder identity and entrepreneurial identities to develop the novel concept of funder identity. We derive a series of propositions establishing connections between funder identity and evidence used to form judgments as well as boundary conditions at the funder and context levels.

IPO Financing

Session Moderator: **Diane M. Nelson**, *Washington State U.*

ENT: **The Impact of Founders on Post-IPO Decision-Making in the Face of Performance Decline**

Author: **Diane M. Nelson**, *Washington State U.*
Author: **Chandresh Baid**, *Grand Valley State U.*
Author: **Aaron Wilson**, *Ohio U.*

Extending the behavioral agency model (BAM) of executive risk-taking, we explain how founder CEOs make decisions in the context of their companies' post-IPO performance. Analyzing stock market performance for 435 companies in the six-month period following the IPO, we found that founder CEOs, which have high levels of psychological ownership, are less likely than non-founder CEOs (professional managers) to engage in risk-seeking behavior when financial performance is poor. Venture capital backing reduced this risk-avoiding behavior. Our study extends entrepreneurial research, providing another tool for stakeholders and investors to employ in predicting the behaviors of CEOs and the performance of a venture.

ENT: **Reciprocity Relationships Between Underwriters and Institutional Investors in the IPO Market**

Author: **Chaowen Deng**, *Chinese U. of Hong Kong*
Author: **William Wan**, *Chinese U. of Hong Kong*
Author: **XUAN LI**, *Chinese U. of Hong Kong*
Author: **Daphne Yiu**, *Singapore Management U.*

This study seeks to extend research on initial public offering (IPO) by examining the intricate relationships between institutional investors and underwriters by viewing the IPO market as a social relational structure. We posit that institutional investors and underwriters maintain reciprocity relationships in the IPO market, and such relationships have a significant impact on underwriters' share allocations and institutional investors' investment decisions. Using a reciprocity dynamics perspective, our study further depicts how perceived fairness and indirect reciprocity affect the reciprocity relationships between underwriters and institutional investors. By illuminating their reciprocity relationships, our study furnishes a more in-depth understanding of the processes and mechanisms in the IPO market.

ENT: **Long-Term Performance Puzzle: High Growth IPO Firms and the Moderating Role of Post-IPO Strategies**

Author: **Mahdi Shahriari**, *Erasmus U. Rotterdam*
Author: **Yu Liu**, *Erasmus U. Rotterdam*
Author: **Tom Mom**, *Erasmus U. Rotterdam*

This study investigates the long-term performance of IPO firms. Although earlier work suggested that IPO firms underperform in the long run, recent findings show that such performance diverges significantly. In this study, we build upon expectancy violation theory and develop a conceptual framework that explains how the distinction between high growth and non-high-growth firms at IPO is important for understanding the long-term IPO performance. Our findings suggest the lower long-term IPO performance of high growth firms compared to non-high growth firms. We also explain and show how post-IPO strategies (acquisition intensity and scaling) shape this main relationship. A sample of 550 US IPOs during 2002-2015 supports our hypotheses that post-IPO acquisition intensity and scaling weaken the negative long-term performance of high growth firms such that the effect of being a high growth firm at IPO on long-term performance becomes positive.

ENT: **¿To Each Their Own? Signal Portfolios of Newly Public Ventures and Different Investors' Decisions**

Author: **Juan Carlos Rivera-Prieto**, *U. of Passau*
Author: **Bárbara Larrañeta**, *Pablo de Olavide U.*
Author: **Rocio Aguilar**, *Pablo de Olavide U.*

Building upon recent research on signaling theory, we propose that signal portfolios containing both substantive and rhetorical signals about the strategic value of employees for floating ventures can affect the decisions of various types of investors—long-term institutional, short-term institutional, and individual—in distinct ways. We test our predictions on a unique database comprising 440 fast-growing new ventures entering the principal alternative investment markets in Europe in their first three years of their existence during the period 2009-2018, capturing as substantive and rhetorical signals the average cost of employees and the extent to which the strategic value of employees is mentioned in the IPO prospectuses. We find that during the IPO valuation of new ventures long-term institutional investors react positively to both substantive and signals about the strategic value of employees while individual investors react negatively. Short-term institutional investors react negatively and exclusively to substantive signals about the strategic value of employees. Furthermore, we find that during IPO valuation the combined effect of substantive and rhetorical signals is negatively associated with long-term institutional investors, positively with short-term institutional investors, and not associated with individual investors. Our results contribute to the literature on entrepreneurship, signaling, and investors' decisions, and have meaningful strategic implications for ventures' managers and stakeholders.

The Emerging Frontiers of International Entrepreneurship Research in the Digital Age

Moderator: **Olga Petricevic**, *U. of Calgary*
Panelist: **Erkko Autio**, *Imperial College Business School*
Panelist: **Janet E.L. Bercovitz**, *U. of Colorado, Boulder*
Panelist: **Nicole Coviello**, *Wilfrid Laurier U.*
Panelist: **Giuseppe Criaco**, *Erasmus U. Rotterdam*
Panelist: **Ram Mudambi**, *Temple U.*
Panelist: **Satish Nambisan**, *Weatherhead School of Management, Case Western Reserve U.*

In this panel we will present an opportunity for a lively intellectual discussion on demystifying the evolving nature and illuminating the most promising research trajectories for international entrepreneurship in the digital age. Digital technologies, platforms, ecosystems, infrastructure and digital global connectivity have unleashed both novel opportunities and critical challenges for ventures operating across national borders. The advent of the digital age exemplifies a new reality that calls for reevaluation of existing theories and frameworks to account for new forms and new dynamics of international ventures. While affording tremendous opportunities, this also creates a multitude of issues, risks, and challenges that are underestimated in our current research approaches. In a highly engaging and interactive way, this panel symposia brings an interdisciplinary lens to the topic and aims to explicate the evolving nature and the emerging frontiers of international entrepreneurship research in the digital age.

Panelist: **Yi Zhao**, *Stanford U.*

Civic wealth refers to a community's economic, social, and communal assets and endowments. It is a broad indicator of the intellectual, affective, and material resources, capacities, and capabilities of a segment of society. Civic wealth creation (CWC) is a term used to describe what occurs when diverse stakeholders and regular citizens collaborate, participate, negotiate and coalesce around actions to improve their well-being and vitality through cooperation, kinship, and commerce. Because civic wealth creation is broadly construed and encompasses multiple actors—local leaders, community residents, entrepreneurs, funders, supporters, organizations, agencies, and others—in settings ranging from neighborhoods and villages to cities and regions, it lends itself to interdisciplinary analyses. Too often, however, conversations about CWC remain siloed within one's discipline, missing the opportunity to reveal the complexities and nuances inherent in CWC solutions. This symposium convenes leading scholars from different disciplines (e.g., entrepreneurship, organization studies, public administration, public policy, sustainability, nonprofit management) and across AOM Divisions (e.g., ENT, OMT, PNP, but also ONE and SIM) to present research that illuminates and informs the CWC conversation, and highlights its interdisciplinary nature.

Entrepreneurship is a central economic driver that leads to technological advancements and new business opportunities. But entrepreneurship is an arena fraught with uncertainty, and entrepreneurs have to make a variety of decisions under these uncertain conditions. There are a number of pillars important to the process of building a new venture – the motivation, the team, and the idea itself. Taken under uncertain conditions, the decisions about these elements are fundamental strategic decisions that impact the outcomes for the new venture and dictate the potential direction new ventures may take. Perhaps the highest uncertainty could be attributed to the very early stages of the new venture creation process, given that there are too many moving factors, especially the idea and the team. Despite a number of studies documenting the various stages of the new venture creation process, there is a dearth of studies that zoom into the very early stages of the new venture creation process and understand how the decisions made during these early stages about the fundamental building blocks affect the new venture outcomes. Studying the very early stages of the venture creation process could provide critical insights that can potentially inform the strategic decisions that entrepreneurs have to make. Through the presentations and discussion in the proposed symposium, which involves both conceptual and empirical studies and both qualitative and quantitative studies, we aim to shed light on the various decisions at the very early stage of the process of new venture creation and the potential outcomes of these decisions for the new venture.

Session Moderator: **Gary J Young**, *Northeastern U.*

HCM: **Physician Practice Migration and Changes in Practice Style: A Study of Low-Value Diagnostic Imaging**

Author: **Gary J Young**, *Northeastern U.*
Author: **David Zepeda**, *Northeastern U.*
Author: **Stephen Flaherty**, *Northeastern U.*
Author: **Md Mahmudul Hasan**, *U. of Florida at Gainesville*

Much interest exists in physicians' ability and willingness to change their practice style as research demonstrates that many physicians practice in ways that are not aligned with the best available scientific evidence. We exploit migration patterns of primary care physicians in Massachusetts over a span of eight years by tracking physician migrations to practice sites comprised of new peers. We examined whether a patient's likelihood of receiving an inappropriate referral for diagnostic imaging, specifically an MRI, was associated with a change in a physician's work environment. Study results indicate that migrating physicians did change their practice style for imaging soon after migration in conformance with the prevailing practice style of their new peer group, which directly influenced a patient's likelihood of receiving an inappropriate MRI. Physician practice style appeared malleable in either direction – more or less likely to deviate from evidence-based standards based on the new prevailing practice style of their new peer group. The effect did diminish with greater variability within the new peer group for inappropriate MRI referral rates. The results suggest that healthcare managers can influence physician behavior in the direction of evidence-based practice by adopting strategies directed towards developing strong peer influence in physicians' work environments.

HCM: **Utterance Based Analysis of Communicative Phases in Multidisciplinary Health Care Team Meetings**

Author: **Margo Janssens**, *Tilburg School of Social and Behavioral Sciences*
Author: **Samantha Van Der Bruggen**, *Department of Oncology, st Elisabeth Hospital Tilburg, The Netherlands*
Author: **Alexander Schouten**, *Department of Communication and Cognition, U. of Tilburg, Tilburg, Nethe*
Author: **Laurens Beerepoot**, *Department of Oncology, st Elisabeth Hospital Tilburg, The Netherlands*
Author: **Roger Leenders**, *Tilburg U.*

Multidisciplinary health care teams consist of experienced and highly specialized medical professionals who combine their discipline-specific expertise to advise upon suitable treatment plans for patients. In this paper, we explore how healthcare professionals communicate across time during 565 patient case discussions embedded in 38 Multidisciplinary Team Meetings (MDTMs) in two different types of oncological board meetings. We investigate, in a fine-grained way, the extent to which the team adheres to two decision-making process models (i.e., unitary and multiple sequence models). Using a mixed-method approach, we find empirical evidence for more back-and-forth communicative structures (i.e., evidence for multiple sequence models) underlying the decision-making process, especially in highly complex patient case discussions. Next, we explore the role of the initial orientation phase and how it influences the subsequent decision-making process. We find that if the team spends more time building a collective representation of the patient problem, a more efficient and structured way of communicating is observed subsequently. Adding to these quantitative findings, a more qualitative analysis shows that insufficient orientation is one of the major reasons for more back-and-forth communication. We contribute to the group decision-making literature, by providing objective and fine-grained empirical insights into the decision-making process of actual organizational multidisciplinary health care teams.

HCM: **Learning from Patients: The Impact of Using Patient Narratives on Patient Experience Scores**

Author: **Ingrid Nembhard**, *The Wharton School, U. of Pennsylvania*
Author: **Sasmira Matta**, *The Wharton School, U. of Pennsylvania*
Author: **Dale Shaller**, *Shaller Consulting*
Author: **Rachel Grob**, *U. of Wisconsin, Madison*
Author: **Mark Schlesinger**, *Yale U.*

Many healthcare organizations struggle to improve their patient experience scores despite significant effort. Enthusiasm has grown about the potential for patient narratives ? stories about care experiences in patients' own words ? to provide insights that advance organizational learning about care and thus how to improve it. However, there is no evidence establishing an association between narrative use and organizational performance. In a one-year study utilizing survey data from patients and personnel affiliated with primary care clinics, we tested whether organizations that share narratives with their personnel frequently have higher patient experience survey scores. We found that they do, conditional on domain of experience and personnel's confidence in own knowledge of patients and practice. For operational measures of experience (e.g., timeliness of care), increased narrative use correlated with higher scores for more confident personnel and higher or lower scores for less confident, depending on measure. For relational measures (e.g., patient-provider communication), increased narrative use correlated with higher scores for the less confident and lower scores for the more confident. These results indicate that narratives use should be encouraged as an improvement strategy and that organizations need to address how narrative feedback interacts with confidence to yield higher scores across domains.

We Can Work It Out: Teamwork Gone Right and Teams Gone Wrong

Session Moderator: **Robin Peeters**, *Maastricht U.*

HCM: **Does your Perception of Safety Matter? Spillover Effect Analysis During Covid-19 Pandemic**

Author: **Federica Morandi**, *U. Cattolica del Sacro Cuore*
Author: **Roberta Laurita**, *Catholic U. of Rome*
Author: **Vincenzo Nardelli**, *U. of Milan - Bicocca*
Author: **Eugenio Di Brino**, *Catholic U. of Rome*
Author: **Americo Cicchetti**, *U. Cattolica del Sacro Cuore*

This study aims to examine the organizational and network-level factors that determine patients' perception of safety during the Covid-19 pandemic. We used a unique database of 366 oncological patients and 68 breast unit team leaders operating within the Italian NHS. We used spatial econometric models to test our hypotheses. Our results reveal the importance of team stability and continuity in the provision of care in patients' perception of safety. We also highlight the invisible network between patients with similar conditions and the circumstances they experience.

HCM: **Dark Personalities and their Relationship to Counterproductive Work Behaviors Among Arab Nurses**

Author: **Aaron Cohen**, *U. of Haifa*
Author: **Geries Abdo**, *U. of Haifa*

This study examines the relationship between dark triad personality traits, counterproductive work behavior, and organizational citizenship behavior. Few studies have examined the relationship between dark triad personality traits, organizational citizenship behavior, and counterproductive work behavior among nurses. Recent literature calls for much more extensive research on this issue. The study was performed among Arab nurses in Israel. A survey was administered to 267 nursing personnel employed in Arab hospitals and healthcare organizations in the North of Israel, with a response rate of 57%. The findings showed a significant relationship between secondary psychopathy and narcissism with organizational citizenship behavior and counterproductive work behavior. The study concluded that nurses' destructive behaviors that are detrimental to the organization's effectiveness may lead to low-quality patient care and must be dealt with immediately.

HCM: **It's a Jungle Out There: Understanding Physician Payment and its Role in Group Dynamics**

Author: **Rachel Gifford**, *Maastricht U.*

Collaboration between healthcare professionals is essential for the delivery of effective, efficient, and high quality care but remains an ongoing and critical challenge across health systems. As a result, many countries are experimenting with innovative payment and employment models to incentivize better collaboration among care providers. However, the literature tends to focus primarily on improving collaboration across organizational and sectoral boundaries, ignoring potential barriers to collaborative work between members of the same profession, within organizational boundaries. Intergroup dynamics and professional boundaries have been shown to restrict patient flow and collaboration between specialties, yet, until now, studies have tended to overlook the potential of differential organizational and payment models on physicians' behaviors and group dynamics. In the present study, I work to unpack the influence of physicians' payment and employment models on their collaborative behaviors and intergroup dynamics between specialties, adding to the current scholarship on physician payment and employment by considering how physicians' view and act in response to different structural arrangements. The findings suggest that operating hybrid models, with physicians differentially employed or paid within the same organization or practice, creates a bifurcation of the profession whereby physicians across different models are perceived to behave differently and have conflicting professional values. These models were also perceived to inhibit collaboration between physicians and complicate hospital governance, restricting the ability to move towards new models of care delivery. These findings can be used as a basis for future work that aims to unpack the reality of physician payment and offer important insights for policies surrounding physician employment.

HCM: **Does Autonomy Affect Multidisciplinary Team Performance? The Mediating Role of Boundary Spanning**

Author: **Luca Giorgio**, *U. Cattolica del Sacro Cuore*
Author: **Roberta Laurita**, *Catholic U. of Rome*
Author: **Federica Morandi**, *U. Cattolica del Sacro Cuore*

This study examines the determinants of the multidimnesional performance of multidisciplinary team. Existing research on multidisciplinary team in healthcare is maily focused on patient outcomes and satisfaction, efficient use of staff time, improved staff satisfaction, and decreased monetary expenditure. In this research we aim to shed light on the organizational conditions in which team members act and the degree of collaboration they maintain in order to achieve performance. We posit that team member's perception of team autonomy plays a crucial role in promoting work team performance. We also predict that the esistence of relations with colleagues outised the focal organization, i.e. boundary spanning, moderated the positive relations between autonomy and performance. We find general support for our arguments in an analysis of data on among 174 belonging 22 multidisciplary teams in the Italian National Health Service. We discuss the theoretical and practical implications of organizational characteristic that affects teams' performance and how the external relations may influence this effect.

HCM: **The Role of Transactive Memory Systems, Psychological Safety & Quality in Interprofessional Teams**

Author: **Tera Webb**, *U. of Alabama, Birmingham*

Objective: Through research we know that placing different healthcare professionals together in an interprofessional (IP) team can be beneficial, but we do not know what mechanisms unlock effective knowledge exchange in these teams. Without this knowledge, we cannot foster the environment needed for IP teams to produce favorable outcomes in patient care delivery. Methods: A cross-sectional, quantitative study using survey data to measure the independent variable of psychological safety (PS), the mediating variable of transactive memory systems (TMS), and the dependent variable of perceived quality of care. Data was collected from IP ambulatory teams. Key Findings: For team-level analysis, the final dataset included 209 individual respondents that were aggregated into 27 teams. Path analysis revealed that PS was positively associated with TMS (ß=.49, $p<0.001$). and perceived quality of care (ß=.19, $p<.05$). TMS was not significantly associated with perceived quality of care (ß=.13, $p>.05$) and TMS did not play a mediating role (ß=.07, $p>.05$). Relevance: Findings demonstrate that PS must be situated in the team so that TMS can emerge. In addition, findings reinforce previous evidence in the literature that states PS positively impacts quality of care. Keywords: quality; psychological safety; transactive memory; interprofessional teams

HRM and Workplace Experiences

Session Moderator: **Annie Eunhee Kim**, *U. of Nevada, Reno*

HR: **An Organizational Model of Age Differences in Working From Home**

Author: **Max Reinwald**, *LMU Munich*
Author: **Hendrik Huettermann**, *BWU Munich*
Author: **Heike Bruch**, *U. of St. Gallen*

Many organizations offer the possibility to work from home, resulting in hybrid workplaces with employees working on- and off-site. While this trend holds many promises, it has also been proposed to constitute a risk to an organization's diversity, as the propensity to work from home may systematically depend on employee demographic characteristics, such as their age. Integrating the age diversity literature with the literature on flexible work arrangements, our study investigates age-related differences in both the availability and the actual usage of working from home. Building on the social identity approach and the organizational climate literature, we develop and test an organizational-level model on both consequences and antecedents of age-related differences in working from home. Findings from a multi-industry study of 12,777 employees and HR managers in 82 German firms show that age differences in the access to working from home are negatively related to employees' collective organizational identification and subsequent organizational performance. Moreover, we can show that an age-inclusive organizational diversity climate prevents age biases in the access to working from home. Contrary to expectations, however, age differences in the usage of working from home had a positive impact on employees' collective organizational identification and thereby indirectly benefitted company performance.

HR: **Workforce Aging and Firm Performance: The Moderating Effects of HRM and Organizational Culture**

Author: **Annie Eunhee Kim**, *U. of Nevada, Reno*

Little is known about the effects of company-wide workforce aging on different firm performances, although the relationship between individual aging and job performance and between top management demography and organizational outcome is relatively well verified. Employing theories regarding abilities, motivations, and opportunities of employee, I theorized that workforce aging is positive for firm sales performance, but insignificant for firm profit performance. I also suggested that the relationship between workforce aging and firm performance is moderated by performance-based pay system and externally oriented cultures – adhocracy and market cultures. The theoretical arguments are tested by using data from 229 Korean firms in the manufacturing sector, and the hypotheses were generally supported. The results indicate that workforce aging is an ambivalent social trend which has both of advantages and disadvantages on firms performances, and that the disadvantages can be overcome by contextual factors such as Human Resource Management (HRM) practices and organizational cultures. Future research can test the relationship between workforce aging and firm performance by using various indicators of workforce aging and organizational outcomes within different contexts.

HR: **Harmonious Passion and Procrastination: An Exploration Based on APIM**

Author: **Yifei Shen**, *Dalian U. of Technology*
Author: **Zhenduo Zhang**, *Dalian U. of Technology*
Author: **Qian Li**, *Dalian U. of Technology*

Procrastination is becoming widespread among hospitality employees during the COVID-19 pandemic. This study attempts to explore the relationship between harmonious passion and procrastination at the intra- and interpersonal levels within the theoretical framework of the job demands- resources model and spillover-crossover model. Using a two-wave multi-source questionnaire survey, this study collected 256 cases nested in 128 coworker dyads from two hotels in Shanghai. Multilevel analysis and the actor-partner interdependence model were adopted to test the hypotheses. The results indicate that: 1) employees' harmonious passion is indirectly negatively associated with procrastination through workplace well-being at the intrapersonal level; 2) employees' harmonious passion is indirectly negatively associated with their coworkers' procrastination through the coworkers' workplace well-being: 3) the crossover influence of employees' harmonious passion on coworkers' workplace well-being is contingent upon interpersonal conflict at the dyadic level, such that the crossover influence is stronger in condition of low rather than high interpersonal conflict. This study provides a comprehensive insight into the relationship between harmonious passion and procrastination in hospitality employees, which extends our understanding of the outcomes and benefits of harmonious passion at interpersonal level, and defines the boundary condition under which harmonious passion has a crossover influence on coworkers' workplace well-being.

HR: **A Relational Approach to HRM and Cultivating Social Capital: Developing an Integrative Theory**

Author: **Al-Karim Samnani**, *U. of Windsor*

There has been increased attention to the importance of workplace relationships and social capital within the context of human resource management (HRM). This has led researchers to explore several distinct, but related concepts and theories, such as relational climate, relational coordination, and social networks. Extending and integrating this research, this manuscript develops an integrative theory and conceptual model. This integrative relational theory of social capital posits four key features – shared context, information asymmetry, tie dependence communication, and an extended network of ties – to cultivate social capital among employees. Using this theory, this manuscript theorizes and elucidates the relationship between relational HRM practices and social capital. Theoretical and practical contributions are highlighted, while setting an agenda for future research.

HR: **Social Networks, Social Exchange, and Citizenship Behavior**

Author: **Thomas Joseph Zagenczyk**, *North Carolina State U.*
Author: **Kevin S. Cruz**, *Georgia Southern U.*
Author: **E. Erin Powell**, *North Carolina State U.*

Research on helping behavior in the workplace (organizational citizenship behavior; OCB) typically takes a view steeped heavily in individual-level psychology (e.g., organization- and job-related attitudes predict helping) or relational factors (e.g., relationships with others predicts helping). We bring these perspectives together and test the direct relationships between the (1) quality of an employee's social exchange relationship with the organization (SER); (2) the relationships between advice and friendship ties and OCB; and (3) the moderating effects of social network variables on the relationship between social exchange relationship quality and OCB. Although we do not find the expected direct relationship between SER and OCB, we do find that there is a direct relationship between advice network in-degree centrality (the number of advice ties an employee has, as reported by others) and OCB, as well as a significant interaction between SER and out-degree friendship centrality (the number of friends that an employee reports that they have). Our research offers a more nuanced perspective on social exchange that considers both individual-level psychological principles and relational factors, rather than just one or the other, and teases out important differences between friendship and advice ties in predicting citizenship behavior.

HR: **Numbers v. Narrative: The Format of Performance Feedback and its Consequences**

Author: **Emily Zitek**, *Cornell U.*
Author: **Caitlin Stroup**, *Cornell U. and 3M*
Author: **Joonyoung Kim**, *Cornell U.*
Author: **Alin Weingarten**, *Cornell U.*

Should organizations follow the recent trend of removing numbers from their performance appraisals? In two experiments, we compared how people responded to hypothetical performance feedback that was delivered in a numerical-only format (i.e., number ratings of how the employee did), a narrative-only format (i.e., a write-up of the employee's strengths and weaknesses), or a combination of the two. Our results showed that people generally perceived narrative-only feedback as the fairest (likely because they felt the least negatively evaluated by it), but this was not the case when they received extremely positive feedback or they found out about associated monetary outcomes. Furthermore, our results indicated that recipients of feedback with a narrative component had more knowledge of how to improve their future performance. Thus, simple differences in the format of performance feedback can affect fairness perceptions and improvement intentions of employees. Organizations should be cognizant of these issues when designing performance appraisal practices.

HR: **Oh My Goodness: Investigating the Goodness of Performance Appraisal Formats Between and Within Teams**

Author: **Jana Kim Gutt**, *Paderborn U.*
Author: **Miro Mehic**, *Paderborn U.*
Author: **Kirsten Thommes**, *Chair of Organizational Behavior, U. of Paderborn*

Performance appraisals are subject to recent debates with one common denominator: most discussions point to their lack of accuracy. In theory, performance appraisals aim to reflect an employee's performance over a certain period of time. However, recent research shows that appraisals fall short in reaching this goal. Although many studies acknowledge the benefits of open-ended performance comments over closed-ended ratings on a scale, research has paid little attention to the potential of performance comments in achieving higher accuracy in performance evaluations. To approach this issue, we conducted a laboratory experiment and collected objective performance data as well as closed- and open-ended performance appraisals. In particular, we compile numerical ratings, written comments, and spoken comments on performance. To make the numbers and the texts comparable, we applied a Random Forest algorithm to transfer the comments into numerical ratings. Additionally, we conducted our analyses between and within teams to examine the evaluation behavior on different levels. By analyzing each rating (assigned and text-based) in relation to the performance, we find preliminary evidence that open-ended formats reflect performance most accurately within a team. Between teams, no appraisal format reflects performance accurately. Our results provide essential implications for conducting performance appraisals with informative value in terms of objective performance.

HR: **Employee Reactions to Negative Feedback: Unpacking the Consequences of Feedback on Employee Outcomes**

Author: **Emily Sue Corwin**, *Bentley U.*
Author: **Lauren Simon**, *U. of Arkansas*

Although negative feedback should facilitate performance and goal attainment, scholars have suggested that it can have unintended consequences that impede, rather than improve, employee performance. While a large literature on feedback reactions indicates that negative feedback receipt can be an aversive experience, an important limitation of this research is the emphasis on annual performance reviews and other "one-shot" situations, with less attention given to the negative feedback process as it unfolds in organizational settings. To enhance understanding of informal feedback processes, we draw from self-regulation theory to develop and test a conceptual model that identifies two mechanisms—felt competence and cognitive depletion—that explain how and why negative feedback receipt impacts employee effectiveness on a daily basis. Further, we identify trait self-control as a boundary condition that might mitigate the deleterious effects of negative feedback on employee outcomes. Our results were generally supportive of our theory, indicating that negative feedback reduces (a) employees' belief in their capacity to achieve their goals (i.e., felt competence), as well as (b) the availability of cognitive resources needed to do so. Additionally, we found that for those with higher trait self-control, the negative relationships between negative feedback receipt and employee work outcomes are attenuated.

HR: **Stop Watching Me! Potential Negative Effects of Electronic Monitoring on Employees' Job Performance**

Author: **Qin Zhou**, *New Mexico State U.*
Author: **Carol Flinchbaugh**, *New Mexico State U.*

Our study conceptualizes how agency theory depicts a relationship between an employer's use of electronic monitoring and employee performance by incorporating the effects of employee self-evaluation and self-determination from self-determination theory. Electronic monitoring is a growing practice for most companies to ensure the quality of employees' work when they work from home. Agency theory suggests that electronic monitoring, as a form of surveillance may prevent employees from behaving opportunistically and impact employee performance positively. However, self-determination theory suggests that an employer's use of electronic monitoring to deter employees' unwanted behaviors may reduce employees' felt trust and employees' perceived autonomy, thus resulting in lower job performance. To disentangle the conflicting outcomes surrounding employee performance in the context of employer's electronic monitoring, we posit that the intensity of telework will impact employees' job performance by affecting the relationship between electronic monitoring and employees' felt trust and autonomy. More specifically, we posit that the use of electronic monitoring bears a negative relationship with employees' performance, especially when the intensity of telework is high. We suggest that the opposite holds true with the low-intensity of telework (e.g., hybrid), such that employee performance is not negatively compromised given the information exchange that employees receive when in-person reduces the deleterious effects of information asymmetry. We will conceptualize the relationships underlying these expectations in this study.

HR: **Evaluation of Human Labor in Human-Robot Working Environments: Empirical Evidence**

Author: **Arna Woemmel**, *U. of Hamburg*
Author: **Gari Walkowitz**, *Technical U. of Freiberg*

We study how the introduction of robots into the workforce affects the subjective evaluation of human work performance, using an online vignette experiment (N=1,321). In the experiment, subjects assumed the role of supervisors in a taxi company and rated individual work performance of human taxi drivers in a three-member-workforce based on quantitative performance results. We compare a baseline rating in which the workforce consisted of three human drivers to two treatments in which the workforce consisted of (i) two human drivers and one robotaxi, and (ii) one human driver and two robotaxis. The performance of both human drivers and robotaxis varied across top, average, and low levels. We find that ratings for low-performing human workers are higher in the treatment with two robots and one human worker than ratings in the other two conditions. Top-performing human workers, however, are rated more strictly as robot performance increases. These findings suggest differential implications of workforce automation on leniency bias in performance evaluation depending on the level of robotic job displacement and the performance level of human workers.

Work-Life Harmony: Policies, Perspectives, and the Future of Well-being

Session Moderator: **Yeong-hyun Hong**, *U. of Michigan, Dearborn*

HR: **Impact of Paternal Job Insecurity and Youth's Perceived Employability**

Author: **Qian Shanshan**, *Business school, Guangdong U. of Foreign Studies*
Author: **Vivien Lim**, *National U. of Singapore*
Author: **Thompson Teo**, *National U. of Singapore*

This study examines the crossover effect of paternal job insecurity on youth's perceived employability. Drawing from crossover and conservation of resources theories, we posit that paternal job insecurity is negatively related with youth's perceived employability through paternal career support. As well, we hypothesize that maternal financial contribution to the household attenuates the negative relationship between paternal job insecurity and paternal career support, and youth's identification with father strengthens the positive relationship between paternal career support and youth's perceived employability. Data were collected from a sample of undergraduate students and their fathers. Results supported the crossover effect of paternal job insecurity on youth's perceived employability through paternal career support. The negative relationship between paternal job insecurity and paternal career support was weaker when maternal financial contribution to the household was higher. The positive relationship between paternal career support and youth's perceived employability was stronger for youth who identify strongly with father. The indirect effect of paternal job insecurity on youth's perceived employability through paternal career support was strongest when maternal financial contribution to the household was lower and youth's identification with father was higher. Implications of the findings are discussed.

HR: **Intent Attributions for Work-Family Support Policies, Policy Use, and Employee Attitudes**

Author: **Yeong-hyun Hong**, *U. of Michigan, Dearborn*
Author: **Michael Thomas Ford**, *U. of Alabama*
Author: **Xiaochuan Song**, *Texas A&M U. - Kingsville*
Author: **Jung Hyun Lee**, *U. of Michigan, Dearborn*
Author: **Yinyin Cao**, *U. of Michigan, Dearborn*

The purpose of this paper is to investigate the relationships between employees' attribution of their organization's work-family support practices with employees' actual use of the policies, affective organizational commitment, and organizational citizenship behaviors (OCB). Based on the analysis of data gathered through a three-wave survey study ($N = 251$), results indicated that a performance improvement goal behind work-family support practices (perceived by employees) was positively related to actual policy use, whereas that of a well-being improvement goal was not. Perceiving a well-being improvement goal, however, was positively and directly related to employees' affective commitment after accounting for their use of work-family support practices. Results further supported the indirect relationship between employee perceptions of a well-being improvement goal and OCBs via their affective organizational commitment. On the other hand, the indirect relationships between employee perceptions of a performance improvement goal and OCBs through the use of work-family support practices and affective commitment were not statistically significant. We discuss the implications of our study for theory and practice.

HR: **Work-Life Ideologies: Measure Development and Theoretical Refinement**

Author: **Sabrina L. Speights**, *Wheaton College*
Author: **Lisa Michelle Leslie**, *New York U.*
Author: **Eden King**, *Rice U.*
Author: **Elinor Flynn**, *The Wharton School, U. of Pennsylvania*
Author: **Judith A Clair**, *Boston College*

Theory suggests that individuals hold at least three ideological beliefs about the relationship between work and personal life: fixed- versus expandable-pie ideologies, segmentation versus integration ideologies, and work- versus life-priority ideologies. Moreover, although prior theory suggests that these ideologies are consequential, no validated measure or empirical test of the effects of work-life ideologies exists. As a result, questions remain regarding the construct's dimensionality, discriminant validity, and utility for understanding key outcomes in the work-life literature. To address these limitations, we develop and validate a measure of work-life ideologies, which we then use to provide an initial test of its effects. To this end, we first generate items and assess their content validity (Study 1). We then explore the items' factor structure and assess discriminant validity vis-à-vis related constructs (Study 2). Finally, we confirm the items' factor structure and assess predictive validity (Study 3). Our work extends work-life theory and research by supporting several aspects of the original theorizing regarding work-life ideologies, while also providing a theoretical refinement regarding the construct's nature and consequences and a roadmap for future work.

HR: **Work-life Balance: A Landscape Mapping of Two Decades of Scholarly Research**

Author: **Gertrude Iranganie Hewapathirana**, *Gulf U. of Science and Technology*
Author: **Mohamed Moustafa**, *Gulf U. for Science and Technology*
Author: **Michel Zaitouni**, *Gulf U. for Science and Technology*
Author: **Raghid Al Hajj**, *Gulf U. of Science and Technology*
Author: **Ahmed Rashad ElMelegy**, *Gulf U. for Science and Technology*

The major purpose of this research is to analyze peer-reviewed work-life balance (WLB) research to identify the gaps, hotspots, underlying dynamics, theoretical and thematic trends, influential authors, research collaborations, geographic networks, and the multidisciplinary nature of the WLB theory. Using keywords such as WLB and associated variants, 1,190 peer-reviewed articles were extracted from the Scopus database. Results reveal that the WLB theory has grown into a multifaceted, multidisciplinary field of research. Results also reveal a "Locally-centralized-globally-discrete" collaboration among researchers, indicating a "North-South" divide between developed and developing nations. This lack of research collaboration hinders a global understanding of the WLB as a universal phenomenon. We believe that this study represents the most comprehensive WLB landscape analysis that reveals emerging trends, concepts, networks, underlying dynamics, and growing theoretical and disciplinary boundaries.

HR: **Role of Future of Work for a Sustainable Work Life and Well-being**

Author: **Adrian Heng Tsai Tan**, *Curtin U.*

While research and practical interest in the future of work has been gaining momentum, there are concerns with deterministic views of work contradictions regarding what sustainable work life and well-being might be. This paper systematically reviews the literature to synthesize the role of the future of work for a sustainable work life and well-being of workers. Undertaking a bibliometric systematic review methodology, the review uncovered four major research themes which led to the development of a continuum model of the future of work, used as a lens to appraise the role of the future of work in decent work and employment, occupational health and safety, job performance and satisfaction, and gender, age and work ability issues. Despite varying perspectives there is rising inclination towards more humanistic perspectives in which sense-making of work is crucial to aid the development of a sustainable work life and well-being. Strong humanistic and ethical foundations are suggested for the role of the future of work.

Employee Experiences in the Virtual Workplace

Session Moderator: **Elena Ressi**, *U. of Graz*

HR: **Virtual Team Leadership: An Integrative Framework**

Author: **Thao Phan Hanh Nguyen**, *Cornell U.*
Author: **Bradford S. Bell**, *Cornell U.*

Research on virtual team leadership has relied on theories developed for dyadic leader-member relationships or has focused on the informal authority executed by team members, leaving many questions regarding the role of formal leaders unanswered. Integrating Bell and Kozlowski's (2002) and Hill and Bartol's (2016) theoretical perspectives with the functional leadership framework, we posit that formal leaders who engage in certain guiding and empowering functions enhance collective performance by enabling their virtual teams to self-manage. A scenario-based experiment and a 10-week field study of 70 virtual team leaders and 376 members in two Fortune 500 organizations generally support our theorizing. The field survey further shows that the effects of the formal leadership functions at both the individual and team levels are moderated by media richness. More commonly studied dimensions of virtuality including geographical dispersion and technological reliance had negligible moderating roles. We discuss our contributions to the virtual teams and leadership literatures and offer practical guidance for those who are charged with managing in a virtual environment.

HR: **Decision-making on Working from Home: An Opportunity for Inclusive Organizational Behavior?**

Author: **Elena Ressi**, *U. of Graz*
Author: **Silvana Weiss**, *U. of Graz*
Author: **Renate Ortlieb**, *U. of Graz*

In the context of working from home triggered by the Covid-19 pandemic, we theorize on inclusive organizational behavior (IOB), considering participation as a key element in dealing with diverse interests among organizational actors when defining the future of work. We adopt a mixed-method design to examine qualitative data from four companies as well as data from an online survey of 157 companies. In Study 1, we identify four IOB approaches (harmonizing, balancing, silencing, and blighting), illustrating how organizational actors (managers, HR managers, employees, and the latter's representatives) deal with diverse interests in more or less participative ways. We develop a model of IOB that integrates the interaction between heterogeneity of interests and participation targeting organizational culture, organizational structures, and everyday (inter-)actions. In Study 2, we examine the relationship between heterogeneity, participation, and organizational experiences with working from home. Our findings show that a higher degree of participation relates positively to experiences with working from home. The results on heterogeneity and its interaction with participation are more inconclusive. Our research contributes to the conceptualization and practical implementation of IOB by emphasizing the importance of participation in co-creating coherence between given and potentially emerging interests in a constantly changing world of work.

HR: **Work Away, Feel Close: How Does Telework Relate to Employee Work Alienation?**

Author: **Ying Zhang**, *Renmin U. of China*
Author: **Zhen Wang**, *Renmin U. of China*
Author: **Guodong Cui**, *Shandong U.*

This study draws on self-determination theory to investigate the relationship between telework and work alienation and take into account the mediation effect of autonomous motivation. Further, this study theorizes and examines human resource practice flexibility (HR practice flexibility) as the boundary condition in this relationship. In study 1, a two-wave survey was conducted. The results indicated telework had an indirect effect on work alienation via autonomous motivation and the indirect effect was stronger when HR practice flexibility was high. These results were confirmed in Study 2 with a three-wave survey data. Implications and future research directions are discussed.

HR: **Welcome Home!? A Meta-Analysis on the Covid-19 Pandemic's Consequences for Remote Work**

Author: **Elka Thevanesan**, *Ruhr U. Bochum*
Author: **Matthias Weiss**, *Radboud U. Nijmegen*

Remote work has recently experienced a great increase in relevance. Prior research portrays both positive and negative aspects connected to this flexible work arrangement. Taking advantage of the extraordinary situation due to the COVID-19 pandemic, when employees worldwide have been shifted to working remotely, this paper aims to investigate the effects of remote work on employees when remote work is not a choice but an obligation. Using a meta-analysis of 87 independent studies including 62,797 participants, we obtain insights on the impact of remote work before and in an exceptional setting. Comparing empirical evidence before and since the pandemic, results show that the pandemic and the sudden shift to remote work have had an overall negative impact on employees, leading to a deterioration in well-being, decrease in performance, motivation, and job satisfaction. However, a decreasing trend in emotional exhaustion and work-family-conflict in these results may indicate better and faster recovery when working at home. A second meta-analytical approach implies an overall positive effect of remote work before the pandemic, while indicating a more negative impact since the pandemic. Our results show significant changes between both periods, suggesting a negative impact of remote work when introduced suddenly or unprepared.

Agile Talent Management

Session Moderator: **Stefan Jooss**, *U. of Queensland*

HR: **Towards Agile Talent Management: The Opportunities of a Skills-first Approach**

Author: **Stefan Jooss**, *U. of Queensland*
Author: **David Collings**, *Trinity College Dublin*
Author: **John Francis McMackin**, *Dublin City U. Business School*
Author: **Michael Dickmann**, *Cranfield U.*

Despite its evolution over the last two decades, talent management has been criticised for being too static in its approach. Drawing on matching theory and adopting an agility lens, we show how a skills-matching perspective on talent management fosters the development of strategic agility, responsive to external and internal demands. Through qualitative research encompassing 34 interviews in 15 multinational enterprises, we illustrate how a skills focus required revisiting talent strategies to facilitate initial and dynamic matching in external and internal labour markets, and we highlight key boundary conditions for skills-matching. We reveal a set of dynamic capabilities, underlying two meta-capabilities, strategic sensitivity and resource fluidity, which underpin the skills-matching process and enable strategic agility. In doing so, we shift the focus of talent management towards skills acquisition and development, and emphasise the need to look beyond traditional learning and development to alignment across the wider talent function.

HR: **Managing Talent with In-house Employee Assistance Programmes: A Qualitative Extension of HRM Agility**

Author: **Tianyi Long**, *PhD Student at Monash*

One of the greatest challenges facing contemporary organisations is building resilient talent pipelines to ensure an adequate knowledge base and human capital. In the change-oriented dynamic business environment, dynamic capabilities of talent management (TM) have been seen as a prerequisite for organisations to survive in the era of talentism. This study focuses on the research and practice of a widely adopted but understudied human resource management (HRM) practice— employee assistance programmes (EAPs) in TM processes. Drawing on 42 in-depth interviews from multilevel participants in a wide range of industries in China, we unveil that in-house EAPs allow more dynamic mobilisation of resources to ensure HRM is adapted quickly to new challenges in attracting, developing, and retaining talents. In addition, they are conducive to developing organisational strategic agility with proactive and preventative functions. Novel insights are also offered on why keeping EAPs in-house gains organisations agile and strategic advantages, compared to the prevalent outsourced programmes. This study contributes to explicating and theorising the process through which in-house EAPs can foster dynamic capabilities of organisations in the whole TM process, and thus contribute to fostering HRM and organisational strategic agility. An integrative conceptual framework of this process is also provided.

HR: **Talent Management Implementation in Indian Organizations: Surviving or Thriving during the COVID-19**

Author: **Uday Bhaskar**, *Institute of Management Technology Ghaziabad, India*
Author: **Sherry E. Sullivan**, *Bowling Green State U.*

Despite the growing interest in Talent Management (TM), few empirical studies have examined how it is actually implemented in organizations. To address this research gap and gain a greater understanding of TM implementation, we examined organizations operating in India during the COVID-19 pandemic. Employing qualitative inquiry, 42 semi-structured interviews with managers from 21organizations were completed. Each manager was interviewed during both wave one and two of the pandemic. Based on our analysis of the interviews and triangulation with archival data, four aggregate TM themes were identified: obstacles to employee performance, changes in competency building, organizational approaches to employees' work well-being, and HR departments taking on new responsibilities during the pandemic. While we found relatively little variance among the organizations for three of the TM aggregate themes, there was a substantial variance in the TM approaches used to enhance employees' work well-being. We propose a model that integrates TM research and the theory of thriving to explain our findings. Directions for future research and implications for managers are discussed.

HR: **Gendered Social Consequences of Job Crafting for Early-Career Talent**

Author: **Zhishuang Guan**, *U. of Maryland, College Park*
Author: **Hui Liao**, *U. of Maryland*

Focusing on individuals at their early-career stages, this paper examines the social consequences of early career talent's two types of job crafting (i.e., increasing structural job resources and challenging job demands). Drawing on the multiple categorization theory, we propose that both types of job crafting can earn early-career talent more coworker support, which carries consequential influences for important job outcomes, such as intent to stay and career advancement. Meanwhile, we propose the effects of increasing challenging job demands will be moderated by gender. We tested our hypotheses utilizing multi-wave data of 228 interns matched with data from their colleagues, objective HR records for career advancement, and the annual employee survey database of a large company. We found while increasing structural job resources benefited both male and female interns in terms of gaining more coworker support, increasing challenging job demands only benefited male interns. Coworker support, in turn, not only enhanced interns' desire to stay with the organization via higher job satisfaction, but also increased their chances of receiving an official job offer from the company via better job performance. This research extends our understanding of how early-career talent's social and career outcomes are impacted differently depending on their engagement in different types of job crafting strategies and on their gender, and offers interesting research and practical implications on early-career talent.

Green Initiatives and Social Responsibility

Session Moderator: **Zhenya Zhang**, *U. of Electronic Science and Technology of China*

HR: **Why and When Employees Speak out in Greenwashing Organizations: A Mediated Moderation Model**

Author: **Zhenya Zhang**, *U. of Electronic Science and Technology of China*
Author: **Lu Chen**, *U. of Electronic Science and Technology of China*
Author: **Yilin Xiang**, *U. of Electronic Science and Technology of China*
Author: **Yutong Zhou**, -

Based on the social cognition theory of morality and taking the perspective of employee, we build and test a mediated moderation model in which perceived greenwashing interacts with perceived inter-organizational competitive pressure to affect ethical voice through moral disengagement. A multisource time-lagged organizational field survey from 250 members and 62 supervisors was conducted to test our model. Results show that perceived greenwashing negatively (positively) affects ethical voice through moral disengagement under high (low) perceptions of competitive pressure. The studies indicate that when employees feel that their organizations are under greater competitive pressure, the stress may cause them to suppress their objections to greenwashing through moral disengagement. The findings have implications for the social cognition theory of morality and for managers who want to encourage ethical voice and discourage moral disengagement.

HR: **Modeling Workplace Green Performance: Moderation of Problem-based Learning**

Author: **Chieh-Peng Lin**, *National Yang Ming Chiao Tung U.*
Author: **Chou-Kang Chiu**, *National Taichung U. of Education*
Author: **Pei-Feng Wu**, *National Yang Ming Chiao Tung U.*

Drawing upon self-determination theory and situated learning theory, this work proposes a theoretical model that shows how self-determined motivation influences workplace green performance. In the model, workplace green performance is indirectly influenced by perceived autonomy, competence, and relatedness as three predictors via the mediation of green learning goal orientation (Green-LGO). In the meantime, the effects of the three predictors on Green-LGO are hypothetically moderated by problem-based learning. An anonymous field survey on engineers was conducted across two large semiconductor companies. Multiple statistical methods such as hierarchical moderated regression analysis and structural equation modeling were performed to verify the proposed hypotheses of this study. Finally, this study presents research

HR: **Sustaining Workers: The Influence of Environmental Sustainability on Employees' Commitment to Work**

Author: **Cristen Dalessandro**, *O.C. Tanner Institute*
Author: **Alexander Lovell**, *O.C. Tanner Institute*

Recent reports suggest that employees are increasingly seeking out organizations with environmentally-friendly reputations. However, we still don't fully understand the extent to which environmentally-friendly policies and practices matter when it comes to organizational efforts to recruit and retain employees. Thus, in this paper, we use original survey data with an international group of employees (N=3,101) to investigate the extent to which environmental sustainability practices matter for employees' self-reported levels of commitment to their organizations. In particular, we are concerned with how environmental sustainability matters to workers of different ages/generations, although we explore how additional demographics might also matter. Using a logistic regression model, we found that younger workers, including millennials (OR: 2.21; 95%CI: 1.45-3.40) and Gen Z workers (OR: 3.12; 95%CI: 1.66-6.10) as well as leaders (OR: 1.90; 95%CI: 1.45-2.50) reported that an employer's sustainability practices matter significantly for how committed they feel to their jobs. Separate chi-square analyses also found that leaders and younger workers were significantly more likely to say they would look for another job if they discovered that their current employers had environmentally unfriendly practices. While organizations struggle to find talent and to build diverse and inclusive workplaces in the wake of "The Great Resignation," commitment to environmental sustainability is one potential untapped strategy for recruiting and retaining groups of in-demand employees.

HR: **What is the Role of CSR Champions in Facilitating Employee CSR Engagement?**

Author: **Kelsy Hejjas**, *Edinburgh Napier U.*
Author: **Caroline Scarles**, *U. of Surrey*
Author: **Graham Miller**, *U. of Surrey*

Although corporate social responsibility (CSR) champions and employee CSR networks are increasingly used to embed CSR throughout organizations, there remains a lack of understanding relating to how leadership between co-workers, as opposed to managers and subordinates, influences employee willingness to engage in CSR. The aim of this research was therefore to analyse employee perspectives on the perceived role and effectiveness of CSR champions in facilitating employee CSR engagement. Semi-structured interviews with CSR champions (22) and both engaged (15) and disengaged (14) employees were conducted across three hospitality and tourism organizations. Stakeholder, social identity, and social capital theory were subsequently utilised to explain both individual and relational mechanisms affecting employee behaviour in relation to CSR peer-leadership and CSR engagement, and how these may differ between employees based on their existing level of engagement. Counter-intuitive findings suggest that although champions can drive engagement, these individuals also actively facilitate disengagement. A spectrum of employee CSR engagement is subsequently presented, identifying how employees' current levels of engagement, social capital, and social identity moderate the effectiveness of leadership by CSR champions. By acknowledging individual needs in relation to CSR engagement, the framework presents alternative means to engage a range of employees, including those who are disengaged from organizational CSR.

Talent for the Future of Work

Session Moderator: **Kiran Marlapudi**, *Indian Institute of Technology Roorkee*

HR: **Empowering the Worker in Industry 4.0: A Study on Redefining Talent, and Evolving Competencies**

Author: **Kiran Marlapudi**, *Indian Institute of Technology Roorkee*
Author: **Usha Lenka**, *PROFESSOR, Head of Management Studies, IIT Roorkee*

Talent, the intangible asset of an organization, is the source of competitive advantage, making talent management (TM) practices more prevalent across industries. The business environment of the global economy has entirely transformed since the call of the "war for talent," necessitating the need to re-examine TM practices and the concept of talent in the contemporary world. With the advent of Industry 4.0-related technologies, jobs and tasks are highly automated, diminishing the traditional job roles and creating a new wave of jobs requiring new skill sets and evolved competencies. To succeed in this complex scenario, organizations and individuals must get into the habit of reskilling and upskilling to stay relevant to the evolving nature of the future of work. In this paper, we explore how talent can be redefined for Industry 4.0 by systematically tracing the evolution of the talent concept over the two decades and identifying the evolving competencies required for Industry 4.0 using a state-of-the-art review method and inductive content analysis. We propose a dynamic matrix of Industry 4.0 competencies based on the global skills taxonomy that encompasses the competencies that talents need for Industry 4.0. This dynamic matrix can be constantly updated with evolving skills to keep up with changing times and contexts. Therefore, the main objective of this research is to empower the worker in Industry 4.0 by providing a framework to identify the competencies that are required to survive and thrive in the future of work. Through this research, we aim to bridge the gap between the traditional definition of talent and the evolving definition of Industry 4.0. This study has implications for guiding training institutions, organizations, and governments to identify the competencies individuals need to develop through reskilling and upskilling to be prepared for the future of work.

HR: **What Is the Most Valuable Intelligence for the Future of Work?**

Author: **Yuan Pan**, *U. of Electronic Science and Technology of China*
Author: **Ni Liu**, *U. of Goettingen*

Recent progress in digitalization has changed the competencies demanded for future employment. Drawing on the multiple intelligence theory, this study focuses on the types of intelligence desired by recruiters and how they contribute to wages, considering occupational differences. Our analysis of 29,962 job advertisements suggests that interpersonal intelligence commands higher wages across all occupations, whereas logical intelligence is valuable for most occupations. Linguistic, intrapersonal, spatial, bodily, and musical intelligence are also valuable for certain occupations. In contrast, natural intelligence is consistently related to lower wages. The results from our fuzzy-set analysis further revealed certain combinations of intelligence that are particularly valuable. Based on our results, we discuss the theoretical and practical implications of the study.

HR: **They Are Not Match-Makers: Understanding the Behavior of a Search Firm**

Author: **Olga Ivanova**, *USI Lugano*
Author: **Anne Bowers**, *U. of Toronto*

Search firms play an important role in modern labor markets. They shape the structure of job opportunities and regulate talent flows. While prior studies have investigated how search firms match workers to jobs, we pay attention to the implications of failed searches and explore how search firms allocate resources and manage their client portfolios. Using the data from a contingency search agency, we demonstrate that the agency invests more effort in searches for clients that provided job orders but did not hire in the past and save resources on more successful clients by presenting them already known candidates. We also show that the knowledge that search firms accumulate through a history of successful searches is used to compile a convincing shortlist and stimulate the client to select one of the presented candidates. These findings have implications for the study of market intermediaries and the understanding of labor market outcomes more generally.

HR: **Does "Putting People First" Pay Off? Institutional Logics and Substantive Employee-Centric Signals**

Author: **Juan I. Sanchez**, *FIU-EGADE Tec Monterrey*
Author: **Yasmina Lazrak**, *Florida International U.*
Author: **Luis Antonio Perez-Batres**, *Missouri State U.*
Author: **Ivan E. Pineda**, *Florida International U.*

We draws on signaling (Connelly et al., 2011; Spence, 1973), stakeholder (Freeman, 2010; Mitchell, Agle, & Wood, 1997; Parmar, Freeman, & Harrison, 2010), and institutional logics (Scott, 2001; Thornton, Ocasio, & Lounsbury, 2012) theories to develop a theoretical model of the substantive correlates of employee-centric signals. We hypothesized that, when the dominant symbolic and normative pillars of the firms' institutional logics underscore the importance of employee stakeholders (Scott, 2001), the strength employee-centric signals will correlate with firm profitability. An association between the strength of employee-centric signals found in the corporate websites of 282 Fortune 500 firms and increases in firm profitability emerged for firms in people-intensive service industries and for large firms, thereby supporting the importance of addressing the firms' institutional logics when emitting employee-centric signals (Perez-Batres et al., 2012).

Thriving in the Gig Economy

Session Moderator: **Kabiru Oyetunde**, *LSBU Business School, London / UK*

HR: **How a Gamified System Influences Gig Workers' Job Satisfaction and Performance?**

Author: **WeiMing YE**, *Peking U. HSBC Business School*
Author: **Shubin Yu**, *BI Norwegian Business School*
Author: **Yangjuan Hu**, *Peking U. HSBC Business School*

As the platform economy continues to grow, gamified algorithms have become a useful tool to manage gig workers. While researchers are optimistic about the effect of gamified work in many sectors, a gamified work system might not always result in "blissful productivity". A survey study and a field experiment were conducted to investigate how engagement with a gamified job system affects job satisfaction and performance of gig workers. The results suggest that engagement with a gamified job system has a positive effect on motivation to work, which leads to higher job satisfaction and better performance. However, a negative indirect effect of gamification engagement on job satisfaction through work stress and anxiety was also observed. A higher level of gamification engagement elicited work stress and induced anxiety, consequently decreasing job satisfaction and performance. Thus, the total effect of gamification engagement depends on the competition between two routes of motivation versus stress/anxiety. This study contributes to the explanation of the divergent findings of previous research in gamified work.

HR: **Incessant Struggle to be Heard: A Study of Temporary Agency and Platform Workers' Voice**

Author: **Kabiru Oyetunde**, *LSBU Business School, London / UK*
Author: **Rea Prouska**, *London South Bank U.*
Author: **Aidan McKearney**, *London South Bank U.*

Triangular workers are vulnerable to unfavourable employment relations practices particularly in developing economic contexts characterised by a high rate of un/under-employment and poverty. Theoretically framed on Hirschman's exit, voice, and loyalty (EVL) theory and drawing on the triangular work literature, our study compares the voice regimes in physically and digitally mediated triangular work in a developing context. Based on a qualitative study of temporary agency and platform workers in Nigeria, we demonstrate that triangular workers are in a constant struggle to voice their grievances, more so for platform workers than for temporary agency workers. Workers' individual considerations, organisation structural, and external societal influences drive or impede triangular workers' voice. However, triangular workers respond to voice restriction with loyalty or exit depending on the degree of their career commitment, and availability of alternative opportunity. Our study extends the voice and EVL theory by conceptualising an initial EVL-led framework of triangular workers' voice. It offers avenues for future research and presents practical implications for practitioners.

HR: **Gig Work and its Impacts on Existing HR and Organizational Responsibilities and the Role of HRM**

Author: **Anna Tillmann**, *Rotterdam School of Management, Erasmus U.*
Author: **Bastiaan A. Koene**, *Rotterdam School of Management, Erasmus U.*

Gig work describes a growing part of the labor market where workers are hired to do small, temporary jobs called "gigs" mostly using online digital platforms to manage supply and demand. It requires changes in the way we organize and manage work. The existing literature sheds light on the reasons why companies use Gig work and highlights the legal complexity due to the lack of classification of Gig workers. However, the organizational perspective, which examines the challenges and changes for HRM and other organizational actors have been largely neglected. The impact of Gig work is reflected in the organization of work, with the use of online platforms and algorithms, accompanied by numerous changes in terms of processes and systems. A key question is how this affects the day-to-day work and organizational HR responsibilities of the actors involved in the organization of work? To answer this complex question, we examined how Gig work changes HR practices and responsibilities, focusing on the role of not just the HR department but various internal and external organizational actors. Our analysis shows that the introduction of Gig work brings fundamental changes to the people management process, as the HR department has no longer the sole or even primary responsibility for carrying out HR practices. While technology is removing some of the tasks originally performed by HR, the role of the line manager is becoming more central and other actors such as procurement and, in some cases, dedicated platform managers get involved. Our research provides a detailed analysis of responsibility shifts, outlines new responsibilities arising with Gig work and highlights theoretical and practical recommendations for organizations introducing Gig work.

HR: **Free to Have Imbalance: Freelancers Work-life Balance and the Mediating Role of Key Work Facets**

Author: **Christer Andre Flatøy**, *NHH Norwegian School of Economics*

Freelancing, by some described as the prototypical work arrangement of the 'new world of work', is becoming an increasingly relevant work arrangement. Freelancing's emphasis on individual agency, coupled with the inherent uncertainty that follows from it can have important implications for freelancers' work-life balance. Yet, freelancers' work-life balance remains understudied, with empirical comparisons between freelancers' and employees' lacking from the literature. This study investigates if freelancers' work-life balance differs from that of employees with open-ended contracts. In so doing, particular attention is paid to the mediating role of three key facets of work: work-scheduling autonomy, job-income security and collegial support. Hypotheses are tested in a sample of journalists. Journalism fits the criteria of a high-status occupation. Extant literature offers to possible explanations for how work facets may mediate workers' work arrangement and their work-life balance in such a population. Resource theory contends that these facets promote work-life balance. On the other side, the 'stress of higher status' perspective contends that these facets, while beneficial in several regards, are attained at the expense of workers' work-life balance. The results show, first, that freelancers experience a lower level of work-life balance than employees. Second, the results provide unanimous support for the stress of higher status perspective. This paper offers two overall contributions. First, it contributes to the literature on freelancing by demonstrating that while freelancing may formally 'free' workers, this freedom does not lead to a greater work-life balance than what employees have. Second, the paper contributes to the literature on work-life balance by demonstrating that key work facets, usually presumed to promote work-life balance, may in fact entail a reduced work-life balance.

Entrepreneurship and HRM

Session Moderator: **Radhika Shrivastava**, *Fortune Institute of International Business*

HR: **HRM in Venture Funded Entrepreneurial Firms: A Stage-wise Functional Elaboration Approach**

Author: **Romana Gulshani**, *Indian Institute of Management, Bangalore*

There is growing recognition that venture finance impacts human resource management in a startup context. However, venture capitalists' specific roles in influencing their portfolio companies' HR processes are less known. The study focuses on growing ventures that face significant HRM challenges as they transition from an early to a growth stage. The current study uses qualitative research to explore the influence of venture capital investment on human resource management (HRM) in venture-funded startups. The present study is significant because it lies at the intersection of the literature on HRM, entrepreneurship, and venture finance. The findings of the study suggest that VCs contribute towards both the quantitative and qualitative elaboration of HRM through their involvement in recruitment, performance management, compensation mapping, organization design, founder coaching, networking and outreach. Overall, the study contributes to a nuanced understanding of venture finance and its implications on HRM in entrepreneurial firms.

HR: **Growing Pains - Talent Management through the Scaling-up Stages of an Entrepreneurial Firm**

Author: **Radhika Shrivastava**, *Fortune Institute of International Business*
Author: **Malcolm Higgs**, *Southampton U.*

This paper sheds light on the entrepreneurially-relevant contingencies that shape the evolution of talent management (TM) practices in growth-stage entrepreneurial firms (EFs). TM has been studied mostly in MNC settings, and there are multiple calls in the literature to broaden focus to include varied contexts and bring to the forefront voices of a wider stakeholder group. In response to this gap this paper presents findings of an exploratory study conducted in founder-led growth-stage ventures using an empirical approach. Through this study the plan is to identify the institutional and external forces that shape the thinking around installing a TM program, as well as to understand the triggers and consequence of transitions to uncover responses to multi-level organizational challenges to managing talent that will emerge as a firm grows. A multiple case study methodology has been used to study the phenomenon from the perspective of three distinct organizational actors at five firms. On this basis a framework has been proposed that outlines the evolution of a firms' key TM systems through three related stages that a small business grows through, and within these stages are trigger points that precede the advance into the next stage of growth. The findings are significant as they present a lens to understand TM at different stages of a firms' growth, plan for these transitions by anticipating the path and successfully manage the change that results to ensure the growth of the EF. The analysis to some extent contradicts existing research which categorizes small business TM into informal and inclusive approaches. To the best of our knowledge, this is the first empirical study that examines the interplay of talent management and growth at entrepreneurial firms.

HR: **To Achieve Dual-Oriented Strategic Goals: Unveiling Human Resource Management Systems of Young Firms**

Author: **Qian Zhang**, *U. of Ottawa*

As a result of intensified business competition, increased work complexity, and an aging workforce, attracting, developing, and retaining employees has become a fundamental and on-going challenge for organizations. This is particularly important for new ventures who face strategic needs of survival and growth simultaneously. Yet, research is largely silent on how human resource management (HRM) systems can enable new ventures to achieve their strategic goals. Drawing on 51 semi-structured interviews and organizational documents describing two new ventures in the healthcare industry in China, this study investigates a model of HRM systems espoused by new ventures when they face simultaneous strategic goals—survival and growth. The findings show that new ventures attempted to utilize the HRM systems embedded in relationship-oriented collaboration. Specifically, at the macro-level, new ventures relied on cross-organization partnerships to share and develop their employees; at the meso-level, these organizations cultivated collaborative cultures and designed strategically targeted HR policies; and at the micro-level, relational capabilities, in addition to technical skills, were highly emphasized among individuals. The paper provides valuable insights into the elaboration of how strategic HRM can affect a firm in its early stages of development.

HR: **Employee Agility in New Ventures: Examining the Role of Trust in Founder in Cross-Cultural Context**

Author: **Ashneet Kaur**, *assistant professor*
Author: **Sudhanshu Maheshwari**, *S P Jain Institute of Management and Research*
Author: **Sunil Kumar Maheshwari**, *Indian Institute of Management, Ahmedabad*

Employee agility represents an important driver of new venture performance in a highly dynamic and competitive market. We examine what factors influence employee agility in new ventures in the context of individualistic and collective cultures. Drawing on Job Demand-Resource Theory, we develop a theoretical model that explains how job autonomy among the employees of a new venture influences agility through positive work engagement. We also argue that trust in founders is crucial in enhancing the relationship between work engagement and employee agility. To test our model, we conducted two studies in cross-cultural settings. In Study 1, we collected 205 responses in a multi-wave survey circulated among employees working for startups in India (a collective culture) and in Study 2, we collected 187 survey responses in the United States of America (an individualistic culture). Our results from both studies facilitate disentangling the underlying mechanism of employee agility and show that trust in founders even indirectly moderates the relationship between job autonomy and employee agility, such that this relationship is stronger when trust in founders is high. Thus, our study allows for more accurate predictions about how employee agility emerges in new ventures. Our study contributes to research on how a founder's interpersonal relations could have an implication on employee agility in startups.

HR: **Organizational Ambidexterity and Performance: Examining the Moderating Role of Unit Differentiation**

Author: **Leon Barton**, *U. of St. Gallen*

To be successful in the long term, companies must meet current requirements (exploit) while being prepared for future demands (explore) – a dynamic capability referred to as ambidexterity. Research investigating the microfoundations of organizational ambidexterity has identified the crucial role of individual exploitative and explorative behaviors of employees in achieving ambidexterity on the organizational level. But what happens if employees in business units work with (very) different foci? This study provides a new perspective on the impact of high differentiation between business units in organizations focused on exploratory and/or exploitative goals. Drawing from paradox and social identity theory, I argue for an effect of organizational ambidexterity on firm performance via increased levels of positive affective tone. I subsequently theorize that this positive effect might be switched off by strong ambidextrous unit differentiation. This moderated mediation model is tested and supported by multiple regression analyses in a multisource data set containing 17,429 employees from 92 companies. These results are discussed and contribute to the literature on organizational ambidexterity.

Promoting Employee Well-Being

Session Moderator: **Sari Mansour**, *U. du Québec, TÉLUQ*

HR: **Promoting Workers' Well-being Through Human Resource Management Practices and Job Crafting**

Author: **Sari Mansour**, *U. du Québec, TÉLUQ*

The COVID19'crisis put more pressure on organizations to care about employees' well-being and to support them to adapt to their altered work environment. Because many approaches in the field of strategic human resource management have failed to consider seriously employees well-being, there is a need for a sustainable and well-being-oriented approach. This study examines the links between well-being-oriented human resource management (WBHRM), job crafting and well-being at work using two waves sample of nurses working in healthcare organizations in Quebec-Canada (N= 344). Based on the conservation of resource theory and using structural equation methods to analyze data, results show when nurses who perceive the value of WBHRM in context of crises as high, they reinvest more resources over time in form of job crafting by actively crafting more decisions on how to do their work, by reorganizing work to be more effective, by using more technology to improve work process and by developing more their skills and capacities to acquire additional resources such as well-being. The findings reveal that job crafting mediates the link between WBHRM and well-being at work.

HR: **Is the Well-being Paradox Real? A Meta-Analysis of Human Resource Management and Employee Well-being**

Author: **Zhao Dan**, *Hainan U.*
Author: **Ningyu Tang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Employee well-being is a composite construct; hence HRM systems may have convergent and divergent effects on different dimensions of well-being. While numerous studies have documented the critical role of HRM systems in employee well-being, a systematic overview of the associations between different HRM dimensions and multiple aspects of well-being still needs to be provided. This study reports a meta-analysis investigating the associations between HRM systems and various types of well-being. Drawing on data from 58 samples (N = 742,368), our results found a clear primary trend, namely, that ability-enhancing HR practices had the strongest positive association with happiness well-being; motivation-enhancing HR practices were the most negative predictive of health well-being; opportunity-enhancing HR practices displayed strongest positive association with social well-being. Moreover, MASEM results indicated HRM-well-being-performance model had a good fit. Overall, the meta-analysis findings highlight the relationship between HRM systems and different types of well-being. Implications for future research and policy recommendations aiming to increase well-being are discussed.

HR: **Investigating the Paradoxes of Workplace Well-being: A Systematic Literature Review**

Author: **Steven Kavaratzis**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Ellen Choi**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Megan Herrewynen**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Trisha Bugra**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Research examining how corporate wellness programs (CWPs) can ease employee stress is on the rise; however, much of existing research neglects the contextual factors that may undermine well-being (WB) or does not fully consider the tension between how WB may compete with outcomes like job performance. Applying Job Demands-Resources (JD-R) and Conservation of Resources (COR) theory, we examine how pursuits of WB may paradoxically be competing with other employee resources in a loss spiral that can outpace gains. We conduct a large-scale systematic literature review of 156 articles using the Covidence software to better understand WB and workplace outcomes, contextual planning and evaluation components of CWPs, and the theory used when examining CWPs. Our review finds that replenishing and adapting resources to offset loss spirals will improve physical and psychological WB under the right context, outcome planning and execution. While CWPs reliably enhance WB, workplace variables did not always yield the same outcome. We propose that part of the paradox may be reconciled by considering how congruent a CWP's design is with its intended outcomes, most notably job performance and satisfaction. Our review offers theoretical and practical considerations to guide future research aimed at supporting both WB and workplace gains.

HR: **The Impact of Isolation on Employee Well-Being: a Daily Diary Investigation**

Author: **Wilfred Van Den Brand**, *The Open U., Netherlands*
Author: **Irina Nikolova**, *Maastricht U., School of Business & Economics*
Author: **Marjolein C.J. Caniels**, *The Open U., Netherlands*

Drawing on affective events theory, we propose that work-related isolation can affect employee well-being (i.e., high engagement and low emotional exhaustion) through positive affect. In addition, building on conservation of resources theory we examine the moderating role of self-efficacy. Hypotheses were tested using a daily diary methodology. Study variables were captured in a daily questionnaire during ten consecutive working days. The sample consists of 44 employees from whom we obtained 333 daily observations. Multilevel path analysis revealed that isolation was negatively related to positive affect. Furthermore, positive affect was significantly related to employee well-being. Moreover, we established significant indirect effects from isolation to work engagement and emotional exhaustion through positive affect. These results hold for both the within-level and between-level. In addition, the indirect effects were moderated by self-efficacy for both work engagement and emotional exhaustion at the between-level. The study results demonstrate the importance of self-efficacy in preventing decrease in positive affect under the condition of isolation and emphasize the need to safeguard the individuals with low self-efficacy whose well-being might be in greater jeopardy.

HR: **A Contingent Multilevel Model: Employee Burnout and Firm Performance in Paradoxical Working Contexts**

Author: **Sophie Kathrin Meier**, *U. of St. Gallen*

Paradox scholarship has warned of the vicious cycles that entrap individuals dealing with paradoxical tensions. Yet, the health-related consequences tension-laden environments bestow upon employees remain significantly understudied. Addressing this gap, the present study combines paradox theory and the job demands-resource model to illuminate how conflicting work demands can deplete employees' resources. Resulting in higher rates of employee burnout, paradoxical tensions are theorized to impair organizational effectiveness. However, the study simultaneously suggests a remedy: Conceiving of social capital as a job resource, firms whose organizational climate promotes boundary spanning can effectively attenuate the (health) depleting effect of paradoxical tensions. Capitalizing on data comprised from over 13'000 employees and top management teams from 80 SMEs, a cross-sectional multilevel analysis corroborates the hypothesized negative indirect relationship between paradoxical tensions and organizational performance. Yet, an organization climate conducive of boundary spanning mitigates and ultimately nullifies the negative effect of paradoxical tensions on burnout proclivity. Hence, being among the first to shed light on the negative side of paradoxical tensions, this study explores important boundary conditions that enable employees to master contradictory work demands.

Line Managers and HR Implementation

Session Moderator: **Peipei Bai**, *Hongik U.*

HR: **A Stressor–coping Model of First-line Manager's HRM Implementation: An Empirical Investigation**

Author: **Peipei Bai**, *Hongik U.*
Author: **Huikun Chang**, *Seoul National U.*
Author: **Longzhen Li**, *Hongik U. College of Business Management*
Author: **Jongwook Pak**, *U. of Auckland Business School*

Devolving human resource (HR) roles and practices to first-line managers (FLM) is a prominent feature of modern human resource management. The main purpose of HR devolution is to improve the effectiveness of HR implementation. However, it is unclear 1) whether there is a consensus between HR department and FLM on the outcomes of HR devolution, and 2) what conditions need to be resolved to ensure FLMs' HR implementation effectiveness. To fill this void, this study extends the current literature in two key ways by concentrating on the stressor–coping strategy model of FLMs' HR implementation. First, this study explores that HR devolution is associated with stressors, which is, in turn, related to coping strategies, and ultimately influenced HR implementation effectiveness. Second, this study investigates the moderating effects of FLMs' attributions toward HR devolution on the stressor–coping strategy. Hypotheses were tested with 723 employees in 203 workgroups from 20 Chinese companies. The results showed that the proposed model is mainly supported. Therefore, this study contributes to extending the literature in several ways.

HR: **The Impact of Promotion for Leadership Potential on HR Role Identity and HR Implementation**

Author: **Jongwook Pak**, *U. of Auckland Business School*
Author: **Hossein Heidarian Ghaleh**, *allameh Tabataba'i U.*
Author: **Huikun Chang**, *Seoul National U.*
Author: **Keith Townsend**, *Griffith Business School, Griffith U.*

Over the last two decades, HR devolution has garnered sizable literature, and the significance of frontline managers'(FLMs) HR implementation has received significant scholarly attention. However, the research has hardly embraced a retrospective approach to view FLMs' promotion background and their psychological attachment to HRM as a sine qua non. Thus, drawing on role identity theory, this study proposes a theoretical model whereby FLMs promoted based on their leadership potential are more likely to hold strong HR role identity and exhibit greater HR implementation. Our model also describes how FLMs' HR implementation impacts group performance. The study used a time-lagged research design to collect multi-source data from 528 employees and their FLMs from a large Chinese information and communication technology (ICT) company. Our findings confirm that FLMs' promotion for leadership potential significantly impacts their HR role identity, and that HR identity operates as a determinant for subsequent HR implementation. We also revealed that FLMs' HR implementation substantially anticipates group performance. Together, this study captures key developments in devolution and promotion research by uncovering that promoting FLMs attentive to their leadership capacity is a prelude to the success of HR initiatives.

HR: **Line Manager HRM Implementation: Linking its Attributions to Employee's Experience and Behaviors**

Author: **Zhu YAO**, *Hunan U.*
Author: **Na Fu**, *Trinity Business School, Trinity College Dublin*
Author: **Jinlian Luo**, *Tongji U.*
Author: **Zhengde Xiong**, *Hunan U.*

Line manager HRM implementation, also labelled as the real or actual HRM, has received the increasing attention in the past decades. This study contributes to the line manager HRM implementation research by theorizing the attributions of line manager HRM implementation and its impact on employee attitudes and behaviors. Drawing on social exchange theory and the approach-avoidance framework, this study establishes a series of mediation models to explain how and why employees' perceived attributions of line managers HRM implementation influence employees' withdrawn behaviors, including knowledge hiding and unethical pro-organizational behavior (UPB). The attributions of line manager HRM implementation influence employees' motivations towards opportunities (approach or avoidance orientation), which are linked to their identification with organisations, ultimately to their behaviors at work. The mediation models are tested via two studies. In Study 1 with three-wave data collection from 303 employees, attributions of line manager HRM implementation are found to be correlated with knowledge hiding mediated by organizational identification. Using four-wave data collection from 738 employees, Study 2 extends Study 1 by finding the pathway through which employees' perceived attributions of line manager HRM implementation influence organizational identification, i.e., approach and avoidance orientation. Overall, this research contributes to HRM research by investigating the perceived why of and how line manager HRM implementation and its impact on employee motivation, cognition, and behaviors.

HR: **The Assignment of HRM Responsibilities to Line Managers: A Contextually Based Perspective**

Author: **Jordi Trullen**, *ESADE Business School*
Author: **Nadima Hassan**, *U. Rovira I Virgili*
Author: **Mireia Valverde**, *U. Rovira I Virgili*

Increasing needs for flexibility and adaptation in organizations call for higher levels of autonomy in managers' HRM decisions. Yet, large differences remain in the extent to which organizations assign HRM responsibilities to line managers, a process known as devolution. Adopting a contextualized perspective supported by contingency theory, we use a large multi-country data set to test the influence of institutional, competitive, and heritage-based mechanisms on the uptake of devolution, finding support for the latter two. Our results point at the need for more integrative and multi-level approaches to context, which complement predominant managerialist views on the assignment of HRM responsibilities to line managers.

The market for talent is highly competitive - more so now than before COVID-19; top talent can work for anyone and anywhere. Workplace design influences employee health and engagement, and employers whose physical workplaces promote safety and well-being will likely have a competitive advantage in the labor market. We will discuss cognitive design aspects like colors and lightning for cognitive refreshment but also psychological design aspects like control over their workplace, perceptions of fairness, and spatial or virtual layout that promotes interaction. As there are more and more flexible work arrangements, we will go beyond the classic pre-pandemic office setting and discuss how virtual reality can improve employee satisfaction within hybrid environments. With this panel, we want to highlight the importance of workspaces to the AOM audience. We aim to prompt future thinking regarding workspaces that align needs for comfort, connection, privacy, flexibility, predictability, equity, and security.

Digitalization in the International Context

Session Moderator: **Murad A. Mithani**, *Rutgers U., Camden*

IM: **The Benefit of Foreignness during Digital Disruption**

Author: **Murad A. Mithani**, *Rutgers U., Camden*

When digital entrants disrupt an established industry, who amasses the most benefits: foreign or domestic entrants? Past research offers conflicting advice. It suggests that digital technology bestows advantage of foreignness but disruptive digital products experience market hostility that turns into liability of foreignness. This study reconciles the two perspectives by focusing on the fit between technology and market, i.e., the business model. It argues that a disruptive digital business model disproportionately benefits foreign entrants when they offer a basic product to an underserved market. But as that market gains more attention or when foreign entrants focus on advanced products, the advantage of foreignness is replaced by liability of foreignness. Using the setting of the U.S. financial advice industry, I examined the disruption of non-digital face-to-face advisory services by digital advisors known as roboadvisors. The findings show that while foreign roboadvisors grew faster than domestic roboadvisors, the growth of foreign roboadvisors diminished as their market became attractive to incumbents and when roboadvisors focused on complex solutions. The evidence integrates the research on foreignness and business model disruption to show that a digital business model increases the benefits but also the costs for foreign entrants.

IM: **TMT International Experience, Platform Firms, and Internationalization of Chinese Digital Firms**

Author: **Tianhao Liu**, *Rutgers Business School*
Author: **Ajai Singh Gaur**, *Rutgers U.*
Author: **Kusum Mundra**, *Rutgers*

This study investigates how digital platform firms are different from other digital firms in the internationalization process and how the international experience of returnee managers influences the internationalization of digital firms in an emerging economy. Taking a microfoundation approach to study the international experience of managers at the top management teams (TMT) level, we also propose that the international experience of managers is positively associated with firm internationalization, and platform businesses and state ownership weaken this association. More specifically, we distinguish platform firms from other types of digital firms and examine how being "platforms businesses" moderates the association between the international experience of returnee managers and firm internationalization. Testing our hypotheses on a sample of 148 digital firms in China from 2012 to 2020, consistent with our arguments, we find that platform firms are positively associated with internationalization to a greater degree than other types of digital firms. We also show that the international experience of TMT is positively associated with firm internationalization. Regarding the moderating effects, we find that platform weakens the positive effect of TMT international experience on international expansion.

IM: **The Effects of Digital Capability on Firms' Export-Financial Performance Under Immigrant Ownership**

Author: **Horatio M. Morgan**, *U. of Waterloo*
Author: **Sui Sui**, *Ryerson U.*

Firms are increasingly investing in digital technologies amidst accelerating technological change in developed countries. They could reap benefits that compensate for the costs and risks involved. For internationalizing firms operating under immigrant ownership, this could mean improved export and financial performance relative to what is possible under non-immigrant ownership. This perspective treats digital capability development (DCD) as a strategically enabling factor underpinned by performance-enhancing complementarities between digital and non-digital capabilities. On the contrary, DCD could be a strategically inhibiting factor associated with performance-inhibiting digital market misfit linked to the global digital divide. To resolve these conflicting views, we articulate a dynamic capabilities framework that explains why and how DCD could improve firms' export-financial performance, and whether immigrant ownership amplifies or reduces export-financial gains from DCD. We use a representative sample of 7,761 Canadian small and medium-sized enterprises (SMEs) to validate a strategically enabling view of DCD: internationalizing firms realize larger export-financial gains from DCD under immigrant than non-immigrant ownership. Our novel insights and findings contribute to multiple research streams spanning international business and entrepreneurship.

The internationalization of digital platform firms has reshaped the competitive dynamic of the marketplace. The nature of platform business in terms of a winner-takes-all dynamics leads to monopolistic and oligopolistic control over markets which in turn causes reactions from institutions to regulate or prevent platform-based firms from entering the market or to impose specific regulations to protect local players. Platform competition has attracted significant interest across multiple disciplines from economics, information technology, management and organization, strategy, and international studies. Attempts have been made in the field of management and international studies to develop broad interdisciplinary reviews of the literature on digital platforms that have touched on the international aspect of digital platforms. However, the issues specific to internationalization and the role of institutions remain under-explored theoretically and in detail empirically. This article offers a systematic review of the literature on the internationalization of digital platforms by analyzing a sample of 43 articles published from 2001 to 2023. The systematic literature review approach ensures an explicit process of literature identification, retrieval, and evaluation and has been proven as a robust and rigorous methodology ensuring transparency and minimizing the research bias This review of literature contributes by chronicling the extant literature on digital platform internationalization, examining the use of institutional theory to explain the patterns of digital platform internationalization and to highlight areas for future research.

Legitimacy in International Business and IB Research

Session Moderator: **Christiaan Roell**, *Sheffield U. Management School*

IM: **Managing the Legitimacy of 'Sinful' Companies in Extreme Institutional Environments**

Author: **Christiaan Roell**, *Sheffield U. Management School*
Author: **Felix Arndt**, *U. of Guelph*
Author: **Wilson Ng**, *IDRAC Business School*

We examine how multinational enterprises (MNEs) manage their legitimacy in extreme institutional environments. Building on the legitimacy-as-process perspective, we investigate the legitimation activities of a century-old local subsidiary of a beer-brewing MNE in Indonesia, the world's largest Muslim country. Drawing on a triangulated dataset that includes a series of interviews with company directors and related market and non-market actors, we present a longitudinal case study of how the subsidiary continued to negotiate its legitimacy and nonmarket influence in an unstable environment where alcohol consumption is proscribed. Based on this case we present a process model that suggests how foreign-owned businesses may maintain legitimacy in extreme institutional environments despite their engagement in 'sinful' products. Our study contributes to the nonmarket strategy literature and notably to research on managing the legitimacy of foreign firms in 'sin' industries. These contributions have implications for political risk management in inherently extreme institutional contexts.

IM: **Screening Inbound FDI Legitimacy from a Theorization Process Perspective**

Author: **Yi-Chi Hsiao**, *Department of Business, National Central U.. Taiwan*
Author: **Chun-Ping Yeh**, *National Taiwan U. of Science and Technology*
Author: **Hsueh Liang Wu**, *National Taiwan U.*

In the context of international expansion, it remains unknown how reputed enterprises are affected by the ex-ante screening of regulatory agencies in the host country and how they navigate market entry approval processes. We used the theorization process perspective and a sample of 415 Chinese multinational enterprises' (CMNEs') foreign direct investment (FDI) applications in Taiwan to examine the legitimacy concerns raised by regulatory agencies. Our findings show that investments by publicly listed CMNEs elicit more concerns than those by state-owned enterprises. Reputable CMNEs can decrease the legitimacy concerns they face by using a low-profile approach to entering the market, creating appropriate 'bridging interface strategies', and increasing their visibility through an intensive exposure strategy. This study provides some relevant academic contributions and managerial implications.

IM: **MNEs' Role on Skills Building in Africa: The Policy Network View Using the Case of Japanese Firms**

Author: **ATTA Kouassi Akora**, *U. Laval*
Author: **Zhan SU**, *U. Laval*

This study analyzes the role multinational enterprises and their home countries institutions in skills building policies in Africa. It uses the Japanese case by analyzing the interactions between home country institutions (in this case, the Japanese government), African host country institutions, and Japanese MNCs as skills building policies network. The research undertakes a qualitative approach using secondary data on the involvement of these MNEs and their home country government in skills building policies in Africa combining with online semi-structured interviews with participants from each category of the policy network actors. The fundings show that these policy network actors perceived the same problems of mismatching between the skills that are developed in many education systems in Africa and the real needs of the labor market. Therefore, they exchange diverse resources, have different preferences, and use different strategies for elaborating or/and implementing skills building policies in Africa. The study also show that multinationals can gain legitimacy by positively impacting their institutional environment in both their home and host countries; contrary to the neoclassical institutional theory that postulates that multinationals need to follow the rules of the game to gain legitimacy. One way to impact their environment is through policy network.

IM: **What's the P(roblem)? The State of Hypothesis-Testing Research in International Business**

Author: **Jelena Cerar**, *WU Vienna*

Over the past decade, researchers in the field of International Business (IB) and other areas of management science have suggested that the prevalent statistical methods based on null-hypothesis systematic testing (NHST) and related practices should be significantly revised or even abandoned. In this article, I examine problematic approaches in original papers published in the Journal of International Business Studies (JIBS), the leading IB journal, between 2012 and 2022. My analysis indicates a high probability of HARKing, file-drawing, and p-hacking. Furthermore, my data shows that the problems seem to have become more severe. There are only few positive trends. I discuss the main factors driving these trends and highlight systemic problems that require collective action. I address some of these challenges and propose potential solutions, thereby contributing to the list of JIBS publications that promote good scientific values and reporting standards.

Challenges in Managing Human Resources Globally

Session Moderator: **Natalia Fey**, *Hanken School of Economics*

IM: **Rethinking the Role of Cultural Intelligence: A Relational View on Intercultural Leadership Coaching**

Author: **Natalia Fey**, *Hanken School of Economics*
Author: **Christof Miska**, *WU Vienna U. of Economics and Business*
Author: **Jason Ighani**, *The Humanitarian Coaching Network*

Intercultural leadership coaching is an increasingly important type of global leadership development. Nevertheless, the role that cultural intelligence (CQ) plays in facilitating intercultural leadership coaching remains largely unknown. Drawing on social exchange theory, we suggest a relational perspective that considers CQ levels on the part of the coach and the coachee. In addition, from this relational perspective, we hypothesize and test single CQ components rather than aggregate levels. Based on a sample of 107 intercultural leadership coaching dyads representing 74 nationalities, and analyses using fsQCA, we find that metacognitive CQ and motivational CQ on the part of both coach and coachee are consistently relevant to coachee learning. This points to the rather general relevance of these CQ components in the context of intercultural leadership coaching, whereas cognitive CQ and behavioral CQ appear more relevant in relation to dyad contexts. Therefore, we argue for the relational rather than static nature of CQ specifically, and intercultural competence in general. This implies consideration of the specific individuals involved in intercultural encounters and their interrelationships, rather than a focus on culture-general versus culture-specific deliberations as well as the domain nature of intercultural interaction.

IM: **Multiculturalism and Positive Leadership**

Author: **Davina E. Vora**, *State U. of New York at New Paltz*
Author: **Salma Raheem**, *U. of Liverpool Management School*

Drawing up on social identity theory and self-categorization theory, we explore positive leadership among multicultural individuals – those who have knowledge of, identification with, and internalization of more than one societal culture (Vora et al., 2019). We suggest that, while on average multicultural individuals are likely to engage in positive leadership across cultures, there are individual-, dyadic-, team-, organizational-, and national-level factors that moderate this relationship. We propose how factors at these different levels may influence this relationship. Our hope is that these propositions can spark future research on positive leadership among multicultural individuals.

IM: **The Role of CEO Cognition in Cross-Border Acquisition Pace: Evidence from US Serial Acquirers**

Author: **Olivier Bertrand**, *Fundação Getúlio Vargas/EBAPE*
Author: **Marie-Ann Betschinger**, *HEC Montreal*
Author: **Kyeong Hun Lee**, *NHH Norwegian School of Economics*
Author: **Emma Q. Xu**, *U. of New Mexico*

The fast pacing of cross-border acquisitions (CBAs) can be critical to a firm's competitiveness. But the antecedents of a firm's ability to quickly execute serial CBAs and thus build a strategic momentum have been disregarded in the international strategy literature. We focus on the role of CEO cognition in serial CBAs and argue that firms are better able to compress the time between deals in a target country when a CEO has more acquisition experience in the focal firm in the target country and when this CEO shares a similar cognitive frame with the target country due to cultural ancestry links. Using a sample of CBAs by 348 US serial acquirers and 428 CEOs in 34 host countries, our findings support most of our predictions. CEO acquisition experience matters. A similar cultural heritage magnifies the CEO acquisition experience effect, thus increasing the CEO's absorptive capacity in experiential learning.

Research about the implications that cultural differences have for managers in different parts of Anglophone Canada and the United States, like management studies of regional culture throughout the world, have been based on varied, narrowly focused theories and have reached varied conclusions. Here, we identify and compare theories about immigrant group characteristics and contemporary socioeconomic characteristics that figure strongly in research comparing Canada, the United States, and their regions. We summarize the predictions that each immigration theory and each socioeconomic characteristic makes for the two implications of culture that are most prominent in regional studies of North America – self-reliance and deference to authority. We conclude with thoughts about the potential contributions of culture research about North American regions along with theories of culture emergence and change that need to be revised or added to them to advance research about cultural regions of Europe.

Cross Border Innovation

Session Moderator: **Weichieh Su**, *National Chengchi U.*

IM: **How Does Outward FDI Account for Innovation Performance? The Mediation Role of Knowledge Search**

Author: **Jyun-Ying Fu**, *National Chengchi U.*
Author: **Danchi Tan**, *National Chengchi U.*
Author: **Weichieh Su**, *National Chengchi U.*

Drawing on springboard perspective, emerging multinational enterprises (EMNEs) may increase their innovation performance through outward foreign investments (OFDIs). Yet, the mechanism of how OFDIs promote innovation is underexplored. In this study, we propose and theorize how knowledge search plays a mediation role to stimulate the effect of OFDIs on innovation. We use a matching technique to control endogeneity arising from sample selection bias. Based on a sample of Chinese MNEs from 2009 to 2018, we find that the OFDIs of EMNEs are positively associated with the scope and the depth of their knowledge search. Furthermore, we find that OFDIs in developed markets have a more salient impact on the knowledge search scope (i.e., using new patent citations) than OFDIs in emerging markets. But OFDIs in emerging markets have a more salient impact on the depth of knowledge search (repeating old patent citations). Theoretical and managerial implications are provided for consideration.

IM: **The Role of Innovation Pressure from Domestic and Foreign Competitors on Firm Internationalization**

Author: **Yun Dong Yeo**, *San Diego State U.*
Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*

The current study aims to understand how innovation pressure from different competitor groups (i.e., domestic and foreign) affects firm internationalization in transition economies. We argue that while innovation pressure from domestic competitors pressures transition economies firms to engage in horizontal differentiation that lock them within the domestic market, innovation pressure from foreign competitors forces them to vertically differentiate that enhance their competitiveness in international markets. Based on a survey dataset covering 26 transition economies, we find empirical results that corroborate our ideas. While innovation pressure from domestic competitors is negatively associated with internationalization, we find the opposite results for innovation pressure from foreign competitors. Moreover, we find that firm innovation and the economic development of the country strengthen the main associations.

IM: **The Incompatible Impact of Proprietary Technologies and Standards on Firm Internationalization**

Author: **Netanel Drori**, *The College of Law and Business*
Author: **Niron Hashai**, *Arison School of Business, The Interdisciplinary Center (IDC), Israel*
Author: **Joseph Clougherty**, *U. of Illinois at Urbana-Champaign*

This study contributes to the firm internationalization literature by identifying proprietary technologies and international standards as industry-level attributes affecting the ability of firms to engage in cross-border business activities. Firms operating in industries that support the presence of extensive proprietary technologies can enhance internationalization via technology-based competitive advantages. Furthermore, firms operating in industries with extensive international standardization can enhance internationalization via the reduction of the transaction costs and information asymmetries concomitant with cross-border business. Yet operating in industries replete with both proprietary technologies and international standards raises challenges for internationalizing firms due to the incompatibility of these attributes. Thus, the marginal utility of extensive proprietary technologies reduces when international standards are abundant and in turn yields a negative joint effect on firm internationalization. We test these priors by employing panel data on the internationalization of up to 4,248 publicly traded U.S. firms in the manufacturing sector over the 1997-2019 period.

IM: **Replication-Based Innovation View of Internationalization Process**

Author: **Bin Zhang**, *Beijing U. of Posts and Telecommunications*
Author: **Zhu Zhang**, *U. of International Business and Economics*
Author: **Xiangming Tao**, *U. of Sussex, SPRU*

The traditional literature on internationalization process has emphasized on the knowledge accumulation and commitments, which, however, becomes challenging in explaining how digital platforms achieve globalization nowadays. To address this gap, in this study, we build the replication-based innovation theory by analyzing business model as the unit of analysis through a multi-case method. Our inductive, comparative study of ByteDance and Kuaishou shows that these digital platforms achieved globalization, based on replication strategy, through a dynamic process of reproduction, adaption, variation, and innovation. Our findings reveal the importance of the replication strategy for business model innovation during the internationalization process, and then highlight two distinct patterns of replication-based innovation: gradual, as demonstrated by ByteDance's great improvements of its replicated business model in host countries and positive revision in home country; and radical, as exemplified by Kuaishou's slight adjustments in host countries and negative reconstruction in the home country. We further combine these distinct patterns together as the replication-based innovation theory, which is helpful to explain why some digital platforms are more successful in globalization, while others are not. Our study provides new insights into the internationalization process of digital platforms and offers guidance to managers on navigating the replication-innovation game.

Internationalization Strategies of MNEs

Session Moderator: **Rui Hou**, *Royal Holloway, U. of London*

IM: **Resource Allocation Implications on R&D Due to Overseas Investment & Foreign Shareholder Divestment**

Author: **Deepak Sardana**, *U. of South Australia*
Author: **Vikas Kumar**, *U. of Sydney Business School*
Author: **Narain Gupta**, *Management Development Institute Gurgaon*
Author: **Ying Zhu**, *U. of South Australia*

In this study we examine how resource allocation of emerging market firms are impacted due to the divestment of shareholding by the foreign investors. We specifically focus on the relationship between two main constructs that often influence and shape strategy of the firms, namely internationalization and innovation. International strategy scholars have often found strong relationship between internationalization and innovation. We therefore postulate that the relationship between the two are likely to be impacted due to the foreign shareholding divestment. This is because the latter, depending on its scale, can have both direct as well as indirect adverse effect on the resources of the firm. With an extensive dataset of 20 years on Indian companies, we find empirical support to our primary thesis. We found that the emerging market firms seek to substantially increase their resource allocations for R&D expense when foreign shareholding divestment is low; and only marginally cut back on it when divestment is high. The results are counterintuitive but are further supported as we advanced the analysis by considering moderation of two other important constructs, namely affiliation to business groups and industry sector.

IM: **Decoupling Hand in Hand with Internationalisation: A Case Study of a Chinese Bank**

Author: **Rui Hou**, *Royal Holloway, U. of London*
Author: **Huaichuan Rui**, *U. of London*

The world is witnessing intensifying geopolitical tensions, and notably the decoupling between the world's two largest powers, the US and China. As the micro foundations of geopolitics in the business realm, multinational enterprises (MNEs) play an important role in and are subjected to the rivalries between the states. This paper aims at providing powerful empirical evidence, which the existing literature lacks, in order to explain how and why MNEs (de)couple with the world market. By conducting an in-depth case study of a Chinese bank and integrating insights from the literature on international relations, we identify three key factors and tracks their evolution towards this decoupling. We build a triad in explaining the interactions among the factors which contribute to the decoupling. This study also enhances the applicability of springboard theory, showing that state-owned companies also follow the logic of the upward spiral.
